# 6. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.40.17776.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   Restart each service.

# 1. New Features

## PACS Integration Update

At times it is possible that the eRAD RIS application will see a delay in the Reporting window when PACS is waiting for the "close session" reply. To mitigate this delay we have introduced a new ris.exe.config application setting "ShouldCloseViewSessionOnThread". The default value is false, meaning the close session happens on the main application thread and we pause for reply, so the reporting window will see a delay loading next. When set to true it closes on a background task and the reporting window will not see the delay. The next study will load in dictate window, although the PACS may still be loading images.

A new ris.exe.config entry has been created with a default value of false.

```
<add key="ShouldCloseViewSessionOnThread" value="false"/>
```

**NOTE:** With a value of false, the behaviour will be unchanged compared to previous versions.

In the ris.exe.config file, this new key is to be added to the <appSettings> section.

Before:

```
<appSettings>
   <add key="defaultEndPointName" value="NetTcpBinding_IStudyService" />
   <add key="ClientSettingsProvider.ServiceUri" value="" />
   <!--<add key="RowLevelCacheDataSetNamesCSV" value="*"/> -->
 </appSettings>
```

After:

```
<appSettings>
   <add key="defaultEndPointName" value="NetTcpBinding_IStudyService" />
   <add key="ClientSettingsProvider.ServiceUri" value="" />
   <add key="LookupTableTimeToLiveInMinutes" value="5"/>
   <add key="ShouldCloseViewSessionOnThread" value="false"/>
   <!--<add key="RowLevelCacheDataSetNamesCSV" value="*"/>-->
  </appSettings>
```

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Reporting – Pending Dictation WL to Omit Studies not Assigned to a Chair

The Pending Dictation WL content has been modified. Now if a study does not have chair assigned, and the study is not assigned to me (Radiologist user) I will not see the study on my work list. If the study is assigned to me, but is not assigned a chair, it will appear on my Pending Dictation WL. If the study is assigned to the chair I am currently accessing, but is not assigned to a user, it will appear on my work list. Finally, if the study is assigned to the chair I am currently accessing, but is assigned to a different user, it will not appear on my work list. The tables below describe this in better detail. The values in red are what has changed for this build.

If I am sitting in Chair1, then:

| **Chair** | **Assigned To** | **Include in My Pending Dictation WL** | | |
|---|---|---|---|---|
| | | <= B40.013 | >= B40.014 | |
| | | | Chair WF Enabled | Chair WF Disabled |
| <*null*> | <*null*> | Yes | **No** | Yes |
| <*null*> | Me | Yes | Yes | Yes |
| <*null*> | NotMe | No | No | No |
| | | | | |
| Chair1 | Me | Yes | Yes | Yes |
| Chair1 | <*null*> | Yes | Yes | Yes |
| Chair1 | NotMe | No | No | No |
| | | | | |
| Chair2 | <*null*> | No | No | **Yes** |
| Chair2 | Me | No | **Yes** | **Yes** |
| Chair2 | NotMe | No | No | No |

If my chair is not set (viewing all chairs), then:

| **Chair** | **Assigned To** | **Include in My Pending Dictation WL** | | |
|---|---|---|---|---|
| | | <= B40.013 | >= B40.014 | |
| | | | Chair WF Enabled | Chair WF Disabled |
| <*null*> | <*null*> | Yes | **No** | Yes |
| <*null*> | Me | Yes | Yes | Yes |
| <*null*> | NotMe | No | No | No |
| | | | | |
| Chair1 | Me | Yes | Yes | Yes |
| Chair1 | <*null*> | Yes | Yes | Yes |
| Chair1 | NotMe | No | No | No |
| | | | | |
| Chair2 | <*null*> | Yes | Yes | Yes |
| Chair2 | Me | Yes | Yes | Yes |
| Chair2 | NotMe | No | No | No |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Hide Report Contents on Suspended Studies

The report template (when modified, this is a customization that is not packaged in the build) will not show the contents of the report for a study that is in suspended status. Looking at the screenshot below, you can see that the report contents are not displayed, but rather a message informing the viewer that the study is suspended. This will also be the case for suspended studies that may be inadvertently sent to print or fax.

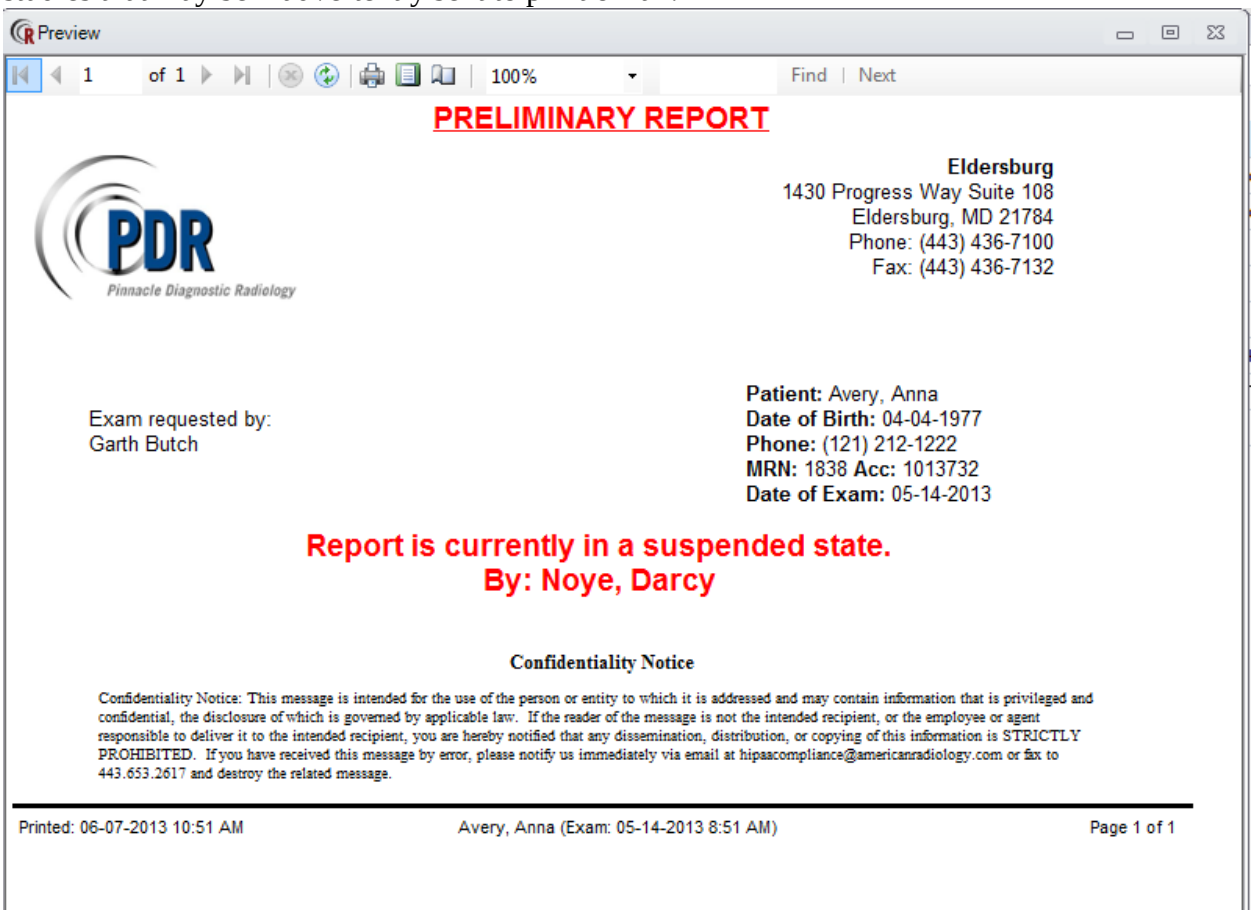

**Figure 1.1 – Preview of report in suspended status**

Also a new Access String "Clinical.PreviewSuspendedReport" has been added to control who has access to preview a report that has been suspended by another user. When a user that does not have this permission tries to preview the report, the option will not be available in the context menu. The data nugget for report will be disabled when the study is in suspended status. Lastly, like the Preview Report context menu option, Send To will not be available, thus removing the option for these users the ability to send the report to Document Distribution.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 2. New Configuration settings and Changes

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| AccessString lookup<br><br>UserGroupPermission lookup | Clinical.PreviewSuspendedReport | None | Controls access to previewing reports that were suspended by another user |
| Ris.exe.config | Before:<br><appSettings><br><add key="defaultEndPointName" value="NetTcpBinding_IStudyService" /><br><add key="ClientSettingsProvider.ServiceUri" value="" /><br><!--<add key="RowLevelCacheDataSetNamesCSV" value="*"/> --><br></appSettings><br><br>After:<br><appSettings><br><add key="defaultEndPointName" value="NetTcpBinding_IStudyService" /><br><add key="ClientSettingsProvider.ServiceUri" value="" /><br><add key="LookupTableTimeToLiveInMinutes" value="5"/><br><add key="ShouldCloseViewSessionOnThread" value="false"/><br><!--<add key="RowLevelCacheDataSetNamesCSV" value="*"/>--><br></appSettings> </appSettings> | False | |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 3. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 4019 | Patient search error on patient who had multiple merges | Urgent |
| 4091 | (Stale cache issue) Can't open scan doc nugget if you have no prefence set... | Urgent |
| 3989 | Reporting - Error on submit and next | Urgent |
| 3919 | RadNet - Prevent users from distributing "SUSPENDED CASES" | Urgent |
| 4040 | RadNet - Chair - Don't show null chairs in pending dictation worklist | High |
| 3513 | DB showing expensive query on retrieve image of doctors signature for diagnostic report | High |
| 3518 | Procedure Plans may not appear correctly on IVT work list | High |
| 4080 | logging of failures to obtain a lock | Normal |
| 4075 | PACS integration can pause main application thread while waiting for a close session reply | Normal |
| 4069 | Memory Leak specific to Reporting and Break Lock | Normal |
| 4064 | YellowSticker XML notes sometimes fail and don't properly handle the error | Normal |
| 4059 | Reporting - Writing Yellow Sticker not writing exception | Normal |
| 4056 | Reporting - Activate/Deactivate errors. | Normal |
| 4050 | Reporting - Invoke begininvoke cannot be called... | Normal |
| 4032 | Scanning - Canon Flatbed scanners are locking up RIS | Normal |
| 4024 | Reporting - Reduce # of WS Calls | Normal |
| 3979 | Performance - recently accessed patients should only be saved on app exit | Normal |

## 4. Package Contents

Files included for this server update:

1) GUI ZIP Updates folder contains
   a) rRIS_1.3.40.18063.zip

2) RIS Service Updates folder contains
   a) CDSJobManager.dll
   b) CDSJobManager.pdb
   c) CommonLib.dll
   d) CommonLib.pdb
   e) DDEngine.dll
   f) DDEngine.pdb
   g) rRISServices.exe
   h) rRISServices.pdb
   i) rRISServicesx64.exe
   j) ScheduledTaskManager.dll
   k) ScheduledTaskManager.pdb
   l) SignatureApprovalService.exe
   m) SignatureApprovalService.pdb
   n) WCFService.dll
   o) WCFService.pdb
   p) WebApi.dll
   q) WebApi.pdb
   r) Wedge.exe
   s) Wedge.pdb

3) SQL folder contains:
   a) B40_014.sql

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 5. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

## 6. Who is affected

Build 40 installs. This server update must be applied directly to the build 40 core install. Server updates are not cumulative. Any previous server updates must be applied before this one.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# 8. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.40.18063.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

   **NOTE:** there is a change to the ris.exe.config file.

   See Sections
   1 New Features - Configurable dataset retrieval interval and
   2 New Configuration settings and Changes

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   Restart each service.

3) Run the B40_014.sql file against the eRAD RIS database instance.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# 6. Installing

1) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   Restart each service.

# 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.40.18127 (3GB).zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   Restart each service.

3) Run the B40_015.sql file against the eRAD RIS database instance.

## 3. Package Contents

Files included for this server update:

1) GUI ZIP Updates folder contains
   a) rRIS_1.3.40.18585 (3GB).zip

2) RIS Service Updates folder contains
   1. CDSJobManager.dll
   2. CDSJobManager.pdb
   3. CommonLib.dll
   4. CommonLib.pdb
   5. DDEngine.dll
   6. DDEngine.pdb
   7. rRISServices.exe
   8. rRISServices.pdb
   9. rRISServicesx64.exe
   10. ScheduledTaskManager.dll
   11. ScheduledTaskManager.pdb
   12. SignatureApprovalService.exe
   13. SignatureApprovalService.pdb
   14. WCFService.dll
   15. WCFService.pdb
   16. WebApi.dll
   17. WebApi.pdb
   18. Wedge.exe
   19. Wedge.pdb

3) SQL folder contains:
   a) B40_016.sql

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 4. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

## 5. Who is affected

Build 40 installs. This server update must be applied directly to the build 40 core install. Server updates are not cumulative. Any previous server updates must be applied before this one.

## 6. eRAD RIS Release Version Numbers

## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.40.18585.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   Restart each service.

3) Run the B40_016.sql file against the eRAD RIS database instance.

## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.40.18705.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

# 1. New Features

## Optimize field navigation

We have a concept of FFF (Form Filling Fields) and regular commands. Until now FFF were using the default M*Modal optimized field navigation. This is believed to be the cause of the second form of jumping. M*Modal is working on a solution but it will take some time before completion.
We have implemented a new user preference setting titled "Aggressive field navigation" that will turn off FFF navigation when unselected. The result will be less aggressive field navigation but it should result in less jumping. To accomplish this we had to create our own voice commands for each field in a similar manner as our macros and other RadNet commands.
To summerize:

- Added new method to ReportTemplateEditor.cs called CreateVoiceCommandsForFields
- Added the call to load the field commands in ReportingRadiologist activate method and to unload the commands in the unloadshortcuts method
- Had to move GetCurrentReportFields methods back to build 40.017 so I could use them to get field data
- Place a check in the CreateVoiceCommandsForFields method to look at the newly created user preference. If on, it will behave as it did before otherwise use our own RadNet commands to navigate.
- Overloaded the NavigateToField method to include by cue or by title
- Handled the new voice commands in ReportingRadiologist to raise the proper navigate to field

The new user preference "Aggressive field navigation" can be found in the Interactive Dictation section on the Reporting tab of the User Preferences window.

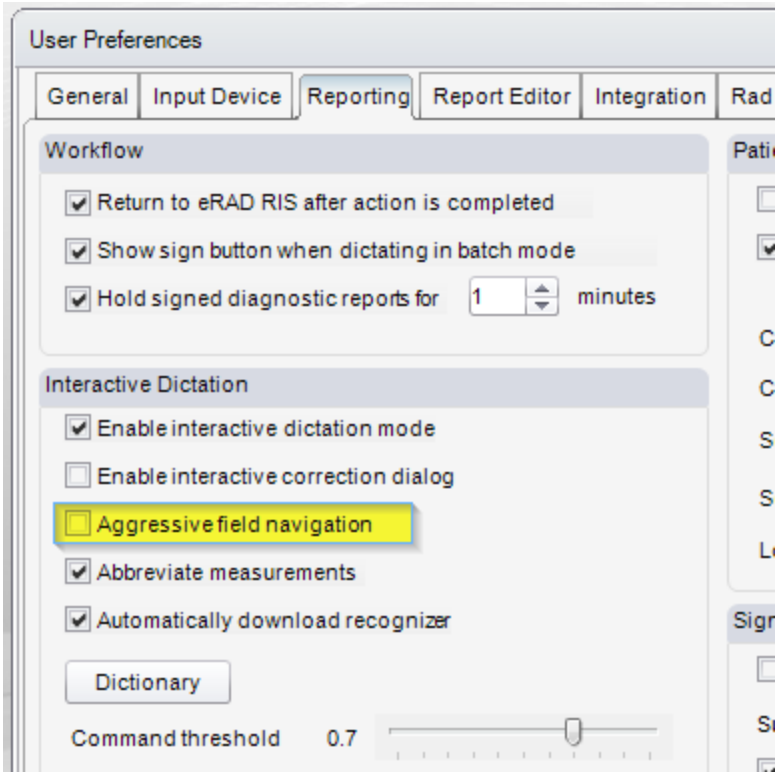

**Figure 1.1 – New user preference "Aggressive field navigation"**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Locking section titles enhanced

In a previous build the user preference Protect section headers was added to lock the section title and header area to be locked so it could not be deleted or altered. Also within the reporting window a new button was added to toggle this feature on and off when needed. While this feature did not protect the section title completely it did add to the section title from being removed.

In this patch release the section title will also be protected when using interactive dictation. Users were finding the section title could be selected and altered via dictation. For instance, a range of text is completely selected that resided directly above or below a section title, empty spaces may be also selected which may include the start or beginning of the section title. When the user dictated to overwrite the selected text, it would inadvertently remove the section title as well. This has been improved, but is not perfect yet. We have discovered that inserting a macro over the selected text, or if the section title is completely selected, it can overwrite the section title. We have logged an additional bug for this issue.

## New M*Modal Recoginizer File

A new recognizer file has been supplied with this patch release. The new version is v13_v5_351.12341.

**Figure 1.2 – New M*Modal Recognizer file**

This file can be replaced manually or via the use of the User Preference on the Reporting tab titled "Automatically download recognizer" and at next login, the newest will be downloaded from M*Modal. If this **option** is selected, the user **must be aware** that the Recognizer could change at each login.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Reporting – Microphone wizard changes

Accessing the microphone wizard has seen some changes in this patch release. First, you will no longer find the wizard in the user preferences section. It will only be accessible from the Reporting windows such as Dictate, or Sign Reports on the editor toolbar.
Secondly, there are now 2 icons for the SpeechMike wizard.

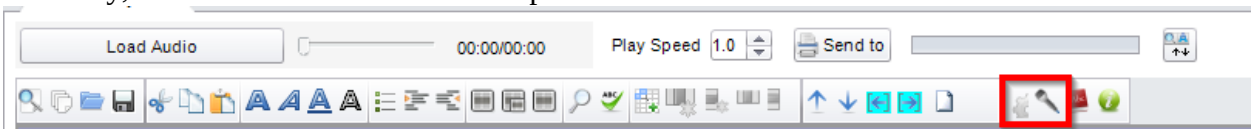

**Figure 1.3 – New icons for speechmike**

The first one is to select Microphone Setting. This window will show you recording devices attached and capturing sound. For instance in testing I was getting poor recognition and this window helped me determine that the internal mic on my laptop was also capturing speech.

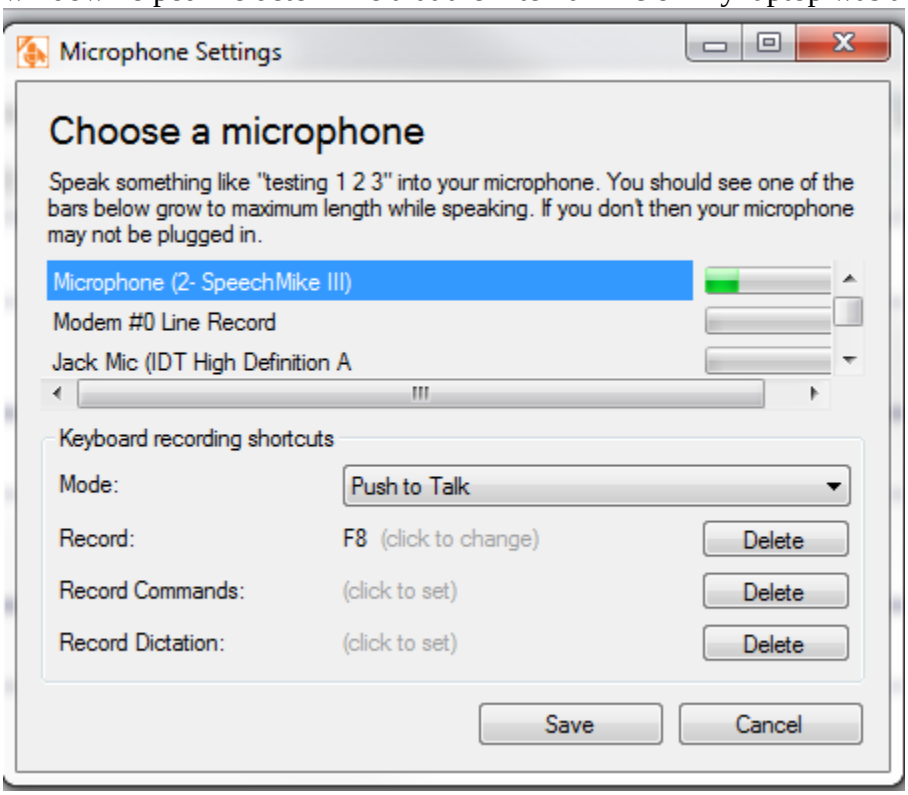

**Figure 1.4 – Microphone setting window**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

The second icon will open the Microphone Calibration window. This simple window will allow the user adjust the microphone by reading the text supplied within the window.

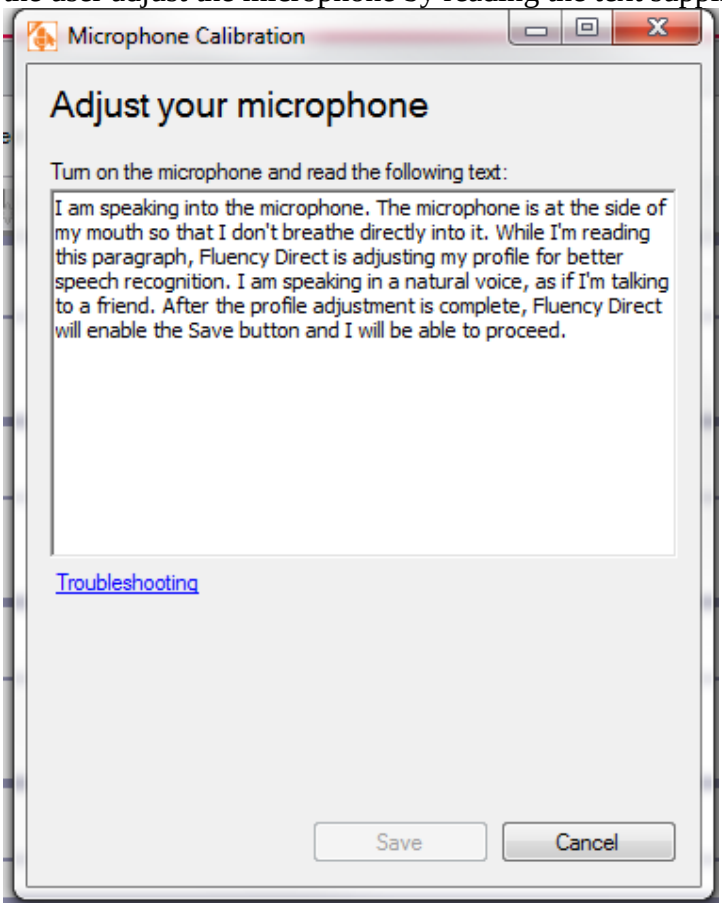

**Figure 1.5 – Microphone calibration window**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

Selecting the Troubleshooting link will give the user 2 options. After reading the text, you can play back what the system has picked up in the last 5 seconds. The second play button will play a prerecorded to verify the sound is being played back.

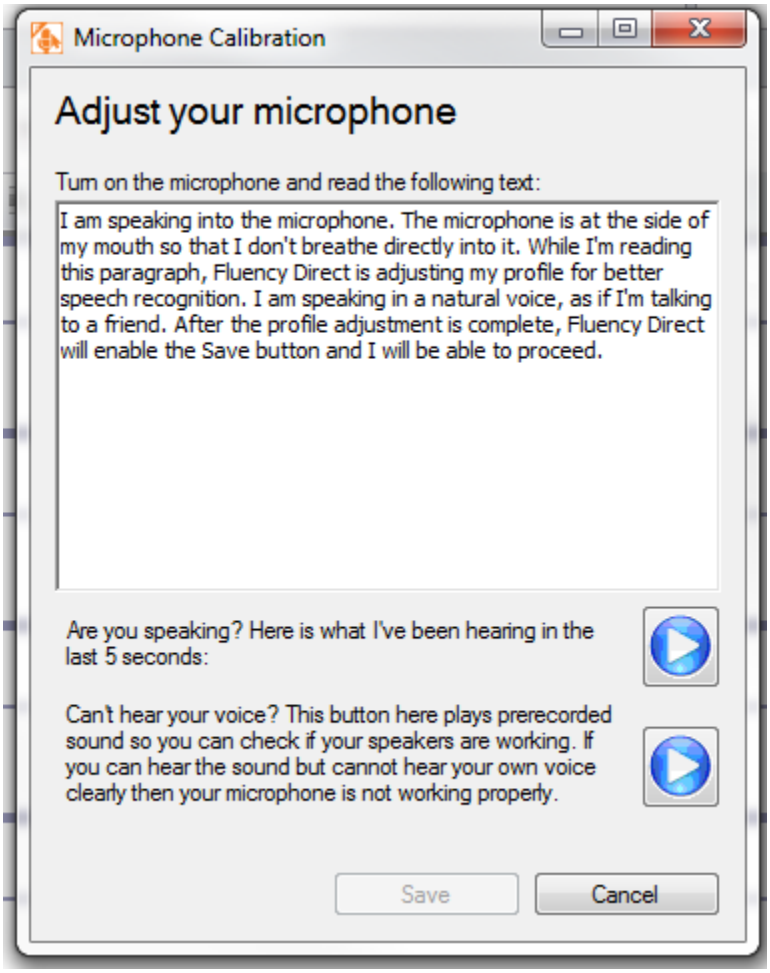

**Figure 1.6 – Troubleshooting options**

NOTE: for Build 40.017, the prerecorded message was not supplied. A message can be recorded and inserted into the appropriate directory with the file name gainWizardTroubleShooting.wav.

Selecting the Play ICON for "Can't hear your voice"… will inform the user that the file was not found and display the directory in which the .wav file should reside.

## 2. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 4485 | CD Import - Fails with error unable to insert duplicate | Urgent |
| 4476 | CD Import - Crashes when the Date of Service on the CD is less than equal to the year 1753-01-01 | Urgent |
| 4493 | Error when testing 40.17 - Transcription Reort Drafted WL (Create Edit report) | HIgh |
| 4478 | Patient folder navigation | High |
| 4427 | Reporting - implement new M*Modal libraries and functionality 7.82 suite (Feature) | Normal |
| 4293 | Inappropriate activation of verbal cued field | Normal |
| 4226 | Reporting - Need microphone icon | Normal |
| 3734 | Reporting - protect section headers not working with interactive | Normal |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 3. Package Contents

Files included for this server update:

1) GUI ZIP Updates folder contains
   a) rRIS_1.3.40.18780 (3GB).zip

2) Installer Updates folder contains 1 subfolder called _setup. This subfolder contains
   a) rRISSetup.msi
   b) setup.exe

3) RIS Service Updates folder contains the following files and 1 subfolder titled XSL
   1. CDSJobManager.dll
   2. CDSJobManager.pdb
   3. CdsLib.dll
   4. CdsLib.XmlSerializers.dll
   5. CdsLIb.xml
   6. CommonLib.dll
   7. CommonLib.pdb
   8. DDEngine.dll
   9. DDEngine.pdb
   10. rRISServices.exe
   11. rRISServices.pdb
   12. rRISServicesx64.exe
   13. ScheduledTaskManager.dll
   14. ScheduledTaskManager.pdb
   15. SignatureApprovalService.exe
   16. SignatureApprovalService.pdb
   17. WCFService.dll
   18. WCFService.pdb
   19. WebApi.dll
   20. WebApi.pdb
   21. Wedge.exe
   22. Wedge.pdb
   23. Tourreau.Gilles.FaxDotNet.xml
   24. XSL subfolder contains a stylesheets subfolder which contains
       a. CDAToHTMLCompleteReport.xslt
       b. CDAToHTMLImpressionSection.xslt
       c. CDATorRIS.xslt
       d. CDAToTxt.xslt
       e. DocumentModelReport.xslt
       f. DocumentModelReportAsXml.xslt

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 4. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

## 5. Who is affected

Build 40 installs. This server update must be applied directly to the build 40 core install. Server updates are not cumulative. Any previous server updates must be applied before this one.

## 6. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|
| 37 | - | 1.2.37.12843 | 1.2.37.12782 | 1.2.37.12843 | 1.2.37.12843 | Full version release |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.40.18780.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

2) Copy the _setup folder and its contents and replace the _setup folder and its contents. The _setup folder is located in the RISDeployment \Core folder.

   **NOTE:** Core install is required for radiologist users to register the new M*Modal .dll files provided with this build. Other users are not required to run the core install, but may do so if they wish to.

3) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   Restart each service.

# 1. New Features

## Optimize field navigation

In build 40.017 we introduced a change to the mic wizazrd. The selection of the recording device and Speechmike calibration. Missing in the GUI was the ability to select a playback device. (This can be accomplished in the windows control panel > sound option.) In build 18 we have replaced the Microphone Settings window, with the Recording and Playback Settings window displayed in Figure 1.1.

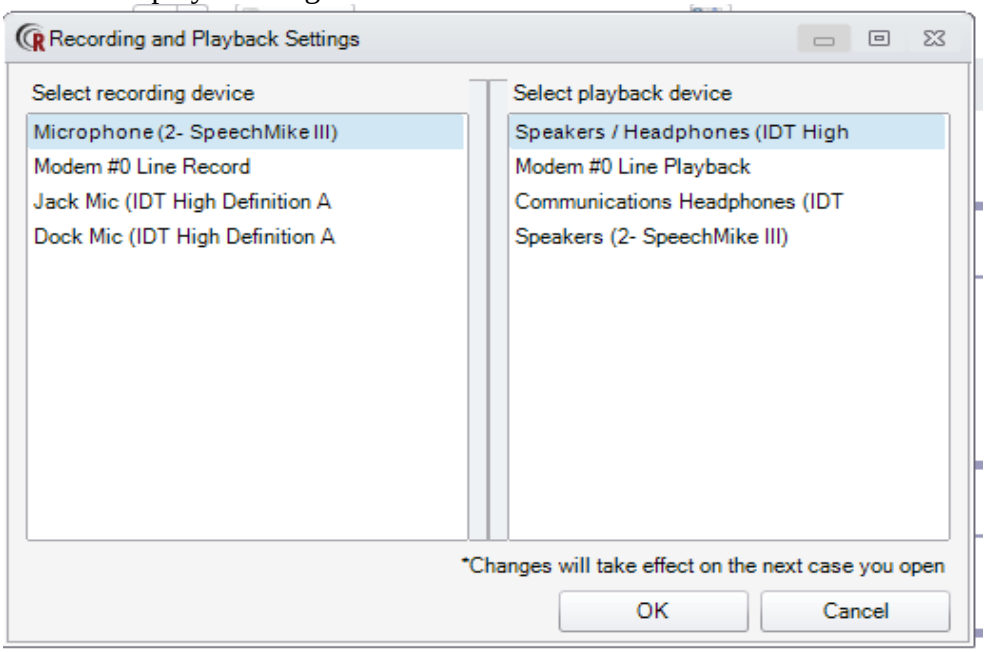

**Figure 1.1 – Recording and Playback Settings**

This window is accessed from within the Reporting window and selecting the Recording and playback settings option on the toolbar.

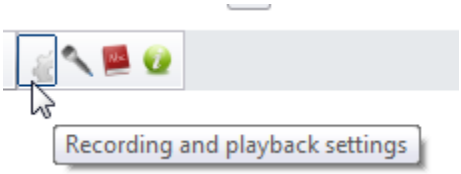

**Figure 1.2 – Recording and Playback Settings toolbar button**

In this window the recording and playback devices can be selected. As noted in the Recording and Playback Settings window the changes will take affect

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Recognizer deployment

In previous builds the MModal Recognizer file was included with the install process. This has been removed from the install process.

This file can be replaced manually or via the use of the User Preference on the Reporting tab titled "Automatically download recognizer" and at next login, the newest will be downloaded from M*Modal. If this **option** is selected, the user **must be aware** that the Recognizer could change at each login.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 4564 | Batch users lost ability to run microphone wizard to set gain on the microphone | High |
| 4710 | Reporting - inserting a template or macro with interactive timestamps will cause playback corruption and confusion | Urgent |
| 4715 | Portions of reports are not showing in distributed report | Immediate |
| 4717 | Sections from incorrect practice loading into template editor | High |
| 4563 | Inability to change playback device for rads. | High |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 3. Package Contents

Files included for this server update:

1) GUI ZIP Updates folder contains
   a) rRIS_1.3.40.19253 (3GB).zip

2) RIS Service Updates folder contains the following files and 1 subfolder titled XSL. The XSL folder also contains 1 subfolder titled Stylesheets. The following files are contained in the Stylesheets folder
   a) CDAToHTMLCompleteReport.xslt
   b) CDAToHTMLImpressionSection.xslt
   c) CDATorRIS.xslt
   d) CDAToTxt.xslt
   e) DocumentModelReport.xslt
   f) DocumentModelReportAsXml.xslt

3) SQL folder contains:
   a) B40_018.sql

## 4. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

## 5. Who is affected

Build 40 installs. This server update must be applied directly to the build 40 core install. Server updates are not cumulative. Any previous server updates must be applied before this one.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.40.19253.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   Restart each service.

3) Run the B40_018.sql file against the eRAD RIS database instance.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# Server Update

## For eRAD RIS
## Version 1.0
## Build 40
## Update 40.019

Due to a few bugs discovered this software release will not be available for installation. The bugs fixes and new features listed in this document will be available in 40.020

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# Table of Contents

1. New Features ..... 3

# 1. New Features

### Reporting - Limit or convert special characters in cue names, macros and templates

Conversion of special characters in cue names, macros and templates.
In a template if you have a field with a value in the cue like this "Technique :"
When you save the template and reopen it, the : is converted as follows "Technique %colon%".

This feature does the following, while dictating an exam and you say the words Technique colon, your cursor will be brought to the field that has a value of "Technique %colon%" in the cue.

NOTE: The user preference "Aggressive field navigation" must be checked for this feature to work, after checking this preference, a restart of RIS is required.

### Reporting - Ability to map "delete last word" to input devices

Mappings were added to delete last word functionality with keyboard, foot pedal and speechmike buttons.
This is User Preference > Input Device > SpeechMike Button Actions > DeleteWordLeftOfCursor

Known limitation: At some point we were able to delete last word multiple times, then redo each word individually. But if the input devices are set up to perform these actions, the Undo and Redo does nothing after executing this action.

### Reporting - Ability to map "Redo" and "Undo" to input devices

Mappings were added for Redo and Undo functionality with keyboard, foot pedal and speechmike buttons.
This is User Preference > Input Device > SpeechMike Button Actions > Redo or Undo

### Reporting - Radiologist edit text color

Added the ability to see what text was typed into the report by a radiologist. A new user preference was added to the editor appearance settings in Dictation window "Radiologist Typed Text". The editor will use the selected color.

### Reporting - field tooltips staying on top of other screens after displaying

When you hover the mouse over a field it will display the tooltip popup, this is great. Now when you alt+tab, so that another application comes up on top of the report editor, you will notice the tooltip popup is still there.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

A new user preference was added "Show report field tooltips", which will disable the tooltip feature.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 4857 | Wrong document model is loading in template editor | Urgent |
| 4952 | Reporting - ability to navigate cued fields without pausing | High |
| 4798 | Reporting - 7.82+ Numbering paragraphs creates an unwanted list | High |
| 4740 | Reporting - playback is not in order of dictated | High |
| 4717 | Sections from incorrect practice loading into template editor | High |
| 3767 | Using next field button while dictating (Fisher site visit) | High |
| 1441 | Interactive VR - Voice Commands not recognized efficiently | High |
| 5148 | Reporting - speech mics 3500 and 3600 showing incorrectly in Help>About | Normal |
| 5048 | Reporting - New recognizer for 7.88 | Normal |
| 4975 | Next field voice command, showing field popup for one field too far | Normal |
| 4961 | Reporting - improper capitalization of measurements outside of a field | Normal |
| 4960 | Reporting - structured lists splitting when dictating next item in the middle of an existing item | Normal |
| 4959 | Reporting - ability to dictate 'next item' without pausing | Normal |
| 4958 | Reporting - integrate M*Modal 7.88 release into 40.019 code stream. | Normal |
| 4957 | Reporting - negative two views rendering | Normal |
| 4954 | Reporting - ability to dictate negative or minus numbers | Normal |
| 4732 | Reporting - AudioReplacementEnabled on causes "undo that" to malfunction | Normal |
| 3838 | Improve performance of "next field" (CRA site visit) | Normal |
| 3072 | Reporting - Not a field exception causing application hang | Normal |
| 2981 | M*Modal - select command will not select first or last word in a field | Normal |
| 2520 | Reporting - interactive number lists are not consistent | Normal |
| 3840 | Unable to dictate "+" into a report (CRA site visit) | Low |

## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.40.19909.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   Restart each service.

3) Copy the Recognizer files to your local machine to the following folder.
   Note: this could be a hidden folder.
   C:\ProgramData\RadNet\Recognizer\2.16.840.1.113883.3.21\

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# Server Update

For eRAD RIS
Version 1.0
Build 40
Update 40.020

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# 1. New Features

## Reporting - Limit or convert special characters in cue names, macros and templates

Conversion of special characters in cue names, macros and templates.
In a template if you have a field with a value in the cue like this "Technique :"
When you save the template and reopen it, the : is converted as follows "Technique %colon%".

This feature does the following, while dictating an exam and you say the words Technique colon, your cursor will be brought to the field that has a value of "Technique %colon%" in the cue.

NOTE: The user preference "Aggressive field navigation" must be checked for this feature to work, after checking this preference, a restart of RIS is required.

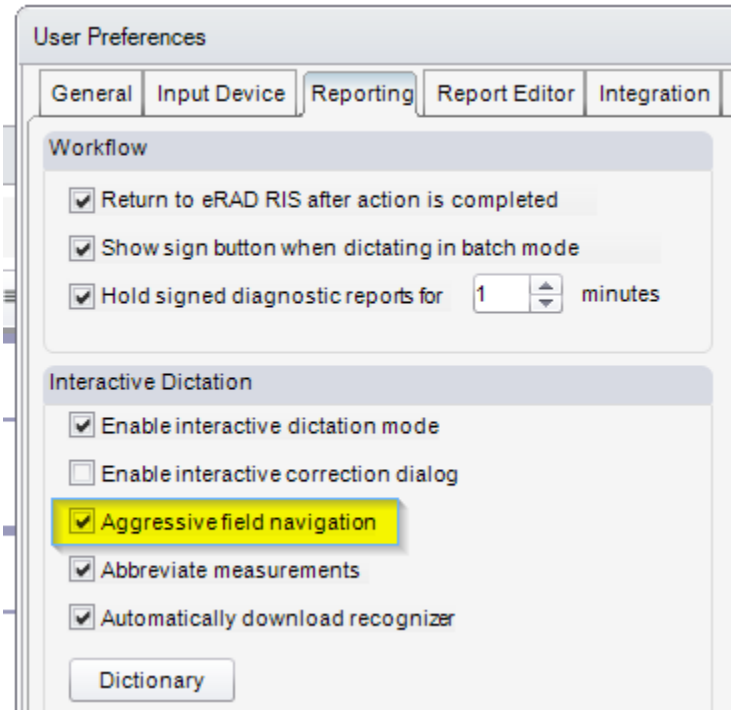

**Figure 1.1 – User preference "Aggressive field navigation"**

NOTE: the user preference "Aggressive field navigation" will need to be selected for "No Wait Navigate". We had issues in the past when dictating in Field 1 and before the text was inserted the command for next field was issued. The text that had not yet been inserted in Field 1 would appear in Field 2. This has been addressed, but as mentioned above the Aggressive field navigation user preference needs to be enabled.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Reporting - Ability to map "delete last word" to input devices

This new feature titled "DeleteWordLeftOfCursor" can be mapped as SpeechMike button, keyboard left/right arrow key, Foot Pedal button and also implemented as an xKeys command manually using the preexisting xKeys set up.

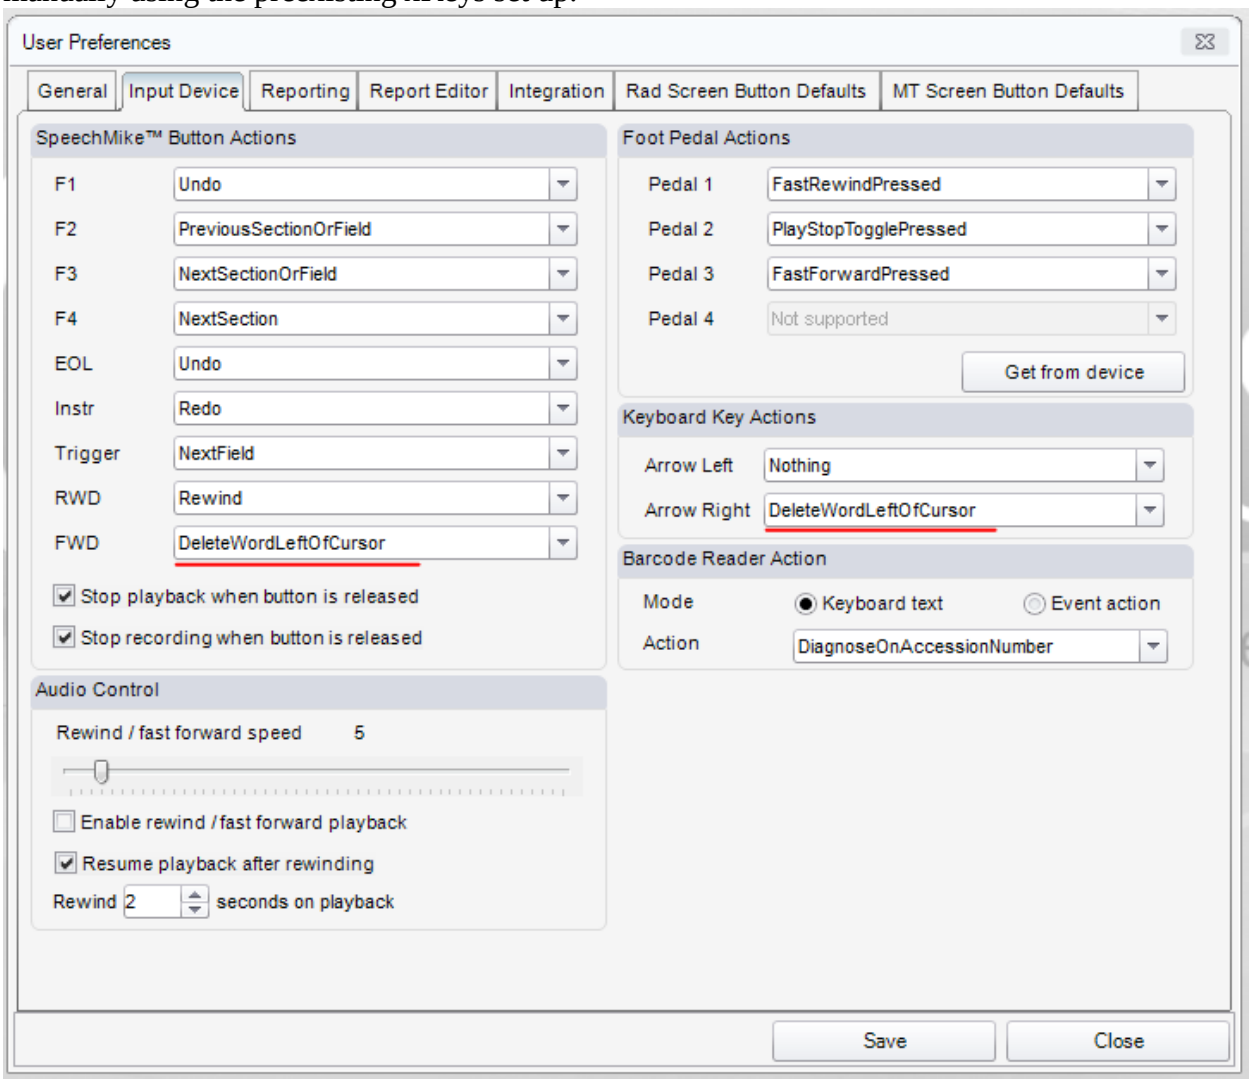

**Figure 1.2 - DeleteWordLeftOfCursor function in user preferences**

Support has been added for itemized lists. If you reach the end of a list item while deleting the last word, the empty item will be removed and the cursor will go to the end of the previous item.

Known limitation: At some point we were able to delete last word multiple times, then redo each word individually. But if the input devices are set up to perform these actions, the Undo and Redo does nothing after executing this action.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Reporting - Ability to map "Redo" and "Undo" to input devices

We have added two new SpeechMike function key options that can be assigned. The options of Undo and Redo have been added. These new options can also be made the default action of the keyboards left and right arrow keys.

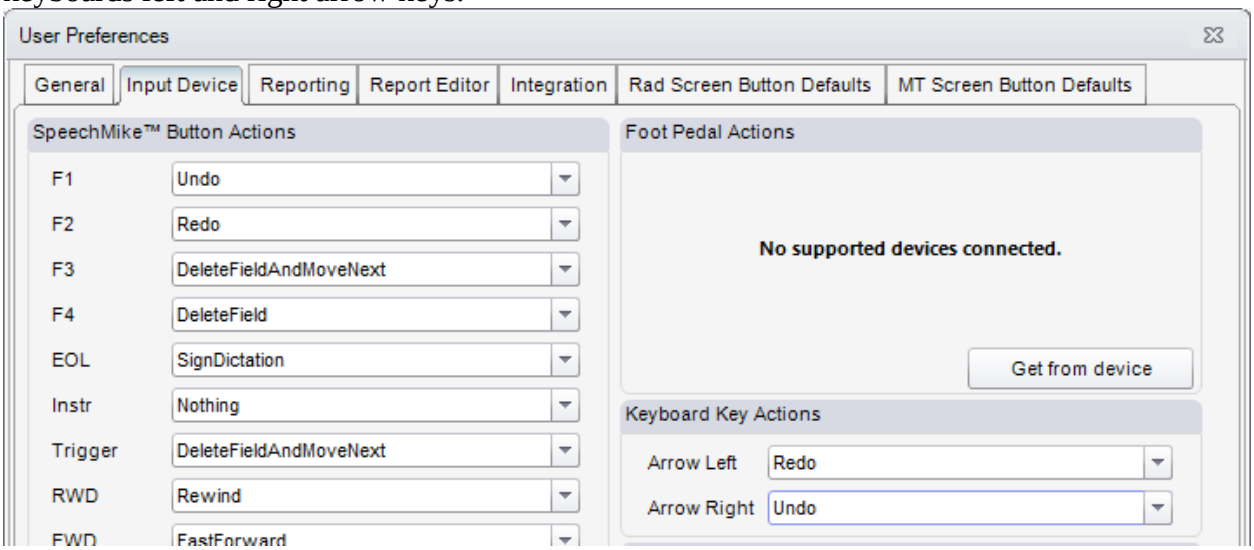

**Figure 1.3 – The Undo and Redo options added for SpeechMike buttons and Keyboard arrow actions**

It should be noted that these options can also be set as default Foot Pedal Actions and also mapped as an xKey command manually using the existing xKeys set up.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Reporting - Radiologist edit text color

Within the reporting window, the user can open the context menu (right click) on the editor. This will present the user with a list of options. Selecting the "Editor Appearance" option will open the "Editor Appearance" window. A new option has been added.

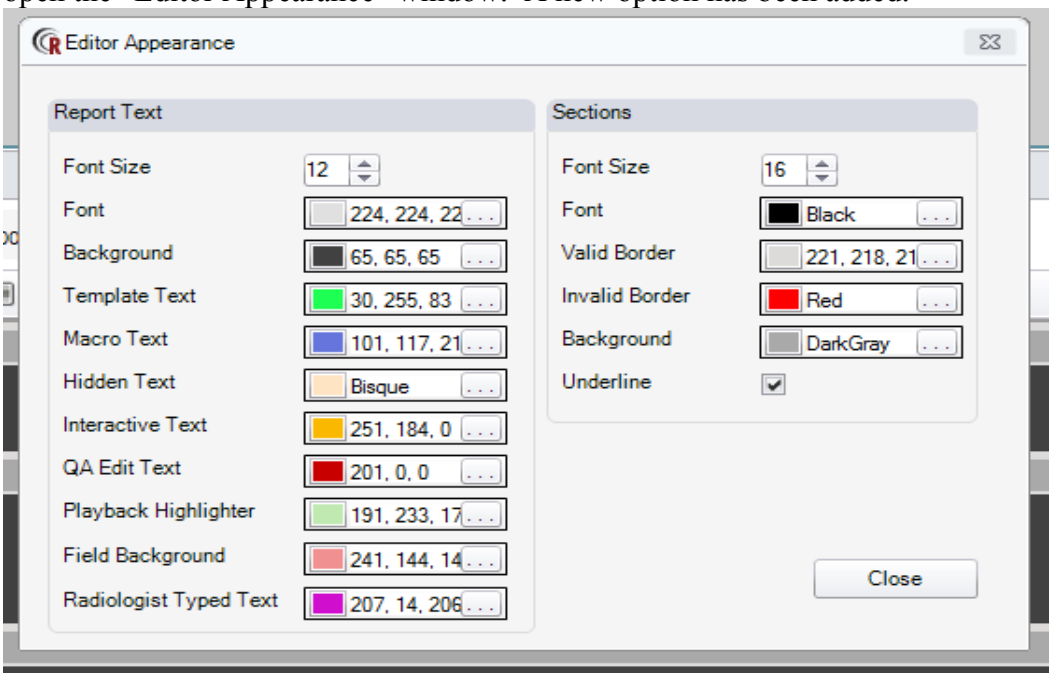

**Figure 1.4 – Editor Appearance window with new Radiologist Typed Text option**

This new option controls the color of the manually entered/edited text by the radiologist

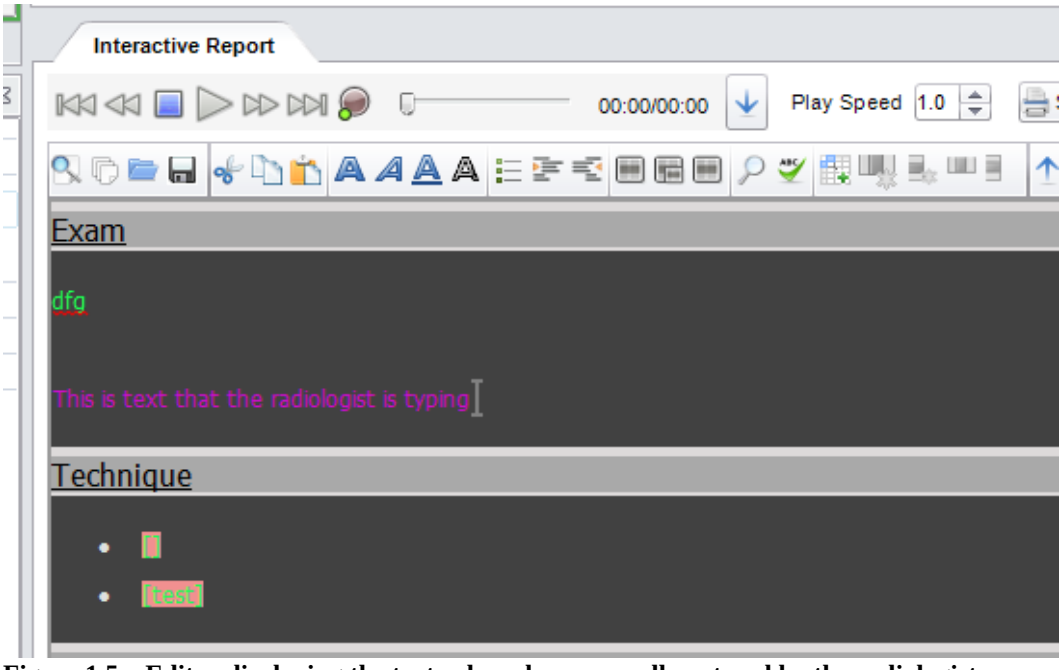

**Figure 1.5 – Editor displaying the text color when manually entered by the radiologist.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Reporting - field tooltips staying on top of other screens after displaying

Templates used in the reporting window can have navigational fields pre-defined in the template. Each of these fields has a name associated with it. If the mouse pointer hovers over a field it will display the field name in a tooltip.

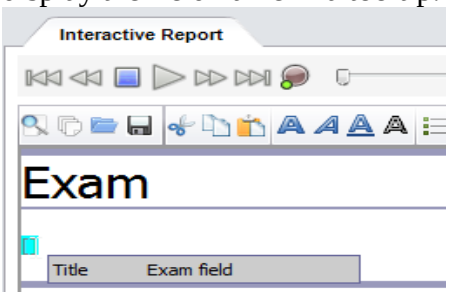

**Figure 1.6 – Reporting field tooltip.**

A new user preference on the Report Editor tab called "Show report field tooltips" will enable/disable the tooltip from displaying.

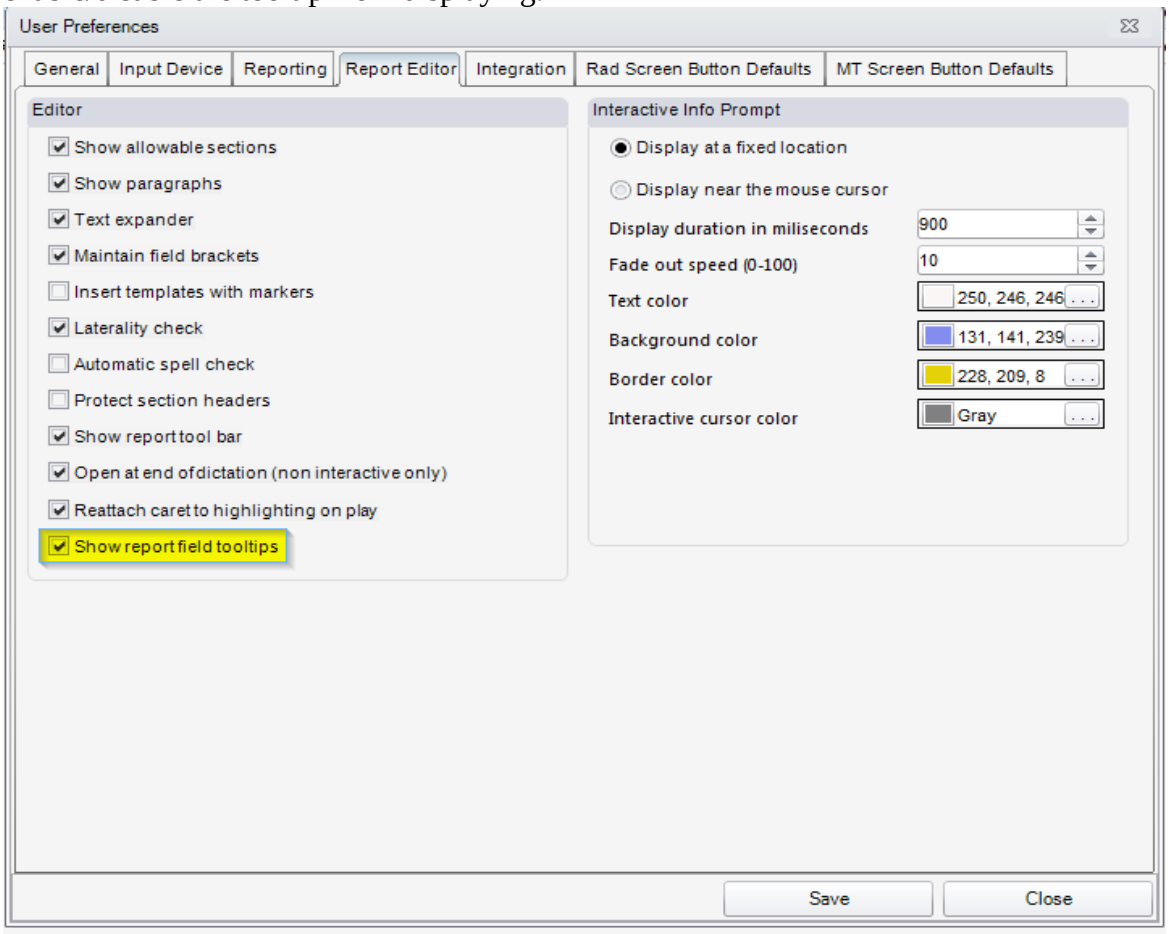

**Figure 1.7 – New User Preference "Show report field tooltips"**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 4857 | Wrong document model is loading in template editor | Urgent |
| 4952 | Reporting - ability to navigate cued fields without pausing | High |
| 4798 | Reporting - 7.82+ Numbering paragraphs creates an unwanted list | High |
| 4740 | Reporting - playback is not in order of dictated | High |
| 4717 | Sections from incorrect practice loading into template editor | High |
| 3767 | Using next field button while dictating (Fisher site visit) | High |
| 1441 | Interactive VR - Voice Commands not recognized efficiently | High |
| 5148 | Reporting - speech mics 3500 and 3600 showing incorrectly in Help>About | Normal |
| 5048 | Reporting - New recognizer for 7.88 | Normal |
| 4975 | Next field voice command, showing field popup for one field too far | Normal |
| 4961 | Reporting - improper capitalization of measurements outside of a field | Normal |
| 4960 | Reporting - structured lists splitting when dictating next item in the middle of an existing item | Normal |
| 4959 | Reporting - ability to dictate 'next item' without pausing | Normal |
| 4958 | Reporting - integrate M*Modal 7.88 release into 40.019 code stream. | Normal |
| 4957 | Reporting - negative two views rendering | Normal |
| 4954 | Reporting - ability to dictate negative or minus numbers | Normal |
| 4732 | Reporting - AudioReplacementEnabled on causes "undo that" to malfunction | Normal |
| 3838 | Improve performance of "next field" (CRA site visit) | Normal |
| 3072 | Reporting - Not a field exception causing application hang | Normal |
| 2981 | M*Modal - select command will not select first or last word in a field | Normal |
| 2520 | Reporting - interactive number lists are not consistent | Normal |
| 3840 | Unable to dictate "+" into a report (CRA site visit) | Low |

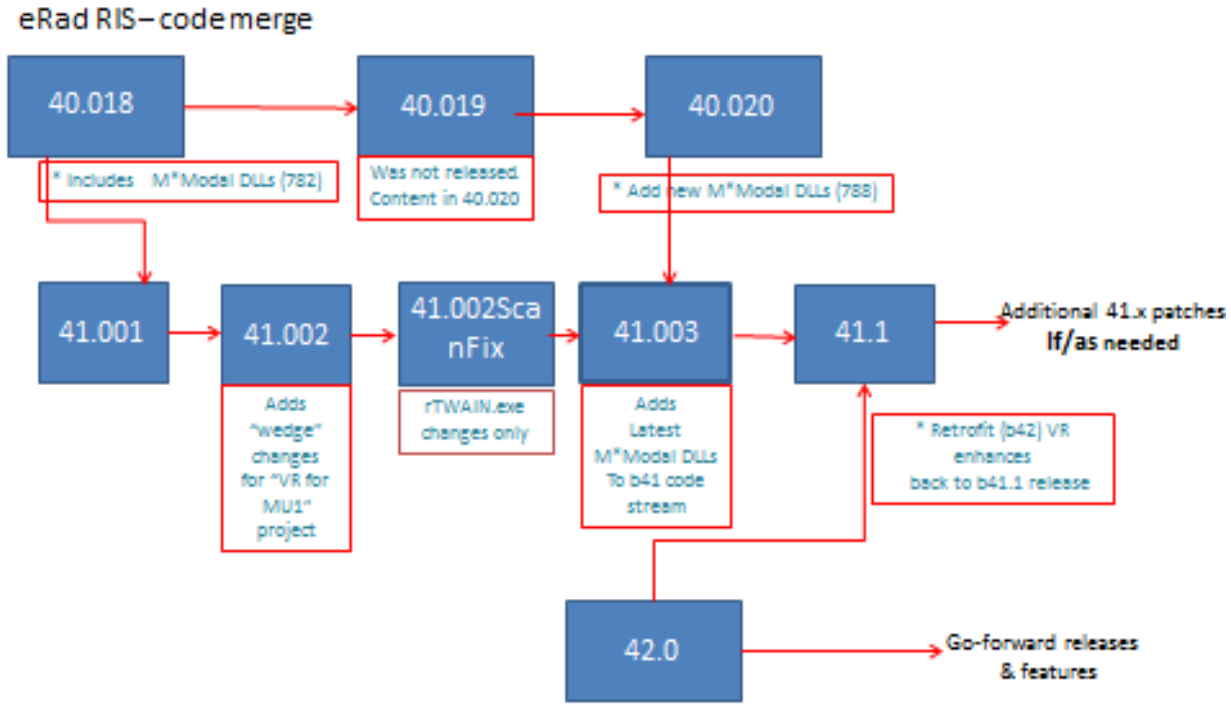
## 3. Code Stream



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 4. Package Contents

Files included for this server update:

1) GUI ZIP Updates folder contains
   a) rRIS_1.3.40.20086(3GB).zip

2) RIS Service Updates folder contains the following files.
   a) CDSJobManager.dll
   b) CDSJobManager.pdb
   c) CommonLib.dll
   d) CommonLib.pdb
   e) DDEngine.dll
   f) DDEngine.pdb
   g) rRISServices.exe
   h) rRISServices.pdb
   i) rRISServicesx64.exe
   j) ScheduledTaskManager.dll
   k) ScheduledTaskManager.pdb
   l) SignatureApprovalService.exe
   m) SignatureApprovalService.pdb
   n) WCFService.dll
   o) WCFService.pdb
   p) WebApi.dll
   q) WebApi.pdb
   r) Wedge.exe
   s) Wedge.pdb

3) Recognizer folder contains:
   a) 7~Recognizer.MtiRecognitionUS.Radiology_Interactive_v13_v5_401.12965.xc
   b) 7~Recognizer.MtiRecognitionUS.Radiology_Interactive_v13_v5_401.12965-descriptor.xc

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 5. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

## 6. Who is affected

Build 40 installs. This server update must be applied directly to the build 40 core install. Server updates are not cumulative. Any previous server updates must be applied before this one.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 7. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |

## 8. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.40.20086.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   Restart each service.

3) Copy the Recognizer files to your local machine to the following folder.
   Note: this could be a hidden folder.
   C:\ProgramData\RadNet\Recognizer\2.16.840.1.113883.3.21\

## 9. Known Limitations

Known limitations listed in this document may not have been introduced in 40.020, but have been discovered during testing of 40.020.

| Redmine # | Subject | Info |
|---|---|---|
| 5245 | Reporting - Spine navigational cues are not recognized | My cues were configured as<br>1. C two dash three colon<br>2. C three dash four colon<br>3. C four dash five colon<br><br>I changed them to be<br>1. C two colon<br>2. C three colon<br>3. C four colon<br>The change in cues names worked much better |
| 5248 | Reporting - Edit template from reporting window error | This was only occurring with one of my templates. If this occurs try “refresh configuration”. If that does not work |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

| | | |
|---|---|---|
| | | open the same template in the TemplateMacro editor and save. |
| 5249 | Reporting - Shift Tab in the template editor or reporting editor will return error | |
| 5219 | Reporting - Function key action DeleteWordLeftOfCursor will delete fields and section titles | If you continue to select the function key after the text has been removed it will jump to the section title and can also delete it as well |
| 5220 | Reporting - Interactive Info Prompt can show fields that have been jumped over when using Next Section command | If in a section that has multiple field with default text, issue the command Next Section, the interactive info prompt will display the text from the fields that were skipped. |
| 5254 | Reporting - using the undo feature, the cursor is not following the text that is being removed. | Seems to occur when the "undo" feature is used multiple times concurrently. |

## 1. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
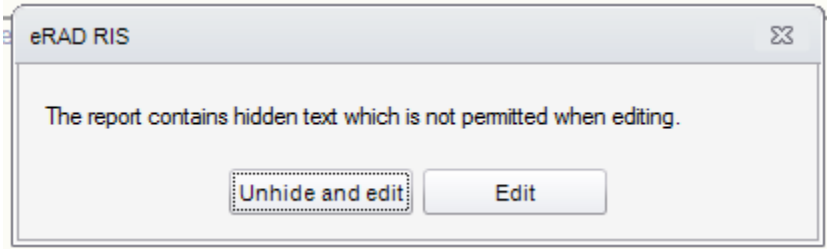
| 6190 | Hidden text in editor counts as text when validating fields and section | High |

The resolved bug listed above resolves an issue in which users had the option to hide text within the reporting window. This option was available to radiologist and transcription users. The workflow for this option has been altered. You can no longer hide text, only unhide. If there is hidden text in a report, transcription users cannot transcribe and radiologist users cannot sign. They will be presented with a message like the one displayed below.

Message presented to transcription



Message presented to radiologist

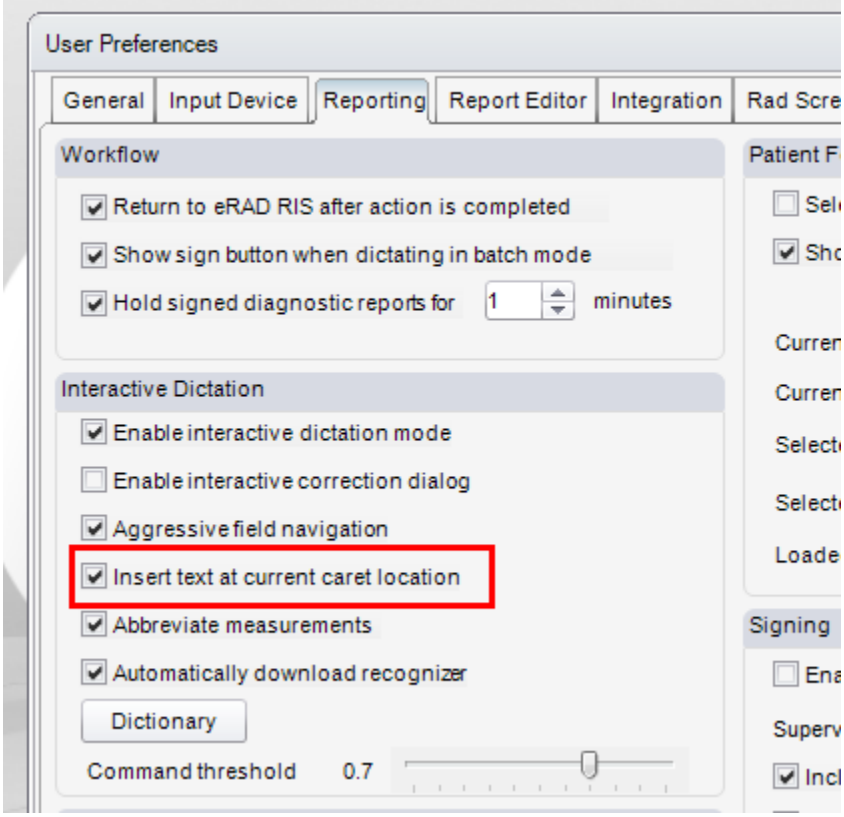
## 1. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 5823 | Hidden text in editor counts as text when validating fields and section | High |

With the above bug a new user preference has been added. The user preference titled "**Insert text at current caret location**" is located on the Reporting tab and is for use only with Interactive Dictation users.



When selected, the dictated text will be inserted where the current cursor position is. Example: User starts dictation and then moves the cursor from point A to point B, the text will be inserted at point B

When un-selected it will put the text in the place where the cursor was when the dictation started. Example: User starts dictation and then moves the cursor from point A to point B, the text will be inserted at point A.

## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.40. 21976.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 40 and subsequent server releases. This version of eRAD RIS is referred to as Build 1.3.41.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.41 is considered a new core release of the application and will require a reinstallation of eRAD RIS. This is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 4. New Access Strings and Configuration Settings

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Access string / User Group Permission tables | Clinical.PersonMerge | None | Controls access to the Personnel Merge window access from the Administration menu. Allows the user to "Suggest" a person merge. |
| Access string / User Group Permission tables | Clinical.PersonMergeAdmin | None | Controls access to the options of Complete or Reject a Person merge. |
| Access string / User Group Permission tables | WL.PersonMergeRequest | None | Provides access to the Personnel Merge WL accessed under the Administration menu. |
| Access string / User Group Permission tables | View.Custom.Layout | None | Controls access to the View menu options of Save as Custom Layout and Delete Custom Layouts… |
| Access string / User Group Permission tables | WL.Rad.CriticalResults | None | Controls access to the All Critical Results work list menu item under the Radiologist Menu |
| Access string / User Group Permission tables | WL.Rad.MyCriticalResults | Full | Controls access to the Critical Results work list menu item under the Radiologist Menu |
| Access string / User Group Permission tables | Clinical.CTRNNotification | None | Controls access to the CTRN button in the reporting window |
| Access string / User Group Permission tables This access string has been removed. | View.Administration<br><br>**OBSOLETE** | n/a | This access string is no longer used and has been removed. The access string view.preset.administration has replaced this one. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| Access string / User Group Permission tables | View.Preset.Administration | None | Access to preset layout administration submenu |
| Access string / User Group Permission tables | View.Preset.Administration.PresetSigning | None | Access to preset layout administration for Signing |
| Access string / User Group Permission tables | View.Preset.Administration.PresetEditing | None | Access to preset layout administration for Editing |
| Access string / User Group Permission tables | View.Preset.Administration.PresetDictationNormal | None | Access to preset layout administration for Dictation Normal |
| Access string / User Group Permission tables | View.Preset.Administration.PresetDictationMinimal | None | Access to preset layout administration for Dictation Minimal |
| Access string / User Group Permission tables | View.Preset.Administration.PresetDictationFull | None | Access to preset layout administration for Dictation Full |
| Access string / User Group Permission tables | UserPreference.Theme.AllowDarkMode | None | Controls if user has the 'enable dark mode' checkbox in user preferences screen |
| Access string / User Group Permission tables | Clinical.UserPreferences.ReportingAutoSave | None | Controls access to the user preference "Enable Autosave Reports" |
| Access string / User Group Permission tables | Clinical.PatientMergeMixer<br><br>**Replaces**<br><br>Clinical.PatientMerge | None | Controls access to the Patient Merge window |
| Access string / User Group Permission tables | DataNugget.Attachments<br><br>**Replaces**<br><br>DataNugget.Documents | None | Controls access to the nugget for attachments |
| Access string / User Group Permission tables | Flag.Allergy<br><br>**Replaces**<br><br>Flag.DrugAllergies | Full | Controls access to see the Allergy flag |
| Access string / User Group Permission tables | WL.Rad.PendingSignature<br><br>**Replaces**<br><br>WL.PendingSignature | None | Controls access to the Pending Signature menu option under the Radiologist menu |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| Access string / User Group Permission tables | WL.Rad.TentativelySigned<br><br>Replaces<br><br>WL.TentativelySigned | None | Controls access to the Signed, Pending Release |
| Access string / User Group Permission tables | MT.ReportDraftedProblem<br><br>Replaces<br><br>MT.ReportDraftedProblemAll | None | Controls access to the 'All Problem' menu option under the Transcription menu |
| The following access strings were added in B41 for work lists, buttons, etc… that existed in previous versions but missing access string to control function/accesss | | | |
| Access string / User Group Permission tables | WL.Rad.PendingEdit | None | Controls access to the Pending Edit menu option from the Radiologist menu |
| Access string / User Group Permission tables | Clinical.Confirmation | None | Controls access to the Confirmation button and context menu option of the Confirmation work list. |
| Access string / User Group Permission tables | Clinical.MarkForAddendum | None | Controls access to the context menu options of Request Addendum and Cancel Addendum Request |
| Access string / User Group Permission tables | Clinical.ChangeSupervisingRadiologist | None | Controls access to the context menu option for Change Supervising Radiologist |
| Access string / User Group Permission tables | Clinical.TemplateEditing | None | Controls access to the Edit Template option in the reporting window\template browser data pane |
| SystemConfig lookup | SignAndSymptomsRequiredByTech | False | Determines in the Signs and Symptoms text box in the Perform Exam window on Documentation tab is required.<br>Possible values: True or |

# 5. New Features and Enhancements

## Reporting – Radiologist Notifications

Under User Preferences, we have renamed the configuration section to **Feedback**. Also we have divided the configuration into logical sections based on when, in the user's workflow the feedback occurs.

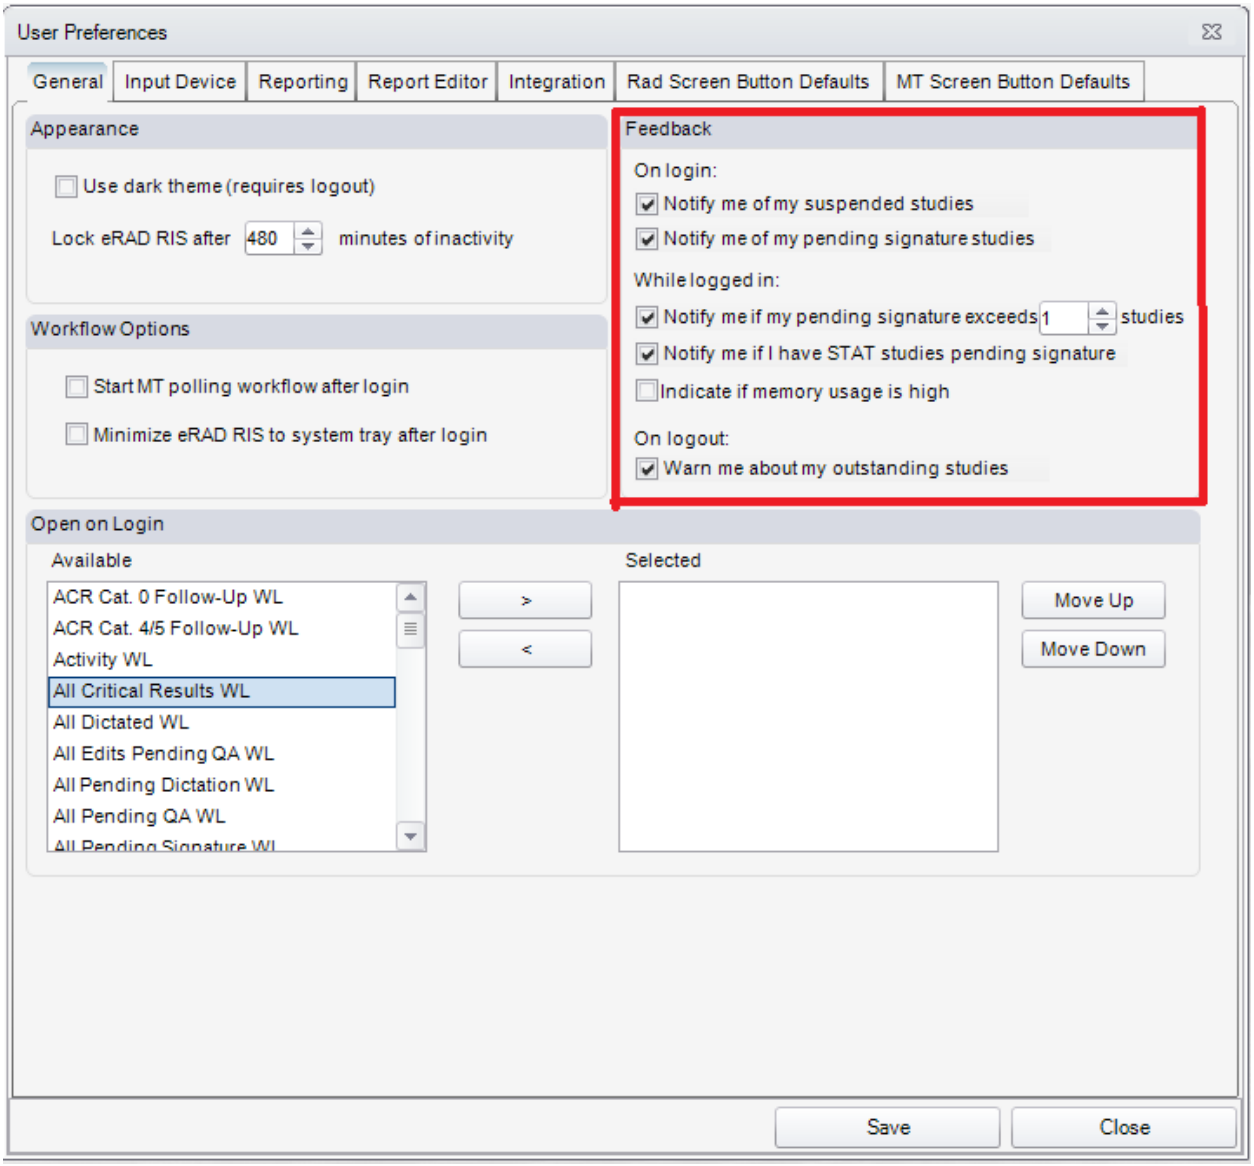

**Figure 5.1 – User Preferences\General Tab\Feedback options**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### On Login

Users can now subscribe to two optional notifications that occur on login.

*Pending Signatures* - the notification will display the user's pending signature count. The action button will take the user to the pending signatures work-list.

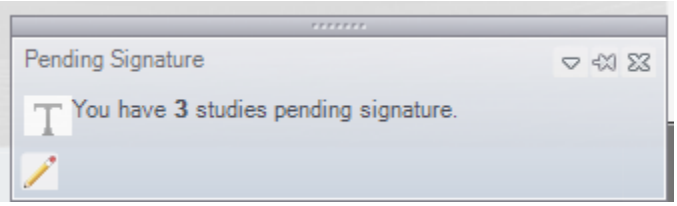

**Figure 5.2 – Prompt on login for outstanding reports to be signed**

*Suspended Studies* - the notification will display the user's suspended studies count. The action button will take the user to the suspended work-list.

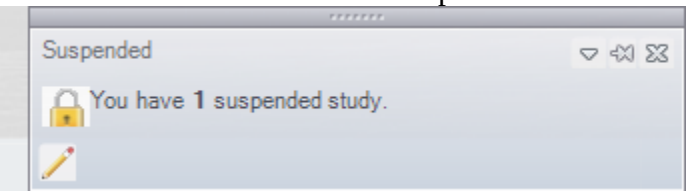

**Figure 5.3 – Prompt on login for exams you have in suspended status**

### While Logged In

Users can now subscribe to three feedback options that occur during their session.

*Pending Signatures* - the notification will display the user's pending signature count. The action button will take the user to the pending signatures work-list. This happens when the signature count exceeds the pre-set value. This notification is only executed with the pending signature work list open. The work-list can be open in a background tab.

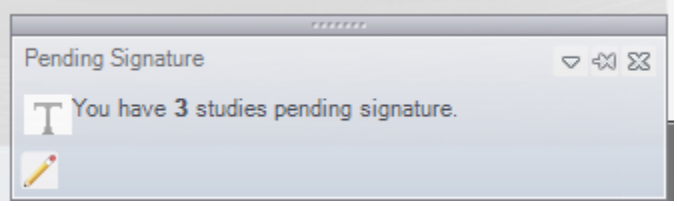

**Figure 5.4 – Prompt when pending signature count reaches defined threshold.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

*STAT Pending Signature Studies* - the notification will display when the user has a STAT case enter their pending signature list. This notification is only executed with the pending signature work list open. The work-list can be open in a background tab.

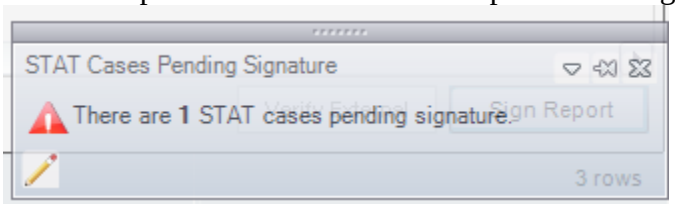

**Figure 5.5 – Prompt on STAT cases pending signature**

*High Memory Indicator* – If memory usage is high the user is displayed an indicator.

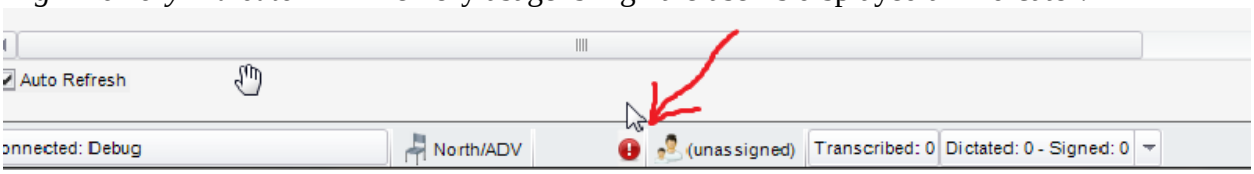

**Figure 5.6 – Status bar indicator**

Mouse over the indicator shows a message.

**Figure 5.6a – Message displayed on mouse hover**

## On Logout

Users can now subscribe to one optional warning that occurs on logout.

*Outstanding Studies* – the outstanding studies prompt will occur on log out if the user has any pending signature, pending release or suspended exams. The example below shows all 3, however if one of these counts is 0 the line will not be in the message.

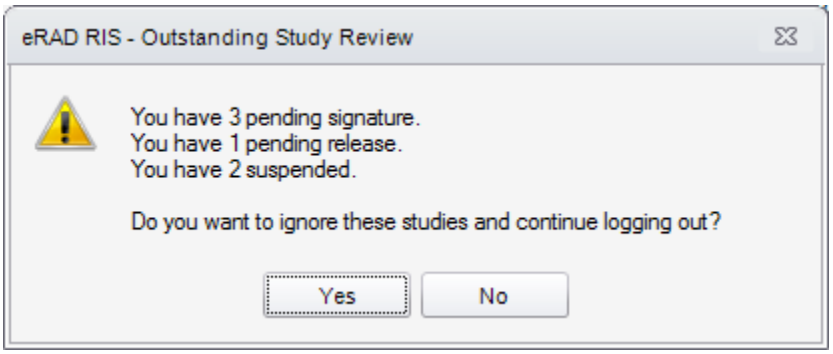

**Figure 5.7 – Notification on logout**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting - Dark Theme

There is now a darker theme that can be used by the radiologist. This is controlled by a new user preference titled "Use dark theme (requires logout)". The user preference itself is controlled by a new Access String titled **"UserPreference.Theme.AllowDarkMode"**

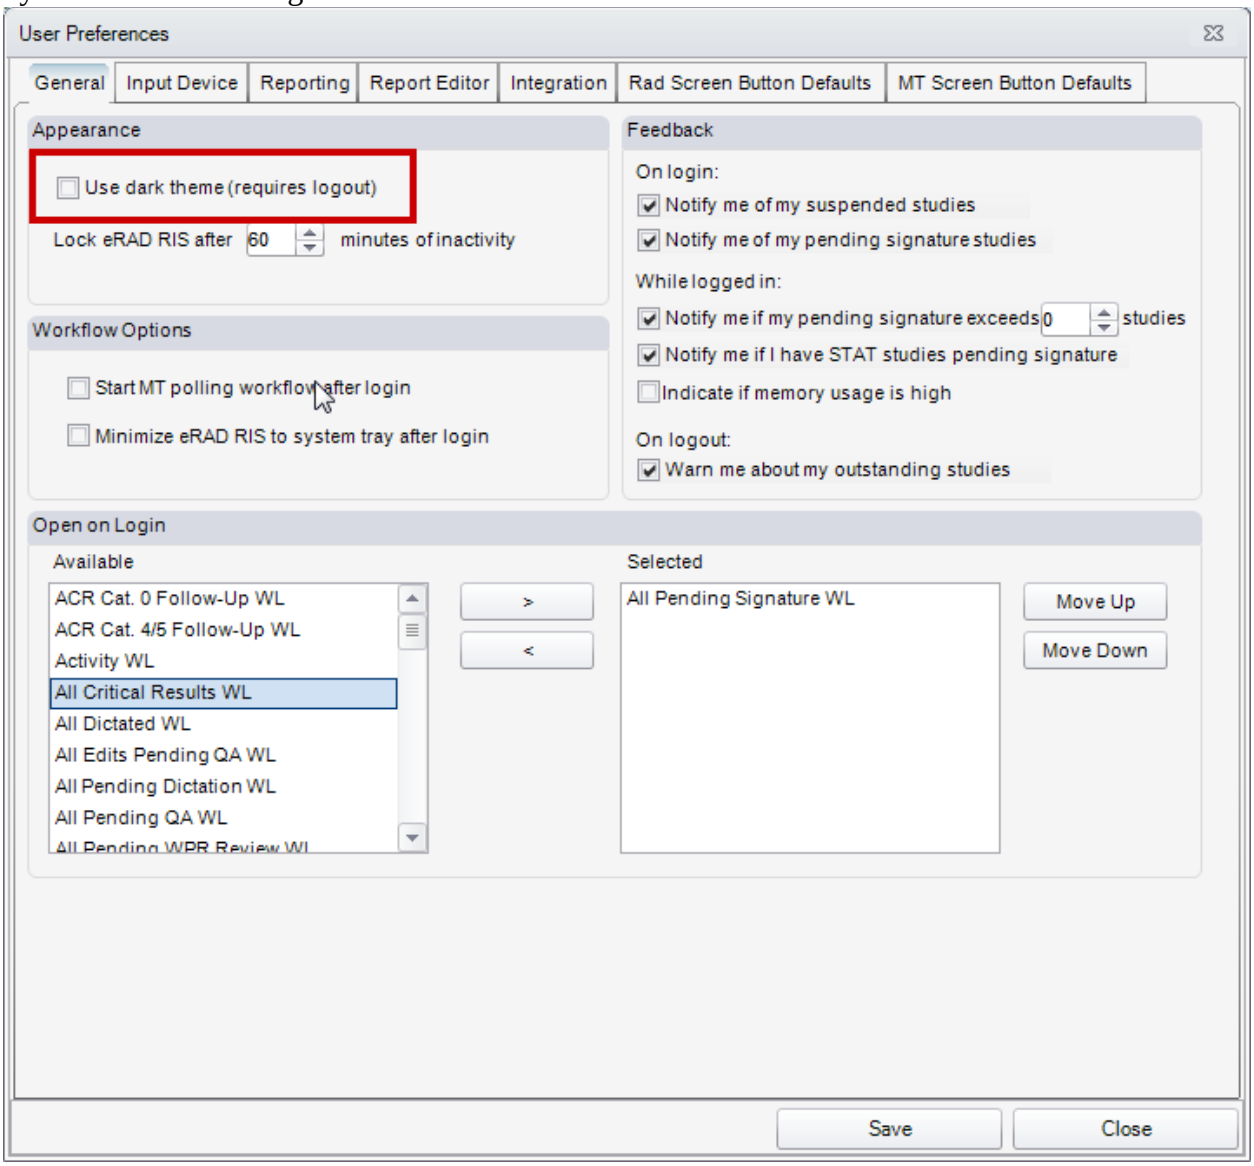

**Figure 5.8 – Preferences showing Dark Mode**

After selecting/unselecting the new user preference, the user must logout and login for it to take effect.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Editor Field Background Color

Within the reporting window, the user can open the context menu (right click) on the editor. This will present the user with a list of options. Selecting the "Editor Appearance" option will open the "Editor Appearance" window. A new option of "Field Background" color has been added. Adjusting this color will change the color of the fields within the editor template. This will apply to any fields that are inserted with a Macro too.

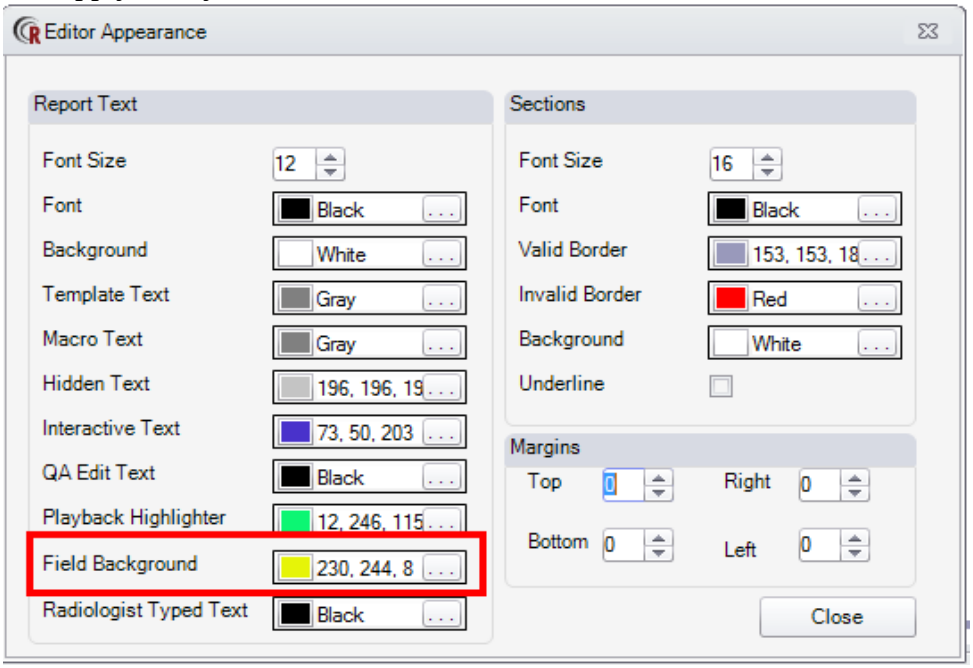

**Figure 5.9 – Editor Appearance window showing option for Field Color.**

With the color selected above for Field Background and fields within the template will appear in that color

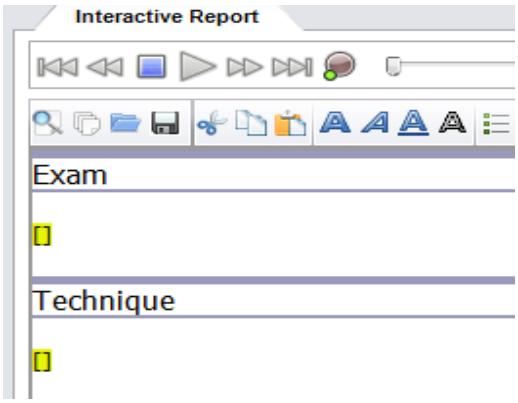

**Figure 5.10 – Field Color in editor**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Radiologist Edit Text Color

Within the reporting window, the user can open the context menu (right click) on the editor. This will present the user with a list of options. Selecting the "Editor Appearance" option will open the "Editor Appearance" window. A new option has been added.

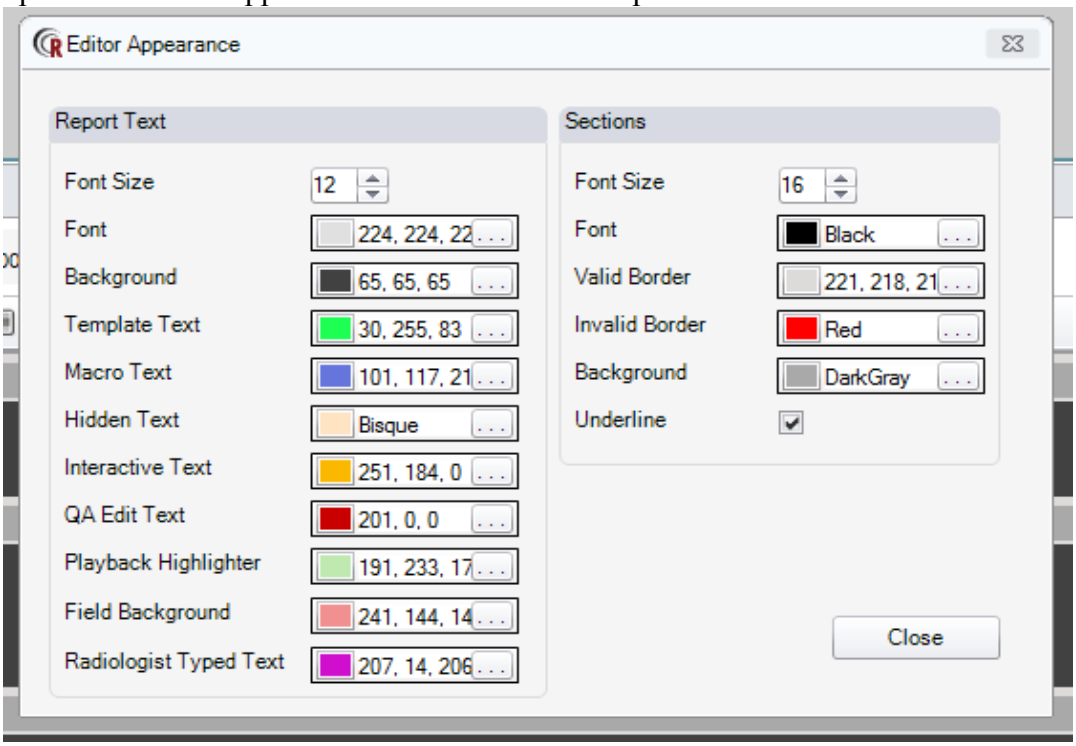

**Figure 5.11 – Editor Appearance window with new Radiologist Typed Text option**

This new option controls the color of the manually entered/edited text by the radiologist

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

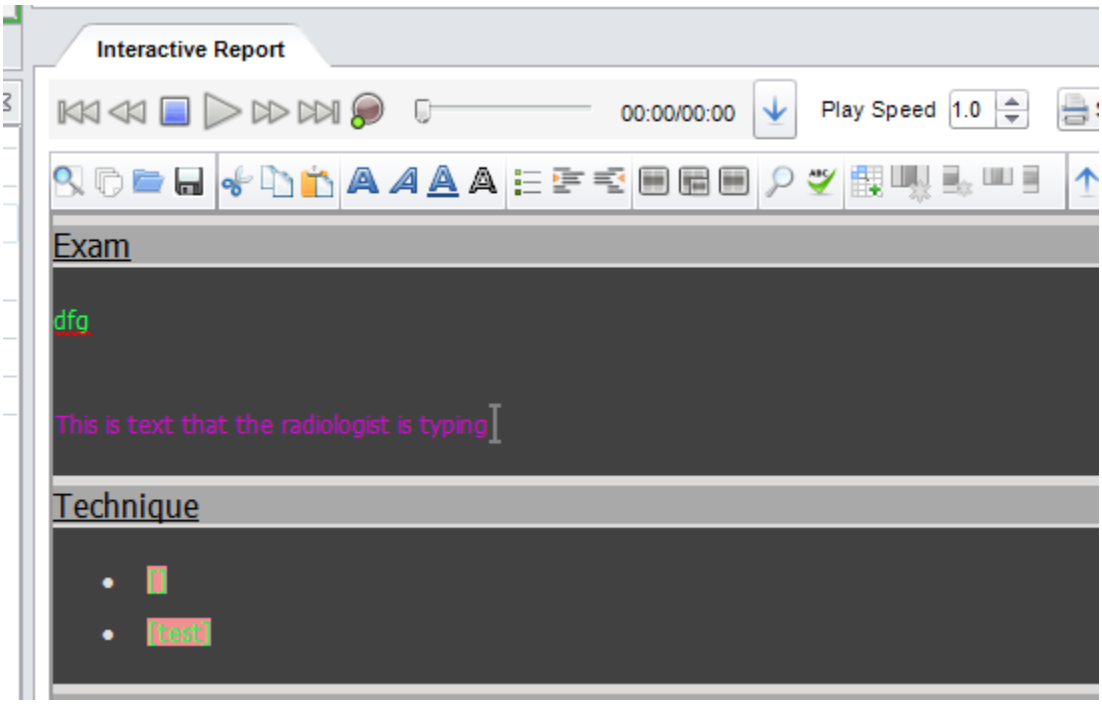

**Figure 5.12 – Editor displaying the text color when manually entered by the radiologist.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Editor Margins

Within the reporting window, the user can open the context menu (right click) on the editor. This will present the user with a list of options. The "Margins" section of the Editor Appearance window has been added. This will allow the user to set their margins within the editor.

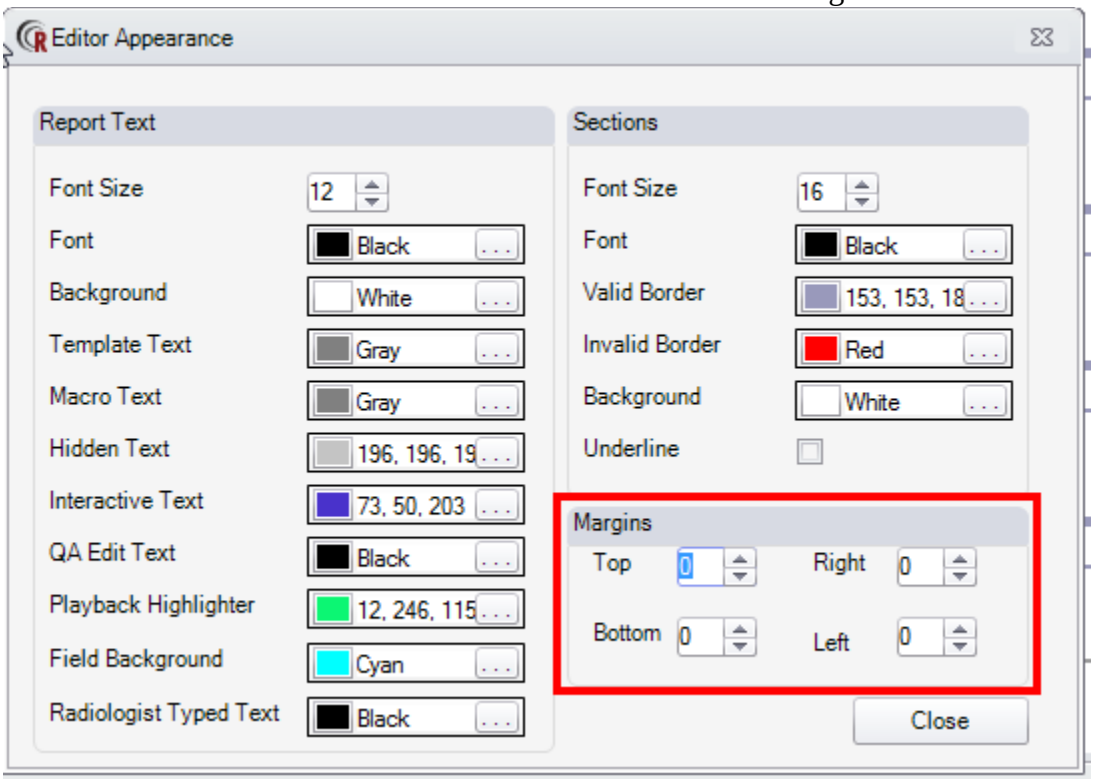

**Figure 5.13 – Editor Appearance window displaying new Margins options**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – New SpeechMike mapping options

We have added two new SpeechMike function key options that can be assigned. The options of Undo and Redo have been added. These new options can also be made the default action of the keyboards left and right arrow keys

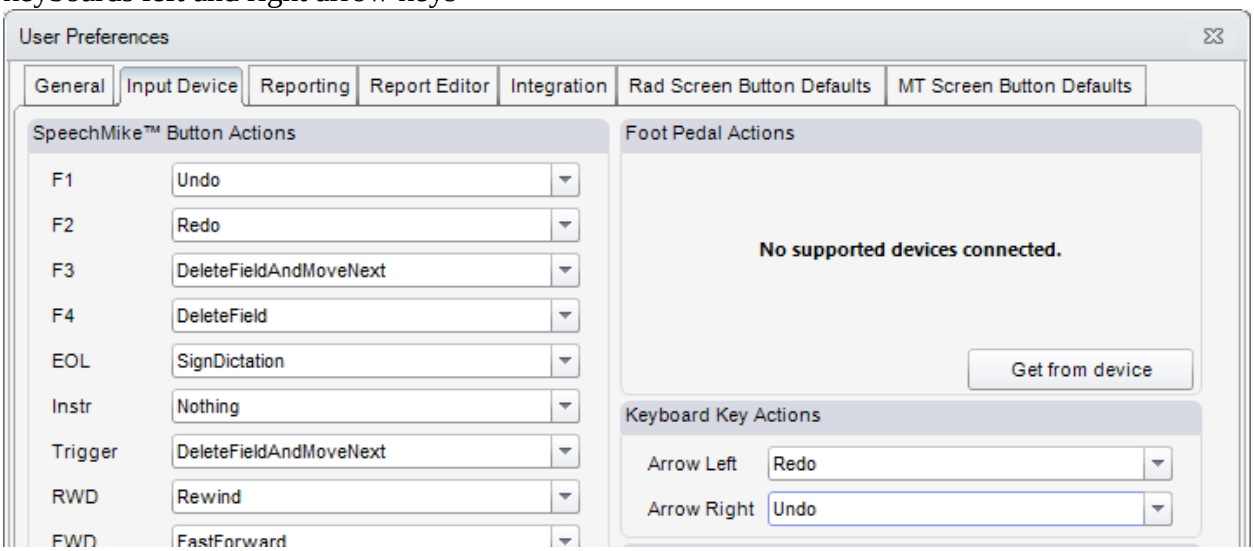

**Figure 5.14 – The Undo and Redo options added for SpeechMike buttons and Keyboard arrow actions**

It should be noted that these options can also be set as default Foot Pedal Actions and also mapped as an xKey command manually using the existing xKeys set up.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Delete Last Word

This new feature titled “DeleteWordLeftOfCursor” can be mapped as SpeechMike button, keyboard left/right arrow key, Foot Pedal button and also implemented as an xKeys command manually using the preexisting xKeys set up.

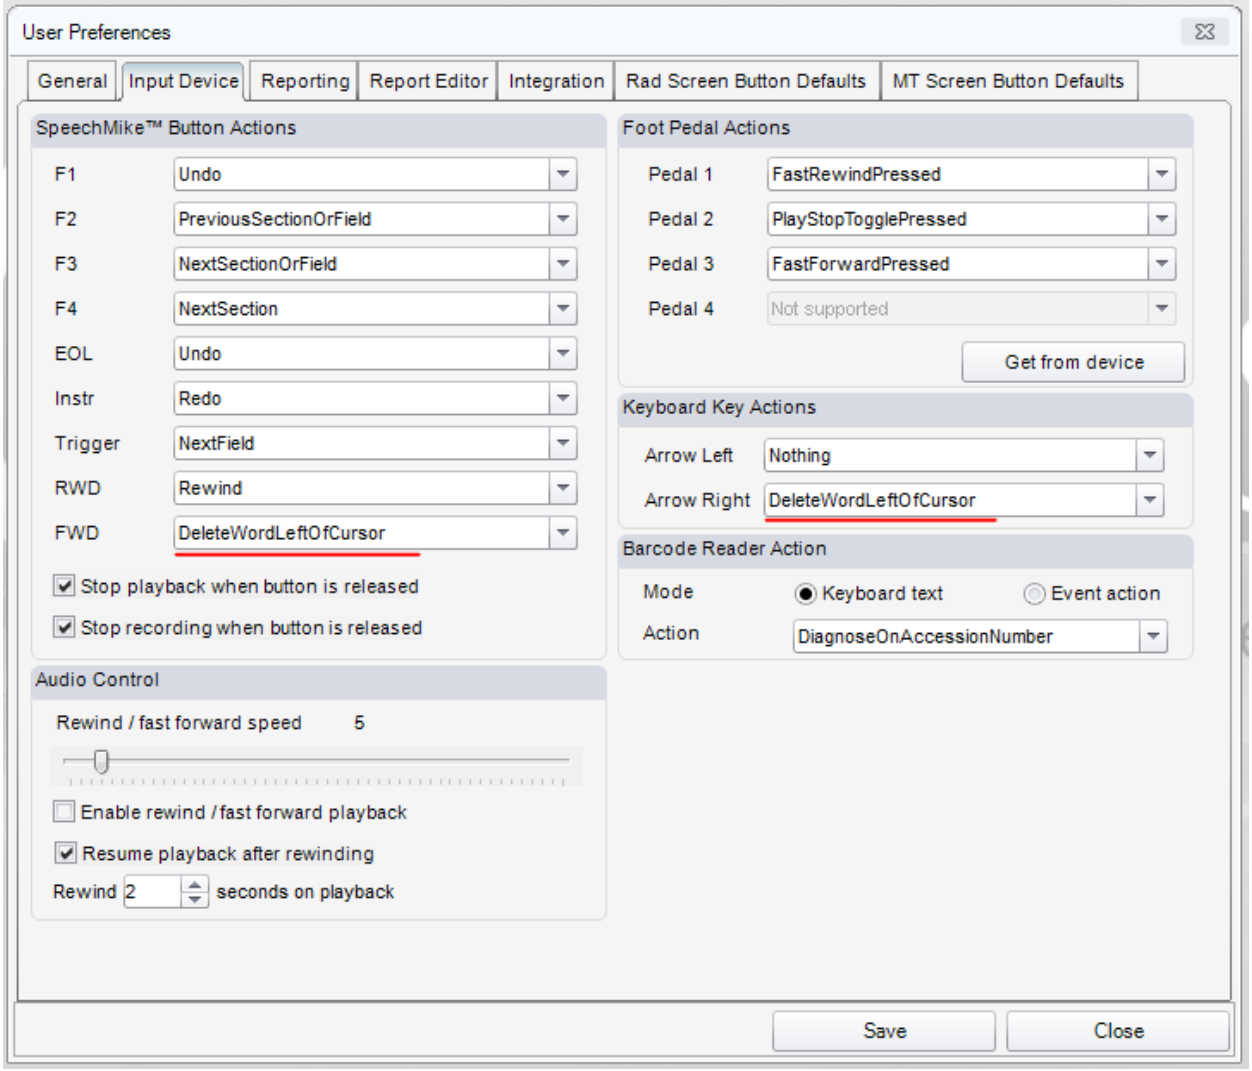

**Figure 5.15 – DeleteWordLeftOfCursor function in user preferences**

Support has been added for itemized lists. If you reach the end of a list item while deleting the last word, the empty item will be removed and the cursor will go to the end of the previous item.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Message Prompt on Submit

A new user preference option of "Enable submit warning" has been added under the Reporting tab of the User Preferences window.

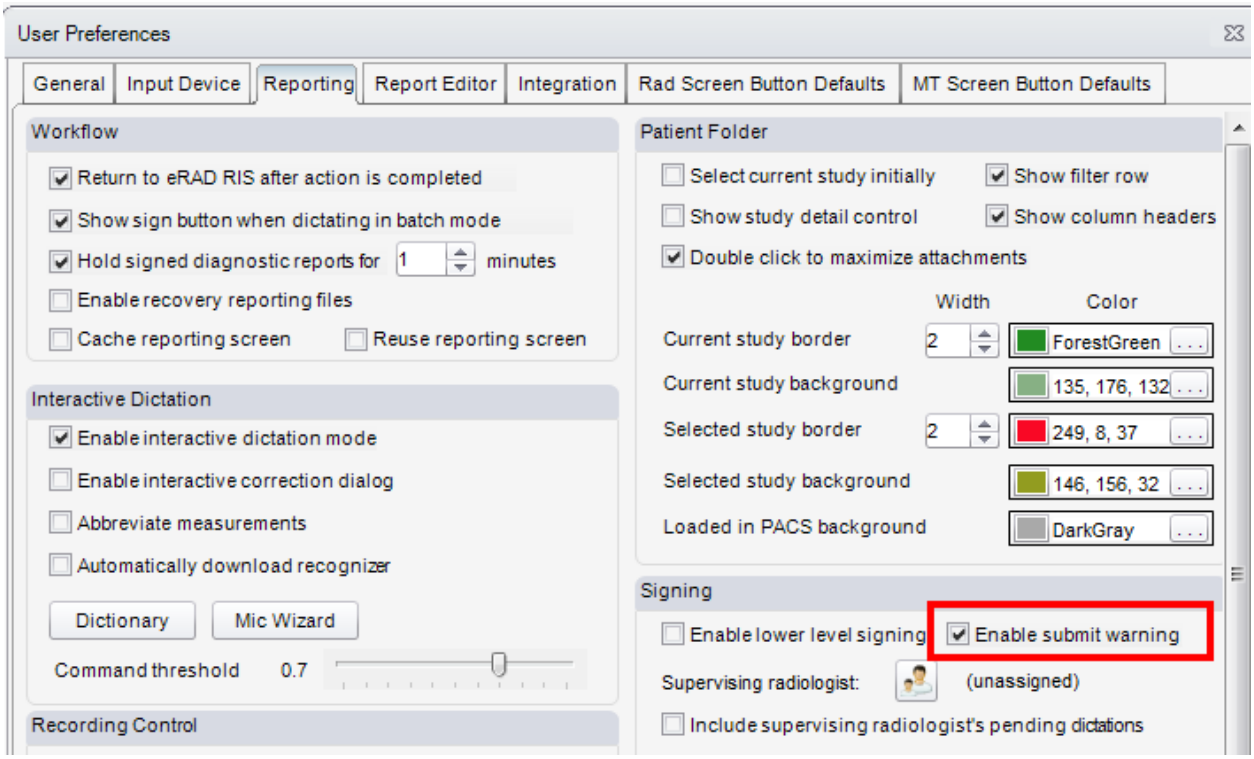

**Figure 5.16 – User Preference of "Enable submit warning"**

When enabled, and the user is in Signing mode and the Submit button is selected, they will receive a message prompt asking if this was the intended action.

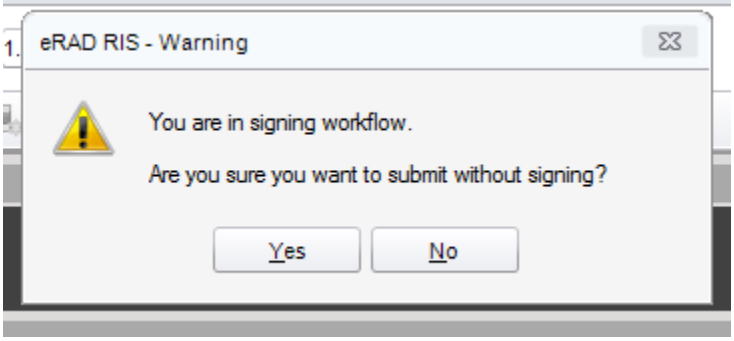

**Figure 5.17 – Submit warning message from signing workflow.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Addendum Show All Templates

In previous versions of eRAD RIS when dictating an addendum, the user only had access to one template titled “Addendum”. We have added the “Show All Templates” option when creating an addendum. This was previous only available when creating the report initially.

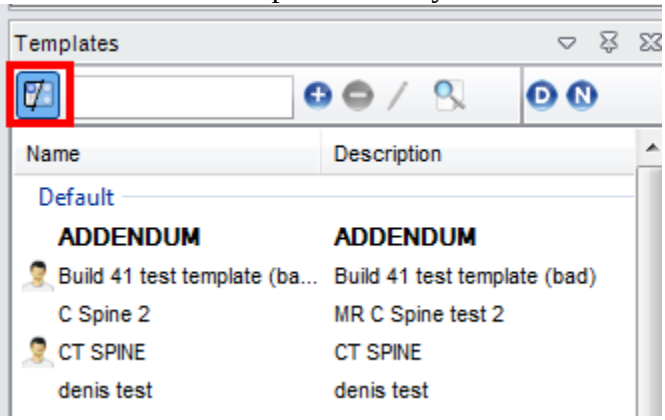

**Figure 5.18 – Show All available on Addendums**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Reject Addendum Request

It had been requested that the Radiologists wanted a way to reject addendum requests from within the reporting (dictate) window.
This is now possible. The last split button for Close/Skip now has 2 additional options that will be available if the current study open in the Dictate window is flagged as "*Request Addendum". The 2 new options are "*Reject addendum request and continue" and "Reject addendum request and close". These 2 new options are prefixed with an asterisk, which informs the user that they cannot be set as default.

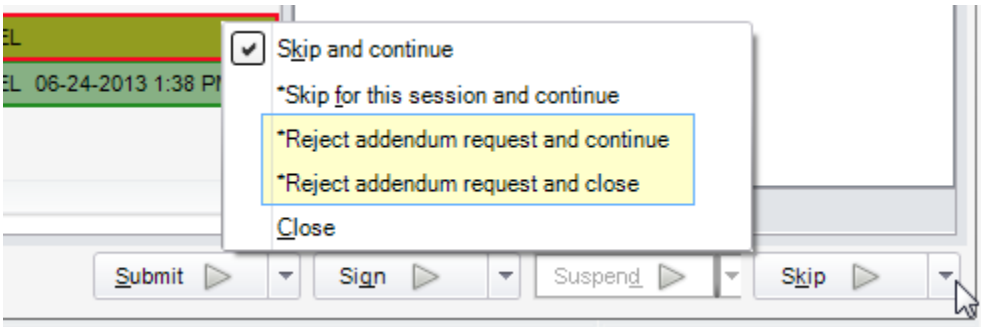

**Figure 5.19 – New options added to the Close split button in reporting window**

If one of these options is selected, the user will be prompted with the Reject Addendum window. In this window the user can enter in notes and reject the addendum or cancel the window

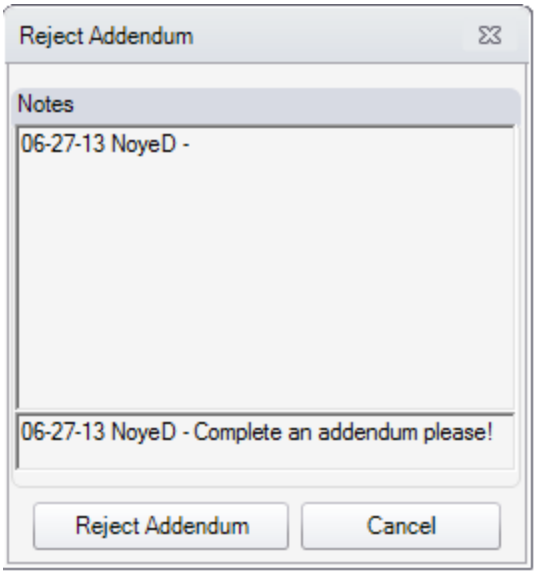

**Figure 5.20 – Reject Addendum window.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# Reporting – Verify Report from All Signed Pending Release WL

The Verify Report button has been added to the All Signed, Pending Release WL.

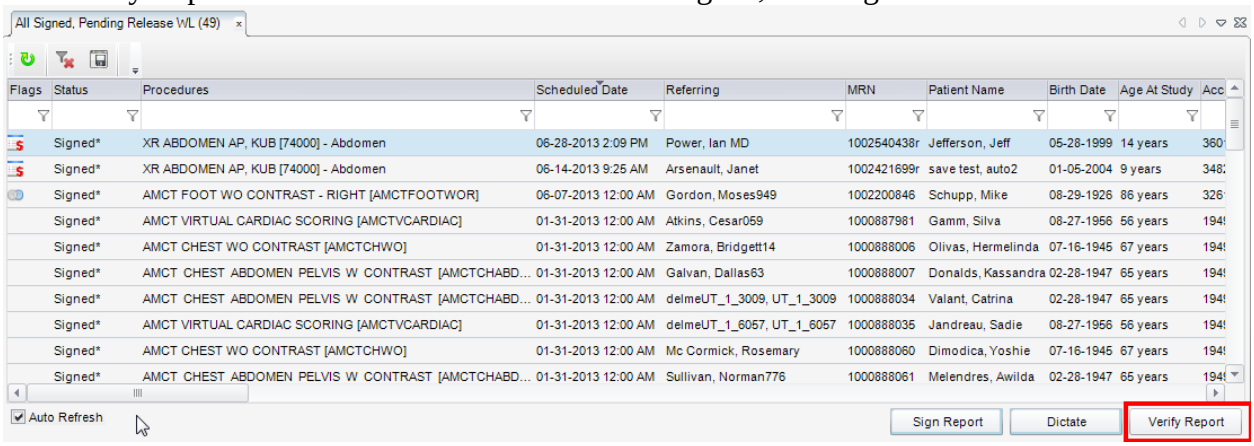

**Figure 5.21 – All Signed, Pending Release with Verify Report option**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Create Template from Current Report

In build 41 users can now create a Template from the current report in the reporting window.
This is similar to the existing feature of creating a macro from the selected text.
When the user has a template configured with desired text, formatting, macros inserted, etc…
they now have the option to create a template from this report.
From the context menu in the report editor select Create Template From…
This will open the Editing Template: New window

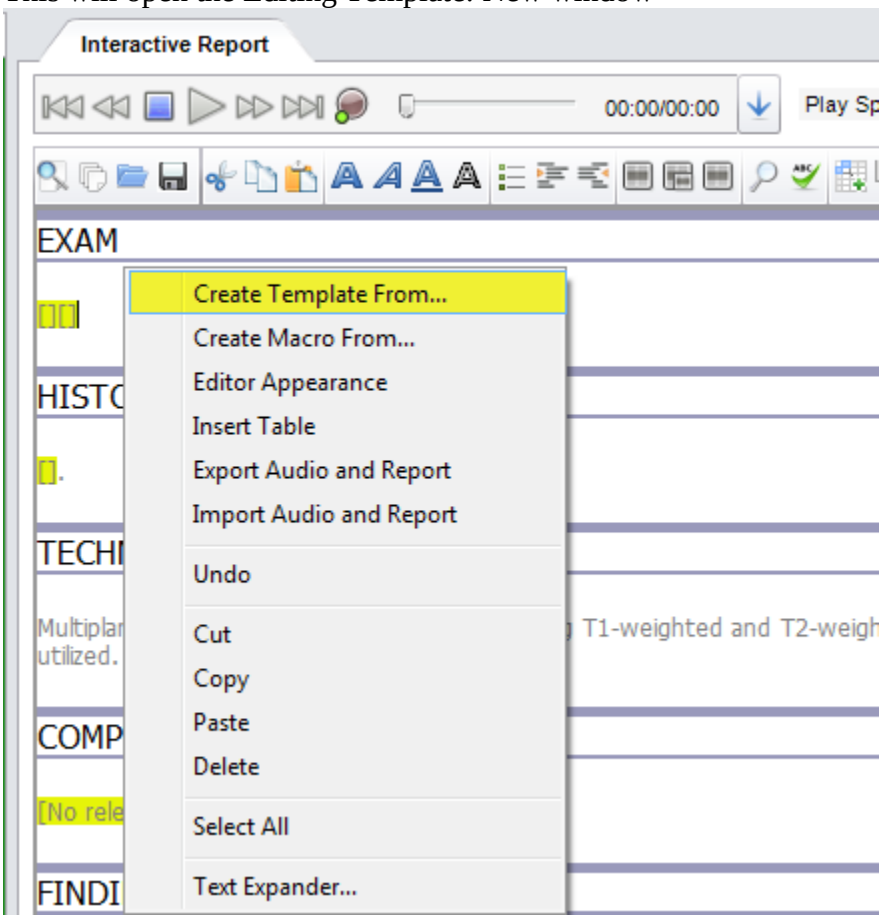

**Figure 5.22 – Create Template option in reporting window**

Once the edit template window is open, the user can create a new template as before.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Support Multiple Layouts

In build 40 we introduced the concept of having multiple default layouts. These layouts could not be altered and saved by the user or an admin.
We have taken this concept a step further in build 41 allowing the user to create a custom layout and save. Once the user has a desired layout, from the view menu select Save as Custom Layout. This feature is controlled by new access string "**View.Custom.Layouts**" with a default of None.

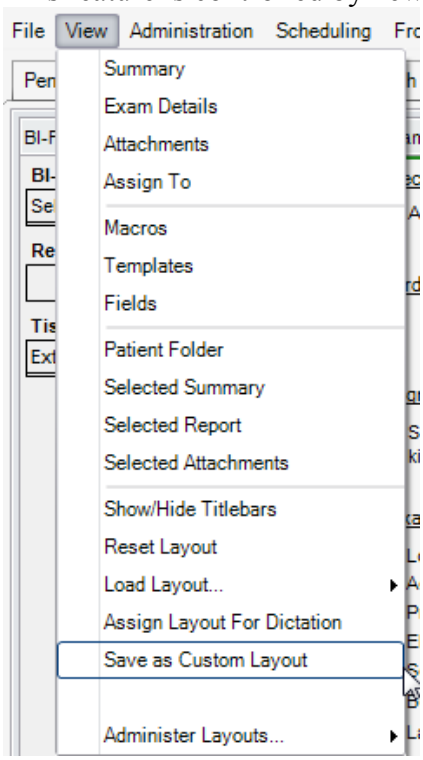

**Figure 5.23 – Saving custom layout**

Selecting the View menu option of "Save as Custom Layout" a new window will open allowing the user name this layout

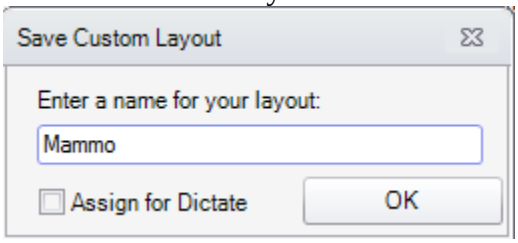

**Figure 5.24 – Save custom layout**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The next the reporting window is accessed, the custom layout can be loaded from the current load layout menu; they appear below the standard admin pre-sets.

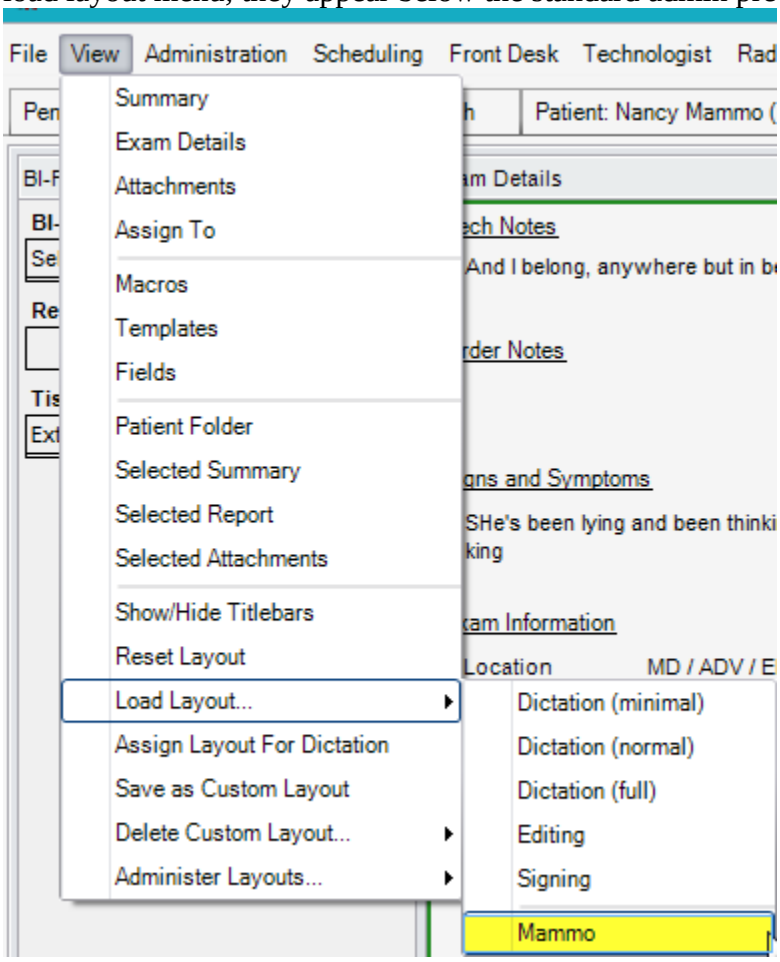

**Figure 5.25 – Displaying how to load a custom layout**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Custom layouts can be removed using the View menu “Delete Custom Layout option.

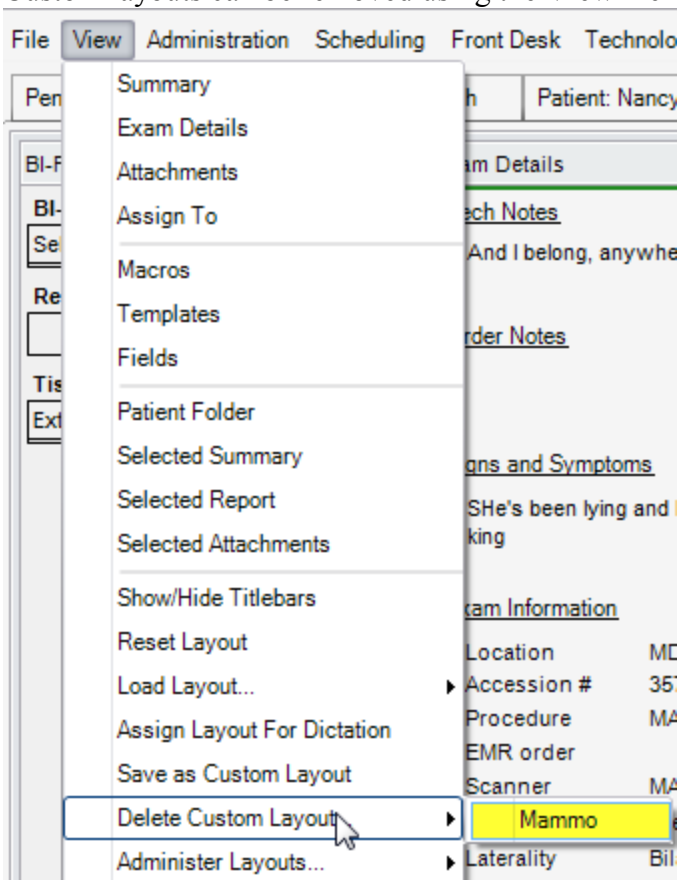

**Figure 5.26 – Displaying how to remove a custom layout.**

Before the layout is removed, the user is prompted with a confirmatory message.

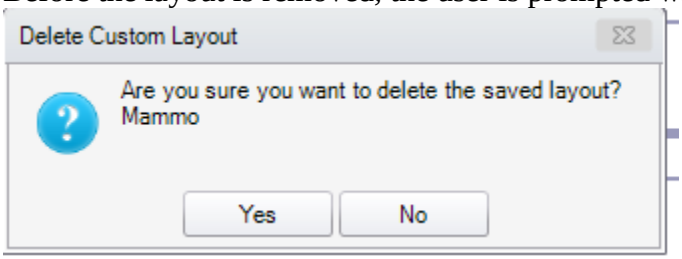

**Figure 5.27 – Confirmatory message displayed when deleting a custom layout**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

In addition to the Custom Layouts, in build 40.008 an administration user was given the ability to administer layouts, meaning they could configure a layout and save it as Dictation (minimal), Dictation (normal), Dictation (full), Save as Editing and Save as Signing.

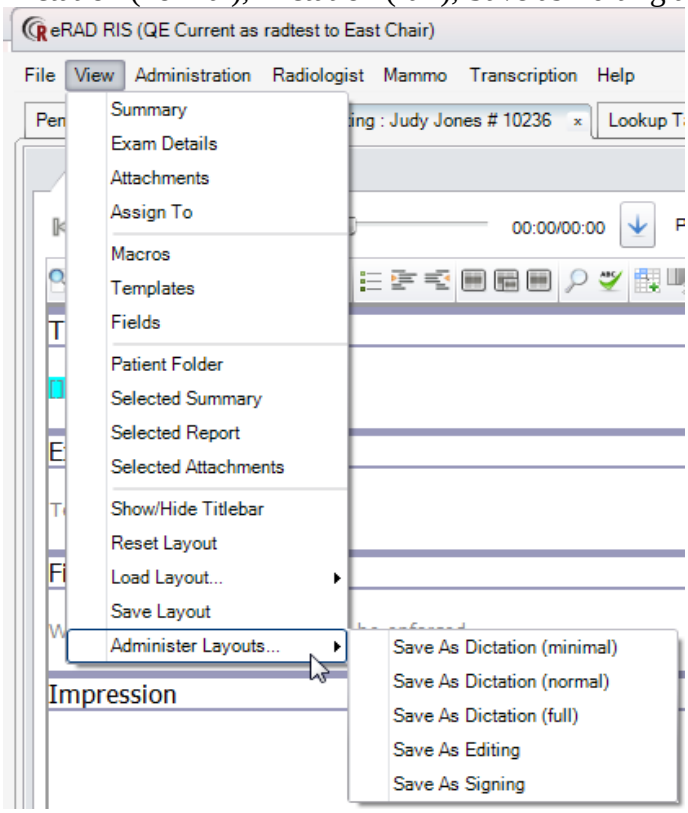

**Figure 5.28 – Administer Layouts…**

Access to all of these was controlled by one access string titled **View.Administration**. The View.Administration access string has been removed and replaced with the following

**View.Preset.Administration** - Access to preset layout administration submenu
**View.Preset.Administration.PresetSigning** - Access to preset layout administration for Signing
**View.Preset.Administration.PresetEditing** - Access to preset layout administration for Editing
**View.Preset.Administration.PresetDictationNormal** - Access to preset layout administration for Dictation Normal
**View.Preset.Administration.PresetDictationMinimal** - Access to preset layout administration for Dictation Minimal
**View.Preset.Administration.PresetDictationFull** - Access to preset layout administration for Dictation Full

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Set Problem Flag without Rejecting Report

The verify reports window in the QA work flow previously had all the on screen controls and forms locked down until your reject the report.
Now we have enabled the Problem radio button option, notes box and assign to drop down.

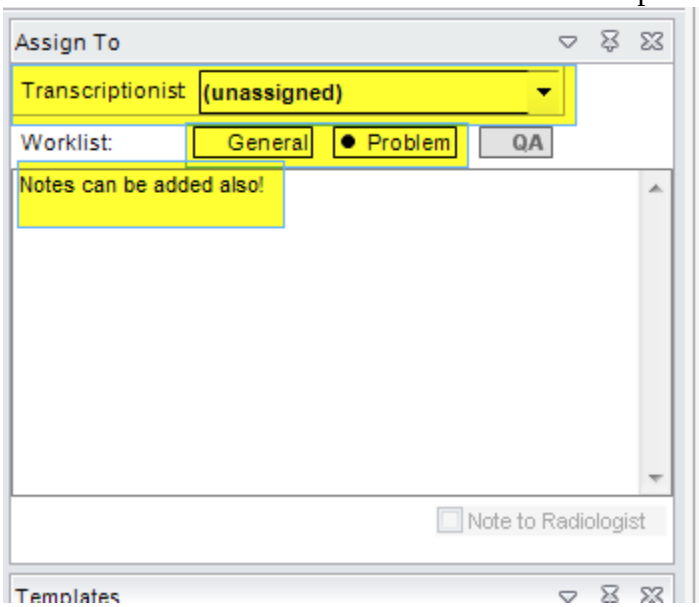

**Figure 5.29 – Set problem flag in QA window without rejecting the report**

This will allow the user to set a problem flag and note from the QA verify report work flow without having to reject the report.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Warn when Submitting From Sign Reports Window

When in the Sign Reports window, the user also has the option to submit the report and change the status to Report Drafted. It may happen on occasion that the Submit button is selected mistakenly instead of the Sign button. We have introduced a confirmatory message on the selection of the Submit button from the Sign Reports window. Selecting Yes will complete the Submit action, while selecting No will return the user to the Sign Reports window on the current study.

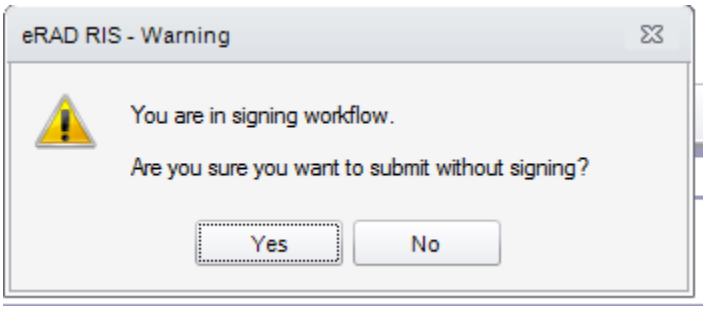

**Figure 5.30 – Submit confirmatory message from Sign Report window.**

This message is controlled by a new user preference. The user preference "Warn submit warning" which is located under the Reporting tab, when selected will ensure that the user is informed they have selected the Submit button.

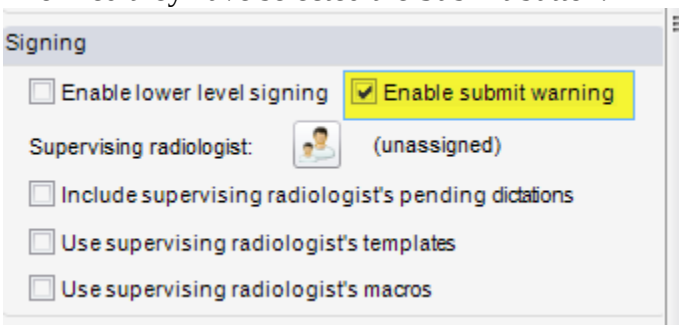

**Figure 5.31 – Enable submit warning user preference**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Report Verification Checks on QA Windows

When signing off a report a series of report checks are completed before the study can be advanced to "Signed" status. It has been requested that these report checks also happen when verifying reports in the QA work flow.
The report checks includes

- Section validation against document model.
- Report formatting (sections, fields, etc…)
- BI-RADS, Recommendation, and Tissue Density
- Auto spell check (this is optional driven by user preference)

## Reporting – View Patient's Phone Number in Reporting Window

The reporting window now has the patient's home and mobile phone numbers displayed under the Exam Details data pane > Patient Information section.

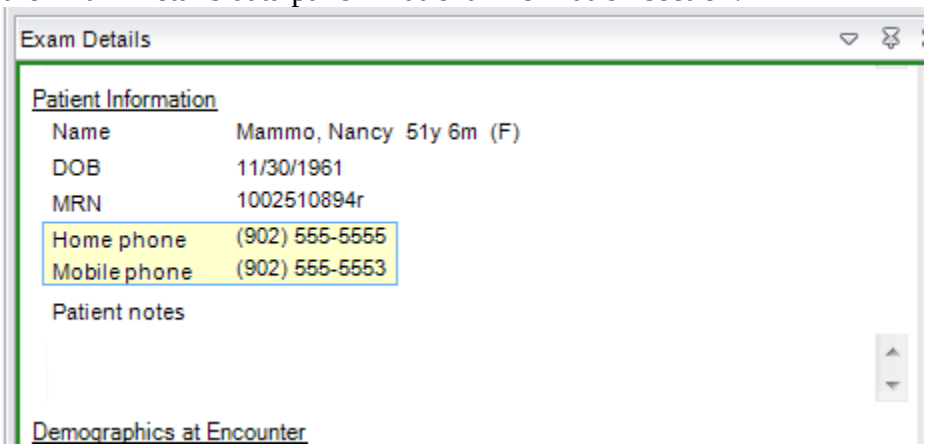

**Figure 5.32 – Patients home and mobile numbers displayed in the reporting window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting - View Attachments in Full Screen Launched via Double Clicking

This new feature is driven by a new user preference titled “Double click to maximize attachments” located under the Reporting tab of the User Preferences window.

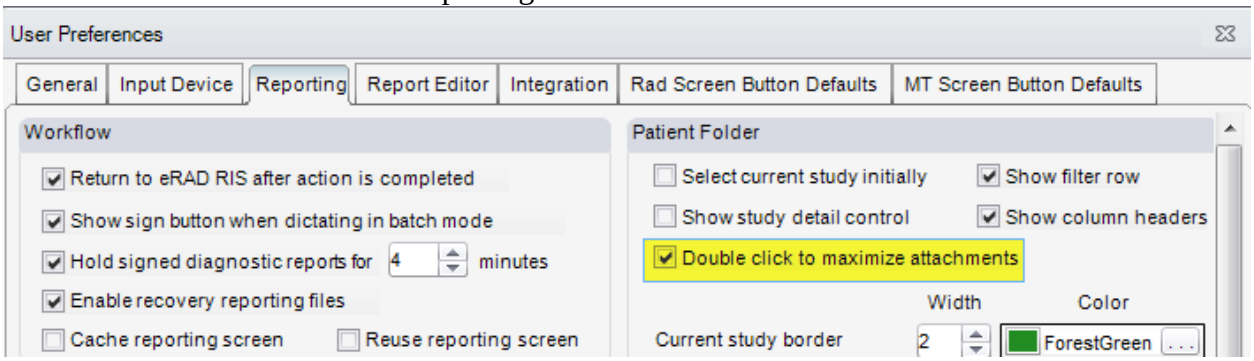

**Figure 5.33 – Displaying new user preference “Double click to maximize attachments”**

With this set double clicking on an attachment will maximize the tool window to the current screen. Once maximized you can double click to restore it to its previous location or in the case of a RAD Floating Dockable window you can close the window with the “X” in the top right corner (when in full screen maximized mode).
If you are to save your layout with this configuration, the full screen maximized toggle will not save with the layout manager.

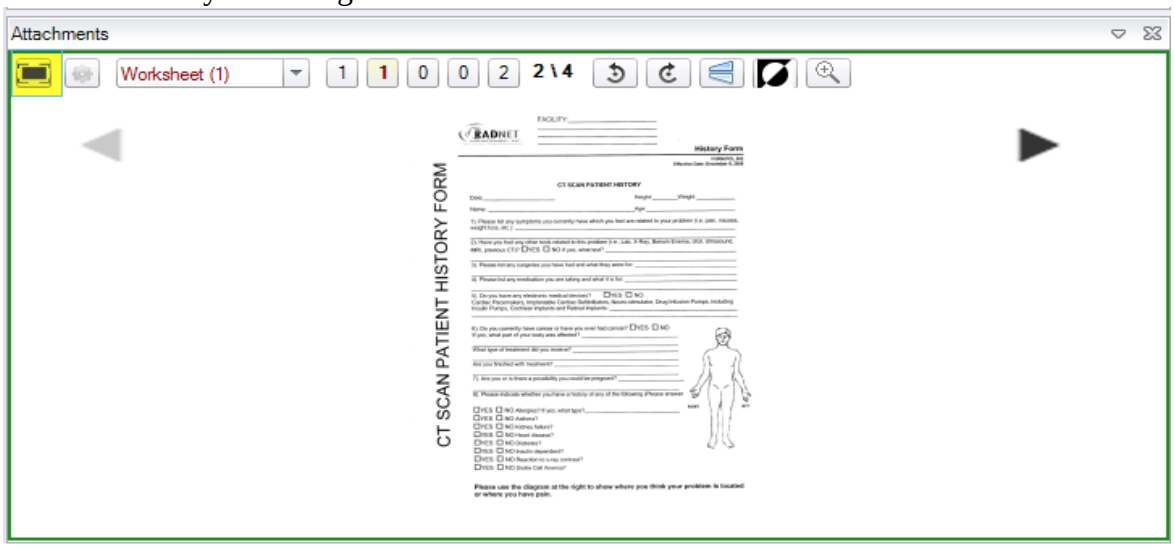

**Figure 5.34 – Attachment data pane displaying button open in Full view mode**

In addition to the double click to maximize the user can also click on the full screen icon shown in the above screen shot (top left).

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Document Model to be Stored in TemplateMacro Table

All along the document model has been stored in the template itself. In this build we will now be storing the document model in the Macro Template database table. If there happens to be a template that does not have a document model, the user will find a new context menu item in the TemplateMacro table titled *Load Document Model Value. Selecting this menu option will extract the document model from the template and insert the value in the new column of Base Template.

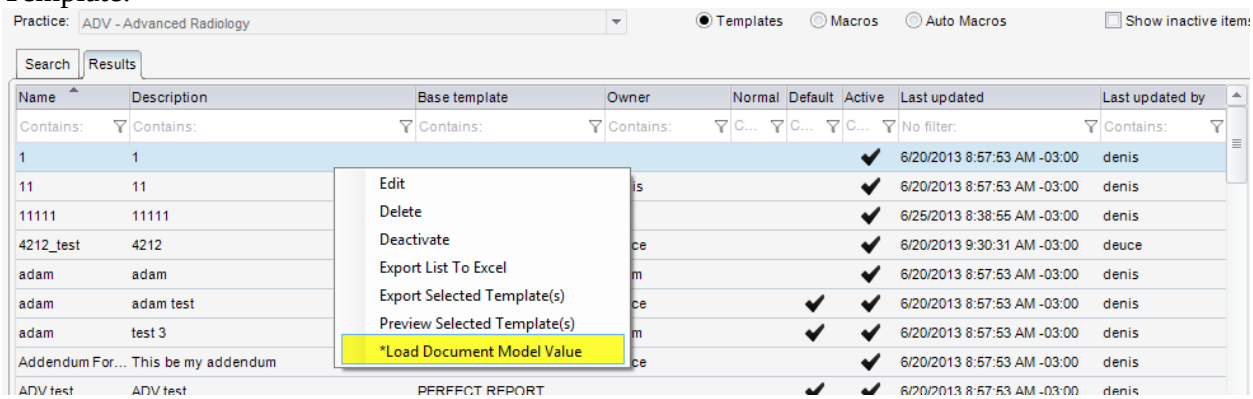

**Figure 5.35 – TemplateMacro table displaying context menu option of Load Document Model Value**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – TemplateMacro Editor Enhancements

The look and feel of this lookup table is quite different in build 41. First thing you may notice when opening the TemplateMacro lookup table is that there are now two tabs.
The First tab allows you to set criteria to search/filter on (Practice, Users, Procedures and Scanners) and the second tab is similar to the old worklist of template/macros. However in this new version, the worklist is filtered based on the criterion that was listed in the first tab. Also there is additional information on the templates and macros in the work list as well as visible below in a grid.
This should add exceptionally more control for the administrators when it pertains to finding and working with a set of macro/templates.
Filter tab shown here with no filters set (include ALL in the results)

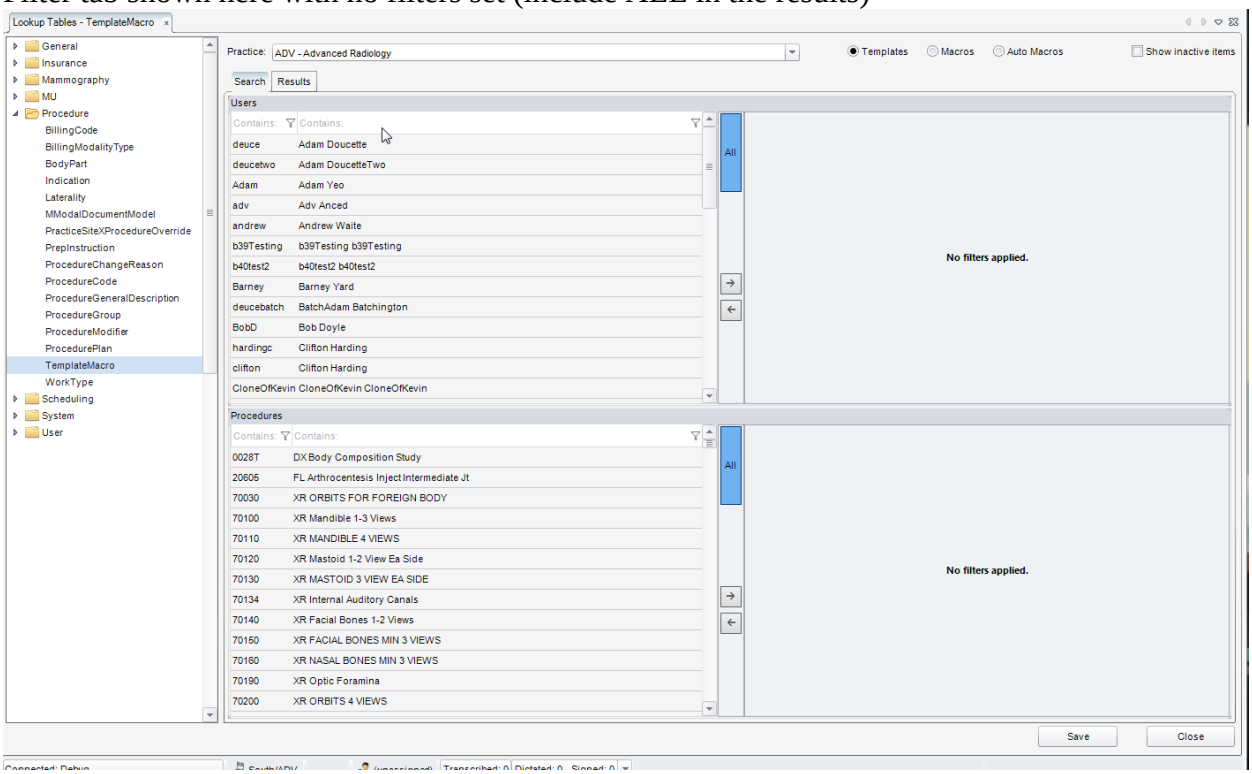

**Figure 5.36 – New and improved TemplateMacro lookup editor window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

A look at the Results tab below you will see that additional columns have been added so the user can see the template row selected is a Normal or Default template. The others columns are like before with the Name and Description of the template, what the Base template is, the owner, if the template is active and last updated date and user.
Also notice the details section below where assignments are displayed in a quick view fashion.

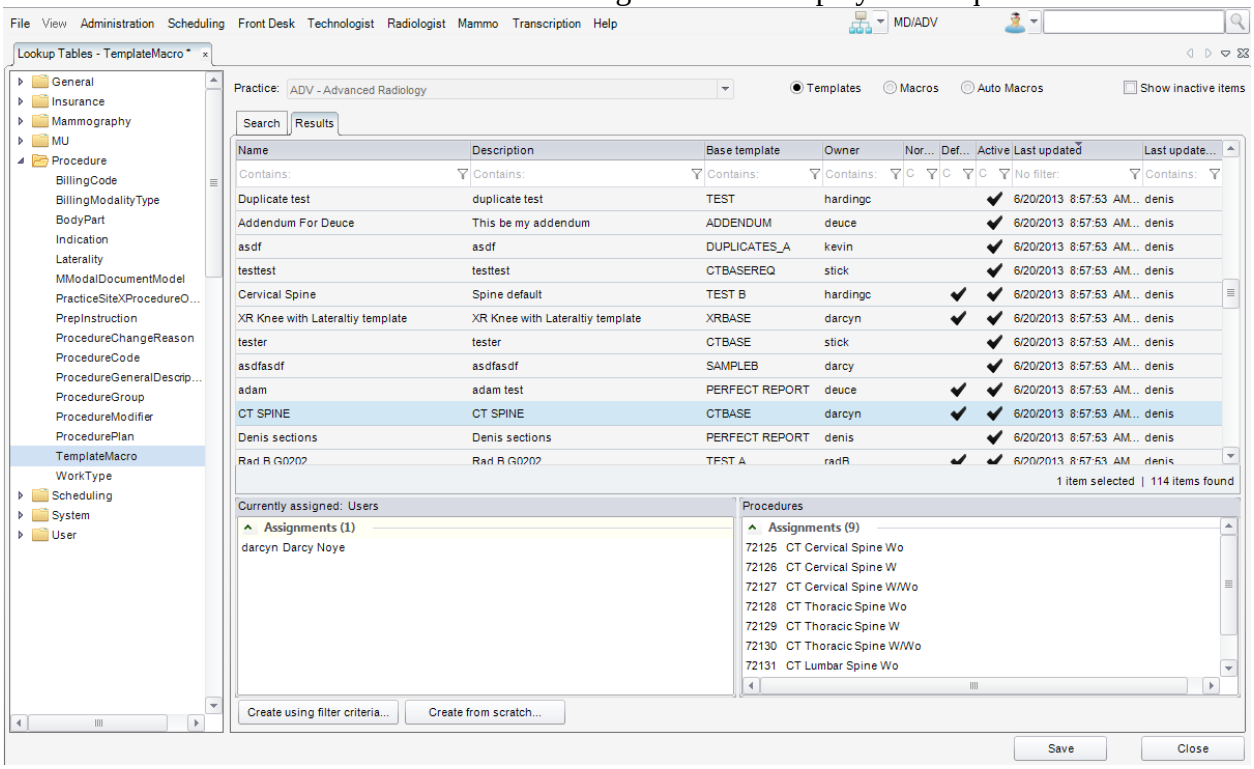

**Figure 5.37 – Results tab of the TemplateMacro lookup editor**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

When the Auto-Macros option is selected from the top radio button group, a Scanners grid is added to both the search and results sections.

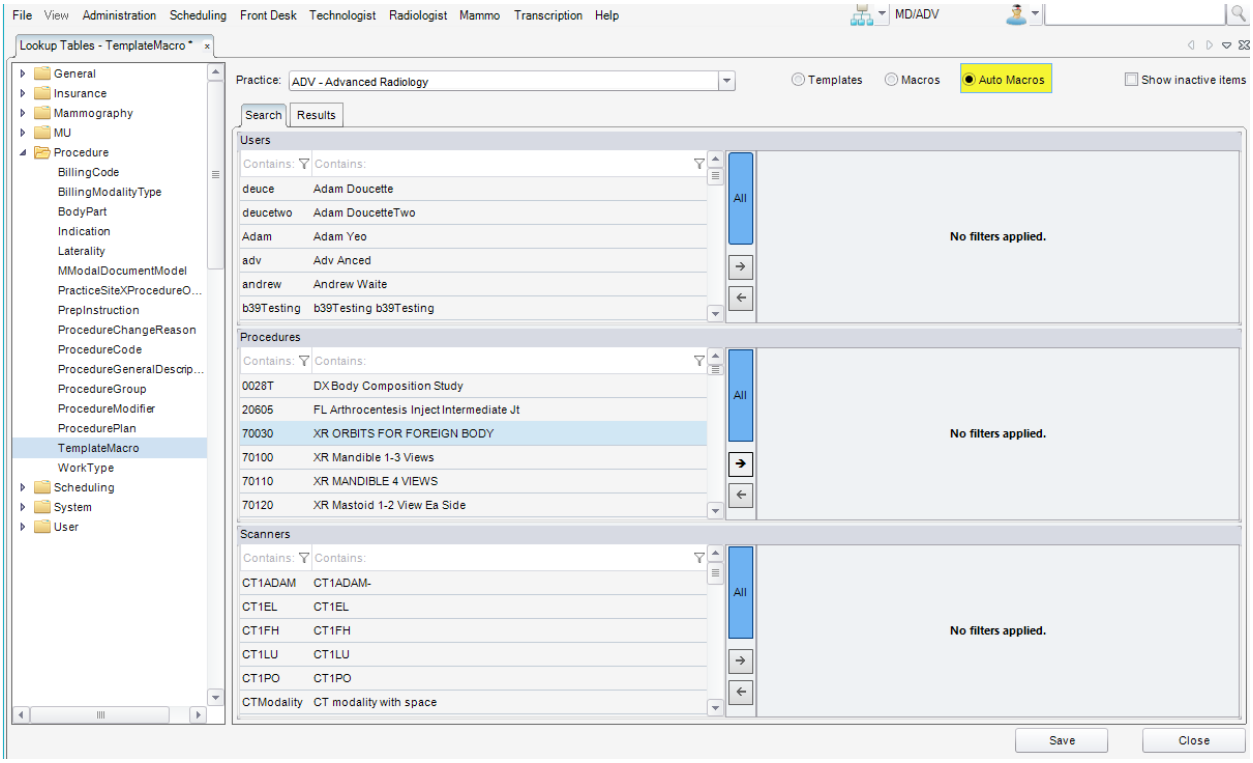

**Figure 5.38 – Auto Macros search tab**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

On the Results tab the Normals and Defaults columns do not appear as they are not relevant to Auto-Macros. Also the Scanners details are listed in the quick view area of the window.

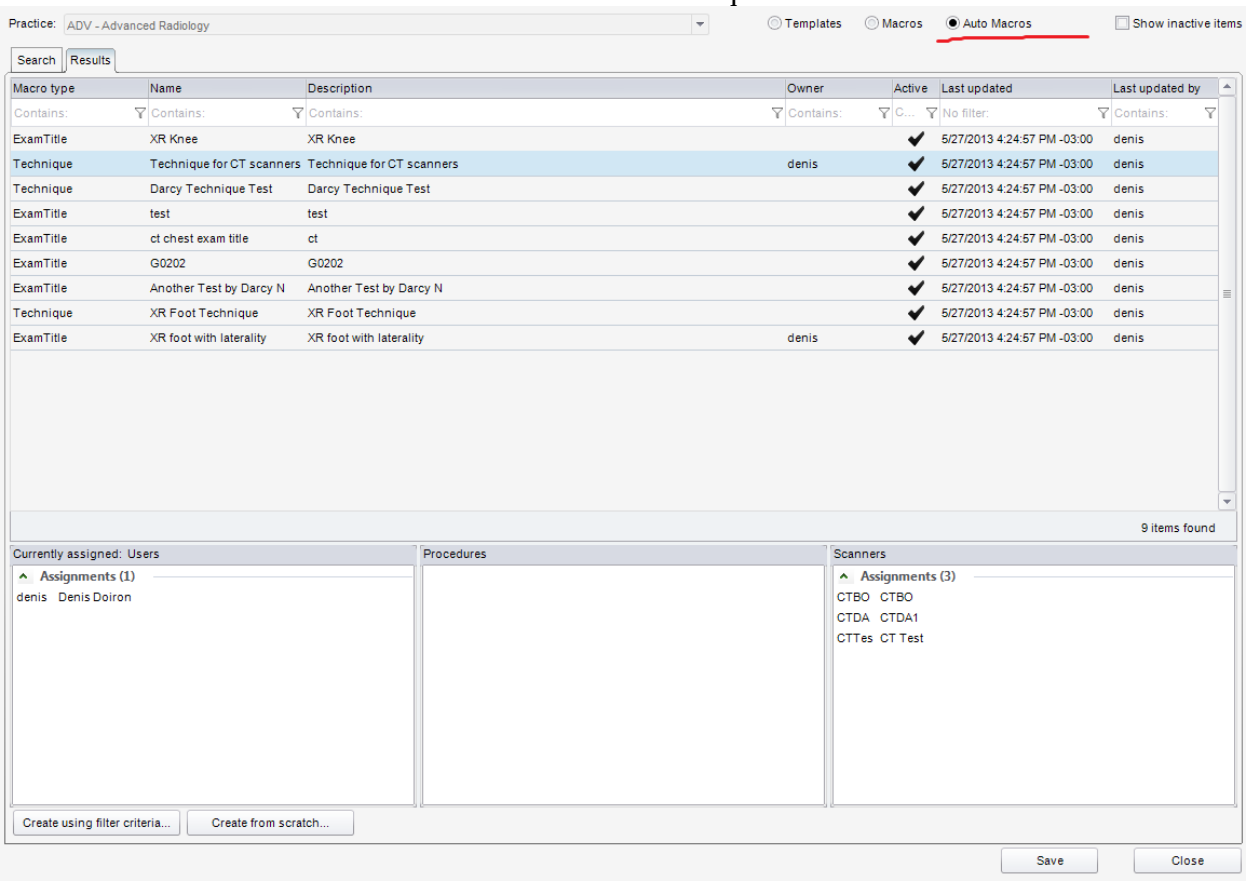

**Figure 5.39 – Auto-Macros Results tab**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Filter/Search screen allows you to double click items to move them to the filter list as well as use the on screen arrow buttons. Items on the right will be used to filter on. If you select the **All** button, the filter is removed from use and the items are returned to the left. However if you select **All** again, the previously filtered on items will return. This will persist so long as you don't close the window or change types.

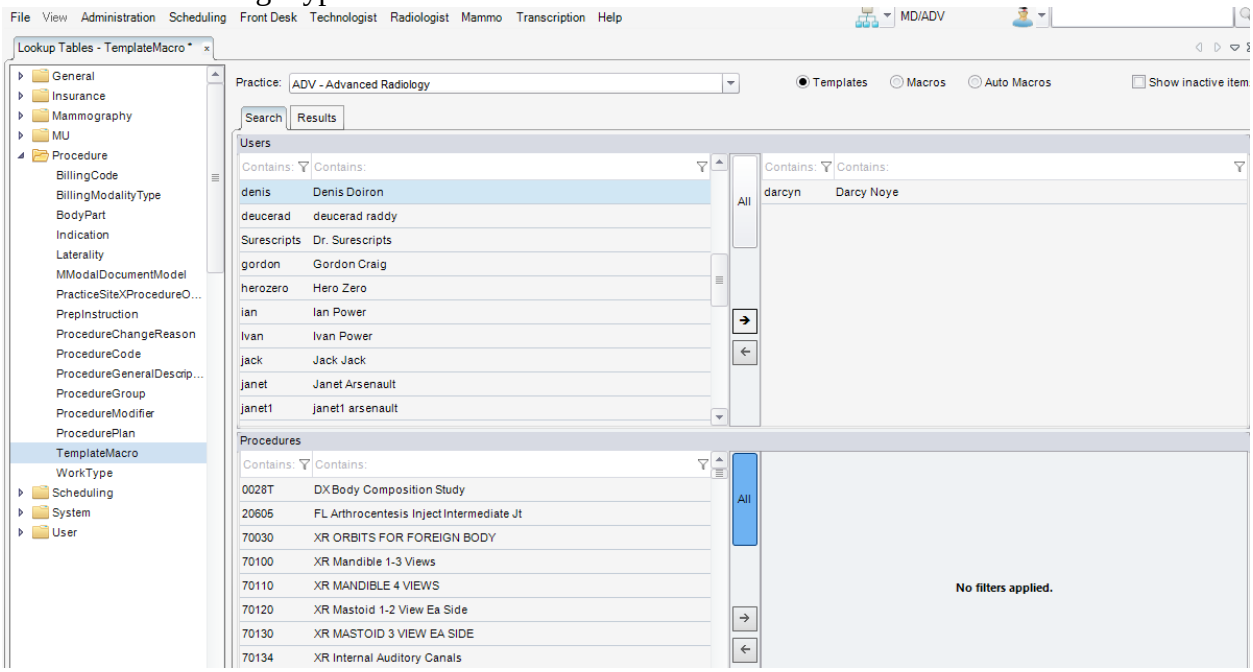

**Figure 5.40 – Displaying the search tab of TemplateMacro editor**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Here we see the results screen using the above filters. The work list is filtered based on the one filter we applied in the figure above. Also notice the details section below lists the assignments on a template/macro in two groups. Matched assignments and assignments (like before). In his case if an assignment is a match to the criteria you searched on, then it is listed under Matched Assignments

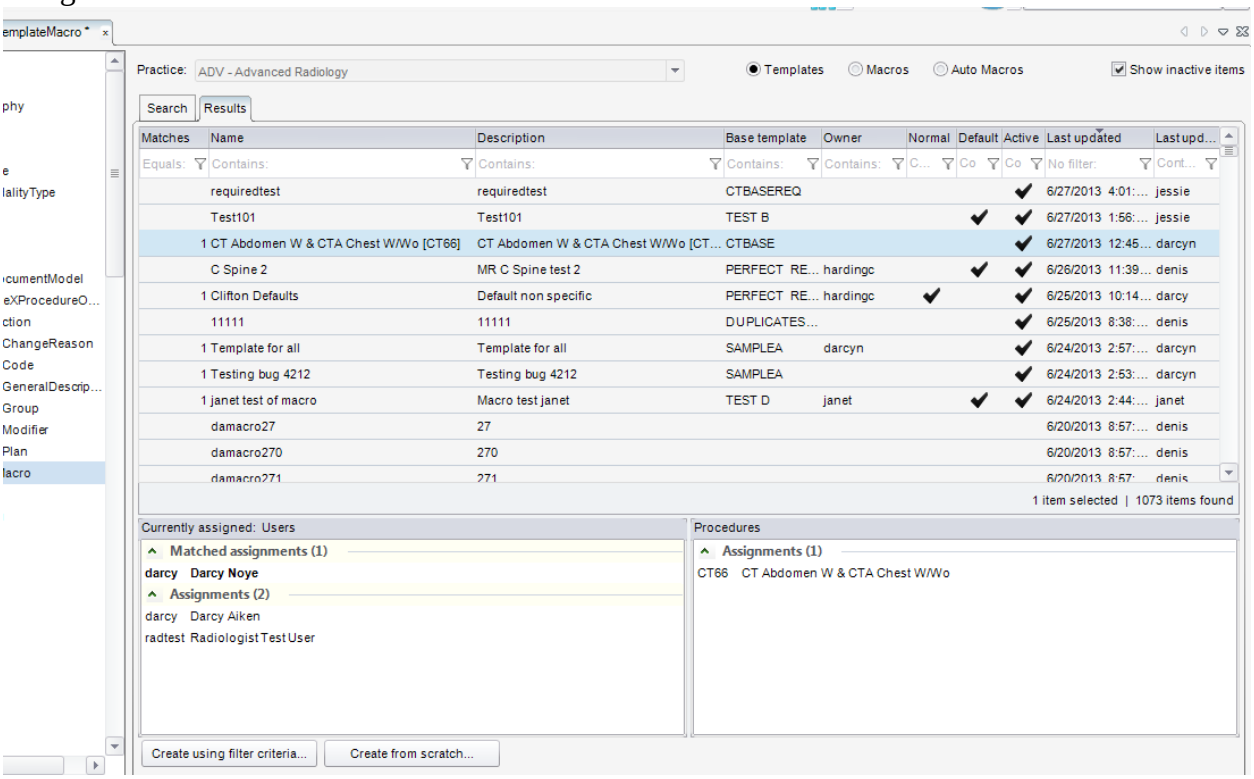

**Figure 5.41 – Results displayed on the entered filtered criteria of the Search tab.**

If the "Show Inactive items" check box is selected, the inactive templates will also appear in the results.

Loading the results screen based on a filtered criteria, you will have a "Create using filter criteria…" button as well as a "Create from scratch…" button. The "Create from scratch" option is the same as we had in previous versions. The "Create from filter criteria" button is new and uses the filter criteria to prepopulate assignments when creating a new template/macro.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

In addition to the new design of the TemplateMacro editor, some new context menu items have also been introduced.
The first is the ability to export the templates, preview the templates and export the list to excel.

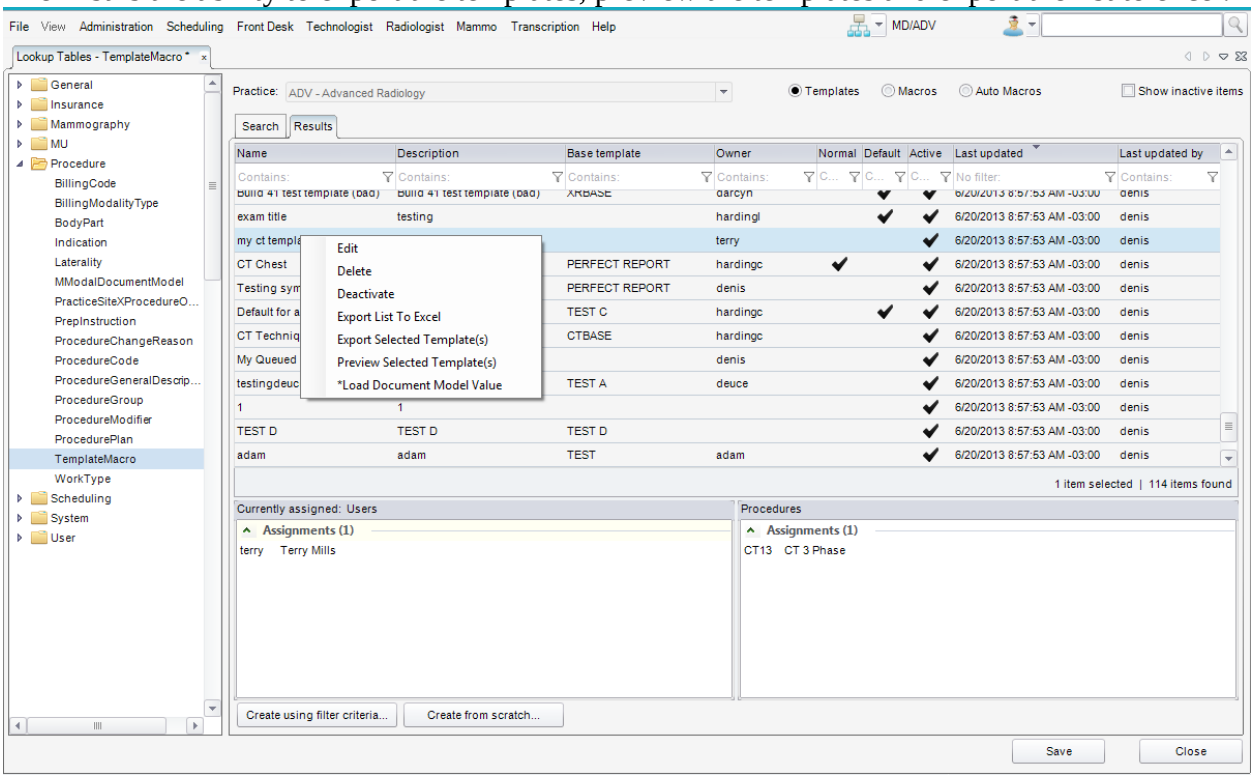

**Figure 5.42 – Context menu in the TemplateMacro lookup table window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The style sheet and the report were adjusted so that we would show empty sections and fields. Since we are previewing templates and macros, we want to show everything it contains.
The user can preview one or multiple reports.

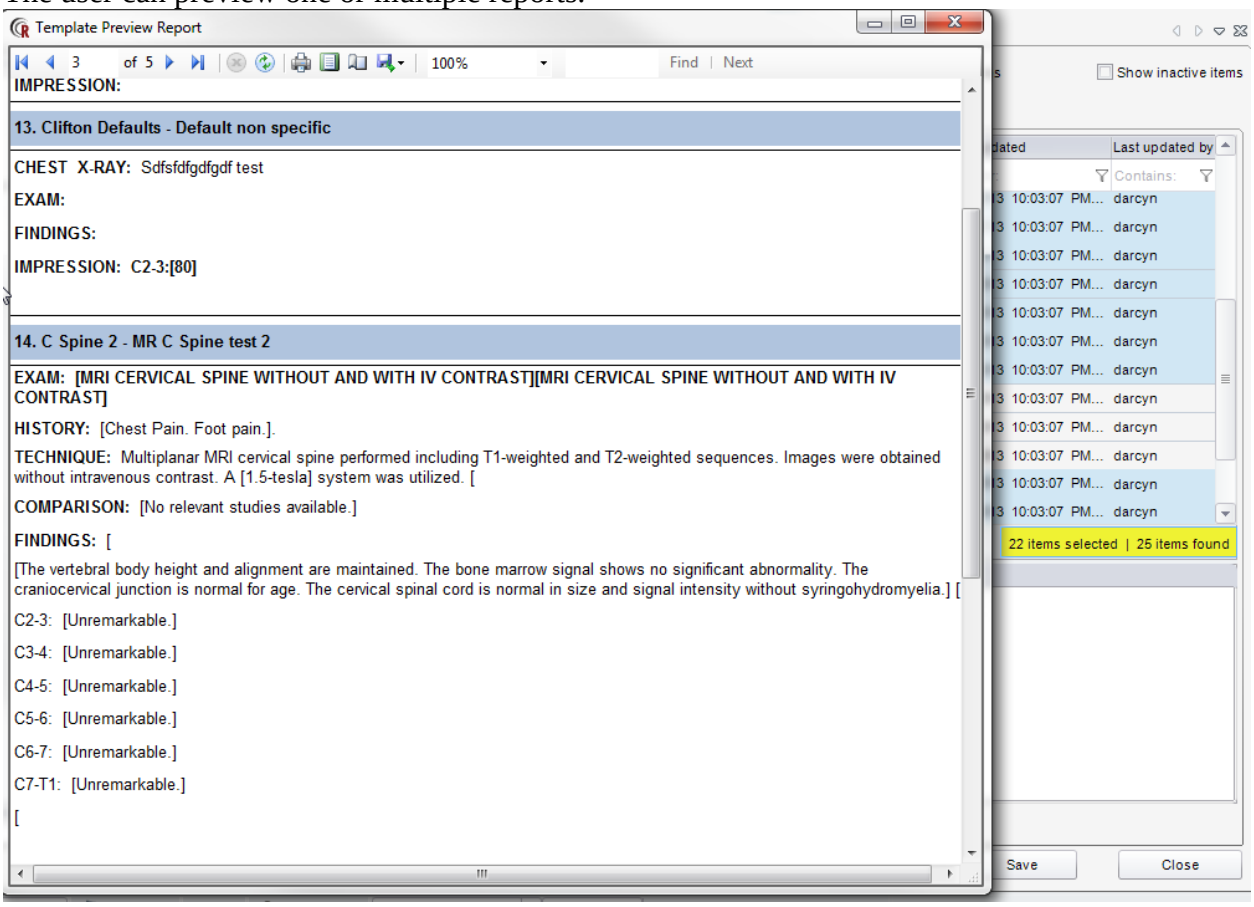

**Figure 5.43 – Template preview**

In the example above you can see that it tells me in the on the TemplateMacro lookup results tab how many rows I have selected compared with the total number of rows in my list (22 items selected | 25 items found)

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

For exports, users are prompted for a directory to save to, and then all files are saved in that location. In this case this exports the documents in their raw form, which is a CDA document, an XML representation of the document and all of its contents.

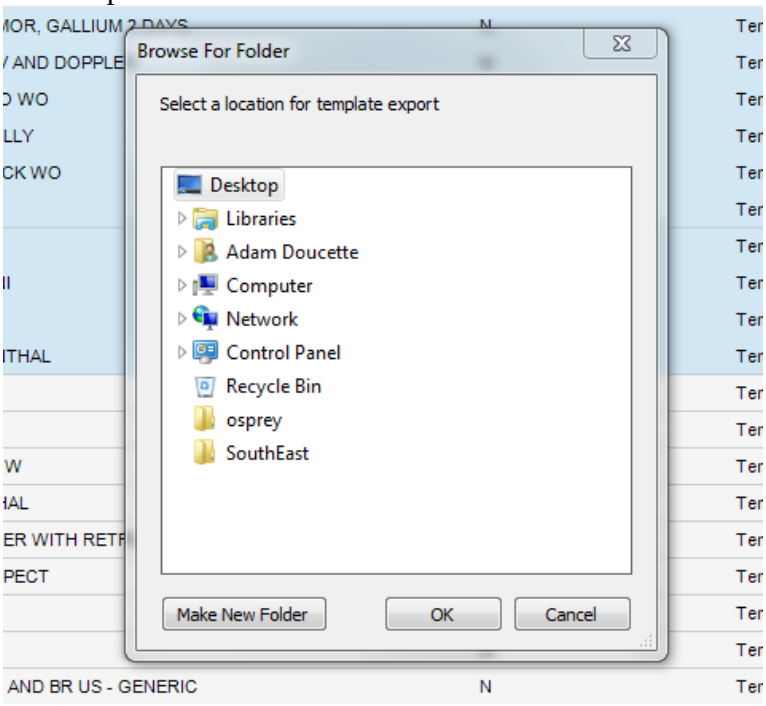

**Figure 5.44 – Exporting templates**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Verbose Trace Logging to a Flat File

We now log verbose log statements to a subdirectory entitled **verbose_log**. By default config, the files are named trace.log and when they are rolled hourly the names will get tagged with the date, such as **trace.2013-03-14.14.log.1**, **trace.2013-03-14.14.log.2**, etc.
They are configured in the ris.exe.config

```
      <add name="Rolling Flat File Trace Listener"
type="Microsoft.Practices.EnterpriseLibrary.Logging.TraceListeners.RollingFlatFileTraceLi
stener, Microsoft.Practices.EnterpriseLibrary.Logging, Version=5.0.414.0,
Culture=neutral, PublicKeyToken=31bf3856ad364e35"

listenerDataType="Microsoft.Practices.EnterpriseLibrary.Logging.Configuration.RollingFlat
FileTraceListenerData, Microsoft.Practices.EnterpriseLibrary.Logging, Version=5.0.414.0,
Culture=neutral, PublicKeyToken=31bf3856ad364e35"
          rollFileExistsBehavior="Increment" rollInterval="Hour"
          fileName="verbose_log/trace.log" formatter="Text Formatter" />
```

Also under the specialSources directive, we need to add the listener for use.

```
        <allEvents switchValue="Verbose" name="All Events">
          <listeners>
            <add name="Rolling Flat File Trace Listener" />
          </listeners>
        </allEvents>
```

The *rollInterval* can be changed to any of the following values:

| Member Name | Description |
|---|---|
| None | No Interval |
| Minute | Minute Interval |
| Hour | Hour Interval |
| Day | Day Interval |
| Week | Week Interval |
| Month | Month Interval |
| Year | Year Interval |
| Midnight | At Midnight |

**Table 5.1 – Possible rollInterval values**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting - Autosave

If a Radiologist user has a report open for dictate or signing, RIS has the ability to temporarily autosave the report and audio files.
This feature can be enabled or disabled via configuration. The new user preference is titled "Enable Autosave Reports" and is controlled by a new access string titled **"Clinical.UserPreferences.ReportingAutoSave"** that has a default of None

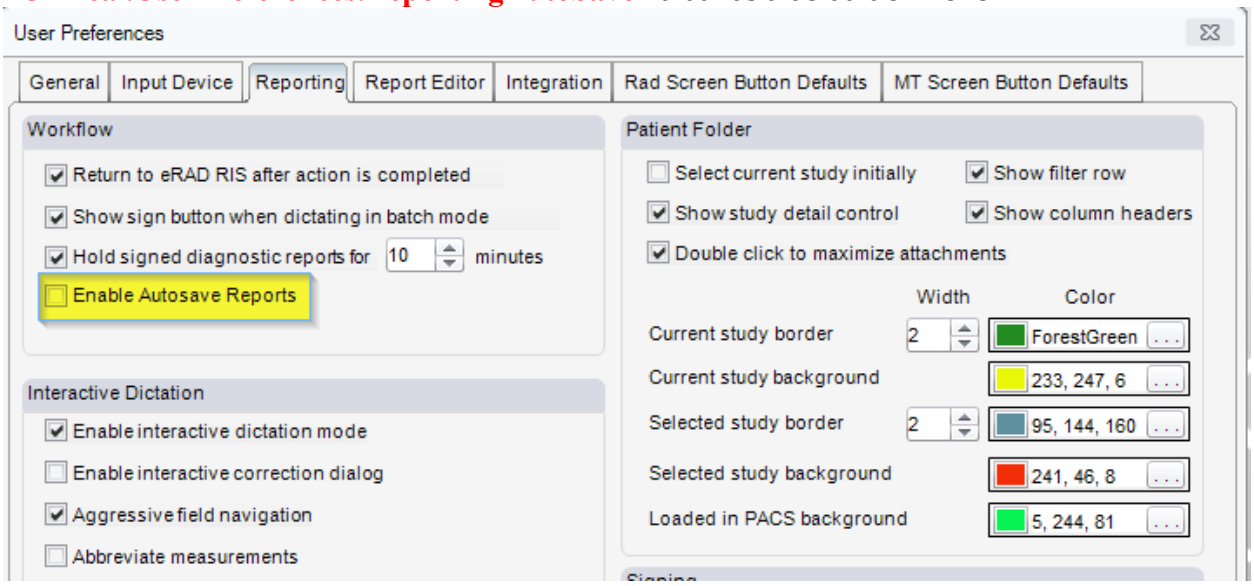

**Figure 5.45 – User preference "Enable Autosave Reports"**

The files are stored in the *application_path + /Reporting/autosave/**username**/* where **username** would be the logged in user's username.

The files have the following naming convention:
MODE-#-ACCESSION

Both audio and report files have the base filename. The report has no extension and the audio file has the extension of **.audio**.

The **MODE** is either DICT or SIGN, depending on the mode in which the report was open.
**-#-** is a delimiter used by the system

**ACCESSION** would be replaced with the accession number of the report in question.
Here is an example of an actual set of files:

**DICT-#-1070954**
**DICT-#-1070954.audio**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

When a radiologist opens an exam for dictation or signing the auto save fires up in the background and begins saving both the report file and dictation every 5 seconds. If the exam window is dismissed properly; application closed, action button, Xed out, basically as long as RIS doesn't crash, these files are cleaned up and deleted.

In the event that RIS crashes or does not get to properly close (killed from task manager) while a radiologist has the reporting window open, these files do not have the opportunity to clean up. As a result they remain saved.

When a user with saved recovery files logs into eRAD RIS, the Select Recovery Files window is presented to them:

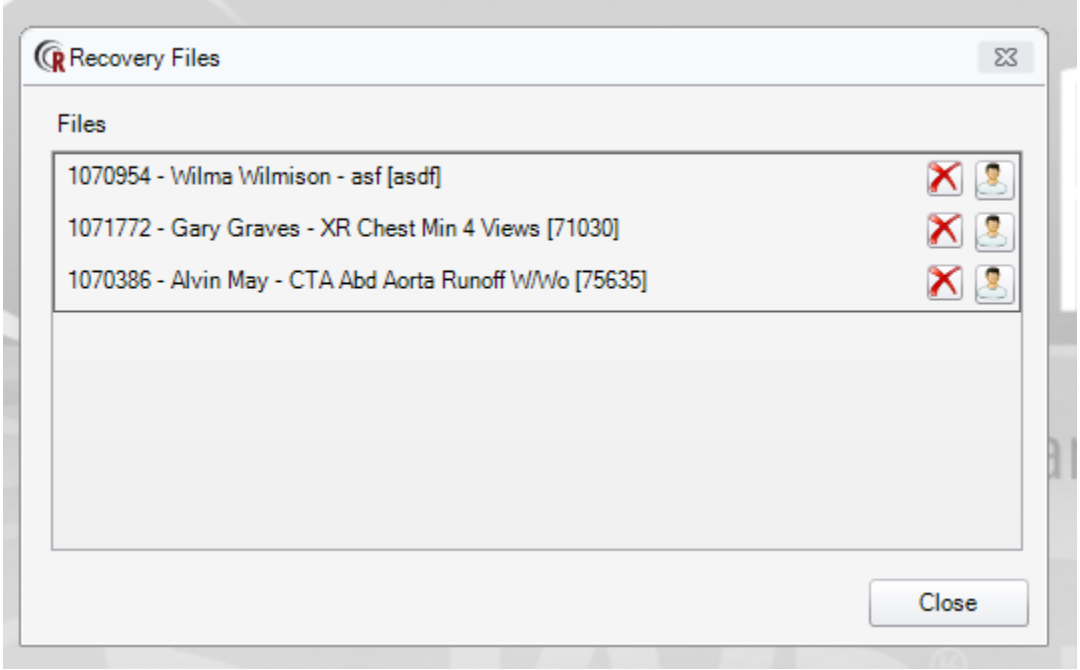

**Figure 5.46 – Recovery Files window on login**

Here the user is shown the accession number, patient name and exam type of each available recovery. They have two actions that can be taken on each recovery item. The X button will delete the files and remove the item from the current list. The Doctor button will launch the exam, restore the report and audio files from the save location as well as remove the item from the list.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

If the recovery files window is dismissed, it can be reopened from the main radiologist menu:

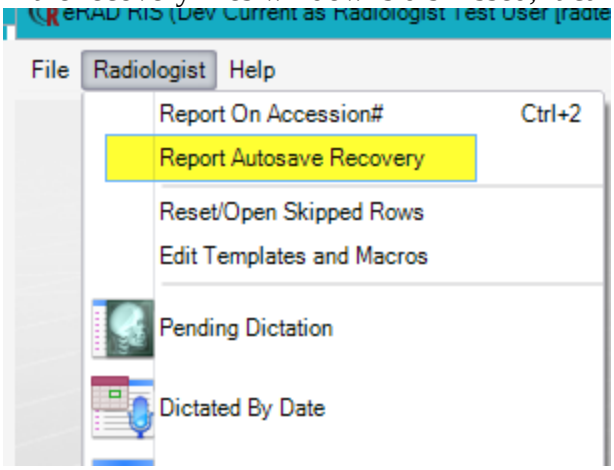

**Figure 5.47 – Autosave Recovery menu option**

In the event that another user has altered the interpretation (and committed it to the database) you will be presented the following while trying to recover your reading:

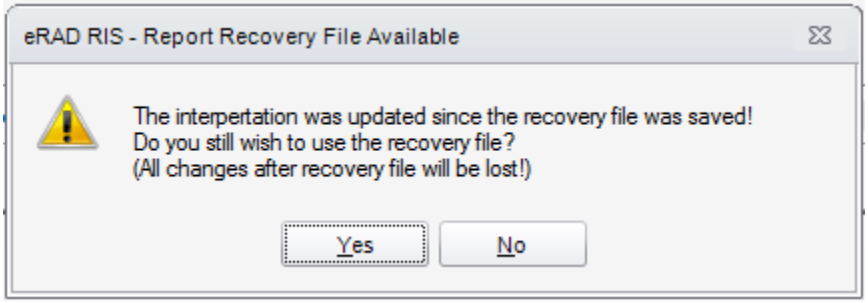

**Figure 5.48 – Confirmatory message presented if the study has already been updated**

If you chose to open the report with recover then the previous changes will be overwritten. If you do not SAVE during this session your override will be unwound, as it was not committed yet.
If you chose to not use the recovery file then you will open the report normally loading the most recent interpretation.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting - Bypass QA From Reporting Screen

The reporting window Sign split button has 2 new options that can be selected but not defaulted. When "*Sign for immediate release and continue" or "*Sign for immediate release and close" is selected the report will be moved directly to signed status bypassing QA workflow and bypassing Hold signed diagnostic reports.

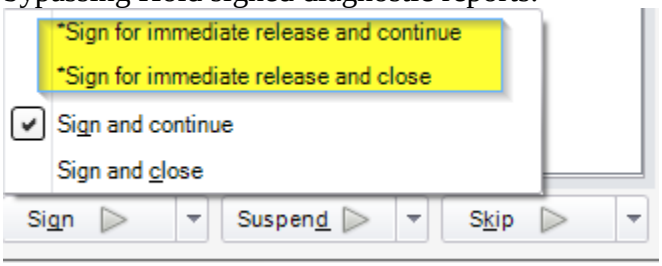

**Figure 5.48a – New options for Sign split button in reporting window**

A change was also made to the Quality Review Distribution editor.

a. Added ability to turn on/off QA at practice level, for stat and non-stat studies separately
   i. All/None option that will turn all practices to the relevant value.
b. Quality review distribution rows are now filtered by practice using a drop down.

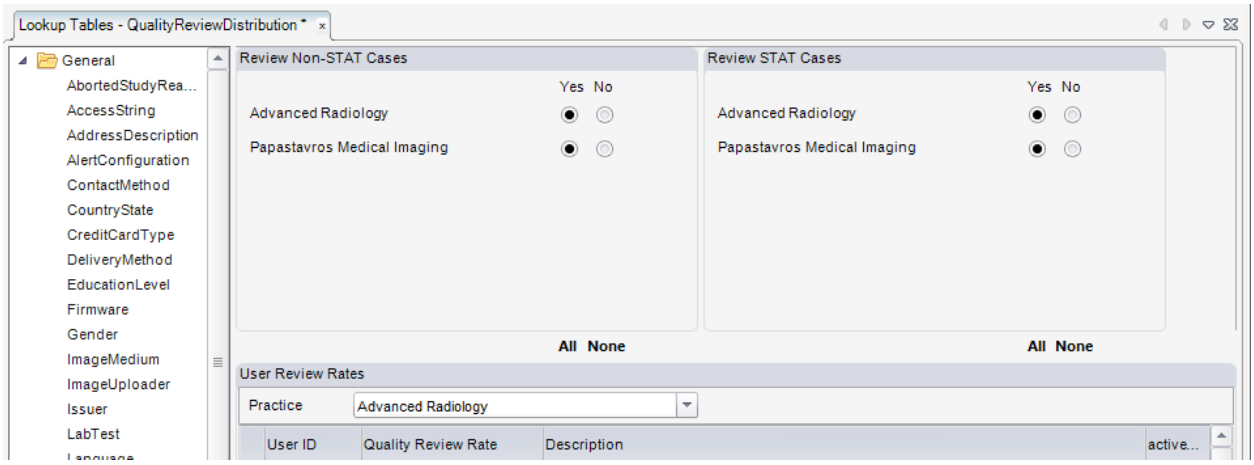

**Figure 5.48b – Additions to the Quality Review Distribution lookup table**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## CTRM Integration Support

A new button was created on the reporting screen located in the lower left, that will be available if the user has full access permission to the "**Clinical.CTRNNotification**" access string. The CTRN notification has two primary states, when the study does not have any notifications currently saved in the dataset it will appear greyed out; , if there is currently a notification that has been created it will be appeared pressed and with color; .

From within the notification screen the currently selected referring physician will be selected by default, with phone numbers and email address listed to be used. An additional referring can be selected, either from the dropdown or by searching from the available referring in the database.

When a referrer is selected the configured notification Phone Number, SMS (cell Phone) Number and email address will be used to populate the text box. If the referrer has chosen to be contacted by one of these options, it will be checked by default.

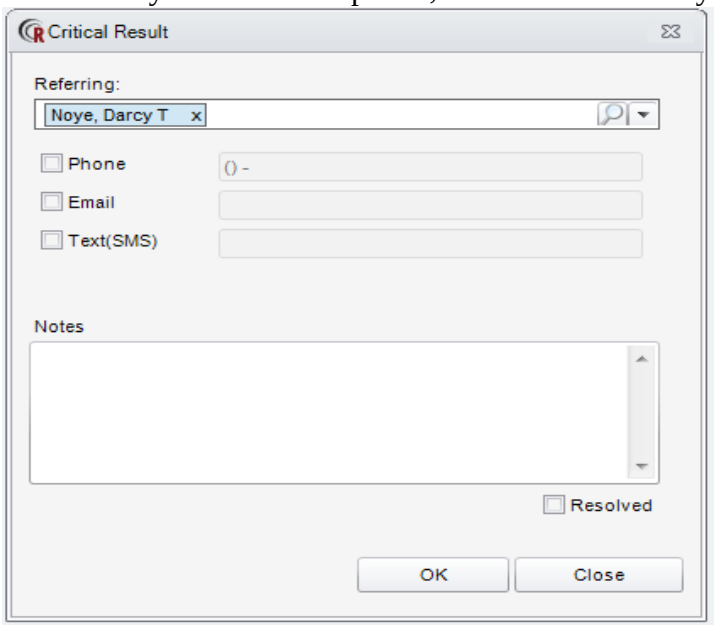

**Figure 5.49 – Critical Result window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

We have also added to new work lists located under the Radiologist menu.

The first is titled **Critical Results**, controlled by access string **"WL.Rad.MyCriticalResults"**

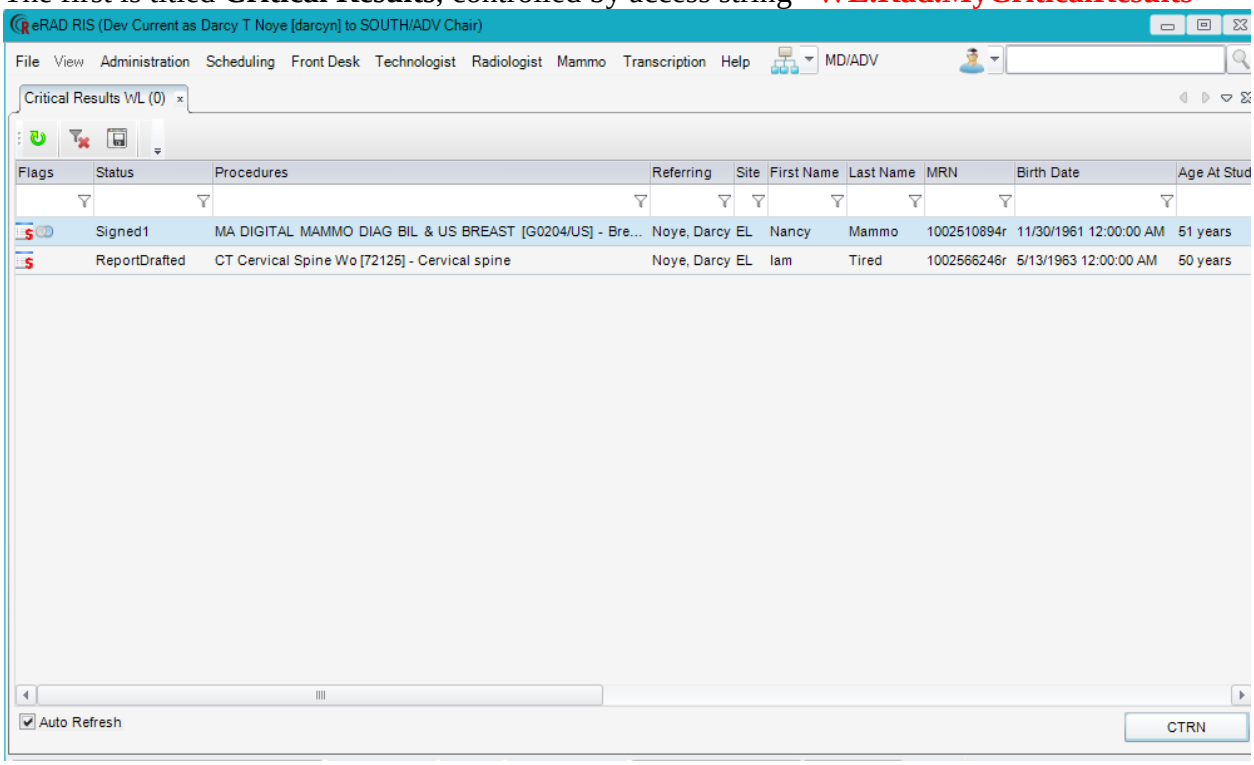

**Figure 5.50 – Critical Results WL**

The second is titled **All Critical Results**, controlled by access string **"WL.Rad.CriticalResults"**.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

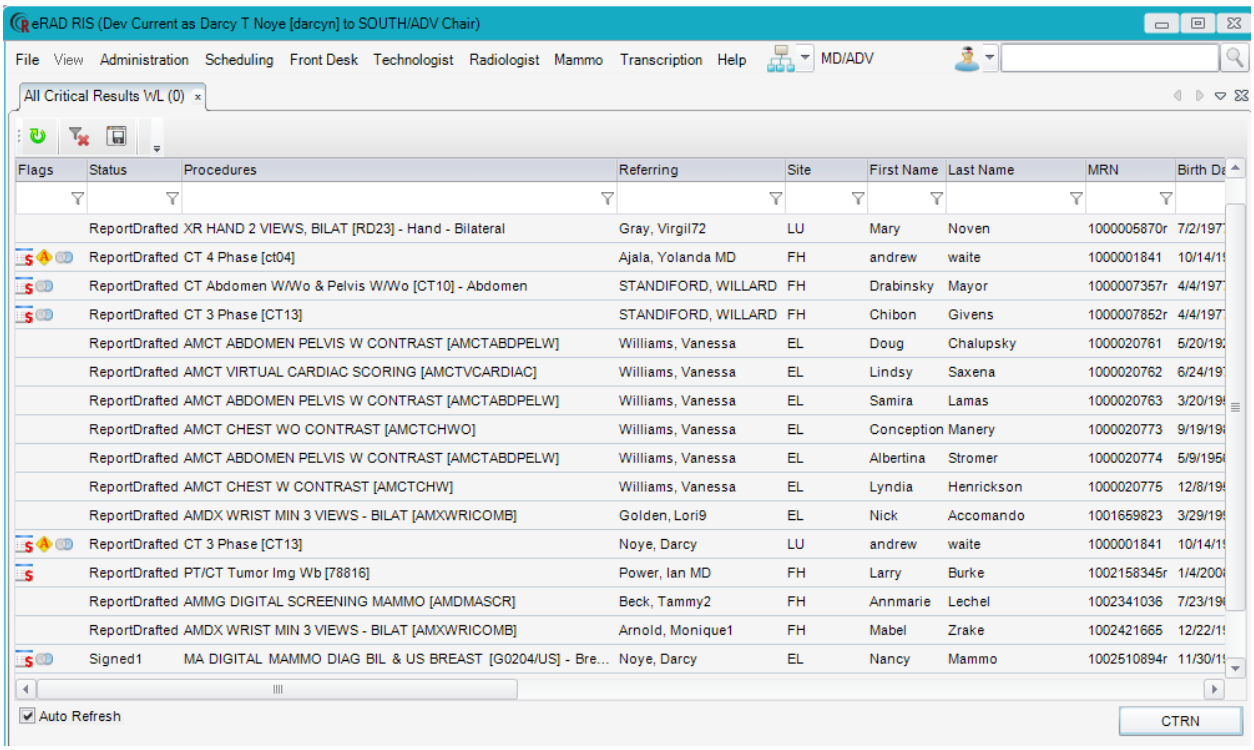

**Figure 5.51 – All Critical Results**

Each work list has a context menu that consists of CTRN and Audit History.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Increase Weighting of Laterality in Relevancy Calculation

Now placing more weight on the ordering of relevant studies if the matching study's laterality matches, as shown in the following example where the Right Knee, gets a score of 69 instead of 100.

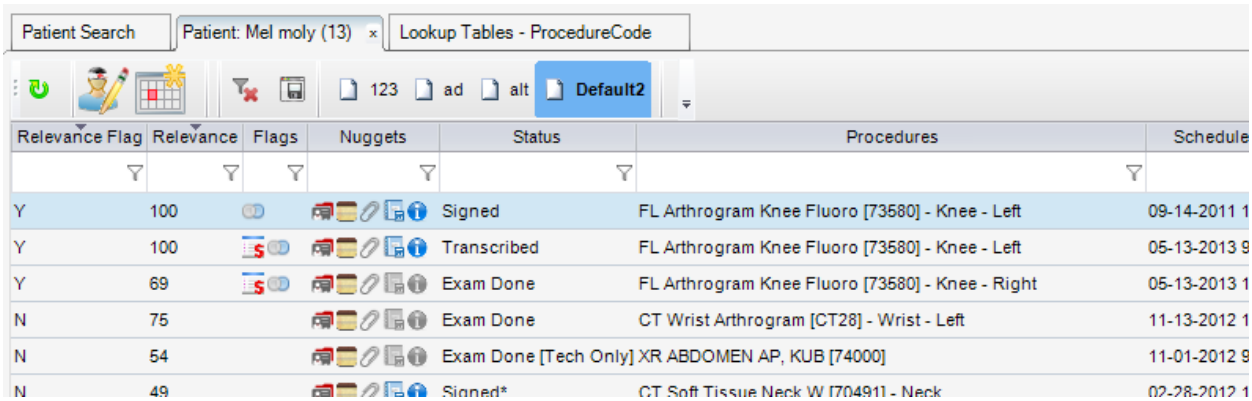

**Figure 5.52 – Relevancy calculation**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Personnel Merge

There is now a Personnel Merge option on the Administration menu. The new menu option is controlled by the access string "Clinical.PersonMerge". The Personnel Merge screen is modeled after the Patient Merge screen, in that the user can search for 2 people (e.g. referring physicians), choose which one is the Source (i.e. the person that will be marked as deleted), which one is the Destination (i.e. the person that will survive the merge), and there is also a limited ability to choose some criteria from the Source that will be used to update the destination (currently only the NPI can be retained from the source).

