SUMMARY

Release Announcement

This release of ᴇRAD RIS 4.2023.046 introduces enhancements to the Portal procedure picker.

New Features

This release introduces the following features and enhancements:

Category	Redmine #	Subject	Description
Digital Forms	33815	Display most appropriate answer when portals share a Digital Forms question	This enhancement to the Digital Form Editor adds the ability to display the most appropriate answer in a digital form when the same question appears in both the Patient and Referring portals.
System Config	31704	Additional granularity options for Question Details by Portal type	This enhancement to System Config adds additional options to the Question Details and allows for separation of configuration between Portals.
System Config	33953	Additional Granularity to Question Details by Portal Type (Using in Portal Side)	This enhancement to System Config adds additional options to the Question Details and allows for separation of configuration between Portals.

Sᴏʀᴛᴇᴅ ʙʏ Cᴀᴛᴇɢᴏʀʏ ᴀɴᴅ Rᴇᴅᴍɪɴᴇ

Refer to the Fᴇᴀᴛᴜʀᴇ Dᴇᴛᴀɪʟs section below for configuration and usage information.

Resolved Issues

This release resolves the following issues:

Category	Redmine #	Subject
Digital Forms	34155	Resolved a Digital Forms issue where Portal Call Center only questions were not displaying the PortalAdditionalInfoToCall message.

FEATURE DETAILS

Digital Forms

Feature #33815 – Display most appropriate answer when portals share a Digital Forms question

Summary

This enhancement to the Digital Form Editor adds the ability to display the most appropriate answer in a digital form when the same question appears in both the Patient and Referring portals.

Background

Previously, questions created via the Procedure Picker could be used by both the Patient and Referring Portal. A referring could create an order for an exam int the Provider Portal and answer one of these questions, and the patient viewing the order to schedule in the Patient Portal would see the answer from the referring portal and can update it. However, Digital Forms must map to either the Patient Portal or Referring Portal version of the question, and do not distinguish which is the most recent answer to the question.

The recently resolved Feature #30297 and Bug #32759 now allows these responses to be viewed and edited in digital forms.

Note that these answers may be different as changes made in one location will not be reflected in the other.

Feature Description

Since questions can be answered differently by the referring doctor and the patient, a new read-only `Portal Question Recent Answer` column has been added to the Digital Form Editor that prioritizes the patient response - it will always display the Patient Portal response if one exists, otherwise it will use the Provider Portal response.

THE SAME QUESTION MAPPED TO THREE SOURCES.

Configuration Instructions

No System Administrator actions are necessary to enable this feature.
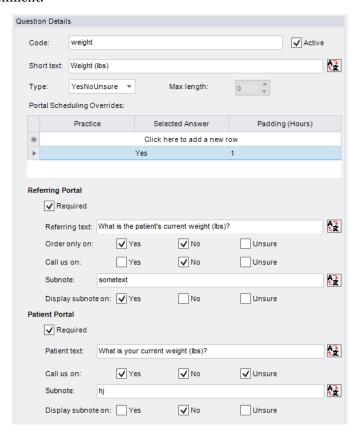

System Config

Feature #31704, 33953 – Additional granularity options for Question Details by Portal type

Summary

This enhancement to System Config adds additional options to the `Question Details` and allows for separation of configuration between Portals.

Feature #31704 – Additional granularity options for Question Details by Portal type

With this change, new sections have been created for each portal within the `Procedure Picker` » `Edit Questions` dialog. This provides the ability to independently update questions with respect to the desired portal environment.

Feature #33953 – Additional Granularity to Question Details by Portal Type (Using in Portal Side)

Previously, questions used on the Referring and Patient portals shared the same "question details" section, meaning there was no way to independently configure question details on both Portals.

With this change, there are new options:

- Both the new `Referring Portal` and `Patient Portal` sections can be noted as `Required`,
- Both the `Call us on:` and `Display subnote on:` questions now have been updated from a `Yes/No` radiobuttons to the checkbox states of `Yes`, `No`, and `Unsure` (which allows combinations such as `Yes/Unsure`).
- A `Subnote:` phrase can be displayed on checkbox states of `Yes`, `No`, and `Unsure`.

- A new `Order only on:` option for the Referring Portal limits the ability to schedule. Note that orders created due to the `Order only on:` question will be promoted with the `Call the Call Center` prompt in the Patient Portal.

Configuration Instructions

No System Administrator actions are necessary to enable this feature.
