Customer Release Notes

eRAD PACS
Version 8.0
Viewer Build 74

Release Date December 8, 2021
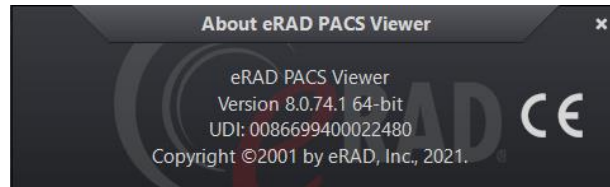

Table of Contents

New Features and Enhancements

1. **Display CE Mark in viewer**
   The CE Mark is displayed on the viewer's About panel.

Resolved Issues

1. **Window/Level doesn't work with LINEAR_EXACT VOI LUT function**
   If an object declared the image displays using a LINEAR_EXACT VOI LUT function, window and leveling failed to work because the viewer already overwrote the user-specified values with the full range values. This has been resolved.

2. **Stack ruler wrong with rotated RMLO images**
   In some conditions, rotating a mammography image 90 degrees inverted the stack ruler's direction. This has been resolved.

3. **Exported Plugin Series Not Listed in Thumbnail Panel**
   A change in build 70 introduced a refresh problem which failed to display images exported from a plugin module in the thumbnail panel. This has been resolved.

4. **Cw3 reconstruction fails when the resampled image has one dimension less than 64 pixels**
   Image reconstruction failed an internal consistency check when the resampled image had a dimension less than that used by the thumbnail images (64 pixels). This has been resolved.

5. **Next/Previous study sometimes causes Invalid study error**
   A timing issue could cause the viewer to read the next or previous study URL before it was ready, resulting in an invalid study error message. This has been resolved.