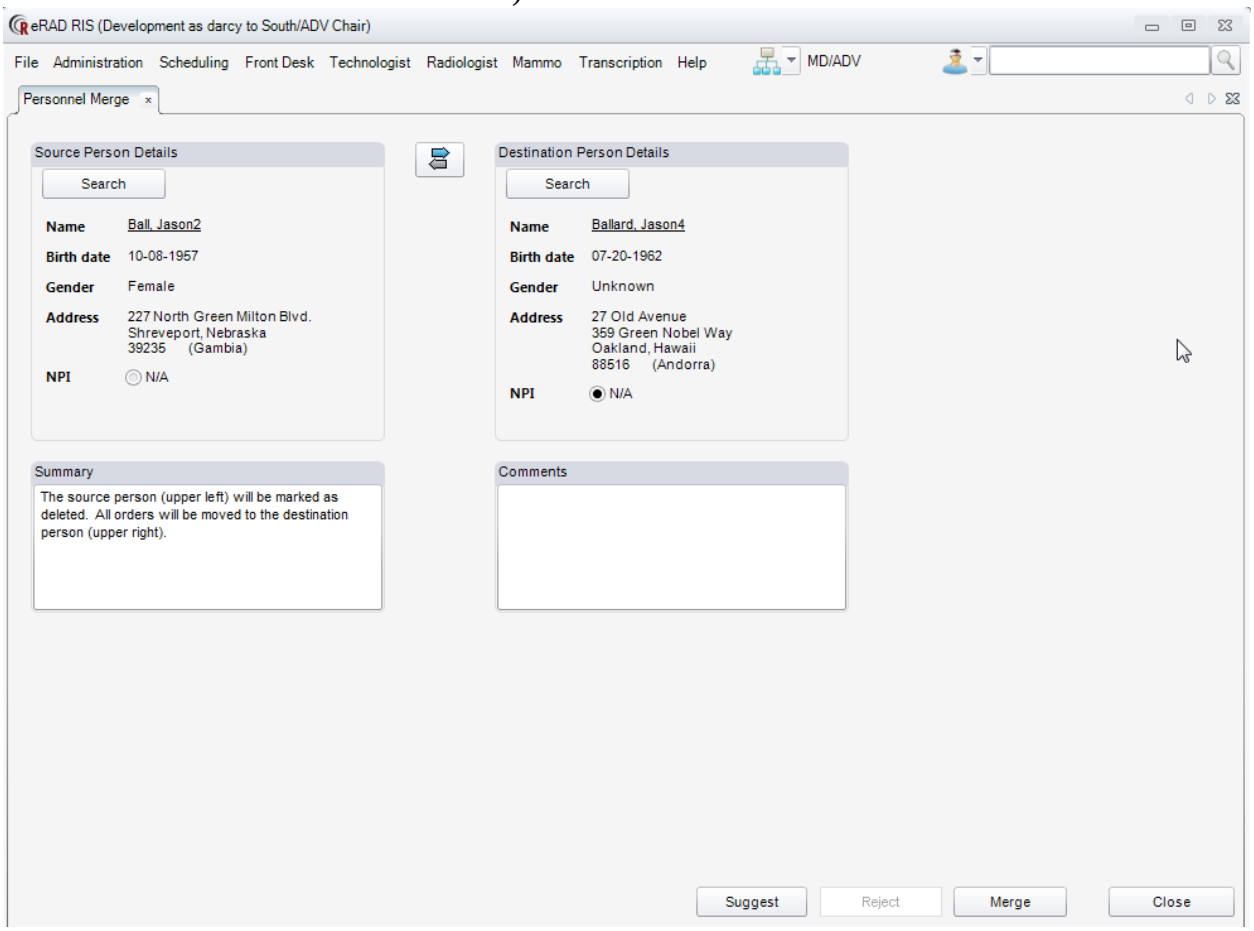

**Figure 5.53 – Personnel Merge window**

The Person Detail panels show the Name, Birth date, Gender, Address, NPI and User ID if applicable. As in the Patient Merge screen, there is a switch button located in between the two person detail panels that allows the user to swap the source person and the destination person.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Merge Suggestions

A comment section is designed for users that do not have sufficient authorization to perform a merge, but would like to leave a comment or detailed explanation for the RIS Administrator who will perform the merge at a later date. When the user clicks the Suggest button, the screen will save their suggestion and close. The details of the merge suggestion will then appear on the Personnel Merge Request Worklist.

## Personnel Merge Request Worklist

The Personnel Merge Request Worklist displays all of the outstanding Merge Suggestions. Access to this work list item is controlled by access string "WL.PersonMergeRequest". Items on this worklist will disappear when one of the following occurs:

a) The merge is performed
b) The merge is rejected
c) Any merge occurs that results in the source or destination person being marked as deleted (i.e. an alternate/conflicting merge took place)

The administrator who performs the action on the suggested merges will need the access string "Clinical.PersonMergeAdmin". These actions are to complete or reject the merge.

## Reject Merge Suggestions

A RIS Administrator or other authorized user can open the Personnel Merge Request worklist and then double-click any row (or click Personnel Merge) to open the Personnel Merge screen and see the details of the Suggested Merge. The administrator can Reject the Merge if it is felt that the suggestion was inappropriate, and the row will disappear from the worklist. The ability to reject a merge is controlled by access string "Clinical.PersonMergeAdmin".

## Effect of a Merge on Source Person Record

The source person will be marked as deleted, and no longer be returned in Internal Person Search results. Additionally, their NPI will be set to Null.
For a referring physician, all orders that are marked as being "Requested By" or "CC" for this physician, will be marked as "Requested By" or "CC" as the new physician (destination person of the merge).
The addresses associated with the source person will be moved to the Destination Person, but marked as inactive. A RIS Administrator or other authorized personnel can make the

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

determination as to which addresses should be set as active. We make no effort to determine which addresses may be duplicated between the source and the destination.

## Effect of a Merge on Destination Person Record

The destination person's internal notes will be updated to show that a person merge took place. The message will be similar to the following:

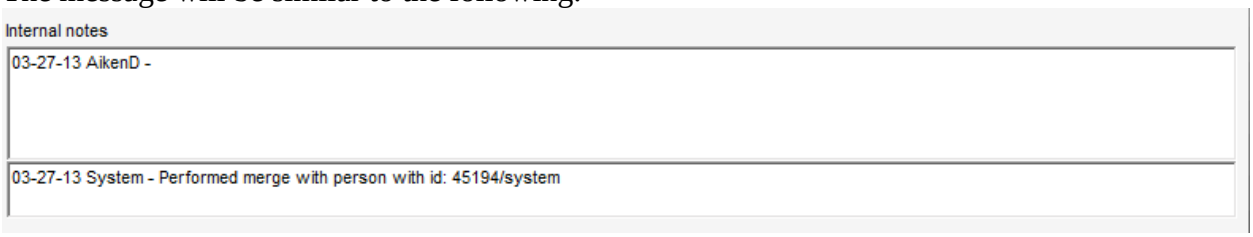

**Figure 5.54 – Destination person notes after person merge**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Auto Open Work List Tabs

This feature will allow the user to pre-set which worklists they would like to have automatically open at the time of login. The worklists to be open at login can be set up in 2 ways.

The first is from the context menu of the work list tab itself. The user can select the option to Open on Login. This context menu option will only be available for work list. If context menu of a data window is accessed, this menu option will be disabled.

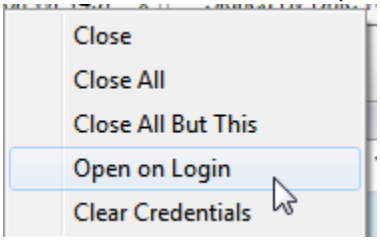

**Figure 5.55 – Open on Login context menu option**

Once selected, the menu item will become checked

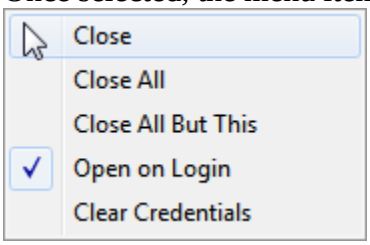

**Figure 5.56 – Open on Login selected**

This tab will then automatically open when the user launches eRAD RIS. This is identified by the small icon will appear in the tab header to indicate that it has been set to automatically open.

**Figure 5.57 – Work list tab displaying icon for Open on Login**

Multiple worklist tabs may be selected, although the system will limit you to approximately 7 tabs, based on the length of the tab name. The selected tabs are automatically saved to each user's preferences, so the same tabs will auto load on any workstation the user uses.
The user also has a new feature to allow all RIS tabs to be re-arranged by dragging them. When any auto-open tabs are re-arranged, their loading order is adjusted so that on re-loading, this order will be reflected. If the maximum number of tabs to Open on Login has been reached, the user will be informed with a pop up message.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

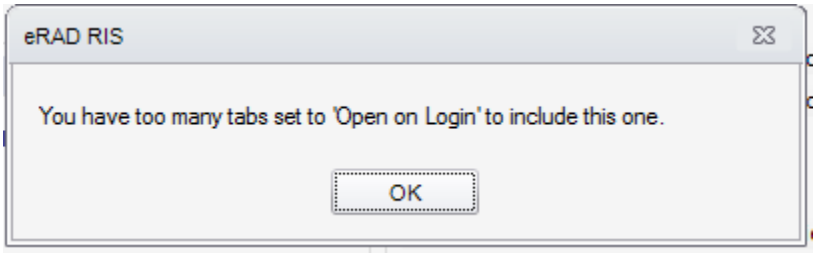

**Figure 5.58 – Message informing maximum number of tabs to open on login has been reached**

In addition, the ability to manipulate these screens has been added to the user preferences screen:

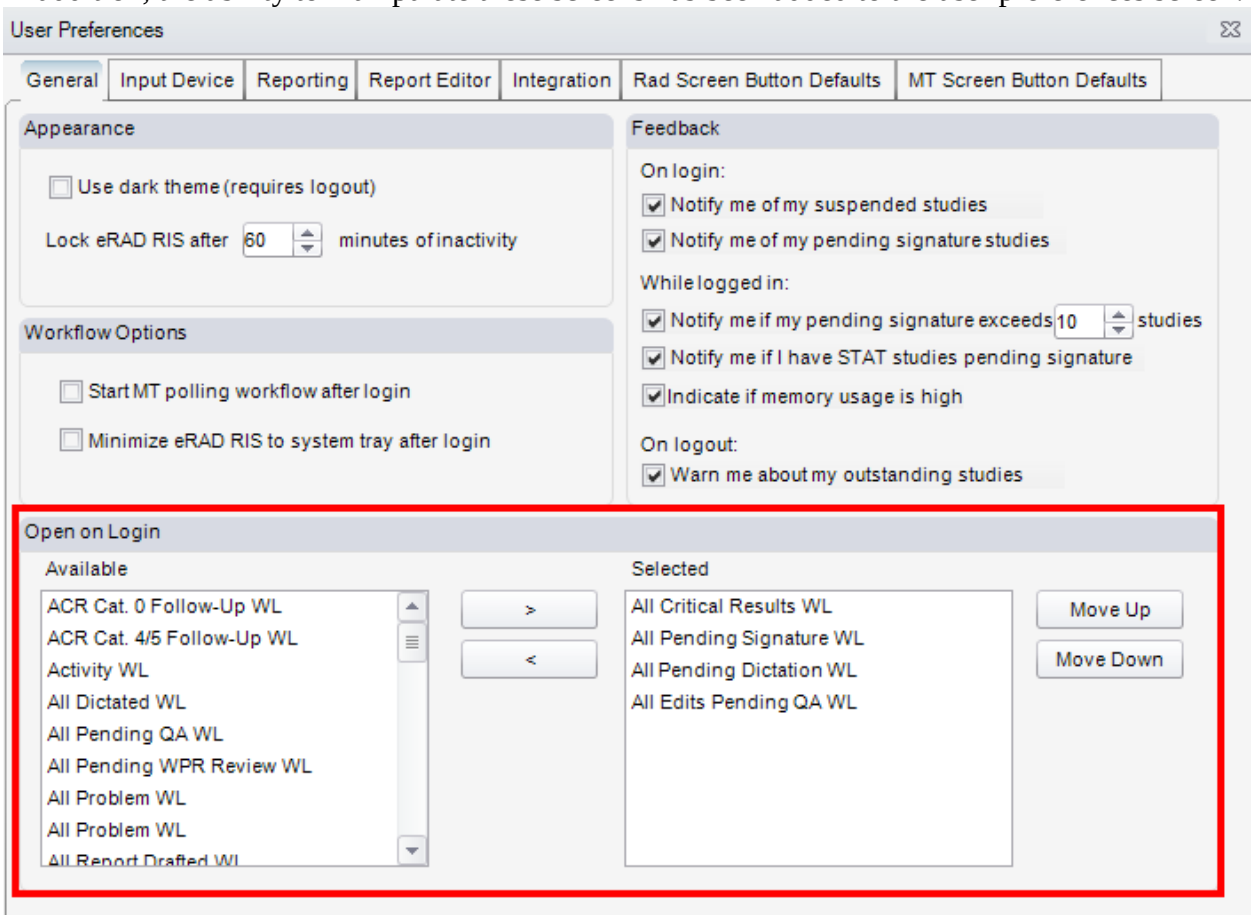

**Figure 5.59 – User preference window displaying Open on Login**

This screen allows the user to re-arrange the loading order for the tabs by using the up and down and also to add or remove tabs from the list of all available tabs that can auto-open. By design,

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

the list of available worklists is a complete set of all worklists, but if the user does not have permission to the worklist, it will not open on his/her workstation.

Lastly, if the user closes one or all of the work lists they have set to be Open at Login and they wish to load those work lists again, they can select the File menu option of Auto-Open Worklists. If the user has one of the four work lists open, the other 3 will load in their pre-defined order.

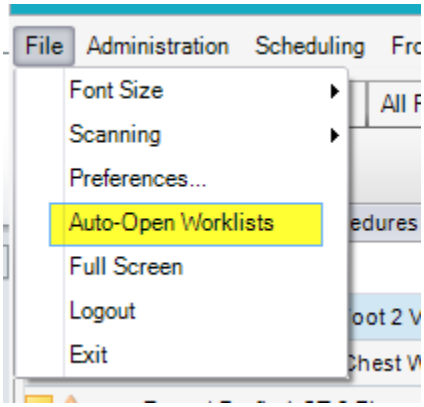

**Figure 5.60 – File menu option to Auto-Open Worklists**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Enhance Work List Filtering

Under the filter icon menu you will see a new option of "Select Values…" that will open the self-titled Select Values window. Columns such as Flags, Status, Procedures, and Modality Type to name a few will have this option.

**Figure 5.61 – Select values filter option**

Once the filter is applied, it defaults to contains, from Starts with.

The Procedures column is somewhat unique as this columns Select Values list will have the Modality Type, Body Part and Laterality values available for selection. A double click on the Possible Values / Selected Values item will move the value to opposite side. The arrows will also perform this action, but allow the user to multi select values to be moved to the opposing side.

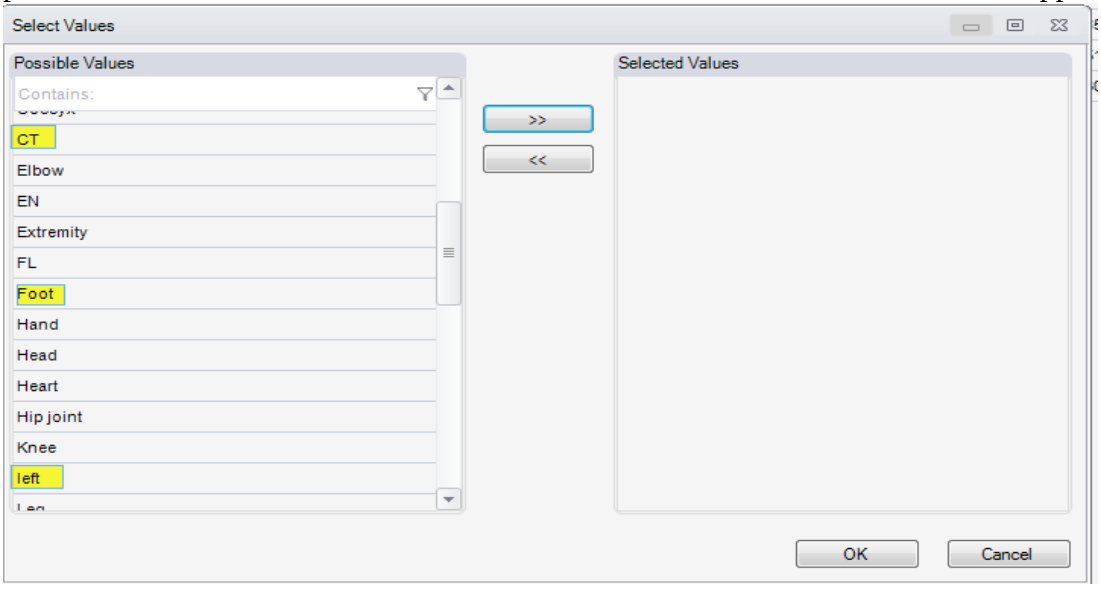

**Figure 5.62 – Select Values window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Patient Merge Requests Work List Enhancement

An additional column titled “Duplicate” was added to the Patient Merge Request. If the Source Patient Id and Destination Patient Id are suggested more than once in the same merge request, this column will have a check mark to indicate that it is a duplicate entry.

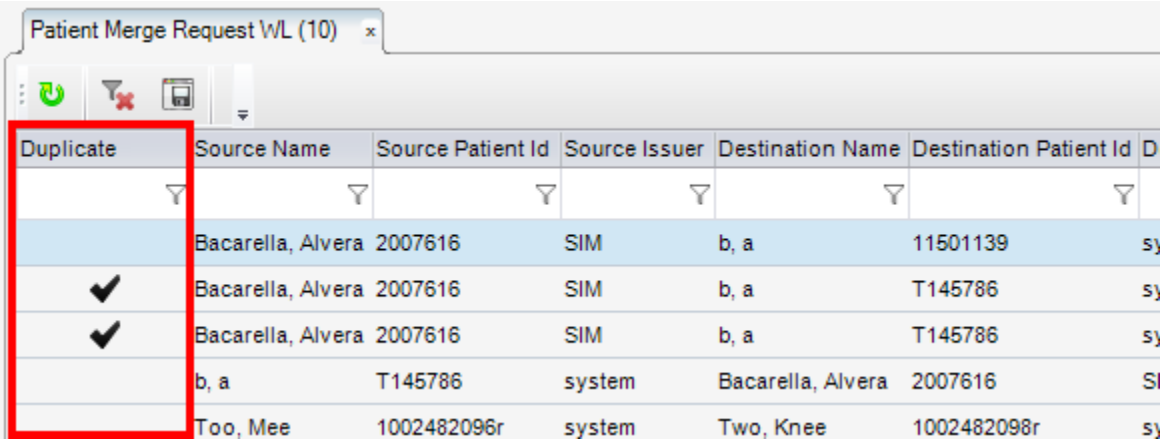

**Figure 5.63 – Patient Merge Requests WL**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Remove Date Filter from Activity Work List

In the previous build the Activity work list was controlled and displayed in a daily view. The user would be required to move from day to day to see what was on the Activity work list. This date control has been removed. The Activity work list will now display all studies that are not completed.

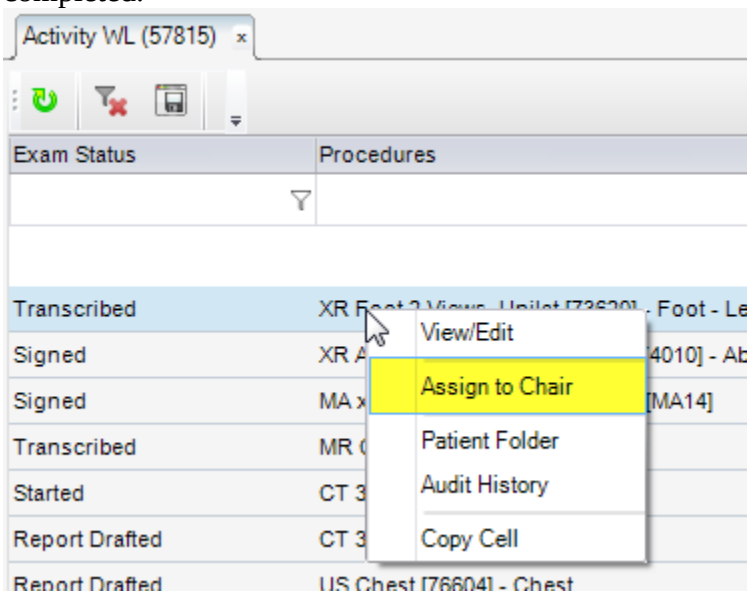

**Figure 5.64 – Activity WL**

Additionally, a new column was added to the Chair lookup table called "Hold_On_Activity_WL_Flag". When this flag is set to "Y", any updates to a study assigned to that chair will remain in the activity worklist until the study is removed from that chair. Note, any studies assigned to a chair that just had the "Hold_On_Activity_WL_Flag" changed will not be automatically added or removed to or from the activity WL. An update to the study row has to occur for it to recognize whether it should or should not appear on the activity WL.

All studies recently updated and assigned to a chair with this flag will appear on the activity WL until it is unassigned from the chair or its status changes from "Cancelled", "Discontinued" and "Void".

The Assign to Chair context menu option is also available.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## IVT – Insurance Verification PreCert tab Enhancements

At the top of the Insurance Verification PreCert tab will now have the Patients date of birth and the Referring physician.

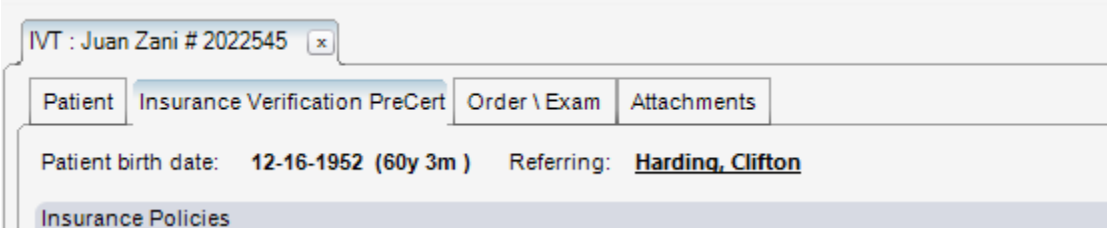

**Figure 5.65 – Insurance Verification PreCert enhancements**

## Scheduling - MRN Added to Appointment Book

From with the Appointment Book, if the user hovers over the study, it would display details of the study. The MRN has been included with this information that is presented to the user.

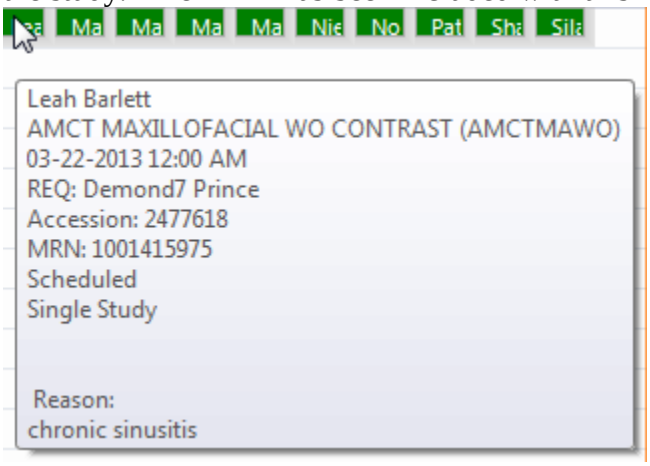

**Figure 5.66 – MRN included in the hover value in Appointment Book**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Scheduling – Repeating Modality Restrictions

The modality lookup table has an additional option added to the modality restriction grid. The Repeat column has a list of values that include days of the week, weekday, weekend, all week and full range.

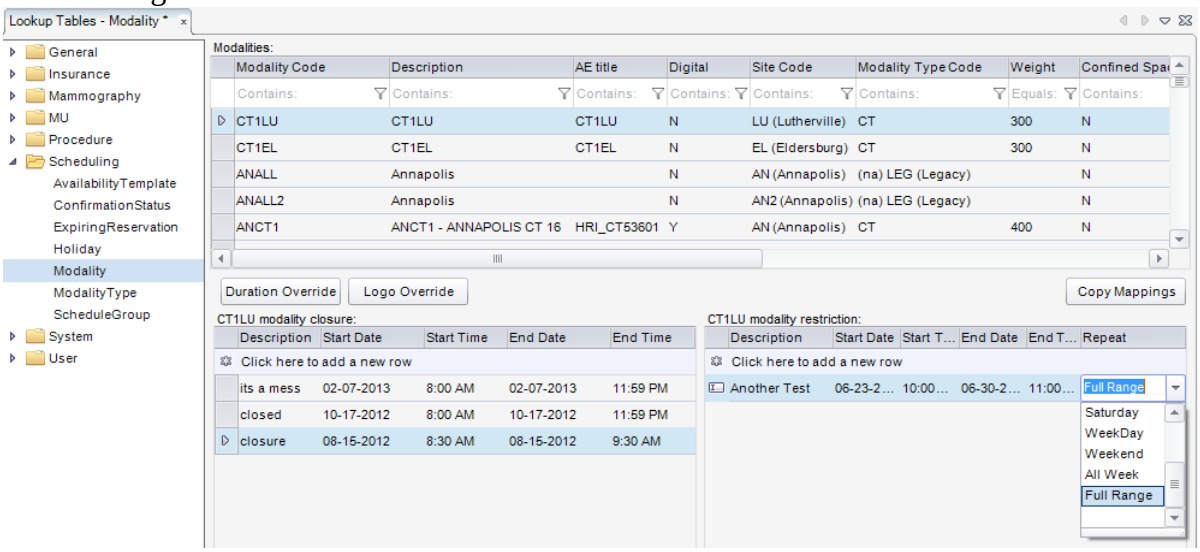

**Figure 5.67 – Modality repeat restriction**

An example of this would be restriction on the weekend between 7am – 5pm, selecting the Weekend option would apply the restriction to Saturdays and Sundays in your specified date range.

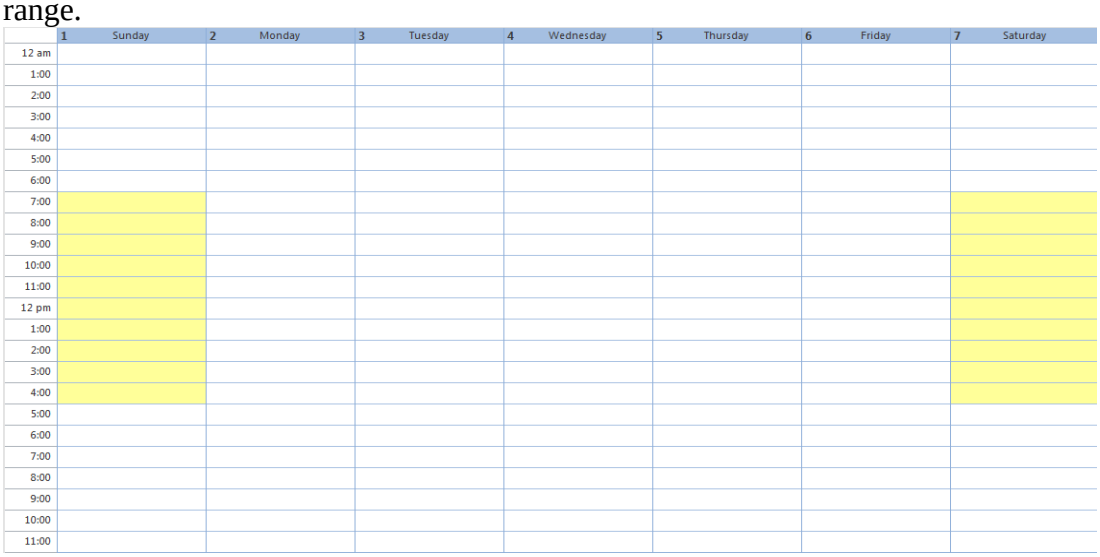

**Figure 5.68 – Calendar displaying the configured weekend restriction**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Scheduling – Ability to Check-In Procedures Separately

We will now scan for studies that span more than 3 hours between the end of one study and the start of the next and display a slightly modified version of the prompt to allow for the selection of individual studies; with the study that was opened from the WL would be a disabled checked box which does require that study to be opened.

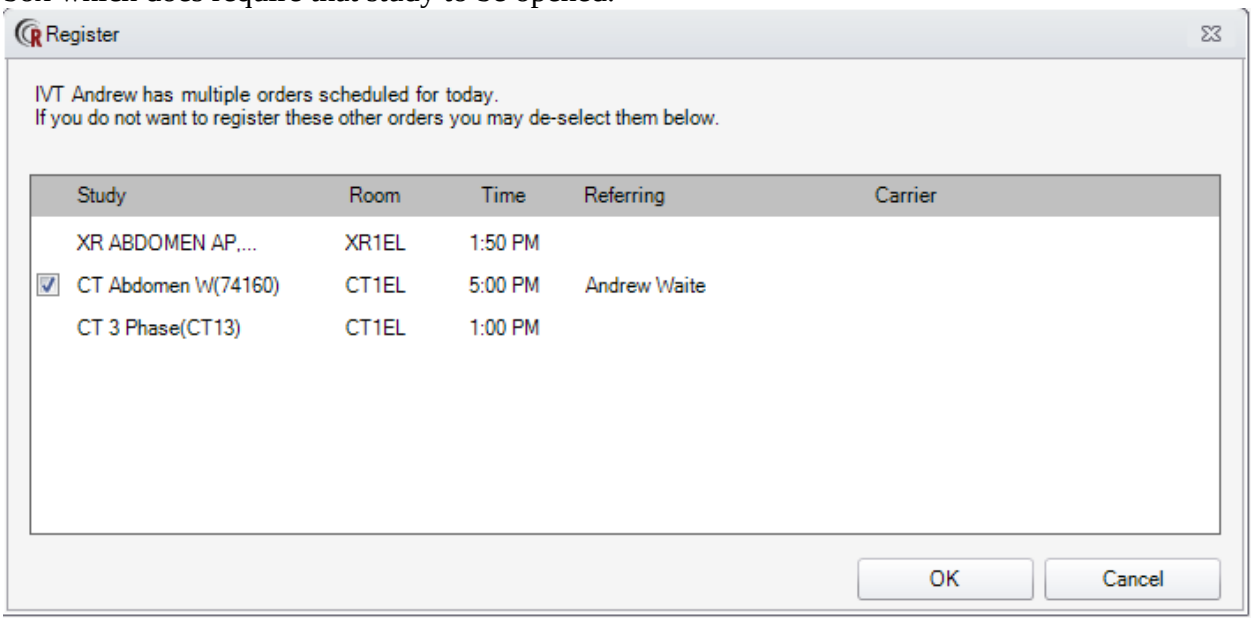

**Figure 5.69 – Ability to unselect order to be checked in.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Scheduling – Enter Follow-Up Information

The scheduling windows, including Schedule Order, Confirmation, Register, etc… will now include the Contact Log tab. On this tab the user can add contact log information. Add new contact information the user can select a pre-defined contact type and notes pertaining to the contact. The tab will display each contact attempt with the date, Contact by, captures the logged in user, and the contact type. The first column will display a Notes icon to let the user know if there were notes entered in the Contact Details.

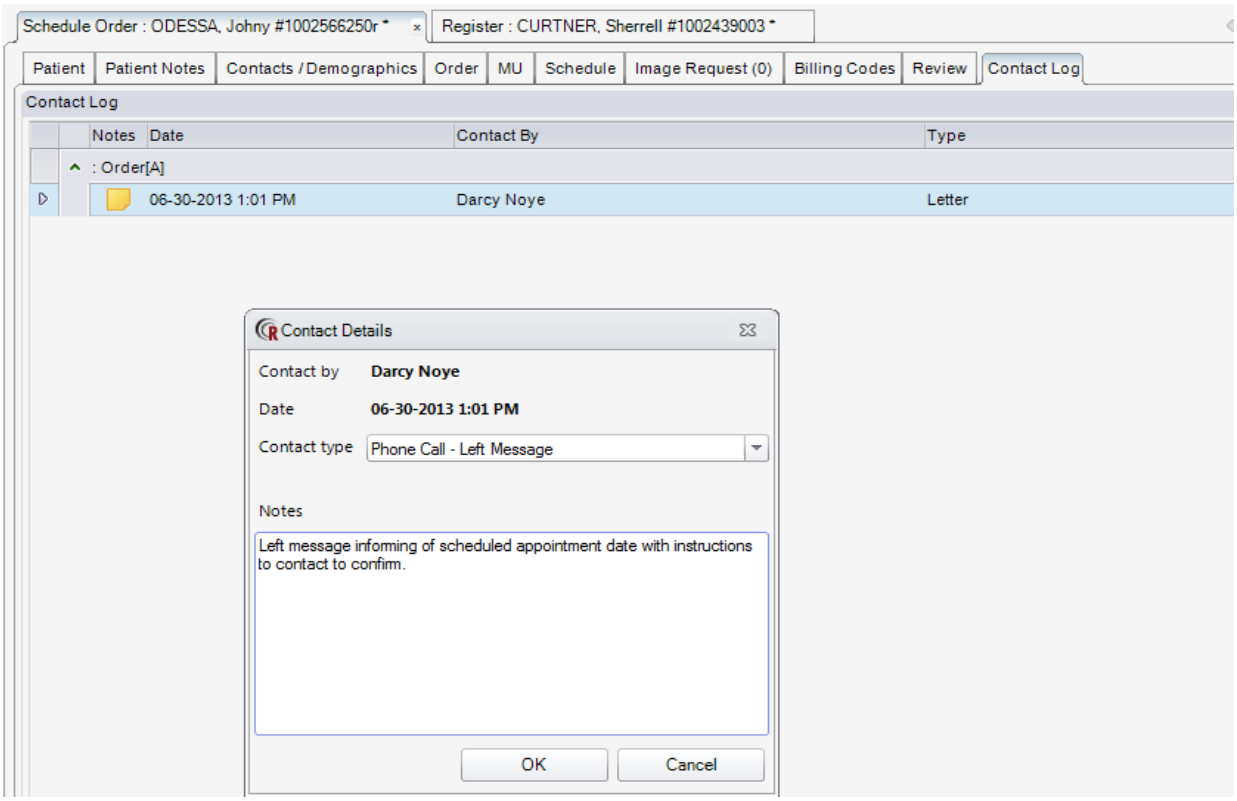

**Figure 5.70 – Contact log**

The Orders to Schedule WL and the IVT WL have two additional columns added to show Last Follow Up Date and Last Follow Up Type

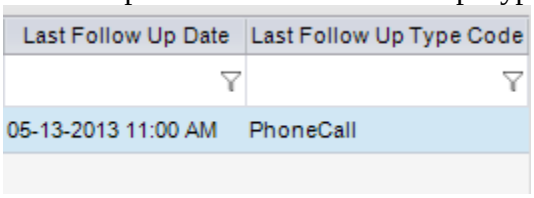

**Figure 5.71 – New columns added to Orders to Schedule and IVT WL's**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Scheduling – Import EMR Scheduled Procedures Filtering

Scheduling an order from and EMR, the ordered procedure will sometimes have to be matched up that ordered procedure with an eRAD RIS procedure.

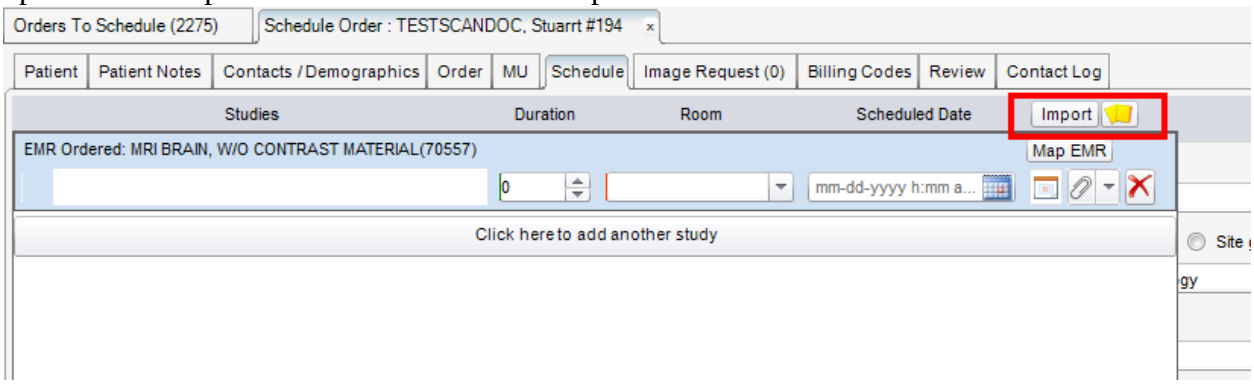

**Figure 5.72 – Import procedure**

This list could be extensive, showing too many rows in the Import Scheduled Procedures window. A checkbox has been added to the bottom of the import window.

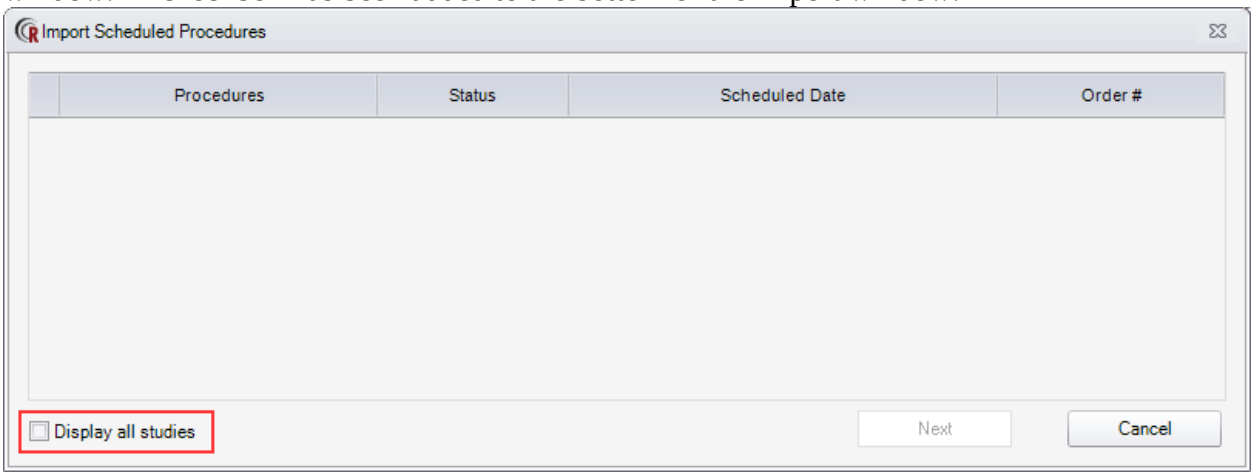

**Figure 5.73 – Import Scheduled Procedures window**

By default we will display studies that have occurred in the last 2 days, in the appropriate status. If there are more studies that to be displayed then the check box will be enabled to allow for a larger list of items.

Upon checking, the grid will display all studies in a valid status that have been performed in the 60 days or scheduled within the next year.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Signs and Symptoms Field and Renaming Chief Complaint

In previous versions a field titled Chief Complaint was present on all Order tabs. This fields name has been changed to “Reason for Exam”. An additional change has also been made to all Order tabs. A new field titled “Scheduling Notes” has been included, and is positioned to the right of Order Notes field.

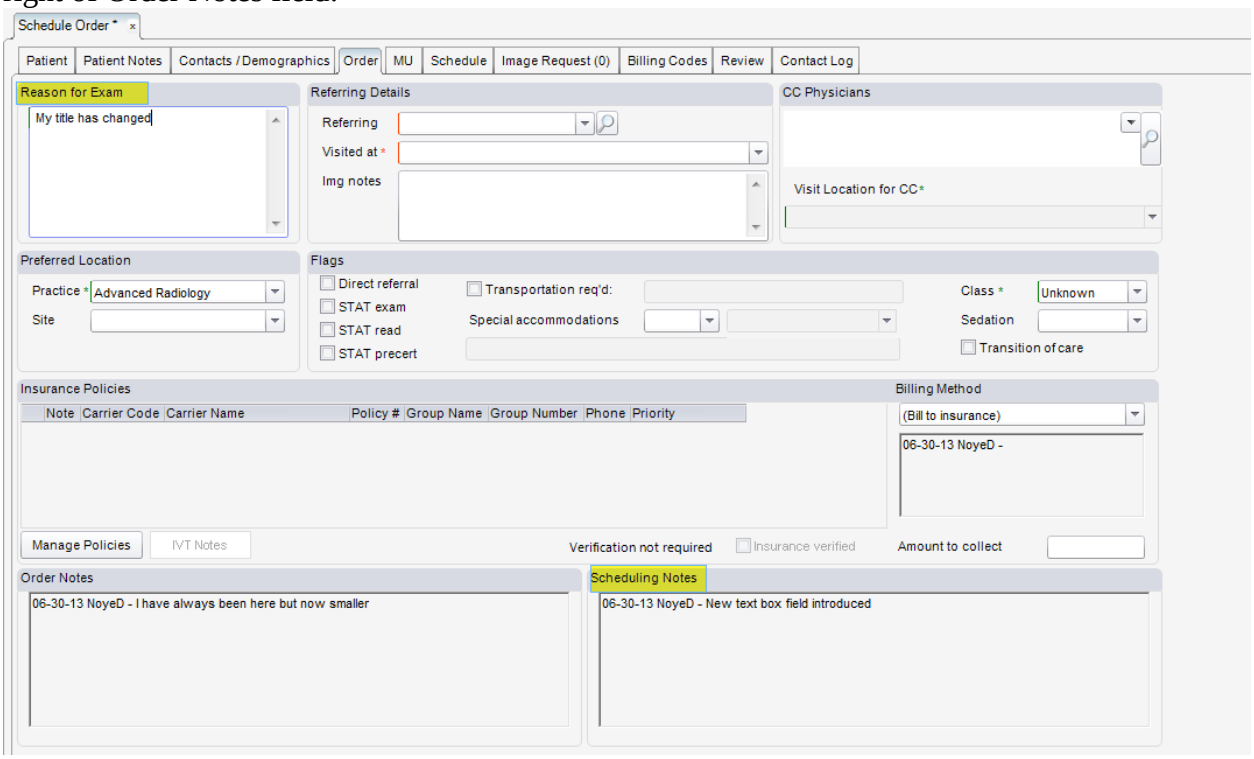

**Figure 5.74 – New Scheduling Notes field and Chief Complaint changed to Reason for Exam**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Another new field titled "Signs & Symptoms" is being added to the Documentation tab of the Perform Exam window. If the Signs & Symptoms field is required will be determined by a new system configuration setting "**SignAndSymptomsRequiredByTech**" which has a default value of False (not required).

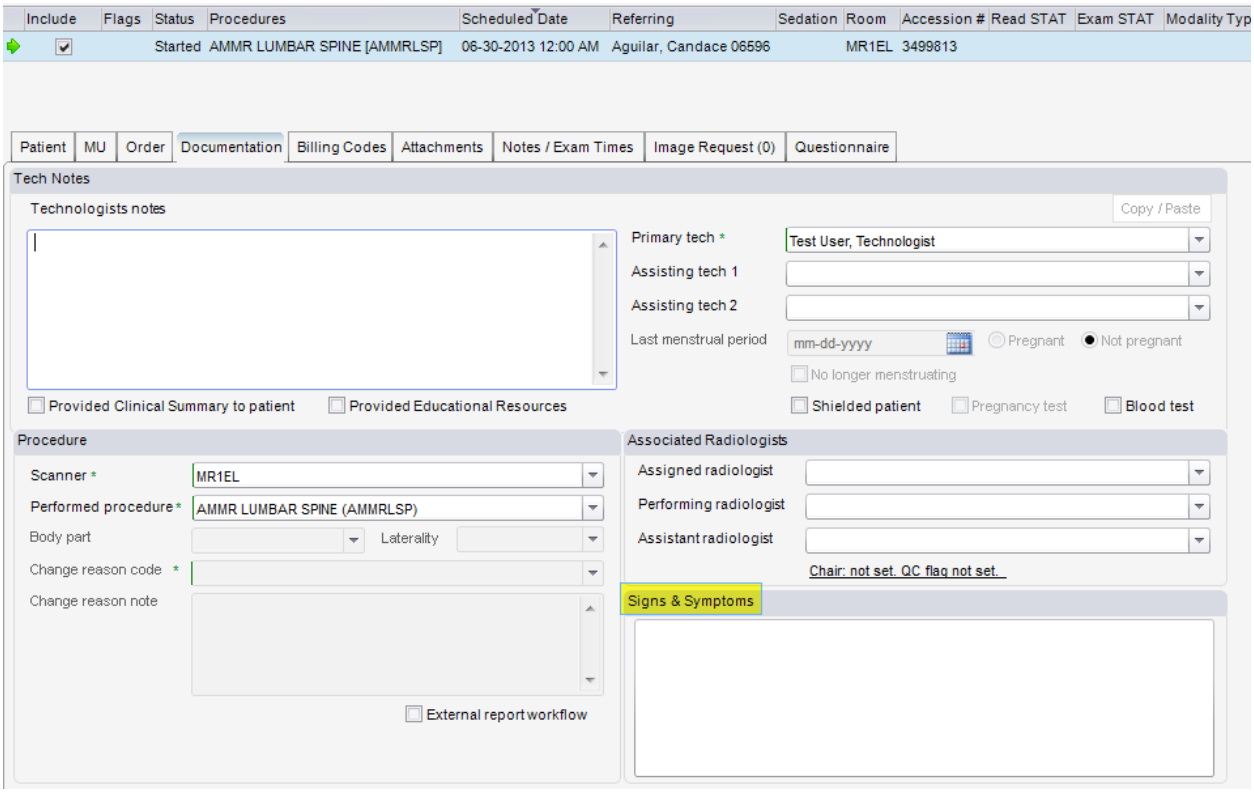

**Figure 5.75 – Signs & Symptoms field on Documentation tab**

**NOTE:**
Macro and report document templates will have to be manually changed if "Signs and Symptoms" are to be used in diagnostic reports.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Direct Referral Enhancements

In previous versions the Direct Referral flag was set on Referring Physician Personnel account. If the referrer selected on the Order tab had the Direct Referral flag, a label would appear next to the Referring field.

In build 41 this has changed. In addition to the referrer personnel account that may have the flag, a "Direct referral" check box has been added to the Order tab in the Flags section of this window that will always be present.

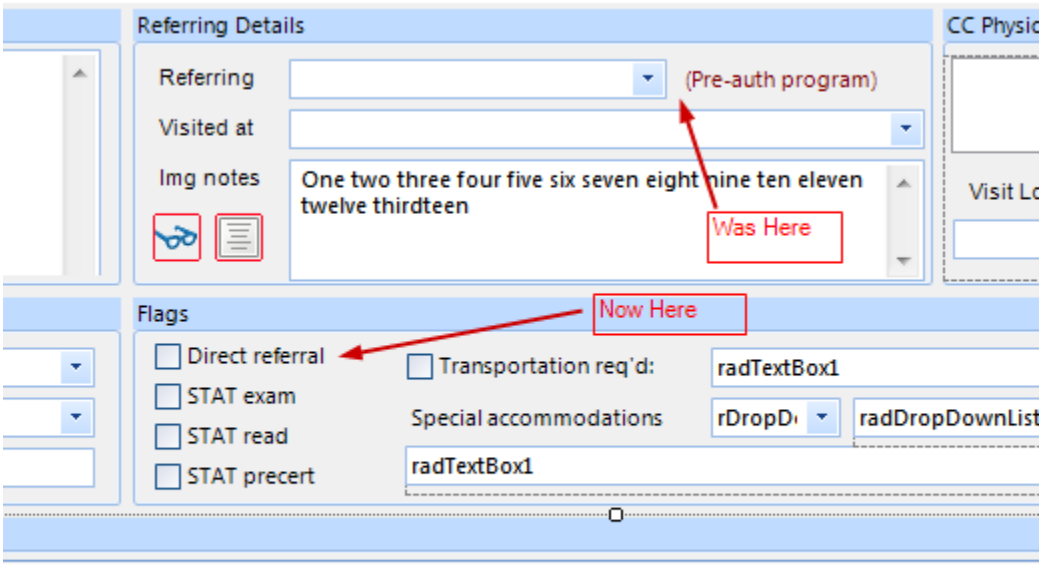

**Figure 5.76 – Direct referral flag added to the Order tab**

If the referrer selected for the order has the Direct referral flag set in the Personnel editor, the Direct referral label on the order tab will be bolded, but not required to be selected.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Allow Cancellation of Outside Reads

In previous versions the user did not have the ability to cancel the study if the study was an Outside Read. An appropriateness check was added for studies that are Exam Done status and area also an Outside Read.

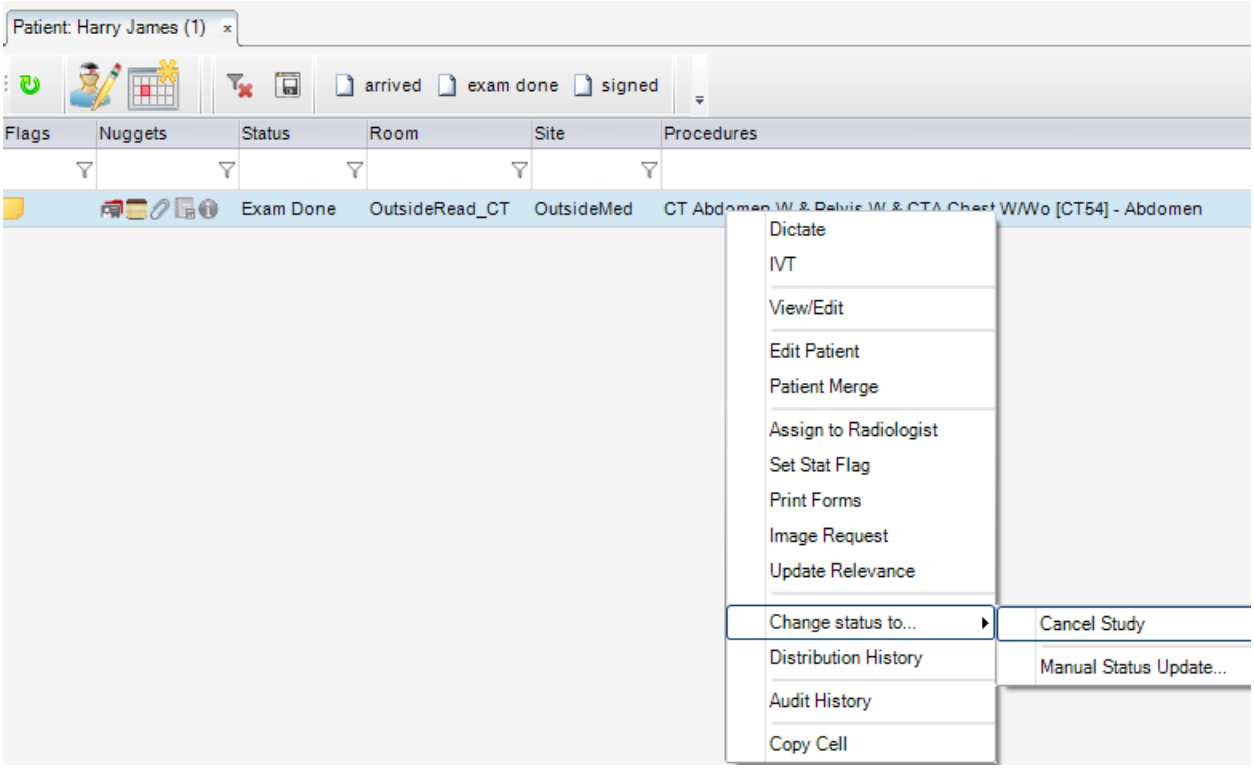

**Figure 5.77 – Cancelling and Outside Read**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Abort Reason added To View/Edit

In previous versions if the study was aborted from the Perform Exam window, the user would be prompted with the Abort Exam window and would be required to select a predefined reason for aborting the exam.
If the study was already completed, the user could abort the study from the view edit window, but they were not required to select a reason for aborting the study.
In build 41, we have added this to the View/Edit > Abort window and the user will be prompted with the same Abort Exam window that is produced in the Perform Exam window.

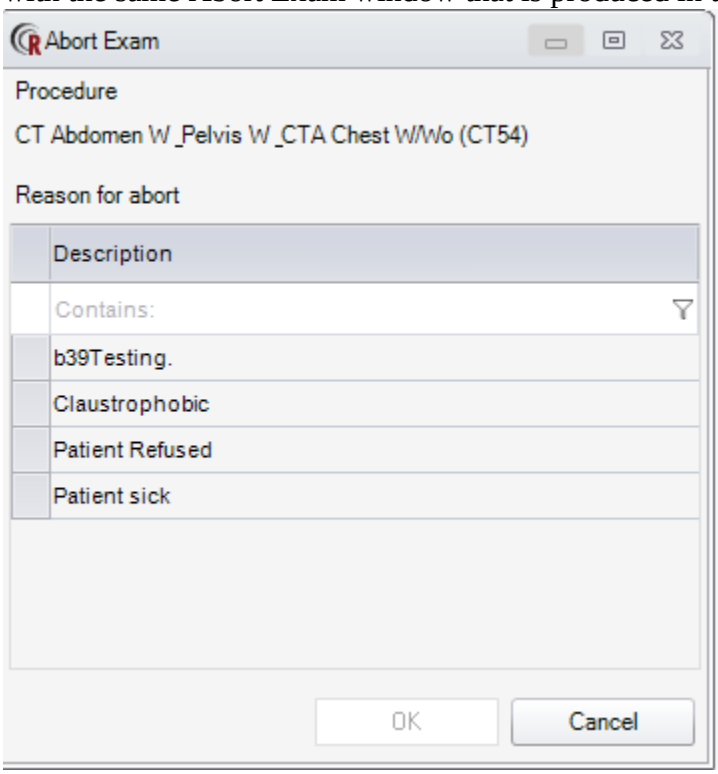

**Figure 5.78 – Abort exam reason**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Ability to Add Attachments and Check-In another Patient

The Attachment Viewer window is now a non-modal window, meaning that a user can have the be scanning attachments for patient A and have the ability to Check-In, Schedule, create Walk-In, etc… on patient B.
With the Attachment Viewer open the user can change tabs/enter information within the same study window or can access another patient in the Register window, patient search, etc…

## Print Diagnostic Report to Local Printer

Studies with a report now have a context menu "Report/Print Report", which can be used to print the report without having to preview the report.

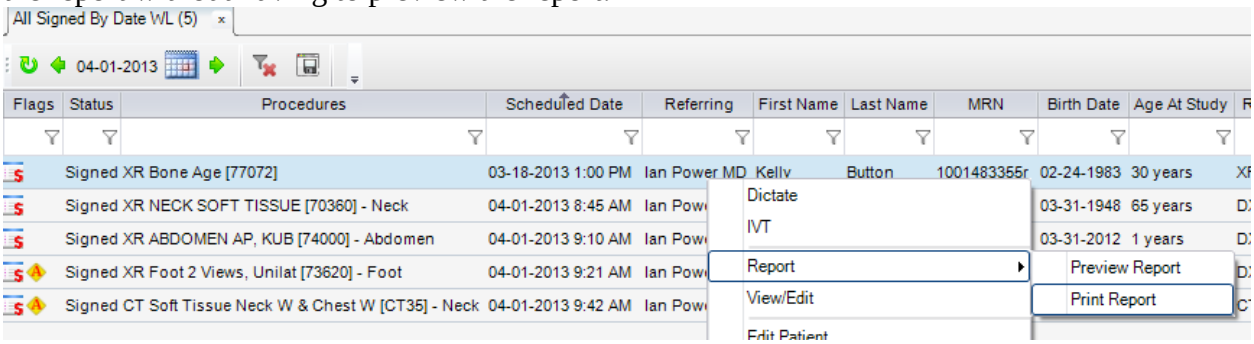

**Figure 5.79 – Report context menu and sub menu**

Also multi-select for this feature is supported so you can select multiple studies and print the reports for all of them at once.
When you select the "Print Report" feature you are prompted with a print dialog and your selection of printer for that first print dialog will apply to all documents that will be printed (in the multi select case).

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# Mammography Enhancements

**Item #1**

In the Follow Up window on the Contact Log tab, the check box labelled “Follow Up Resolved” has been relabelled “Resolved”.

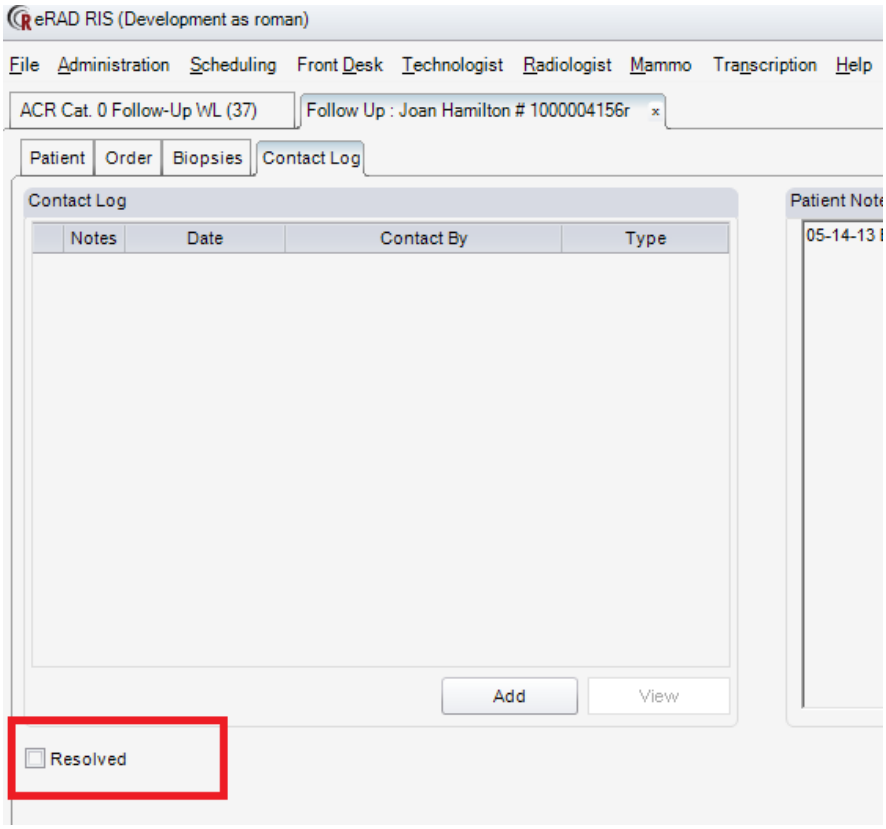

**Figure 5.80 – Check box renamed “Resolved”**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Item #2

Added "Breast Density Required Flag" to the procedure code lookup table ( if set to "N" Breast Density drop down will not be visible or required ). During upgrade to v41 all existing procedures that are BIRAD enabled will be set to "Y" for breast density required flag.

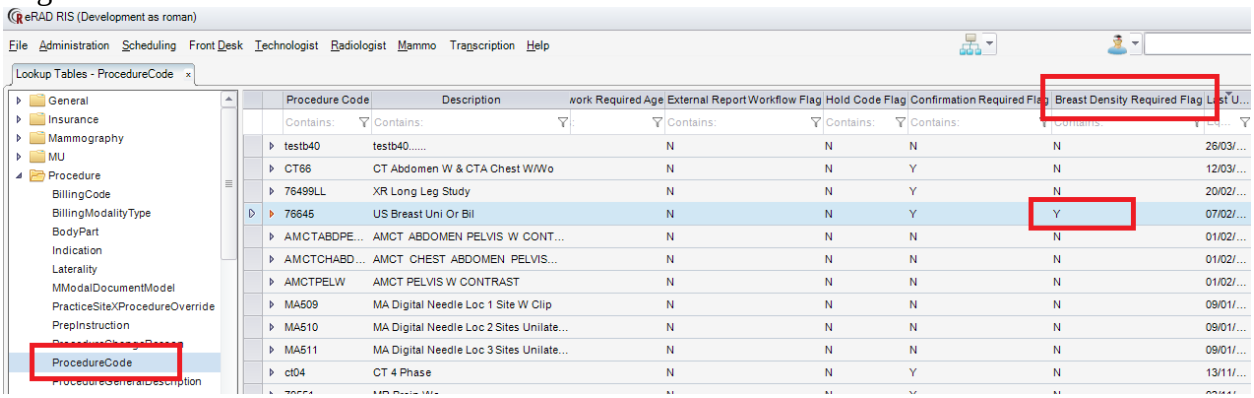

**Figure 5.81 – Breast Density Required Flag on Procedure codes**

## Item # 3

A permission already exists to control if user is allowed to manually "Resolve" a mammo follow-up **Clinical.ManuallyResolveMammoFollowUp**

## Item # 4

New management report has been created that will identify patients that have possible orphaned mammography orders. The report looks for any patient that in the system that has a mammography study advanced to a status of scheduled or further. (that still has an outstanding mammography order)

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Mammo Orphaned Orders

**Practice:** Advanced Radiology
**Description:** This report will identify patients that have possible orphaned mammography orders. The report looks for any patient that in the system that has a mammography studie(s) advanced to a status of scheduled or further. (that still have an outstanding mammography order). This report does not look at studies that are Signed as these studies normally have a mammography follow up order.

| Practice / Site | Patient ID | Study Status in Progress | Orphan Filler Order Number | Orphan Order Request Date | Orphan Order Procedure |
|---|---|---|---|---|---|
| ⊟ ADV | 3 | | | | |
| ⊟ EL | 1 | | | | |
| | 1000005490r | Started | 1070395 | 07-10-2012 | US Breast Uni Or Bil [76645] - Breast - Left |
| ⊞ FH | 1 | | | | |
| ⊞ LU | 1 | | | | |
| **Total Patients:** | **3** | | | | |

Mammo Orphaned Orders Advanced Radiology Confidential and Proprietary Date Run: 5/14/2013 12:45 PM
Page 1 of 1 RMIS\roman

**Figure 5.82 – Mammo Orphaned Orders**

## Item #5

Added RIS logic to bring back the Mammography order if study is Cancelled.

If a study that was generated from a mammography short term follow-up , callback or invitation has been cancelled a new order will be placed back on Mammography orders worklist for follow-up from the original mammo study info.

In case of Discontinued workflow user is given a manual choice to bring the order back for scheduling
via "Would you like to send this to the Orders To Schedule WL?" prompt

"Void" actions is designed to be end of workflow so no action is taken to bring back the Mammo order.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**Item # 6**

Added functionality to allow per site Mammography Tracking.
If Mammography Tracking is enabled for a site (default = enabled)..RIS will generate layletters, follow-up orders, all follow-up letters, and will forward studies to the "Mammo Followup worklists".
If tracking is turned off. RIS will still capture the BIRADS, Recommendation and breast density data, but will not generate letters or any follow-up workflow (It is assumed that a third party product or system is responsible for follow-up at the site.)

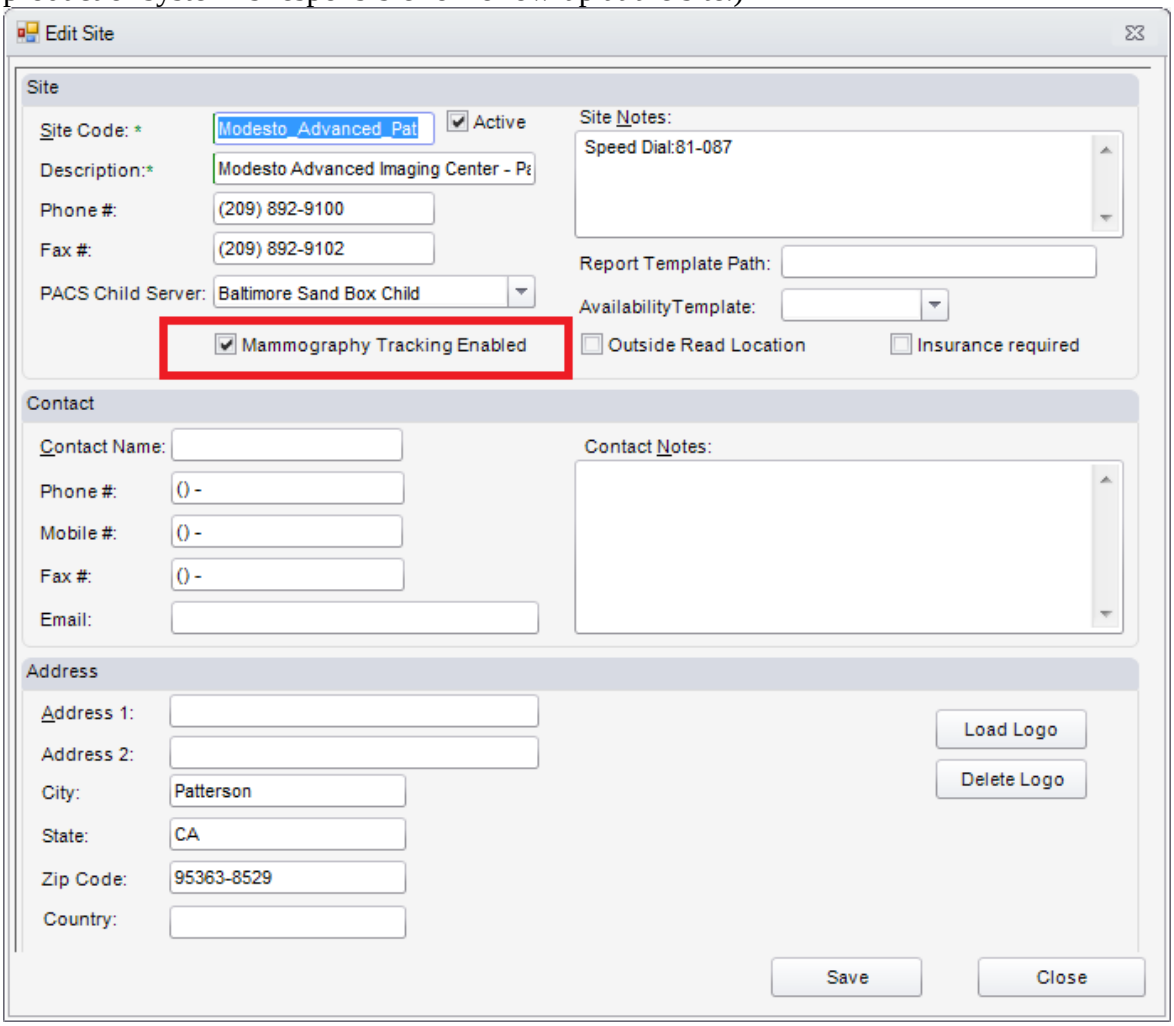

**Figure 5.83 – Mammography Tracking Enabled at Site level**

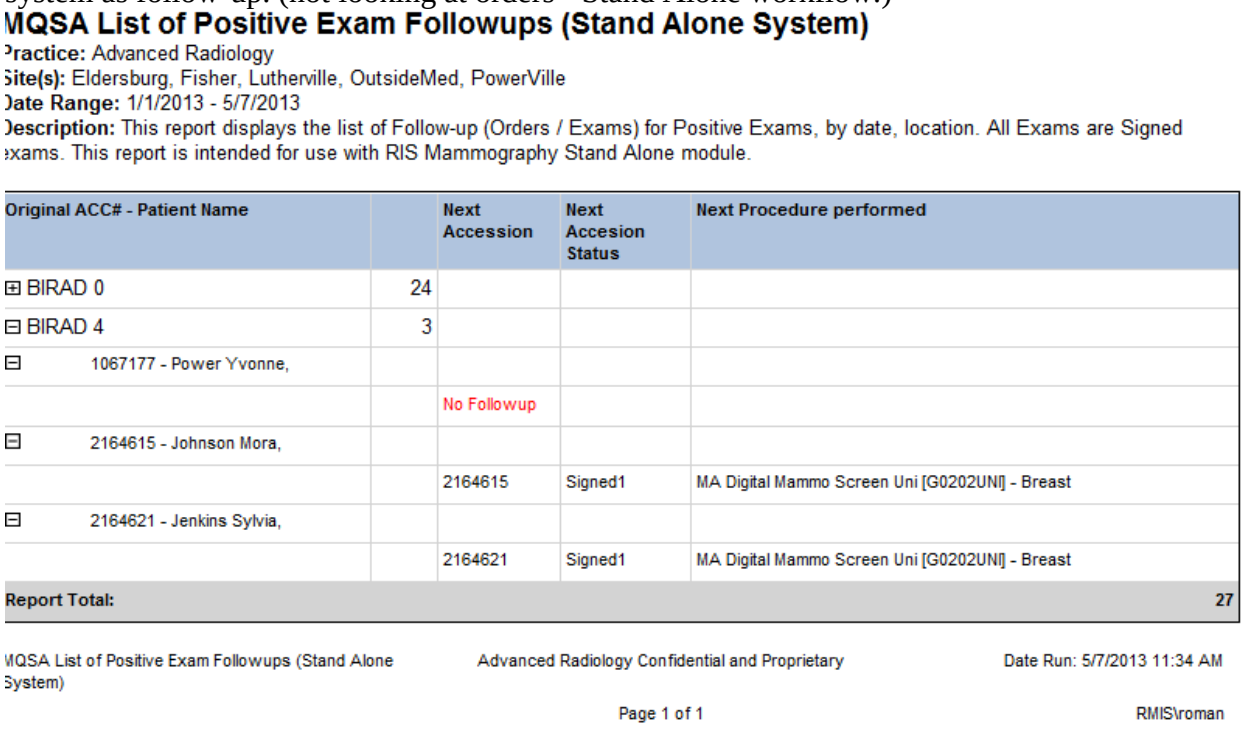
## Standalone Mammography Tracking

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

For Standalone mode: Only one management report had to be re-written to function in standalone.

(**Please Read Note**) for standard MQSA Tracking → The below report should be used for tracking standard follow-ups as well as Stand Alone Mode. This report will produce the same results as the standard RIS "MQSA List of Positive Exam Follow-ups" with one major difference. The report below does not look for the relationship to the system generated mammography follow up order. So for rear cases where mammography follow-up order was not used to schedule (user created a new order from scratch) for the mammography study. This report will catch these cases.

"**MQSA List of Positive Exam Follow-ups (Stand Alone System)**" is the new report. The report pulls back follow ups, NOT based on the follow-up order from original exam ( RIS Normal Workflow). This new report looks for additional exams/studies for the patient in the system as follow-up. (not looking at orders - Stand Alone workflow.)



**MQSA List of Positive Exam Followups (Stand Alone System)**

**Practice:** Advanced Radiology
**Site(s):** Eldersburg, Fisher, Lutherville, OutsideMed, PowerVille
**Date Range:** 1/1/2013 - 5/7/2013
**Description:** This report displays the list of Follow-up (Orders / Exams) for Positive Exams, by date, location. All Exams are Signed Exams. This report is intended for use with RIS Mammography Stand Alone module.

| Original ACC# - Patient Name | | Next Accession | Next Accesion Status | Next Procedure performed |
|---|---|---|---|---|
| ⊞ BIRAD 0 | 24 | | | |
| ⊟ BIRAD 4 | 3 | | | |

MQSA List of Positive Exam Followups (Stand Alone System) Advanced Radiology Confidential and Proprietary Date Run: 5/7/2013 11:34 AM

Page 1 of 1 RMIS\roman

**Figure 5.84 – MQSA List of Positive Exam Followups (Stand Alone System) report**

Additional Notes:

Patient Correspondence should be tracked through Audit History in RIS / and mammo Follow-up Contact Log.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

New GENERAL MQSA report has been created to audit historic exams to make sure LAYLETTERS went out within 30 days.
"**MQSA Layletter Audit**" -> This report looks only at letter distribution via Document Distribution Engine.

## MQSA Layletter Audit

**Practice:** Advanced Radiology
**Site(s):** Eldersburg, Fisher, Lutherville, OutsideMed, PowerVille
**Date Range:** 1/1/2013 - 5/7/2013
**Description:** This report displays the list of mammography exams that LAYLETTERS were not distributed to via Document Distribution Engine within 30 days, by date, location. All Exams are Signed exams.

| BIRAD | Patient ID | Patient Name | Accession | Signed Date | DDE Status | DDE Last Updated Date | DDE Last Updated User |

MQSA Layletter Audit — Advanced Radiology Confidential and Proprietary — Date Run: 5/7/2013 11:32 AM
Page 1 of 1 — RMIS\roman

**Figure 5.85 – MQSA Layletter Audit report**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Administration - Order Level Document Type (Scan Docs)

In a previous sprint order level scanning was added in via the advanced section at the time of scanning but it wasn't possible to associate a default scan type with the order level, because the dropdown item for "OrderLevel" scanning wasn't available in the scantype lookup table. With this sprint that option is now available in the scan doc type lookup as shown in the following:

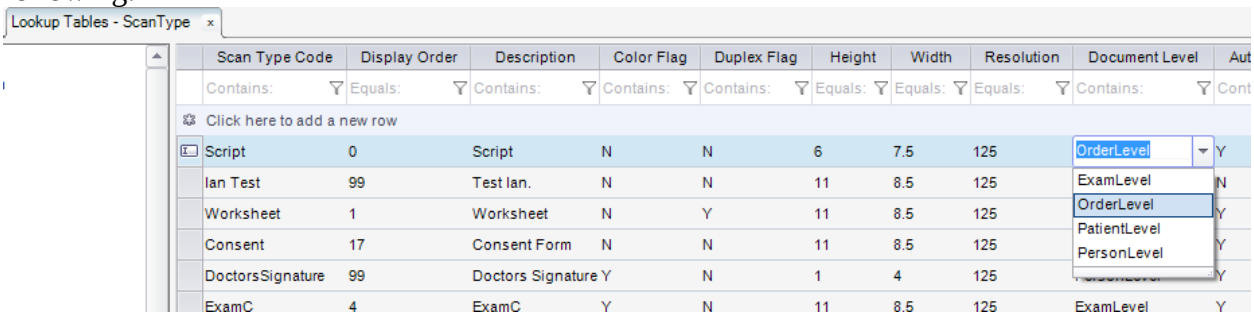

**Figure 5.86 – Order Level Document Type**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# Administration – Procedure Plan Duration Override

A new field was created in the procedure plan editor that will allow for the selection of a duration override:

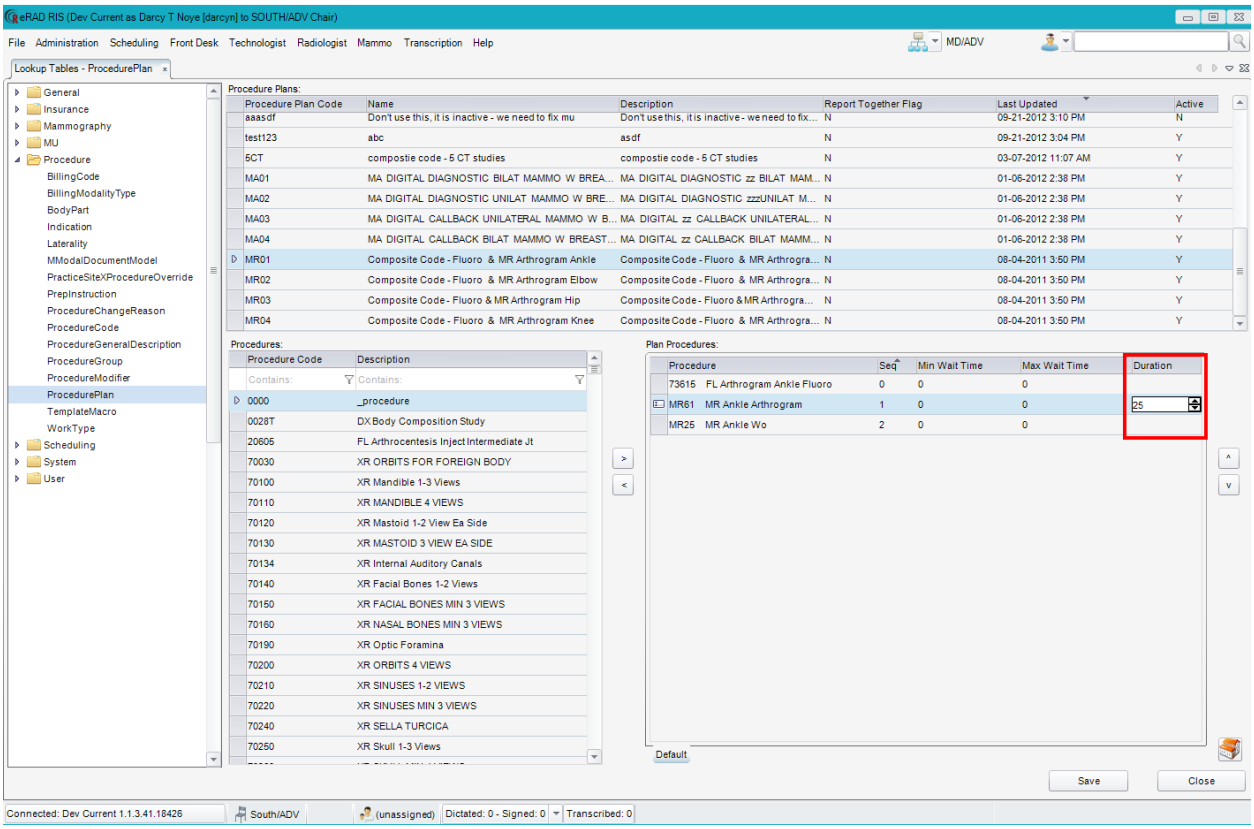

**Figure 5.87 – Procedure Plan Duration Override**

The default duration value is null, but can range anywhere from 0 and up.

If there are already pre-existing site overrides for the procedure plan then the duration will not propagate across the different sites when a value is provided, but when new site overrides are created then the default duration will be used on the new site overrides.

Currently the order of overrides for duration is

- Procedure duration
- Modality override
- Template time duration
- Procedure plan duration

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Administration - Schedule Group Performance Enhancement

Build 41 includes a Schedule Group lookup editor performance enhancement allowing users to switch and filter quicker between schedule groups.

## Administration – Personnel Internal Notes

The notes field text box has been changed to a text box control that will track the date and User ID for the Internal Notes field of the Personnel Editor. User will be familiar with this type of tracking as the notes fields such as Order Notes, Patient Notes, etc… have this tracking.

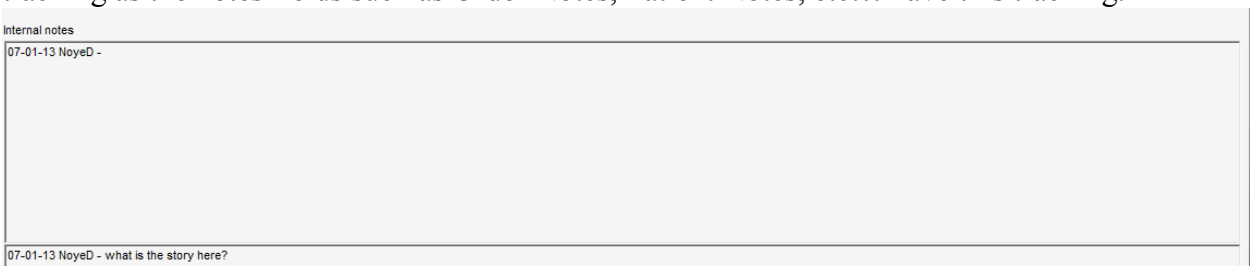

**Figure 5.88 – Internal Notes field tracking date and user ID**

## Administration – Internal Person Search Enhancements

Added middle name to the person search results and sorted the results by last_name, first_name as requested.
Removed the quick search by (City/State) feature.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Administration – Client IP Address Captured in Audit Table

Added client IP address for all new entries in the audit table for build 41 and going forward.

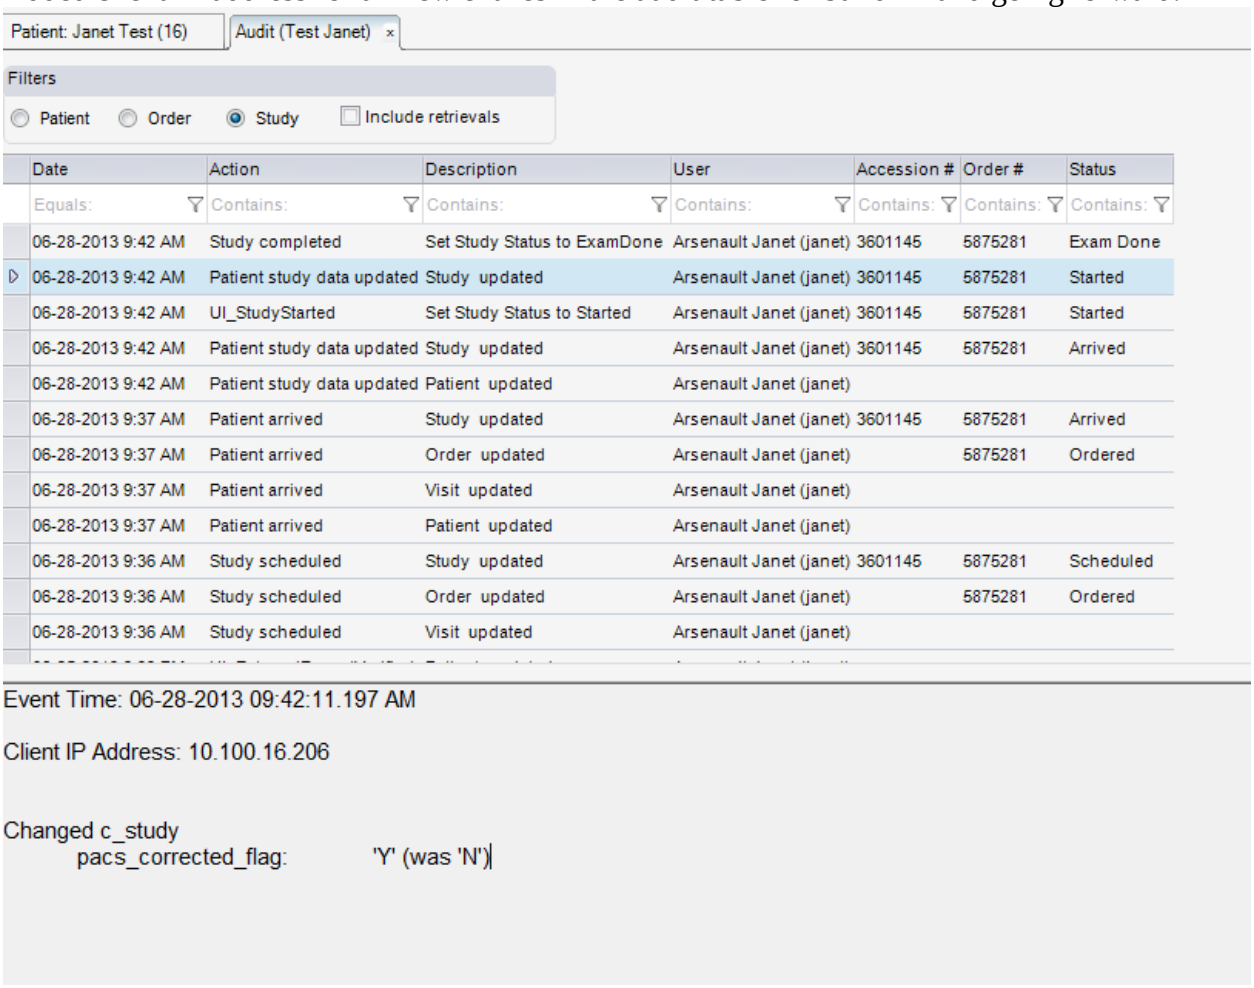

**Figure 5.89 – Audit history displaying entry that captured Client IP Address**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Administration – Add Support Phone # to Help About Window

Created a new configuration variable called **"HelpContactInfo"**, the default value for this is empty.

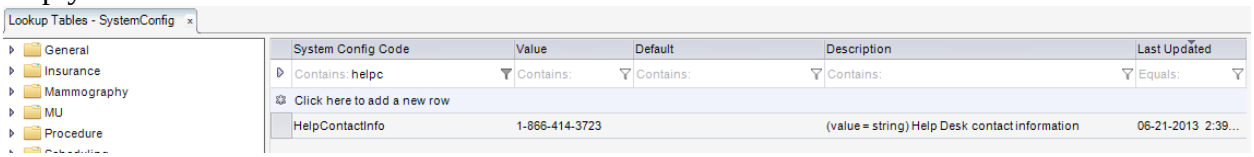

**Figure 5.90 – New system config setting HelpContactInfo**

The variable will allow for html text to be provided, this will allow for the formatting of the desired phone number, or allow for additional information to be provided also, such as a webpage or email link

Ex: Phone Number: 1-866-414-3723     <a href="mailto:help@radnet.com?Subject=RIS Help"> Contact Help</a>

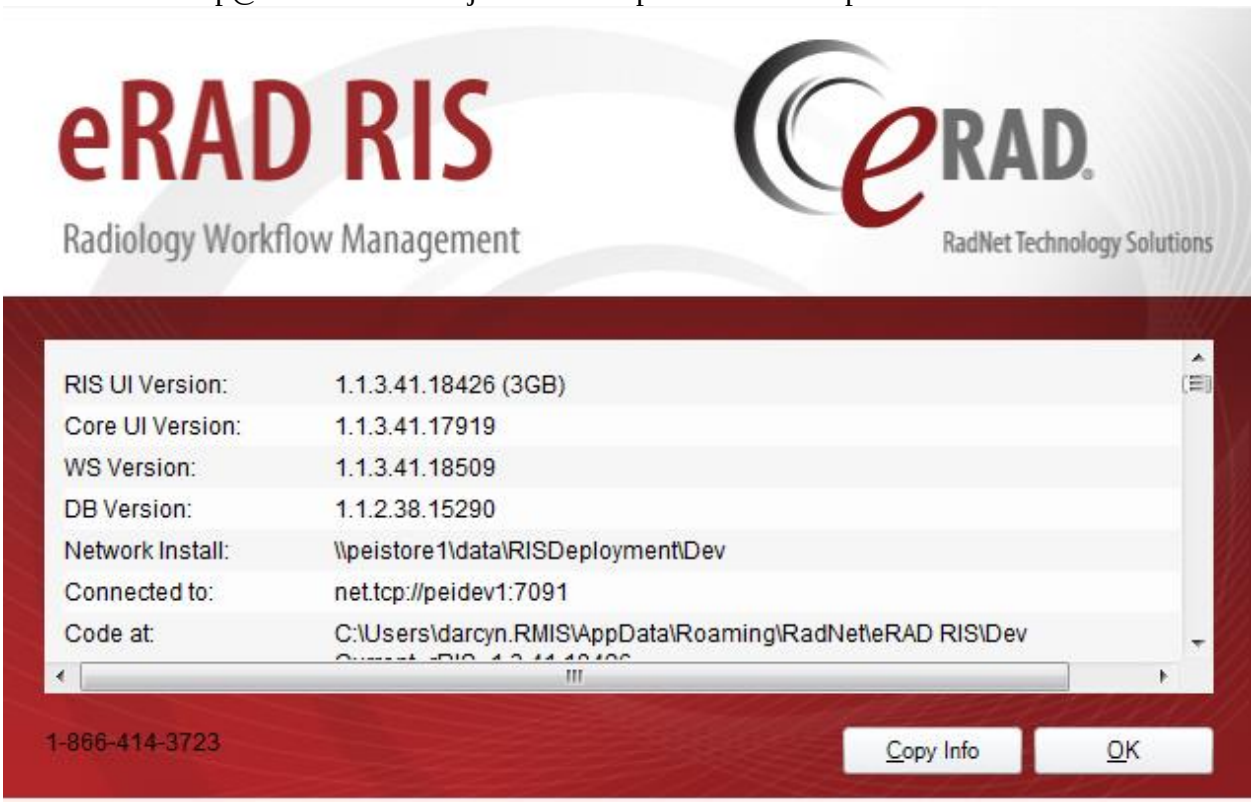

**Figure 5.91 – Support phone # added to Help About window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Administration – Process Events Service

All studies that have been modified via the GUI are stored in c_study_post_processing table. We need the ability for the system to automatically call this procedure.

A sub services to the RIS Core Services was added to wake up every "X" seconds and call the c_ProcessPostEvents stored procedure.

This sub service starts with every RIS Core Service.

A new system configuration setting titled **"ProcessPostEventInterval"** was added to control the frequency of the call to c_ProcessPostEvent. The default is 60 seconds. A value of 0 will mean the events will not be processed.

The ProcessPostEvent sub service may take up to five minutes to detect any changes to the ProcessPostEventInterval configuration setting.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Administration – Hold Study on Activity Work List

A new column was added to the Chair lookup table called "Hold_On_Activity_WL_Flag". When this flag is set to "Y", any updates to a study assigned to that chair will remain in the activity worklist until the study is removed from that chair. Note, any studies assigned to a chair that just had the "Hold_On_Activity_WL_Flag" changed will not be automatically added or removed to or from the activity WL. An update to the study row has to occur for it to recognize whether it should or should not appear on the activity WL.

All studies recently updated and assigned to a chair with this flag will appear on the activity WL until it is unassigned from the chair or its status changes from "Cancelled", "Discontinued" and "Void".

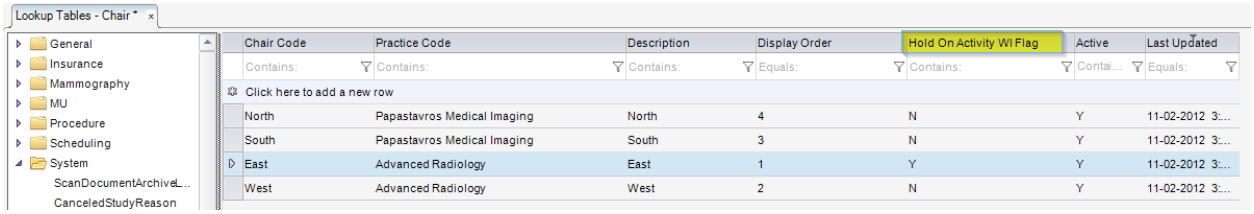

**Figure 5.91a – Hold on Activity WL Flag added to Chair lookup table**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Management Reports – Dashboard Color Picker for Practice

The eRAD RIS GUI will display a different color for a practice selected from the Organization picker. This is configured in the Organization lookup Editor on the Practice.
In build 41 we have also added the title bar color to the Dashboard.

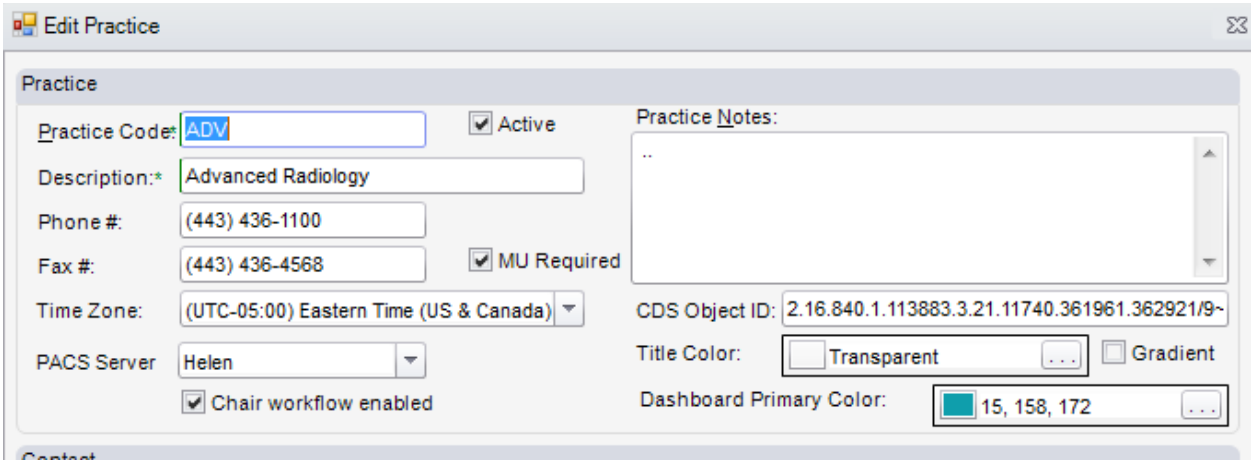

**Figure 5.92 – Edit Practice displaying Dashboard Primary Color selector.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Management Report – ADA added to Special Accommodations

The Special Accommodation lookup table first had to have the flag added.

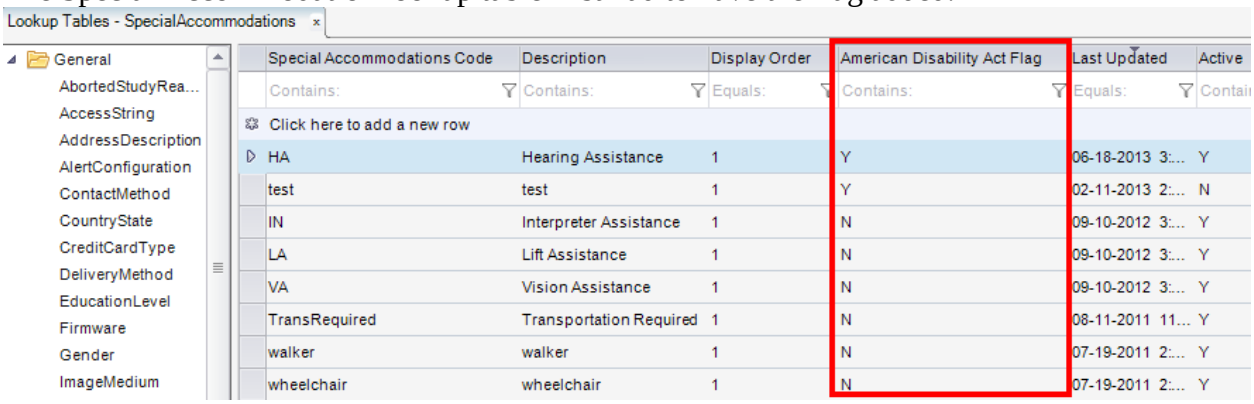

**Figure 5.93 – American Disability Act flag (ADA)**

When an appointment is created and a value for Special Accommodations is selected that is flagged as an ADA Special Accommodation code, the management report can reflect this flag. The report can be filtered to show only ADA, exclude ADA or both.

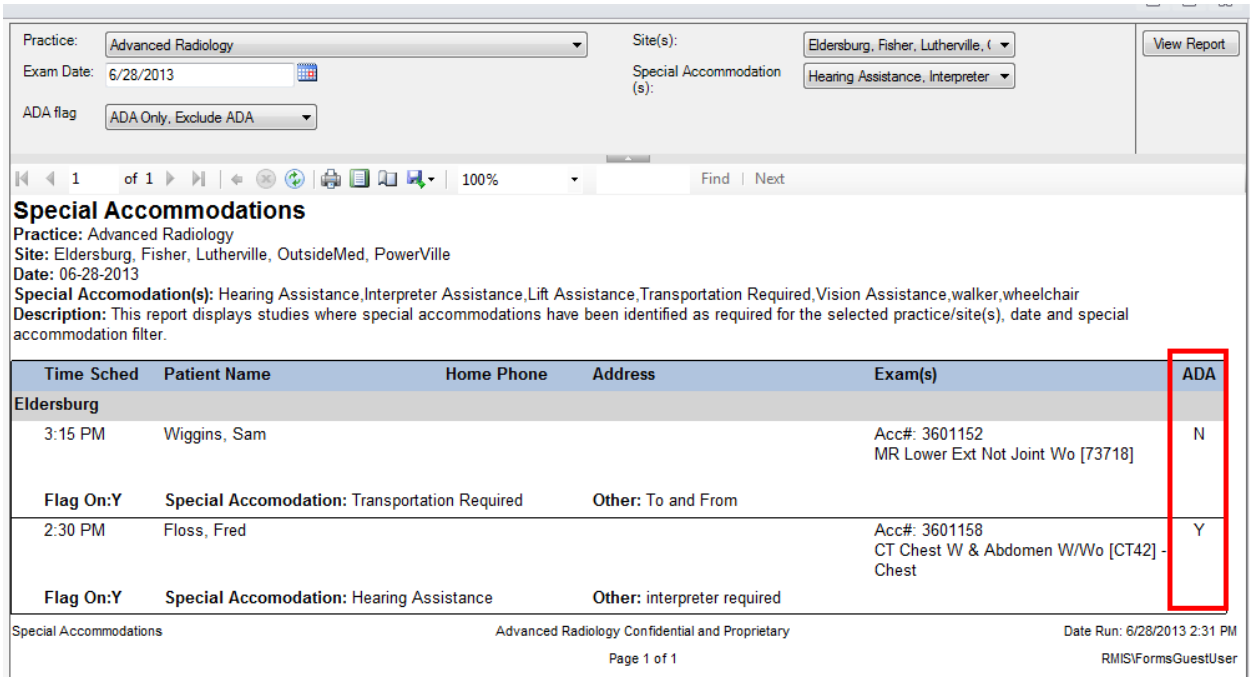

**Figure 5.94 – Special Accommodations management report with ADA column**

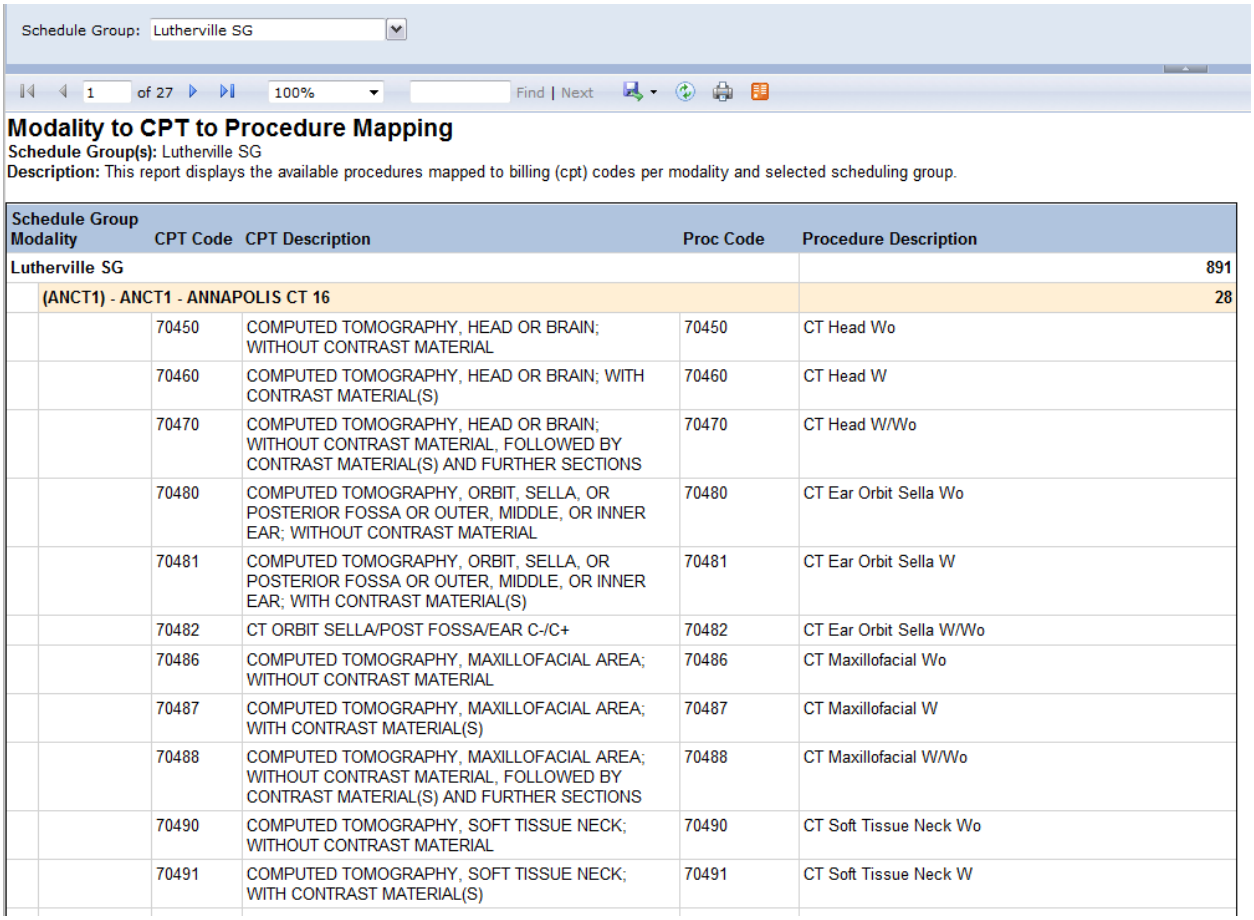
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# Management Report – Modality to CPT to Procedure Mapping

This management report will identify the mappings to a schedule group to modality to procedure and associated CPT codes



Schedule Group: Lutherville SG

1 of 27 100% Find | Next

**Modality to CPT to Procedure Mapping**

**Schedule Group(s):** Lutherville SG

**Description:** This report displays the available procedures mapped to billing (cpt) codes per modality and selected scheduling group.

| Schedule Group Modality | CPT Code | CPT Description | Proc Code | Procedure Description |
|---|---|---|---|---|
| Lutherville SG | | | | 891 |
| (ANCT1) - ANCT1 - ANNAPOLIS CT 16 | | | | 28 |
| | 70450 | COMPUTED TOMOGRAPHY, HEAD OR BRAIN; WITHOUT CONTRAST MATERIAL | 70450 | CT Head Wo |
| | 70460 | COMPUTED TOMOGRAPHY, HEAD OR BRAIN; WITH CONTRAST MATERIAL(S) | 70460 | CT Head W |
| | 70470 | COMPUTED TOMOGRAPHY, HEAD OR BRAIN; WITHOUT CONTRAST MATERIAL, FOLLOWED BY CONTRAST MATERIAL(S) AND FURTHER SECTIONS | 70470 | CT Head W/Wo |
| | 70480 | COMPUTED TOMOGRAPHY, ORBIT, SELLA, OR POSTERIOR FOSSA OR OUTER, MIDDLE, OR INNER EAR; WITHOUT CONTRAST MATERIAL | 70480 | CT Ear Orbit Sella Wo |
| | 70481 | COMPUTED TOMOGRAPHY, ORBIT, SELLA, OR POSTERIOR FOSSA OR OUTER, MIDDLE, OR INNER EAR; WITH CONTRAST MATERIAL(S) | 70481 | CT Ear Orbit Sella W |
| | 70482 | CT ORBIT SELLA/POST FOSSA/EAR C-/C+ | 70482 | CT Ear Orbit Sella W/Wo |
| | 70486 | COMPUTED TOMOGRAPHY, MAXILLOFACIAL AREA; WITHOUT CONTRAST MATERIAL | 70486 | CT Maxillofacial Wo |

| | 70490 | COMPUTED TOMOGRAPHY, SOFT TISSUE NECK; WITHOUT CONTRAST MATERIAL | 70490 | CT Soft Tissue Neck Wo |
| | 70491 | COMPUTED TOMOGRAPHY, SOFT TISSUE NECK; WITH CONTRAST MATERIAL(S) | 70491 | CT Soft Tissue Neck W |

**Figure 5.95 – Modality to CPT to Procedure Mapping management report**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Management Report – BI-RAD to Recommendation Mapping

New report created that will show the BI-RAD and Recommendations assigned to that BI-RAD. There are no filters required for this management report

### Birad to Recommendation Mapping

**Description:** This report displays the Birad to recommendation mappings configured within the system.

| Birad | Recommendation | | Default Recommendation? |
|---|---|---|---|
| **Radnet Central** | | | |
| **0** | **Need additional imaging evaluation** | | |
| | P | Additional Projections | N |
| | U | Ultrasound | N |
| | O | Old films for comparison | N |
| | Z | Breast MRI | N |
| | PU | Additional Projections and Ultrasound | N |
| | PXIF | Additional Projections if no old films can be obtained | N |
| | UXIF | Additional Ultrasound if no old films can be obtained | N |
| | PUXIF | Additional Projections and Ultrasound if no old films can be obtained | N |
| | C0 | ADDENDUM FOR COMPARISION - NEED ADDITIONAL IMAGING | N |
| **1** | **Negative** | | |
| | N | Normal interval follow up | Y |
| | F-11M | 11 months | N |
| | F-10M | 10 months | N |
| | F-9M | 9 months | N |
| | F-8M | 8 months | N |
| | F-7M | 7 months | N |

**Figure 5.96 – BI-RAD to Recommendation Mapping management report.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Management Report – MR Breast Dictated

The MR Breast Dictated report was created to monitor Breast MR. The parameters for the report are Practice, Site, To and From date and Procedure Code.

The report will display the Site, patient name, Procedure, date of service, dictated date, MRN and Accession number.

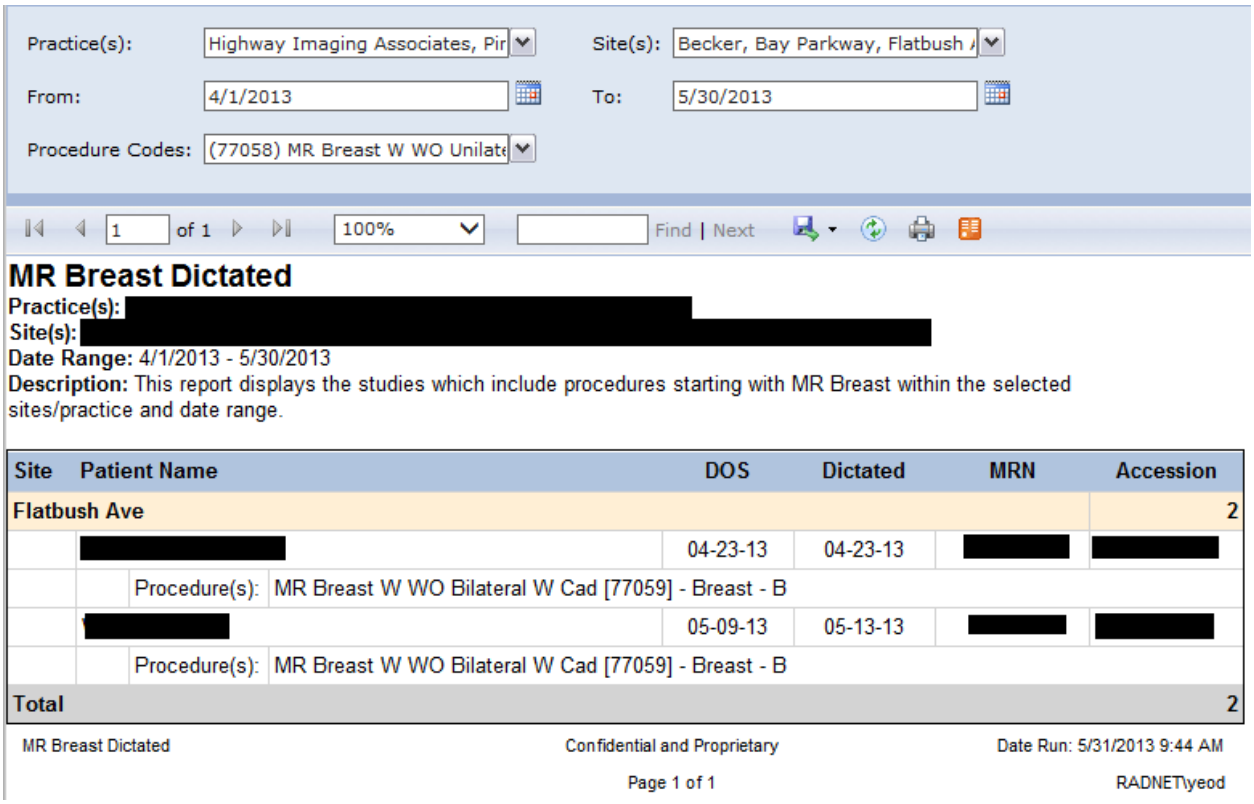

**Figure 5.97 – MR Breast Dictated management report**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Management Report – New Sales Mgmt Report for Referring Practice

We need to get all sales data into a rollup table and call this rollup data to improve performance for sales mgmt reports. To do this we created a stored procedure "c_SummaryMaster" that will be called nightly by a job. These new reports will report off this rollup data("c_summary_sales_trend"). I talked to Sean Clark and he is fine if we return 36 months of data only in this rollup table. I confirmed that counts will be based off cpt counts. I will add a note to **create a script** to create this job on the B41 build directory to call this new stored procedure "c_SummaryMaster".

Created a new management report "Sales Referring Practice Raw Data" where the results can be exported to either csv or excel based off the following parameters [a practice_code, multiple sites, multiple referring physician practice, multiple modalities, a monthly variance(6 or 13 variance), and a date. Note: if the report contains more than 65636 rows the report will not be able to export to excel.

| PHYSICIAN | MODALITY | LOCATION | SPECIALTIES | November | December | January | February | March | April | May | Total |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Jacobson, Kyle8 35939 | XR | Lutherville | Accupuncturist \| Breast Surgery | | | 1 | | | 1 | | 2 |
| JONES, WHAY | CT | Eldersburg | General Practice | | | | 1 | | | | 1 |
| JONES, WHAY | CT | Fisher | General Practice | 1 | | | | | | | 1 |
| JONES, WHAY | CT | Lutherville | General Practice | | | | 1 | | | | 1 |
| JONES, WHAY | MA | Lutherville | General Practice | | | | 1 | | | | 1 |
| JONES, WHAY | MR | Eldersburg | General Practice | 1 | | | | | | | 1 |

**Figure 5.98 – Sales Referring Practice Raw Data**

Created a new mgmt. report "Sales Referring Practice Raw Quarter Data " the sales team can export to csv or excel based off the following parameters [a practice_code, multiple sites, multiple referring physician practice, multiple modalities, a monthly variance(6 or 13 variance), and a date.

| PRACTICE | PHYSICIAN | MODALITY | Qtr 1 2012 | Qtr 4 2012 | Qtr 1 2013 | Total | Qtr 2 2013 | Qtr 1 2012 Avg | Qtr 4 2012 Avg | Qtr 1 2013 Avg | Qtr 2 2013 Avg |
|---|---|---|---|---|---|---|---|---|---|---|---|
| ADV | HODGSON, WESLEY | MA | 0 | 1 | 0 | 1 | 0 | 0.0 | 0.3 | 0.0 | 0.0 |
| ADV | HODGSON, WESLEY | MR | 0 | 1 | 0 | 1 | 0 | 0.0 | 0.3 | 0.0 | 0.0 |
| ADV | HODGSON, WESLEY | XR | 0 | 2 | 0 | 2 | 0 | 0.0 | 0.7 | 0.0 | 0.0 |
| ADV | Jacobson, Kyle8 35939 | XR | 0 | 0 | 1 | 1 | 1 | 0.0 | 0.0 | 0.3 | 0.3 |
| ADV | JONES, WHAY | CT | 4 | 1 | 2 | 7 | 0 | 1.3 | 0.3 | 0.7 | 0.0 |

## Management Report – Upload Custom Management Reports

The DeployReports.bat tool has been modified to prompt the user if they would like to upload Custom Management reports. When the customer reports are uploaded the DeployReports.bat tool will create a sub folder called "Uploads" that will be created under the Custom folder. The uploaded custom reports will be placed in the "Uploads" folder. The user will then be responsible to move the report in the Custom folder.

To summarize:

1. In the deployment folder created a folder called Upload Custom Management Reports
2. Modified scripts to prompt: Do you wish to upload Custom Management Reports?
3. Modified scripts to upload from the Upload Custom Management Reports folder to create a folder below Custom called Uploads and Upload the reports there.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Management Report – Automate Backup of Management Report Deployment

When deploying the newest management reports a backup will now be created to ensure that no existing report that was to be kept. This backup will serve not only as a backup but an easy way to download forms\templates or custom reports to deploy to another installation.

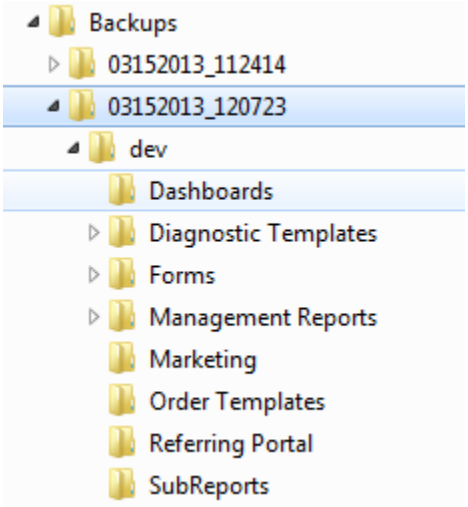

**Figure 5.106 – Displaying management report backups**

In the example above you can see it creates a folder called backups, below that a folder named the datetime of the backup and below that the report structure for the installation you are deploying to. In this example it backed up the dev deployment on Mar 15 2013 at 12:07.

- Do you wish to create a backup of the existing reports?
- Do you wish to deploy core management reports?
- Do you wish to upload Forms?
- Do you wish to upload Diagnostic Templates?
- Do you wish to upload Custom Management Reports?
- Do you wish to create a datasource?

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Management Report – Mammo Back on Track

This report has been created to allow the user to determine when the "Back on Track" date for the patient's next mammo screening is. Looking at all "ShortTermFollowup" and "CallBack" orders where recommendation is "BACK ON TRACK" ( target date cannot be manually adjusted. Staff can cancel the order and generate a new Mammo follow-up order with correct target date).

**Mammo Back on Track**

**Practice:** Radnet Central

**Site(s):** Modesto Advanced Imaging Center, Stockton Diagnostic, Stockton Diagnostic Outside Read, Outside CD

**Description:** The intention of this report is to identify any patient in the system that has order type of "CallBack" or "ShortTermFollowup" where the mammo orders have come for an original study with a diagnosis of "BIRAD 1 or 2".

| Patient | MRN | Study Status | Requested Date | Order Status | Original Accession | Recommendation | Birad |
|---|---|---|---|---|---|---|---|
| [redacted] | | Signed1 | 07-08-2013 | ShortTermFollowUp | 29172 | 4 months | 2-Benign finding |
| | | Signed1 | 04-05-2013 | ShortTermFollowUp | 10740 | 10 months | 2-Benign finding |
| | | Signed1 | 04-05-2013 | ShortTermFollowUp | 10751 | 11 months | 1-Negative |
| | | Signed1 | 04-07-2013 | ShortTermFollowUp | 11923 | 11 months | 1-Negative |
| | | Signed1 | 04-09-2013 | ShortTermFollowUp | 12458 | 10 months | 1-Negative |
| | | Signed1 | 06-26-2013 | ShortTermFollowUp | 24177 | 6 months | 1-Negative |
| | | Signed1 | 07-09-2013 | ShortTermFollowUp | 25744 | 5 months | 1-Negative |
| | | Signed1 | 06-26-2013 | ShortTermFollowUp | 27608 | 3 months | 2-Benign finding |
| | | Signed1 | 07-12-2013 | ShortTermFollowUp | 32782 | 5 months | 2-Benign finding |
| | | Signed1 | 07-05-2013 | ShortTermFollowUp | 27012 | 5 months | 1-Negative |
| | | Signed1 | 04-23-2013 | ShortTermFollowUp | 12040 | 8 months | 2-Benign finding |

**Table 5.2 – Management reports with Practice parameter**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – MU Administration > Configure Directory

For ease of use and the MU lookups have been grouped together in the Configure window. As displayed in the figure below, the lookups grouped under MU are Allergy, FamilyHistory, FamilyRelation, Medication, SearchProviders, SmokingStatus, UnitOfMeasure, Vaccine and VaccineManufacter.

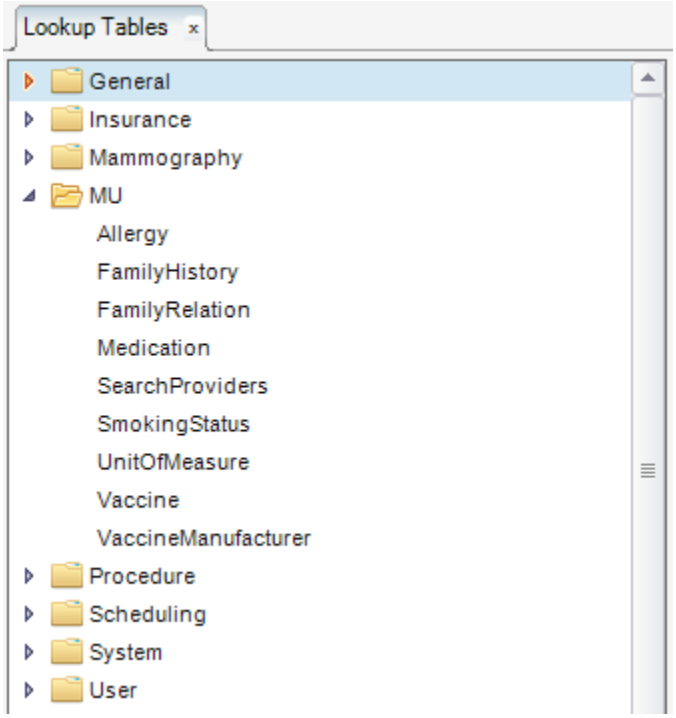

**Figure 5.107 – MU Category in containing lookup tables pertaining to MU**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – Vital Signs, BMI and Growth Chart

Only numeric values can be entered for height/length, weight and blood pressure. These values can be changed on edit. The height/length, weight and blood pressure are all captured on the MU tab available in View/Edit, Scheduling, Registration and Perform Exam windows.

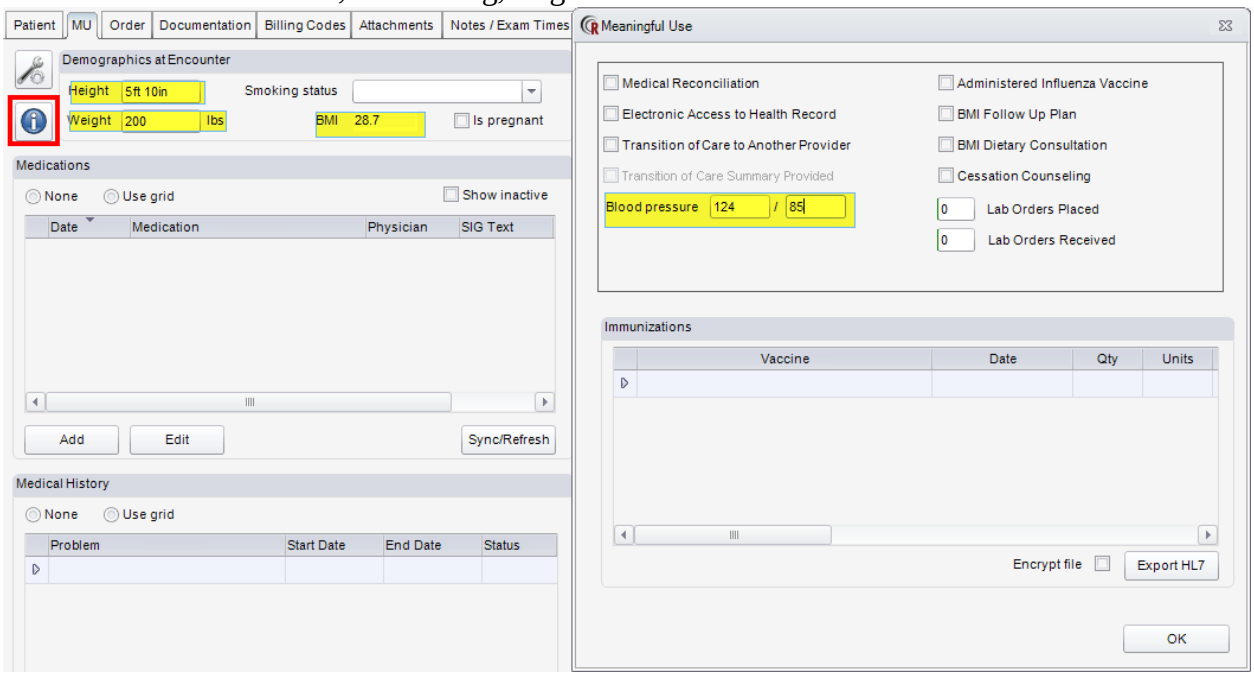

**Figure 5.108 – Height, weight, BMI and blood pressure captured**

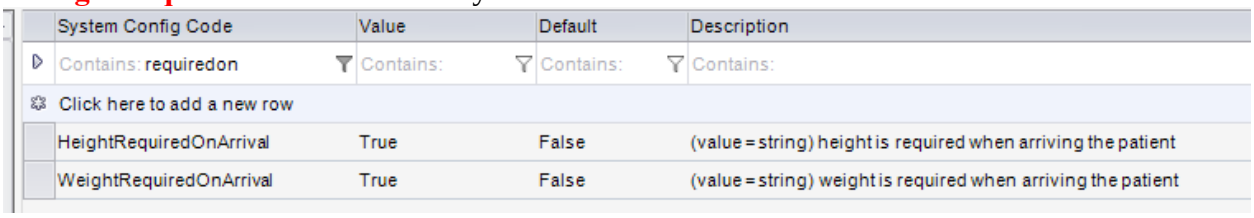
In the figure about the BMI value is auto calculated based on the height and weight values entered. Blood pressure is entered in the Meaningful Use window and is accessed via the Meaningful Use Information button outlined in red.

The height and weight fields can also now be configured to be required on arrival. This is based on the value of two new system configuration settings **"HeightRequiredOnArrival"** and **"WeightRequiredOnArrival"**. They both have a default value of False



| System Config Code | Value | Default | Description |
|---|---|---|---|
| Contains: requiredon | Contains: | Contains: | Contains: |
| Click here to add a new row | | | |
| HeightRequiredOnArrival | True | False | (value = string) height is required when arriving the patient |
| WeightRequiredOnArrival | True | False | (value = string) weight is required when arriving the patient |

**Figure 5.109 – Displaying new SystemConfig settings**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

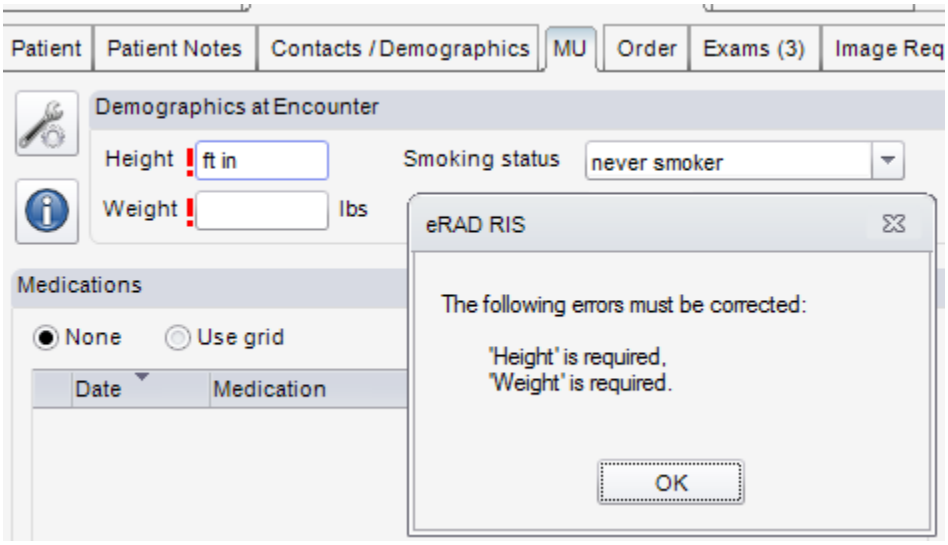


**Figure 5.110 – Height and Weight required on arrival**

If the patients Height and Smoking status was captured in a previous visit, this data will auto populate in the appropriate fields when the next study is registered.

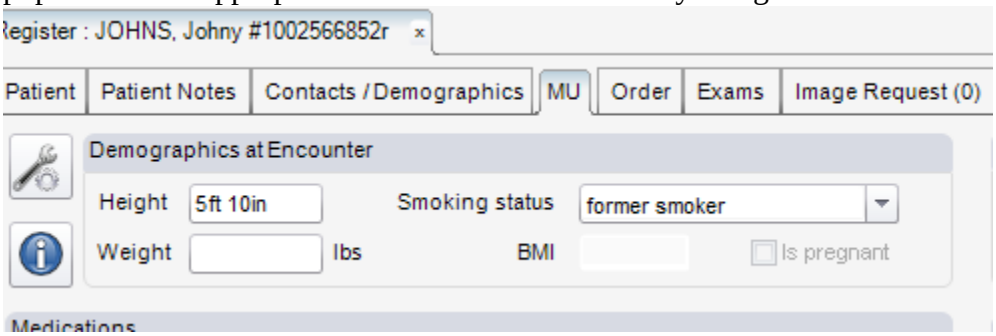

**Figure 5.111 – Height and Smoking status auto populates from previous visit**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – Family Health History

Family health history is meaningful use requirement #170-314-a-13. The user needs to be able to record, access and edit patient's family health history.

To start, two new lookup tables have been introduced under the MU category on the Configure windows.

FamilyRelation lookup was added and is access is controlled by a new access string **"Config.LookupEditor.FamilyRelation"** with a default of none. This table contains the "first degree" relation options for the patient. This table will be pre-populated with build 41 and these values should not change or be altered.

| Family Relation Code | Description | Display Order | Last Updated | Active |
|---|---|---|---|---|
| Contains: | Contains: | Equals: | Contains: | Contains: |
| Click here to add a new row | | | | |
| Brother | Brother | 5 | 04-09-2013 2:24 PM | Y |
| Daughter | Daughter | 6 | 04-09-2013 2:24 PM | Y |
| Father | Father | 2 | 04-09-2013 2:24 PM | Y |
| Mother | Mother | 1 | 04-09-2013 2:24 PM | Y |
| Sister | Sister | 3 | 04-09-2013 2:24 PM | Y |
| Son | Son | 4 | 04-09-2013 2:24 PM | Y |

**Figure 5.112 – FamilyRelation lookup table**

The second new lookup table is the FamilyHistory table and access is controlled by **"Config.LookupEditor.FamilyRelation"** with a default of none. This table will also be pre-populated with snomed codes and descriptions. These values should not be altered.

| Family History Code | Description | Display Order | Last Updated | Active |
|---|---|---|---|---|
| Contains: | Contains: | Equals: | Contains: | Contains: |
| Click here to add a new row | | | | |
| 160302006 | Family history: Thyroid disorder | 1 | 04-08-2013 3:22 PM | Y |
| 160357008 | Family history: Hypertension | 1 | 04-08-2013 1:53 PM | Y |
| 160364005 | Family history: Congenital heart disease | 1 | 04-08-2013 1:53 PM | Y |
| 160377001 | Family history: Asthma | 1 | 04-08-2013 2:21 PM | Y |
| 275937001 | Family history of cancer | 1 | 04-08-2013 1:53 PM | Y |
| 429959009 | Family history of heart failure | 1 | 04-08-2013 3:22 PM | Y |

**Figure 5.113 – FamilyHistory lookup table**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

On the GUI side a new data pane titled “Family History” was added on the Patient tab. It replaces the Patient Notes data pane which has been moved to its own tab immediately following the Patient tab.

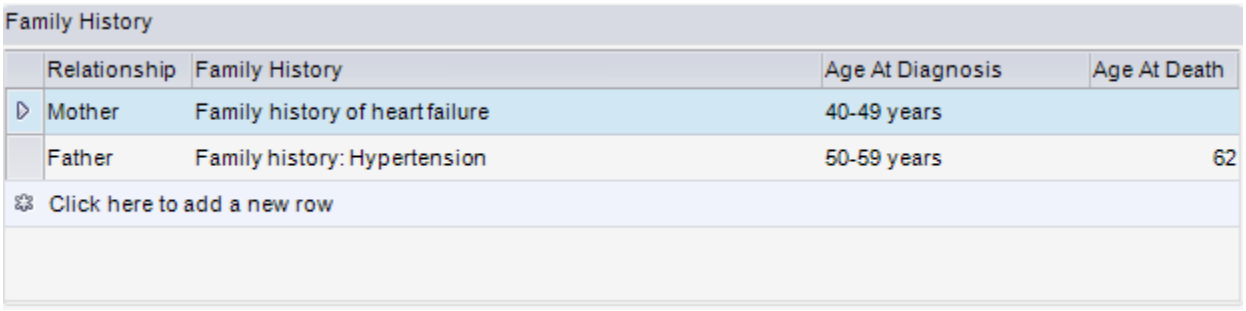

**Figure 5.114 – Family History data pane**

**Relationship** - is populated with a new lookup FamilyRelation and we will load with first degree relatives (“Brother”, “Daughter”, “Father”, “Mother”, “Sister”, “Son”).

**Family History** - is populated with a new lookup FamilyHistory and this table must contain valid snomed ct concept codes. With the build 41 upgrade the following will be marked as active (”Family history: Thyroid disorder”, “Family history: Hypertension”, “Family history: Congenital heart disease”, “Family history: Asthma”, “Family history of cancer”, “Family history of heart failure”).

**Age of Diagnosis** - Are hard coded with the following values ("Pre-Birth", "Newborn", "In Infancy", "In Childhood", "In Adolescence", "20-29 years", "30-39 years", "40-49 years", "50-59 years", "60 years and older, "Unknown"). Values were added based of the Surgeon General's Family Health History Initiative.

**Age of Death** - field will take a numeric value for the age the family member passed away.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – Immunization Updates

Four new fields have been added to the Immunization data pane. Expiration Data, Route, Administration Site and a Notes field.

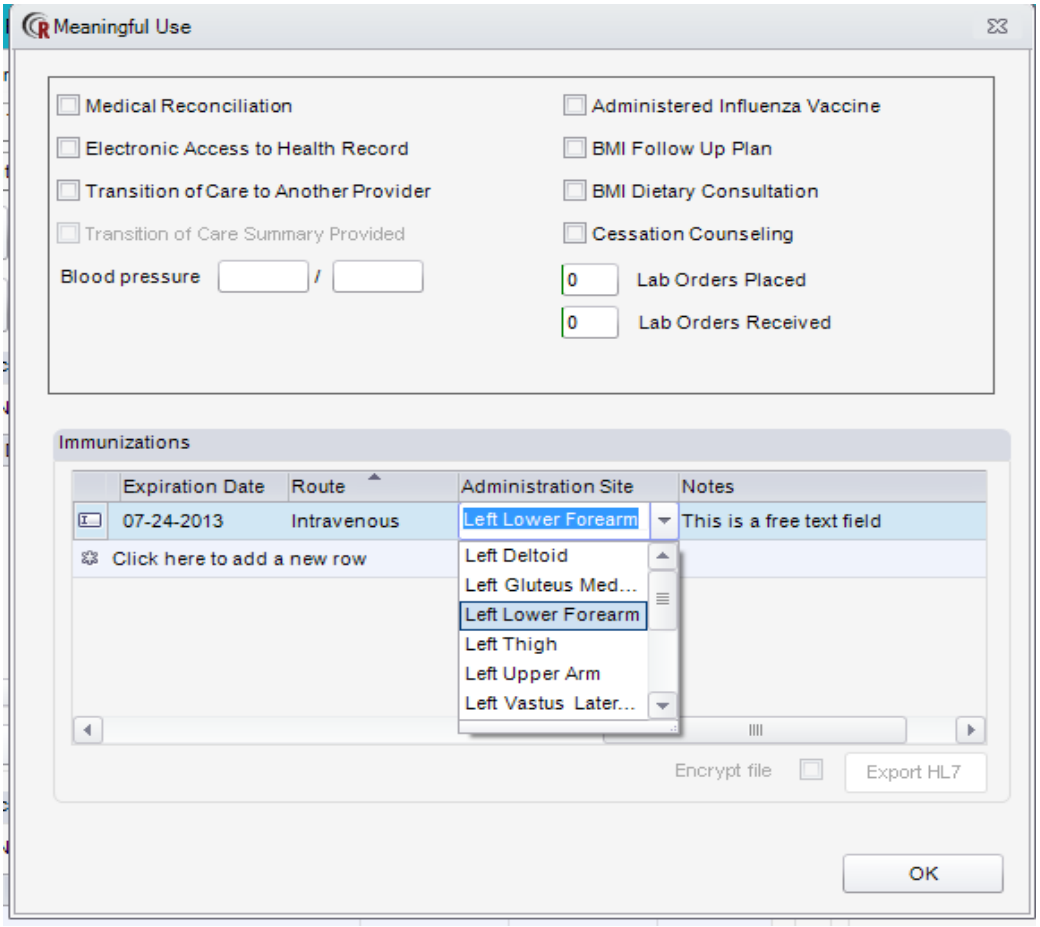

**Figure 5.115 – Immunizations data pane additions**

The values for Route and Administration Site are taken from hidden lookup tables that Admins will not be able to altered (hard coded values).

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – CQM Filtered by Practice

In Build 41 we modified all meaningful use stored procedure for calculating cqm measures to pass in a practice code as a parameter so that users can only view data from practices they have access to see ( reason for change: B40 change on how management reports work. Management Reports are also filtered by practice the logged in user has access to.)

## Lastname, Firstname

It was requested that many fields in the application conform to Lastname, Firstname. Therefore, on all worklists, tabs, combo boxes and fields that refer to people, the names are now formatted Lastname, Firstname. If the person is a user of the RIS system, it will show as Lastname, Firstname (userid). In the case of referring doctors, it will show as Lastname, Firstname Middlename Suffix.

Throughout the code, the name format was changed as appropriate.
**User:**
The current user of this RIS will have their name in the titlebar of the application as First Middle Last [userid]

**RIS tabs (ie, Walk-in, Registration)**
RIS tab header will display LASTNAME, Firstname #accession for all work tabs.
**Order tab within a workflow tab set**
(unchanged) Referring doctor and CC doctors in the order tab for all roles is unchanged from 40:
**Last, First M**

**Perform exam window:**
In the mini-patient-history at the top of the screen, referring is: **Last,** (unchanged): **First Middle Suffix**
Assigned radiolgist, performing, assisting…
**(unchanged) Last, First**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**Radioloigst Dictate Screen:**
Assign To Radiologist
**Last, First Middle**

**Audit screen**
Tab Title: Last, First #MRN
User who did the audit event:
**Last, First (userid)**

**Worklists columns:**
Virtually all worklists in RIS were updated to this new pattern. In most cases, there was dependant code on the _userid column, so these were left intact, and new columns were added to the worklist datasets to represent the names.
Referring column – now formatted to Last, First suffix
Radiologist, Tech, Transcriptionist, : Last, First Middle suffix (userid)
Patient: A new Patient name column was created which is Last, First

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 6. RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|
| 37 | - | 1.2.37.12843 | 1.2.37.12782 | 1.2.37.12843 | 1.2.37.12843 | Full version release. **Core install required.** |

# 7. Resolved Defects

Bugs Suggested Features and Support Issues resolved in build 1.41. The extract is taken from Redmine bug tracking system and only displays defects resolved in 1.41.

| Bug # | Priority | Subject | Category | Found Version |
|---|---|---|---|---|
| 3664 | Immediate | Wedge-Mirth speed needs to be improved!!!! CRA CANNOT GO LIVE ON THIS SAME BOX BEFORE THIS IS ADDRESSED | HL7 | 1.40 |
| 4186 | Urgent | Multitab next workflow | Radiology Reporting | 1.40 |
| 4149 | Urgent | Reporting - Potiental hazard of loading/saving incorrect dictation | Thick Client GUI | 1.39.001 |
| 4094 | Urgent | RadNet - Support HP ScanJet 3000 s2 | Thick Client GUI | 1.40.11 |
| 3700 | Urgent | Billing detail table contains an unneeded copy of the study container | Web Services/DB | 1.40 |
| 3463 | Urgent | RIS Billing interface needs to send unique numeric MRN to MDIV | HL7 | 1.40 |
| 4461 | High | Patient Wait Times | Mgt Reports | 1.40 |
| 4305 | High | Get attached user id not populating properly when making addendum requests | Web Services/DB | 1.40 |
| 4213 | High | PACS Caching Framework Busted | PACS Integration | 1.40 |
| 4133 | High | View Edit - Change scan type when patient has study open in reporting window will throw error | Thick Client GUI | 1.40.014 |
| 4084 | High | RRR - Forms 'criteria' - insurance criteria not recognized by right-click print forms from work list | Thick Client GUI | 39.16 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 3871 | High | Magview reports need addendums to be signed in Magview | Thick Client GUI | 1.40 |
| 4125 | High | Scheduling - User not informed at time of scheduling if study doesn't have billing code | Thick Client GUI | 1.40 |
| 3810 | High | Patient folder notes text boxes autosizing. (Fisher site visit) | Thick Client GUI | 40.01 |
| 3690 | High | WCF Services can be enumerated using the http mex binding | Web Services/DB | 1.40 |
| 3689 | High | c_SelectReportBodyAddendums need to add multi-sign information | Web Services/DB | 1.40 |
| 3550 | High | Scheduled study can appear on IVT work list twice | Thick Client GUI | 1.40.005 |
| 3402 | High | Push signature service stops processing all jobs when performed_end_date is null | Web Services/DB | 1.38 |
| 3336 | High | Required sections not being enforced | Thick Client GUI | 1.40 |
| 2922 | High | Reporting - insert macro doesn't select first field in macro moves to first field in report | Thick Client GUI | 1.39 |
| 2824 | High | Reporting - rejected reports should never go back to QA after signing again | Thick Client GUI | 1.38 |
| 1691 | High | Perform Exam - Error on click of complete button: "error determining study keys for status update" | Thin Client GUI | 1.2.37.13040 |
| 4062 | High | DD: Default option on saving new address info should be No when changing fax number. | Document Distribution | 1.40 |
| 4500 | Normal | Reporting - Missing speechmike setup file on Microphone Calibration wizard | Radiology Reporting | 1.40.017 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 4496 | Normal | Management Reports - Cancelled Reasons too slow | Mgt Reports | 1.40 |
| 4490 | Normal | Protect section headers does not protect against macro insertions | Radiology Reporting | 1.40.017 |
| 4475 | Normal | c_mgmt_study_details date of service | Web Services/DB | 1.40 |
| 4362 | Normal | abort study is sending all procedures back to orders to schedule | Thick Client GUI | 1.40 |
| 4316 | Normal | Add access string "Clinical.ResolveRadProblem " | Radiology Reporting | 1.40 |
| 4306 | Normal | Scanning - able to modify scan types even if they don't have access to Config.LookupEditor.ScanType | | 1.40 |
| 4288 | Normal | having a ( ' ) single quote in a scan type description, causes the attachments data nugget from loading | | 1.40.15 |
| 4252 | Normal | Reporting - custom fields list not displayed in logical order | Radiology Reporting | 1.40 |
| 4217 | Normal | Caching - Performance Can Be Improved. | | 1.40 |
| 4206 | Normal | errors deserializing lookups when called by multiple threads | Thick Client GUI | 1.40.015 |
| 4178 | Normal | billing message will not build for tech only studies. | HL7 | 1.40 |
| 4156 | Normal | ActiveAudioControl.DictationModeCurrent not reflecting actual Dictation Mode | Radiology Reporting | 1.40 |
| 4131 | Normal | Need index on c_visit.insurance_verification_approved_on_date | Web Services/DB | 1.40 |
| 4089 | Normal | Payment Detail Report - does not run at SE | Mgt Reports | 1.40 |
| 4088 | Normal | Scanning - cropping too much for ID cards | | 1.40 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 3996 | Normal | HL7 Billing interface change the PID.18 to contain the accession number | HL7 | 1.40 |
| 3994 | Normal | Activity WL is showing non active studies | Web Services/DB | 1.40 |
| 3975 | Normal | Verify External - button is greyed out in Patient Folder, even if you have permission | Thick Client GUI | 39.10 |
| 3973 | Normal | Scanning - Color issues | Thick Client GUI | 1.40.012 |
| 3972 | Normal | Blank Modality Lookup --> new site Index out of Range | Thin Client GUI | 40.10 |
| 3971 | Normal | RIS Administrator - permissions | Web Services/DB | 39.10 |
| 3968 | Normal | Mammo - Recall, Call back, Shor term follwup letter configuration. | Thick Client GUI | 40.11 |
| 3967 | Normal | Mammo Letters --> Manual printing of letters | Thick Client GUI | 40.11 |
| 3965 | Normal | Management Reports - RTAT Detail too slow | Mgt Reports | 1.40 |
| 3959 | Normal | screen access counts are inflated | Thick Client GUI | 1.40.16638 |
| 3951 | Normal | MU - Duplicate records for Merge Patients | Thick Client GUI | 1.40 |
| 3950 | Normal | MU - Get the following error when View/Print CQM Measures from rRIS | Thick Client GUI | 1.40 |
| 3945 | Normal | Remove Edit Order | | 1.00 |
| 3929 | Normal | RadNet - Ranjan - fix MyView default issue | Thick Client GUI | 1.40 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 3925 | Normal | Reporting - Extra get config file not needed when opening a report. | Thick Client GUI | 1.40 |
| 3923 | Normal | Patch Updates - Unable to easily hide patch builds | Thick Client GUI | 1.40 |
| 3922 | Normal | RIS Referring Physician Search Details | Mgt Reports | 1.40 |
| 3921 | Normal | PatientWorkList - GetConfigFIle / GetConfigFileList are going to the WS too often. | | 1.40 |
| 3915 | Normal | ambiguous error on My Pending Signature WL | Web Services/DB | 1.40 |
| 3906 | Normal | Outside Reads: In viewedit the Assigned Radiologist dropdown doesn't have the Rad's for the "site_code" specified. | | 1.40 |
| 3897 | Normal | Billing to Modality Type | Thick Client GUI | 1.40 |
| 3864 | Normal | Error on opening attachment window of Schedule Order window | Thick Client GUI | 1.40.010 |
| 3859 | Normal | Mgmt Reports c_study needs a field to store the version of the original signed off reprot | Mgt Reports | 1.40 |
| 3855 | Normal | Remove 6 -Mth / 13 -Mth Variance Report | Mgt Reports | 1.40 |
| 3854 | Normal | CD Import - Cast exception if an image set does not have a study_instance_uid | | 1.40 |
| 3768 | Normal | Mammo - Ignored Reminder report - performance | Mgt Reports | 40.01 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 3760 | Normal | Management Report - Radiologist Dashboard | Mgt Reports | 1.40 |
| 3748 | Normal | Quality Review Rate | Thick Client GUI | 40.00 |
| 3746 | Normal | Scanning - Auto cropping needs to be improved | | 1.40 |
| 3736 | Normal | Management Reports - remove defaulting of the sites value | Mgt Reports | 1.40 |
| 3735 | Normal | Management Reports - Radiologist Dashboard | Mgt Reports | 1.40 |
| 3733 | Normal | Medication Reconciliation should be checked when medication rb checked | Thick Client GUI | 1.40 |
| 3726 | Normal | Procedure code picker when creating macros/template filter issue | Thick Client GUI | 1.40 |
| 3697 | Normal | ICM Dashboard - Add parameter for Unknown Referring ID | Mgt Reports | 1.40 |
| 3668 | Normal | Managememt Reports - Transcription Dashboard | Mgt Reports | 1.40 |
| 3653 | Normal | mgmt report performance - Edited Jobs By User By Hour | Mgt Reports | 1.40 |
| 3641 | Normal | Reporting - soft return characters showing in the report editor | Thick Client GUI | 1.40 |
| 3640 | Normal | Reporting - insert macro not adding space between period and captial letter. | | 1.40 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 3637 | Normal | Internal voice command not working. (next field, insert template/macro, etc) | Thick Client GUI | 1.40 |
| 3631 | Normal | 6 -Mth / 13 -Mth Variance Report | Mgt Reports | 1.40 |
| 3630 | Normal | Exam Details pane doesn't contain everything the Summary pane does. | Thick Client GUI | 1.40 |
| 3625 | Normal | Duplicate NPI | Thick Client GUI | 1.40 |
| 3620 | Normal | Reporting - ability to load interactive dictionaries from user management | Thick Client GUI | 1.38 |
| 3618 | Normal | Managememt Reports - QA Radiologist Review | Mgt Reports | 1.40 |
| 3601 | Normal | Opening and Closing Screens is slowed down by the Recently Accessed List | | 1.40 |
| 3599 | Normal | l_person_address clustered index | Thick Client GUI | 1.40 |
| 3596 | Normal | Reporting - summary panel not displaying legacy users | Thick Client GUI | 1.40 |
| 3581 | Normal | Report rendering with empty table tags causing a misleading message | Thick Client GUI | 1.40 |
| 3573 | Normal | Reporting - Laterality Check throwing "cannot insert bookmark error" | Thick Client GUI | 1.40 |
| 3564 | Normal | message: "an error occurred while printing forms" when printing some forms from patient history | Thick Client GUI | 1.40.16638 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 3561 | Normal | Missing Access String | Web Services/DB | 1.40 |
| 3558 | Normal | Addendum request generates a new c_interpretation row | Thick Client GUI | 1.40 |
| 3554 | Normal | Errors in the Procedure code table editor | | 1.40 |
| 3542 | Normal | Unclear error message thrown when you chose an invalid value for 'State' | Thick Client GUI | 39.10 |
| 3541 | Normal | front desk activity report performance issue | Mgt Reports | 1.40 |
| 3527 | Normal | Error from lookup tables when choosing not to save changes. | Admin Tools | 1.40.002 |
| 3509 | Normal | Notification popup box fade too slow when clicking the "x" | Thick Client GUI | 1.40 |
| 3453 | Normal | Create macro from... Not working if template or macro browser is closed. | Thick Client GUI | 1.40 |
| 3452 | Normal | Document Model Info popup not disabling parent content base | | 1.40 |
| 3442 | Normal | Exception filtering lookup | Admin Tools | 1.40 |
| 3441 | Normal | CaptureUIControlHelper not disabling parent form when showing popups | Thick Client GUI | 1.38 |
| 3430 | Normal | Scroll bar is either not displayed or when it is displayed is useless | Thick Client GUI | 1.1.3.40.16854 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 3414 | Normal | RRR - CCR Doc for MU is displaying 'Radnet User' beside the From: section | Thick Client GUI | 39.10 |
| 3392 | Normal | Alergy flag broken in Dev | | 1.40 |
| 3388 | Normal | Mgmt MU Reports | Mgt Reports | 1.39 |
| 3374 | Normal | RRR Image Request Worklist is still showing 'Patient Id' as a column header, which should be MRN | | 39.10 |
| 3372 | Normal | Bypass PACS correction does not release lock | | 1.40 |
| 3364 | Normal | Cancel Order Dialog + Cancel button does not release lock | Thick Client GUI | 1.40.16638 |
| 3362 | Normal | Admin - template macros work list loses filters when editing a template/macro | Thick Client GUI | 1.40 |
| 3352 | Normal | Activity WL - Clear all filters on empty wl will throw exception | Thick Client GUI | 1.40 |
| 3342 | Normal | Referring without a first name preventing study from being worked in rad/mt workflow. | Thick Client GUI | 1.40 |
| 3320 | Normal | Cast error when performing an image request from some Rad WL | Thick Client GUI | 1.40 |
| 3308 | Normal | issue on tech screen when documenting a procedure where the active_flag is N | Thick Client GUI | 1.40.16328 |
| 3305 | Normal | Image Request - Cannot choose referring physician | Thick Client GUI | 1.40 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 3249 | Normal | study item certifications are not using the user defined order item certification precert status values | | 1.40 |
| 3231 | Normal | Transcribe/Suspend button not loading defaults properly | Thick Client GUI | 1.40 |
| 3230 | Normal | Reset open skipped rows, open an addendum requested study throws an exception | Thick Client GUI | 1.40 |
| 3144 | Normal | Radiologist Dashboard - Completed Exams 7 Day trend is showing less than 7 days. | Mgt Reports | 1.40 |
| 3138 | Normal | tech can accidentally take exam out of exam done status when completing together | Thick Client GUI | 1.40.16328 |
| 3084 | Normal | Config setting default is rRIS Reports | Thick Client GUI | 1.40 |
| 3044 | Normal | Meaningful Use Close button realignment | Thick Client GUI | 1.40 |
| 3032 | Normal | Register Context menu shouldn't be available on Tentatively Signed studies. | Thick Client GUI | 1.40 |
| 3026 | Normal | Selected Attachments Tool Window | Thick Client GUI | 1.40 |
| 3022 | Normal | PersonHyperLink throws exception due to data received from HL7 | Thick Client GUI | 1.40 |
| 3008 | Normal | Poor performance on management report Front Desk Activity Report | Mgt Reports | 1.37 |
| 2989 | Normal | Attachment viewer - inverting resets zoom level | Thick Client GUI | 1.39 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 2986 | Normal | Reporting - WPR error attempting to create WPR dictation | Thick Client GUI | 1.39.001 |
| 2980 | Normal | Report nugget signed on verbiage | Thick Client GUI | 1.39 |
| 2956 | Normal | Reporting - transcribed count at the bottom of the app is not including tentatively signed studies | Thick Client GUI | 1.38 |
| 2954 | Normal | Reporting - WPR workflow suspend dictation does not show on my suspended worklist | Thick Client GUI | 1.38 |
| 2952 | Normal | Reporting - when signing a report and empty fields are present move to the first one | Thick Client GUI | 1.38 |
| 2912 | Normal | RRR - Tech able to enter IVT notes ( with no specific IVT permissions) | Thick Client GUI | 1.38.0 |
| 2688 | Normal | Voice navigation which moves the cursor/position in the document does not result in axCdsEditorCtrl1_CursorChangedEvent | Thick Client GUI | 1.39 |
| 2677 | Normal | Create Report from Reset Open skipped rows | Thick Client GUI | 1.39 |
| 2660 | Normal | Template Macro Editor - Adv Assignment - user not defaulting | Thick Client GUI | 1.39 |
| 2637 | Normal | Next field command selecting multiple fields | Thick Client GUI | 1.39 |
| 2628 | Normal | Reporting screen not drawing in, if user make worklists active | Thick Client GUI | 1.39 |
| 2544 | Normal | "Reset" function in worklists does not appear to be working | Thick Client GUI | 38.15 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 2469 | Normal | Red X and application hang in Administration UserGroupPermission | | 1.38 |
| 2426 | Normal | When scheduling (outside read, new appointment, walkin) and you enter the letter 'c' into the first name field, then press 'Patient Search' RIS throws an error. | Thick Client GUI | 38.14 |
| 1864 | Normal | BarCode font install not included in eRAD RIS Reporting Services Installation document | Thick Client GUI | 1.37 |
| 1524 | Normal | MU - Grids.. When saving auto select - Use Grid option if validation fails | | 1.2.37.12739 |
| 1248 | Normal | Reporting layout can fail to load, causing patient history to not localize correctly | Thick Client GUI | 1.35 |
| | | | | |
| 1530 | Normal | Macro editor | | 1.37 |
| 3846 | Normal | Change references to all persons (patients and doctors) to be Lastname, Firstname | | 1.40 |
| 3931 | Normal | RadNet - Ranjan - resolve "starts with" in Audit history | Thick Client GUI | 1.40 |
| 3940 | Normal | RadNet - Ranjan - fix arrow on next doc when the scanned doc is a report | Thick Client GUI | 1.40 |
| 3969 | Normal | Mammo Letters Worklist | Thick Client GUI | 40.11 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 3978 | Normal | WL Calculated columns missing in B40 | | 1.40 |
| 4016 | Normal | Performance - Turn off global animations | | 1.40 |
| 4130 | Normal | "collection was modified" or "datatable internal index is corrupted" error when opening a radiologist screen | Thick Client GUI | 1.40.18063 |
| 4408 | Normal | Inactive rooms are appearing on the Tech available rooms list | | 1.40 |
| 3870 | Normal | Reporting - Assing to Radiologist window | Thick Client GUI | 1.40.010 |
| 4098 | Low | View attachment from View/edit window | Thick Client GUI | 40.01 |
| 3680 | Low | Font size - not saving | Thick Client GUI | 1.40 |
| 3671 | Low | Weight field allows user to enter non-numerical values | Thick Client GUI | 1.40 |
| 3623 | Low | CD Import - better handle null PACS AE Title | PACS Integration | 1.40 |
| 3544 | Low | PatientContactTypeLookup should be hidden | Admin Tools | 1.40 |
| 3334 | Low | patient merge reject does not refresh merge worklist | Thick Client GUI | 1.40.16593 |
| 3322 | Low | View Edit should not be the default aciton on patient folder | | 1.40 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 3261 | Low | specialty read and referring protocol notes do not display new line characters | Thick Client GUI | 1.40.16328 |
| 3246 | Low | Date column filters AM/PM switching advances date. | Thick Client GUI | 1.40 |
| 3146 | Low | Required fields dropping there icon when leaving the control. | Thick Client GUI | 1.40 |
| 3087 | Low | Meaningful Use Dialog Close button position is off | Thick Client GUI | 1.40 |
| 2658 | Low | Stored function c_getcontrastrequiredflag could return wrong value if multiple study items exist | Web Services/DB | 1.39 |
| 2071 | Low | Window handle error from Dictate window | Thick Client GUI | 1.2.38.14194 |
| 1855 | Low | Reporting - Exam details - Procedure name my not display completely | Thick Client GUI | 1.1.2.38.13809 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 8. Known Limitations

The following are Bugs Suggested Features and Support Issues found in build 1.41. Bugs reported in previous versions are not captured as Known Limitation in this document.

| # | Status | Priority | Subject | Resolved Build |
|---|---|---|---|---|
| 4575 | New | Urgent | Critical Results - Resolving causes error when signing exams | |
| 4574 | New | High | Outside Reads - history field changed to signs and symptoms | |
| 4479 | Resolved | High | Reporting - using re-use causing confusion when getting a message box like "Addendum Requested" | 42 |
| 4411 | Resolved | High | WorkItemManager failes on reloading a addendum study after WS error | |
| 4379 | Resolved | High | All signed by date column sorts | 42 |
| 4366 | Resolved | High | Transcribe next workflow (beeps) | 42 |
| 4356 | QE Rejected | High | Critical Result - CTRN - Unknown referrers added in critical result window display as invalid | |
| 4354 | New | High | Long lookup time-to-live is causing problems | |
| 4090 | New | High | RIS/PACS desktop integration ( no default value on PACS Server type) | |
| 4577 | New | Normal | View Edit - open view edit window and save with no changes made logs entry to audit history | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 4576 | New | Normal | Personnel - Internal person notes | |
| 4569 | New | Normal | suspend button is displayed on the bottom of the reporting screen after opening a suspended case | |
| 4567 | Resolved | Normal | Reporting - notifications need to be placed above action buttons. | 42 |
| 4566 | Resolved | Normal | Reporting Reuse - Next workflow loads cases that are pending saving. | 42 |
| 4560 | New | Normal | Some message boxes don't close when hitting X | |
| 4557 | Resolved | Normal | Read only mode hides recording button, but can still record using microphone | 42 |
| 4556 | Resolved | Normal | Read only mode not reflecting on minimized dictation controls | 42 |
| 4555 | Resolved | Normal | When opening a study in read only, user should get a prompt | 42 |
| 4551 | Resolved | Normal | Modified GoggleSearchAction to support Multiple passed in params | 42 |
| 4548 | New | Normal | CTRM - Notes field isn't read only | |
| 4547 | New | Normal | CTRM - Reopening the Critical Results window caused error | |
| 4544 | Resolved | Normal | Send-to button blanks out the reporting screen | 42 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 4543 | Resolved | Normal | RXNorm is not captured from NewCrop | 42 |
| 4542 | Resolved | Normal | Worklist refresh exception | 42 |
| 4541 | Resolved | Normal | autosave - button positions should be switched | 42 |
| 4540 | Resolved | Normal | Autosave - close should prompt to delete | 42 |
| 4539 | Resolved | Normal | Autosave - double click row does nothing | 42 |
| 4536 | Resolved | Normal | Reporting - Reuse enabled status area messages not populating for action buttons | 42 |
| 4533 | Resolved | Normal | Reporting - edit template > make changes > x to close > no prompt presented about changes | 42 |
| 4532 | Resolved | Normal | Reporting - edit template > esc > cancel will close the form instead of cancelling | 42 |
| 4527 | New | Normal | Attachments - Verbal button causing error | |
| 4525 | New | Normal | Pre-Auth required before I select my referrer | |
| 4522 | New | Normal | intermittent error: transaction was deadlocked on lock resources with another process and has been chosen as the deadlock victim | |
| 4521 | Resolved | Normal | Scanning - Editing Document width and height causing error on blanks | 42 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 4519 | New | Normal | if you get an exception while opening a recovered dictation that dictation is lost | |
| 4516 | Resolved | Normal | Reporting - MT polling enabled open RIS initially will result in messed up reporting screen | 42 |
| 4515 | New | Normal | If you get an exception while opening a dictation with floating windows the floating windows do not close when the tab closes | |
| 4512 | New | Normal | WPR workflow not working with screen reuse | |
| 4511 | New | Normal | CDA - ordered List vs unordered lists | |
| 4510 | Resolved | Normal | Reporting - editing reports MT's have the microphone selection option available | 42 |
| 4509 | New | Normal | Caching reporting screen - panels stay open after close | |
| 4508 | Resolved | Normal | Transcriptionist next workflow not properly skipping | 42 |
| 4503 | New | Normal | Perform Exam - Complete / Start can advance a study when it shouldn't | |
| 4497 | New | Normal | Deleting a table in a report leaves the tables but deletes the section header | |
| 4483 | New | Normal | Reporting - Add patient folder control to reporting window will not display history | |
| 4481 | Resolved | Normal | LogTextBox - Permission for an admin to edit previous log details isn't always available. | 42 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 4480 | Resolved | Normal | b41 Joe Testing - you can backspace in patient notes and erase the date and name | 42 |
| 4463 | New | Normal | Transparency on notifications | |
| 4457 | New | Normal | B41 Joe Testing - splitting order - wrong one gets precert | |
| 4450 | New | Normal | Auto-open worklist won't open if you cancel the chair selection prompt | |
| 4449 | New | Normal | Changes made to set up do not auto refresh appt book. Have to close and relaunch appt book. | |
| 4444 | New | Normal | Scanning - Order/Patient/Exam Level can change when re-viewing the document | |
| 4443 | Resolved | Normal | External Report Workflow - changing room/procedure resets external flag. | 42 |
| 4436 | New | Normal | Notification wording/layout | |
| 4434 | Resolved | Normal | Outside Reads do not fall into external workflow | 42 |
| 4431 | New | Normal | Forms in labels require a rule otherwise they will never be available | |
| 4429 | New | Normal | Opening report drafted study in Create/Edit Report marks study dirty on open | |
| 4426 | Resolved | Normal | Reports that should have site filter | 42 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 4423 | New | Normal | User preference need to restart application | |
| 4421 | New | Normal | Shortcut for Tables not working in report editor (CTRL + T) | |
| 4414 | Resolved | Normal | Importing multiples studies into one EMR order throws an already declared exception | |
| 4405 | New | Normal | Patient ID still appearing as columns on person merge request WL | |
| 4404 | New | Normal | Pending PACS correction WL contains Contributed A/B columns | |
| 4400 | New | Normal | EMR Patient Linking causes insurance error when printing forms. | |
| 4395 | New | Normal | Report  margins should indicate units. | |
| 4392 | New | Normal | alignments of MT screen buttons in user preferences are a little miss aligned | |
| 4389 | Resolved | Normal | Reporting - Addendum request make notes required on request and reject. | 42 |
| 4387 | QE Rejected | Normal | Reporting - auto save items not sizing appropriately in the list of files to recover | |
| 4386 | New | Normal | Report History Error | |
| 4383 | New | Normal | External Report Workflow check box looses value on open of view edit | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 4382 | New | Normal | Opening Editing - patient name is lower case | |
| 4381 | New | Normal | Preview report issue where new changes to report config doesn't take | |
| 4378 | New | Normal | Canceling Unscheduled orders not appearing on Patient Folder | |
| 4377 | New | Normal | Procedure code picker when creating search macros/template filter issue | |
| 4374 | New | Normal | Delete Dictation/Report and Reset Status not available for exam done status with exsisting interpretation rows | |
| 4372 | New | Normal | Creating a new appointment from the patient search window causes error. | |
| 4359 | New | Normal | Ranjan - Need all dictated by date WL | |
| 4343 | New | Normal | Change password of a credential swap user while logged on, means can't swap | |
| 4341 | Resolved | Normal | QA worflow problem flag #2894 | 42 |
| 4326 | In Progress | Normal | Reporting - Multiple Pending Signature notifications raised | |
| 4322 | New | Normal | Dark Mode misses | |
| 4308 | New | Normal | Patient Folder - Selected Summary not resizing properly when dragging the pane | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 4299 | New | Normal | Administration - MModal Document Model - error on right click preview of expanded rows | |
| 4298 | New | Normal | Reporting - Show all templates will bold a template that has no connection with current study | |
| 4274 | New | Normal | All Signed By Date WL missing context menu option for Patient Folder | |
| 4267 | Resolved | Normal | Report context menu item does not have access string | 42 |
| 4264 | New | Normal | Ris remembers it's position but not based on user login | |
| 4202 | New | Normal | Many user-id columns still in transcription worklist | |
| 4198 | New | Normal | patient folder doesn't load unless part of the initial layout on open of rad screen | |
| 4197 | Resolved | Normal | Hard to find patient first and last name in exam search | |
| 4193 | Resolved | Normal | Contact log tab - expanding the contact log to display all rows throughs error | |
| 4185 | In Progress | Normal | Login - After logging in as a Rad user the splash screen doesn't always repaint | |
| 4179 | New | Normal | Pending dictation WL showing locked items | |
| 4153 | Resolved | Normal | Sort on audio length throws error on worklist refresh | 42 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 4128 | New | Normal | Adding insurance policies on new patient | |
| 4118 | New | Normal | Reporting - TemplateMacro editor Hitting refresh can duplicate fields or inserted text | |
| 4101 | New | Normal | Birad picker, cannot select recommendation as it doesn't load. | |
| 4100 | New | Normal | Right click on reporting drop down buttons | |
| 4082 | New | Normal | Previewing unsaved addendums from the reporting screen. | |
| 4070 | New | Normal | Patient Merge - Patient history does not show orders | |
| 3949 | New | Normal | Encrypt audio files used in report recovery autosave | |
| 4435 | New | Low | Ranjan - Age format in worklist is different than in data panes - prefer data pane look | |
| 4385 | New | Low | Reception WL still refreshing while not on the screen | |
| 4358 | New | Low | Ranjan - Terminology updates | |
| 4357 | New | Low | B42 - Missing Access Strings | |
| 4324 | New | Low | Worklist Auto Open not auto opening | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 4282 | New | Low | Template / macro - Create using filter criteria | |
| 4247 | New | Low | Open at login user preference (usability) | |
| 4163 | New | Low | Perform Exam - Cancelled studies in patient history list have buttons enabled | |
| 4028 | New | Low | Locking - not warned about stealing locks with pacs enabled | |
| 4672 | New | Normal | Auto Refresh Rate inconsistent | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 41 and subsequent server releases. This version of eRAD RIS is referred to as Build 1.3.41.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.41.1 is considered a new core release of the application and will require a reinstallation of eRAD RIS. This is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 4. New Access Strings and Configuration Settings

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Ris.exe.config | **MModalDataTransferValue** | None | Override the user preference for M*Modal's Data Transfer.<br><br>See feature Reporting – Ability to Configure MModal Transfer Task in this document for more details |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 5. New Features and Enhancements

## Reporting – Talked to Doctor Macro

Radiologists often call the referring physicians office while reading cases with time sensitive findings. In these cases they contact the referrer to let them be notified and take any required actions before the report has been drafted, QAed, signed and distributed.

After contact with the referring office the radiologist add details to the report. To support such calls we have added custom fields in the Template/Macro editor to insert a "Talked to Doctor" statement in the report.

Fields added are (with examples)
**TimeStamp12** - 4:30pm
**TimeStamp24** – 16:30
**Today** - 11-20-2013
**ReferringShort** – Dr. Last
**ReferringLong** – Dr. First Last

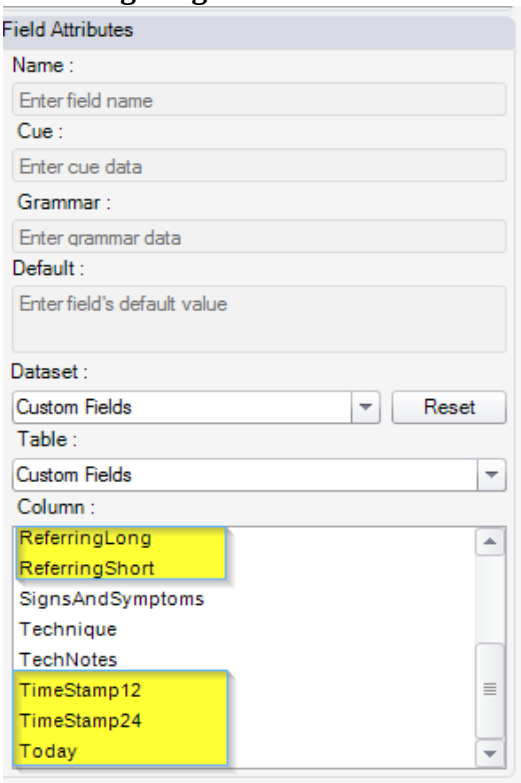

**Figure 5.1 – Custom fields added for creation of Talked to Doctor macro**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Open Patient Folder when Signing

Users currently have two main layouts. Either they are signing or dictating. Reason for this is that most signing task don't require the full patient folder detail, pacs images or dictation. So the signing layout is typically much smaller or less detailed then the dictation layout.

Users on occasion do want to display the Patient Folder and other detail similar to dictation when singing reports.

We now provide the user ability to load the dictation layout (patient folder) when signing reports. This is a manual click to load the dictating (patient folder) layout.

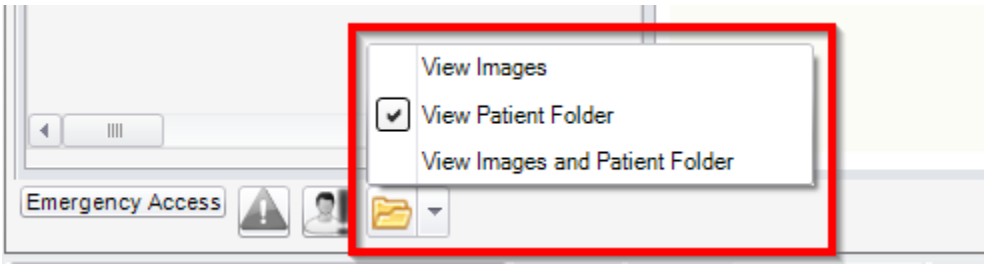

**Figure 5.2 – Signing mode layout options**

In the example above you can see that the Load Images button has been converted to be a split button with the additional options for "View Patient Folder" and "View Images and Patient Folder" with the "View Patient Folder" currently set as the default. This new dropdown button acts like other dropdown buttons for the reporting screen. Click the arrow to open other options and select option as desired. Holding the CTRL+<option> will render it the default and save in your user preferences.

1.)  2.)  3.) 
**Figure 5.3 – Options available as default**

The three images above show the icon when set as default action for 1.) View Images 2.) View Patient Folder 3.) View Images and Patient Folder

When the Sign Report window is reloaded with the next study either from the work list or from the Submit/Sign/Suspend/Skip and Continue option the users Signing Layout will be used. What this means is that it will load the dictation layout when clicking Load Patient Folder but it won't be sticky.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Add Laterality to the Patient Folder

The patient folder within the reporting window had the laterality in the procedure description, but it was desired to have this in its own column. In 41.1this column has been added to the patient folder. The column can be filtered, sorted, removed from current view, etc… as other columns in the reporting patient folder.

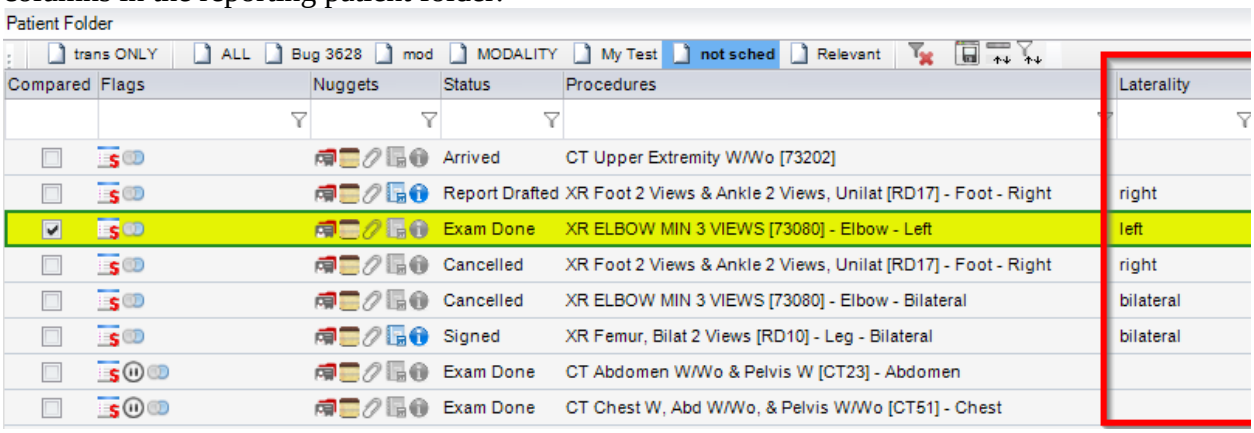

**Figure 5.4 – Reporting patient folder with new Laterality column**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Laterality Check when Transcribing Reports

In previous versions a laterality check was performed when signing and when verifying reports. In 41.1 the laterality check is performed for transcription as well as signing. Transcription users will need to have the User Preference Laterality Check selected to enable this feature.

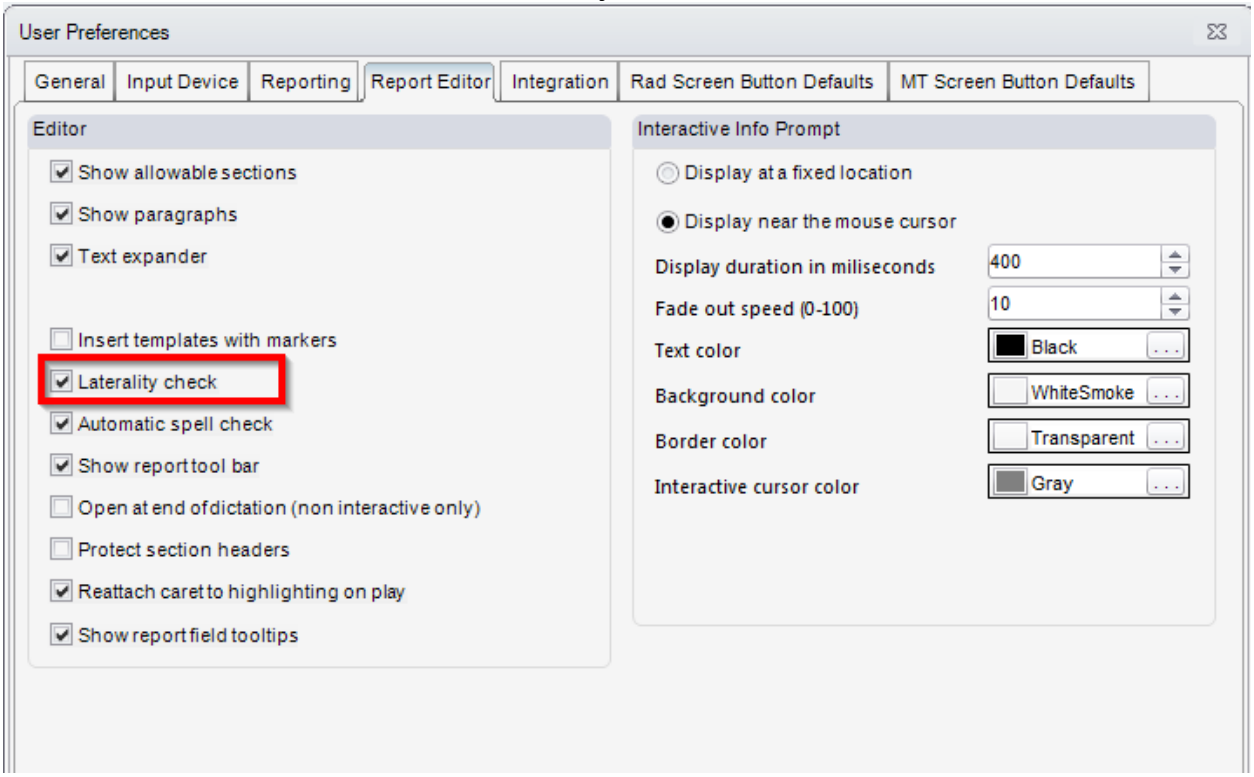

**Figure 5.5 – User Preference Laterality check**

If your procedure contains laterality and your report has a conflicting left or right the user will be informed via message on selecting the Transcribe button.

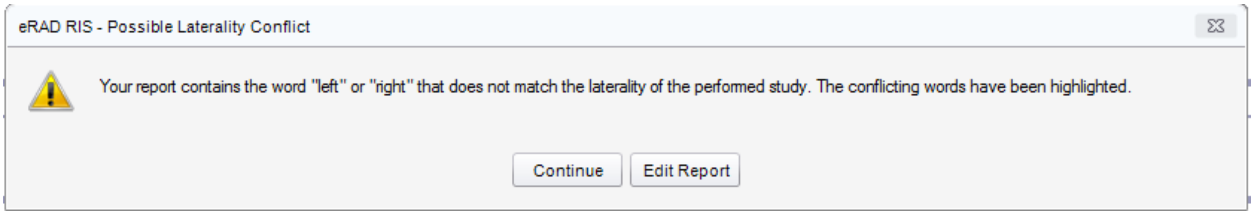

**Figure 5.6 – Laterality conflict on Transcribe message.**

Selecting Continue will ignore the conflict and complete transcription. The Edit Report button will leave the editor window open and highlight the conflicting and matching literalities.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The report in my example was on a procedure with a left laterality in the screenshot below the conflicting laterality of "right" and matching laterality of 'left' are left highlighted in the report.

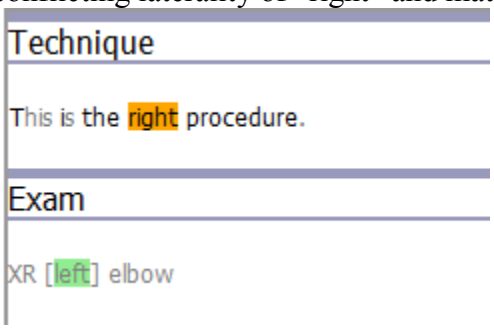

**Figure 5.7 – Conflicting and matching literalities are highlighted in report**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Remove Content Tags from CDA when Creating Macros/Templates

eRAD RIS offers the ability for a user to copy an existing report as a template for future reports. This functionality is inhibited by the fact that the new template they create contains mm:status and mm:part that should be stripped out.

As a result of the mm:status and mm:part still contained in the template, some of the jumping problems we have encountered on play back were related to time stamps being saved in templates and macros at the time of save. To correct this we found we could manually remove the time stamps from the underlying document.

We are now using the convertCdsToCda method to remove the time stamps and unneeded tags.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Ability to Configure MModal Transfer Task

The ris.exe.config now has an app setting to override the user preference for M*Modal's Data Transfer Config: **MModalDataTransferValue**

Acceptable values are any sum of the following options:

**SUBMIT_TRAINING_INFO:** Upload log of user interaction (including recorded audio) to server for profile building. Applicability: only for local recognition; ignored for remote recognition. constant value = **1**

**SUBMIT_ERROR_LOGS:** Whether to automatically submit an error report for debugging after an uncontrolled shutdown, or when encountering another non fatal error.
Applicability: all modes; requires storage manager for crash log uploads (non-fatal error reports can be submitted without). constant value = **2**

**STORE_USER_SETTINGS:** If set, store user preferences (including audio gain etc) on CDS server, and retrieve on next startup. Applicability: all modes. constant value = **4**

**UPDATE_PROFILES:** If set, checks at session creation whether an updated user profile is available on the server. If yes it is downloaded in a background thread and used as soon as it becomes available. Until then the recognizer would use either a speaker independent profile, or an older locally cached profile version (only if an IStorageManager is configured).
Applicability: local recognition; ignored for remote. constant value = **8**

**UPDATE_RECOGNIZER:** If set, check in regular intervals whether an updated compatible recognizer version is available on the server. If yes, the recognizer mode is downloaded in a background thread and used when the local recognizer is next instantiated (i.e. not switched out in a running session).
Applicability: local recognition; ignored for remote. Requires an IStorageManager, ignored if none is configured. constant value = **16**

**WRITE_DEBUG_LOG:** Like SUBMIT_TRAINING_INFO, but leaves information in a local IStorageManager for debug purposes instead of (or in addition to) uploading it to a server.
Applicability: local recognition; ignored for remote recognition constant value = **32**

If the value is not present or invalid, we resort to existing logic. This would be to check the user config for auto download, if present use 29 else 13

13 = SUBMIT_TRAINING_INFO, STORE_USER_SETTINGS, UPDATE_PROFILES
29 = SUBMIT_TRAINING_INFO, STORE_USER_SETTINGS, UPDATE_PROFILES, UPDATE_RECOGNIZER

0 (zero) is a valid option. Zero will disable the calls.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – MT Edit Text Color

MT edit text color has been set up as a user preference that is accessible in your editor preferences. Once a color is chosen it will take effect the next time the editor window is opened. (Doesn't take effect in current editor window)

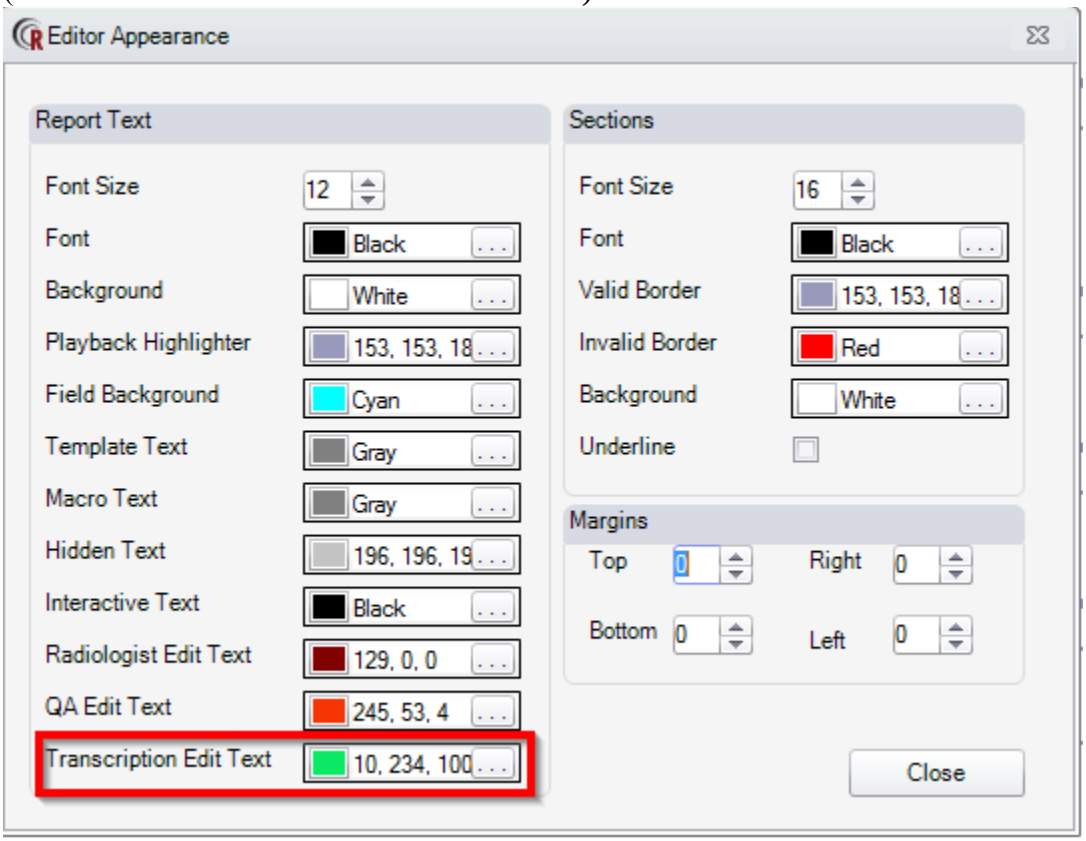

**Figure 5.8 – Transcription Edit Text color in Editor Appearance window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Double Click to Launch Attachments in Full Screen

In the user preferences we have a setting for "Double click to maximize attachments". With this set double clicking on an attachment will maximize the tool window to the current screen. Once maximized you can double click to restore it to its previous location or in the case of a reporting floating window you can close the window with the "X" in the top right corner (when in full screen maximized mode).

If you are to save your layout with this configuration, the full screen maximized toggle will not save with the layout manager.

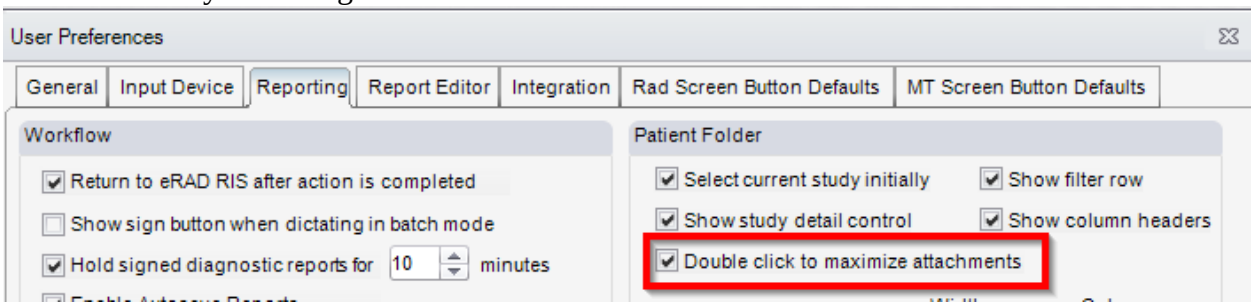

**Figure 5.9 – User preference to enable double click to maximize attachments**

In addition to the double click to maximize the user can also use the button in the upper left of the Attachments or Selected Attachments data pane to open in full screen.

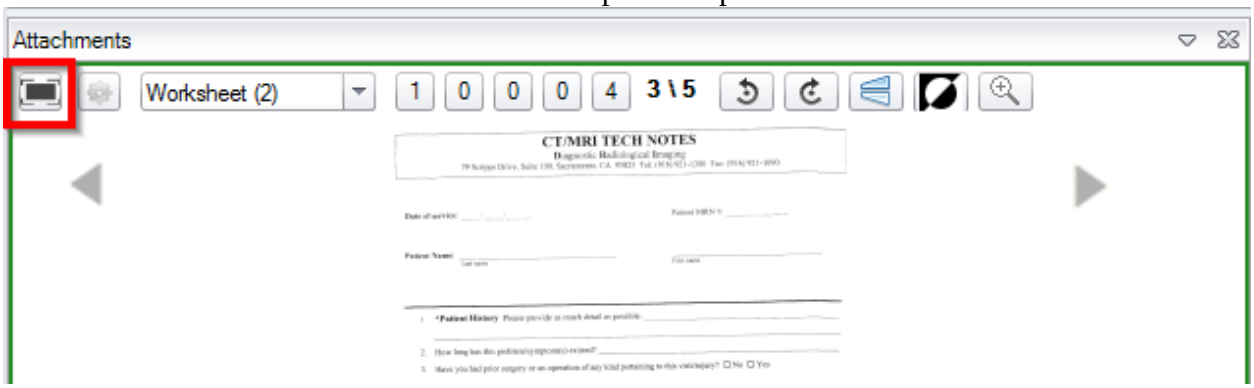

**Figure 5.10 – Button on Attachments data pane to launch in full screen.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Attachments "Show Me Everything" Option

The attachment types dropdown can be configured to display only those attachments they want to see appear in the Attachments data pane or data nugget. We have added an option to enable the users to have access to the remaining attachments that may be associated with the patient.

Two new options will appear in the attachment types dropdown
+ Show More
- Show Less

By default the attachment data nugget opens with only the scan document types the user wants to see, which is configurable via the ' button'. By choosing "+ Show More" the attachment data nugget will reopen and display all attachment types regardless of user preference.

These options will not display if there are no additional attachments.

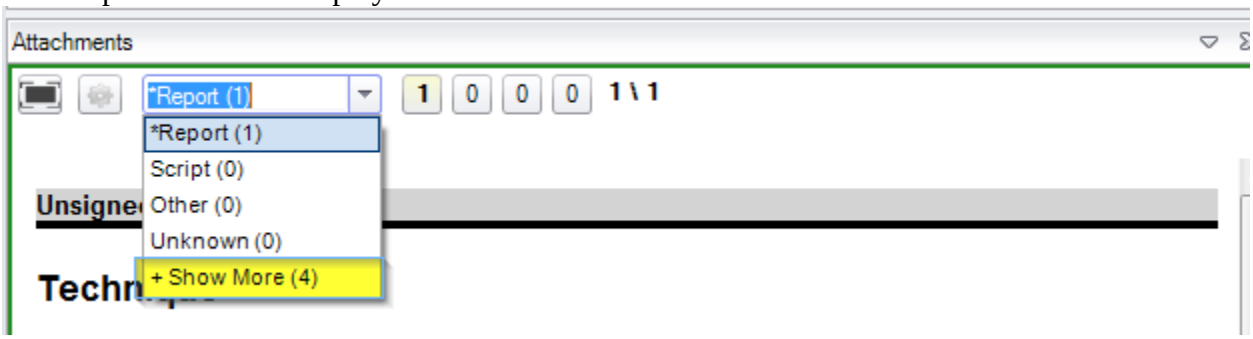

**Figure 5.11 – Show more attachments**

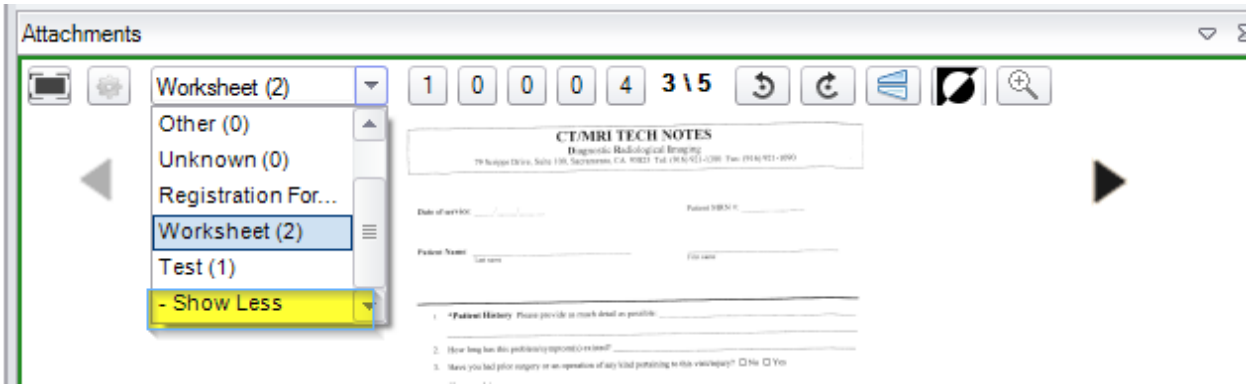

**Figure 5.12 – Show less attachment options.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Relevancy Calculation Adjustable via Configuration

In production we have procedure codes that because of legacy data have very different names even on different modality types, but those procedures are actually exactly the same and should match exactly when assigned a relevancy score. Previous to B42 this was not possible because the relevance calculation was based entirely on word matching. A score was assigned based on the number of matching words and words that are modality type, body part or laterality are given great weight in the matching. Furthermore the administrator can setup the site so that only studies done on the same modality are considered relevant.

A new window titled Relevance Override has been added and is accessed from the "Override…" button on the Relevance lookup table.

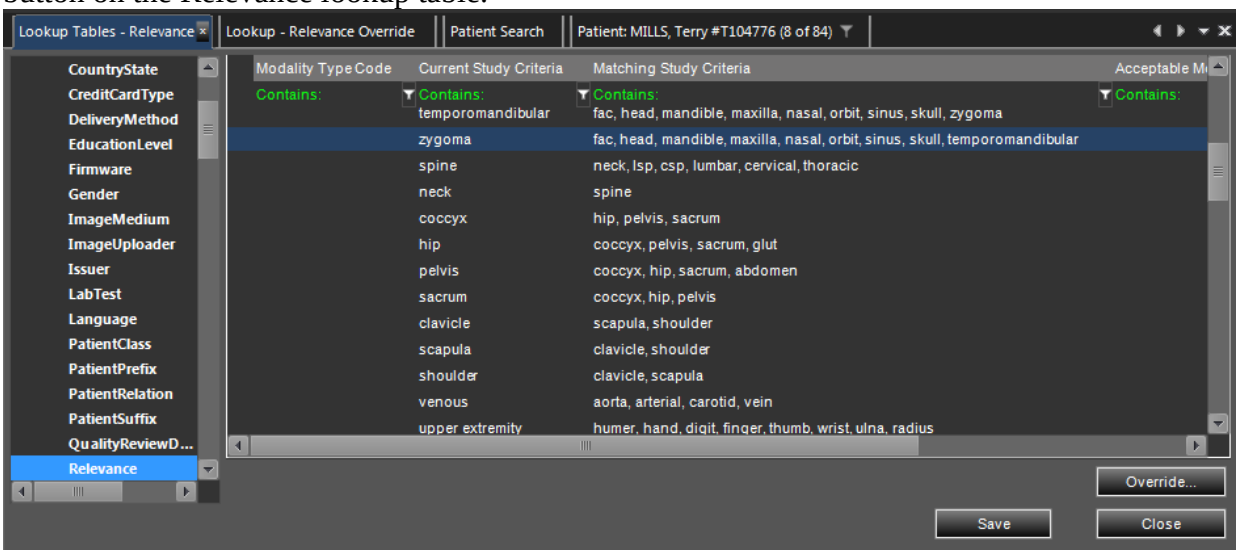

**Figure 5.13 – Accessing the Relevancy Override window**

When procedures in the patient's history have a matching relevancy override the configuration defines how much weight will be assigned as part of the procedure matching score (value between 0 and 100) and if the outcome will produce a Matching or Non-Matching Relevance Flag.

This solution also allows laterality to be an option part of the matching criteria. If the laterality is blank then it isn't considered as part of the matching criteria; however, if laterality is selected as "Same" then the rule only applies if the laterality of both procedures is identical. If the laterality is selected as "Different" then the rule only applies when the laterality differs and can be used to lower the score or make it Not Relevant, which could be useful when you want to give a high score when the laterality matches but a significantly lower score when the laterality is different.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

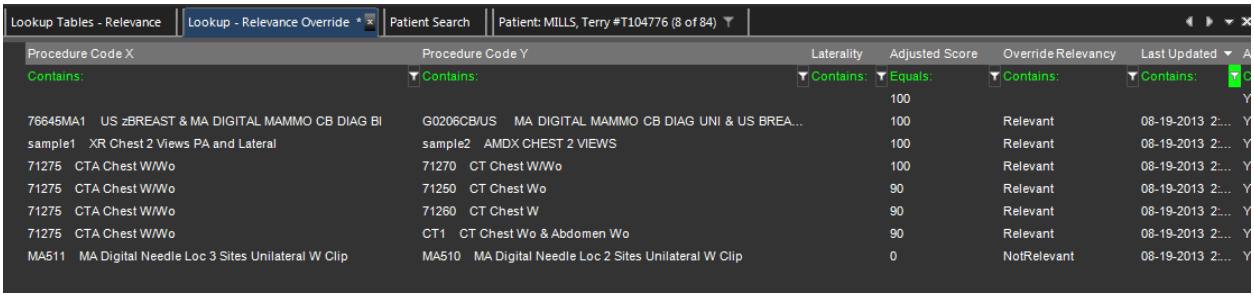

**Figure 5.14 – Relevance Override**

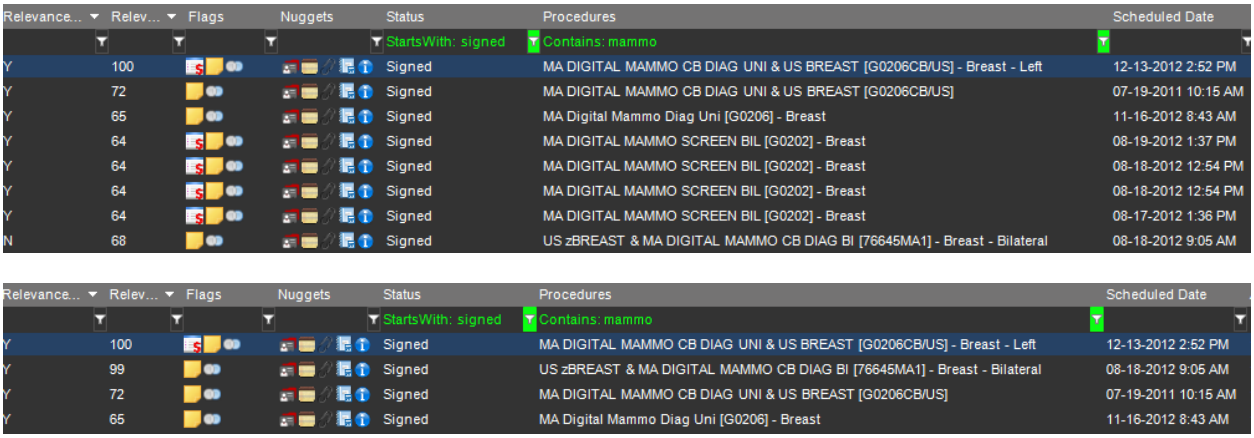
When the user clicks on the "Override…" button a tab opens up for the "Relevance Override" table, which allows you to specify two procedures (X and Y). When calculating relevancy if the studies match based on X and Y then the adjusted score will be applied and the relevancy flag will be set based on the selected value in the "Override Relevancy" column.

