# Customer Release Notes

## eRAD PACS
## Version 8.0
## Viewer Build 72

### Release Date October 30, 2021

# Table of Contents

## New Features and Enhancements

1. **Progression view overlapping**
   The overlap indicators when using the progression view tool can be hidden by setting the configuration setting Options/Images/Progression/Show overlapped area to off.

2. **Support cw3 in HTTP[s] channels**
   DEPENDENCY NOTICE: This feature requires SRV-729.
   The key thumbnail (blue-line) data and HTTP/S frame data (as opposed to streaming frame data) can be requested from cw3 files, avoiding the need to process cw1 files if cw3 files already exist.

3. **Support reconstruction of smaller image from cw3 data stream**
   DEPENDENCY NOTICE: This feature requires SRV-729.
   Decompressing the initial quality images for use in the thumbnail panel has been optimized to allow the request to produce a smaller image.

## Resolved Issues

1. **Special characters not displayed properly**
   Some special characters used in names and rendered by the viewer, primarily on tabs and in the DICOM information panel, were displayed incorrectly.  This has been resolved.