Note: The "Adjusted Score" and "Override Relevancy" columns are optional. If the "Adjusted Score" is blank then the score will remain as it was calculated without the override but the relevancy flag override would apply. Also, if the "Override Relevancy" column is blank only the score will be adjusted.

In the above Relevance Override configuration the procedures 76645MA1 and G0206CB/US are interesting. One is a US Breast & MA MAMMO CB and the other is a MA Mammo CB and US Breast. The default word matching produces a relevance score that is very close but not exact therefore some installations of RIS will want to correct for this. The following screen shots shows the relevancy results for a test patient's history – the first screen is with the override rule inactive and in the second screen shot the rule has been activated.



**Figure(s) 5.15 – Before and After Override applied**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Note: that in the first screen shot without the Relevance Override, the 76645MA1 doesn't even show up as relevant because in the base relevancy rules there is a rule that says only MA modality type studies are relevant to MA studies. In the second screen shot the rule for 76645MA1 and G0206CB/US says the procedure matching will get a score of 100% but since the procedure matching only accounts for half of the total score (the other half is used to sort by date), therefore we see the score increase from 68 to 72 and 76645MA1 actually gets placed before the older G0206CB/US study because it's a recent prior.

# 8. Resolved Defects

Bugs Suggested Features and Support Issues resolved in build 1.41.1. The extract is taken from Redmine bug tracking system and only displays defects resolved in 1.41.1

| Bug # | Priority | Subject | Category | Found Version |
|---|---|---|---|---|
| 5311 | Immediate | Insert macro can reset a field back to its default value | Radiology Reporting | 1.42 |
| 5164 | Immediate | Losing default value for fields when saving template/macro | Radiology Reporting | 40.02 |
| 5585 | Urgent | Maximize Attachments - does not close on deactivation of the reporting screen. | | 1.42 |
| 5550 | Urgent | DD: Printer rules do not take effect appropriately for outside read sites | Document Distribution | 1.41.002 |
| 5337 | Urgent | Reporting - Dictionary Add / Train changes | Radiology Reporting | 1.40.20 |
| 5571 | High | MERGE - Reporting - Transcription user error on first study opened in create report window | Radiology Reporting | 40.02 |
| 5542 | High | Null reference error when opening appointment book -- "LoadCascadingComboBoxes" | Thick Client GUI | 1.41.002.1 |
| 5437 | High | Reporting - possible wrong document model loading if more than one practice | Radiology Reporting | 1.40.20 |
| 5418 | High | Print Report - Timeout exception handling needed | | 1.42 |
| 5386 | High | Patient Folder work list relevancy error | Thick Client GUI | 1.41.1 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 5382 | High | RRR - Offering times that are not available for NucMed procedure plans | Thick Client GUI | 1.41.002 |
| 5381 | High | RRR - Procedure Plan Time Duration not correct | Thick Client GUI | 1.41.002 |
| 5375 | High | Exception when opening a locked studies for dictation and cancelling on the break lock message | Radiology Reporting | 41.10 |
| 5374 | High | Canceling Unscheduled orders not appearing on Patient Folder | Thick Client GUI | 1.41.18633 |
| 5328 | High | multi type ahead (procedure picker) control cuts off portion of text | | 1.38 |
| 5261 | High | RIS does not retrieve lookup tables / configuration changes under certain circumstances | Thin Client GUI | 1.40 |
| 5260 | High | Skip and Continue only loads images every other study | PACS Integration | 1.41.1 |
| 5243 | High | The client app config contains LookupTableTimeToLiveInMinutes=400 | Thick Client GUI | 1.41 |
| 5197 | High | Wedge processing notes ex. Visit Notes - overwrites existing notes. (MSK) | HL7 | 41.00 |
| 5187 | High | B41.002 Scanning errors (RRR) | | 41.00 |
| 5176 | High | Signs and Symptoms coming up required when setting is set to False (RRR) | Thick Client GUI | 41.00 |
| 5120 | High | Template / macro - create template from... doesn't retain custom fields | | 1.42 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 5118 | High | Concurrency violation on save for byte [] results in second save's data being rejected. | Web Services/DB | 1.42 |
| 5107 | High | patient folder doesn't load unless part of the initial layout on open of rad screen | Thick Client GUI | 1.41 |
| 5094 | High | Next workflow broken when using multiple tabs of different types | Radiology Reporting | 1.41 |
| 5089 | High | Able to sign a report when the field(s) in a template does not have a value. | Thick Client GUI | 1.41 |
| 5088 | High | Infinite loop when validating empty [] | Radiology Reporting | 1.42 |
| 5063 | High | Reporting - using re-use causing confusion when getting a message box like "Addendum Requested" | Radiology Reporting | 1.41 |
| 5060 | High | Transcribe next workflow (beeps) | Radiology Reporting | 1.41 |
| 5054 | High | Reporting Screens fail to load if unable to find a good description for the current procedure code | Thick Client GUI | 1.40 |
| 4983 | High | Search for appointment returns slot that should not be available due to room closure | | 1.40 |
| 5582 | Normal | Spell check on the fly no longer turned on. Squigly lines are not shown under misspelled words | Radiology Reporting | 1.40.21 |
| 5568 | Normal | Transcription users will get null exceptions when trying to activate ReportTemplateEditor | Radiology Reporting | 1.41.005 |
| 5533 | Normal | null reference in appointment book while painting in the appointments stack trace indicates SetStatusFill | Thick Client GUI | 1.40 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 5520 | Normal | timing issue can cause null reference error loading registration | Thick Client GUI | 1.41.002.1 |
| 5499 | Normal | duplicate "void" payment for the same payment | Thick Client GUI | 1.40 |
| 5491 | Normal | Birad picker either shows on non Birads studies or doesn't show on birad studies. | Radiology Reporting | 41.00 |
| 5489 | Normal | Procedure code assignment screen in template editor keeps button disabled | Radiology Reporting | 1.41.002 |
| 5473 | Normal | Reporting - Attachments data pane default is report | Radiology Reporting | 1.41 |
| 5442 | Normal | Reporting - rad edit text default color is yellow - should be "#810000" | Radiology Reporting | 1.40.20 |
| 5433 | Normal | Reporting - dictating negative 5 percent will render the word percent not the symbol | Radiology Reporting | 1.40.20 |
| 5370 | Normal | Error scheduling exam: "A follow up order already exists for this exam" | Web Services/DB | 1.41.003 |
| 5331 | Normal | Reporting - no wait navigate fails when dictating and then clicking next field > 1 time without pausing | Radiology Reporting | 1.40.019 |
| 5325 | Normal | Send Report -> Delivery Method "Print" does not default to the most appropriate printer | Thick Client GUI | 1.41.003 |
| 5316 | Normal | Reporting - Laterality check causing duplicate words | Radiology Reporting | 1.40.020 |
| 5270 | Normal | Reporting - Automatic spell check "on the fly" marks words as misspelled that are at the beginning of a field | Radiology Reporting | 1.40.020 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 5264 | Normal | MERGE - Report History Window | Thick Client GUI | 1.40 |
| 5263 | Normal | MERGE - Report History Error | Thick Client GUI | 1.41 |
| 5247 | Normal | Constraint error when trying to printing forms on a study that has been dictated | Thick Client GUI | 1.41 |
| 5228 | Normal | error on save: Invalid column name 'inverted_face' | Thick Client GUI | 1.41 |
| 5226 | Normal | object reference error after locking failure | Thick Client GUI | 1.41 |
| 5168 | Normal | Aggressive field cue navigation fails after editing a cue on a template. | Radiology Reporting | 1.40.019 |
| 5154 | Normal | Prompt when creating templates if the word colon is in a cue | | 1.40.019 |
| 5135 | Normal | Worklist refresh exception | | 1.41 |
| 5134 | Normal | Reporting - Reuse enabled status area messages not populating for action buttons | Radiology Reporting | 1.41 |
| 5133 | Normal | Reporting - MT polling enabled open RIS initially will result in messed up reporting screen | Radiology Reporting | 1.41 |
| 5132 | Normal | Attachments - wide documents that a small height cause an out of memory exception | | 1.40 |
| 5131 | Normal | Memory leak fixes discovered in B40 | | 1.40 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 5129 | Normal | Reporting buttons, when disabled, has a wider seperator. | Thick Client GUI | 1.40 |
| 5125 | Normal | Reporting screen not drawing in, if user make worklists active | Thick Client GUI | 1.39 |
| 5124 | Normal | Interactive "New paragraph" with protected sections headers | Radiology Reporting | 1.42 |
| 5123 | Normal | Ris hangs... For a long time in template editor. | Radiology Reporting | 1.41 |
| 5122 | Normal | Row-level caching - Error trying to save template | Radiology Reporting | 1.42 |
| 5117 | Normal | Reporting Reuse - Next workflow loads cases that are pending saving. | Thick Client GUI | 1.41 |
| 5115 | Normal | Reporting - template/macro editor cue text box too small | Radiology Reporting | 1.41 |
| 5111 | Normal | QA worflow problem flag #2894 | Radiology Reporting | 1.41 |
| 5108 | Normal | First chance exception when getting field description in report template editor. | Radiology Reporting | 1.40 |
| 5097 | Normal | xKeys integration - next and prev field doesnt spawn radiologist pop up text | | 1.42 |
| 5093 | Normal | Reporting - performance - require two raddocks to support signing and dictating | Radiology Reporting | 1.41 |
| 5092 | Normal | Reporting - reuse enabled and open a screen for signing, skip next will not populate the tab text | Radiology Reporting | 1.41 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 5090 | Normal | Reporting - reuse when skipping reports and there are change we don't get a prompt to save changes | Radiology Reporting | 1.41 |
| 5087 | Normal | Reporting - reuse selected report tool window keeping previous data | Radiology Reporting | 1.41 |
| 5085 | Normal | Reporting - SetAccountRules not called when opening an exam for the default template | Radiology Reporting | 1.41 |
| 5084 | Normal | Report fields control showing as a blank canvas | Radiology Reporting | 1.41 |
| 5082 | Normal | Dictating previous field moves two fields back instead of one. | Radiology Reporting | 1.41 |
| 5081 | Normal | Interactive fast forward light up play and fast forward | Radiology Reporting | 1.41 |
| 5080 | Normal | Audio control allows rewinding and fastforwarding to show at the same time as active. | Radiology Reporting | 1.41 |
| 5079 | Normal | RCW error closing reporting window | Radiology Reporting | 1.41 |
| 5078 | Normal | Recording rewinding in interactive mode falls into a playback/rewind loop. | Radiology Reporting | 1.41 |
| 5077 | Normal | Recording interactive and rewinding | Radiology Reporting | 1.41 |
| 5076 | Normal | Audio starts playing when recording | Radiology Reporting | 1.41 |
| 5075 | Normal | Switching from record to play in batch mode | Radiology Reporting | 1.41 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 5074 | Normal | Interactive record + playback at same time | Radiology Reporting | 1.41 |
| 5071 | Normal | Reporting - notifications need to be placed above action buttons. | | 1.41 |
| 5070 | Normal | Template editor, inserting a field into a section header throws an error. | Radiology Reporting | 1.40 |
| 5069 | Normal | Send-to button blanks out the reporting screen | Radiology Reporting | 1.41 |
| 5066 | Normal | Transcriptionist next workflow not properly skipping | Radiology Reporting | 1.41 |
| 5065 | Normal | Protect section headers does not protect against macro insertions | Radiology Reporting | 1.40.017 |
| 5064 | Normal | Reporting - Add patient folder control to reporting window will not display history | Thick Client GUI | 1.41 |
| 5059 | Normal | Reporting - next field navigating two fields when cursor immediately to the left of field | Radiology Reporting | 1.40 |
| 5056 | Normal | Known Limitation - Side by side registration broken from 40.016 - 40.017 | Thick Client GUI | 40.02 |
| 5055 | Normal | Reporting - reuse only - macros are not getting reset and old command are staying around on next workflow | Radiology Reporting | 1.41 |
| 3804 | Normal | Double click on patient folder header (Fisher site visit) | Thick Client GUI | 40.01 |
| 3800 | Normal | Pacs IW shortcut for measurement inserts "m" into our report. (Fisher site visit) | Thick Client GUI | 40.01 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 3774 | Normal | Dictating "Item one" in a field will hang the application (Fisher site visit) | Thick Client GUI | 40.01 |
| 5058 | Low | Template / macro - Create using filter criteria | Radiology Reporting | 1.41 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 9. Known Limitations

The following are Bugs Suggested Features and Support Issues found in build 1.41.1. Bugs reported in previous versions are not captured as Known Limitation in this document.

| # | Status | Priority | Subject | Resolved Build |
|---|---|---|---|---|
| 5601 | New | High | When opening an exam from All Suspended WL to sign the report, get an Error | |
| 5416 | New | High | Reporting - Switching between record / playback and playback / record has mixed results | |
| 5387 | MModal support | High | Reporting - Field is removed if SpellCheck finds error in default text | |
| 5660 | New | Normal | Reporting - Edited text selected does not highlight the same | |
| 5606 | New | Normal | When you do an import, in the Attached documents window, in the top left, the types of documents don't include types that are order level. | |
| 5403 | New | Normal | Reporting - cannot delete default text from a field in template macro editor | |
| 5401 | New | Normal | Cannot re-dock patient folder window because of exception on title bar right-click | |
| 5385 | New | Normal | Reporting - Selected summary and attachments are not initially populating | |
| 5368 | New | Normal | Reporting - Changing template in reporting window can rearrange sections | |
| 5365 | New | Normal | Reporting - Auto macro will be inserted multiple times when the same template is selected for use | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 5358 | New | Normal | Reporting - dictated text in a field. Some text is highlighted and some is not. | |
| 5357 | New | Normal | MU- Patient Lists MU1, lists medications that were added then deleted in NewCrop | |
| 5350 | New | Normal | Reporting - Attachment viewer does not go back into place on double click of title bar | |
| 5330 | New | Normal | Reporting / Scanning - Viewing attachments in Attachments data pane rotate image twice and received error. | |
| 5320 | New | Normal | Reporting - Attachment viewer in reporting window - double click to open the report will change to the next scan doc. | |
| 5275 | New | Normal | Reporting - Adding empty space to field will allow user to sign | |
| 5274 | New | Normal | PACS - when viewing an image in patient folder, when you try and view the same image twice image is not displayed | |
| 4418 | New | Normal | Security token error on login ( after latest build update) | |
| 5546 | New | Low | Dark Theme - behavior inconsistent if color setting are not saved in Dictation window. | |
| 5482 | New | Low | Open on Login has duplicate WL in list | |
| 5334 | New | Low | Attachment data nugget doesn't auto select "+Show More" scan doc when selected | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# Server Update

For eRAD RIS
Version 1.0
Build 41
Update 41.1.001

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# Table of Contents

## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.41.21162.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   Restart each service.

3) Run the B41_1_002.sql file against the eRAD RIS database instance.

## 1. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 5823 | InsertTextAtPastCaretPositions is causing undesired behavior for rads when editing. | Urgent |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 2. New Features

This new feature is to resolve Redmine bug # 5823.
Some users were experiencing an issue during self-edit. If the text was highlighted after the dictation had started, the range of text selected to be corrected would leave the selected text intact and insert the new dictation before or after the selected text.

This was happening because when the dictation was started the caret position had already been detected at point A, but as the dictation had started, a range of text was then selected. Now the caret position is in point B. The dictation that supposed to be the corrected text does not overwrite the selected text but is inserted where caret position was initially.

We have created a new user preference titled "**Insert text at current caret location**". When this preference is selected it will correct the issue described above, meaning that if the dictation is started, a range of text is then selected, it will overwrite the range of text.

The previous way of working may be desirable for some users, so if the user preference is unselected, it will behave as before.

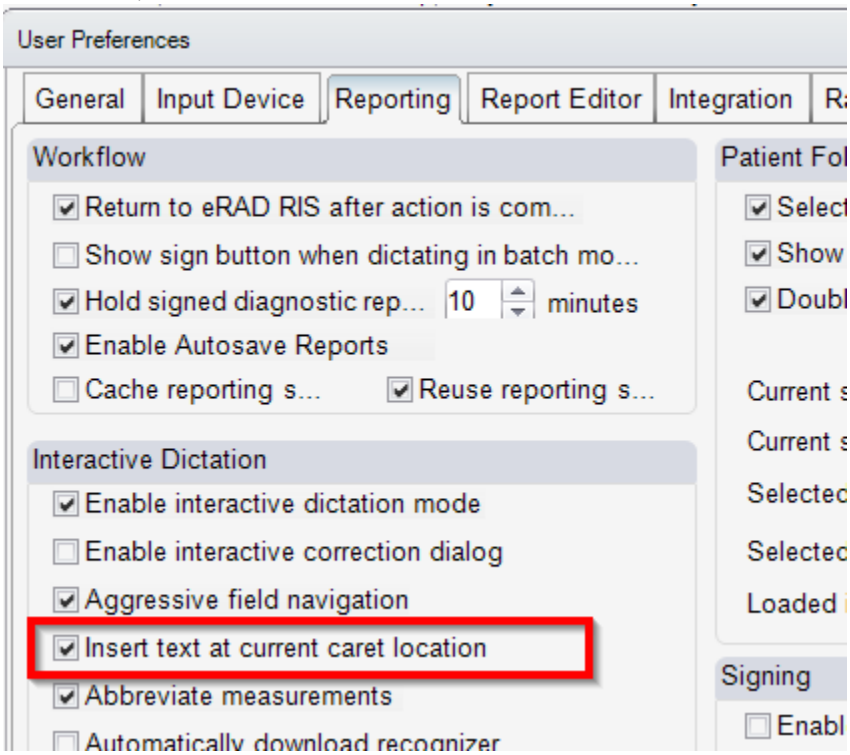

**Figure 2.1 – New User Preference "Insert text at current caret location"**

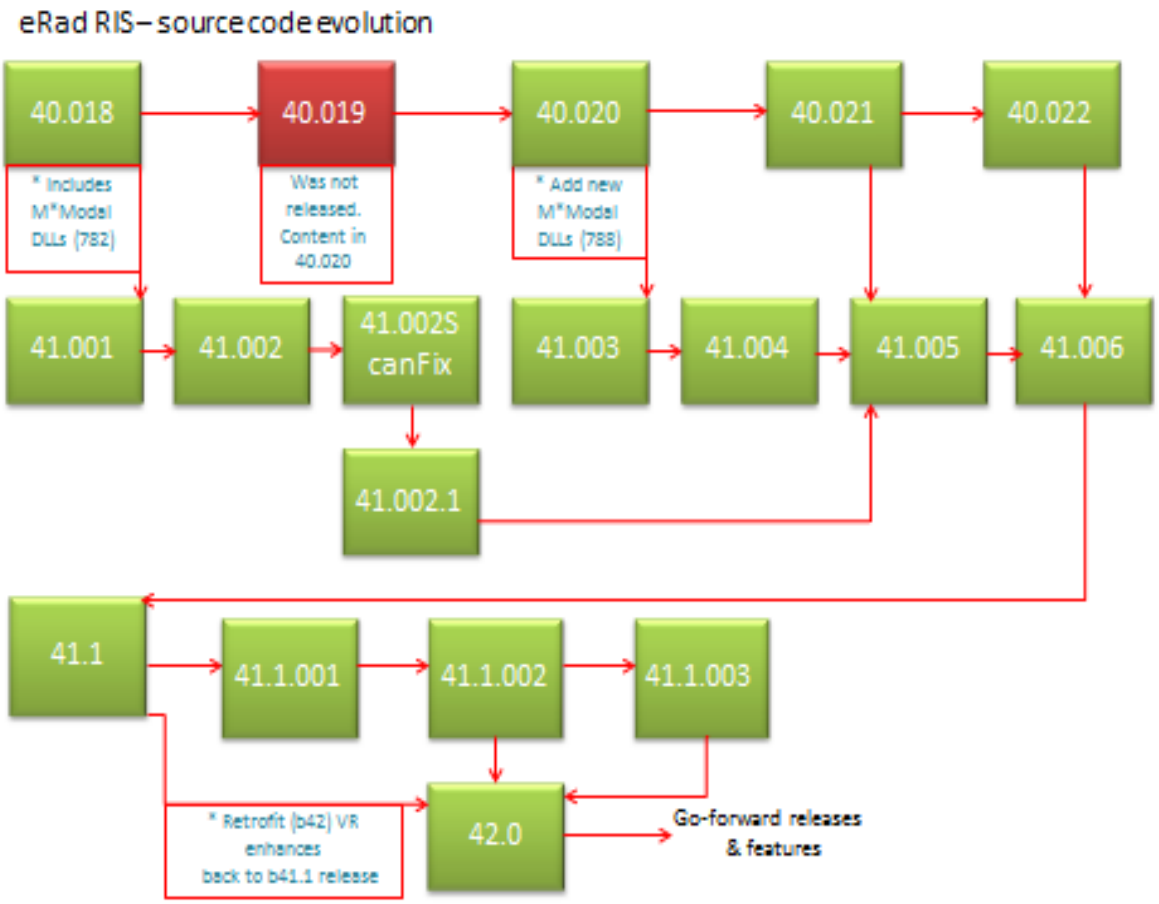
## 3. Code Stream



**Legend:**

**Green = Released software**

**Red = Will not be released**

**Blue = Future release**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 4. Package Contents

Files included for this server update:

1) GUI ZIP Updates folder contains
   a) rRIS_1.3.41.21264 (3GB).zip

## 5. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

## 6. Who is affected

Build 41.1 installs. This server update must be applied directly to the build 41.1 core install. Server updates are not cumulative. Any previous server updates must be applied before this one.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

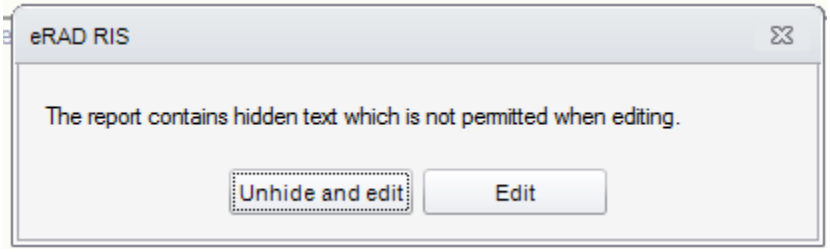
## 1. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 6192 | Hidden text in editor counts as text when validating fields and section | High |

The resolved bug listed above resolves an issue in which users had the option to hide text within the reporting window. This option was available to radiologist and transcription users. The workflow for this option has been altered. You can no longer hide text, only unhide. If there is hidden text in a report, transcription users cannot transcribe and radiologist users cannot sign. They will be presented with a message like the one displayed below.

Message presented to transcription



Message presented to radiologist

# 1. New Features

## 41.001 New Features

### PACS Server Override

It has been requested that radiologists be able to access images on eRAD PACS and PACS IW from the same work list without changing the practice selected in the Org picker. This is now possible with the selection of a new user preference.

On the Integration tab there is a new option titled PACS Server and associated list box. This list box will contain the available PACS systems configured in the PACSServer lookup table that are in Active status.

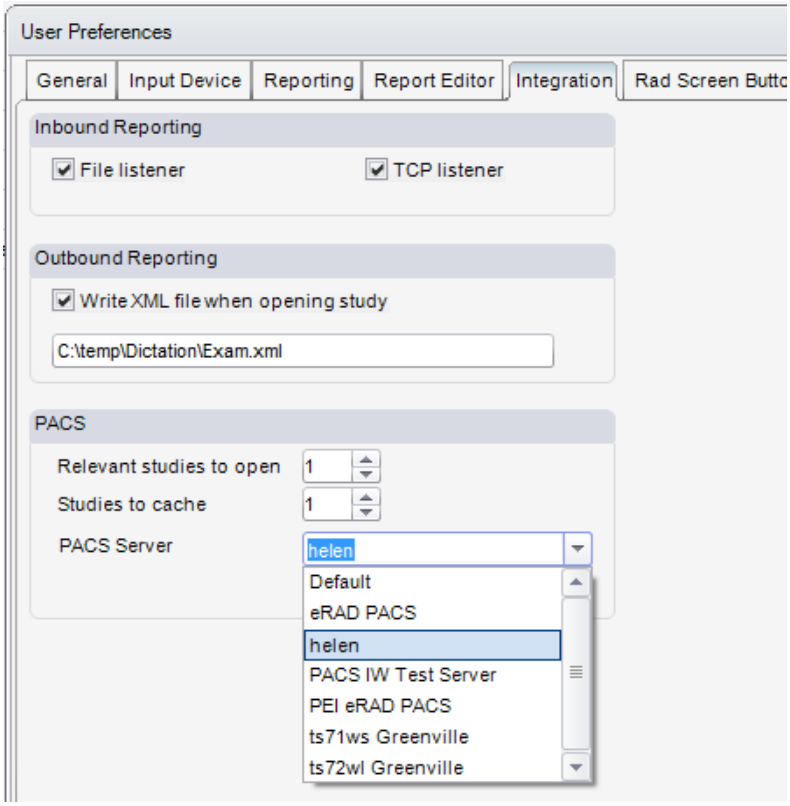

**Figure 1.1 – PACS Server user preference**

One of the PACS Server options is Default. If this is selected, the default PACS Server associated with your current practice selected in the Org picker will be used (same as before). If a specific server is selected, this will be the PACS that the images are displayed. For instance, if patient A has images on eRAD PACS and also PACS IW Test Server, when that server is selected the call for PACS will be made to that server and not the default for the practice.
**NOTE: If the PACS Server user preference selection is changed, the user will need to log out and back in again to pick up the changes. The user may encounter an error if they don't logout after changing the user preference.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

**40.018 New Features –** The features in 40.018 were not included in the original build of 41. The new features and bug fixes have been included in this 41.001 build.

## Optimize field navigation

In build 40.017 we introduced a change to the mic wizazrd. The selection of the recording device and Speechmike calibration. Missing in the GUI was the ability to select a playback device. (This can be accomplished in the windows control panel > sound option.) In build 18 we have replaced the Microphone Settings window, with the Recording and Playback Settings window displayed in Figure 1.1.

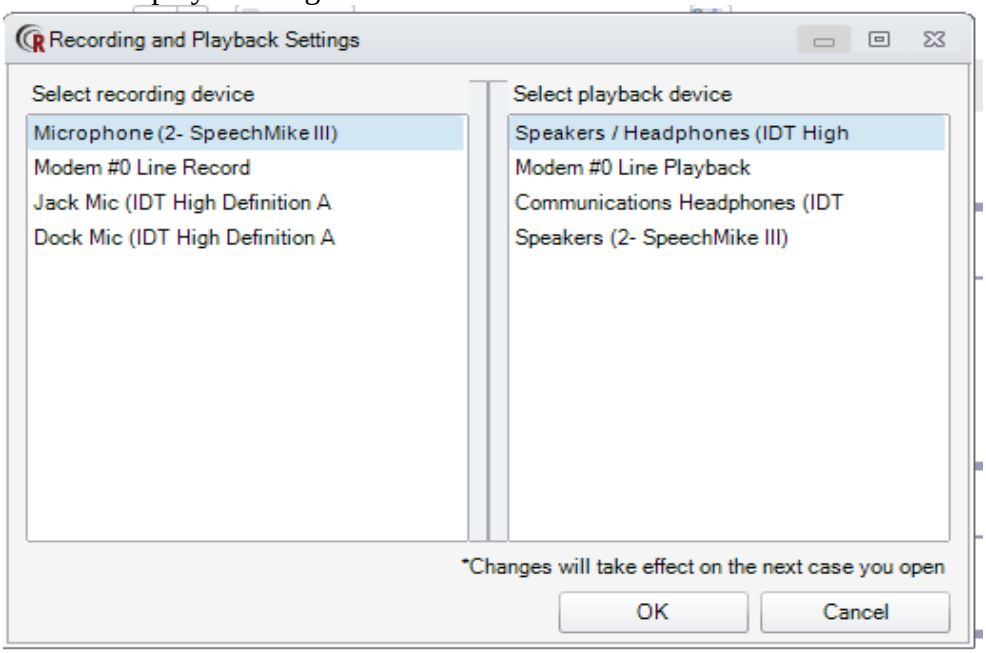

**Figure 1.2 – Recording and Playback Settings**

This window is accessed from within the Reporting window and selecting the Recording and playback settings option on the toolbar.

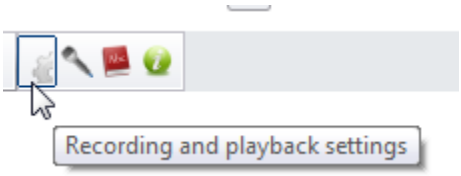

**Figure 1.3 – Recording and Playback Settings toolbar button**

In this window the recording and playback devices can be selected. As noted in the Recording and Playback Settings window the changes will take affect

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Recognizer deployment

In previous builds the MModal Recognizer file was included with the install process. This has been removed from the install process.

This file can be replaced manually or via the use of the User Preference on the Reporting tab titled "Automatically download recognizer" and at next login, the newest will be downloaded from M*Modal. If this **option** is selected, the user **must be aware** that the Recognizer could change at each login.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Defects Resolved

The following defects that have been resolved in the 41.001 server release

| Redmine # | Subject | Priority |
|---|---|---|
| 4622 | Message boxes inaccessible when dictating in minimized mode | High |
| 3871 | Magview reports need addendums to be signed in Magview | High |
| 4691 | RRR - IVT user activity issue | Normal |

The following defects were resolved in Build 41 but were missed in the release notes.

| Redmine # | Subject | Priority |
|---|---|---|
| 4471 | Mammo - Edit Mam Target Date is missing | Urgent |
| 4599 | Message: "an error occurred while retrieving patient history worklist" when opening the biopsy screen from the FollowUp window | High |
| 4592 | Patient Merge, Patient History not showing current Patient, Show license button still active | High |
| 4656 | Input string was not in a correct format error on clicking IVT button from the billing codes | Normal |

The following defects were resolved in 40.018 and added to the 41.001 server release

| Redmine # | Subject | Priority |
|---|---|---|
| 4564 | Batch users lost ability to run microphone wizard to set gain on the microphone | High |
| 4710 | Reporting - inserting a template or macro with interactive timestamps will cause playback corruption and confusion | Urgent |
| 4715 | Portions of reports are not showing in distributed report | Immediate |
| 4717 | Sections from incorrect practice loading into template editor | High |
| 4563 | Inability to change playback device for rads. | High |

The follow defects are listed as Known Limitations.

| Redmine # | Subject | Info |
|---|---|---|
| 4776 | PACS Server override user preference requires log-out, then log-in to take effect | This bug is regarding a new feature that enables a user to use the same work list in a practice but use more than one different PACS system. Users must log out and back in to get the user preference update for PACS Server. |
| 4780 | Known Limitation - Side by side registration broken from 40.016 - 40.017 | The core install must be used to move between build 40.016 and other previous versions of build 40 and 40.017, 40.018 and any version 41 builds. This is due to incompatibility with M*Modal dll's |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 3. Package Contents

Files included for this server update:

1) GUI ZIP Updates folder contains
   a) rRIS_1.3.40.19356 (3GB).zip

2) RIS Service Updates folder contains the following 19 files and 1 subfolder titled XSL. The XSL folder also contains 1 subfolder titled Stylesheets. The following files are contained in the Stylesheets folder
   a) CDSJobManager.dll
   b) CDSJobManager.pdb
   c) CommonLib.dll
   d) CommonLib.pdb
   e) DDEngine.dll
   f) DDEngine.pdb
   g) rRISServices.exe
   h) rRISServices.pdb
   i) rRISServicesx64.exe
   j) ScheduledTaskManager.dll
   k) ScheduledTaskManager.pdb
   l) SignatureApprovalService.exe
   m) SignatureApprovalService.pdb
   n) WCFService.dll
   o) WCFService.pdb
   p) WebApi.dll
   q) WebApi.pdb
   r) Wedge.pdb
   s) Wedge.exe
   t) XSL folder contains a subfolder titled Stylesheets:
      i. CDAToHTMLCompleteReport.xslt
      ii. CDAToHTMLImpressionSection.xslt
      iii. CDATorRIS.xslt
      iv. CDAToTxt.xslt
      v. DocumentModelReport.xslt
      vi. DocumentModelReportAsXml.xslt

3) SQL folder contains:
   a) B41_001.sql

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 4. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

## 5. Who is affected

Build 41 installs. This server update **must be applied directly to the build 41 core install**. Server updates are not cumulative. Any previous server updates must be applied before this one.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 6. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|
| 39 | - | 1.3.39.15389 | 1.3.39.15389 | 1.3.39.15377 | 1.3.39.15355 | Full version release |

## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.40.19356.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   Restart each service.

3) Run the B41_001.sql file against the eRAD RIS database instance.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 1. New Features

The wedge has been updated to handle the c_patient_medication, c_patient_problem_list, and c_patient_drug_allergy tables in a special way. They now activate/inactivate based on the presence or absence of rows in the message as well as the value of the problem_list_flag, medication_flag, and drug_allergy_flag on the visit table.

The rest of the data on the MU form, such as ethnic type, race, height and weight were just fields on the visit table and required no modification to the wedge.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Defects Resolved

The following defects that have been resolved in the 41.001 server release

| Redmine # | Subject | Priority |
|---|---|---|
| 4917 | (Feature) Feed of MU data into the Wedge | Normal |

## 3. Package Contents

Files included for this server update:

1) GUI ZIP Updates folder contains
   a) rRIS_1.3.41.199620 (3GB).zip

2) RIS Service Updates folder contains the following 19 files and 1 subfolder titled XSL. The XSL folder also contains 1 subfolder titled Stylesheets. The following files are contained in the Stylesheets folder
   a) CDSJobManager.dll
   b) CDSJobManager.pdb
   c) CommonLib.dll
   d) CommonLib.pdb
   e) DDEngine.dll
   f) DDEngine.pdb
   g) rRISServices.exe
   h) rRISServices.pdb
   i) rRISServicesx64.exe
   j) ScheduledTaskManager.dll
   k) ScheduledTaskManager.pdb
   l) SignatureApprovalService.exe
   m) SignatureApprovalService.pdb
   n) WCFService.dll
   o) WCFService.pdb
   p) WebApi.dll
   q) WebApi.pdb
   r) Wedge.pdb
   s) Wedge.exe

## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.40.19620.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   Restart each service.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.41.20622.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   Restart each service.

## 8. Known Limitations

Known limitations listed in this document may not have been introduced in 41.002.1, but have been discovered during testing of 41.002.1.

| Redmine # | Subject | Info |
|---|---|---|
| 5409 | Legacy PDF documents are not rendering in HTML | This is feature not completed not really a Known Limitation. Making note as it was communicated that Redmine item 5409 would be in this release. |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.40.19620SF.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# Server Update

For eRAD RIS
Version 1.0
Build 41
Update 41.003

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# Table of Contents

1. New Features ..... 3
   Reporting - Limit or convert special characters in cue names, macros and templates ..... 3
   Reporting - Radiologist edit text color ..... 4
   Reporting - field tooltips staying on top of other screens after displaying ..... 5
2. Defects Resolved ..... 6
3. Code Stream ..... 7
4. Package Contents ..... 8
5. Intended Audience ..... 9
6. Who is affected ..... 9
7. eRAD RIS Release Version Numbers ..... 10
8. Installing ..... 11
9. Known Limitations ..... 11

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# 1. New Features

### Reporting - Limit or convert special characters in cue names, macros and templates

Conversion of special characters in cue names, macros and templates.
In a template if you have a field with a value in the cue like this "Technique :"
When you save the template and reopen it, the : is converted as follows "Technique %colon%".

This feature does the following, while dictating an exam and you say the words Technique colon, your cursor will be brought to the field that has a value of "Technique %colon%" in the cue.

NOTE: The user preference "Aggressive field navigation" must be checked for this feature to work, after checking this preference, a restart of RIS is required.

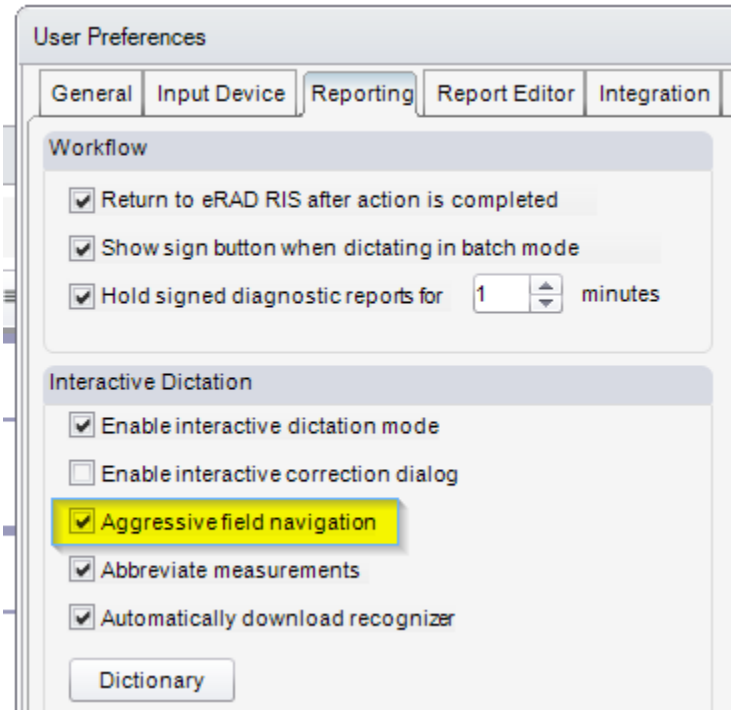

**Figure 1.1 – User preference "Aggressive field navigation"**

NOTE: the user preference "Aggressive field navigation" will need to be selected for "No Wait Navigate". We had issues in the past when dictating in Field 1 and before the text was inserted the command for next field was issued. The text that had not yet been inserted in Field 1 would appear in Field 2. This has been addressed, but as mentioned above the Aggressive field navigation user preference needs to be enabled.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Reporting - Radiologist edit text color

Within the reporting window, the user can open the context menu (right click) on the editor. This will present the user with a list of options. Selecting the "Editor Appearance" option will open the "Editor Appearance" window. A new option has been added.

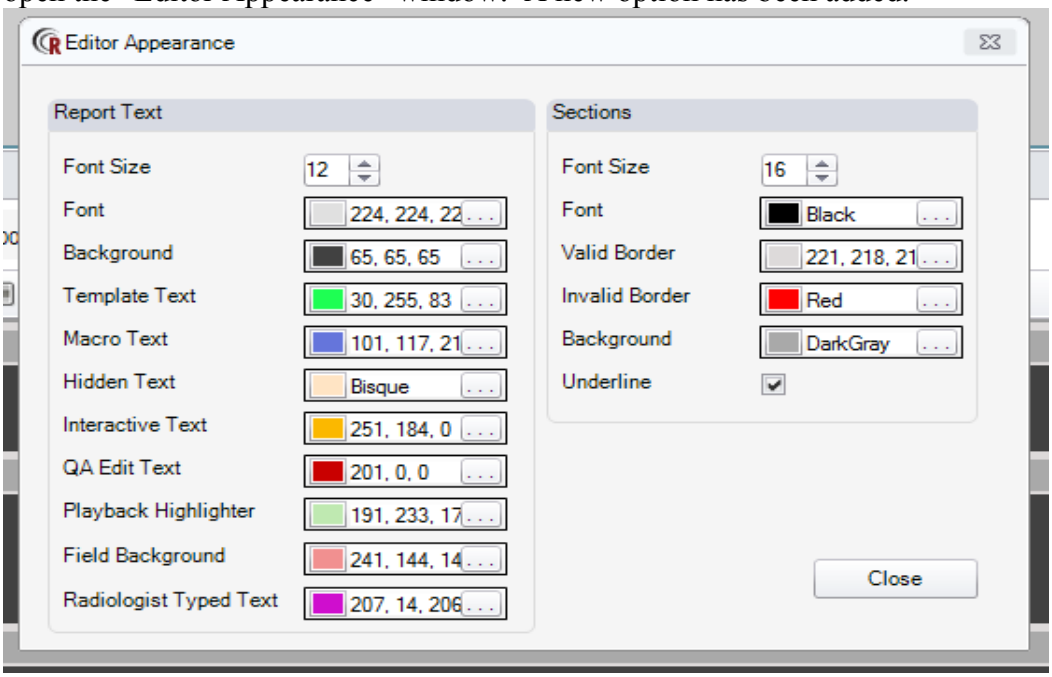

**Figure 1.2 – Editor Appearance window with new Radiologist Typed Text option**

This new option controls the color of the manually entered/edited text by the radiologist

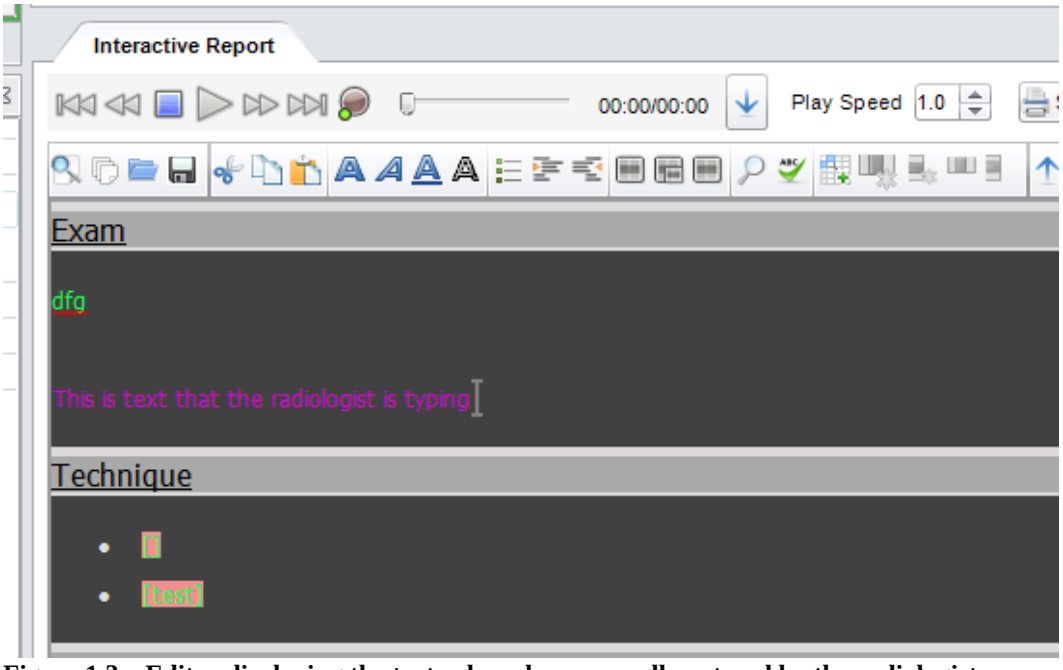

**Figure 1.3 – Editor displaying the text color when manually entered by the radiologist.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Reporting - field tooltips staying on top of other screens after displaying

Templates used in the reporting window can have navigational fields pre-defined in the template. Each of these fields has a name associated with it. If the mouse pointer hovers over a field it will display the field name in a tooltip.

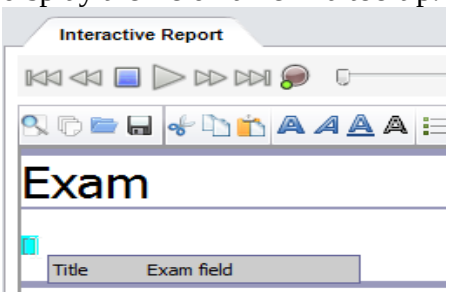

**Figure 1.4 – Reporting field tooltip.**

A new user preference on the Report Editor tab called "Show report field tooltips" will enable/disable the tooltip from displaying.

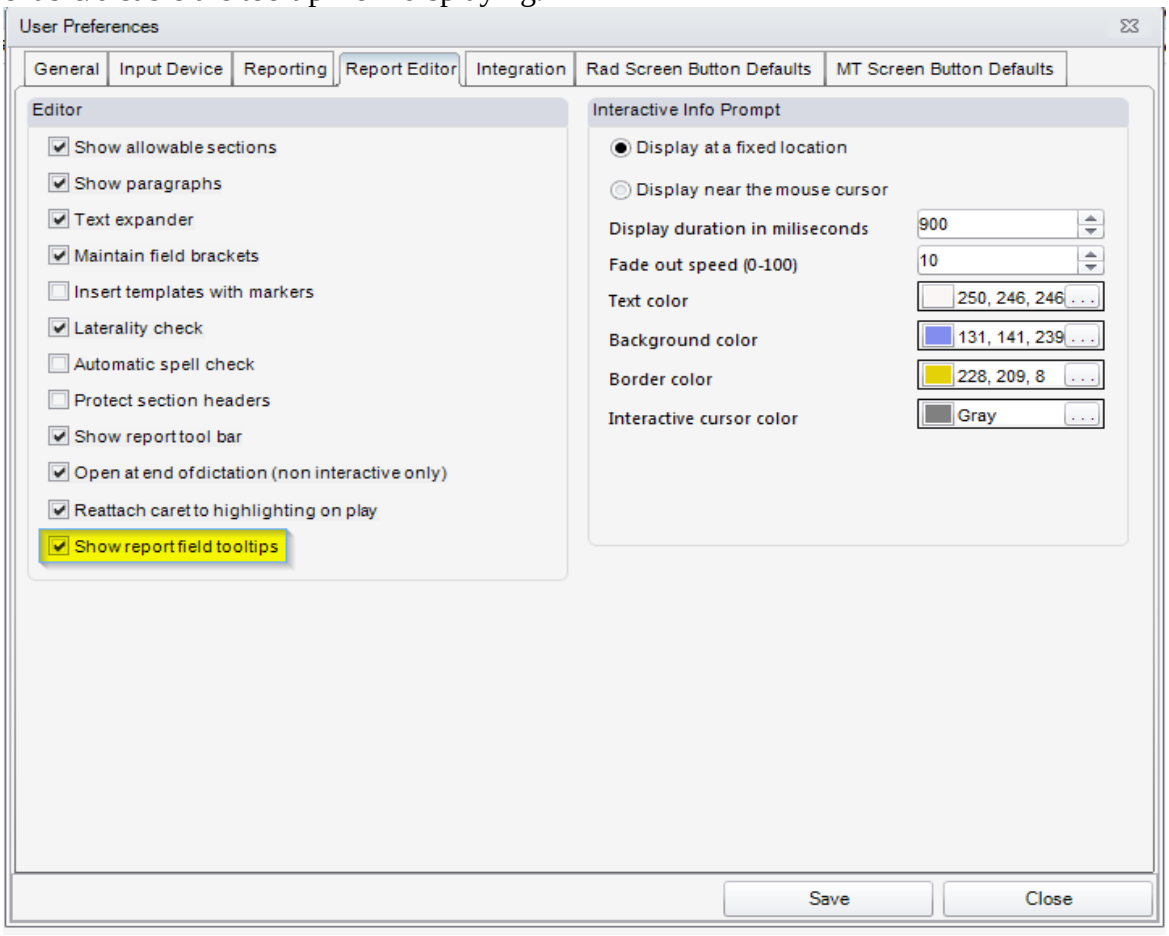

**Figure 1.5 – New User Preference "Show report field tooltips"**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

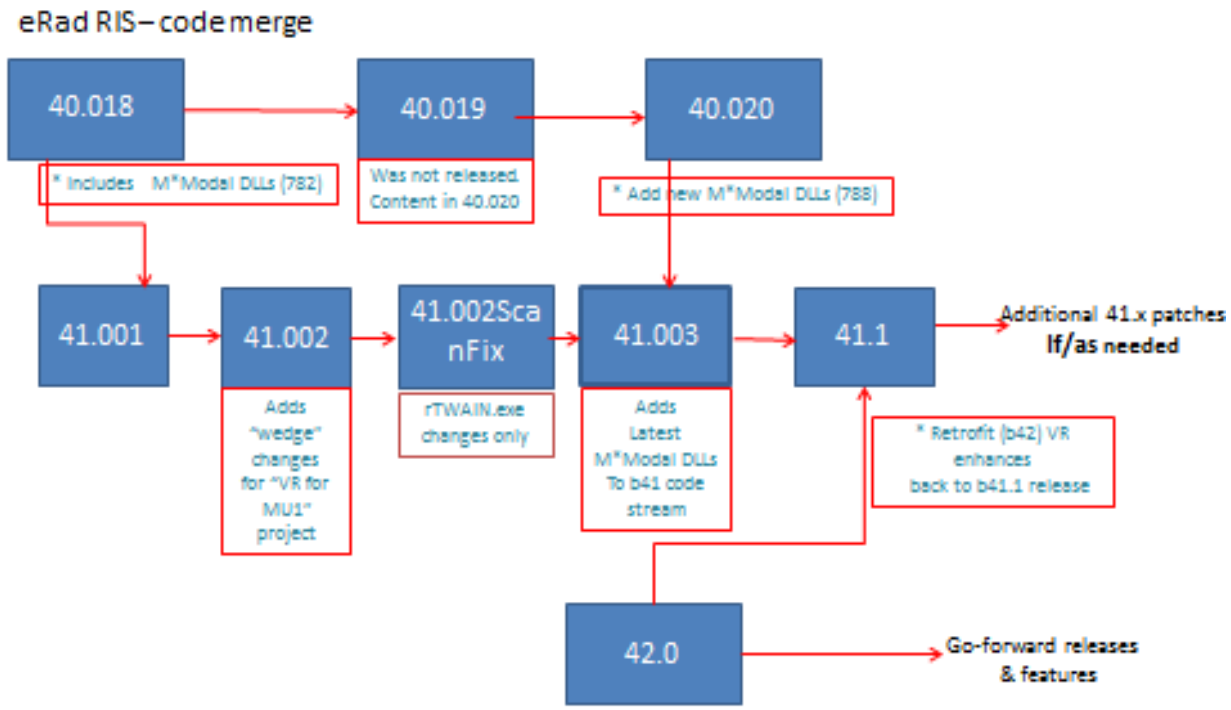
## 2. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 5251 | Document Distribution - EMR Sender functionality broke in B41 | Immediate |
| 5163 | Losing default value for fields when saving template/macro | Immediate |
| 5212 | Scanner loads previous patients scans in preview after scanning (RRR) | Urgent |
| 5184 | Arrive individual exams error (RRR) | Urgent |
| 5035 | Wrong document model is loading in template editor | Urgent |
| 5140 | Editing fields in template editor sometimes throws an exception | High |
| 5036 | Reporting - ability to navigate cued fields without pausing | High |
| 5034 | Reporting - 7.82+ Numbering paragraphs creates an unwanted list | High |
| 5032 | Reporting - playback is not in order of dictated | High |
| 5030 | Sections from incorrect practice loading into template editor | High |
| 5027 | Using next field button while dictating (Fisher site visit) | High |
| 5167 | Aggresive field cue navigation fails after editing a cue on a template. | Normal |
| 5149 | Reporting - speech mics 3500 and 3600 showing incorrectly in Help>About | Normal |
| 5049 | Reporting - New recognizer for 7.88 | Normal |
| 5047 | Next field voice command, showing field popup for one field too far. | Normal |
| 5046 | Reporting - ability to configure the completeTimeout setting for interactive dictation | Normal |
| 5045 | Reporting - ability to configure the finalTimeout setting for interactive dictation | Normal |
| 5044 | Reporting - ability to configure the speedVsAccuracy setting for interactive dictation | Normal |
| 5043 | Reporting - improper captialization of measurements outside of a field | Normal |
| 5042 | Reporting - structured lists splitting when dictating next item in the middle of an existing item | Normal |
| 5041 | Reporting - ability to dictate 'next item' without pausing | Normal |
| 5040 | Reporting - integrate M*MOdal 7.88 release into 41.1 code stream. | Normal |
| 5039 | Reporting - negative two views rendering | Normal |
| 5038 | Reporting - Limit or convert special characters in cue names, macros and templates | Normal |
| 5037 | Reporting - ability to dictate negative or minus numbers | Normal |
| 5033 | Reporting - interactive dictation of the word "through" appearing as "-" not ideal | Normal |
| 5031 | Reporting - AudioReplacementEnabled on causes "undo that" to malfunction | Normal |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

| | | |
|---|---|---|
| 5028 | Improve performance of "next field" (CRA site visit) | Normal |
| 5023 | Reporting - Not a field exception causing application hang | Normal |
| 5022 | MModal - select command will not select first or last word in a field | Normal |
| 5020 | Reporting - interactive number lists are not consistent | Normal |
| 5019 | Reporting - field tooltips staying on top of other screens after displaying | Normal |
| 4801 | NewCrop UPIN problem | Normal |
| 5029 | Unable to dictate "+" into a report (CRA site visit) | Low |

## 3. Code Stream



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 4. Package Contents

Files included for this server update:

1) GUI ZIP Updates folder contains
   a) rRIS_1.3.41.20171 (3GB).zip

2) RIS Service Updates folder contains the following files.
   a) CDSJobManager.dll
   b) CDSJobManager.pdb
   c) CommonLib.dll
   d) CommonLib.pdb
   e) DDEngine.dll
   f) DDEngine.pdb
   g) rRISServices.exe
   h) rRISServices.pdb
   i) rRISServicesx64.exe
   j) ScheduledTaskManager.dll
   k) ScheduledTaskManager.pdb
   l) SignatureApprovalService.exe
   m) SignatureApprovalService.pdb
   n) WCFService.dll
   o) WCFService.pdb
   p) WebApi.dll
   q) WebApi.pdb
   r) Wedge.exe
   s) Wedge.pdb

3) Recognizer folder contains:
   a) 7~Recognizer.MtiRecognitionUS.Radiology_Interactive_v13_v5_401.12965.xc
   b) 7~Recognizer.MtiRecognitionUS.Radiology_Interactive_v13_v5_401.12965-descriptor.xc

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 5. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

## 6. Who is affected

Build 41 installs. This server update must be applied directly to the build 41 core install. Server updates are not cumulative. Any previous server updates must be applied before this one.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 8. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.41.20171.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   Restart each service.

3) Copy the Recognizer files to your local machine to the following folder.
   Note: this could be a hidden folder.
   C:\ProgramData\RadNet\Recognizer\2.16.840.1.113883.3.21\

## 9. Known Limitations

Known limitations listed in this document may not have been introduced in 41.003, but have been discovered during testing of 41.003.

| Redmine # | Subject | Info |
|---|---|---|
| 5245 | Reporting - Spine navigational cues are not recognized | My cues were configured as<br>1. C two dash three colon<br>2. C three dash four colon<br>3. C four dash five colon<br><br>I changed them to be<br>1. C two colon<br>2. C three colon<br>3. C four colon<br>The change in cues names worked much better |
| 5248 | Reporting - Edit template from reporting window error | This was only occurring with one of my templates. If this occurs try “refresh configuration”. If that does not work |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

| | | |
|---|---|---|
| | | open the same template in the TemplateMacro editor and save. |
| 5249 | Reporting - Shift Tab in the template editor or reporting editor will return error | |
| 5219 | Reporting - Function key action DeleteWordLeftOfCursor will delete fields and section titles | If you continue to select the function key after the text has been removed it will jump to the section title and can also delete it as well |
| 5220 | Reporting - Interactive Info Prompt can show fields that have been jumped over when using Next Section command | If in a section that has multiple field with default text, issue the command Next Section, the interactive info prompt will display the text from the fields that were skipped. |
| 5254 | Reporting - using the undo feature, the cursor is not following the text that is being removed. | Seems to occur when the "undo" feature is used multiple times concurrently. |
| 5260 | Skip and Continue only loads images every other study | Two workarounds exist for this.<br>1. Turn off (unselect) user preference "Resuse reporting screen"<br>2. If using "Reuse reporting screen" select the Load images icon in the reporting window. |

## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.41.20285.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## 8. Known Limitations

Known limitations listed in this document may not have been introduced in 41.004, but have been discovered during testing of 41.004.

| Redmine # | Subject | Info |
|---|---|---|
| 5268 | Reporting - Automatic spell check "on the fly" marks words as misspelled that are at the beginning of a field | With the user preference Automatic Spell Check on, words that are at the begging of a field will be recognized as spelling errors. Once the Radiologist selects the Sign button (transcribe for MT's) they are prompted with the Spell Check. Selecting Yes on this prompt will then determine that there were in fact no spelling mistakes.<br>If there are spelling errors it will still detect those and highlight and provide options to correct. |
| 5306 | Reporting - Dictionary Add / Train changes | This is behaving slightly different than before.<br>In previous versions the user opened the Dictionary window > Add / Train window, entered text, selected the Record Pronunciation once to capture the voice recording of the word entered and select the Record Pronunciation again to stop.<br><br>In 41.004 the user will open the Dictionary window > Add / Train window, enter text, NOW they must initiate the record on the SpeechMike, then select the Record Pronunciation button to capture the voice recording of the word entered. There are 2 different modes of using the record button.<br>If user preference "Stop recording when button is released" is selected the user must select and hold the record |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

| | | |
|---|---|---|
| | | button, select the Record Pronunciation button and to stop recording the pronunciation release the record button on the SpeechMike<br>If user preference "Stop recording when button is released" is not selected the user must select record on the SpeechMike, select Record Pronunciation in the Add/Train window, once the voice recording is complete select record button on the SpeechMike again to complete. |

## 1. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 5315 | Insert macro can reset a field back to its default value | Immediate |
| 5457 | Merge to B41.1 - Enhance the relevancy calculation to be adjustable via configuraiton | Urgent |
| 5336 | Reporting - Dictionary Add / Train changes | Urgent |
| 5436 | Reporting - possible wrong document model loading if more than one practice | High |
| 5409 | Truxtun - Legacy PDF documents are not rendering in HTML | High |
| 5380 | RRR - Reschedule problem for procedure plans | High |
| 5369 | Canceling Unscheduled orders not appearing on Patient Folder | High |
| 5498 | duplicate "void" payment for the same payment | Normal |
| 5486 | Procedure code assignment screen in template editor keeps button disabled | Normal |
| 5477 | Birad picker either shows on non Birads studies or doesn't show on birad studies. | Normal |
| 5472 | Reporting - Attachments data pane default is report | Normal |
| 5470 | Reporting - default recognizer getting picked up instead of the new one | Normal |
| 5441 | Reporting - rad edit text default color is yellow - should be "#810000" | Normal |
| 5432 | Reporting - dictating negative 5 percent will render the word percent not the symbol | Normal |
| 5349 | Reporting - Laterality check causing duplicate words | Normal |
| 5343 | Playback with bouncing ball, preventing word selection with double click. | Normal |
| 5318 | Dictating previous field moves two fields back instead of one. | Normal |
| 5317 | Reporting - no wait navigate fails when dictating and then clicking next field > 1 time without pausing | Normal |
| 5268 | Reporting - Automatic spell check "on the fly" marks words as misspelled that are at the beginning of a field | Normal |
| 5046 | Reporting - ability to configure the completeTimeout setting for interactive dictation | Normal |
| 5045 | Reporting - ability to configure the finalTimeout setting for interactive dictation | Normal |
| 5044 | Reporting - ability to configure the speedVsAccuracy setting for interactive dictation | Normal |

## 4. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

## 5. Who is affected

Build 41 installs. This server update must be applied directly to the build 41 core install. Server updates are not cumulative. Any previous server updates must be applied before this one.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 6. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|

## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.41.20809.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

2) Copy the _setup folder and its contents and replace the _setup folder and its contents. The _setup folder is located in the RISDeployment \Core folder.

   NOTE: If your upgrade is coming from 40.016.1 or less a core install will be required.

3) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   Restart each service.

4) Run the B41_005.sql file against the eRAD RIS database instance.

## 8. Known Limitations

Known limitations listed in this document may not have been introduced in 41.005, but have been discovered during testing of 41.005.

| Redmine # | Subject | Info |
|---|---|---|
| 5535 | Issue with Void payment, can void the same payment from Register window and from View/edit window | Two different users can void the same payment resulting in one single payment being voided twice. |
| 5388 | error on save: Invalid column name 'inverted_face' | This bug is in previous versions. Although it has not been completely corrected, the occurrence will less frequent. This only occurs when the user preference “Use Dark Mode” is on. |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 1. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
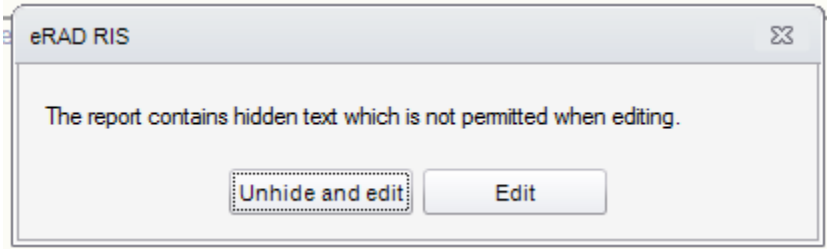
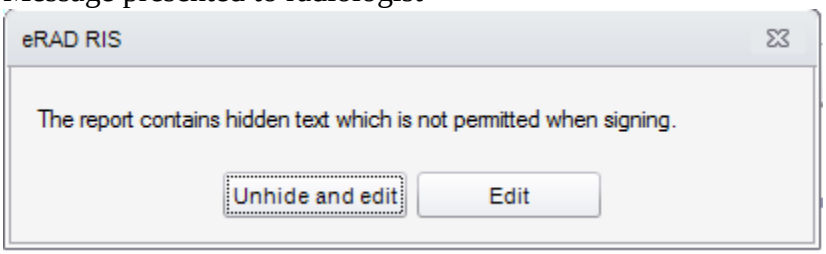
| 6191 | Hidden text in editor counts as text when validating fields and section | High |

The resolved bug listed above resolves an issue in which users had the option to hide text within the reporting window. This option was available to radiologist and transcription users. The workflow for this option has been altered. You can no longer hide text, only unhide. If there is hidden text in a report, transcription users cannot transcribe and radiologist users cannot sign. They will be presented with a message like the one displayed below.

Message presented to transcription



Message presented to radiologist



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.41.21963.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 42 and subsequent server releases. This version of eRAD RIS is referred to as Build 2.42.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 2.42 is considered a new core release of the application and will require a reinstallation of eRAD RIS. This is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 4. New Access Strings and Configuration Settings

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Access string / User Group Permission tables | Clinical.PreviewPreliminaryReport | None | Controls access to preview, print and faxing of unsigned (preliminary) reports |
| Access string / User Group Permission tables | Clinical.ResolveRadProblem | Full | Controls access to the Resolve Problem window for Transcription users from the All Problem WL |
| Access string / User Group Permission tables | Clinical.UserPreferences.PACSServerOverride | Disabled | Controls access to the User Preference PACS Server on the Integration tab. |
| Access string / User Group Permission tables | Clinical.ShowRVUs | None | Controls Access to see the RVUs on the chair selector report |
| SystemConfig lookup | MRNPrefix | | Value entered will be prefixed new MRN's created |
| SystemConfig lookup | MRNSuffix | | Value entered will be appended to new MRN's created |
| SystemConfig lookup | AccessionPrefix | | Value entered will be prefixed to new accession numbers |
| SystemConfig lookup | AccessionSuffix | | Value entered will be appended to new accession numbers |
| SystemConfig lookup | PrivacyMessageText | | Value entered will be displayed on a locked eRAD RIS login window |
| SystemConfig lookup | CPOELabTestCode | Pathology | Value of the Lab Test code that will be created when a procedure with the CPOE Pathology Flag = Y is signed |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| SystemConfig lookup | MUMedlinePlusConnectDebug | N | (value = Y/N) Adds prompt to UI for reviewing MedlinePlusConnect xml messages. |
| SystemConfig lookup | MUMedlinePlusConnectEnabled | N | (value = Y/N) Enable MedlinePlus Connect MU feature. |
| SystemConfig lookup | MUMedlinePlusConnectBaseUrl | http://apps.nlm.nih.gov/medlineplus/services/mpconnect_service.cfm | (value = string) MedlinePlus Connect Base URL. |
| SystemConfig lookup | MUMedlinePlusConnectDrugSearch | mainSearchCriteria.v.cs=2.16.840.1.113883.6.88 | (value = string) MedlinePlus Connect Drug RXCUI search specification. |

| SystemConfig lookup | MUMedlinePlusConnectProblemSearch | mainSearchCriteria.v.cs=2.16.840.1.113883.6.103 | (value = string) MedlinePlus Connect Problem ICD-9-CM search specification. |
| Ris.exe.config<br><br>Added in 41.1 | MModalDataTransferValue | None | Override the user preference for M*Modal's Data Transfer.<br><br>See feature Reporting – Ability to Configure MModal Transfer Task in this document for more details |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 5. New Features and Enhancements

## Reporting – Laterality Check when Transcribing Reports

Previous to build 42 the laterality check was performed when signing and verifying reports. Now this option is available in the transcription workflow as well.

As with the radiologist role, the user preference of "Laterality Check" must be selected to enable the feature for transcription users.

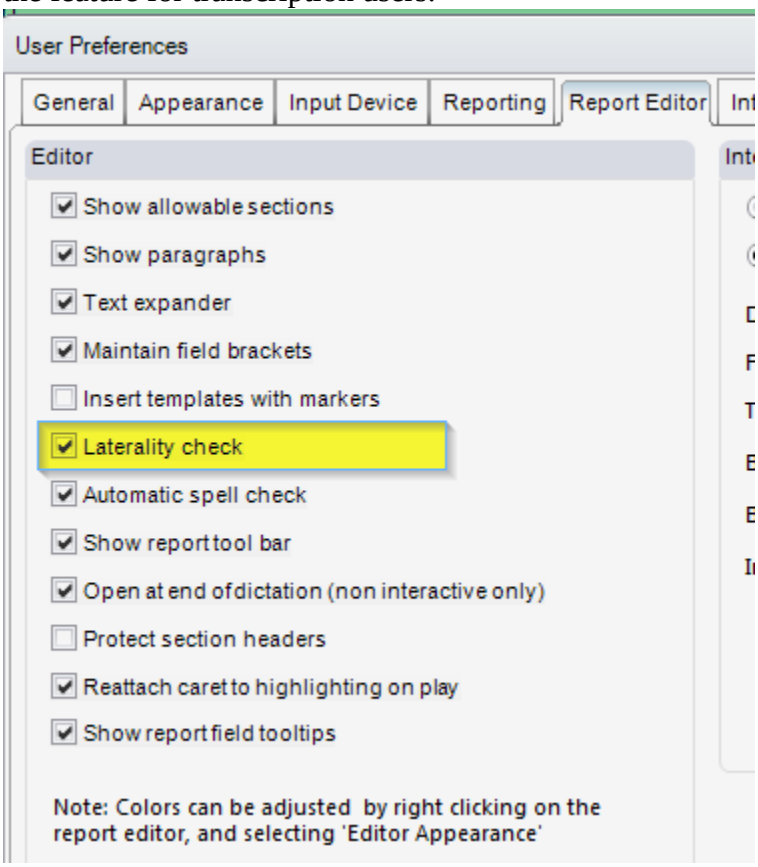

**Figure 5.1 – Laterality check user preference for transcription now as well!**

If the procedure being reported on has laterality and the report has conflicting left or right the transcriptionist will be presented with a pop up message and the literalities in the report will be highlighted.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

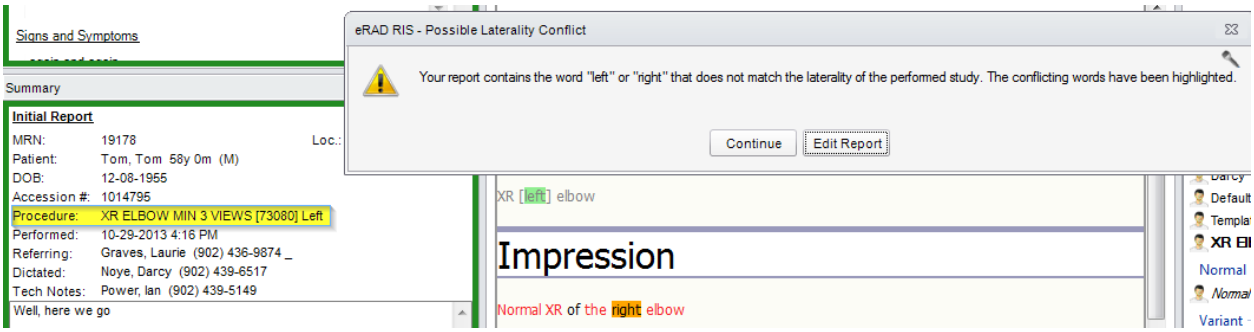

**Figure 5.2 – Message presented when conflicting laterality is detected.**

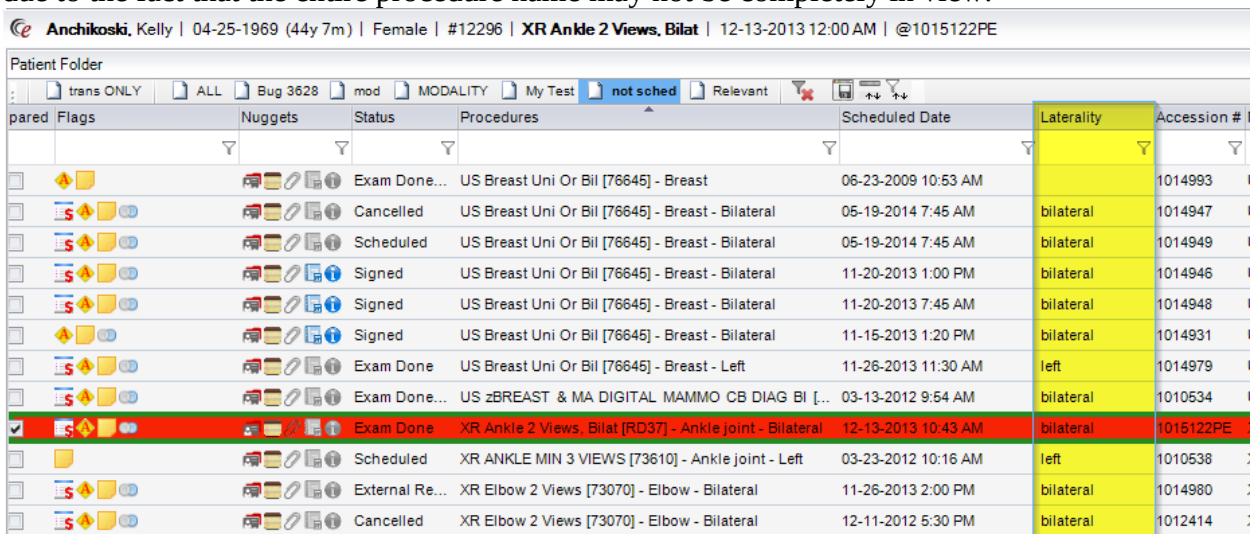
The user has the option to "Continue" if they believe the conflict is not valid, example the words left or right are detected in the report but are used in different context not related to the procedures laterality. The other option is "Edit Report", selecting this button with return the user to the editor window allowing them to make needed corrections if the conflict is related to the procedure laterality.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Laterality added to Patient Folder

The patient folder data pane that is available in the reporting windows now has the Laterality column added to its list of columns. In the screenshot below the procedure column may also have the laterality listed, but it was requested that a column specific to laterality also be added due to the fact that the entire procedure name may not be completely in view.



| pared | Flags | Nuggets | Status | Procedures | Scheduled Date | Laterality | Accession # |
|---|---|---|---|---|---|---|---|
| | | | Exam Done... | US Breast Uni Or Bil [76645] - Breast | 06-23-2009 10:53 AM | | 1014993 |
| | | | Cancelled | US Breast Uni Or Bil [76645] - Breast - Bilateral | 05-19-2014 7:45 AM | bilateral | 1014947 |
| | | | Scheduled | US Breast Uni Or Bil [76645] - Breast - Bilateral | 05-19-2014 7:45 AM | bilateral | 1014949 |
| | | | Signed | US Breast Uni Or Bil [76645] - Breast - Bilateral | 11-20-2013 1:00 PM | bilateral | 1014946 |
| | | | Signed | US Breast Uni Or Bil [76645] - Breast - Bilateral | 11-20-2013 7:45 AM | bilateral | 1014948 |
| | | | Signed | US Breast Uni Or Bil [76645] - Breast - Bilateral | 11-15-2013 1:20 PM | bilateral | 1014931 |
| | | | Exam Done | US Breast Uni Or Bil [76645] - Breast - Left | 11-26-2013 11:30 AM | left | 1014979 |

| | | | Cancelled | XR Elbow 2 Views [73070] - Elbow - Bilateral | 12-11-2012 5:30 PM | bilateral | 1012414 |

**Figure 5.3 – Laterality column added to the patient folder of the reporting windows.**

It should be noted that it is the Laterality description text that is being used from the Laterality lookup table and not the Laterality Code.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – MT Edit Text Color

Previous to build 42, Interactive Dictation users had the option to set color preference for edits made from the All Signed Pending QA worklist by setting the QA Edit Text color option. If the job was submitted (not signed) to transcription, any edits performed could not be colored in the same way as when edited via QA workflow.

We have added another option to the Editor Appearance window for possible edits made in transcription.

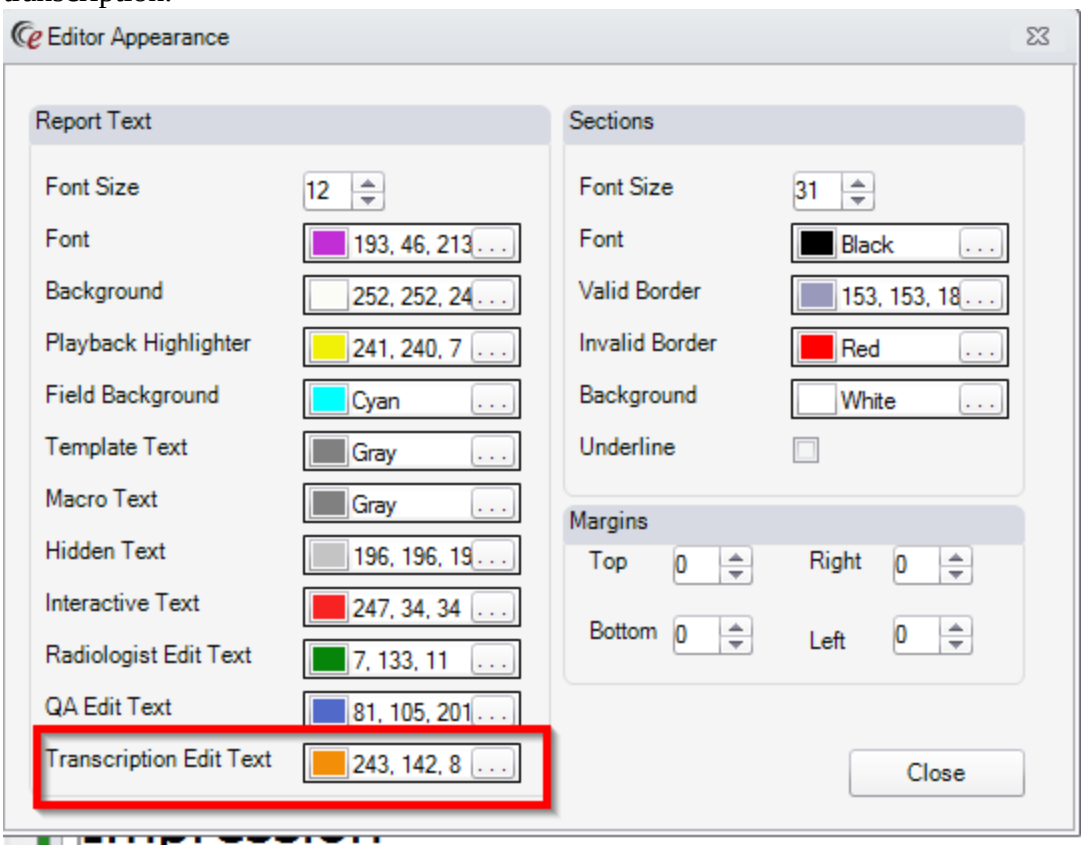

**Figure 5.4 – Transcription Edit Text color option in Editor Appearance window.**

This text color option is titled Transcription Edit Text and has a default value of black.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Available Speechmike Buttons for Mapped Commands and Input Device Redesigned and New Button Options

The Speechmike now has additional buttons that can be mapped to use commands within the reporting windows. The buttons for "Play, Record, and INS/OVR" have been added. In addition the layout of the Input Device tab has been changed to be more intuitive with the layout of the Speechmike.

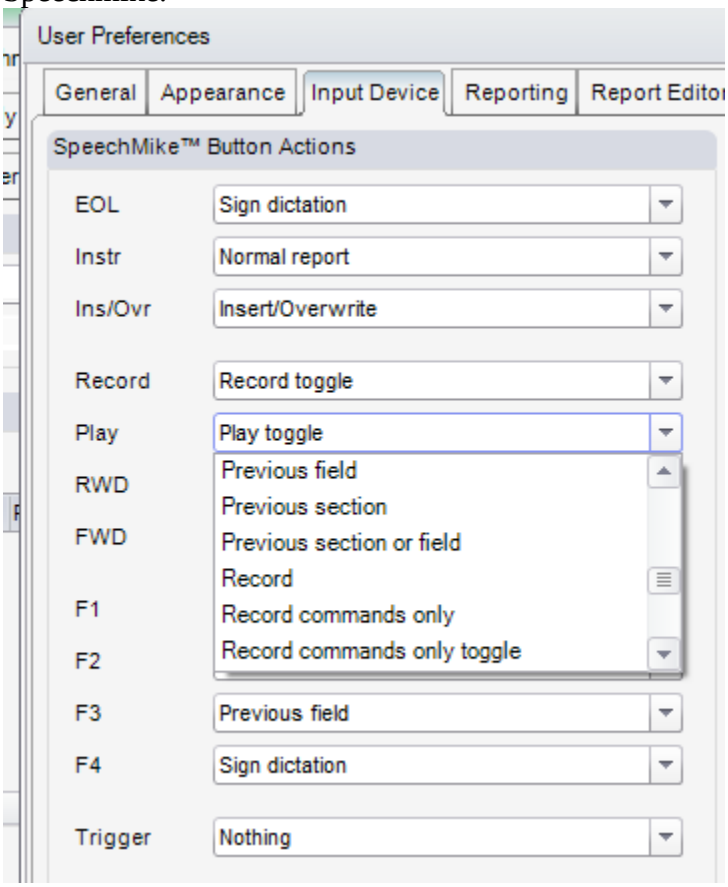

**Figure 5.5 – Input tab additions and redesign**

To accommodate the potential re-mapping of the play, record and Insert/Overwrite buttons their actions have also been added for use with other buttons.
Additional new commands added are:
**Play –** Enables play function to the assigned button
**Play toggle –** Start and stops play function with press/release of assigned button. This replaces the User Preference "Stop playback with button is released"
**Record –** Enable record function to the assigned button

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**Record toggle** – Starts and stops record function with press/release of assigned button. This replaces the User Preference "Stop recording when button is released"
**Record commands only** – allow the user to issue commands without dictating in the report. This can make editing reports easier and increases voice command recognition.
**Record commands only toggle** – Same function as Record commands only with this command the function starts and stops with the button press/release
**Insert/Overwrite –** Enables insert/overwrite function to assigned button
**Cap that -** The first letter of each word in the selected range of text is capitalized.
Example:

results in

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – New Voice Commands for Reporting Windows

Newly added voice commands added in build 42 are:

**Submit report –** voice command will perform submit button click
**Suspend report –** voice command will perform suspend button click
**Close report / Skip report –** voice command will perform the skip/close button click. Invokes the button click and will use the current assigned button click
**Cap that –** voice command that will capitalize the first letter of each word in the selected range of text.
**New line -** Now when dictating "new line" you get a new line and "new paragraph" will result in a new paragraph.
**Redo that –** If text is removed from report while dictating using undo that voice command or select a range of text and delete/overwrite selection, or by way of Speechmike button such as undo or delete word left of cursor, issuing the redo that command will reverse the change.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Voice Enabled Message Boxes

We added, to our base message box class, the ability to interact with the buttons on a given message box. Now when a message box is presented we load into our voice command options the following for each button.

**Value -** This is the value in code for the button. Most often it may equal the text but some instances it may not. For example a button that says "Close without saving" may have a value of "OK" or "Yes". Overtime a user will get accustomed to which command is more fluid for them.

**Text -** This is the visible text seen on the button. So a button that shows "Close without saving" will have a voice command of "Close without saving"

**Button # -** This position the button shows on the message box starting with the number one. So a message box with "YES" and "NO" would have voice commands of "button one" and "button two".

**Option # -** This position the button shows on the message box starting with the number one. So a message box with "YES" and "NO" would have voice commands of "option one" and "option two".

We also added a new icon to the message boxes to indicate they are voice enabled. This icon should show only for radiologists. Even batch users can interact with message boxes via voice command. This new icon has a tooltip that displays the voice command options to invoke each button.

There are some dialog boxes that are not voice enabled. The whole application is not at that state yet.
Spell check, mic wizard, dictionary and user preferences to name a few. Goal of this item was to get most common message boxes.

The image below shows the new icon and tooltip options.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

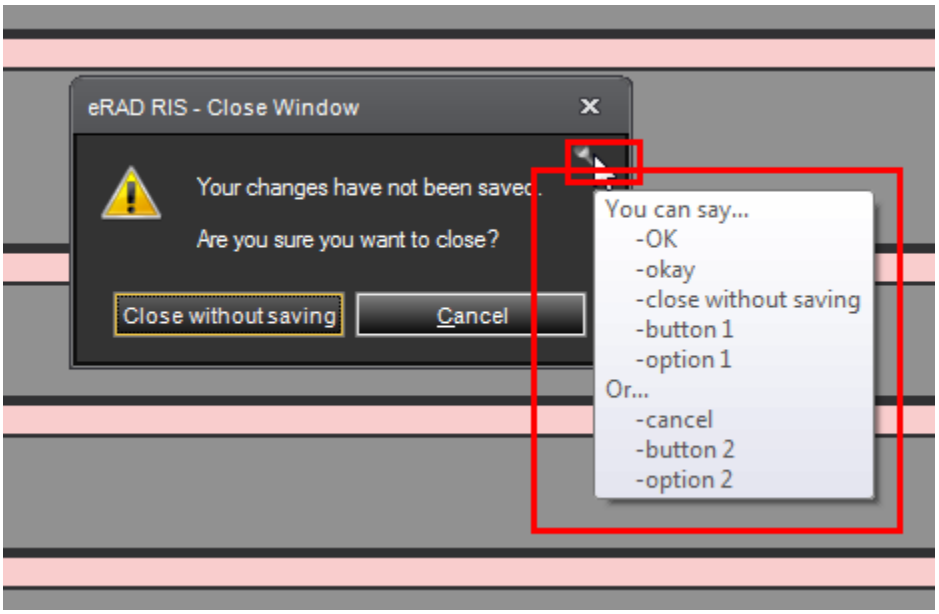

**Figure 5.6 – Voice enabled message boxes displaying available command options**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Support Tracking of Magnet Strength

To start the magnet strength column has been added to the Modality lookup table. The column has a max character length of 10.

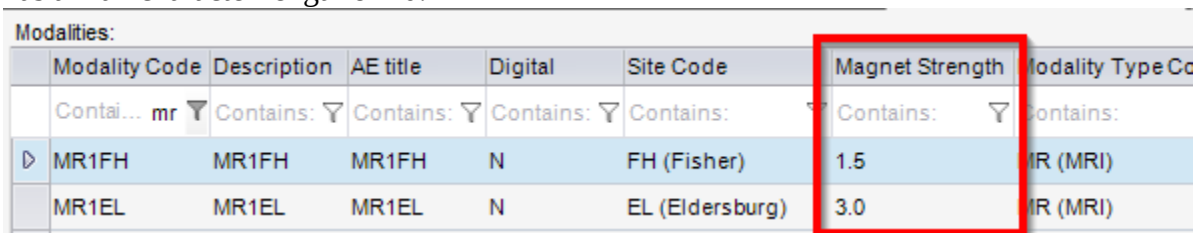

**Figure 5.7 – Magnet Strength column added to Modality lookup table.**

To have this value added to the template or macro a new custom field is now available in the Template/Macro editor.

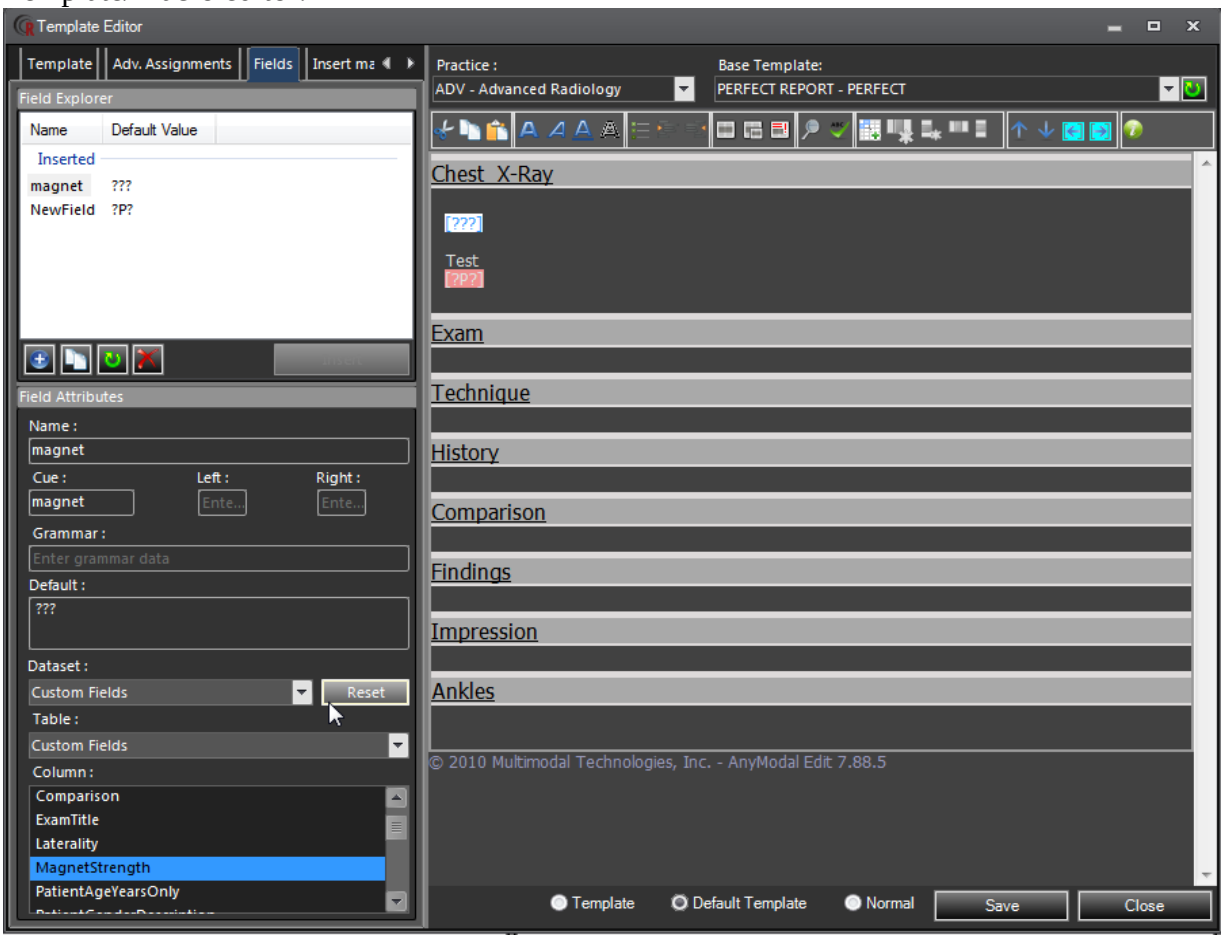

**Figure 5.8 – MagnetStrength added as a custom field**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Talked to Doctor Macro

Additional custom fields have been added to aid users in creating a "Talked to Doctor Macro". Below are the custom fields and examples of values for each field
**TimeStamp12** – 6:30pm
**TimeStamp24** – 18:30
**Today** – 08-13-2013
**ReferringShort** – Dr. Last
**ReferringLong** – Dr. First Last

In the Macro editor these custom fields can be used to create a the "Talked to Doctor Macro".

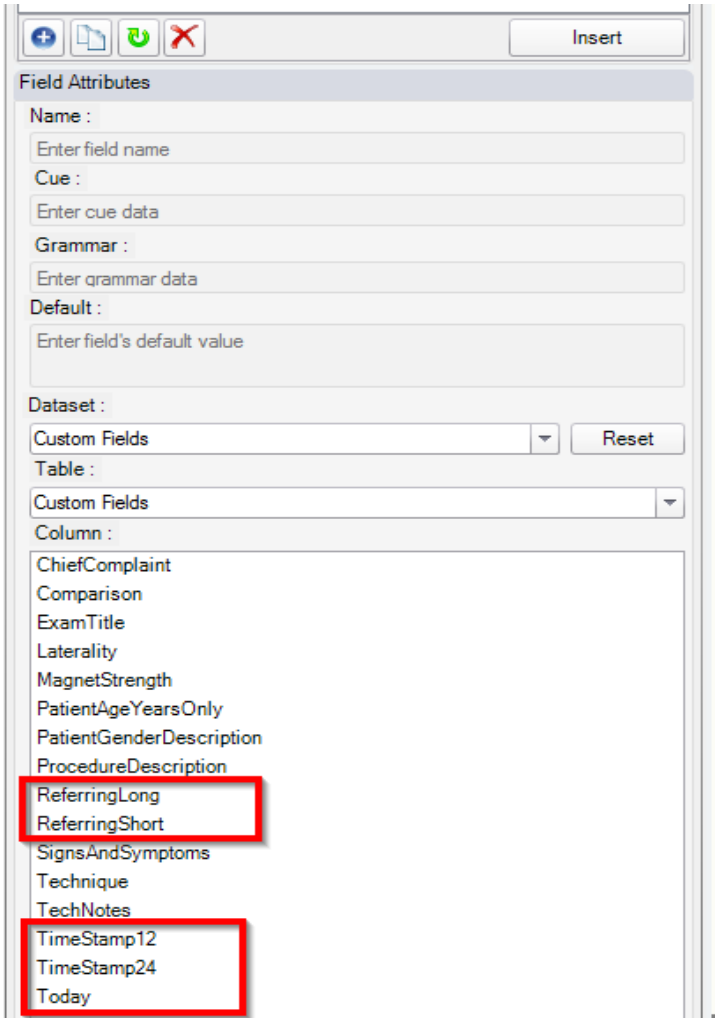

**Figure 5.9 – New custom fields to support talked to doctor macro**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The results will look something like this

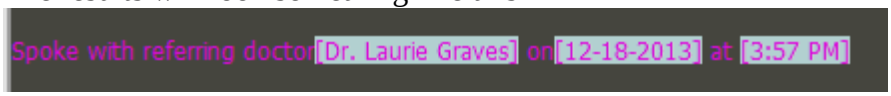

**Figure 5.10 – Talked to Doctor macro used in template**

## Reporting – No Wait Insert Macro

We have altered how we handle our 'insert macro' commands. You can now dictated and insert a macro without pausing. Once the macro is inserted a 'beep' (existing) will sound indicating dictation can progress. Users MUST wait for the macro to insert because there may be fields within the macro that direct report creation.

## Reporting – No Wait Undo/Redo that Voice Commands

Currently there is no option for "redo that" voice command. Also when using the "undo that" command it rarely is recognized on the initial attempt. It will render things like "underline" or "undo that" as text. We need "undo that" and "redo that" to work well without pausing or rendering the text into the editor.

Added in build 42 is the "Redo that" voice command. Also, we now have a concept of adding word to the recognizer and lowering the cost of these words. Think of it as increasing the possibility that these words will be spoken – resulting in better recognition of these particular words.

We now have "undo that" and "undo last" added in this category. These commands existed previously but are not low cost.

We added a completely new voice command(s) "redo that" and "redo last" which will undo the undo command.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Load Audio when Signing Reports

Using a user preference to enable and disable automatic loading of audio when signing. The user preference is "**Load audio in sign mode**". This can be accessed in the workflow section of the reporting tab in the user preferences window.

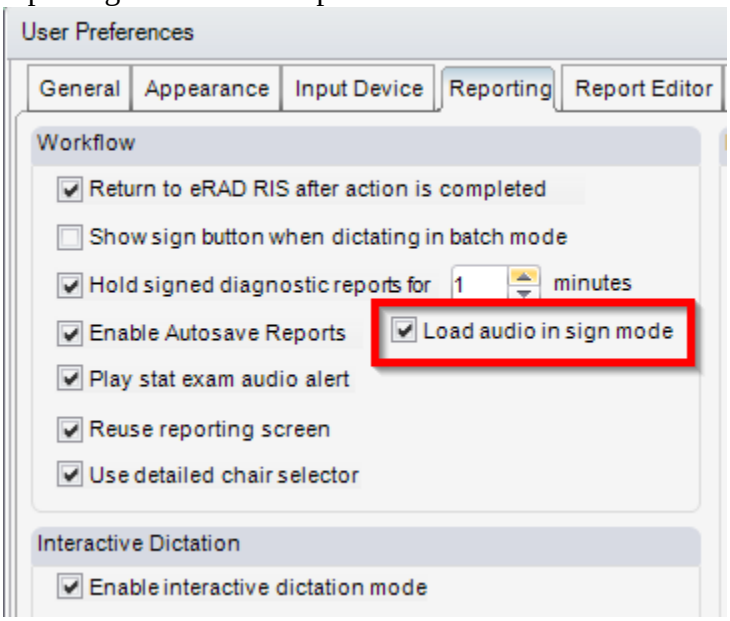

**Figure 5.11 – User preference Load audio in sign mode**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Make STAT Audible Alert Configurable

A new user preference has been added to the Reporting tab / Workflow section titled "**Play stat exam audio alert**". When selected it will work like is has in the past by informing the user when opening the study in reporting window that it is a STAT exam. When unselected the user will not be presenting with the audible message.

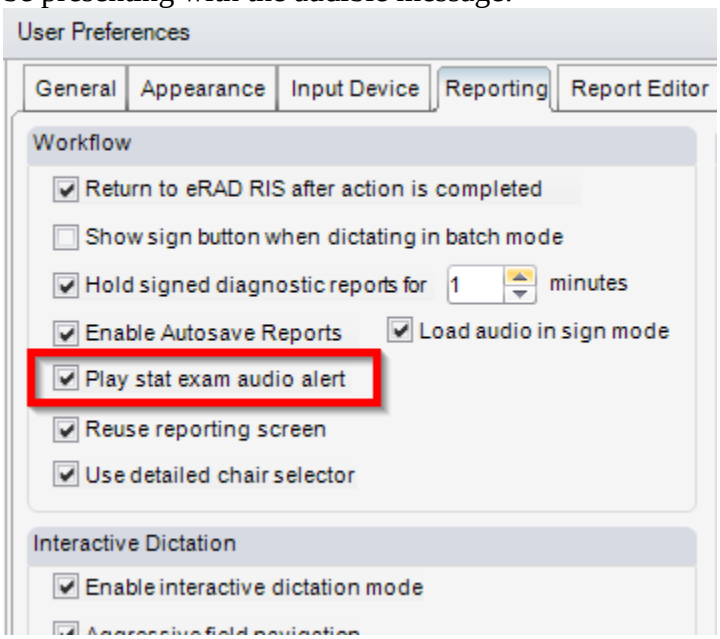

**Figure 5.12 – Play stat exam audio alert User Preference**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Displaying Report Field Tooltips Configurable

Yet another user preference has been added to enable/disable the field tooltips from displaying in the reporting editor. The user preference titled "**Show report field tooltips**" has been added the Report Editor tabs Editor Section.

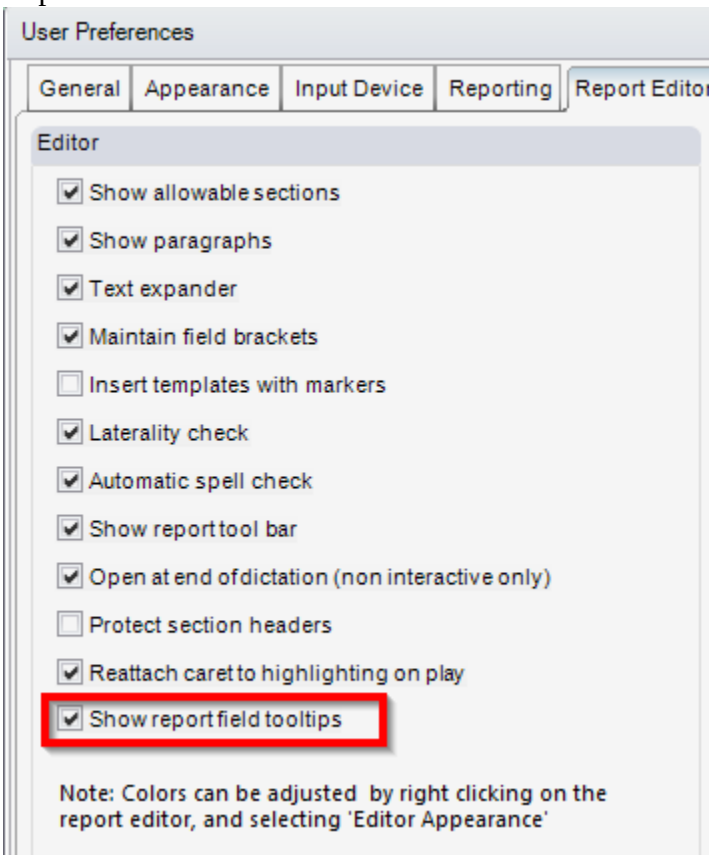

**Figure 5.13 – User preference Show report field tooltips**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Load Dictation Layout in Supervised Radiologist Workflow

In addition to new option in the Sign Report window to load images and patient folder (next feature in this document) we have also added a new user preference that will automatically load the Dictation layout when performing final signature during Supervising Radiologist workflow. The new user preference titled "**Use dictation layout when final signing supervised reports**" will automatically load the users Dictation layout instead of the

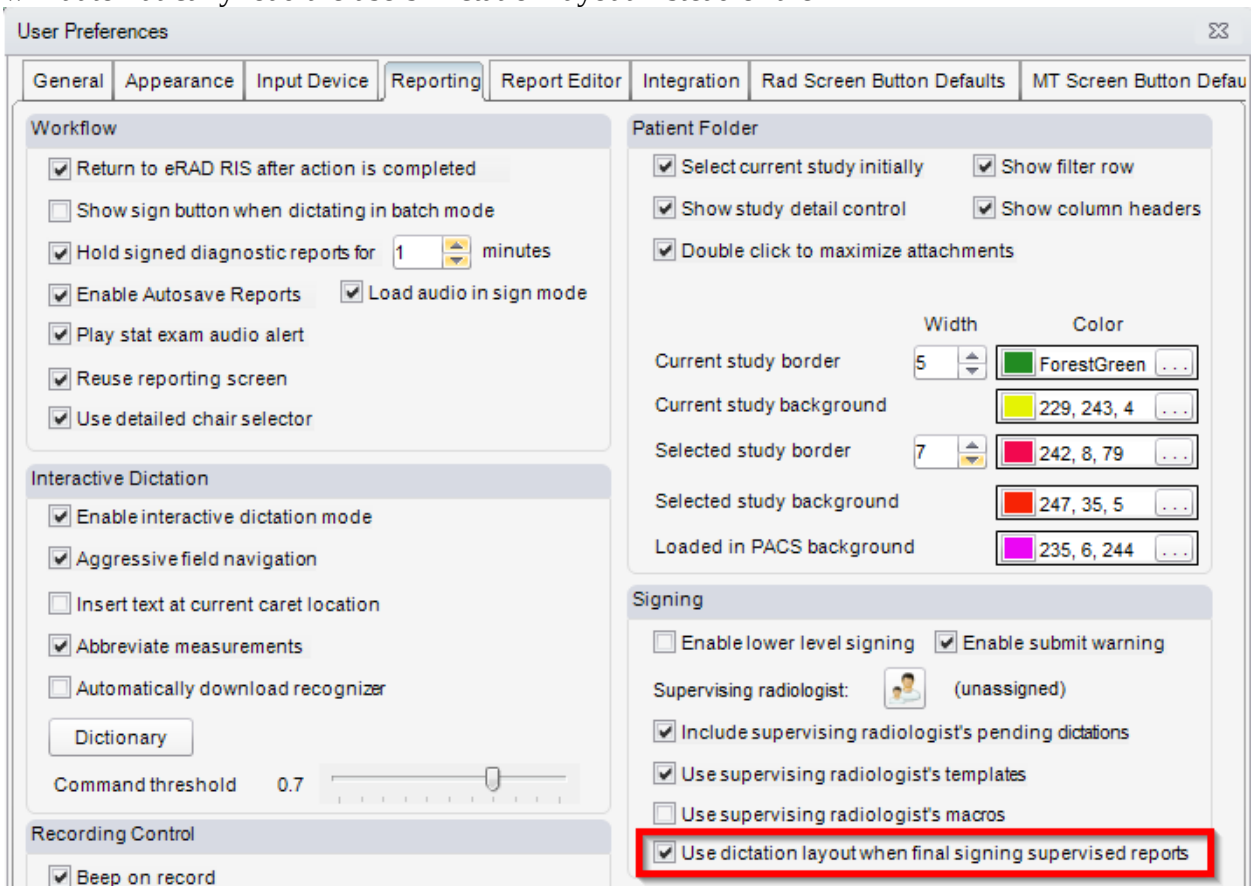

**Figure 5.14 – User preference Use dictation layout when final signing supervised reports**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Open Patient Folder/Images when Signing

Users currently have two main layouts. Either they are signing or dictating. Reason for this is that most signing task don't require the full patient folder detail, pacs images or dictation. So the signing layout is typically much smaller or less detailed then the dictation layout.

Users on occasion do want to display the Patient Folder and other detail similar to dictation when singing reports.

We now provide the user ability to load the dictation layout (patient folder) when signing reports. This is a manual click to load the dictating (patient folder) layout.

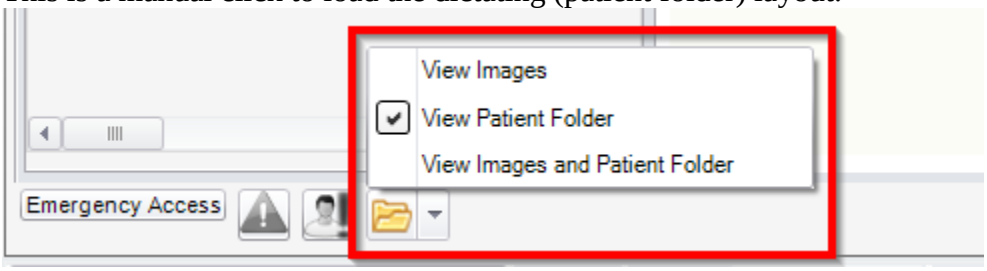

**Figure 5.15 – Signing mode layout options**

In the example above you can see that the Load Images button has been converted to be a split button with the additional options for "View Patient Folder" and "View Images and Patient Folder" with the "View Patient Folder" currently set as the default. This new dropdown button acts like other dropdown buttons for the reporting screen. Click the arrow to open other options and select option as desired. Holding the CTRL+<option> will render it the default and save in your user preferences.

1.)  2.)  3.) 
**Figure 5.16 – Options available as default**

The three images above show the icon when set as default action for 1.) View Images 2.) View Patient Folder 3.) View Images and Patient Folder

When the Sign Report window is reloaded with the next study either from the work list or from the Submit/Sign/Suspend/Skip and Continue option the users Signing Layout will be used. What this means is that it will load the dictation layout when clicking Load Patient Folder but it won't be sticky.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Lock Access to Preliminary Reports

Unsigned reports can be previewed, printed and sent to distribution for faxing. To restrict users from distributing preliminary reports we have added a new access string titled "**Clinical.PreviewPreliminaryReport**"

If the user does not have this access string set to full, they will not be able to preview, print or fax preliminary reports from context menu within the RIS.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Set Problem Flag without Rejecting Report

In previous versions of eRAD RIS users would have to select the Reject/Edit button to enable the Assign to radio buttons. New in build 42 is the ability set the Problem flag without rejecting the report. Along with the Problem radio button, the Transcription list box and Notes fields are also enabled during QA verify report workflow.

Now the All Problem Worklist for MTs will show exams with problem flags set that are in TenativelySigned1 status.

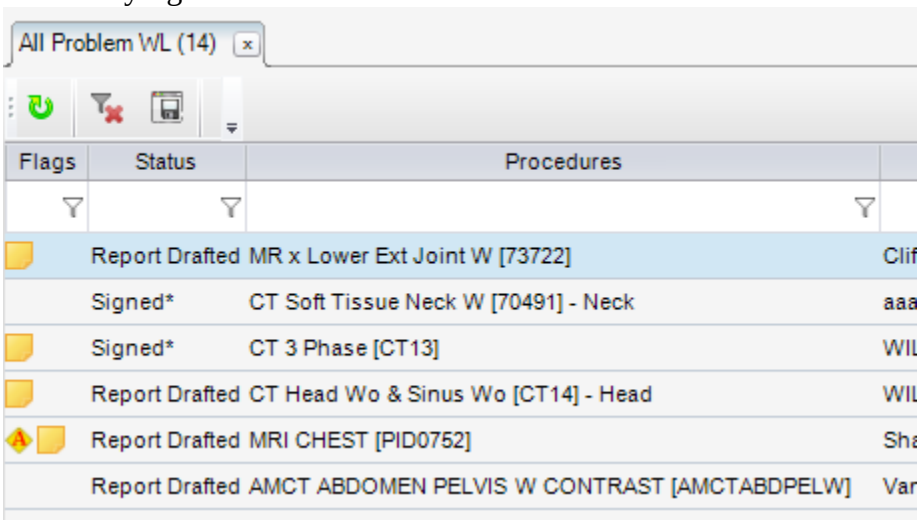

**Figure 5.17 – All Problem WL showing studies in Tentatively Signed status**

The Resolve problem window is now accessible in the MTs All Problem Worklist via the context menu. Please note this is dependent on the access string "**Clinical.ResolveRadProblem**".

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

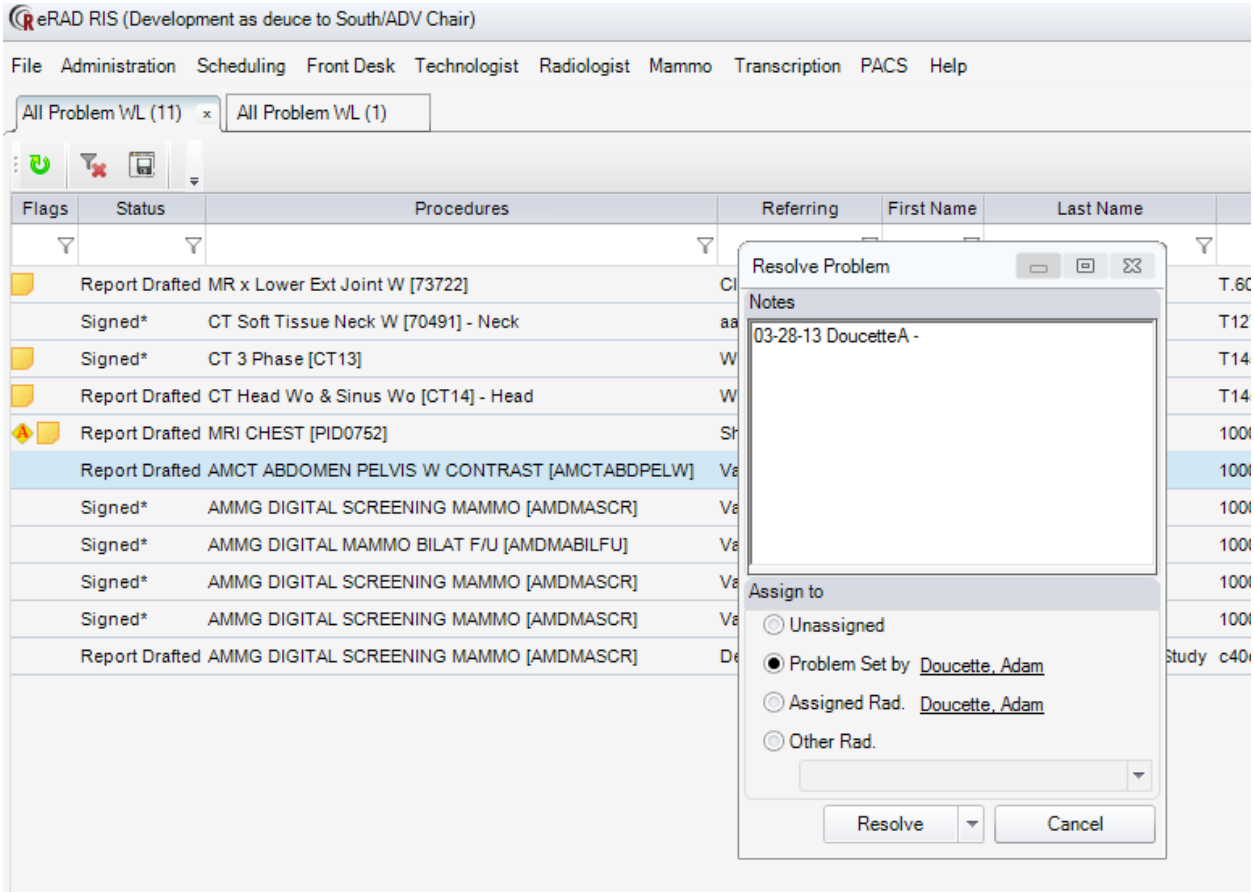

**Figure 5.18 – Resolve Problem window accessible from All Problem WL**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Remove Content Tags from CDA when Creating Macros/Templates

eRAD RIS offers the ability for a user to copy an existing report as a template for future reports. This functionality is inhibited by the fact that the new template they create contains mm:status and mm:part that should be stripped out.

As a result of the mm:status and mm:part still contained in the template, some of the jumping problems we have encountered on play back were related to time stamps being saved in templates and macros at the time of save. To correct this we found we could manually remove the time stamps from the underlying document.

We are now using the convertCdsToCda method to remove the time stamps and unneeded tags.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Ability to Configure MModal Transfer Task

The ris.exe.config now has an app setting to override the user preference for M*Modal's Data Transfer Config: **MModalDataTransferValue**

Acceptable values are any sum of the following options:

**SUBMIT_TRAINING_INFO:** Upload log of user interaction (including recorded audio) to server for profile building. Applicability: only for local recognition; ignored for remote recognition. constant value = **1**

**SUBMIT_ERROR_LOGS:** Whether to automatically submit an error report for debugging after an uncontrolled shutdown, or when encountering another non fatal error.
Applicability: all modes; requires storage manager for crash log uploads (non-fatal error reports can be submitted without). constant value = **2**

**STORE_USER_SETTINGS:** If set, store user preferences (including audio gain etc) on CDS server, and retrieve on next startup. Applicability: all modes. constant value = **4**

**UPDATE_PROFILES:** If set, checks at session creation whether an updated user profile is available on the server. If yes it is downloaded in a background thread and used as soon as it becomes available. Until then the recognizer would use either a speaker independent profile, or an older locally cached profile version (only if an IStorageManager is configured).
Applicability: local recognition; ignored for remote. constant value = **8**

**UPDATE_RECOGNIZER:** If set, check in regular intervals whether an updated compatible recognizer version is available on the server. If yes, the recognizer mode is downloaded in a background thread and used when the local recognizer is next instantiated (i.e. not switched out in a running session).
Applicability: local recognition; ignored for remote. Requires an IStorageManager, ignored if none is configured. constant value = **16**

**WRITE_DEBUG_LOG:** Like SUBMIT_TRAINING_INFO, but leaves information in a local IStorageManager for debug purposes instead of (or in addition to) uploading it to a server.
Applicability: local recognition; ignored for remote recognition constant value = **32**

If the value is not present or invalid, we resort to existing logic. This would be to check the user config for auto download, if present use 29 else 13

13 = SUBMIT_TRAINING_INFO, STORE_USER_SETTINGS, UPDATE_PROFILES
29 = SUBMIT_TRAINING_INFO, STORE_USER_SETTINGS, UPDATE_PROFILES, UPDATE_RECOGNIZER

0 (zero) is a valid option. Zero will disable the calls.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Make Patient Name Stand Out in Reporting Windows

The reporting windows now have additional optional patient and study information that can be displayed on the top of the main reporting window and also can display on the top of any floating data panes. If a multiple floating panes are grouped together, it will only appear on the title bar of the floating group.

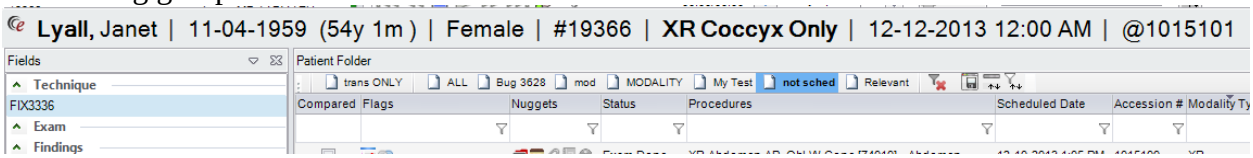

**Figure 5.19 – Patient and Study information in title bar**

Looking at the figure above I have the font size set to 16. The font size options are from 8-20. The context menu displayed above is accessed via a right click on the title bar. Under the Window Caption option the sub menu allows for font size change and option to display the Patient Information, Study information, both or neither.
Patient Information includes the patients name, DOB/age, gender, and MRN.
Study information includes the procedure, performed start date/time and the accession number

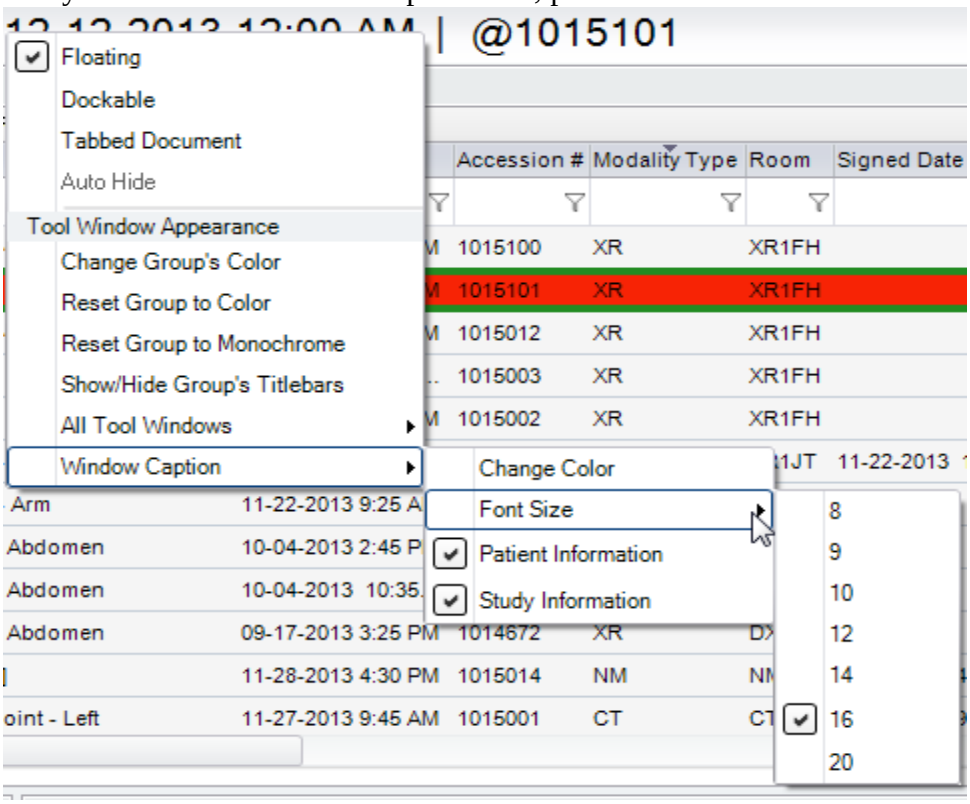

**Figure 5.20 – Context menu from title bar showing Window Caption options**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Create Backup of Capture Log

We now back up old capture logs.

On startup of Interactive, we check for existing capturelog file in $APP_PATH\captureLog.txt

If exists, we copy a backup to $APP_PATH\Reporting\CaptureLogs\$USER\captureLog-yyyy-MM-dd HH.mm.ss.log where yyyy-MM-dd HH.mm.ss is the LAST WRITTEN time on the current existing file.

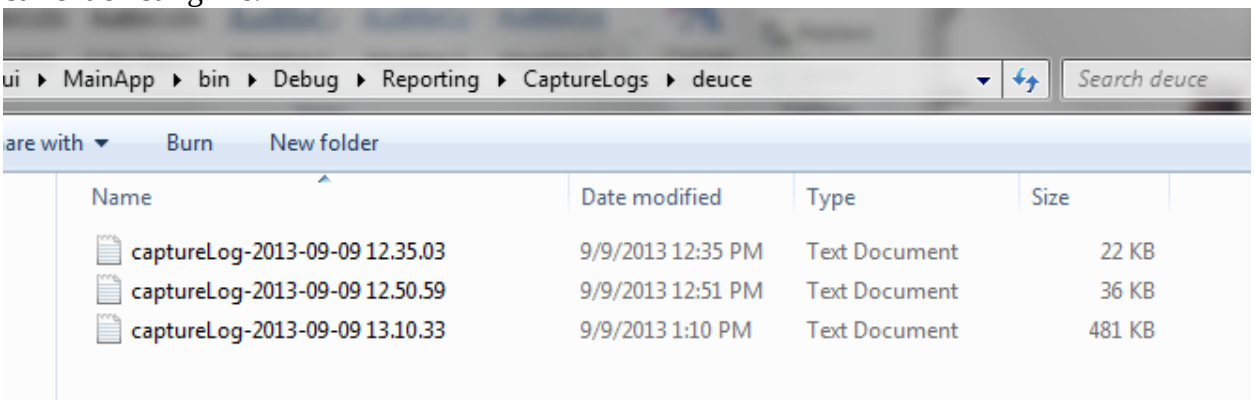

**Figure 5.21 – Showing CaptureLogs backup path**

Then we start up the new capture log which overwrites the old file location, as we always did.

So the current active capture log file name and location is unchanged. This will make for easy transition for support. Only the backed up logs are in a new location and file name.

Similar to the verbose logs, we check for outdated capture logs on login and delete ones that are older than two weeks and have not been accessed within the last day.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Relevancy Calculation Adjustable via Configuration

In production we have procedure codes that because of legacy data have very different names even on different modality types, but those procedures are actually exactly the same and should match exactly when assigned a relevancy score. Previous to B42 this was not possible because the relevance calculation was based entirely on word matching. A score was assigned based on the number of matching words and words that are modality type, body part or laterality are given great weight in the matching. Furthermore the administrator can setup the site so that only studies done on the same modality are considered relevant.

A new window titled Relevance Override has been added and is accessed from the "Override…" button on the Relevance lookup table.

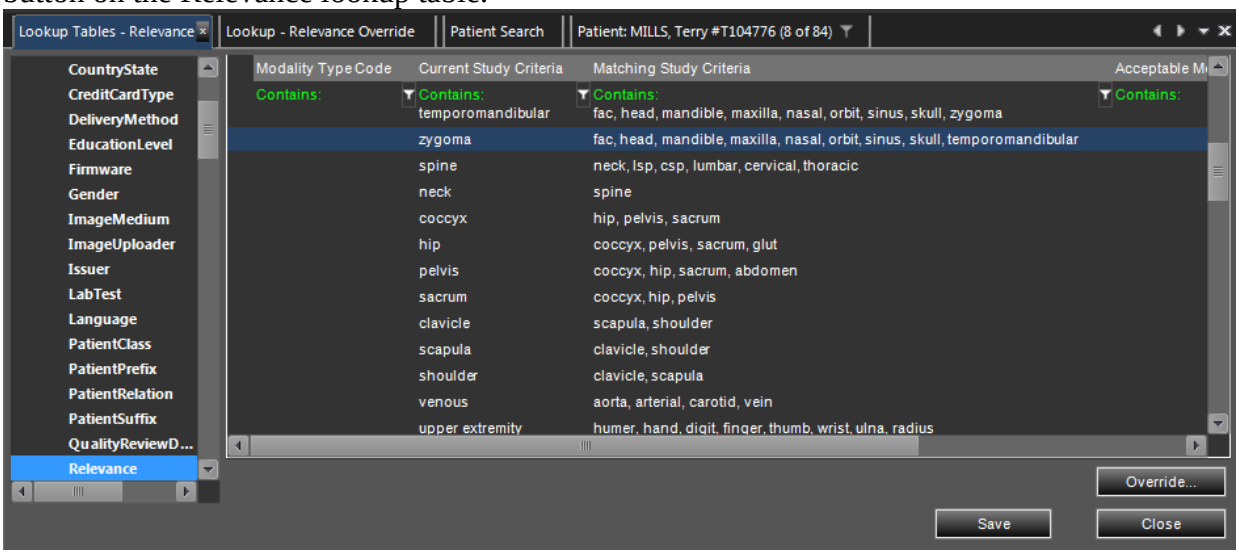

**Figure 5.22 – Accessing the Relevancy Override window**

When procedures in the patient's history have a matching relevancy override the configuration defines how much weight will be assigned as part of the procedure matching score (value between 0 and 100) and if the outcome will produce a Matching or Non-Matching Relevance Flag.

This solution also allows laterality to be an option part of the matching criteria. If the laterality is blank then it isn't considered as part of the matching criteria; however, if laterality is selected as "Same" then the rule only applies if the laterality of both procedures is identical. If the laterality is selected as "Different" then the rule only applies when the laterality differs and can be used to lower the score or make it Not Relevant, which could be useful when you want to give a high score when the laterality matches but a significantly lower score when the laterality is different.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

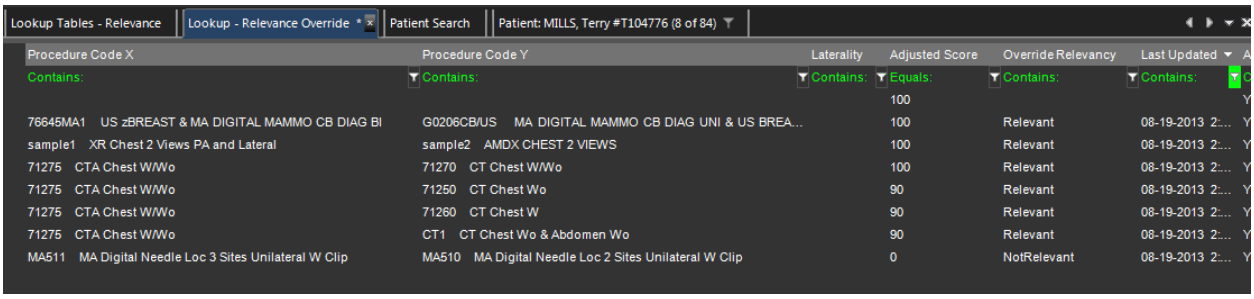

**Figure 5.23 – Relevance Override**

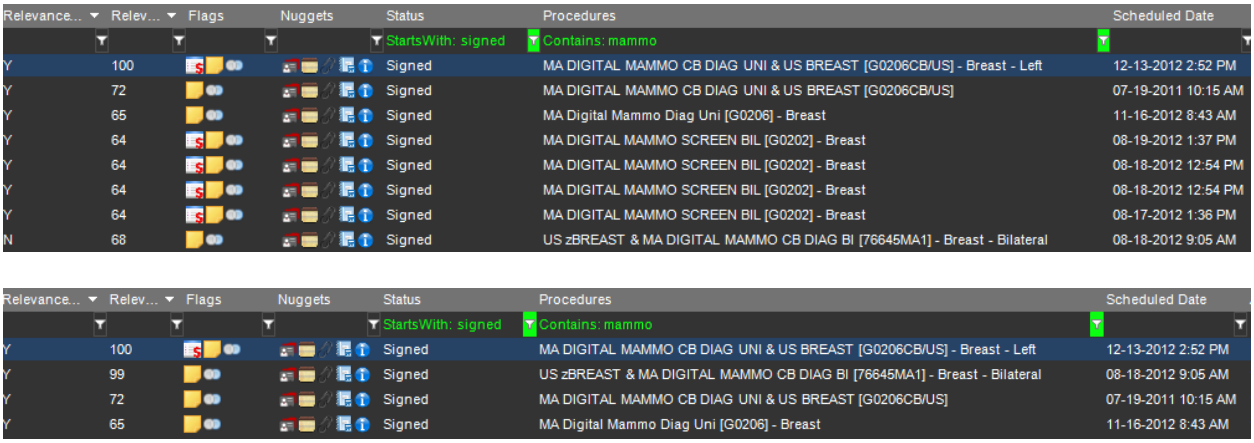
When the user clicks on the "Override…" button a tab opens up for the "Relevance Override" table, which allows you to specify two procedures (X and Y). When calculating relevancy if the studies match based on X and Y then the adjusted score will be applied and the relevancy flag will be set based on the selected value in the "Override Relevancy" column.

Note: The "Adjusted Score" and "Override Relevancy" columns are optional. If the "Adjusted Score" is blank then the score will remain as it was calculated without the override but the relevancy flag override would apply. Also, if the "Override Relevancy" column is blank only the score will be adjusted.

In the above Relevance Override configuration the procedures 76645MA1 and G0206CB/US are interesting. One is a US Breast & MA MAMMO CB and the other is a MA Mammo CB and US Breast. The default word matching produces a relevance score that is very close but not exact therefore some installations of RIS will want to correct for this. The following screen shots shows the relevancy results for a test patient's history – the first screen is with the override rule inactive and in the second screen shot the rule has been activated.



**Figure(s) 5.24 – Before and After Override applied**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Note: that in the first screen shot without the Relevance Override, the 76645MA1 doesn't even show up as relevant because in the base relevancy rules there is a rule that says only MA modality type studies are relevant to MA studies. In the second screen shot the rule for 76645MA1 and G0206CB/US says the procedure matching will get a score of 100% but since the procedure matching only accounts for half of the total score (the other half is used to sort by date), therefore we see the score increase from 68 to 72 and 76645MA1 actually gets placed before the older G0206CB/US study because it's a recent prior.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Cached by Name Column

*Cached By Name* column has been added to the Pending Dictation Worklist. It shows the formatted name of the user who is caching the study. The logic behind which studies are cached follows the same criteria as the 'Next' logic of the Dictation window. That means it starts at the top of the sorted worklist. This is re-evaluated every time the worklist is refreshed. If you are the one that is marked for caching the study it will simply have "me" as the Cached by Name value.

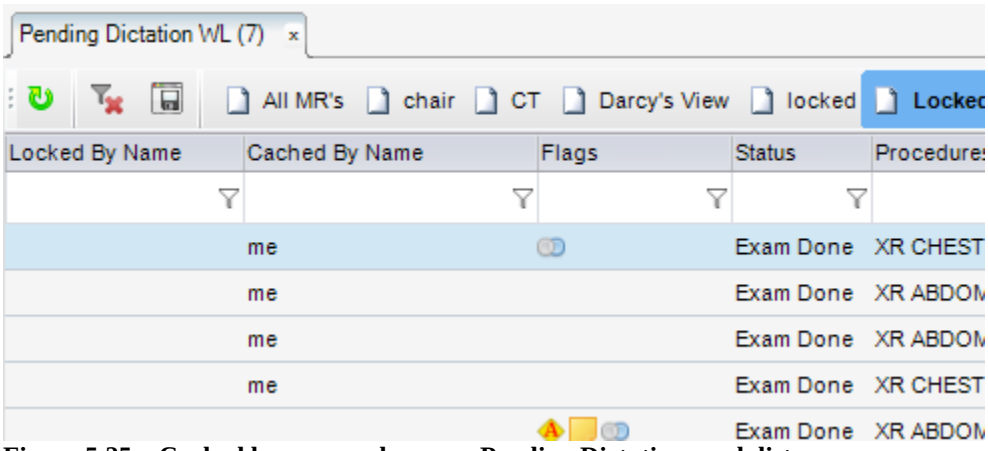

**Figure 5.25 – Cached by name column on Pending Dictation work list.**

Right-clicking on a study on the pending dictation worklist and selecting Add To Cache will cause that study to be cached regardless of its position in the worklist. This uses up one of the available cache slots as dictated by the Max Number to Cache user preference. Multi-selecting studies will cache studies up to this max number. Manually cached studies will be un-cached when either a different study (or set of studies) is selected to be manually cached or when they drop off the worklist due to a worklist sorting change or a change in the status of the study.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

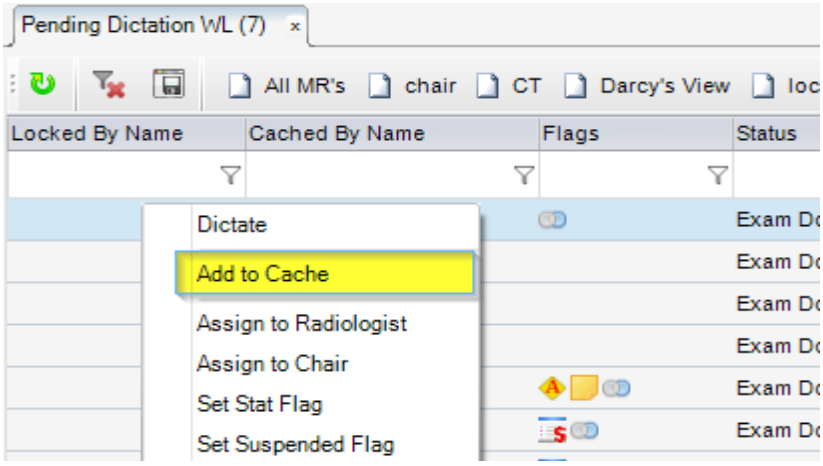

**Figure 5.25a – Add to Cache context menu option from Pending Dictation WL**

IW PACS "Caching" was attempted by actually opening the study. This has issues where studies that are "caching" sometimes pop up over top of images actually in use. This is probably suitable to be tested by a radiologist with warning they should be cautious and ensure that the images they are sync'd with the study they are reading.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – PACS Server Override

It has been requested that radiologists be able to access images on eRAD PACS and PACS IW from the same work list without changing the practice selected in the Org picker. This is now possible with the selection of a new user preference.

On the Integration tab there is a new option titled PACS Server and associated list box. This list box will contain the available PACS systems configured in the PACSServer lookup table that are in Active status. An access string named "**Clinical.UserPreferences.PACSServerOverride**" has been added for this preference with a default value of Disabled.

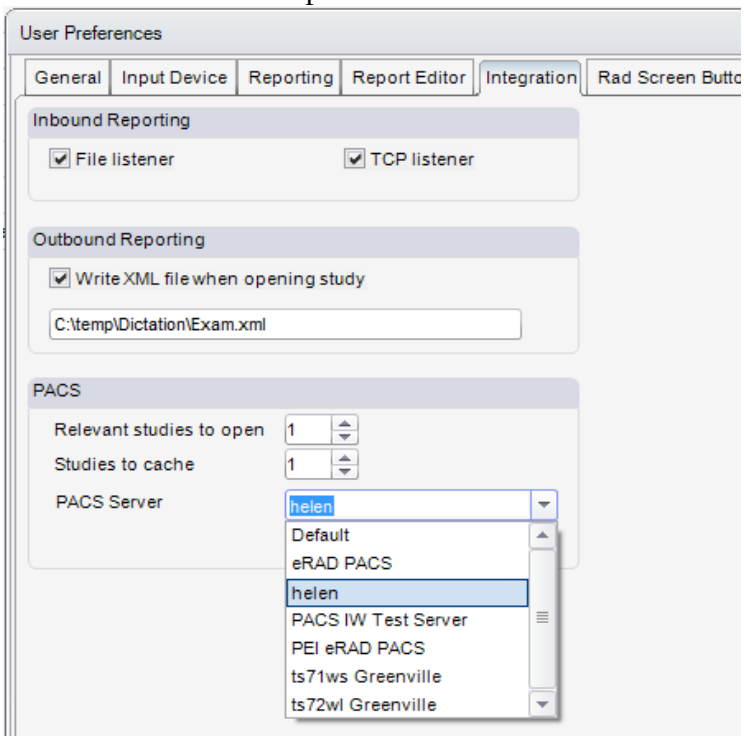

**Figure 5.26 – PACS Server user preference**

One of the PACS Server options is Default. If this is selected, the default PACS Server associated with your current practice selected in the Org picker will be used (same as before). If a specific server is selected, this will be the PACS that the images are displayed. For instance, if patient A has images on eRAD PACS and also PACS IW Test Server, when that server is selected the call for PACS will be made to that server and not the default for the practice.
**NOTE: If the PACS Server user preference selection is changed, the user will need to log out and back in again to pick up the changes. The user may encounter an error if they don't logout after changing the user preference.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Noticeable Sign Button in Reporting Windows

To make the Sign button in the reporting windows easier to identify a new user preference was added add color to the background of the button and the option to change the font color.
The "**Visually enhance sign button**" user preference is located on the Appearance tab under the Radiologist Reporting Buttons section.

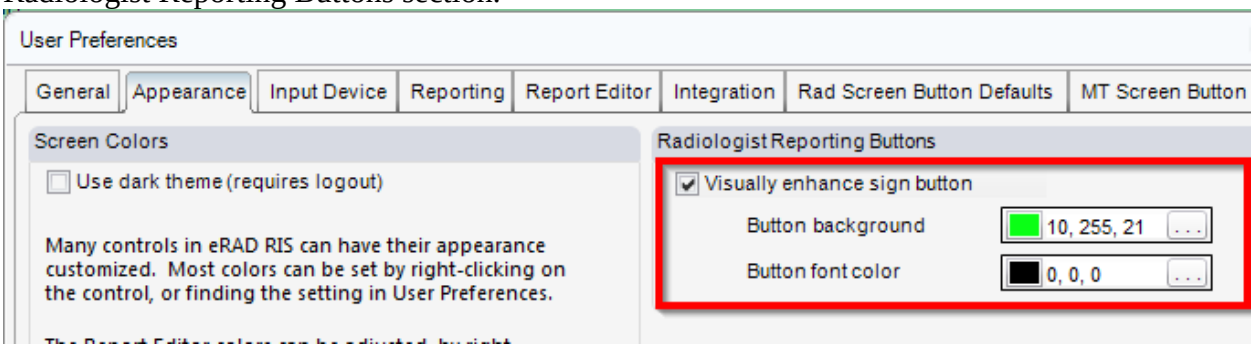

**Figure 5.27a – New user preference Visually enhance sign button**

With the preference selected and the above colors set the Sign button will look this in the reporting widow.

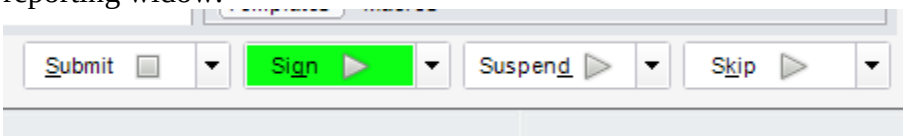

**Figure 5.27b – Noticeable Sign Button in Reporting window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

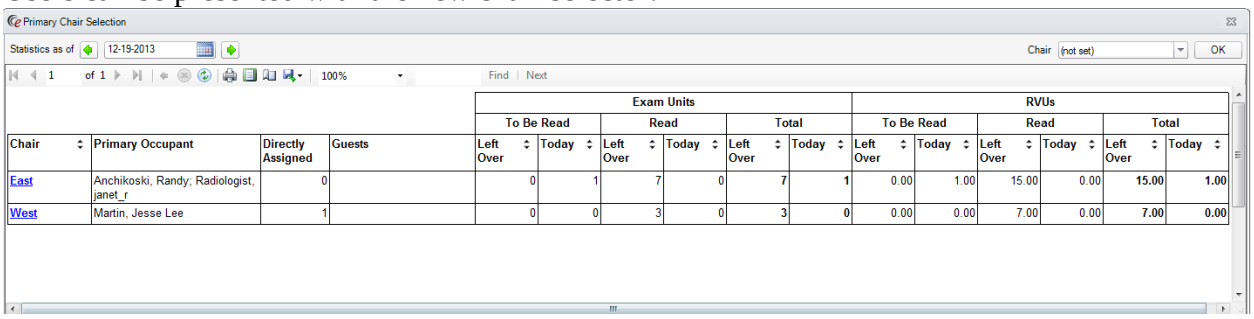
## Reporting – Chair Workflow Enhancements

You will first notice the Chair workflow enhancements upon login of eRAD RIS in build 42. Users can be presented with the new chair selector.



| | | | | Exam Units | | | | | | RVUs | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | To Be Read | | Read | | Total | | To Be Read | | Read | | Total | |
| Chair | Primary Occupant | Directly Assigned | Guests | Left Over | Today | Left Over | Today | Left Over | Today | Left Over | Today | Left Over | Today | Left Over | Today |
| East | Anchikoski, Randy; Radiologist, janet_r | 0 | | 0 | 1 | 7 | 0 | 7 | 1 | 0.00 | 1.00 | 15.00 | 0.00 | 15.00 | 1.00 |
| West | Martin, Jesse Lee | 1 | | 0 | 0 | 3 | 0 | 3 | 0 | 0.00 | 0.00 | 7.00 | 0.00 | 7.00 | 0.00 |

**Figure 5.27 – New Chair selector**

The original chair selector provided a simple drop down list of chairs and an OK and Cancel button. We have augmented this screen to show which radiologists are currently assigned to each chair, and we now describe the amount of work assigned to the chair for today and previous days. The old chair selector is still available and the user can choose "the old" or "the new" chair selector with a new User Preference "**Use detailed chair selector**". This is found under Reporting>Workflow.
The radiologist can select a chair either by clicking the blue hyperlink for the chair, or they can use a dropdown list if they prefer to make a selection with the keyboard. Once the radiologist selects a chair, the chair selector will disappear, and a chair filter will be applied to the My Pending Dictation WL.

The calendar control in the top left of the chair selector is used to determine the effective date for the statistics shown for each chair e.g. the stats for each chair break down the number of exams into "Today" and "Left Over". The calendar control defaults to "Today" when the chair selector is initially opened, so the "Today" column represents exams that were assigned to the chair today, while the "Left Over" column covers exams that were assigned in the previous 7 days. If the radiologist changes the date to reflect "Yesterday", the numbers in the "Today" column will instead reflect the exams assigned "Yesterday", while the "Left Over" column will again reflect the 7 days prior to "Yesterday". The calendar control also affects the numbers shown in the "Directly Assigned" column, we calculate the total number of exams assigned to the primary occupants of the chair based on the specified "chair assigned date."

For practices with a large number of chairs, we may find that there are too many choices to fit onto a single page. The tool strip has "next page / previous page" style controls that will allow the user to browse all of the chairs if desired. The "Find" control on the same tool strip can also be used to help jump to other pages.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### Primary Chair vs "View Other Chairs"

The chair selector serves the dual purpose of allowing the radiologist to set their Primary Chair that they will be working for the day, while still allowing them to browse the worklist for other chairs. When the radiologist first logs in, they will be presented with the chair selector with the title "Primary Chair Selection"

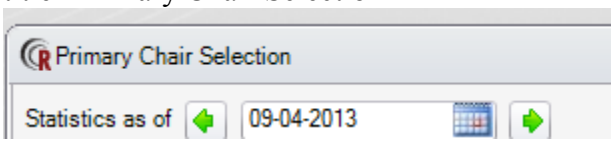

**Figure 5.28 – Primary Chair Selection window**

The primary chair selection will be used to ensure a particular chair is credited for the work done by the radiologist. We will assign an exam to the radiologist's primary chair once it is dictated or signed, provided it has not already been set.

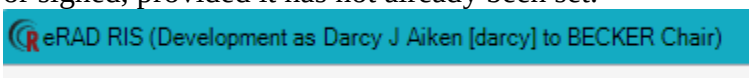

**Figure 5.29 – Primary chair displayed in the title bar**

After the radiologist selects a primary chair, they can bring up the chair selector by pressing the chair icon on the status bar at the bottom of RIS. The chair selector now has the title "View Other Chairs" and will be used for filtering worklists only, credit will not be assigned to this chair when the radiologist is dictating or signing exams.

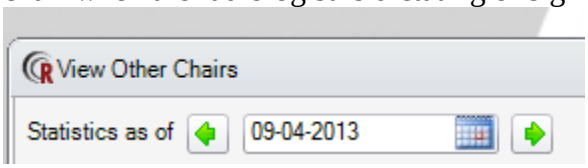

**Figure 5.30 – View other chair selector**

The figure below indicates that the "South" chair is occupied by Janet i.e. Janet's Primary Chair is "South" and that "Darcy" is currently filtering his worklist for the "South" chair via the "View Other Chairs" selection. In this case the 2 "Directly Assigned" refers only to the occupant of the chair (i.e. Janet).

**Figure 5.31 – Occupants and Guests displayed in chair selector**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

If a user tries to choose a chair that is already occupied by another user, they are presented with a prompt to confirm their choice:

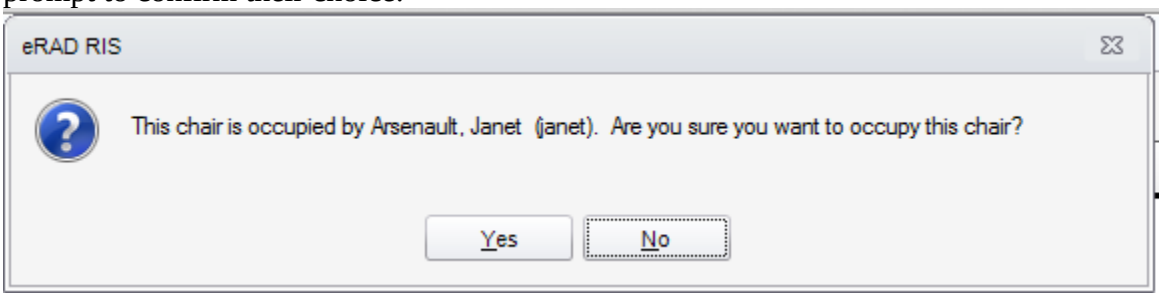

**Figure 5.32 – Prompt to confirm when the user selects a chair that is occupied by another user**

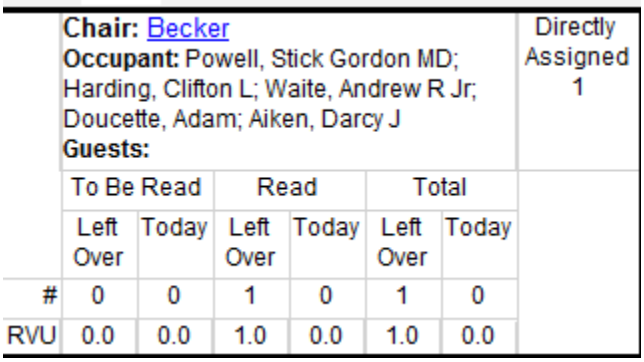
Previously the RIS back end services were agnostic of the user's Primary Chair selection, this was a detail managed solely by the client. We were required to save the user's choices to the database in order to be able to show occupants and guests on the new chair selector. We clear out these choices when the user logs out. In the event of an abnormal application termination (e.g. a power outage or crash), we do not have the opportunity to clear out the chairs. In this case, the chair occupants will remain in their chairs until they log back in and make a new selection, or their chair selection expires. RIS is presently set to occupy a chair for 2 hours or until the user logs out or makes a different selection, these 2 hour chair selections are renewed every hour.

### Descriptive Statistics for Chairs



| | **Chair:** Becker<br>**Occupant:** Powell, Stick Gordon MD; Harding, Clifton L; Waite, Andrew R Jr; Doucette, Adam; Aiken, Darcy J<br>**Guests:** | | | | Directly Assigned 1 | |
|---|---|---|---|---|---|---|
| | To Be Read | | Read | | Total | |
| | Left Over | Today | Left Over | Today | Left Over | Today |
| # | 0 | 0 | 1 | 0 | 1 | 0 |
| RVU | 0.0 | 0.0 | 1.0 | 0.0 | 1.0 | 0.0 |

**Figure 5.33 – Close-up of the statistics for a single chair**

The following logic was used to calculate the numbers in the chart above:

| Label | Definition |
|---|---|
| Directly Assigned | The total number of exams assigned to all primary occupants of the chair with a chair assigned date that matches the selection in the calendar control on the chair selector |
| To Be Read | Exams with a status of ExamDone or Signed with an addendum |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | |
|---|---|
| | requested |
| Read | Exams with a status of Dictated, Transcribed, Report Drafted, Tentatively Signed, or Signed (excluding Signed Exams with an addendum requested) |
| Today | Exams with a chair assigned date that matches the selection in the calendar control on the chair selector |
| Left Over | Exams with a chair assigned date that is within the 7 days prior to the selection in the calendar control on the chair selector |
| # | The number of exams |
| RVU | The sum of the weighted value for the exams. These weighted values can be configured by procedure code and practice, the configuration for these weights is discussed later in this document. |

**Table 5.1 – Detailed explanation on stats in chair selector**

### Chair Selection Management Report

The tables shown in the chair selector thus far have all been built within a management report. There is a new system configuration setting called "**ChairSelectionReport**". RIS will fall back to the previous chair selector if this entry is blank. A valid entry for this setting will describe the path to a management report on the report server (e.g. /dev/Management Reports/Custom/ChairSelection). The use of a configuration setting will help with the introduction of different versions of Chair Selection Reports – if the new version has issues, the configuration setting can be set to point back to another version of the report.

The hyperlinks in the chair selection report must be crafted in a particular way in order to be handled by RIS. This approach will initially be managed and refined by eRAD R&D and documented later for use in the field.

### Work Unit Configuration (aka RVUs or weights)

Procedures can now be assigned a relative weight to make it easier to ensure radiologists are given the appropriate credit for their work. Some procedures are significantly more involved than others, (e.g. Chest X-Ray vs PET/CT) so comparing just the number of exams is not meaningful. Access to see the RVUs option in the chair selector is configurable based on the new access string "**Clinical.ShowRVUs**"

There is now a new configuration option under Administration -> Configure -> Procedure -> WorkUnit that allows an administrator to assign weights to different procedures.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| Procedure | Practice | Work Units | Display Order | Effective Date | Dollar Value | Last Updated | Active |
|---|---|---|---|---|---|---|---|
| Contains: | Contains: | Equals: | Equals: | Equals: | Equals: | Equals: | Contains: |
| Click here to add a new row | | | | | | | |
| CT 3 Phase (CT13) | Advanced Radiology | 2.000 | 1 | 07-01-2013 | | 08-26-2013 2:08 PM | Y |
| CT 3 Phase (CT13) | Advanced Radiology | 1.100 | 1 | | | 08-26-2013 1:16 PM | Y |
| CT 3 Phase (CT13) | Advanced Radiology | 3.000 | 1 | 08-01-2013 | | 08-26-2013 1:13 PM | Y |

**Figure 5.34 – WorkUnit configuration lookup from Administration -> Configure**

Work units are designed to allow different practices to assign their own weights to the same procedure. Rather than require the administrators to map out rules for each procedure and practice, we have a default weight of 1.00 that will be used for any procedure that does not have a weight configured (for a given practice).

Because weights may be subjective, we have built in a date based versioning scheme. If an administrator decides that a Chest X-Ray should have a weight of 0.10 units, they can set the effective date to July 1, 2013 to make the new weight apply to all studies with a date of service greater than July 1, 2013. In the event that their opinion changes as to the relative weight of a Chest X-Ray, they have the option of changing the 0.10 to another value (e.g. 0.20) either by modifying the existing row, or creating a new row with a different effective date. If the new effective date is August 1st, 2013, it will apply only to exams performed after August 1st, while those performed in July will still use the original weight of 0.10. Modifying an existing weight and leaving the previous "effective date" intact will retroactively assign the new weight to exams performed after the effective date.

It is important to note that the default of 1.00 will apply to any exam performed before the earliest effective date for a given procedure and practice. If there is no rule for Chest X-Rays with an effective date earlier than July 1, 2013, then any Chest X-Rays performed in June would be the default 1.00 units. There is also a Dollar Value column that behaves the same as the weights themselves, but this may be removed if it does not add value.

### Chair Assigned Date

There is now a new attribute that is set when assigning an exam to a chair: chair assigned date. Whenever a user in the RIS client assigns an exam to a chair, we now set the chair assigned date to the current date and time. Although the "chair assigned date" has not been added to any worklists, the chair assigned date is factored into the statistics on the chair selector's statistics - "Left Over" vs "Today" is determined using the chair assigned date.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Administration - Display Locked Items in Different Color on the Work List

This requirement was almost achievable without code by using the existing "Conditional Formatting" telerik feature, except for one limitation. The user could have created a conditional format filter with a 'Contains' condition looking for their userID. However, this means the filter would have to be created by each radiologist independently and could not be shared since it is unique to each person's userid. Also, the conditional formatting tool is not a simple and intuitive feature for a novice user, therefore the effort of creating and maintaining these features would have fallen to implementation people to create and maintain for each radiologist. We deemed this too much work, and a feature could be built to support it instead.

The column/cell that will be colored is the locked_by_name column and the cached_by_name column.. Therefore, implicitly this column must be in the worklist you wish to add this feature to.

The user will be able to select the foreground and background colors simply and easily.
The user will be able to select either "Colour my rows" or "color other people rows" or both.
The system will have default colors that will be compatible with both light and dark mode.
The color filters will be part of the worklist views feature; therefore saving a worklist view implicitly saves the color filters.
To implement this, a new control was added to the right-click menu on the worklist.

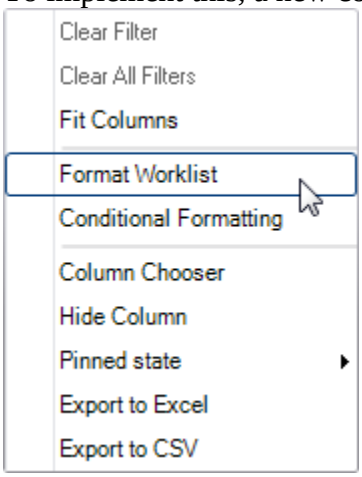

**Figure 5.35 – Context menu option to create colored columns for Locked By and Cached By**

Selecting Format Worklist from the context menu as displayed above will open the Formal Worklist window.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

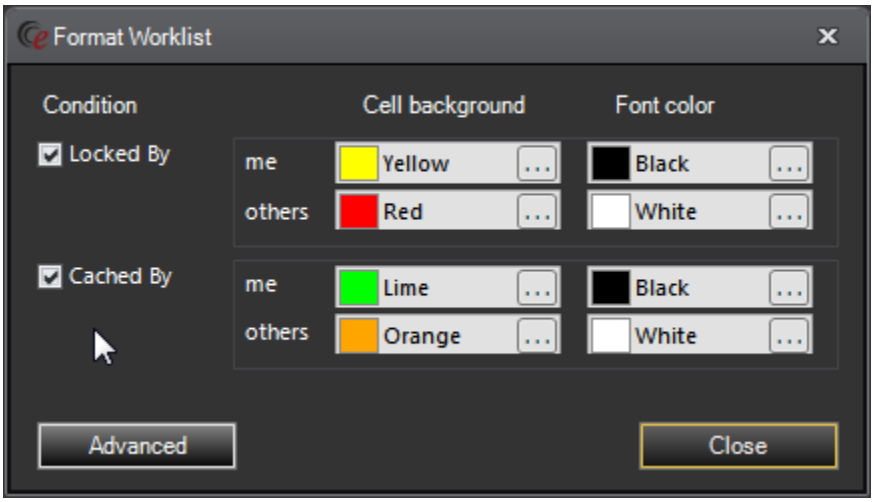

**Figure 5.36 – Format Worklist window**

This screen allows the user to configure their color filters.

The 'Advanced' button is provided as another way to access the Telerik Conditional Formatting feature. The Close button implicitly stores and invokes the color filters.

**NOTE:** ***Once color filters are set, they must be saved into a worklist view if the user would like to keep the selection.***

As well, it was mentioned that the user might like a filter condition which would show them only the worklist rows that they currently have locked.
While the user could just create a typical worklist filter condition, it was slightly complicated by the fact that the expected filter condition (ie, starts with 'me') would not work. In fact, it would have to be written as (contains me). To simplify this for the user, a new filter context menu option was added.

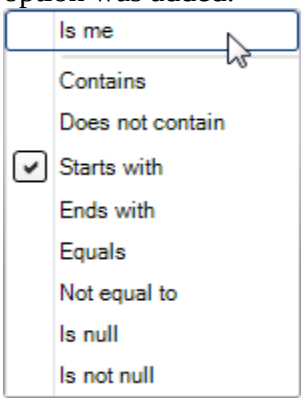

**Figure 5.37 – Filter option added**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Attachments - “Show Me Everything” Option

The attachment types dropdown can be configured to display only those attachments they want to see appear in the Attachments data pane or data nugget. We have added an option to enable the users to have access to the remaining attachments that may be associated with the patient.

Two new options will appear in the attachment types dropdown
+ Show More
- Show Less

By default the attachment data nugget opens with only the scan document types the user wants to see, which is configurable via the ' button'. By choosing "+ Show More" the attachment data nugget will reopen and display all attachment types regardless of user preference.

These options will not display if there are no additional attachments.

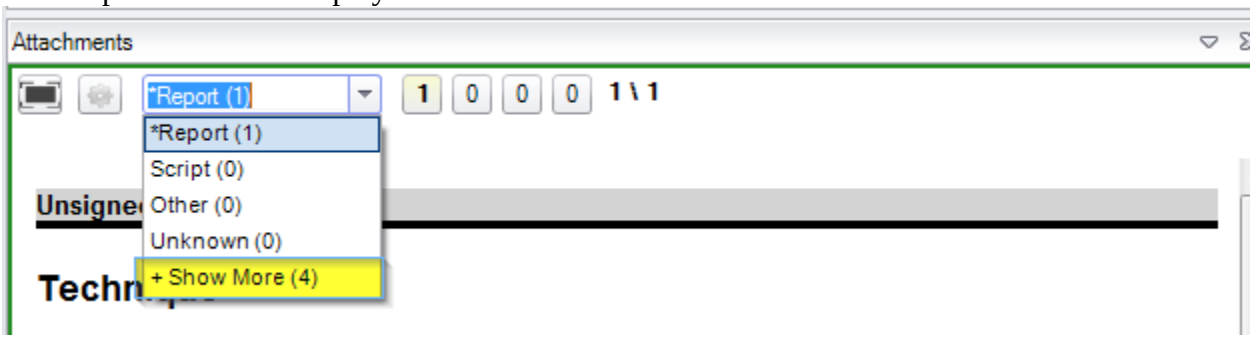

**Figure 5.38 – Show more attachments**

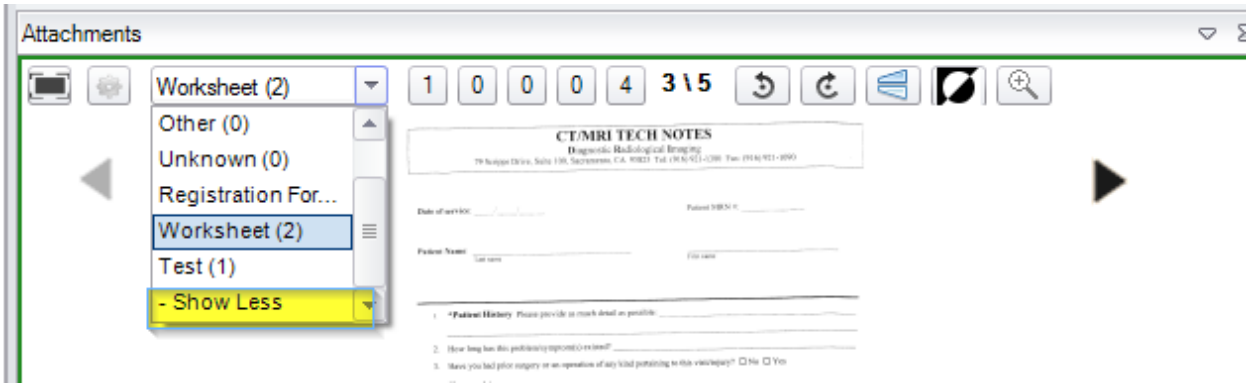

**Figure 5.39 – Show less attachment options**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Attachments - Ability to Add Attachments from Worklist Context Menu

The ability to add attachments from wordlist's context menus has been added in build 42. Wordlist's that allow for "Edit Patient" will now have the context menu option of "Attachments"

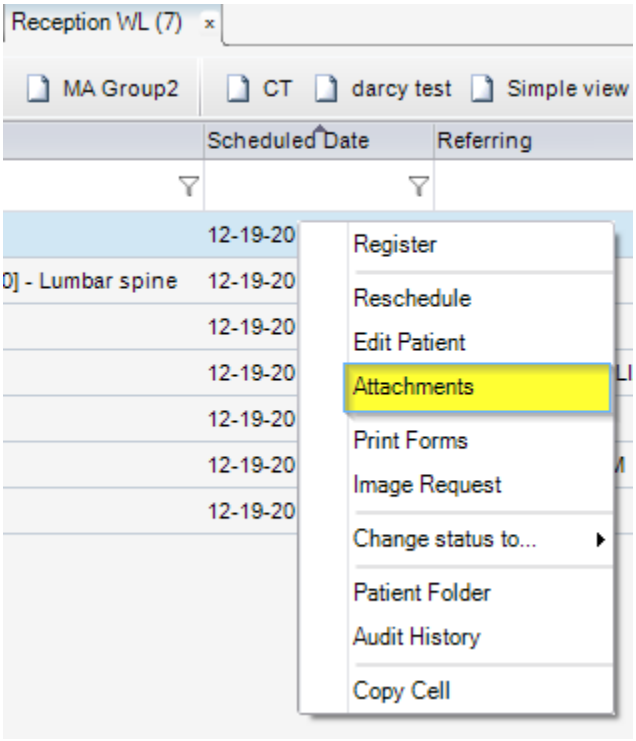

**Figure 5.40 – Attachments context menu option**

Also added were study details above the attachment list so we know exactly what the current study is.

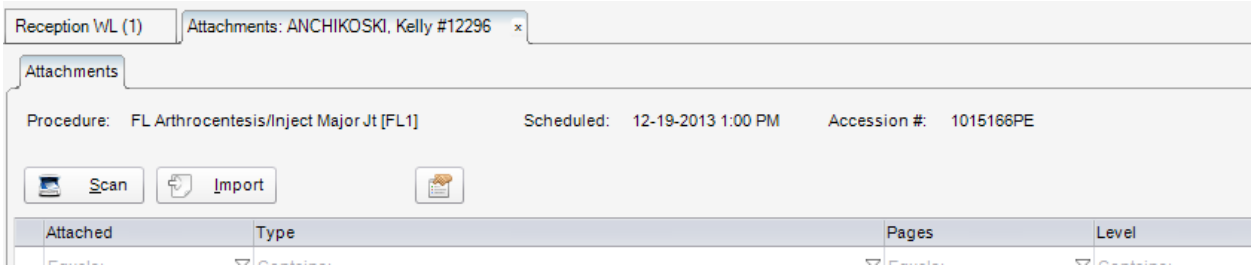

**Figure 5.41 – New Attachments window opened from context menu on work list**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## IVT - Next Follow up Date

Both IVT and Schedulers rely upon the contact log to show the follow-up activity (e.g. phone calls, letters, etc) for a particular patient/exam. The worklist for IVT and scheduling were modified to show the last follow-up type and the date of the last follow-up, but short of opening up the IVT screen or Scheduling screen to read notes, it can be difficult to know which patient/exam to "work" next. Ideally the schedulers and IVT team would have a means to record the "Next Follow Up Date" and/or "Next Follow Up Type" and have it show on the worklist for sorting/filtering purposes in order to reduce the need to open each row on the worklist.

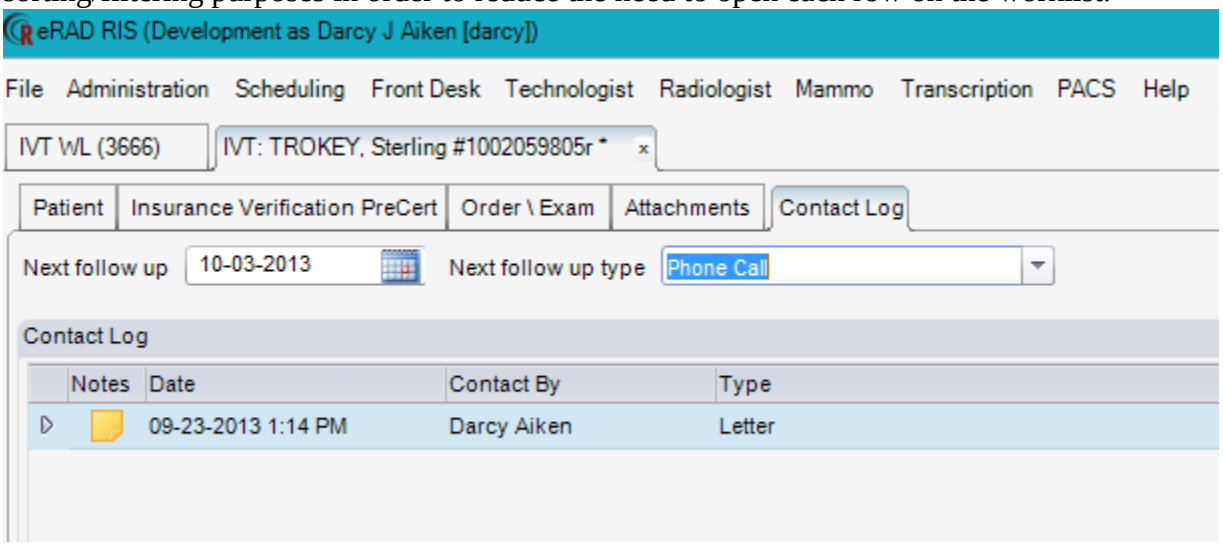

**Figure 5.42 – Contact Log on IVT window now includes a Next Follow Up Date**

In the above example the "Next Follow Up Date" is stored in a database field specific to IVT.

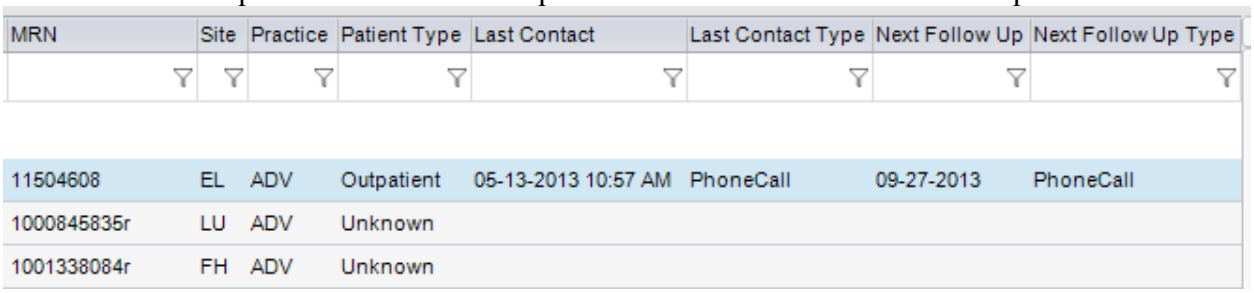

**Figure 5.43 – IVT Worklist now includes Next Follow Up / Next Follow Up Type that can be sorted/filtered**

The figures above are for IVT, but the Contact Log tab is the same in the Schedule Order window and columns on the Orders To Schedule work list also includes the Next Follow Up and Next Follow Up Type.

The values for the "Next follow up type drop down list are taken from the FollowUpType lookup table under Administration -> Configure -> Mammography -> FollowUpType.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Support Non Order Level Locking

Previous to build 42, RIS used Order Level application locks to reduce the risk of multiple users editing the same data at one time. If one user opens a particular exam, RIS will prevent other users from opening that exam (or any other exam that belongs to the same Order). This causes problems for our users by requiring the user to wait for the lock holder to close out before they can make their changes.

To refine the locking strategy such that we lock single studies instead of the entire order, (where appropriate) taking into consideration the action the user is attempting (e.g. Perform Exam). i.e. Two techs should not be allowed to perform an exam at the same time, but perhaps we should allow a Tech and a Rad to simultaneously have the same exam open. On the other hand, a Radiologist and a Transcriptionist should not be allowed to open the same exam at one time.

In build 42, this has become a reality. Changes to the lock tag generation will allow users to simultaneously make changes to the same study based on the following:

One of the keys to managing locks is that we generate a tag based on what we intend to lock, and if another user requests the same lock tag, we will return a lock failure message. As of build 41, we were generating these lock tags in the form of 123Order where 123 uniquely identifies the order that is locked.

The new approach is to build a 3 part lock: the identifier for the Order or Study being locked (either order_key or study_key), a lock suffix that indicates the type of action being performed e.g. IVT, PerformExam, and finally the word “Order” or “Study”.

Because some screens need to conflict with others (e.g. ReportingRadiologist and the Transcriptionist screens), we map different screens into buckets. In many cases a screen will have its own bucket e.g. IVT and PerformExam. There are a few screens that are report related that are given the same bucket “Report” in order to reduce the likelihood of conflicting changes.

A system table in the database (i.e. one that is not editable through Administration->Configuration in the RIS) assists with the mapping of screens to buckets, and helps determine if the screen will lock on the Order or on the Study.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | lock_hint | study_level_flag | lock_suffix |
|---|---|---|---|
| 1 | BillingConfirmation | Y | Billing |
| 2 | FollowUp | N | FollowUp |
| 3 | IVT | N | IVT |
| 4 | PerformExam | Y | Tech |
| 5 | ReportingRadiologist | Y | Report |
| 6 | ReportingTranscription | Y | Report |
| 7 | VerifyExternalReport | Y | Report |
| 8 | ViewEdit | Y | ViewEdit |

**Figure 5.44 – Mapping class names in RIS to lock**

Any screens or other functionality that is not included in the list above will continue to lock the Order. E.g. Scheduling and Register will lock the Order with a lock tag in the form of "123Order". Because of the lock tag design, Scheduling and Reception will not block anyone from opening any of the other screens above, but they will conflict with each other.

### Server Side Checks for Locks Prior to Saving

Immediately before we save an order or study on the server, a check is performed to see if the user holds a valid lock for the data in question. In the past we simply needed to check for the existence of a valid lock in the database with a lock tag that corresponded to the order being modified. If no valid lock were found, we would throw an error back to the client and not allow the user to save their changes. Under normal circumstances, the only way this would occur would be in the event that an authorized user used the Break Lock functionality.

The new approach is to check for a valid order level lock, if found we allow the save to continue. If there is no valid order level lock, we check for a valid study level lock for each study that is being passed in. If there are enough valid locks we throw an error back to the user, otherwise we allow the save to succeed.

Note that orders and studies that are being created do not require locks, so we exclude them from the lock checks above.

### Changes to Lock Management

Each screen that requires locking functionality makes use of a class called GUILockManager that is responsible for refreshing and releasing locks. Previously this class could manage only one lock at a time. We now generate a unique lock identifier that helps to uniquely identify the instance of the lock and can refresh or release multiple locks in a single service call.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

In some cases the user may attempt to acquire or refresh multiple locks and the call will be only partially successful – e.g. only two of three locks will be granted. In these cases the client will behave as though the entire lock request has failed.

### Changes to Worklists

The worklists that are designed for Radiologists and Transcriptionists include a column that identifies the user that holds a lock on that data. Because the lock tag is calculated differently, the worklist views were updated to filter for the type of locks that are used by Rads. If a Tech has an exam open, previously we would show the tech's name/userID in the "Locked By" column. Now that we are only interested in specific kinds of locks, we will only populate "Locked By" if it is a "Report" level lock (i.e. opened by another Rad, Transcriptionist, or someone using VerifyReport). Previously the worklists were parsing the lock_item_code in order to join to order, we now have a foreign key to Order and Study to assist with the join.

There are worklists that are not specific to Rads and Transcriptionists that have a locked by column e.g. the BI-RADS 0 and BI-RADS 4/5 worklists. Because the users working this list are not focused on the report, their worklist will only display the type of locks that pertain to them.

### Changes to Perform Exam

The Perform Exam screen generates a lock for each study within an Order. When the Perform Exam screen is initially opened, a single lock tag is generated. If the user clicks the include button, we attempt to acquire additional locks to prevent other techs from working on those studies simultaneously. In the event that there is a locking failure when the tech clicks the include button, we display a locking failure message to the tech, uncheck the "Include" box, and reselect the previous exam on the patient history grid. No "break-lock" functionality is planned for this case.

### Alerts for Similar Locks

A new alert was created (verbiage to be determined) to warn a user on Perform Exam or View Edit if a Rad or Transcriptionist has the same exam open.

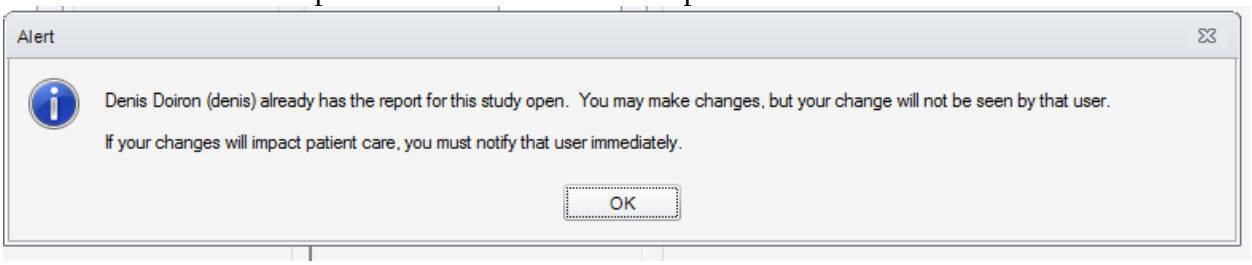

**Figure 5.45 – Alert on View Edit and Perform Exam when a Rad or Transcriptionist has the same exam open**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

We need to determine if these types of warnings will be sufficient, or if we need to have a locking mechanism that can acquire a fine grained lock that can prevent other users from making specific types of changes.

**Special Handling for Notes**

Our original implementation of "Notes" requires special handling. As users add new notes, we concatenate the new notes to the existing notes. In the case where two users update patient notes at the same time, the second saver wins and the first saver's notes are lost.

We have updated the concurrency handling to help reduce the risk of issues surrounding simultaneous updates to notes. If two users save changes at the same time, we detect the conflict on the server side and then extract the new notes from the second saver's update and then concatenate that with the existing notes in the database.

This was tested and works well for updates (i.e. adding new notes), but there is an outstanding issue with deletions. A typical user is not authorized to delete previously saved notes, but there is a permission that can allow an authorized user to edit existing notes. We did not build any handling for deleted notes – if two users update a row at the same time and the second saver deleted some notes, we simply allow the first saver to win.

A future sprint should address the current implementation of notes, possibly considering a design change so that each note is stored in its own row.

**Special Handling for Manage Policies**

When the user presses Manage Policies on a screen such as Registration, IVT, or ViewEdit, we now attempt to acquire a special insurance related lock. If the attempt to acquire the lock succeeds, the manage policies dialog will appear as before. If the lock acquisition is unsuccessful, the user will be presented with a lock failure message which identifies the lock holder and presents a "Read-Only", "Cancel", or "Break-Lock" option (the latter requires a lock override permission).

If a user's insurance lock is stolen, the GUILockManager will release all other related locks for that screen. E.g. if the user has ViewEdit open, they will lose the study level lock that they were granted when they opened the screen. Break lock for insurances should be used sparingly. Note that there is no enforcement of the insurance lock on the server, i.e. the user requires a lock to open the screen in the GUI, but the server will not reject an insurance update from a user that doesn't have a lock.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

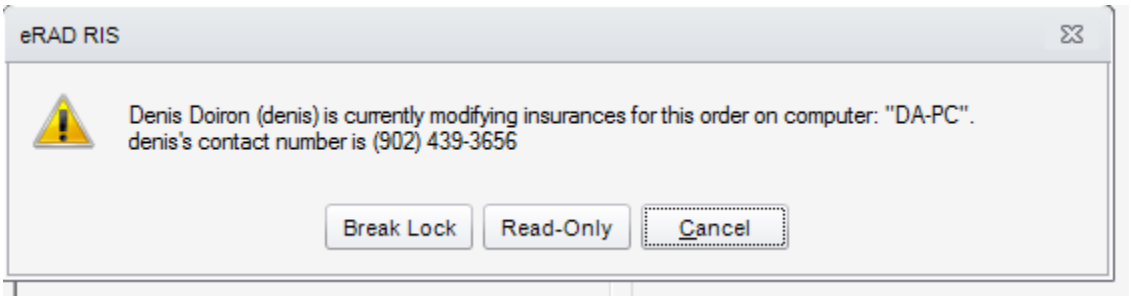

**Figure 5.46 – Break lock message**

## Special Handling for Patient Merge

When a Patient Merge is performed, there is a Source Patient and a Destination Patient. The Source Patient's visits, orders, studies, etc. are moved to the Destination Patient and the Source Patient is marked as Deleted. We have had cases where one user was actively working on the Source Patient during the merge process, and some studies were re-associated with the Source (i.e. deleted) Patient.

The Patient Merge screen has been updated to help reduce the chance of this happening in the future. When the user presses the Merge button on the Patient Merge screen, we now check for any locks on the source patient. If any locks are held for any of that patient's orders or studies, we identify the lock holders (userID and full name) and tell the user that the merge cannot be performed until those users' locks are released.

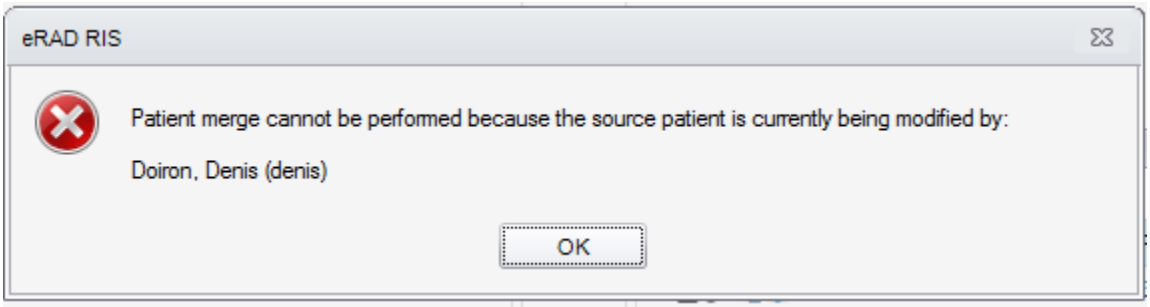

**Figure 5.47 – Message prompt on Patient Merge when Source patient is locked**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### Change Status / Cancel Study / Manual Status Change

Change Status, Cancel Study, and Manual Status Change have been updated to include a check for locks on the same study. We first attempt to acquire a traditional order level lock, if that succeeds we do a secondary check for any locks on the given study. If either of those fail we show a message similar to the following:

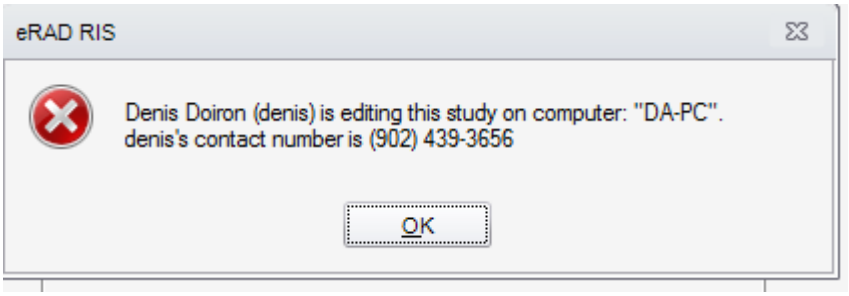

**Figure 5.48 – Message prompt from change status, cancel study, manual status change on locked study**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Administration - Multiple Person Ids

A grid has been added to the Account tab of the personnel editor. Users can add, edit, and delete alternate ids for the person as well as make them active/inactive. The idea is that a user can have multiple ids from a particular issuer, but only one of them *should* be active, but this is not enforced.

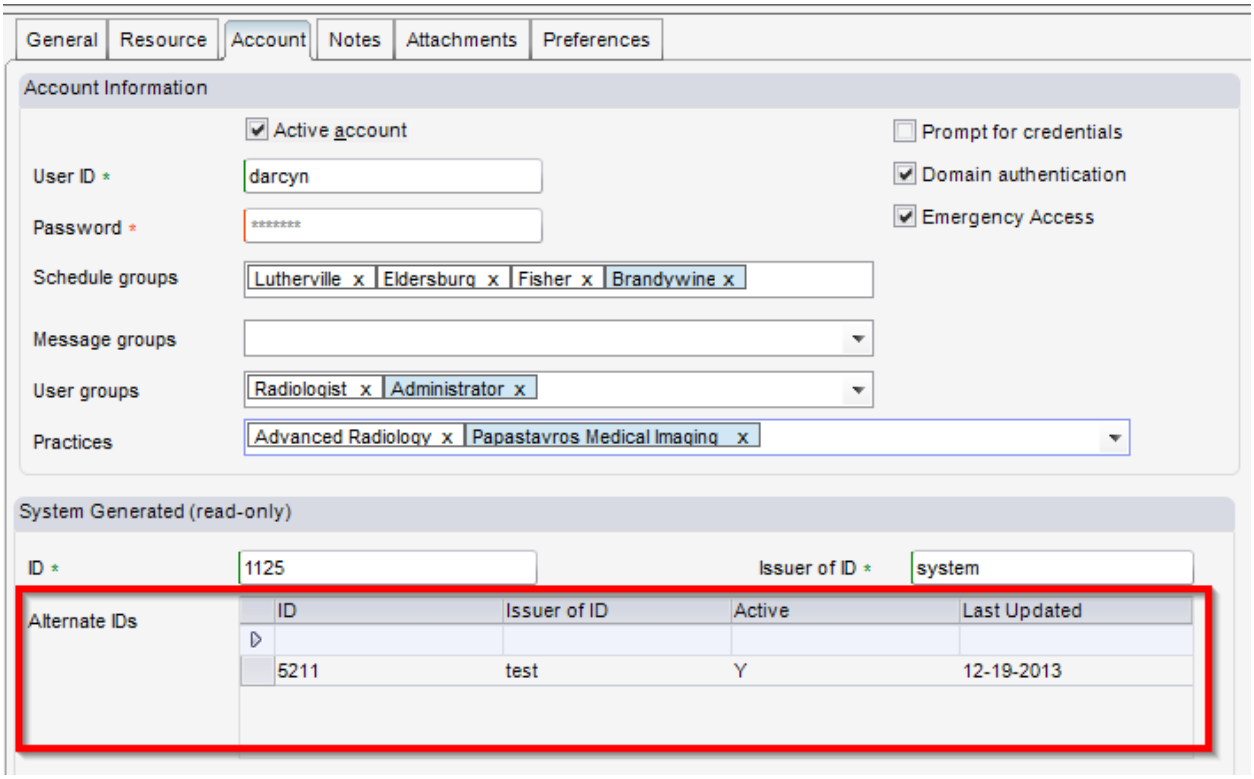

**Figure 5.49 – Alternate IDs can be added in Personnel Editor**

On inbound HL7 messages, the person will be resolved based on id/issuer of all primary and alternate ids and associated to the correct person.

On outbound messages, the wedge will expand the person_key and user_id nodes to include l_child_person nodes which contain the alternate ids. The mappings can then be made on a per-interface basis to select the correct alternate id to use based on the issuer. If multiple ids from that issuer exist, and they are both listed as active, then the mapping must pick one based on some other criteria ie. first one in the list or most recently updated.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Administration - Allow Editing of Billing Units

A new flag column has been added that will allow editing on the Billing Code / Procedure Code combination. In the Administration → Procedure Code lookup table → expand procedure code to view a new setting that allows the Billing Code / Procedure Code combination to be locked to users as far as ability to edit number of Units.

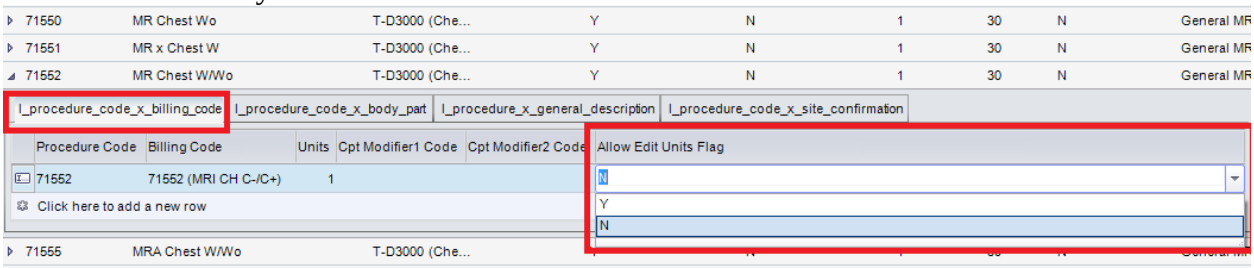

**Figure 5.50 – Allow Edit Units Flag**

By default editing is enabled to preserve pre-upgrade functionality. IF setting is set to "N" users will not be able to edit # of Units.

If set to N, in the billing code grid the user will not be able edit the number of units from the drop down for that particular procedure/cpt code.

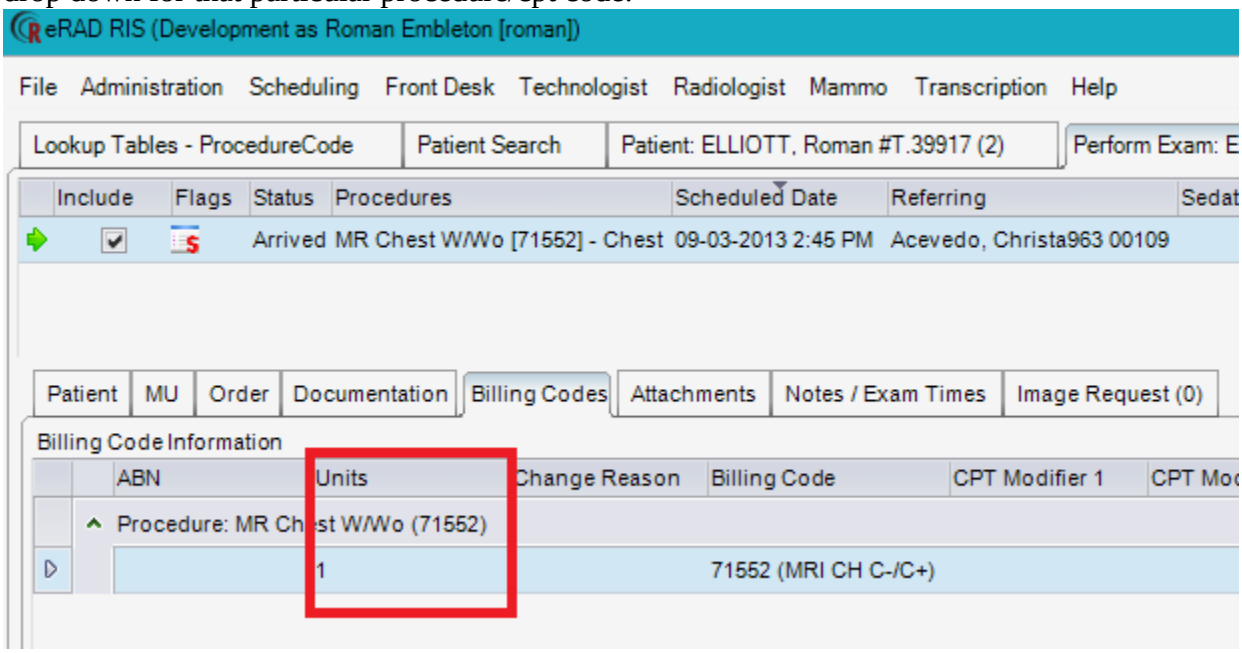

**Figure 5.51 – Units on billing code tab cannot be edited when set to N**

The user will still be able to add other billing codes that may (or may not) be edited.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

If the user attempts to add a billing code to the performed procedure and the value of "Allow Edit Units Flag" is set to N for that procedure, the Add Billing Code window will have the Units field disabled.

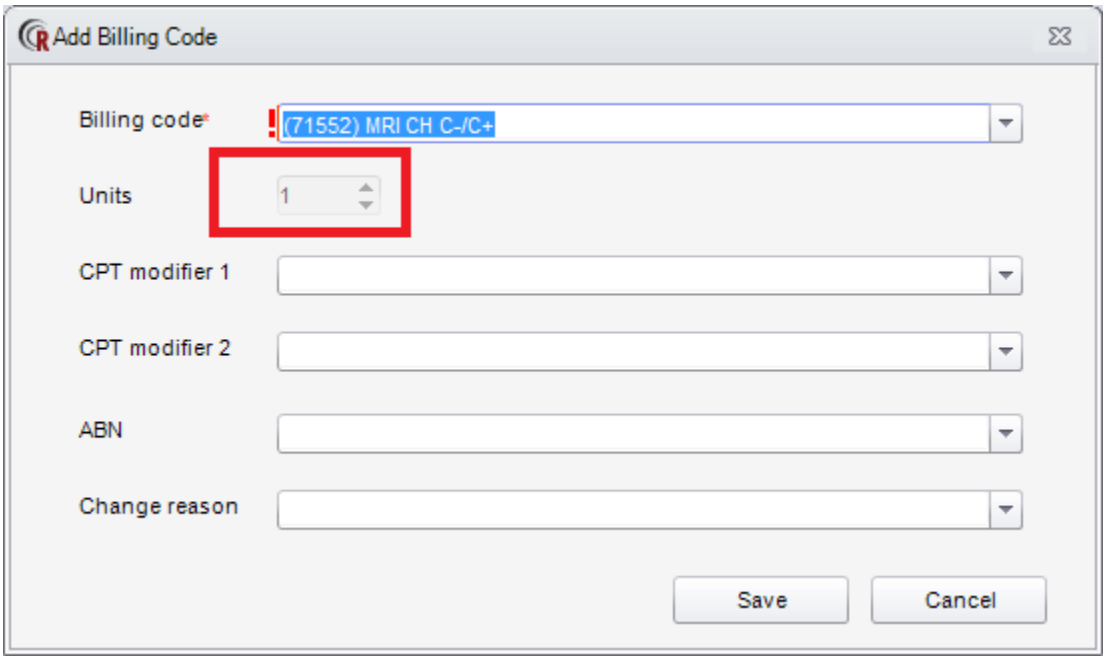

**Figure 5.51a – Add Billing Code window on billing code that the units cannot be edited**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Administration - Disable BI-RADS ® Per Site

In build 42 the ability to disable BI-RADS ® tracking can be turned off per site. The Organization Editor in Administration -> Configure has been updated to include a new checkbox to Disable BI-RADS Controls (verbiage may vary at time of release).

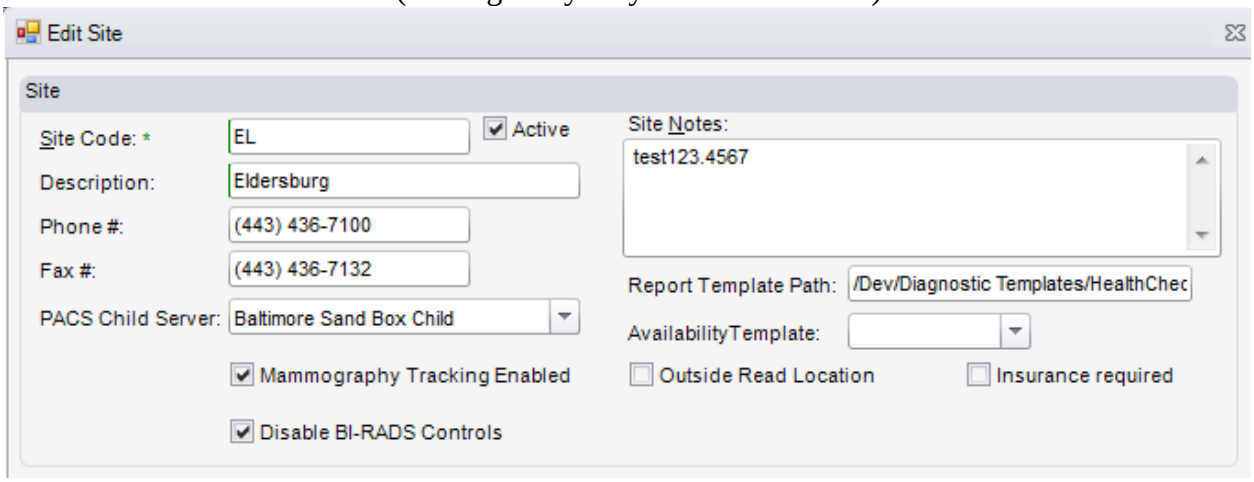

**Figure 5.52 – Ability to disable BI-RADS Controls per site.**

By default, "Disable BI-RADS Controls" will be unchecked when creating a new site. Mammography Tracking Enabled means that the site will generate follow-up orders, reminder letters, lay letters, etc. for any BI-RADS enabled mammo procedures.

Disable BI-RADS Controls means that the site will opt out of BI-RADS tracking altogether (in effect the setting for Mammography Tracking Enabled will be ignored if BI-RADS are disabled)

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Administration - Ability to Add MRN and Accession Prefix and Suffix

The ability to add and prefix and or suffix to the patients MRN and also to the Accession number has been added. This is controlled by two new system configuration settings.
For MRN they are:
"**MRNPrefix**" – Prefix that will be added to new MRN's
"**MRNSuffix**" – Suffix that will be appended to new MRN's
"**AccessionPrefix**" – Prefix that will be added to new accession numbers
"**AccessionSuffix**" – Suffix that will be added to new accession numbers

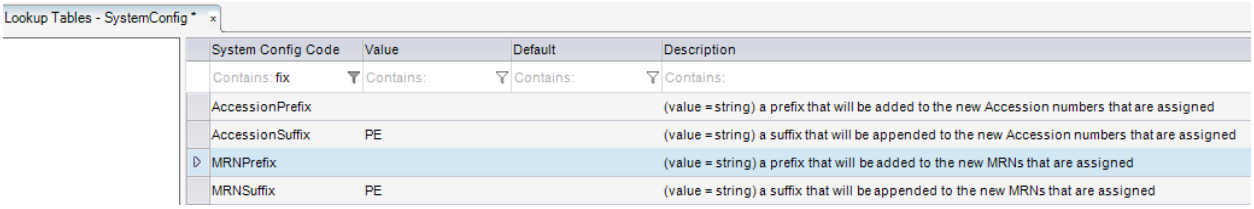

**Figure 5.53 – New systemconfig values**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Administration - Privacy Message on Locked eRAD RIS

A new system configuration setting "**PrivacyMessageText**" has been added to the system config lookup table. When this field has a string value, the string is displayed on the lock screen.

| System Config Code | Value | Default | Description |
|---|---|---|---|
| Contains: priva | Contains: | Contains: | Contains: |
| PrivacyReminderText | REMINDER: Do not snoop in patient records! | | (value = string) Defines the privacy string that will be displayed on the lock workstation screen. |

**Figure 5.54 – New system config setting PrivacyMessageText**

**Figure 5.55 – PrivacyMessageText value displayed on locked eRAD RIS**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

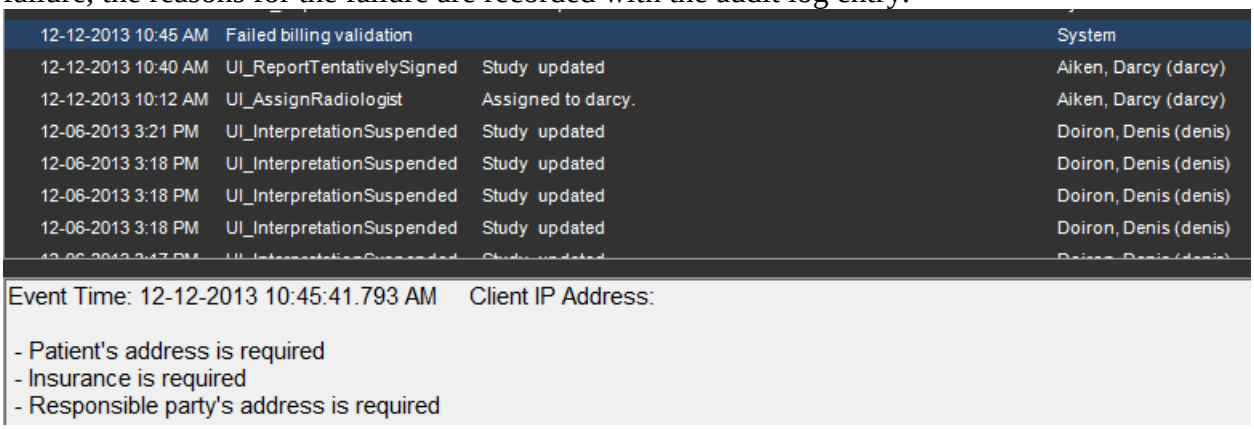
## Billing – Audit Log Capturing Billing Failure \ Reason

The audit table will now capture the success and failure of billing actions. If the billing action was successful the audit log will display "Posted to Billing"

| Date | Action | Description | User | Accession # | Order # | Status | Procedure |
|---|---|---|---|---|---|---|---|
| Equals: | Contains: | Contains: | Contains: | Contains: | Contains: | Contains: | Contains: |
| 12-12-2013 10:39 AM | UI_ReportSigned | Study updated | Aiken, Darcy (darcy) | 5131280 | 7405261 | Signed | Randy Test 02 |
| 12-12-2013 10:39 AM | UI_ReportSigned | Patient updated | Aiken, Darcy (darcy) | | | | |
| 12-12-2013 10:39 AM | Posted to billing | | Aiken, Darcy (darcy) | 5131280 | 7405261 | Exam Done | Randy Test 02 |

**Figure 5.56 – Successful billing action entry in audit log**

An unsuccessful attempt to bill will display "Failed billing validation". In the event of a billing failure, the reasons for the failure are recorded with the audit log entry.



| | | | |
|---|---|---|---|
| 12-12-2013 10:45 AM | Failed billing validation | | System |
| 12-12-2013 10:40 AM | UI_ReportTentativelySigned | Study updated | Aiken, Darcy (darcy) |

| 12-06-2013 3:18 PM | UI_InterpretationSuspended | Study updated | Doiron, Denis (denis) |

Event Time: 12-12-2013 10:45:41.793 AM Client IP Address:

- Patient's address is required
- Insurance is required
- Responsible party's address is required

**Figure 5.57 – Failed billing action reasons for failure**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## External – View Legacy Report PDF's as HTML

The web interfaces are unable to get an html version of the legacy reports, which were imported in the the RIS as PDFs. To solve this we are planning to integrate a PDF to html converter so that when we call the WebAPI interface we get the legacy PDF as html. The following is an example in the dev database of an accession number, which has a legacy PDF report.
http://localhost:9002/api/DiagnosticReport/1014129?format=HTML4.0

We decided to use a third party product to convert the legacy PDF documents to HTML so when you call the WebAPI url as described in the description of this issue, that the report will be returned as HTML.
The 3rd party API we are using is called AbcPDF.dll and must exist in the deployment directory for this to work.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

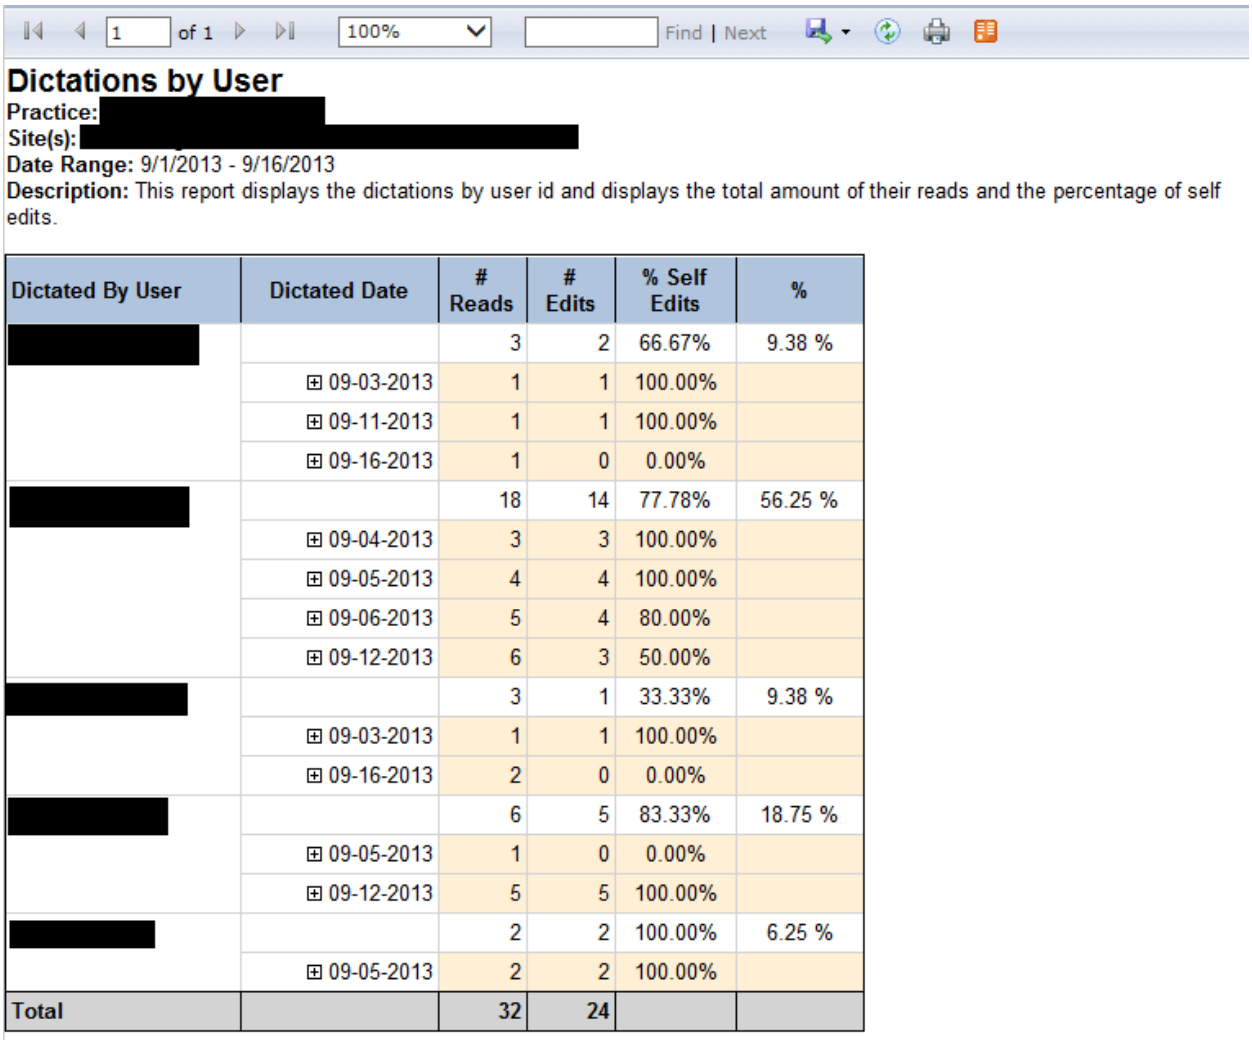
## Management Report – Dictations by User

Management report was created for displaying the dictation statistics for Radiologists broken down by

- number of reads
- number of edits
- % of their workload identified as a self-edit.
- % of the the total workload.



1 of 1 100% Find | Next

**Dictations by User**

**Practice:** [redacted]
**Site(s):** [redacted]
**Date Range:** 9/1/2013 - 9/16/2013
**Description:** This report displays the dictations by user id and displays the total amount of their reads and the percentage of self edits.

| Dictated By User | Dictated Date | # Reads | # Edits | % Self Edits | % |
|---|---|---|---|---|---|
| [redacted] | | 3 | 2 | 66.67% | 9.38 % |
| | ⊞ 09-03-2013 | 1 | 1 | 100.00% | |
| | ⊞ 09-11-2013 | 1 | 1 | 100.00% | |
| | ⊞ 09-16-2013 | 1 | 0 | 0.00% | |
| [redacted] | | 18 | 14 | 77.78% | 56.25 % |
| | ⊞ 09-04-2013 | 3 | 3 | 100.00% | |
| | ⊞ 09-05-2013 | 4 | 4 | 100.00% | |
| | ⊞ 09-06-2013 | 5 | 4 | 80.00% | |
| | ⊞ 09-12-2013 | 6 | 3 | 50.00% | |
| [redacted] | | 3 | 1 | 33.33% | 9.38 % |
| | ⊞ 09-03-2013 | 1 | 1 | 100.00% | |
| | ⊞ 09-16-2013 | 2 | 0 | 0.00% | |
| [redacted] | | 6 | 5 | 83.33% | 18.75 % |
| | ⊞ 09-05-2013 | 1 | 0 | 0.00% | |
| | ⊞ 09-12-2013 | 5 | 5 | 100.00% | |
| [redacted] | | 2 | 2 | 100.00% | 6.25 % |
| | ⊞ 09-05-2013 | 2 | 2 | 100.00% | |
| **Total** | | **32** | **24** | | |

**Figure 5.58 – Dictation by User management report**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

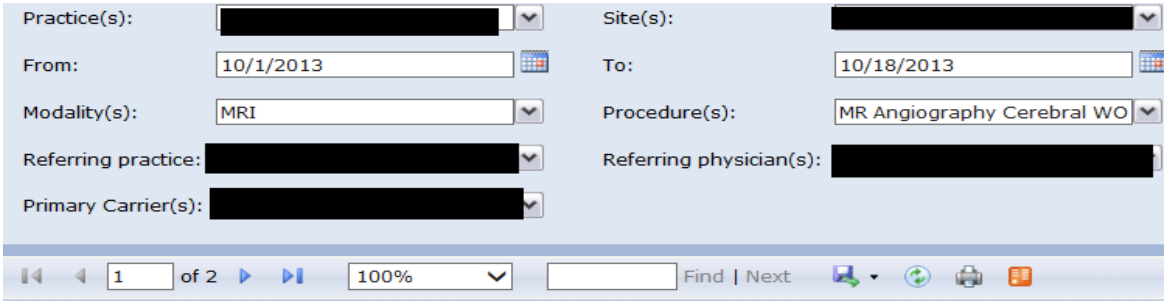
## Management Report – Direct Referrals

Management report was created to identify all orders and studies identified as a Direct Referral on the order tab. Parameters used are:

- Practice(s)
- Site(s)
- From and to dates
- Modality(s)
- Procedures
- Referring Practice(s)
- Referring Physician(s)
- Primary Carrier(s)



**Direct referrals**
**Practice:** [redacted]
**Site(s):** [redacted]
**Modality(s):** MRI
**Date Range:** 10/1/2013 - 10/18/2013
**Description:** This report looks at orders with the direct referral flag set. It excludes cancelled orders, and studies that are cancelled or discontinued.

| Acc# | CPT | CPT Description | PreCert Status |
|---|---|---|---|
| **Modesto Advanced Imaging Center** | | | |
| 10-01-2013 | | | |
| MR | | | |
| Physician [redacted] | | | |
| Referring practice: **None** | | | |
| Accession: **not scheduled** | | Status: **OrderSigned** | |
| Primary Insurance: [redacted] | | | |
| | 70553 | MRI BRAIN BRAIN STEM W/O &W/CONTRAST MATERIAL | Approved |
| | A9579 | INJECTION, GADOLINIUM-BASED MAGNETIC RESONANCE CONTRAST AGENT, NOT OTHERWISE SPECIFIED (NOS), PER ML | N |

**Figure 5.59 – Direct Referral management report**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Management Report – User List

Management report was created to see the user and which practices and schedule groups the user is associated with.

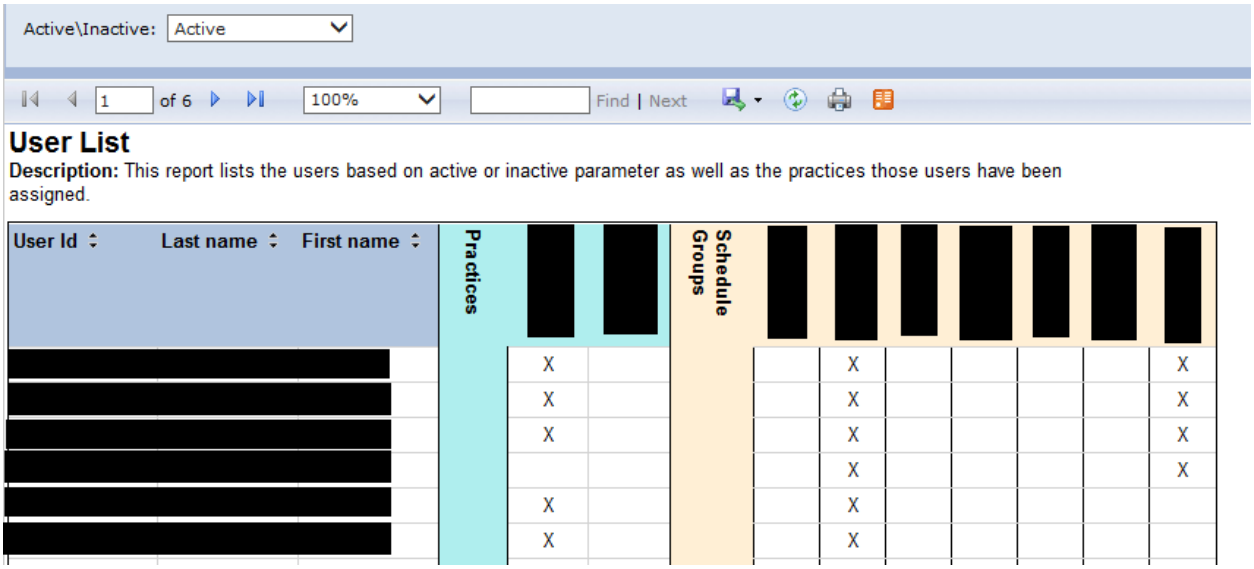

**Figure 5.60 – User List management report**

## Management Report – Double Count CPT's

We modified all sales management reports in the Marketing folder to double count cpt codes (74176, 74177, 74178).

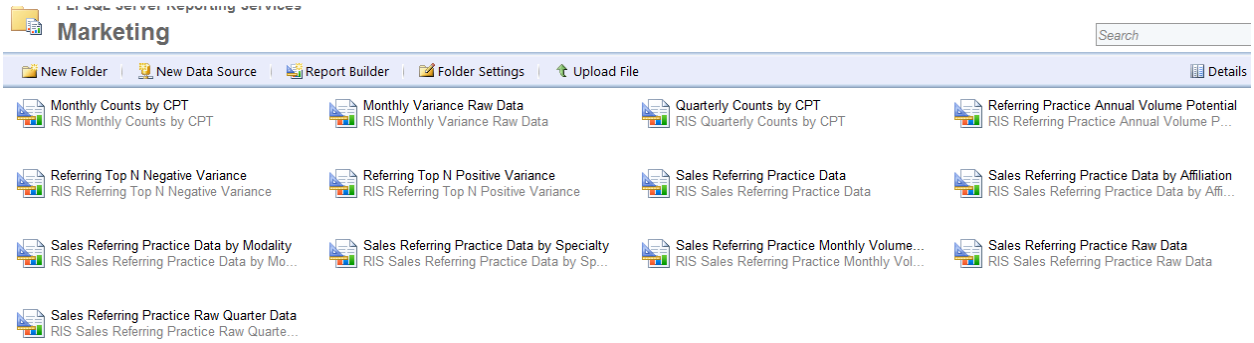

**Figure 5.61 – Double Count CPT's**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MU – Management Report for Patient List Creation – MU Phase 2

Report Parameters are:

1. From age
2. To age
3. From date (nullable)
4. To date (nullable)
5. Primary language *(multi-select populated from lookup table)*
6. Sex *(multi-select populated from lookup table)*
7. Race *(multi-select populated from lookup table)*
8. Ethnicity *(multi-select populated from lookup table)*
9. Problems (ICD) *(multi-valued, free text expected the ICD code itself)*
10. Medications *(multi-valued, free text using the like syntax where you just need to enter the start of a medication name. ie: pen would look return all results where the medication name starts with pen. Wild cards are added behind the scene)*
11. Medication allergies *(multi-select populated from lookup table)*
12. Lab Test *(multi-select populated from lookup table)*
13. Lab Results *(single valued free text field expecting >, <, = or combination of those comparison operators and a value. Ie: >100) (nullable)*
14. Preferred Communication
15. Max Results *(defaulting to 5000 rows, this helps control the number of results returned in a search, but can be manually increased or decreased if desired)*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

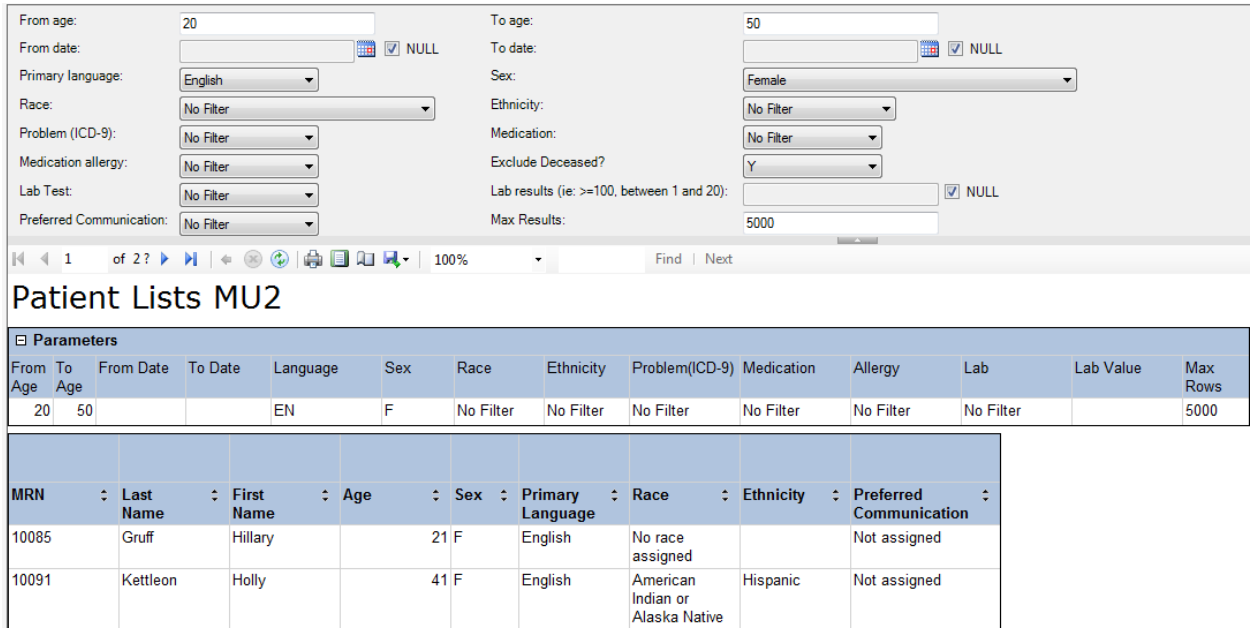

**Figure 5.62 – Patient Lists MU2 management report**

All parameters require a value to execute the report. The "No Filter" value in the parameters is just a placeholder that the stored procedure treats as a null. The No filter will be disregarded if you add values into the parameter, meaning there is no need to delete it out, or uncheck it.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MU – Auto Request Pathology and Follow Up with Lab Worklist

For MU requirement 170.314.b.5, we needed to create a lab test for Pathology when a report is signed for procedures that are configured to require CPOE_Pathology . We then need to track those Pathology requests in the Lab WL.

To start the Cpoe Pathology Flag column was added to the Procedure Code lookup table

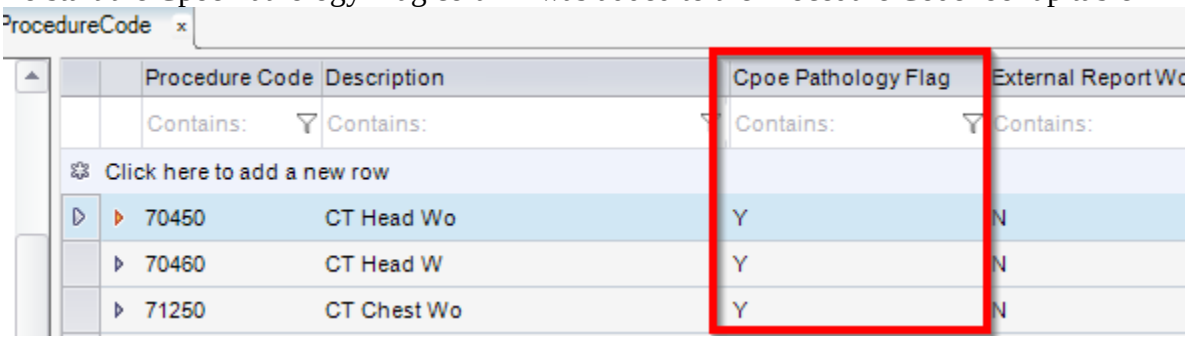

**Figure 5.63 – CPOE Pathology Flag added to the Procedure Code lookup table**

The Practice window from the Organization lookup table had the Track CPOE pathology results in Lab WL for <#> days

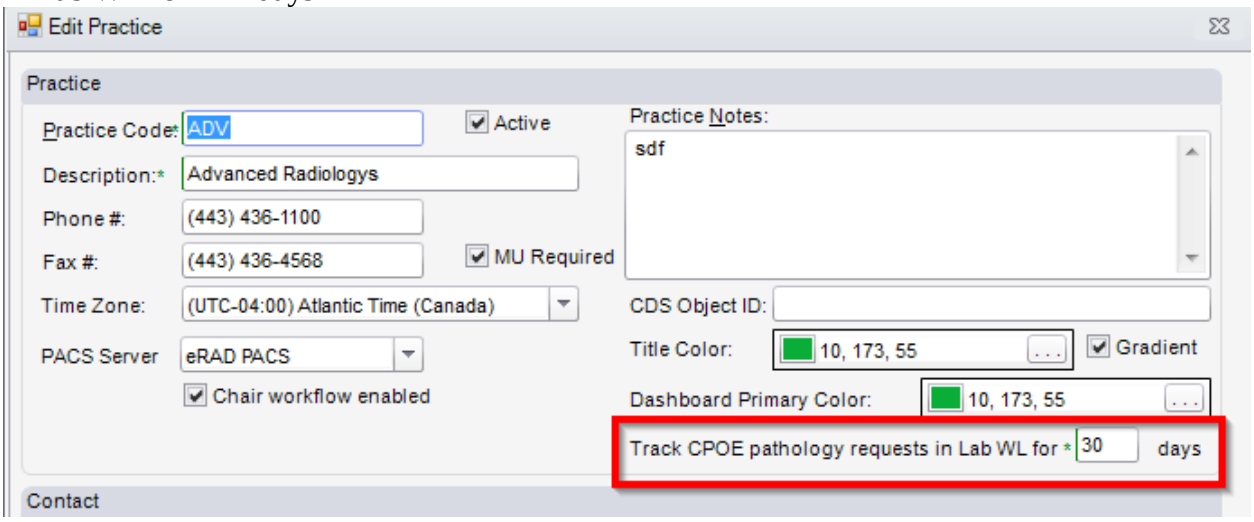

**Figure 5.64 – Practice displaying new field in days to be captured to Track CPOE pathology**

A new System Configuration setting "**CPOELabTestCode"** was added the system config lookup table with a default value of Pathology

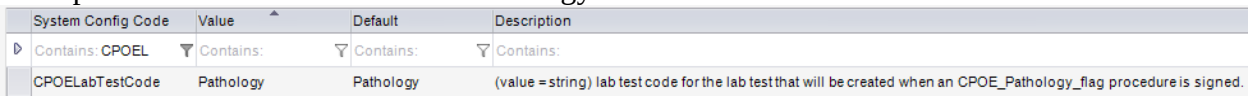

**Figure 5.65 – System configuration setting CPOELabTestCode**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

When report is signed, if its procedure has CPOE pathology flag = 'Y', and there are no active Lab Test Requests for CPOE pathology, then a lab test result row will be created. The lab test code will have a lab_requsted_by_user_id of the dictating rad and will have a requested date equal to the studies performed end date. The c_study.cpoe_request_expiry_date, will get assigned to today + l_practice.days_to_track_cpoe_requests.

The item will then appear in the Lab WL until:

1. User opens the study in View Edit and checks "Skip Lab WL"
2. User Opens the study in View Edit and records a value for the test
3. The current datetime is past cpoe_request_expiry_date
4. Or the lab test is set to the lab_order_status of “Discontinued” or “Active”, meaning we’ve made the call to the patient and have been notified that the pathology test has either been requested or is not going to be addressed.

**Note:** outside read studies will not show in the Lab WL, even if they are for a procedure that is configured with cpoe_pathology_flag='Y'.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MU - Race Field Allow for Multi Select

Meaningful Use requirement 170.314.a.3.
Previous to build 42 the Race field on the Patient tab would only allow for one value to be selected. Now a user can select multiple values and save with the patient record.
The list box is not a multi select tool (expand the list and select multiple at once) the user will need to select a value one at a time or use the type ahead options
The race type can only be added once for the patient.

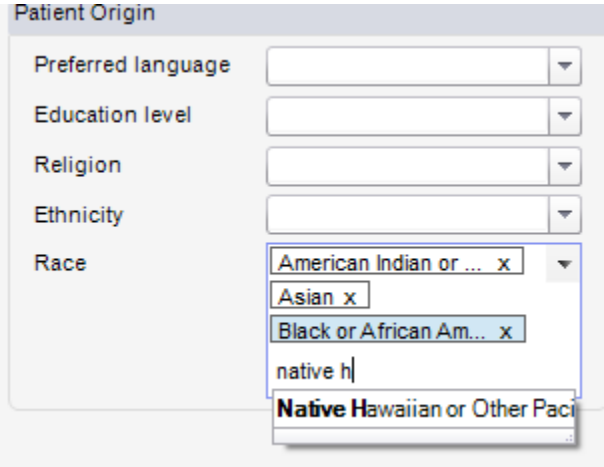

**Figure 5.66 – Race field is now multi select/type ahead field**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MU – Improvement to How We Record Height

Meaningful Use requirement 170.314.a.4
For this requirement we needed to store the patients height as a single numeric value instead of a character string such as 5ft 7in.

A new column (height_value) was added to the visit table, which will store the height in inches. The height was previously stored in the old column (height) in the visit table.

The pervious character field (height) will continue to be populated for backwards compatibility with existing reports.

Also, the upgrade was created to backfill the new field in the visit table (height_value).

## MU – Retain Patients Smoking Status and Height

For existing patients that have previously had the smoking status and height captured in the previous visit, when scheduling a new procedure, these 2 values will be carried forward to the new visit. This is not a meaningful use requirement, but rather a request to try and speed up the scheduling process when capturing MU data.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MU – Problem List for MU Phase 2

Meaningful Use requirement 170.314.a.5

**Record** - evaluates the capability to enter patient health problems into the EHR to create the patient problem list. The Tester enters the ONC-supplied patient problem test data. The Inspection Test Guide describes several methods by which the EHR can demonstrate conformance with the vocabulary requirement.

**Change –** evaluates the capability to change patient problem list data which have been previously entered into the EHR. The Tester displays the patient problem list data entered during the Record Patient Problems test
o The Tester changes the previously entered patient problems data using ONC-supplied patient problem list data.

**Access –** evaluates the capability to display the patient problem list data that have been previously entered into the EHR, including the capability to display the patient problem list as recorded during multiple ambulatory encounters with the same provider or during a single inpatient hospitalization.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MU – Medication List for MU Phase 2

Meaningful Use requirement 170.314.a.6

**Record** - evaluates the capability to enter patient active medication data into the EHR to create the patient active medication list

**Change –** evaluates the capability to change patient medication data that have been previously entered into the EHR. The Tester displays the patient active medication list data entered during the Record Patient Active Medications test . The Tester changes the previously entered active medication data using ONC-supplied medication data, for example, changing a medication dose or frequency and discontinuing a medication

**Access –** evaluates the capability to display the patient medication list data that have been previously entered into the EHR, including the capability to display the patient medication list as recorded during multiple ambulatory encounters with the same provider or during the duration of an entire inpatient hospitalization

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MU – Image Results for MU Phase 2

Meaningful Use requirement 170.314.a.12

This requirement is for eRAD RIS to prove that the images and report can be viewed in the RIS when in the appropriate status. Below is a list of the test cases to validate that fact.

- Create 2 patients IM-Patient-1 and IM-Patient-2 schedule an exam.
- Go to patient folder for IM-Patient-1
- Show in rRIS where imaging information will be for Patient #1(Right click on patient folder there is no option to view images).
- Update Record for IM-Patient-1 bring exam to (Exam Done status)
- Show in rRIS where imaging information will be for Patient #1(Right click on patient folder there is an option to View Images).
- Open IM-Patient-1 and dictate exam and bring to signed1 status.
- In patient folder right click on the patient. There is an option to view narrative interpretation (report>>preview/print report) and View Images.
- Go to patient folder for IM-Patient-2
- Show in rRIS where imaging information will be for Patient #2(no images)…Right click on patient folder there is no option to view images
- Update Record for IM-Patient-2 bring exam to (Exam Done status)
- In patient folder right click on the patient. There is no option to view narrative interpretation (report>>preview/print report) however, the user can View Images.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MU – Audit Reports – MU Phase 2

Meaningful Use requirement 170.314.d.3
Enable a user to create an audit report for a specific time period and to sort entries in the audit log according to each of the data specified in the standards at § 170.210(e).

**Create Audit Report –** evaluates the capability of the EHR technology to enable a user to generate an audit report for a specific time period

- The Vendor provides the Tester with audit log information containing ten or more entries that was generated by the EHR technology
- Using the Vendor-provided audit log information and reporting functions, the Tester generates an audit report for a time period that includes the time at which the entries in the audit log information were recorded and verifies that the audit report is successfully created

**Sort Audit Log Entries –** evaluates the capability of the EHR technology to enable a user to sort entries in the audit log or in an audit report

- The Vendor provides the Tester with audit log information containing ten or more entries that was generated by the EHR technology. This could be provided through access to the audit log itself or audit reporting functions.
    - The audit report used in the previous test procedure step can be used for this test procedure step as long as the audit report entries contain the following data elements:
        - Date and time of event
        - Patient identification
        - User identification
        - Type of action (additions, deletions, changes, queries, print, copy)
        - Identification of the patient data that is accessed
- The Vendor identifies the EHR function(s) that are available to sort the audit log information by the previously described data elements

The Tester uses the Vendor-provided audit log information, sorts the audit log entries by each of the data elements listed above, and verifies that the entries were correctly sorted

## MU – Goals and Condition

The Goals and Condition fields have been added to the Meaningful User Information window (hidden tab)

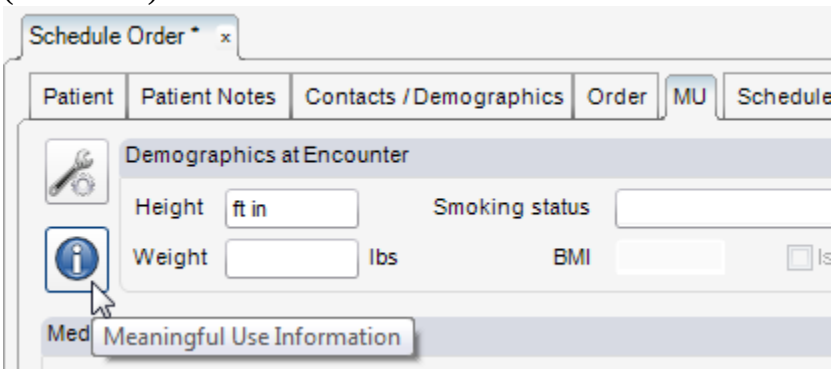

**Figure 5.67– Meaningful Use Information window access**

The Condition field is a type ahead/multi select field. The Goals option is a grid with 2 columns. The Goal column is list box and the Instructions column is a text field

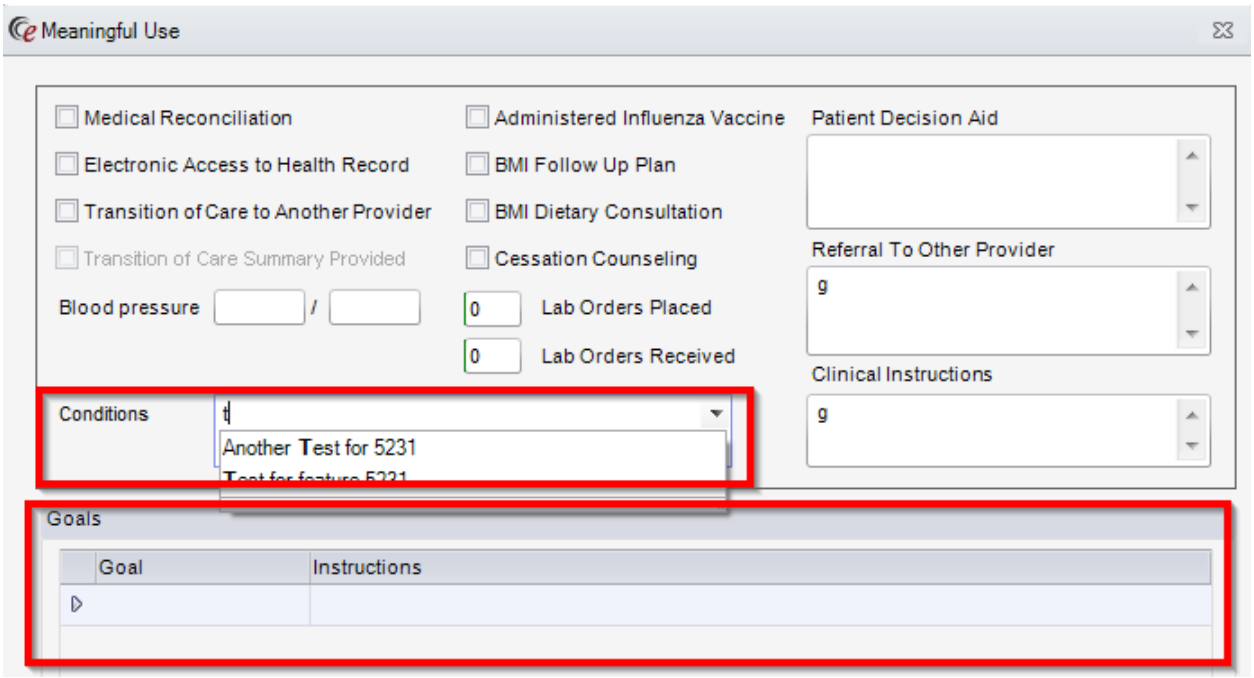

**Figure 5.68 – Displaying Conditions and Goals field in Meaningful Use Information window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The values for the Conditions field are from a new lookup table Administration>Configure>MU>Condition table. The Description is displayed in the eRAD RIS and the HL7 values are to be mapped to valid SNOMED CT codes used for structured data for generating CCDA.

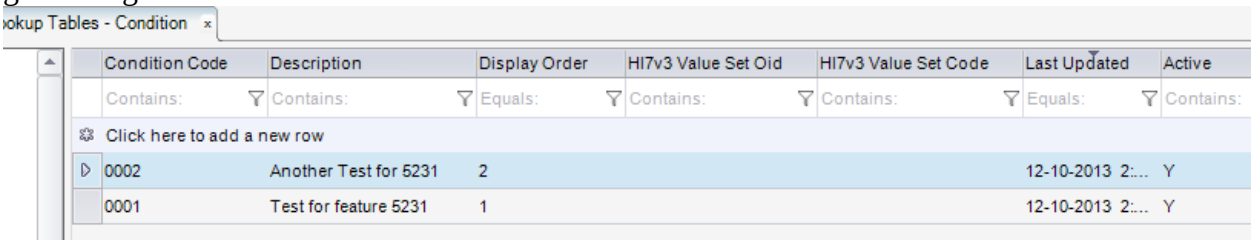

**Figure 5.69 – Condition lookup table.**

The values for Goals is from another new lookup table Administration>Configure>MU>Goals table. The Description is the value what will appear in the Goal field of the Meaningful Use Information window.

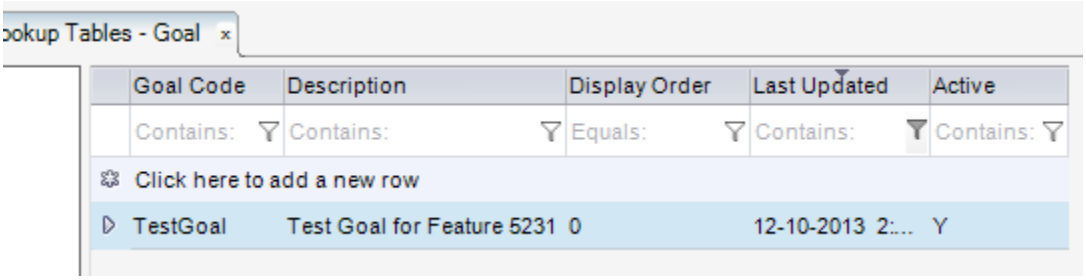

**Figure 5.70 – Goal lookup table**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MU – Patient Specific Education Resources

For patient education resources we will be using Medline Plus. The Medline Plus info can be accessed from the context menu on the 3 grids of Medication, Medical History and Lab Results on the MU tab and select View Medline Plus Info.

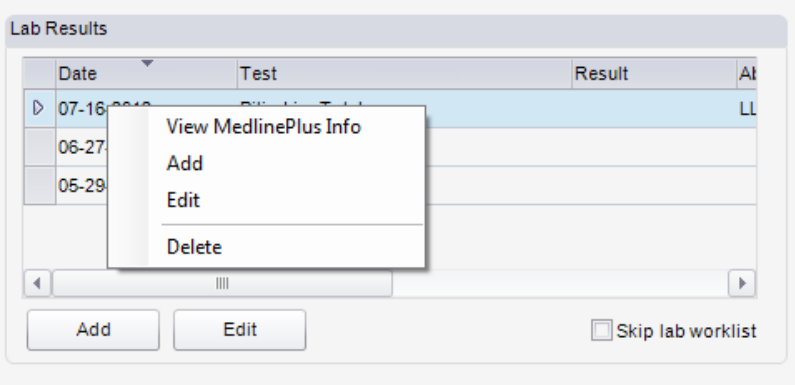

**Figure 5.71 – Accessing MedlinePlus Info**

Selecting the context menu option will open a modal browser window providing information on the topic selected in the grid you opened the context menu on.

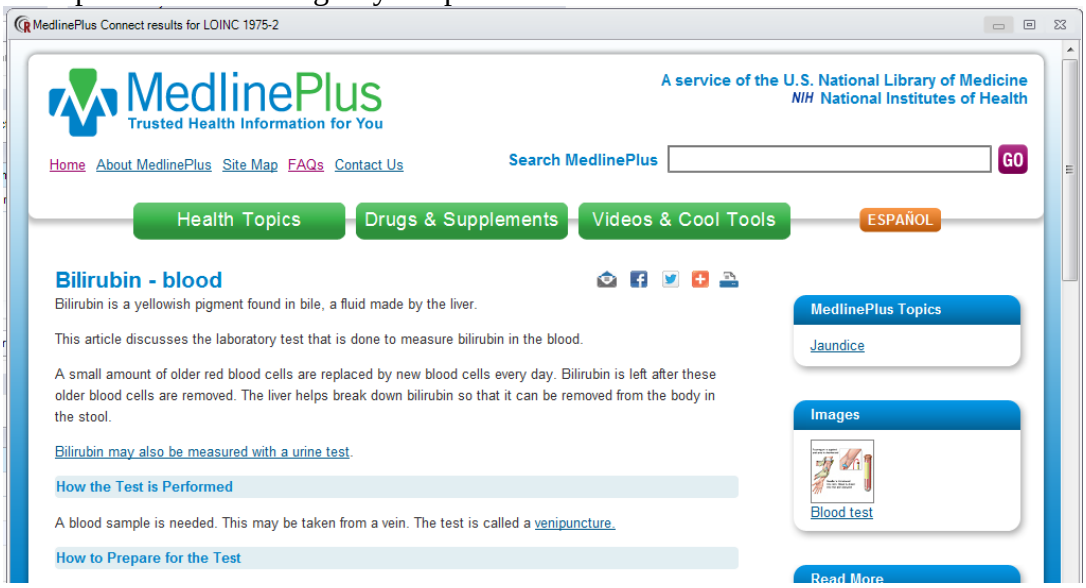

**Figure 5.72 – Web browser opens with search on MedlinePlus**

You can right click the window and print the information for the patient.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

If no results are returned from Medline a message like the following is presented to the user.

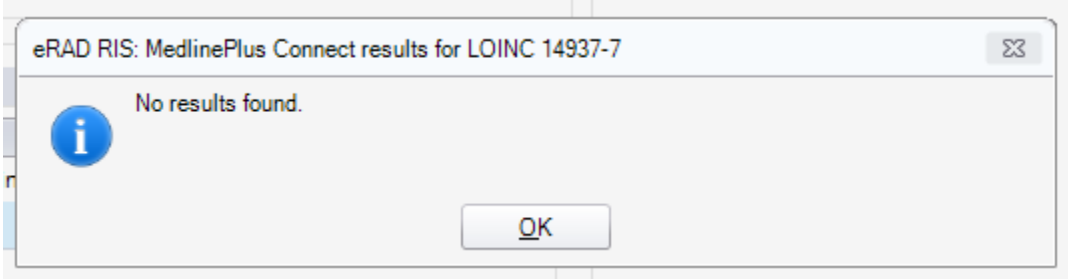

**Figure 5.73 – When search doesn't find topic**

When you close the browser control, you get prompted with this window to help capture the MU statistic.

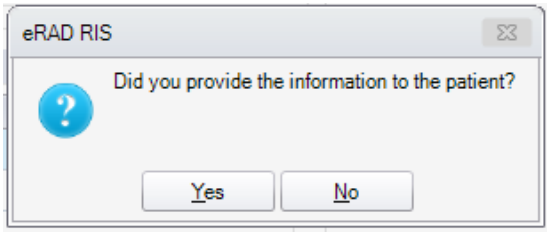

**Figure 5.74 – Prompt asking if information was provided to patient**

Clicking Yes is the same as checking the "Provided Education Resources" checkbox on the Documentation tab.

For this feature the following new system configuration settings have been added. The table below has the code and its default value.

| Code | Default value | Actions |
|---|---|---|
| MUMedlinePlusConnectDebug | N | Enables debug mode |
| MUMedlinePlusConnectEnabled | N | Enables if Medline Plus is on or off |
| MUMedlinePlusConnectBaseUrl | http://apps.nlm.nih.gov/medlineplus/services/mpconnect_service.cfm | URL path for browser |
| MUMedlinePlusConnectDrugSearch | mainSearchCriteria.v.cs=2.16.840.1.113883.6.88 | Search from Medications grid on MU tab |
| MUMedlinePlusConnectLabSearch | mainSearchCriteria.v.cs=2.16.840.1.113883.6.1 | Search from Lab Results grid on MU tab |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | |
|---|---|---|
| MUMedlinePlusConnectProblemSearch | mainSearchCriteria.v.cs=2.16.840.1.113883.6.103 | Search from Medical History grid on MU tab |

**Table 5.2 – MedlinePlus system config settings**

Additionally there is a new system configuration value called "**MUMedlinePlusConnectDebug**" which when set to Y puts it into debug mode and will prompt to save the XML returned from the web service when you perform a search.

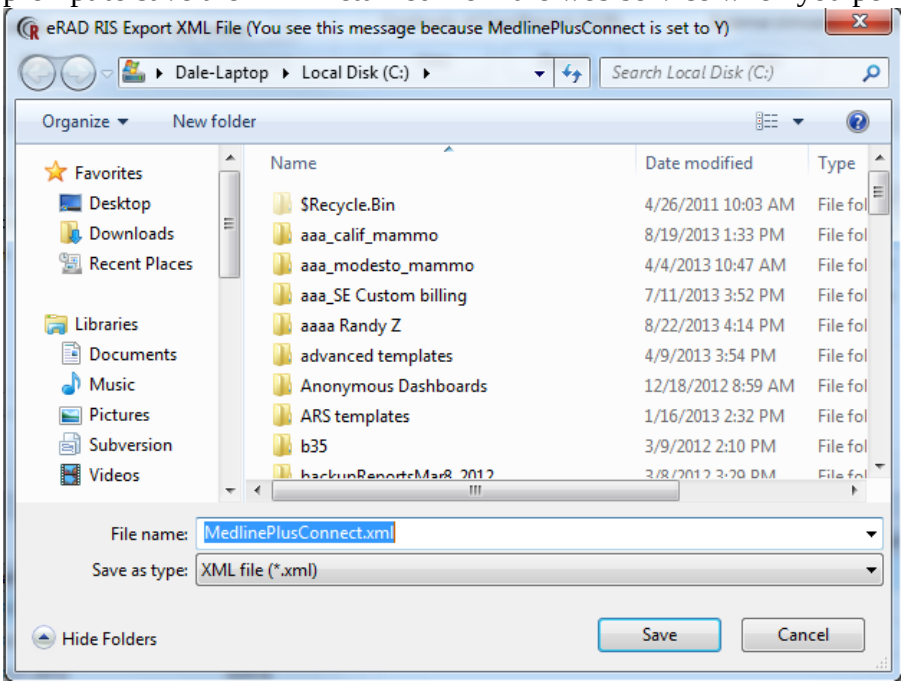

**Figure 5.75 – Generating Medline Plus xml**

The contents of which looks something like this…

## MU – New Alert Rules – MU Phase 2

Here are the alerts that we have created

1. **NM Stress Test** – you can configure as many of these as you like. Typically one for each procedure_code you want the high blood pressure check on. It also allows you to configure the 200/100 to any value you like. Alert Generator name is "**ProcedureXAndHighBP**"

2. **Empty Lab Test** –This just looks over all lab tests for the patient and if any are blank will prompt with the alert. Note: the administrator isn't allowed to provide a custom description since the description of the alert is generated dynamically and will include the text of the lab tests that are missing. Alert Generator name is "**LabOrderWithEmptyValue**"

3. **CT Contrast Allergy** & 4. **MR Contrast Allergy** – Fire when the indication specified exists and the patient has the specified contrast allergy code. This alert is highly configurable so that the alert implementation isn't dependent on specific allergy, indication or modality type codes, which may differ depending on the customer implementation. Alert Generator name is "**IndicationAndSevereContrastAllergy**"

The following screen shot shows the above three generators configured for the 4 rules NM Stress, Empty Lab Test, CT Contrast and MR Contrast Allergies.

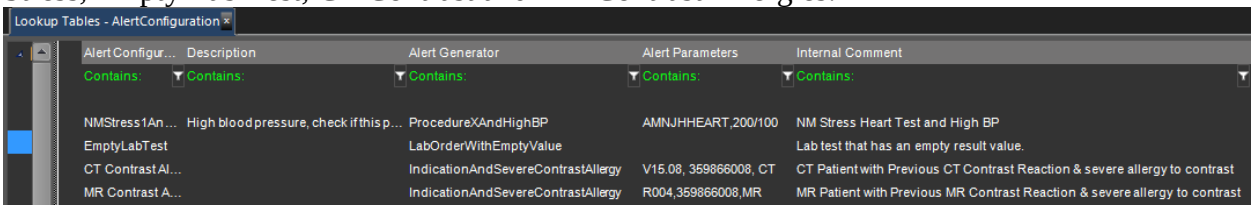

**Figure 5.77 – Alert Configuration table displaying new alerts**

In addition to the configuration column "Alert Parameters", the column "Internal Comments" has also been added, which can be used by the implementer to document the reasons they created or possibly disabled an alert.

The following lookup table validation error displays, if the alert parameters is blank for ProcedureXandHighBP:

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

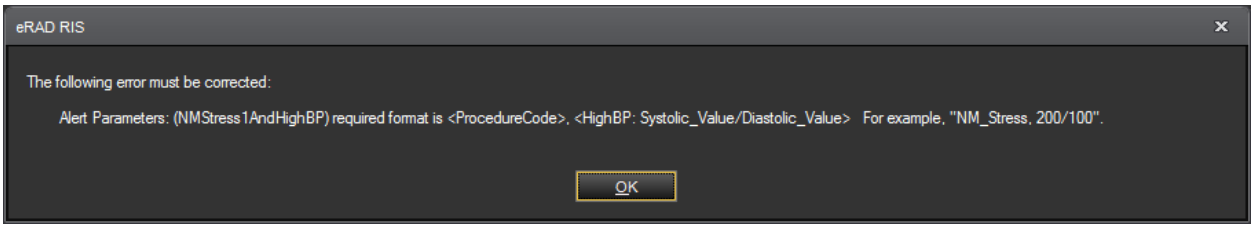

**Figure 5.78– Error message presented if ProcedureXandHighBP is blank**

The following lookup table validation error displays, if the alert parameters is blank for IndicationAndSevereContrastAlergy:

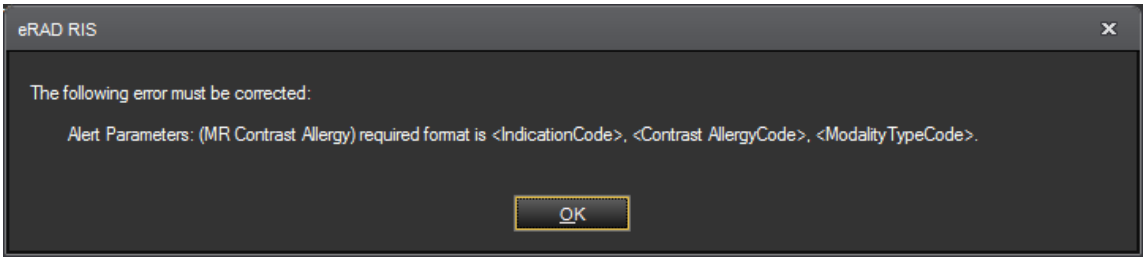

**Figure 5.79 – error message presented if alert IndicationAndSevereContrastAlergy is blank**

The following lookup table validation error displays, If a code is incorrect such as the Contrast AllergyCode:

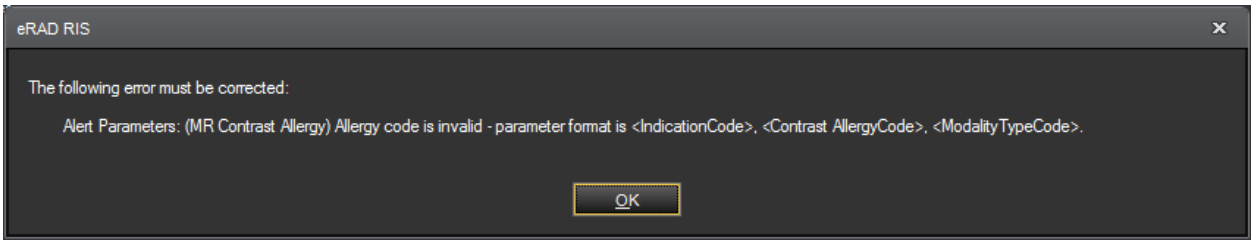

**Figure 5.80 – error message presented if Contrast Allergy code is incorrect**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MU – CCDA

CCDA information is a lengthy document that can be reviewed from the following URL

http://www.hl7.org/implement/standards/product_brief.cfm?product_id=7

The CDA® Release 2 document can be downloaded from this site as well.

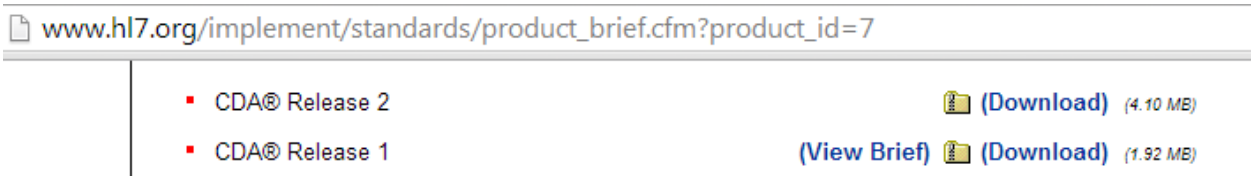

**Figure 5.81 – Download CDA Release 2**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MU – CCDA Generation

To access the CCDA the user can select the View button under the Clinical Document (C-CDA) section on the MU tab. Selecting this button opens the View Clinical Document (C-CDA) window.

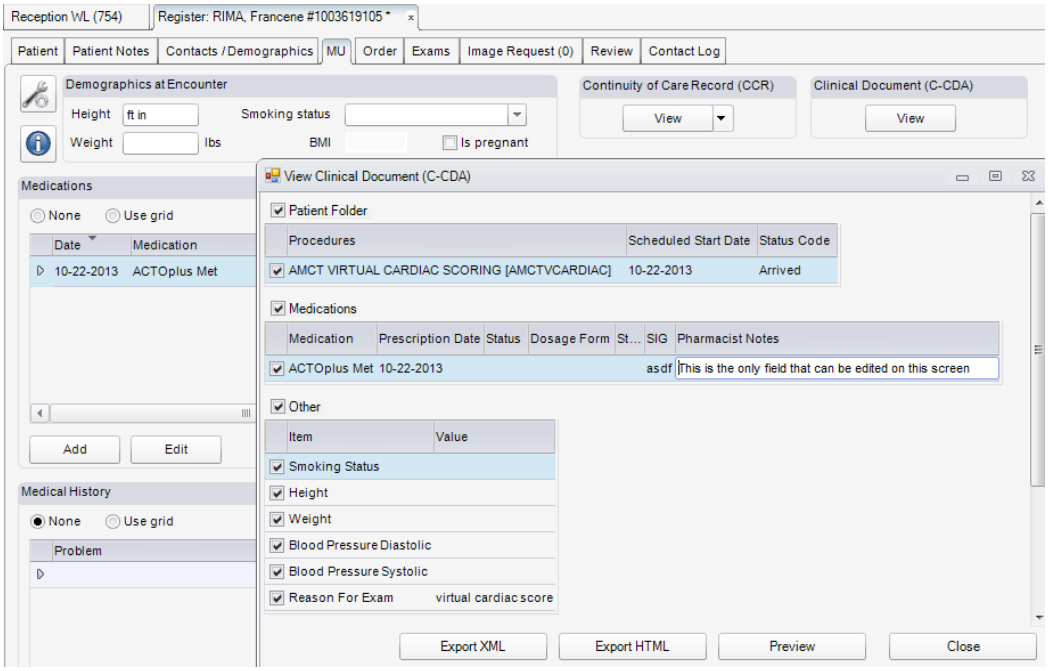

**Figure 5.82 – Accessing CCDA**

From the View Clinical Document (C-CDA) window the user can select the data elements that will be displayed in the C-CDA.

Options to Export XML, Export HTML, Preview the document and close.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MU – SNOMED CT

Meaningful Use Stage 2 Problems must be recorded in SNOMED CT codes. However, these codes do not necessarily have to be displayed in the user entry but can be stored or mapped elsewhere in the EHR product such as a dictionary map or a database. The specific vocabulary standard is **US Extension to SNOMED CT.** Today, we are recording Problems using ICD9 codes and eventually moving to ICD10 codes by October 1, 2014. We will need to find a mapping table for ICD9 and eventually ICD10 codes to SNOMED CT codes. In order to use SNOMED CT codes in the application we will need a **License Agreement** with IHTSDO (International Health Terminology Standards Development Organisation).

The International Release is updated each year in January and July. The download contains SNOMED CT files in both Release Format 1 (RF1) and the **new Release Format 2 (RF2) versions which** eRAD / Radnet will use. Updates to the US Edition will be available approximately one month after publication of the International Release of SNOMED CT. eRAD / Radnet will use the US Edition of SNOMED CT codes to certify for Meaningful Use Stage 2 (2014). The US Edition of SNOMED CT is the official source of SNOMED CT for use in US healthcare systems. **Note: The March 2013 Release of the US Extension will mark the last time that NLM will make the standalone US Extension files available for download. For future releases, users must download the US Edition to obtain US Extension content.**

For Meaningful Use (2014) we will download Snomed ct codes into two new lookups (l_snomed_concept and l_snomed_description). These get populated with the Snapshot release of the US edition of SNOMED CT codes. We will have to come up with a strategy of populating these in a future release as the codes are released every six months. We also need to download the ICD9 and SNOMED CT mapping file to a new lookup (l_snomed_icd9_map). We will also have to come up with a strategy of populating this mapping table with future releases.

**NOTE:** these are hidden lookups and cannot be accessed via the GUI

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## HL7 Payments

In eRAD RIS we are currently able to attach payments manually, no problem.

If there is HL7 integration with a patient kiosk, where a patient can check-in and also make a payment.

Payment is sent to eRAD RIS via HL7 (FT1 - financial segment).

Currently there is a logic gap in Wedge that restricts us from being able to accept payments via HL7.

Current logic --> Delete all current records from c_payment table for visit.
Add new rows provided with Study update.

The issue is the "Delete" --> This would cause an issue if a payment was already entered in RIS, then a new transaction comes through.
Existing payment in RIS would be deleted, new payment added.

Created a new column in Visit.c_payment called external_payment_id as a varchar(50).
If a message comes in that contains a c_payment row with an empty external_payment_id the wedge will throw an exception and reject the message.

The receipt_number field needs to be populated with a value in the format "site_code-?", so in the example below I used "SS-?". The RIS core services handles generating a receipt number value based on this. This site_code value does not need to be a value from the l_site table, but it might be a good idea.

For testing purposes, I created a Mirth channel which simply reads an xml file from disk and sends it to the wedge. The export of the Mirth channel is attached to this bug in Redmine.

The file contained a very empty StudyContainer with only a c_payment row with the needed test data and a c_study row with an existing accession number.

# 8. Resolved Defects

Bugs Suggested Features and Support Issues resolved in build 2.42. The extract is taken from Redmine bug tracking system and only displays defects resolved in 2.42.

| Bug # | Priority | Subject | Category | Found Version |
|---|---|---|---|---|
| 5785 | Immediate | Automacros containing fields lose their field attributes | Radiology Reporting | 1.41.1 |
| 5165 | Immediate | Losing default value for fields when saving template/macro | Radiology Reporting | 40.019 |
| 2972 | Immediate | multi sign - personnel search from administation will not populate the sign level saved with the user | Thick Client GUI | 1.39.001 |
| 5827 | Urgent | InsertTextAtPastCaretPositions is causing undesired behavior for rads when editing. | Radiology Reporting | 1.40.022 |
| 5758 | Urgent | Mammo follow-up orders no longer included in the list of outstanding orders when scheduling | Thick Client GUI | 1.41.006 |
| 5338 | Urgent | Reporting - Dictionary Add / Train changes | Radiology Reporting | 1.40.20 |
| 4972 | Urgent | RadNet - Sales Reports - Adjust all reports to CPT based | Mgt Reports | 1.4 |
| 4710 | Urgent | Reporting - inserting a template or macro with interactive timestamps will cause playback corruption and confusion | Radiology Reporting | 1.41 |
| 4641 | Urgent | RRR- support issue. Outside Read Bug | Thick Client GUI | 40.17 |
| 5604 | High | Error after login: nullable object must have a value (see alternative steps to reproduce) | Thick Client GUI | 1.41.002.1 |
| 5576 | High | Saving system layout saved signing layout as editing and vice versa. | Radiology Reporting | 1.40.21 |
| 5438 | High | Reporting - possible wrong document model loading if more than one practice | Radiology Reporting | 1.40.20 |
| 5348 | High | Reporting - ability to navigate cued fields without pausing | Radiology Reporting | 1.4 |
| 5298 | High | Next fields wraps document but previous field does not | Radiology Reporting | 1.40.020 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 5210 | High | Not able to arrive a patient (MSK) | Thick Client GUI | 41.002 |
| 5196 | High | Date filter not working correctly on - Last Followup Date column (RRR) | Thick Client GUI | 41.002 |
| 5171 | High | Cancelled by Reason Core management report fails to run (RRR) | DB | 41.002 |
| 5152 | High | Correction dialog can cause word duplication | Radiology Reporting | 1.40.018 |
| 5141 | High | Editing fields in template editor sometimes throws an exception | Radiology Reporting | 40.019 |
| 5137 | High | Management Reports - Modifications to reports in Operations Folder | Mgt Reports | 1.4 |
| 4987 | High | Tentatively signed studies that are suspended should be better protected | Radiology Reporting | 1.40.017 |
| 4984 | High | HL7 --> placer order number contains literal | | 41.001 |
| 4856 | High | Wedge fails to insert order and returns Patient and OrderPlacerNumber reference check failure The transaction ended in the trigger. The batch has been aborted. to Mirth | DB | 1.41 |
| 4823 | High | Reporting Screens fail to load if unable to find a good description for the current procedure code | Thick Client GUI | 1.4 |
| 4803 | High | Template/macro add ability to assign to Modality Type | Radiology Reporting | 1.4 |
| 4751 | High | Next workflow broken when using multiple tabs of different types | Radiology Reporting | 1.41 |
| 4681 | High | Able to sign a report when the field(s) in a template do not not have a value. | Thick Client GUI | 1.41 |
| 4671 | High | Unknown CC physician --> not displayed properly on Unknown reconsiliation WL (RRR) | Thick Client GUI | 40.17 |
| 4649 | High | Error adding a procedure plan for new appointment | Thick Client GUI | 1.41 |
| 4626 | High | Protect Section Headers - Two new cases to handle | Radiology Reporting | 1.41 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 4625 | High | Reporting - ability to open multiple dictations in batch mode | Radiology Reporting | 1.4 |
| 4597 | High | RRR - HTML Codes are breaking prep instructions | Thick Client GUI | 40.18127 |
| 4580 | High | Special Accommodations Flag does not get turned off if Special Accommodations is the only flag that is turned on and the user switches the Yes to a No | Web Services/DB | 1.4 |
| 4546 | High | Patient Merge event while another user has that patient open on a screen. | Thick Client GUI | 1.4 |
| 4545 | High | Referrings with No delivery preference in any address do not get their reports. | Document Distribution | 1.40.16 |
| 4479 | High | Reporting - using re-use causing confusion when getting a message box like "Addendum Requested" | Radiology Reporting | 1.41 |
| 4379 | High | All signed by date column sorts | Radiology Reporting | 1.41 |
| 4378 | High | Canceling Unscheduled orders not appearing on Patient Folder | Thick Client GUI | 1.41.18633 |
| 4375 | High | Patient Merge - Suggest button causes Index error when trying to add to the Patient Merge WL | Thick Client GUI | 1.41 |
| 4366 | High | Transcribe next workflow (beeps) | Radiology Reporting | 1.41 |
| 4281 | High | Template / macro user assignent screen slow to load. | Radiology Reporting | 1.4 |
| 4198 | High | patient folder doesn't load unless part of the initial layout on open of rad screen | Thick Client GUI | 1.41 |
| 4005 | High | Memory leak - Reporting - Resizing floating panes | Thick Client GUI | 1.40.013 |
| 3909 | High | Show / Hide titlebars from view menu throws exception | Thick Client GUI | 1.40.010 |
| 3845 | High | Lookup editor drop down won't must show existing values | Thick Client GUI | 40.006 |
| 3575 | High | RadNet - West Coast - Add Age as an Pre-Cert rule option | Thick Client GUI | 1.39 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 3570 | High | Reporting - Playback then record does not work with Interactive Dictation. | Thick Client GUI | 1.40.005 |
| 3528 | High | Magview reports come in via HL7 containing  | HL7 | 1.4 |
| 3036 | High | Reporting - Pending Signature worklist not obtaining lock for patients with multiple studies from same order | Thick Client GUI | 1.39.001 |
| 2941 | High | Request Addendum | Thick Client GUI | 1.37 |
| 2532 | High | access to changing the access strings needs to read only. | Thick Client GUI | 1.39 |
| 5788 | Normal | xkeys - insert template is not working | | 1.41 |
| 5779 | Normal | c_selectreporttable throwing error on report server when there is no table for the dx report | Web Services/DB | 1.41 |
| 5729 | Normal | Exam Search with Scheduled Date Range includes one extra day | Thick Client GUI | 1.41.006 |
| 5641 | Normal | Parameter is not valid error while loading thumbnail images in document viewer | Thick Client GUI | 1.41.005 |
| 5631 | Normal | Special Accommodations flag does not display properly | Thick Client GUI | 1.4 |
| 5623 | Normal | null reference error when opening administration / management reports | Thick Client GUI | 1.41.005 |
| 5612 | Normal | null reference error from CDImportManager | Thick Client GUI | 1.41.005 |
| 5600 | Normal | ICM Dashboard - outside read site code issue | Web Services/DB | 1.4 |
| 5599 | Normal | wrong data in c_study._site_code for outside read | Web Services/DB | 1.41 |
| 5583 | Normal | Spell check on the fly no longer turned on. Squigly lines are not shown under misspelled words | Radiology Reporting | 1.40.21 |
| 5577 | Normal | Report Fields do not update when you load a new layout | Radiology Reporting | 1.41 |
| 5561 | Normal | foreign key error when adding follow-up / contact log entries | Thick Client GUI | 1.41.005 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 5525 | Normal | Scanning - Performs scan but returns no pages. | | 1.41 |
| 5516 | Normal | Error when reprinting Receipts | Thick Client GUI | 1.41.002.1 |
| 5507 | Normal | Patient Folder - Null Scheduled Dates should show at top as most recent. | | 1.41 |
| 5487 | Normal | Procedure code assignment screen in template editor keeps button disabled | Radiology Reporting | 1.41.002 |
| 5478 | Normal | MERGE - Birad picker either shows on non Birads studies or doesn't show on birad studies. | Radiology Reporting | 41.002 |
| 5460 | Normal | When deleting, activating or deactivating items in the template/macro editor, all rows are updated | Radiology Reporting | 1.41 |
| 5443 | Normal | Reporting - rad edit text default color is yellow - should be "#810000" | Radiology Reporting | 1.40.20 |
| 5408 | Normal | Object Reference Error entering an OutsideRead 41.004 | Thick Client GUI | 41.004 |
| 5394 | Normal | missing index on c_summary_mu_history | DB | 1.41 |
| 5379 | Normal | right click Print Report should record an audit log entry | Thick Client GUI | 1.40.003 |
| 5377 | Normal | Stored procedure for Radar confirmations in core install is out of date in relation to SE | Web Services/DB | 1.4 |
| 5351 | Normal | Reporting - Laterality check causing duplicate words | Radiology Reporting | 1.40.020 |
| 5346 | Normal | Reporting - report history requires a lock and offers a read only mode that will not allow you to view anything | | 1.40.020 |
| 5345 | Normal | Playback with bouncing ball, preventing word selection with double click. | Radiology Reporting | 40.016 |
| 5332 | Normal | Reporting - no wait navigate fails when dictating and then clicking next field > 1 time without pausing | Radiology Reporting | 1.40.019 |
| 5327 | Normal | Problem with AME Spellcheck CP-14969 | | 1.40.020 |
| 5308 | Normal | Reporting - dictating negative 5 percent will render the word percent not the symbol | Radiology Reporting | 1.40.20 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 5273 | Normal | CD Import: import fails, if images don't have an accession number | | 1.41 |
| 5272 | Normal | Reporting - Automatic spell check "on the fly" marks words as misspelled that are at the beginning of a field | Radiology Reporting | 1.40.020 |
| 5271 | Normal | Field navigation popup not showing for FFF | Radiology Reporting | 40.02 |
| 5244 | Normal | Copy and pasting words into a report should add leading and trailing space as in MS Word | Radiology Reporting | 1.4 |
| 5242 | Normal | Input device invokable events need proper display text | Radiology Reporting | 9 |
| 5221 | Normal | Reporting - User preference for Redo needs to be selected twice to work | Radiology Reporting | 1.40.020 |
| 5219 | Normal | Reporting - Function key action DeleteWordLeftOfCursor will delete fields and section titles | Radiology Reporting | 1.40.020 |
| 5217 | Normal | Solution name is wrong in installer - and possibly icon for shortcuts. | | 1.38 |
| 5211 | Normal | Prompt when creating templates if the word colon is in a cue | | 1.40.019 |
| 5203 | Normal | Unable to dictate a new line (shift+enter). Always renders as a paragraph | Radiology Reporting | 1.40.019 |
| 5202 | Normal | Next/Previous section unusable due to inconsistant results | | 1.40.019 |
| 5201 | Normal | Rendering of spine levels have changed in 7.88 | | 1.40.019 |
| 5200 | Normal | First word in field persisting and will not overwrite | Radiology Reporting | 1.41 |
| 5179 | Normal | DEA blank vs Null | Thick Client GUI | 1.41 |
| 5178 | Normal | Template - cannot remove a value in either the Grammar or Default value fields | Thick Client GUI | 41.003 |
| 5170 | Normal | Reporting - template/macro editor cue text box too small | Radiology Reporting | 1.41 |
| 5169 | Normal | Aggresive field cue navigation fails after editing a cue on a template. | Radiology Reporting | 1.40.019 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 5160 | Normal | Prompt when creating templates if the word colon is in a cue | | 1.40.019 |
| 5145 | Normal | Next field voice command, showing field popup for one field too far. | Radiology Reporting | 40.18 |
| 5136 | Normal | Management Report updates - removals | Mgt Reports | 1.4 |
| 4979 | Normal | Advanced needs created date to appear on the dx template next to each addendum | Web Services/DB | 1.4 |
| 4977 | Normal | forms will not print for exams scheduled in closed rooms | Thick Client GUI | 1.4 |
| 4976 | Normal | Appliction icon is rris icon instead of eRAD icon - and is grainy / blocky in task bar | | 1.4 |
| 4974 | Normal | RadNet - Sales reports - add patient zip code report | Mgt Reports | 1.4 |
| 4940 | Normal | Multi-type ahead control not sufficient for replacement of Race/Ethnic combo box. | | 1.41 |
| 4939 | Normal | Type ahead for ICD codes on Medical History Grid does not handle decimal | Thick Client GUI | 1.41 |
| 4934 | Normal | Assign to Control can populates user list based on wrong practice | Radiology Reporting | 1.41 |
| 4875 | Normal | support row level caching for lookup tables | Web Services/DB | 1.4 |
| 4862 | Normal | null reference error in PatientGeneral constructor line 126 | Thick Client GUI | 1.41 |
| 4860 | Normal | Ris hangs... For a long time in template editor. | Radiology Reporting | 1.41 |
| 4850 | Normal | TypeError: The prefix "mm" for attribute "mm:major" associated with an element type "ClinicalDocument" is not bound | HL7 | 1.41 |
| 4839 | Normal | RRR - IVT - Managed Policies - billing code info goes blank | | 1.4 |
| 4828 | Normal | Report fields control throws exception when in minimized mode | Radiology Reporting | 1.41 |
| 4818 | Normal | Reporting - reuse only - macros are not getting reset and old command are staying around on next workflow | Radiology Reporting | 1.41 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 4817 | Normal | First chance exception when getting field description in report template editor. | Radiology Reporting | 1.4 |
| 4813 | Normal | First chance exception on SpeechMike Firrmware check | Radiology Reporting | 1.41 |
| 4812 | Normal | First chance exception on PacsCacheServer | Thick Client GUI | 1.41 |
| 4811 | Normal | First chance exception when loading reporting autosave screen. | Radiology Reporting | 1.41 |
| 4806 | Normal | Reporting - spell check on the fly user preference not working | Radiology Reporting | 1.41 |
| 4786 | Normal | Management Report - User Group Permissions is missing access string name | Mgt Reports | 1.41 |
| 4784 | Normal | Patient merge - recent history list - pulls up the deleted patient | Thick Client GUI | 1.4 |
| 4780 | Normal | Known Limitation - Side by side registration broken from 40.016 - 40.017 | Thick Client GUI | 40.017 |
| 4778 | Normal | duplicate "void" payment for the same payment | Thick Client GUI | 1.4 |
| 4776 | Normal | PACS Server override user preference requires log-out, then log-in to take effect | PACS Integration | 1.41.001 |
| 4775 | Normal | PACS Viewer 7.2.34 returns Success="1" with a view session id but empty openedaccessionnbs attribute. When RIS closes this view session PACS is unresponsive. | PACS Integration | 1.41.001 |
| 4758 | Normal | Invalid insurance policy saved to DB | Thick Client GUI | 40.016 |
| 4752 | Normal | Reporting - speech mics 3500 and 3600 showing incorrectly in Help>About | Radiology Reporting | 1.41 |
| 4748 | Normal | scan document archive "write check" fails when 2 or more processes run on the same server | Web Services/DB | 1.4 |
| 4746 | Normal | Reporting - performance - require two raddocks to support signing and dictating | Radiology Reporting | 1.41 |
| 4741 | Normal | Scan document archiving fails when the scan document page is null | Web Services/DB | 1.4 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 4739 | Normal | Reporting - reuse enabled and open a screen for signing, skip next will not populate the tab text | Radiology Reporting | 1.41 |
| 4725 | Normal | IVT Worklist - new field "Last Contact entry" | Thick Client GUI | 1.41 |
| 4723 | Normal | Dark mode watermark (eRad RIS logo) too bright | | 1.41 |
| 4720 | Normal | c_GetNameFromUserID still referencing c_format_name using format 1 | Web Services/DB | 1.4 |
| 4716 | Normal | Reporting - reuse when skipping reports and there are change we don't get a prompt to save changes | Radiology Reporting | 1.41 |
| 4714 | Normal | RRR - unknown reconsiliation - right click not available on HoldCodeCompleted | Thick Client GUI | 40.17 |
| 4683 | Normal | MU Ethnic HL7 codes | Web Services/DB | 1.41 |
| 4682 | Normal | MU - c_patient_medication is missing FK reference to l_medication.medicaiton_code | Thick Client GUI | 40.17 |
| 4676 | Normal | Reporting - reuse selected report tool window keeping previous data | Radiology Reporting | 1.41 |
| 4673 | Normal | Management Report - Appointment Schedule | Mgt Reports | 1.4 |
| 4665 | Normal | Numbered lists that aren't formatted as true ordered lists are wrapping up to the seciton line | Mgt Reports | 1.41 |
| 4662 | Normal | Reporting - SetAccountRules not called when opening an exam for the default template | Radiology Reporting | 1.41 |
| 4660 | Normal | Report fields control showing as a blank canvas | Radiology Reporting | 1.41 |
| 4654 | Normal | Dictating previous field moves two fields back instead of one. | Radiology Reporting | 1.41 |
| 4639 | Normal | Interactive fast forward light up play and fast forward | Radiology Reporting | 1.41 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 4638 | Normal | Audio control allow rewinding and fastforwarding to show at the same time as active. | Radiology Reporting | 1.41 |
| 4637 | Normal | RCW error closing reporting window | Radiology Reporting | 1.41 |
| 4636 | Normal | Recording rewinding in interactive mode falls into a playback/rewind loop. | Radiology Reporting | 1.41 |
| 4635 | Normal | Recording interactive and rewinding | Radiology Reporting | 1.41 |
| 4634 | Normal | Audio starts playing when recording | Radiology Reporting | 1.41 |
| 4633 | Normal | Switching from record to play in batch mode | Radiology Reporting | 1.41 |
| 4632 | Normal | Interactive record + playback at same time | Radiology Reporting | 1.41 |
| 4630 | Normal | Reporting - Edit Templates and Macros from the menu option is showing templates not soley owned by the radiologist | Radiology Reporting | 1.4 |
| 4628 | Normal | MU Height and Smoking Status should pre-populate for walk-in | Thick Client GUI | 1.41 |
| 4627 | Normal | RectangleDrawer timer throws exception | Radiology Reporting | 1.4 |
| 4624 | Normal | Reporting - Automacros do not use scanner in scoring which available macro should load | | 1.4 |
| 4621 | Normal | QA workflow, set to problem without rejecting | Radiology Reporting | 1.41 |
| 4607 | Normal | RadNet - Dark Theme - Within template/macro editor, forecolor is the same as backcolor | Thick Client GUI | 1.41 |
| 4588 | Normal | CD Import - Fails to import CDs from some hospitals that have "Screen Save" type images | | 1.4 |
| 4581 | Normal | Ampersand in template / macro field name can corrupt report | Radiology Reporting | 1.4 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 4577 | Normal | View Edit - open view edit window and save with no changes made logs entry to audit history | Thick Client GUI | 1.41 |
| 4567 | Normal | Reporting - notifications need to be placed above action buttons. | | 1.41 |
| 4566 | Normal | Reporting Reuse - Next workflow loads cases that are pending saving. | Thick Client GUI | 1.41 |
| 4562 | Normal | Template editor, inserting a field into a section header throws an error. | Radiology Reporting | 1.4 |
| 4560 | Normal | Some message boxes don't close when hitting X | Thick Client GUI | 1.41 |
| 4557 | Normal | Read only mode hides recording button, but can still record using microphone | Radiology Reporting | 1.41 |
| 4556 | Normal | Read only mode not reflecting on minimized dictation controls | Radiology Reporting | 1.41 |
| 4551 | Normal | Modified GoggleSearchAction to support Multiple passed in params | Thick Client GUI | 1.41 |
| 4549 | Normal | person search results does not correctly show specialties | Thick Client GUI | 1.4 |
| 4544 | Normal | Send-to button blanks out the reporting screen | Radiology Reporting | 1.41 |
| 4543 | Normal | RXNorm is not captured from NewCrop | Thick Client GUI | 1.41 |
| 4542 | Normal | Worklist refresh exception | | 1.41 |
| 4541 | Normal | autosave - button positions should be switched | | 1.41 |
| 4540 | Normal | Autosave - close should prompt to delete | | 1.41 |
| 4539 | Normal | Autosave - double click row does nothing | | 1.41 |
| 4536 | Normal | Reporting - Reuse enabled status area messages not populating for action buttons | Radiology Reporting | 1.41 |
| 4533 | Normal | Reporting - edit template > make changes > x to close > no prompt presented about changes | Radiology Reporting | 1.41 |
| 4532 | Normal | Reporting - edit template > esc > cancel will close the form instead of cancelling | Radiology Reporting | 1.41 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 4528 | Normal | WPR-000 | Radiology Reporting | 1.4 |
| 4527 | Normal | Attachments - Verbal button causing error | Thick Client GUI | 1.41 |
| 4522 | Normal | intermittent error: transaction was deadlocked on lock resources with another process and has been chosen as the deadlock victim | Web Services/DB | 1.41 |
| 4521 | Normal | Scanning - Editing Document width and height causing error on blanks | Thick Client GUI | 1.41 |
| 4516 | Normal | Reporting - MT polling enabled open RIS initially will result in messed up reporting screen | Radiology Reporting | 1.41 |
| 4514 | Normal | Attachments - wide documents that a small height cause an out of memory exception | | 1.4 |
| 4510 | Normal | Reporting - editing reports MT's have the microphone selection option available | Radiology Reporting | 1.41 |
| 4508 | Normal | Transcriptionist next workflow not properly skipping | Radiology Reporting | 1.41 |
| 4490 | Normal | Protect section headers does not protect against macro insertions | Radiology Reporting | 1.40.017 |
| 4489 | Normal | Inactive printers can still be selected in Send Report dialog | Document Distribution | 1.4 |
| 4488 | Normal | CD Import - add a button to access this feature from Patient Folder. | | 1.4 |
| 4487 | Normal | CD Import - Some customers have CD media without a DICOMDIR | | 1.4 |
| 4486 | Normal | dicom error while importing a CD | Thick Client GUI | 1.40.16328 |
| 4483 | Normal | Reporting - Add patient folder control to reporting window will not display history | Thick Client GUI | 1.41 |
| 4481 | Normal | LogTextBox - Permission for an admin to edit previous log details isn't always available. | | 1.41 |
| 4444 | Normal | Scanning - Order/Patient/Exam Level can change when re-viewing the document | | 1.41 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 4443 | Normal | External Report Workflow - changing room/procedure resets external flag. | | 1.41 |
| 4434 | Normal | Outside Reads do not fall into external workflow | | 1.41 |
| 4426 | Normal | Reports that should have site filter | Mgt Reports | 1.41 |
| 4392 | Normal | alignments of MT screen buttons in user preferences are a little miss aligned | Thick Client GUI | 1.41 |
| 4389 | Normal | Reporting - Addendum request make notes required on request and reject. | Radiology Reporting | 1.41 |
| 4386 | Normal | Report History Error | Thick Client GUI | 1.41 |
| 4383 | Normal | External Report Workflow check box looses value on open of view edit | | 1.41 |
| 4341 | Normal | QA worflow problem flag #2894 | Radiology Reporting | 1.41 |
| 4334 | Normal | Report History Window | Thick Client GUI | 1.4 |
| 4296 | Normal | RRR Modality Closures and Restrictions - when you delete a row after pressing 'enter' at the end of the column 'End Time' RIS does not seem to recognize the row is gone, and prompts user for 'Description' | Thick Client GUI | 40.15 |
| 4290 | Normal | Reporting - next field navigating two fields when cursor immediately to the left of field | Radiology Reporting | 1.4 |
| 4274 | Normal | All Signed By Date WL missing context menu option for Patient Folder | Thick Client GUI | 1.41 |
| 4267 | Normal | Report context menu item does not have access string | Web Services/DB | 1.41 |
| 4260 | Normal | RRR - Appointment book is not showing all outside read locations, only one. | Admin Tools | 40.15 |
| 4259 | Normal | RRR - Order of preferred radiologists in the Personnel editor or image notes, is not the same order it appears in the workflow within RIS | Thick Client GUI | 40.15 |
| 4227 | Normal | eRAD PACS: Often not closing images | PACS Integration | 1.40.012 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 4199 | Normal | Error thrown on refresh lock after just having closed reporting screen. | Thick Client GUI | 40.15 |
| 4185 | Normal | Login - After logging in as a Rad user the splash screen doesn't always repaint | Thick Client GUI | 1.41 |
| 4153 | Normal | Sort on audio lenght throws error on worklist refresh | Thick Client GUI | 1.41 |
| 4135 | Normal | Workstation locks do not reliably fire on workstations that have not been rebooted for 25+ days | Thick Client GUI | 1.40.16328 |
| 4096 | Normal | Send To button on Report History screen should be hidden | Radiology Reporting | 1.40.14 |
| 4093 | Normal | Assign to Radilogist from WL clears Chair when configured not to clear the chair. | Thick Client GUI | 1.40.012 |
| 4087 | Normal | Getting "Viewer is opening another view!" when trying to launch images in eRAD PACS | PACS Integration | 40.12 |
| 4086 | Normal | Scanning - HP Scanjet 3000 s2 does not work with Twain 2.0 | | 1.4 |
| 4085 | Normal | RRR reported 'painting' issue with scheduling window | | 40.18019 |
| 4068 | Normal | Reporting - next workflow excluding reports locked by the current user | Thick Client GUI | 1.4 |
| 4052 | Normal | Suspended reports can still be previewed in dictate screen using patient folder | | 1.4 |
| 4018 | Normal | Memory leak fixes discovered in B40 | | 1.4 |
| 4006 | Normal | Scan Documents from EMR | Thick Client GUI | 1.4 |
| 3976 | Normal | Reporting buttons, when disabled, has a wider seperator. | Thick Client GUI | 1.4 |
| 3975 | Normal | Verify External - button is greyed out in Patient Folder, even if you have permission | Thick Client GUI | 39.1 |
| 3971 | Normal | RIS Administrator - permissions | Web Services/DB | 39.1 |
| 3914 | Normal | order lock not released in some cases, refreshes continue until user logs out | Thick Client GUI | 1.4 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 3901 | Normal | Reporting - Chair assignment - Chair selection shows study assigned but work list doesn't have any studies assigned | Thick Client GUI | 1.40.010 |
| 3873 | Normal | Patient Merge - when you choose phone number details for a patient and suggest merge, then re-open, those details are not maintained. | Thick Client GUI | 1.1.3.40.17435 |
| 3872 | Normal | Signing contribution dates and userid missing in supervising dictation worklist | Thick Client GUI | 1.40.010 |
| 3866 | Normal | Installing Updates... - Two can run at the same time, which causes errors | | 1.4 |
| 3828 | Normal | Toggle record not stopping when pressed again (Fisher site visit) | Thick Client GUI | 40.006 |
| 3802 | Normal | RadNet - ADV defect - Blanking out the chair | Thick Client GUI | 1.40.006 |
| 3796 | Normal | RadNet - ADV Call Centre - Order level scanning support | Thick Client GUI | 1.40.006 |
| 3755 | Normal | RadNet - Call Centre - Preferred site not always populating | Thick Client GUI | 1.40.006 |
| 3753 | Normal | RadNet - Call Centre - IVT Attachment - advanced scanning pop-up issue | Thick Client GUI | 1.40.006 |
| 3732 | Normal | MU2 (2014) Requires Gender to Change to Sex | Thick Client GUI | 1.4 |
| 3708 | Normal | Inactive but currently used procedures are not apearing as an option in the performed procedure list on view edit | Thick Client GUI | 1.40.0007 |
| 3692 | Normal | Can't reschedule - strange error - | | 1.4 |
| 3683 | Normal | Rad Sign Level lookup exception | Admin Tools | 1.40.007 |
| 3662 | Normal | Schedule Group lookup table exception | Admin Tools | 1.40.006 |
| 3621 | Normal | RadNet - Resolve Audit log issues - resolve in b41 if time permits, else move to b42 | Thick Client GUI | 1.38 |
| 3587 | Normal | Administration --> cross_x_reference tables and Active column | Admin Tools | 1.1.3.40.17118 |
| 3586 | Normal | Administration --> BIRAD + Recommendation mapping change Active = object reference ERR | Admin Tools | 1.1.3.40.17118 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 3562 | Normal | L access string settings for Mammography worklists should default to "None" | Thick Client GUI | 1.4 |
| 3464 | Normal | Reporting - Increase the size of selected attachments data pane and the border doesn't repaint | Thick Client GUI | 1.4 |
| 3455 | Normal | Reporting - Indent / Outdent not working | Thick Client GUI | 1.4 |
| 3403 | Normal | IVT WL not showing the WL Row count as expected | Thick Client GUI | 1.4 |
| 3397 | Normal | RRR - scan doc types when marked inactive are still showing in the dropdown menus in the GUI | Thick Client GUI | 40.16659 |
| 3394 | Normal | problems with validation of "Visited at" for "unknown referring physicians" without an address | Thick Client GUI | 1.40.16328 |
| 3391 | Normal | User editor loading config values twice, causing errors | Thick Client GUI | 1.38 |
| 3373 | Normal | EMR order fails - sending in an unknown referring physician | Thick Client GUI | 1.4 |
| 3035 | Normal | Missing access string | Web Services/DB | 1.4 |
| 3010 | Normal | Multi-sign: When you have a preconfigured sign level overrides (RadSignLevel table), and you disable contribute a and contribute b, user cannot sign on the modality type in the override. | | 39.16026 |
| 2991 | Normal | Patient Folder - don't duplicate attachment viewers | Thick Client GUI | 1.39 |
| 2970 | Normal | Reporting - Report history - Does not always load and may return object reference error | Radiology Reporting | 1.39.001 |
| 2897 | Normal | Report History - from patient folder tab name is not correct | Thick Client GUI | 1.39 |
| 2823 | Normal | audit history does not provide sufficient detail for study data | Thick Client GUI | 1.39 |
| 2716 | Normal | System Config Lookup Editor | Thick Client GUI | 1.38 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 2690 | Normal | Show/Hide Titlebar issue | Thick Client GUI | 1.39 |
| 2628 | Normal | Reporting screen not drawing in, if user make worklists active | Thick Client GUI | 1.39 |
| 2453 | Normal | River Ranch - When you reschedule a study we set an internal flag on the study that was rescheduled, when we just cancel we are not clearing this flag if it was previously set. | Thick Client GUI | 38 |
| 2418 | Normal | River Ranch - When two users with similar names edit an order, there can be some confusion in who actually wrote notes that are stamped (ie: order notes) | Thick Client GUI | 38.14486 |
| 2163 | Normal | Studies in Edits Pending QA can be signed off | Thick Client GUI | 1.2.38.14350 |
| 2113 | Normal | error on patient search when formatted_first_name is null | Web Services/DB | 1.37.12 |
| 2072 | Normal | Reporting - Worklist refresh when worklist is not in focus. | Thick Client GUI | 1.37 |
| 2057 | Normal | Unknown Insurance reconsiliation - reload problem | Admin Tools | 37.11 |
| 1943 | Normal | No access string to prevent access to Unknown Carrier | | 1.37 |
| 1842 | Normal | Reporting - CdsInterctive Text Color not consitent | | 1.38 |
| 1487 | Normal | Worklist column does not refresh when exception thrown in Bulk Field Assignment | Thick Client GUI | 1.2.37.12644 |
| 1177 | Normal | Completing fields in report editor and using Back button < will return COM error. | Thick Client GUI | 1.36 |
| 4368 | Low | Ranjan - Date format | Radiology Reporting | 1.41 |
| 4282 | Low | Template / macro - Create using filter criteria | Radiology Reporting | 1.41 |
| 3889 | Low | Null reference exception in lookup | Admin Tools | 1.1.3.40.16659 |
| 3750 | Low | Reporting - Exam details pane layout | Thick Client GUI | 1.40.008 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 3680 | Low | Font size - not saving | Thick Client GUI | 1.4 |
| 3229 | Low | Patient search - folder preview feature - does not clear with reset button | | 1.4 |
| 3228 | Low | Patient Folder (Preview Mode) - docking\floating issue on Patient Search | Thick Client GUI | 1.4 |
| 1977 | Low | Birthdate search often defaults to dates in the future | | 1.37 |
| 1348 | Low | Special Accommodations required fields | Thick Client GUI | 1.37 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 9. Known Limitations

The following are Bugs Suggested Features and Support Issues found in build 2.42. Bugs reported in previous versions are not captured as Known Limitation in this document.

| # | Status | Priority | Subject |
|---|---|---|---|
| 5783 | New | High | Dark mode login box impossible to see |
| 5120 | QE Rejected | High | Template / macro - create template from... doesnt retain custom fields |
| 5861 | New | Normal | unhandled exception logging in as a rad but without permission to some WL. |
| 5860 | New | Normal | PACS Images not opening from Patient folder |
| 5857 | New | Normal | Critical Results worklist throws null exception |
| 5854 | New | Normal | PACS Caching - Sometimes possible to steal someone else's cache lock |
| 5851 | New | Normal | Reporting - Error on pending dictation work list |
| 5847 | New | Normal | Dark mode - BMI on MU tab is white on white and unreadable |
| 5843 | New | Normal | MU - When editing the date in Lab results get error. |
| 5839 | New | Normal | Edit Templates and Macros icons enabled toggle is backwards |
| 5837 | New | Normal | Reporting - Open study in dictate window and get C++ Exception |
| 5836 | New | Normal | Chair selector throws error after RIS locked due to inactivity |
| 5835 | New | Normal | interact with message boxes via voice commands - can dictate into the message itself |
| 5832 | New | Normal | Scheduling - Restriction displayed in advanced search on Schedule tab not always accurate |
| 5829 | New | Normal | Scheduling / Registration |
| 5822 | New | Normal | 'Assign' functionality throws error on report addendum |
| 5821 | MModal support | Normal | Redo That command needs to be uttered twice to work/catch up with undo that |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 5814 | New | Normal | If lab test code matching systemconfig's CPOELabTestCode value doesn't exist for procedure who's CPOE Pathology flag is set, misleading exception occurs |
| 5812 | New | Normal | Orders to Schedule WL and IVT WL show last follow-up type code and the Mammo Worklists (0/4/5) show |
| 5811 | New | Normal | Suspended reports stops several voice commands from working |
| 5808 | New | Normal | Dark mode, very hard to read text in Recording and Playback settings |
| 5800 | New | Normal | parameter is not valid and/or out of memory error while viewing thumbnails |
| 5784 | New | Normal | Default attachment is order level, cant be changed to patient level |
| 5777 | New | Normal | Attatchment Veiwer "Show More/Show Less" option is switching when pressing the Ok Button in the Attachment Viewer Preferences |
| 5770 | New | Normal | Button label on "Report on Accession Number" prompt is incorrect. |
| 5768 | New | Normal | DeleteLeftWord |
| 5767 | New | Normal | Cannot save IVT screen due to undetermined required field ("! Is Required") |
| 5766 | New | Normal | potential performance issues with c_ctrn_dictation |
| 5762 | New | Normal | Unplugging then repluging in speech mic causes Ris to crash, need to reboot |
| 5754 | New | Normal | Open quotes become duplicated |
| 5745 | New | Normal | Lookup bug "Non-static method requires a target" |
| 5738 | New | Normal | patient folder will not load when saved as a secondary tab on another tool window |
| 5732 | New | Normal | issues with sorting exam search results when max row count is reached |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 5726 | New | Normal | Management Reports - Many reports have new parameters, these fields should be returned on the report |
| 5712 | In Progress | Normal | C++ Exception when pressing the play button |
| 5711 | New | Normal | Using two procedures at scheduling, and patient is claustro - it is showing an option for a closed modality when it should not |
| 5700 | New | Normal | Template, cannot remove the dataset values |
| 5697 | New | Normal | RIS screen lock does not function properly when using minimize to tray mode |
| 5685 | New | Normal | Logout - after entering username and PWD error saying eRAD RIS is already running |
| 5682 | New | Normal | Inactivity message showing under ris error pop up |
| 5678 | New | Normal | View/Edit notes exam times tab marks as dirty |
| 5672 | New | Normal | Next Workflow on All_____ worklists, locked studies break work flow. |
| 5664 | New | Normal | When dictating, losing your lock, and save failed with screen recovered, you won't be able to save |
| 5657 | New | Normal | Cannot click 'OK' or 'Cancel' in PACSLoginDialog when running in 'Minimized' recording control mode |
| 5654 | In Progress | Normal | MU Lab Results Error |
| 5637 | New | Normal | Complete button on Report screen has misaligned formatting |
| 5625 | New | Normal | Reporting - cant exit minimized dictation screen with cancel button or close button |
| 5620 | New | Normal | Swap creditial user being used for user preference and lock screen |
| 5619 | New | Normal | Macro editor field "bleeds" into next line when field is at end of line and Enter pressed |
| 5610 | New | Normal | Clear Credentials is available from perform exam tab context menu |
| 5603 | New | Normal | recent activity message list shows Assign To as Dictated |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 5597 | New | Normal | Reporting - delete next field speech mike option leaves a space after deleting |
| 5569 | New | Normal | Lookup tables->ProcedureCode - Missing null checks on new l_procedure_code_x_billing_code rows throws exception |
| 5563 | In Progress | Normal | Reporting - Field markers allowing normal spelling errors to pass |
| 5549 | New | Normal | Edit Image Request's "Previous Requests" grid shows only 2-3 previous requests , can't be sorted or scrolled to see more |
| 5526 | In Progress | Normal | Reporting - Delete previous n words and undo that resulting in wrong cursor location |
| 5519 | New | Normal | Reporting - pending signature on login and pending signature worklist notifications can be shown at the same time |
| 5515 | In Progress | Normal | Reporting - Setting DictationEnabled = false still allows dictated text into the report. |
| 5506 | In Progress | Normal | Reporting - lowercase selection voice command inoperable |
| 5469 | New | Normal | Alerts may not fire properly if screens are re-used in RIS |
| 5459 | New | Normal | right click change status to cancel does not refresh worklist afterwards |
| 5452 | New | Normal | Reporting - Spine level 'T seven eight' rendering incorrectly. |
| 5451 | New | Normal | Reporting - enable rewind/fast foward playback rename |
| 5446 | New | Normal | Radnet only: Multi-install dashboard |
| 5439 | In Progress | Normal | new practices can cause null ref errors when signing |
| 5420 | New | Normal | some messageboxes improperly sized |
| 5406 | New | Normal | concurrency violation on save of UserPrefs can crash RIS |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 5305 | New | Normal | Report field control shows duplicate field if laterality check highlighted words exist in a field |
| 5259 | New | Normal | Multi-type ahead: down arrow does not open the dropdown |
| 5258 | New | Normal | Multi-type ahead: control is too tall |
| 5257 | New | Normal | Multi-type ahead: Dropdown button should have a ... in the icon |
| 5256 | New | Normal | Multi-type ahead: Dropdown button is doesn't have left and bottom border |
| 4830 | New | Normal | Carrier search error if carrier name is not found |
| 4810 | New | Normal | PACSCacheServer system config setting is no longer used and should go away |
| 4792 | New | Normal | Reporting - Open multiple autosaved reports at once can cause error |
| 4787 | New | Normal | Next field not going to next field when dictating paragraphs in field. |
| 4771 | New | Normal | insert multi paragraph macro into field ignores paragraphs |
| 4718 | In Progress | Normal | Reporting - AME 7.88.3 - extra paragraph when protect section headers is on |
| 4593 | New | Normal | WPR - Send To button causes error |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

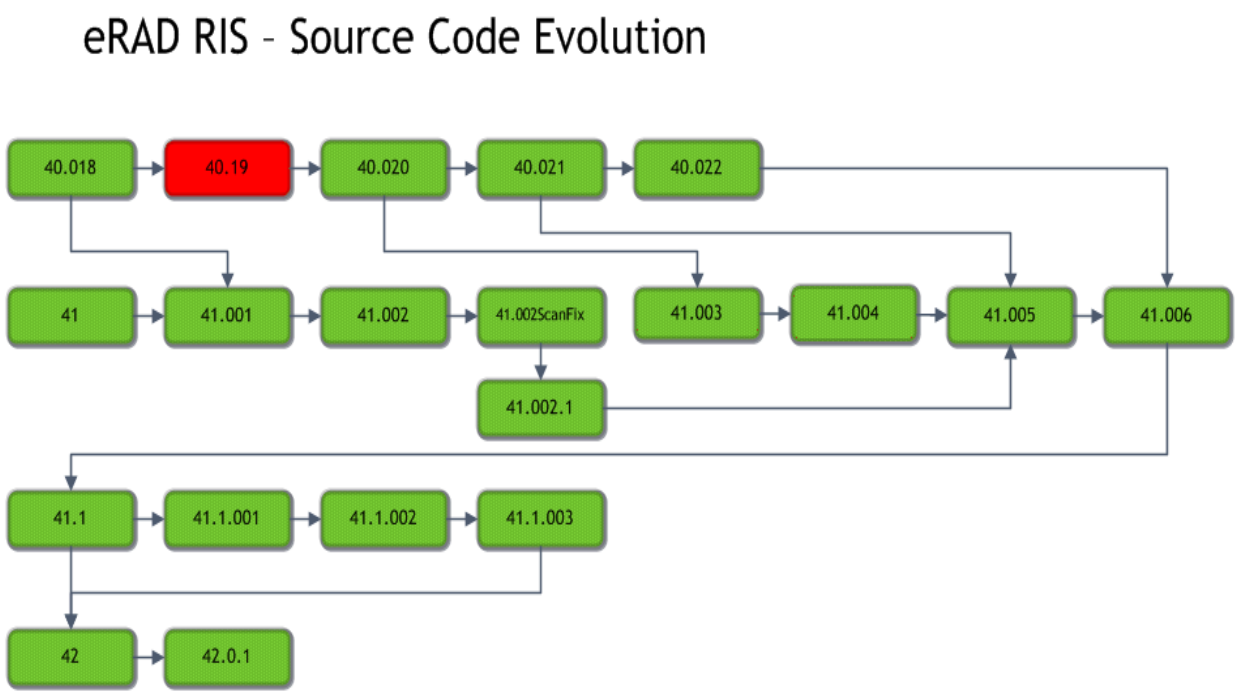
## 1. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 5980 | Faxes failing to submit to fax queue | Immediate |
| 6054 | Medications table displaying incorrectly | Urgent |
| 6030 | Problems and Allergies not populated on Reschedule | High |
| 6029 | Message when opening MU tab on Rescheduling: "open in another tab" | High |
| 6042 | Non-Insurance Verifiable Modalities (XR) are falling to worklist | Normal |
| 6041 | Mammo invitives can be rescheduled once but not a second time | Normal |
| 6040 | Reschedule-x obtaining locks and not releasing them | Normal |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Code Stream



**Legend:**

**Green = Released software**

**Red = Will not be released**

## 4. Intended Audience

This document is created by the RIS Development team for the RadNet/eRAD RIS Implementation teams.

## 5. Who is affected

Build 42 installs. Server updates are not cumulative. Any previous server updates must be applied before this one.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 6. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|
| 40 | 17 | 1.3.40.18780 (3GB) | 1.3.40.18756 | 1.3.40.18756 | 1.3.40.18646 | Core install required for Radiologist User Group. GUI.zip, Core setup, and Web Service updates |
| 40 | 18 | 1.3.40.19253(3GB) | 1.3.40.18756 | 1.3.40.18756 | 1.3.40.19253 | GUI.zip, Web Service and database updates |
| 40 | 19 | 1.3.40.19909(3GB) | 1.3.40.18756 | 1.3.40.19878 | 1.3.40.19253 | GUI.zip, Web Service |
| 40 | 20 | 1.3.40.20086(3GB) | 1.3.40.18756 | 1.3.40.19878 | 1.3.40.19253 | Gui.zip and Recognizer |
| 40 | 21 | 1.3.40.20703(3GB) | 1.3.40.18756 | 1.3.40.19878 | 1.3.40.19253 | Gui.zip |
| 40 | 22 | 1.3.40.20898(3GB) | 1.3.40.18756 | 1.3.40.19878 | 1.3.40.19253 | Gui.zip |
| 41 | - | 1.3.41.19135(3GB) | 1.3.41.19135 | 1.3.41.19135 | 1.3.41.19135 | Full version release |
| 41 | 1 | 1.3.41.19256(3GB) | 1.3.41.19135 | 1.3.41.19256 | 1.3.41.19256 | GUI.zip, Web Service and database updates |
| 41 | 2 | 1.3.41.19620(3GB) | 1.3.41.19135 | 1.3.41.19620 | 1.3.41.19346 | GUI.zip and Web Service |
| 41 | 2sf | 1.3.41.19620SF(3G) | 1.3.41.19135 | 1.3.41.19620 | 1.3.41.19346 | GUI.zip |
| 41 | 2.1 | 1.3.41.20622(3GB) | 1.3.41.19135 | 1.3.41.20617 | 1.3.41.19346 | GUI.zip and Web Service |
| 41 | 3 | 1.3.41.20125(3GB) | 1.3.41.19135 | 1.3.41.20171 | 1.3.41.19346 | GUI.zip , Web Service and Recognizer |
| 41 | 4 | 1.3.41.20285(3GB) | 1.3.41.19135 | 1.3.41.20171 | 1.3.41.19346 | GUI.zip |
| 41 | 5 | 1.3.41.20809(3GB) | 1.3.41.20708 | 1.3.41.20792 | 1.3.41.20738 | GUI.zip, Core install, Web Service and database updates |
| 41 | 6 | 1.3.41.20912(3GB) | 1.3.41.20708 | 1.3.41.20792 | 1.3.41.20738 | GUI.zip |
| 41.1 | - | 1.3.41.20918(3GB) | 1.3.41.20791 | 1.3.41.20918 | 1.3.41.20739 | GUI.zip, Core install, Web Service and DB updates, Help files |
| 41.1 | 1 | 1.3.41.20987(3GB) | 1.3.41.20791 | 1.3.41.20918 | 1.3.41.20739 | GUI.zip |
| 41.1 | 2 | 1.3.41.21162(3GB) | 1.3.41.20791 | 1.3.41.21162 | 1.3.41.21150 | GUI.zip, Web Service and DB updates, |
| 41.1 | 3 | 1.3.41.21264(3GB) | 1.3.41.20791 | 1.3.41.21162 | 1.3.41.21150 | GUI.zip |
| 42 | - | 2.42.0.0.21261(3GB) | 2.42.0.0.21261 | 2.42.0.0.21261 | 2.42.0.0.21187 | Full version release |
| 42 | 1 | 42.0.1.21597 | 2.42.0.0.21261 | 42.0.1.21597 | 2.42.0.0.21187 | GUI and Web Service updates |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_42.0.1.21597.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

   NOTE: If your upgrade is coming from 40.016.1 or less a core install will be required.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   Restart each service.

## 8. Known Limitations

Known limitations listed in this document may not have been introduced in 42.0.1, but have been discovered during testing of 42.0.1.

| Redmine # | Subject | Info |
|---|---|---|
| 6043 | Mammo follow up reschedule – schedule later creates order and short term follow-up | In this case the user can continue to use the Short Term Follow-Up study and cancel the order. Reason for this is if the order is used to schedule again and on reschedule again select Schedule Later it will not let the user save as a Follow Up Order already exists |
| 6072 | Document Distribution - Jobs for Print can be added to distribution with no default printer | Referrers may not have report delivery preferences (although they have address(s)). In this case the report will be sent to Document Distribution for print but without a default printer. A user will have to edit job and select printer |

## 1. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 6096 | Exception thrown on reschedule of study with illegal XML character in notes field | High |
| 6085 | Patient tab - tab order - Cannot tab to Patient Origin fields, stuck in Family History | High |
| 6038 | Wedge stopps processing messages ( illegal XML) | High |
| 6092 | CD Import via patient folder can match with the wrong patient. | Normal |
| 6076 | RIS Wedge x64 ( stopps processing + spikes CPU when error in c_action_queue) | Normal |
| 6043 | mammo follow up reschedule - rescheduling second time - select schedule later creates order and short term followup | Normal |
| 6036 | RadNet - error in Radiologist message box | Normal |
| 5987 | Scanning - Keep Scanner Connection Open (doesn't work on all scanner models) | Normal |
| 5966 | Scanning - Keep Scanner Connection Open is causing scans to fail | Normal |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

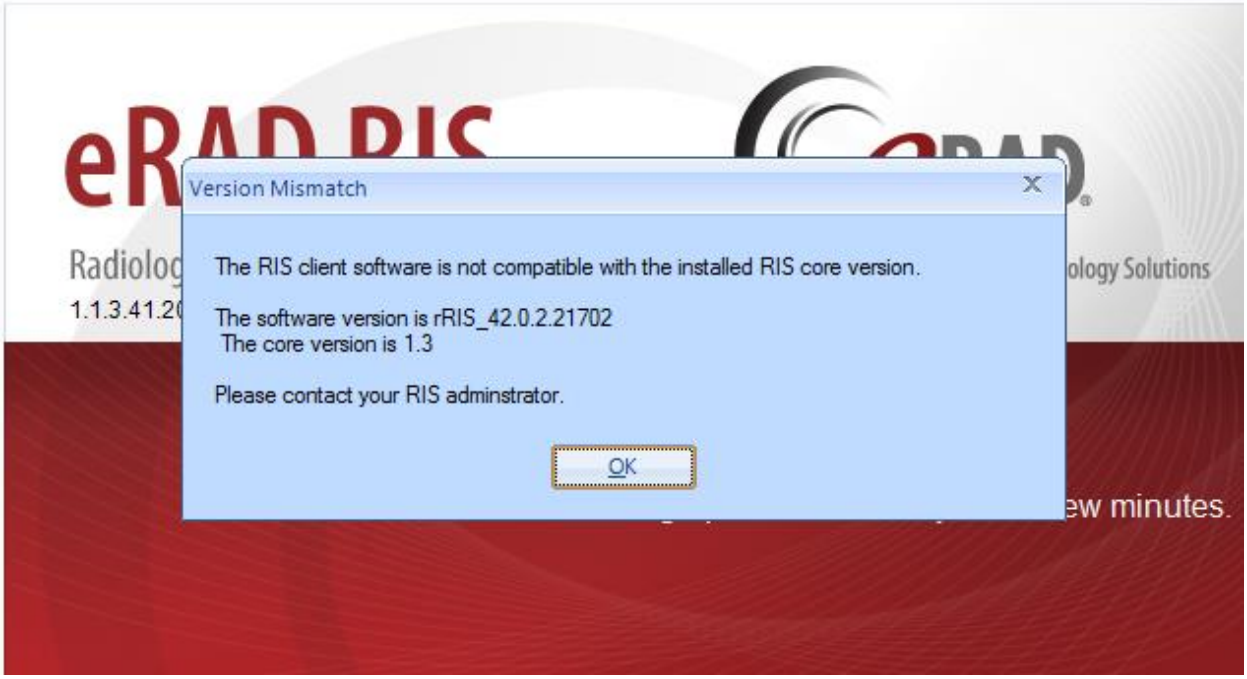
## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.42.0.2.21702.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_42.0.2.21702 → rRIS_1.3.42.0.2.21702. NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

NOTE: If your upgrade is coming from 40.016.1 or less a core install will be required.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   **Restart each service.**

## 8. Known Limitations

Known limitations listed in this document may not have been introduced in 42.0.2, but have been discovered during testing of 42.0.2.

| Redmine # | Subject | Info |
|---|---|---|
| 6105 | Exception thrown from Family History grid | The issue occurs when a user tabs into the Family History grid and attempts to enter data into the first field. If the user presses the spacebar first, it will enable the list box in the Relationship column. They can also use the mouse to enable the list. The user can then select from the list or enter value |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# Server Update

For eRAD RIS
Version 2.0
Build 42
Update 42.0.3

## 1. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 6133 | Filter by schedule date (calendar control) in IVT WL does not work properly | Immediate |
| 6132 | Error opening IVT with CheckUnitEditFlag | Immediate |
| 6142 | Reporting - users may not get properly assigned default templates | Urgent |
| 6146 | insurances locked by the current user | High |
| 6135 | c_Calculate_BMI error when height or weight entererd without the mask | High |
| 6149 | Mammo Biopsy cannot be saved in View/Edit window | Normal |

## Change to Configuration

A configuration change to the ris.exe.config file was introduced in build 2.42 this setting was designed to lessen the delays when retrieving lookup tables that are larger in size.
This config setting, as mentioned, is located in the ris.exe.config file located in the <appSettings> section of the file

This setting is:
<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/>

Where the value can be any lookup table, and a value=”*”, will retrieve all lookups.

The setting has resulted in undesired results of possible slowness, depending on the lookup table, and possibly additional bugs. Because of this, we are requesting that all sites comment out this line in the ris.exe.config table. The commented line will look like

<!--<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/> -->

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

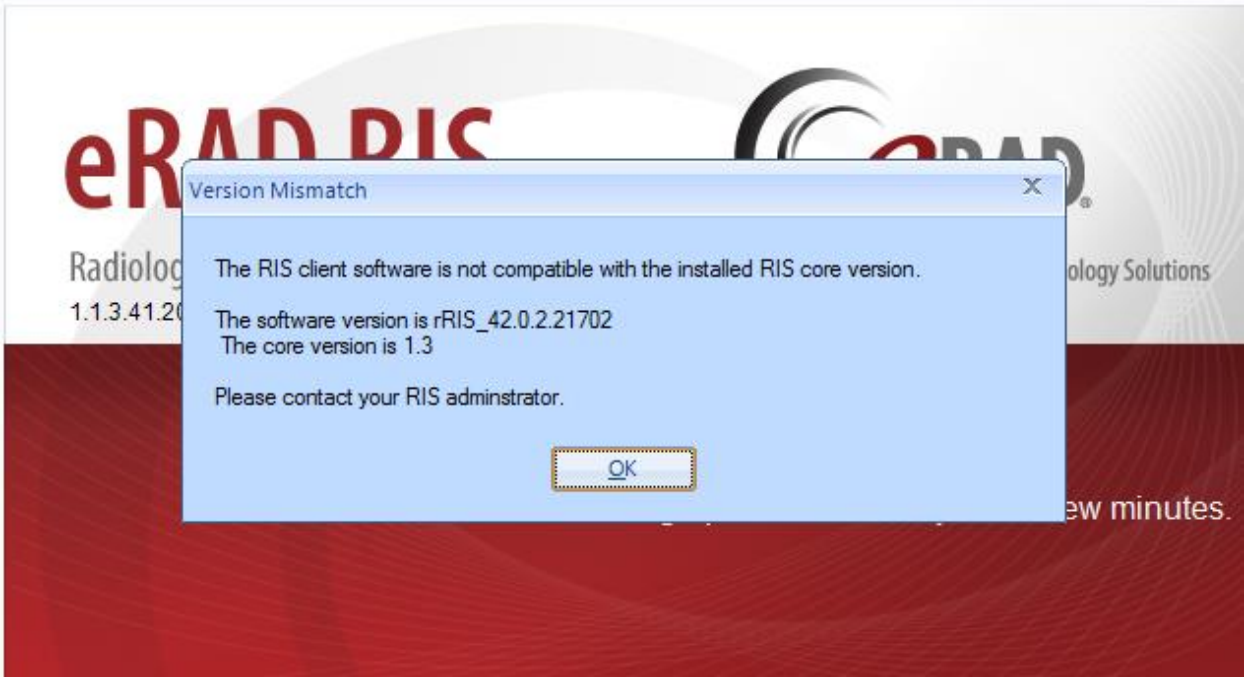
## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.42.0.2.21806.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_42.0.2.21806 → rRIS_1.3.42.0.2.21806. NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   **Restart each service.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 1. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 6173 | Reporting - Worklists not refreshing when reporting screen is open is causing worklist count problems | High |
| 6172 | Locking issue where next workflow might fetch a study that was already locked by another user | Normal |
| 6141 | Radiologist screen reuse causes detault template errror | Normal |

## Change to Configuration

A configuration change to the ris.exe.config file was introduced in build 2.42 this setting was designed to lessen the delays when retrieving lookup tables that are larger in size.
This config setting, as mentioned, is located in the ris.exe.config file located in the <appSettings> section of the file

This setting is:
<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/>

Where the value can be any lookup table, and a value=”*”, will retrieve all lookups.

The setting has resulted in undesired results of possible slowness, depending on the lookup table, and possibly additional bugs. Because of this, we are requesting that all sites comment out this line in the ris.exe.config table. The commented line will look like

<!--<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/> -->

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Code Stream

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

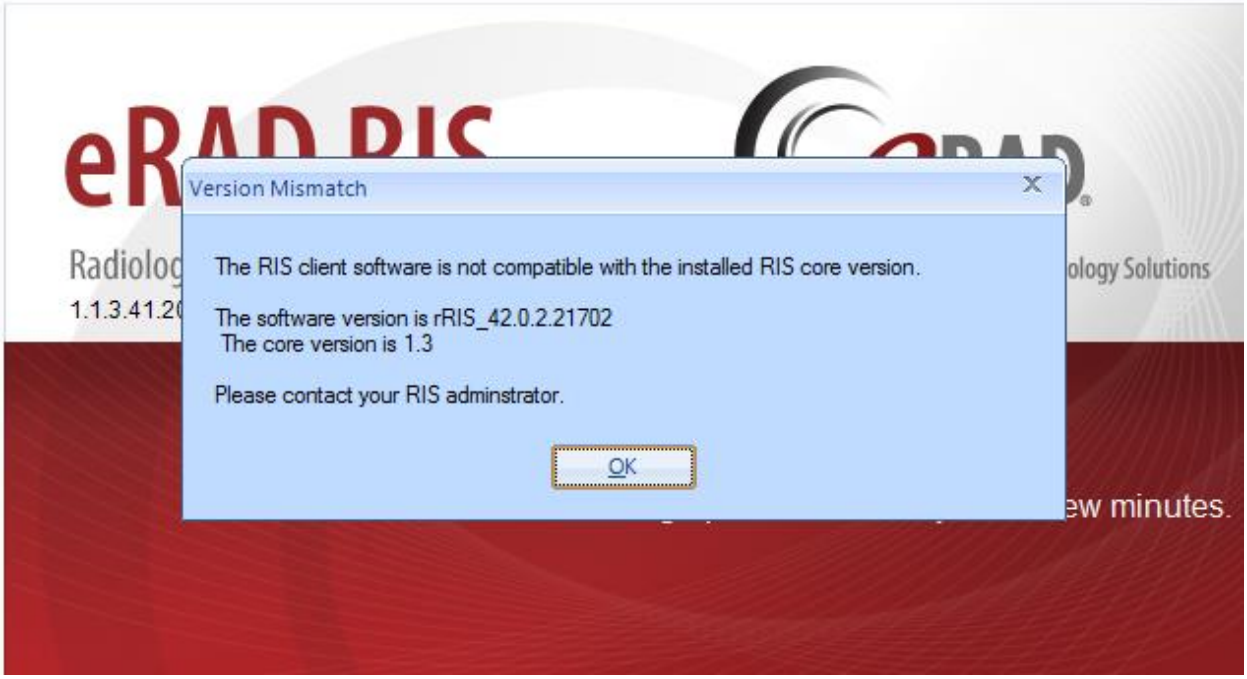
## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.42.0.4.21862.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_42.0.4.21862 → rRIS_1.3.42.0.4.21862. NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Run the B42.04.sql file against the eRAD RIS database instance.

## 8. Known Limitations

Known limitations listed in this document may not have been introduced in 42.0.4, but have been discovered during testing of 42.0.4.

| Redmine # | Subject | Info |
|---|---|---|
| 6186 | RADNET - Reporting - My pending dictation - worklist counts display differently | This does not affect work list refreshing, study access or the count on the work list. When a refresh of the work list is completed it will show correctly. Example: the count on the work list tab may show 9 of 10, where 9 is the correct study count on the work list, but another user has the other study open in the dictate window (locked by that user). |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

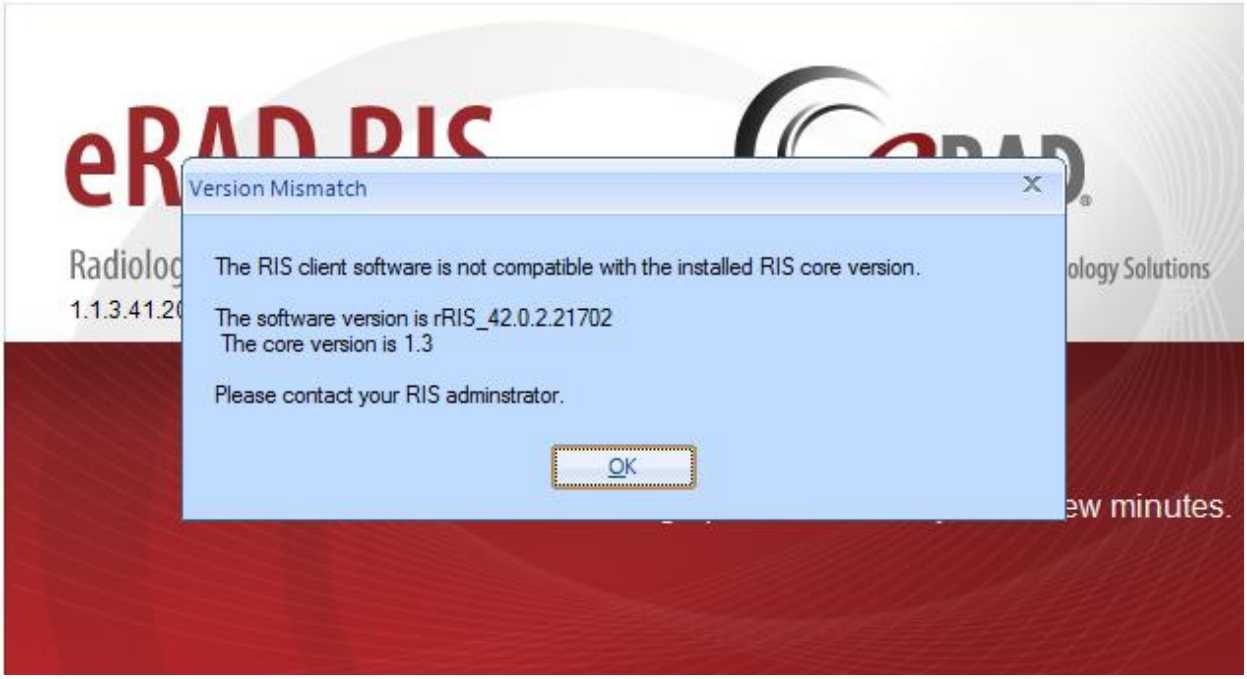
## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.42.0.5.21924.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_42.0. 5.21924→ rRIS_1.3.42.0. 5.21924. NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# Server Update

For eRAD RIS
Version 2.0
Build 42
Update 42.0.6

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 1. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 6215 | Ability to include Procedure Code General Description in the wedge and include in HL7 mappings | High |
| 6217 | Cannot manually create new Document Distribution jobs for Outside Read studies in B42. | Normal |
| 6048 | RadNet - Race - tab to Race put focus on dropdown instead of textbox | Low |

Quick note on 6048: this bug is partially resolved. The issue was a user couldn't tab out of the race field once on it. Now a user can tab out of this field, but must select tab twice. This will be fixed in later release.

## Change to Configuration

A configuration change to the ris.exe.config file was introduced in build 2.42 this setting was designed to lessen the delays when retrieving lookup tables that are larger in size.
This config setting, as mentioned, is located in the ris.exe.config file located in the <appSettings> section of the file

This setting is:
<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/>

Where the value can be any lookup table, and a value="*", will retrieve all lookups.

The setting has resulted in undesired results of possible slowness, depending on the lookup table, and possibly additional bugs. Because of this, we are requesting that all sites comment out this line in the ris.exe.config table. The commented line will look like

<!--<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/> -->

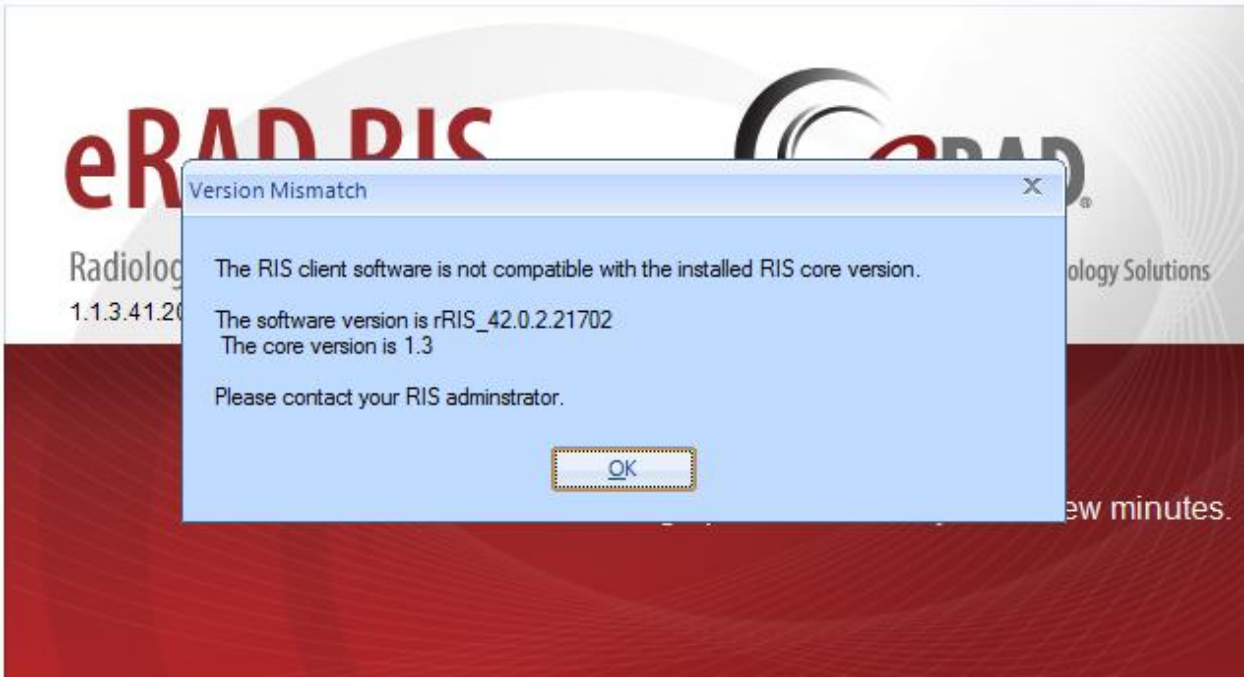
## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.42.0.5.22209.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_42.0. 5.22009→ rRIS_1.3.42.0. 5.22009. NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   **Restart each service.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

| Redmine # | Subject | Priority |
|---|---|---|
| 6241 | Error on reschedule and schedule from orders when CC physician is used | Normal |

## Change to Configuration

A configuration change to the ris.exe.config file was introduced in build 2.42 this setting was designed to lessen the delays when retrieving lookup tables that are larger in size.
This config setting, as mentioned, is located in the ris.exe.config file located in the <appSettings> section of the file

This setting is:
<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/>

Where the value can be any lookup table, and a value=”*”, will retrieve all lookups.

The setting has resulted in undesired results of possible slowness, depending on the lookup table, and possibly additional bugs. Because of this, we are requesting that all sites comment out this line in the ris.exe.config table. The commented line will look like

<!--<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/> -->

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Code Stream

## 3. Package Contents

Files included for this server update:

1) GUI ZIP Updates folder contains:
   - rRIS_1.3.42.0.7.22090.zip

## 4. Intended Audience

This document is created by the RIS Development team for the RadNet/eRAD RIS Implementation teams.

## 5. Who is affected

Build 42 installs. Server updates are not cumulative. This server update must be applied to 42.0.6

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 6. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|
| 40 | 17 | 1.3.40.18780 (3GB) | 1.3.40.18756 | 1.3.40.18756 | 1.3.40.18646 | Core install required for Radiologist User Group. GUI.zip, Core setup, and Web Service updates |
| 40 | 18 | 1.3.40.19253(3GB) | 1.3.40.18756 | 1.3.40.18756 | 1.3.40.19253 | GUI.zip, Web Service and database updates |
| 40 | 19 | 1.3.40.19909(3GB) | 1.3.40.18756 | 1.3.40.19878 | 1.3.40.19253 | GUI.zip, Web Service |
| 40 | 20 | 1.3.40.20086(3GB) | 1.3.40.18756 | 1.3.40.19878 | 1.3.40.19253 | Gui.zip and Recognizer |
| 40 | 21 | 1.3.40.20703(3GB) | 1.3.40.18756 | 1.3.40.19878 | 1.3.40.19253 | Gui.zip |
| 40 | 22 | 1.3.40.20898(3GB) | 1.3.40.18756 | 1.3.40.19878 | 1.3.40.19253 | Gui.zip |

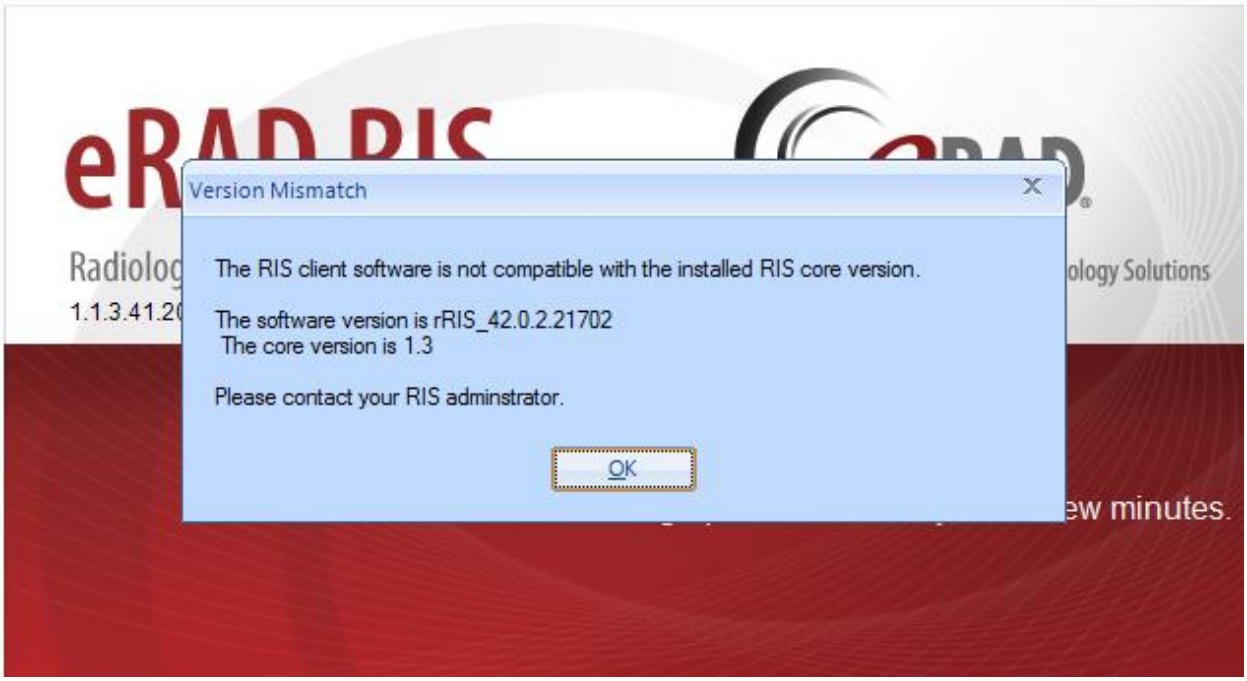
## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.42.0.7.22090.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive a Version Mismatch error similar to the one above, the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_42.0. 7.22090→ rRIS_1.3.42.0. 7.22090. NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Change to Configuration

A configuration change to the ris.exe.config file was introduced in build 2.42 this setting was designed to lessen the delays when retrieving lookup tables that are larger in size.
This config setting, as mentioned, is located in the ris.exe.config file located in the <appSettings> section of the file

This setting is:
<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/>

Where the value can be any lookup table, and a value=”*”, will retrieve all lookups.

The setting has resulted in undesired results of possible slowness, depending on the lookup table, and possibly additional bugs. Because of this, we are requesting that all sites comment out this line in the ris.exe.config table. The commented line will look like

<!--<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/> -->

## 7. Installing

1) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   **Restart each service.**

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

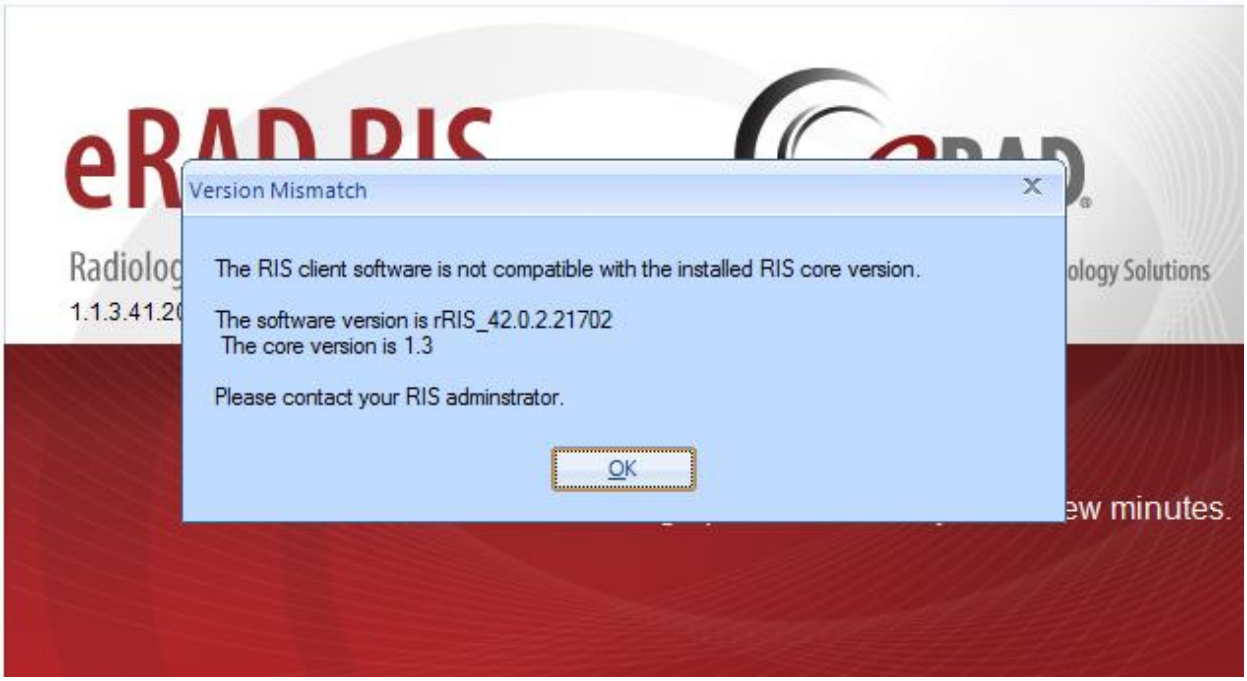
## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.42.0.9.22203.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_42.0. 9.22203→ rRIS_1.3.42.0. 9.22203. NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   **Restart each service.**

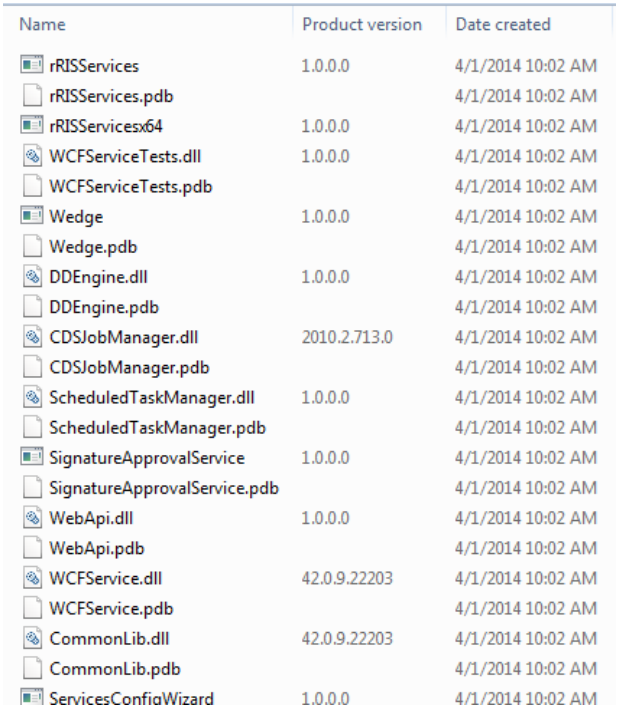
## 1. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 6288 | Error starting CDS service | Urgent |

The files produced for this software patch have the same build and version number of 42.0.9. To differentiate between the two you can look at the date created column in windows explorer.

In the screenshots below the image on the left are files that are released with this Server Update with the date of 4/1/2014. The image on the right displays the previous release of 42.0.9 has a Date Created date of 3/25/2014.



| Name | Product version | Date created |
|---|---|---|
| rRISServices | 1.0.0.0 | 4/1/2014 10:02 AM |
| rRISServices.pdb | | 4/1/2014 10:02 AM |

## 7. Installing

1) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   **Restart each service.**

   **NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 1. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 6275 | excessive logging contributing to performance issues | High |
| 6274 | RIS does not make optimal use of connections to the server | High |
| 4354 | Long lookup time-to-live is causing problems | High |
| 6161 | RIS Hang after entering partial or invalid height | Normal |

## Change to Configuration

This server update includes 1 new entry and 1 edit for the ris.exe.config file. The new entry and the edit are located in the <appSettings> section .

The new setting added is:
**<add key="EnableHighPriorityLookupStrategy" value="true"/>**

The edit is on the appSetting key for LookupTableTimeToLiveInMinutes. The change only applies for systems that have a value of less than 60. For example if the current setting is:

<add key="LookupTableTimeToLiveInMinutes" value="5"/>

Change the value of 5 to 60. The key will now look like:

**<add key="LookupTableTimeToLiveInMinutes" value="60"/>**

==========

The following change to the <appSettings> section of the ris.exe.config file was introduced in Server Update 42.0.3.
A configuration change to the ris.exe.config file was introduced in build 2.42 this setting was designed to lessen the delays when retrieving lookup tables that are larger in size.
This config setting, as mentioned, is located in the ris.exe.config file located in the <appSettings> section of the file

This setting is:
<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/>

Where the value can be any lookup table, and a value="*", will retrieve all lookups.

The setting has resulted in undesired results of possible slowness, depending on the lookup table, and possibly additional bugs. Because of this, we are requesting that all sites comment out this line in the ris.exe.config table. The commented line will look like

<!--<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/> -->

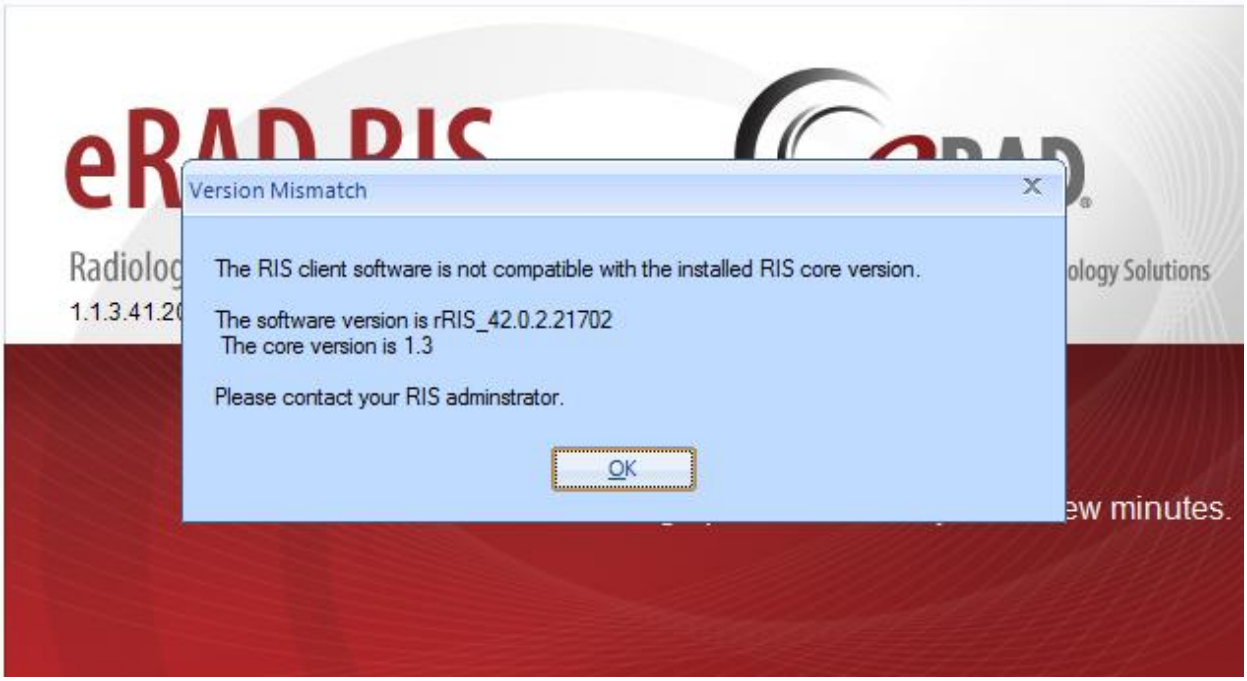
## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.42.0.10.22232.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_42.0.10.22232→ rRIS_1.3.42.0. 10.22232. NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# Server Update

## 1. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 6275 | Excessive logging contributing to performance issues | High |
| 6274 | RIS does not make optimal use of connections to the server | High |
| 4354 | Long lookup time-to-live is causing problems | High |
| 6161 | RIS Hang after entering partial or invalid height | Normal |
| 6451 | SearchResults Constructor slows screen load of New Appointment screen on older hardware | Normal |
| 6450 | Binding to billing codes can slow New Appointment screen load, particularly on older machines | Normal |
| 6449 | Slow building valid sites table on schedule order screen | Normal |
| 6443 | New Appointment Performance: Style code in LogTextBox | Normal |
| 6442 | New Appointment Performance: Extra NewCrop WS Calls | Normal |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Change to Configuration

This server update includes 1 new entry and 1 edit for the ris.exe.config file. The new entry and the edit are located in the <appSettings> section .

The new setting added is:
**<add key="EnableHighPriorityLookupStrategy" value="true"/>**

The edit is on the appSetting key for LookupTableTimeToLiveInMinutes. **The change only applies for systems that have a value of less than 60**. For example if the current setting is:

<add key="LookupTableTimeToLiveInMinutes" value="5"/>

Change the value of 5 to 60. The key will now look like:

**<add key="LookupTableTimeToLiveInMinutes" value="60"/>**

Since the Time to Live will be increased to 60 minutes, the cache will be updated every 60 minutes if changes were made. With the High Priority lookups the client will still check every 5 minutes. When the lookup list is retrieved we will mark any updated lookups as Dirty, which will result in the lookup being served up stale initially while a back ground thread will go get a fresh copy.

The High Priority Lookup is different by role. If someone opens scheduling (or appointmentbook), we add Modality, ProcedureCode, AvailabilityTemplate, and ScheduleGroup to the High Priority List. If someone opens Reporting or Transcription, we add QualityReviewDistribution to the High Priority List.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

**From Server Update 42.0.3**

The following change to the <appSettings> section of the ris.exe.config file was introduced in Server Update 42.0.3.

A configuration change to the ris.exe.config file was introduced in build 2.42 this setting was designed to lessen the delays when retrieving lookup tables that are larger in size.

This config setting, as mentioned, is located in the ris.exe.config file located in the <appSettings> section of the file

This setting is:

<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/>

Where the value can be any lookup table, and a value=”*”, will retrieve all lookups.

The setting has resulted in undesired results of possible slowness, depending on the lookup table, and possibly additional bugs. Because of this, we are requesting that all sites comment out this line in the ris.exe.config table. The commented line will look like

<!--<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/> -->

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

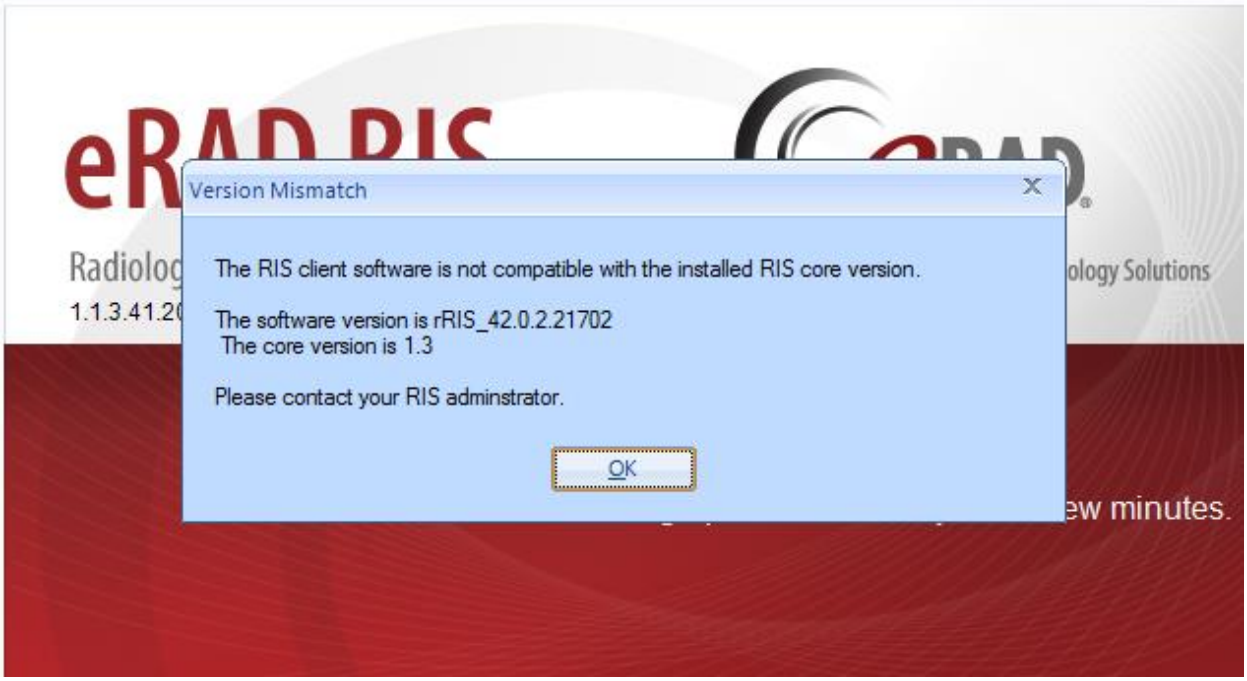
## 8. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.42.0.10. 22420.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_42.0.10. 22420→ rRIS_1.3.42.0. 10. 22420. NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 1. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 6370 | Error starting CDS service | Urgent |
| 6307 | Potential for studies to be orphaned in a way as they won't appear on worklists | Urgent |
| 6276 | Reporting - Error thrown when suspend, dictate, then suspend or submit again | High |
| 6238 | EMR Orders with multiple procedures - in some cases the order does not appear in the Map EMR screen | High |
| 6214 | _max_interpretation_version does not update when an addendum is deleted | High |
| 6131 | Reschedule Order - Contact/Demographics Changes Not Saving | High |
| 6130 | Reschedule Order - Race Changes Not Saving | High |
| 6129 | Reschedule Order - Family History Changes Not Saving | High |
| 6445 | Person Merge improperly invalidates Quality Review Distribution dataset | Normal |
| 6428 | Payment Detail (Now OTC QA) pulling incorrect site if site gets changed | Normal |
| 6424 | Radiologist Dashboard - Activity by Radiologist counts off | Normal |
| 6422 | Typo in report name CTP Count - Performed Procedures | Normal |
| 6411 | RTAT Detail Mammo report | Normal |
| 6402 | Scanned Document version of EMR Orders has address line duplicated and is missing phone number and reason for visit | Normal |
| 6372 | MU - dgridLabResults failed with: System.NullReferenceException: Object reference not set to an instance of an object. | Normal |
| 6337 | Modality Logo Override Issue | Normal |
| 6329 | Mgmt Report issue - Edited Jobs By User Detail | Normal |
| 6316 | RTAT by Radiologist - returning incorrect results | Normal |
| 6315 | Radiologist Signing Activity Report - pulling in addended exams | Normal |
| 6313 | Radiologist Dictation Activity by Date - pulling incorrect site\practice for outside reads | Normal |
| 6248 | Billing exception screen no displaying Patient Race | Normal |
| 6219 | locking failure after changing status | Normal |
| 6216 | Value cannot be null error when using Release Form on Image Request | Normal |

## 2. Changes to Configuration

New Access Strings and Configuration Settings

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Access string / User Group Permission tables | Clinical.CreateTableInReport | Full | Grants access to creating tables in diagnostic reports |

A configuration change to the ris.exe.config file was introduced in build 2.42 this setting was designed to lessen the delays when retrieving lookup tables that are larger in size.
This config setting, as mentioned, is located in the ris.exe.config file located in the <appSettings> section of the file

This setting is:
<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/>

Where the value can be any lookup table, and a value=”*”, will retrieve all lookups.

The setting has resulted in undesired results of possible slowness, depending on the lookup table, and possibly additional bugs. Because of this, we are requesting that all sites comment out this line in the ris.exe.config table. The commented line will look like

<!--<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/> -->

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 3. New Features and Enhancements

### Studies from Inactive Sites Included at Practice Level

The behavior of the org picker has changed when a user picks a practice. Now all sites, active and inactive are included in filter for the WL. Note that when a user attempts to pick a specific site within a practice on the org picker that only "active" sites are shown. The difference here is when a user picks an item at the practice level the WL will include all sites regardless if they are active/inactive status.

Note: this solution does not allow you to see items in WL where the scope of the WL is limited to a site, such as the reception and technologist WL.

### Performed Date Added to Transcription WL's

Prior to this patch release the Performed Start Date and the Performed End Date columns were not available on Transcription WL's. With patch release 42.0.11 they are now included in all Transcription WL's with the exception of Pending Review WL and All Pending Review WL.

In addition, the columns Performed Start Date and Performed End Date have also been added to the Dictated By Date and All Dictated WL's under the Radiologists menu.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Table Creation for Diagnostic Reports Now Configurable

In patch release 42.0.11 we have added a new access string titled "**Clinical.CreateTableInReport**". Default access is "Full". When set to "None" in the User Group Permissions table, the user(s) that belong to this user group will no longer have the Toolbar option or Context Menu option to insert tables into diagnostic reports.

In this figure, the toolbar buttons outlined in red are for creating tables and inserting/removing rows and columns.

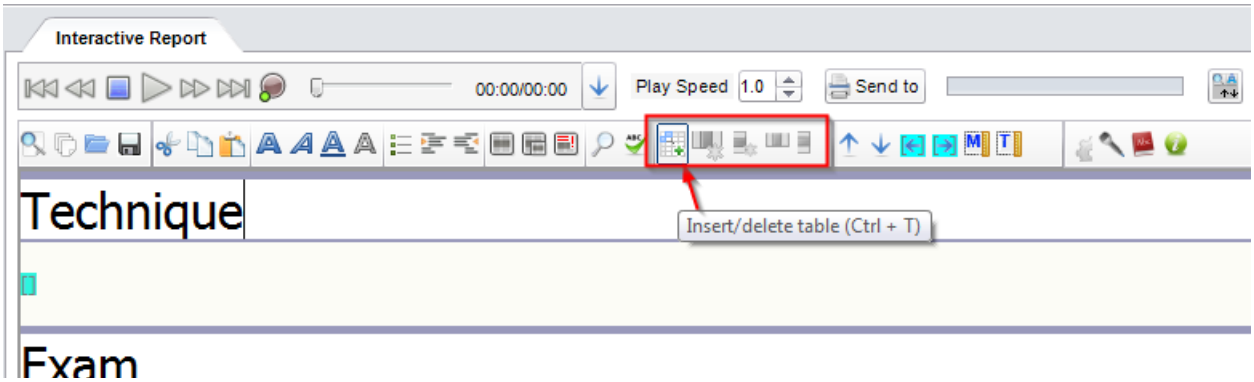

**Figure 3.1 – Toolbar options for tables in reporting window**

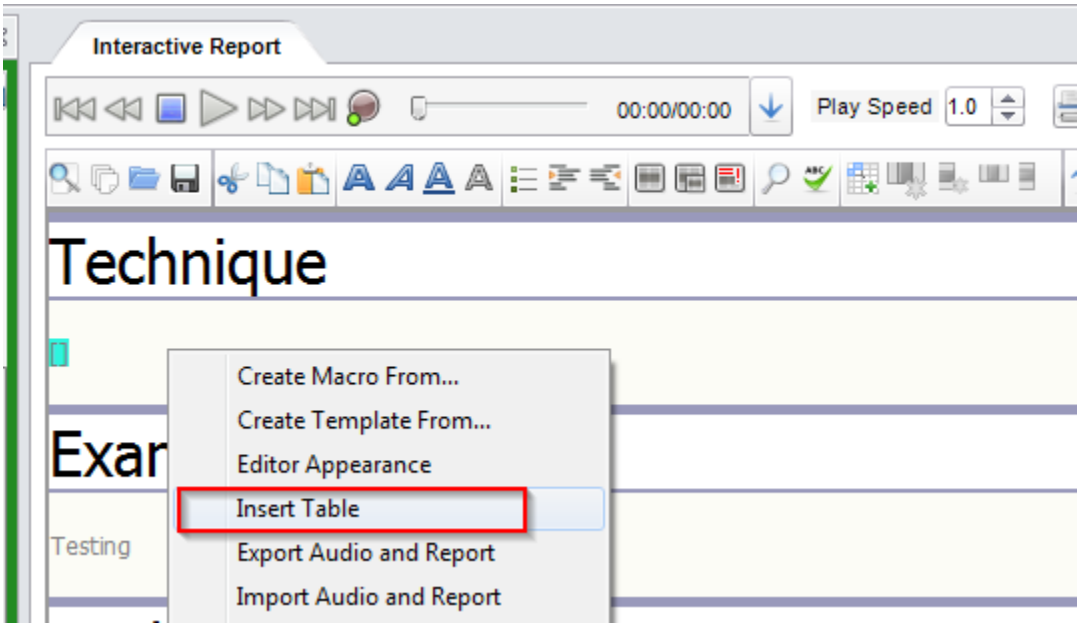

**Figure 3.2 – Context menu option to Insert Table**

## 6. Intended Audience

This document is created by the RIS Development team for the RadNet/eRAD RIS Implementation teams.

## 7. Who is affected

Build 42 installs. Server updates are not cumulative. This server update must be applied to 42.0.4

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

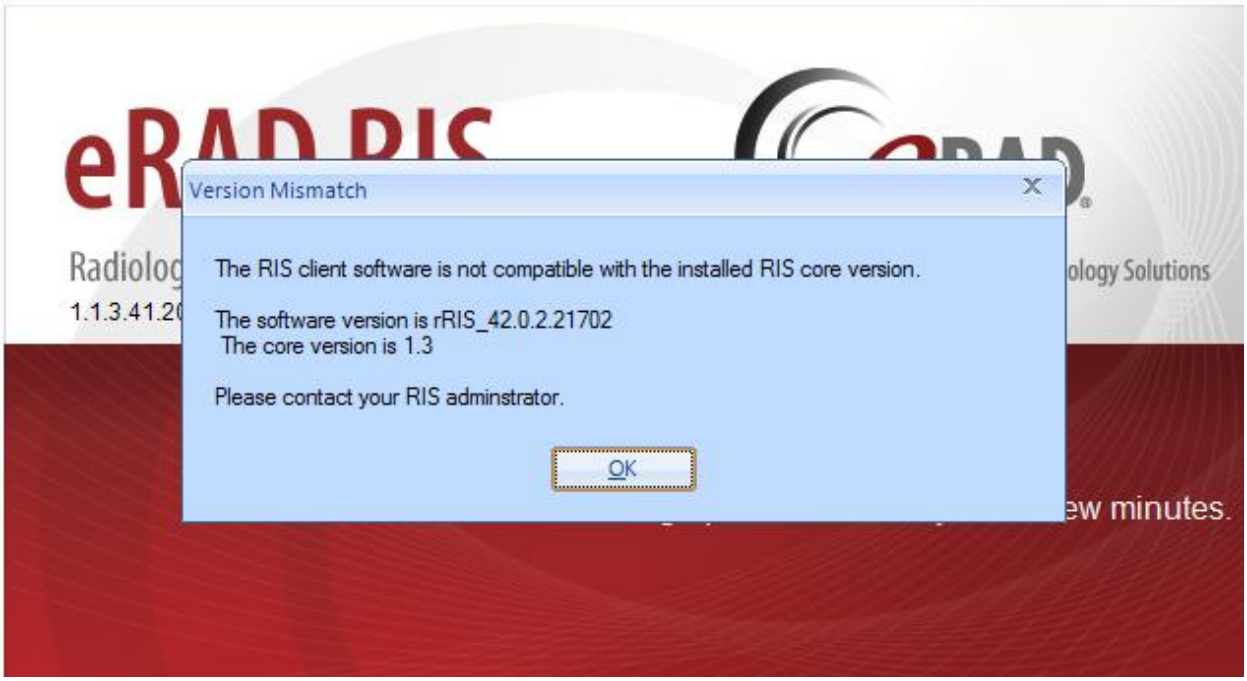
## 9. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.42.0.11.22495a.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_42.0. 11.22495a→ rRIS_1.3.42.0. 11.22495a. NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
*rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   **Restart each service.**

3) Run the B42.0.11.sql file against the eRAD RIS database instance

4) SQL Reporting - Deploying eRAD RIS Reporting Services:

There is a utility called **DeployReports.bat** that will deploy the reports to a SQL Server Report Service. This utility is found in the **Build X\SSRSDeployment** folder. Below are the steps on how to use this utility.

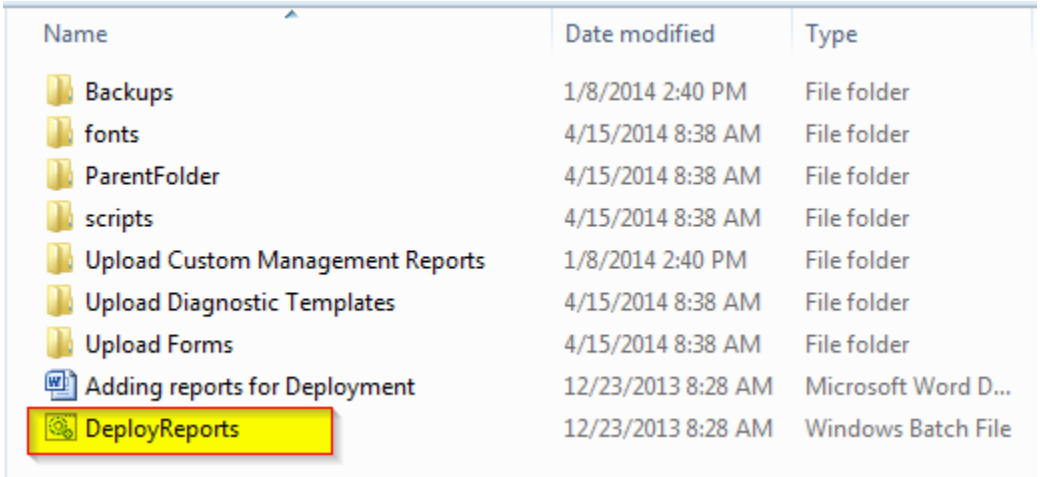


**Figure 9.1 – DeployReports.bat file in the SSRSDeployment folder**

1. Launch the DeployReports.bat file.
2. ***Enter report server name [default:<computer_name>]:***
   a. A script will run against the server and return a list of all the root folders on that report server
   **By Default this will pull the computer_name environmental variable from the machine running the script. I suggest running this from the report server for performance anyway.
3. **Enter root folder to deploy reports [default: production]**:

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

   a. This will create a new root if the name you give doesn't exist, or it will simply publish below the root of the folder if it does already exist. We typically will use "production" for the installation folder. Note: The script forces the root name to be lowercase.
   **Default is suggested to be production, but you may need to change it based on the environment you are deploying to. Ie: testserver might be called something else.

4. **Do you wish to create a backup of the existing reports?**:
   a. This will create a file backup of the report directory specified in the same directory deploy.bat is being run from inside a folder called Backups where it will create a folder based on datetime of backup. Ie: 04172014_110605 (MMDDYYYY_HHMISS).
5. **Do you wish to deploy core management reports**?
   a. If you enter "y", it will redeploy the core management reports
6. **Do you wish to upload Forms**?
   a. If you enter "y", the script will deploy any .rdl files into the installations Forms folder that you have previously saved into the script folder called "Upload Forms" including the folder below it called SubReports.
7. **Do you wish to upload Diagnostic Templates**?
   a. If you enter "y", the script will deploy any .rdl files into the installations Diagnostic Templates folder that you have previously saved into the script folder called "Upload Diagnostic Templates" including the folder below it called SubReports.
8. **Do you wish to upload Custom Management Reports?**
   a. Entering "Y" will copy any .rdl files you've copied under the deployment folder called Upload Custom Management Reports onto the server under Management Reports\Custom\Uploads directory
9. **Do you wish to create a datasource**?
   a. If you select "y" you will get prompted for more information about the datasource you wish to create. You only need to create a datasource, if this is a new installation. No need to do this if you are upgrading an existing installation. The datasource gets created in the root of the folder from step 3. The datasource will be called RISDataSource.

If you chose to create a datasource, the following steps will be requested to complete the connection string.

1. **Enter database server name**:
   a. This is the name of the physical database server
   ex. MYSERVER-1
2. **Enter database name**:

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

   a. This is the name of the database on the database server
      ex. rRIS_Site
3. **Enter report schema user name**: ex. The account that the datasource will use to connect to the database ie: SA. (For security reasons "sa" is not recommended)
4. **Enter report schema password**:

The results of deployment will be written to log.txt in the same folder as the DeployReports.bat file.

## 1. Defects Resolved

| Redmine # | Subject | Priority | Found Version |
|---|---|---|---|
| 6598 | PAC IW Out of sync problem | Urgent | 2.42.0.9 |
| 6311 | Verbal order is hard-coded to associate to a known scan document type - this should be configurable | High | 1.40 |
| 6594 | referring physician "visited at" drop down list contains only numbers, not human readable addresses | High | 2.42.0.11 |
| 6566 | ReportTemplateEditor not being cleaned up when ReportingRadiologist closes | High | 2.42.09 |
| 6548 | bi-rads info not reset when using screen re-use on dictate screen. | High | 2.42.11 |
| 6543 | Reporting - screen reuse and pending save items may hang around on the worklist | Normal | 2.42.0.11 |
| 6441 | PACS images are loaded even if reporting window ultimately does not open. | Normal | 2.42 |
| 6644 | PACS Caching - The RIS is failing to clear out the cache field properly when it is to no longer be cached. | Normal | 2.42.0 |
| 5401 | Cannot re-dock patient folder window because of exception on title bar right-click | Normal | 1.41.1 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

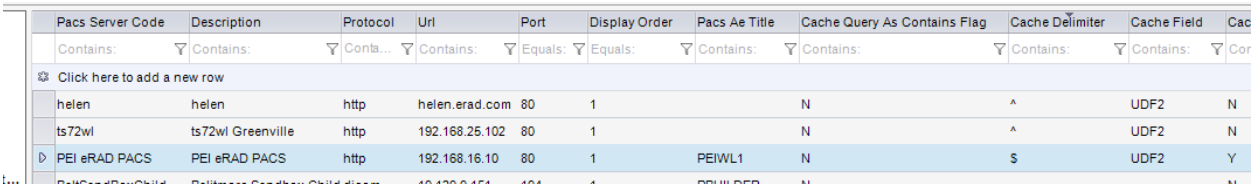
## 2. Changes to Configuration

New Access Strings and Configuration Settings

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Access string / User Group Permission tables | Clinical.CreateTableInReport | Full | Grants access to creating tables in diagnostic reports |
| SystemConfig lookup | VerbalOrderScanDocumentType | Script | Default scan document type for a verbal order. Note if this scan document type doesn't exist, the first scan document type will be chosen. |
| SystemConfig lookup | ElectronicOrderScanDocumentType | Script | Default scan document type for a Electronic/HL7 order. |

# PLEASE NOTE IMPORTANT CHANGE

**NOTE: During testing of these new PACS features, it was discovered that using ^ as a cache delimiter does not work with an "equals" style query. Recommended character is now $. The delimiter is set in the PACSServer lookup table. In the figure below notice the caret ^ is replaced with a dollar sign $ for the PEI eRAD PACS server.**



| Pacs Server Code | Description | Protocol | Url | Port | Display Order | Pacs Ae Title | Cache Query As Contains Flag | Cache Delimiter | Cache Field | Cac |
|---|---|---|---|---|---|---|---|---|---|---|
| Contains: | Contains: | Conta... | Contains: | Equals: | Equals: | Contains: | Contains: | Contains: | Contains: | Cor |
| Click here to add a new row | | | | | | | | | | |
| helen | helen | http | helen.erad.com | 80 | 1 | | N | ^ | UDF2 | N |
| ts72wl | ts72wl Greenville | http | 192.168.25.102 | 80 | 1 | | N | ^ | UDF2 | N |

**Figure 2.1 – PACSServer lookup displaying new cache delimiter**

++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++

A configuration change to the ris.exe.config file was introduced in build 2.42 this setting was designed to lessen the delays when retrieving lookup tables that are larger in size.
This config setting, as mentioned, is located in the ris.exe.config file located in the <appSettings> section of the file

This setting is:
<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/>

Where the value can be any lookup table, and a value=”*”, will retrieve all lookups.

The setting has resulted in undesired results of possible slowness, depending on the lookup table, and possibly additional bugs. Because of this, we are requesting that all sites comment out this line in the ris.exe.config table. The commented line will look like

<!--<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/> -->

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 3. New Features and Enhancements

### Allow Billing Codes Edits Controlled from Billing Codes Lookup

This relates to a feature that was released in Build 42 titled "Allow Edit Billing Units". Users were able to add additional billing codes to the study that were not associated with the procedure. While this in itself is not an issue, the fact that users could then increase/decrease the amount units for the billing code is.

What we have done is added a new column to the BillingCode lookup table titled "Allow Edits Units Flag" that has possible values of Y or N.

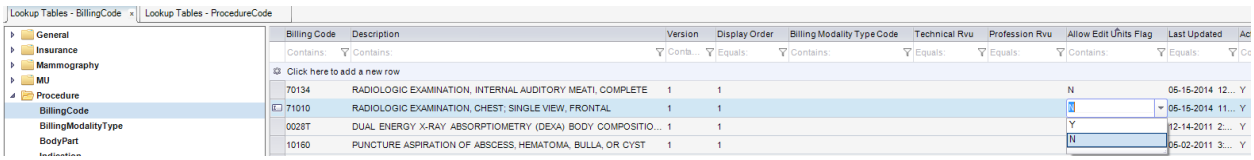

**Figure 3.1 – BillingCode lookup displaying new column**

If the value on the billing code for Allow Edit Units Flag = N, when a user adds this billing code to a study from the Technologist's Perform Exam window, the View Edit window or the Billing Exception window, they will not be able to edit the unit value for that Billing Code.

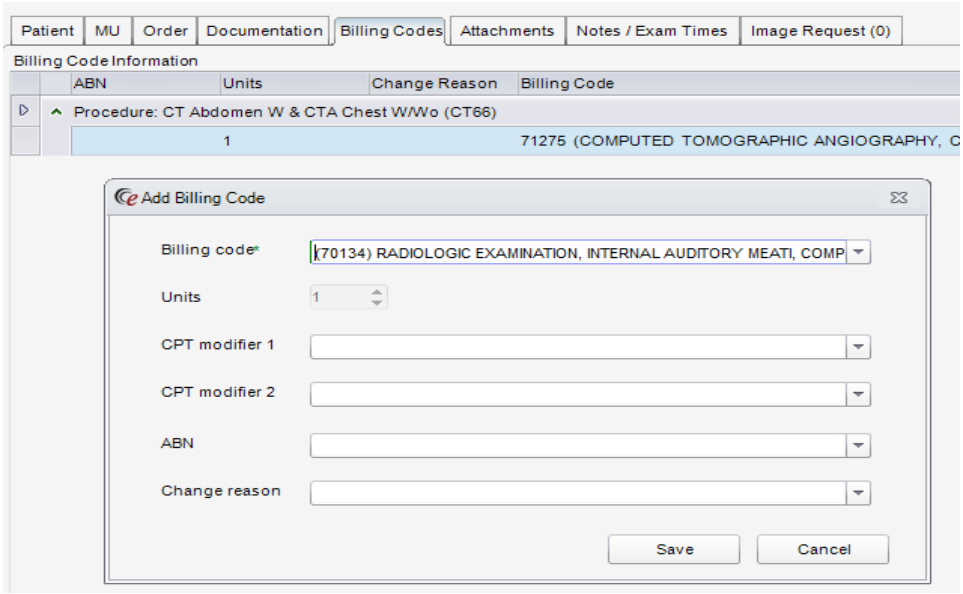

**Figure 3.2 – Add billing code not associated with procedure that units cannot be edited**

If the billing code doesn't allow for the edit of Units, but when associated to a procedure code in the ProcedureCode lookup table and it is desired to allow the edit of units for this particular procedure, it can be overridden by using the method to add the billing code described in the original feature of 42.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

The procedure code row can be expanded in the lookup table. Under the l_procedure_code_x_billing_code tab the user added the billing code and can select if the billing code should have the option to Allow Edit Units.

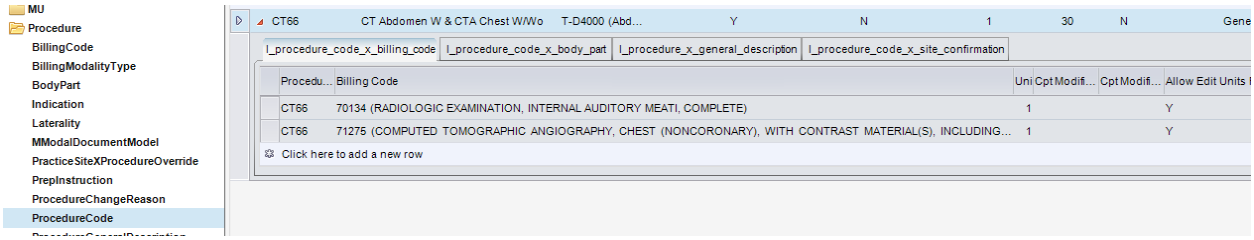

**Figure 3.3 – Override for default Allow Edit Units flag at Procedure Code level**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## PACS Caching - Query to see what is being cached by a particular user is a contains query and is expensive

On every refresh of the Pending Dictation worklist the RIS initiates a URL call to the PACS to retrieve the list of studies being cached by the user. This call is done using * as a wildcard before and after the filter value. This is an expensive operation on the PACS database. Since changes in 42 prevent more than one user from caching a study anyway, these wildcards are no longer necessary.

We have introduced a new caching option for PACS calls of the images to be cached for a user.

A new column added to the PACSService lookup table titled “Cache Query As Contains Flag” has been added with possible values of Y or N.

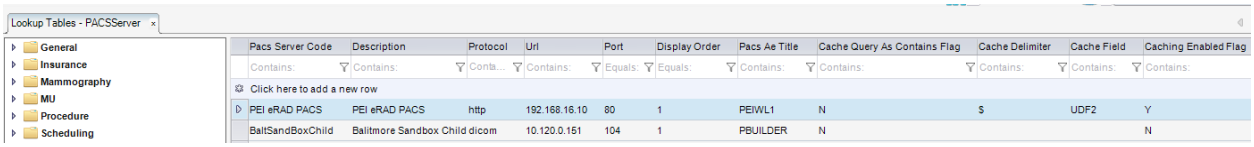

**Figure 3.4 – PACSServer lookup displaying new column of Cache Query As Contains Flag.**

When set to Y, it works as before, using the wildcard to find the user to cache for. When set to N it will not use the wildcards before and after the username, thus doing an exact search on the username, instead of a “is like”.

The default value of this setting is off and is not recommended to be turned on.

## PLEASE NOTE IMPORTANT CHANGE

**NOTE: During testing of these new PACS features, it was discovered that using ^ as a cache delimiter does not work with an "equals" style query. Recommended character is now $. The delimiter is set in the PACSServer lookup table. In the figure below notice the caret ^ is replaced with a dollar sign $ for the PEI eRAD PACS server.**

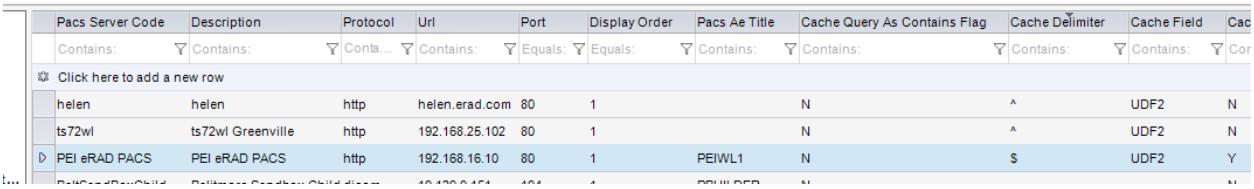

**Figure 3.5 – PACSServer lookup displaying new cache delimiter**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## PACS Cache Improvement - New field to determine priority/order of studies for the PACS to cache

The current method by which the RIS controls the PACS caching mechanism has no way to provide a priority for the PACS. This means that if there are a large number of studies to cache the first ones that are needed by the user may not be the first ones that the PACS viewer retrieves.

Added new columns to the PACSServer lookup table called Cache Order Field.

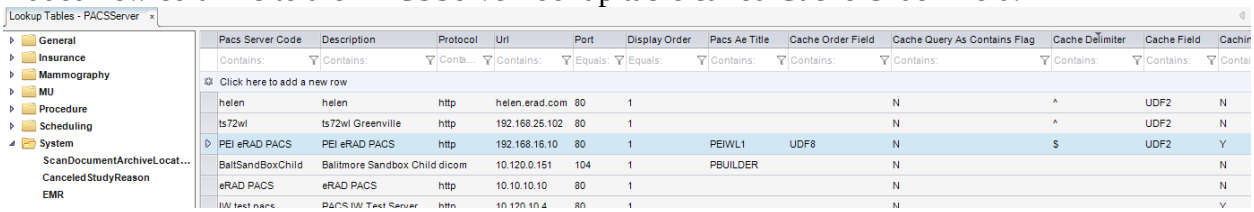

**Figure 3.6 – PACSServer lookup displaying new column of Cache Order Field**

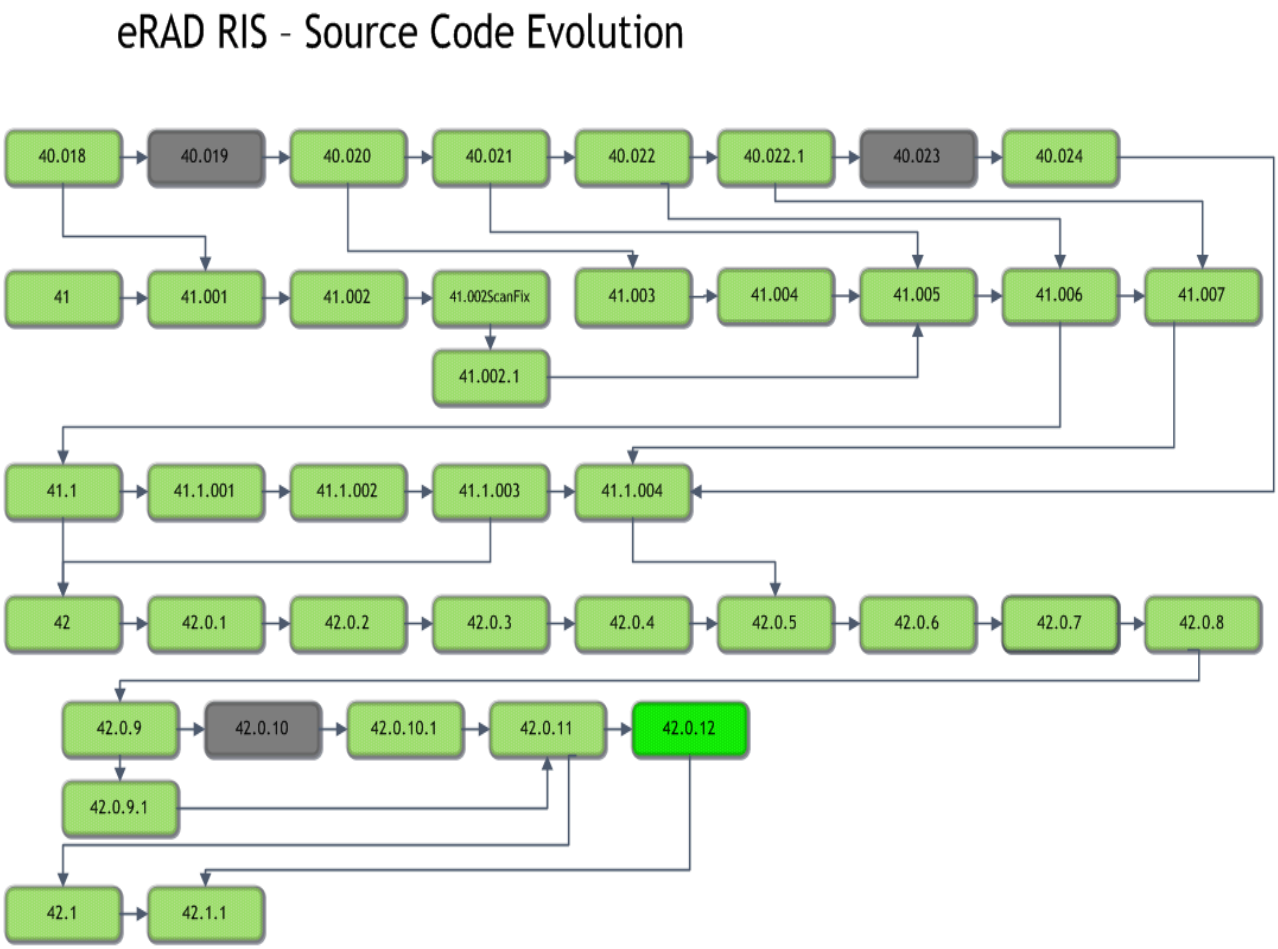
The cache order field is used to determine the priority of the cache job and is filled with a datetime and a set id.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 4. Code Stream



**Legend:**

Light Green = Released software

Gray = Will not be released

Bright Green = Current Release

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

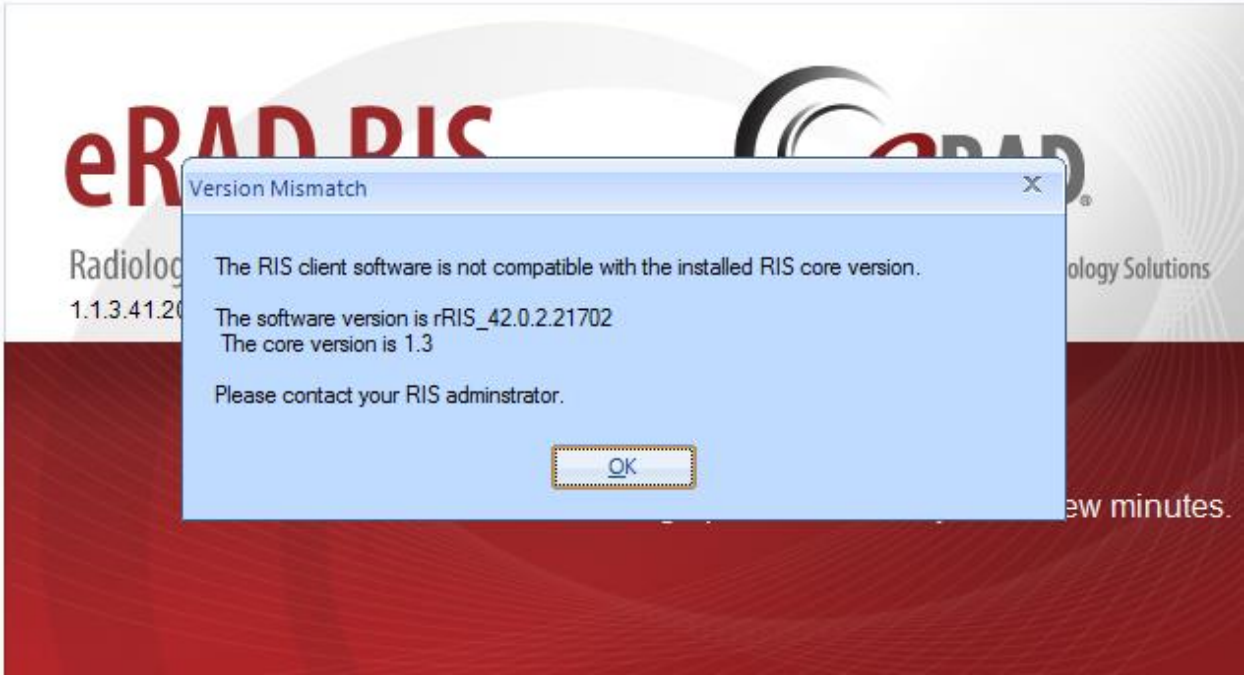
## 9. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.42.0.12.22982.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_42.0.12.22982→ rRIS_1.3.42.0.12.22982. NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   **Restart each service.**

3) Run the B42.0.12.sql file against the eRAD RIS database instance

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 42.1 and subsequent server releases. This version of eRAD RIS is referred to as Build 2.42.1.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 2.42.1 is considered a new core release of the application and will require a reinstallation of eRAD RIS. This is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 4. New Access Strings and Configuration Settings 42.1

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Access string / User Group Permission tables | Config.AllowMModalConfig | None | Allows users access to turning on M*Modal workflow for themselves or other users if the current user has admin access |
| Access string / User Group Permission tables | Config.AllowPowerScribeConfig | None | Allows users access to turning on PowerScribe workflow for themselves or other users if the current user has admin access |
| Access string / User Group Permission tables | PowerScribe360.AllowAutofeed | None | Allows users access to the PowerScribe autofeed next study functionality |
| Access string / User Group Permission tables | PowerScribe360.Enable | Full | Controls Access to the PowerScribe 360 menu item. Under this menu item are 2 options - enable and disable .When set to Disabled messages will not be sent to Powerscribe 360 via API integration |
| Access string / User Group Permission tables | Clinical.SetMarkAsReadFlag | None | Allows access to right click menu to Mark As Read or Unmark As Read |
| SystemConfig lookup | LimitOpenReportingWithPowerscribeCount | 0 | Determines the number of reporting windows that can be opened at one time by a given user with Powerscribe integration. 0 or negative values result in no defined limit. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

New access strings from 42.0.3

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Ris.exe.config | <add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/><br><br>**Changes to**<br><br><!--<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/> --> | | The setting has resulted in undesired results of possible slowness, depending on the lookup table, and possibly additional bugs. Because of this, we are requesting that all sites comment out this line in the ris.exe.config table. |

New access strings from 42.0.10

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Ris.exe.config | <add key="EnableHighPriorityLookupStrategy" value="true"/> | | New setting added. The High Priority Lookup is different by role.<br>If someone opens scheduling (or appointmentbook), we add Modality, ProcedureCode, AvailabilityTemplate, and ScheduleGroup to the High Priority List. If someone opens Reporting or Transcription, we add QualityReviewDistribution to the High Priority List |
| Ris.exe.config | <add key="LookupTableTimeToLiveInMinutes" value="5"/><br><br>**Changes to**<br><br><add key="LookupTableTimeToLiveInMinutes" value="60"/> | | The change **only applies for systems that have a value of less than 60**. For example: Change the value of 5 to 60. Since the Time to Live will be increased to 60 minutes, the cache will be updated every 60 minutes if changes were made. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 5. New Features and Enhancements

## Reporting – Reporting Mode User Preference option added.

There is an additional user preference accessible from the administrative personnel area and also in the User Preferences, to turn off embedded reporting and turn on PowerScribe reporting. The new Reporting Integration user preference is set up in the User Preference on the General tab under the Workflow Options section and is labeled as "Reporting mode". The preference is set with a drop down list.

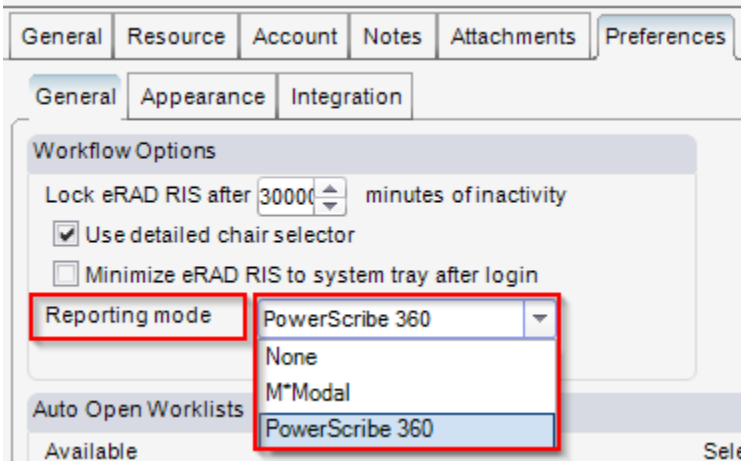

**Figure 5.1 – Reporting mode selection dropdown list**

The available reporting integration options available are described below:

*None*

This mode will disable the embedded or closely integrated reporting solutions. Radiologist worklists and screens do exist but do not include a report editor, dictation control or any other tool windows that would otherwise interact or depend on the report or the dictation existing within RIS.

If PACS integration is enabled, this will remain. It is possible in *None* mode to have PACS drive a third party reporting solution. However RIS will not communicate directly with such reporting solution.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

*M*Modal*

The *M*Modal* mode will use the traditional eRad RIS embedded reporting solution with M*Modal.

A new access string named "**Config.AllowMModalConfig**" controls access to the M*Modal option in the Reporting Mode list box. The default value for this access string is None.

*PowerScribe*

The PowerScribe mode will enable system integration with PowerScribe 360s reporting solution. This option will allow for reporting to be done externally with PowerScribe 360 however will support direct application communication/interaction between eRad RIS and PowerScribe 360.

An access string named "**Config.AllowPowerScribeConfig**" has been added for this preference with a default value of 'None'. This ensures only admins have access to enable/disable the preference, or users who have access via this could also enable/disable this preference for themselves.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Non Essential View menu items removed from Reporting window when user is not in M*Modal mode.

While a user is working in the Reporting window and is in "PowerScribe" mode or "None" mode, the view menu options will only display relevant patient folder tool windows. "Templates", "Macros", and "Fields" are no longer available to the user. These options are still available for an M*Modal user.

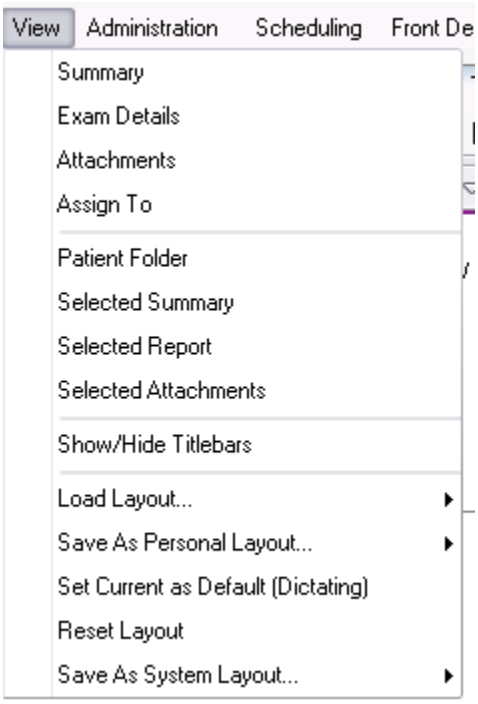

**Figure 5.2 – Reporting View menu when PowerScribe or None mode is enabled**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Non-essential Tool windows removed from the PowerScribe Reporting window

While a user is working in the Reporting window and is in "PowerScribe" mode or "None" mode, the non-essential tool windows will not be displayed. The tool windows removed includes "Templates", "Macros", and "Fields".

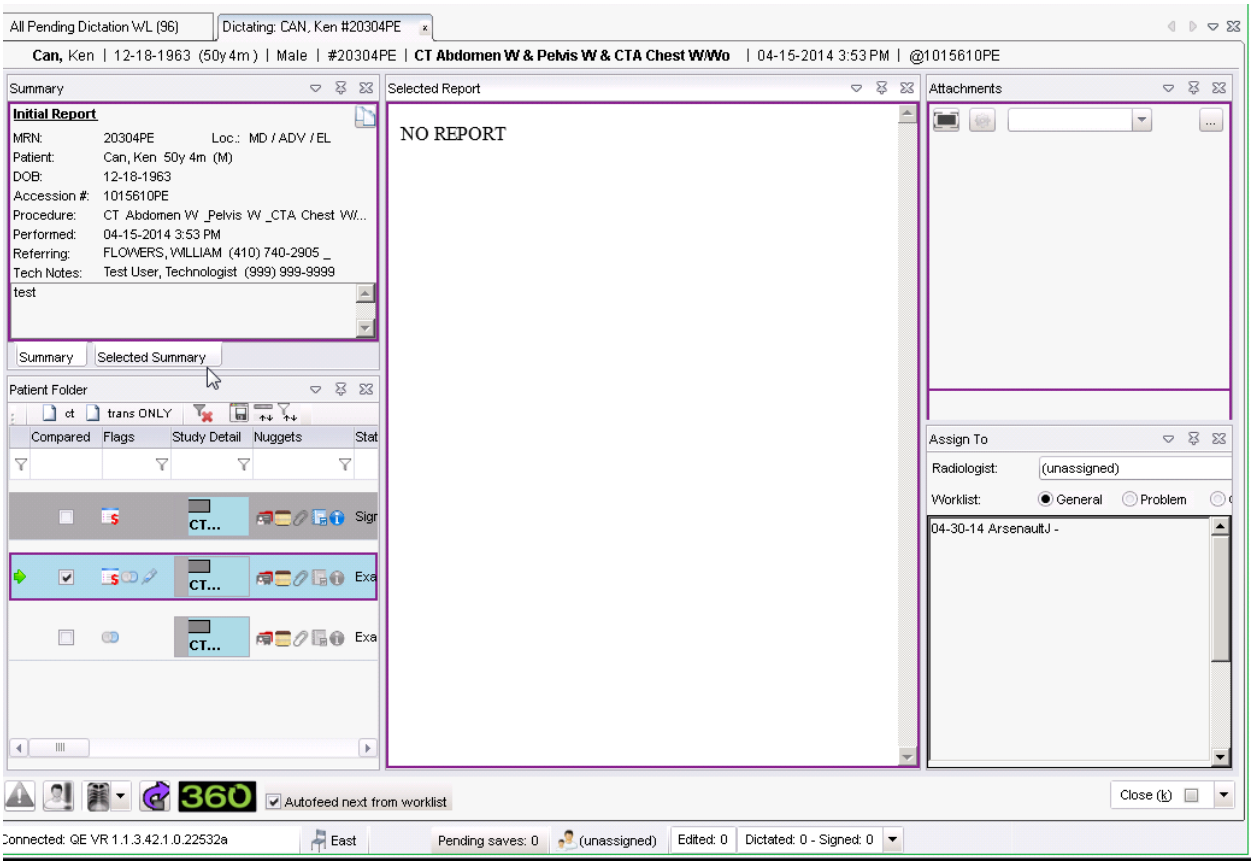

**Figure 5.3 – Reporting window displaying only the essential tool windows.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – BI-RADS control disabled for Reporting Integration Type that is not M*Modal.

The BI-RADs control is no longer available for non M*Modal reporting integration types. The control now is hidden and disabled.

## Reporting – SpeechMike - ability to bypass activation of the speech mike

If the user is not in M*Modal mode, the speech mike initialization routines will be bypassed, leaving the speech mike non-functional other than as an audio input/output device as configured in Windows.

## Reporting – Report Recovery disabled for Reporting Integration Type that is not M*Modal.

For M*Modal ReportIntegrationType you can enable autosave on your user preference, and the feature will be available to you. Autosave/report recovery work flow does not run if you are not using M_MODAL as your ReportingIntegrationType. Now we have created a convenience method for the system to use which tells the system whether report recovery is enabled. It checks the ReportingInterpertationType first, if not M_MODAL then the recovery feature is disabled regardless of user preference for autosaving.

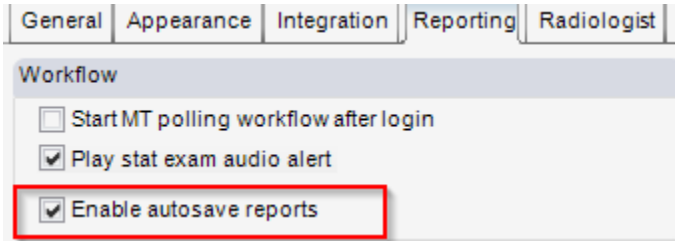

**Figure 5.4 – Enable autosave reports from User Preferences**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – "CDS Management Console" option removed when not in M*Modal mode.

The system currently relies on an MModal connection for radiologists. We need to be able to open the dictate screen cleanly without prompts or errors and without CDS configuration values present in the system config table.

The ability to launch the application and open dictate screen without CDS system configuration variables is now available. The "CDS Management Console" option in the "Administration" menu is now hidden when not in M*Modal mode.

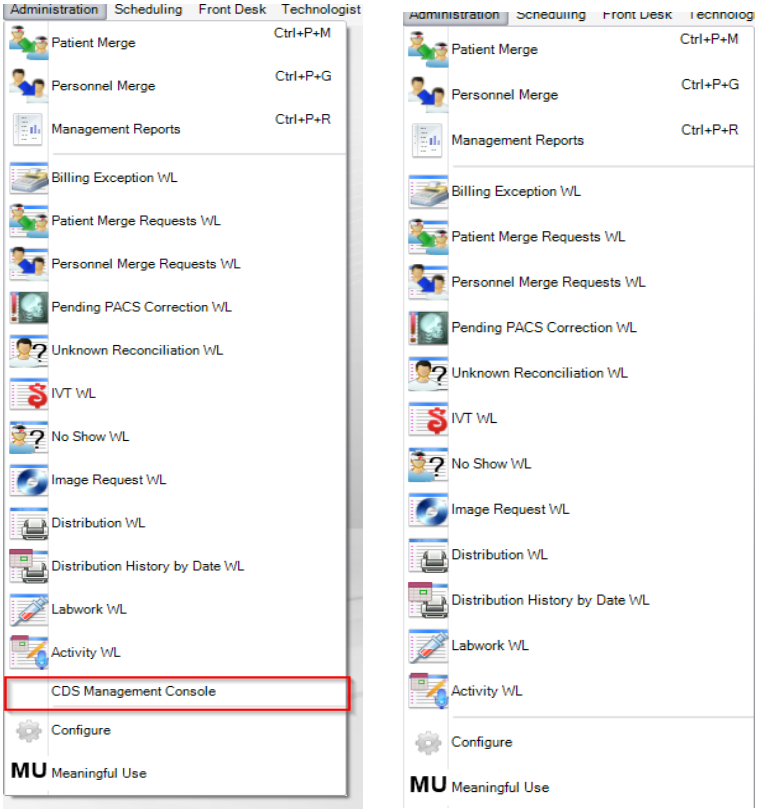

**Figure 5.5 - Administration menu with and without M*Modal enabled**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Report History - ability to support non M*Modal reporting

If you are using reporting integration mode that is not M*Modal or you are using M*Modal but looking to preview a report that was not created via M*Modal integration, the report history window will load an HTML version of the report. This differs from M*Modal integration that loads the full editor and dictation control in read only modes.

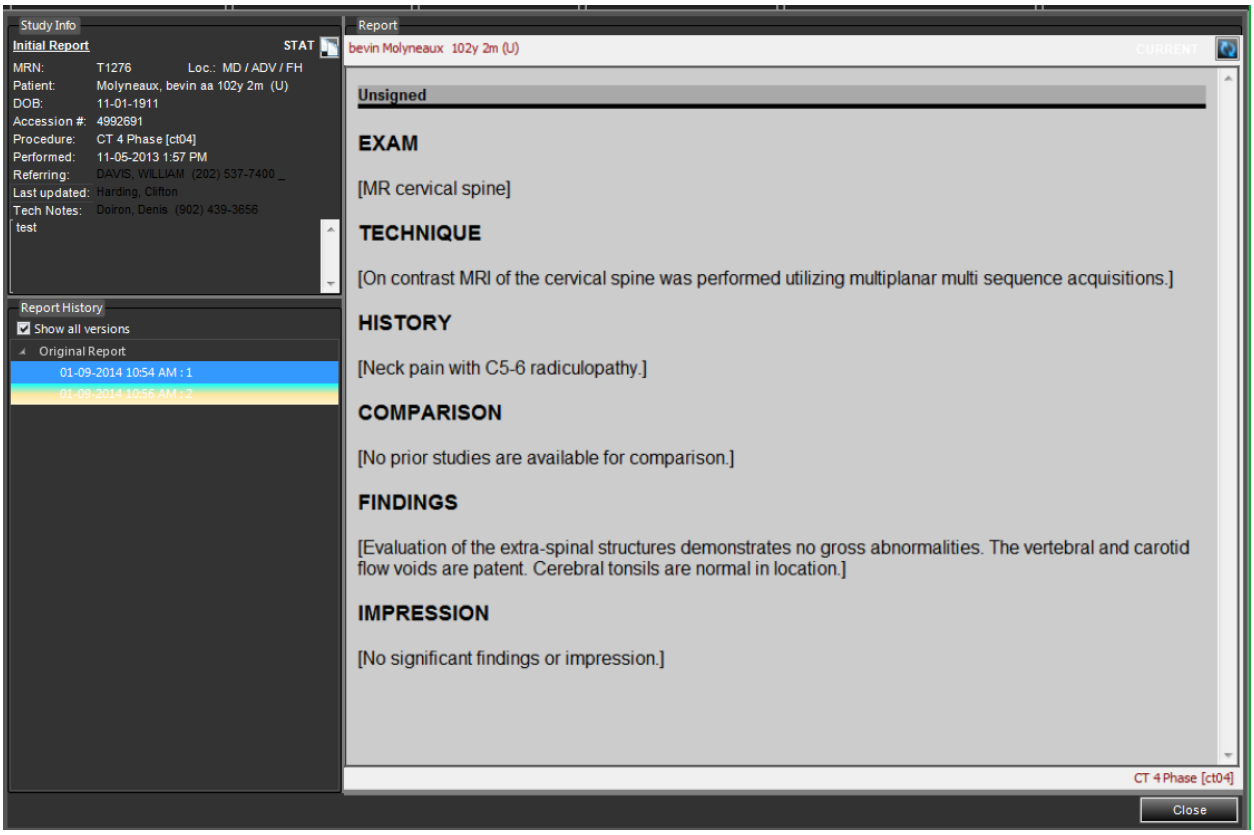

**Figure 5.6 – HTML version of the report without the audio components.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Added Powerscribe 360 to the available Interpretation Types.

Powerscribe360 was added to the available InterpretationTypes in the s_interpretation_type database table as well as the InterpretationTypes enumeration type within the client code.

What does this mean? Previous to Build 42.1 we had to Interpretation Types of Interactive and Batch. These interpretation types were assigned to studies that were dictated on in eRAD RIS using the M*Modal reporting solution. The interpretation type assigned depended on the users dictation type setting (if they had the user preference "Enable Interactive" selected or not)

With the introduction of PowerScribe 360 as a reporting solution to be used with eRAD RIS we created a new interpretation type of PowerScribe 360. If the user has a Reporting mode of PowerScribe 360 and they action a study in PowerScribe 360, the study will be given an interpretation type of PowerScribe 360.

During the transition period between the 2 reporting systems, users will have to complete all studies that currently have been reported on using M*Modal and is not in a status of Signed.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – User prevented from opening a study when interpretation type conflict with current Reporting Mode.

If a user is set up as using "NONE" as his reporting integration, then that user will not be able to open M*Modal or PowerScribe studies. User can only open studies of the same type as their reporting integration mode. If a user tries to open an unsupported study, a message prompt is displayed and the study will abort loading.
When using next workflow, items on the worklist that are not compatible, with the current reporting integration will be skipped.

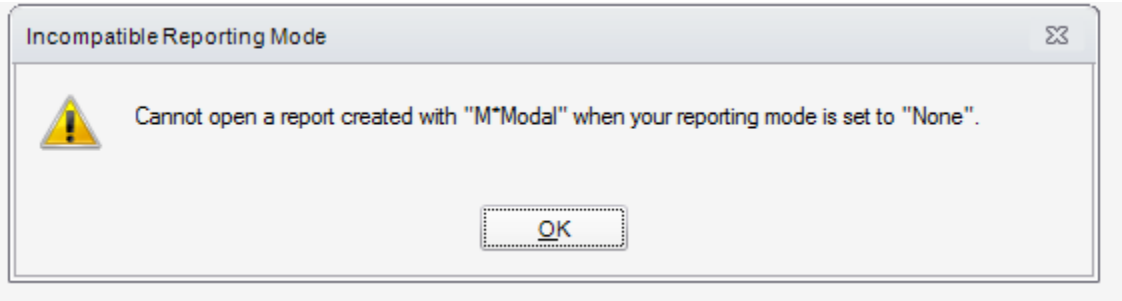

**Figure 5.7 – Message prompt for user trying to open unsupported study.**

Any study that has an interpretation type of Interactive or Batch cannot be opened in PowerScribe 360 until the study is in Signed status, in which at that point the user will be able to open for Addendum in PowerScribe 360.

If a PowerScribe 360 user attempts to open a study that is not signed and has interpretation type of Interactive or Batch they will receive a message.

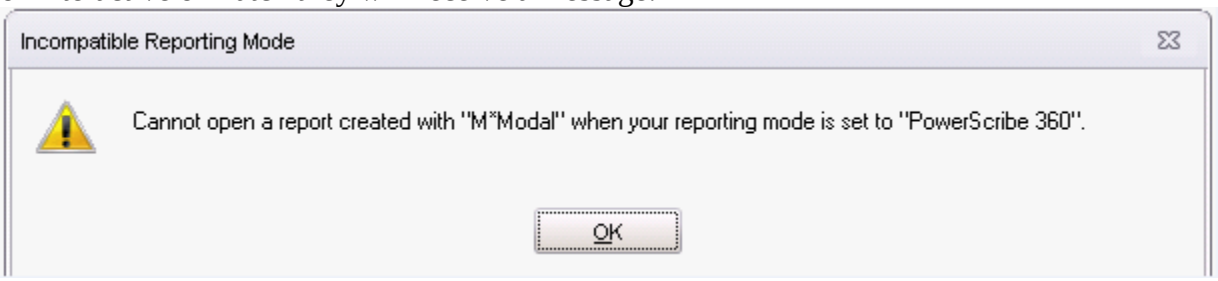

**Figure 5.8 – Message to PowerScribe 360 users from mismatched interpretation type**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

For users that will continue to use M*Modal and also for previous studies that were actioned in eRAD RIS using the M*Modal reporting option they will assigned an interpretation type of Interactive or Batch, depending on the user's M*Modal dictation option.

As well, M*Modal users are prevented from opening studies in reporting window that have an interpretation type of PowerScribe 360.

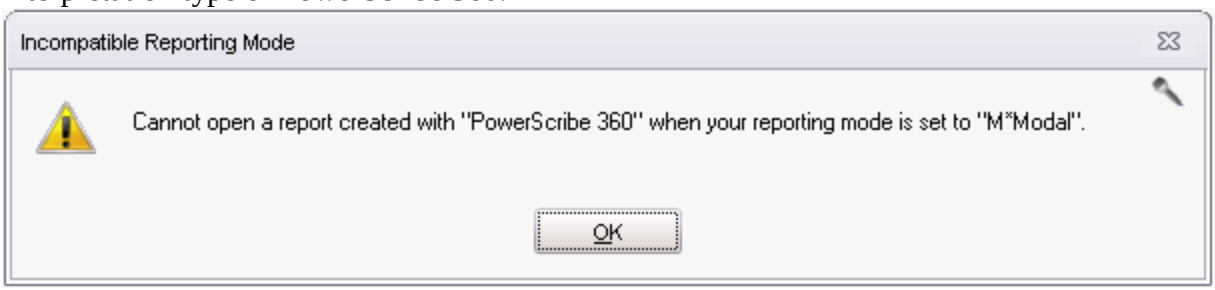

**Figure 5.9 – Message to M*Modal users from mismatched interpretation type**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – WPR workflow button disabled for Reporting Integration Type that is not M*Modal.

When using non-M_MODAL ReportingIntegrationType, users no longer have the WPR-000 workflow button available to create new reports that do not have an accession number associated with it.
Users can still use report on accession to load valid exams.

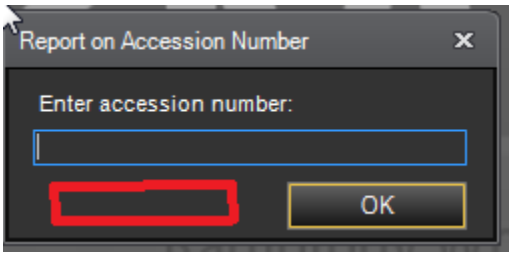

**Figure 5.10 – Updated Report on Accession Number display.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Added the ability to drop an XML file to open PowerScribe reports.

The ability to drop an XML file to open PowerScribe reports has been added as a User Preference. The ability to provide a path to write the XML file has also been added. These are available in the Outbound Reporting Section under the Integration tab. This new file will be dropped when we open or focus a reporting tab in RIS. When the file is dropped PowerScribe reads the file and attempts to open the study.

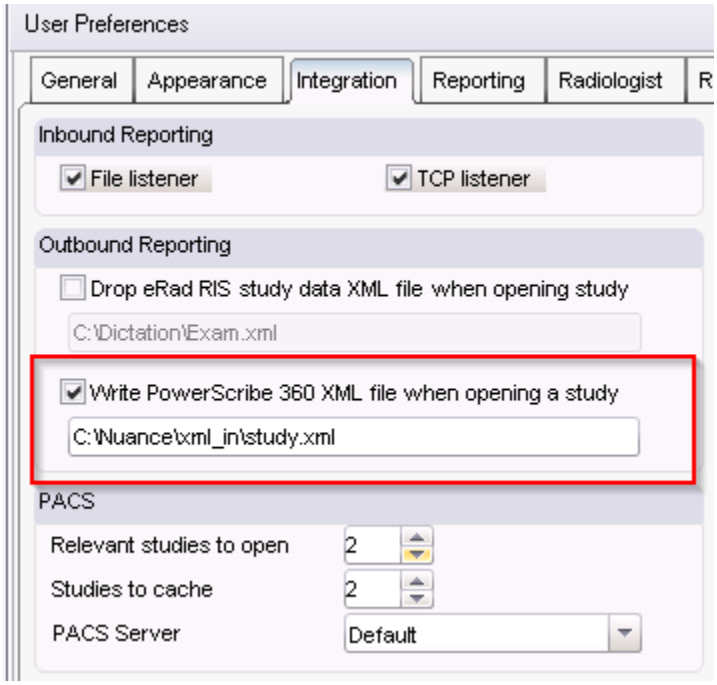

**Figure 5.11 – New Integration User Preferences in Outbound Reporting**

If these are enabled and configured, when opening exams to dictate, RIS will now save an xml file formatted to be read by PowerScribe to trigger opening a study.

If the study fails to load in PowerScribe there will be a trigger button on the rad screen. This can be pressed to re-drop the XML file and try to get PowerScribe to load the file.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

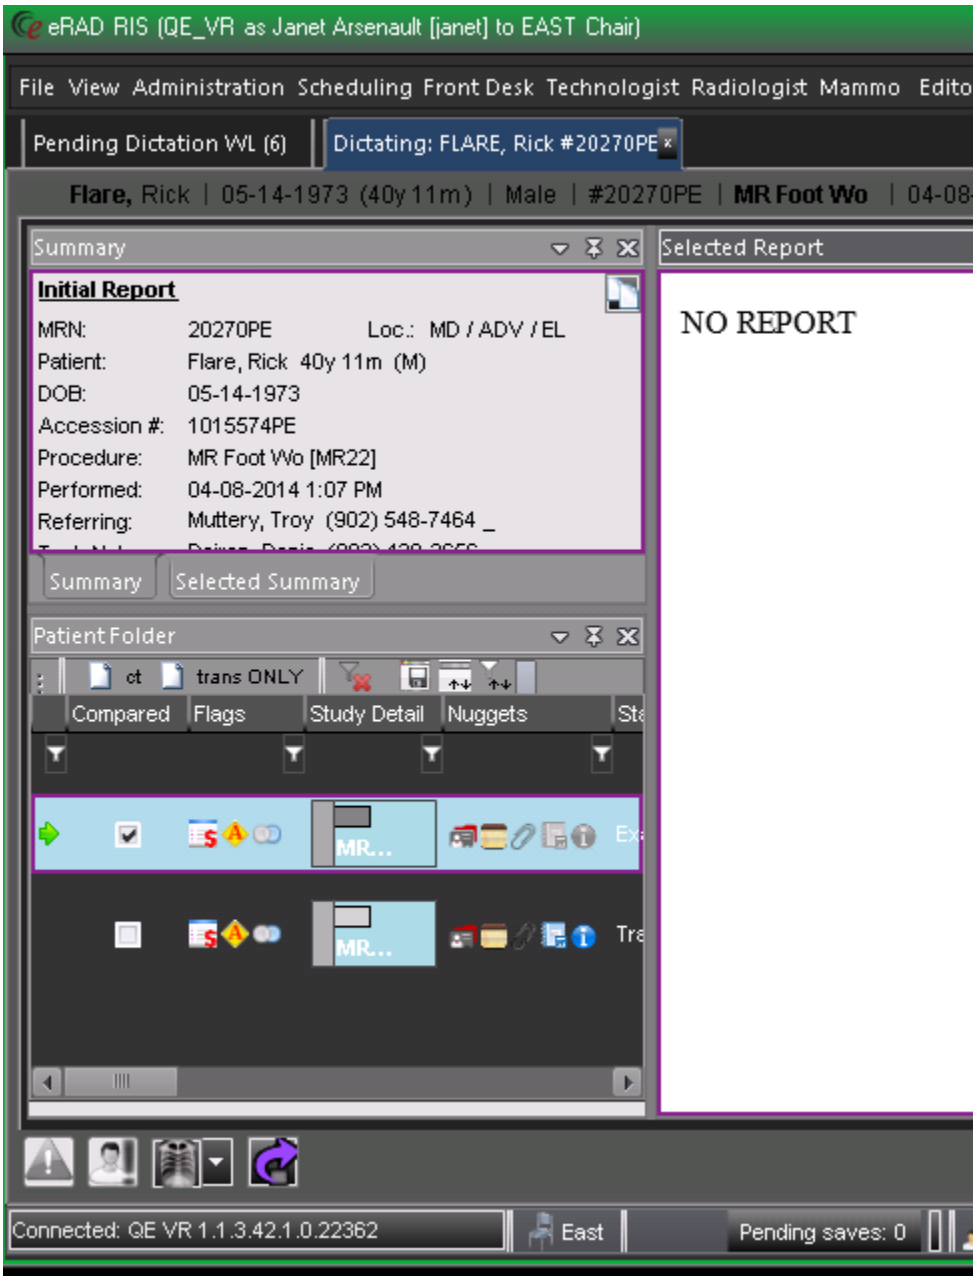

**Figure 5.12 –Trigger button to re-drop XML file shown as purple arrow.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Reporting Integration None – advance status flag.

The advanced status flag is called “Marked Read” and is indicated on the work list with a new flag that will appear under the Flags column in all work lists that have the Flags column. There is also a new column added to the My Pending Dictation, All Pending Dictation, My Pending Signature and All Pending Signature work lists. The column name is “Marked Read” that will display a check mark if the study has the flag applied. This flag is only relevant for reporting integration mode being set to NONE.

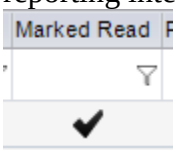

**Figure 5.13 – Marked Read column**

While using Reporting Mode of NONE (as opposed to MModal or PowerScribe 360), RIS does not advance the status of the exam until the outside reading system tells RIS to do so (such as HL7). This new flag is used to indicate that a study which has been on a pending work list has been actioned on. When set, the flag removes the study in question from the My Pending work lists, however leaves it on the All Pending work lists.

New context menu options have been added to add / remove the Marked As Read flag. These options from the context menu (right click menu) are available on the My Pending Dictation, All Pending Dictation, My Pending Signature, All Pending Signature work lists and the Patient Folder.

The menu option names are “Mark As Read” which is available when the study does not have the flag applied. Once it is applied the context menu option will be ‘Unmark As Read”. See figures below.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

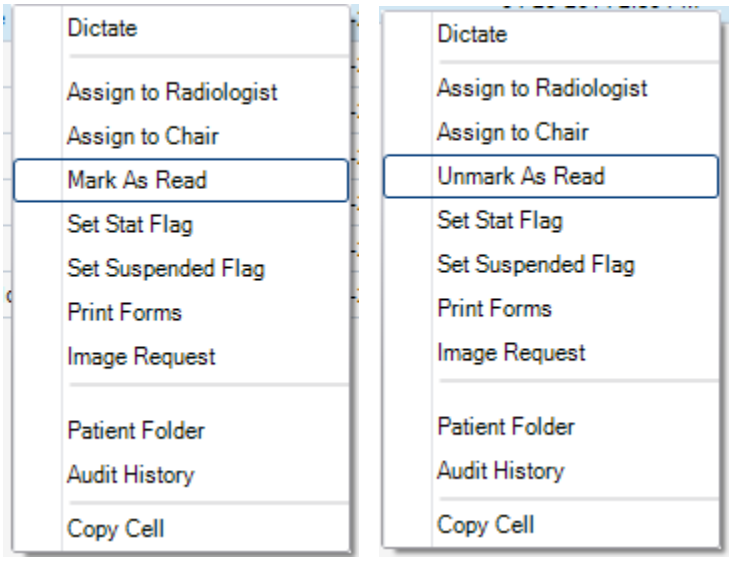

**Figure 5.14 – Mark/Unmark As Read context menu options**

Access to these new context menu options are controlled by a new access string titled "**Clinical.SetMarkAsReadFlag**" that has a default value of None. User groups will need to have this access string added to the user group permissions to gain access to the menu option.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Added the ability to limit the number of reporting windows open.

We now can limit the number of reporting screens that a user can open while using ReportingIntegrationType of PowerScribe 360. There is a new system configuration variable named "**LimitOpenReportingWithPowerscribeCount**" which is to be used by the administrator to set how many reporting windows can be open. The default value for this setting is 0 (zero).

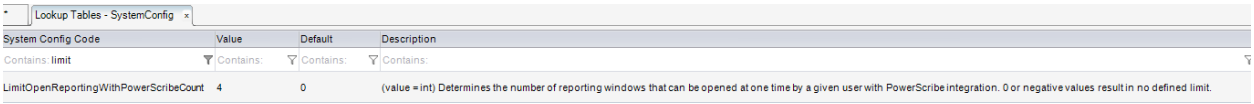

**Figure 5.15 – New system config table setting**

While using PowerScribe 360 mode, if the user tries to open a new reporting window which would exceed the predefined count, they will be notified to close some tabs before opening a new one.

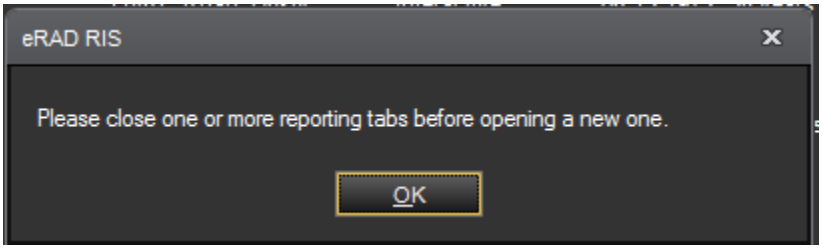

**Figure 5.16 – Prompt to notify user they will have to close one or more tabs.**

This new setting will override the User Group setting.

As a reminder, the User Group setting value is set in the UserGroup lookup table under the column Maximum Open Tabs.

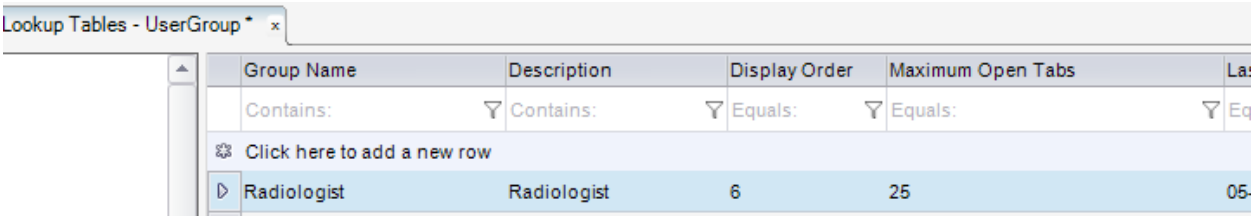

**Figure 5.17 – Usergroup lookup displaying Maximum Open Tabs column**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Added User Preference Autofeed studies for PowerScribe users.

The new user preference "Autofeed studies from worklist" was added to the Reporting tab under the PowerScribe section, which is only available in the PowerScribe 360 reporting integration mode. This determines if this user wishes to have the next study in their worklist auto-fed after completing a study in PowerScribe.

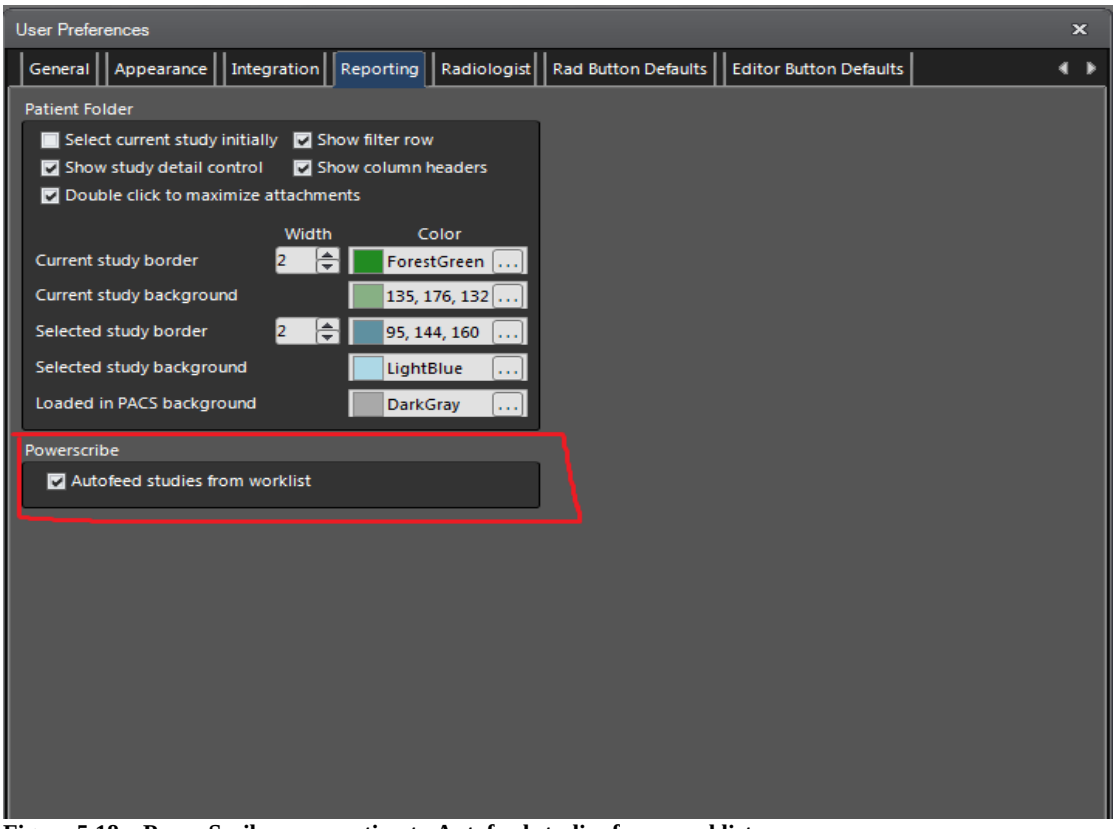

**Figure 5.18 – PowerScribe users option to Autofeed studies from worklist.**

The user preference also shows up as a check box in lower left corner of reporting screens. So a user can change it mid-way through workflow. The checkbox in the reporting windows is controlled by a new access string titled "**PowerScribe360.AllowAutofeed**". Default for this setting is None. The User Preference is always available

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

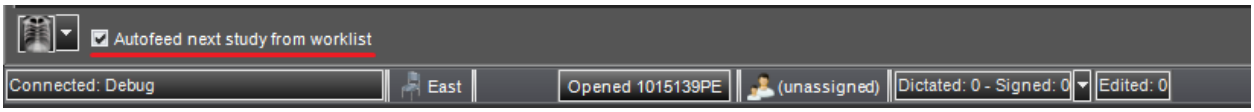

**Figure 5.19 – Option to Autofeed studies from reporting screen.**

Changing the setting "on the fly" via the check box on the reporting screen does not change the actual user preference. It just adjusts/overrides that setting for the current session. When checked, the preference tells RIS to open the next study in your work list after closing/completing the current study. This is enables a "next" workflow of sorts.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Added menu option to Enable or Disable PowerScribe 360.

A new main menu option for PowerScribe 360 has been added that is only displayed when the reporting integration mode is set to PowerScribe 360. The menu item is displayed when the user is logged in using PowerScribe 360. This new menu option will be used to house any PowerScribe 360 specific main menu options in the future. The PowerScribe 360 menu item also has a new access string titled "**PowerScribe360.Enable**" that will control access to the menu item. Default value is Full.

**Figure 5.20 – New Menu option for PowerScribe 360 users.**

For now it will simply have options for Enable and Disable, which will operate similar to the PACS menu options. By default, each session will begin with the menu item set to Enabled.

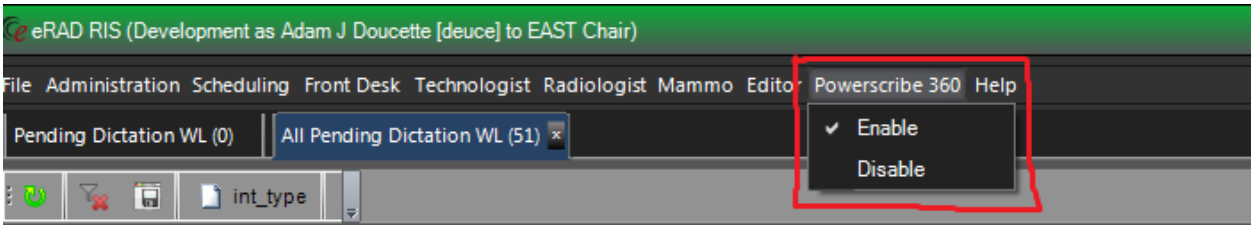

**Figure 5.21 – Dropdown list options for PowerScribe 360 menu option.**

**Figure 5.22 –PowerScribe 360 menu option set to Disable.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

When PowerScribe 360 is set to Disable, the reporting window will open with the same format and style as it usually does with reporting integration mode set to PowerScribe 360. See image below. However the study is not launched in PowerScribe.

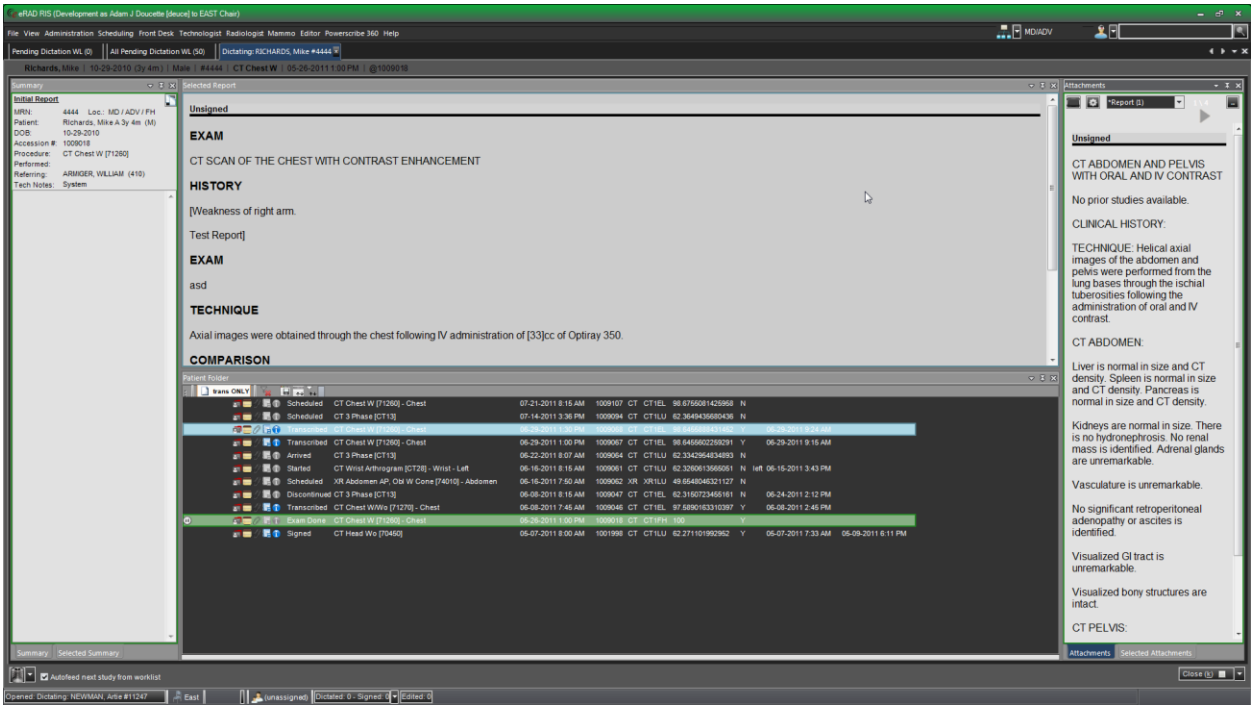

**Figure 5.23 – The reporting window view with PowerScribe 360 disabled.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Access string added for M*Modal reporting mode.

A new Access String "**Config.AllowMModalConfig**" has been added. This allows users access to turning on M*Modal workflow for themselves or other users if the current user has admin access.
If a user has access, then M*Modal will be a reporting mode available in their user preferences.

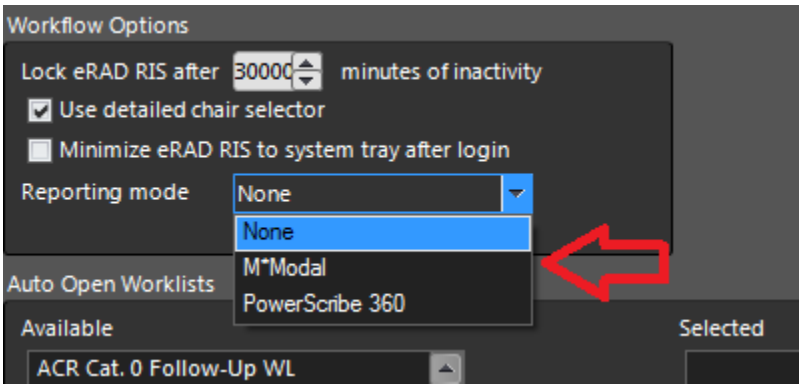

**Figure 5.24 – Reporting mode list of options including M*Modal.**

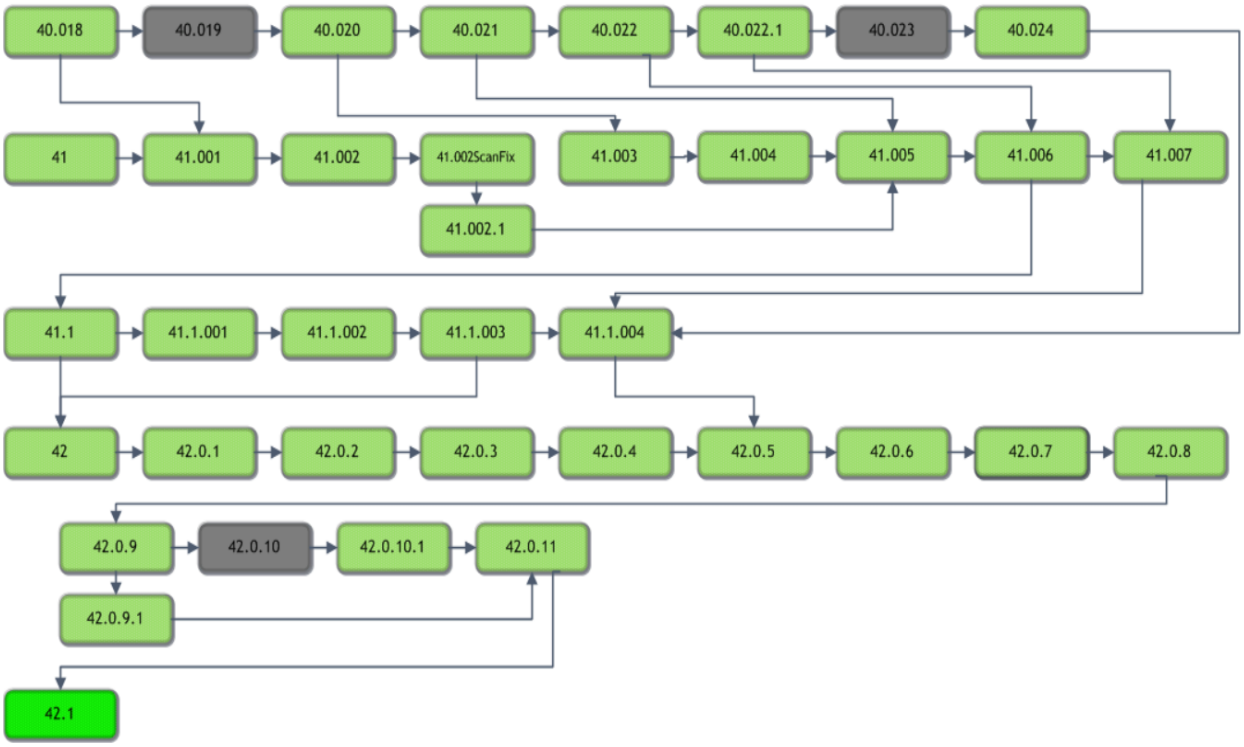
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 6. Code Stream

eRAD RIS - Source Code Evolution



**Legend:**

**Light Green = Released software**

**Gray = Will not be released**

**Bright Green = Current Release**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 7. RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|
| 41 | - | 1.3.41.19135(3GB) | 1.3.41.19135 | 1.3.41.19135 | 1.3.41.19135 | Full version release |
| 41 | 1 | 1.3.41.19256(3GB) | 1.3.41.19135 | 1.3.41.19256 | 1.3.41.19256 | GUI.zip, Web Service and database updates |

# 8. Resolved Defects

Bugs Suggested Features and Support Issues resolved in build 2.42.1. The extract is taken from Redmine bug tracking system and only displays defects resolved in 2.42.1.

| Bug # | Priority | Subject | Category | Found Version |
|---|---|---|---|---|
| 6426 | Immediate | Faxes failing to submit to fax queue | Document Distribution | 1.42 |
| 6427 | Urgent | Medications table displaying incorrectly | Thick Client GUI | 1.42 |
| 6148 | Urgent | Reporting - users may not get properly assigned default templates | Radiology Reporting | 2.42 |
| 6567 | High | ReportTemplateEditor not being cleaned up with ReportingRadiologist closes | Radiology Reporting | 2.42.0.9 |
| 6446 | High | _max_interpretation_version does not update when an addendum is deleted | Radiology Reporting | 2.42 |
| 6390 | High | HL7 report signed not removing addendum flag | HL7 | 2.42.0.9 |
| 6213 | High | Reporting - cannot reopen suspended studies (user id case problem) | Radiology Reporting | 1.42 |
| 6114 | High | Hidden text in editor counts as text when validating fields and section. | Radiology Reporting | 1.4 |
| 6270 | Normal | Reporting - images not loading automatically when user preference use dictating layout when signing supervised reports is set | Radiology Reporting | 2.42 |
| 6210 | Normal | Reporting - Next Section Or Field - if you have only one field in the template, it stops checking for sections after reaching field | | 1.41 |
| 6202 | Normal | When showing message boxes we should be passing in the parent control. | Thick Client GUI | 1.4 |
| 6184 | Normal | Reporting - delete dictation and report doesn't remove suspended data | Web Services/DB | 1.42 |
| 6027 | Normal | PersonHyperlink for referring is not visible after hitting one with a null address row | Radiology Reporting | 1.42 |
| 6020 | Normal | view images/patient folder button should not be disabled in read only mode | Powerscribe Integration | 1.42 |
| 6018 | Normal | disable critical results in read only | Radiology Reporting | 1.42 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 9. Known Limitations

The following are Bugs Suggested Features and Support Issues found in build 2.42.1. Bugs reported in previous versions are not captured as Known Limitation in this document.

| # | Status | Priority | Subject |
|---|---|---|---|
| 6574 | New | Normal | Worklist Notifications memory leak |
| 6545 | In Progress | Normal | Reporting - Access string PowerScribe360.AllowAutofeed doesn't control user preference |
| 6544 | New | Normal | Reporting - Access string required to control access to User Preference Reporting Mode. |
| 6538 | New | Normal | Reporting - PowerScribe - Limit the number of open dictation tabs - UserGroup - Maximum is not adhered |
| 6537 | New | Normal | Reporting - Select Supervising Radiologist window has Unassign button enabled when no-one has been assigned |
| 6467 | New | Normal | PACS - disable via menu item will become enabled after user preference or org change |
| 6335 | New | Normal | Interactive dictation in suspended status will open in dictate window at start of dictation should be the end |
| 6235 | New | Normal | multiple pop ups at the same time can result in wrongly labeled buttons |
| 6530 | New | Low | Modality lookup - Logo Override will not accept procedure code number |
| 6524 | New | Low | Reporting - None. Close reporting window receive error |

## 1. Defects Resolved

**The following defects were resolved in 42.1.1**

| Redmine # | Subject | Priority |
|---|---|---|
| 6668 | Problem workflow radiologists - ends up suspending studies | Normal |
| 6645 | Object reference error when opening transcription screens in read only mode | High |
| 6631 | Referring physician "visited at" drop down list contains only numbers, not human readable addresses | High |
| 6630 | Reporting mode default access string is None - should be full to not interupt anyone upgrading. | High |
| 6294 | Scanner - users are having to re-scan documents | Normal |

**The following defects were resolved in 42.0.12 and merged to 42.1.1**

| Redmine # | Subject | Priority | Found Version |
|---|---|---|---|
| 6598 | PAC IW Out of sync problem | Urgent | 2.42.0.9 |
| 6311 | Verbal order is hard-coded to associate to a known scan document type - this should be configurable | High | 1.40 |
| 6594 | referring physician "visited at" drop down list contains only numbers, not human readable addresses | High | 2.42.0.11 |
| 6566 | ReportTemplateEditor not being cleaned up when ReportingRadiologist closes | High | 2.42.09 |
| 6548 | bi-rads info not reset when using screen re-use on dictate screen. | High | 2.42.11 |
| 6543 | Reporting - screen reuse and pending save items may hang around on the worklist | Normal | 2.42.0.11 |
| 6441 | PACS images are loaded even if reporting window ultimately does not open. | Normal | 2.42 |
| 6644 | PACS Caching - The RIS is failing to clear out the cache field properly when it is to no longer be cached. | Normal | 2.42.0 |
| 5401 | Cannot re-dock patient folder window because of exception on title bar right-click | Normal | 1.41.1 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

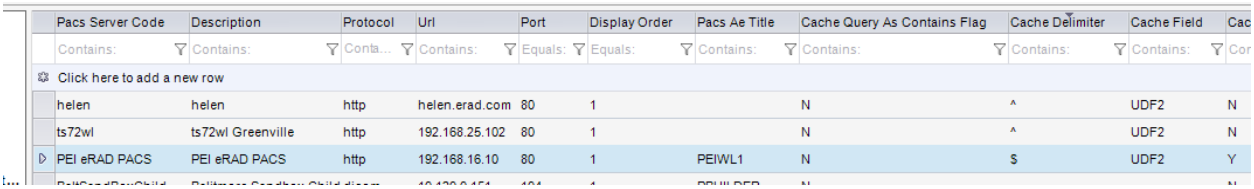
## 2. Changes to Configuration

New Access Strings and Configuration Settings

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Access string / User Group Permission tables | Clinical.CreateTableInReport | Full | Grants access to creating tables in diagnostic reports |
| SystemConfig lookup | VerbalOrderScanDocumentType | Script | Default scan document type for a verbal order. Note if this scan document type doesn't exist, the first scan document type will be chosen. |
| SystemConfig lookup | ElectronicOrderScanDocumentType | Script | Default scan document type for a Electronic/HL7 order. |

# PLEASE NOTE IMPORTANT CHANGE

**NOTE: During testing of these new PACS features, it was discovered that using ^ as a cache delimiter does not work with an "equals" style query. Recommended character is now $. The delimiter is set in the PACSServer lookup table. In the figure below notice the caret ^ is replaced with a dollar sign $ for the PEI eRAD PACS server.**



| Pacs Server Code | Description | Protocol | Url | Port | Display Order | Pacs Ae Title | Cache Query As Contains Flag | Cache Delimiter | Cache Field | Cac |
|---|---|---|---|---|---|---|---|---|---|---|
| Contains: | Contains: | Conta... | Contains: | Equals: | Equals: | Contains: | Contains: | Contains: | Contains: | Cor |
| Click here to add a new row | | | | | | | | | | |
| helen | helen | http | helen.erad.com | 80 | 1 | | N | ^ | UDF2 | N |
| ts72wl | ts72wl Greenville | http | 192.168.25.102 | 80 | 1 | | N | ^ | UDF2 | N |
| PEI eRAD PACS | PEI eRAD PACS | http | 192.168.16.10 | 80 | 1 | PEIWL1 | N | $ | UDF2 | Y |

**Figure 2.1 – PACSServer lookup displaying new cache delimiter**

++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++

A configuration change to the ris.exe.config file was introduced in build 2.42 this setting was designed to lessen the delays when retrieving lookup tables that are larger in size.
This config setting, as mentioned, is located in the ris.exe.config file located in the <appSettings> section of the file

This setting is:
<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/>

Where the value can be any lookup table, and a value=”*”, will retrieve all lookups.

The setting has resulted in undesired results of possible slowness, depending on the lookup table, and possibly additional bugs. Because of this, we are requesting that all sites comment out this line in the ris.exe.config table. The commented line will look like

<!--<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/> -->

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 3. New Features and Enhancements

### Allow Billing Codes Edits Controlled from Billing Codes Lookup

This relates to a feature that was released in Build 42 titled "Allow Edit Billing Units". Users were able to add additional billing codes to the study that were not associated with the procedure. While this in itself is not an issue, the fact that users could then increase/decrease the amount units for the billing code is.

What we have done is added a new column to the BillingCode lookup table titled "Allow Edits Units Flag" that has possible values of Y or N.

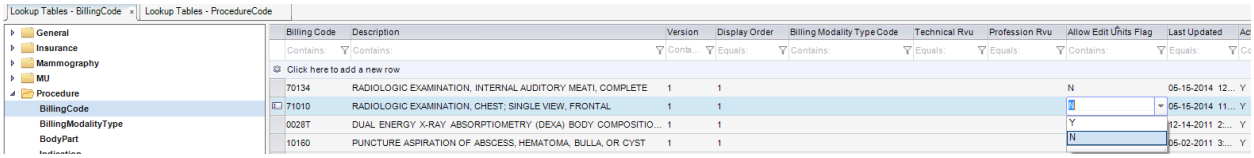


**Figure 3.1 – BillingCode lookup displaying new column**

If the value on the billing code for Allow Edit Units Flag = N, when a user adds this billing code to a study from the Technologist's Perform Exam window, the View Edit window or the Billing Exception window, they will not be able to edit the unit value for that Billing Code.

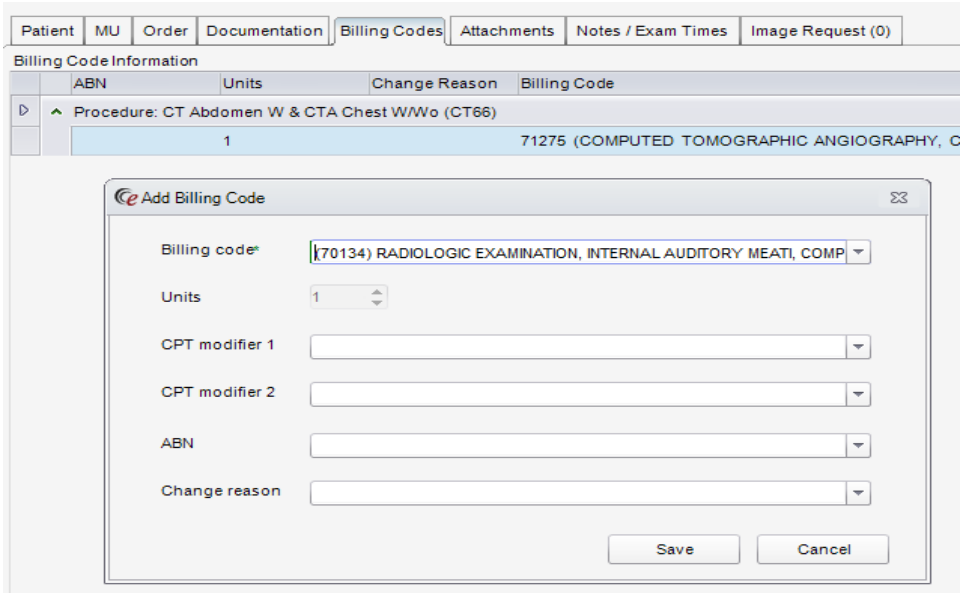

**Figure 3.2 – Add billing code not associated with procedure that units cannot be edited**

If the billing code doesn't allow for the edit of Units, but when associated to a procedure code in the ProcedureCode lookup table and it is desired to allow the edit of units for this particular procedure, it can be overridden by using the method to add the billing code described in the original feature of 42.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

The procedure code row can be expanded in the lookup table. Under the l_procedure_code_x_billing_code tab the user added the billing code and can select if the billing code should have the option to Allow Edit Units.

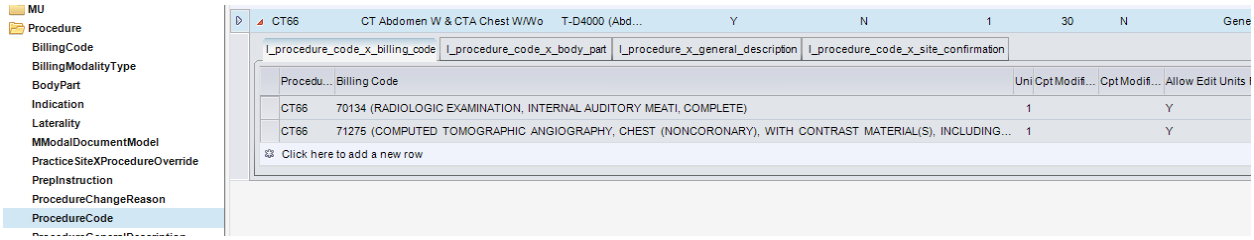

**Figure 3.3 – Override for default Allow Edit Units flag at Procedure Code level**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## PACS Caching - Query to see what is being cached by a particular user is a contains query and is expensive

On every refresh of the Pending Dictation worklist the RIS initiates a URL call to the PACS to retrieve the list of studies being cached by the user. This call is done using * as a wildcard before and after the filter value. This is an expensive operation on the PACS database. Since changes in 42 prevent more than one user from caching a study anyway, these wildcards are no longer necessary.

We have introduced a new caching option for PACS calls of the images to be cached for a user.

A new column added to the PACSService lookup table titled “Cache Query As Contains Flag” has been added with possible values of Y or N.

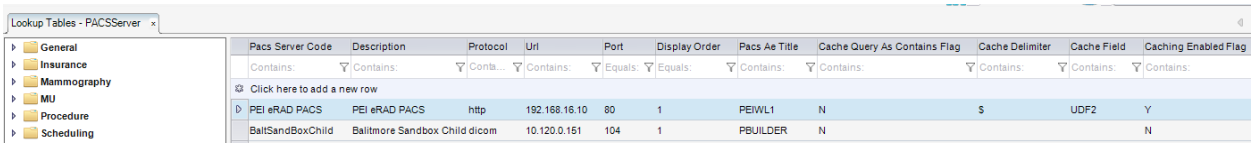

**Figure 3.4 – PACSServer lookup displaying new column of Cache Query As Contains Flag.**

When set to Y, it works as before, using the wildcard to find the user to cache for. When set to N it will not use the wildcards before and after the username, thus doing an exact search on the username, instead of a “is like”.

The default value of this setting is off and is not recommended to be turned on.

## PLEASE NOTE IMPORTANT CHANGE

**NOTE: During testing of these new PACS features, it was discovered that using ^ as a cache delimiter does not work with an "equals" style query. Recommended character is now $. The delimiter is set in the PACSServer lookup table. In the figure below notice the caret ^ is replaced with a dollar sign $ for the PEI eRAD PACS server.**

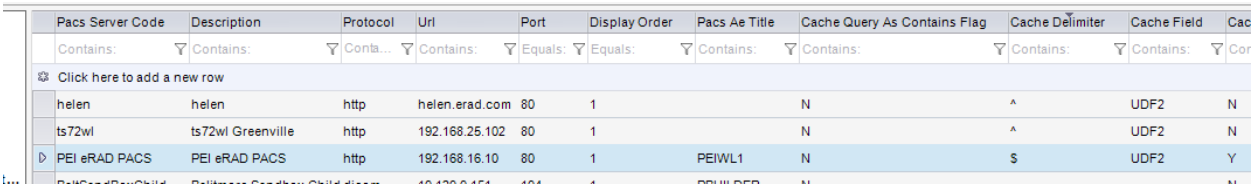

**Figure 3.5 – PACSServer lookup displaying new cache delimiter**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## PACS Cache Improvement - New field to determine priority/order of studies for the PACS to cache

The current method by which the RIS controls the PACS caching mechanism has no way to provide a priority for the PACS. This means that if there are a large number of studies to cache the first ones that are needed by the user may not be the first ones that the PACS viewer retrieves.

Added new columns to the PACSServer lookup table called Cache Order Field.

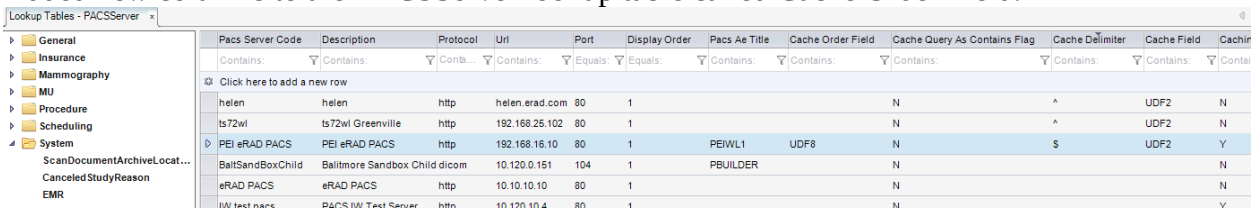

**Figure 3.6 – PACSServer lookup displaying new column of Cache Order Field**

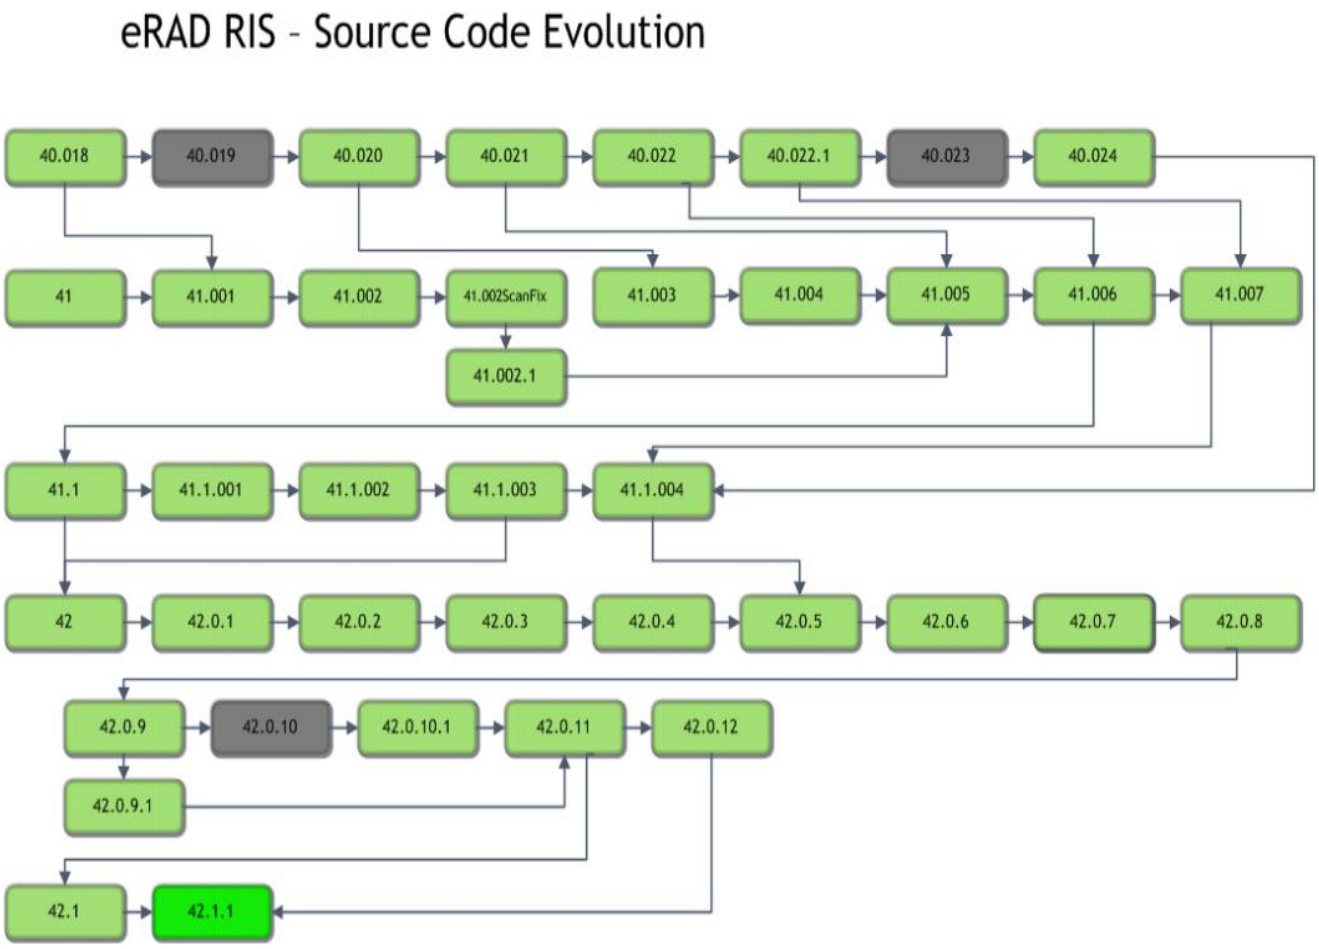
The cache order field is used to determine the priority of the cache job and is filled with a datetime and a set id.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 4. Code Stream



**Legend:**

Light Green = Released software

Gray = Will not be released

Bright Green = Current Release

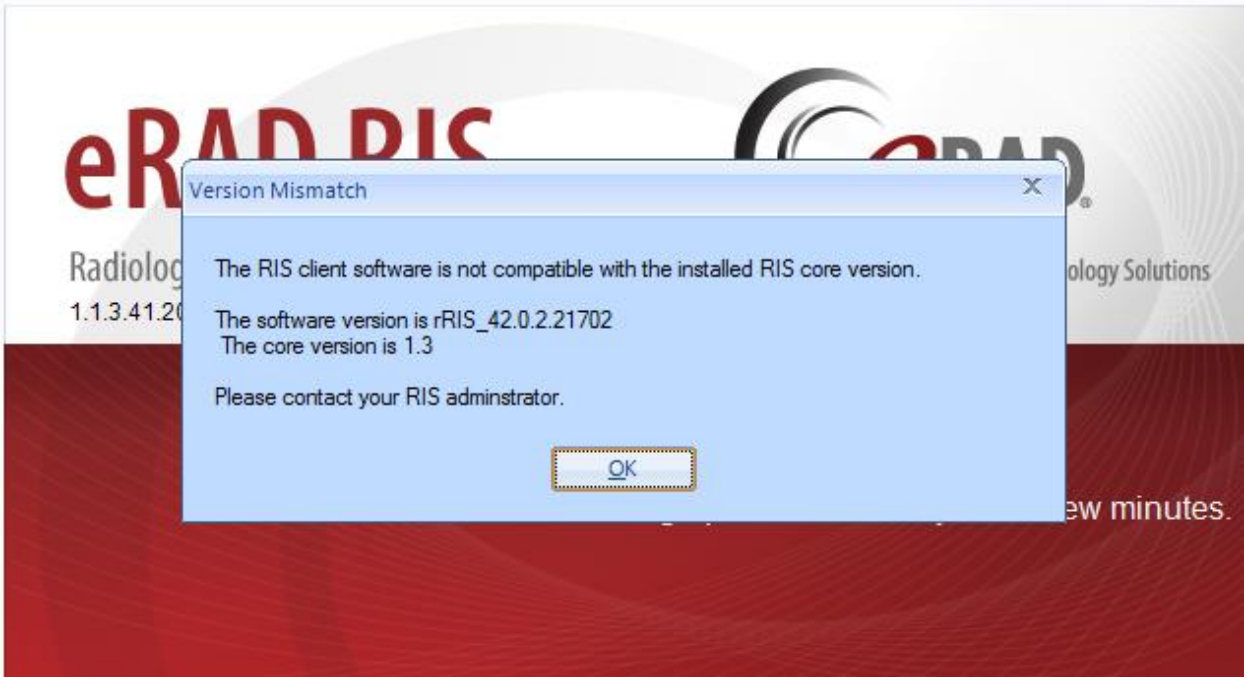
## 9. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.42.1.1.22963.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_42.1.1.22963→ rRIS_1.3.42.1.1.22963. NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   **Restart each service.**

3) Run the B42.1.1.sql file against the eRAD RIS database instance

## 1. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 6713 | Once an external patient is matched to a new or existing internal patient, it cannot be found by searching for external MRN | Urgent |
| 6721 | Lock is not being released when the message "The study was updated moments ago. It is no longer on the worklist" is displayed. | Normal |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

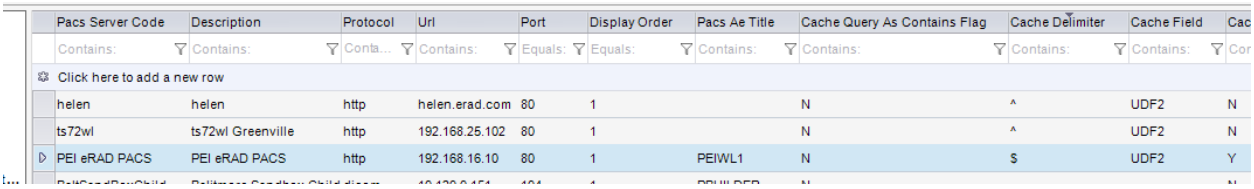
## 2. Changes to Configuration

**The following changes were introduced in 42.1.1**. For more information on the access strings and system configuration lookup table changes, please refer to the eRAD RIS Build 42 Server Update **42.1.1** document.

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Access string / User Group Permission tables | Clinical.CreateTableInReport | Full | Grants access to creating tables in diagnostic reports |
| SystemConfig lookup | VerbalOrderScanDocumentType | Script | Default scan document type for a verbal order. Note if this scan document type doesn't exist, the first scan document type will be chosen. |
| SystemConfig lookup | ElectronicOrderScanDocumentType | Script | Default scan document type for a Electronic/HL7 order. |

# PLEASE NOTE IMPORTANT CHANGE

**NOTE: During testing of these new PACS features, it was discovered that using ^ as a cache delimiter does not work with an "equals" style query. Recommended character is now $. The delimiter is set in the PACSServer lookup table. In the figure below notice the caret ^ is replaced with a dollar sign $ for the PEI eRAD PACS server.**



| Pacs Server Code | Description | Protocol | Url | Port | Display Order | Pacs Ae Title | Cache Query As Contains Flag | Cache Delimiter | Cache Field | Cac |
|---|---|---|---|---|---|---|---|---|---|---|
| Contains: | Contains: | Conta... | Contains: | Equals: | Equals: | Contains: | Contains: | Contains: | Contains: | Cor |
| Click here to add a new row | | | | | | | | | | |
| helen | helen | http | helen.erad.com | 80 | 1 | | N | ^ | UDF2 | N |
| ts72wl | ts72wl Greenville | http | 192.168.25.102 | 80 | 1 | | N | ^ | UDF2 | N |
| PEI eRAD PACS | PEI eRAD PACS | http | 192.168.16.10 | 80 | 1 | PEIWL1 | N | $ | UDF2 | Y |

**Figure 2.1 – PACSServer lookup displaying new cache delimiter**

++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++

A configuration change to the ris.exe.config file was introduced in build 2.42 this setting was designed to lessen the delays when retrieving lookup tables that are larger in size.
This config setting, as mentioned, is located in the ris.exe.config file located in the <appSettings> section of the file

This setting is:
<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/>

Where the value can be any lookup table, and a value=”*”, will retrieve all lookups.

The setting has resulted in undesired results of possible slowness, depending on the lookup table, and possibly additional bugs. Because of this, we are requesting that all sites comment out this line in the ris.exe.config table. The commented line will look like

<!--<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/> -->

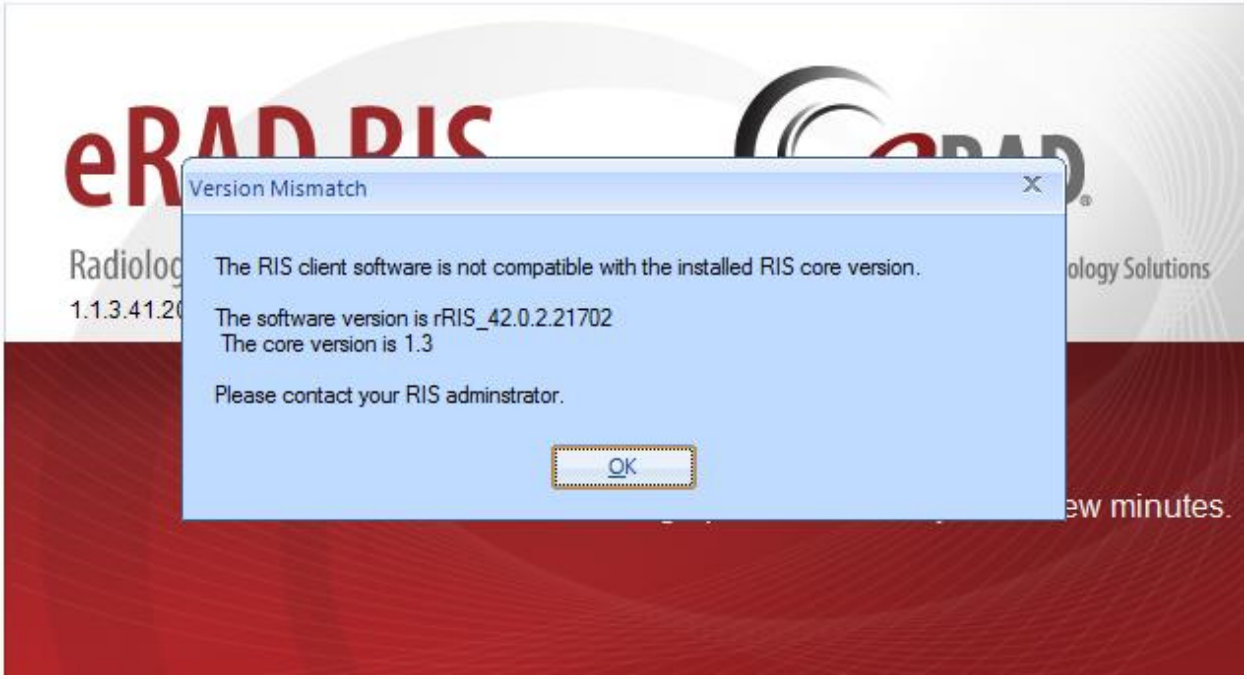
## 8. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.42.1.1.23007.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_42.1.1.23007→ rRIS_1.3.42.1.1.23007. NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   **Restart each service.**

3) Run the B42.1.2.sql file against the eRAD RIS database instance

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 1. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 6631 | Referring physician "visited at" drop down list contains only numbers, not human readable addresses | High |
| 6182 | Mulitple scanned images do not get sent to PACS | High |
| 6758 | Discontinued Transaction does not include extended tables in CLOB | Normal |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Changes to Configuration

A configuration change to the ris.exe.config file was introduced in build 2.42 this setting was designed to lessen the delays when retrieving lookup tables that are larger in size.
This config setting, as mentioned, is located in the ris.exe.config file located in the <appSettings> section of the file

This setting is:
<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/>

Where the value can be any lookup table, and a value="*", will retrieve all lookups.

The setting has resulted in undesired results of possible slowness, depending on the lookup table, and possibly additional bugs. Because of this, we are requesting that all sites comment out this line in the ris.exe.config table. The commented line will look like

<!--<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/> -->

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

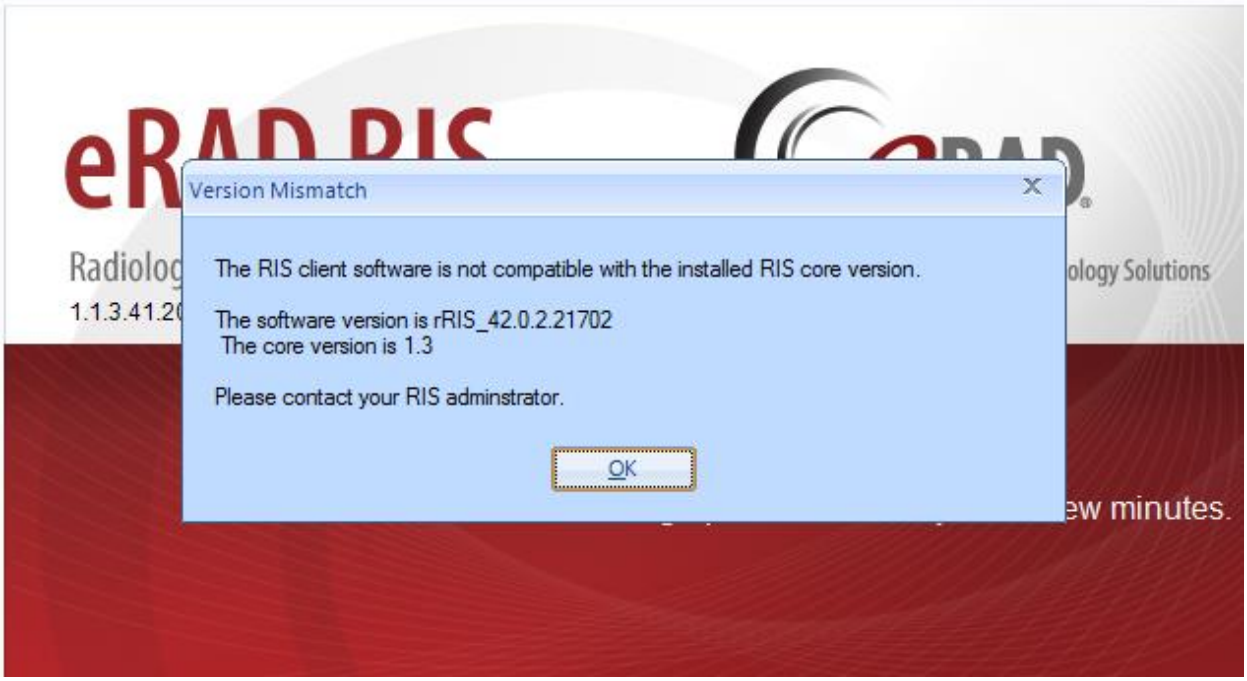
## 8. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.42.1.1.23237.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_42.1.1.23237→ rRIS_1.3.42.1.1.23237. NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   **Restart each service.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 1. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 6873 | Settings missing from ris.exe.config file | High |
| 3376 | Patient folder for previously unlinked external patient does not get re-associated when the patient is mapped. | High |
| 6903 | There is no way to register individual studies at different sites that are on one order. | Normal |
| 6871 | Appointment book cannot be accessed if user doesn't have scheduling group assigned. | Normal |
| 6714 | Scheduling using external MRN ( does not consistently display alternate MRN in grid) | Normal |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Changes to Configuration

We had noticed that there were some settings missing from the standard ris.exe.config file that is supplied with the GUI.zip file. The following settings had been introduced in previous builds, but now reside in the file. Settings starting with <! -- are commented out. These settings are located in the <appsettings> section of the ris.exe.config file. Please do a compare with your current one.

<add key="ShouldCloseViewSessionOnThread" value="true"/>
<add key="LookupTableTimeToLiveInMinutes" value="60"/>
<add key="EnableHighPriorityLookupStrategy" value="true"/>
<!--<add key="RowLevelCacheDataSetNamesCSV"
value="ProcedureCode,TemplateMacro,Indication"/> -->
<!-- <add key="MModalDataTransferValue" value="0"/> -->

A configuration change to the ris.exe.config file was introduced in build 2.42 this setting was designed to lessen the delays when retrieving lookup tables that are larger in size.
This config setting, as mentioned, is located in the ris.exe.config file located in the <appSettings> section of the file

This setting is:
<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/>

Where the value can be any lookup table, and a value=”*”, will retrieve all lookups.

The setting has resulted in undesired results of possible slowness, depending on the lookup table, and possibly additional bugs. Because of this, we are requesting that all sites comment out this line in the ris.exe.config table. The commented line will look like

<!--<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/> -->

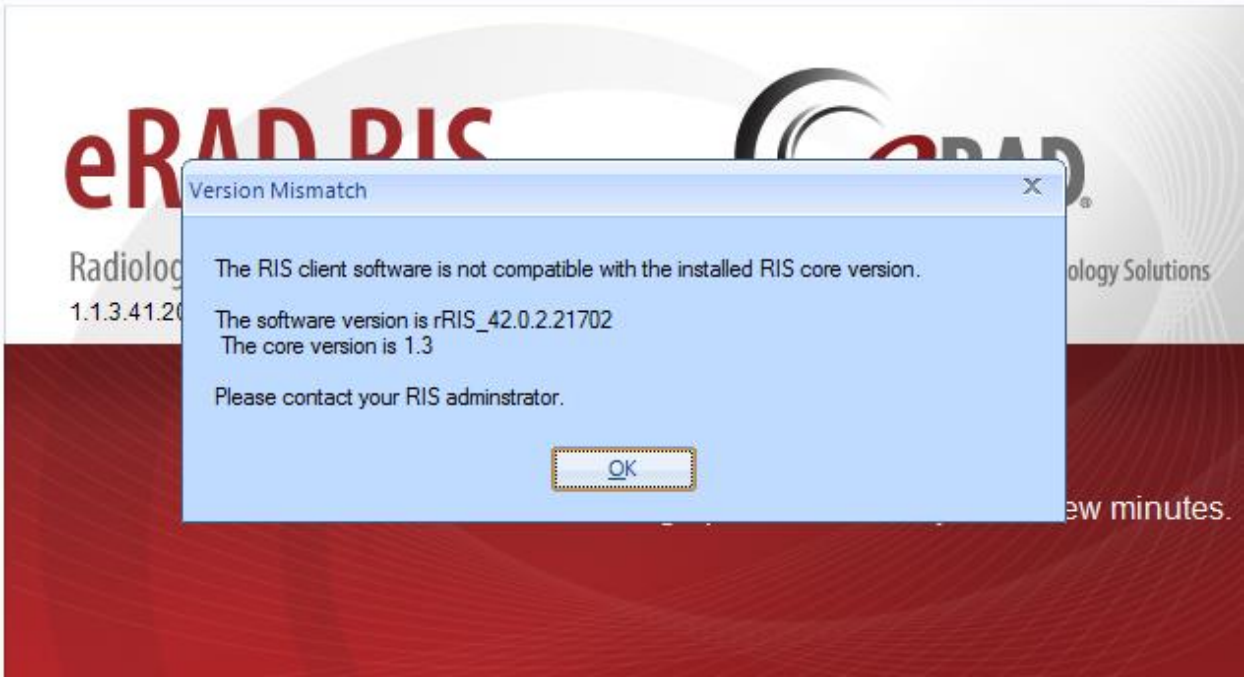
## 8. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.42.1.4.23338.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_42.1.4.23348→ rRIS_1.3.42.1.4.23348. NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   **Restart each service.**

## 1. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 6956 | CD Import - PACS Send fails due to compression | High |
| 6921 | Reporting - insert report template with automacros will remove the technique section | High |
| 6950 | User Preference - "Write Powerscribe 360 XML file when opening a study" and "Drop eRAD RIS study data XML file when opening study" - the xml files are not updated when skipping thru studies. | Normal |
| 6936 | Cross site prompt at registration is occurring when the studies as scheduled at different modalites | Normal |
| 6925 | Reporting - create template from when the current template has automacros will raise an exception | Normal |
| 6928 | Reporting - apply style formatting to automacro inserted text will break create template from | Low |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Changes to Configuration

**The following configuration changes were corrected\included in 42.1.4**

We had noticed that there were some settings missing from the standard ris.exe.config file that is supplied with the GUI.zip file. The following settings had been introduced in previous builds, but now reside in the file. Settings starting with <! -- are commented out. These settings are located in the <appsettings> section of the ris.exe.config file. Please do a compare with your current one.

<add key="ShouldCloseViewSessionOnThread" value="true"/>
<add key="LookupTableTimeToLiveInMinutes" value="60"/>
<add key="EnableHighPriorityLookupStrategy" value="true"/>
<!--<add key="RowLevelCacheDataSetNamesCSV"
value="ProcedureCode,TemplateMacro,Indication"/> -->
<!-- <add key="MModalDataTransferValue" value="0"/> -->

A configuration change to the ris.exe.config file was introduced in build 2.42 this setting was designed to lessen the delays when retrieving lookup tables that are larger in size.
This config setting, as mentioned, is located in the ris.exe.config file located in the <appSettings> section of the file

This setting is:
<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/>

Where the value can be any lookup table, and a value="*", will retrieve all lookups.

The setting has resulted in undesired results of possible slowness, depending on the lookup table, and possibly additional bugs. Because of this, we are requesting that all sites comment out this line in the ris.exe.config table. The commented line will look like

<!--<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/> -->

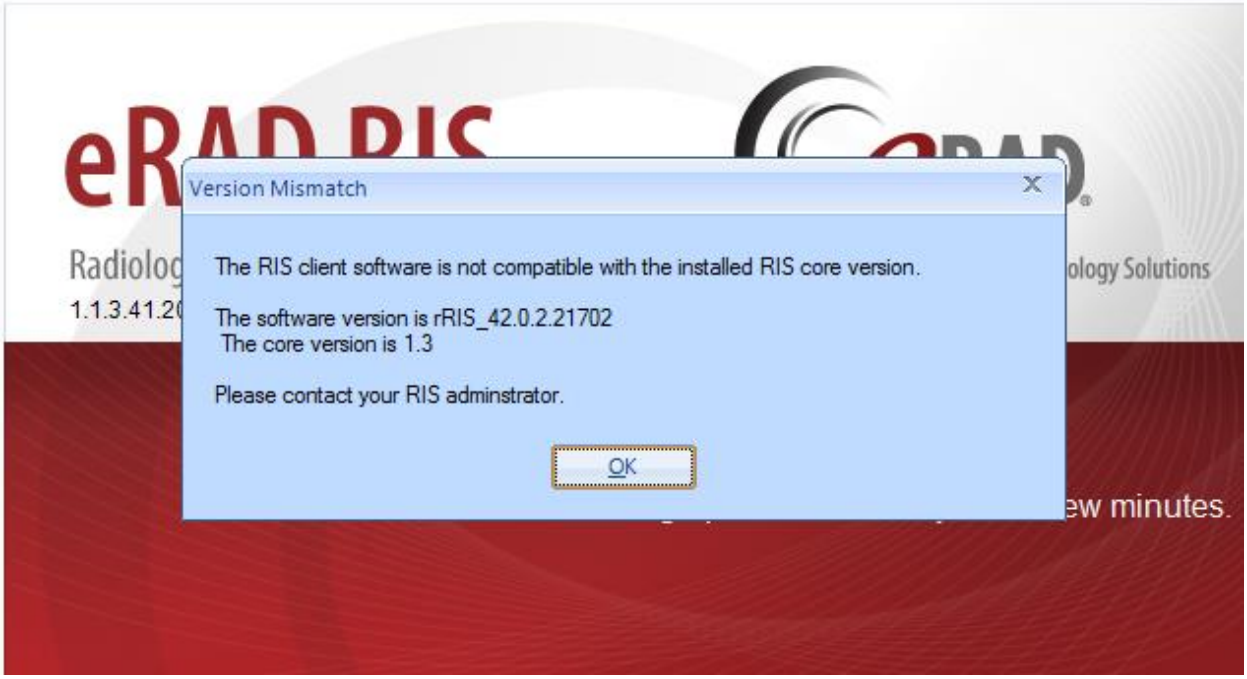
## 8. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.42.1.5.23406.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_42.1.5.23406→ rRIS_1.3.42.1.5.23406. NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   **Restart each service.**

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 42 and subsequent server releases. This version of eRAD RIS is referred to as Build 2.42.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 2.42 is considered a new core release of the application and will require a reinstallation of eRAD RIS. This is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 4. New Access Strings and Configuration Settings

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Access string / User Group Permission tables | Clinical.PreviewPreliminaryReport | None | Controls access to preview, print and faxing of unsigned (preliminary) reports |
| Access string / User Group Permission tables | Clinical.ResolveRadProblem | Full | Controls access to the Resolve Problem window for Transcription users from the All Problem WL |
| Access string / User Group Permission tables | Clinical.UserPreferences.PACSServerOverride | Disabled | Controls access to the User Preference PACS Server on the Integration tab. |
| Access string / User Group Permission tables | Clinical.ShowRVUs | None | Controls Access to see the RVUs on the chair selector report |
| SystemConfig lookup | MRNPrefix | | Value entered will be prefixed new MRN's created |
| SystemConfig lookup | MRNSuffix | | Value entered will be appended to new MRN's created |
| SystemConfig lookup | AccessionPrefix | | Value entered will be prefixed to new accession numbers |
| SystemConfig lookup | AccessionSuffix | | Value entered will be appended to new accession numbers |
| SystemConfig lookup | PrivacyMessageText | | Value entered will be displayed on a locked eRAD RIS login window |
| SystemConfig lookup | CPOELabTestCode | Pathology | Value of the Lab Test code that will be created when a procedure with the CPOE Pathology Flag = Y is signed |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| SystemConfig lookup | MUMedlinePlusConnectDebug | N | (value = Y/N) Adds prompt to UI for reviewing MedlinePlusConnect xml messages. |
| SystemConfig lookup | MUMedlinePlusConnectEnabled | N | (value = Y/N) Enable MedlinePlus Connect MU feature. |
| SystemConfig lookup | MUMedlinePlusConnectBaseUrl | http://apps.nlm.nih.gov/medlineplus/services/mpconnect_service.cfm | (value = string) MedlinePlus Connect Base URL. |
| SystemConfig lookup | MUMedlinePlusConnectDrugSearch | mainSearchCriteria.v.cs=2.16.840.1.113883.6.88 | (value = string) MedlinePlus Connect Drug RXCUI search specification. |
| SystemConfig lookup | MUMedlinePlusConnectLabSearch | mainSearchCriteria.v.cs=2.16.840.1.113883.6.1 | (value = string) MedlinePlus Connect Lab LOINC search specification. |
| SystemConfig lookup | MUMedlinePlusConnectProblemSearch | mainSearchCriteria.v.cs=2.16.840.1.113883.6.103 | (value = string) MedlinePlus Connect Problem ICD-9-CM search specification. |
| Ris.exe.config<br><br>Added in 41.1 | MModalDataTransferValue | None | Override the user preference for M*Modal's Data Transfer.<br><br>See feature Reporting – Ability to Configure MModal Transfer Task in this document for more details |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 5. New Features and Enhancements

## Reporting – Laterality Check when Transcribing Reports

Previous to build 42 the laterality check was performed when signing and verifying reports. Now this option is available in the transcription workflow as well.

As with the radiologist role, the user preference of "Laterality Check" must be selected to enable the feature for transcription users.

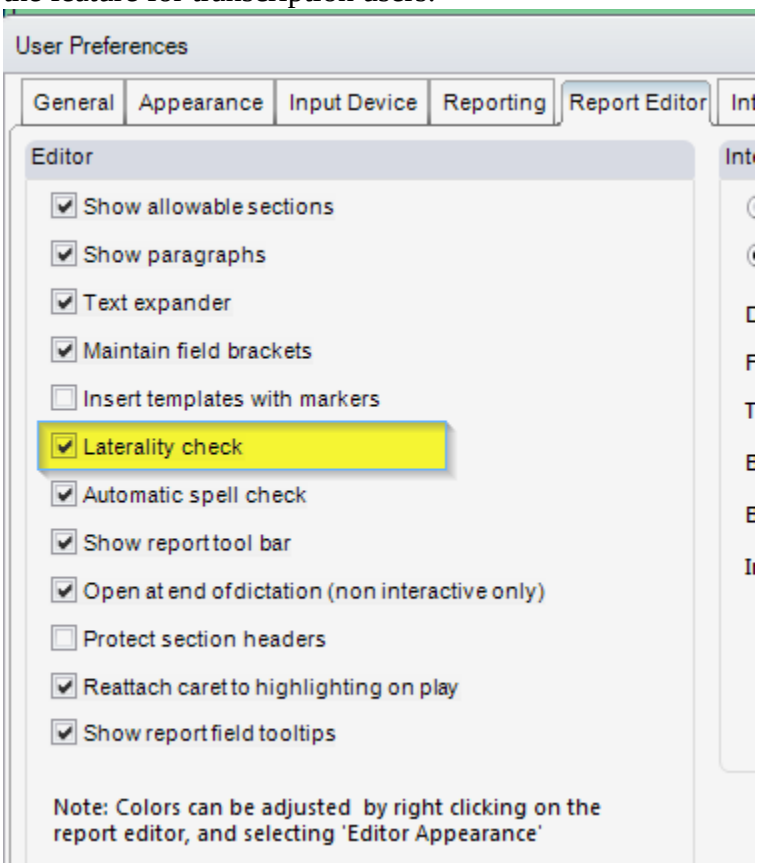

**Figure 5.1 – Laterality check user preference for transcription now as well!**

If the procedure being reported on has laterality and the report has conflicting left or right the transcriptionist will be presented with a pop up message and the literalities in the report will be highlighted.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

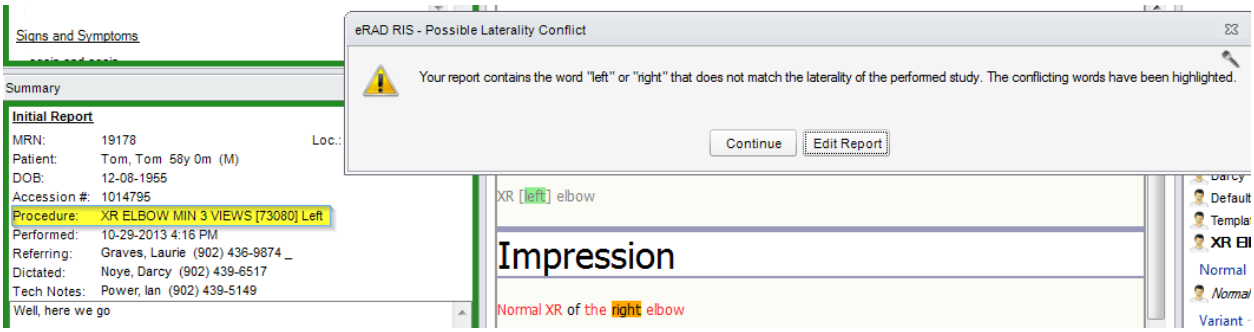

**Figure 5.2 – Message presented when conflicting laterality is detected.**

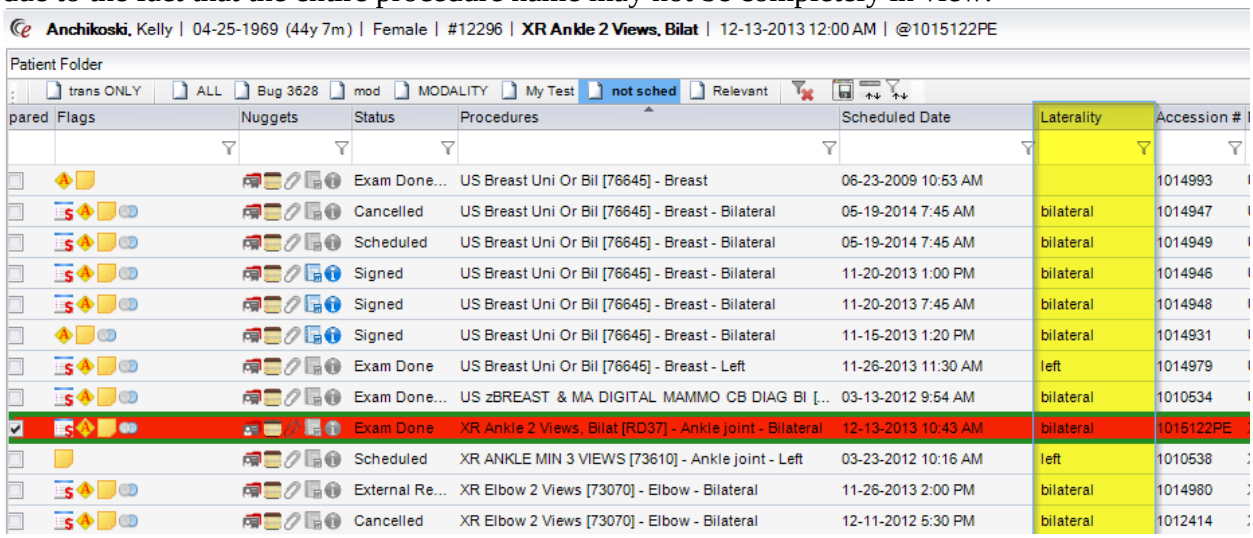
The user has the option to "Continue" if they believe the conflict is not valid, example the words left or right are detected in the report but are used in different context not related to the procedures laterality. The other option is "Edit Report", selecting this button with return the user to the editor window allowing them to make needed corrections if the conflict is related to the procedure laterality.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Laterality added to Patient Folder

The patient folder data pane that is available in the reporting windows now has the Laterality column added to its list of columns. In the screenshot below the procedure column may also have the laterality listed, but it was requested that a column specific to laterality also be added due to the fact that the entire procedure name may not be completely in view.



| pared | Flags | Nuggets | Status | Procedures | Scheduled Date | Laterality | Accession # |
|---|---|---|---|---|---|---|---|
| | | | Exam Done... | US Breast Uni Or Bil [76645] - Breast | 06-23-2009 10:53 AM | | 1014993 |
| | | | Cancelled | US Breast Uni Or Bil [76645] - Breast - Bilateral | 05-19-2014 7:45 AM | bilateral | 1014947 |
| | | | Scheduled | US Breast Uni Or Bil [76645] - Breast - Bilateral | 05-19-2014 7:45 AM | bilateral | 1014949 |
| | | | Signed | US Breast Uni Or Bil [76645] - Breast - Bilateral | 11-20-2013 1:00 PM | bilateral | 1014946 |
| | | | Signed | US Breast Uni Or Bil [76645] - Breast - Bilateral | 11-20-2013 7:45 AM | bilateral | 1014948 |
| | | | Signed | US Breast Uni Or Bil [76645] - Breast - Bilateral | 11-15-2013 1:20 PM | bilateral | 1014931 |
| | | | Exam Done | US Breast Uni Or Bil [76645] - Breast - Left | 11-26-2013 11:30 AM | left | 1014979 |
| | | | Exam Done... | US zBREAST & MA DIGITAL MAMMO CB DIAG BI [... | 03-13-2012 9:54 AM | bilateral | 1010534 |
| ☑ | | | Exam Done | XR Ankle 2 Views, Bilat [RD37] - Ankle joint - Bilateral | 12-13-2013 10:43 AM | bilateral | 1015122PE |
| | | | Scheduled | XR ANKLE MIN 3 VIEWS [73610] - Ankle joint - Left | 03-23-2012 10:16 AM | left | 1010538 |
| | | | External Re... | XR Elbow 2 Views [73070] - Elbow - Bilateral | 11-26-2013 2:00 PM | bilateral | 1014980 |
| | | | Cancelled | XR Elbow 2 Views [73070] - Elbow - Bilateral | 12-11-2012 5:30 PM | bilateral | 1012414 |

**Figure 5.3 – Laterality column added to the patient folder of the reporting windows.**

It should be noted that it is the Laterality description text that is being used from the Laterality lookup table and not the Laterality Code.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – MT Edit Text Color

Previous to build 42, Interactive Dictation users had the option to set color preference for edits made from the All Signed Pending QA worklist by setting the QA Edit Text color option. If the job was submitted (not signed) to transcription, any edits performed could not be colored in the same way as when edited via QA workflow.

We have added another option to the Editor Appearance window for possible edits made in transcription.

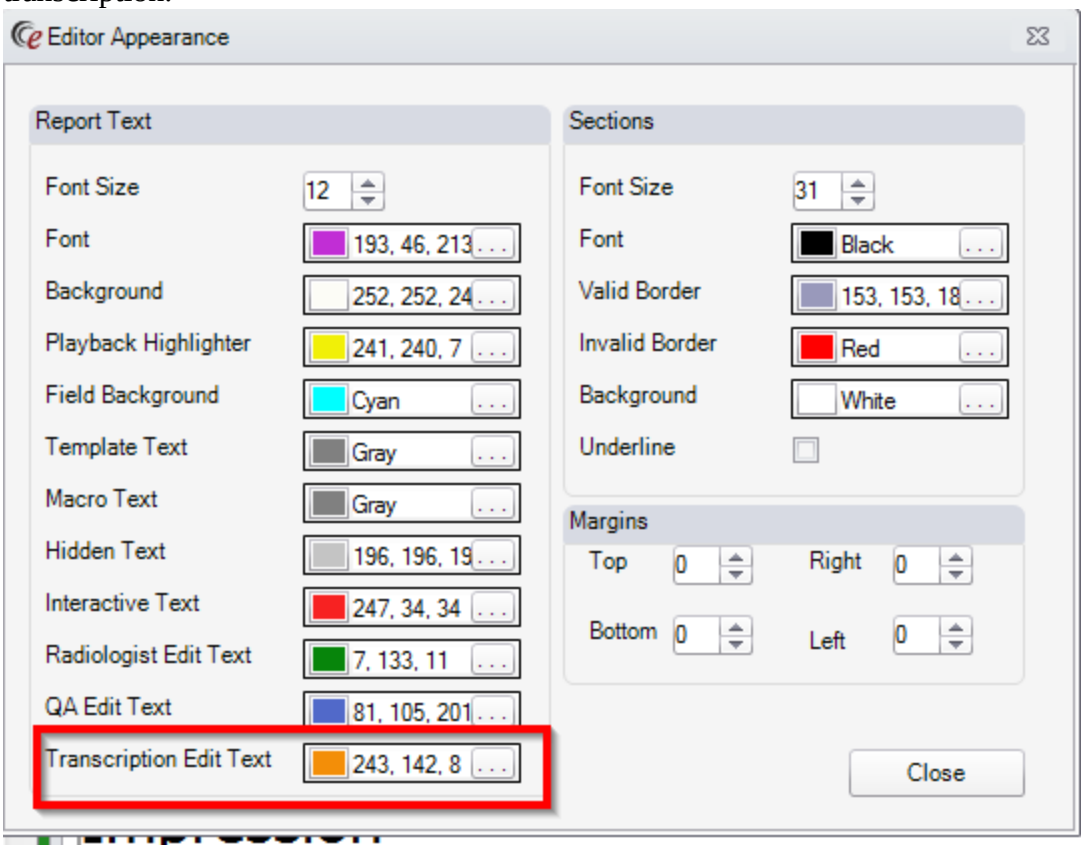


**Figure 5.4 – Transcription Edit Text color option in Editor Appearance window.**

This text color option is titled Transcription Edit Text and has a default value of black.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Available Speechmike Buttons for Mapped Commands and Input Device Redesigned and New Button Options

The Speechmike now has additional buttons that can be mapped to use commands within the reporting windows. The buttons for "Play, Record, and INS/OVR" have been added. In addition the layout of the Input Device tab has been changed to be more intuitive with the layout of the Speechmike.

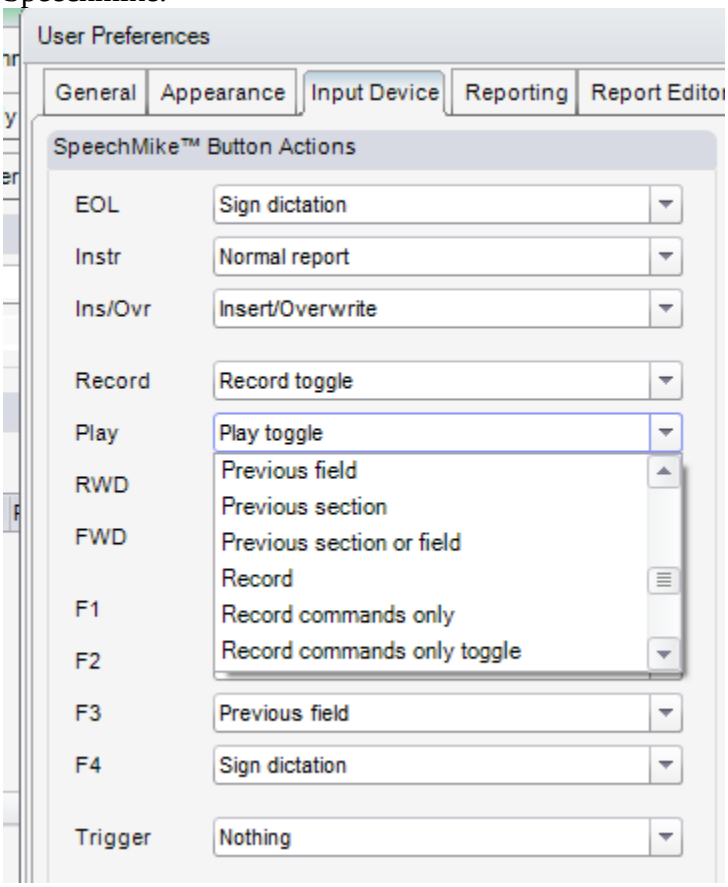

**Figure 5.5 – Input tab additions and redesign**

To accommodate the potential re-mapping of the play, record and Insert/Overwrite buttons their actions have also been added for use with other buttons.
Additional new commands added are:
**Play –** Enables play function to the assigned button
**Play toggle –** Start and stops play function with press/release of assigned button. This replaces the User Preference "Stop playback with button is released"
**Record –** Enable record function to the assigned button

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**Record toggle** – Starts and stops record function with press/release of assigned button. This replaces the User Preference "Stop recording when button is released"
**Record commands only** – allow the user to issue commands without dictating in the report. This can make editing reports easier and increases voice command recognition.
**Record commands only toggle** – Same function as Record commands only with this command the function starts and stops with the button press/release
**Insert/Overwrite –** Enables insert/overwrite function to assigned button
**Cap that -** The first letter of each word in the selected range of text is capitalized.
Example:

results in

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – New Voice Commands for Reporting Windows

Newly added voice commands added in build 42 are:

**Submit report –** voice command will perform submit button click
**Suspend report –** voice command will perform suspend button click
**Close report / Skip report –** voice command will perform the skip/close button click. Invokes the button click and will use the current assigned button click
**Cap that –** voice command that will capitalize the first letter of each word in the selected range of text.
**New line -** Now when dictating "new line" you get a new line and "new paragraph" will result in a new paragraph.
**Redo that –** If text is removed from report while dictating using undo that voice command or select a range of text and delete/overwrite selection, or by way of Speechmike button such as undo or delete word left of cursor, issuing the redo that command will reverse the change.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Voice Enabled Message Boxes

We added, to our base message box class, the ability to interact with the buttons on a given message box. Now when a message box is presented we load into our voice command options the following for each button.

**Value -** This is the value in code for the button. Most often it may equal the text but some instances it may not. For example a button that says "Close without saving" may have a value of "OK" or "Yes". Overtime a user will get accustomed to which command is more fluid for them.

**Text -** This is the visible text seen on the button. So a button that shows "Close without saving" will have a voice command of "Close without saving"

**Button # -** This position the button shows on the message box starting with the number one. So a message box with "YES" and "NO" would have voice commands of "button one" and "button two".

**Option # -** This position the button shows on the message box starting with the number one. So a message box with "YES" and "NO" would have voice commands of "option one" and "option two".

We also added a new icon to the message boxes to indicate they are voice enabled. This icon should show only for radiologists. Even batch users can interact with message boxes via voice command. This new icon has a tooltip that displays the voice command options to invoke each button.

There are some dialog boxes that are not voice enabled. The whole application is not at that state yet.
Spell check, mic wizard, dictionary and user preferences to name a few. Goal of this item was to get most common message boxes.

The image below shows the new icon and tooltip options.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

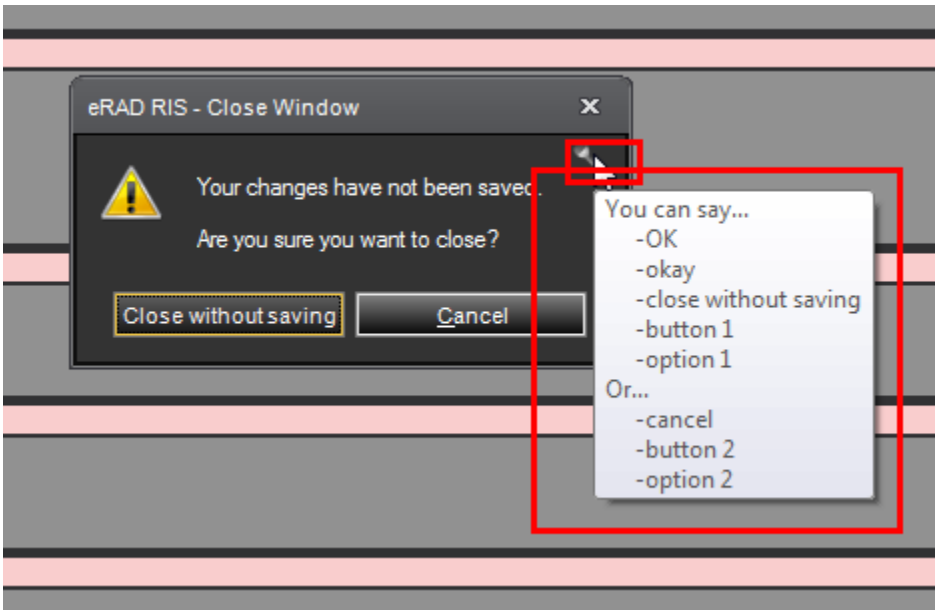

**Figure 5.6 – Voice enabled message boxes displaying available command options**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Support Tracking of Magnet Strength

To start the magnet strength column has been added to the Modality lookup table. The column has a max character length of 10.

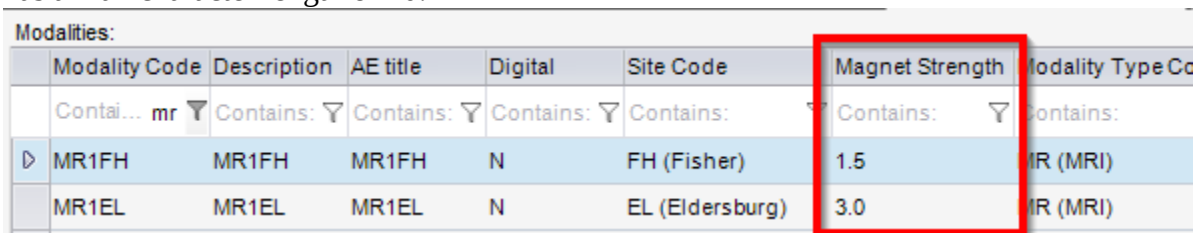

**Figure 5.7 – Magnet Strength column added to Modality lookup table.**

To have this value added to the template or macro a new custom field is now available in the Template/Macro editor.

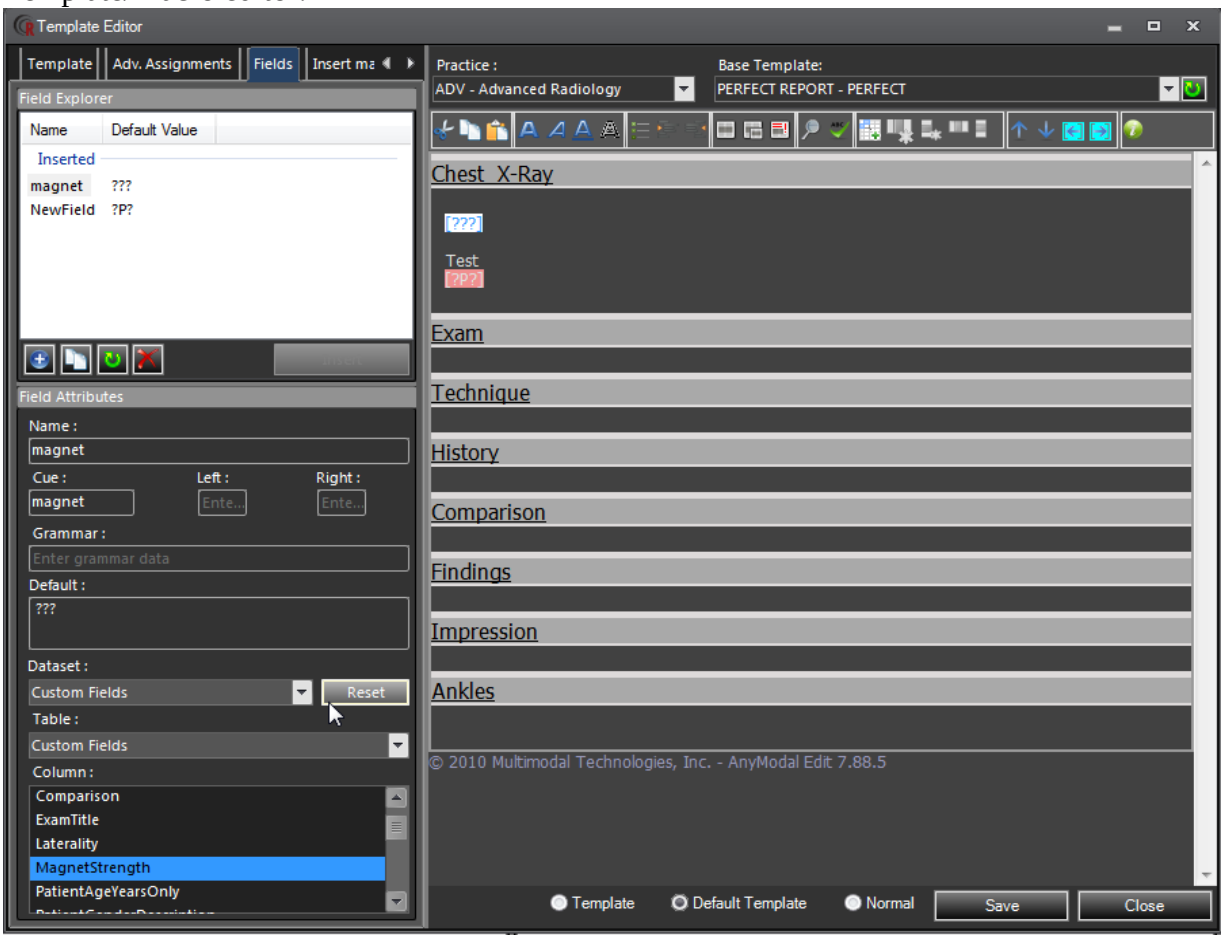

**Figure 5.8 – MagnetStrength added as a custom field**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Talked to Doctor Macro

Additional custom fields have been added to aid users in creating a "Talked to Doctor Macro". Below are the custom fields and examples of values for each field
**TimeStamp12** – 6:30pm
**TimeStamp24** – 18:30
**Today** – 08-13-2013
**ReferringShort** – Dr. Last
**ReferringLong** – Dr. First Last

In the Macro editor these custom fields can be used to create a the "Talked to Doctor Macro".

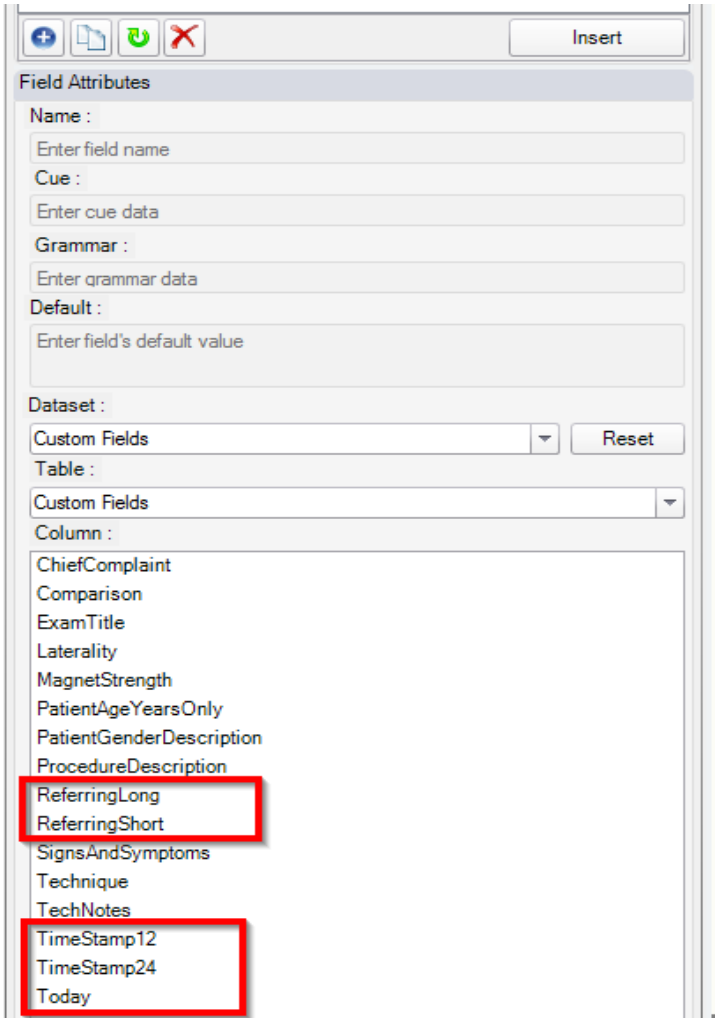

**Figure 5.9 – New custom fields to support talked to doctor macro**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The results will look something like this

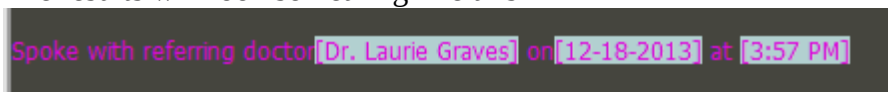

**Figure 5.10 – Talked to Doctor macro used in template**

## Reporting – No Wait Insert Macro

We have altered how we handle our 'insert macro' commands. You can now dictated and insert a macro without pausing. Once the macro is inserted a 'beep' (existing) will sound indicating dictation can progress. Users MUST wait for the macro to insert because there may be fields within the macro that direct report creation.

## Reporting – No Wait Undo/Redo that Voice Commands

Currently there is no option for "redo that" voice command. Also when using the "undo that" command it rarely is recognized on the initial attempt. It will render things like "underline" or "undo that" as text. We need "undo that" and "redo that" to work well without pausing or rendering the text into the editor.

Added in build 42 is the "Redo that" voice command. Also, we now have a concept of adding word to the recognizer and lowering the cost of these words. Think of it as increasing the possibility that these words will be spoken – resulting in better recognition of these particular words.

We now have "undo that" and "undo last" added in this category. These commands existed previously but are not low cost.

We added a completely new voice command(s) "redo that" and "redo last" which will undo the undo command.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Load Audio when Signing Reports

Using a user preference to enable and disable automatic loading of audio when signing. The user preference is "**Load audio in sign mode**". This can be accessed in the workflow section of the reporting tab in the user preferences window.

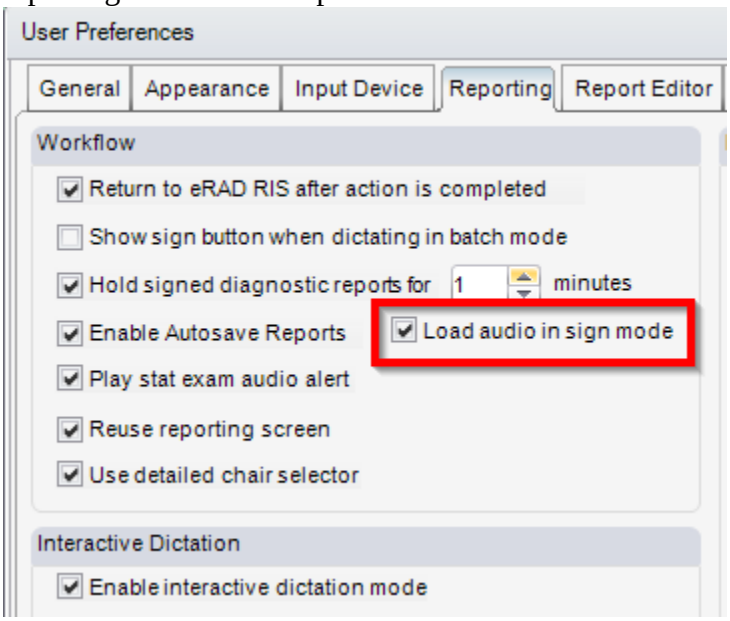

**Figure 5.11 – User preference Load audio in sign mode**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Make STAT Audible Alert Configurable

A new user preference has been added to the Reporting tab / Workflow section titled "**Play stat exam audio alert**". When selected it will work like is has in the past by informing the user when opening the study in reporting window that it is a STAT exam. When unselected the user will not be presenting with the audible message.

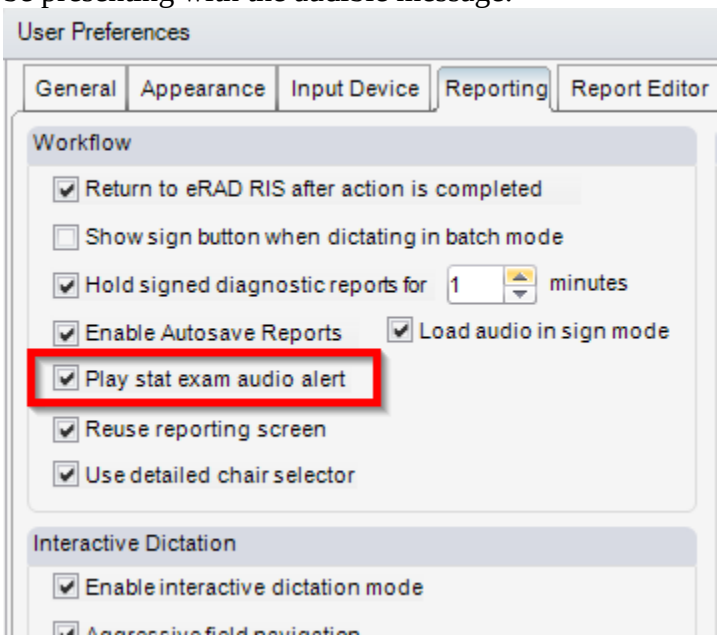

**Figure 5.12 – Play stat exam audio alert User Preference**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Displaying Report Field Tooltips Configurable

Yet another user preference has been added to enable/disable the field tooltips from displaying in the reporting editor. The user preference titled "**Show report field tooltips**" has been added the Report Editor tabs Editor Section.

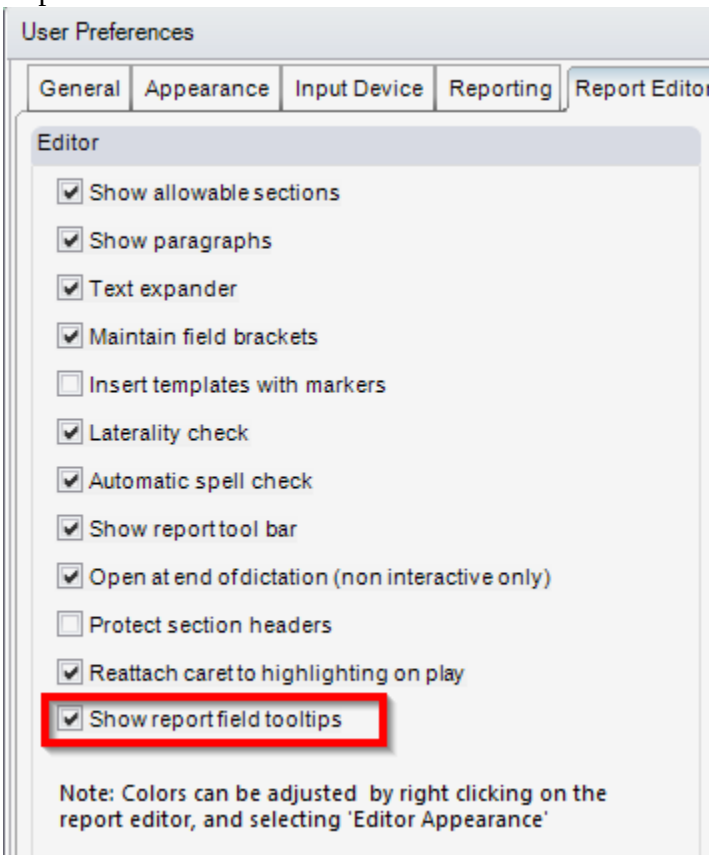

**Figure 5.13 – User preference Show report field tooltips**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Load Dictation Layout in Supervised Radiologist Workflow

In addition to new option in the Sign Report window to load images and patient folder (next feature in this document) we have also added a new user preference that will automatically load the Dictation layout when performing final signature during Supervising Radiologist workflow. The new user preference titled "**Use dictation layout when final signing supervised reports**" will automatically load the users Dictation layout instead of the

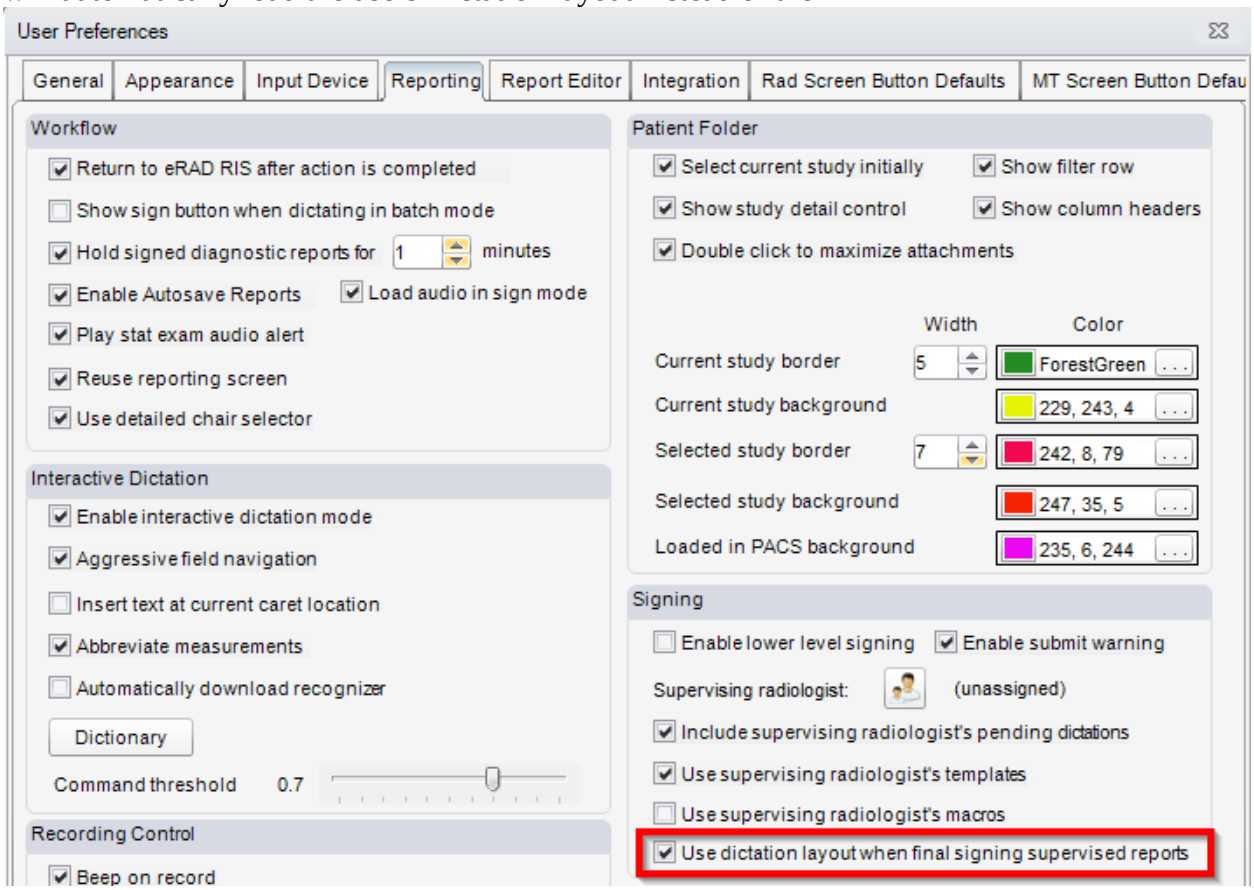

**Figure 5.14 – User preference Use dictation layout when final signing supervised reports**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Open Patient Folder/Images when Signing

Users currently have two main layouts. Either they are signing or dictating. Reason for this is that most signing task don't require the full patient folder detail, pacs images or dictation. So the signing layout is typically much smaller or less detailed then the dictation layout.

Users on occasion do want to display the Patient Folder and other detail similar to dictation when singing reports.

We now provide the user ability to load the dictation layout (patient folder) when signing reports. This is a manual click to load the dictating (patient folder) layout.

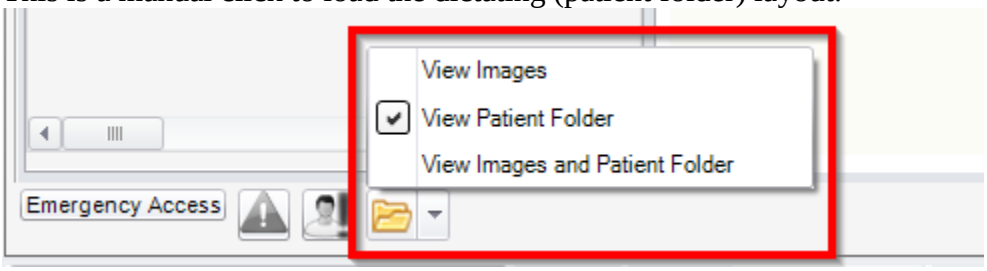

**Figure 5.15 – Signing mode layout options**

In the example above you can see that the Load Images button has been converted to be a split button with the additional options for "View Patient Folder" and "View Images and Patient Folder" with the "View Patient Folder" currently set as the default. This new dropdown button acts like other dropdown buttons for the reporting screen. Click the arrow to open other options and select option as desired. Holding the CTRL+<option> will render it the default and save in your user preferences.

1.)  2.)  3.) 
**Figure 5.16 – Options available as default**

The three images above show the icon when set as default action for 1.) View Images 2.) View Patient Folder 3.) View Images and Patient Folder

When the Sign Report window is reloaded with the next study either from the work list or from the Submit/Sign/Suspend/Skip and Continue option the users Signing Layout will be used. What this means is that it will load the dictation layout when clicking Load Patient Folder but it won't be sticky.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Lock Access to Preliminary Reports

Unsigned reports can be previewed, printed and sent to distribution for faxing. To restrict users from distributing preliminary reports we have added a new access string titled "**Clinical.PreviewPreliminaryReport**"

If the user does not have this access string set to full, they will not be able to preview, print or fax preliminary reports from context menu within the RIS.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Set Problem Flag without Rejecting Report

In previous versions of eRAD RIS users would have to select the Reject/Edit button to enable the Assign to radio buttons. New in build 42 is the ability set the Problem flag without rejecting the report. Along with the Problem radio button, the Transcription list box and Notes fields are also enabled during QA verify report workflow.

Now the All Problem Worklist for MTs will show exams with problem flags set that are in TenativelySigned1 status.

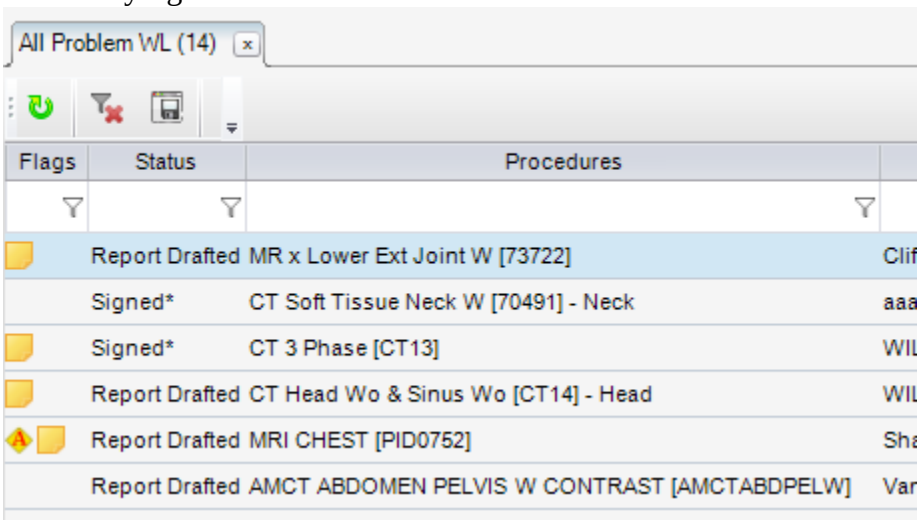

**Figure 5.17 – All Problem WL showing studies in Tentatively Signed status**

The Resolve problem window is now accessible in the MTs All Problem Worklist via the context menu. Please note this is dependent on the access string "**Clinical.ResolveRadProblem**".

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

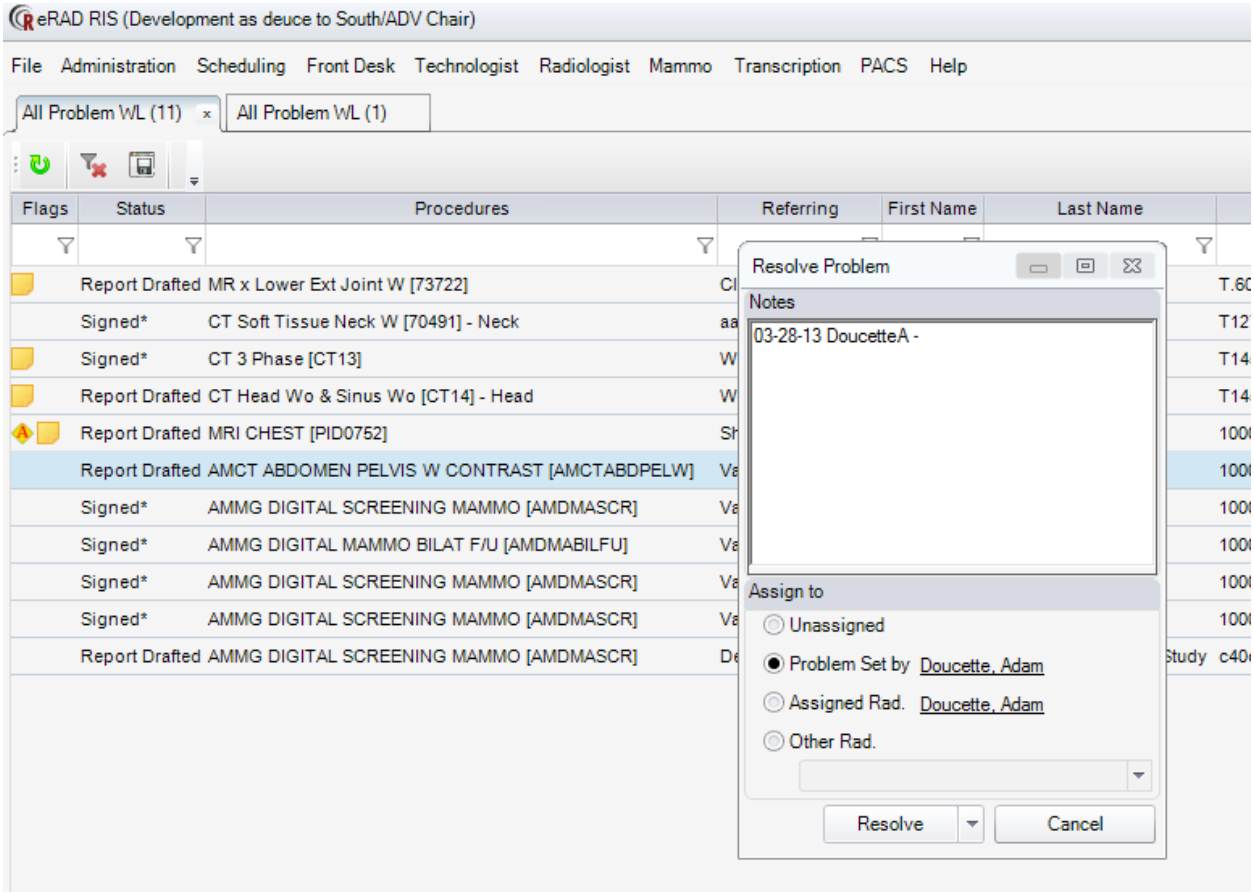

**Figure 5.18 – Resolve Problem window accessible from All Problem WL**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Remove Content Tags from CDA when Creating Macros/Templates

eRAD RIS offers the ability for a user to copy an existing report as a template for future reports. This functionality is inhibited by the fact that the new template they create contains mm:status and mm:part that should be stripped out.

As a result of the mm:status and mm:part still contained in the template, some of the jumping problems we have encountered on play back were related to time stamps being saved in templates and macros at the time of save. To correct this we found we could manually remove the time stamps from the underlying document.

We are now using the convertCdsToCda method to remove the time stamps and unneeded tags.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Ability to Configure MModal Transfer Task

The ris.exe.config now has an app setting to override the user preference for M*Modal's Data Transfer Config: **MModalDataTransferValue**

Acceptable values are any sum of the following options:

**SUBMIT_TRAINING_INFO:** Upload log of user interaction (including recorded audio) to server for profile building. Applicability: only for local recognition; ignored for remote recognition. constant value = **1**

**SUBMIT_ERROR_LOGS:** Whether to automatically submit an error report for debugging after an uncontrolled shutdown, or when encountering another non fatal error.
Applicability: all modes; requires storage manager for crash log uploads (non-fatal error reports can be submitted without). constant value = **2**

**STORE_USER_SETTINGS:** If set, store user preferences (including audio gain etc) on CDS server, and retrieve on next startup. Applicability: all modes. constant value = **4**

**UPDATE_PROFILES:** If set, checks at session creation whether an updated user profile is available on the server. If yes it is downloaded in a background thread and used as soon as it becomes available. Until then the recognizer would use either a speaker independent profile, or an older locally cached profile version (only if an IStorageManager is configured).
Applicability: local recognition; ignored for remote. constant value = **8**

**UPDATE_RECOGNIZER:** If set, check in regular intervals whether an updated compatible recognizer version is available on the server. If yes, the recognizer mode is downloaded in a background thread and used when the local recognizer is next instantiated (i.e. not switched out in a running session).
Applicability: local recognition; ignored for remote. Requires an IStorageManager, ignored if none is configured. constant value = **16**

**WRITE_DEBUG_LOG:** Like SUBMIT_TRAINING_INFO, but leaves information in a local IStorageManager for debug purposes instead of (or in addition to) uploading it to a server.
Applicability: local recognition; ignored for remote recognition constant value = **32**

If the value is not present or invalid, we resort to existing logic. This would be to check the user config for auto download, if present use 29 else 13

13 = SUBMIT_TRAINING_INFO, STORE_USER_SETTINGS, UPDATE_PROFILES
29 = SUBMIT_TRAINING_INFO, STORE_USER_SETTINGS, UPDATE_PROFILES, UPDATE_RECOGNIZER

0 (zero) is a valid option. Zero will disable the calls.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Make Patient Name Stand Out in Reporting Windows

The reporting windows now have additional optional patient and study information that can be displayed on the top of the main reporting window and also can display on the top of any floating data panes. If a multiple floating panes are grouped together, it will only appear on the title bar of the floating group.

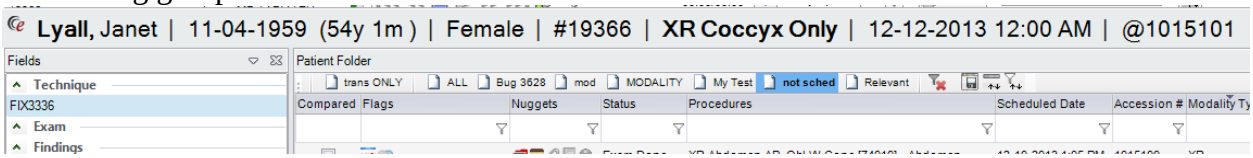

**Figure 5.19 – Patient and Study information in title bar**

Looking at the figure above I have the font size set to 16. The font size options are from 8-20. The context menu displayed above is accessed via a right click on the title bar. Under the Window Caption option the sub menu allows for font size change and option to display the Patient Information, Study information, both or neither.
Patient Information includes the patients name, DOB/age, gender, and MRN.
Study information includes the procedure, performed start date/time and the accession number

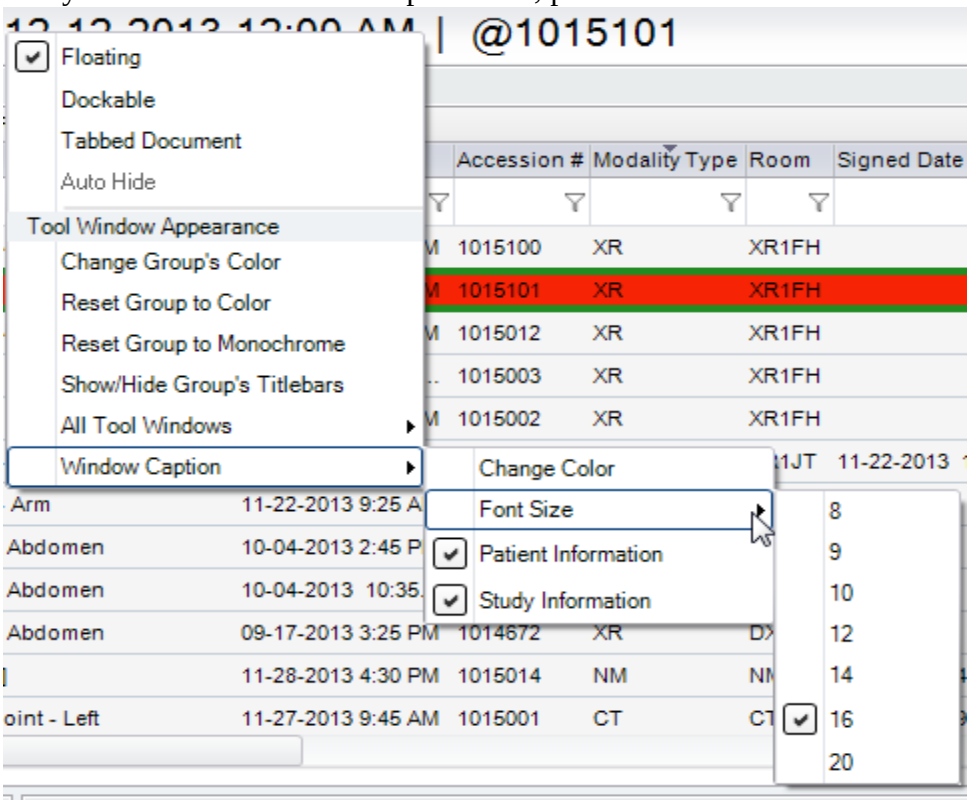

**Figure 5.20 – Context menu from title bar showing Window Caption options**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Create Backup of Capture Log

We now back up old capture logs.

On startup of Interactive, we check for existing capturelog file in $APP_PATH\captureLog.txt

If exists, we copy a backup to $APP_PATH\Reporting\CaptureLogs\$USER\captureLog-yyyy-MM-dd HH.mm.ss.log where yyyy-MM-dd HH.mm.ss is the LAST WRITTEN time on the current existing file.

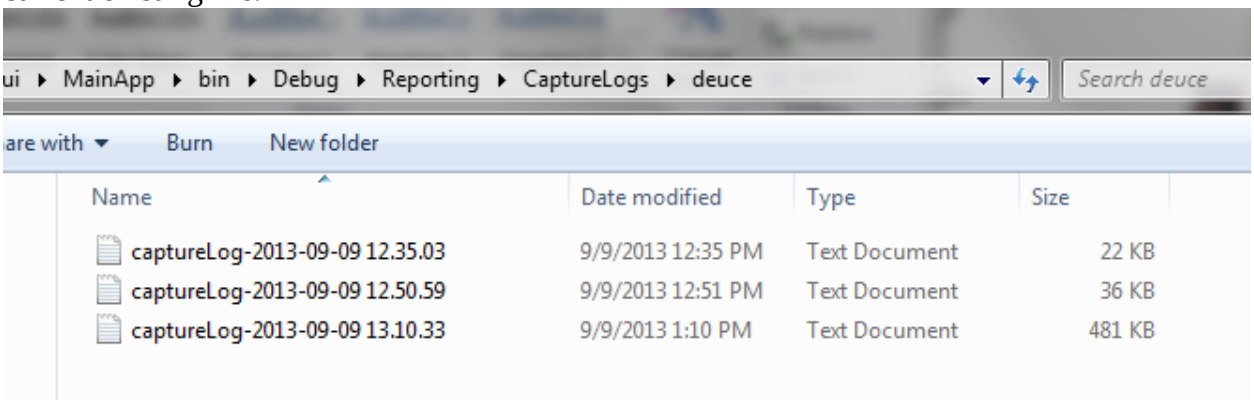

**Figure 5.21 – Showing CaptureLogs backup path**

Then we start up the new capture log which overwrites the old file location, as we always did.

So the current active capture log file name and location is unchanged. This will make for easy transition for support. Only the backed up logs are in a new location and file name.

Similar to the verbose logs, we check for outdated capture logs on login and delete ones that are older than two weeks and have not been accessed within the last day.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Relevancy Calculation Adjustable via Configuration

In production we have procedure codes that because of legacy data have very different names even on different modality types, but those procedures are actually exactly the same and should match exactly when assigned a relevancy score. Previous to B42 this was not possible because the relevance calculation was based entirely on word matching. A score was assigned based on the number of matching words and words that are modality type, body part or laterality are given great weight in the matching. Furthermore the administrator can setup the site so that only studies done on the same modality are considered relevant.

A new window titled Relevance Override has been added and is accessed from the "Override…" button on the Relevance lookup table.

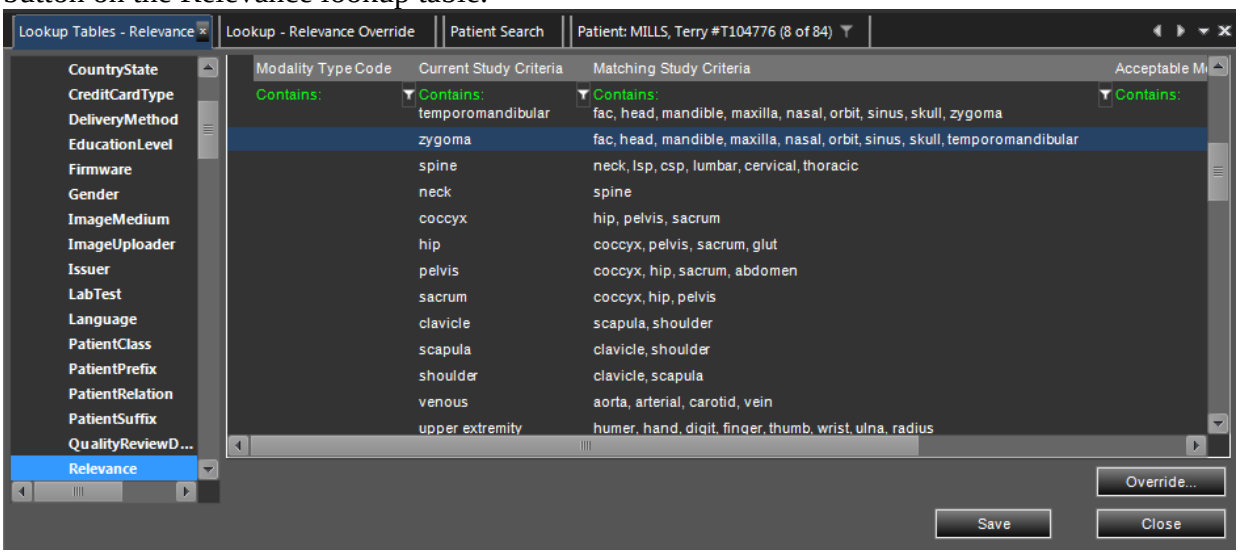

**Figure 5.22 – Accessing the Relevancy Override window**

When procedures in the patient's history have a matching relevancy override the configuration defines how much weight will be assigned as part of the procedure matching score (value between 0 and 100) and if the outcome will produce a Matching or Non-Matching Relevance Flag.

This solution also allows laterality to be an option part of the matching criteria. If the laterality is blank then it isn't considered as part of the matching criteria; however, if laterality is selected as "Same" then the rule only applies if the laterality of both procedures is identical. If the laterality is selected as "Different" then the rule only applies when the laterality differs and can be used to lower the score or make it Not Relevant, which could be useful when you want to give a high score when the laterality matches but a significantly lower score when the laterality is different.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

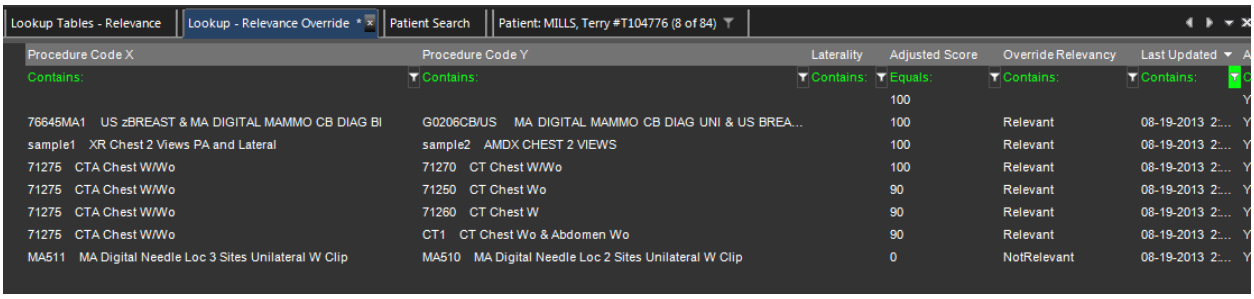

**Figure 5.23 – Relevance Override**

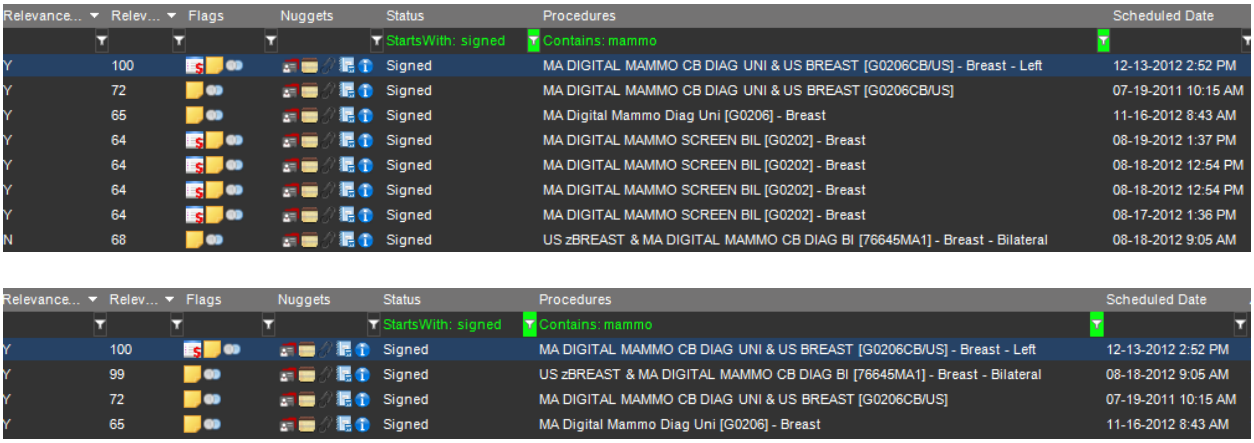
When the user clicks on the "Override…" button a tab opens up for the "Relevance Override" table, which allows you to specify two procedures (X and Y). When calculating relevancy if the studies match based on X and Y then the adjusted score will be applied and the relevancy flag will be set based on the selected value in the "Override Relevancy" column.

Note: The "Adjusted Score" and "Override Relevancy" columns are optional. If the "Adjusted Score" is blank then the score will remain as it was calculated without the override but the relevancy flag override would apply. Also, if the "Override Relevancy" column is blank only the score will be adjusted.

In the above Relevance Override configuration the procedures 76645MA1 and G0206CB/US are interesting. One is a US Breast & MA MAMMO CB and the other is a MA Mammo CB and US Breast. The default word matching produces a relevance score that is very close but not exact therefore some installations of RIS will want to correct for this. The following screen shots shows the relevancy results for a test patient's history – the first screen is with the override rule inactive and in the second screen shot the rule has been activated.



**Figure(s) 5.24 – Before and After Override applied**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Note: that in the first screen shot without the Relevance Override, the 76645MA1 doesn't even show up as relevant because in the base relevancy rules there is a rule that says only MA modality type studies are relevant to MA studies. In the second screen shot the rule for 76645MA1 and G0206CB/US says the procedure matching will get a score of 100% but since the procedure matching only accounts for half of the total score (the other half is used to sort by date), therefore we see the score increase from 68 to 72 and 76645MA1 actually gets placed before the older G0206CB/US study because it's a recent prior.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Cached by Name Column

*Cached By Name* column has been added to the Pending Dictation Worklist. It shows the formatted name of the user who is caching the study. The logic behind which studies are cached follows the same criteria as the 'Next' logic of the Dictation window. That means it starts at the top of the sorted worklist. This is re-evaluated every time the worklist is refreshed. If you are the one that is marked for caching the study it will simply have "me" as the Cached by Name value.

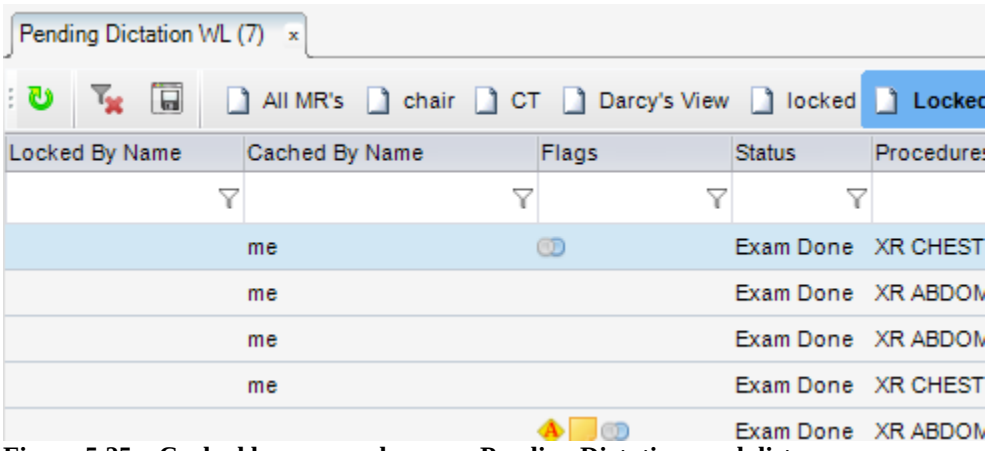

**Figure 5.25 – Cached by name column on Pending Dictation work list.**

Right-clicking on a study on the pending dictation worklist and selecting Add To Cache will cause that study to be cached regardless of its position in the worklist. This uses up one of the available cache slots as dictated by the Max Number to Cache user preference. Multi-selecting studies will cache studies up to this max number. Manually cached studies will be un-cached when either a different study (or set of studies) is selected to be manually cached or when they drop off the worklist due to a worklist sorting change or a change in the status of the study.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

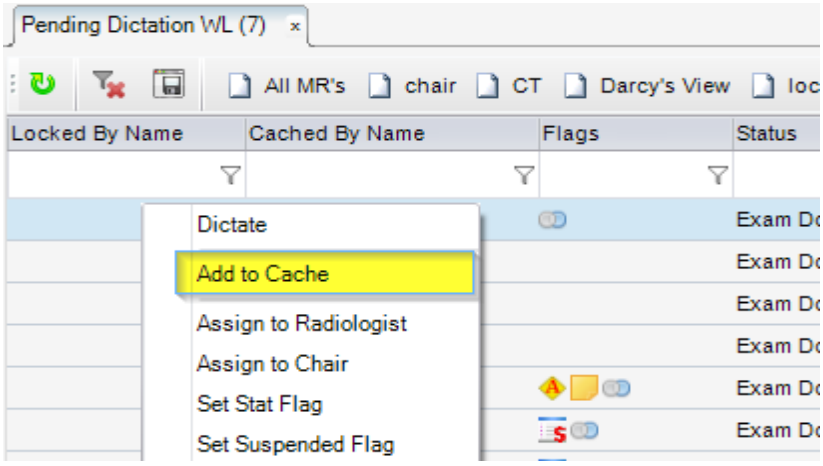

**Figure 5.25a – Add to Cache context menu option from Pending Dictation WL**

IW PACS "Caching" was attempted by actually opening the study. This has issues where studies that are "caching" sometimes pop up over top of images actually in use. This is probably suitable to be tested by a radiologist with warning they should be cautious and ensure that the images they are sync'd with the study they are reading.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – PACS Server Override

It has been requested that radiologists be able to access images on eRAD PACS and PACS IW from the same work list without changing the practice selected in the Org picker. This is now possible with the selection of a new user preference.

On the Integration tab there is a new option titled PACS Server and associated list box. This list box will contain the available PACS systems configured in the PACSServer lookup table that are in Active status. An access string named "**Clinical.UserPreferences.PACSServerOverride**" has been added for this preference with a default value of Disabled.

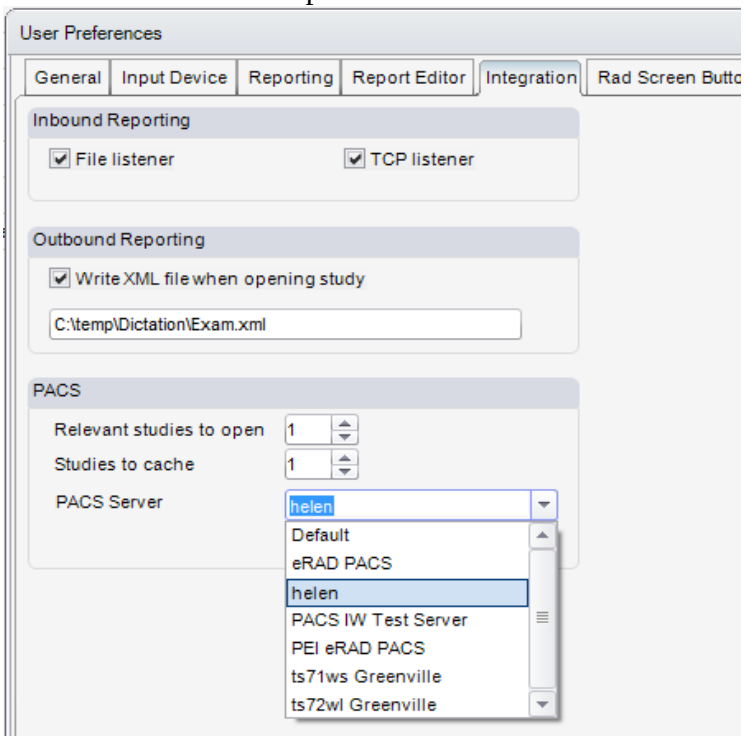

**Figure 5.26 – PACS Server user preference**

One of the PACS Server options is Default. If this is selected, the default PACS Server associated with your current practice selected in the Org picker will be used (same as before). If a specific server is selected, this will be the PACS that the images are displayed. For instance, if patient A has images on eRAD PACS and also PACS IW Test Server, when that server is selected the call for PACS will be made to that server and not the default for the practice.
**NOTE: If the PACS Server user preference selection is changed, the user will need to log out and back in again to pick up the changes. The user may encounter an error if they don't logout after changing the user preference.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Noticeable Sign Button in Reporting Windows

To make the Sign button in the reporting windows easier to identify a new user preference was added add color to the background of the button and the option to change the font color.
The "**Visually enhance sign button**" user preference is located on the Appearance tab under the Radiologist Reporting Buttons section.

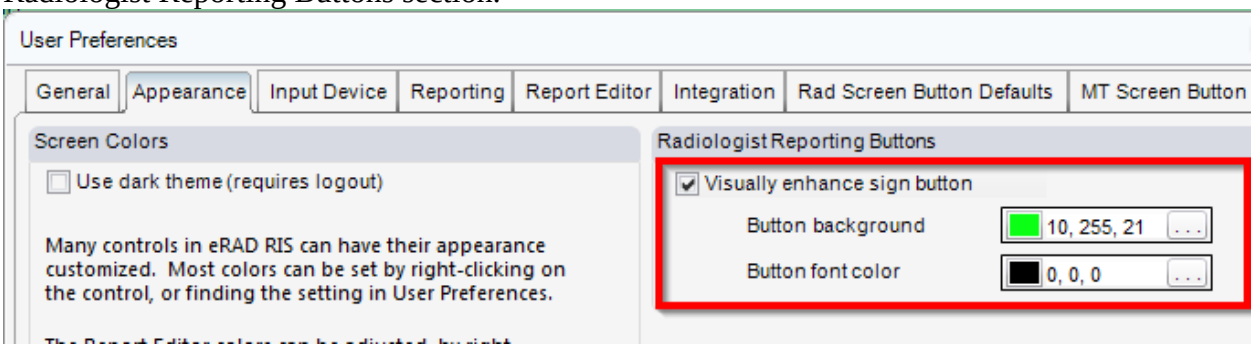

**Figure 5.27a – New user preference Visually enhance sign button**

With the preference selected and the above colors set the Sign button will look this in the reporting widow.

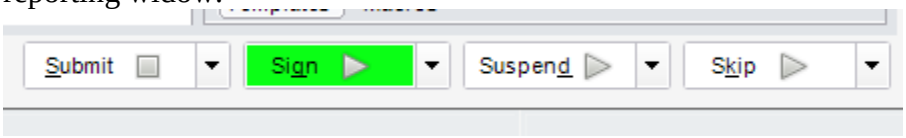

**Figure 5.27b – Noticeable Sign Button in Reporting window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

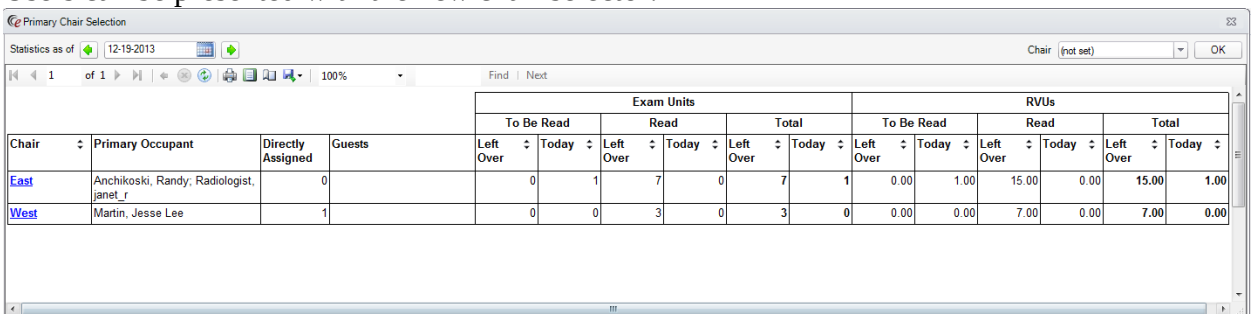
## Reporting – Chair Workflow Enhancements

You will first notice the Chair workflow enhancements upon login of eRAD RIS in build 42. Users can be presented with the new chair selector.



| | | | | Exam Units | | | | | | RVUs | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | To Be Read | | Read | | Total | | To Be Read | | Read | | Total | |
| Chair | Primary Occupant | Directly Assigned | Guests | Left Over | Today | Left Over | Today | Left Over | Today | Left Over | Today | Left Over | Today | Left Over | Today |
| East | Anchikoski, Randy; Radiologist, janet_r | 0 | | 0 | 1 | 7 | 0 | 7 | 1 | 0.00 | 1.00 | 15.00 | 0.00 | 15.00 | 1.00 |
| West | Martin, Jesse Lee | 1 | | 0 | 0 | 3 | 0 | 3 | 0 | 0.00 | 0.00 | 7.00 | 0.00 | 7.00 | 0.00 |

**Figure 5.27 – New Chair selector**

The original chair selector provided a simple drop down list of chairs and an OK and Cancel button. We have augmented this screen to show which radiologists are currently assigned to each chair, and we now describe the amount of work assigned to the chair for today and previous days. The old chair selector is still available and the user can choose "the old" or "the new" chair selector with a new User Preference "**Use detailed chair selector**". This is found under Reporting>Workflow.
The radiologist can select a chair either by clicking the blue hyperlink for the chair, or they can use a dropdown list if they prefer to make a selection with the keyboard. Once the radiologist selects a chair, the chair selector will disappear, and a chair filter will be applied to the My Pending Dictation WL.

The calendar control in the top left of the chair selector is used to determine the effective date for the statistics shown for each chair e.g. the stats for each chair break down the number of exams into "Today" and "Left Over". The calendar control defaults to "Today" when the chair selector is initially opened, so the "Today" column represents exams that were assigned to the chair today, while the "Left Over" column covers exams that were assigned in the previous 7 days. If the radiologist changes the date to reflect "Yesterday", the numbers in the "Today" column will instead reflect the exams assigned "Yesterday", while the "Left Over" column will again reflect the 7 days prior to "Yesterday". The calendar control also affects the numbers shown in the "Directly Assigned" column, we calculate the total number of exams assigned to the primary occupants of the chair based on the specified "chair assigned date."

For practices with a large number of chairs, we may find that there are too many choices to fit onto a single page. The tool strip has "next page / previous page" style controls that will allow the user to browse all of the chairs if desired. The "Find" control on the same tool strip can also be used to help jump to other pages.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### Primary Chair vs "View Other Chairs"

The chair selector serves the dual purpose of allowing the radiologist to set their Primary Chair that they will be working for the day, while still allowing them to browse the worklist for other chairs. When the radiologist first logs in, they will be presented with the chair selector with the title "Primary Chair Selection"

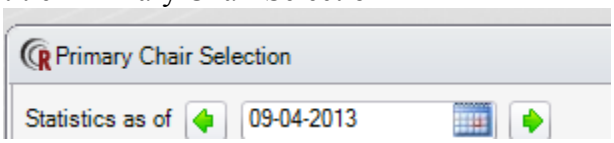

**Figure 5.28 – Primary Chair Selection window**

The primary chair selection will be used to ensure a particular chair is credited for the work done by the radiologist. We will assign an exam to the radiologist's primary chair once it is dictated or signed, provided it has not already been set.

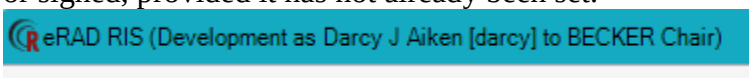

**Figure 5.29 – Primary chair displayed in the title bar**

After the radiologist selects a primary chair, they can bring up the chair selector by pressing the chair icon on the status bar at the bottom of RIS. The chair selector now has the title "View Other Chairs" and will be used for filtering worklists only, credit will not be assigned to this chair when the radiologist is dictating or signing exams.

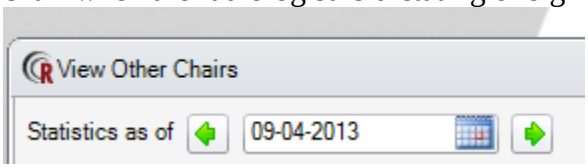

**Figure 5.30 – View other chair selector**

The figure below indicates that the "South" chair is occupied by Janet i.e. Janet's Primary Chair is "South" and that "Darcy" is currently filtering his worklist for the "South" chair via the "View Other Chairs" selection. In this case the 2 "Directly Assigned" refers only to the occupant of the chair (i.e. Janet).

**Figure 5.31 – Occupants and Guests displayed in chair selector**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

If a user tries to choose a chair that is already occupied by another user, they are presented with a prompt to confirm their choice:

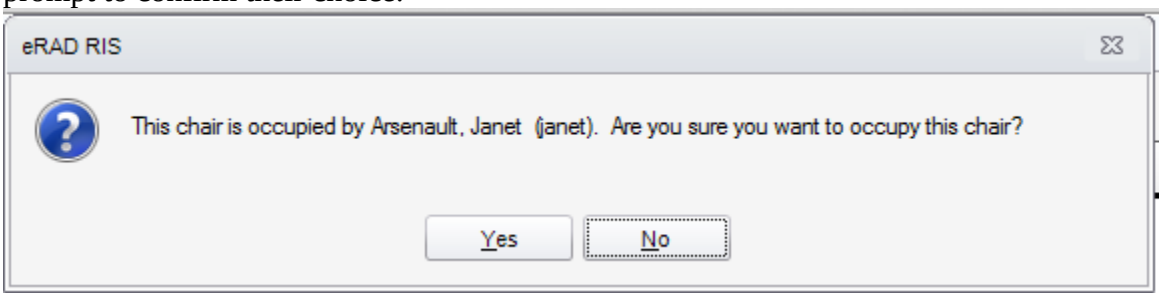

**Figure 5.32 – Prompt to confirm when the user selects a chair that is occupied by another user**

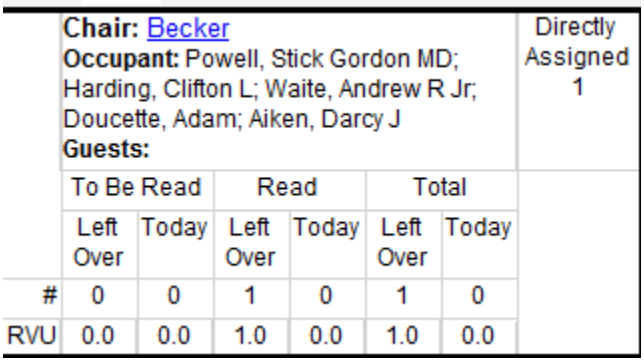
Previously the RIS back end services were agnostic of the user's Primary Chair selection, this was a detail managed solely by the client. We were required to save the user's choices to the database in order to be able to show occupants and guests on the new chair selector. We clear out these choices when the user logs out. In the event of an abnormal application termination (e.g. a power outage or crash), we do not have the opportunity to clear out the chairs. In this case, the chair occupants will remain in their chairs until they log back in and make a new selection, or their chair selection expires. RIS is presently set to occupy a chair for 2 hours or until the user logs out or makes a different selection, these 2 hour chair selections are renewed every hour.

### Descriptive Statistics for Chairs



| | **Chair:** Becker<br>**Occupant:** Powell, Stick Gordon MD; Harding, Clifton L; Waite, Andrew R Jr; Doucette, Adam; Aiken, Darcy J<br>**Guests:** | | | | Directly Assigned 1 | |
|---|---|---|---|---|---|---|
| | To Be Read | | Read | | Total | |
| | Left Over | Today | Left Over | Today | Left Over | Today |
| # | 0 | 0 | 1 | 0 | 1 | 0 |
| RVU | 0.0 | 0.0 | 1.0 | 0.0 | 1.0 | 0.0 |

**Figure 5.33 – Close-up of the statistics for a single chair**

The following logic was used to calculate the numbers in the chart above:

| Label | Definition |
|---|---|
| Directly Assigned | The total number of exams assigned to all primary occupants of the chair with a chair assigned date that matches the selection in the calendar control on the chair selector |
| To Be Read | Exams with a status of ExamDone or Signed with an addendum |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | |
|---|---|
| | requested |
| Read | Exams with a status of Dictated, Transcribed, Report Drafted, Tentatively Signed, or Signed (excluding Signed Exams with an addendum requested) |
| Today | Exams with a chair assigned date that matches the selection in the calendar control on the chair selector |
| Left Over | Exams with a chair assigned date that is within the 7 days prior to the selection in the calendar control on the chair selector |
| # | The number of exams |
| RVU | The sum of the weighted value for the exams. These weighted values can be configured by procedure code and practice, the configuration for these weights is discussed later in this document. |

**Table 5.1 – Detailed explanation on stats in chair selector**

### Chair Selection Management Report

The tables shown in the chair selector thus far have all been built within a management report. There is a new system configuration setting called "**ChairSelectionReport**". RIS will fall back to the previous chair selector if this entry is blank. A valid entry for this setting will describe the path to a management report on the report server (e.g. /dev/Management Reports/Custom/ChairSelection). The use of a configuration setting will help with the introduction of different versions of Chair Selection Reports – if the new version has issues, the configuration setting can be set to point back to another version of the report.

The hyperlinks in the chair selection report must be crafted in a particular way in order to be handled by RIS. This approach will initially be managed and refined by eRAD R&D and documented later for use in the field.

### Work Unit Configuration (aka RVUs or weights)

Procedures can now be assigned a relative weight to make it easier to ensure radiologists are given the appropriate credit for their work. Some procedures are significantly more involved than others, (e.g. Chest X-Ray vs PET/CT) so comparing just the number of exams is not meaningful. Access to see the RVUs option in the chair selector is configurable based on the new access string "**Clinical.ShowRVUs**"

There is now a new configuration option under Administration -> Configure -> Procedure -> WorkUnit that allows an administrator to assign weights to different procedures.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| Procedure | Practice | Work Units | Display Order | Effective Date | Dollar Value | Last Updated | Active |
|---|---|---|---|---|---|---|---|
| Contains: | Contains: | Equals: | Equals: | Equals: | Equals: | Equals: | Contains: |
| Click here to add a new row | | | | | | | |
| CT 3 Phase (CT13) | Advanced Radiology | 2.000 | 1 | 07-01-2013 | | 08-26-2013 2:08 PM | Y |
| CT 3 Phase (CT13) | Advanced Radiology | 1.100 | 1 | | | 08-26-2013 1:16 PM | Y |
| CT 3 Phase (CT13) | Advanced Radiology | 3.000 | 1 | 08-01-2013 | | 08-26-2013 1:13 PM | Y |

**Figure 5.34 – WorkUnit configuration lookup from Administration -> Configure**

Work units are designed to allow different practices to assign their own weights to the same procedure. Rather than require the administrators to map out rules for each procedure and practice, we have a default weight of 1.00 that will be used for any procedure that does not have a weight configured (for a given practice).

Because weights may be subjective, we have built in a date based versioning scheme. If an administrator decides that a Chest X-Ray should have a weight of 0.10 units, they can set the effective date to July 1, 2013 to make the new weight apply to all studies with a date of service greater than July 1, 2013. In the event that their opinion changes as to the relative weight of a Chest X-Ray, they have the option of changing the 0.10 to another value (e.g. 0.20) either by modifying the existing row, or creating a new row with a different effective date. If the new effective date is August 1st, 2013, it will apply only to exams performed after August 1st, while those performed in July will still use the original weight of 0.10. Modifying an existing weight and leaving the previous "effective date" intact will retroactively assign the new weight to exams performed after the effective date.

It is important to note that the default of 1.00 will apply to any exam performed before the earliest effective date for a given procedure and practice. If there is no rule for Chest X-Rays with an effective date earlier than July 1, 2013, then any Chest X-Rays performed in June would be the default 1.00 units. There is also a Dollar Value column that behaves the same as the weights themselves, but this may be removed if it does not add value.

### Chair Assigned Date

There is now a new attribute that is set when assigning an exam to a chair: chair assigned date. Whenever a user in the RIS client assigns an exam to a chair, we now set the chair assigned date to the current date and time. Although the "chair assigned date" has not been added to any worklists, the chair assigned date is factored into the statistics on the chair selector's statistics - "Left Over" vs "Today" is determined using the chair assigned date.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Administration - Display Locked Items in Different Color on the Work List

This requirement was almost achievable without code by using the existing "Conditional Formatting" telerik feature, except for one limitation. The user could have created a conditional format filter with a 'Contains' condition looking for their userID. However, this means the filter would have to be created by each radiologist independently and could not be shared since it is unique to each person's userid. Also, the conditional formatting tool is not a simple and intuitive feature for a novice user, therefore the effort of creating and maintaining these features would have fallen to implementation people to create and maintain for each radiologist. We deemed this too much work, and a feature could be built to support it instead.

The column/cell that will be colored is the locked_by_name column and the cached_by_name column.. Therefore, implicitly this column must be in the worklist you wish to add this feature to.

The user will be able to select the foreground and background colors simply and easily.
The user will be able to select either "Colour my rows" or "color other people rows" or both.
The system will have default colors that will be compatible with both light and dark mode.
The color filters will be part of the worklist views feature; therefore saving a worklist view implicitly saves the color filters.
To implement this, a new control was added to the right-click menu on the worklist.

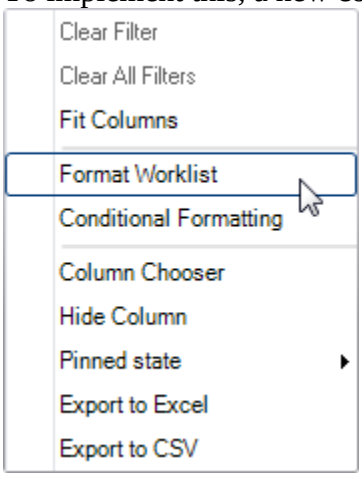

**Figure 5.35 – Context menu option to create colored columns for Locked By and Cached By**

Selecting Format Worklist from the context menu as displayed above will open the Formal Worklist window.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

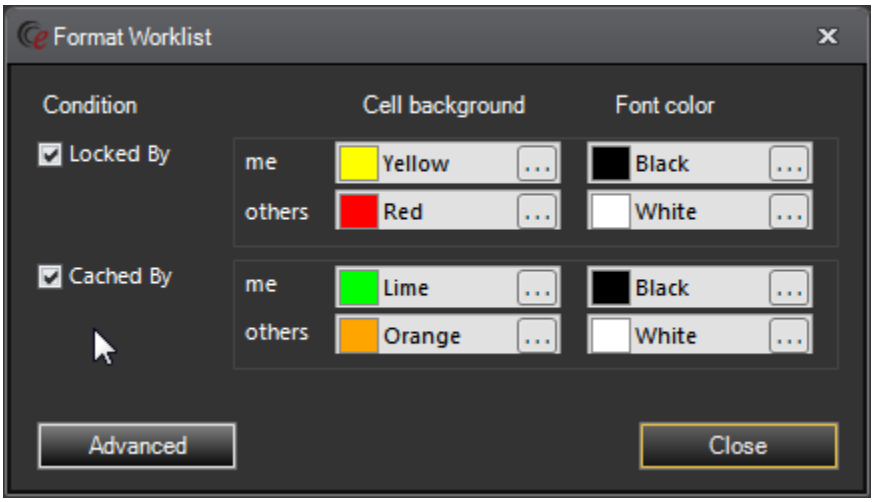

**Figure 5.36 – Format Worklist window**

This screen allows the user to configure their color filters.

The 'Advanced' button is provided as another way to access the Telerik Conditional Formatting feature. The Close button implicitly stores and invokes the color filters.

**NOTE:** ***Once color filters are set, they must be saved into a worklist view if the user would like to keep the selection.***

As well, it was mentioned that the user might like a filter condition which would show them only the worklist rows that they currently have locked.
While the user could just create a typical worklist filter condition, it was slightly complicated by the fact that the expected filter condition (ie, starts with 'me') would not work. In fact, it would have to be written as (contains me). To simplify this for the user, a new filter context menu option was added.

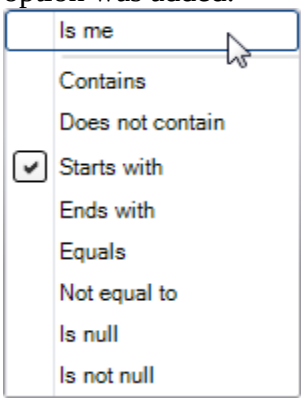

**Figure 5.37 – Filter option added**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Attachments - “Show Me Everything” Option

The attachment types dropdown can be configured to display only those attachments they want to see appear in the Attachments data pane or data nugget. We have added an option to enable the users to have access to the remaining attachments that may be associated with the patient.

Two new options will appear in the attachment types dropdown
+ Show More
- Show Less

By default the attachment data nugget opens with only the scan document types the user wants to see, which is configurable via the ' button'. By choosing "+ Show More" the attachment data nugget will reopen and display all attachment types regardless of user preference.

These options will not display if there are no additional attachments.

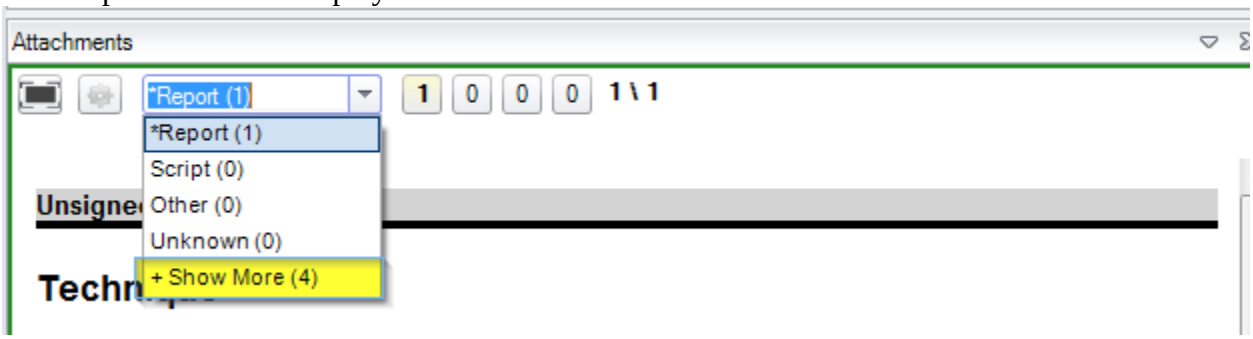

**Figure 5.38 – Show more attachments**

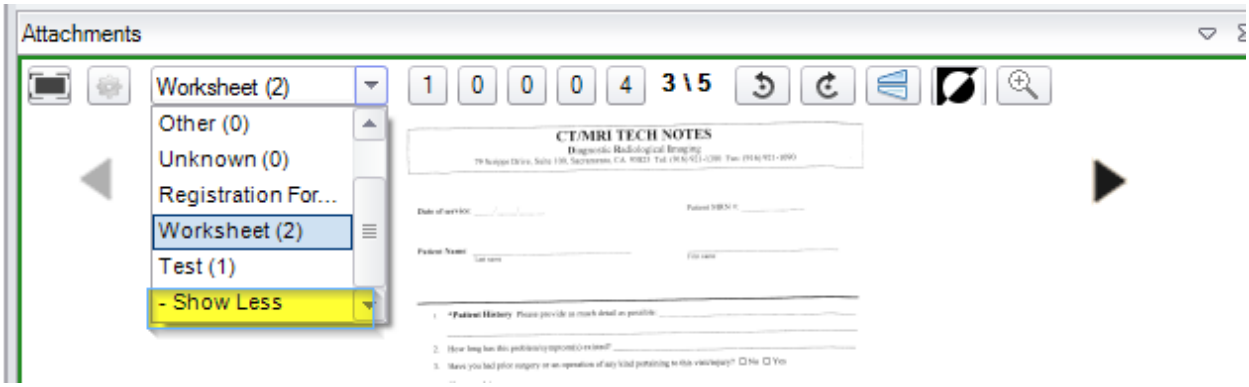

**Figure 5.39 – Show less attachment options**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Attachments - Ability to Add Attachments from Worklist Context Menu

The ability to add attachments from wordlist's context menus has been added in build 42. Wordlist's that allow for "Edit Patient" will now have the context menu option of "Attachments"

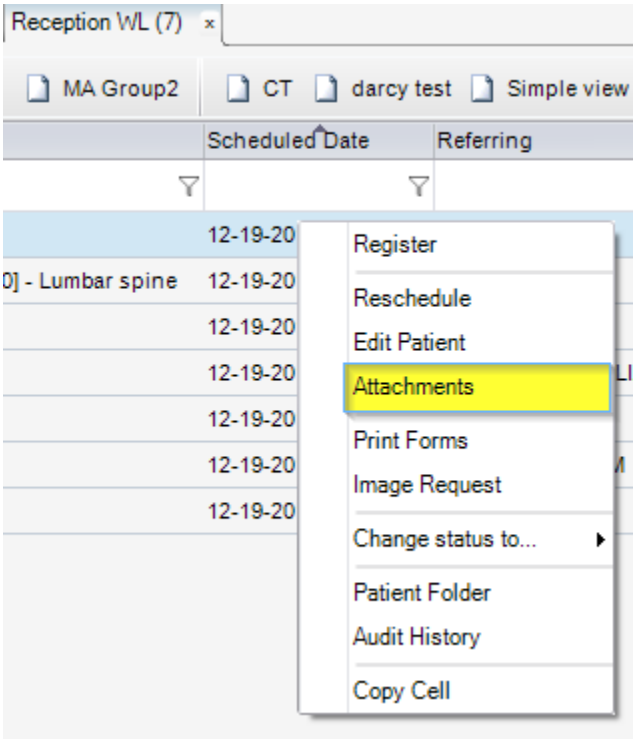

**Figure 5.40 – Attachments context menu option**

Also added were study details above the attachment list so we know exactly what the current study is.

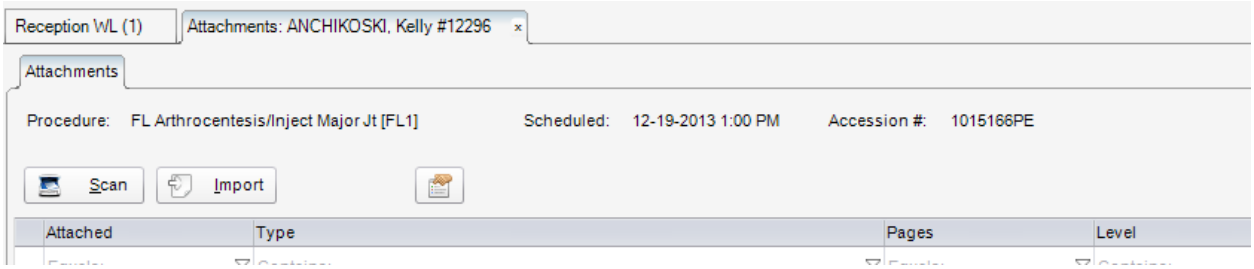

**Figure 5.41 – New Attachments window opened from context menu on work list**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## IVT - Next Follow up Date

Both IVT and Schedulers rely upon the contact log to show the follow-up activity (e.g. phone calls, letters, etc) for a particular patient/exam. The worklist for IVT and scheduling were modified to show the last follow-up type and the date of the last follow-up, but short of opening up the IVT screen or Scheduling screen to read notes, it can be difficult to know which patient/exam to "work" next. Ideally the schedulers and IVT team would have a means to record the "Next Follow Up Date" and/or "Next Follow Up Type" and have it show on the worklist for sorting/filtering purposes in order to reduce the need to open each row on the worklist.

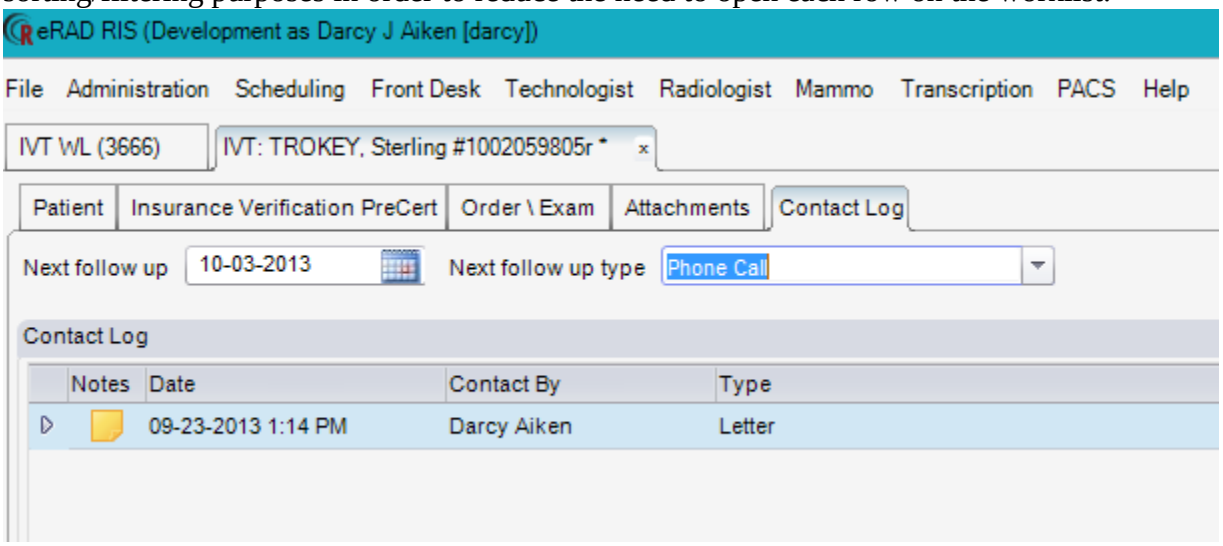

**Figure 5.42 – Contact Log on IVT window now includes a Next Follow Up Date**

In the above example the "Next Follow Up Date" is stored in a database field specific to IVT.

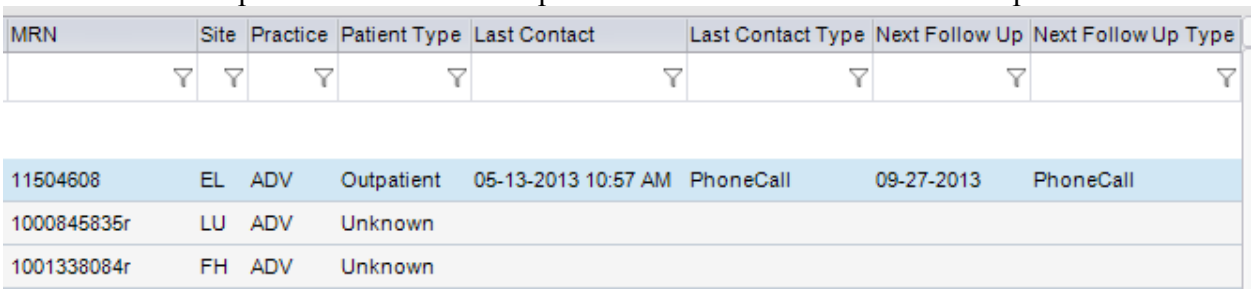

**Figure 5.43 – IVT Worklist now includes Next Follow Up / Next Follow Up Type that can be sorted/filtered**

The figures above are for IVT, but the Contact Log tab is the same in the Schedule Order window and columns on the Orders To Schedule work list also includes the Next Follow Up and Next Follow Up Type.

The values for the "Next follow up type drop down list are taken from the FollowUpType lookup table under Administration -> Configure -> Mammography -> FollowUpType.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Support Non Order Level Locking

Previous to build 42, RIS used Order Level application locks to reduce the risk of multiple users editing the same data at one time. If one user opens a particular exam, RIS will prevent other users from opening that exam (or any other exam that belongs to the same Order). This causes problems for our users by requiring the user to wait for the lock holder to close out before they can make their changes.

To refine the locking strategy such that we lock single studies instead of the entire order, (where appropriate) taking into consideration the action the user is attempting (e.g. Perform Exam). i.e. Two techs should not be allowed to perform an exam at the same time, but perhaps we should allow a Tech and a Rad to simultaneously have the same exam open. On the other hand, a Radiologist and a Transcriptionist should not be allowed to open the same exam at one time.

In build 42, this has become a reality. Changes to the lock tag generation will allow users to simultaneously make changes to the same study based on the following:

One of the keys to managing locks is that we generate a tag based on what we intend to lock, and if another user requests the same lock tag, we will return a lock failure message. As of build 41, we were generating these lock tags in the form of 123Order where 123 uniquely identifies the order that is locked.

The new approach is to build a 3 part lock: the identifier for the Order or Study being locked (either order_key or study_key), a lock suffix that indicates the type of action being performed e.g. IVT, PerformExam, and finally the word “Order” or “Study”.

Because some screens need to conflict with others (e.g. ReportingRadiologist and the Transcriptionist screens), we map different screens into buckets. In many cases a screen will have its own bucket e.g. IVT and PerformExam. There are a few screens that are report related that are given the same bucket “Report” in order to reduce the likelihood of conflicting changes.

A system table in the database (i.e. one that is not editable through Administration->Configuration in the RIS) assists with the mapping of screens to buckets, and helps determine if the screen will lock on the Order or on the Study.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | lock_hint | study_level_flag | lock_suffix |
|---|---|---|---|
| 1 | BillingConfirmation | Y | Billing |
| 2 | FollowUp | N | FollowUp |
| 3 | IVT | N | IVT |
| 4 | PerformExam | Y | Tech |
| 5 | ReportingRadiologist | Y | Report |
| 6 | ReportingTranscription | Y | Report |
| 7 | VerifyExternalReport | Y | Report |
| 8 | ViewEdit | Y | ViewEdit |

**Figure 5.44 – Mapping class names in RIS to lock**

Any screens or other functionality that is not included in the list above will continue to lock the Order. E.g. Scheduling and Register will lock the Order with a lock tag in the form of "123Order". Because of the lock tag design, Scheduling and Reception will not block anyone from opening any of the other screens above, but they will conflict with each other.

### Server Side Checks for Locks Prior to Saving

Immediately before we save an order or study on the server, a check is performed to see if the user holds a valid lock for the data in question. In the past we simply needed to check for the existence of a valid lock in the database with a lock tag that corresponded to the order being modified. If no valid lock were found, we would throw an error back to the client and not allow the user to save their changes. Under normal circumstances, the only way this would occur would be in the event that an authorized user used the Break Lock functionality.

The new approach is to check for a valid order level lock, if found we allow the save to continue. If there is no valid order level lock, we check for a valid study level lock for each study that is being passed in. If there are enough valid locks we throw an error back to the user, otherwise we allow the save to succeed.

Note that orders and studies that are being created do not require locks, so we exclude them from the lock checks above.

### Changes to Lock Management

Each screen that requires locking functionality makes use of a class called GUILockManager that is responsible for refreshing and releasing locks. Previously this class could manage only one lock at a time. We now generate a unique lock identifier that helps to uniquely identify the instance of the lock and can refresh or release multiple locks in a single service call.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

In some cases the user may attempt to acquire or refresh multiple locks and the call will be only partially successful – e.g. only two of three locks will be granted. In these cases the client will behave as though the entire lock request has failed.

### Changes to Worklists

The worklists that are designed for Radiologists and Transcriptionists include a column that identifies the user that holds a lock on that data. Because the lock tag is calculated differently, the worklist views were updated to filter for the type of locks that are used by Rads. If a Tech has an exam open, previously we would show the tech's name/userID in the "Locked By" column. Now that we are only interested in specific kinds of locks, we will only populate "Locked By" if it is a "Report" level lock (i.e. opened by another Rad, Transcriptionist, or someone using VerifyReport). Previously the worklists were parsing the lock_item_code in order to join to order, we now have a foreign key to Order and Study to assist with the join.

There are worklists that are not specific to Rads and Transcriptionists that have a locked by column e.g. the BI-RADS 0 and BI-RADS 4/5 worklists. Because the users working this list are not focused on the report, their worklist will only display the type of locks that pertain to them.

### Changes to Perform Exam

The Perform Exam screen generates a lock for each study within an Order. When the Perform Exam screen is initially opened, a single lock tag is generated. If the user clicks the include button, we attempt to acquire additional locks to prevent other techs from working on those studies simultaneously. In the event that there is a locking failure when the tech clicks the include button, we display a locking failure message to the tech, uncheck the "Include" box, and reselect the previous exam on the patient history grid. No "break-lock" functionality is planned for this case.

### Alerts for Similar Locks

A new alert was created (verbiage to be determined) to warn a user on Perform Exam or View Edit if a Rad or Transcriptionist has the same exam open.

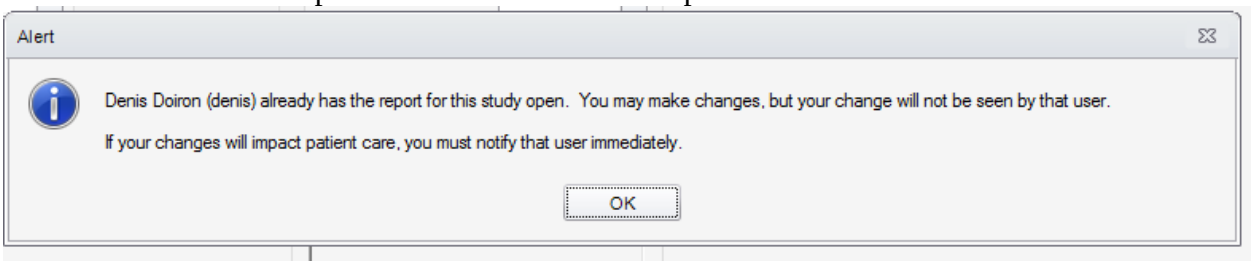

**Figure 5.45 – Alert on View Edit and Perform Exam when a Rad or Transcriptionist has the same exam open**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

We need to determine if these types of warnings will be sufficient, or if we need to have a locking mechanism that can acquire a fine grained lock that can prevent other users from making specific types of changes.

**Special Handling for Notes**

Our original implementation of "Notes" requires special handling. As users add new notes, we concatenate the new notes to the existing notes. In the case where two users update patient notes at the same time, the second saver wins and the first saver's notes are lost.

We have updated the concurrency handling to help reduce the risk of issues surrounding simultaneous updates to notes. If two users save changes at the same time, we detect the conflict on the server side and then extract the new notes from the second saver's update and then concatenate that with the existing notes in the database.

This was tested and works well for updates (i.e. adding new notes), but there is an outstanding issue with deletions. A typical user is not authorized to delete previously saved notes, but there is a permission that can allow an authorized user to edit existing notes. We did not build any handling for deleted notes – if two users update a row at the same time and the second saver deleted some notes, we simply allow the first saver to win.

A future sprint should address the current implementation of notes, possibly considering a design change so that each note is stored in its own row.

**Special Handling for Manage Policies**

When the user presses Manage Policies on a screen such as Registration, IVT, or ViewEdit, we now attempt to acquire a special insurance related lock. If the attempt to acquire the lock succeeds, the manage policies dialog will appear as before. If the lock acquisition is unsuccessful, the user will be presented with a lock failure message which identifies the lock holder and presents a "Read-Only", "Cancel", or "Break-Lock" option (the latter requires a lock override permission).

If a user's insurance lock is stolen, the GUILockManager will release all other related locks for that screen. E.g. if the user has ViewEdit open, they will lose the study level lock that they were granted when they opened the screen. Break lock for insurances should be used sparingly. Note that there is no enforcement of the insurance lock on the server, i.e. the user requires a lock to open the screen in the GUI, but the server will not reject an insurance update from a user that doesn't have a lock.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

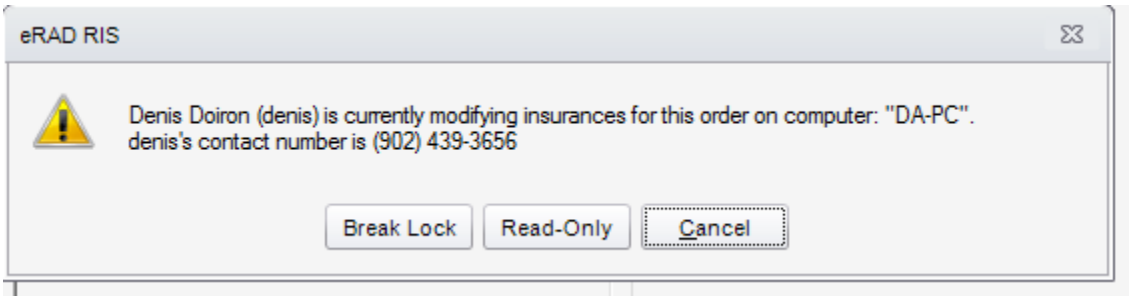

**Figure 5.46 – Break lock message**

## Special Handling for Patient Merge

When a Patient Merge is performed, there is a Source Patient and a Destination Patient. The Source Patient's visits, orders, studies, etc. are moved to the Destination Patient and the Source Patient is marked as Deleted. We have had cases where one user was actively working on the Source Patient during the merge process, and some studies were re-associated with the Source (i.e. deleted) Patient.

The Patient Merge screen has been updated to help reduce the chance of this happening in the future. When the user presses the Merge button on the Patient Merge screen, we now check for any locks on the source patient. If any locks are held for any of that patient's orders or studies, we identify the lock holders (userID and full name) and tell the user that the merge cannot be performed until those users' locks are released.

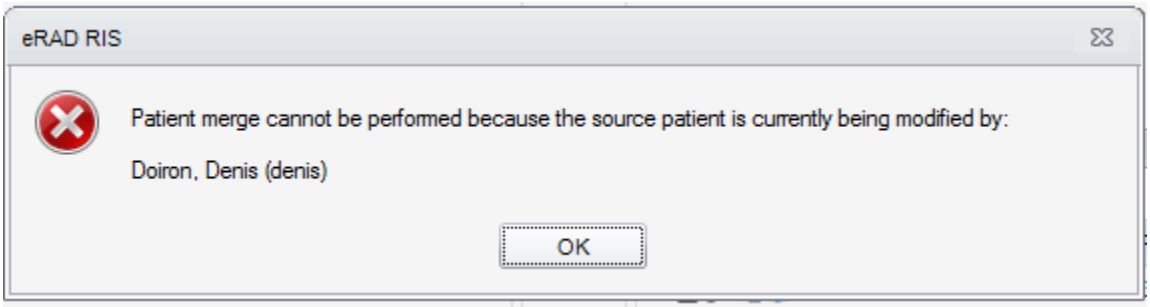

**Figure 5.47 – Message prompt on Patient Merge when Source patient is locked**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### Change Status / Cancel Study / Manual Status Change

Change Status, Cancel Study, and Manual Status Change have been updated to include a check for locks on the same study. We first attempt to acquire a traditional order level lock, if that succeeds we do a secondary check for any locks on the given study. If either of those fail we show a message similar to the following:

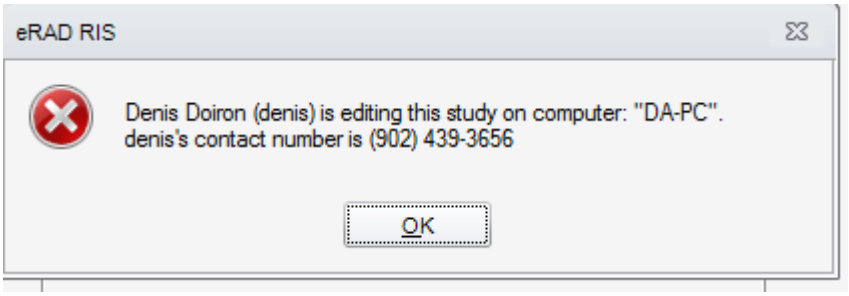

**Figure 5.48 – Message prompt from change status, cancel study, manual status change on locked study**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Administration - Multiple Person Ids

A grid has been added to the Account tab of the personnel editor. Users can add, edit, and delete alternate ids for the person as well as make them active/inactive. The idea is that a user can have multiple ids from a particular issuer, but only one of them *should* be active, but this is not enforced.

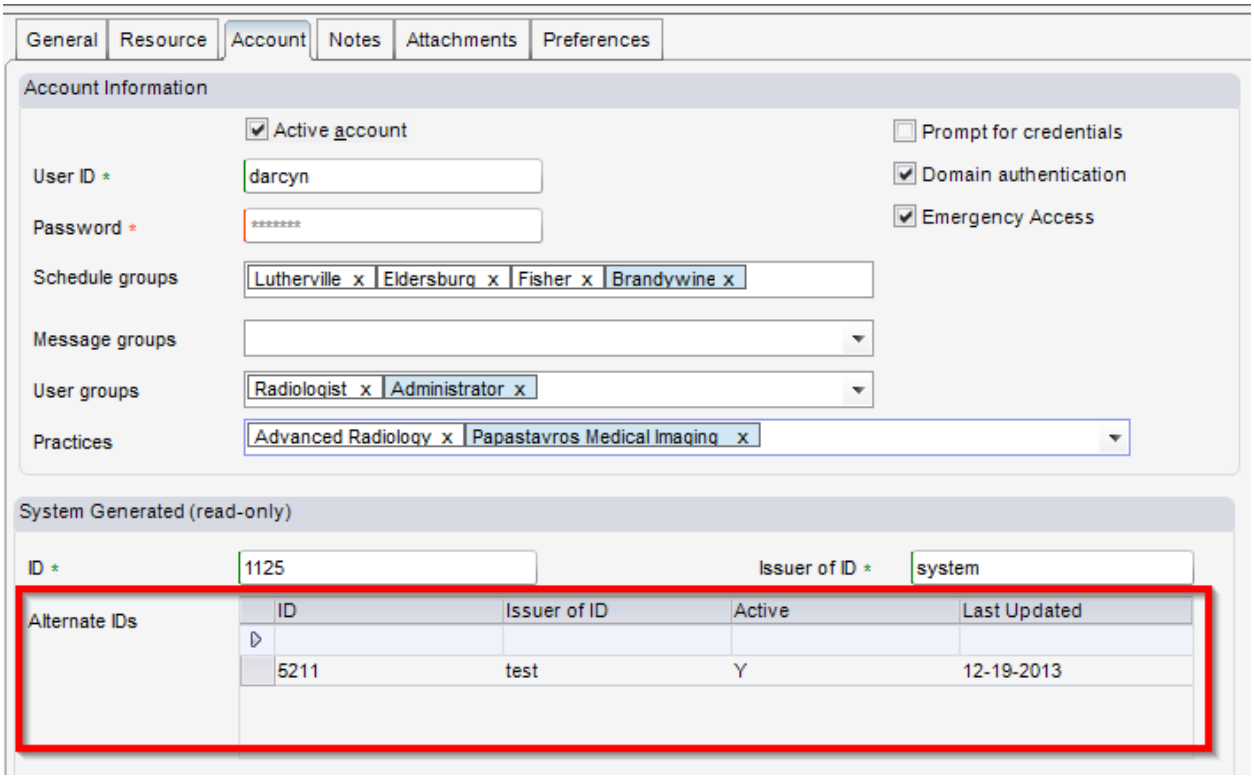

**Figure 5.49 – Alternate IDs can be added in Personnel Editor**

On inbound HL7 messages, the person will be resolved based on id/issuer of all primary and alternate ids and associated to the correct person.

On outbound messages, the wedge will expand the person_key and user_id nodes to include l_child_person nodes which contain the alternate ids. The mappings can then be made on a per-interface basis to select the correct alternate id to use based on the issuer. If multiple ids from that issuer exist, and they are both listed as active, then the mapping must pick one based on some other criteria ie. first one in the list or most recently updated.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Administration - Allow Editing of Billing Units

A new flag column has been added that will allow editing on the Billing Code / Procedure Code combination. In the Administration → Procedure Code lookup table → expand procedure code to view a new setting that allows the Billing Code / Procedure Code combination to be locked to users as far as ability to edit number of Units.

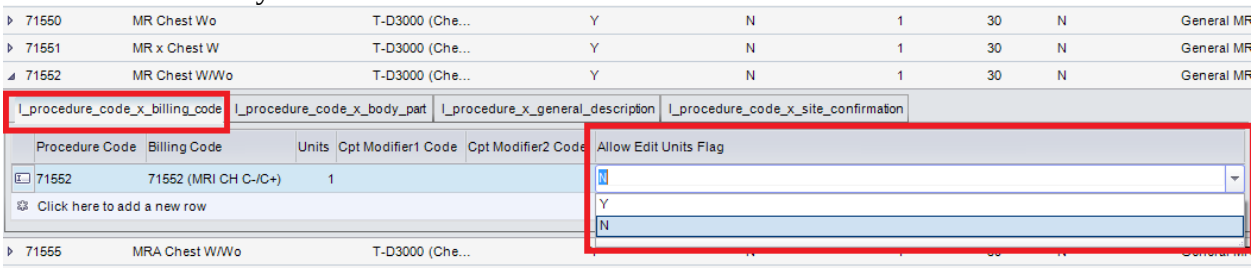

**Figure 5.50 – Allow Edit Units Flag**

By default editing is enabled to preserve pre-upgrade functionality. IF setting is set to "N" users will not be able to edit # of Units.

If set to N, in the billing code grid the user will not be able edit the number of units from the drop down for that particular procedure/cpt code.

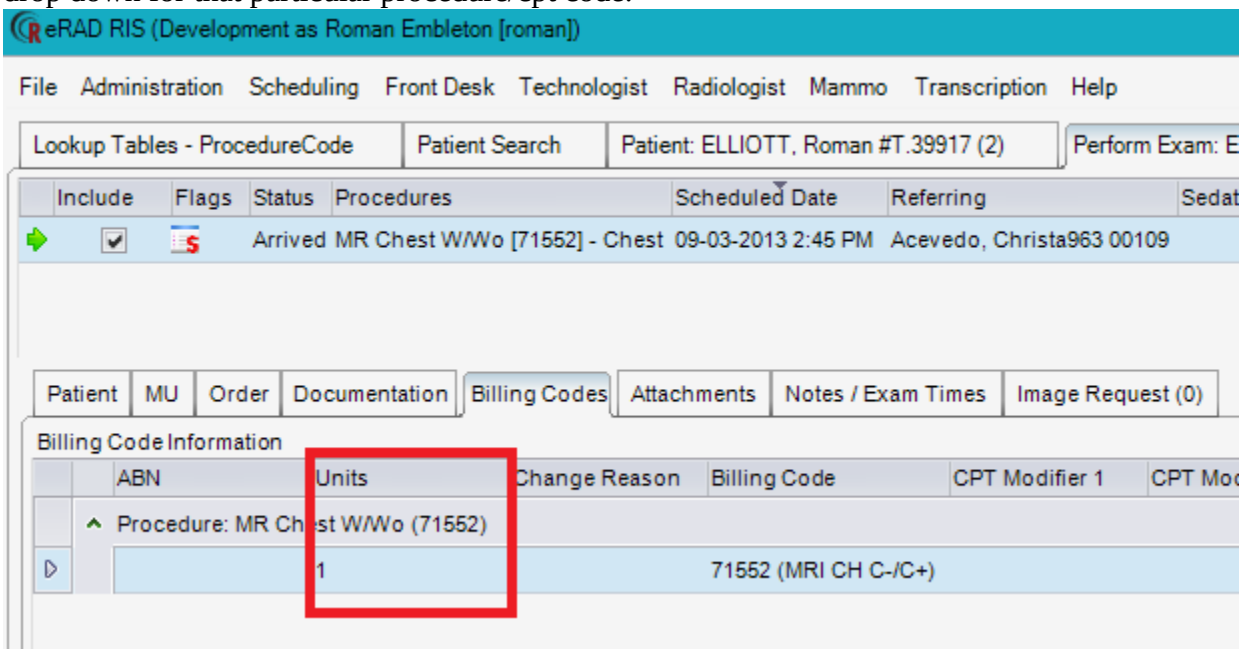

**Figure 5.51 – Units on billing code tab cannot be edited when set to N**

The user will still be able to add other billing codes that may (or may not) be edited.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

If the user attempts to add a billing code to the performed procedure and the value of "Allow Edit Units Flag" is set to N for that procedure, the Add Billing Code window will have the Units field disabled.

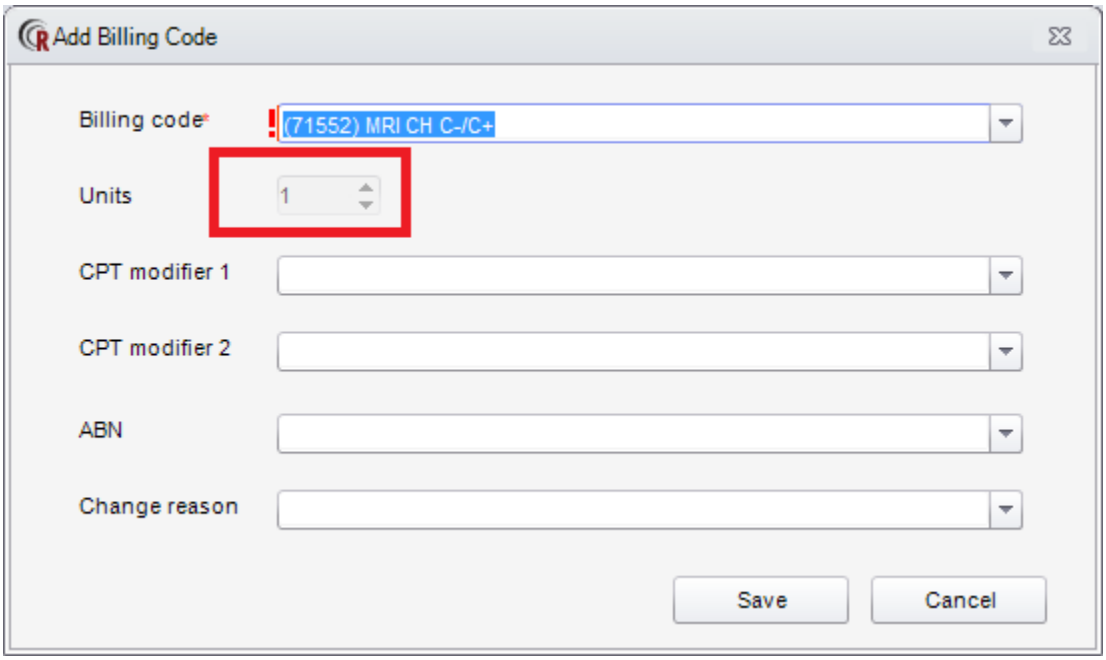

**Figure 5.51a – Add Billing Code window on billing code that the units cannot be edited**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Administration - Disable BI-RADS ® Per Site

In build 42 the ability to disable BI-RADS ® tracking can be turned off per site. The Organization Editor in Administration -> Configure has been updated to include a new checkbox to Disable BI-RADS Controls (verbiage may vary at time of release).

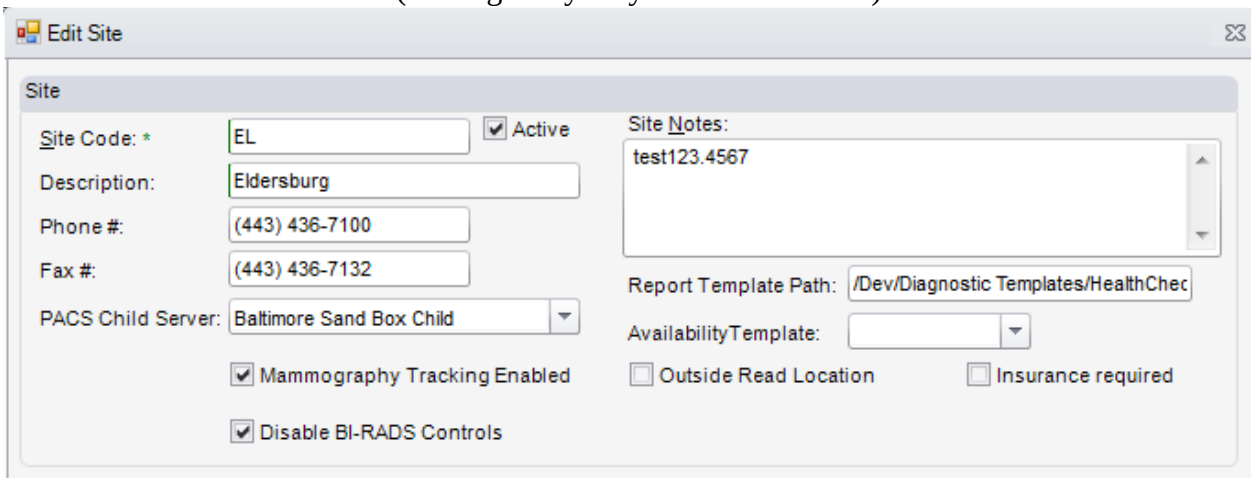

**Figure 5.52 – Ability to disable BI-RADS Controls per site.**

By default, "Disable BI-RADS Controls" will be unchecked when creating a new site. Mammography Tracking Enabled means that the site will generate follow-up orders, reminder letters, lay letters, etc. for any BI-RADS enabled mammo procedures.

Disable BI-RADS Controls means that the site will opt out of BI-RADS tracking altogether (in effect the setting for Mammography Tracking Enabled will be ignored if BI-RADS are disabled)

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Administration - Ability to Add MRN and Accession Prefix and Suffix

The ability to add and prefix and or suffix to the patients MRN and also to the Accession number has been added. This is controlled by two new system configuration settings.
For MRN they are:
"**MRNPrefix**" – Prefix that will be added to new MRN's
"**MRNSuffix**" – Suffix that will be appended to new MRN's
"**AccessionPrefix**" – Prefix that will be added to new accession numbers
"**AccessionSuffix**" – Suffix that will be added to new accession numbers

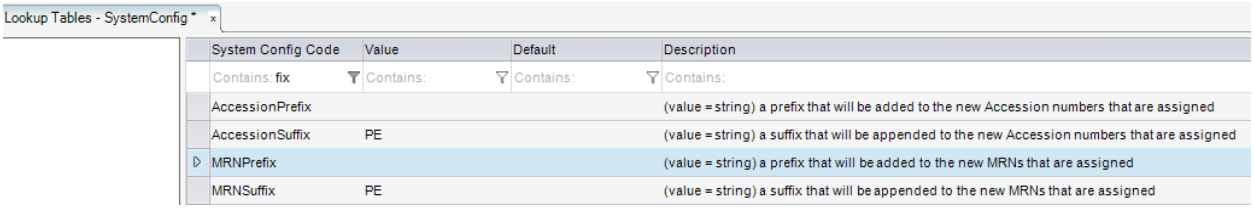

**Figure 5.53 – New systemconfig values**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Administration - Privacy Message on Locked eRAD RIS

A new system configuration setting "**PrivacyMessageText**" has been added to the system config lookup table. When this field has a string value, the string is displayed on the lock screen.

| System Config Code | Value | Default | Description |
|---|---|---|---|
| Contains: priva | Contains: | Contains: | Contains: |
| PrivacyReminderText | REMINDER: Do not snoop in patient records! | | (value = string) Defines the privacy string that will be displayed on the lock workstation screen. |

**Figure 5.54 – New system config setting PrivacyMessageText**

**Figure 5.55 – PrivacyMessageText value displayed on locked eRAD RIS**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

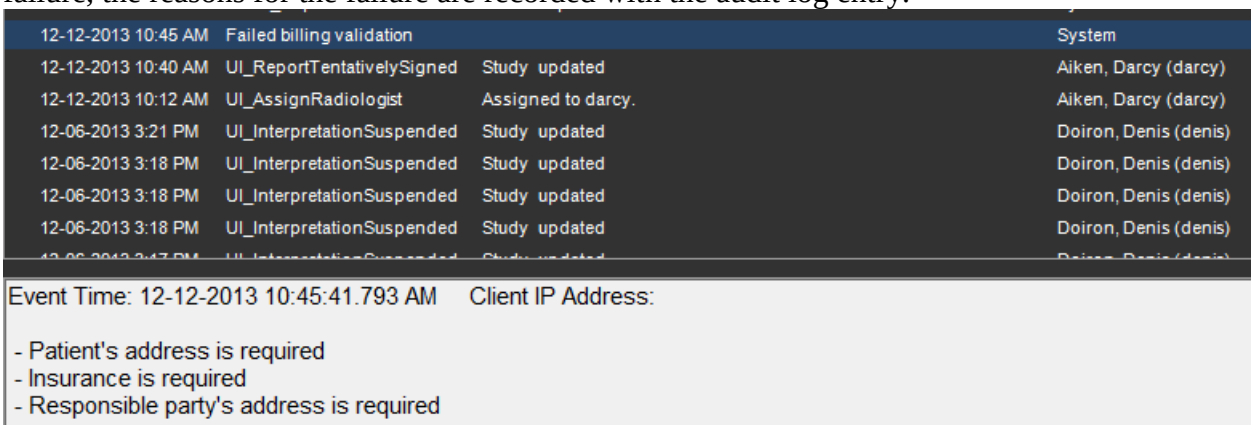
## Billing – Audit Log Capturing Billing Failure \ Reason

The audit table will now capture the success and failure of billing actions. If the billing action was successful the audit log will display "Posted to Billing"

| Date | Action | Description | User | Accession # | Order # | Status | Procedure |
|---|---|---|---|---|---|---|---|
| Equals: | Contains: | Contains: | Contains: | Contains: | Contains: | Contains: | Contains: |
| 12-12-2013 10:39 AM | UI_ReportSigned | Study updated | Aiken, Darcy (darcy) | 5131280 | 7405261 | Signed | Randy Test 02 |
| 12-12-2013 10:39 AM | UI_ReportSigned | Patient updated | Aiken, Darcy (darcy) | | | | |
| 12-12-2013 10:39 AM | Posted to billing | | Aiken, Darcy (darcy) | 5131280 | 7405261 | Exam Done | Randy Test 02 |

**Figure 5.56 – Successful billing action entry in audit log**

An unsuccessful attempt to bill will display "Failed billing validation". In the event of a billing failure, the reasons for the failure are recorded with the audit log entry.



| | | | |
|---|---|---|---|
| 12-12-2013 10:45 AM | Failed billing validation | | System |
| 12-12-2013 10:40 AM | UI_ReportTentativelySigned | Study updated | Aiken, Darcy (darcy) |

| 12-06-2013 3:18 PM | UI_InterpretationSuspended | Study updated | Doiron, Denis (denis) |
| 12-06-2013 3:18 PM | UI_InterpretationSuspended | Study updated | Doiron, Denis (denis) |
| 12-06-2013 3:18 PM | UI_InterpretationSuspended | Study updated | Doiron, Denis (denis) |

Event Time: 12-12-2013 10:45:41.793 AM Client IP Address:

- Patient's address is required
- Insurance is required
- Responsible party's address is required

**Figure 5.57 – Failed billing action reasons for failure**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## External – View Legacy Report PDF's as HTML

The web interfaces are unable to get an html version of the legacy reports, which were imported in the the RIS as PDFs. To solve this we are planning to integrate a PDF to html converter so that when we call the WebAPI interface we get the legacy PDF as html. The following is an example in the dev database of an accession number, which has a legacy PDF report.
http://localhost:9002/api/DiagnosticReport/1014129?format=HTML4.0

We decided to use a third party product to convert the legacy PDF documents to HTML so when you call the WebAPI url as described in the description of this issue, that the report will be returned as HTML.
The 3rd party API we are using is called AbcPDF.dll and must exist in the deployment directory for this to work.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

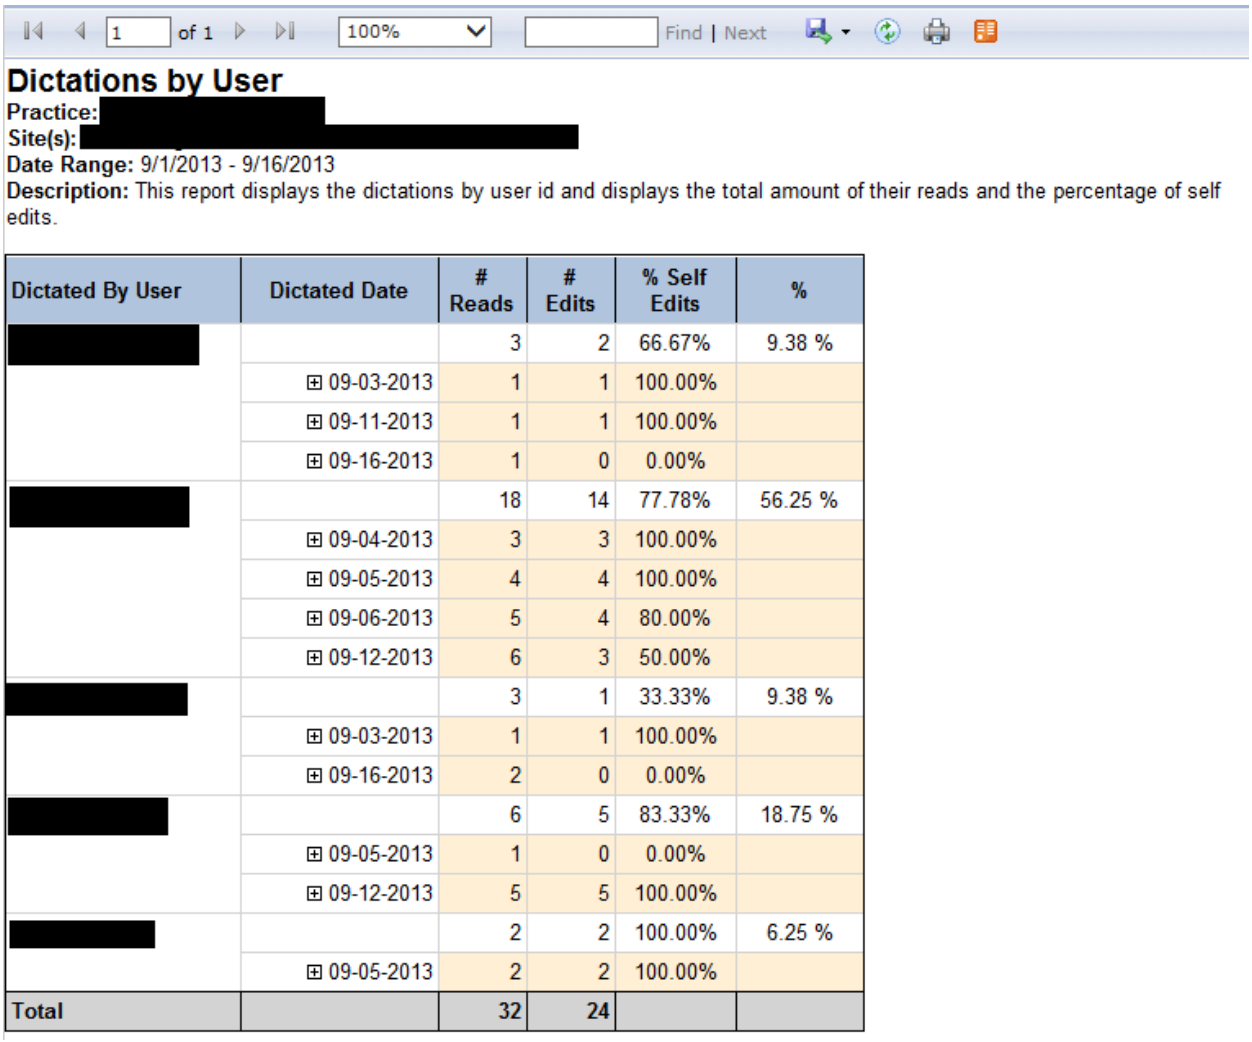
## Management Report – Dictations by User

Management report was created for displaying the dictation statistics for Radiologists broken down by

- number of reads
- number of edits
- % of their workload identified as a self-edit.
- % of the the total workload.



1 of 1 100% Find | Next

**Dictations by User**

**Practice:** [redacted]
**Site(s):** [redacted]
**Date Range:** 9/1/2013 - 9/16/2013
**Description:** This report displays the dictations by user id and displays the total amount of their reads and the percentage of self edits.

| Dictated By User | Dictated Date | # Reads | # Edits | % Self Edits | % |
|---|---|---|---|---|---|
| [redacted] | | 3 | 2 | 66.67% | 9.38 % |
| | ⊞ 09-03-2013 | 1 | 1 | 100.00% | |
| | ⊞ 09-11-2013 | 1 | 1 | 100.00% | |
| | ⊞ 09-16-2013 | 1 | 0 | 0.00% | |
| [redacted] | | 18 | 14 | 77.78% | 56.25 % |
| | ⊞ 09-04-2013 | 3 | 3 | 100.00% | |
| | ⊞ 09-05-2013 | 4 | 4 | 100.00% | |
| | ⊞ 09-06-2013 | 5 | 4 | 80.00% | |
| | ⊞ 09-12-2013 | 6 | 3 | 50.00% | |
| [redacted] | | 3 | 1 | 33.33% | 9.38 % |
| | ⊞ 09-03-2013 | 1 | 1 | 100.00% | |
| | ⊞ 09-16-2013 | 2 | 0 | 0.00% | |
| [redacted] | | 6 | 5 | 83.33% | 18.75 % |
| | ⊞ 09-05-2013 | 1 | 0 | 0.00% | |
| | ⊞ 09-12-2013 | 5 | 5 | 100.00% | |
| [redacted] | | 2 | 2 | 100.00% | 6.25 % |
| | ⊞ 09-05-2013 | 2 | 2 | 100.00% | |
| **Total** | | **32** | **24** | | |

**Figure 5.58 – Dictation by User management report**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

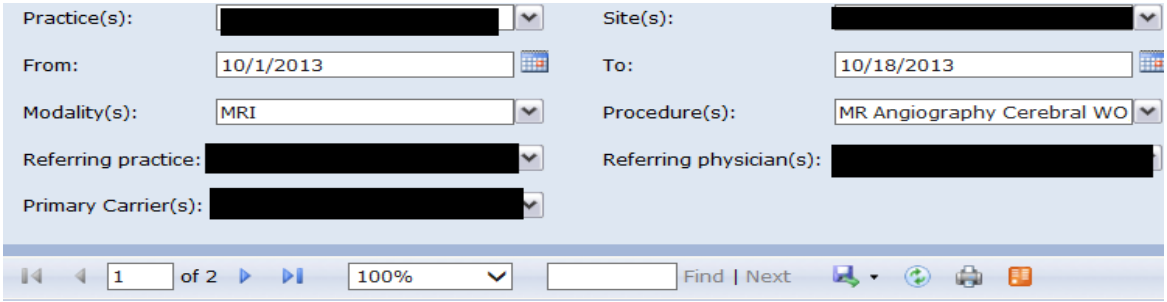
## Management Report – Direct Referrals

Management report was created to identify all orders and studies identified as a Direct Referral on the order tab. Parameters used are:

- Practice(s)
- Site(s)
- From and to dates
- Modality(s)
- Procedures
- Referring Practice(s)
- Referring Physician(s)
- Primary Carrier(s)



**Direct referrals**
**Practice:** [redacted]
**Site(s):** [redacted]
**Modality(s):** MRI
**Date Range:** 10/1/2013 - 10/18/2013
**Description:** This report looks at orders with the direct referral flag set. It excludes cancelled orders, and studies that are cancelled or discontinued.

| Acc# | CPT | CPT Description | PreCert Status |
|---|---|---|---|
| **Modesto Advanced Imaging Center** | | | |
| 10-01-2013 | | | |
| MR | | | |
| Physician [redacted] | | | |
| Referring practice: **None** | | | |
| Accession: **not scheduled** | | Status: **OrderSigned** | |
| Primary Insurance: [redacted] | | | |
| | 70553 | MRI BRAIN BRAIN STEM W/O &W/CONTRAST MATERIAL | Approved |
| | A9579 | INJECTION, GADOLINIUM-BASED MAGNETIC RESONANCE CONTRAST AGENT, NOT OTHERWISE SPECIFIED (NOS), PER ML | N |

**Figure 5.59 – Direct Referral management report**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Management Report – User List

Management report was created to see the user and which practices and schedule groups the user is associated with.

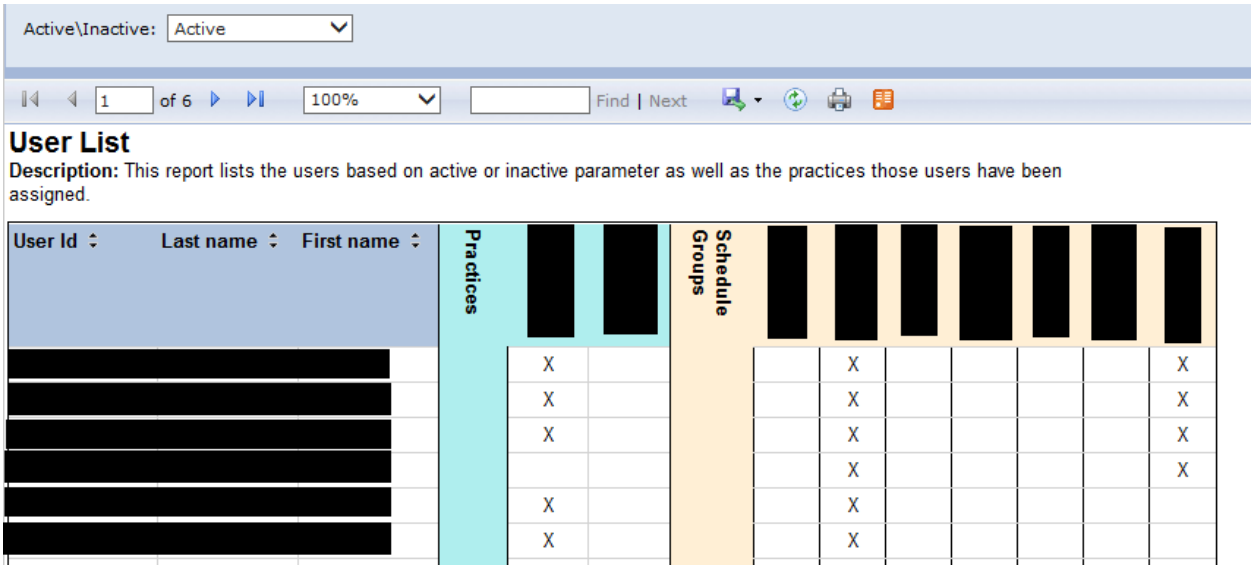

**Figure 5.60 – User List management report**

## Management Report – Double Count CPT's

We modified all sales management reports in the Marketing folder to double count cpt codes (74176, 74177, 74178).

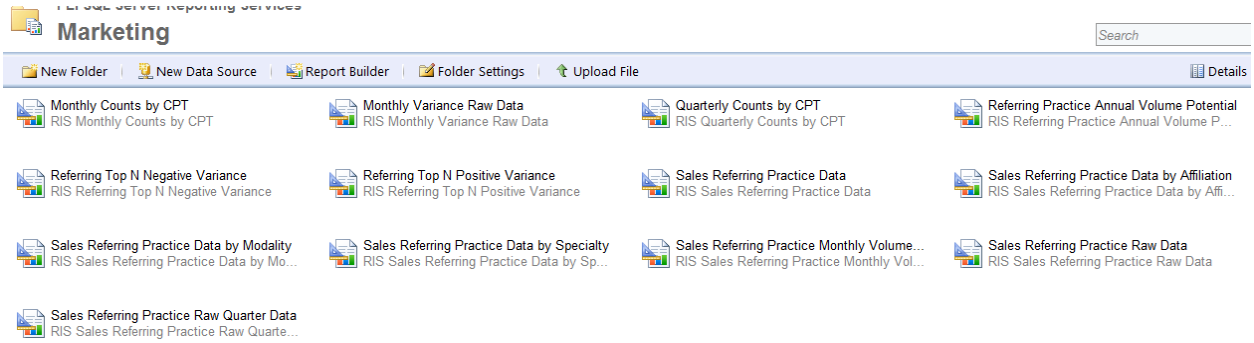

**Figure 5.61 – Double Count CPT's**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MU – Management Report for Patient List Creation – MU Phase 2

Report Parameters are:

1. From age
2. To age
3. From date (nullable)
4. To date (nullable)
5. Primary language *(multi-select populated from lookup table)*
6. Sex *(multi-select populated from lookup table)*
7. Race *(multi-select populated from lookup table)*
8. Ethnicity *(multi-select populated from lookup table)*
9. Problems (ICD) *(multi-valued, free text expected the ICD code itself)*
10. Medications *(multi-valued, free text using the like syntax where you just need to enter the start of a medication name. ie: pen would look return all results where the medication name starts with pen. Wild cards are added behind the scene)*
11. Medication allergies *(multi-select populated from lookup table)*
12. Lab Test *(multi-select populated from lookup table)*
13. Lab Results *(single valued free text field expecting >, <, = or combination of those comparison operators and a value. Ie: >100) (nullable)*
14. Preferred Communication
15. Max Results *(defaulting to 5000 rows, this helps control the number of results returned in a search, but can be manually increased or decreased if desired)*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

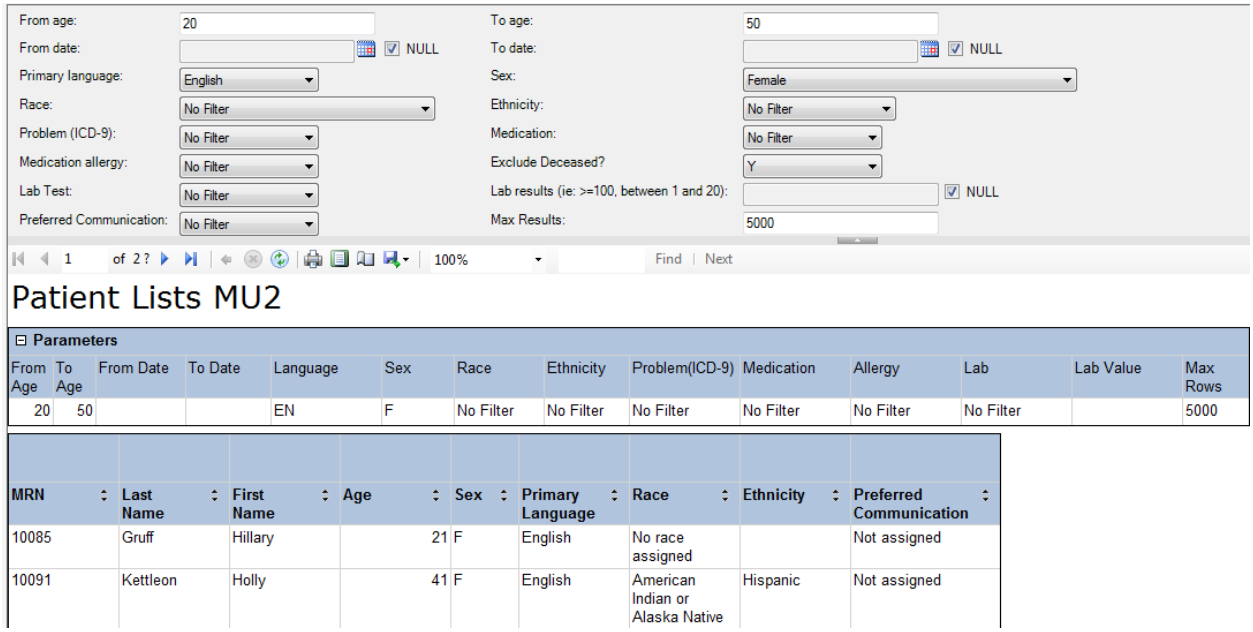

**Figure 5.62 – Patient Lists MU2 management report**

All parameters require a value to execute the report. The "No Filter" value in the parameters is just a placeholder that the stored procedure treats as a null. The No filter will be disregarded if you add values into the parameter, meaning there is no need to delete it out, or uncheck it.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MU – Auto Request Pathology and Follow Up with Lab Worklist

For MU requirement 170.314.b.5, we needed to create a lab test for Pathology when a report is signed for procedures that are configured to require CPOE_Pathology . We then need to track those Pathology requests in the Lab WL.

To start the Cpoe Pathology Flag column was added to the Procedure Code lookup table

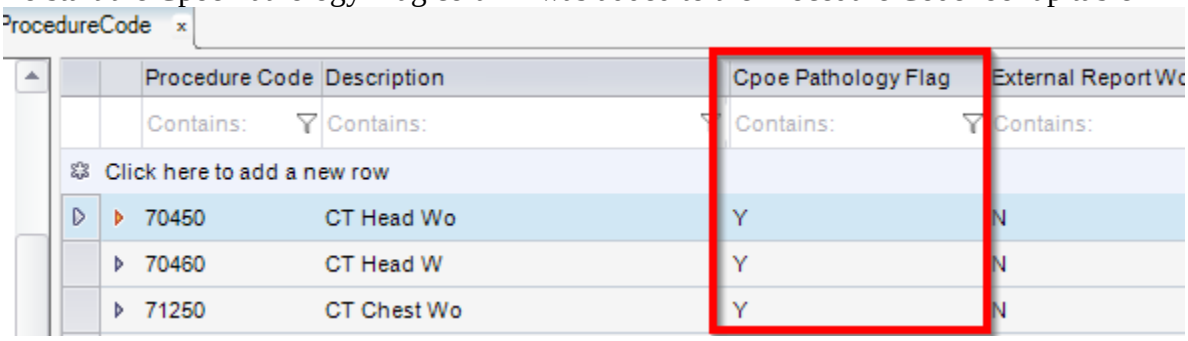

**Figure 5.63 – CPOE Pathology Flag added to the Procedure Code lookup table**

The Practice window from the Organization lookup table had the Track CPOE pathology results in Lab WL for <#> days

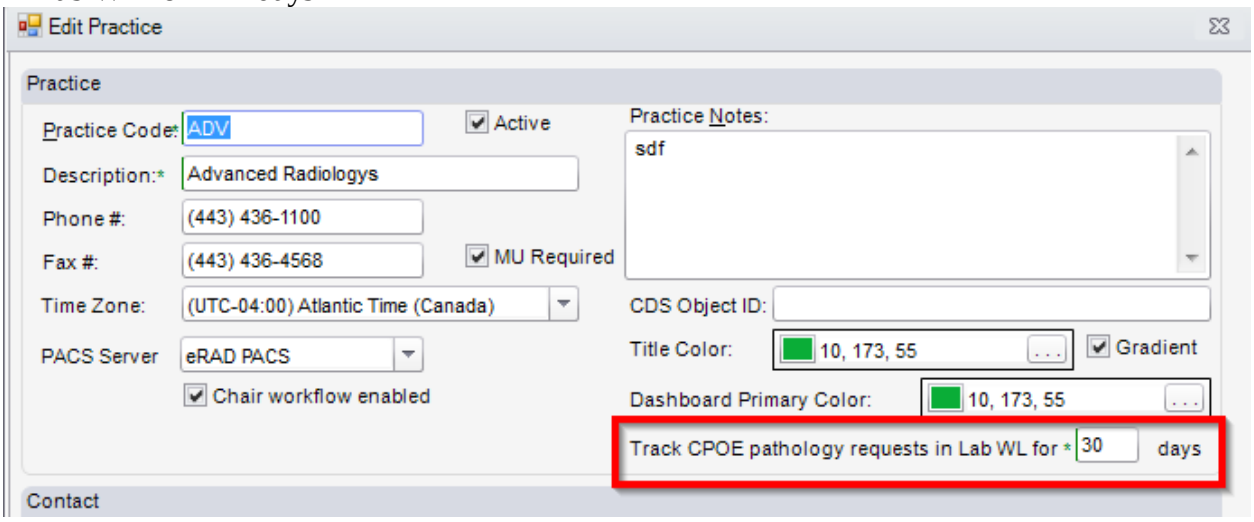

**Figure 5.64 – Practice displaying new field in days to be captured to Track CPOE pathology**

A new System Configuration setting "**CPOELabTestCode"** was added the system config lookup table with a default value of Pathology

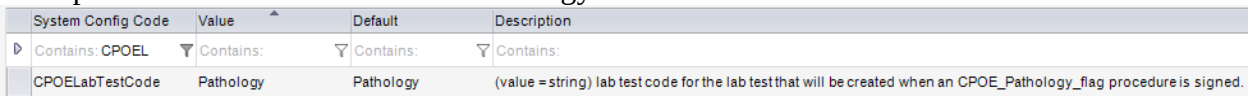

**Figure 5.65 – System configuration setting CPOELabTestCode**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

When report is signed, if its procedure has CPOE pathology flag = 'Y', and there are no active Lab Test Requests for CPOE pathology, then a lab test result row will be created. The lab test code will have a lab_requsted_by_user_id of the dictating rad and will have a requested date equal to the studies performed end date. The c_study.cpoe_request_expiry_date, will get assigned to today + l_practice.days_to_track_cpoe_requests.

The item will then appear in the Lab WL until:

1. User opens the study in View Edit and checks "Skip Lab WL"
2. User Opens the study in View Edit and records a value for the test
3. The current datetime is past cpoe_request_expiry_date
4. Or the lab test is set to the lab_order_status of “Discontinued” or “Active”, meaning we’ve made the call to the patient and have been notified that the pathology test has either been requested or is not going to be addressed.

**Note:** outside read studies will not show in the Lab WL, even if they are for a procedure that is configured with cpoe_pathology_flag='Y'.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MU - Race Field Allow for Multi Select

Meaningful Use requirement 170.314.a.3.
Previous to build 42 the Race field on the Patient tab would only allow for one value to be selected. Now a user can select multiple values and save with the patient record.
The list box is not a multi select tool (expand the list and select multiple at once) the user will need to select a value one at a time or use the type ahead options
The race type can only be added once for the patient.

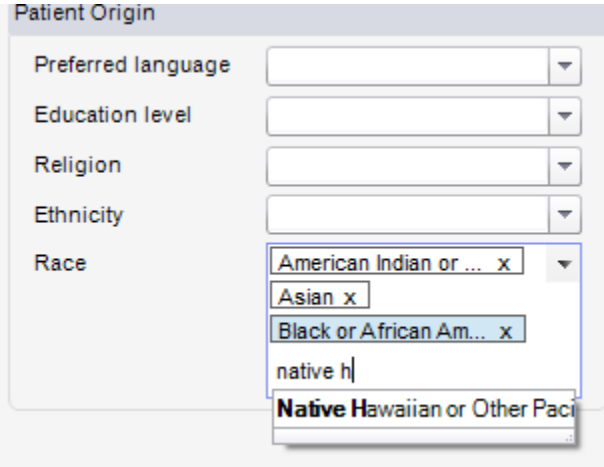

**Figure 5.66 – Race field is now multi select/type ahead field**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MU – Improvement to How We Record Height

Meaningful Use requirement 170.314.a.4
For this requirement we needed to store the patients height as a single numeric value instead of a character string such as 5ft 7in.

A new column (height_value) was added to the visit table, which will store the height in inches. The height was previously stored in the old column (height) in the visit table.

The pervious character field (height) will continue to be populated for backwards compatibility with existing reports.

Also, the upgrade was created to backfill the new field in the visit table (height_value).

## MU – Retain Patients Smoking Status and Height

For existing patients that have previously had the smoking status and height captured in the previous visit, when scheduling a new procedure, these 2 values will be carried forward to the new visit. This is not a meaningful use requirement, but rather a request to try and speed up the scheduling process when capturing MU data.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MU – Problem List for MU Phase 2

Meaningful Use requirement 170.314.a.5

**Record** - evaluates the capability to enter patient health problems into the EHR to create the patient problem list. The Tester enters the ONC-supplied patient problem test data. The Inspection Test Guide describes several methods by which the EHR can demonstrate conformance with the vocabulary requirement.

**Change –** evaluates the capability to change patient problem list data which have been previously entered into the EHR. The Tester displays the patient problem list data entered during the Record Patient Problems test
o The Tester changes the previously entered patient problems data using ONC-supplied patient problem list data.

**Access –** evaluates the capability to display the patient problem list data that have been previously entered into the EHR, including the capability to display the patient problem list as recorded during multiple ambulatory encounters with the same provider or during a single inpatient hospitalization.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MU – Medication List for MU Phase 2

Meaningful Use requirement 170.314.a.6

**Record** - evaluates the capability to enter patient active medication data into the EHR to create the patient active medication list

**Change –** evaluates the capability to change patient medication data that have been previously entered into the EHR. The Tester displays the patient active medication list data entered during the Record Patient Active Medications test . The Tester changes the previously entered active medication data using ONC-supplied medication data, for example, changing a medication dose or frequency and discontinuing a medication

**Access –** evaluates the capability to display the patient medication list data that have been previously entered into the EHR, including the capability to display the patient medication list as recorded during multiple ambulatory encounters with the same provider or during the duration of an entire inpatient hospitalization

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MU – Image Results for MU Phase 2

Meaningful Use requirement 170.314.a.12

This requirement is for eRAD RIS to prove that the images and report can be viewed in the RIS when in the appropriate status. Below is a list of the test cases to validate that fact.

- Create 2 patients IM-Patient-1 and IM-Patient-2 schedule an exam.
- Go to patient folder for IM-Patient-1
- Show in rRIS where imaging information will be for Patient #1(Right click on patient folder there is no option to view images).
- Update Record for IM-Patient-1 bring exam to (Exam Done status)
- Show in rRIS where imaging information will be for Patient #1(Right click on patient folder there is an option to View Images).
- Open IM-Patient-1 and dictate exam and bring to signed1 status.
- In patient folder right click on the patient. There is an option to view narrative interpretation (report>>preview/print report) and View Images.
- Go to patient folder for IM-Patient-2
- Show in rRIS where imaging information will be for Patient #2(no images)…Right click on patient folder there is no option to view images
- Update Record for IM-Patient-2 bring exam to (Exam Done status)
- In patient folder right click on the patient. There is no option to view narrative interpretation (report>>preview/print report) however, the user can View Images.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MU – Audit Reports – MU Phase 2

Meaningful Use requirement 170.314.d.3
Enable a user to create an audit report for a specific time period and to sort entries in the audit log according to each of the data specified in the standards at § 170.210(e).

**Create Audit Report –** evaluates the capability of the EHR technology to enable a user to generate an audit report for a specific time period

- The Vendor provides the Tester with audit log information containing ten or more entries that was generated by the EHR technology
- Using the Vendor-provided audit log information and reporting functions, the Tester generates an audit report for a time period that includes the time at which the entries in the audit log information were recorded and verifies that the audit report is successfully created

**Sort Audit Log Entries –** evaluates the capability of the EHR technology to enable a user to sort entries in the audit log or in an audit report

- The Vendor provides the Tester with audit log information containing ten or more entries that was generated by the EHR technology. This could be provided through access to the audit log itself or audit reporting functions.
    - The audit report used in the previous test procedure step can be used for this test procedure step as long as the audit report entries contain the following data elements:
        - Date and time of event
        - Patient identification
        - User identification
        - Type of action (additions, deletions, changes, queries, print, copy)
        - Identification of the patient data that is accessed
- The Vendor identifies the EHR function(s) that are available to sort the audit log information by the previously described data elements

The Tester uses the Vendor-provided audit log information, sorts the audit log entries by each of the data elements listed above, and verifies that the entries were correctly sorted

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MU – Goals and Condition

The Goals and Condition fields have been added to the Meaningful User Information window (hidden tab)

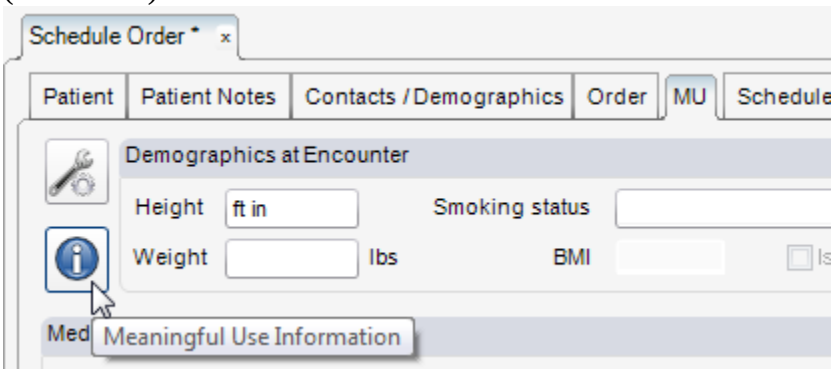

**Figure 5.67– Meaningful Use Information window access**

The Condition field is a type ahead/multi select field. The Goals option is a grid with 2 columns. The Goal column is list box and the Instructions column is a text field

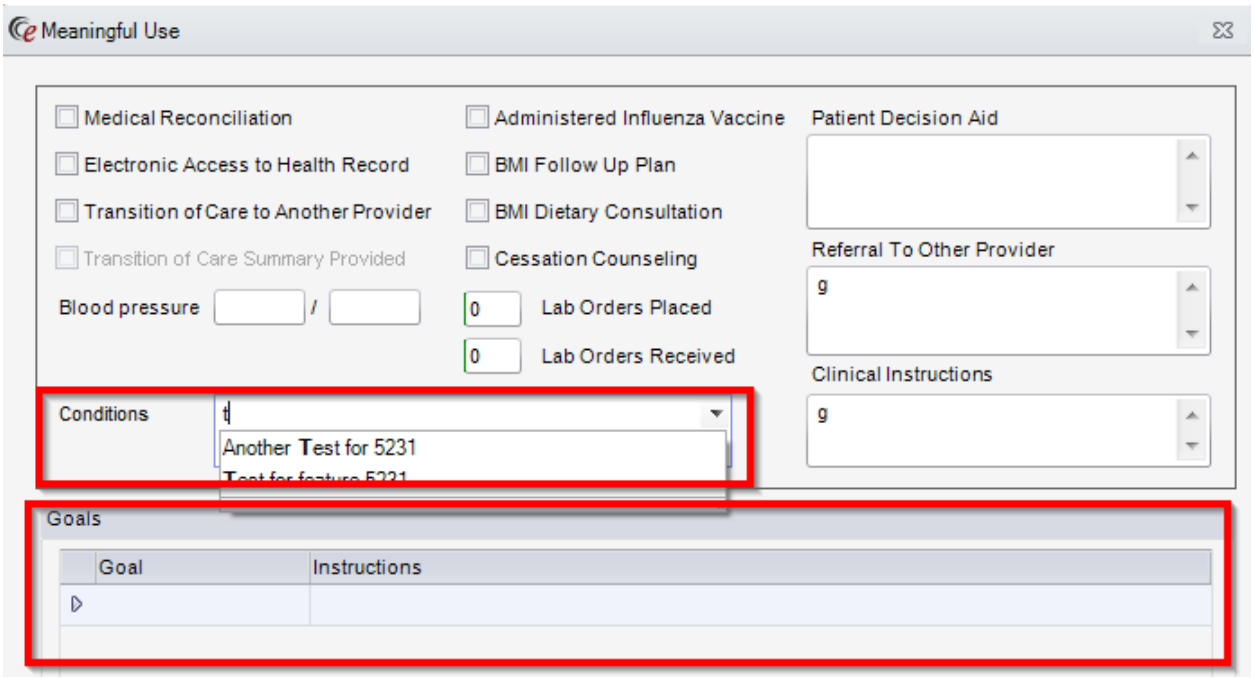

**Figure 5.68 – Displaying Conditions and Goals field in Meaningful Use Information window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The values for the Conditions field are from a new lookup table Administration>Configure>MU>Condition table. The Description is displayed in the eRAD RIS and the HL7 values are to be mapped to valid SNOMED CT codes used for structured data for generating CCDA.

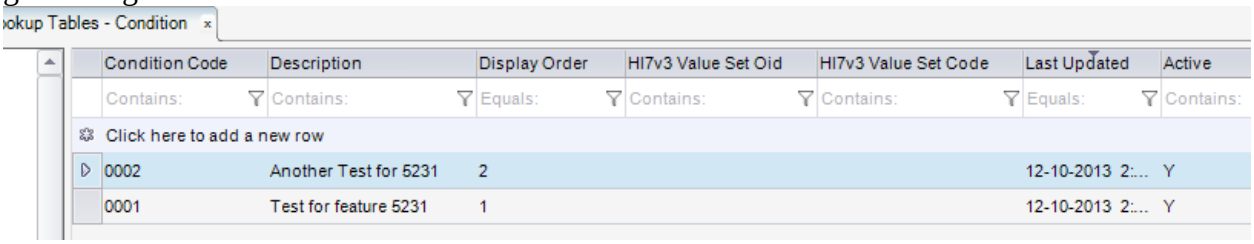

**Figure 5.69 – Condition lookup table.**

The values for Goals is from another new lookup table Administration>Configure>MU>Goals table. The Description is the value what will appear in the Goal field of the Meaningful Use Information window.

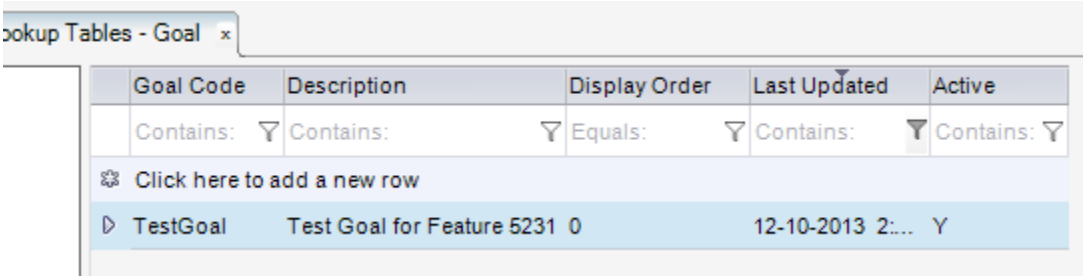

**Figure 5.70 – Goal lookup table**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MU – Patient Specific Education Resources

For patient education resources we will be using Medline Plus. The Medline Plus info can be accessed from the context menu on the 3 grids of Medication, Medical History and Lab Results on the MU tab and select View Medline Plus Info.

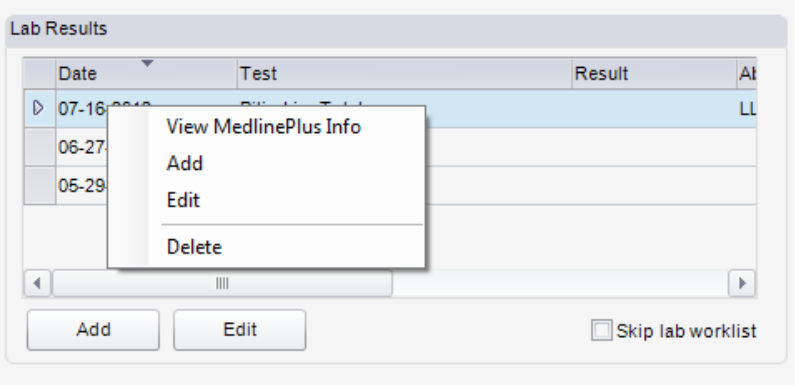

**Figure 5.71 – Accessing MedlinePlus Info**

Selecting the context menu option will open a modal browser window providing information on the topic selected in the grid you opened the context menu on.

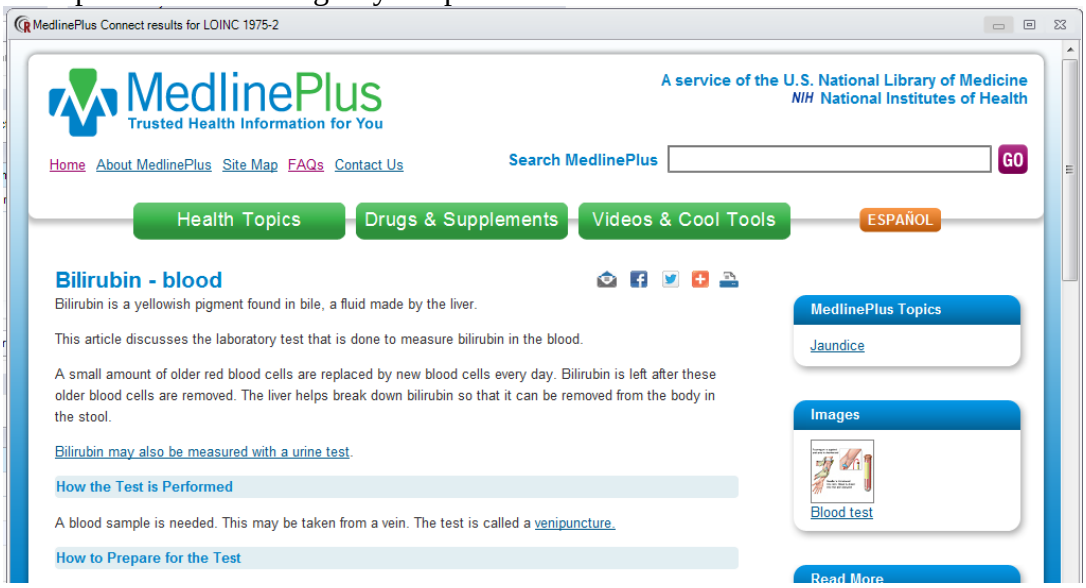

**Figure 5.72 – Web browser opens with search on MedlinePlus**

You can right click the window and print the information for the patient.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

If no results are returned from Medline a message like the following is presented to the user.

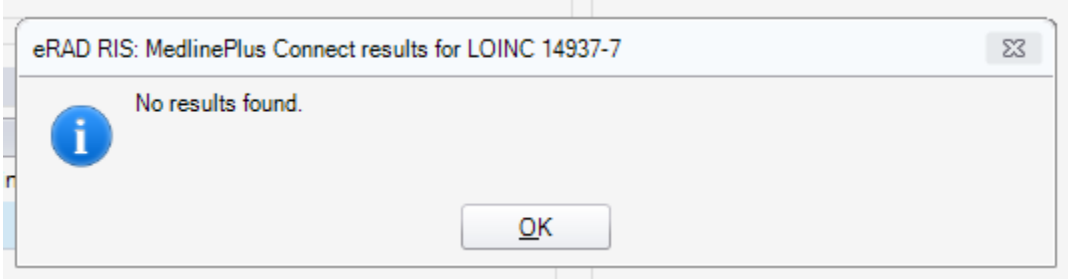

**Figure 5.73 – When search doesn't find topic**

When you close the browser control, you get prompted with this window to help capture the MU statistic.

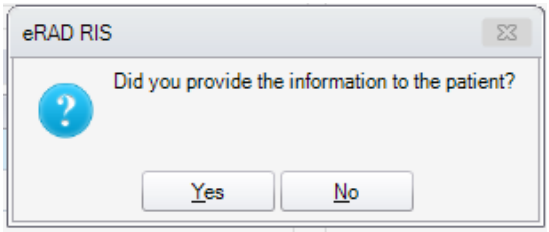

**Figure 5.74 – Prompt asking if information was provided to patient**

Clicking Yes is the same as checking the "Provided Education Resources" checkbox on the Documentation tab.

For this feature the following new system configuration settings have been added. The table below has the code and its default value.

| Code | Default value | Actions |
|---|---|---|
| MUMedlinePlusConnectDebug | N | Enables debug mode |
| MUMedlinePlusConnectEnabled | N | Enables if Medline Plus is on or off |
| MUMedlinePlusConnectBaseUrl | http://apps.nlm.nih.gov/medlineplus/services/mpconnect_service.cfm | URL path for browser |
| MUMedlinePlusConnectDrugSearch | mainSearchCriteria.v.cs=2.16.840.1.113883.6.88 | Search from Medications grid on MU tab |
| MUMedlinePlusConnectLabSearch | mainSearchCriteria.v.cs=2.16.840.1.113883.6.1 | Search from Lab Results grid on MU tab |

**Table 5.2 – MedlinePlus system config settings**

Additionally there is a new system configuration value called "**MUMedlinePlusConnectDebug**" which when set to Y puts it into debug mode and will prompt to save the XML returned from the web service when you perform a search.

## MU – New Alert Rules – MU Phase 2

Here are the alerts that we have created

1. **NM Stress Test** – you can configure as many of these as you like. Typically one for each procedure_code you want the high blood pressure check on. It also allows you to configure the 200/100 to any value you like. Alert Generator name is "**ProcedureXAndHighBP**"

2. **Empty Lab Test** –This just looks over all lab tests for the patient and if any are blank will prompt with the alert. Note: the administrator isn't allowed to provide a custom description since the description of the alert is generated dynamically and will include the text of the lab tests that are missing. Alert Generator name is "**LabOrderWithEmptyValue**"

3. **CT Contrast Allergy** & 4. **MR Contrast Allergy** – Fire when the indication specified exists and the patient has the specified contrast allergy code. This alert is highly configurable so that the alert implementation isn't dependent on specific allergy, indication or modality type codes, which may differ depending on the customer implementation. Alert Generator name is "**IndicationAndSevereContrastAllergy**"

The following screen shot shows the above three generators configured for the 4 rules NM Stress, Empty Lab Test, CT Contrast and MR Contrast Allergies.

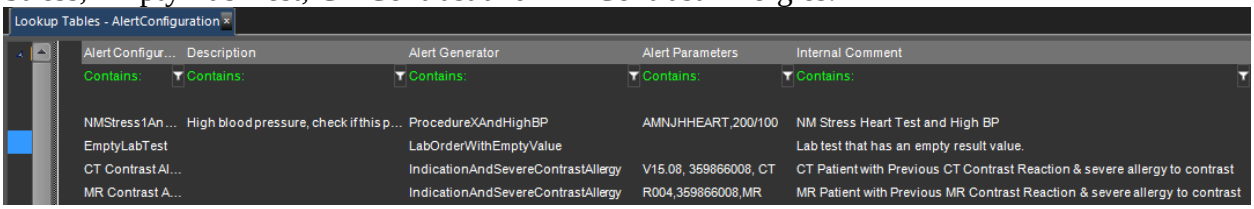

**Figure 5.77 – Alert Configuration table displaying new alerts**

In addition to the configuration column "Alert Parameters", the column "Internal Comments" has also been added, which can be used by the implementer to document the reasons they created or possibly disabled an alert.

The following lookup table validation error displays, if the alert parameters is blank for ProcedureXandHighBP:

## MU – CCDA

CCDA information is a lengthy document that can be reviewed from the following URL

http://www.hl7.org/implement/standards/product_brief.cfm?product_id=7

The CDA® Release 2 document can be downloaded from this site as well.

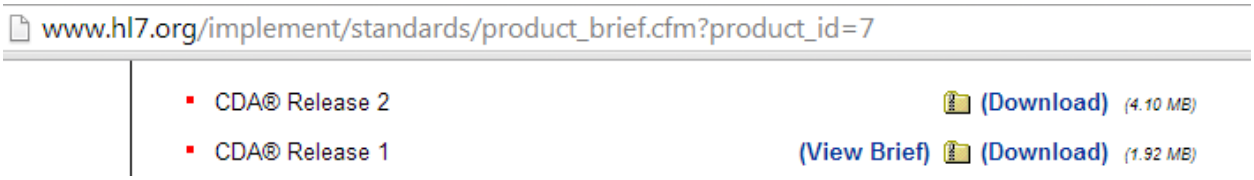

**Figure 5.81 – Download CDA Release 2**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MU – CCDA Generation

To access the CCDA the user can select the View button under the Clinical Document (C-CDA) section on the MU tab. Selecting this button opens the View Clinical Document (C-CDA) window.

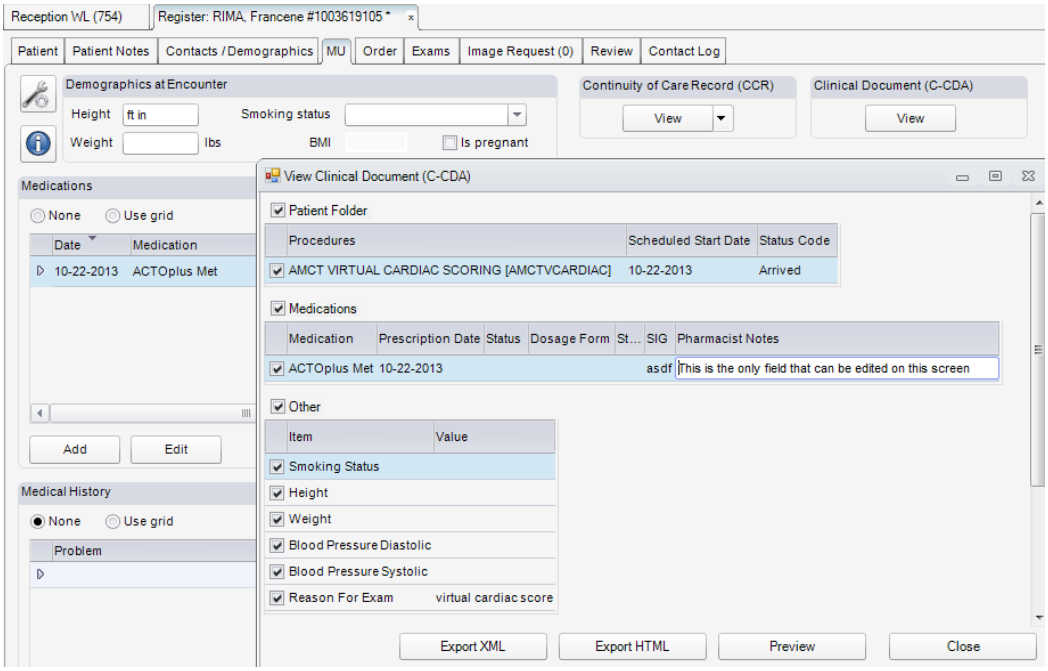

**Figure 5.82 – Accessing CCDA**

From the View Clinical Document (C-CDA) window the user can select the data elements that will be displayed in the C-CDA.

Options to Export XML, Export HTML, Preview the document and close.

## MU – SNOMED CT

Meaningful Use Stage 2 Problems must be recorded in SNOMED CT codes. However, these codes do not necessarily have to be displayed in the user entry but can be stored or mapped elsewhere in the EHR product such as a dictionary map or a database. The specific vocabulary standard is **US Extension to SNOMED CT.** Today, we are recording Problems using ICD9 codes and eventually moving to ICD10 codes by October 1, 2014. We will need to find a mapping table for ICD9 and eventually ICD10 codes to SNOMED CT codes. In order to use SNOMED CT codes in the application we will need a **License Agreement** with IHTSDO (International Health Terminology Standards Development Organisation).

The International Release is updated each year in January and July. The download contains SNOMED CT files in both Release Format 1 (RF1) and the **new Release Format 2 (RF2) versions which** eRAD / Radnet will use. Updates to the US Edition will be available approximately one month after publication of the International Release of SNOMED CT. eRAD / Radnet will use the US Edition of SNOMED CT codes to certify for Meaningful Use Stage 2 (2014). The US Edition of SNOMED CT is the official source of SNOMED CT for use in US healthcare systems. **Note: The March 2013 Release of the US Extension will mark the last time that NLM will make the standalone US Extension files available for download. For future releases, users must download the US Edition to obtain US Extension content.**

For Meaningful Use (2014) we will download Snomed ct codes into two new lookups (l_snomed_concept and l_snomed_description). These get populated with the Snapshot release of the US edition of SNOMED CT codes. We will have to come up with a strategy of populating these in a future release as the codes are released every six months. We also need to download the ICD9 and SNOMED CT mapping file to a new lookup (l_snomed_icd9_map). We will also have to come up with a strategy of populating this mapping table with future releases.

**NOTE:** these are hidden lookups and cannot be accessed via the GUI

## HL7 Payments

In eRAD RIS we are currently able to attach payments manually, no problem.

If there is HL7 integration with a patient kiosk, where a patient can check-in and also make a payment.

Payment is sent to eRAD RIS via HL7 (FT1 - financial segment).

Currently there is a logic gap in Wedge that restricts us from being able to accept payments via HL7.

Current logic --> Delete all current records from c_payment table for visit.
Add new rows provided with Study update.

The issue is the "Delete" --> This would cause an issue if a payment was already entered in RIS, then a new transaction comes through.
Existing payment in RIS would be deleted, new payment added.

Created a new column in Visit.c_payment called external_payment_id as a varchar(50).
If a message comes in that contains a c_payment row with an empty external_payment_id the wedge will throw an exception and reject the message.

The receipt_number field needs to be populated with a value in the format "site_code-?", so in the example below I used "SS-?". The RIS core services handles generating a receipt number value based on this. This site_code value does not need to be a value from the l_site table, but it might be a good idea.

For testing purposes, I created a Mirth channel which simply reads an xml file from disk and sends it to the wedge. The export of the Mirth channel is attached to this bug in Redmine.

The file contained a very empty StudyContainer with only a c_payment row with the needed test data and a c_study row with an existing accession number.

| 4096 | Normal | Send To button on Report History screen should be hidden | Radiology Reporting | 1.40.14 |
| 4093 | Normal | Assign to Radilogist from WL clears Chair when configured not to clear the chair. | Thick Client GUI | 1.40.012 |
| 4087 | Normal | Getting "Viewer is opening another view!" when trying to launch images in eRAD PACS | PACS Integration | 40.12 |
| 4086 | Normal | Scanning - HP Scanjet 3000 s2 does not work with Twain 2.0 | | 1.4 |
| 4085 | Normal | RRR reported 'painting' issue with scheduling window | | 40.18019 |
| 4068 | Normal | Reporting - next workflow excluding reports locked by the current user | Thick Client GUI | 1.4 |
| 4052 | Normal | Suspended reports can still be previewed in dictate screen using patient folder | | 1.4 |
| 4018 | Normal | Memory leak fixes discovered in B40 | | 1.4 |
| 4006 | Normal | Scan Documents from EMR | Thick Client GUI | 1.4 |
| 3976 | Normal | Reporting buttons, when disabled, has a wider seperator. | Thick Client GUI | 1.4 |
| 3975 | Normal | Verify External - button is greyed out in Patient Folder, even if you have permission | Thick Client GUI | 39.1 |
| 3971 | Normal | RIS Administrator - permissions | Web Services/DB | 39.1 |
| 3914 | Normal | order lock not released in some cases, refreshes continue until user logs out | Thick Client GUI | 1.4 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 3901 | Normal | Reporting - Chair assignment - Chair selection shows study assigned but work list doesn't have any studies assigned | Thick Client GUI | 1.40.010 |
| 3873 | Normal | Patient Merge - when you choose phone number details for a patient and suggest merge, then re-open, those details are not maintained. | Thick Client GUI | 1.1.3.40.17435 |
| 3872 | Normal | Signing contribution dates and userid missing in supervising dictation worklist | Thick Client GUI | 1.40.010 |
| 3866 | Normal | Installing Updates... - Two can run at the same time, which causes errors | | 1.4 |
| 3828 | Normal | Toggle record not stopping when pressed again (Fisher site visit) | Thick Client GUI | 40.006 |
| 3802 | Normal | RadNet - ADV defect - Blanking out the chair | Thick Client GUI | 1.40.006 |
| 3796 | Normal | RadNet - ADV Call Centre - Order level scanning support | Thick Client GUI | 1.40.006 |
| 3755 | Normal | RadNet - Call Centre - Preferred site not always populating | Thick Client GUI | 1.40.006 |
| 3753 | Normal | RadNet - Call Centre - IVT Attachment - advanced scanning pop-up issue | Thick Client GUI | 1.40.006 |
| 3732 | Normal | MU2 (2014) Requires Gender to Change to Sex | Thick Client GUI | 1.4 |
| 3708 | Normal | Inactive but currently used procedures are not apearing as an option in the performed procedure list on view edit | Thick Client GUI | 1.40.0007 |
| 3692 | Normal | Can't reschedule - strange error - | | 1.4 |
| 3683 | Normal | Rad Sign Level lookup exception | Admin Tools | 1.40.007 |
| 3662 | Normal | Schedule Group lookup table exception | Admin Tools | 1.40.006 |
| 3621 | Normal | RadNet - Resolve Audit log issues - resolve in b41 if time permits, else move to b42 | Thick Client GUI | 1.38 |
| 3587 | Normal | Administration --> cross_x_reference tables and Active column | Admin Tools | 1.1.3.40.17118 |
| 3586 | Normal | Administration --> BIRAD + Recommendation mapping change Active = object reference ERR | Admin Tools | 1.1.3.40.17118 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 3562 | Normal | L access string settings for Mammography worklists should default to "None" | Thick Client GUI | 1.4 |
| 3464 | Normal | Reporting - Increase the size of selected attachments data pane and the border doesn't repaint | Thick Client GUI | 1.4 |
| 3455 | Normal | Reporting - Indent / Outdent not working | Thick Client GUI | 1.4 |
| 3403 | Normal | IVT WL not showing the WL Row count as expected | Thick Client GUI | 1.4 |
| 3397 | Normal | RRR - scan doc types when marked inactive are still showing in the dropdown menus in the GUI | Thick Client GUI | 40.16659 |
| 3394 | Normal | problems with validation of "Visited at" for "unknown referring physicians" without an address | Thick Client GUI | 1.40.16328 |
| 3391 | Normal | User editor loading config values twice, causing errors | Thick Client GUI | 1.38 |
| 3373 | Normal | EMR order fails - sending in an unknown referring physician | Thick Client GUI | 1.4 |
| 3035 | Normal | Missing access string | Web Services/DB | 1.4 |
| 3010 | Normal | Multi-sign: When you have a preconfigured sign level overrides (RadSignLevel table), and you disable contribute a and contribute b, user cannot sign on the modality type in the override. | | 39.16026 |
| 2991 | Normal | Patient Folder - don't duplicate attachment viewers | Thick Client GUI | 1.39 |
| 2970 | Normal | Reporting - Report history - Does not always load and may return object reference error | Radiology Reporting | 1.39.001 |
| 2897 | Normal | Report History - from patient folder tab name is not correct | Thick Client GUI | 1.39 |
| 2823 | Normal | audit history does not provide sufficient detail for study data | Thick Client GUI | 1.39 |
| 2716 | Normal | System Config Lookup Editor | Thick Client GUI | 1.38 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 2690 | Normal | Show/Hide Titlebar issue | Thick Client GUI | 1.39 |
| 2628 | Normal | Reporting screen not drawing in, if user make worklists active | Thick Client GUI | 1.39 |
| 2453 | Normal | River Ranch - When you reschedule a study we set an internal flag on the study that was rescheduled, when we just cancel we are not clearing this flag if it was previously set. | Thick Client GUI | 38 |
| 2418 | Normal | River Ranch - When two users with similar names edit an order, there can be some confusion in who actually wrote notes that are stamped (ie: order notes) | Thick Client GUI | 38.14486 |
| 2163 | Normal | Studies in Edits Pending QA can be signed off | Thick Client GUI | 1.2.38.14350 |
| 2113 | Normal | error on patient search when formatted_first_name is null | Web Services/DB | 1.37.12 |
| 2072 | Normal | Reporting - Worklist refresh when worklist is not in focus. | Thick Client GUI | 1.37 |
| 2057 | Normal | Unknown Insurance reconsiliation - reload problem | Admin Tools | 37.11 |
| 1943 | Normal | No access string to prevent access to Unknown Carrier | | 1.37 |
| 1842 | Normal | Reporting - CdsInterctive Text Color not consitent | | 1.38 |
| 1487 | Normal | Worklist column does not refresh when exception thrown in Bulk Field Assignment | Thick Client GUI | 1.2.37.12644 |
| 1177 | Normal | Completing fields in report editor and using Back button < will return COM error. | Thick Client GUI | 1.36 |
| 4368 | Low | Ranjan - Date format | Radiology Reporting | 1.41 |
| 4282 | Low | Template / macro - Create using filter criteria | Radiology Reporting | 1.41 |
| 3889 | Low | Null reference exception in lookup | Admin Tools | 1.1.3.40.16659 |
| 3750 | Low | Reporting - Exam details pane layout | Thick Client GUI | 1.40.008 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 3680 | Low | Font size - not saving | Thick Client GUI | 1.4 |
| 3229 | Low | Patient search - folder preview feature - does not clear with reset button | | 1.4 |
| 3228 | Low | Patient Folder (Preview Mode) - docking\floating issue on Patient Search | Thick Client GUI | 1.4 |
| 1977 | Low | Birthdate search often defaults to dates in the future | | 1.37 |
| 1348 | Low | Special Accommodations required fields | Thick Client GUI | 1.37 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 9. Known Limitations

The following are Bugs Suggested Features and Support Issues found in build 2.42. Bugs reported in previous versions are not captured as Known Limitation in this document.

| # | Status | Priority | Subject |
|---|---|---|---|
| 5783 | New | High | Dark mode login box impossible to see |
| 5120 | QE Rejected | High | Template / macro - create template from... doesnt retain custom fields |
| 5861 | New | Normal | unhandled exception logging in as a rad but without permission to some WL. |
| 5860 | New | Normal | PACS Images not opening from Patient folder |
| 5857 | New | Normal | Critical Results worklist throws null exception |
| 5854 | New | Normal | PACS Caching - Sometimes possible to steal someone else's cache lock |
| 5851 | New | Normal | Reporting - Error on pending dictation work list |
| 5847 | New | Normal | Dark mode - BMI on MU tab is white on white and unreadable |
| 5843 | New | Normal | MU - When editing the date in Lab results get error. |
| 5839 | New | Normal | Edit Templates and Macros icons enabled toggle is backwards |
| 5837 | New | Normal | Reporting - Open study in dictate window and get C++ Exception |
| 5836 | New | Normal | Chair selector throws error after RIS locked due to inactivity |
| 5835 | New | Normal | interact with message boxes via voice commands - can dictate into the message itself |
| 5832 | New | Normal | Scheduling - Restriction displayed in advanced search on Schedule tab not always accurate |
| 5829 | New | Normal | Scheduling / Registration |
| 5822 | New | Normal | 'Assign' functionality throws error on report addendum |
| 5821 | MModal support | Normal | Redo That command needs to be uttered twice to work/catch up with undo that |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 5814 | New | Normal | If lab test code matching systemconfig's CPOELabTestCode value doesn't exist for procedure who's CPOE Pathology flag is set, misleading exception occurs |
| 5812 | New | Normal | Orders to Schedule WL and IVT WL show last follow-up type code and the Mammo Worklists (0/4/5) show |
| 5811 | New | Normal | Suspended reports stops several voice commands from working |
| 5808 | New | Normal | Dark mode, very hard to read text in Recording and Playback settings |
| 5800 | New | Normal | parameter is not valid and/or out of memory error while viewing thumbnails |
| 5784 | New | Normal | Default attachment is order level, cant be changed to patient level |
| 5777 | New | Normal | Attatchment Veiwer "Show More/Show Less" option is switching when pressing the Ok Button in the Attachment Viewer Preferences |
| 5770 | New | Normal | Button label on "Report on Accession Number" prompt is incorrect. |
| 5768 | New | Normal | DeleteLeftWord |
| 5767 | New | Normal | Cannot save IVT screen due to undetermined required field ("! Is Required") |
| 5766 | New | Normal | potential performance issues with c_ctrn_dictation |
| 5762 | New | Normal | Unplugging then repluging in speech mic causes Ris to crash, need to reboot |
| 5754 | New | Normal | Open quotes become duplicated |
| 5745 | New | Normal | Lookup bug "Non-static method requires a target" |
| 5738 | New | Normal | patient folder will not load when saved as a secondary tab on another tool window |
| 5732 | New | Normal | issues with sorting exam search results when max row count is reached |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 5726 | New | Normal | Management Reports - Many reports have new parameters, these fields should be returned on the report |
| 5712 | In Progress | Normal | C++ Exception when pressing the play button |
| 5711 | New | Normal | Using two procedures at scheduling, and patient is claustro - it is showing an option for a closed modality when it should not |
| 5700 | New | Normal | Template, cannot remove the dataset values |
| 5697 | New | Normal | RIS screen lock does not function properly when using minimize to tray mode |
| 5685 | New | Normal | Logout - after entering username and PWD error saying eRAD RIS is already running |
| 5682 | New | Normal | Inactivity message showing under ris error pop up |
| 5678 | New | Normal | View/Edit notes exam times tab marks as dirty |
| 5672 | New | Normal | Next Workflow on All_____ worklists, locked studies break work flow. |
| 5664 | New | Normal | When dictating, losing your lock, and save failed with screen recovered, you won't be able to save |
| 5657 | New | Normal | Cannot click 'OK' or 'Cancel' in PACSLoginDialog when running in 'Minimized' recording control mode |
| 5654 | In Progress | Normal | MU Lab Results Error |
| 5637 | New | Normal | Complete button on Report screen has misaligned formatting |
| 5625 | New | Normal | Reporting - cant exit minimized dictation screen with cancel button or close button |
| 5620 | New | Normal | Swap creditial user being used for user preference and lock screen |
| 5619 | New | Normal | Macro editor field "bleeds" into next line when field is at end of line and Enter pressed |
| 5610 | New | Normal | Clear Credentials is available from perform exam tab context menu |
| 5603 | New | Normal | recent activity message list shows Assign To as Dictated |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 5597 | New | Normal | Reporting - delete next field speech mike option leaves a space after deleting |
| 5569 | New | Normal | Lookup tables->ProcedureCode - Missing null checks on new l_procedure_code_x_billing_code rows throws exception |
| 5563 | In Progress | Normal | Reporting - Field markers allowing normal spelling errors to pass |
| 5549 | New | Normal | Edit Image Request's "Previous Requests" grid shows only 2-3 previous requests , can't be sorted or scrolled to see more |
| 5526 | In Progress | Normal | Reporting - Delete previous n words and undo that resulting in wrong cursor location |
| 5519 | New | Normal | Reporting - pending signature on login and pending signature worklist notifications can be shown at the same time |
| 5515 | In Progress | Normal | Reporting - Setting DictationEnabled = false still allows dictated text into the report. |
| 5506 | In Progress | Normal | Reporting - lowercase selection voice command inoperable |
| 5469 | New | Normal | Alerts may not fire properly if screens are re-used in RIS |
| 5459 | New | Normal | right click change status to cancel does not refresh worklist afterwards |
| 5452 | New | Normal | Reporting - Spine level 'T seven eight' rendering incorrectly. |
| 5451 | New | Normal | Reporting - enable rewind/fast foward playback rename |
| 5446 | New | Normal | Radnet only: Multi-install dashboard |
| 5439 | In Progress | Normal | new practices can cause null ref errors when signing |
| 5420 | New | Normal | some messageboxes improperly sized |
| 5406 | New | Normal | concurrency violation on save of UserPrefs can crash RIS |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 5305 | New | Normal | Report field control shows duplicate field if laterality check highlighted words exist in a field |
| 5259 | New | Normal | Multi-type ahead: down arrow does not open the dropdown |
| 5258 | New | Normal | Multi-type ahead: control is too tall |
| 5257 | New | Normal | Multi-type ahead: Dropdown button should have a ... in the icon |
| 5256 | New | Normal | Multi-type ahead: Dropdown button is doesn't have left and bottom border |
| 4830 | New | Normal | Carrier search error if carrier name is not found |
| 4810 | New | Normal | PACSCacheServer system config setting is no longer used and should go away |
| 4792 | New | Normal | Reporting - Open multiple autosaved reports at once can cause error |
| 4787 | New | Normal | Next field not going to next field when dictating paragraphs in field. |
| 4771 | New | Normal | insert multi paragraph macro into field ignores paragraphs |
| 4718 | In Progress | Normal | Reporting - AME 7.88.3 - extra paragraph when protect section headers is on |
| 4593 | New | Normal | WPR - Send To button causes error |

# User Release Notes

for eRAD RIS
Version 2
Build 43

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# Table of Contents

1. Purpose ..... 4
2. Intended Audience ..... 4
3. Installing/Accessing the Application ..... 4
4. New Access Strings and Configuration Settings 43 ..... 5
5. New Features and Enhancements ..... 16
Reporting – Peer Review (Phase 1) ..... 16
Export Images (Burn CD) ..... 22
County Option for Radiologist Signing Location ..... 32
IVT – Ability to Edit Patient Information ..... 35
ICD10 Support ..... 36
IMPORTANT: Radiologist ICD Support Uncomplete ..... 41
Secure Messaging ..... 43
Patient Portal Legal Documents ..... 47
Mammography – Suggest Manual Review ..... 49
Option to Not Allow Editing of Billing Codes by Technicians ..... 50
Patient "Not Yet Menstruating" Flag ..... 51
Exam Search Filter of BI-RADS ..... 52
Patient Search – New Patient Split Button Added ..... 53
Responsible Party MRN ..... 54
Scheduling – Patients Height and Weight Required at Time of Scheduling ..... 55
Patients Weight and Room Added to Weight Limit Message ..... 56
Ability to Add Longer Room Names ..... 57
Ability to Use a Closed Room from Registration Window ..... 58
Scheduling – Repeating Modality Closures ..... 59
Last Contact and Last Contacted Type Added to Work Lists ..... 60
Additional Columns Added to the Confirmation WL ..... 61
Additional Columns added to the Orders to Schedule WL ..... 61
Columns added to the Image Request WL ..... 62
Locked By Column Added to the CTRM WL ..... 62
Ability to Select Date Range for Confirmation WL ..... 63
Problem and QA Flags Added to Patient Folder WL ..... 64
Personnel Editor – Have City Populated by Zip Code ..... 65
Ability to Define Primary Specialty for Referring Physician ..... 66
Referring Practice Address Changes ..... 67
Management Report – Appointment Schedule by Procedure Group ..... 71
Management Report – Users in Usergroups ..... 72
Management Reports – Radiologist Productivity by User – Mammo ..... 73
Utilization Management – Addition of Medical Group Lookup Table ..... 74

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Utilization Management – Support Medical Group Contact Types ..... 76
Utilization Management – Support UM Coverage Type ..... 77
Utilization Management – Support UM Common Language ..... 78
Utilization Management – Support Default Review Times ..... 78
Utilization Management – Support UM Status ..... 79
Utilization Management – Authorization Rules for Medical Groups ..... 80
Utilization Management – Support Capitated Carriers ..... 81
Utilization Management – Mapping Carriers to Medical Groups ..... 82
Utilization Management – Addition of Utilization Management User Group ..... 82
Meaningful Use – Site Level MU Override ..... 83
Meaningful Use – Direct Messaging ..... 84
Meaningful Use – Additional Options for MU Fields ..... 90
Meaningful Use – Additional Medications for Quick Add Edit Window ..... 91
Meaningful Use – Laboratory Tests and Values / Results ..... 92
Meaningful Use – Office Visit ..... 93
Meaningful Use – Clinical Summaries ..... 94
Meaningful Use – Data Portability ..... 95
Meaningful Use – Alerts and Clinical Decision Support ..... 97
Meaningful Use – Clinical Quality Measures ..... 103
Meaningful Use – Preventative Care ..... 105
Meaningful Use – Automated Measures Management Report ..... 107
Meaningful Use – Reports by Radiologist Management Report ..... 110
Meaningful Use – Stage 2 Management Reports ..... 111
6. Code Stream ..... 113
7. RIS Release Version Numbers ..... 114
8. Resolved Defects ..... 115
9. Known Limitations ..... 127

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 43 and subsequent server releases. This version of eRAD RIS is referred to as Build 2.43.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 2.43 is considered a new core release of the application and will require a reinstallation of eRAD RIS. This is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 4. New Access Strings and Configuration Settings 43

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Access string / User Group Permission tables | Alert.AgeGreaterThan | Full | full access to this enables users to see the alert of the "AgeGreaterThan" type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.CDS_01_HighBP | Full | full access to this enables users to see the alert |
| Access string / User Group Permission tables | Alert.CDS_02_HighCholesteral | Full | full access to this enables users to see the alert |
| Access string / User Group Permission tables | Alert.CDS_03_PossibleReaction | Full | full access to this enables users to see the alert |
| Access string / User Group Permission tables | Alert.CDS_04_TobaccoUser | Full | full access to this enables users to see the alert |
| Access string / User Group Permission tables | Alert.CDS_05_PneumoniaBooster | Full | full access to this enables users to see the alert |
| Access string / User Group Permission tables | Alert.ExpiredInsurance | Full | full access to this enables users to see the alert of the "ExpiredInsurance" type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.HasAllergy | Full | full access to this enables users to see the alert of the "HasAllergy" type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.HasProblem | Full | full access to this enables users to see the alert of the "HasProblem" type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.InactiveCarrierAppliedToVisit | Full | full access to this enables users to see the alert of the "InactiveCarrierAppliedToVisit" type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.IndicationAndMedication | Full | full access to this enables users to see the alert of the "IndicationAndMedication" type when it is evaluated |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| | | | to be true |
| Access string / User Group Permission tables | Alert.IndicationAndSevereContrastAllergy | Full | full access to this enables users to see the alert of the "IndicationAndSevereContrastAllergy" type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.LabOrderWithEmptyValue | Full | full access to this enables users to see the alert of the "LabOrderWithEmptyValue " type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.MRI65PlusHeartDiseaseLipitorAndLDL100Plus | Full | full access to this enables users to see the alert of the "MRI65PlusHeartDiseaseLipitorAndLDL100Plus" type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.OnMedication | Full | full access to this enables users to see the alert of the "OnMedication" type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.PatientBirthChanged | Full | full access to this enables users to see the alert of the "PatientBirthChanged" type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.PatientDeceased | Full | full access to this enables users to see the alert of the "PatientDeceased" type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.PatientDrugAllergyWhenArrivedOrStarted | Full | full access to this enables users to see the alert of the "PatientDrugAllergyWhenArrivedOrStarted" type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.PatientFirstNameChanged | Full | full access to this enables users to see the alert of the "PatientFirstNameChanged " type when it is evaluated |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| | | | to be true |
| Access string / User Group Permission tables | Alert.PatientLastNameChanged | Full | full access to this enables users to see the alert of the "PatientLastNameChanged " type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.PatientMissingPhoneInfo | Full | full access to this enables users to see the alert of the "PatientMissingPhoneInfo" type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.ProcedureXAndHighBP | Full | full access to this enables users to see the alert of the "ProcedureXAndHighBP" type when it is evaluated to be true |
| | Clinical.AlertFramework | Full | Allows the user to see alerts, which by default should be set to full access. Added this to pass an MU test case which requires us to show we can configure alerts not to fire for a specific user group. |
| Access string / User Group Permission tables | Config.LookupEditor.AllergySeverity | Full | allows the user to see alerts, which by default should be enabled full for all users. Added this to pass an MU test case which requires us to show we can configure alerts not to fire for a specific user group. |
| Access string / User Group Permission tables | Clinical.Attachments | Full | Controls access to the standalown Attachments screen accessable in a worklist via Right Click / Attachments |
| Access string / User Group Permission tables | Clinical.BurnCD | None | Controls access to the "Burn CD" Image Request context menu, the "Burn CD" from the tech's Perform Exam screen and |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| | | | the patient folder's Burn CD menu items |
| Access string / User Group Permission tables | Clinical.DataField.Patient.Notes | None | Controls if the user has access to change previous patient notes |
| Access string / User Group Permission tables | Clinical.DeleteDictationAndResetStatus.ExternalReportVerified | None | When a external report is verified, this permission will allow the verified report to be reverted back to exam done so it can be either re-verified or changed to a non-external report. |
| Access string / User Group Permission tables | Clinical.DiagnosisCodes | None | Controls access for users to enter ICD Codes in the MU Tab's MU Extra Info Screen. |
| Access string / User Group Permission tables | Clinical.InfoButton | Full | allows user access to the MU Info button feature accessabel in the MU tab's grids for Medications, Medical History or Lab Results via a Right Click / View Medline Plus Info. |
| Access string / User Group Permission tables | Clinical.Insurance.Override | None | controls access to override Eligiblity/Eligible API results |
| Access string / User Group Permission tables | Clinical.Insurance.Reverify | None | Controls access to the Reverify button in the Manage Insurance groupbox |
| Access string / User Group Permission tables | Clinical.Labwork.AddEdit | None | limits users ability to add or edit labwork |
| Access string / User Group Permission tables | Clinical.Labwork.Request | None | limits users ability to request labwork |
| Access string / User Group Permission tables | Clinical.PeerReview | None | Access to Peer Review context menu item and buttons |
| Access string / User Group Permission tables | Clinical.Schedule.AssignIcdCode | None | Controls whether ICD codes can be assigned during scheduling, ordering, registering |
| Access string / User | Clinical.Schedule.Calendar | None | Schedule Calendar control |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 5. New Features and Enhancements

## Reporting – Peer Review (Phase 1)

In build 43 peer review options have been added to the Patient Folder and also from the Reporting windows Patient History data pane.

From the Patient Folder the study can be peer reviewed by selecting the Peer Review option from the context menu. The option will display for studies not signed by "you" and are in signed status.

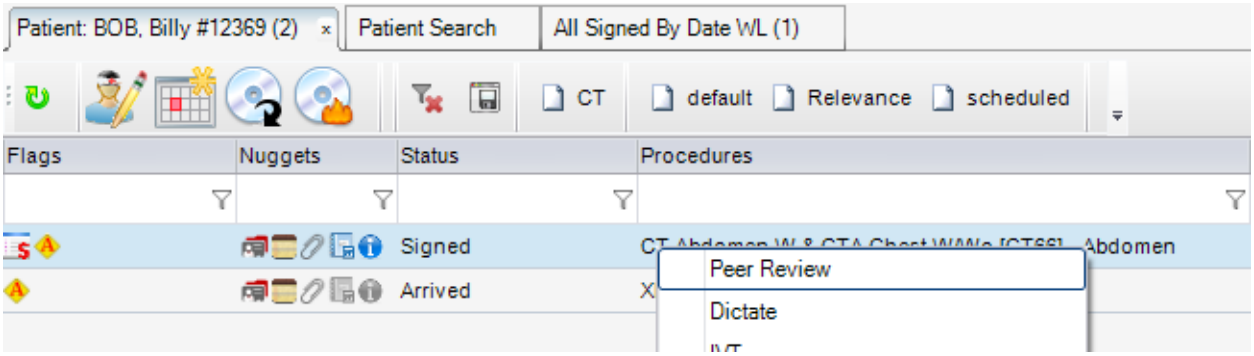

**Figure 5.1 – Peer Review context menu option from Patient Folder**

From the Reporting windows Patient History control the Peer Review button will be displayed in the "My Views" column.

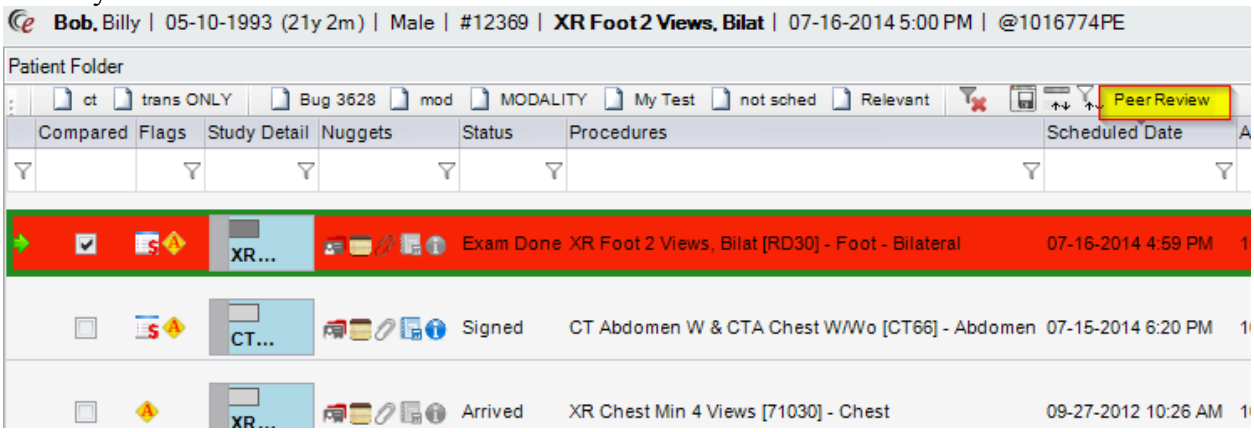

**Figure 5.2 – Peer Review button on Patient History control of reporting window.**

Again, only the studies in signed status that were not signed by you can be reviewed. Selecting a study in a status other than signed with inform the user that the current study status cannot be peer reviewed

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

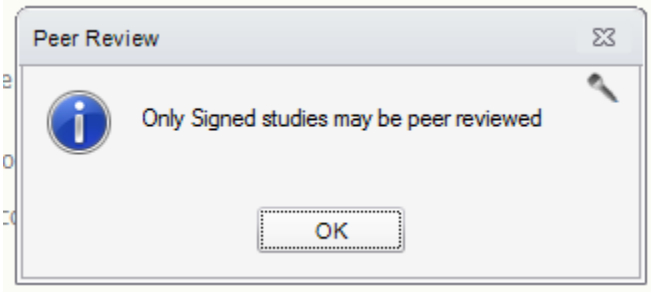

**Figure 5.3 – Attempt to peer review a study in status other than signed**

The options for peer review are controlled by an access string titled **"Clinical.PeerReview"** with a default level of None.

Upon selecting one of the options for peer review the Peer Review window will open. From this window the user can see the performed data, accession number, procedure performed, patients name, MRN and date of birth.

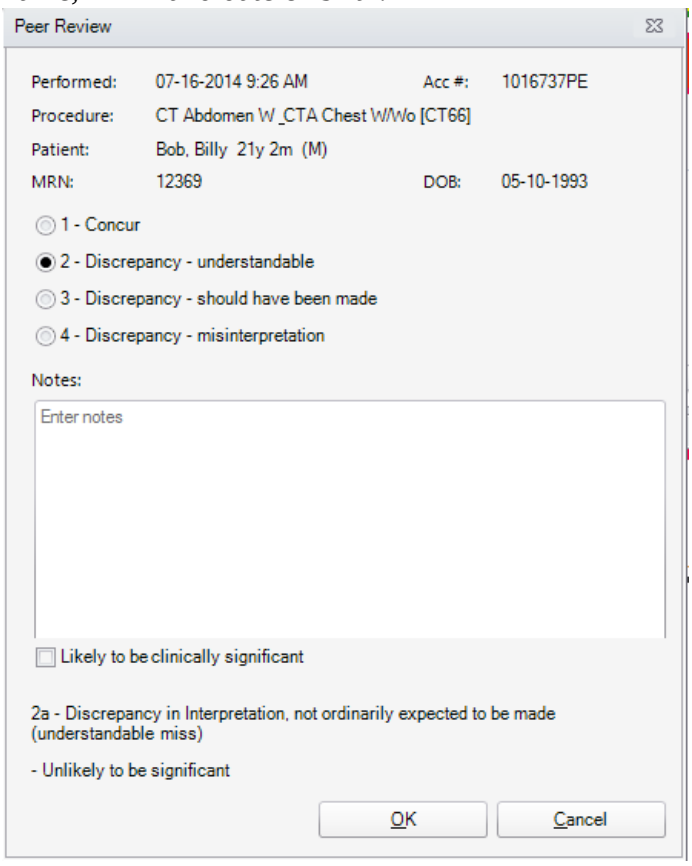

**Figure 5.3 – Peer Review window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The Peer Reviewer will have 7 scoring options. The values are 1-4 with the option to select the check box "Likely to be clinically significant". Selecting this check box if the difference of the study to be Unlikely significant and Likely significant, changing the score from 2a to 2b for example.
The scoring would look like this:

| Peer review score code | Description |
|---|---|
| 1 | Concur with interpretation |
| 2a | Discrepancy in Interpretation/not ordinarily expected to be made (understandable miss) - Unlikely to be significant |
| 2b | Discrepancy in Interpretation/not ordinarily expected to be made (understandable miss) - Likely to be significant |
| 3a | Discrepancy in Interpretation/should be made most of time - Unlikely to be significant |
| 3b | Discrepancy in Interpretation/should be made most of time - Likely to be significant |
| 4a | Discrepancy in Interpretation/should be made almost every time (misinterpretation of findings) - Unlikely to be significant |
| 4b | Discrepancy in Interpretation/should be made almost every time (misinterpretation of findings) - Likely to be significant |

**Table 5.1 – Peer review scores**

There is also a notes field for the user to add any notes pertaining to the studies peer review. Notes are required when the score passes a certain threshold, that threshold is configurable at the system and the practice level. The practice level overrides the system configuration setting if it is configured. This threshold identifies the score at which notes will start to be required. When notes are required, the OK button will be disabled until notes are entered. This is also set at the system and practice level. The system configuration setting it titled **"PeerReviewScoreToStartRequiringNotes"** with a default value of 2b.

The Add/Edit Practice window has been redesigned. To access the optional settings for Peer Review, select the appropriate tab as shown in the screenshot below.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

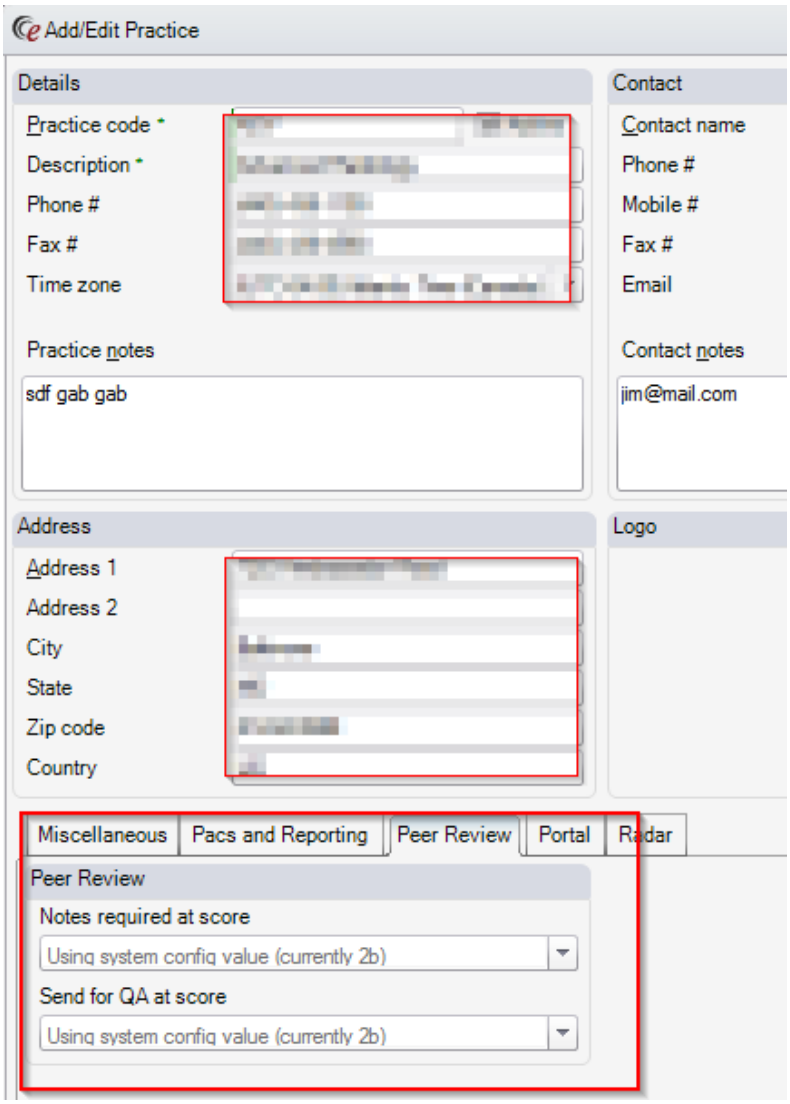

**Figure 5.4 – Peer Review tab of the Add/Edit Practice window**

Similar to the system configuration setting for notes, we have another setting titled **"PeerReviewScoreToStartSendinfToQA"** with a default value of 2b that determines if a peer review will then go to a "post peer review work list" where it can then be reviewed, or entered in an external system and marked as completed. This is also set at the system and practice level with the practice level overriding the system configuration setting.

Once a study is peer reviewed, if it meets the **"PeerReviewScoreToStartSendinfToQA"** settings, the peer review will be went to the "All Peer Review Pending Action WL". This worklist can be accessed from the Radiologist and Editor menus and each is controlled by its

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

own new access string. The All Peer Review Pending Action WL under the Radiologist menu is controlled by access string **"WL.Rad.PeerReviewPendingActionAll"** with a default of none. Access to the work list option under the Editor menu is controlled by access string **"WL.MT.PeerReviewPendingActionAll"** which also has a default of none.

This work list will show the score and score description along with some details attached to the peer review and the study itself. From this worklist, the user will have the option to "Mark as Completed" which will remove the item from the worklist, or "Open".

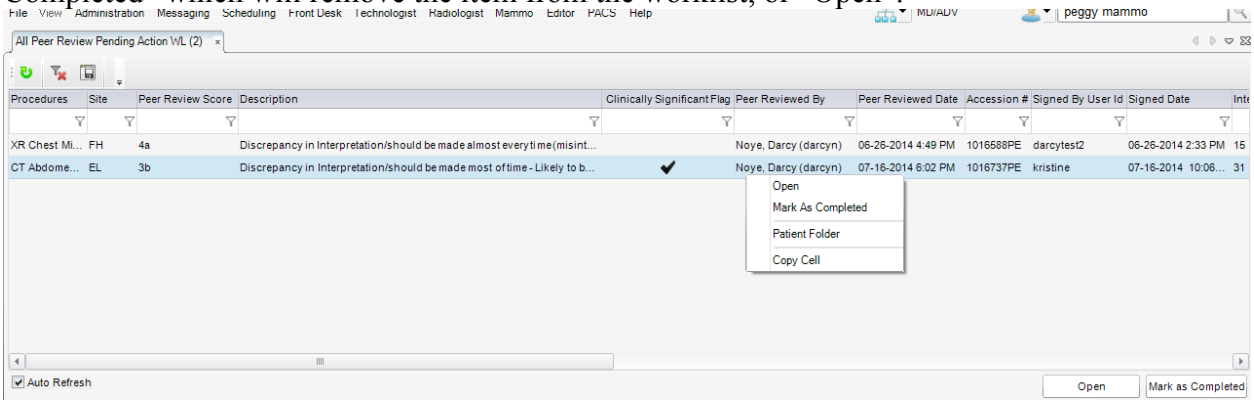

**Figure 5.5 – All Peer Review Pending Action WL**

Selecting Open will present the user with a read only version of the Peer Review window. The user can see the notes and score given by the peer reviewer. Options in this window are to Mark As Completed and Cancel. There is also an ICON in the upper right corner that will allow the user to copy and paste the details of the peer review. Data can also be copied from each row in the peer review window via a right click on the snippet of information.

## Export Images (Burn CD)

Burn CD option in eRAD RIS will be available from 3 locations in the application, the Image Request work list, the Patient Folder work list and the Technologists Perform Exam window. Access to Burn CD from all 3 locations is controlled by the access string tilted **"Clinical.BurnCD"** with a default value of Full.

Access from Image Request work list:
Image request work list now has the option to group requests. Default grouping is: Site, Media Type and Deliver To. This grouping makes it easier to multi select the items and completes the "Burn CD" in one step as shown in the following "Burn CD" context menu selection. Multiple studies can be selected from the Image request work list to be burned. From the Burn CD window the user can choose to include or not the studies for the CD. The Deliver To information in the Burn CD window will automatically be populated from the data entered on the Image Request. If there are different deliver to addresses, the user will be required to select one or can cancel and reselect the studies from the work list.

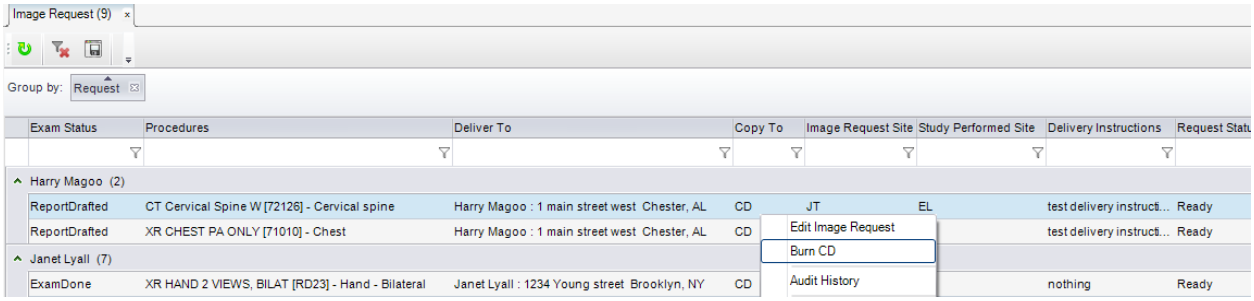

**Figure 5.7 – Image Request work list**

Access from Patient Folder work list:
From the Patient Folder work list the user can select a single or multiple studies. The Burn CD option is also in the context menu. When the Burn CD window opens the Deliver To information will be blank. These fields are not required to be completed. Again the user can decide in the Burn CD window if they want to include all of the studies that were selected.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

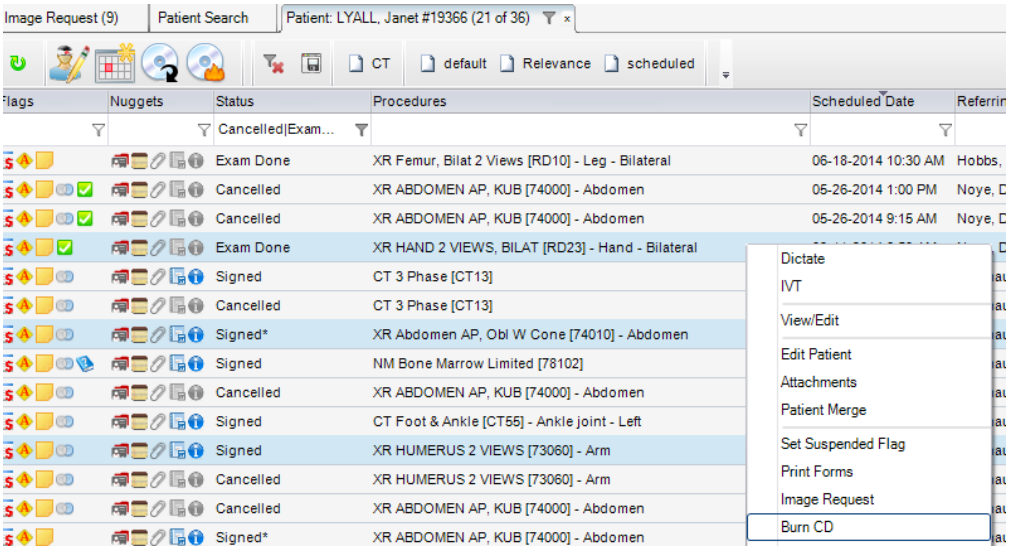

**Figure 5.8 – Patient Folder work list**

Access from Technologist's Perform Exam window:

The Perform Exam window will have access to the Burn CD window via the button of the same name in the lower left corner of the data window.

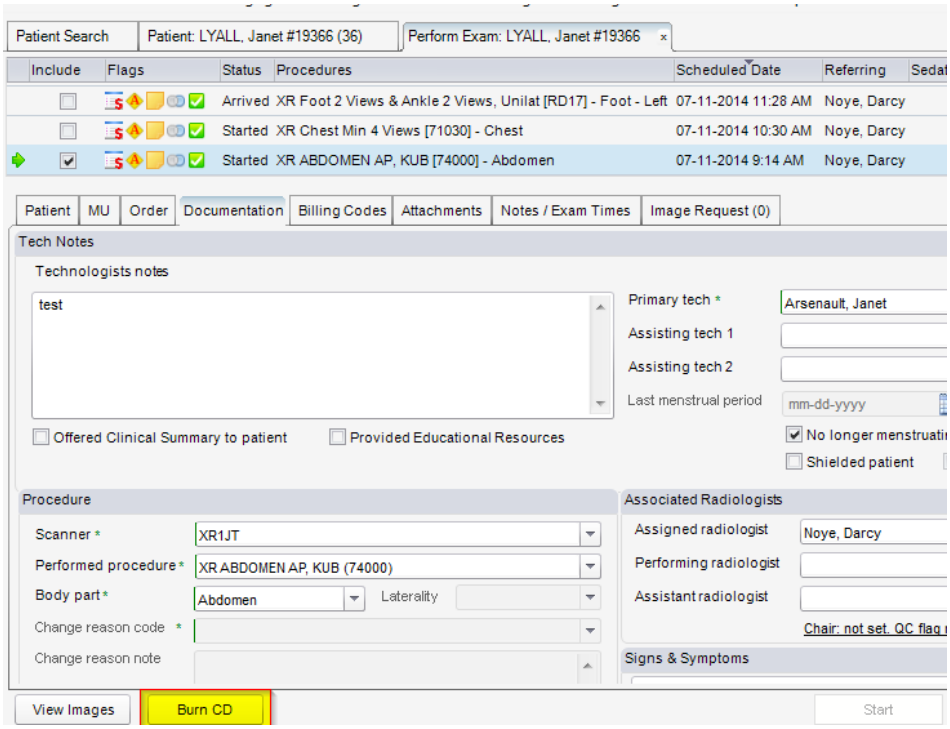

**Figure 5.9 – Perform Exam window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

As a precaution the user will be prompted with a message from the Perform Exam window to ensure all of the images have been uploaded to PACS.

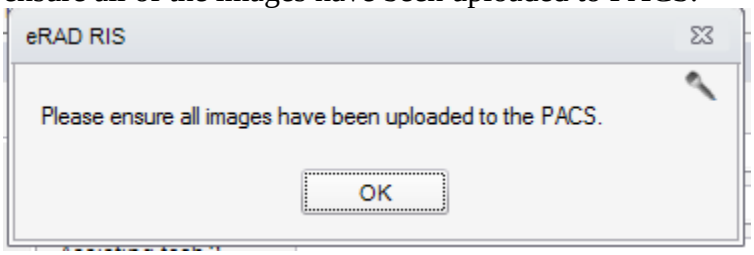

**Figure 5.10 – Message displayed from Perform Exam window when Burn CD is selected**

When the Burn CD window opens the Deliver To information will be blank. The user will have the option to select additional studies to burn that have been completed for that day.

Burn CD window:

The Burn CD window is the main dialog for this feature. It shows all the studies that were selected in the Image Request WL or Patient Folder WL (the exception is the Burn CD from Perform Exam) and allows you to uncheck items to exclude them from the CD. The checked items are included in an Image Request level lock so that if another user tries to export the same Image Requests they will be notified that another user is processing that request.

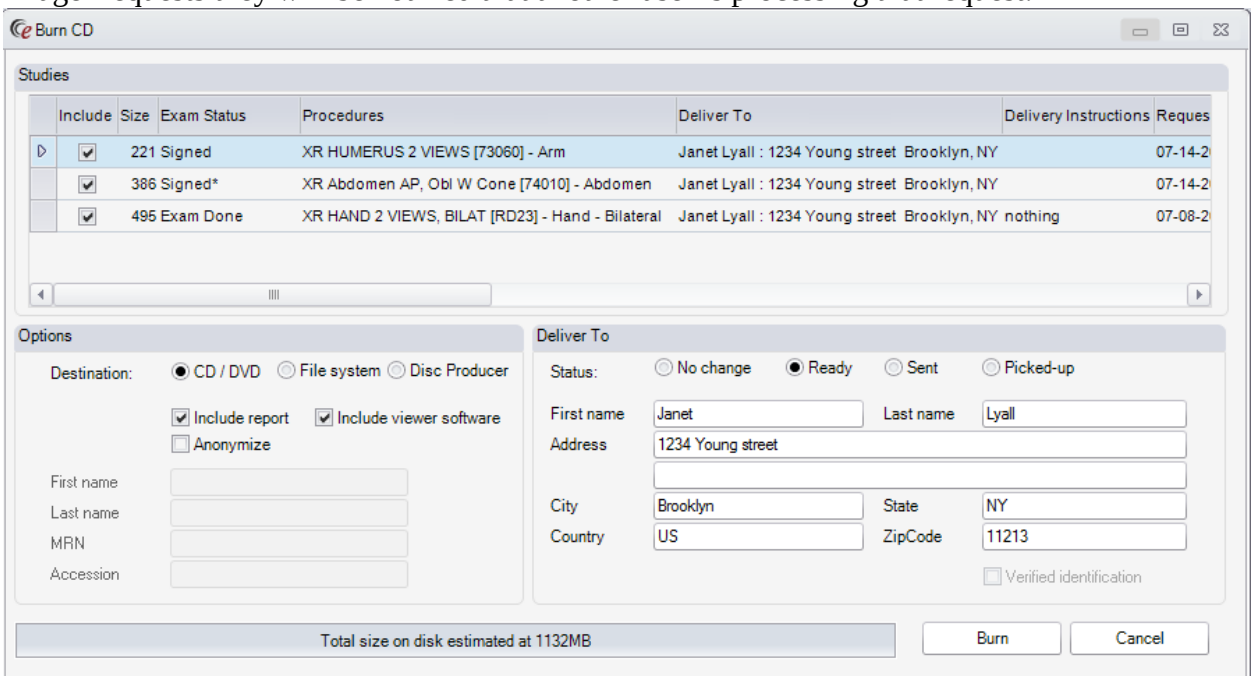

**Figure 5.11 – Burn CD window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

If actioned from the Image Request WL, successful burns will remove the selected studies requests from the WL.

Images for the selected studies are requested from PACS and the contents are written to the specified media type. If the media type is "CD/DVD", the contents will be written to the local burner. If the media type is Filesytem or Disc Producer, the contents will be written to the directory chosen. For disc producer the file format written is specific to the Epson JDF file format. After the JDF file is created, the progress can be monitored via the Epson TD Bridge software. The RIS will do an estimated size of the images to be burned.
When the Burn CD window opens, it queries each of the Requesting Site's local child PACS servers. If it does not have the study, it then queries the Practice's PACS WL server. The goal of this query is:

1. To obtain an approximate size of the study data
2. To identify which server has the images

The figure above of the Burn CD window shows the approximate sizes and in the progress bar area a total estimate of the size on disc.

If it exceeds 680MB it will present the user will message informing that the estimated size may not fit on one CD.

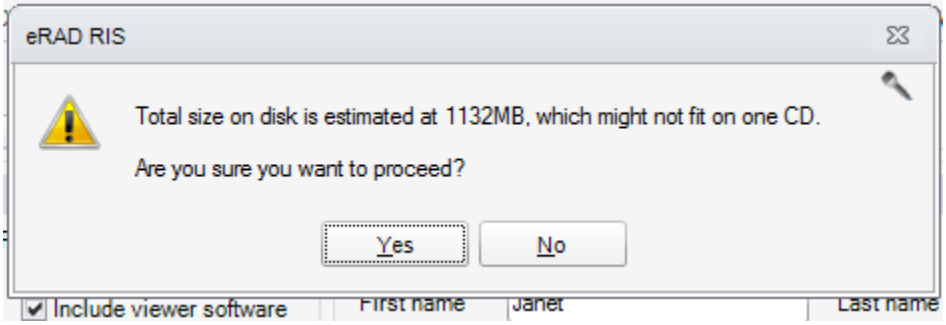

**Figure 5.12 – Are you sure?**

If they are actually burning to a DVD media, they should ignore this message and click "Yes" but if they only have CD's then they will need to click "NO" and include fewer studies.
If all of the selected studies are on the local child PACS server then the request for the CD contents will be made local. But if one or more of the studies are not local the request will be made to the practices PACS WL server.

When the media is successfully burned, the status and deliver to information for the "included" image requests will be updated. And before and after audit messages are written to the Audit log. The description in the audit entry is basically the entire contents of the CD's Readme file, which includes unique identifiers and even the CD's checksum.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

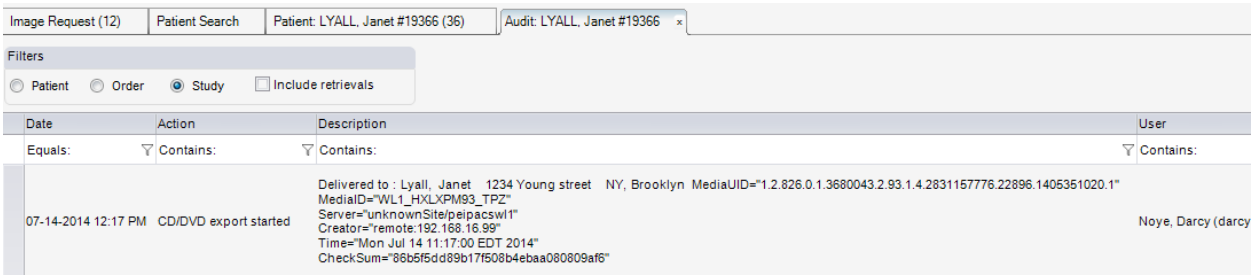

**Figure 5.13 – Audit history**

Change to Image Request:

With B43, when creating an image request there is a new required field "Requesting site".

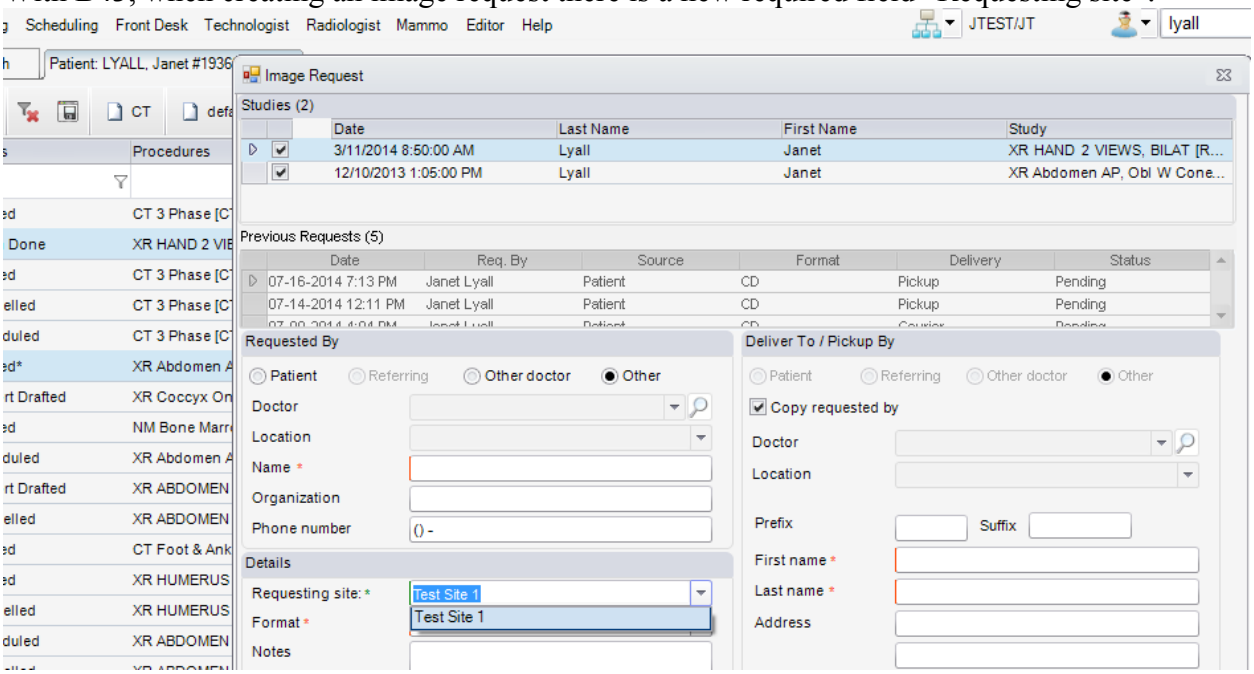

**Figure 5.14 – Image request has new required field of Requesting site**

The "Requesting Site" value is the site used when showing the Image Request WL. So when looking at the JTEST/JT WL as shown in the following screen shot, you see all the image requests that need to be completed at JT. Previous to B43, the JT WL would only show the image request's needed at a site such as JT if they were performed at JT.

We also changed the work list so (by default) it groups Requests by Patient, Meida Format and Deliver To. In the following screen you can see the default "Request" grouping. If the user clicks on the "Group by:" button the sorting changes between Ascending and Descending (by image request date).

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

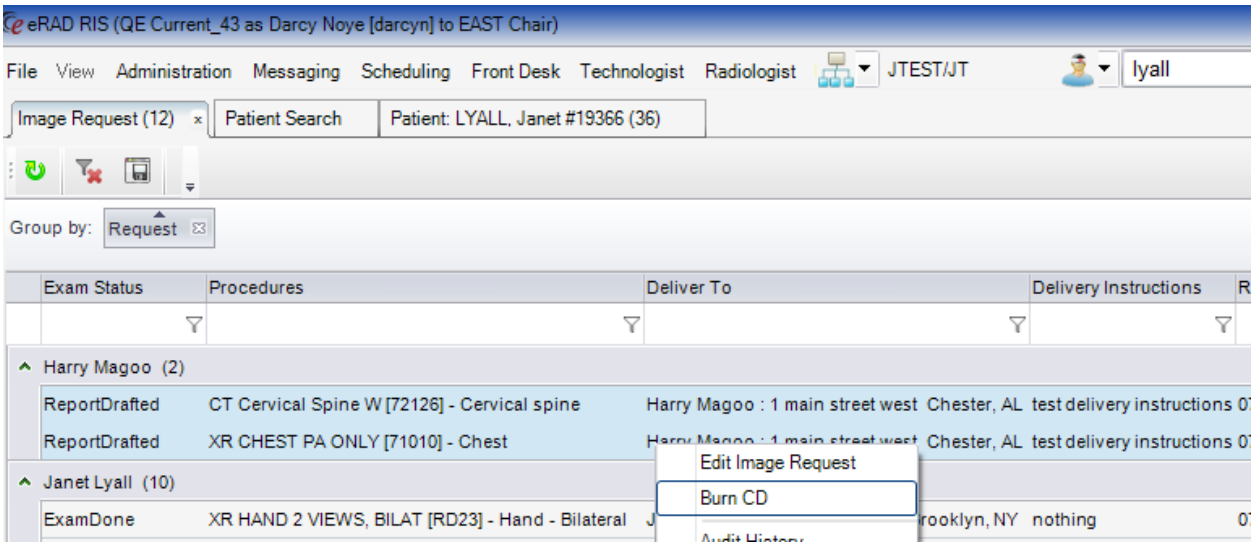

**Figure 5.15 – Image request work list group by Request**

**The remaining will explain how to set up the Disc Producers Epson TD Bridge Server**

When using an Epson Disc Producer you will need to dedicate a PC to host the hardware. On that PC you will need to install the EPSON TD Bridge software. The TD Bridge software and documentation is available at:

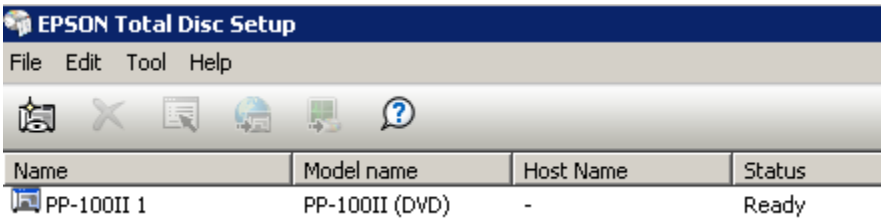
https://www.epsonexpert.com/login

https://www.epsonexpert.com/ee/techRes/index.htm?ProductId=598

In addition to the typical install you will need to:

1. Install the Epson Total Disc Maker Software, either download the latest from Epson or use the install disc that came with the burner.

2. Launch the "Epson Total Disc Setup" utility, which is in your "start/program" menu after the install. Add the local "PP-100" burner as shown in the following:



3. Install the TD Bridge software.

4. Launch the program "EPSON TD Bridge Environment Settings"

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

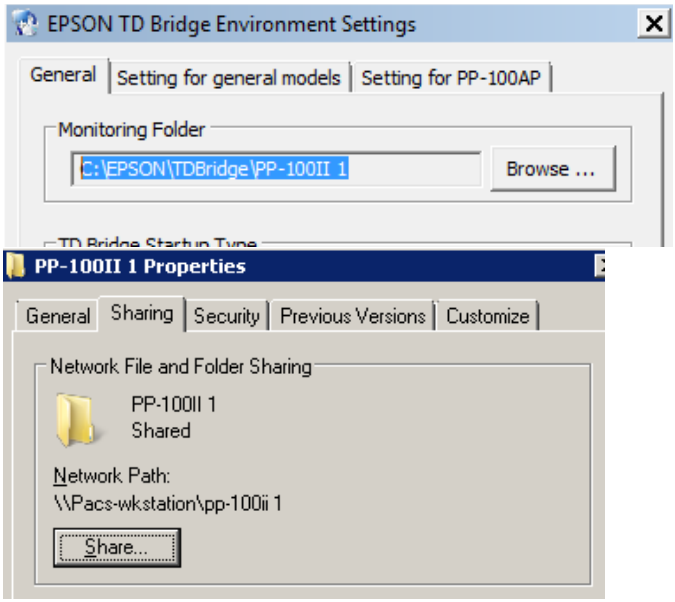
5. Setup the TD Bridge monitoring folder to use a network share, which users will have write access for submitting JDF files and data. Unfortunately, the monitoring folder must be on the host system's hard drive; therefore, will need to share the folder on the Epson Disc Publisher host.

6. **Make sure the subfolder name for that share location is the name of the EPSON Disc Publisher Instance**. For example, in my installation the hardware's name is "PP-100II 1" so:



7. Next, create a text file in the share called "**local_path.txt**", which contains the file path to the monitoring folder as seen by the TD Bridge.

   The reason for this is that users might access the share via g:\Public\PP-100II 1\ but on the server it is actually c:\EPSON\TDBridge\PP-100II 1\ and when the RIS creates the JDF file it needs the actual path as registered in the TD Bridge software

   The following screen shot illustrates what you need to do for this step:

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Finally, as an administrator of the TD Bridge host machine, you may want to consider a batch job that cleans up completed jobs and deletes their data.
When a user creates a Disc Producer Job by submitting a CD Burn request via the RIS, a JDF (Epson Job Definition File) will be created at the monitoring location. As the TD Bridge processes that file it's file extension will change JDF → RJD → IMP → STF → DON and if there is an error it will be renamed to ERR. In the case of an error you can re-submit the job by changing the extension back to "JDF" and lookup the error code in the TDBStatus.txt file. You can also monitor the JOB status in the Epson Total Disc Monitor application, which will tell you when you need to put more discs in the stacker or close the door to the device as shown in the following.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

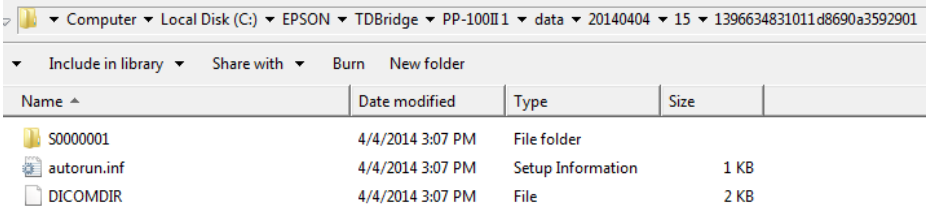
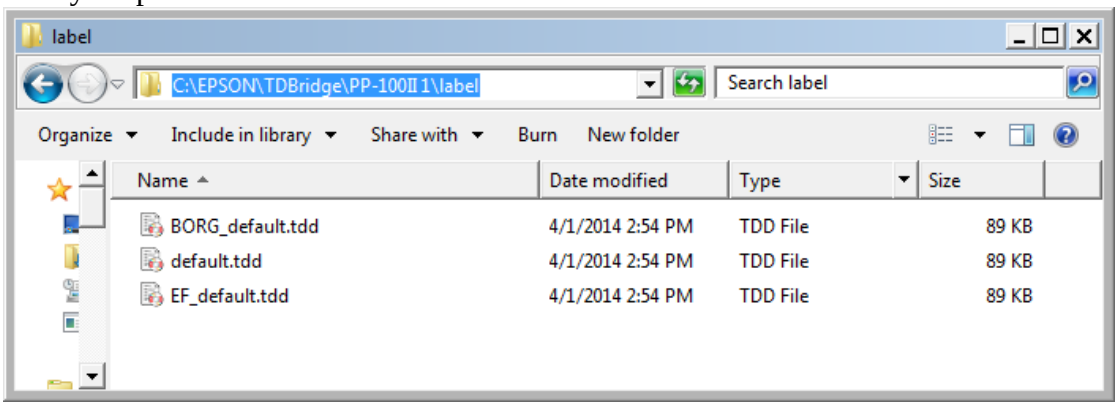
**IMPORTANT:** After the CDs are burned the data for the CD will remain on the TD Bridge share. Over time this will take up lots of drive space and it will be in your best interest to delete/clean out the old data on a daily bases. You just want to make sure the data you are deleting isn't for a job that is in the ".ERR" status.

The data directory is organized by date then by hour, then by JDF file name. The following example shows the job 1396634831011d8690a3592901, which was submitted on April 4th at the 15h and if you look closely at the job id a3592901 represents the accession number of the first study on the CD. The audit log for that study can be used to track down more information about the job.

>> C:\EPSON\TDBridge\PP-100II 1\data\20140404\15\1396634831011d8690a3592901



You can also create a label sub-directory and create default *.TDD files, which will get printed to your CDs. If the label directory and default tdd files don't exist, they will be created the first time RIS submits a job to the disc producer share. You can then edit the default.tdd file to meet the needs of your practice or site.



The fields available for the labels are:

name, patient_id, site_code, site_description, deliver_to_first_name, deliver_to_last_name, deliver_to_address_lines, deliver_to_city, deliver_to_country, deliver_to_state, deliver_to_zip

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

For reference, the following is a sample JDF file:

```
#
# JOB_ID ===  <PacsMediaRequestID>a<RISAccessionNumber>
# you can use the accession number to look at the RIS audit log and see more information about the job
#
JOB_ID=1396634831011d8690a3592901
#
# PUBLISHER === the name of the folder where this job file was written
#
PUBLISHER=PP-100II 1
#

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## County Option for Radiologist Signing Location

Option to select the County for the Radiologist is controlled by a new system configuration setting titled **"EnforceCountySelection"** with a default of False.

If set to False, the application will behave as before and the user will not be required to select a county before dictation. If the site is Chair enabled at the practice level they will still be required to select a Chair, but the County and Zip Code options will note be presented.

If the site is not Chair enabled but requires County based on the above system configuration setting, they will be presented with a window that will allow them to select a County. They can also enter a Zip Code to shorten the list or select the County automatically. The following window is presented on login. The value entered is remembered on a workstation bases.

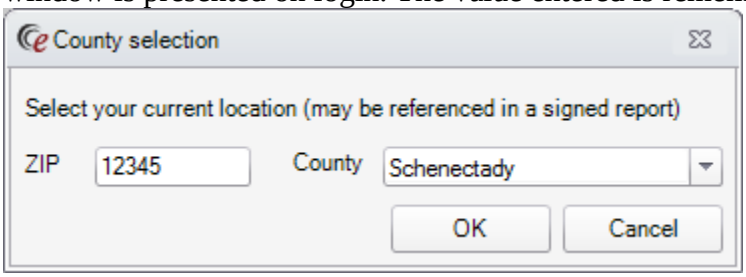

**Figure 5.16 – County selection window prompt**

If "EnforceCountySelection" is true and the chair workflow is enabled for the practice, then the chair selection dialogs with the additional county fields will be displayed

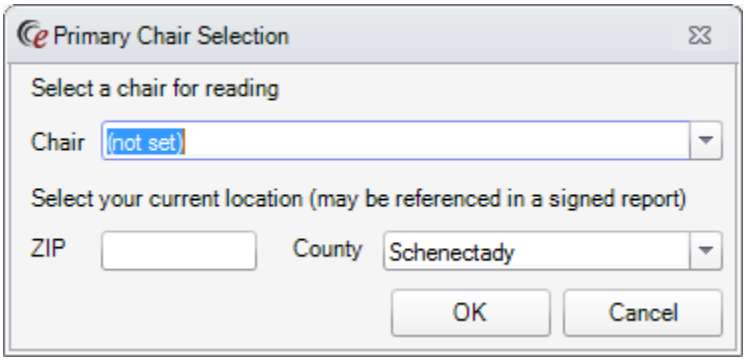

**Figure 5.17 – Chair selector with Zip and County fields**

If the user preference "Use detailed chair selector" is on the user will be prompted with the detailed chair selector window

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

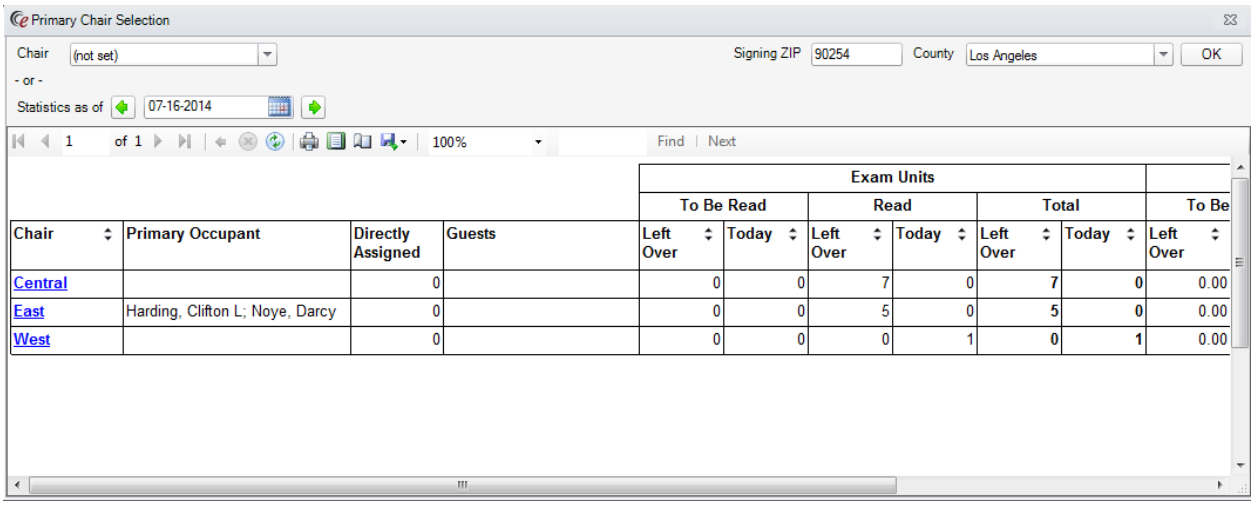

**Figure 5.18 – Detailed chair selector**

If the county selection is enforced, the county that is set at the time of signing is saved to the interpretation table's "signed_county" column.

If Chair is not enabled for the current user but county is enabled, a new status bar icon will be displayed allowing the user to open the County selector.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

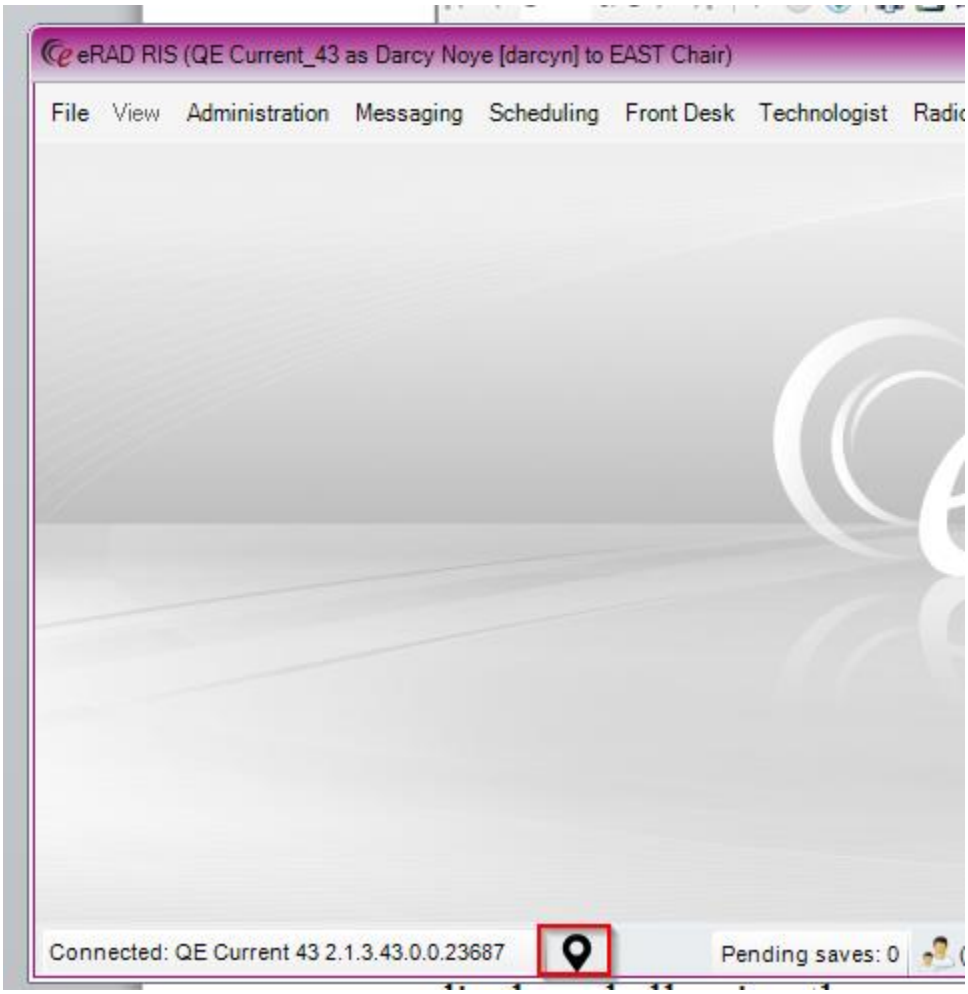

**Figure 5.19 – County selector**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# IVT – Ability to Edit Patient Information

Previous to Build 43, users had to access the Patient Folder – View Edit to alter patient information on the Patient tab. Now the patient tab is editable from the IVT window.

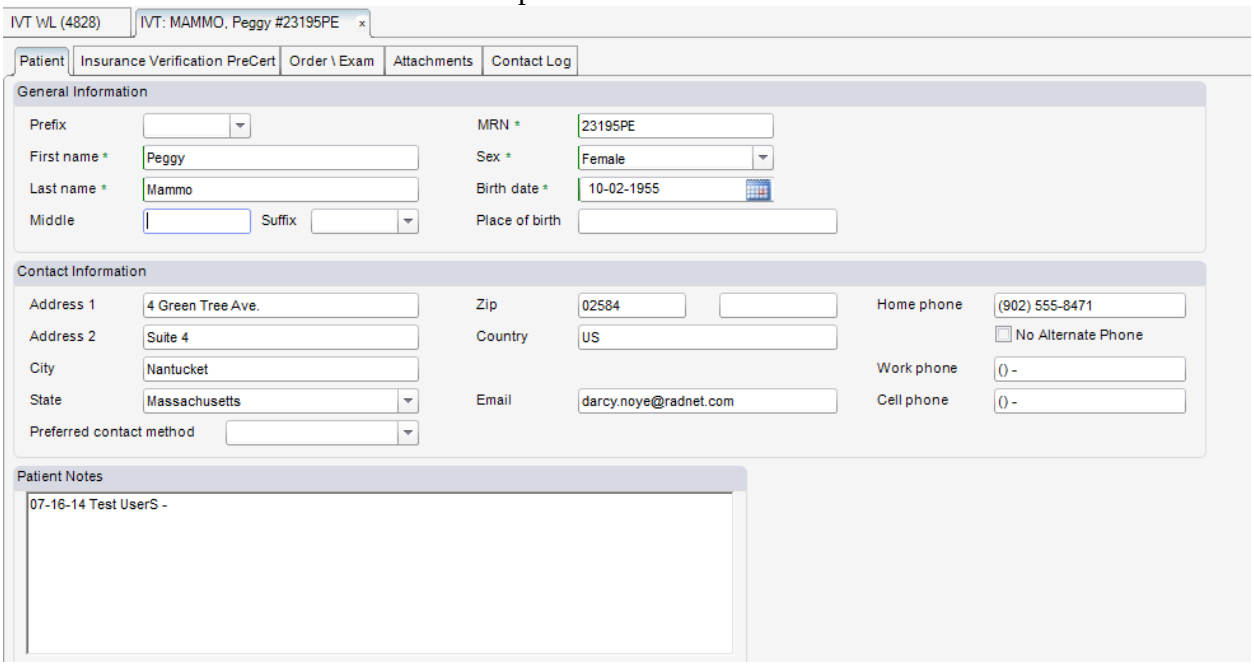

**Figure 5.20 – Patient tab fields editable from IVT window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## ICD10 Support

To support ICD-10, the RIS code table that current contains ICD9 must be upgraded to support ICD-10 and other coding schemes as necessary. A new table called l_indication that is similar to the current l_indication_code has been created. The new table employs a composite key consisting of coding scheme, release date, and code. Rather than the code itself being the primary key, a numeric primary key exists instead. This approach requires that any place in code/XSLT etc. that refers to the indication code explicitly must be updated to perform a reverse lookup to find the code/coding scheme based on the numeric key.

ICD10 codes can be downloaded from
http://www.cdc.gov/nchs/icd/icd10cm.htm#icd2014
Choose the ICD-10-CM XML Format Option

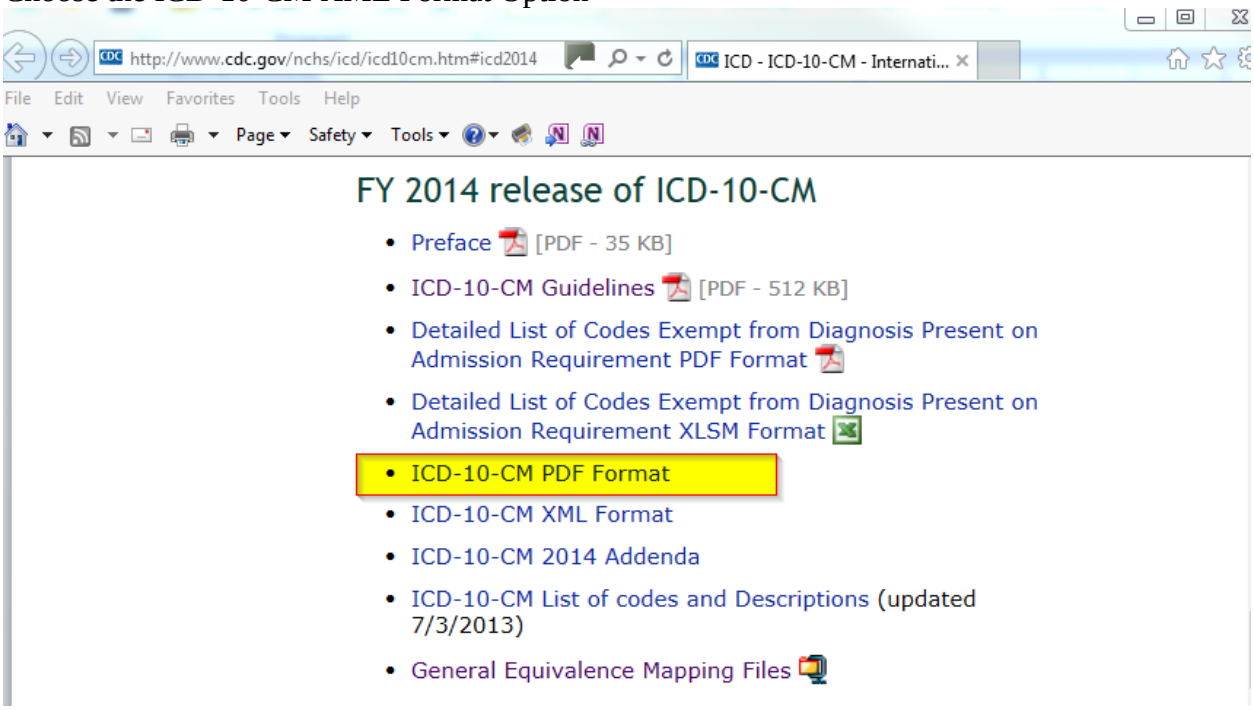

**Figure 5.21 – ICD-10 download**

This XML import file contained roughly 45,000 rows of ICD-10 Clinical Modification (CM) data. Procedure Coding System (PCS) that is also available seems to be for other purposes and not necessary for ICD-10 support. To manage importing of new versions of ICD-10, the indication code lookup has been enhanced with an "Import" button and associated screen for importing only rows in the import XML that do not already exist in the l_indication table. The placement of the "Import" button on the Indications lookup is shown below.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

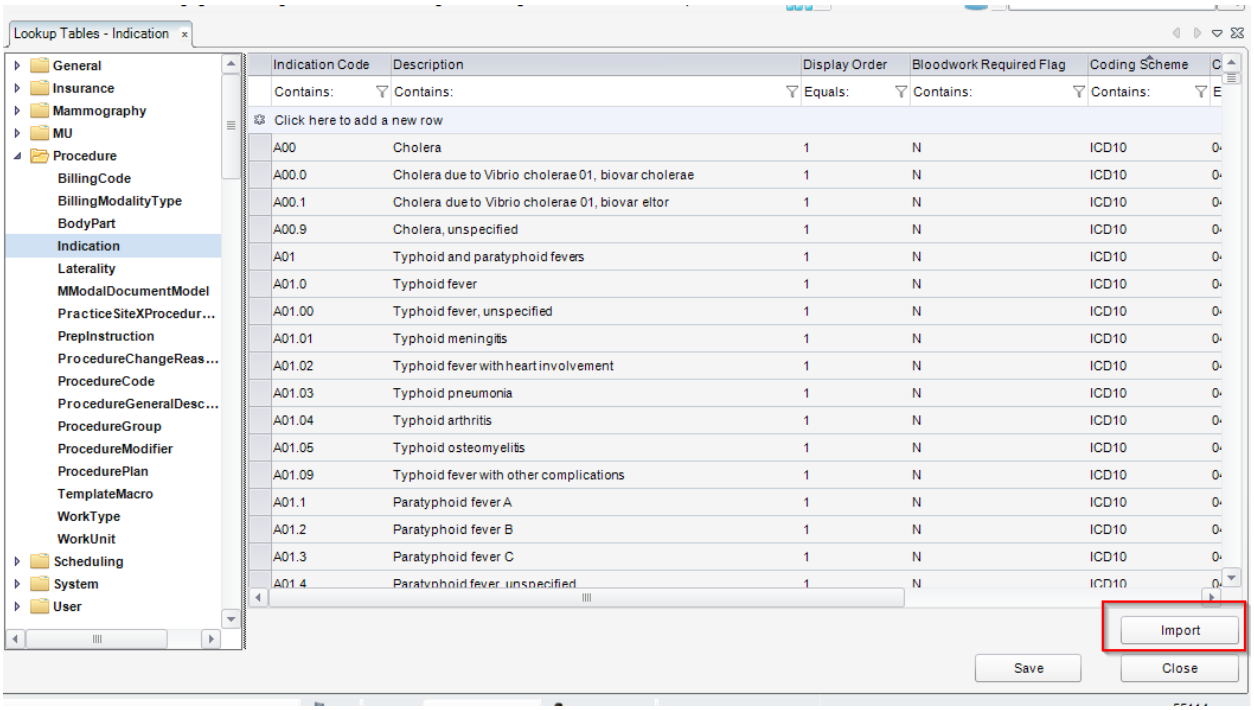

**Figure 5.22 – Indication table with option to Import codes**

To Import new codes select the "Import" button and this will present the Import ICD10 window.

Select the ellipsis button next to the File field. Locate the directory where the XML file was saved. With this folder select the ICD10CM_FY_Full_XML_Tabular.xml file (NOTE: this file will change as new versions are released. It will be the responsibility of the site to continually update with newest codes).
The File path will not be populated. Select the Load XML button. At this point, the user can enter keywords as required. Only the codes that are missing from your current indication list will be imported. In my example I was only missing ICD10 code A22.9, so this is the only one available for download. The "include" column is checked by default. Once editing is complete and all rows that are needed are checked, the "Import" button can be selected. Before selecting the Import button you can also change the effective date.

After import of new rows, RIS must be closed and re-opened for the newly-imported rows to be available in the lookup editor.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

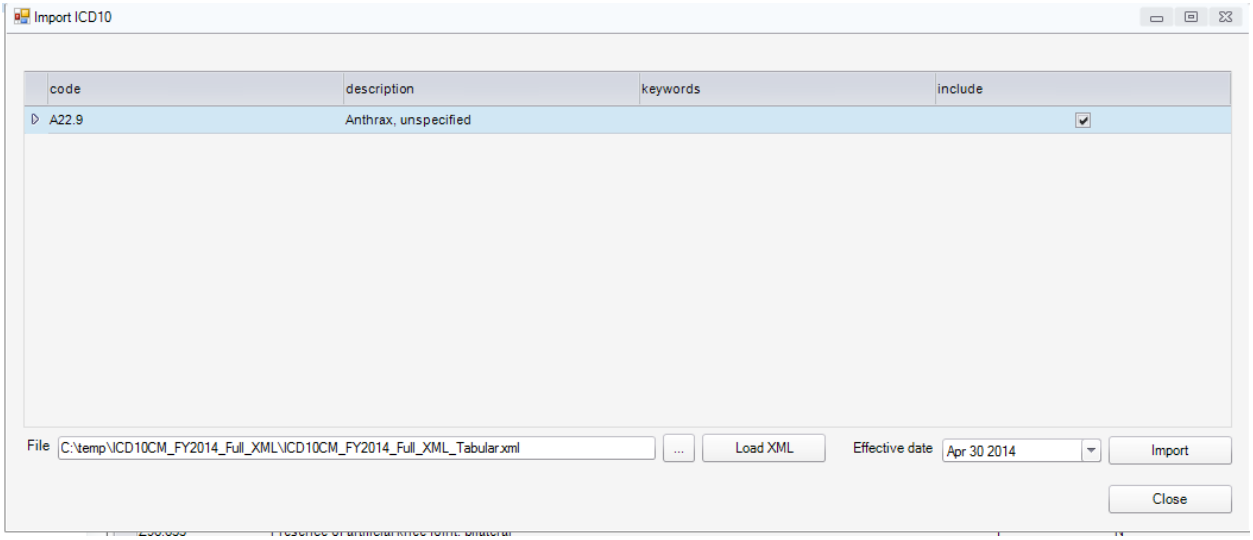

**Figure 5.23 – Import ICD10 window**

## Searching for ICD Codes:

The ICD Codes dialog facilitates searching and filtering of ICD codes in the Indication table. The form contains a textbox for the reason for the exam (from the Order tab) and then the search/results section.

ICD search can be performed from many areas of the application. A general search of a code can be performed from the 'Quick Search" field in the upper right corner of eRAD RIS.

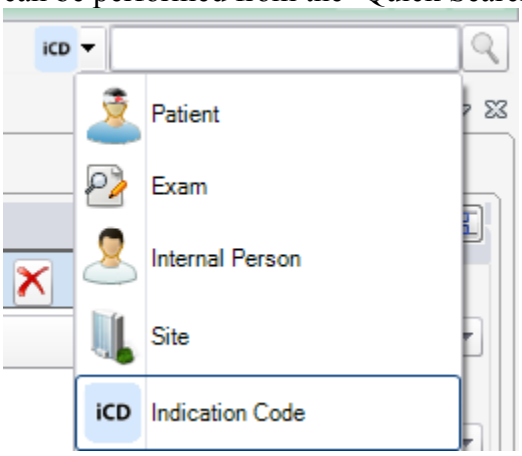

**Figure 5.24 – ICD Quick Search**

Enter the code or description in the field or leave it empty and select the search button to open the ICD Codes window. From this window you can select the Type of code being search for, this

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

can be a combination of ICD9 and ICD10. There is an option for SNOWMED codes, but by default there are no SNOWMED codes included. The box can be checked, but no data will be returned. By default, ICD9 will be checked until the date value in the System Config's **"ICD10EffectiveDate"** whereby ICD10 will be checked by default when the window opens.

Entering a partial or full code number or description will return the results. The search results will display the Code, the Type of code and the Description.

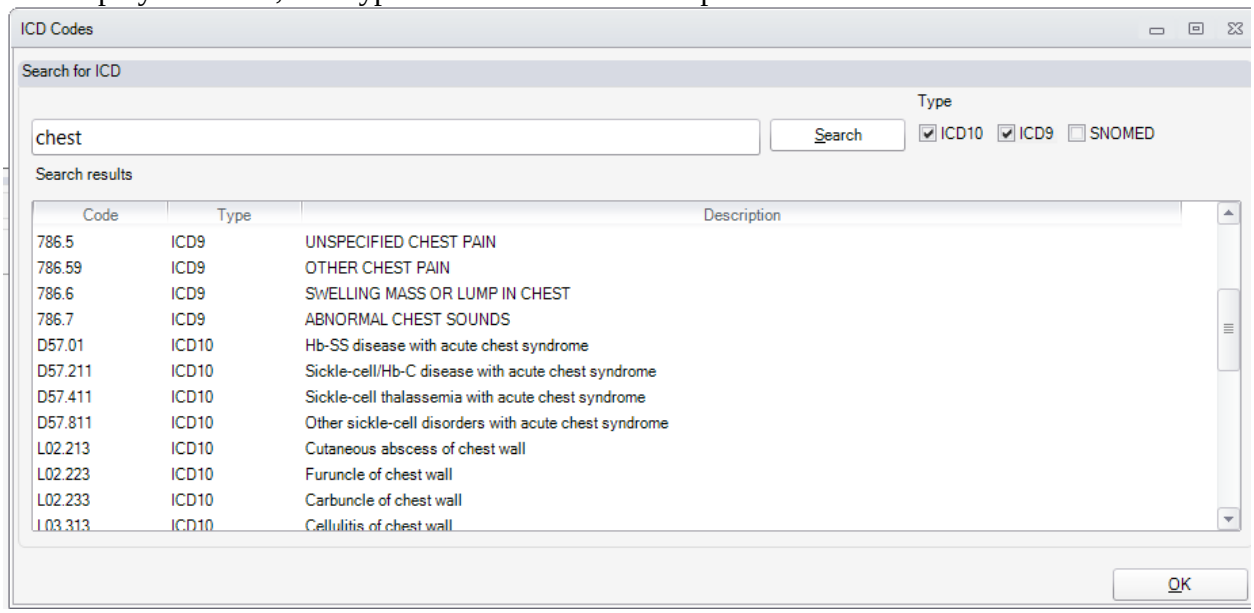

**Figure 5.25 – ICD Codes search window.**

From the Scheduling\Registration\Walk-In windows the user can add Indication codes. The window is accessed on the Schedule\Exam tab, with a new button labeled ICD on the procedure picker row. The button is enabled after the Study is entered. This button is controlled by new access string **"Clinical.Schedule.AssignIcdCode"** with a default of none.

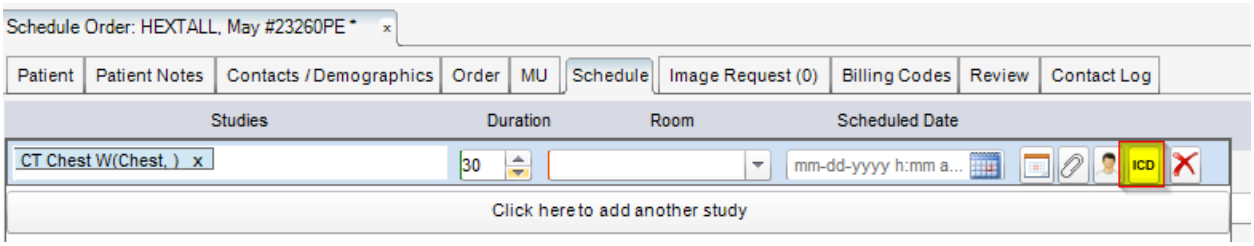

**Figure 5.26 – Add Indication code in Scheduling**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

When the ICD Codes window opens, the Reason for exam will be pre-populated from Order tab. Perform search and from the Search results you can double click a row to insert in the selected codes section of the window. Multiple codes can be entered. When finished, select OK.

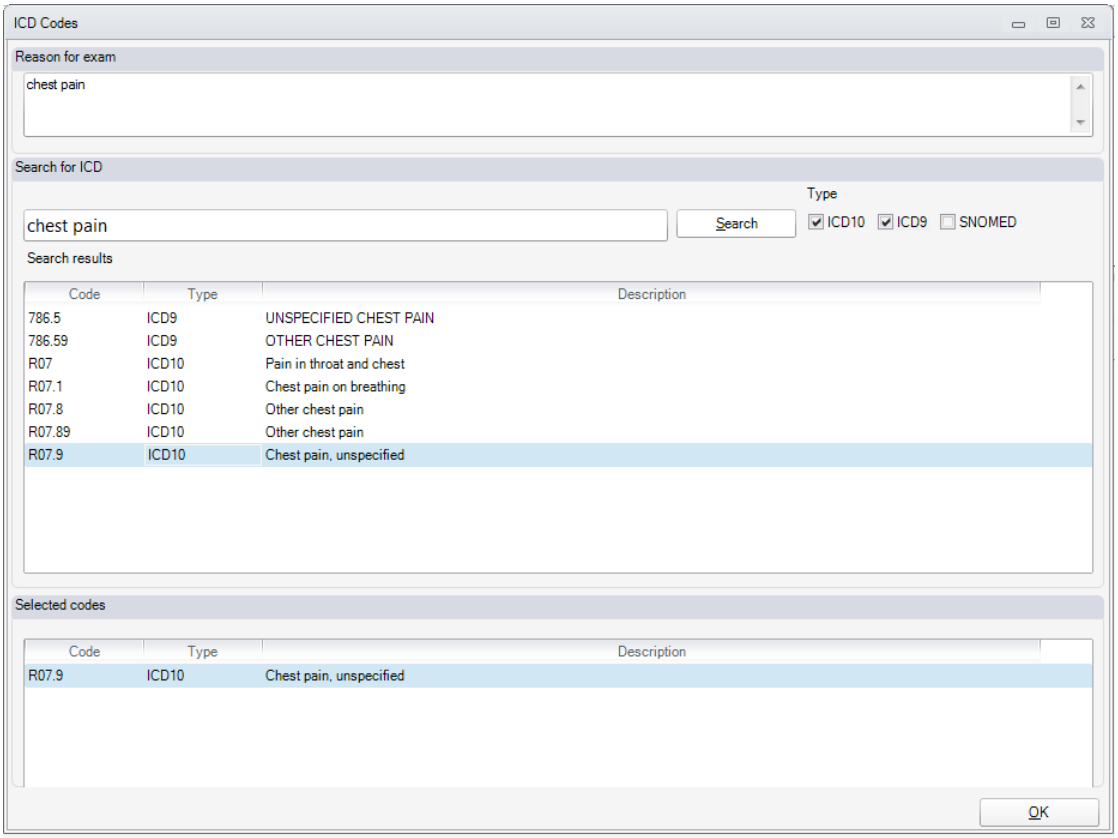

**Figure 5.27 – ICD Codes window accessed from Scheduling\Registration\Walk-in windows.**

In the Technologist workflow, and in View/Edit, The Documentation tab contains two grids that display the ICDs captured up to exam done, and those captured by the radiologist. The buttons to the right of each grid are enabled based on whether the current context should allow editing.
If the new access string titled **"Clinical.ViewEditCanChangeTechIndications"** Is set to full then the Indications button is enabled allowing changing of indications set up to Exam Done.
It can be enforced that a code must be entered by the Tech is the system configuration setting of **"TechMustProvideIcdCode"** is set to True. The default is False
If the new access string titled **"Clinical.ViewEditCanChangeDiagIndications"** is set to full, then the Diagnostic Indications button is enabled, allowing changing of indications set by the radiologist.
The default for both of the above mentioned access strings is none.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

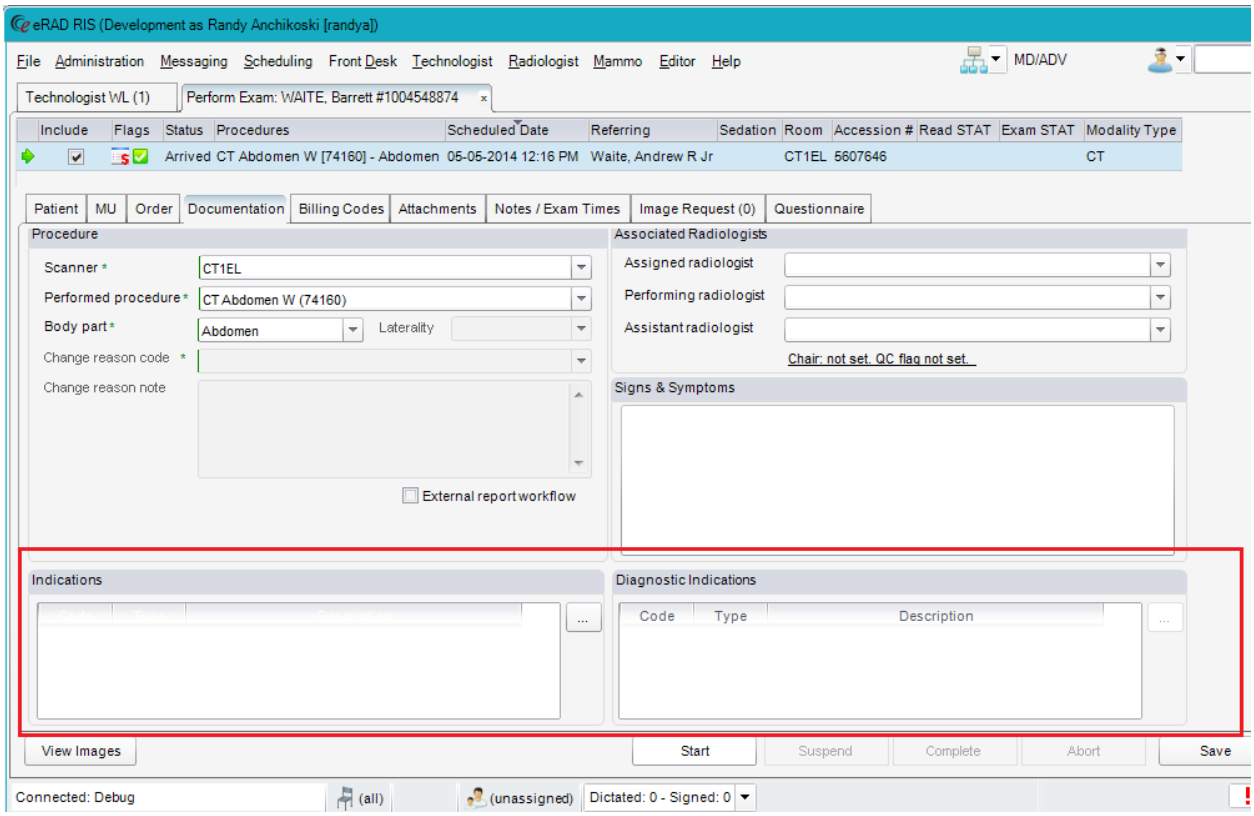

**Figure 5.28 – Indication grids. Left for Technicians and right for Radiologist**

# IMPORTANT: Radiologist ICD Support Uncomplete

**The Radiologist portion of this feature is not complete. It is recommended that the system configuration setting "**RadMustProvideIcdCode**" be left to the default of "False" and the access string of "**Clinical.ViewEditCanChangeDiagIndications**" be left to the default of None.**

The Reporting window also has a new ICD button. The button is enabled with the system configuration setting of **"RadMustProvideIcdCode"** that has a default of False. This button will open the same ICD Codes search window. The data for the indications defined here are saved to c_interpreation_indication.
For the Radiologist to view the Tech workflow defined ICDs, viewing the Exam Details from the View menu will display indications defined in that workflow.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

On the MU tabs Medical History pane the problem codes added are ICD codes and the same search window is provided allowing the user of both ICD9 and ICD10 codes. The user can select the search icon in the problem field o the Medical History grid to open the ICD Codes window, or can enter partial or full value in the problem field and search.

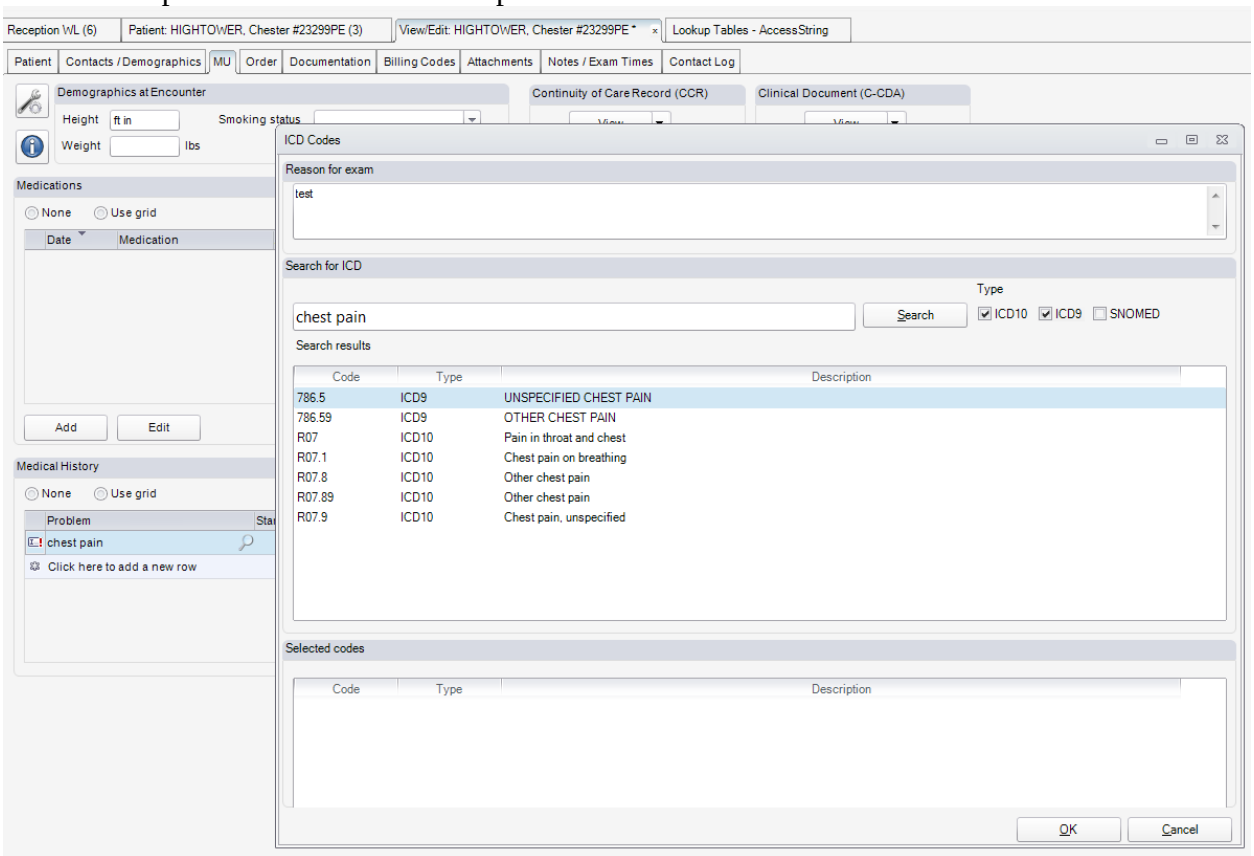

**Figure 5.29 – MU ICD Code search**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Secure Messaging

Secure Messaging has been added in Build 43. This allows RIS users to send secure encrypted messages to other users in the RIS and also to patient that can access the message via the Patient Portal.

To start a new Lookup table titled MessageGroup was created and located under the General list of lookup tables. Columns of the table include the Message Group Code, Description, Display Order, Last Updated and Active column.

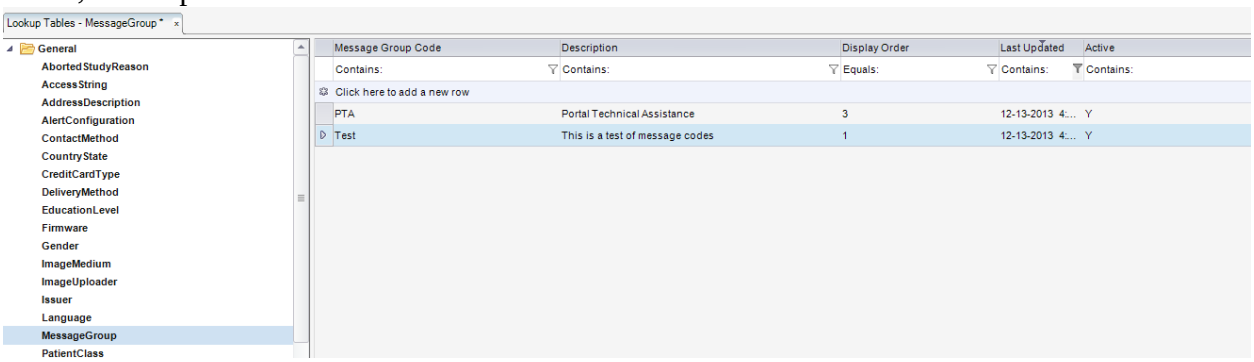

**Figure 5.30 – Message Group lookup**

Values entered in this table will appear in a new field in the Personnel editors Account tab. This field is similar to the other fields on this tab. It is a type ahead field that can contain multiple values.

Having the messaging groups would allow a patient to send a message to a group if they don't know an individual to send it to. The RIS users who have access to this group would then get the messages.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

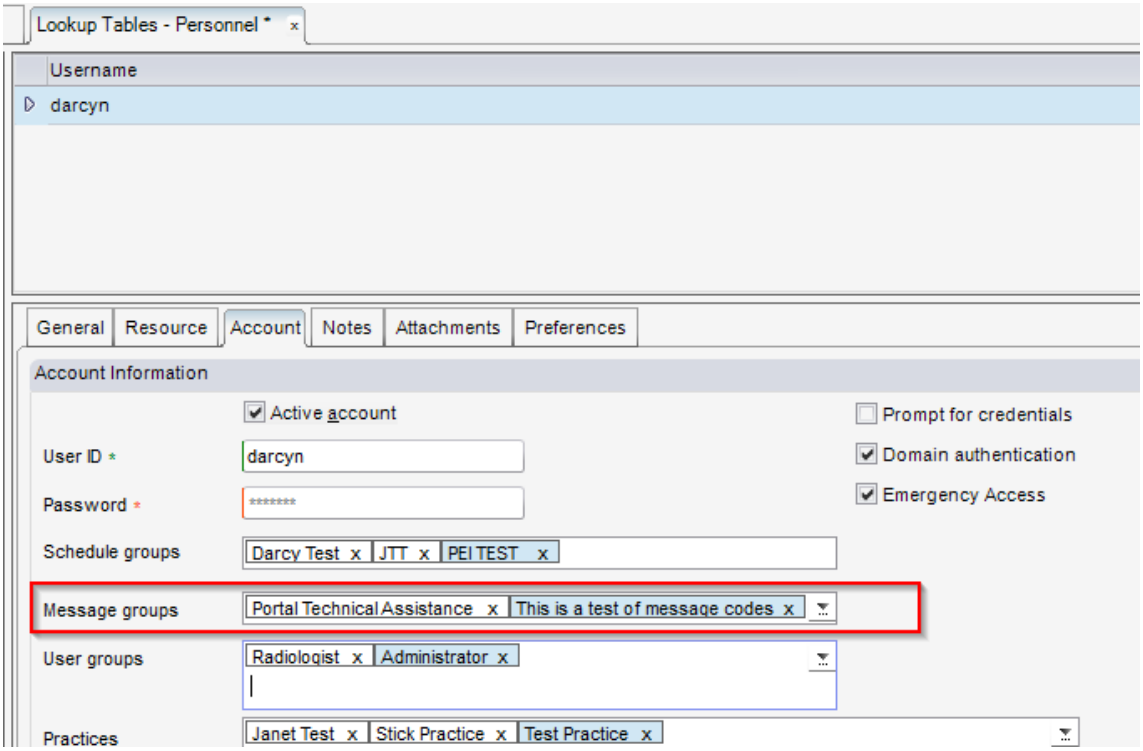

**Figure 5.31 – Assigning message groups to users**

From within the RIS messages are sent/received from under a new Menu option titled Messaging. The Messaging work list access is controlled by access string **"Config.MessageInbox".** This access string also controls access to the Menu option of Secure Message Inbox that is under this Messaging menu. Default is none.

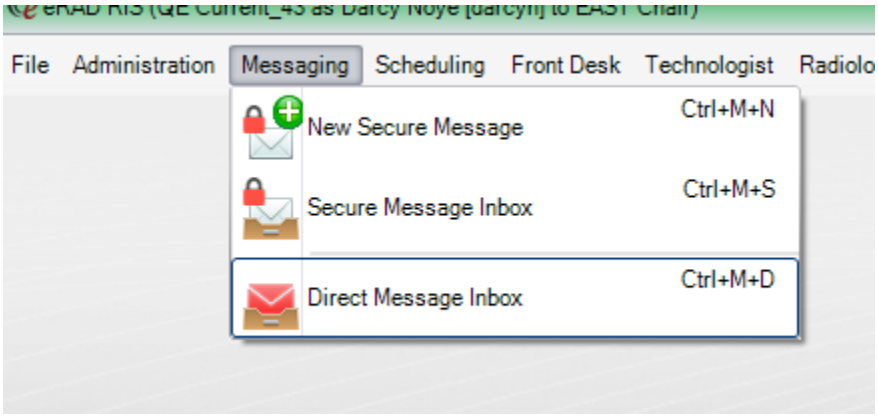

**Figure 5.31a – Message menu and menu options**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

To create a new message select the menu option of New Secure Message that is controlled by the new access string of **"Config.CreateMessage"** that has a default of none. In this window the user can select to send to one of the messaging groups created, or they can send to a patient or another RIS user. The other RIS user would also need access to the Secure Messaging in order to receive the message in their inbox.

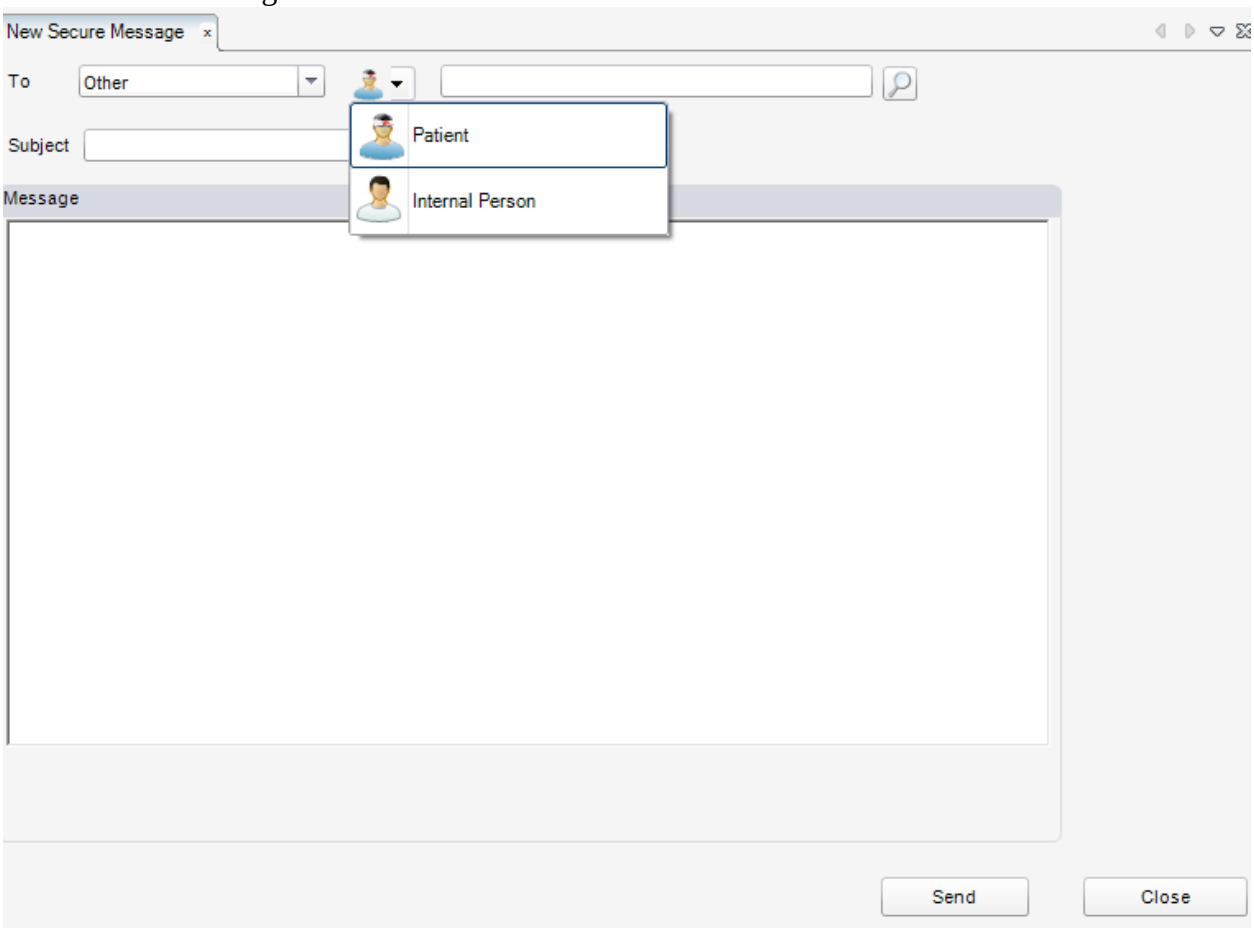

**Figure 5.32 – New Secure Message**

The RIS user can search for a patient or internal person, enter a message and send.

Messages sent to the user can be viewed / reviewed in the Message Inbox. This is accessed from the menu option Secure Message Inbox. Columns of Subject of the message, if the message has been Read, if the message has been replied, Date Sent, Date Read and From and To columns.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

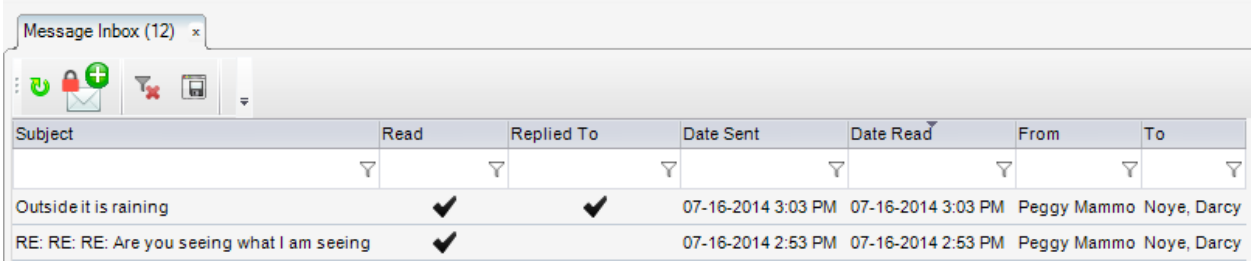

**Figure 5.33 – Secure message inbox**

The Direct Message aspect of this menu will be covered later in this document with the Meaningful Use updates.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Patient Portal Legal Documents

Legal documents were required for the Patient Portal. A new lookup table was created titled LegalDoucment that resides under the System folder of the Administration>Configure menu.

Document types that can be created include:
Terms and Conditions
Privacy Statement
Notice of Privacy Practices
Patient Portal Terms and Conditions
Patient Privacy Notes
Patient Service Agreement
Patient Consent Agreement

The user can define the Document Title and the Description of the Document to be displayed in the Patient Portal.

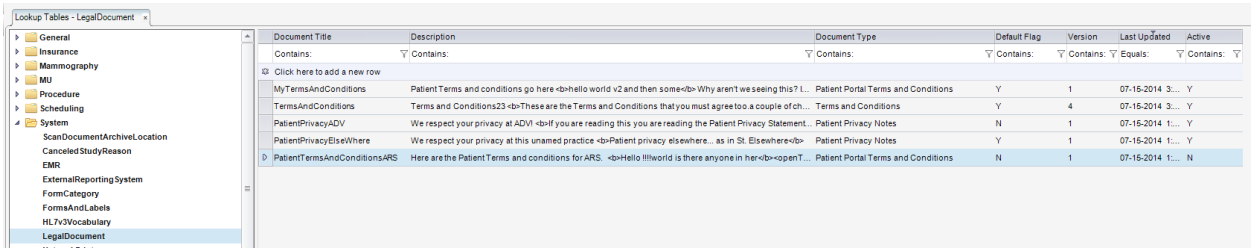

**Figure 5.34 – LegalDoucment look up**

Each type is allowed to have one default of that type, which would be used in the case when a practice cannot be determined or the practice does not have the desired legal document.

The Add\Edit Practice window accessed from the Organization lookup can have Legal Documents defined for a specific practice. Select the Portal tab and use the type ahead feature to add the legal documents.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

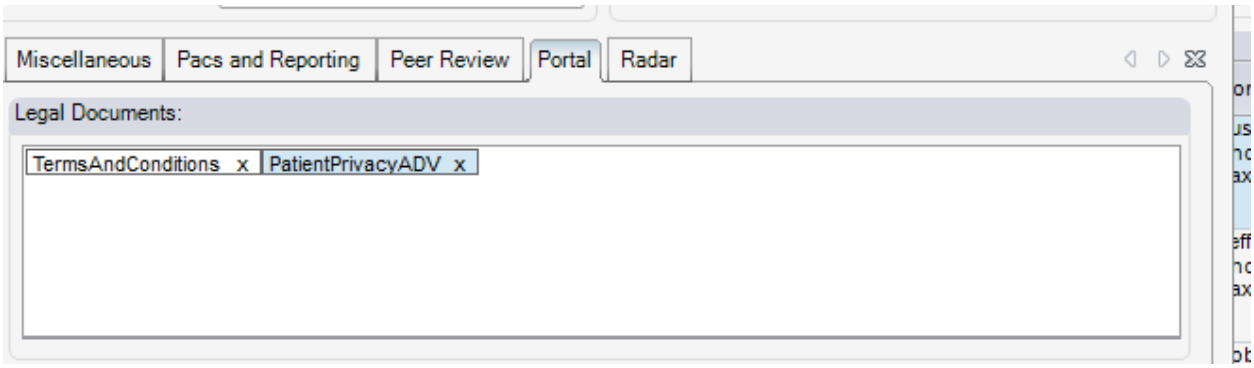

**Figure 5.35 – Legal document specified for a practice**

When logging into the Portal the system will check to see if the document has changed based on the last updated date, and display to the user before they will be able to access the site, if they have already approved that version then the site will load as normal.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Mammography – Suggest Manual Review

Manual review has been addressed by adding a new column to the Mammo Letters WL. The column titled "Suggest Manual Review Reason" will display reasons for a manual review.
If the patient has multiple follow up orders that have not been scheduled the column will inform the user.

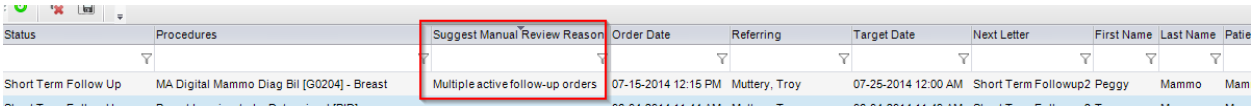

**Figure 5.36 – Mammo Letters work list displaying new column for patient with multiple follow up orders.**

If the patient has a follow up letter on the Mammo Letters WL and the patient has another mammo exam scheduled within 30 days of the target date of the follow up, this column will also inform the user with a reason of another breast exam.

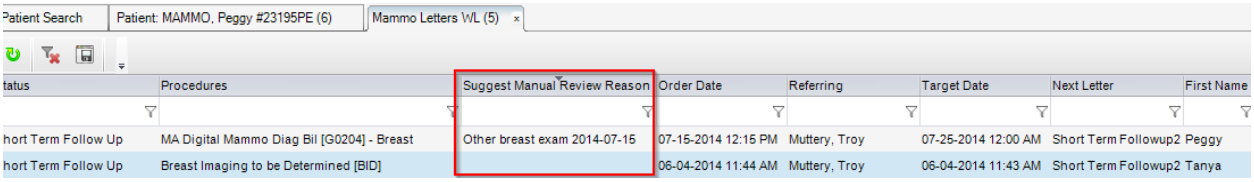

**Figure 5.37 – Mammo Letters work list displaying new column for patient with a breast exam scheduled.**

Also from this work list the user can access the Patient Folder and Cancel Order from the context menu.

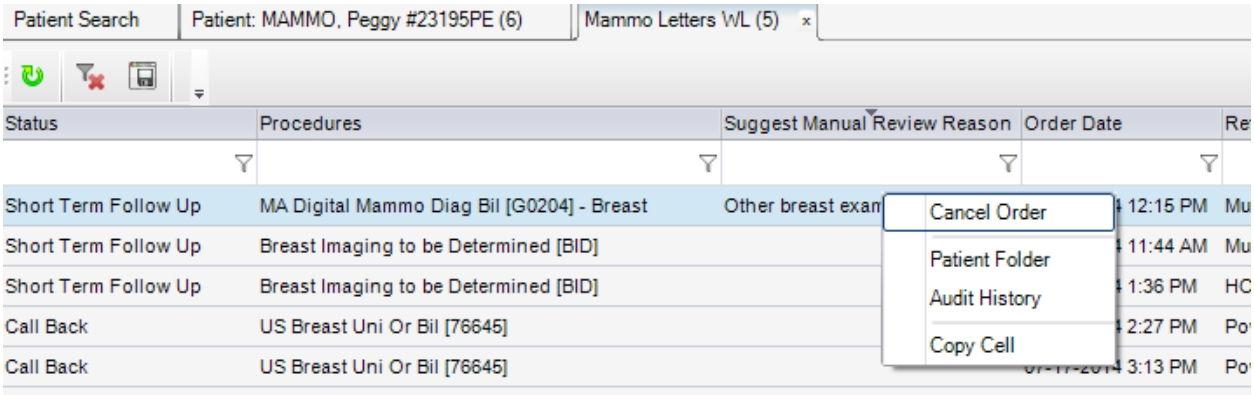

**Figure 5.38 – Context menu options from Mammo Letters WL**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Option to Not Allow Editing of Billing Codes by Technicians

Currently in the RIS we have an option on the procedure code that will allow\disallow the editing of the amount of units for a billing code. This works great for billing codes that are associated to the procedure, but doesn't prevent the tech user from adding a different code and change the units.

For this we have added a new column on the Billing Code table titled Allow Edit Units Flag. If the value of this column is set to Y the user will be able to edit the value on the Billing Code tab of the Perform Exam window. Alternately, if it is N, the user will be prevented from changing the unit value.

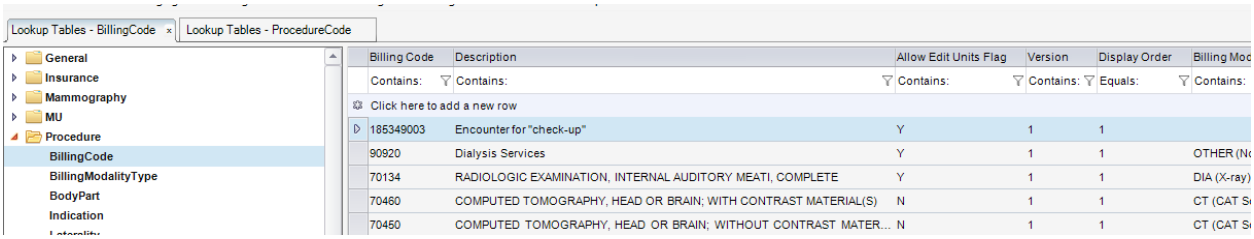

**Figure 5.39 – Billing code lookup showing new column Allow Edit Units Flag**

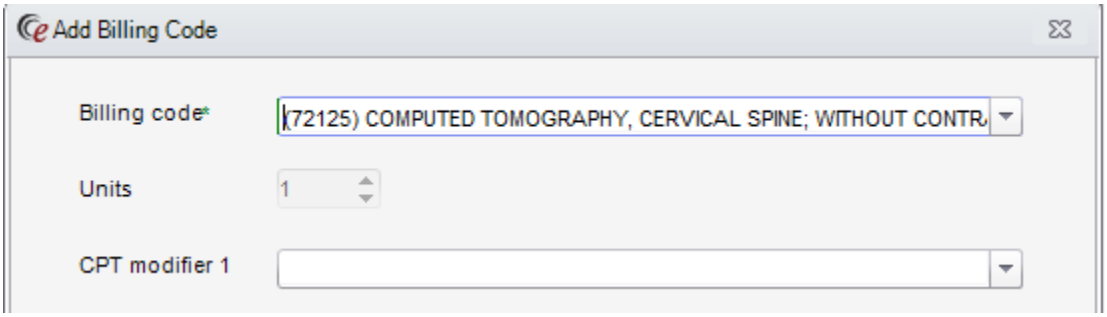

**Figure 5.40 – Unit that cannot be edited**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Patient "Not Yet Menstruating" Flag

In the Perform Exam window there was a flag of No longer menstruating that would disable the LMP and Pregnant fields. For cases of patients that have not starting menstruating but were over the age in which we active the LMP and Pregnant fields, there was no mechanism to disable.

We have added another flag of "Not yet menstruating".

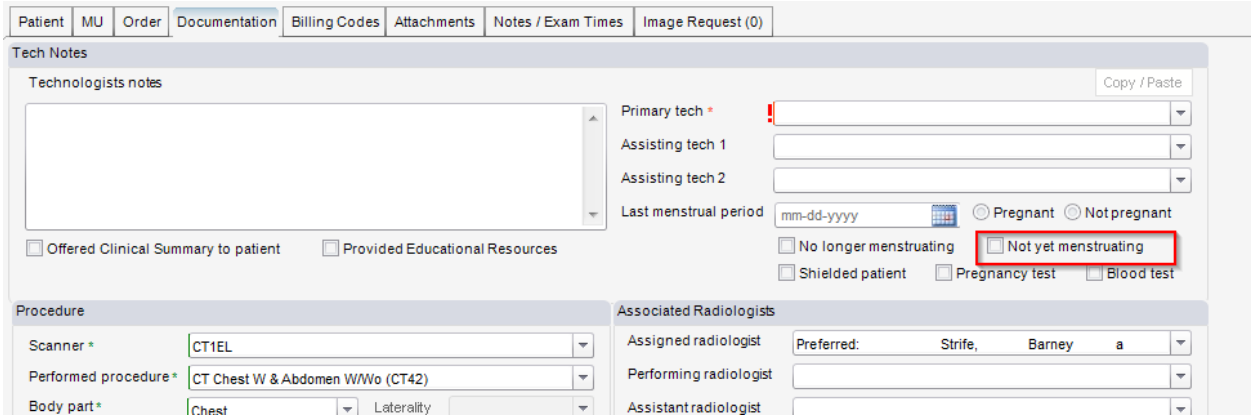

**Figure 5.41 – Not yet menstruating flag**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Exam Search Filter of BI-RADS

The exam search window now has the BI-RADS option filter that can be added for search criteria

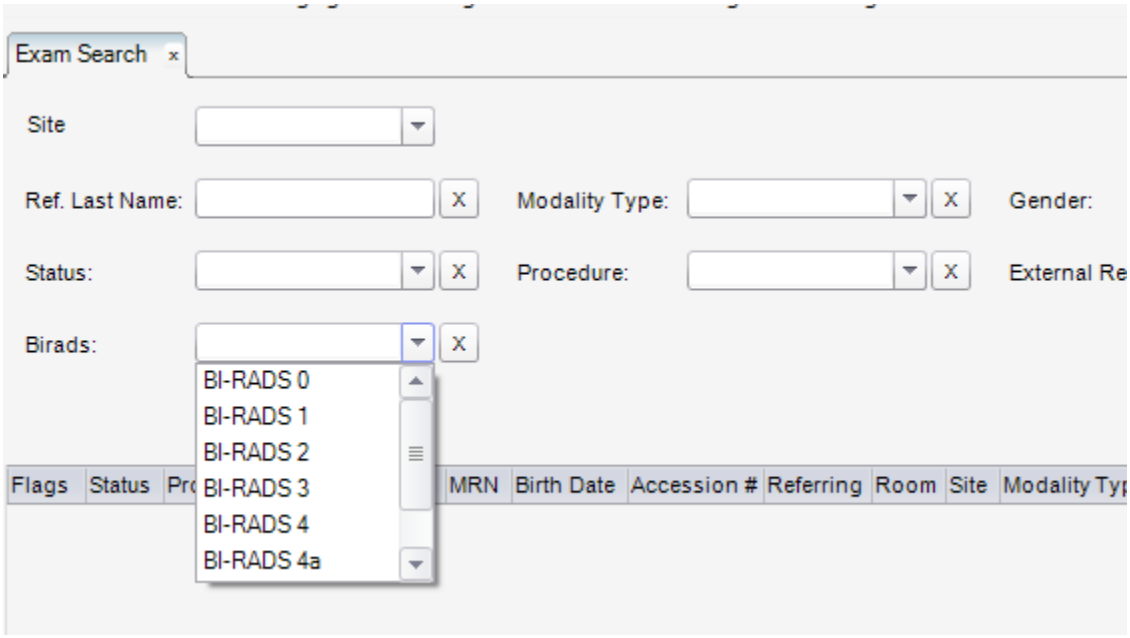

**Figure 5.42 – Exam search capability of searching on BI-RAD levels**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Patient Search – New Patient Split Button Added

The New Patient button has been updated with a new split button. Options within the split button are New patient / New appointment, New appointment and New patient.

**Figure 5.43 – Patient search**

If the user wishes to create a new appointment and performs a search and no results are found the New patient / New appointment option can be selected. This will open the Schedule Order window with for a new patient. If they wish to just create a new patient in the system the New patient option can be used

If the user performs a search and the results list does have a match or multiple results returned, they can select a patient from the list and select the New appointment option. This will open the Schedule Order window with the patient details pre-populated.

In the case of orders from external systems that have to matched with an eRAD RIS MRN, the patient search window will open with only the option of New patient.

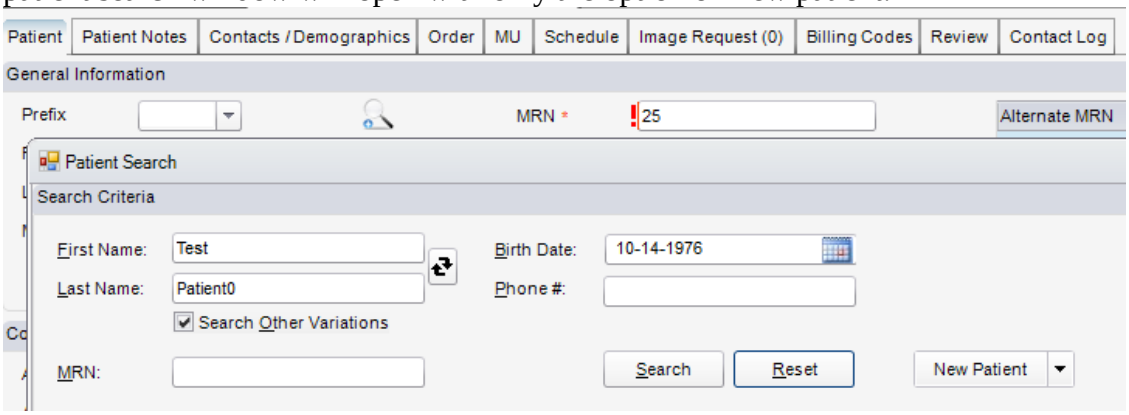

**Figure 5.44 – Patient search for external order**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Responsible Party MRN

Two new fields have been added to the Responsible Party's information on the Contacts / Demographics tab. The fields are not required to be completed. The fields are Relation's ID and ID Issuer.

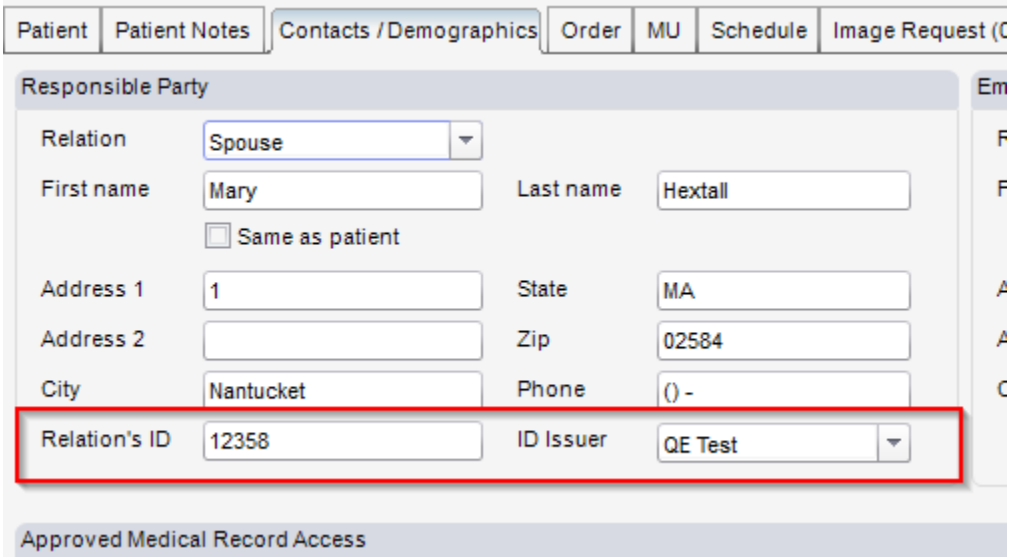

**Figure 5.45 – Responsible Party fields added**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Scheduling – Patients Height and Weight Required at Time of Scheduling

**In previous** versions we had the ability to turn on/off if the patient's height and weight were required at the time of "arriving" the patient. We have added to the ability to turn on/off is the patient's height and / or weight is required at the time of scheduling.

Two new system configuration settings have been created. For patient's height required at scheduling the setting is **"HeightRequiredOnSchedule"**

For the patient's weight required at the time of scheduling the new setting is **"WeightRequiredOnSchedule"**

Both have a default value of none.

| System Config Code | Value | Default | Description |
|---|---|---|---|
| Contains: onsche | Contains: | Contains: | Contains: |
| HeightRequiredOnSchedule | False | False | (value = True/False) height is required when scheduling the patient |
| WeightRequiredOnSchedule | False | False | (value = True/False) weight is required when scheduling the patient |

**Figure 5.46 – new system configuration settings for height/weight required at scheduling.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Patients Weight and Room Added to Weight Limit Message

The message box that is presented to the user informing them that the current selected scanner has a weight limit that the patient exceeds has had the weight of the patient and the room name added to the message.

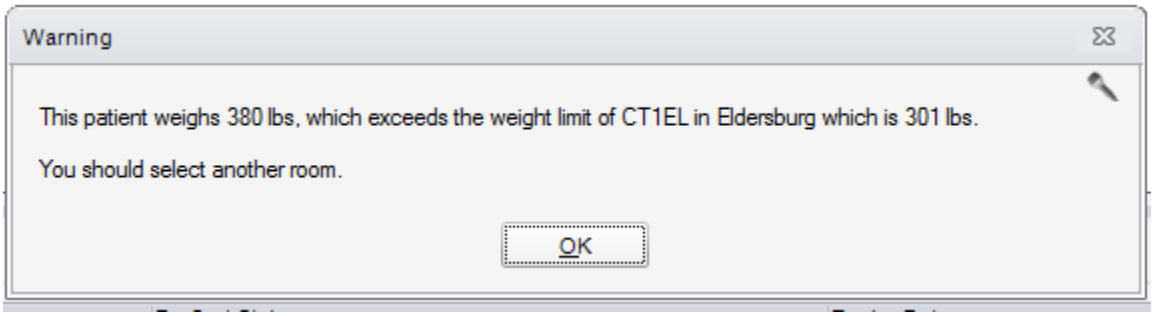

**Figure 5.47 – Message includes patients weight and room**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Ability to Add Longer Room Names

Currently in the scheduling window the names of the rooms come from the Modality Code of the Modality table. A new column was added to the Modality lookup titled Short Description that has a character length of 50. If this field has a value it will be displayed.

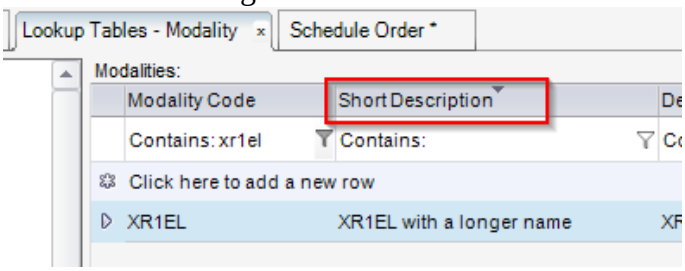

**Figure 5.48 – Short description column added to the modality lookup**

Admins can enter in a longer description name of the room and have it display in the scheduling windows details section.

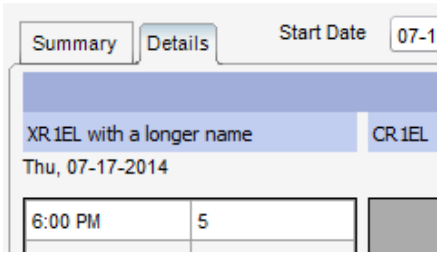

**Figure 5.49 – Details showing short description**

Also displayed in the Calendar of the Scheduling window

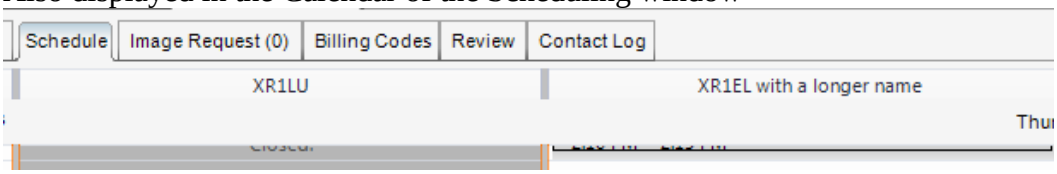

**Figure 5.50 – Calendar control of the new appointment window**

Lastly in the procedure picker rows Room list box

**Figure 5.51 – Room list box on the procedure picker row**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Ability to Use a Closed Room from Registration Window

Registration screen will now allow the use of a closed room/holiday, but on checking-in and arriving they will be prompted to ensure they would like to still use the selected modality.

For checking in a patient, the user will be presented with the following message

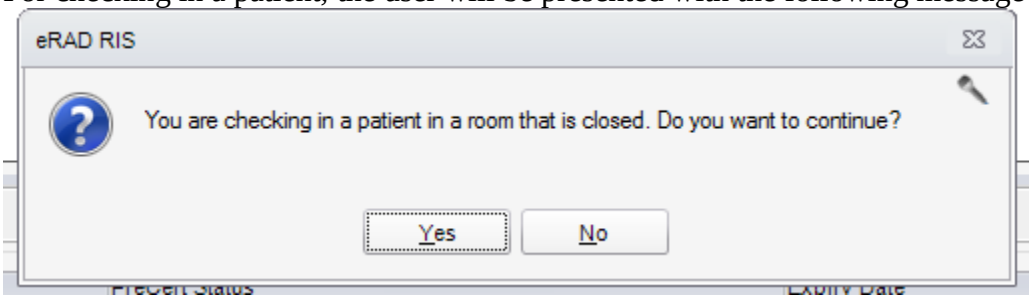

**Figure 5.52 – Message on closed room for checking in a patient**

When arriving the patient in a closed the room the message is:

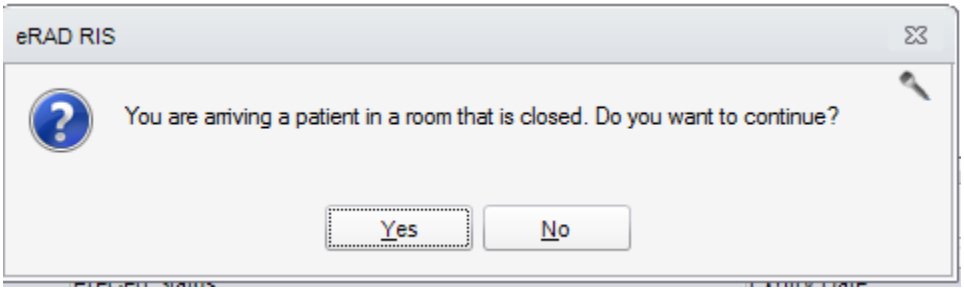

**Figure 5.53 – Arriving a patient in a closed room**

The message will be presented when completing a walk in to a closed room as well.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Scheduling – Repeating Modality Closures

The modality lookup table has an additional option added to the modality closures grid. The Repeat column has a list of values that include days of the week, weekday, weekend, all week and full range.

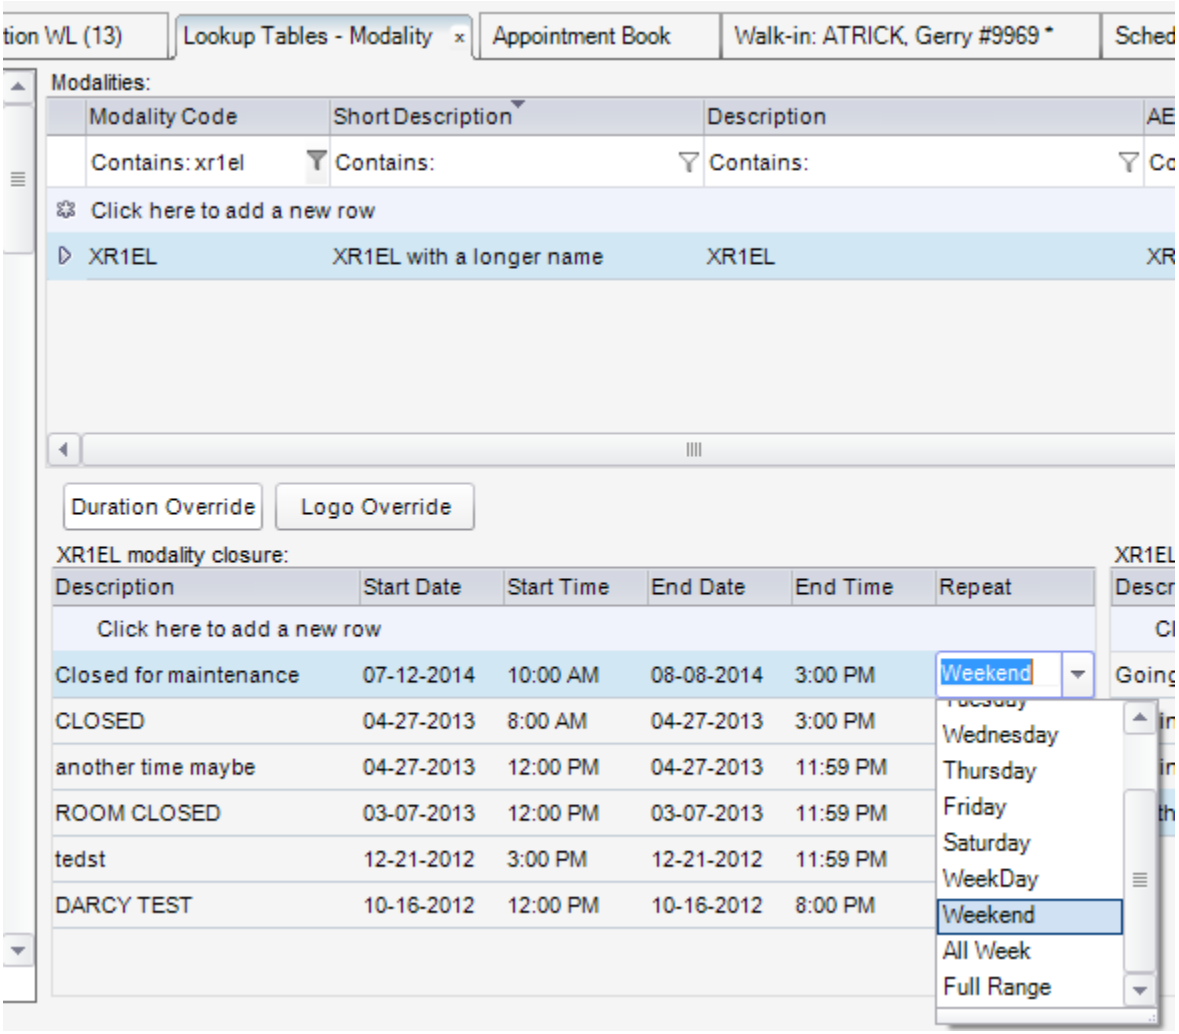

**Figure 5.54 – Repeating room closures**

An example of this would be closure on the weekend between 7am – 5pm, selecting the Weekend option would apply the closure to Saturdays and Sundays in your specified date range.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Last Contact and Last Contacted Type Added to Work Lists

The columns of Last Contact and Last Contacted Type have been added to the following work lists.

- Confirmation
- Reception
- Technologist
- No Show
- Closed Room

Example of the columns from the Reception work list:

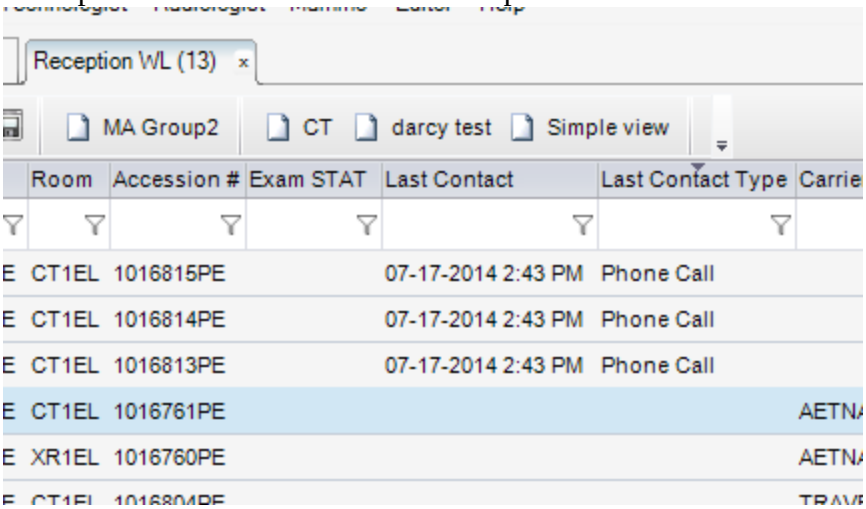

**Figure 5.55 – Last contact and last contact type added to work lists**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Additional Columns Added to the Confirmation WL

The IV Status and PreCert Required columns have been added to the Confirmation WL.

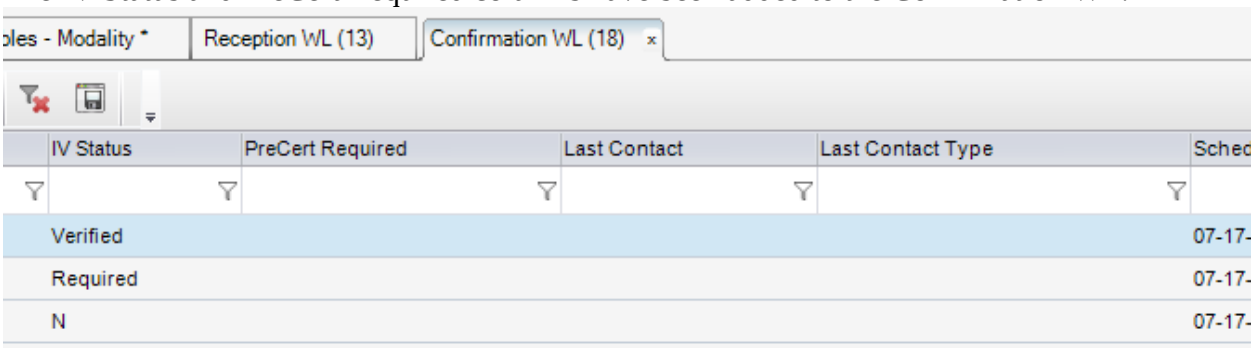

**Figure 5.56 – Columns added to the Confirmation WL**

## Additional Columns added to the Orders to Schedule WL

The columns Birth Date, Abort Reason and Carrier Type have been added to the Orders to Schedule WL

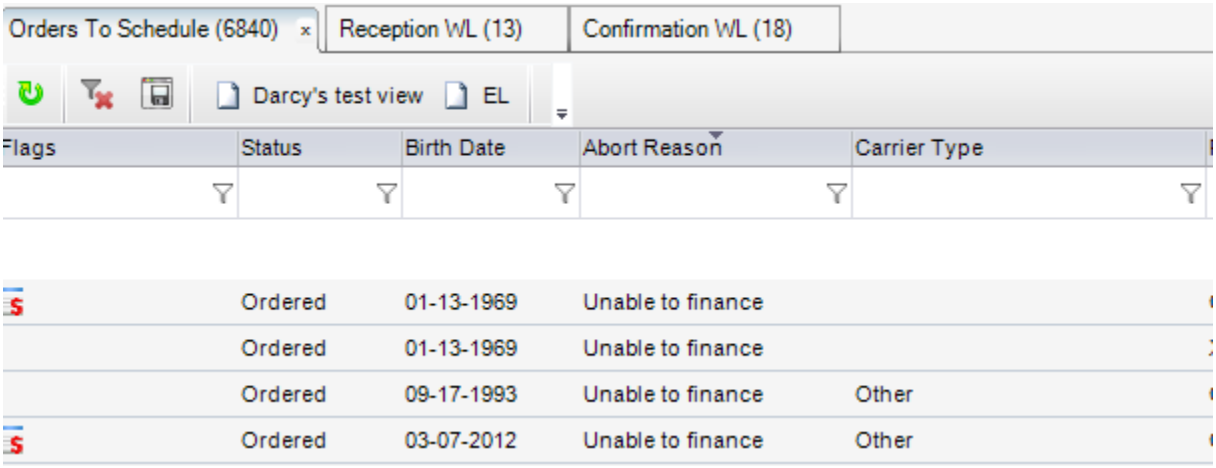

**Figure 5.57 – Columns added to the Orders to Schedule WL**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Columns added to the Image Request WL

The columns of Date of Service and Site columns of Study Performed Site and Image Request site are included on the Image Request WL.

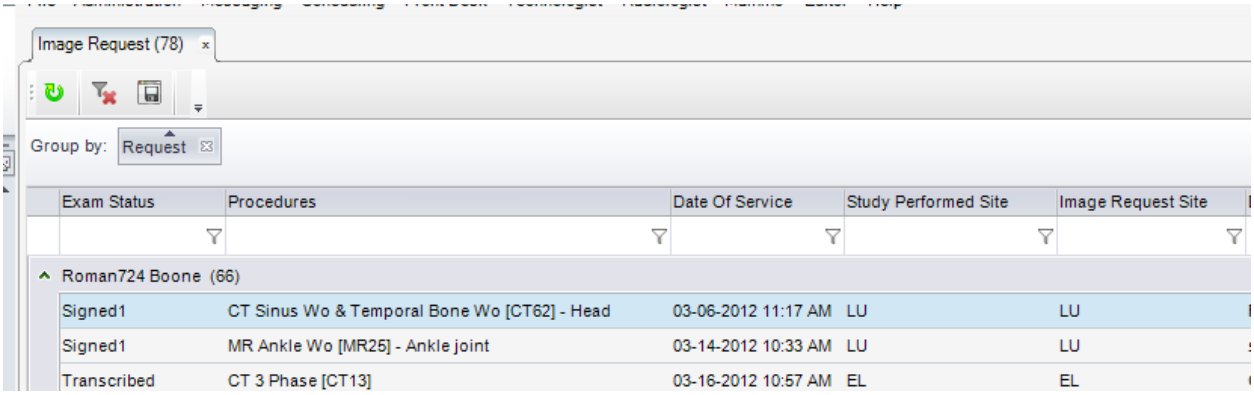

**Figure 5.58 – Columns added to the Image Request WL**

## Locked By Column Added to the CTRM WL

The locked by column has been added to the Critical Results WL and the All Critical Results WL

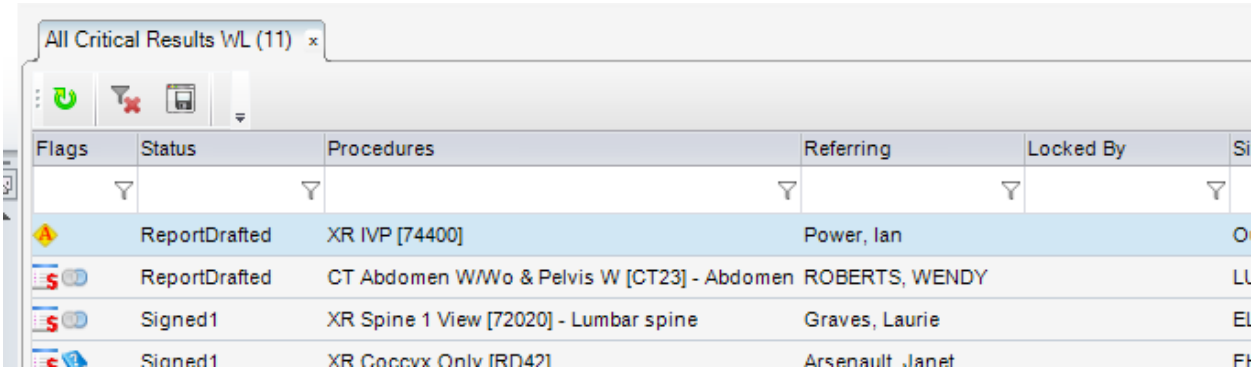

**Figure 5.59 – Locked by column added to Critical Results WL**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Ability to Select Date Range for Confirmation WL

There Confirmation WL is a daily work list in which the user must select each day to see the studies for a specific day. In build 43 we have added to the ability to select a date range from the calendar control to a maximum of 10 days.

This is accomplished by opening the calendar. Focus will be on the current date. Holding down the shift key on the keyboard and select the day in which you would like to end the range. To change back to a single day, double click the day from the calendar.

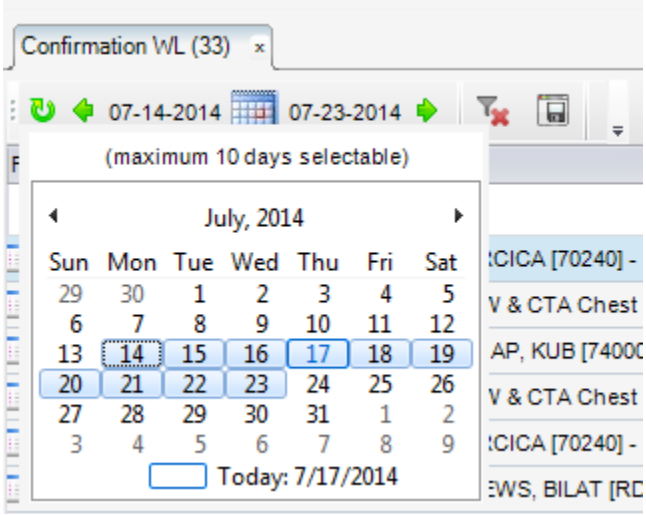

**Figure 5.60 – Selecting a date range on Confirmation WL**

The previous/next arrows cause dates to slide by one day but maintain the selected number of days in the range.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Problem and QA Flags Added to Patient Folder WL

Two new flags have been created for display on the Patient Folder WL. The flag for Problem, with an ICON of a red exclamation point ! and the flag for QA with an ICON of a check mark have been added. The Problem flag is controlled by a new access string titled **"Flag.Problem"** with a default access of full.
The QA flag is controlled by a new access string titled **"Flag.QA"** and it also have a default access of full

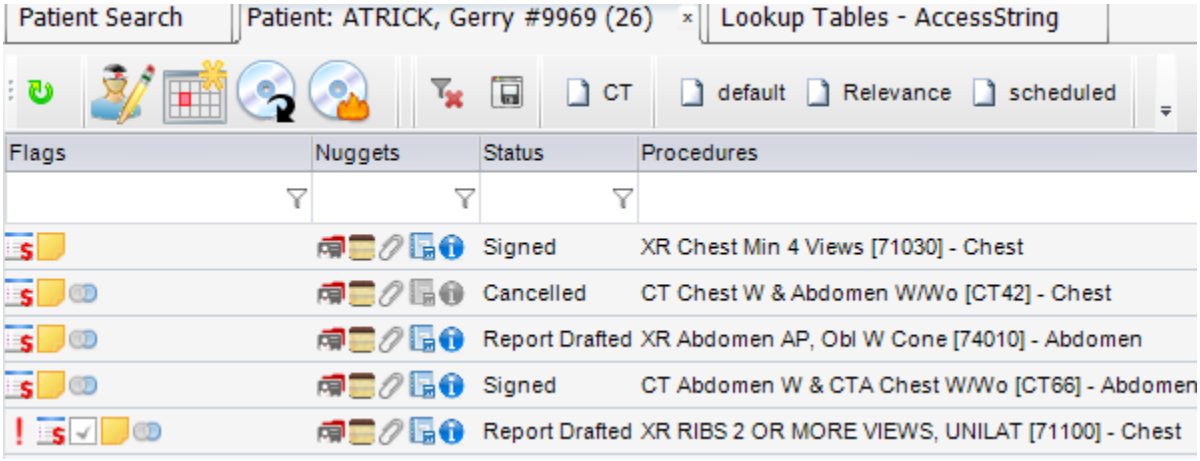

**Figure 5.61 – Problem and QA flags added to Patient Folder**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Personnel Editor – Have City Populated by Zip Code

The common zip code lookup to both the Address section and Deliver To section has been added. The functionality is the same as other areas where this feature exists: when tabbing away from the zip code textbox, if the zip code exists then the city/state will be automatically populated. If more than one entry exists, then the popup shown below will be displayed.

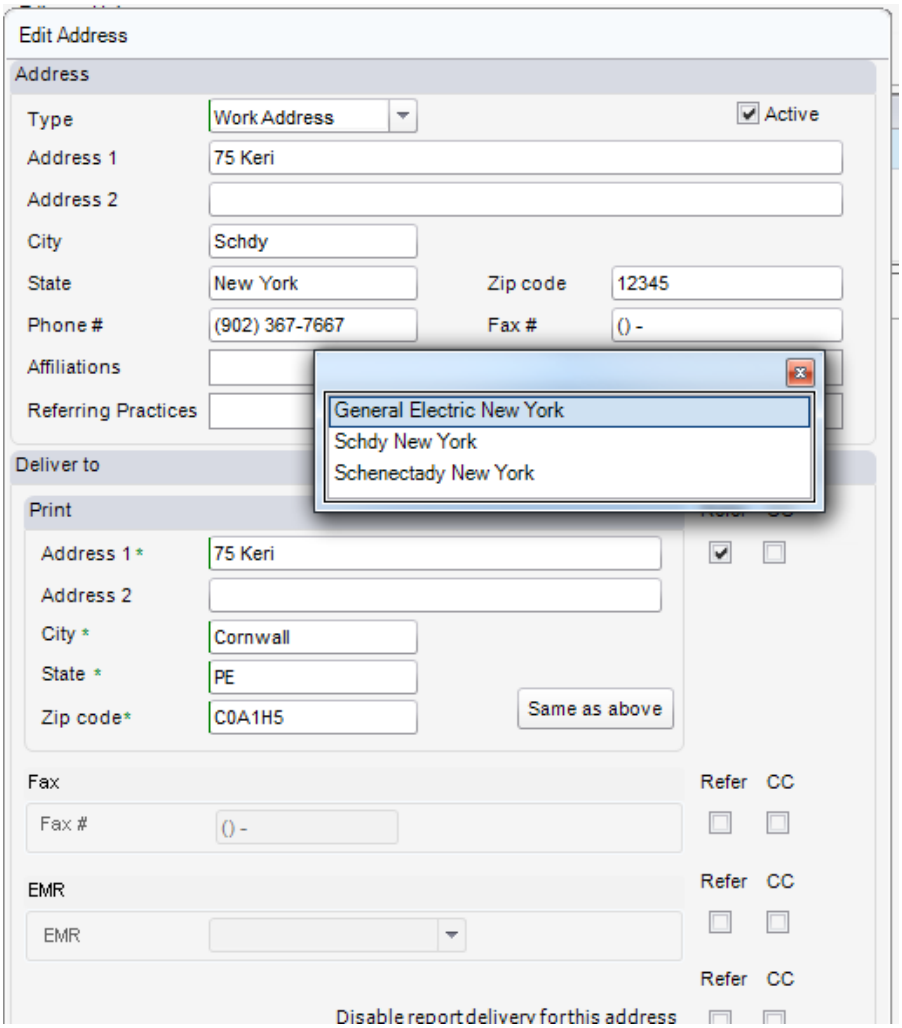

**Figure 5.62 – Personnel editor with zip code lookup**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Ability to Define Primary Specialty for Referring Physician

To set a specialty to 'primary', right click on the item in the multi-select Specialties box and select 'Set as primary'. Only the specialities multi-select should allow this right-click functionality. Only one primary should be allowed.

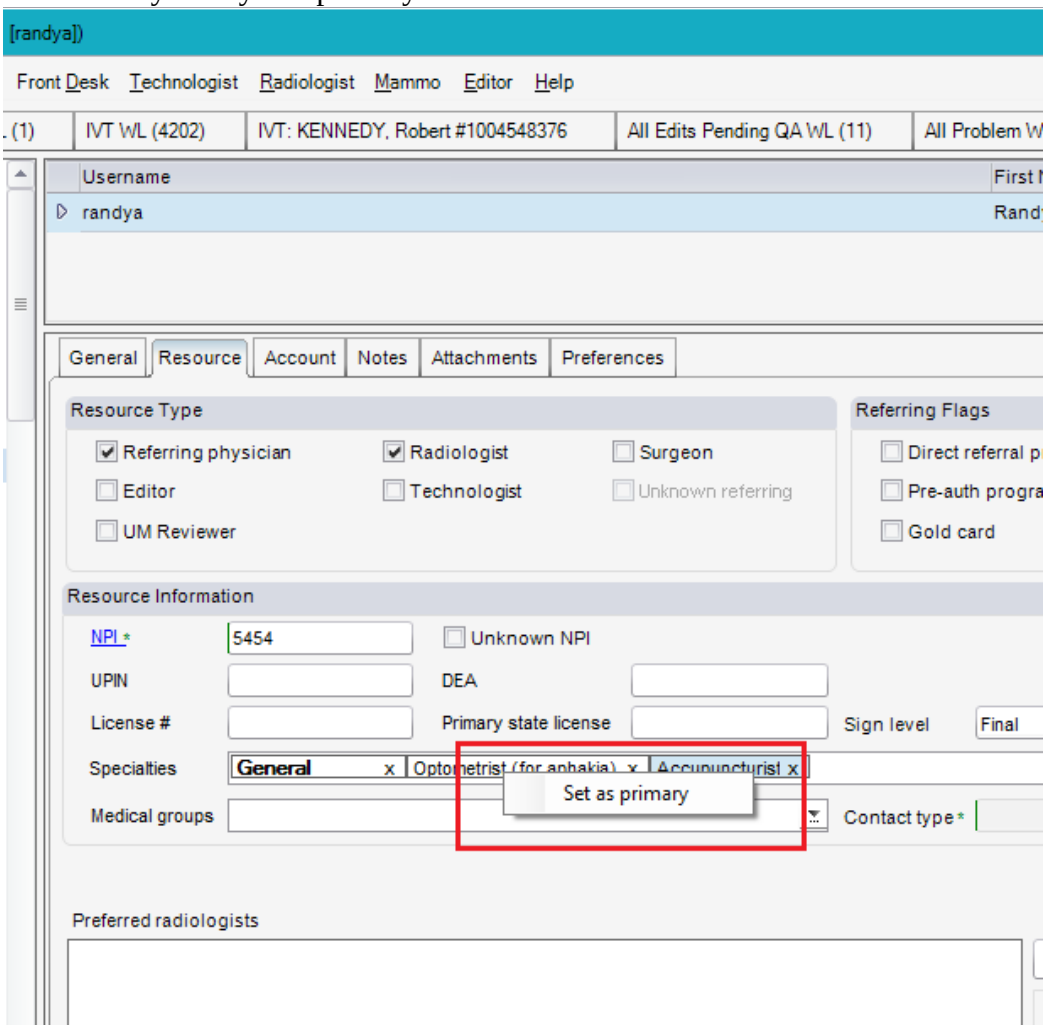

**Figure 5.63 – Set specialty as primary in personnel editor**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Referring Practice Address Changes

Instead of adding a referring practice at the Personnel Level we now have the ability to add 1 or more referring practices when adding or editing addresses as shown in the following:

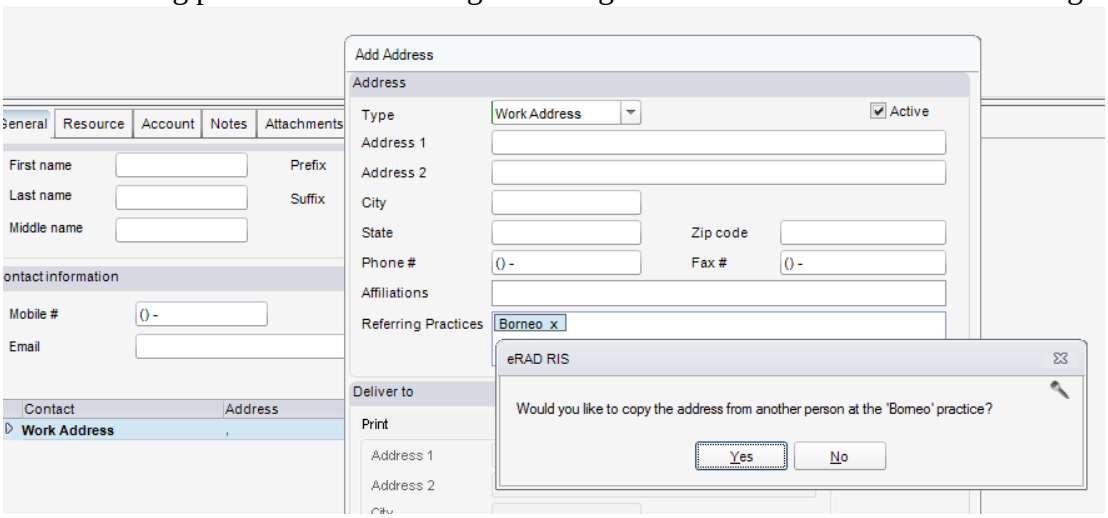

**Figure 5.64 – Add address in Personnel editor**

When a referring practice is added, the user is prompted, "to copy the address from another person at the selected practice". If they choose "Yes" to that question they get a list of person's addresses to use as the address/delivery information, as shown in the following screen capture:

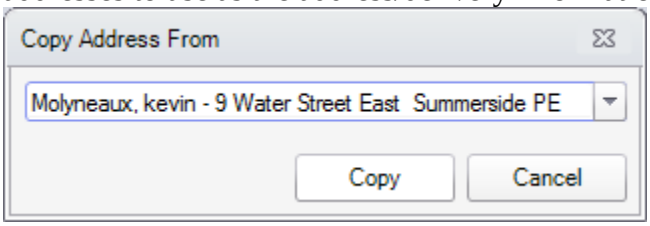

**Figure 5.65 – Copy Address From prompt**

The Personnel editor allows the user to add addresses and edit them individually. To make managing referring addresses easier, we have introduced the following "- Referring Address" editor:

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

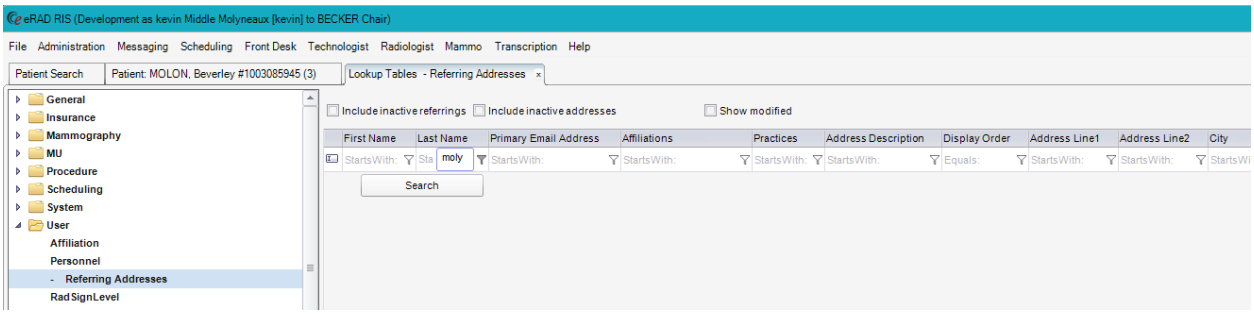

**Figure 5.66 – Referring Addresses lookup**

When you open this screen the first thing you must do is to specify at least one filter value and then click the "Search" button. In this example, I've search for all users with the last name 'molyn'.

Using the context menu option 'Copy/Paste Referring Address" the user can copy an entire address row and paste it to another person/address row.

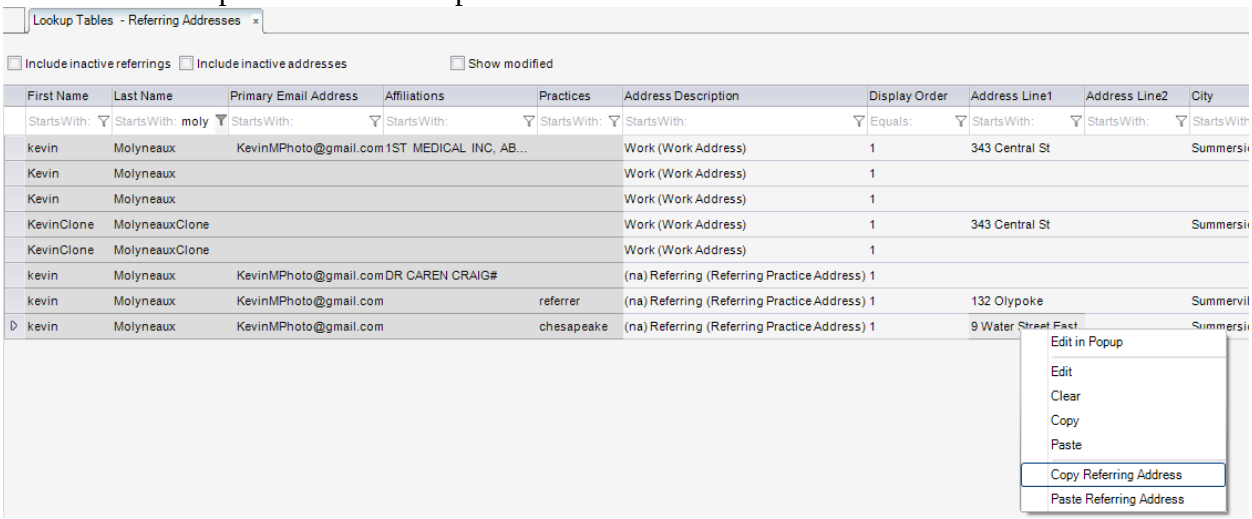

**Figure 5.67 – Referring Addresses context menu options**

Note, the columns shown in the darker shading are non-address fields, which are not included in the "Paste Referring Address" operation and are not editable directly in the gird. Consider these darker columns as read-only, except for the Practice and Affiliations columns which can be edited via the "Add/Remove Practice" context menu as shown in the following screen capture:

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

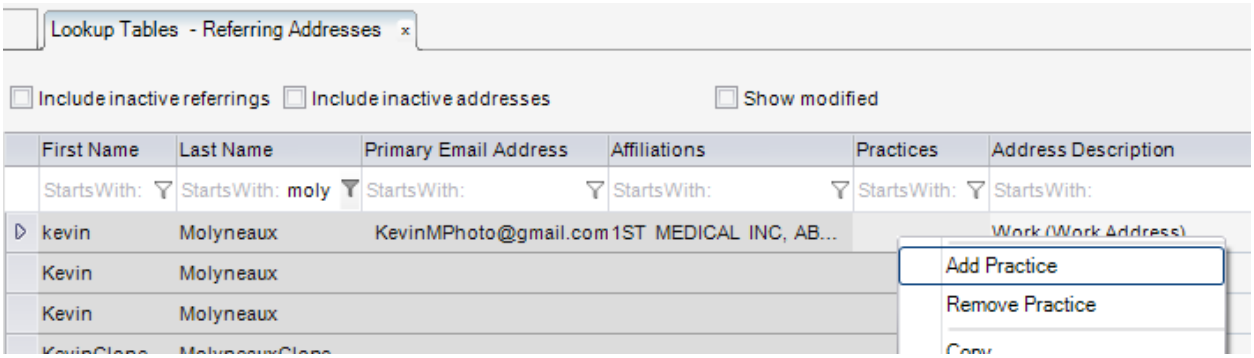

**Figure 5.68 – Add or remove practice**

The grid also support multi cell selection so you could add a practice to more than one address in the same operation as shown in the following screen capture, where I used the keyboard or mouse plus the <CTRL> key to selected multiple Practice cells:

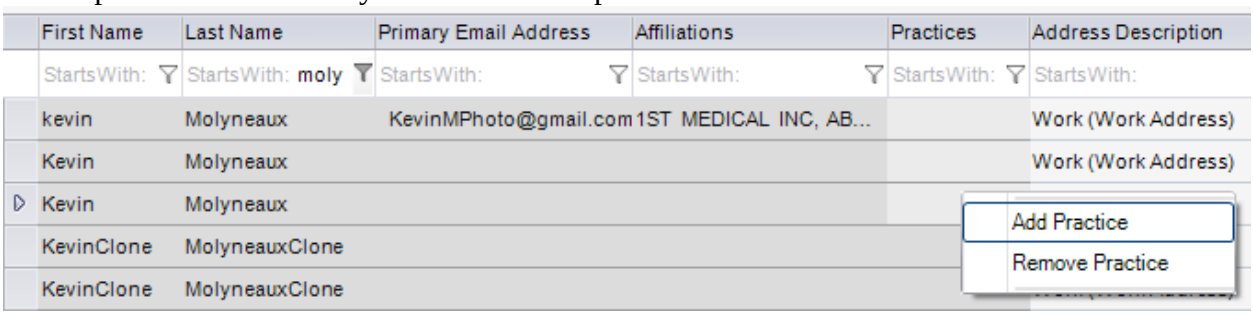

**Figure 5.69 – Multi select cells**

The user can also select multiple cells and paste the same value to all of them as shown in the following example where I am pasting the '343 central st' to all of the selected cells:

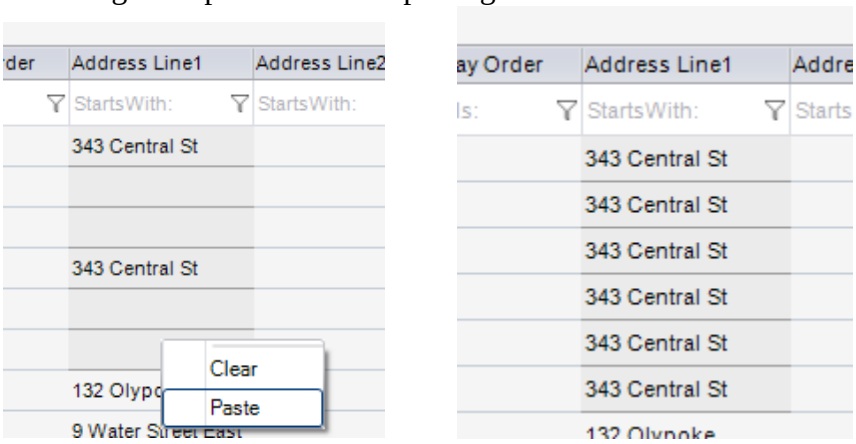

**Figure 5.70 – Before and after copy / paste**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Checking the "Show Modified" checkbox will remove all filters and show all the rows that have been modified and not yet been saved:

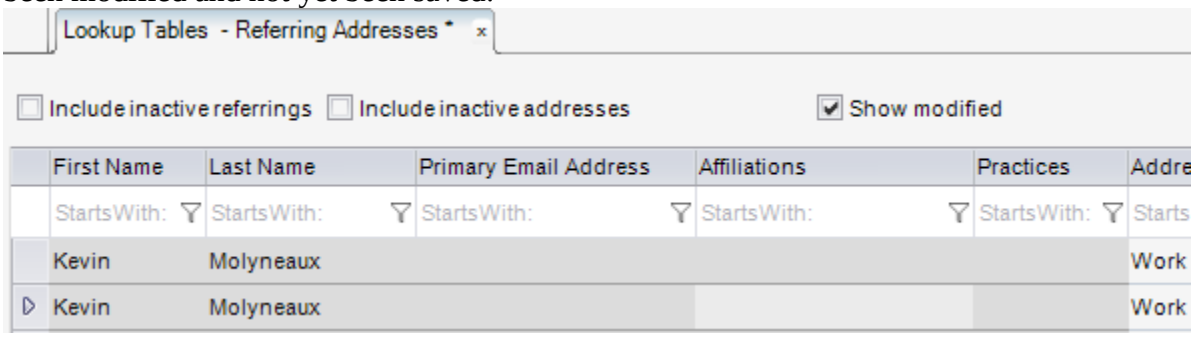

**Figure 5.71 – Show modified**

Then after unchecking the "Show Modified" the filters you had before checking it will be re-applied. If your search returns too many rows (~1000), then the amount returned will be limited and you will see a message explaining that partial results are being displayed. You will also notice that at all times the row count is displayed in the bottom right corner of the RIS screen as shown in the following:

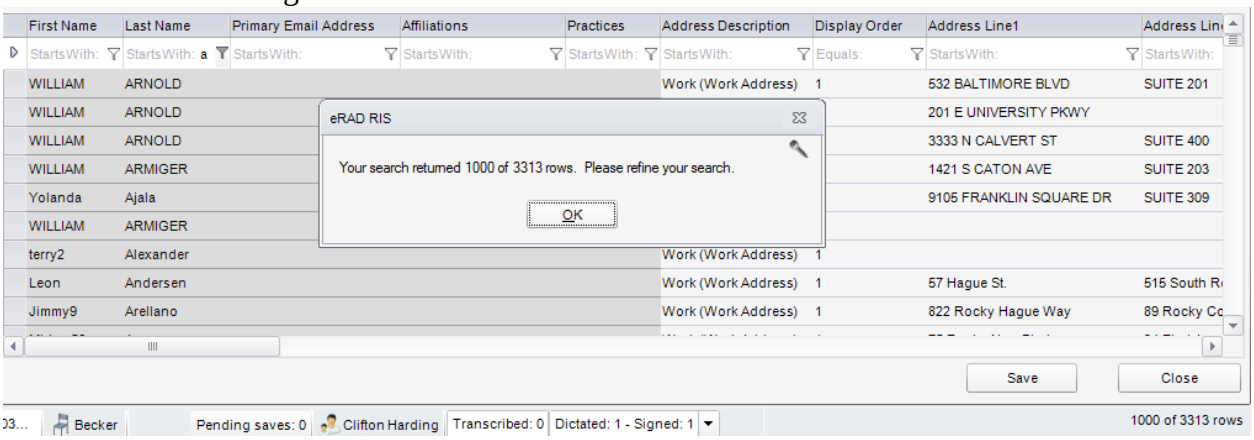

**Figure 5.72 – Unselecting Show Modified results**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

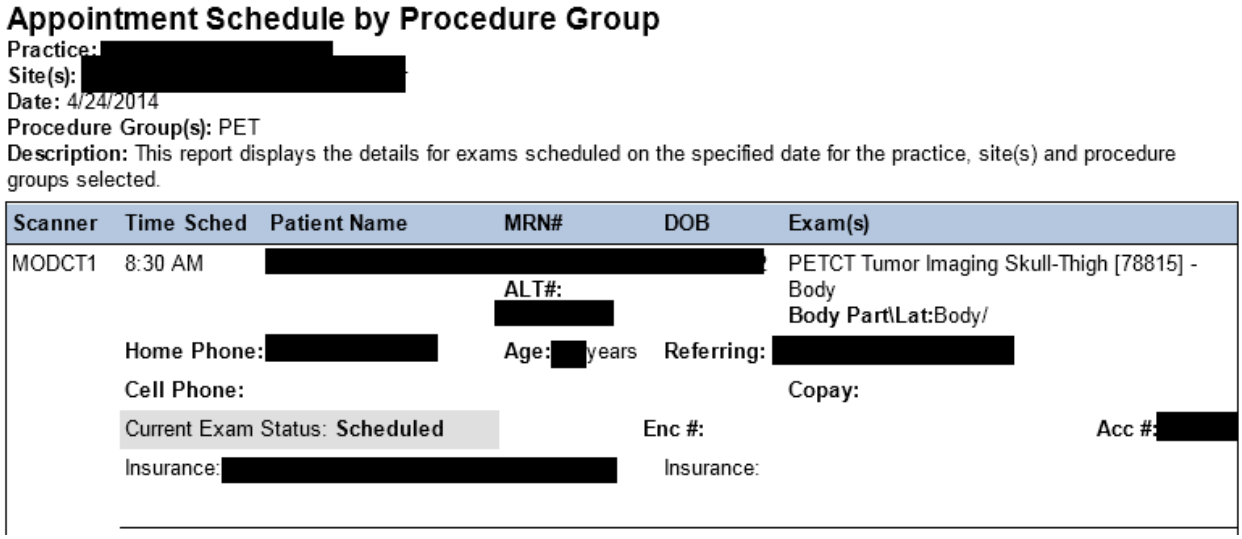
## Management Report – Appointment Schedule by Procedure Group

The Appointment Schedule by Procedure Group management report will display the details for exams scheduled on the specified date for practice, site(s) and procedure groups selected.



**Appointment Schedule by Procedure Group**

**Practice:** [redacted]
**Site(s):** [redacted]
**Date:** 4/24/2014
**Procedure Group(s):** PET
**Description:** This report displays the details for exams scheduled on the specified date for the practice, site(s) and procedure groups selected.

| Scanner | Time Sched | Patient Name | MRN# | DOB | Exam(s) |
|---|---|---|---|---|---|
| MODCT1 | 8:30 AM | [redacted] | ALT#: [redacted] | | PETCT Tumor Imaging Skull-Thigh [78815] - Body<br>**Body Part\Lat:**Body/ |
| | **Home Phone:** [redacted] | | **Age:** [redacted] years | **Referring:** [redacted] | |
| | **Cell Phone:** | | | | **Copay:** |
| | Current Exam Status: **Scheduled** | | | **Enc #:** | **Acc #:** [redacted] |
| | Insurance: [redacted] | | | Insurance: | |

**Figure 5.73 – Appointment Schedule by Procedure Group management report**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Management Report – Users in Usergroups

This report displays the list of users assigned to the selected user group(s). You can choose to see both active (by default) as well as inactive user accounts.

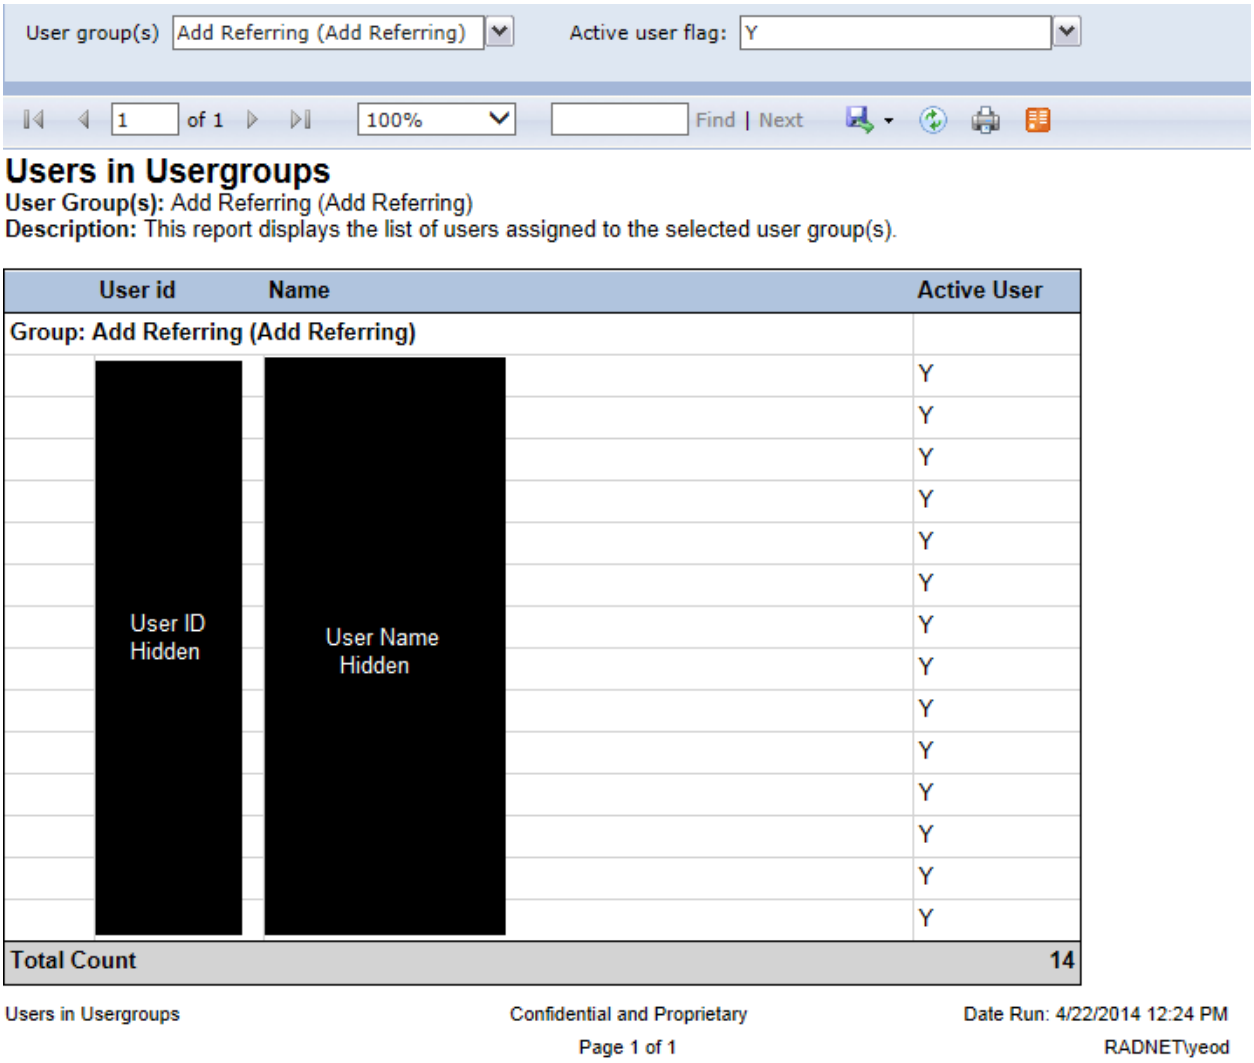

**Figure 5.74 – Users in Usergroups management report**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Management Reports – Radiologist Productivity by User – Mammo

This report is to display the selected mammography exams read by the radiologists for the period specified based on signed off exams.

**Radiologist Productivity by User - Mammo**

**Practice:** [redacted]
**Site(s):** [redacted]
**Date Range:** 3/1/2014 - 3/31/2014
**Procedure Codes:** 76645, 76645SCREE, 77058, 77059, G0202 , G0202BRUS, G0202BRUST, G0202I, G0202IBRUS, G0202IT, G0202T, G0202U, G0202UBRUS, G0202UIMT, G0202UNIT, G0202WCT, G0204 , G0204BRUS, G0204BRUST, G0204CB, G0204CBT, G0204CBUS, G0204CBUST, G0204I, G0204IBRUST, G0204IT, G0204T, G0206 , G0206BRUS, G0206BRUST, G0206CB, G0206CBT, G0206CBUS, G0206CBUST, G0206I, G0206IBRUST, G0206IT, G0206T, HVRA76645, HVRA76645SCREE, HVRA77058, HVRA77059, HVRAG0202 , HVRAG0202BRUS, HVRAG0202I, HVRAG0202IT, HVRAG0202TM, HVRAG0202UNIT, HVRAG0204 , HVRAG0204BRUS, HVRAG0204CB, HVRAG0204CBUS, HVRAG0204I, HVRAG0204IT, HVRAG0204TM, HVRAG0206 , HVRAG0206BRUS, HVRAG0206CB, HVRAG0206CBUS, HVRAG0206I, HVRAG0206IT, HVRAG0206TM, HVRAMA70, MA300, MA300T, MA301, MA301T, MA302T, MA303T, MA999, USBRAD
***Description:*** *This report displays the selected mamography exams read by Radiologist for a specified period. All Exams are Signed exams.*

| | Procedure | Count | % |
|---|---|---|---|

**Figure 5.74a – Radiologist Productivity by User – Mammo Management report**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

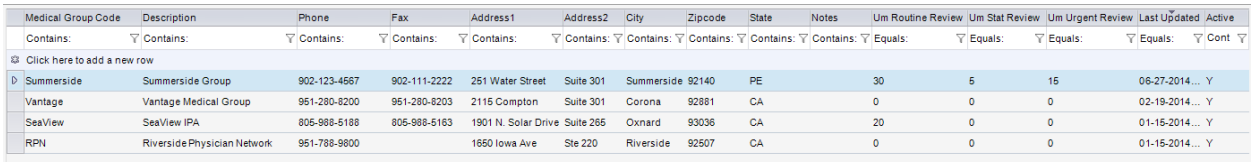
## Utilization Management – Addition of Medical Group Lookup Table

A lookup has been added called Medical Group has been added under the Insurance directory of the Administration>Configure menu. This contains the name and demographics of the medical group. The table includes the column for UM Routine Review, UM Stat Review and UM Urgent Review



| Medical Group Code | Description | Phone | Fax | Address1 | Address2 | City | Zipcode | State | Notes | Um Routine Review | Um Stat Review | Um Urgent Review | Last Updated | Active |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Contains: | Contains: | Contains: | Contains: | Contains: | Contains: | Contains: | Contains: | Contains: | Contains: | Equals: | Equals: | Equals: | Equals: | Cont |
| Click here to add a new row | | | | | | | | | | | | | | |
| Summerside | Summerside Group | 902-123-4567 | 902-111-2222 | 251 Water Street | Suite 301 | Summerside | 92140 | PE | | 30 | 5 | 15 | 06-27-2014... | Y |
| Vantage | Vantage Medical Group | 951-280-8200 | 951-280-8203 | 2115 Compton | Suite 301 | Corona | 92881 | CA | | 0 | 0 | 0 | 02-19-2014... | Y |
| SeaView | SeaView IPA | 805-988-5188 | 805-988-5163 | 1901 N. Solar Drive | Suite 265 | Oxnard | 93036 | CA | | 20 | 0 | 0 | 01-15-2014... | Y |
| RPN | Riverside Physician Network | 951-788-9800 | | 1650 Iowa Ave | Ste 220 | Riverside | 92507 | CA | | 0 | 0 | 0 | 01-15-2014... | Y |

**Figure 5.75 – Medical Group lookup table**

Access to this new lookup table is controlled by the access string **"Config.LookupEditor.MedicalGroup"** with a default of none.

From the Personnel editor the user can be mapped to one or multiple Medical Groups. The option is found on the Resource tab.

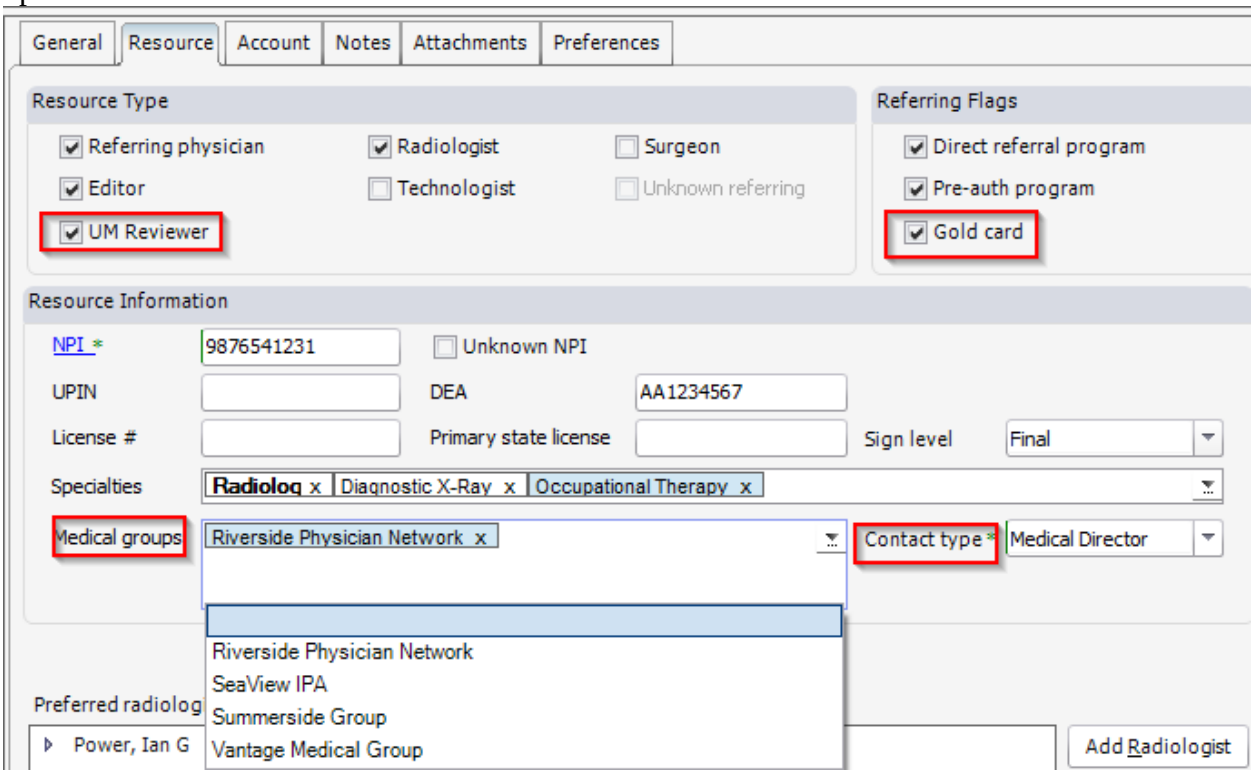


**Figure 5.76 – Map person to medical group**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Also in the Personnel Editor on the Resource tab is the Referring Flag of Gold Card. The gold card flag is only available if the resource type is referring physician. If the gold card flag is checked, then the utilization management notes field, located on the Notes tab, becomes required.

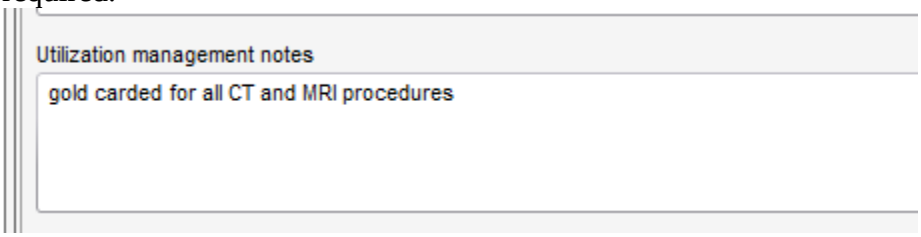

**Figure 5.77 – Utilization management notes**

The end user will need to know why the requesting physician is marked as gold carded. If the utilization notes field is not completed, the user will be promoted with an error message.

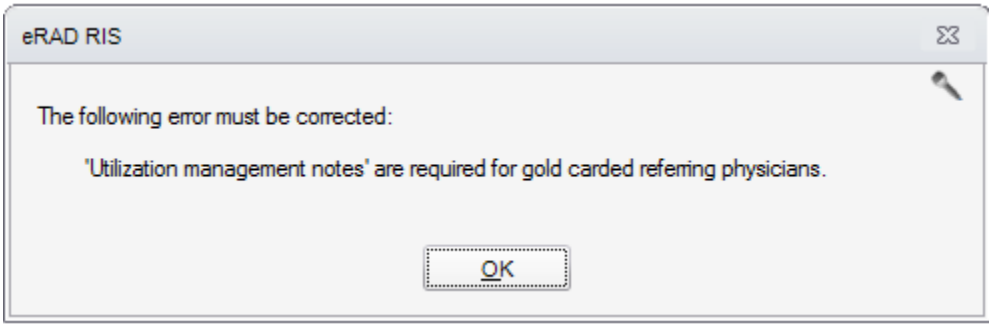

**Figure 5.78 – Prompt is Utilization management notes are not completed**

Again on the Resource tab, the Resource Type of UM Receiver has been added. The Internal Person Search has been modified to include "UM Reviewer" as a Type filter.

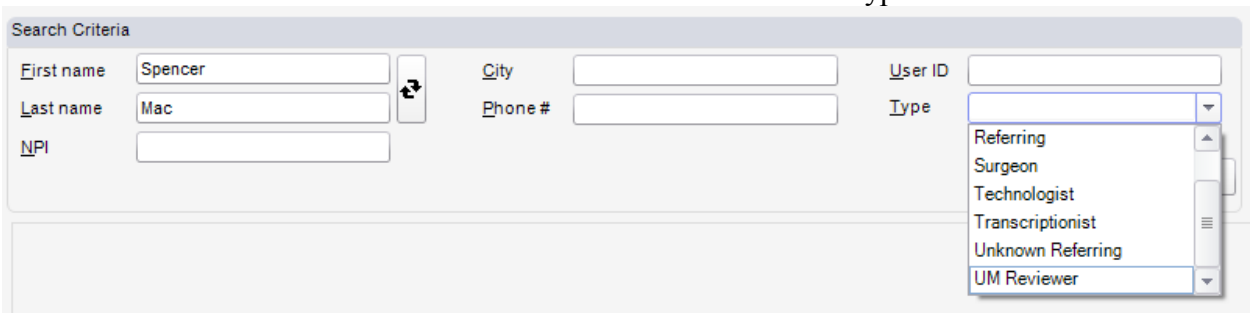

**Figure 5.79 – Internal person search with type of UM Reviewer added**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Utilization Management – Support Medical Group Contact Types

The lookup table Medical Group Contact Type has been added under the Insurance directory of the Administration>Configure menu. This new lookup table is controlled by access string **"Config.LookupEditor.MedicalGroupContactType"**

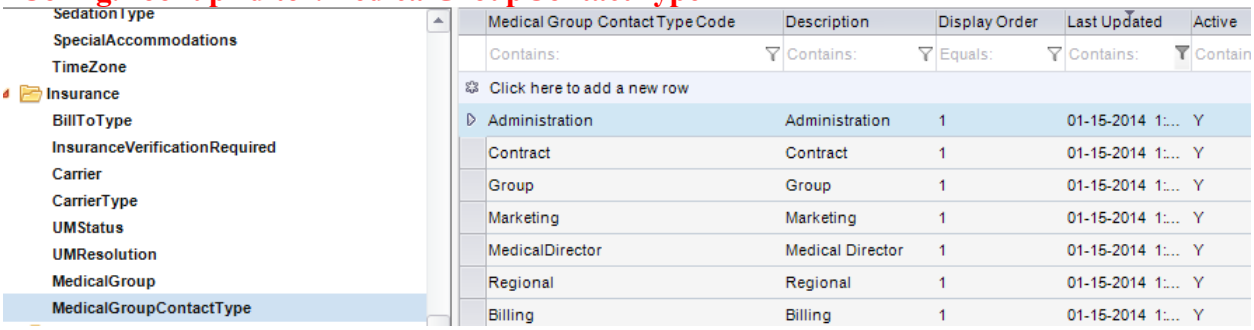

**Figure 5.80 – Medical Group Contact Type lookup table**

The values from this table are used in the Resource tab on the Personnel editor, which has been enhanced to contain a multi type-ahead control for medical groups as well as a corresponding drop-down for medical group contact type. If a medical group is selected, the contact type is a required field.

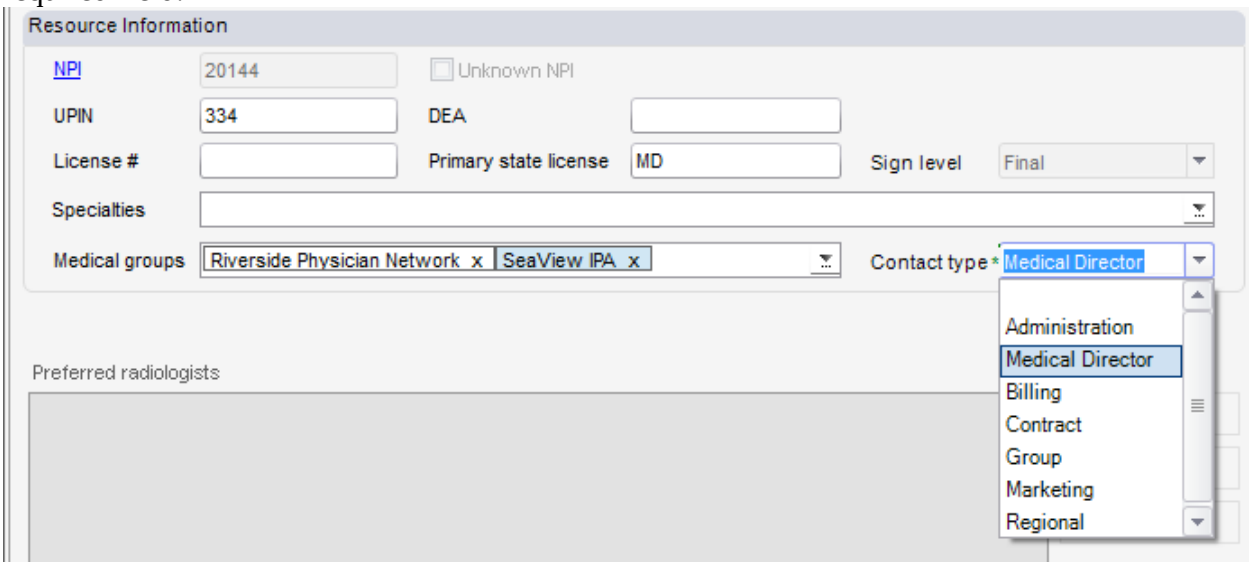

**Figure 5.81 – Adding Contact Type to a user account in Personnel editor**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Utilization Management – Support UM Coverage Type

A lookup called UMCoverage will hold the coverage types that will eventually be applied to a CPT Code level. These coverage types are displayed on the matrix for each medical group so staff can determine which CPT Codes require authorization. The Authorization Flag column will specify which coverage types require review.

| Matrix Name | Effective Date | Revision Date |
|---|---|---|
| ADP - 2013 Matrix - Alliance Desert Physicians | 1/1/2013 | 2/18/2013 |

**Disposition Legend**

A - Capitated service, authorization required

EX - Exclude

FFS - Fee for service, authorization required

IN - Include

TBD - To be determined

X - Capitated service, direct referral (no authorization required)

| EXAM | Body Part | General Comments | CPT | Group Comments | ADP |
|---|---|---|---|---|---|
| **Computed Tomography** | | | | | |
| CT HEAD W/O CONTRAST | Head | | 70450 | | A |
| CT HEAD WITH CONTRAST | Head | | 70460 | | A |
| CT HEAD W/O AND W/CONTRAST | Head | | 70470 | | A |
| CT ORBIT W/O CONTRAST | Head | | 70480 | | A |
| CT ORBIT WITH CONTRAST | Head | | 70481 | | A |
| CT ORBIT WITH&WITHOUT CON | Head | | 70482 | | A |
| CT FACIAL BONES W/O CONTRAST | Head | | 70486 | | A |

**Figure 5.82 – Matrix showing coverage type legend**

The lookup table access is controlled by a new access string titled **"Config.LookupEditor.UMCoverage"** with a default of none.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

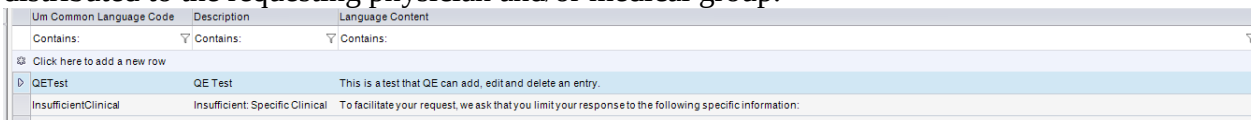
## Utilization Management – Support UM Common Language

A lookup called UMCommonLanguage will hold the list of common language items which will be accessed by the utilization management staff when performing reviews. Each common language item stores the content which will appear in the external comments which will be distributed to the requesting physician and/or medical group.



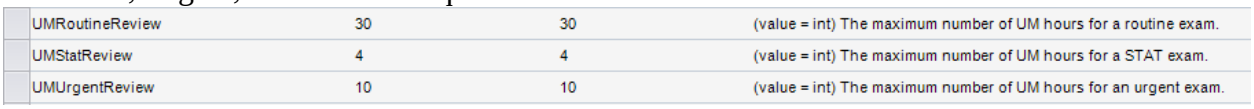
| Um Common Language Code | Description | Language Content |
|---|---|---|
| Contains: | Contains: | Contains: |
| Click here to add a new row | | |
| QETest | QE Test | This is a test that QE can add, edit and delete an entry. |
| InsufficientClinical | Insufficient: Specific Clinical | To facilitate your request, we ask that you limit your response to the following specific information: |

**Figure 5.83 – UM Common Language lookup**

Access to this lookup table is controlled by access string **"Config.LookupEditor.UMCommonLanguage"** with a default of none.

## Utilization Management – Support Default Review Times

A key component of Utilization Management workflow is review time. This is the amount of time (in hours) that it took the UM team to review and finalize the request. Although times can differ based on the contract with the Medical Group, the system is required to have default times for STAT, Urgent, and Routine requests.



| | | | |
|---|---|---|---|
| UMRoutineReview | 30 | 30 | (value = int) The maximum number of UM hours for a routine exam. |
| UMStatReview | 4 | 4 | (value = int) The maximum number of UM hours for a STAT exam. |
| UMUrgentReview | 10 | 10 | (value = int) The maximum number of UM hours for an urgent exam. |

**Figure 5.84 – system configuration settings**

Three new system configuration settings have been added. These values will be used when calculating review time in future releases. Based on a 10 hour workday

- **"UMRoutineReview"** that has a default of 30 hours
- **"UMStatReview"** that has a default of 4 hours
- **"UMUrgentReview"** that has a default of 10 hours

The Medical Group lookup table has 3 columns that will allow for an override to the above system configuration settings to allow for contracts or arrangement differences with the groups.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Utilization Management – Support UM Status

Two lookup tables called UMStatus and UMResolution have been added that are under the Insurance grouping in the lookup table editor. UMStatus contains a list of UM Statuses. This lookup table's access is controlled by the access string "Config.LookupEditor.UMStatus" with a default of none.

| | Um Status Code | Description | Form Content | Final Flag | Display Order |
|---|---|---|---|---|---|
| | Contains: | Contains: | Contains: | Contains: | Equals: |
| | Click here to add a new row | | | | |
| ▷ | QE_Test | QE Test | We're sorry your claim cannot be viewed, processed, approved, declined or rejected at this time. We are doing the... | N | 1 |
| | Approved | Approved | | Y | 11 |

**Figure 5.85 – UMStatus lookup table**

The UMResolution look up is controlled by the access string "Config.LookupEditor.UMResolution"

| | Um Resolution Code | Description | Form Content | Um Status Code | Display C |
|---|---|---|---|---|---|
| | Contains: | Contains: | Contains: | Contains: | Equals: |
| | Click here to add a new row | | | | |
| ▷ | QE_Approved | QE Approved | Please contact QE Test Department for approval process. | QE_Test (QE Test) | 1 |
| | QE_Declined | QE Declined | We're sorry your claim cannot be declined at this time. Please try agai... | QE_Test (QE Test) | 1 |
| | DirectReferral | Direct Referral | No prior review necessary for the requested exam procedure. Please | ReturnedNotInitiat... | 1 |

**Figure 5.86 – UMResolution lookup table**

Each UMResolution is mapped to one UMStatus. A field called Form Content contains the text that will be displayed on the authorization letter when that status and resolution is selected.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Utilization Management – Authorization Rules for Medical Groups

From medical group lookup table the user can create the authorization rules. Each medical group has a set of authorization rules which is available on the right-click context menu. Typically authorization rules will be created by CPT Code and not procedure code or modality type. The rules are access from the context menu.

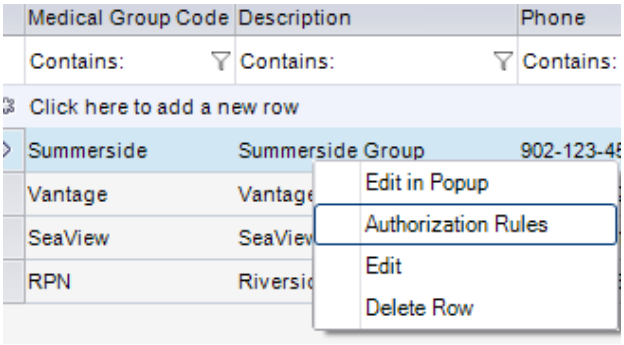

**Figure 5.87 – Accessing Authorization Rules**

The user must select one or more CPT Codes. The user must then specify if this rule is for all practices or a specific one (Matrices will usually apply to all practices however; there are some medical groups where the authorization rules can vary across geographical areas). A coverage type must be specified. These are based on the UM Coverage lookup values.

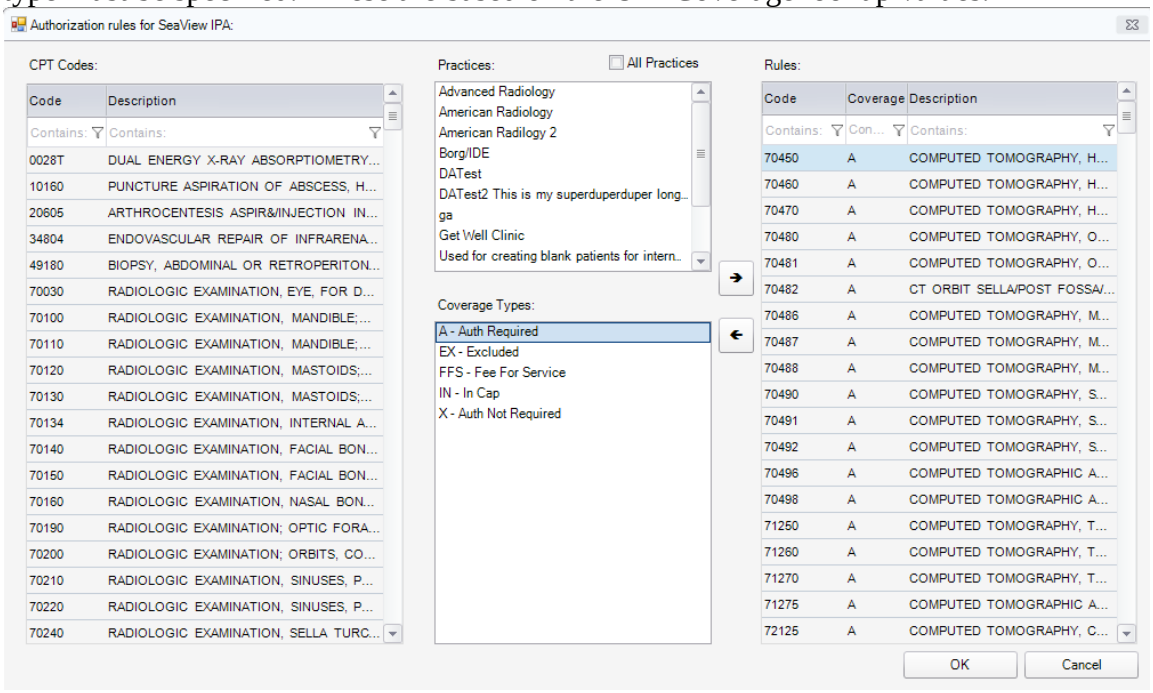

**Figure 5.88 – Authorization rules form**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

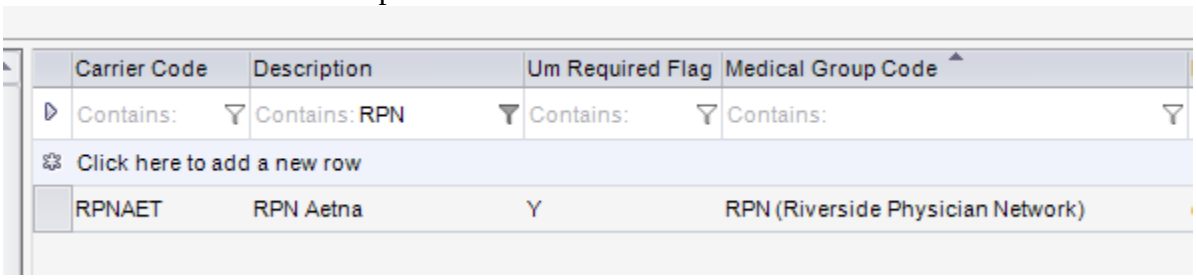
## Utilization Management – Support Capitated Carriers

A new column has been added to the Carrier lookup tabled titled UM Required Flag. All current rows in this the Carrier lookup will have a default of N.



| Carrier Code | Description | Um Required Flag | Medical Group Code |
|---|---|---|---|
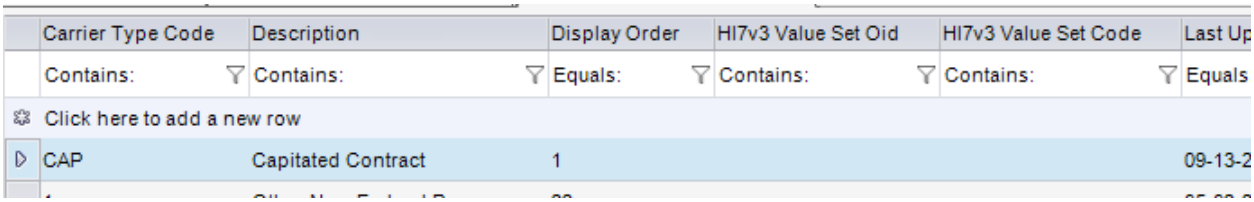
| Contains: | Contains: RPN | Contains: | Contains: |
| Click here to add a new row | | | |
| RPNAET | RPN Aetna | Y | RPN (Riverside Physician Network) |

**Figure 5.89 – Carrier showing UM required flag**

In addition, the Carrier Type lookup table has a new Carrier Type of CAP has been added to further categorise the carriers requiring utilization review.



| Carrier Type Code | Description | Display Order | HI7v3 Value Set Oid | HI7v3 Value Set Code | Last Up |
|---|---|---|---|---|---|
| Contains: | Contains: | Equals: | Contains: | Contains: | Equals |
| Click here to add a new row | | | | | |
| CAP | Capitated Contract | 1 | | | 09-13-2 |

**Figure 5.90 – New carrier type code**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Utilization Management – Mapping Carriers to Medical Groups

From within the Carrier lookup table there is a new column titled Medical Group Code. If the "UM Required Flag" is enabled, then the Medical Group Code field is required. The user will be prompted with "medical group is required for utilization management" if the Medical Group Code is not specified and the UM Required Flag is enabled.

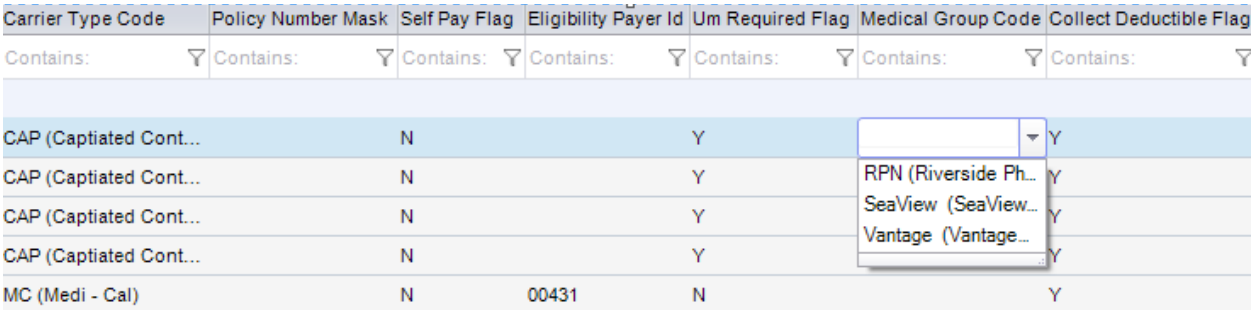

**Figure 5.91 – Specifying Medical Group Code for Carrier**

## Utilization Management – Addition of Utilization Management User Group

This can be done via configuration. A new user group called "Utilization Management" was added to the UserGroup lookup. All utilization review access strings will be mapped to this group.

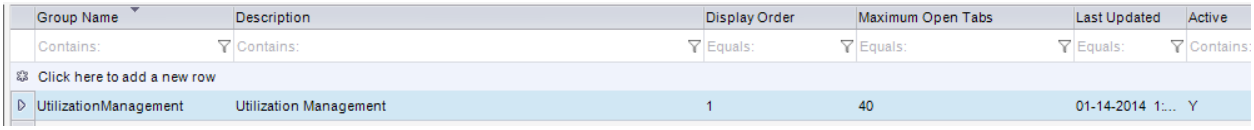

**Figure 5.92 – User Group with new group of UtilizationManagement**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – Site Level MU Override

Currently the MU Required flag is set at the Practice level the sites that fall under that practice will also be MU Required. It has been requested that we allow for a site to disengage from collecting MU data. For this we have added an MU Required check box at the site level so an Administrator can remove the site. This however doesn't work the opposite way. You can't have a site that MU Required when the practice is not.

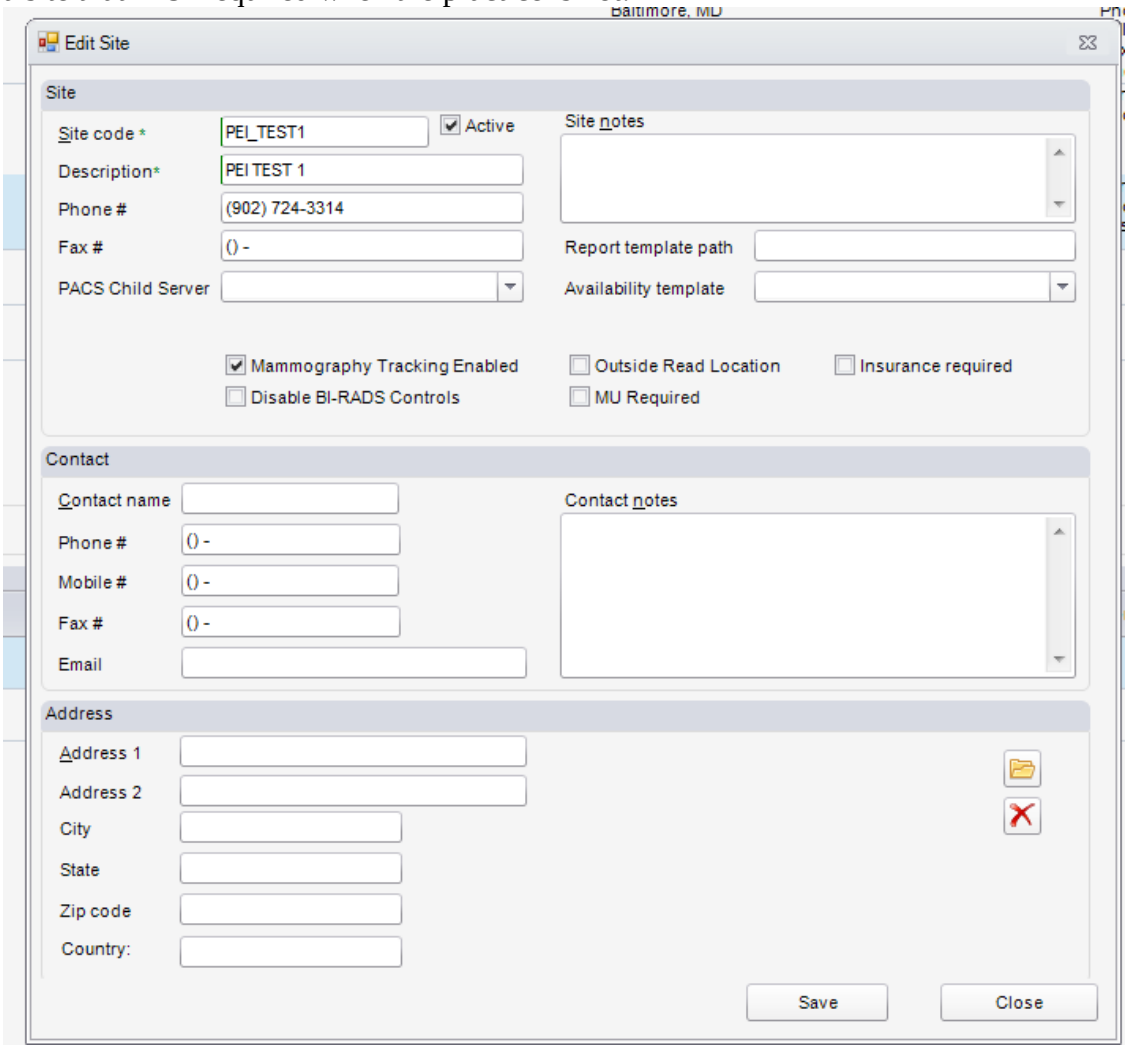

**Figure 5.93 – Site with MU Required flag**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – Direct Messaging

Worked with RADAR, to create an API call to secure exchange (Direct Message) email provider.
During the configuration of each practice a radar login information will need to be provided, it is intended currently for each box to have a RADAR account, with the same info on every practice, but will allow for a practice to have their own RADAR account and direct message address.
The RADAR account is the same account that would be used for Appointment Reminder and CTRM.

Direct Email Address can be requested through RADAR and Secure exchange, which will have to be verified.

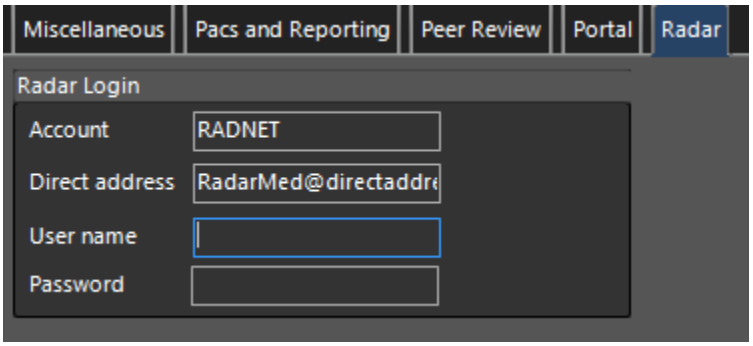

**Figure 5.94 – Practice Radar tab**

This Direct message address and RADAR login is used for sending messages from the Patient Portal as well as sending and receiving Direct message from RIS. When sending a Message the system will first check for a provided value in the practice specific "Direct address" (which does need to be a qualified direct message address), if there is no value specified then we will look at the configuration variable "DirectMessageFromAddress".

### Sending RIS Direct Messages

From within the RIS you are able to send a direct message that will contain the CCDA document by means of opening a patients study through View/Edit, under the MU tab, the process to view the CCDA document will also contain the transmit process for the CCDA document

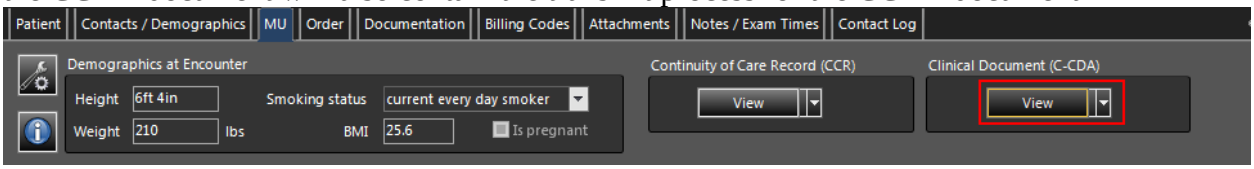

**Figure 5.95 – MU tab Clincal Document access**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

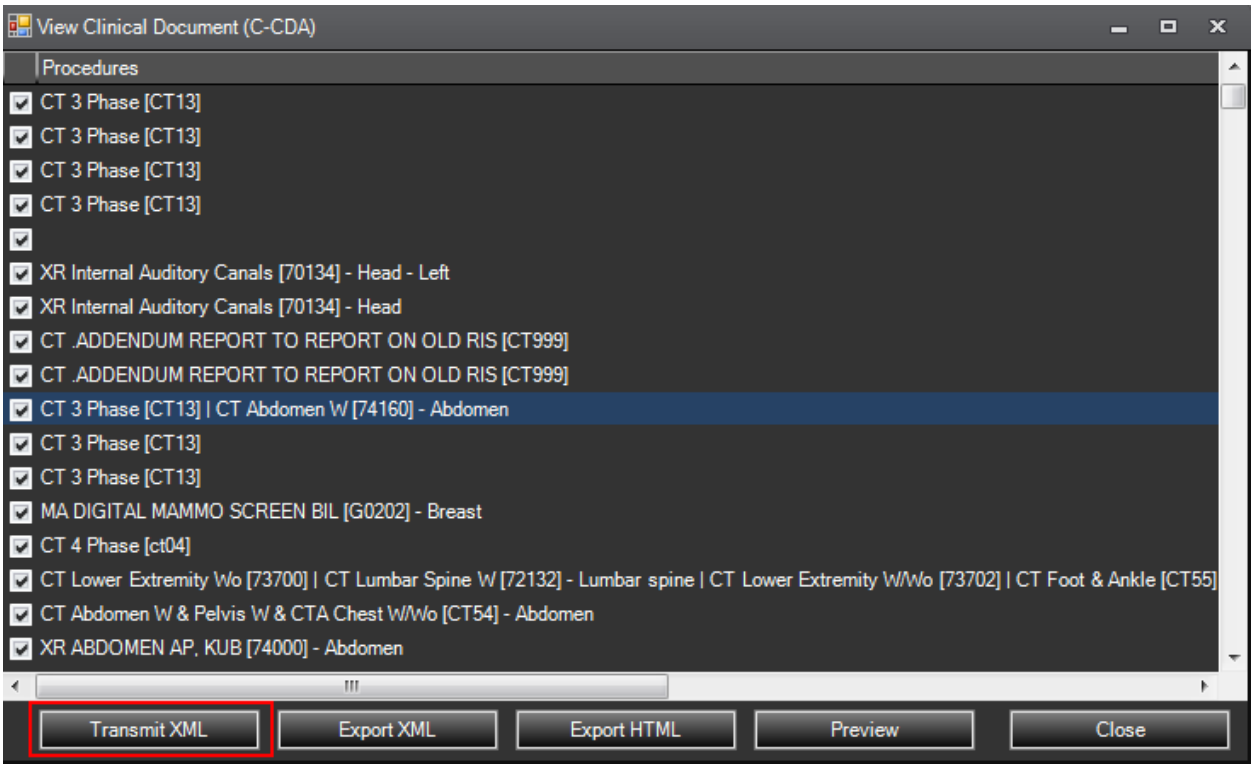

**Figure 5.96 – View Clinical Document**

Transmitting (sending) the CCDA document will allow two version of the document HTML and system(xml) format, where the user will be required to provide a valid Direct message address.

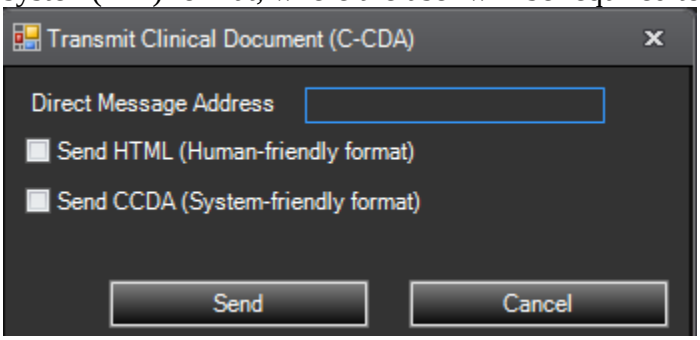

**Figure 5.97 – Transmit Clinical Document**

### Sending Portal Direct Messages

From within the Patient portal, the patient has the ability to send there CCDA document through Direct Message to any desired Direct Message address. When the user has successfully logged

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

into the portal, when there CCDA document is available, the tab will be visible, opening this tab will enable the send button.

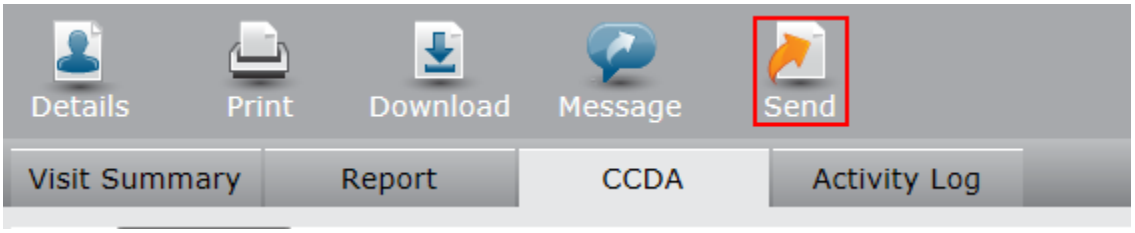

**Figure 5.99 – Sending via Patient Portal**

Click on this will allow for a similar process to the RIS transmit process, where the patient will be prompted for a direct message address, the patient will be required to confirm the address, and then be able to choose what version of the document they would like to send.

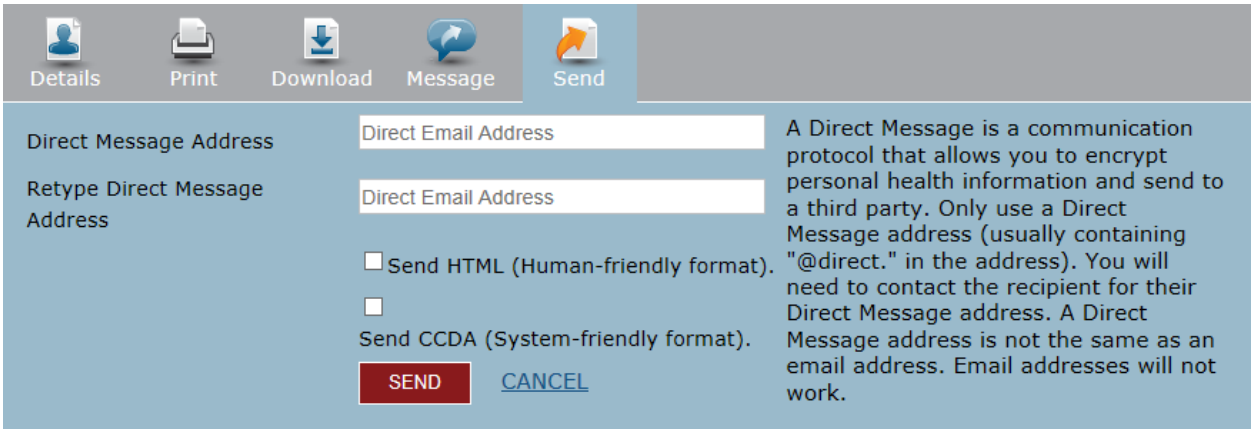

**Figure 5.100 – Entering sender information**

### Receiving Direct Messages

RIS is the only location that is able to receive messages (outside the Direct message provider controlled tools).

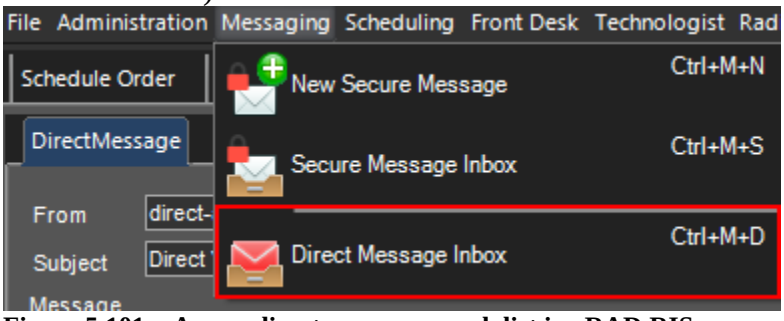

**Figure 5.101 – Access direct messages work list in eRAD RIS**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

From the direct message inbox will list all non-archived messages that for the practices Direct message address.

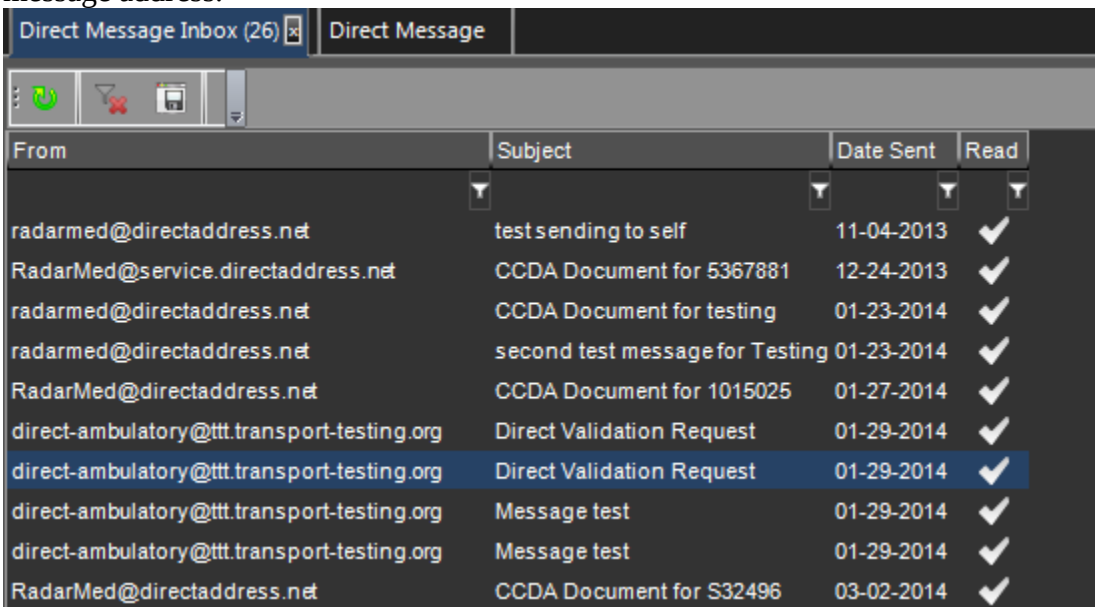

**Figure 5.102 – Direct Message inbox**

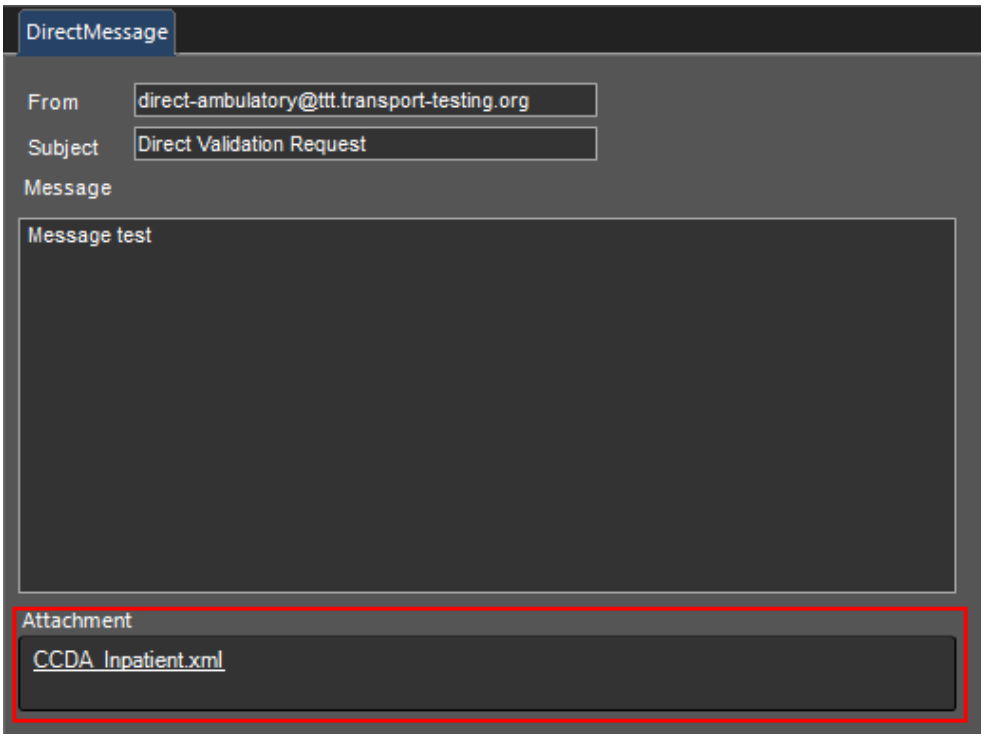

**Figure 5.103 – Accessing direct message**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Depending of the file type will dictate on how the attachment will handled, if the file is an xml or html we will try to display the attachment, otherwise we will just prompt the user to download the file.

When display the attachment, if it is an xml document type, and we detect that it is a CCDA document we will also provide the user with the ability to link the information from the CCFA document to a desired patient;

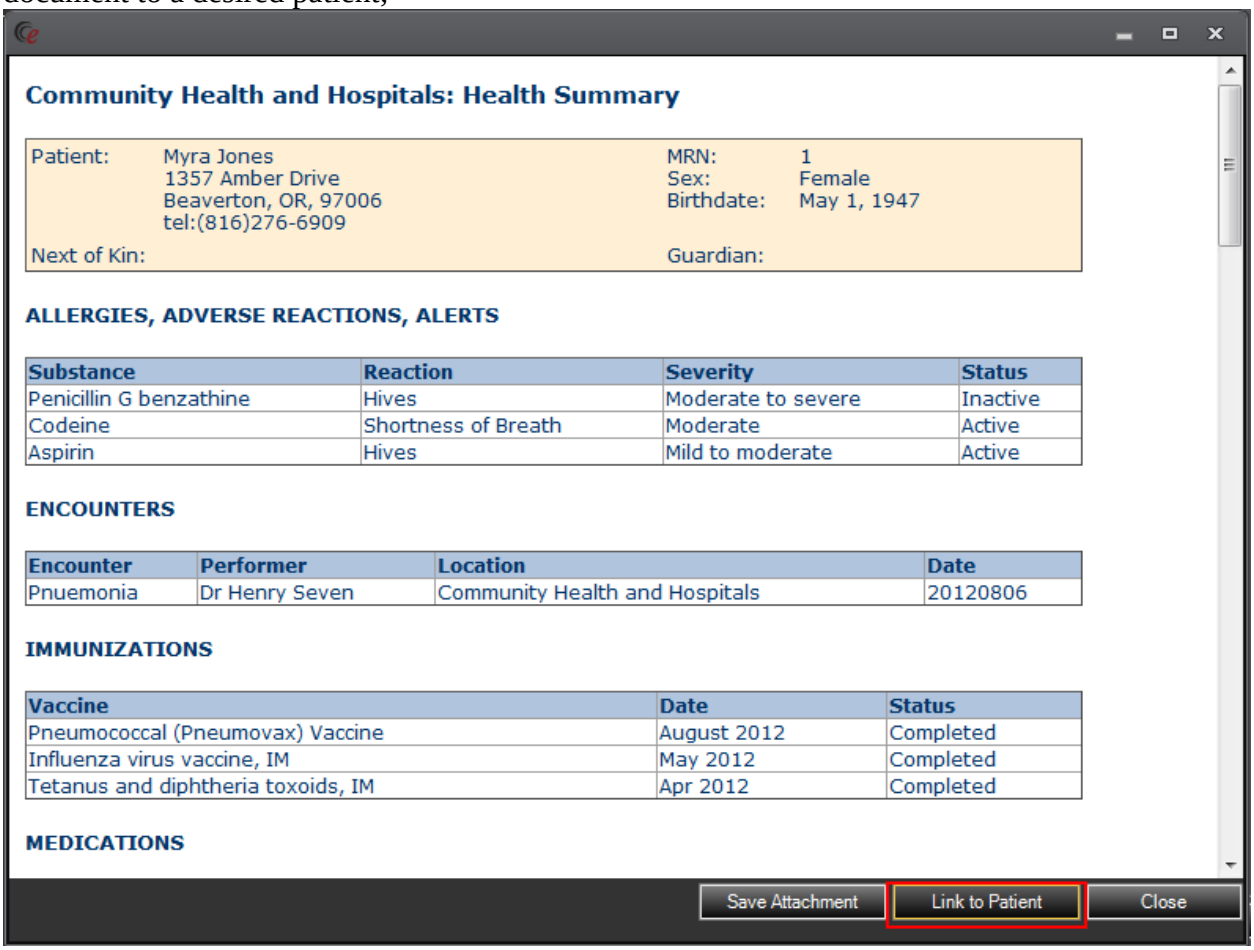

**Figure 5.104 – Viewing CCDA document from link in direct message**

Clicking the link to patient, we will do an initial patient search based on the information we are able to extract from the document, the user is able to modify the search criteria if need be.

Upon selecting a patient, all information from the CCDA document will be merged into the desired patient, and a new patient tab will be added.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

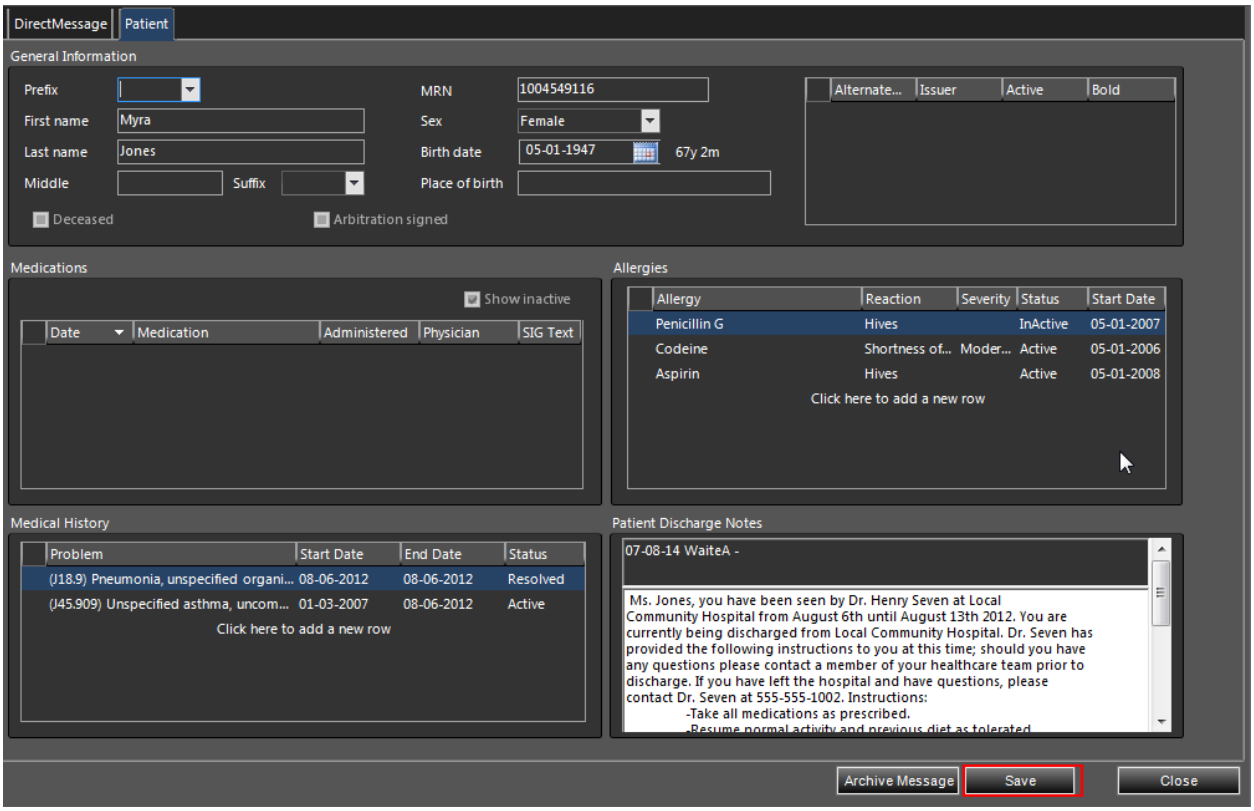

**Figure 5.105 – Patient tab created**

Once all information is imported and confirmed saving will save all imported data. Clicking the archive message is used for once a messages has been completed with, it will remove the message from the direct message inbox WL.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – Additional Options for MU Fields

On the patient tab the field for Race type, Ethic origin and Language now have a value of "Declined to Specify".

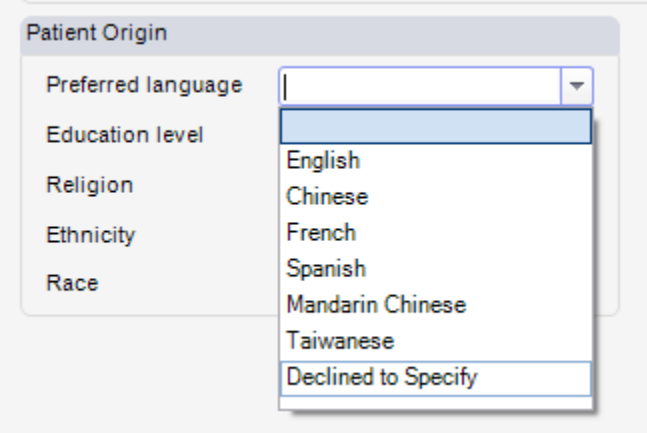

**Figure 5.106 – Declined to specify option**

The Smoking status field on the MU tab also has 2 additional options of Heavy tobacco smoker and Light tobacco smoker.

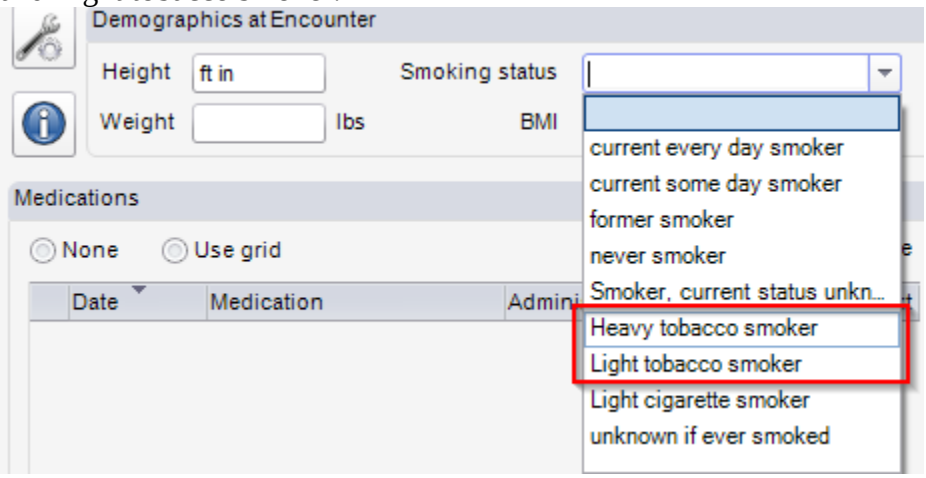

**Figure 5.107 – New smoking status options**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# Meaningful Use – Additional Medications for Quick Add Edit Window

On the MU quick Add/Edit form we modified the code to add the two requested medications (Glycomet and Kombiglzexr).

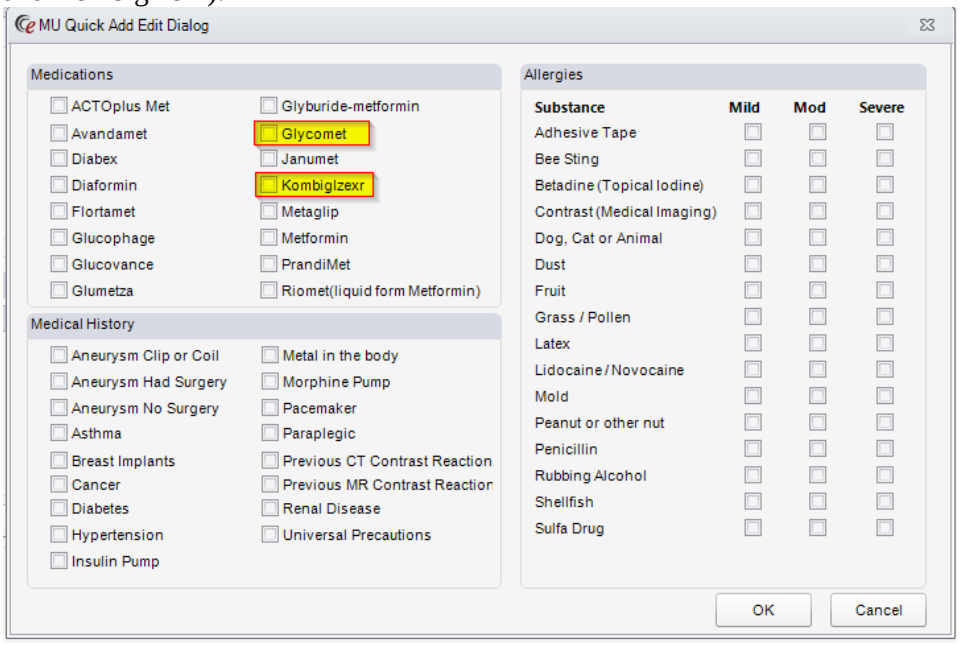

**Figure 5.108 – MU Quick Add Edit window**

Note, in order for these to show enabled on the mu quick add/edit form these two codes will have to be added to the Medication lookup table.

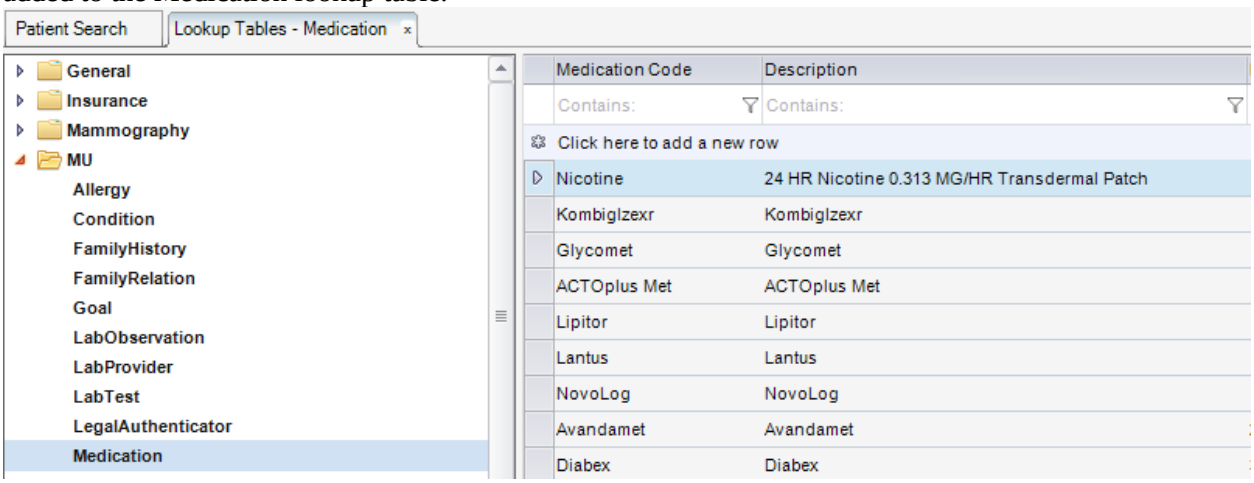

**Figure 5.109 – Medication lookup with new addtions**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – Laboratory Tests and Values / Results

In order to incorporate MU2 laboratory test results we needed to modify the lab value framework and separated the lab order from the lab results. The screen shot below shows the newly designed form. The User has the ability to add lab order information in the top part of the form and the results will be completed in the results grid. A new button was added that allows the user the ability to add child labs to the lab entry.

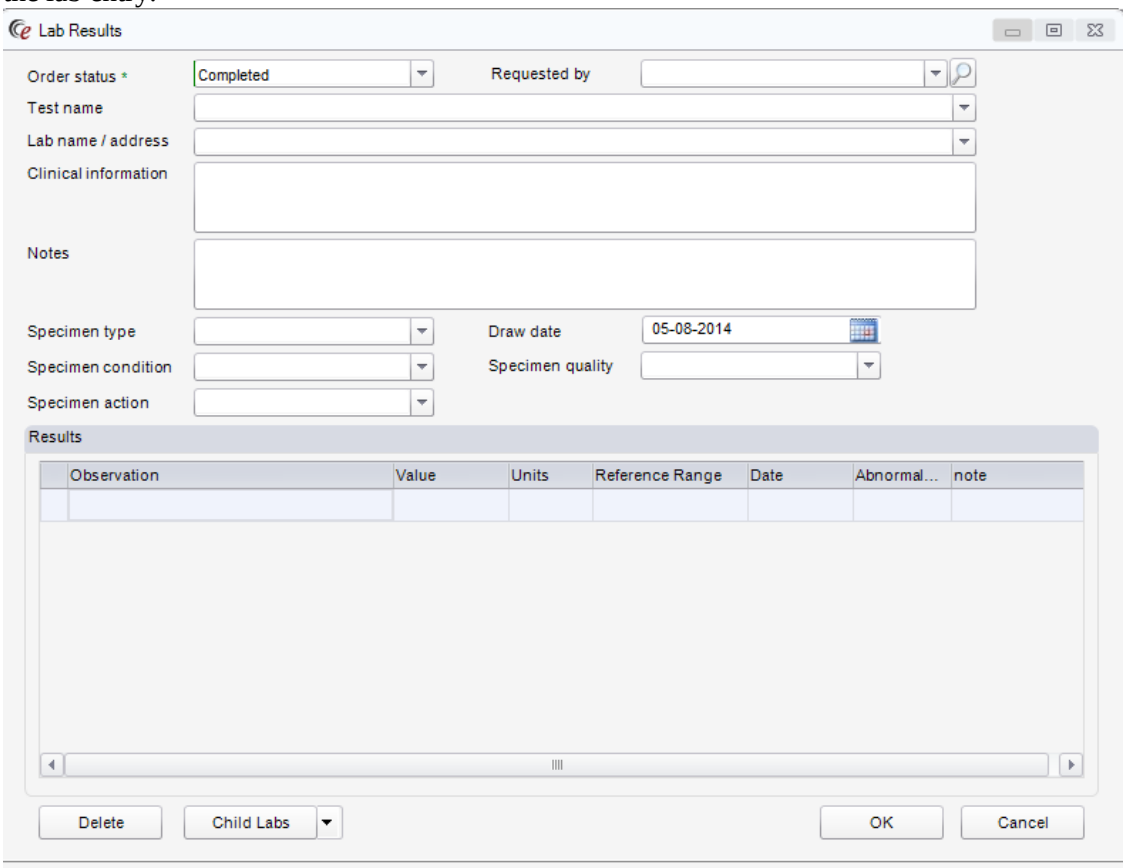

**Figure 5.110 – Lab results window from MU tab**

We created a script (Lab_value_changes.sql) to the build process to migrate over MU values into the new lab framework.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – Office Visit

The Billing Code table has a new column titled MU Office Visit Flag. It will be used by the automated measures management report when applicable to determine if the mu measure is an office visit and calculate the numerator and denominator based on the performed procedure being an office visit. By default the value is set to N.

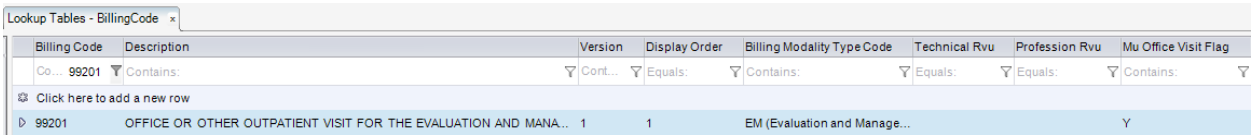

**Figure 5.111 – Billing code table**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – Clinical Summaries

Added to the MU tab is a new section called Clinical Documentation (C-CDA). The button contains 2 new options of "View" which will view all exams for the patient and "View Current Exam" which will only view the current exam. Normally for Clinical Summary we will select "View Current Exam" to generate the CCDA/human readable format since we are mainly concerned about the current visit.

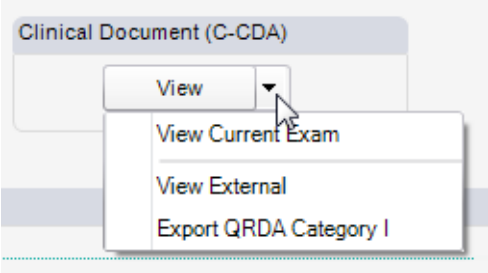

**Figure 5.112 – New options for C-CDA button**

Clicking the View Current Exam will launch a new dialog which will allow the user the ability to customize data. The user will have the option to removed sections for example uncheck Medications will remove medications from both the CCDA and human readable. The user also will have the ability to uncheck specific items they wish not to appear in either the CCDA or human readable format. To generate the CCDA the file format the user will click the Export XML, while the human readable is generated by clicking the Export HTML.

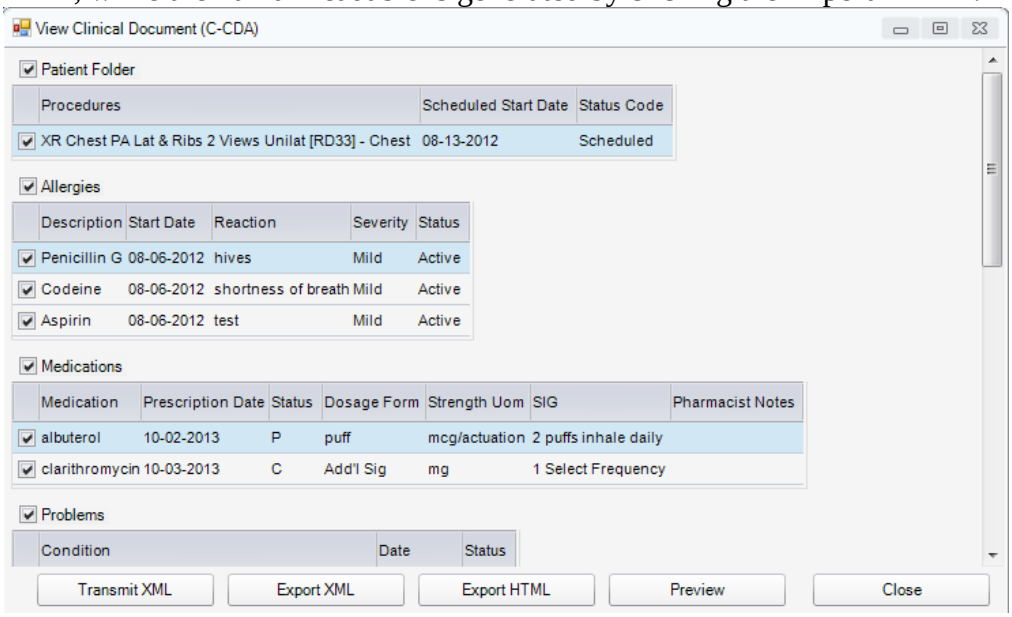

**Figure 5.113 – View Clinical Document (C-CDA)**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – Data Portability

The data portability feature is really the ability to export all CCDA patient records and therefore this story will be referred to as the MUExportAll feature.

When exported the results will be written to the location specified by the system configuration setting **"MUExportAllPath".** This setting doesn't have a default value. When complete the file will be updated with the date it was completed. If an error occurs the error details are captured.

The UI's Meaningful use form under "Administration / Meaningful Use" shows the progress of the current or previous export operation. It shows how many records have been exported and how many in total are to be processed. It also allows the user to start a new export and gives them the option to suspend or resume the latest export.

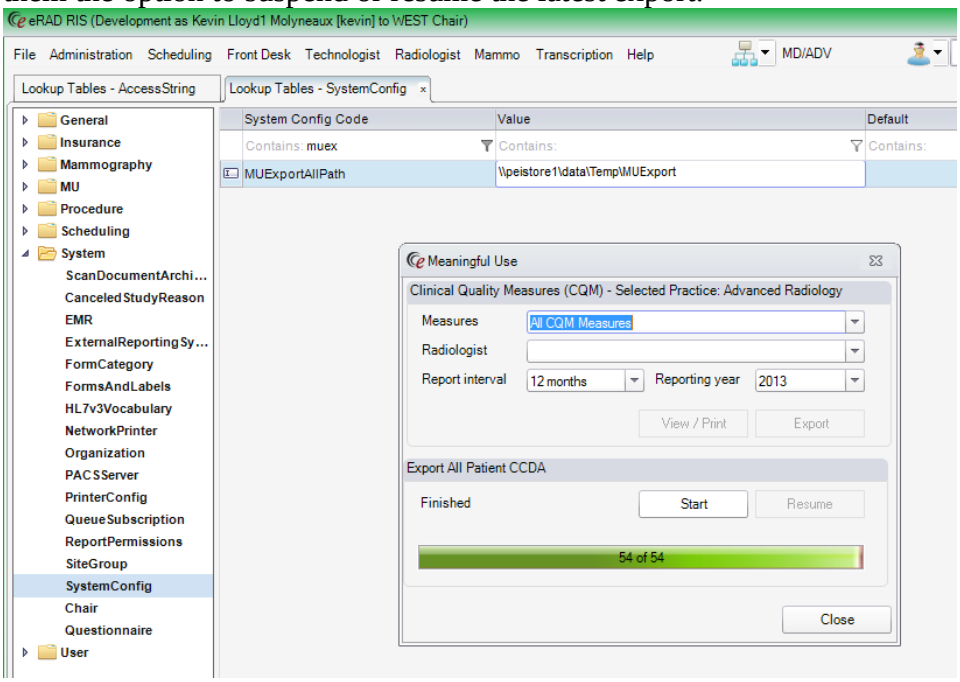

**Figure 5.114 – System config setting and Meaningful Use window display progress**

When clicking the start button the user is asked to confirm the export operations.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

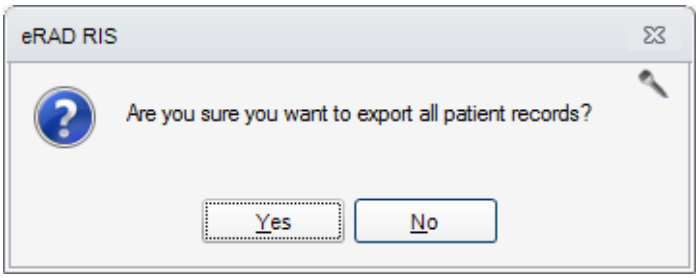

**Figure 5.115 – Confirmatory message**

Choosing Yes will export **all patient** records to the MUExportPath and will overwrite any pre-existing exports at that location. The files are written to the MUExportPath in the format

*Birthyear\birthmonth\birthday\<patient_id>_<issuer_of_id>_<first_name>_<last_name>.xml*

If there is less than 1 GB available at the MUExportPath the status of the export will change to "InsufficientSpace" and after space is made available the user can restart the process by clicking the "Resume" button.

The export progress is completely asynchronous and is executed on the server. There is only one export processing thread per server instances, which on our test instance was exporting about 1 million patients in a week. If you need to process 2 million in a week all you have to do is scale the solution by adding additional WS instances.

Access to this feature is control via the access string **"MU.ExportAll"** with a default of none.

When and export is started, the Start button then becomes the Stop button. If the Stop button is selected the current job will be put in a status of stopped, which in turn will change the stop button to start again. Stopping or suspended the job will terminate the existing export thread (which will take a few seconds to terminate). The count will be refreshed when you decide to Start the export process again which is only available when in stopped state.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

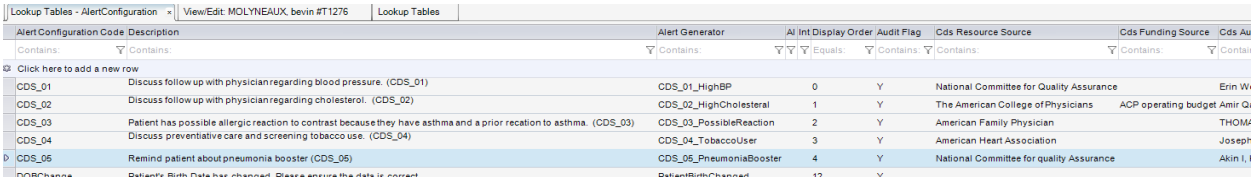
## Meaningful Use – Alerts and Clinical Decision Support

The MU alerts we have provided to meet these MU requirements are as follows:
• MRI65PlusHeartDiseaseLipitorAndLDL100Plus
• **LabOrderWithEmptyValue**
• **HasAllergy** (*allergy_code, contrast_procedure_flag)
• **HasProblem** (*indication_code, contrast_procedure_flag)
• **OnMedication** (*drug_name, contrast_procedure_flag)
• **ProcedureXAndHighBP** (procedure_code, BP) // we will allow * from procedure_code
• **AgeGreaterThan** (age, contrast_procedure_flag)



Lookup Tables - AlertConfiguration | View/Edit: MOLYNEAUX, bevin #T1276 | Lookup Tables

| Alert Configuration Code | Description | Alert Generator | Al | Int Display Order | Audit Flag | Cds Resource Source | Cds Funding Source | Cds Au |
|---|---|---|---|---|---|---|---|---|
| Contains: | Contains: | Contains: | | Equals: | Contains: | Contains: | Contains: | Contai |
| Click here to add a new row | | | | | | | | |
| CDS_01 | Discuss follow up with physician regarding blood pressure. (CDS_01) | CDS_01_HighBP | | 0 | Y | National Committee for Quality Assurance | | Erin W |
| CDS_02 | Discuss follow up with physician regarding cholesterol. (CDS_02) | CDS_02_HighCholesteral | | 1 | Y | The American College of Physicians | ACP operating budget | Amir Q |
| CDS_03 | Patient has possible allergic reaction to contrast because they have asthma and a prior recation to asthma. (CDS_03) | CDS_03_PossibleReaction | | 2 | Y | American Family Physician | | THOM |
| CDS_04 | Discuss preventiative care and screening tobacco use. (CDS_04) | CDS_04_TobaccoUser | | 3 | Y | American Heart Association | | Joseph |
| CDS_05 | Remind patient about pneumonia booster (CDS_05) | CDS_05_PneumoniaBooster | | 4 | Y | National Committee for quality Assurance | | Akin I, |
| DOBChange | Patient's Birth Date has changed. Please ensure the date is correct | PatientBirthChanged | | 12 | Y | | | |

**Figure 5.116 – Alert configuration table**

**contrast_procedure_flag** is either a Y or N value. if Y, then the alert only fires if the procedure requires contrast. * are parameters that can be more than one separated by a comma.
To deal with **Clinical Decision Support** the alert text for several of these entries is customizable via the AlertConfiguration lookup table and supports links to external web sites via the a href syntax such as:

<a href='http://www.med.unc.edu/…'>Heart Disease</a>

With the above, when the user clicks on the "Heart Disease" link, the web page www.med.unc.edu will be displayed in a web browser form. The form will be model and when they close the form they will return to the RIS.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

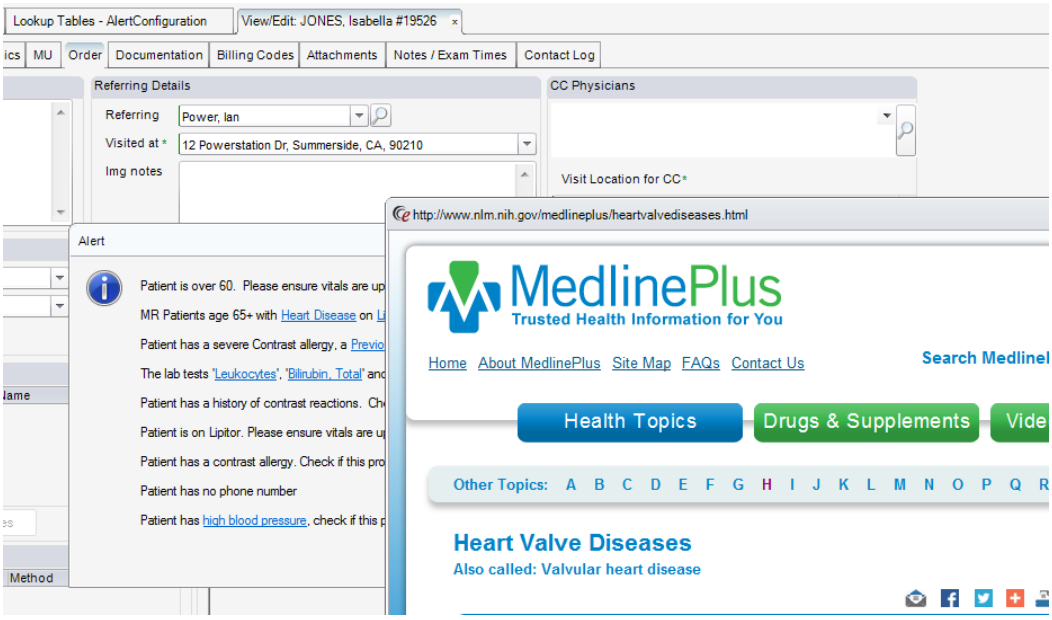

**Figure 5.117 – Clinical decision support**

If the LINK is prefixed with #MUProvidedEducation# and the patient hasn't been provided with CDS information for the current visit, the user will get prompted when they close the web info window with a dialog such as:

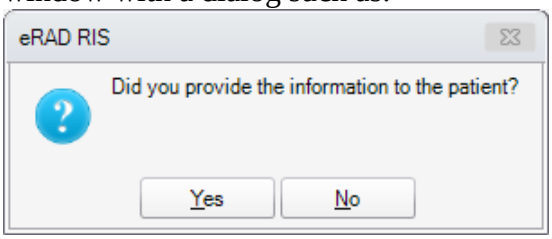

**Figure 5.118 – Confirmatory messge for CDS**

If they choose Yes, it will be marked as "provided educational resources" for the visit.

Here is another example of an alert description, which is set to provide CDS information and record if we provided education resources to the patient:

Patient has <a href='#MUProvidedEducation#https://www.med.unc.edu/im/patients/Resources/high-blood-pressure'>high blood pressure</a>, check if this procedure should be done in an imaging center.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Then in our first round of MU certification testing we realized we needed Clinical Resource Sourced rules for CDS such as the American Family Physician backed rules for our MU alerts. Based on this we produced the following MU rules:

#1 Alert patient to follow up with physician regarding BP

1) Condition that triggers the alert
   - High BP age 18-85
   - Noted hypertension
   - BP is over 140/90
2) The Clinical resource source
   - National Committee for Quality Assurance
3) The funding source
4) The author of the CDS
   - **Erin Weireter,** Released January 17,2012
5) The link to the clinical resource
   - http://www.qualityforum.org/News_And_Resources/Press_Releases/2012/NQF_Endorses_Cardiovascular_Measures.aspx

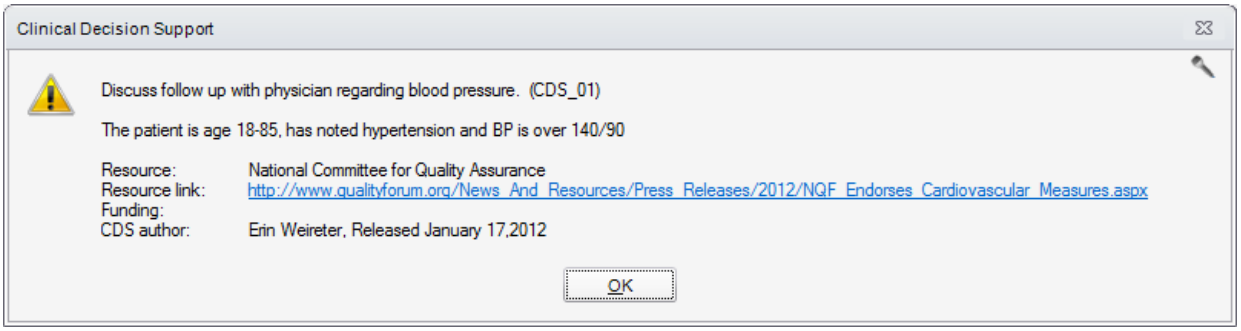

**Figure 5.119 – Alert 1**

#2 Alert patient to follow up with physician regarding cholesterol

1) Conditions that triggers the alert
   - Patient over 65
   - On Lipitor
   - Cholesterol reading over 100
2) The Clinical resource source

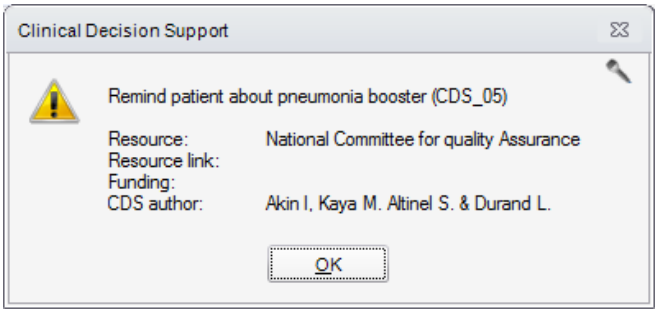

**Figure 5.123 – Alert 5**

**Configuration for new Alerts:**

Alert access strings have been created in the application and can be configured so users whose clinical role allows or does not allow them to see clinical decision support interventions rules. By default the alerts in the system will be set to **Full** access so they will fire for all users. In order to not fire the CDS rule an admin user that has the rights to configure user's rights would have to set the user group to NONE.

Alert #1 is controlled by the access string **"Alert.CDS_01_HighBP"**

Alert #2 is controlled by the access string **"Alert.CDS_02_HighCholesteral"**

Alert #3 is controlled by the access string **"Alert.CDS_03_PossibleReaction"**

Alert #4 is controlled by the access string **"Alert.CDS_04_TobaccoUser"**

Alert #5 is controlled by the access string **"Alert.CDS_05_PneumoniaBooster"**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – Clinical Quality Measures

To resolve this feature we need to use the cypress tool [v2.4.1]. Radnet has selected the following CQMs measures for Meaningful Use stage 2. Documentation to generate QRDA Category I and III use **CDAR2_QRDA_DSTUR2_2012JUL.docx** which can be downloaded from HL7 Implementation website.

**Radnet 9 CQMs measures**

**CMS50** - Closing the referral loop: receipt of specialist report
**CMS65** - Hypertension: Improvement in blood pressure
**CMS69** - Preventive Care and Screening: Body Mass Index Screening and Follow-Up
**CMS117**- Childhood Immunization Status
**CMS125**- Breast Cancer Screening
**CMS138**- Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention
**CMS147**- Preventive Care and Screening: Influenza Immunization
**CMS155**- Weight Assessment and Counseling for Nutrition and Physical Activity for Children and Adolescents
**CMS165**- Controlling High Blood Pressure

1) Clinical Quality Measures – capture and export.
   - Retrieve the patient data from Cypress based on the chosen CQMs
     HTML FILE - G:\Documents\RADNet\rRis Product Requirements\Meaningful Use\2014\CQM\QRDA\Samples\NewFolks
   - Create the QRDA Category I output data for evaluation.

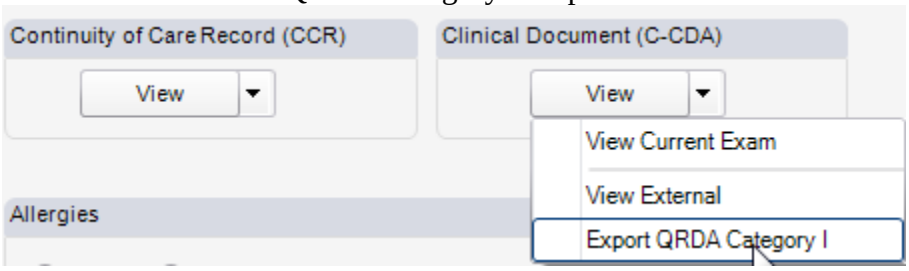

**Figure 5.124 – Capture and export**

User must select the legal authenticator which is used in the QRDA file. (These values are populated from a lookup legal authenticator).

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

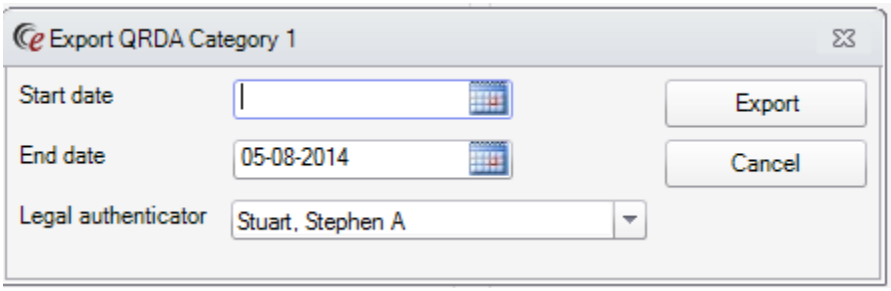

**Figure 5.125 – Export QRDA Category 1**

2) Clinical Quality Measures – Import and calculate
   - Create the patient test deck from Cypress using the specific CQMs selected.
   - Proctor will instruct the Vendor to use the EHR functions to perform the CQM calculations and evaluate them against the expected results.

3) Clinical Quality Measures – electronic submission
   - The CQM calculation results in both QRDA Category I and III format.
   - In order to upload the QRDA Category III results into Cypress for evaluation we added the Quality Reporting Document (QRDA) to the Meaningful Use form for users to generate QRDA Category III results.

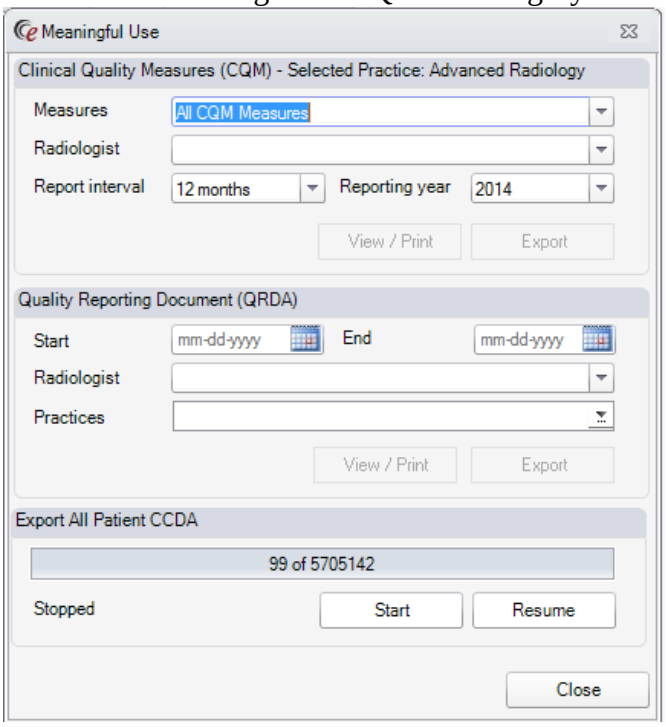

**Figure 5.126 – Meaningful use window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – Preventative Care

A new option has been added to the Contact Method of "Declined" has been added to the ContactMethod lookup table.

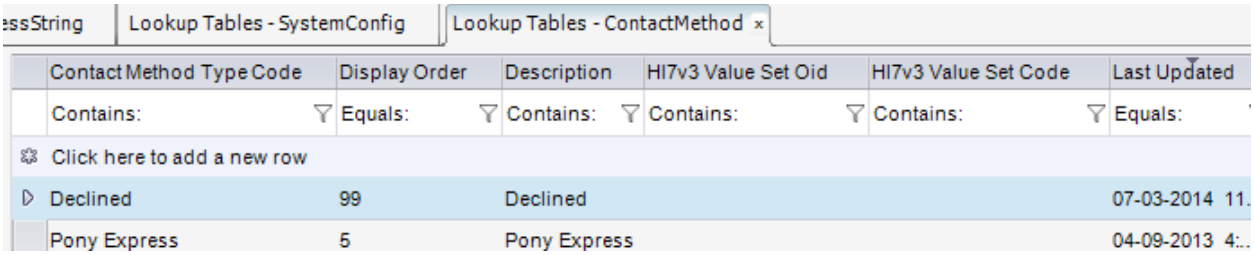

**Figure 5.127 – Declined added to the ContactMethod lookup**

This value will appear in the Preferred Contact Method list box of the Patient tab.

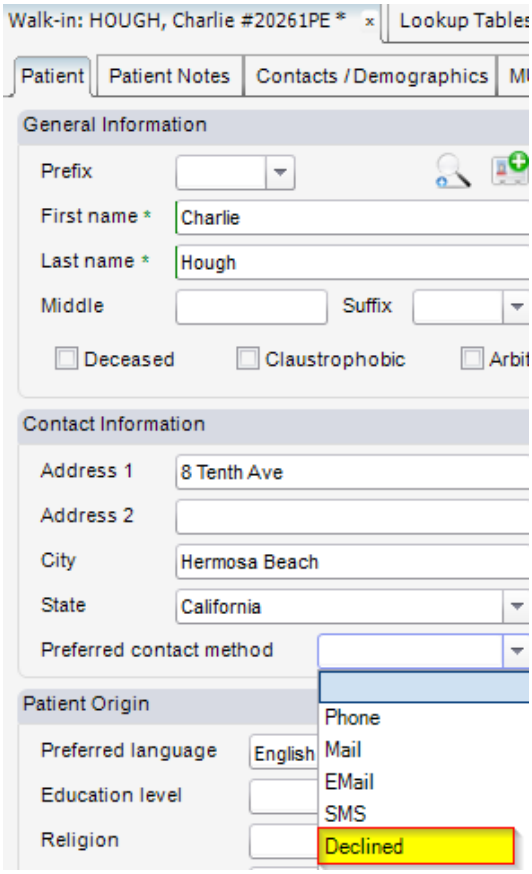

**Figure 5.128 – New preferred contact method**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Also a new system configuration setting of **"CallbackDeclinedValue"** has been added. This value references the item in the ContactMethod lookup that is used to trigger whether the order's last_letter field should be flagged as 'Declined Callback' in the web services. There is no default value set for this config setting.

If contact method is set to decline value, we will set the order's last letter to '*Declined Callback'* and set the order's last letter date to now when a follow-up order is about to be created.

When configuring this setting, users must take a precaution when selecting the value of Declined as the Preferred Contact Method when the System Configuration setting of "CallbackDeclinedValue" is set to Declined or any other value from the ContactMethod lookup.

For example, a patient that has the Preferred Contact Method of Declined and the System Configuration setting has a value of Declined. If this study is a Mammo study in which a follow up letter will be sent, the letter would not appear on the Mammo Letters WL as the contact method of Declined will be filtered out of the work list.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – Automated Measures Management Report

Automated Measures – A management report that can accurately adjust the reporting period for all the required types and that the numerator and denominator information are accurate and complete for each reporting period and meaningful use stage for a specific Radiologist.

### Automated Measures - Stage 1

**Radiologist: Power MD, Ian**
**Date Range:** 1/1/2014 - 12/31/2014
**Practice(s):** Get Well Clinic
**Description:** This report displays the percertage of patients where the mu requirement was recorded.
*Click ***here*** to get the details.

| Description | Numerator | Denominator | MU measure | Percentage |
|---|---|---|---|---|
| Demographics | 5 | 8 | 50 | 62.50 % |
| Patient reminders | 5 | 14 | 20 | 35.71 % |
| Medication reconciliation | 4 | 8 | 50 | 50.00 % |
| Problem list | 6 | 8 | 80 | 75.00 % |
| Medication list | 7 | 8 | 80 | 87.50 % |

## Meaningful Use – Stage 2 Management Reports

MU 2014 requires that the automated measures report be capable of selecting either stage 1(2011) or stage 2(2014) MU statistics; and be able to select date ranges for 90 continuous days within a calendar year, including 90 day periods that span across more than 3 months (e.g. Beginning May 12th); or be able to select a specific calendar year quarter (first, second, third, fourth); and finally be able to select the entire calendar year.

MU 2014 requires a management report(Patient Lists) that will generate a list of patients that can be selected by date and time and based on each data element including: Problems, Medications, Medication Allergy, Demographics, Lab tests and values/results, and Patient communication preference.

To resolve we archived the following MU 2011 management reports.
• Automated Measures.rdl
• CQM Measures.rdl
• MU Automated Measures Details.rdl
• MU Scorecard.rdl
• Patient Lists.rdl
• Patient Reminder List.rdl

We moved all of these reports to a newly created folder "Archive" under Meaningful use on the reporting server. These reports will be used for auditing purposes for previously submitted attestation reports. To ensure these reports are deployed correctly we modified the script for deploying management reports to include the Archive folder structure and reports.

For MU 2014 we created three new management reports and a new SubReport.

1) **Automated Measures** – A management report that can accurately adjust the reporting period for all the required types and that the numerator and denominator information are accurate and complete for each reporting period and meaningful use stage for a specific Radiologist.
   - Automated Measures Details - we created to help troubleshoot MU measure problems in the field a new report that will be used to display summary details which make up the numerators and denominators found in the Automated Measures Report. This report can be found in the "SubReport" folder.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

2) **Automated Measures Raw Data** - A management report that can accurately adjust the reporting period for all the required types and that the numerator and denominator information are accurate and complete for each reporting period and meaningful use stage for multiple Radiologist. The main purpose of this report will be used to export results to csv or excel so administrators can monitor the progress of individual Radiologist with regards to MU measures.

3) **Patient Lists** - Lists of patients are selected by date and time and based on each data element including: Problems, Medications, Medication Allergy, Demographics, Lab tests and values/results, and Patient communication preference

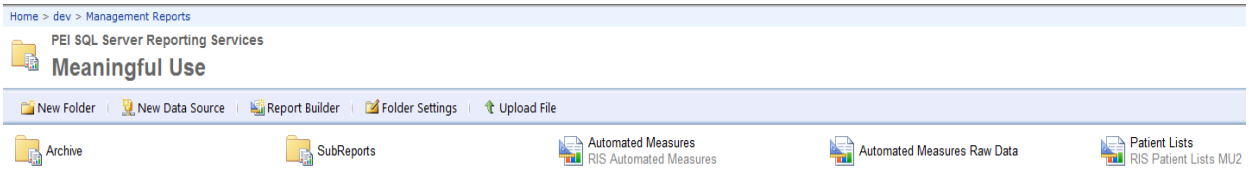

**Figure 5.133 – Meaning Use Stage management reports**

# 8. Resolved Defects

Bugs Suggested Features and Support Issues resolved in build 2.43. The extract is taken from Redmine bug tracking system and only displays defects resolved in 2.43.

| Bug # | Priority | Subject | Category | Found Version |
|---|---|---|---|---|
| | | | | |
| 6701 | Urgent | When a popup window is open in RIS and user actions a report in PS360, Ris crashes. | Powerscribe Integration | 2.42.1 |
| 6678 | Urgent | PAC IW Out of sync problem | PACS Integration | 2.42.0.9 |
| 6534 | Urgent | original_interpretation_version should be stamped on dictated (currently just on signed reports) | Web Services/DB | 2.42.0.11 |
| 6436 | Urgent | Potential for studies to be orphaned in a way as they won't appear on worklists | Thick Client GUI | 2.42.0 |
| 6255 | Urgent | Slow Mammo Letters WL is impacting DB query times | Worklists | 1.42 |
| 7061 | High | MQSA Outcome Report + and - title values should be reversed | Mgt Reports | 42 |
| 6993 | High | RRR - Orders to Schedule Worklist and Procedure Plans | Thick Client GUI | 42.0.9 |
| 6938 | High | Reporting - insert report template with automacros will remove the technique section | Embedded Reporting | 2.42.1 |
| 6926 | High | paitnet folder for previously unlinked external patient does not get reassociated when the patient is mapped. | EMR | 1.4 |
| 6823 | High | Mulitple scanned images do not get sent to PACS | Thick Client GUI | 42.02 |
| 6774 | High | Callback reminder letters print as diagnostic reports instead of using the proper reminder letter | Document Distribution | 2.42.2 |
| 6700 | High | PS360 integration is opening when it doesn't need to causing unnecessary delays and flicker. | Powerscribe Integration | 2.42.1 |
| 6685 | High | Object reference error when opening transcription screens in read only mode | Radiology Reporting | 2.42.1 |
| 6683 | High | Verbal order is hard-coded to associate to a known scan document type - this should be | Thick Client GUI | 1.4 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| | | configurable | | |
| 6681 | High | bi-rads info not reset when using screen re-use on dictate screen. | Mammography | 2.42.11 |
| 6680 | High | ReportTemplateEditor not being cleaned up when ReportingRadiologist closes | Radiology Reporting | 2.42.09 |
| 6679 | High | referring physician "visited at" drop down list contains only numbers, not human readable addresses | Thick Client GUI | 2.42.0.11 |
| 6517 | High | excessive network traffic generated by transfer of dictations and other data | Web Services/DB | 2.42 |
| 6479 | High | BI-RADS 0 and BI-RADS 4/5 stored procedure causes issues with an implicit conversion of birad_code to an integer | DB | 2.42 |
| 6463 | High | Reschedule - Can reschedule studies in exam done status and outside reads | Scheduling | 2.42.0.11 |
| 6462 | High | Order level IVT - billing codes inactive on reschedule save as order | IVT / Precert | 1.41.1 |
| 6447 | High | _max_interpretation_version does not update when an addendum is deleted | Radiology Reporting | 2.42 |
| 6432 | High | Tech screen - procedures list is not alphabetical | Technologist | 1.42 |
| 6189 | High | Hidden text in editor counts as text when validating fields and section. | Radiology Reporting | 1.4 |
| 6106 | High | error opening merge suggestions due to patient search results | Web Services/DB | 1.41 |
| 5963 | High | MU - Medical History grid, cannot delete a row | Thick Client GUI | 1.42 |
| 5950 | High | MU - CCDA preview - the Allergies (Medications) section is messed up. | Thick Client GUI | 1.42 |
| 5847 | High | Dark mode - BMI on MU tab is white on white and unreadable | Thick Client GUI | 1.42 |
| 5800 | High | parameter is not valid and/or out of memory error while viewing thumbnails | Thick Client GUI | 1.42 |
| 5787 | High | RadNet - Western Operations - Breast Density dropdown order not consistent with the config table settings | Thick Client GUI | 41.1 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 5783 | High | Dark mode login box impossible to see | PACS Integration | 1.42 |
| 5732 | High | issues with sorting exam search results when max row count is reached | Thick Client GUI | 1.42 |
| 5720 | High | referring practice address patern has many issues when migrating referring legacy data. | Thick Client GUI | 1.4 |
| 5711 | High | Using two procedures at scheduling, and patient is claustro - it is showing an option for a closed modality when it should not | | 1.42 |
| 5664 | High | When dictating, losing your lock, and save failed with screen recovered, you won't be able to save | Radiology Reporting | 1.42 |
| 5513 | High | index outside the bounds of the array when saving scan documents | Thick Client GUI | 1.41.002.1 |
| 5496 | High | Scanning - Document Viewer Quick Key Issue | | 1.41 |
| 5459 | High | right click change status to cancel does not refresh worklist afterwards | Thick Client GUI | 1.42 |
| 5447 | High | Reporting - RIS allows the addendum workflow on Legacy PDF reports. | | 1.41 |
| 5420 | High | some messageboxes improperly sized | Thick Client GUI | 1.42 |
| 5406 | High | concurrency violation on save of UserPrefs can crash RIS | Thick Client GUI | 1.42 |
| 5393 | High | confirmation screen does not save scan documents | Thick Client GUI | 1.42 |
| 5335 | High | If a study is in a closed room, it should not appear on the confirmation WL | Thick Client GUI | 1.41 |
| 5291 | High | Operational Management Report - Payments Details | Mgt Reports | 1.4 |
| 5289 | High | Operational Management Report - Performed Procedures Count | Mgt Reports | 1.4 |
| 5287 | High | Operational Management Report - Front Desk Activity | Mgt Reports | 1.4 |
| 5258 | High | Multi-type ahead: control is too tall | | 1.42 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 5257 | High | Multi-type ahead: Dropdown button should have a ... in the icon | | 1.42 |
| 5234 | High | Outside Read screen will not open | | 1.4 |
| 5232 | High | For Truxtun DataMigration only, we need a tool to extract diagnostic report from the Intergy DB | DB | 1.41 |
| 5230 | High | Need to enhance our ImportLegacy utility to include diagnostic reports formated as MS-Word and WordPerfect | DB | 1.41 |
| 5192 | High | Outside Read - requires "Reason for Exam" field to be completed in view edit window` | Thick Client GUI | 1.41.003 |
| 4980 | High | Unknown CC flag never re-set if CC referring is removed from the order. (RRR) | | 40.17 |
| 4936 | High | Default lock workstation value should be 60 minutes. | Thick Client GUI | 1.41 |
| 4928 | High | Darkmode misses | | 1.41 |
| 4843 | High | RRR - Scheduling/Front Desk - Verbal Offer - child row has multiple parents | Thick Client GUI | 1.4 |
| 4840 | High | IVT - PreCert Status Update - PreCert Field Changing | Thick Client GUI | 1.4 |
| 4838 | High | RIS Admin - HL7 | HL7 | 1.4 |
| 4836 | High | IVT - IVT Worklist - Error retrieving the IVT worklist | Thick Client GUI | 1.4 |
| 4830 | High | Carrier search error if carrier name is not found | Thick Client GUI | 1.42 |
| 4755 | High | HL7 ReportSigned could produce duplicate addendum | HL7 | 1.41.001 |
| 4742 | High | scan document documents are saved in the db as null | Thick Client GUI | 1.4 |
| 4658 | High | Scheduling --> modality restriction = no warning | Thick Client GUI | 40.17 |
| 4620 | High | Referring without a first name, erroring when multiple orders are available for patient in reception worklist. | Thick Client GUI | 1.1.3.41.19052 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 4598 | High | RRR - Prep Instructions - when prep instructions exceed maximum visible space, scroll bars do not appear as they should, and user cannot read the bottom of the page of instructions. | Thick Client GUI | 40.18127 |
| 4593 | High | WPR - Send To button causes error | Thick Client GUI | 1.42 |
| 4576 | High | Personnel - Internal person notes | Admin Tools | 1.41 |
| 4548 | High | CTRM - Notes field isn't read only | Thick Client GUI | 1.41 |
| 4464 | High | RRR - IVT - when user adds "-01" to the end of the policy number for a patient, upon saving the change to the policy, the billing code exam information disappears. | Thick Client GUI | 40.18127 |
| 4450 | High | Auto-open worklist won't open if you cancel the chair selection prompt | | 1.41 |
| 4412 | High | WL Filter filtering out all rows when no filter value is specified | Thick Client GUI | 1.4 |
| 4356 | High | Critical Result - CTRN - Unknown referrers added in critical result window display as invalid | Thick Client GUI | 1.41 |
| 4349 | High | Worklist filters ending with a pipe "\|" symbol causes error | Thick Client GUI | 1.40.015 |
| 4284 | High | Mammo - generated followup order not setting default patient type | Thick Client GUI | 40.15 |
| 4278 | High | RRR - Responsible party - "Same As Patient" flag not recognized, and orders are hitting the BEWL that should not be there. | Thick Client GUI | 40.16 |
| 4241 | High | Printer Config - Display Order should have a default | Thick Client GUI | 1.4 |
| 4095 | High | Selected report pane showing "Legacy Report' that doesn't work | Thick Client GUI | 40.14 |
| 4035 | High | RIS Client --> Login Failed | Thick Client GUI | 40.12 |
| 3904 | High | removing alternate MRN does not remove all references | Web Services/DB | 1.4 |
| 3877 | High | Walk In - Object Reference Error | Thick Client GUI | 40.1 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 3852 | High | IVT : ?The ?IV required? flag on the worklist said IV was not required, but when I opened it, it says Verification is required? (it was correctly on the worklist as pre-cert was required however) | Thick Client GUI | 1.40.008 |
| 3847 | High | ConfigFile upload everytime a screen is closed. | Thick Client GUI | 1.4 |
| 3798 | High | Worklist refreshes at different scroll positions (Fisher site visit) | Thick Client GUI | 40.006 |
| 3749 | High | RadNet - ADV Call Centre - can not type in order notes field. | Thick Client GUI | 1.40.006 |
| 3738 | High | Perform exam - perform exam completed time is not be saved if Exam Times tab is accessed | Thick Client GUI | 1.40.008 |
| 3688 | High | wsnocertificate Endpoint does not require authentication | Web Services/DB | 1.4 |
| 3661 | High | Availability template lookup table usability | Admin Tools | 1.4 |
| 3644 | High | Removing procedure then procedure row at arriving throws exception | Thick Client GUI | 1.40.006 |
| 3431 | High | RRR - When you choose 'Self' from responsible party dropdown, then update the patient's address information, you have to uncheck then recheck the 'Same as Patient' check box to get the information to update | | 39.1 |
| 3375 | High | RRR Image Request WL - When status is 'Hold Code Completed' and user presses 'Edit' RIS is throwing an error | | 39.1 |
| 2999 | High | When report is viewed from the Billing Exceptions Work List, via Edit Billing it is showing an Addendum line, even though no addendum exists for the exam | Thick Client GUI | 38 |
| 2982 | High | inactive CPT codes are showing up when you check 'Show Previous Pre-cert CPT codes' option. | | 38 |
| 2230 | High | Cannot create Alternate MRN when creating new patient | Thick Client GUI | 1.2.38.14486 |
| 2142 | High | Reschedule permission does not make 'reschedule' appear in context menu | | 1.38 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 1225 | High | Scheduling - Image Request WL --> Edit Image request ( new patient icon) | Thick Client GUI | 1.36 |
| 6986 | Normal | Reporting - going from a non BIRADS enabled study to a BIRADS enabled study will throw an exception | Radiology Reporting | 2.42.1 |
| 6939 | Normal | Reporting - create template from when the current template has automacros will raise an exception | Embedded Reporting | 2.42.1 |
| 6924 | Normal | scheduling using external MRN ( does not consistently display alternate MRN in grid) | EMR | 42.1 |
| 6923 | Normal | Appointment book cannot be accessed if user doensn't have scheduling group assigned. | Appointment book | 2.42.1 |
| 6922 | Normal | There is no way to register individual studies at different sites that are on one order. | | 2.42.2 |
| 6846 | Normal | When tentative sign is disabled through access string, user preference is half visible | Radiology Reporting | 2.42.0.9 |
| 6839 | Normal | Mgmt Report - IVT Canceled (deprecated report) | Mgt Reports | 2.42 |
| 6806 | Normal | A user/person can be cloned even if they have an address with no cc delivery preference. | Administration | 2.42.0 |
| 6773 | Normal | Using PS360: An exam is assigned to a resident and that resident assign a supervising rad, once the exam in in transcribed status, it is not in the supervising rad's Pending Signature WL | Powerscribe Integration | 2.42.1.2 |
| 6751 | Normal | Error on multi procedure schedule after one study is removed | Scheduling | 2.42.1.2 |
| 6735 | Normal | Management Report Deployment - Radnet specific reports deploying to eRAD | Mgt Reports | 2.42 |
| 6711 | Normal | Clicking the close or skip button on the eRAD RIS window doesn't save the values in Assigned to window | Powerscribe Integration | 42.1.1 |
| 6689 | Normal | RadNet - Monthly Variance Raw Data reports needs to be modified to use cpt_Radnet_counts as well add referring practice functionality | Mgt Reports | 2.42 |
| 6688 | Normal | Error: "Deleted row information cannot be accessed through the row" when updating | Thick Client GUI | 2.42.09 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| | | insurances | | |
| 6686 | Normal | Scanner - users are having to re-scan documents | | 1.42 |
| 6682 | Normal | Reporting - screen reuse and pending save items may hang around on the worklist | Radiology Reporting | 2.42.0.11 |
| 6675 | Normal | PACS Caching - The RIS is failing to clear out the cache field properly when it is to no longer be cached. | PACS Integration | 2.42.0 |
| 6611 | Normal | Mgmt Report - Marketing numbers skewed when c_study_item_certification.units is null | Mgt Reports | 2.42.0.11 |
| 6582 | Normal | Unable to create unknown referring | Scheduling | 42.1 |
| 6547 | Normal | Document distribution does not recover InProgress jobs that do not have a job id when it starts up | Document Distribution | 0 |
| 6546 | Normal | Fax Console Outbox grows too large over time and slows faxing down significantly | Document Distribution | 0 |
| 6545 | Normal | Reporting - Access string PowerScribe360.AllowAutofeed doesn't control user preference | Powerscribe Integration | 2.42.1 |
| 6531 | Normal | PACS images are loaded even if reporting window ultimately does not open. | PACS Integration | 2.42 |
| 6526 | Normal | CD Import - Duplicate MRNs resulting in missing images after the import | Patient Search | 1.42 |
| 6525 | Normal | CD Import - null exception opening a CD, which has a empty patient record | PACS Integration | 1.42 |
| 6516 | Normal | c_frm_core_view - cleanup the view | Web Services/DB | 2.42 |
| 6473 | Normal | Print Forms dialog does not appear when checking-in/arriving patients after removing insurance policy | Thick Client GUI | 2.42.09 |
| 6464 | Normal | MU Clinical Summary Form Needs modified to look at the new c_patient_problem_list2 and the new l_indication tables for handling MU problems(medical history). | Meaningful Use | 42 |
| 6452 | Normal | service throttling is not sufficient for large implementations | Web Services/DB | 2.42 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 6331 | Normal | detailed chair selector does not display - print an error message indicating dataset is incorrect. | DB | 2.42 |
| 6330 | Normal | Re-deployment of reports loses folder specific permission | Mgt Reports | 2.42 |
| 6296 | Normal | CD Import - Everything is sent but study can't be found in PACS. | PACS Integration | 1.42 |
| 6268 | Normal | PACS Server lookup the URL can have new line characters which will cause CD Imports to fail | PACS Integration | 1.42 |
| 6251 | Normal | RIS service "Server" garbage collection | Web Services/DB | 1.42 |
| 6242 | Normal | RIS Service Installation document is out of date | Documentation | 42.0.6 |
| 6239 | Normal | RADNET - MU - Problem list - problem with no start date can be added again via Meaningful Use Quick Add Edit window | Thick Client GUI | 2.42.0.6 |
| 6233 | Normal | RADNET - Reporting - Pregnant field displayed in Exam Details for all patients | Radiology Reporting | 2.42.0.6 |
| 6194 | Normal | Report history and dark mode have some visual issues | Radiology Reporting | 1.42 |
| 6187 | Normal | CDS Service  does not start in  x64 mode | Documentation | 42.003 |
| 6185 | Normal | RRR - Error when creating outside reads | Thick Client GUI | 42.02 |
| 6126 | Normal | Scheduling - Calendar view does not display business hours or device availability template | Thick Client GUI | 2.42 |
| 6115 | Normal | Vague descriptions on Referral reports | Mgt Reports | 1.41 |
| 6113 | Normal | Referring Physician Volumes - missing description | Mgt Reports | 1.41 |
| 6109 | Normal | Language, Race and Ethnicity not in the core view for forms | Mgt Reports | 1.42 |
| 6107 | Normal | MU changed Provided Cinical Summaries to Offered Clinical Summary to patient | Meaningful Use | 2.42 |
| 6091 | Normal | Management reports - IVT Turnaround - Total turnaround time is incorrect | Mgt Reports | 2.42 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 6087 | Normal | Management reports - IVT management reports looking for Approved, but status is now Verified | Mgt Reports | 42.0.1 |
| 6080 | Normal | CD Import via patient folder can match with the wrong patient. | Thick Client GUI | 1.42 |
| 6077 | Normal | Relevance Override does not allow assignment of inactive procedures | | 1.42 |
| 6064 | Normal | Scheduling - Procedure Plans Error | Thick Client GUI | 42.0.0.21577 |
| 6052 | Normal | RadNet - Patient Folder - column missing | Thick Client GUI | 1.42 |
| 6051 | Normal | RadNet - Schedule Existing Order - uncheck not working | Thick Client GUI | 1.42 |
| 6015 | Normal | create a function to coalesce site and practice logo | Web Services/DB | 1.42 |
| 6003 | Normal | Management Reports - Automatic Measures - Missing Parameter | Mgt Reports | 2.42.0.0.21410 |
| 5988 | Normal | re-selecting and blanking out the Referring combo box | | 42 |
| 5984 | Normal | Deleted row error saving attachments | | 1.42 |
| 5982 | Normal | Negative values in Dictated to Drafted on the RTAT portion of the Transcription Dashboards. | Mgt Reports | 1.41 |
| 5944 | Normal | Cloning a person "may" impact orginal person being cloned | Thick Client GUI | 1.41 |
| 5861 | Normal | unhandled exception logging in as a rad but without permission to some WL. | Thick Client GUI | 1.42 |
| 5843 | Normal | MU - When editing the date in Lab results get error. | Thick Client GUI | 1.42 |
| 5837 | Normal | Reporting - Open study in dictate window and get C++ Exception | Radiology Reporting | 2.42 |
| 5814 | Normal | If lab test code matching systemconfig's CPOELabTestCode value doesn't exist for procedure who's CPOE Pathology flag is set, misleading exception occurs | Thin Client GUI | 1.42 |
| 5735 | Normal | The query to get radilogist and transcriptionist statistics in taking over 5 | DB | 1.4 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| | | second on SE | | |
| 5603 | Normal | recent activity message list shows Assign To as Dictated | Radiology Reporting | 1.42 |
| 5495 | Normal | Scanning - "Scanner is not responding" can lock up RIS for about 1 minute | | 1.41 |
| 5450 | Normal | RRR - Confirmed Appointments Report Customization | Mgt Reports | 2.41 |
| 5422 | Normal | Scheduling - Assign to Rad is first name, last name | Thick Client GUI | 1.41.002 |
| 5252 | Normal | Reporting - Verify edits context menu option from All Edits Pending QA opens Create Edit report window | Radiology Reporting | 1.41 |
| 5156 | Normal | can't update performed modality (RRR) | Thin Client GUI | 40.17 |
| 4950 | Normal | Race type code | DB | 1.41.002 |
| 4555 | Normal | When opening a study in read only, user should get a prompt | Radiology Reporting | 1.41 |
| 4326 | Normal | Reporting - Multiple Pending Signature notifications raised | Radiology Reporting | 1.41 |
| 4308 | Normal | Patient Folder - Selected Summary not resizing properly when dragging the pane | Radiology Reporting | 1.41 |
| 4116 | Normal | Error on Sign Next or Submit Next in the field | Thick Client GUI | 1.3.40.18063 |
| 3878 | Normal | GUI - procedure code lookup ( laterality dropdown display) | Thick Client GUI | 40.1 |
| 3814 | Normal | Already Transcribed prompt when in signing workflow (Fisher site visit) | Thick Client GUI | 40.006 |
| 3639 | Normal | Reporting - Index out of range | | 1.4 |
| 3521 | Normal | MU - Calculating MU statistics of Void Exams | Meaningful Use | 1.4 |
| 3273 | Normal | Patient Folder Worklist - Default filter applied results in side scrolled WL on open | Radiology Reporting | 1.4 |
| 3099 | Normal | Documentation window - futuristic menstrual periods.... | Thick Client GUI | 1.4 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 2759 | Normal | Distribution WL - Message box should display in the center of the screen | Thick Client GUI | 1.39 |
| 2635 | Normal | Unchecking No Longer Menstruating doesnt enable pregnancy fields | Thick Client GUI | 1.39 |
| 665 | Normal | fk error when adding new order | Thick Client GUI | 1.25 |
| 357 | Normal | Lookup table filters with dropdown datatype don't work | | 1.13 |
| 6940 | Low | Reporting - apply style formatting to automacro inserted text will break create template from | Embedded Reporting | 2.42.1 |
| 4733 | Low | Spelling mistake in details message (Cannot "adden" an interpretation when previous interpretation is not signed off. ) | Thick Client GUI | 1.41 |
| 3991 | Low | Reporting - Exam Details and Summary panes - Text can be entered in notes' fields, but does not save. | Thick Client GUI | 1.40.013 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 9. Known Limitations

The following are Bugs Suggested Features and Support Issues found in build 2.43. Bugs reported in previous versions are not captured as Known Limitation in this document.

| # | Status | Priority | Subject |
|---|---|---|---|
| | | | |
| 7065 | New | High | ICD button is overlaid by the stat button in minimized dictation mode |
| 7195 | New | High | System config setting RadMustProvideIcdCode doesn't force rad to enter ICD code |
| 7196 | New | Normal | When registering a patient with multiple procedures,and then deselecting the procedure checkbox, an error is produced |
| 7186 | New | Normal | Transportation req'd validation issue |
| 7160 | New | Normal | IVT - Issue with "Parent Procedure" on billing code grid |
| 7153 | New | Normal | ICD Codes - Issue removing codes |

# 1. New Features

## Ability to Add Site Code in Drop Down Lists

Currently eRAD RIS supports practice and site names of 500 characters. The drop down fields that display these values typically only allow for 20-30 characters. Issues with the practice or site name may be very similar in the first 20 characters. To help the users differentiate between the practices/sites we have added a new system configuration setting of **"LocationLayoutFormatString"** with a default value of {description}. This default value means that it will display the Practice/Site description in the drop down list box. The user will have the option to have both the description and code displayed.

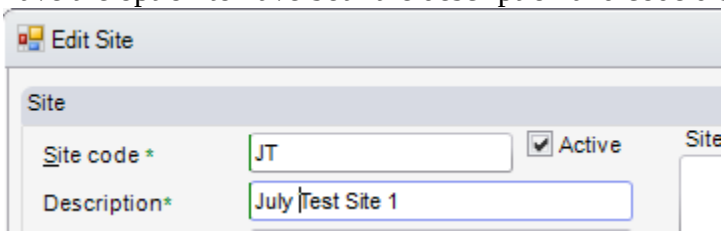

**Figure 1.1 – Displaying site example**

In the systemconfig table I add values for both the site code and the description. The value looks like ({code}) {description}.

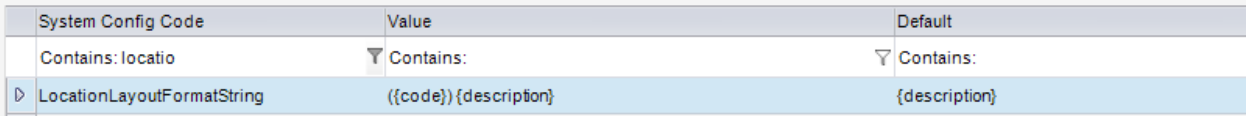

**Figure 1.2 – New configuration setting**

The supporting fields will display these values as displayed in the following screenshot.

Example of the site displayed

(JT) July Test Site 1

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

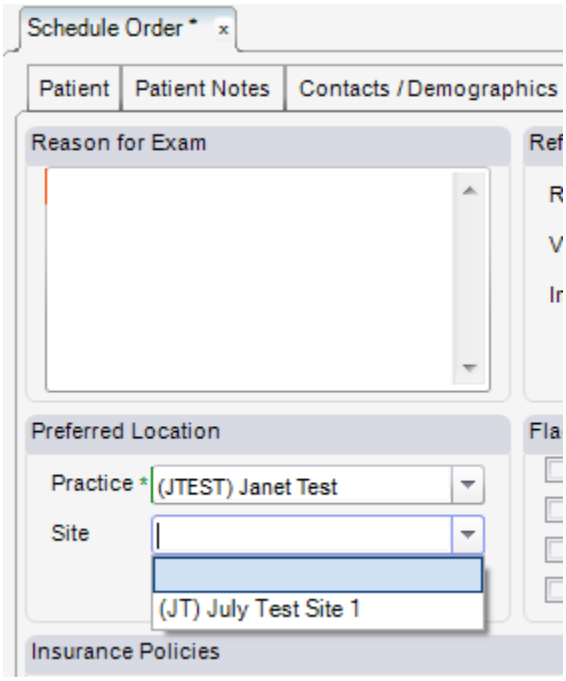

**Figure 1.3 – Displaying values configured for LocationLayoutFormatString**

The configuration setting will allow for the display of the code, description or a combination of both.

- ({code})
- (description) – this is the default vaule
- ({code}) (description)
- (description) ({code})

If any extra characters or spelling mistakes are included in the value the system will return an error when accessing a window that has the practice and/or site field

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Site Column Added to Work Lists

The site column has been requested to be added to various work lists in which it didn't currently exist. The following is a list of work lists in which it was added.

- Billing Exception WL
- Confirmation WL
- Closed Rooms Reschedule WL
- No Show WL
- Distribution WL
- Distribution History by Date WL
- Mammo Follow Up Orders WL
- Mammo Letters WL
- ACR Category 0 Follow Up WL
- ACR Category 4/5 Follow Up WL

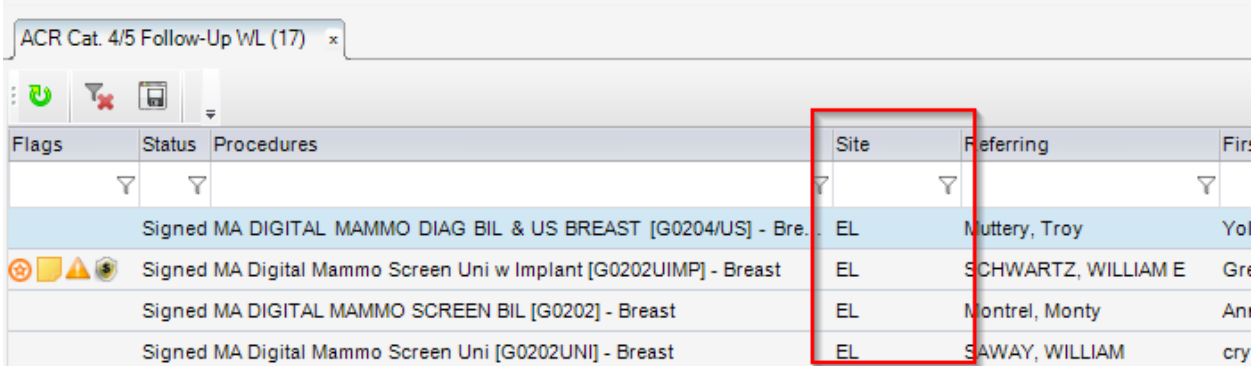

**Figure 1.4 – Site column added to various work lists**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Support International Phone Numbers

In previous builds the phone number fields automatically supply the phone number mask for North America. The mask was input the number as (902) 555-5555. This works great for North American customers/patients.

We will now allow for a leading + or 0 in the phone number field. When a leading + or 0 is added the mask will not be used allowing the user to input the number unformatted.

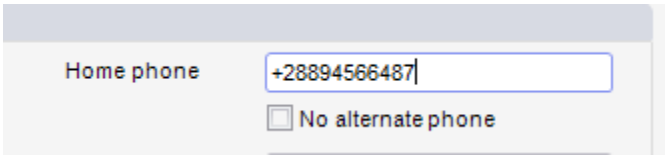

**Figure 1.5 – Phone number with leading plus symbol**

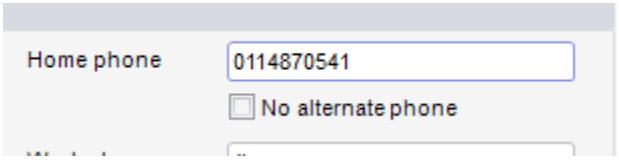

**Figure 1.6 – Phone number with leading 0 (zero)**

This is applied to all phone number fields.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Defects Resolved

| Redmine # | Tracker | Subject | Priority |
|---|---|---|---|
| 7190 | Bug | Dictated by user id changes to editor's id in PowerScribe 360 | High |
| 6894 | Bug | Memory leak in insurance control | High |
| 6856 | Bug | CD Import - PACS Send fails due to compression | High |
| 6540 | Bug | Leading + sign in phone number field no longer disables the format mask | High |
| 7193 | Bug | MU Lab Screen Clean up | Normal |
| 7183 | Bug | maxConnections may be too low for large production environments | Normal |
| 6968 | Bug | DataStoreBase uses non thread safe dictionaries for storing credentials and connections | Normal |
| 6967 | Bug | CommonLib Config class uses non thread safe dictionaries for storing system and user configuration | Normal |
| 6908 | Bug | MU Quick Add Edit Dialog makes 30 consecutive service calls each time it is opened | Normal |
| 7204 | Feature | Site code needed in drop downs to support sites with long names | Urgent |
| 6541 | Feature | Phone number should allow leading 0 | Urgent |
| 7056 | Feature | Worklists - Add site column to various mammo worklists to allow for better filtering | Normal |

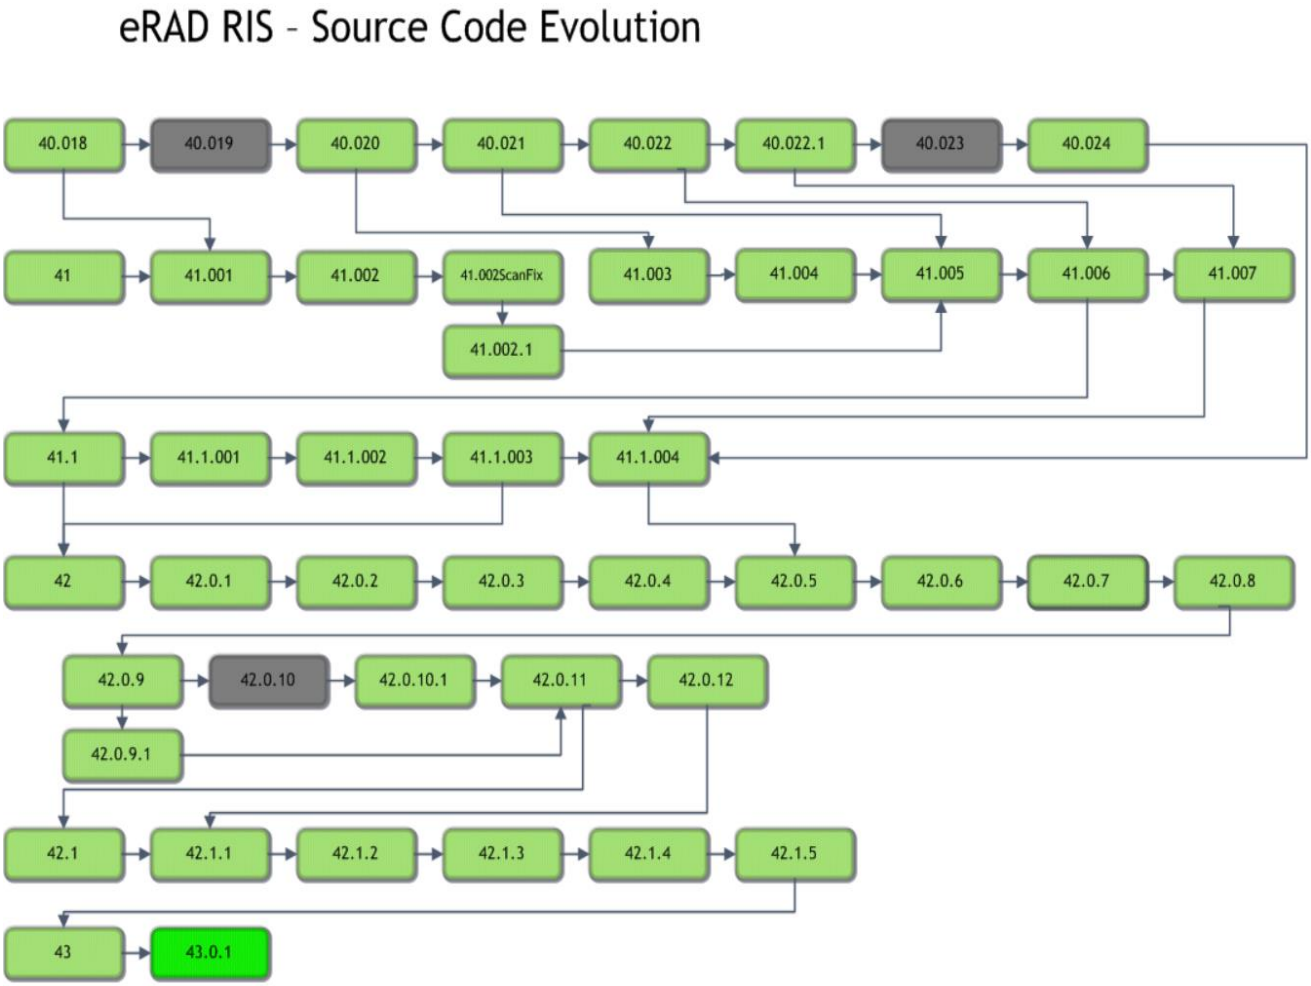
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 3. Changes to Configuration

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| rRISService.exe.config **and** rRISServicex64.exe.config | Change to the <system.serviceModel> section of the rRISServices.exe.config and rRISServicesx64.exe.config file<br><br>**Before:**<br><binding name="netTCPBinding" maxReceivedMessageSize="50000000" maxBufferSize="50000000" maxBufferPoolSize="50000000" **maxConnections="3000" listenBacklog="3000"**><br><br>**After:**<br><binding name="netTCPBinding" maxReceivedMessageSize="50000000" maxBufferSize="50000000" maxBufferPoolSize="50000000" **maxConnections="5000" listenBacklog="100000"**> | | Changes are made under the <system.serviceModel> section of the file. Changes to be made in 2 places in the file<br><br>The changes can be found in the deploy folder > rRISService.exe.config file. Compare with your current file in your rRISService folder. This applies to the rRISService.exe.config and the rRISServicex64.exe.config files<br><br>Manual edit required. |
| Systemconfig setting | LocationLayoutFormatString | {description} | Desired layout for site and practice/site drop down fields such as Preferred location on order tab, search options on schedule tab and Site field on Import CD window. Possible values are {description} and ({code}). The values can be used individually or together. Example: ({code}) {description} |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 4. Code Stream



**Legend:**

**Light Green = Released software**

**Gray = Will not be released**

**Bright Green = Current Release**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 5. Package Contents

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

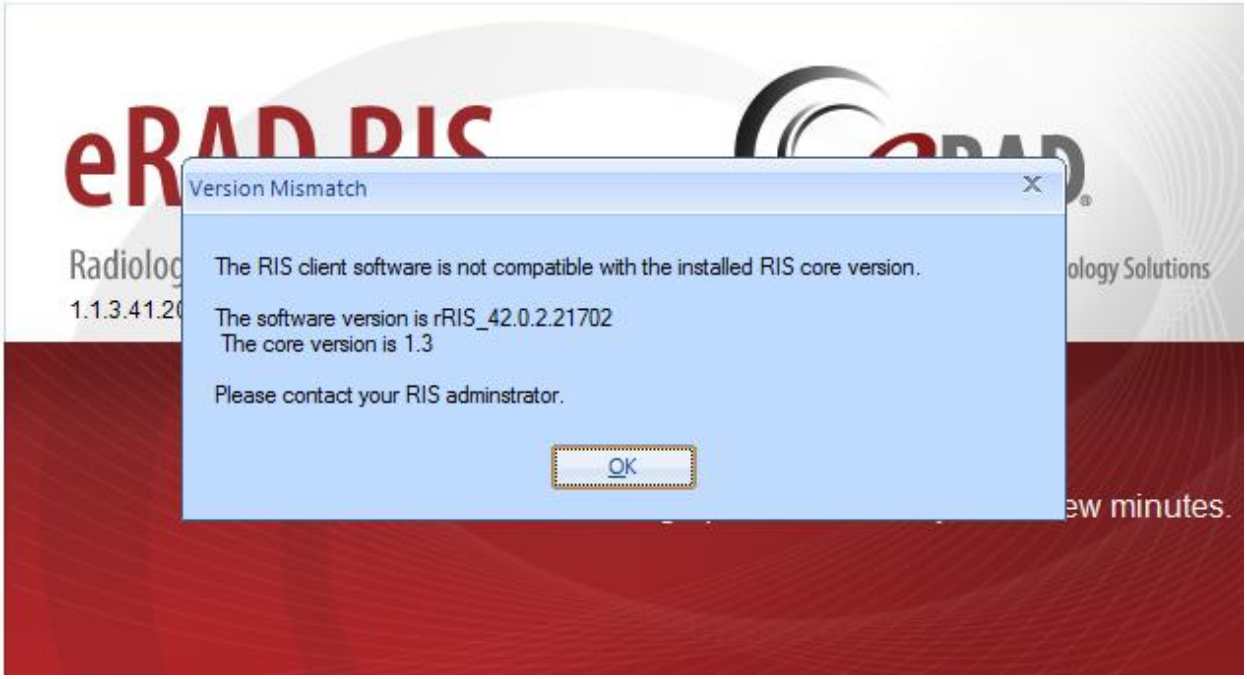
## 9. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.43.0.1.23798.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_43.0.1.23798→ rRIS_1.3.43.0.1. 23798
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   **Restart each service.**

3) Run the B43.0.1.sql file against the eRAD RIS database instance.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# 1. New Features

## Image Request flag added to the Patient Folder WL

A new column titled Image Request Flag has been added the Patient Folder WL. This column is a visual indicator to let the user know if an Image Request has/had been requested for the study.

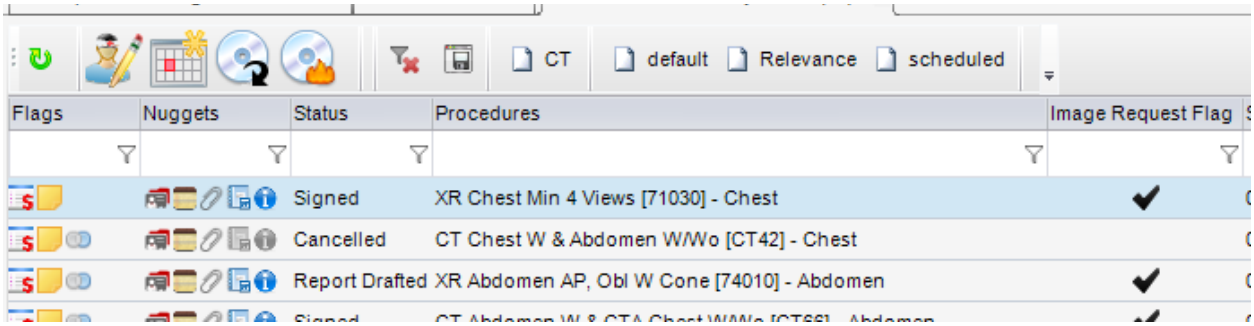

**Figure 1.1 – Image Request Flag column added to patient folder work list**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## ICD Support for Radiologists

In Build 43 we introduced support for ICD 10 codes. The feature was not complete as the Radiologist portion needed some fine tuning.

The Reporting window has a new ICD button. The button is located in the lower left corner of the reporting window.

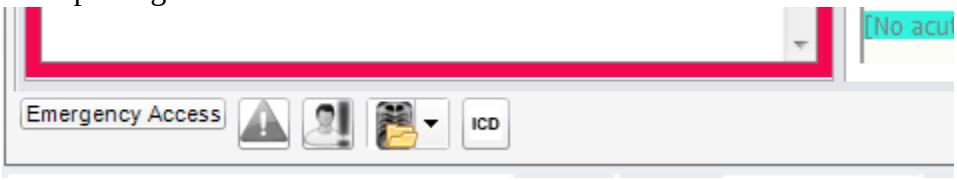

**Figure 1.2 – ICD button in reporting window**

The button is enabled with the system configuration setting of "**RadCanProvideIcdCode"** that has a default of False. This button will open the same ICD Codes search window. The data for the indications defined here are saved to c_interpreation_indication.

The Radiologist can be forced to input an ICD code by enabling the system configuration setting of "**RadMustProvideIcdCode**" that has a default value of False. When this setting is set to "True" the Radiologist will be required to enter at least one ICD code before being able to sign. If a code is not entered they will be presented with a message prompt informing that one must be provided.

**Figure 1.3 – cannot sign with ICD code when "RadMustProvideIcdCode" = true**

The ICD search window looks the same as when accessed from other areas of eRAD RIS. The ICD Codes window will provide the Reason for exam, a text box to enter search criteria where the user can enter the code or description. At least 3 characters must be entered for the search button to enable. The Type of code selected will depend on the value in system configuration setting of "**Icd10EffectiveDate**" which has a default value of 08-07-2014. If the value entered is a future date the Type of code selected will default to ICD 9. In the ICD Codes window the user can still choose to search for either or combine a search for both ICD9 and ICD10. In the example below both are chosen and the search results window displays the values returned. The type column indicates if it is ICD9 or ICD10 codes.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

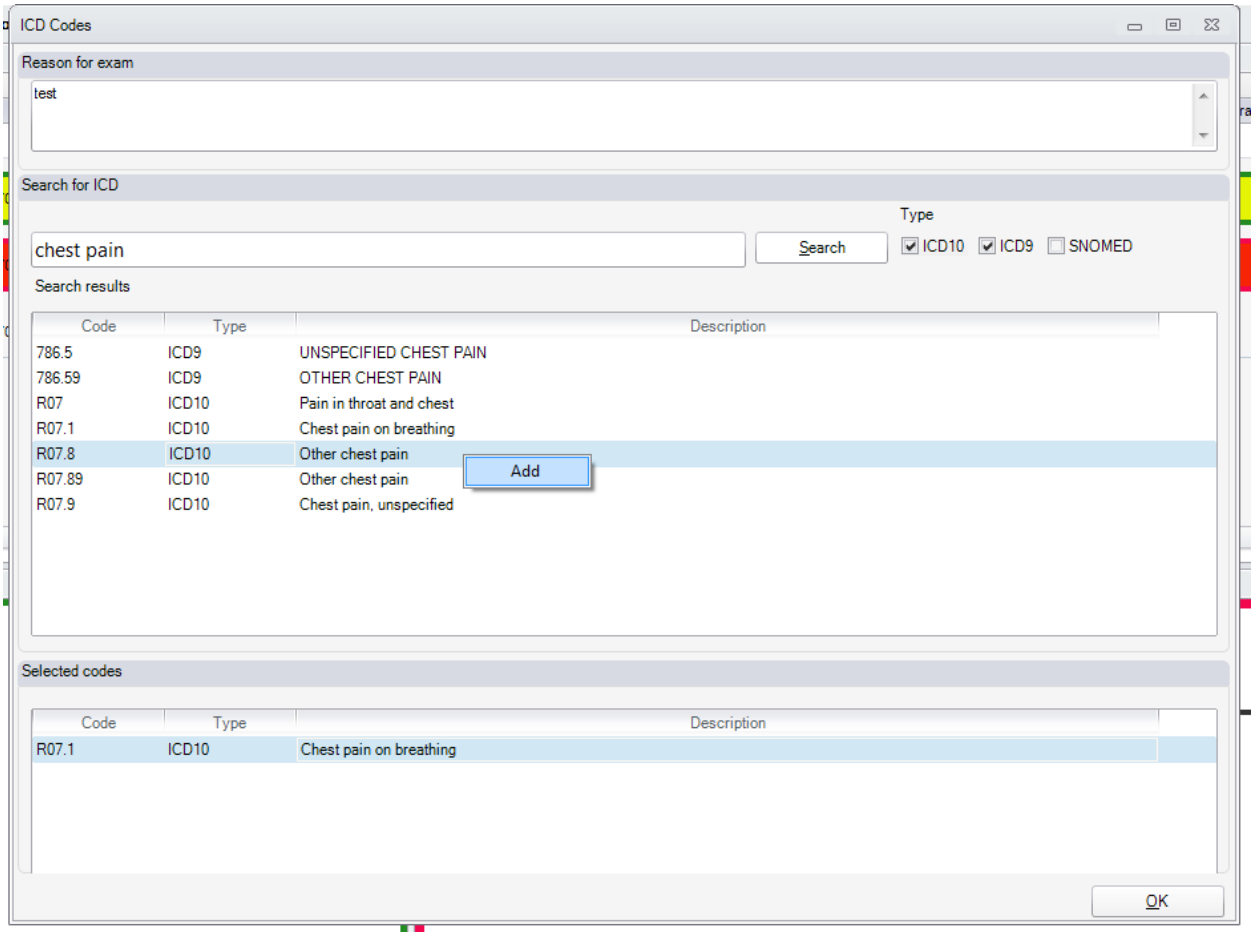

**Figure 1.4 – ICD code search window**

To move a code form the Search results to the Selected codes section of the window, the user must double mouse click, right click and select Add or use the Enter key on the desired code to be added. Multi select is not option. Codes will have to be entered one at a time.

To remove codes from the Selected codes section the user can double mouse click, right click and select Remove or use the delete key on your keyboard.

For the Radiologist to view the Tech workflow defined ICDs, viewing the Exam Details from the View menu will display indications defined in that workflow.

Codes added by a Radiologist can be viewed and/or edited from the View/Edit windows Documentation tab. Users will need the access string permission of "**Clinical.ViewEditCanChangeDiagIndications**" which has a default of None.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Defects Resolved

| Redmine # | Tracker | Subject | Priority |
|---|---|---|---|
| 7236 | Feature | Patient Folder - Add "image request status" as a column on the worklist | Urgent |
| 7291 | Bug | DB Job: Update Mammo Recall categories job will not run | High |
| 7238 | Bug | Mgmt report deployment - issues when date format not same as US (found in SA) | High |
| 7195 | Bug | System config setting RadMustProvideIcdCode doesn't force rad to enter ICD code | High |
| 7184 | Bug | Error when trying to schedule new appointment on a patient with an existing procedure in ordered status | High |
| 7065 | Bug | ICD button is overlaid by the stat button in minimized dictation mode | High |
| 7018 | Bug | Chair and PowerScribe XML files writing to file system when exam not fully opened | High |
| 6910 | Bug | Ris hangs when editing a macro and pasting in new text | High |
| 6037 | Feature | MU2 - CCDA Encounter section does not include Encounter Diagnosis | High |
| 3888 | Feature | ICD 10 - Support | High |
| 7287 | Bug | MU Automated Measures Raw Data report needs Pass column added | Normal |
| 7265 | Bug | CCDA - Height, weight, Blood Pressure Diastolic and Blood Presssue Systolic values are taken from the 1st study | Normal |
| 7264 | Bug | MU Lab Clean up screen | Normal |
| 7261 | Bug | Neat ADF Scanner --> duplex scan support | Normal |
| 7245 | Bug | Clinical.Attachments should be default of Full | Normal |
| 7237 | Bug | Assign to Radiologist popup does not show the rad's for an outside reads c_order.filler_practice_code | Normal |
| 7231 | Bug | MU Related Lab Results window title - has the word Parent in the title | Normal |
| 7229 | Bug | there is a chance that there can be overlapping conflicting date ranges in availablity temapltes | Normal |
| 7222 | Bug | Change location of Technologist Activity by Modality report | Normal |
| 7219 | Bug | Mgmt Report - Biopsy Results Pending Letter | Normal |
| 7211 | Bug | MU Lab Screen Clean date format | Normal |
| 7207 | Bug | MU - clinical.diagnosecodes doesn't control adding indictation codes on mu window | Normal |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

| | | | |
|---|---|---|---|
| 7205 | Bug | Invalid Zip code is retained and not the valid County selection. | Normal |
| 7203 | Management Report | Mgmt Report - Radiologist Signings by VR System | Normal |
| 7182 | Bug | Menu item Messaging doesn't have an access string | Normal |
| 7166 | Bug | Report deployment - MQSA folder really should be called Mammography | Normal |
| 7164 | Bug | Cannot delete indictation codes from the Indication lookup table via GUI | Normal |
| 7146 | Bug | Assign ICD Code button - Using it when saving an order causes error. | Normal |
| 7145 | Bug | MU data is deleted if Patient Search is utilized after data is filled in. | Normal |
| 7137 | Bug | Management Report - Audit Log | Normal |
| 7022 | Bug | Closing .Net connections can cause delays | Normal |
| 7016 | Bug | Exception thrown when deleting a row in MU allergy section and adding a row in MU problem section | Normal |
| 6990 | Bug | the validation for Modality Restriction and Closures are not checking to ensure that the start date occours before the end date | Normal |
| 7050 | Bug | CCDA - BMI value is different that the BMI value in MU tab | Low |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 3. Changes to Configuration

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Access strings and User Group Permissions | Clinical.DiagnosisCodes<br><br>**Has been removed** | N/A | This was originally added in an early build of 43 to control access to enter ICD codes in the MU's Extra Info Screen. The ability to add ICD codes in the Extra Info Screen was removed before release of 43. The user can add ICD Codes in the Medical History Grid. For access to add ICD codes into this grid, users must have access to **MU.MUEnabledControls** which controls access to the grids and radio buttons on the MU tab. |
| Access strings and User Group Permissions | Clinical.Attachments<br><br>The default has changed from None to Full | Full | Controls access to the stand alone Attachments screen accessible in a work list via Right Click / Attachments |
| Access strings and User Group Permissions | Clinical.ViewEditCanChangeDiagIndications | None | In View/Edit, the indications defined by the radiologist can be edited |
| SystemConfig | Icd10EffectiveDate | | (value = DateTime mm-dd-yyyy) The date on which ICD10 is effective. ICD9 will be used prior to this date. |
| SystemConfig | RadMustProvideIcdCode | False | A value of True will force radiologist to provide diagnosis ICD code prior to signing. Possible values are False and True |
| SystemConfig | RadCanProvideIcdCode | False | Enables the ability for the radiologist to provide diagnosis ICD code in the reporting screen. Possible values are False and True |

   y. sectionSocialHistory.xsl
   z. sectionVitalSigns.xsl

3) SQL Folder contains:
   - B43.0.2.sql

4) **SSRSDeployment** folder contains 7 subfolders, a batch file for deploying the reports and a help file for deploying the reports.

   4.1. **Backups** folder is empty

   4.2. **Fonts** folder contains 4 files:
   4.1.1. FRE3OF9X

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

4.1.2 FRE3OF9x_0
4.1.3 FREE3OF9
4.1.4 FREE3OF9_0

4.3. **ParentFolder** folder contains 7 subfolders
- 4.3.1. **Chair** folder contains 1 .rdl file
- 4.3.2. **Dashboards** folder contains 9 .rdl files
- 4.3.3. **Forms folder** contains sub folder and 2 .rdl files
  - 4.3.3.1. **SubReports** contains 10 .rdl files
- 4.3.4. **Management Reports** folder contains 7 sub folders, these subfolders contain the core management report files (.rdl) to be deployed.
- 4.3.5. **Marketing** folder contains 5 .rdl files
- 4.3.6. **Order Templates** contains 1 file (Default.rdl)
- 4.3.7. **Referring Portal** contains 8 .rdl files
- 4.3.8. **SubReports** contains 11.rdl files
- 4.3.9. **Verbal Order** contains 4 .rdl files

4.4. **Scripts** folder contains 9 .rss files. These files are used with the DeployReports.bat utility to deploy the reports.

4.5. **Upload Custom Mangement Reports** is empty

4.6. **Upload Diagnostic Templates** folder contains 1 subfolder
- 4.6.1. **SubReports** folder is empty

4.7. **Upload Forms** folder contains 1 subfolder.
- 4.7.1. **SubReports** folder is empty

4.8. **eRADDeployReports.bat -** batch file for deploying reports to report server for eRAD customers

4.9. **RadnetDeployReports.bat** - batch file for deploying reports to report sever for RadNet

4.10. **Adding reports for Deployment.docx** document to assist in added a report to the install process when deploying the reports.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 6. Intended Audience

This document is created by the RIS Development team for the RadNet/eRAD RIS Implementation teams.

## 7. Who is affected

Build 43 installs. Server updates are not cumulative. This server update must be applied to 43

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 8. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|
| 41.1 | - | 1.3.41.20918(3GB) | 1.3.41.20791 | 1.3.41.20918 | 1.3.41.20739 | GUI.zip, Core install, Web Service and DB updates, Help files |

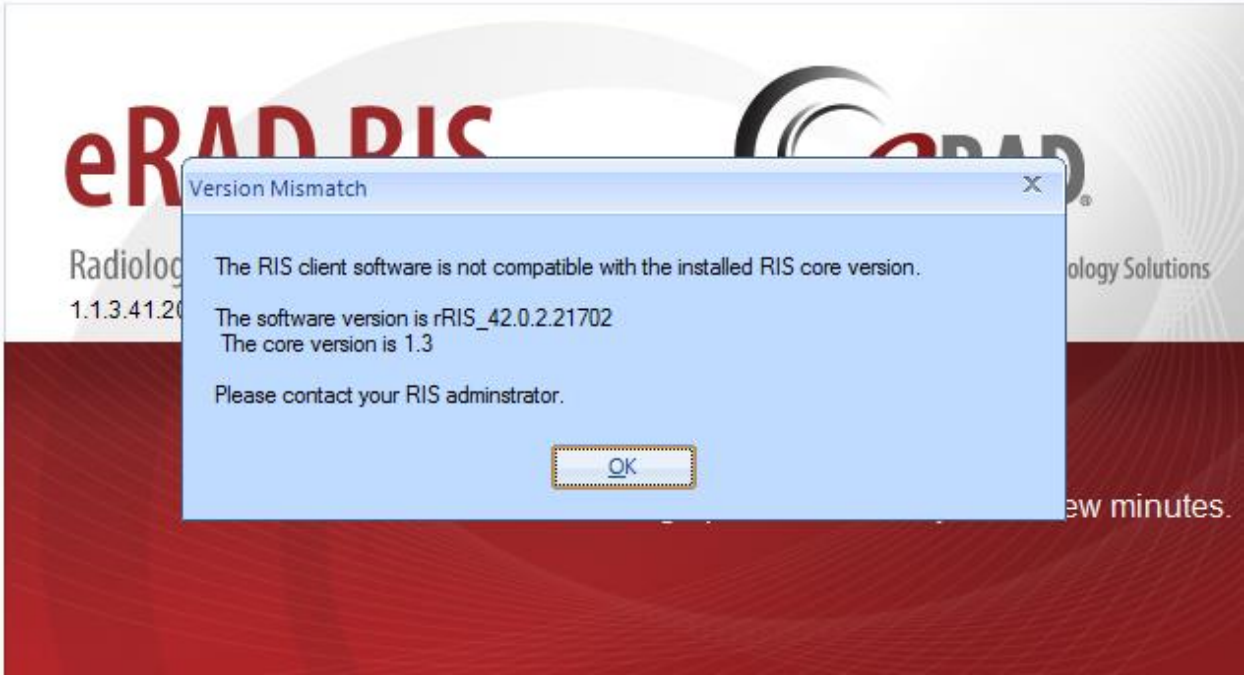
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 9. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.43.0.2.24017.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_43.0.2.24017→ rRIS_1.3.43.0.2. 24017
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

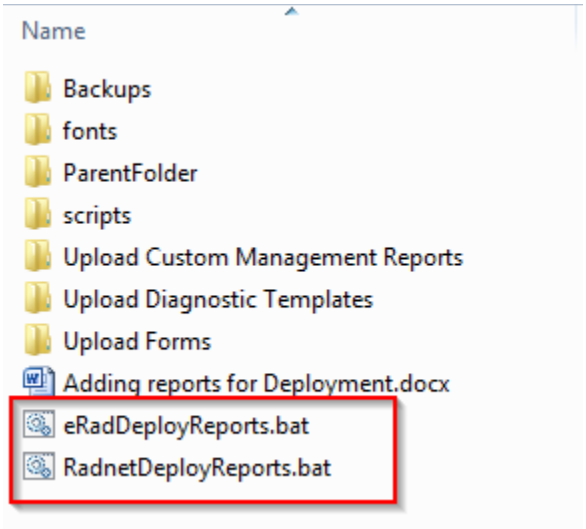
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
*rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   **Restart each service.**

3) Run the B43.0.2.sql file against the eRAD RIS database instance.

4) Management Reports Deployment / SSRSDeployment - There are 2 utilities called **RadnetDeployReports.bat** and **eRadDeployReports.bat** that will deploy the reports to a SQL Server Report Service. This utility is found in the **Build X\SSRSDeployment** folder. Below are the steps on how to use this utility. The purpose for the 2 .bat files are the RadNet one deploys a few extra reports specific to RadNet.



1. Launch the DeployReports.bat file.
2. ***Enter report server name [default:<computer_name>]:***
   a. A script will run against the server and return a list of all the root folders on that report server
   **By Default this will pull the computer_name environmental variable from the machine running the script. I suggest running this from the report server for performance anyway.
3. **Enter root folder to deploy reports [default: production]**:

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

a. This will create a new root if the name you give doesn't exist, or it will simply publish below the root of the folder if it does already exist. We typically will use "production" for the installation folder. Note: The script forces the root name to be lowercase.
**Default is suggested to be production, but you may need to change it based on the environment you are deploying to. Ie: testserver might be called something else.

4. **Do you wish to create a backup of the existing reports?**:
   a. This will create a file backup of the report directory specified in the same directory deploy.bat is being run from inside a folder called Backups where it will create a folder based on datetime of backup. Ie: 04172014_110605 (MMDDYYYY_HHMISS).
5. **Do you wish to deploy core management reports**?
   a. If you enter "y", it will redeploy the core management reports
6. **Do you wish to upload Forms**?

a. If you enter "y", the script will deploy any .rdl files into the installations Forms folder that you have previously saved into the script folder called "Upload Forms" including the folder below it called SubReports.

7. **Do you wish to upload Diagnostic Templates**?

a. If you enter "y", the script will deploy any .rdl files into the installations Diagnostic Templates folder that you have previously saved into the script folder called "Upload Diagnostic Templates" including the folder below it called SubReports.

8. **Do you wish to upload Custom Management Reports?**

a. Entering "Y" will copy any .rdl files you've copied under the deployment folder called Upload Custom Management Reports onto the server under Management Reports\Custom\Uploads directory

9. **Do you wish to create a datasource**?
   a. If you select "y" you will get prompted for more information about the datasource you wish to create. You only need to create a datasource, if this is a new installation. No need to do this if you are upgrading an existing installation. The datasource gets created in the root of the folder from step 3. The datasource will be called RISDataSource.

If you chose to create a datasource, the following steps will be requested to complete the connection string.

1. **Enter database server name**:
   a. This is the name of the physical database server
   ex. MYSERVER-1
2. **Enter database name**:
   a. This is the name of the database on the database server
   ex. rRIS_Site

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

3. **Enter report schema user name**: ex. The account that the datasource will use to connect to the database ie: SA. (For security reasons "sa" is not recommended)
4. **Enter report schema password**:

   The results of deployment will be written to log.txt in the same folder as the DeployReports.bat file.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# 1. New Features

## Insurance Eligibility

A summary of the Eligibility coverage is displayed when the mouse pointer is placed over the Eligibility icon. We also plan to show these details along with the calculated amount to collect in the scheduling information window.

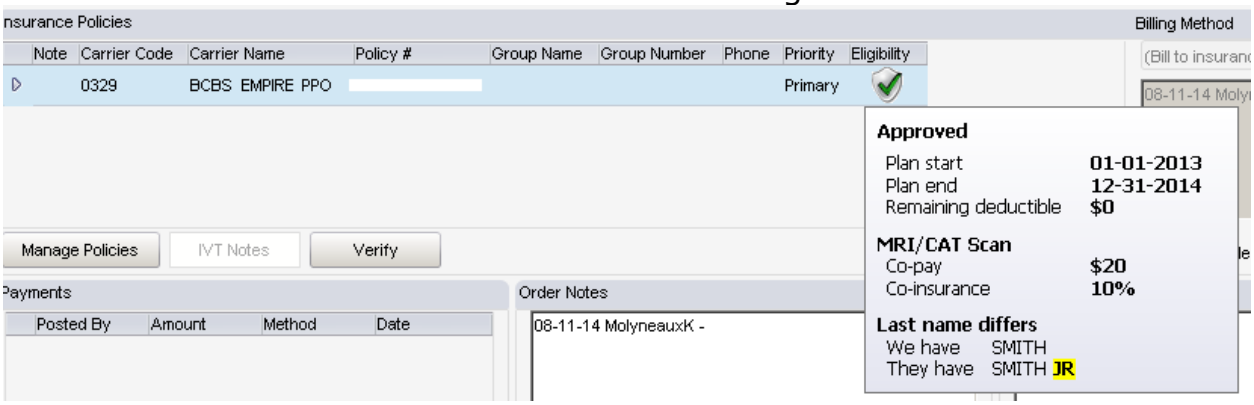

**Figure 1.1 – Displaying eligibility summary**

UI will auto initiate insurance check when all the required data has been entered. Starts after closing the manage policies grid or on "Verify" button.

The insurance check is automatically performed when scheduling or walking in a patient (the first time we get insurance information). Then a second check is automatically performed the first time we open the patients record on the date of service.

Before sending a request to Eligible, we query our previous requests for the current day. If we have an active coverage response from today, which used the same query parameters, we skip the call to Eligible and return the previous response saving us time and eliminating the issue where the user double clicks or missuses the "Verify" button. When we do this, a new root_eligibility_request_key is generated and passed to the eligibility check on the day of service.

The following information is required to start an eligibility request:

- Patient First Name
- Patient Last Name
- Patient DOB

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

- Carrier (payer) name
- Subscriber name
- Subscriber ID

We re-validate when the service type (CT vs MRI) or time of exam change. Not all re-validations will require a second Eligible API query.

If patient insurance details change, another request will be made and the previous request will be terminated.

Although we will trigger this check automatically users have an option to manually request a new insurance check via a "Verify" button (previously "Reverify")

The eligibility check is asynchronous. When the check is in progress the icons for eligibility should display an image indicating that a request is in-progress.

When the results become available, the eligibility icons should update immediately.

If the RIS Screen is closed before the results were finalized or if there is an error in retrieving eligibility then the RIS will display an MS Outlook style notification message should be displayed (this is for when the user already closed the screen).

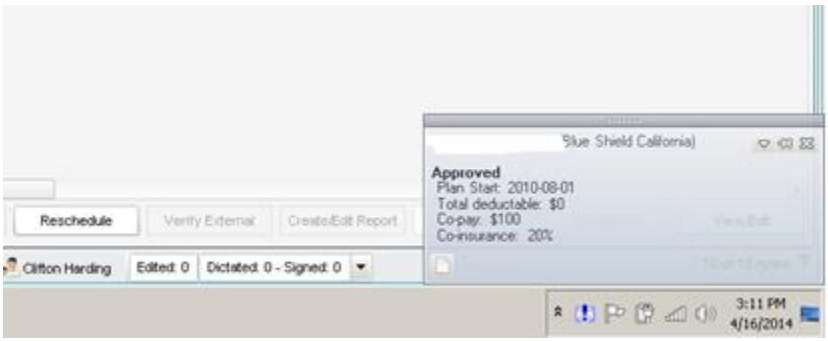

**Figure 1.2 – Eligibility notification**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

Icon in "Insurance Policies Gird" and WLs to display, IVT like shield icon combined with one of the status symbols.

→ 1. Approved

→ 2. Error

→ 3. Warnings

→ 4. Denied

→ 5. in progress

→ 6. Payer not responding

For the rare cases where the insurance response contains multiple possible co-pay or co-insurance values, then we will choose the highest value to collect.

We will use the individuals remaining deductible amount; however, if the family amount is less than the individuals we will use the family remaining deductible amount.

The complete details of the Eligibility response are available by clicking on the Eligibility Status icon and will be displayed using the Eligible API web browser scripts "coverage.js". Clicking on opens the following screen:

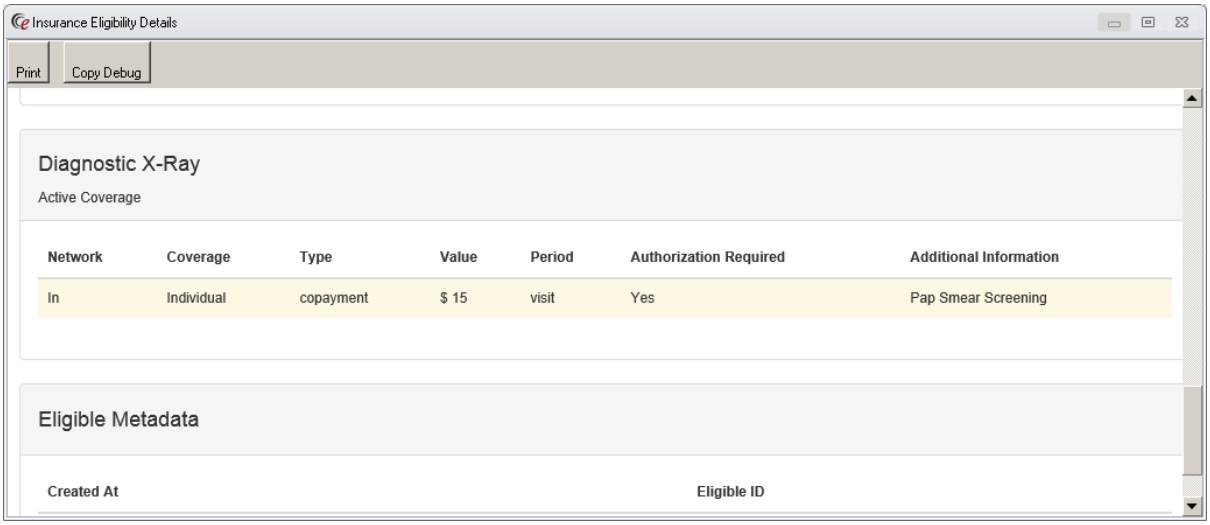

**Figure 1.3 – Insurance Eligibility Details window**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

The RIS will insert the values for the following fields, if they are 'blank':

- Patient address fields
- Patient middle_name

Patient name, gender and birth date are required for the query and will never be blank.

The RIS will insert or update the following RIS fields if they are different in the eligibility return so that we match the insurance company exactly

- Policy Number
- Group Name
- Group Number
- Subscriber's
  - Relation to patient
  - first_name,
  - last_name,
  - middle_name,
  - birth_date,
  - gender
  - Full address

Some fields like first name, last name and birth date might be correct in the RIS but wrong in the insurance database.

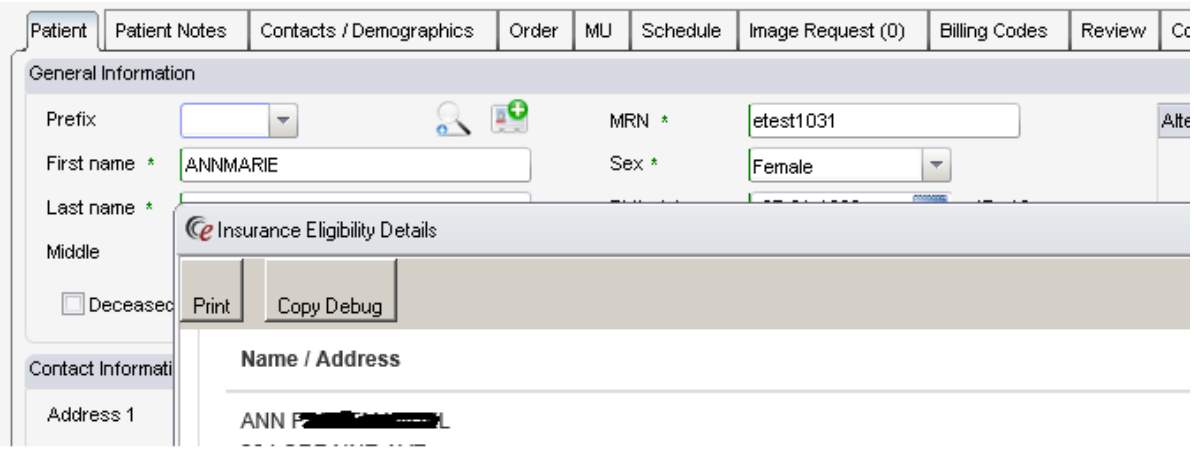

**Figure 1.4 – Comparing patient details**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

In the above example, the patient goes by ANNMARIE, which is what is on her drivers licenses but on her insurance card her first name is just Ann. All other fields match last name, middle name and birthdate.

To make sure this is what the patient and doctors expect, we keep the value we have in RIS but also record the insurance returned values in the following fields, which will be used when communicating with billing:

- insurance_first_name
- insurance_last_name
- insurance_birth_date *see note below

If only one of the above is wrong, we will use the above logic to keep insurance fields for the billing. If two or more of the above fields do not match, we will flag the eligibility check as Questionable. The status will display and the encounter will be referred to IVT. A user with IVT permissions will either need to fix the name or birth date in RIS or use the Eligibility Override feature to ignore the difference.

KM: In a later build, develop some more complex rules and use algorithms such as levenshtein distance (re: http://www.antedes.com/blog/csharp/percentage-match-between-two-strings-levenshtein-distance).

Note: if only one of these insurance field values is different we will allow a green check; however, we will still mention the difference in the insurance summary text (the text displayed when we hover over the eligibility icon).

***We will also store the patient's insurance gender, middle name and address info.**

If the subscriber's relationship is self, we query with the patient's demographics such as first name, last name and birth date.

If the relationship is anything other than self, we will query with the policy holders name, birth_date, plus the patient's demographics as the dependent.

When the service type we are querying comes back as "contact the following entity for coverage info". It means that there is an additional insurance policy that must be checked manually. When this happens (less than 1% of

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

cases tested to date) we will display a reference to the additional insurance policies in the summary text.

If the service type contains, "payer didn't give information for the service" and the service we are querying is not XRay we will attempt again with the XRay service type. If the service type is XRay we will attempt again with CT/MRI.

Worklists will display the eligibility status icon (* when integration with Eligibility API is configured for the site/carrier). Hovering over the icon in the worklist will query the visit information and display a summary of the eligibility results. Clicking on the icon will display the entire insurance details.

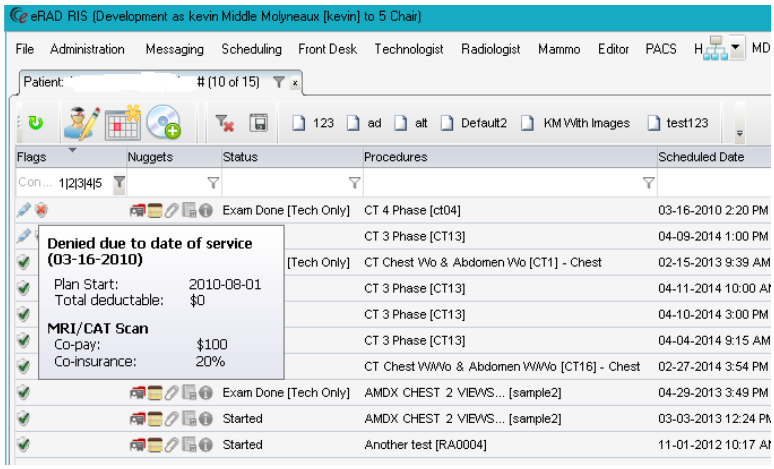

**Figure 1.5 – Summary displayed from flag on patient folder**

When the payer isn't responding, we use the previous result. For example, at the time of scheduling we verified their insurance, then on the day of service if the payer is not responding we allow things to continue with the previous eligibility response:

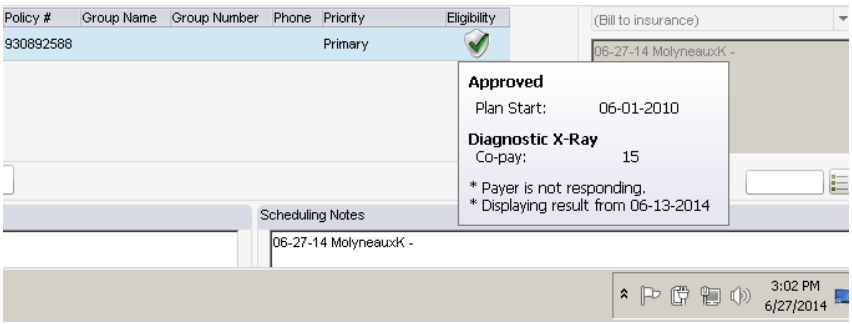

**Figure 1.6 – Showing previous response**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

If the payer isn't responding and we don't have a previous result, then we will display an empty shield icon for the Eligibility ICON, the study won't go to IVT and we will retry with Eligible API every 20 minutes. The c_eligibility_response table will keep a running count of the number of retries and each retry will be logged in the table c_eligibility_retry.

### Integration with the National Payer Database (NPD)

We will integrate with the NPD, passing CPT codes, site information, date of service insurance type (from Eligible API response) and the payer to get the total cost of the visit.

The total cost of the visit will be calculated and stored in the amount to collect text field. The calculation is based on the Insurance Eligibility details and NPD price estimate.

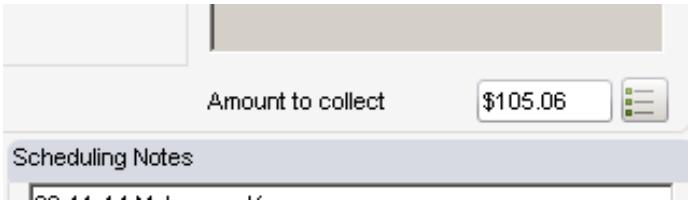

**Figure 1.7 – Amount to collect field can be auto populated**

When the price comes from the NPD, the amount to collect text field will be read-only. Otherwise, if we are using manual insurance verification then the amount to collect can be entered manually.

If we are processing a self-pay insurance, with the code '0100'. Then the price will come from the NPD and the total amount will be displayed in the amount to collect textbox.

If the NPD doesn't return a cost for a selected cpt_code/site/carrier then we will use the '0100' self-pay cost and log the fact that we couldn't find a price in the NPD. The log entry will be stored in the table c_price_unavailable.

To the right of the amount to collect text field, there is a "details" button. This button displays a screen, which explains how the amount to collect was calculated.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

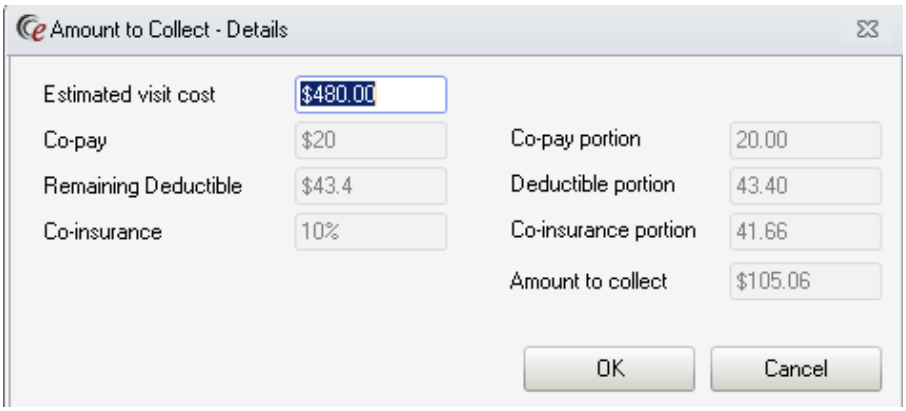

**Figure 1.8 – Amount to collect details**

When we are in any of the scheduling/walking/registration or re-scheduling screens. Note this is only if we are using Auto Insurance Eligibility and NPD pricing.

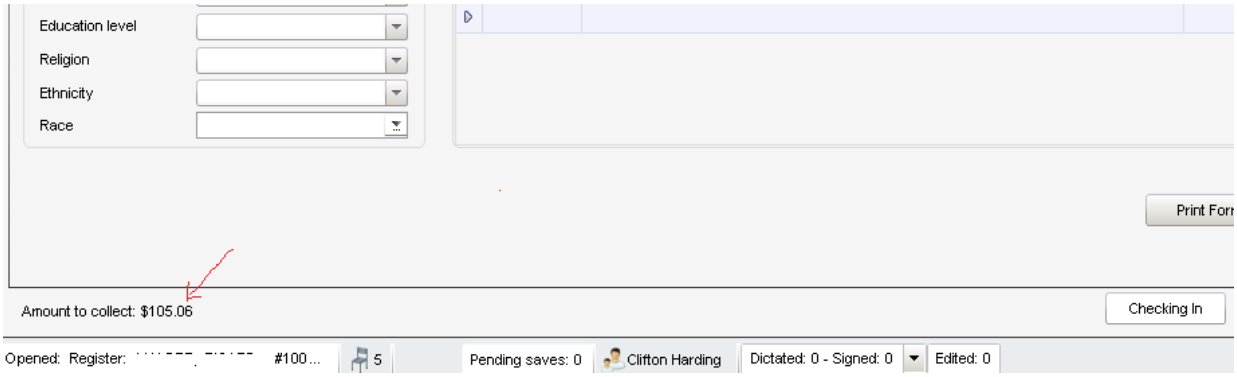

**Figure 1.9 – Amount to collect can be seen on all tabs**

Amount to collect:

a. If there is a secondary insurance, NO COLLECTION WILL BE CALCULATED OR DISPLAYED

b. NPD calculated visit cost is multiplied by the co-insurance % to derive a discrete dollar value to ONLY be displayed when the value of the remaining individual or family deductible is $0 .

c. NPD calculated visit cost will be subtracted from the individual remaining deductible. If this value is equal to or > 0 AND the remaining Family deductible has not been met, and the entire summed contract allowed amount is to be displayed in the RIS to be collected.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

d. If the family deductible has been met or individual deductible amount has been met, collect $0 for deductible. If the value is greater than 0, collect the remaining individual or family deductible amount, whichever is less. Copay, co-insurance, and remaining deductible will be summed and the value will be written into "total to be collected"

If the carrier's carrier_type_code is 'CAP', then we will not use the NPD price and instead only charge the co-pay amount.

At the end of the scheduling process there is now verbiage included in the "Patient Review" message explaining what the patient is expected to pay.

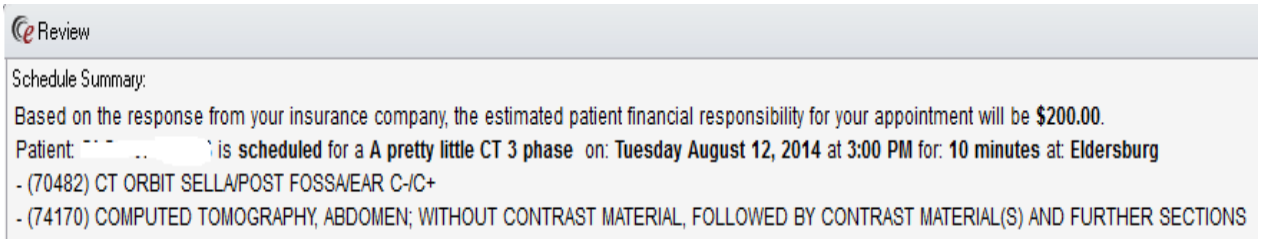

**Figure 1.10 – Updated review window**

## IVT Workflow:

IVT workflow for pre-certs remains the same

If the payer isn't configured for automatic eligibility checking, then we revert to the manual IVT check (same as before).

If we are in the automatic insurance eligibility checking mode the control for manual intervention are not needed and therefore are not shown under the insurance policies as illustrated in the following:

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

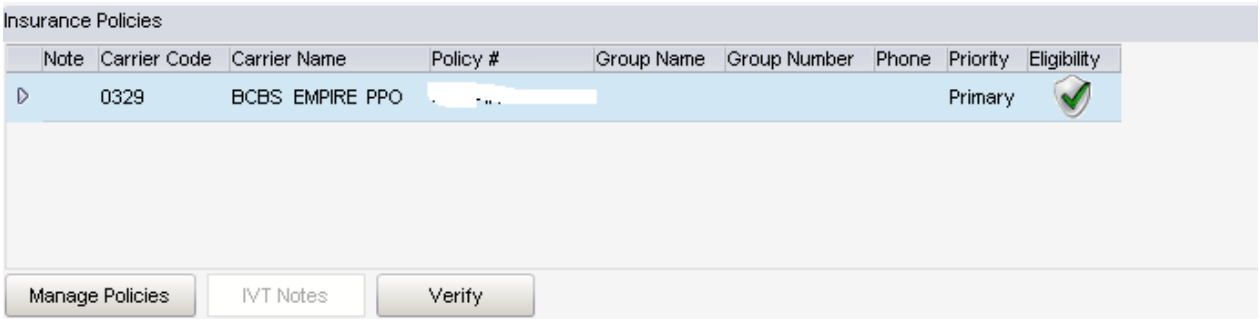

**Figure 1.11 – With and eligible insurance**

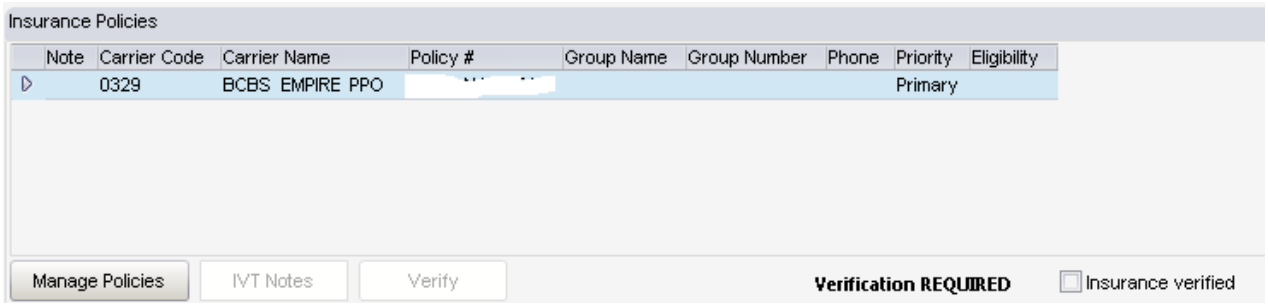

**Figure 1.12 – Without an eligible insurance**

If we get the green check, the study will skip the IVT worklist.

If a patient's insurance is denied, contain errors or has significant warnings, it will be listed in the IVT worklist. The following example shows a case where both the first name and last name are different that the insurer's and therefore we flag this is a possible patient mismatch.

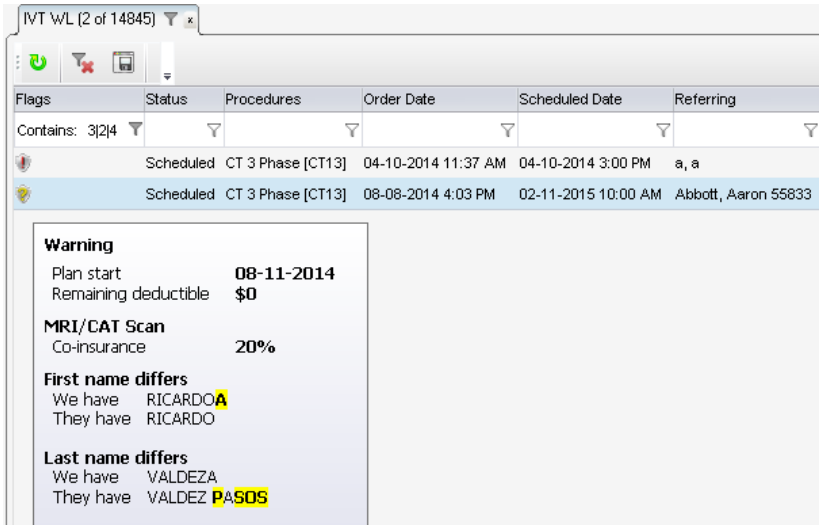

**Figure 1.13 – Eligible insurance that is denied, contains error or warnings will go to IVT**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

The user will get the option on the IVT screen to address the eligibility issue by

- Fixing the issue
  - Correct spelling of patient's name
  - Fix typo in policy number
  - Select the right carrier
  - Change payment to self-pay
- Overriding the eligibility result (admin only)

Right click on the eligibility icon and choose "Override Result".

- Override values for (co_pay, co_insurance, deductible, status)
- Checkbox for override to identify null / not null

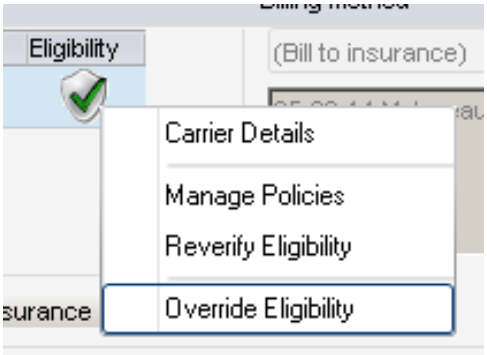

**Figure 1.14 – Override**

We expect this screen will only be accessible (via permissions) to IVT administrators.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

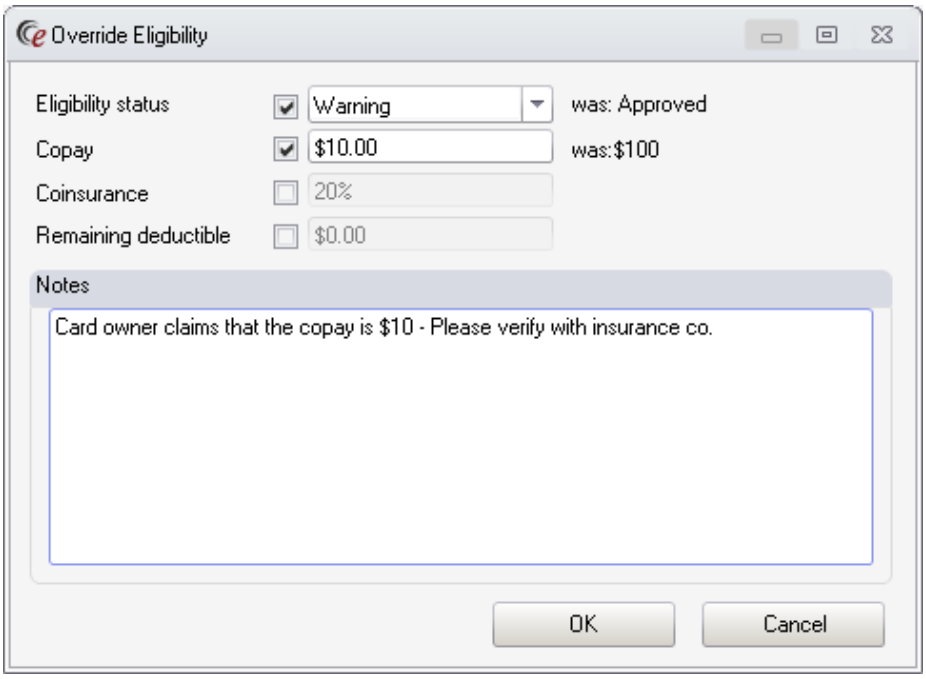

**Figure 1.15 – Override window**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

**Eligibility API Configuration:**

When requesting insurance eligibility we need to know the service type for the patient's visit. For example, is the patient coming in for Consultation (type '3') or a Mammogram (type 'CN') or a MRI (type '62')? For a full list of service types refer to:

https://www.eligibleapi.com/resources/service-codes.xml

A new lookup table called InsuranceServiceType has been created to house the Insurance Service Type Codes

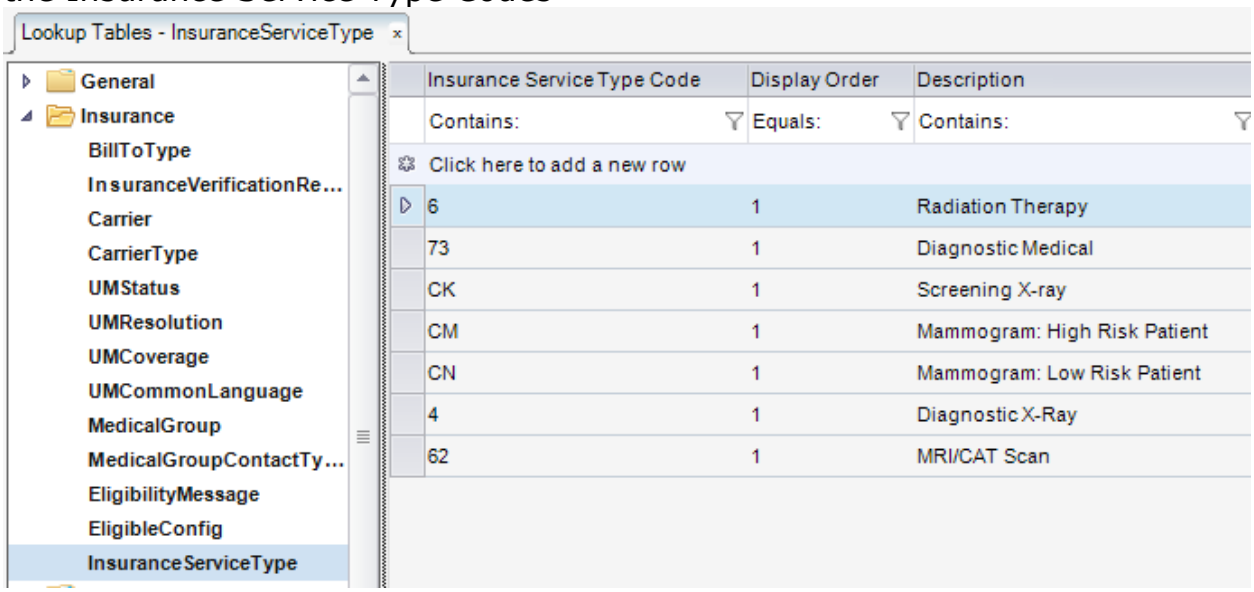

**Figure 1.16 – Insurance Service Type lookup table**

Service type codes are specified in two places:

1. ModalityType lookup
2. ProcedureCode lookup

Specifying a service type code at the modality type level makes it apply for all procedures scheduled on that type of modality, while the procedure code level will override the modality type's service type code.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

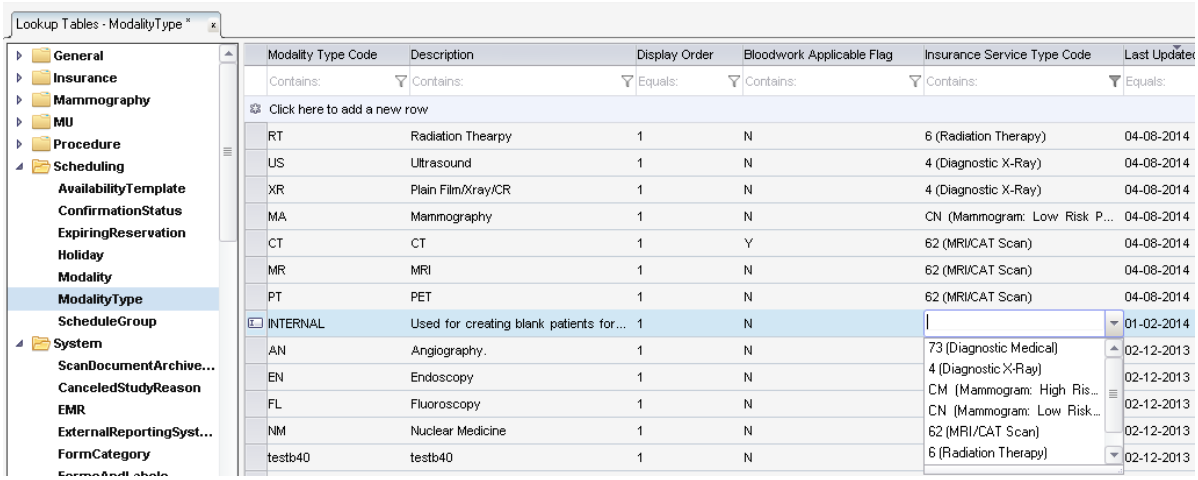

**Figure 1.17 – Modality Type – insurance service type code**

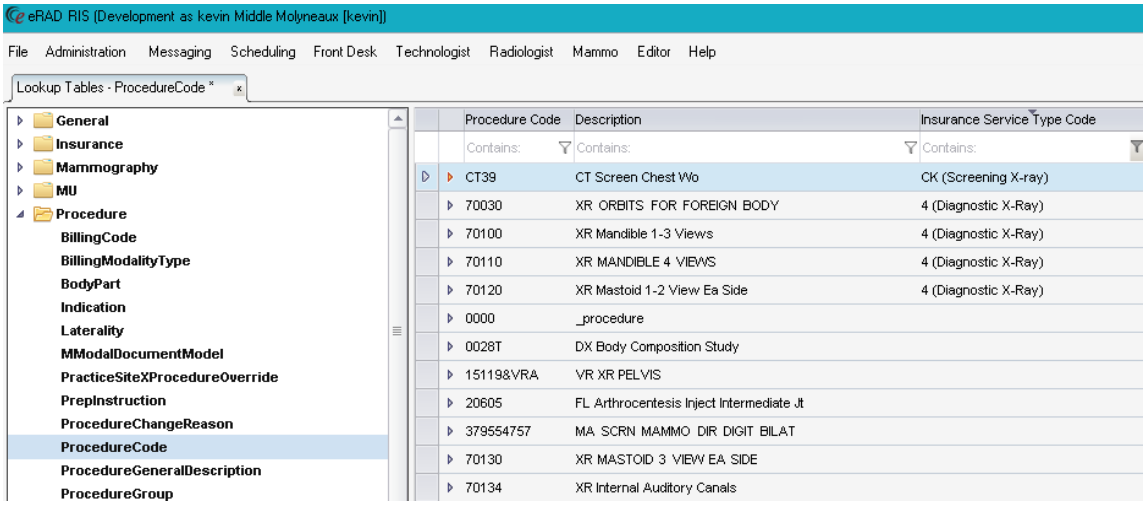

**Figure 1.18 – Procedure Code – insurance service type code**

Next we need to map carriers in RIS to payers in EligibleAPI. The entire list of eligible api payers is at:

https://www.eligibleapi.com/resources/payers/eligibility.xml

Some payers require enrollment, which can be completed at:

https://www.eligibleapi.com/dashboard/enrollment_npis

The mapping for RIS carrier to EligibleAPI Payer is done in the carrier lookup via the "Eligibility Payer ID" column as shown in the following:

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

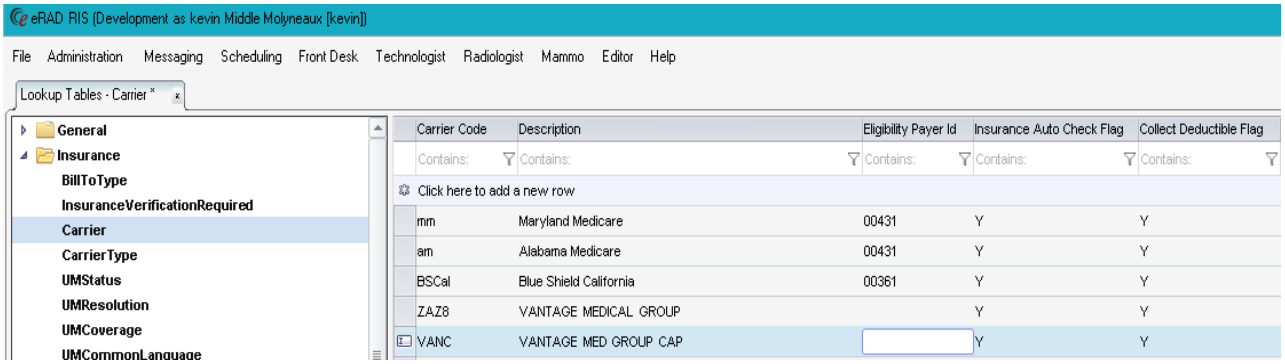

**Figure 1.19 – Carrier lookup with new columns**

The Carrier table also has configuration for "Insurance Auto Check Flag", when this value is Y we will check insurance as soon as we have enough information to perform the insurance check, otherwise, insurance checks will be disabled for this insurance carrier.

Finally, to enable Eligible API integration, we need to specify an NPI and Eligible API String for each site that will be Auto Insurance Eligibility enabled. If you specify a practice and omit the site, this setting will be used for all sites at the specified practice.

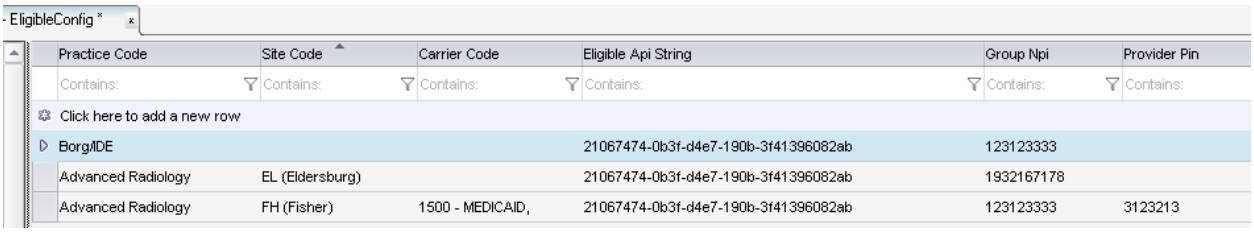

**Figure 1.20 – Eligible config lookup table**

The Eligible Config lookup (shown above) also allows you to specify an optional carrier code if for you want to use a NPI for a given carrier. If you specify a provider_pin you are required to also include a carrier_code. The provider_pin is for payers such as "California Medicaid", which require extra account verification. See the following website for more information:
http://www.dhcs.ca.gov/provgovpart/Pages/ProviderIdentificationNumber(PIN).aspx

Automatic insurance verification has the following access strings:

- Clinical.Insurance.Verify – controls access for re-verifying insurance
- Clinical.Insurance.Override - controls access to override Eligibility/Eligible API results

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

You can also control access to who can see the worklist eligibility flags via the following access strings:

- Flag.EligibilityApproved
- Flag.EligibilityDenied
- Flag.EligibilityError
- Flag.EligibilityInProgress
- Flag.EligibilityWarnings

**NPD Configuration:**

There are two lookup tables to edit for NPD integration. In the Organization lookup table you will need to map the following three fields: NPD client ID, NPD site code and the NPD hospital group

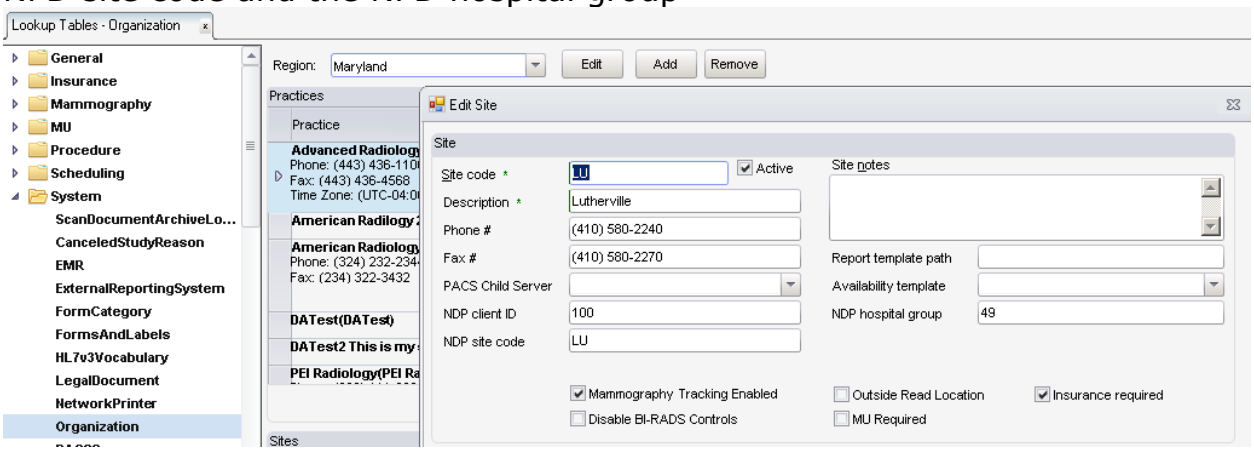

**Figure 1.20 – Site configuration for NPD**

In the Carrier lookup table you will either need the first 4 digits of the carrier code to equal the NPD's Insurance_co_number or you will need to populate the carrier table's "npd_insurance_co_number" field.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

**The table below shows the various Eligibility coverage status and error codes and how they are displayed to IVT.**

| Coverage Status / Error Code | ICON | IVT Workflow |
|---|---|---|
| Approved | Approved | Skips the IVT WL for Insurance Verification |
| First name and last name are different between INS and RIS | Warnings | Visit **will appear** in the IVT WL. Our staff will need to investigate and fix either the first or last name. |
| First name and birth date are different between INS and RIS | Warnings | Visit **will appear** in the IVT WL. Our staff will need to investigate and fix either the first name or DOB. |
| Last name and birth date are different between INS and RIS | Warnings | Visit **will appear** in the IVT WL. Our staff will need to investigate and fix either the last name or DOB. |
| Inactive | Denied | Visit **will appear** in the IVT WL. We will need to use a different insurance or change payment to Self-pay. |
| Not Covered | Denied | Visit **will appear** in the IVT WL. We will need to use a different insurance or change payment to Self-pay. |
| Not Covered due to DOS | Denied | Visit **will appear** in the IVT WL. We will need to use a different insurance, change the DOS or change payment to Self-pay. |
| "42", "41", HTTP TIMEOUT<br>Unable to Respond at Current Time<br>Authorization/Access Restrictions | Payer not responding | The item **will NOT appear** in IVT while we are actively retrying. In this case we are either unable to connect to the payer or the payer isn't responding.<br><br>We will re-try every 20 minutes until we receive a response. If the response is "Approved" it will skip the IVT worklist for Insurance Verification. If the response is "Denied", "Warning" or "Error" it will show in the IVT Worklist. |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

| | | |
|---|---|---|

**Table 1.1**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

**Management Reports:**
We will also develop reports for:

1. Response time performance with Eligible API by payer
2. Requests that failed by carrier and type of error
3. Average number of requests per encounter by site.
4. Insurances that didn't go through eligibility by payer

These management reports will highlight inefficiencies in system performance, the quality of our user entered data and identify populate carriers that haven't been properly configured for Eligible API integration.

The Carriers not using insurance eligibility is useful when examining payers that we should consider contacting Eligible API for a connection with the insurance company. This report shows the number of exams that have gone through our system with a carrier that has not been mapped. If the carrier has the attorney flag set to 'Y' then it will be excluded from this report.

The following reports added for B43.0.3 and are contained in a new directory called Insurance Eligibility.

**Carriers Not Using Insurance Eligibility management report**

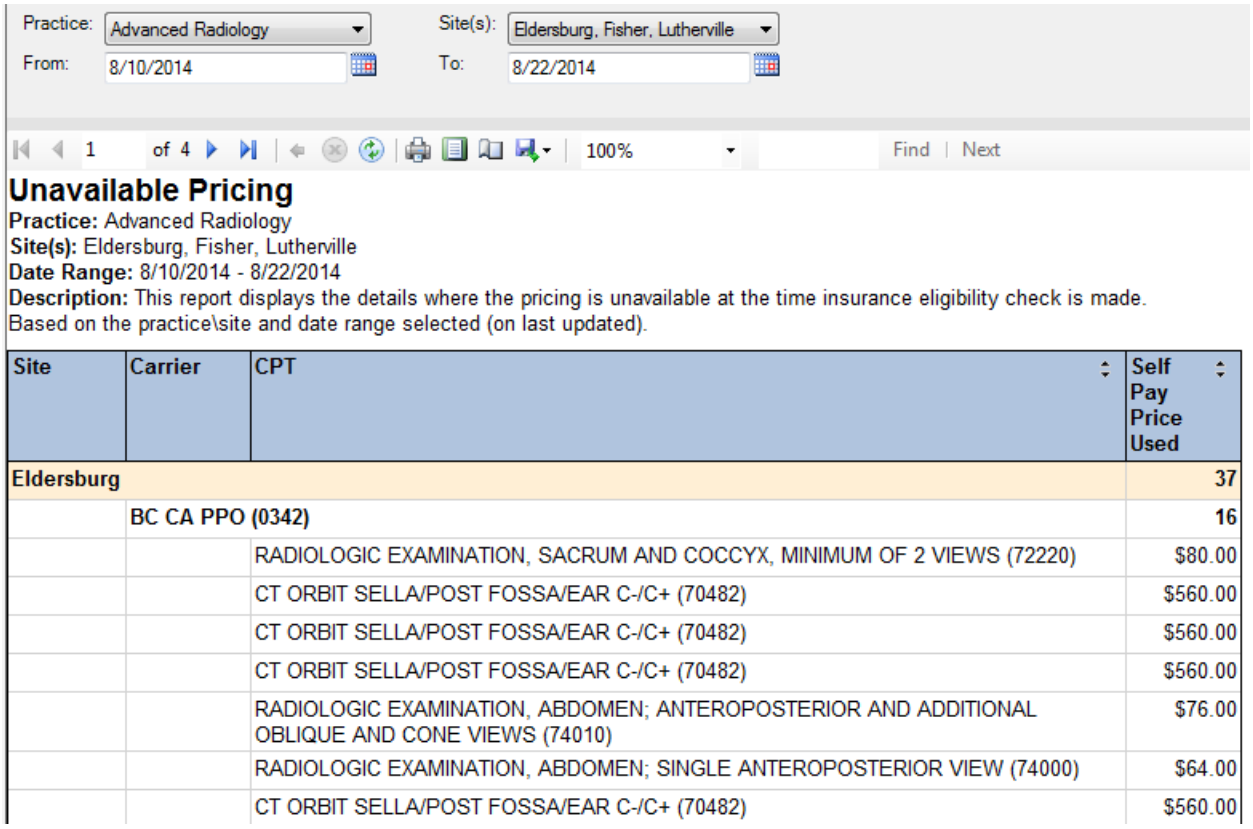
## Unavailable Pricing Management Report



Practice: Advanced Radiology  Site(s): Eldersburg, Fisher, Lutherville
From: 8/10/2014  To: 8/22/2014

1 of 4  100%  Find | Next

**Unavailable Pricing**

**Practice:** Advanced Radiology
**Site(s):** Eldersburg, Fisher, Lutherville
**Date Range:** 8/10/2014 - 8/22/2014
**Description:** This report displays the details where the pricing is unavailable at the time insurance eligibility check is made. Based on the practice\site and date range selected (on last updated).

| Site | Carrier | CPT | Self Pay Price Used |
|---|---|---|---|
| **Eldersburg** | | | **37** |
| | **BC CA PPO (0342)** | | **16** |
| | | RADIOLOGIC EXAMINATION, SACRUM AND COCCYX, MINIMUM OF 2 VIEWS (72220) | $80.00 |
| | | CT ORBIT SELLA/POST FOSSA/EAR C-/C+ (70482) | $560.00 |
| | | CT ORBIT SELLA/POST FOSSA/EAR C-/C+ (70482) | $560.00 |
| | | CT ORBIT SELLA/POST FOSSA/EAR C-/C+ (70482) | $560.00 |
| | | RADIOLOGIC EXAMINATION, ABDOMEN; ANTEROPOSTERIOR AND ADDITIONAL OBLIQUE AND CONE VIEWS (74010) | $76.00 |
| | | RADIOLOGIC EXAMINATION, ABDOMEN; SINGLE ANTEROPOSTERIOR VIEW (74000) | $64.00 |
| | | CT ORBIT SELLA/POST FOSSA/EAR C-/C+ (70482) | $560.00 |

## 2. Defects Resolved

| Redmine # | Tracker | Subject | Priority |
|---|---|---|---|
| 7406 | Bug | Hold codes - Studies that are changed to or from hold codes after scheduling but before completion of the exam will proceed to an incorrect final status. ie; ExamDone for Hold Codes and HoldCodeCompleted for non-hold codes | High |
| 7305 | Bug | DB view missing technologist flag | Normal |
| 7301 | Bug | Modality Closures are being applied to the wrong dates | Normal |

## 3. Changes to Configuration

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Access strings and User Group Permissions | Clinical.Insurance.Override | None | controls access to override Eligiblity/Eligible API results |
| Access strings and User Group Permissions | Clinical.Insurance.Reverify | None | Controls access to the Reverify button in the Manage Insurance groupbox |
| Access strings and User Group Permissions | Flag.EligibilityWarnings | Full | Controls access to the flag displayed on the work list's flag column for Eligibility Warning |
| Access strings and User Group Permissions | Flag.EligibilityApproved | Full | Controls access to the flag displayed on the work list's flag column for Eligibility Approved |
| Access strings and User Group Permissions | Flag.EligibilityDenied | Full | Controls access to the flag displayed on the work list's flag column for Eligibility Denied |
| Access strings and User Group Permissions | Flag.EligibilityError | Full | Controls access to the flag displayed on the work list's flag column for Eligibility Error |
| Access strings and User Group Permissions | Flag.EligibilityInProgress | Full | Controls access to the flag displayed on the work list's flag column for Eligibility In Progress |
| Access strings and User Group Permissions | Config.LookupEditor.InsuranceServiceType | None | Controls access to the lookup table InsuranceServiceType |
| Access strings and User Group Permissions | Config.LookupEditor.EligibleConfig | None | Controls access to the lookup table EligibleConfig |
| SystemConfig | InsuranceEligibleAPIString | | Verification account for billing. |
| SystemConfig | InsuranceReVerifyInterval | 10 | Determines how often, in days, we will re-verify patients insurance before the study is performed. Note: we will also re-verify on the day of |

The rRIS_Service_Updates also contains to subfolders:

A. Deploy folder contains
   a. Applicationsettings.config
   b. ReleaseVersion-connectionstrings.config
   c. rRISServices.exe.config
   d. services.config

B. XSL subfolder contains:
   a. Subfolder titled "Stylesheets" which contains:
      a. CDAToHTMLCompleteReport.xslt
      b. CDAToHTMLCompleteReportDark.xslt
      c. CDAToHTMLImpressionSection.xslt
      d. CDATorRIS.xslt
      e. CDAToTxt.xslt
      f. DocumentModelReport.xslt
      g. DocumentModelReportAsXml.xslt

   b. CDA Subfolder contains
      a. C-CDA.xsl
      b. eRadStylesheet.xsl
      c. generalTemplates.xsl
      d. header.xsl
      e. QRDA.xsl
      f. QrdaLevel3_Cypress2.4.0.xsl
      g. QrdaLevel3_ViewHtml.xsl
      h. sectionAdministeredMedications.xsl
      i. sectionAllergies.xsl
      j. sectionEncounters.xsl
      k. sectionFindings.xsl
      l. sectionFuncCogStatus.xsl
      m. sectionHospitalDischarge.xsl
      n. sectionImmunizations.xsl
      o. sectionInstructions.xsl
      p. sectionMedications.xsl
      q. sectionPlanOfCare.xsl
      r. sectionProblemList.xsl
      s. sectionProcedures.xsl
      t. sectionQRDAMeasures.xsl
      u. sectionQRDAPatientData.xsl
      v. sectionQRDAReporting.xsl

      z. sectionVitalSigns.xsl

3) SQL Folder contains:
   - B43.0.3.sql

4) **SSRSDeployment** folder contains 7 subfolders, a batch file for deploying the reports and a help file for deploying the reports.

   4.1. **Backups** folder is empty

   4.2. **Fonts** folder contains 4 files:
   4.1.1. FRE3OF9X
   4.1.2 FRE3OF9x_0
   4.1.3 FREE3OF9
   4.1.4 FREE3OF9_0

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

4.3. **ParentFolder** folder contains 7 subfolders
- 4.3.1. **Chair** folder contains 1 .rdl file
- 4.3.2. **Dashboards** folder contains 9 .rdl files
- 4.3.3. **Forms folder** contains sub folder and 2 .rdl files
  - 4.3.3.1. **SubReports** contains 10 .rdl files
- 4.3.4. **Management Reports** folder contains 9 sub folders, these subfolders contain the core management report files (.rdl) to be deployed.
- 4.3.5. **Marketing** folder contains 5 .rdl files
- 4.3.6. **Order Templates** contains 1 file (Default.rdl)
- 4.3.7. **SubReports** contains 12.rdl files
- 4.3.8. **Verbal Order** contains 4 .rdl files

4.4. **Scripts** folder contains 9 .rss files. These files are used with the DeployReports.bat utility to deploy the reports.

4.5. **Upload Custom Mangement Reports** is empty

4.6. **Upload Diagnostic Templates** folder contains 1 subfolder
- 4.6.1. **SubReports** folder is empty

4.7. **Upload Forms** folder contains 1 subfolder.
- 4.7.1. **SubReports** folder is empty

4.8. **eRADDeployReports.bat -** batch file for deploying reports to report server for eRAD customers

4.9. **RadnetDeployReports.bat** - batch file for deploying reports to report sever for RadNet

4.10. **Adding reports for Deployment.docx** document to assist in added a report to the install process when deploying the reports.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 6. Intended Audience

This document is created by the RIS Development team for the RadNet/eRAD RIS Implementation teams.

## 7. Who is affected

Build 43 installs. Server updates are not cumulative. This server update must be applied to 43.0.2

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 8. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|
| 41.1 | - | 1.3.41.20918(3GB) | 1.3.41.20791 | 1.3.41.20918 | 1.3.41.20739 | GUI.zip, Core install, Web Service and DB updates, Help files |

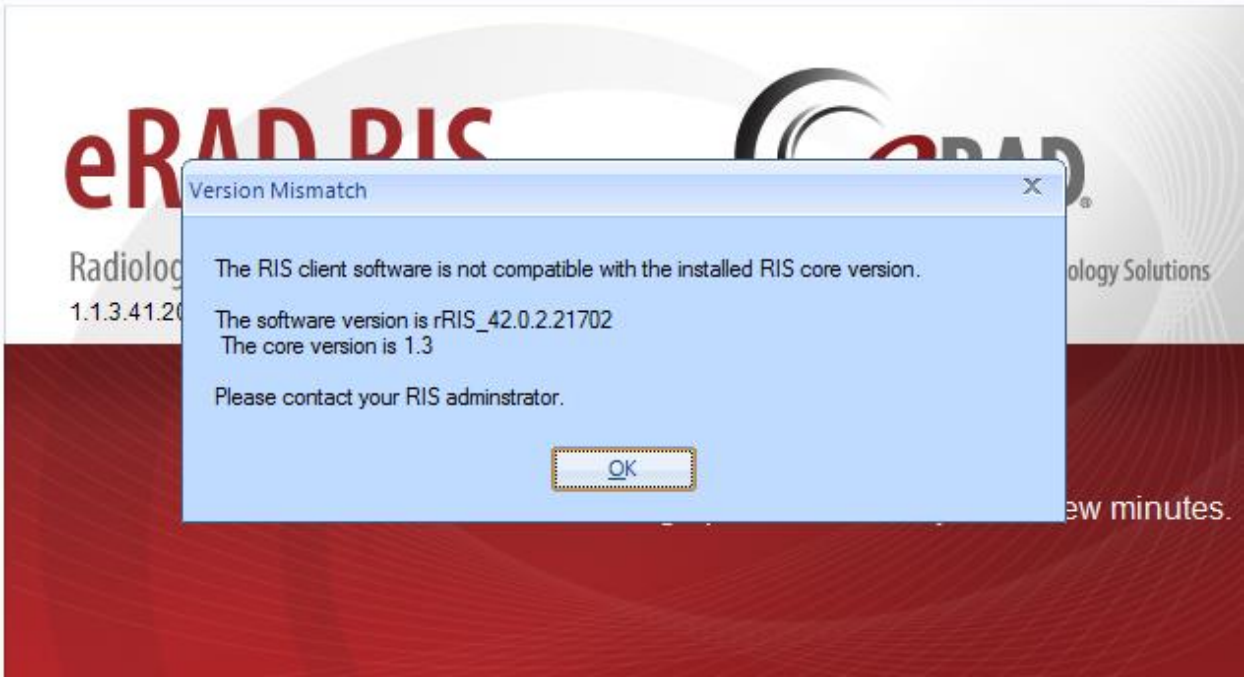
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 9. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.43.0.3.24298.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_43.0..3.24298→ rRIS_1.3.43.0.3. 24298
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

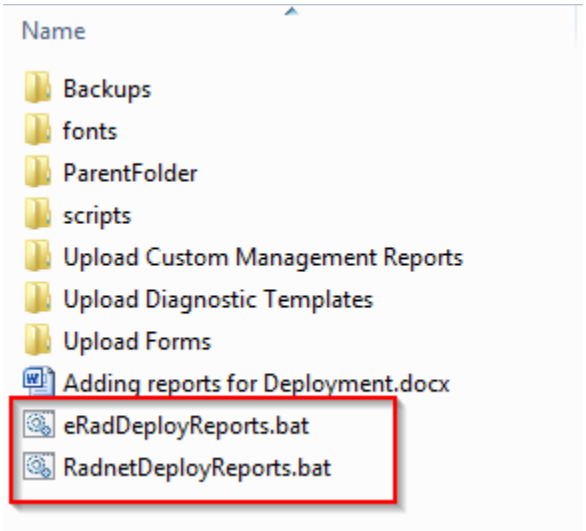
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
*rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   **Restart each service.**

3) Run the B43.0.3.sql file against the eRAD RIS database instance.

4) Management Reports Deployment / SSRSDeployment - There are 2 utilities called **RadnetDeployReports.bat** and **eRadDeployReports.bat** that will deploy the reports to a SQL Server Report Service. This utility is found in the **Build X\SSRSDeployment** folder. Below are the steps on how to use this utility. The purpose for the 2 .bat files are the RadNet one deploys a few extra reports specific to RadNet.



1. Launch the DeployReports.bat file.
2. ***Enter report server name [default:<computer_name>]:***
   a. A script will run against the server and return a list of all the root folders on that report server
   **By Default this will pull the computer_name environmental variable from the machine running the script. I suggest running this from the report server for performance anyway.
3. **Enter root folder to deploy reports [default: production]**:

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

a. This will create a new root if the name you give doesn't exist, or it will simply publish below the root of the folder if it does already exist. We typically will use "production" for the installation folder. Note: The script forces the root name to be lowercase.
**Default is suggested to be production, but you may need to change it based on the environment you are deploying to. Ie: testserver might be called something else.

4. **Do you wish to create a backup of the existing reports?**:
   a. This will create a file backup of the report directory specified in the same directory deploy.bat is being run from inside a folder called Backups where it will create a folder based on datetime of backup. Ie: 04172014_110605 (MMDDYYYY_HHMISS).
5. **Do you wish to deploy core management reports**?
   a. If you enter "y", it will redeploy the core management reports
6. **Do you wish to upload Forms**?

a. If you enter "y", the script will deploy any .rdl files into the installations Forms folder that you have previously saved into the script folder called "Upload Forms" including the folder below it called SubReports.

7. **Do you wish to upload Diagnostic Templates**?

a. If you enter "y", the script will deploy any .rdl files into the installations Diagnostic Templates folder that you have previously saved into the script folder called "Upload Diagnostic Templates" including the folder below it called SubReports.

8. **Do you wish to upload Custom Management Reports?**

a. Entering "Y" will copy any .rdl files you've copied under the deployment folder called Upload Custom Management Reports onto the server under Management Reports\Custom\Uploads directory

9. **Do you wish to create a datasource**?
   a. If you select "y" you will get prompted for more information about the datasource you wish to create. You only need to create a datasource, if this is a new installation. No need to do this if you are upgrading an existing installation. The datasource gets created in the root of the folder from step 3. The datasource will be called RISDataSource.

If you chose to create a datasource, the following steps will be requested to complete the connection string.

1. **Enter database server name**:
   a. This is the name of the physical database server
   ex. MYSERVER-1
2. **Enter database name**:
   a. This is the name of the database on the database server
   ex. rRIS_Site

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

3. **Enter report schema user name**: ex. The account that the datasource will use to connect to the database ie: SA. (For security reasons "sa" is not recommended)
4. **Enter report schema password**:

   The results of deployment will be written to log.txt in the same folder as the DeployReports.bat file.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# Server Update

For eRAD RIS
Version 2.0
Build 43
Update 43.0.3.1

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

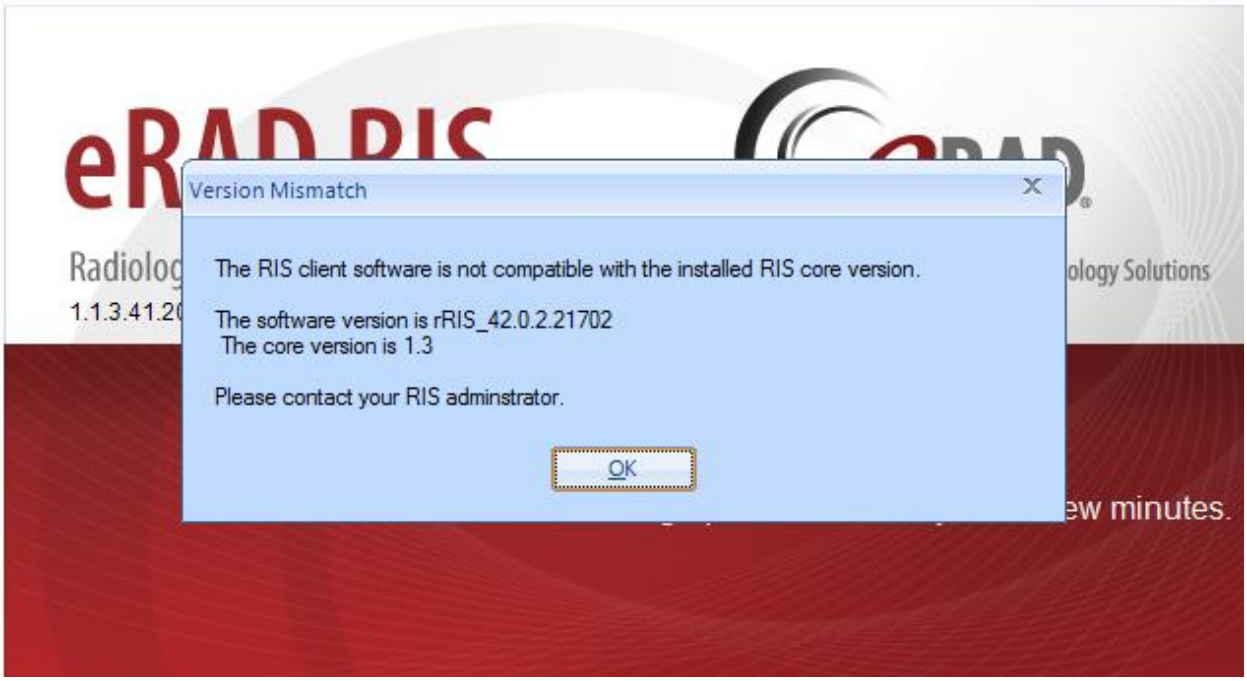
## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.43.0.3.24450.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_43.0..3.24450→ rRIS_1.3.43.0.3. 24450
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Run the B43.0.3.1.sql file against the eRAD RIS database instance.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 1. Defects Resolved

| Redmine # | Tracker | Subject | Priority |
|---|---|---|---|
| 6912 | Bug | EMR patient Merge. | Urgent |
| 7089 | Bug | HL7 merge allows the destination and source patient to be the same | Urgent |
| 7438 | Bug | Prior Report button no longer visible on the schedule order screen for a mammo follow-up order | Urgent |
| 7008 | Bug | IVT WL Counts are off when filters are added | High |
| 7140 | Bug | Message contents sent from portal are not kept | High |
| 7208 | Bug | Chair selection dialog opens with incorrect selection options and on every launch of pending dictation worklist - resulting in duplicate dialogs possible. | High |
| 7277 | Bug | Cannot access a disposed object. Object Name: RadGridView | High |
| 7283 | Bug | IVT Information entered outside of the IVT screen does not save. | High |
| 7328 | Bug | Personnel - Internal Notes field not displaying | High |
| 6930 | Bug | EMR Patient Merge ( HL7 from eRAD) | Normal |
| 6937 | Bug | EMR merge issue - both alternative IDs remain active | Normal |
| 6971 | Bug | EMR merge erad patient into EMR patient | Normal |
| 7007 | Bug | EMR patient merge ( remains on merge request WL) | Normal |
| 7041 | Bug | patient portal - no guarantee that the patient is presented with updated terms for a practice | Normal |
| 7049 | Bug | Error manually changing status | Normal |
| 7063 | Bug | Patient Portal - Visit summary page - there is text overwriting text | Normal |
| 7167 | Bug | Mgmt Report - Mammography Missing Data | Normal |
| 7172 | Bug | Reconcile Form - Issue with layout of Order and Scheduling Notes | Normal |
| 7179 | Bug | County/ZIP - possible wrong county selecting automatically. County drop down changing when nulling out ZIP textbox | Normal |
| 7181 | Bug | County/ZIP - county getting saved with data but dialog doesn't show one selected | Normal |
| 7202 | Bug | ICD - minimized dictation mode needs a smaller ICD icon | Normal |
| 7223 | Bug | CD Import- practice is assigned using the OrgManager instead of the selected site's practice | Normal |
| 7246 | Bug | setting up user for domain authentication - RIS still prompts for | Normal |

3) SQL Folder contains:
   - B43.0.4.sql

4) **SSRSDeployment** folder contains 7 subfolders, a batch file for deploying the reports and a help file for deploying the reports.

   4.1. **Backups** folder is empty

   4.2. **Fonts** folder contains 4 files:
   4.1.1. FRE3OF9X
   4.1.2 FRE3OF9x_0
   4.1.3 FREE3OF9
   4.1.4 FREE3OF9_0

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

4.3. **ParentFolder** folder contains 7 subfolders
- 4.3.1. **Chair** folder contains 1 .rdl file
- 4.3.2. **Dashboards** folder contains 9 .rdl files
- 4.3.3. **Forms folder** contains sub folder and 2 .rdl files
  - 4.3.3.1. **SubReports** contains 10 .rdl files
- 4.3.4. **Management Reports** folder contains 9 sub folders, these subfolders contain the core management report files (.rdl) to be deployed.
- 4.3.5. **Marketing** folder contains 5 .rdl files
- 4.3.6. **Order Templates** contains 1 file (Default.rdl)
- 4.3.7. **SubReports** contains 12.rdl files
- 4.3.8. **Verbal Order** contains 4 .rdl files

4.4. **Scripts** folder contains 9 .rss files. These files are used with the DeployReports.bat utility to deploy the reports.

4.5. **Upload Custom Mangement Reports** is empty

4.6. **Upload Diagnostic Templates** folder contains 1 subfolder
- 4.6.1. **SubReports** folder is empty

4.7. **Upload Forms** folder contains 1 subfolder.
- 4.7.1. **SubReports** folder is empty

4.8. **eRADDeployReports.bat -** batch file for deploying reports to report server for eRAD customers

4.9. **RadnetDeployReports.bat** - batch file for deploying reports to report sever for RadNet

4.10. **Adding reports for Deployment.docx** document to assist in added a report to the install process when deploying the reports.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 5. Intended Audience

This document is created by the RIS Development team for the RadNet/eRAD RIS Implementation teams.

## 6. Who is affected

Build 43 installs. Server updates are not cumulative. This server update must be applied to 43.0.3.1

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 7. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|
| 42 | - | 2.42.0.0.21261(3GB) | 2.42.0.0.21261 | 2.42.0.0.21261 | 2.42.0.0.21187 | Full version release |
| 42 | 1 | 2.42.0.1.21597 | 2.42.0.0.21261 | 2.42.0.1.21597 | 2.42.0.0.21187 | GUI and Web Service updates |
| 42 | 2 | 2.42.0.2.21702 | 2.42.0.0.21261 | 2.42.0.2.21702 | 2.42.0.0.21187 | GUI and Web Service updates |
| 42 | 3 | 2.42.0.2.21806 | 2.42.0.0.21261 | 2.42.0.2.21806 | 2.42.0.0.21187 | GUI and Web Service updates |
| 42 | 4 | 2.42.0.2.21862 | 2.42.0.0.21261 | 2.42.0.2.21806 | 2.42.0.4.21870 | GUI and Database updates |
| 42 | 5 | 2.42.0.5.21924 | 2.42.0.0.21261 | 2.42.0.2.21806 | 2.42.0.4.21870 | GUI |
| 42 | 6 | 2.42.0.5.22009 | 2.42.0.0.21261 | 2.42.0.5.22009 | 2.42.0.4.21870 | GUI and Web Service updates |
| 42 | 7 | 2.42.0.7.22090 | 2.42.0.0.21261 | 2.42.0.6.22009 | 2.42.0.4.21870 | GUI.zip updates |
| 42 | 8 | 2.42.0.7.22090 | 2.42.0.7.22150 | 2.42.0.6.22009 | 2.42.0.4.21870 | Web Service updates |
| 42 | 9 | 2.42.0.9.22203 | 2.42.0.0.21261 | 2.42.0.9.22203 | 2.42.0.4.21870 | GUI and Web Service updates |
| 42 | 9.1 | 2.42.0.9.22203 | 2.42.0.0.21261 | 2.42.0.9.22203 | 2.42.0.4.21870 | Web Service updates |
| 42 | 10 | 2.42.0.10.22232 | 2.42.0.0.21261 | 2.42.0.9.22203 | 2.42.0.4.21870 | GUI.zip |
| 42 | 10.1 | 2.42.0.10.22420 | 2.42.0.0.21261 | 2.42.0.9.22203 | 2.42.0.4.21870 | GUI.zip updates |

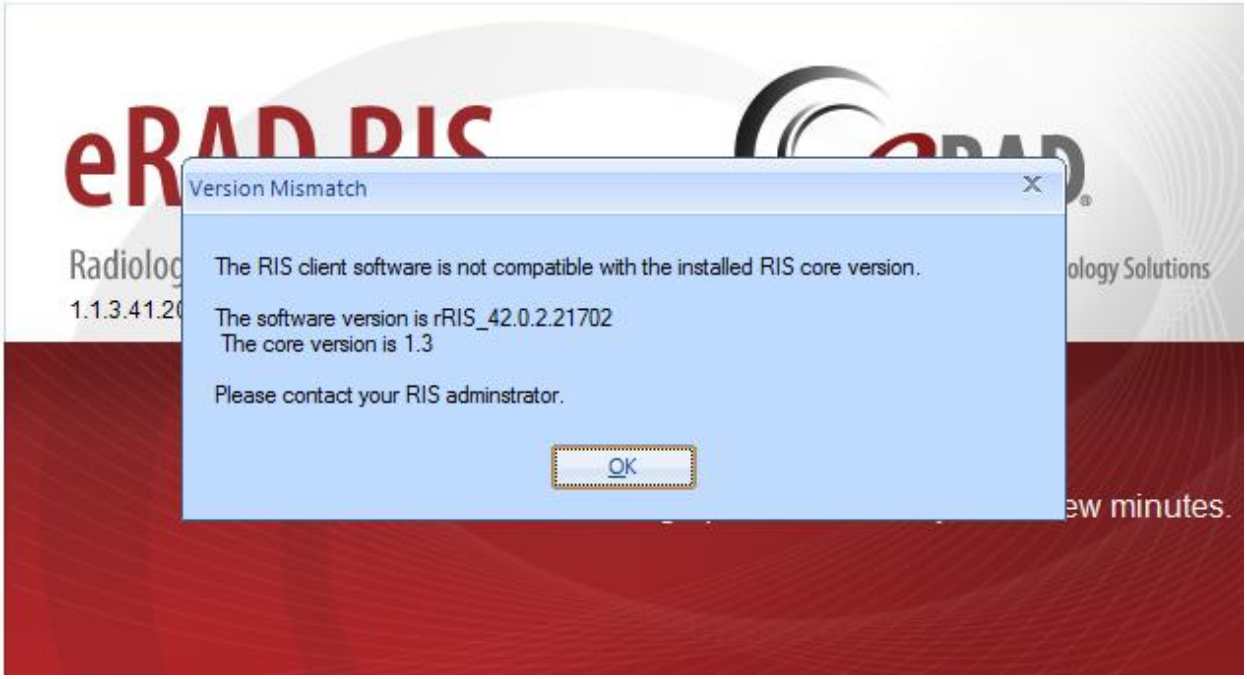
## 8. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.43.0.3.24447.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_43.0..3.24447→ rRIS_1.3.43.0.3. 24447
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

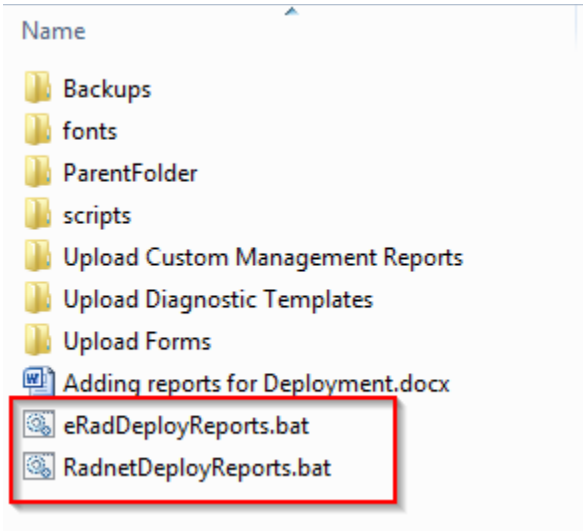
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
*rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   **Restart each service.**

3) Run the B43.0.4.sql file against the eRAD RIS database instance.

4) Management Reports Deployment / SSRSDeployment - There are 2 utilities called **RadnetDeployReports.bat** and **eRadDeployReports.bat** that will deploy the reports to a SQL Server Report Service. This utility is found in the **Build X\SSRSDeployment** folder. Below are the steps on how to use this utility. The purpose for the 2 .bat files are the RadNet one deploys a few extra reports specific to RadNet.



1. Launch the DeployReports.bat file.
2. ***Enter report server name [default:<computer_name>]:***
   a. A script will run against the server and return a list of all the root folders on that report server
   **By Default this will pull the computer_name environmental variable from the machine running the script. I suggest running this from the report server for performance anyway.
3. **Enter root folder to deploy reports [default: production]**:

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

a. This will create a new root if the name you give doesn't exist, or it will simply publish below the root of the folder if it does already exist. We typically will use "production" for the installation folder. Note: The script forces the root name to be lowercase.
**Default is suggested to be production, but you may need to change it based on the environment you are deploying to. Ie: testserver might be called something else.

4. **Do you wish to create a backup of the existing reports?**:
   a. This will create a file backup of the report directory specified in the same directory deploy.bat is being run from inside a folder called Backups where it will create a folder based on datetime of backup. Ie: 04172014_110605 (MMDDYYYY_HHMISS).
5. **Do you wish to deploy core management reports**?
   a. If you enter "y", it will redeploy the core management reports
6. **Do you wish to upload Forms**?

a. If you enter "y", the script will deploy any .rdl files into the installations Forms folder that you have previously saved into the script folder called "Upload Forms" including the folder below it called SubReports.

7. **Do you wish to upload Diagnostic Templates**?

a. If you enter "y", the script will deploy any .rdl files into the installations Diagnostic Templates folder that you have previously saved into the script folder called "Upload Diagnostic Templates" including the folder below it called SubReports.

8. **Do you wish to upload Custom Management Reports?**

a. Entering "Y" will copy any .rdl files you've copied under the deployment folder called Upload Custom Management Reports onto the server under Management Reports\Custom\Uploads directory

9. **Do you wish to create a datasource**?
   a. If you select "y" you will get prompted for more information about the datasource you wish to create. You only need to create a datasource, if this is a new installation. No need to do this if you are upgrading an existing installation. The datasource gets created in the root of the folder from step 3. The datasource will be called RISDataSource.

If you chose to create a datasource, the following steps will be requested to complete the connection string.

1. **Enter database server name**:
   a. This is the name of the physical database server
   ex. MYSERVER-1
2. **Enter database name**:
   a. This is the name of the database on the database server
   ex. rRIS_Site

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

3. **Enter report schema user name**: ex. The account that the datasource will use to connect to the database ie: SA. (For security reasons "sa" is not recommended)
4. **Enter report schema password**:

   The results of deployment will be written to log.txt in the same folder as the DeployReports.bat file.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# Server Update

For eRAD RIS
Version 2.0
Build 43
Update 43.0.5

# 1. New Features

## New Alert Configuration Values

Two new alert generators have been added to the AlertConfiguration lookup table.

- InactiveReferringOrAddress – If the referring physician associated with the study has become inactive or the "visited at" address has become inactive in the system since the order was created the user will receive an alert from the Schedule Order, Registration and IVT windows.

- InacticeCCPhysicianOrAddress - If the CC physician associated with the study has become inactive or the "visited at" address has become inactive in the system since the order was created the user will receive an alert from the Schedule Order, Registration and IVT windows.

## Configurable IVT option for Self-pay

A new system configuration setting of "**SelfPayAppearOnIVTWL**" with a default value of False has been added to control if a study created with Billing Method of Self-Pay has been selected on the Order tab. When set to false the study will be as before and will not appear on the IVT work list. With a value of True, the study will now appear on the IVT work list.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Document Distribution WL Context Menu

The context menu from the Distribution WL and the Distribution History by Date WL now have the option of Patient Folder.

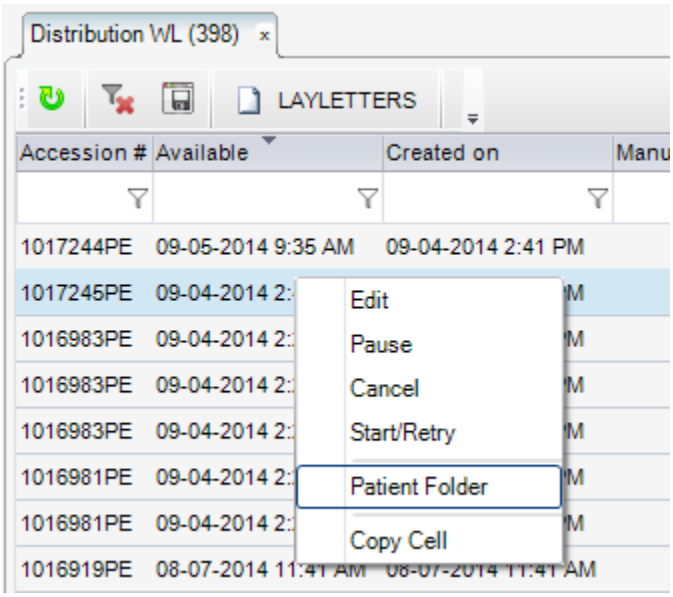

**Figure 1.1 – Patient folder context menu added to Distribution WL's**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Changes to Configuration

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| SystemConfig | SelfPayAppearOnIVTWL | False | Determines if Self-Pay insurance bypasses IVT rules (false) or appear on the IVT work list (true) Possible values are true and false |
| AccessString and UserGroup Permissions | Config.LookupEditor.EligibilityMessage | None | Controls access to the EligibilityMessage lookup table. |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 3. Defects Resolved

| Redmine # | Tracker | Subject | Priority |
|---|---|---|---|
| 7474 | Bug | Insurance Eligibility - Default value for eligibility_intervention_required_flag was incorrect | Normal |
| 7465 | Bug | Stored procedure should return indicator that the user is inactive if the parameter IsInactive is passed to it. | Normal |
| 7463 | Bug | Insurance Eligibility - order saved with order filler site for eligibility doesn't perform eligibility check. | Normal |
| 7462 | Bug | Insurance Eligibility - Self pay amount to collect is not calculating | Normal |
| 7434 | Bug | Replacement MRNs for deleted alternate MRNs are visible in patient search results | Normal |
| 7429 | Bug | Cannot create internal ID for external patient (linked) | Urgent |
| 7426 | Bug | Document distribution jobs created with 'PRINTER NOT FOUND' message do not go to error status. | Normal |
| 7414 | Bug | automatically fail distribution jobs that are attached to inactive addresses. | Normal |
| 7413 | Bug | inactive referring addresses on active studies | Normal |
| 7396 | Bug | EligibilityMessage lookup requires access string | Normal |
| 7388 | Bug | IVT - Self pays are falling to the IVT worklist. | Normal |
| 7383 | Bug | Mgt Reports - Technologist Activity by Modality - the format of the values in the dropdown for the technologist is not the same as user dropdowns in other reports. | Normal |
| 7377 | Feature | Patient folder context menu option on Distribution worklists | Normal |
| 7374 | Bug | Indication grids on tech screen do not take mutiple studies into account | High |
| 7361 | Bug | Patient Search - search a second time in new appointment window when first patient has patient portals documents | Normal |
| 7355 | Bug | Patient Search second time from Walk-in can throw error | Normal |
| 7343 | Bug | Unable to add ICD codes to a second addendum | Normal |
| 7341 | Bug | CD Burning - Introduce detection of images still uploading | High |
| 7317 | Bug | Wedge will only accept a POST message from Mirth with a size less than 2^18 bytes | High |

3) SQL Folder contains:
   - B43.0.5.sql

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 6. Intended Audience

This document is created by the RIS Development team for the RadNet/eRAD RIS Implementation teams.

## 7. Who is affected

Build 43 installs. Server updates are not cumulative. This server update must be applied to 43.0.4

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 8. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|
| 42 | - | 2.42.0.0.21261(3GB) | 2.42.0.0.21261 | 2.42.0.0.21261 | 2.42.0.0.21187 | Full version release |
| 42 | 1 | 2.42.0.1.21597 | 2.42.0.0.21261 | 2.42.0.1.21597 | 2.42.0.0.21187 | GUI and Web Service updates |
| 42 | 2 | 2.42.0.2.21702 | 2.42.0.0.21261 | 2.42.0.2.21702 | 2.42.0.0.21187 | GUI and Web Service updates |
| 42 | 3 | 2.42.0.2.21806 | 2.42.0.0.21261 | 2.42.0.2.21806 | 2.42.0.0.21187 | GUI and Web Service updates |

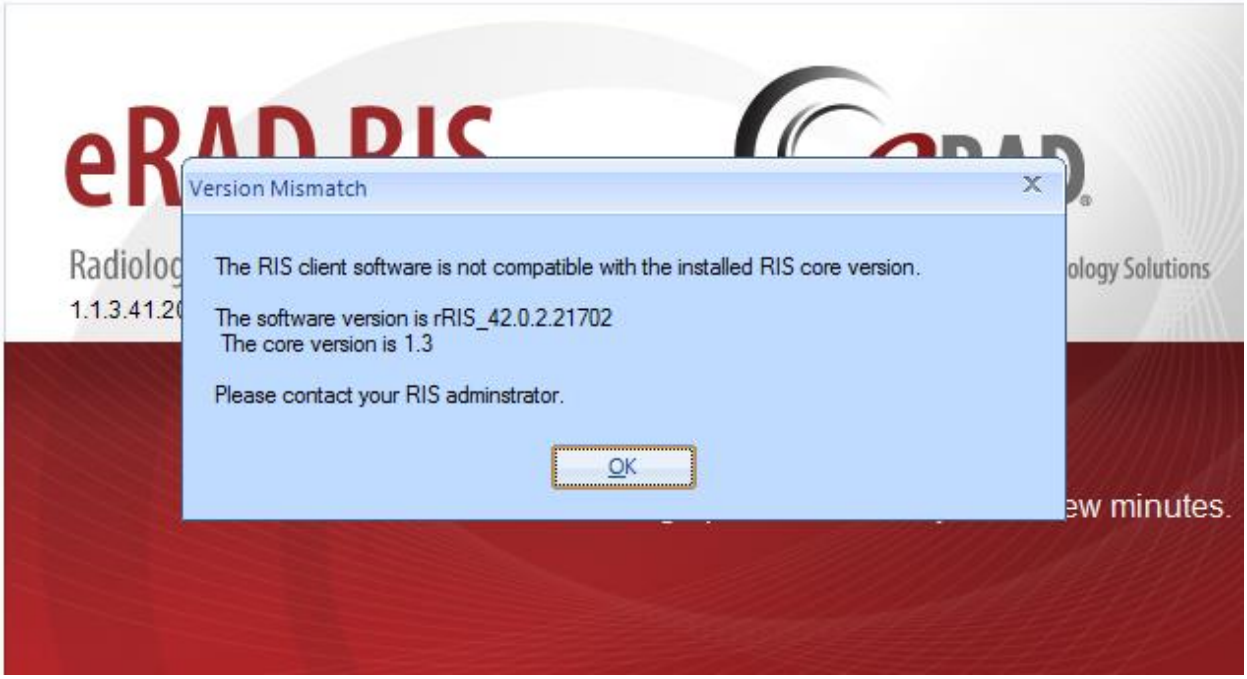
## 9. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.43.0.3.24632.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_43.0..3.24632→ rRIS_1.3.43.0.3. 24632
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   **Restart each service.**

3) Run the B43.0.5.sql file against the eRAD RIS database instance.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 1. New Features

### Relevancy Based on Laterality

A new system configuration setting titled "**LateralitiesThatAreNotRelevant**" has been added in 43.0.6 to determine relevant studies based on their laterality. The value field is a comma separated list of laterality codes. The default values for this setting are L,R. The user can also specify NULL, which would be used in the case of a study that doesn't have a laterality specified.

The values entered (with the exception of NULL) must match the values in the Laterality lookup table. For example if the values in the Laterality lookup are not L or R, but instead Left and Right, the values entered for the setting would be Left,Right.

### Help About Window Contact Info Auto Sizing

There is a system configuration setting titled "**HelpContactInfo**" that allows for contact information to be displayed on the Help About window. Previous to this build, if the contact information entered was larger than the field allowed, the text would not be displayed. Now the Help About screen will expand (auto size) based on the content entered.

If the data entered it to be displayed on multiple lines the keyboard combination of Ctrl + Enter will create a new row. The field in the

### Insurance Eligibility Co-pay to be Highest Service Type

When multiple procedures are specified prefer the CT service type based on the InsruanceServiceType table's display order. Service types with lower display orders will be preferred.

Please check the InsuranceServiceType lookup table and ensure that Insurance Service Type Code of 62 – MRI/CAT Scan is set to a lower display order number than Insurance Service Type Code of 4 – Diagnostic X-Ray

Example: MRI/CAT Scan has a display order of 1, then Diagnostic X-Ray will have a display order of 2.

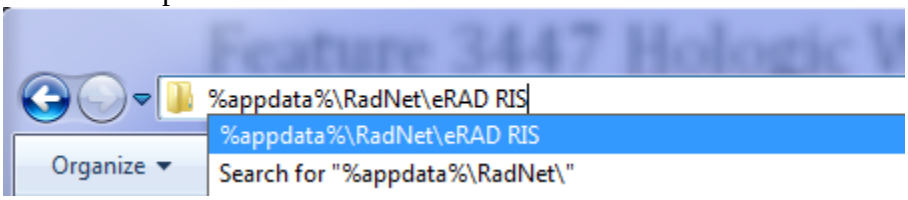
## Hologic Integration

This integration is very similar to PACS integration, but differs in how we configure the RIS to communicate to the image viewer. In the PACS integrations the PACS server settings are configured in the PACS Server lookup table and are associated to an entity within the organization structure. Unless overridden, every workstation in the practice will use that PACS server information to launch images.

## Configuration:

For Hologic integration, each RIS workstation will be set up to use an adjacent Hologic workstation. This means that instead of having one PACS server configured in a lookup table, the settings need to be made on each workstation that will integrate with Hologic. No entry is required for Hologic in the PACS Server lookup.

The settings for the Hologic integration are contained within a file called HologicConfig.xml that is located in the application data directory of eRad RIS. The best way to find where this should go is to open Windows Explorer and type *%appdata% \RadNet\eRAD RIS* into the address text box at the top.



If this file exists then RIS will make Hologic integration available. Since this directory is up a level from where the RIS client is installed the file will not be pushed out automatically nor will it be overwritten. This is to avoid having Hologic integration set up on every workstation even if it is not desired as well as to not overwrite any configuration that has been modified. A template file called HologicConfigTemplate.xml is contained within the RIS package and will be pulled down on an update of the RIS client into the same directory as the RIS executable. This file can be copied to the appropriate directory, renamed to HologicConfig.xml and have its contents changed to the correct settings. The file looks like this:

```
<configuration>
 <configSections>
  <section name="APPLINKER_PROPERTY_DEFINITION" type="a" />
  <section name="DEVICE" type="b" />
 </configSections>
 <APPLINKER_PROPERTY_DEFINITION>
  <NAME>Hologic Bridge</NAME>
  <IP_ADDRESS>ip_of_Hologic_workstation</IP_ADDRESS>
  <HOLOGIC_AS_PORT>5100</HOLOGIC_AS_PORT>
 </APPLINKER_PROPERTY_DEFINITION>
 <DEVICE name="RIS">
  <COMM type="TCPIP">
   <IP_ADDRESS>ip_of_RIS_workstation</IP_ADDRESS>
   <PORT_NUMBER>5102</PORT_NUMBER>
   <Encryption>XOrEncryption</Encryption>
```

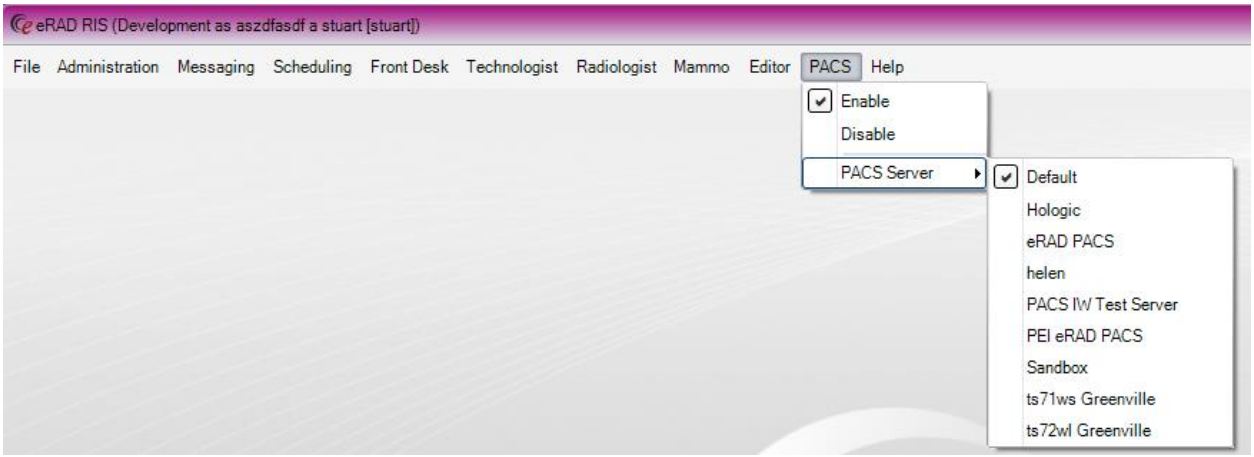
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

```
  </COMM>
 </DEVICE>
</configuration>
```

The important pieces of this are the ip addresses and ports of the Hologic workstation and of the RIS workstation. **Use of localhost or 127.0.0.1 will not work**. Matching changes need to be made on the Hologic workstation to define an incoming connection from a device named *RIS* communicating using that IP and port.

## Activation

Hologic integration does not take effect initially when it is available. This is to allow radiologists who also use another PACS to only use Hologic when they are reading mammography studies. A new submenu has been added to the PACS menu on the main RIS menu bar to temporarily override the PACS integration The PACS Server menu option is controlled by a new access string titled "**PACSIntegration.Override**" that has a default of None. This setting does not persist across restarts of the RIS application. It is populated with items for Default, Hologic (if it is available), and one entry for each of the PACS servers defined in the PACS Server lookup table.



It is recommended that the user close all tabs prior to selecting Hologic or any other item in this menu. This is to avoid confusion between tabs that were opened and associated to an eRad PACS session attempting to close images from Hologic for example. After selecting Hologic from this menu images will be opened and closed from the Hologic workstation defined in the HologicConfig.xml.

## Use

The RIS attempts to log in to the workstation when the user first tries to open images. Upon successfully logging in the images are opened. If login fails the user will be presented with a login dialog. If no connection can be made to AppSync then the login fails and the integration is disabled. It can be re-enabled from the PACS menu.

After the connection has been made and the user logged in, the images will open upon the user opening a reporting window such as the dictation window or the signature window (in this case

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

they need to hit the View Images button). When the user closes the form the images will close on the workstation.
Switching between tabs will keep the images on the workstation in sync. Closing a tab and activating another integrated tab will also cause the appropriate images to be displayed. The View Images menu option from the Patient folder is also supported.

## Limitations

The integration with Hologic is done purely on MRN. This means that the images loaded will be determined by what is on the Hologic workstation. The RIS will receive a success or failure message in response to an Open call but has no way to determine what studies actually opened. This means that the Radiologist's Patient Folder will not show any studies other than the current as loaded. Even the current one is only assumed to have been loaded. There are also no relevant priors requested so the Hologic will be responsible for loading them.
In theory Hologic SecurView can provide notifications to the RIS about actions taken by the user directly within it. During testing with an actual workstation this did not work, possibly due to misconfiguration. Testing with the AppSync simulator verified that the RIS responds to these messages with a NotSupported response, which seems appropriate as it does nothing with the information.
The PACSIntegration.log can be used to monitor the interactions between RIS and Hologic.

## 2. Changes to Configuration

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| SystemConfig | LateralitiesThatAreNotRelevant | L,R | Comma separated list of laterality codes defaulted to: L,R the user can also specify NULL which would be when there is no laterality specified. In the case of L,R,NULL a left arm would only match with a Left and Bilateral and would not match if the other study was Right or an unspecified laterality. |
| AccessString and UserGroup Permissions | PACSIntegration.Override | None | Controls access to the Menu option of PACS Server under the PACS menu. Allows the user to temporarily override the PACS Server from which to launch images. |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 3. Defects Resolved

| Redmine # | Tracker | Subject | Priority |
|---|---|---|---|
| 7543 | Bug | Insurance Eligibility - c_study_item_certification.cost column is a number vs smallmoney | Urgent |
| 7515 | Bug | Insurance eligibility - causes an unexpected error when you try and open an order that has missing information. | Urgent |
| 3447 | Feature | RadNet - Hologix integration | Urgent |
| 7534 | Bug | Insurance Eligibility Pilot - Overriding an exam in the IVT screen does not remove it from the WL. | High |
| 7510 | Bug | Insurance Eligibility Pilot - Patient with insurance should never be charged for specific CPT | High |
| 7504 | Bug | Ins Eligibility - Multiple Insurance carriers - when verification completes at different times the eligibility shield is not refreshing, hour glass (in progress) icon stays on the eligibility shield for the carrier(s) that didn't completed last. | High |
| 7491 | Bug | booking locks not released when opening reschedule | High |
| 7251 | Bug | Cannot reschedule patients that do not have a weight on their patient record | High |
| 7547 | Bug | Insurance Eligibility Pilot - For multiple Procedure Code Studies based the insurance check off of the most expensive service type. | Normal |
| 7544 | Bug | Insurance Eligibility Pilot - Workflow can cause errors when trying to validate insurance | Normal |
| 7525 | Bug | Insurance Eligibility Pilot - failing to run eligibility against a study that was previously cancelled (in IVT) | Normal |
| 7513 | Bug | MU Make Patient Educational resources available upon the patient arrival process | Normal |
| 7511 | Bug | Insurance Eligibility Pilot - When we are missing information to perform the eligibility check we should show the red “!” icon | Normal |
| 7509 | Bug | Insurance Eligibility Pilot - Retry logic is building up transactions | Normal |
| 7502 | Bug | Insurance Eligibility Pilot - IVT WL issue with Precert status 'Pending' | Normal |
| 7501 | Bug | Insurance Eligibility Pilot - Auto check on day of service isn't happening. | Normal |
| 7482 | Bug | Availability Template - delete and create a new date range can cause the default time range to copy and move to the new date range. | Normal |
| 7471 | Bug | CD Burning - PACS cleanup isn't executed if user exits CD Burning via the windows title bar | Normal |
| 7466 | Bug | Relevancy - do not mark as relevant if the laterality is different (Left vs Right) | Normal |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

| | | | |
|---|---|---|---|
| 7443 | Bug | Eligibility Flag displays in WL after rescheduling to a site that does not have Eligibility Automation enabled | Normal |
| 7402 | Bug | Error retrieving WL error when trying to use Equals filter on the columns that contain the new LastName, FirstName MI (userName) format | Normal |
| 7375 | Feature | Auto size the Contact block on the Help About screen for eRad Support & Sales contact info | Normal |
| 7260 | Bug | The INSERT statement conflicted with the Foreign key constraint "fk_c_scan_document_association_c_study" when rescheduling | Normal |
| 6975 | Bug | Unknown referring reconciliation breaks queued wedge messages | Normal |
| 6614 | Bug | Retrying multiple completed print jobs uses the printer description instead of code for the destination printer of the new jobs. | Normal |
| 7387 | Bug | MTG Reports - Eligibility Failed Requests report - may become quite large | Low |

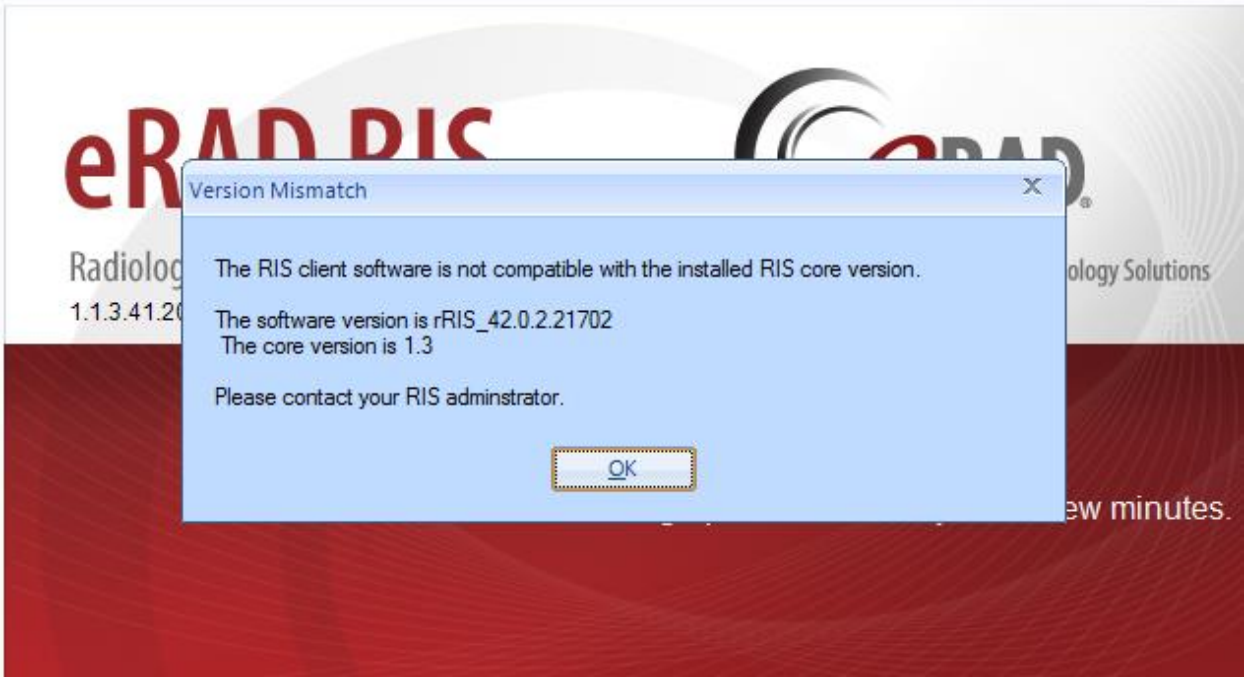
## 9. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.43.0.6.24914.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_43.0..6.24914→ rRIS_1.3.43.0.6. 24914
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   **Restart each service.**

3) Run the B43.0.6.sql file against the eRAD RIS database instance.

## Hologic Integration Installation

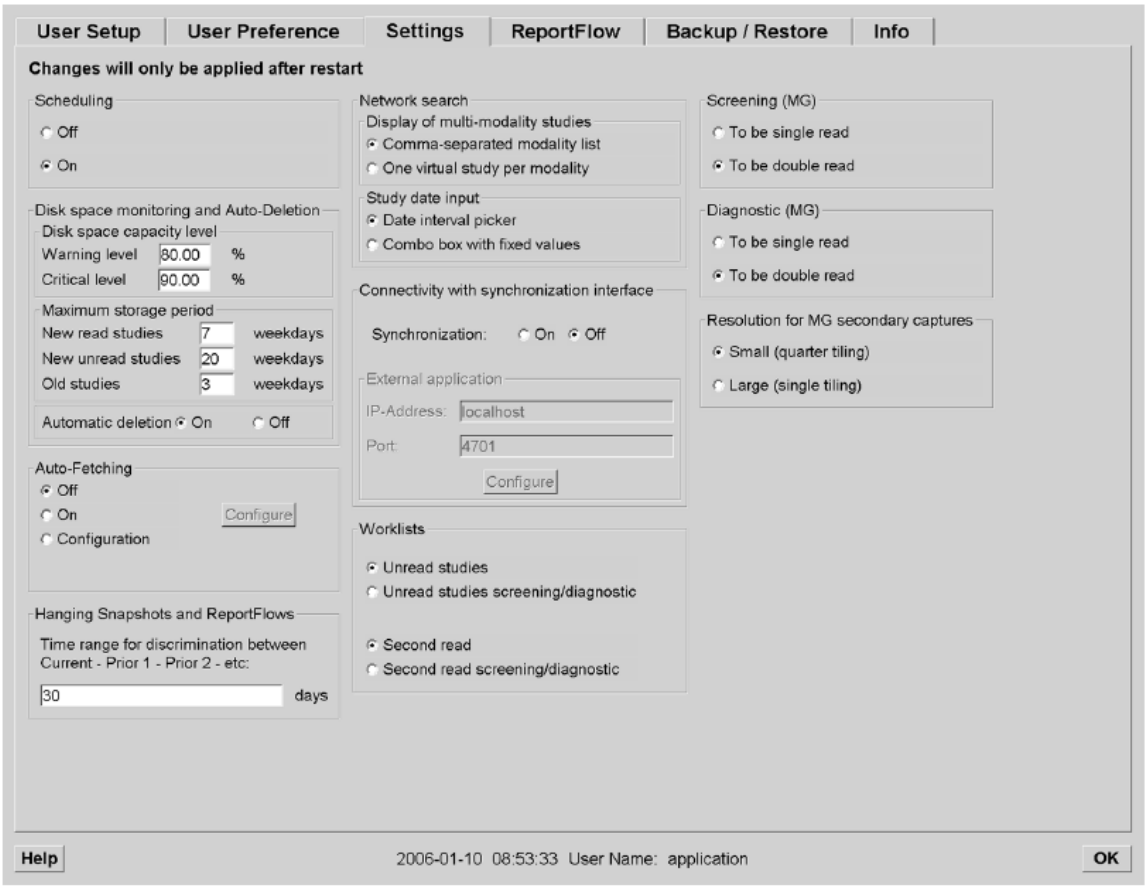
a) Install/upgrade RIS installation to current build

b) Copy HologicConfigTemplate.xml from the RIS GIU.zip folder to *%appdata%\RadNet\eRAD RIS* and rename it HologicConfig.xml.

c) Change the configuration of the IP addresses in HologicConfig.xml to the IPs of the RIS workstation and the Hologic workstation. The port settings should not have to change unless configuration on the Hologic workstation conflicts with them.
   Configure the Hologic workstation to communicate with the RIS device as defined in the config file. This will require logging in to an admin account on the Hologic side and updating the synchronization interface settings. This is accessed via the Configure button in the middle of the screen shown below.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

Click the **Settings** tab to display the window.



d) Restart SecurView for the changes to take effect.

e) Launch RIS.

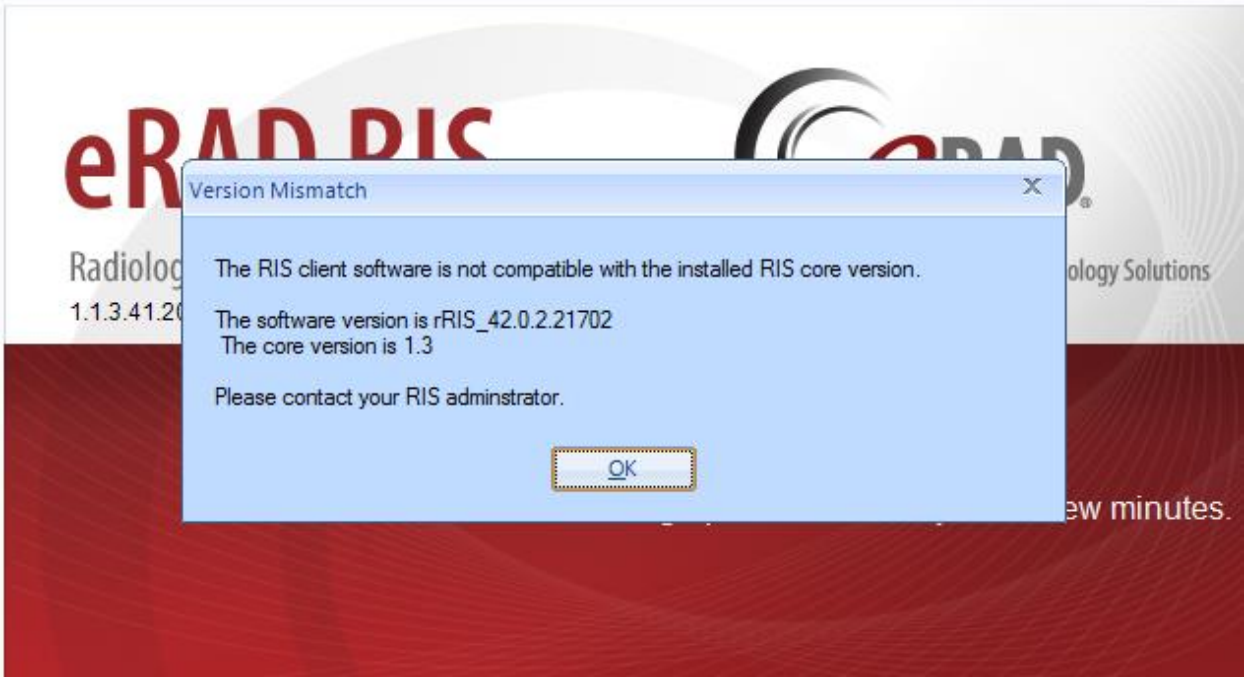
## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.43.0.6.1.24937.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_43.0.6.1.24937→ rRIS_1.3.43.0.6.1.24937
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   **Restart each service.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# 1. New Features

## Zotec TOS Inegration

For Zotec enabled sites, the "Add" button in the payments section will connect with the Zotec TOS portal, passing all relevant information, which includes: patient demographics, CPT codes, insurance and the amount to collect. Zotec will match the patient and display the Zotec TOS portal in a modal dialog as shown in the following:

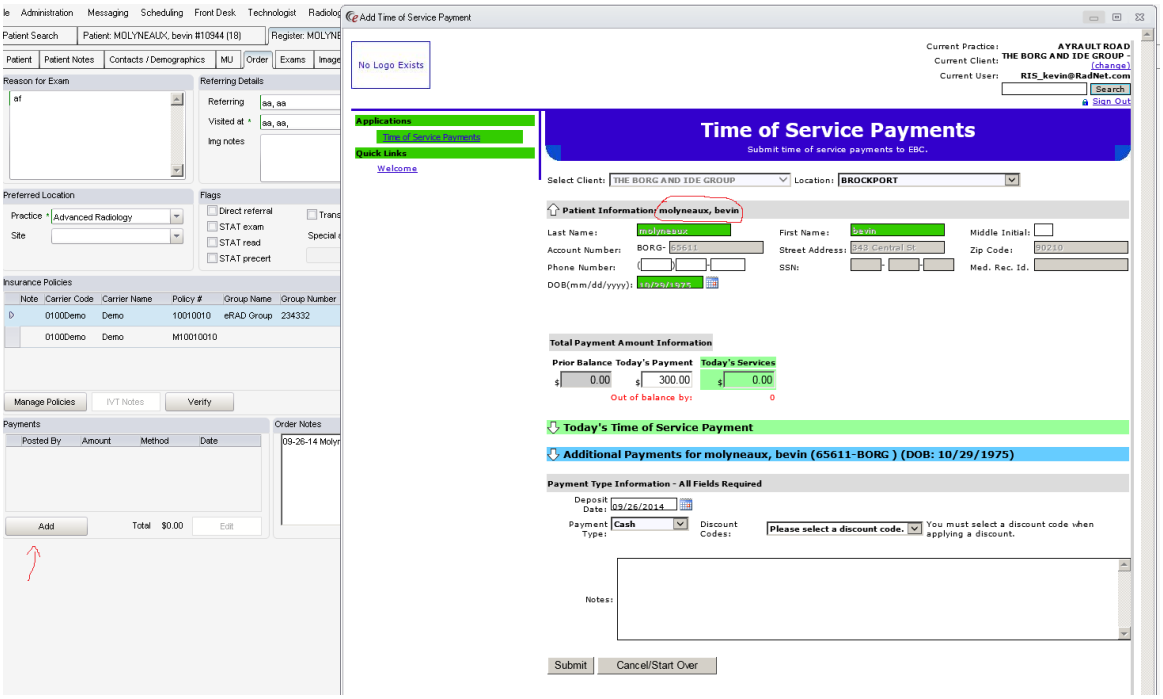

**Figure 1.1 – Adding payment via Zotec TOS payment window**

To record payments for Medical Records services, such as the cost of burning a CD, access the menu "Front Desk / Add Medical Record Payment" as shown in the following:

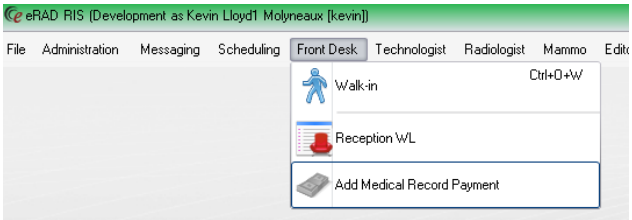

**Figure 1.2 – Add Medical Record Payment access**

When the user clicks on "Add Medical Record Payment", a screen will display, asking the user for the site where the payment will be received. The user will have the option to select any Zotec enabled site for their practice but will default to their "Reception WL" preferred site.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

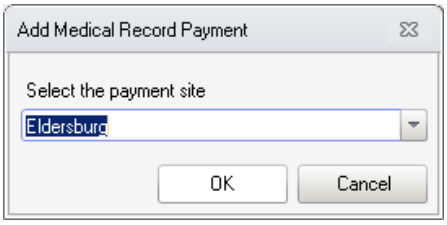

**Figure 1.3 – Selecting site to add medical record payment**

When these choose "OK" to the Add Medical Record Payment, the Zotec TOS web site will display with an extra message at the top of the screen, warning that they are processing a medical record payment. Medical record payments will be processed with following account:

Last Name: MedicalRecords
First Name: <PracticeCode>_<SiteCode>
Address: <site address information>
DOB: Site's Zotec activation date
MRN (not seen on the TOS portal): z<space><PracticeCode>_<SiteCode>

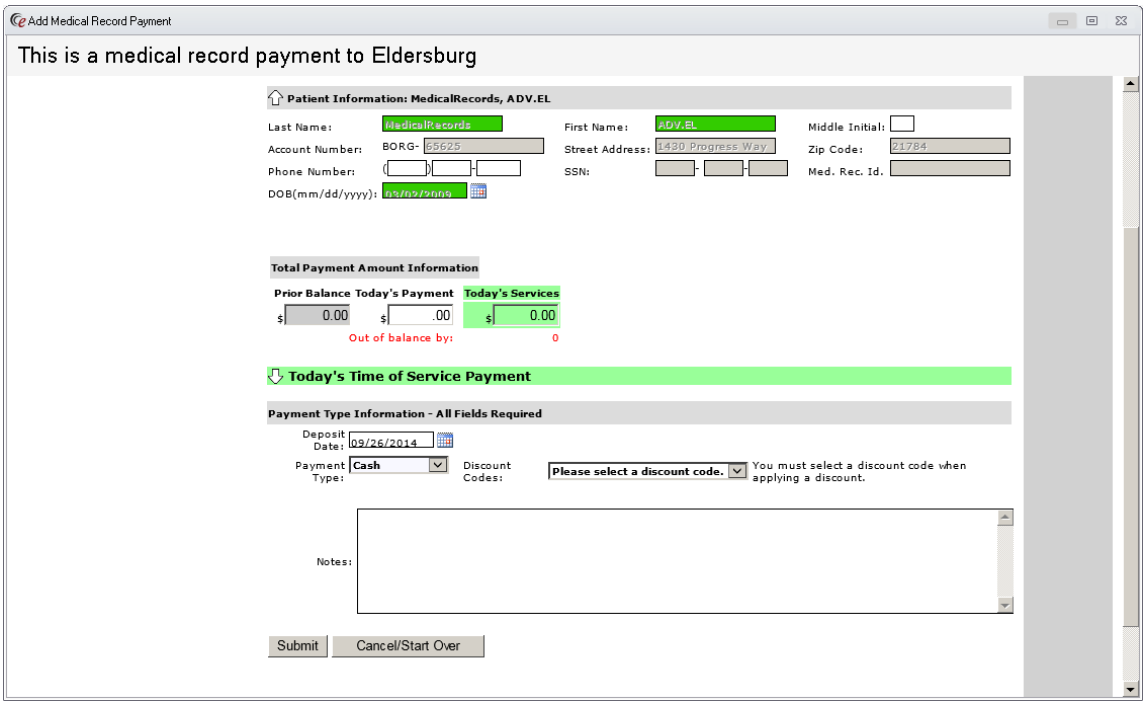

**Figure 1.4 - Zotec TOS payment window**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Changes to Configuration

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Applicationsetting.config | "StartInsuranceEligibilityService"<br><br>Setting looks like this in the .config file<br><br>`<setting name="StartInsuranceEligibilityService" serializeAs="String"><value>False</value></setting>` | False | This setting originally had a default of True, Changed to false in this build.<br>If the current value of this setting is True when you run the ServicesConfigWizard.exe it will keep the current setting. |
| AccessString and UserGroup Permissions | Zotec.AllowDiscount | None | Allows the user to add a medical record payment, via "Add Medial Record Payment" from the "Front Desk" main menu. |
| AccessString and UserGroup Permissions | Zotec.AllowRefund | None | Allows the user to give refunds in the Zotec time-of-service website |
| AccessString and UserGroup Permissions | Zotec.AddMedicalRecordPayment | Full | Allows the user to add a medical record payment, via "Add Medial Record Payment" from the "Front Desk" main menu. |
| SystemConfig settings | ZotecAmountPaidPrefixString | Amount Paid:</td> <td align='left'> | string in the Zotec receipt, just before the amount paid, which will be reported back to the RIS |
| SystemConfig settings | ZotecTOSPassword | None | Password for Zotec TOS (time of service) integration |
| SystemConfig settings | ZotecTOSUrl | None | URL to the Zotec TOS portal |
| SystemConfig settings | ZotecTOSUser | None | Username for Zotec TOS integration |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 3. Defects Resolved

| Redmine # | Tracker | Subject | Priority |
|---|---|---|---|
| 7671 | Bug | internal dataset properties not correctly set | Immediate |
| 7398 | Feature | RIS Integration with Zotec payment portal (TOS) | Urgent |
| 7604 | Bug | Insurance Eligibility Pilot - Invoice Inconsistency | High |
| 7584 | Bug | IVT workflow can cause studies to be moved to Exam Done | High |
| 7455 | Bug | Patient Merge with 1 external MRN is being merged into itself | High |
| 7721 | Slush | Insurance Eligibility Pilot - Should not have pre transaction fee charged to eRAD_Demo payer id | Normal |
| 7716 | Slush | Null exception on login for zotec integration, preventing other code from running, no exception shown to user. | Normal |
| 7715 | Slush | Insurance Eligibility - Zotec integration | Normal |

3) SQL Folder contains:
   - B43.0.7.sql

4) **SSRSDeployment** folder contains 7 subfolders, a batch file for deploying the reports and a help file for deploying the reports.

   4.1. **Backups** folder is empty

   4.2. **Fonts** folder contains 4 files:
   4.1.1. FRE3OF9X
   4.1.2 FRE3OF9x_0
   4.1.3 FREE3OF9

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

4.1.4 FREE3OF9_0

4.3. **ParentFolder** folder contains 7 subfolders
- 4.3.1. **Chair** folder contains 1 .rdl file
- 4.3.2. **Dashboards** folder contains 9 .rdl files
- 4.3.3. **Forms folder** contains sub folder and 2 .rdl files
  - 4.3.3.1. **SubReports** contains 10 .rdl files
- 4.3.4. **Management Reports** folder contains 9 sub folders, these subfolders contain the core management report files (.rdl) to be deployed.
- 4.3.5. **Marketing** folder contains 5 .rdl files
- 4.3.6. **Order Templates** contains 1 file (Default.rdl)
- 4.3.7. **SubReports** contains 13.rdl files
- 4.3.8. **Verbal Order** contains 4 .rdl files

4.4. **Scripts** folder contains 9 .rss files. These files are used with the DeployReports.bat utility to deploy the reports.

4.5. **Upload Custom Mangement Reports** is empty

4.6. **Upload Diagnostic Templates** folder contains 1 subfolder
- 4.6.1. **SubReports** folder is empty

4.7. **Upload Forms** folder contains 1 subfolder.
- 4.7.1. **SubReports** folder is empty

4.8. **eRADDeployReports.bat -** batch file for deploying reports to report server for eRAD customers

4.9. **RadnetDeployReports.bat** - batch file for deploying reports to report sever for RadNet

4.10. **Adding reports for Deployment.docx** document to assist in added a report to the install process when deploying the reports.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 6. Intended Audience

This document is created by the RIS Development team for the RadNet/eRAD RIS Implementation teams.

## 7. Who is affected

Build 43 installs. Server updates are not cumulative. This server update must be applied to 43.0.6

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 8. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|
| 42.1 | - | 2.42.1.0.22744(3GB) | 2.42.0.0.21261 | 2.42.1.0.22744 | 2.42.1.0.22736 | GUI.zip, Web Service, DB updates and Management Report Deployment |

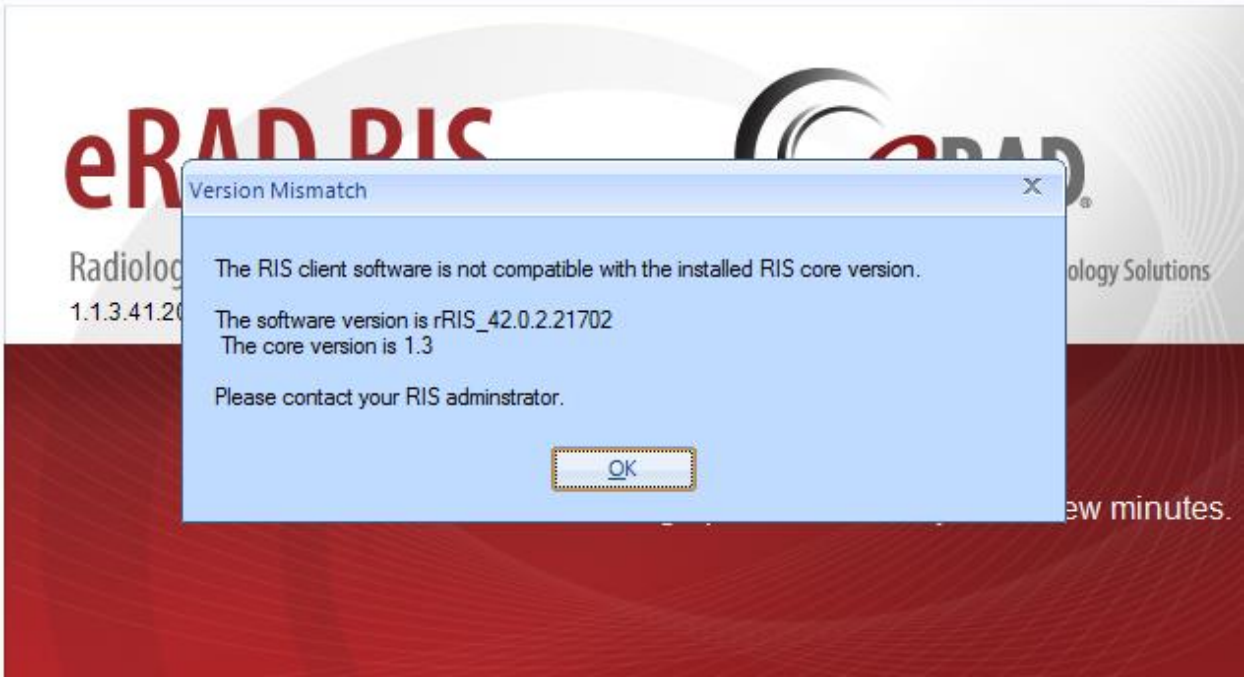
## 9. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.43.0.7.25258.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_43.0.7.25258→ rRIS_1.3.43.0.7.25258
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

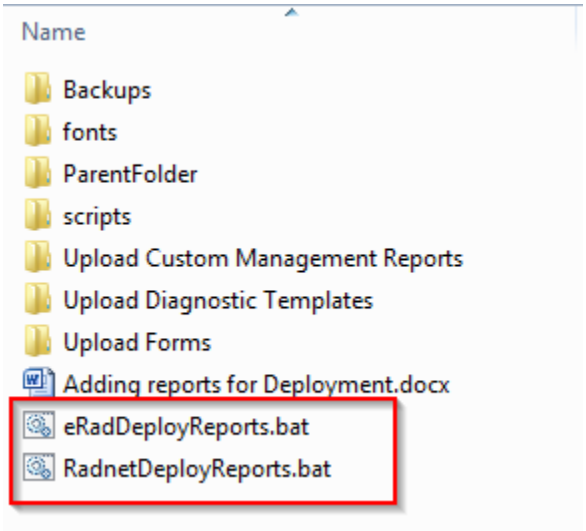
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
*rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   **Restart each service.**

3) Run the B43.0.7.sql file against the eRAD RIS database instance.

4) Management Reports Deployment / SSRSDeployment - There are 2 utilities called **RadnetDeployReports.bat** and **eRadDeployReports.bat** that will deploy the reports to a SQL Server Report Service. This utility is found in the **Build X\SSRSDeployment** folder. Below are the steps on how to use this utility. The purpose for the 2 .bat files are the RadNet one deploys a few extra reports specific to RadNet.



1. Launch the DeployReports.bat file.
2. ***Enter report server name [default:<computer_name>]:***
   a. A script will run against the server and return a list of all the root folders on that report server
   **By Default this will pull the computer_name environmental variable from the machine running the script. I suggest running this from the report server for performance anyway.
3. **Enter root folder to deploy reports [default: production]**:

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

a. This will create a new root if the name you give doesn't exist, or it will simply publish below the root of the folder if it does already exist. We typically will use "production" for the installation folder. Note: The script forces the root name to be lowercase.
**Default is suggested to be production, but you may need to change it based on the environment you are deploying to. Ie: testserver might be called something else.

4. **Do you wish to create a backup of the existing reports?**:
   a. This will create a file backup of the report directory specified in the same directory deploy.bat is being run from inside a folder called Backups where it will create a folder based on datetime of backup. Ie: 04172014_110605 (MMDDYYYY_HHMISS).
5. **Do you wish to deploy core management reports**?
   a. If you enter "y", it will redeploy the core management reports
6. **Do you wish to upload Forms**?

a. If you enter "y", the script will deploy any .rdl files into the installations Forms folder that you have previously saved into the script folder called "Upload Forms" including the folder below it called SubReports.

7. **Do you wish to upload Diagnostic Templates**?

a. If you enter "y", the script will deploy any .rdl files into the installations Diagnostic Templates folder that you have previously saved into the script folder called "Upload Diagnostic Templates" including the folder below it called SubReports.

8. **Do you wish to upload Custom Management Reports?**

a. Entering "Y" will copy any .rdl files you've copied under the deployment folder called Upload Custom Management Reports onto the server under Management Reports\Custom\Uploads directory

9. **Do you wish to create a datasource**?
   a. If you select "y" you will get prompted for more information about the datasource you wish to create. You only need to create a datasource, if this is a new installation. No need to do this if you are upgrading an existing installation. The datasource gets created in the root of the folder from step 3. The datasource will be called RISDataSource.

If you chose to create a datasource, the following steps will be requested to complete the connection string.

1. **Enter database server name**:
   a. This is the name of the physical database server
   ex. MYSERVER-1
2. **Enter database name**:
   a. This is the name of the database on the database server
   ex. rRIS_Site

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

3. **Enter report schema user name**: ex. The account that the datasource will use to connect to the database ie: SA. (For security reasons "sa" is not recommended)
4. **Enter report schema password**:

   The results of deployment will be written to log.txt in the same folder as the DeployReports.bat file.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# Server Update

For eRAD RIS
Version 2.0

# 1. New Features

## Integration with Carestream PACS

With the release of 43.0.8, eRAD RIS now integrates with Carestream PACS. This integration is very similar to the eRad PACS integration. Login, logout, open, append, and close images are all supported. No form of caching is supported.

**Configuration:**
When adding a new row to the PACSServer lookup table, CARESTREAM is now an available option under PACS Server Type. An IP address needs to be provided in the URL column but it is not used by the integration, so 127.0.0.1 can be used.

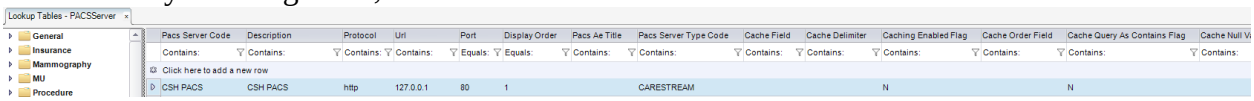

**Figure 1.1 – PACSServer lookup table**

When the Carestream option is added to the PACS Server lookup table, this option can then be added as the default for a Practice from the Organization lookup. Open the Practice for edit and on the PACS and Reporting tab select the Carestream PACS Option.

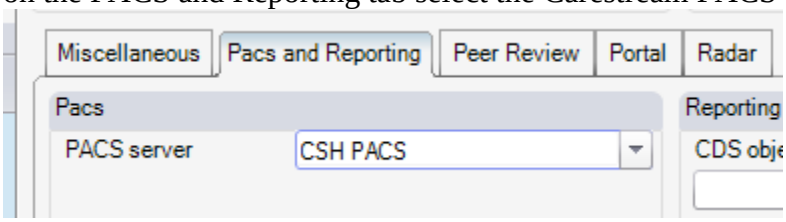

**Figure 1.2 – Adding PACS Server as default to Practice.**

It can also be selected as an option under the PACS menu > PACS Server option which was added in build 43.0.6.

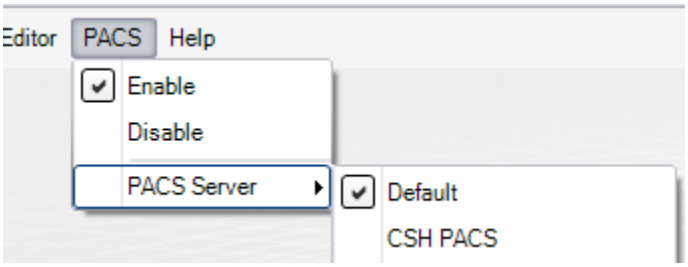

**Figure 1.3 – PACS Server menu option**

**Use:**
The RIS attempts to log in to the PACS when the user first tries to open images. Upon successfully logging in the images are opened. If login fails the user will be presented with a login dialog from the PACS. If the user then logs into the PACS successfully the images will then be launched. If they cancel the PACS login dialog the RIS will try to force the PACS to finish logging out and then display its own login dialog to attempt to resume logging in. The

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

cancellation of the PACS login dialog often leads to disruption of the COM interface which is sometimes irrecoverable.

After the user is logged in, the images will open upon the user opening a reporting window such as the dictation window or the signature window (in this case they need to hit the View Images button). When the user closes the form, the images will close on the workstation.
Switching between tabs will keep the images in the PACS in sync. Closing a tab and activating another integrated tab will also cause the appropriate images to be displayed.

**Limitations:**
The open images call to Carestream PACs is an asynchronous call, meaning that when the RIS instructs the PACs to load images the PACS returns control to the RIS immediately and provides no feedback to the RIS as to whether or not the images actually loaded. The RIS assumes success. In an effort to make sure the images are never out of sync the RIS first issues a Close call before an Open call any time it believes and image session is open.
The COM interfaces that allow PACS to issue call-backs to the RIS have not been implemented as this is very problematic between a COM dll and a .NET application.
The PACSIntegration.log can be used to monitor the interactions between RIS and Carestream.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Eligibility Check for Medical Group

For several carriers the medical group is mentioned in the eligibility return. We would like to notify the staff when they have chosen an incorrect medical group. If the return does not have the expected medical group we can show a warning message that will display in the lower right corner of the application and the eligibility icon will be a yellow question mark 
.

To configure this feature a new lookup table titled Eligibility Special Condition has been added under the Insurance folder group. This new lookup tables access is controlled by a new access string titled "**Config.LookupEditor.EligibilitySpecialCondition**" which has a default of None.

In this table administrator will input the Carrier, matching string and warning message. If insurance details contains the matching_string, we will display the warning_message. If the matching_string STARTS WITH !, we will display the warning_message when the details does not containing the matching_string.

For example, the configuration may look like:

| Carrier | maching_string | warning_message |
|---|---|---|
| Prospect Aetna | !Prospect Medical Group | Medical group is incorrect (PROSPECT) |
| Monarch UHC | !Monarch | Medical group is incorrect |

In the following example, we have created a carrier "Prospect Demo UHC", which is only valid if the return contains "Prospect medical Group".

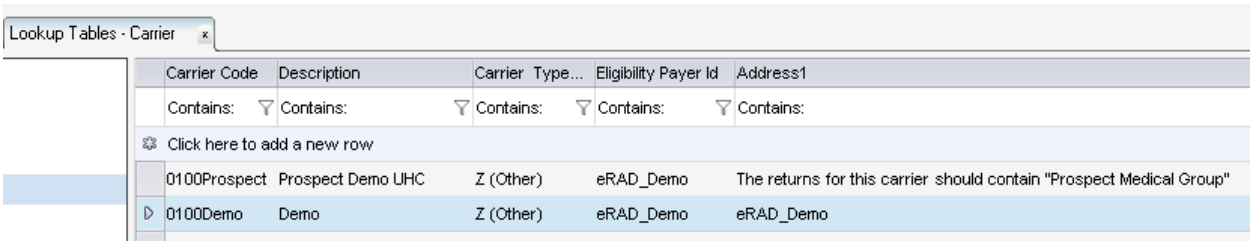

**Figure 1.4 – Carrier lookup**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

Then, the eligibility special condition is configured as shown in the following:

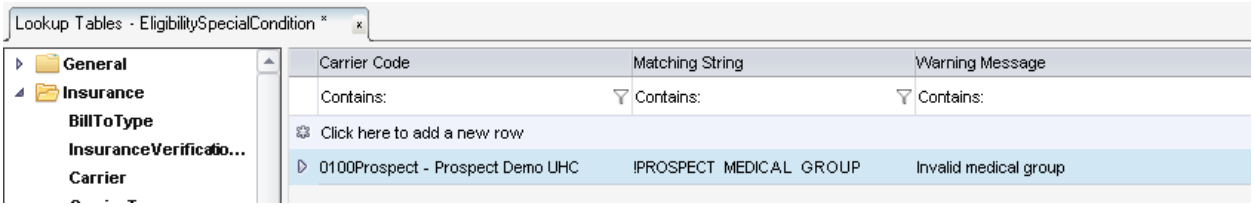

**Figure 1.5 – Eligibility Special Condition lookup**

Carriers can have multiple special conditions but only the first matching condition is displayed. Because the "Prospect Demo UHC" carrier is configured with the eRAD_DEMO eligibility_payer_id testing with the policy #7695 will give a green check. Testing with other policy numbers such as 10010010 will result in the "Invalid medical group" warning.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Copy and Paste Enhancements

The pre-cert field in the billing codes grid, the insurance policy number, group number and group name columns in the Manage Insurance Policies feature all allow a paste to occur that may have unprintable characters. The issues are white space, tab characters, and a trailing CRLF. These characters will cause billing to fail.

The new code looks at PASTE events. These are caused by Ctrl – V, Shift-Insert, and right-click context menu, and Paste.

It also looks at the character by character typing performed by the user.

Before accepting the value into the RIS, the RIS will search the string for any of these magic unprintable characters, and will replace them with a visible space character.

The new code will then trim all leading and trailing spaces, leading and trailing tab characters, and trailing CRLF (that's the problematic 'enter' key that gets auto-pasted from Excel).

**Example – Someone copies from a web page and the copy buffer contains : (space)123(tab)456(space)(CRLF)(space)(tab)(CRLF) the RIS will simply paste '123 456'**

**OR – Someone types in (space)123(space)456(space)(tab) – The RIS will simply apply '123 456'**

We envision that perhaps some rare circumstance will require a special character to be entered. So, we included the following context menu options:

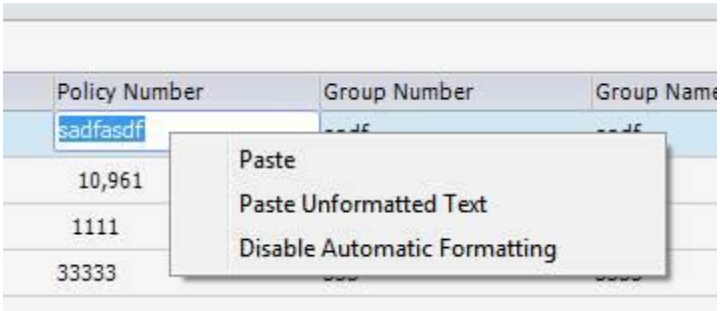

**Figure 1.6 – Pasting options**

**Paste Unformatted Text** disables all the special trimming, and does just what the old paste used to do.

**Disable Automatic Formatting** turns off the auto-trimming feature for every column in that open grid only. When the grid is closed and re-opened (ie, for the next patient) the auto-trimming is again enabled.

We want to put this into a trial-basis by only applying it to the most problematic areas of the RIS first. So, for 43.0.8, it will only work in the areas shown in RED.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

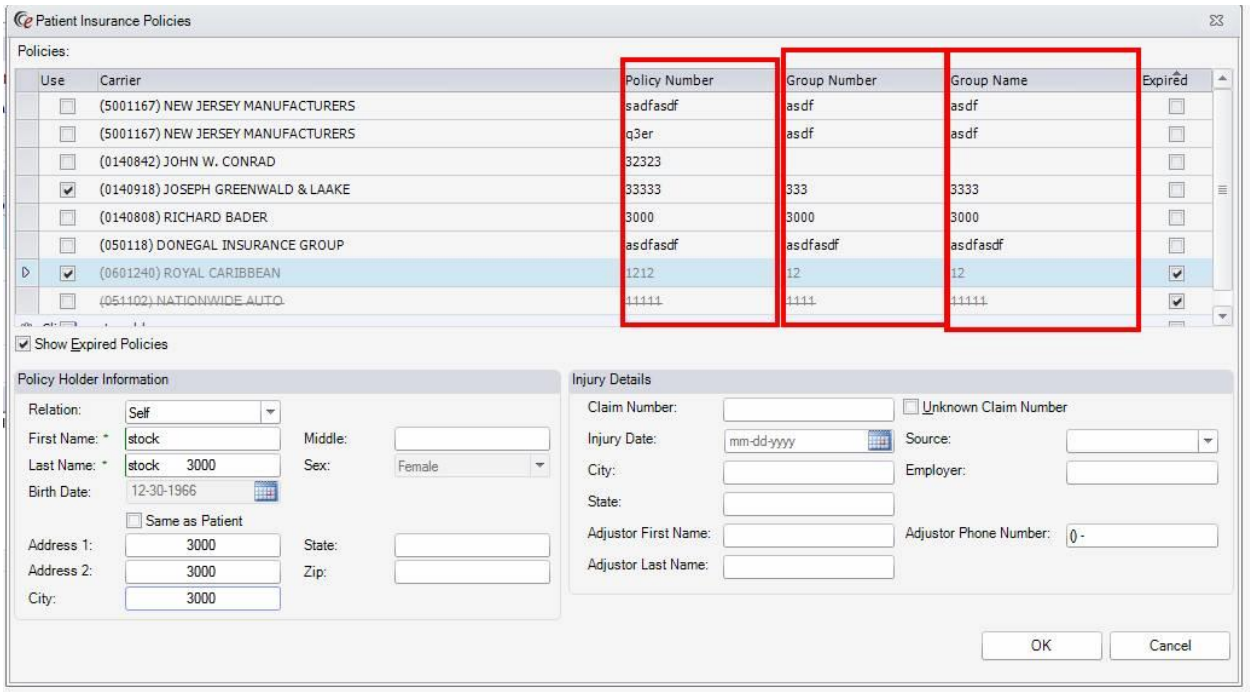

**Figure 1.7 – Manage Policies**

## 2. Changes to Configuration

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Applicationsetting.config | **Config.LookupEditor.EligibilitySpecialCondition** | None | lookup table access for the Eligibility Special Conditions lookup |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 3. Defects Resolved

| Redmine # | Tracker | Subject | Priority |
|---|---|---|---|
| 7751 | Bug | Legacy Reports are included in action data container | Urgent |
| 7627 | Bug | Copy & paste can include unprintable characters that affects billing | Urgent |
| 7818 | Bug | v43 new install number of indexes are not in the right tablespace preventing record inserts | High |
| 7806 | Bug | object reference error when scheduling from the Follow Up screen from BI-RADS 4/5 worklist | High |
| 7612 | Bug | unable to cancel an order if the order contained multiple items, one of which has progressed past scheduling and generated an i-code | High |
| 7354 | Feature | eRAD RIS to Carestream PACS Desktop integration | High |
| 7815 | Bug | Can't set a signed study to Voided status | Normal |
| 7814 | Bug | Insurance Eligibility - for multiple insurances we how now decided to collect the co-pay for the primary insurance | Normal |
| 7786 | Bug | Insurance Eligibility - Issue rescheduling a newly added appointment. | Normal |
| 7779 | Bug | Insurance Eligibility - Deadlock when multiple requests are being made | Normal |
| 7758 | Bug | Editors Activity report fails | Normal |
| 7747 | Bug | Automated Measures by Radiologist - Fails on DRA for 2014 yr and stage 2 | Normal |
| 7740 | Bug | Insurance Eligibiltiy - Mutliple STC count - adding multiple rows in c_eligibility_invoice table and affecting the Mutliple STC count value on Eligible API Invoice report. | Normal |
| 7734 | Bug | Error on rescheduling study with insurance eligibility | Normal |
| 7731 | Bug | Insurance Eligibility Pilot - Invoice Inconsistency (PassThrough Fee) | Normal |
| 7729 | Bug | Insurance Eligibility Pilot - Invoice Inconsistency (Search Option Count) | Normal |
| 7718 | Bug | MU CQM Report with Both Stage 1 and Stage 2 numerator/denominator | Normal |
| 7700 | Bug | Insurance Eligibility - If Maximum remaining has been met, we should not charge a co-insurance | Normal |
| 7699 | Bug | Insurance Eligibility - Ignore plan deductible if deductible exists in the service section. | Normal |
| 7697 | Bug | Insurance Eligibility Pilot - Amount to collect refresh issue | Normal |
| 7695 | Feature | Insurance Eligibility - add a check for the Medical Group | Normal |

3) SQL Folder contains:
   - B43.0.8.sql

4) **SSRSDeployment** folder contains 7 subfolders, a batch file for deploying the reports and a help file for deploying the reports.

   4.1. **Backups** folder is empty

   4.2. **Fonts** folder contains 4 files:
   4.1.1. FRE3OF9X
   4.1.2 FRE3OF9x_0
   4.1.3 FREE3OF9

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

4.1.4 FREE3OF9_0

4.3. **ParentFolder** folder contains 7 subfolders
- 4.3.1. **Chair** folder contains 1 .rdl file
- 4.3.2. **Dashboards** folder contains 9 .rdl files
- 4.3.3. **Forms folder** contains sub folder and 2 .rdl files
  - 4.3.3.1. **SubReports** contains 10 .rdl files
- 4.3.4. **Management Reports** folder contains 9 sub folders, these subfolders contain the core management report files (.rdl) to be deployed.
- 4.3.5. **Marketing** folder contains 5 .rdl files
- 4.3.6. **Order Templates** contains 1 file (Default.rdl)
- 4.3.7. **SubReports** contains 13.rdl files
- 4.3.8. **Verbal Order** contains 4 .rdl files

4.4. **Scripts** folder contains 9 .rss files. These files are used with the DeployReports.bat utility to deploy the reports.

4.5. **Upload Custom Mangement Reports** is empty

4.6. **Upload Diagnostic Templates** folder contains 1 subfolder
- 4.6.1. **SubReports** folder is empty

4.7. **Upload Forms** folder contains 1 subfolder.
- 4.7.1. **SubReports** folder is empty

4.8. **eRADDeployReports.bat -** batch file for deploying reports to report server for eRAD customers

4.9. **RadnetDeployReports.bat** - batch file for deploying reports to report sever for RadNet

4.10. **Adding reports for Deployment.docx** document to assist in added a report to the install process when deploying the reports.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 6. Intended Audience

This document is created by the RIS Development team for the RadNet/eRAD RIS Implementation teams.

## 7. Who is affected

Build 43 installs. Server updates are not cumulative. This server update must be applied to 43.0.7

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 8. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|
| 42.1 | - | 2.42.1.0.22744(3GB) | 2.42.0.0.21261 | 2.42.1.0.22744 | 2.42.1.0.22736 | GUI.zip, Web Service, DB updates and Management Report Deployment |
| 42.1 | 1 | 2.42.1.1.2296(3GB) | 2.42.0.0.21261 | 2.42.1.1.22963 | 2.42.1.1.22864 | GUI.zip, Web Service, DB updates |
| 42.1 | 2 | 2.42.1.2.23007(3GB) | 2.42.0.0.21261 | 2.42.1.2.23007 | 2.42.1.2.23007 | GUI.zip, Web Service, DB updates |
| 42.1 | 3 | 2.42.1.2.23237(3GB) | 2.42.0.0.21261 | 2.42.1.2.23237 | 2.42.1.2.23007 | GUI.zip, Web Services |
| 42.1 | 4 | 2.42.1.4.23348(3GB) | 2.42.0.0.21261 | 2.42.1.4.23348 | 2.42.1.2.23007 | GUI.zip, Web Services |

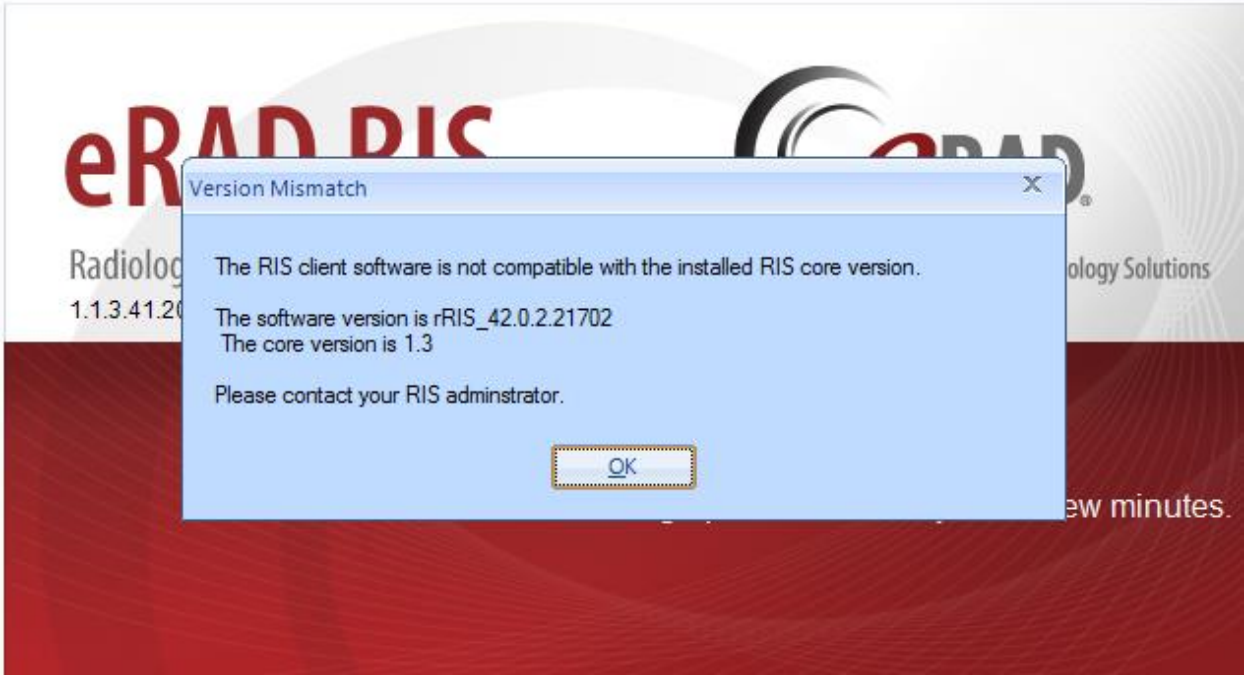
| 43 | 5 | 2.43.0.5.24632(3GB) | 2.43.0.0.23171 | 2.43.0.5.24632 | 2.43.0.5.24560 | GUI.zip, Web Service and DB updates |
| 43 | 6 | 2.43.0.6.24914(3GB) | 2.43.0.0.23171 | 2.43.0.6.24914 | 2.43.0.6.24914 | GUI.zip, Web Service and DB updates |
| 43 | 6.1 | 2.43.0.6.24937(3GB) | 2.43.0.0.23171 | 2.43.0.6.24937 | 2.43.0.6.24914 | GUI.zip, Web Service |
| 43 | 6.2 | 2.43.0.6.24970(3GB) | 2.43.0.0.23171 | 2.43.0.6.24970 | 2.43.0.6.24914 | GUI.zip, Web Service |
| 43 | 7 | 2.43.0.7.25258(3GB) | 2.43.0.0.23171 | 2.43.0.7.25258 | 2.43.0.7.25226 | GUI.zip, Web Service, DB updates and Management Report Deployment |
| **43** | **8** | 2.43.0.8.25440(3GB) | 2.43.0.0.23171 | 2.43.0.8.25440 | 2.43.0.8.25425 | GUI.zip, Web Service, DB updates and Management Report Deployment |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 9. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.43.0.8.25440.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_43.0.8.25440→ rRIS_1.3.43.0.8.25440
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

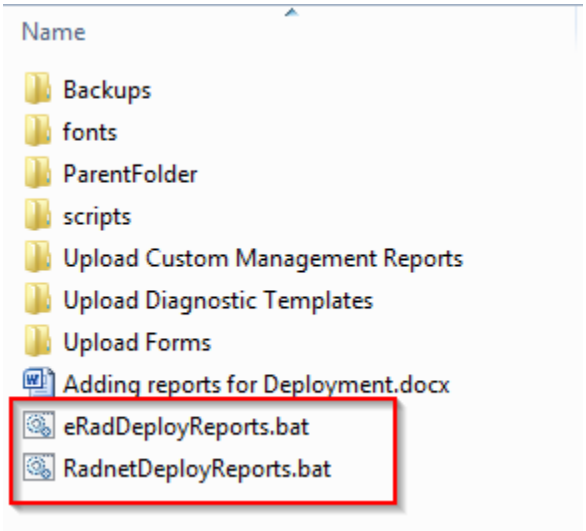
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
*rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   **Restart each service.**

3) Run the B43.0.8.sql file against the eRAD RIS database instance.

4) Management Reports Deployment / SSRSDeployment - There are 2 utilities called **RadnetDeployReports.bat** and **eRadDeployReports.bat** that will deploy the reports to a SQL Server Report Service. This utility is found in the **Build X\SSRSDeployment** folder. Below are the steps on how to use this utility. The purpose for the 2 .bat files are the RadNet one deploys a few extra reports specific to RadNet.



1. Launch the DeployReports.bat file.
2. ***Enter report server name [default:<computer_name>]:***
   a. A script will run against the server and return a list of all the root folders on that report server
   **By Default this will pull the computer_name environmental variable from the machine running the script. I suggest running this from the report server for performance anyway.
3. **Enter root folder to deploy reports [default: production]**:

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

a. This will create a new root if the name you give doesn't exist, or it will simply publish below the root of the folder if it does already exist. We typically will use "production" for the installation folder. Note: The script forces the root name to be lowercase.
**Default is suggested to be production, but you may need to change it based on the environment you are deploying to. Ie: testserver might be called something else.

4. **Do you wish to create a backup of the existing reports?**:
   a. This will create a file backup of the report directory specified in the same directory deploy.bat is being run from inside a folder called Backups where it will create a folder based on datetime of backup. Ie: 04172014_110605 (MMDDYYYY_HHMISS).
5. **Do you wish to deploy core management reports**?
   a. If you enter "y", it will redeploy the core management reports
6. **Do you wish to upload Forms**?

a. If you enter "y", the script will deploy any .rdl files into the installations Forms folder that you have previously saved into the script folder called "Upload Forms" including the folder below it called SubReports.

7. **Do you wish to upload Diagnostic Templates**?

a. If you enter "y", the script will deploy any .rdl files into the installations Diagnostic Templates folder that you have previously saved into the script folder called "Upload Diagnostic Templates" including the folder below it called SubReports.

8. **Do you wish to upload Custom Management Reports?**

a. Entering "Y" will copy any .rdl files you've copied under the deployment folder called Upload Custom Management Reports onto the server under Management Reports\Custom\Uploads directory

9. **Do you wish to create a datasource**?
   a. If you select "y" you will get prompted for more information about the datasource you wish to create. You only need to create a datasource, if this is a new installation. No need to do this if you are upgrading an existing installation. The datasource gets created in the root of the folder from step 3. The datasource will be called RISDataSource.

If you chose to create a datasource, the following steps will be requested to complete the connection string.

1. **Enter database server name**:
   a. This is the name of the physical database server
   ex. MYSERVER-1
2. **Enter database name**:
   a. This is the name of the database on the database server
   ex. rRIS_Site

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

3. **Enter report schema user name**: ex. The account that the datasource will use to connect to the database ie: SA. (For security reasons "sa" is not recommended)
4. **Enter report schema password**:

   The results of deployment will be written to log.txt in the same folder as the DeployReports.bat file.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# Server Update

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

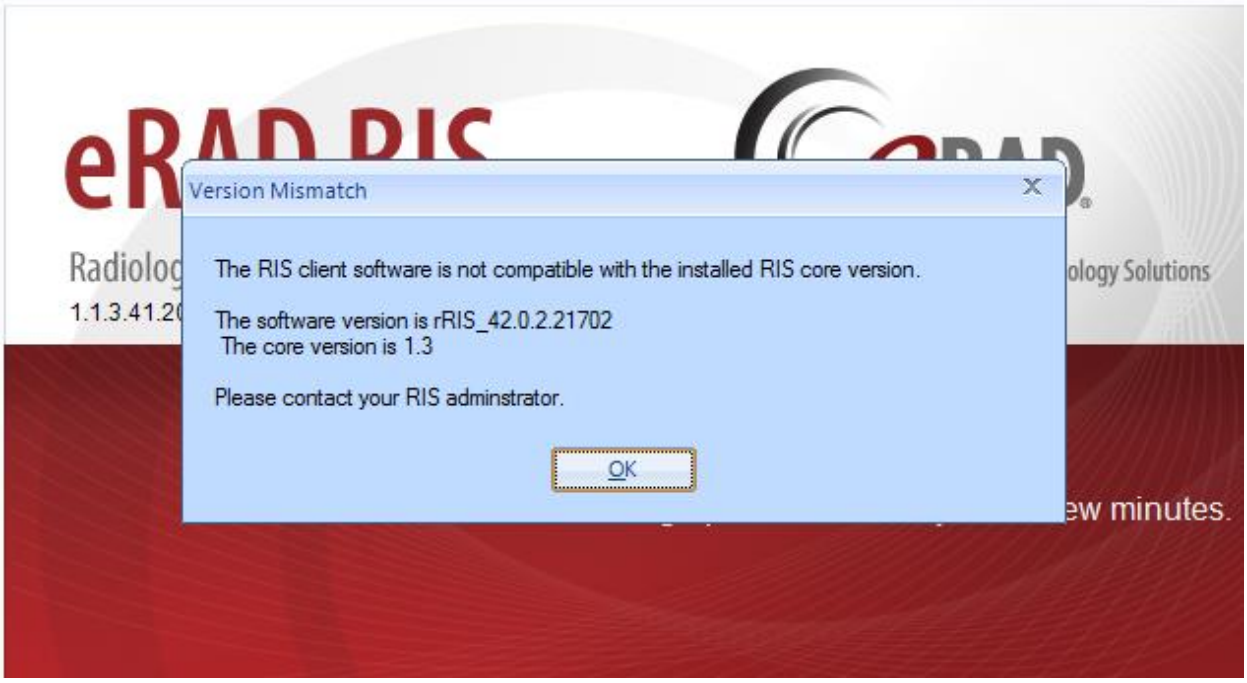
## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.43.0.9.25477.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_43.0.9.25477→ rRIS_1.3.43.0.9.25477
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   **Restart each service.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 7. Installing

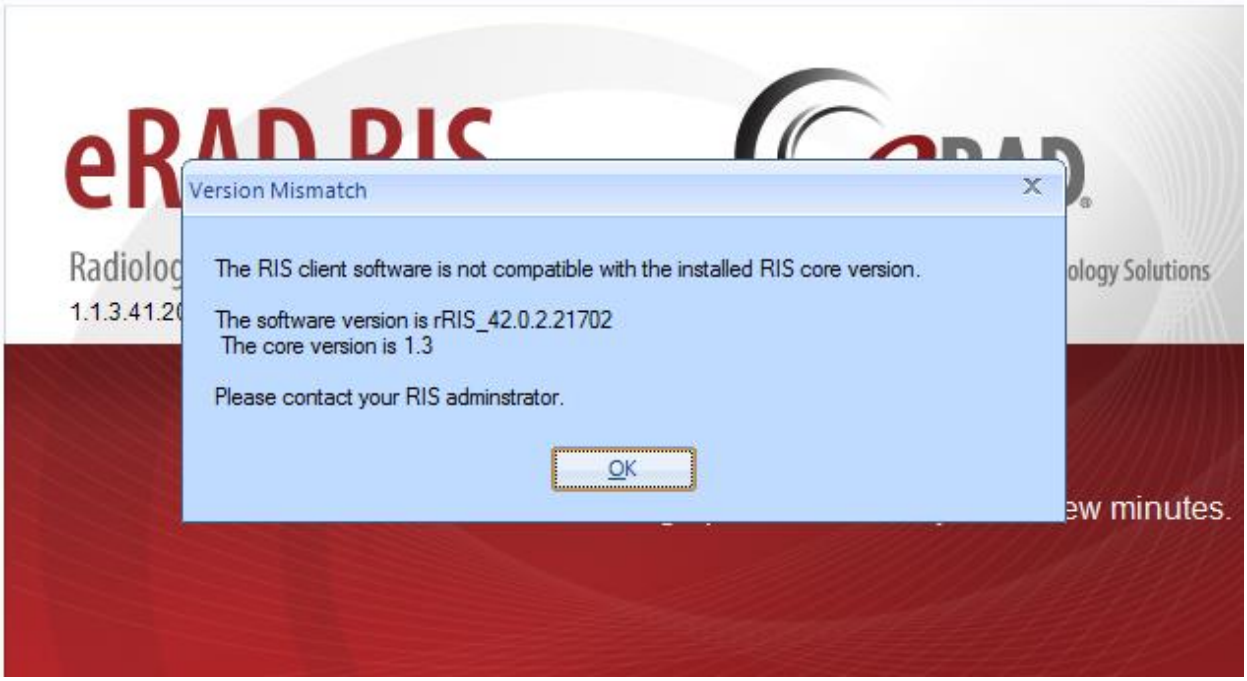
1) Copy and replace the current rRIS…zip file with the rRIS_1.3.43.0.11.25512.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_43.0.11.25512→ rRIS_1.3.43.0.11.25512
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
*rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

**Restart each service.**

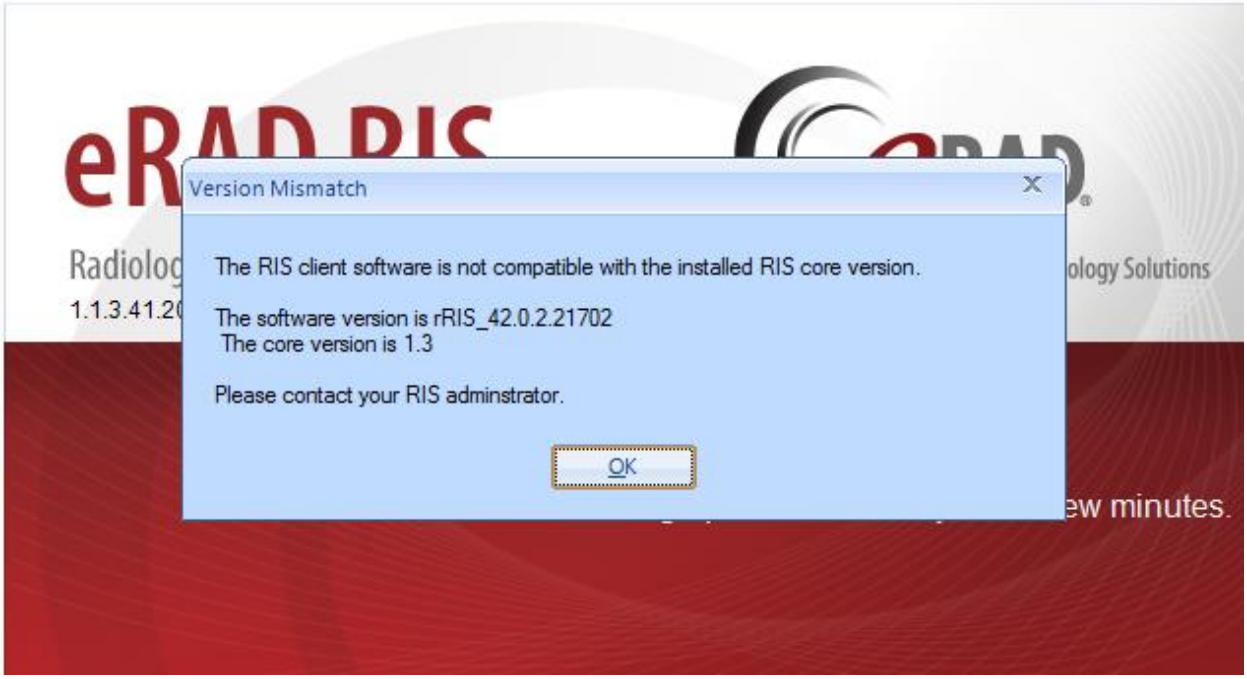
## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.43.0.12.25554.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_43.0.12.25554→ rRIS_1.3.43.0.12.25554
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   **Restart each service.**

3) Run the B43.0.12.sql file against the eRAD RIS database instance.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

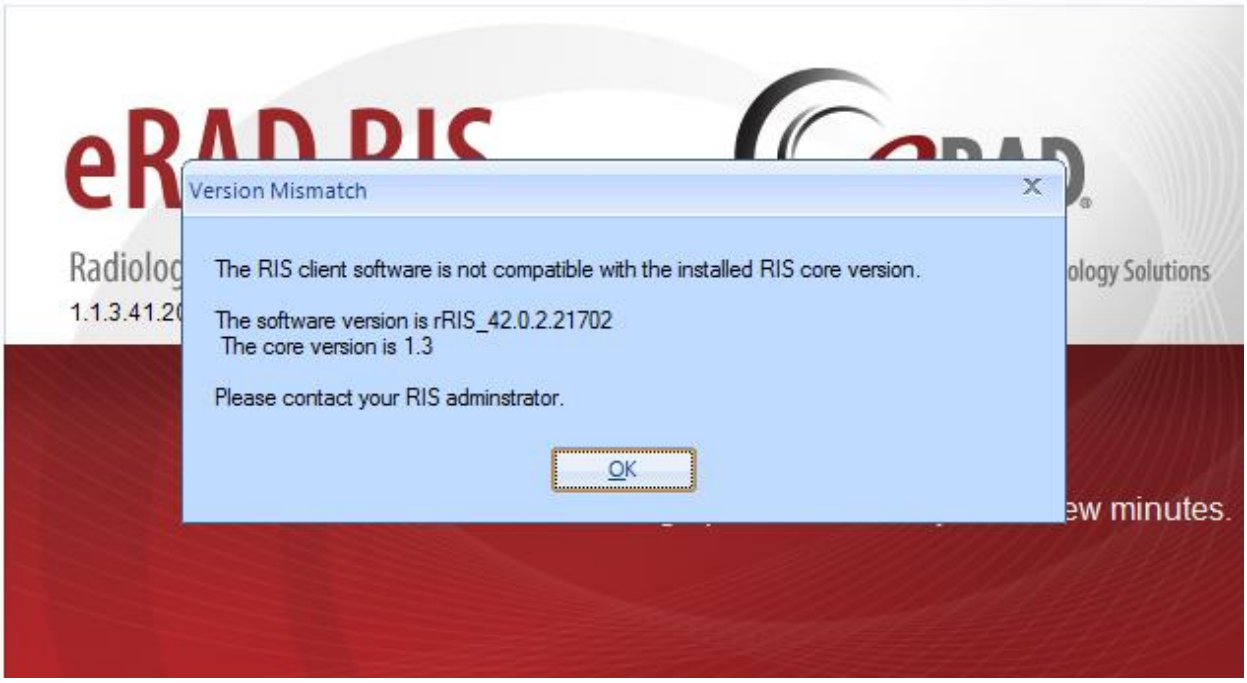
## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.43.0.13.25610.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_43.0.13.25610→ rRIS_1.3.43.0.13.25610
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   **Restart each service.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

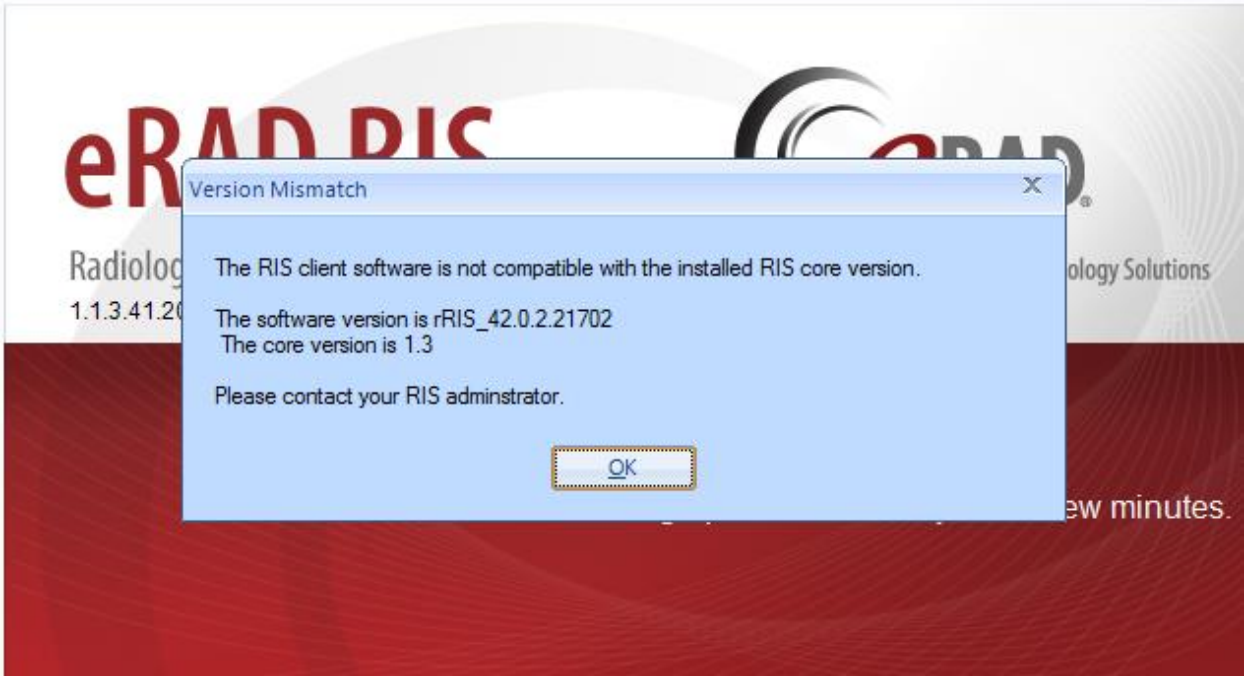
## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.43.0.14.25644.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_43.0.14.25644→ rRIS_1.3.43.0.14.25644
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# Server Update

For eRAD RIS
Version 2.0
Build 43
Update 43.1

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# 1. New Features

## a.) Distribution of Encrypted PDF via Email

1). Person/Address level configuration of email address and password
For now, this will be configured at the address level and later functionality will be provided to allow a default at the person level (see Outstanding Issues).
Passwords added at the address level are hidden from end users by default. If they have access they can click a button to view the password in plain text. Clicking this button audits their request for access and access to the password.
Changing a password is also an audited event.
Passwords are subject to a "strong password check" as a part of their data validation. The check is running the password against a regular expression. There is a system configuration item for EmailPDFPasswordRegex to house the regular expression, thus allowing it to be customized per install.

2). Queue Poller
Changes were made to the queue poller to pick up any referring or CC addresses that prefer to receive email and create a distribution job with the specified email address.
3). PDF Encryption
In order to password protect the PDF file, an open source PDF library called PDFSharp is being used. This library allows us to pass it a password and a byte array containing a non-encrypted PDF and it then returns the password protected PDF.

4). RADAR
After some discussion of using Mirth to encrypt the PDF and send the email, it was decided that PDFSharp would be used to encrypt the pdf and RADAR would be used to send the email. This required an enhancement to the RADAR dll in order to pass a file to the service so they could attach it to the email. Part of the message to RADAR involves an account name. RIS has always used the practice_code of the revelant practice for this. It is being determine based on the practice related to the_site_code of the study of the distribution job. RADAR uses the account name to determine who the sending message is from. Configuration of the email's format will be done in RADAR, including logos, header, footer, colors, and verbiage.

5). Email Sender
A configuration setting called DDEEnableEmail has been added to the applicationsettings.config file of the RIS services binaries. When this setting is True the main method of the Distribution engine will create a worklist working thread that will poll for Email jobs created by the queue poller. This setting was added in order to provide the ability to disable email functionality on a particular Distribution server, mostly for testing purposes. There is nothing preventing multiple Distribution services from processing email jobs at the same time for scalability purposes.
When the Distribution service finds an email job, it will create a PDF of the report using the Sql Server Reporting Services framework in the same way faxes and print jobs are done. It then encrypts the PDF using the PDFSharp library and sends it via RADAR using the dll the RADAR team has provided.

6). Send Report Dialog
The Send Report dialog, also used to edit active Distribution jobs, has been enhanced to allow sending emails. The email portion is disabled when the Other radio button is selected. This is because the password used to encrypt the PDF file is set for the particular person and address.
Upon selecting an address with a delivery preference of Email the Email textbox will automatically populate based on the value from the person's address. For addresses with other default delivery preferences, changing the Delivery method dropdown to Email will cause the email textbox to populate if and Email has been specified for that address.
Note there are outstanding issues regarding this screen.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

7). Worklists
The Document Distribution Worklists in the RIS client now show Email jobs with a Delivery Method value of "Email" and an Email Address column valued with the destination Email address. See screenshots below.

### *How to enable the Feature*

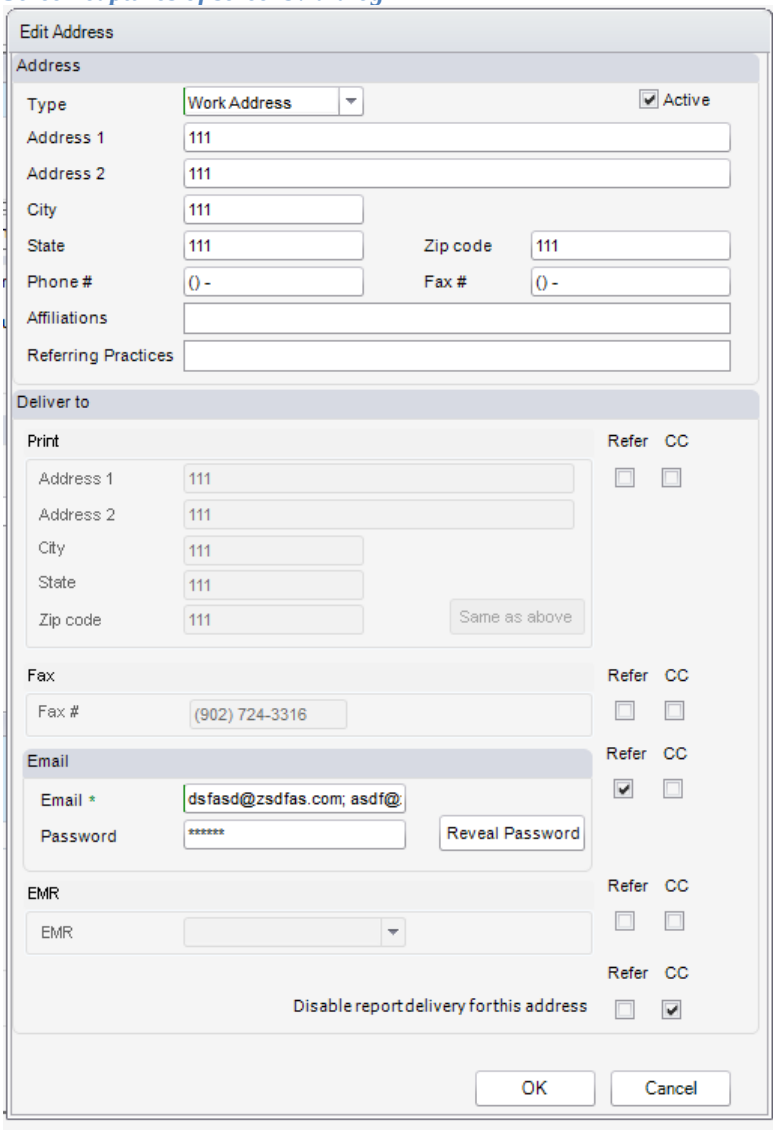
1) Personnel changes
    a. Any referring physicians that wish to receive reports via email when they are the referring or a CC doctor on a study must be configured with that preference via the Personnel editor.
2) Service setting changes
    a. The queue used by the Distribution Engine must be set up appropriately to subscribe to report related events. If the service is already set up for Fax and Print jobs the queue is already ready.
    b. The applicationsettings.config file for the Document Distribution service now contains a setting called "DDEEnableEmail" which must be set to True for the DD to process email jobs.
3) RADAR settings
    a. RADAR must have accounts for all practices which will be sending emails.

### *Permission Strings*

Config.LookupEditor.Personnel.EmailPassword = full access to this enables users to view personnel address distribution email passwords (Default == None)

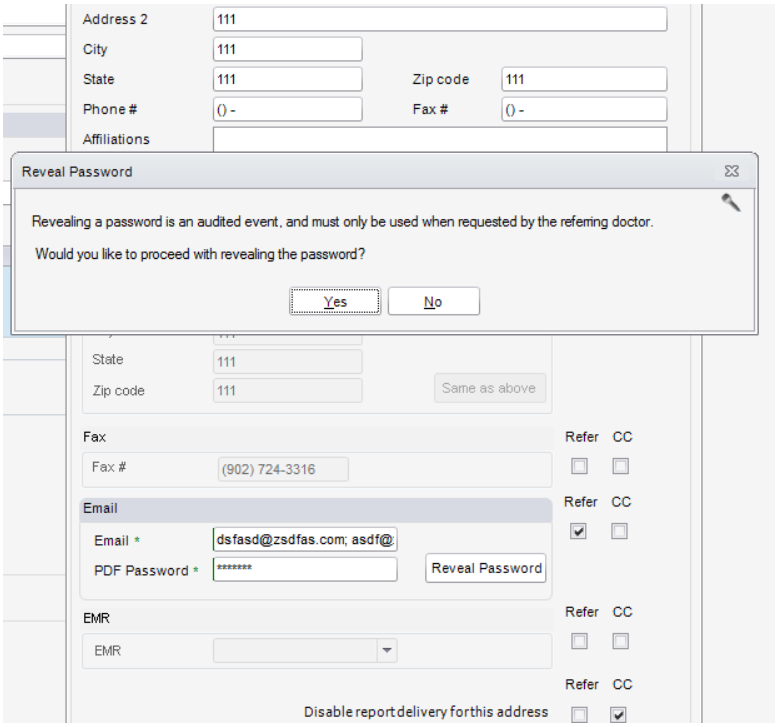
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

*Screen captures of screens / dialog*

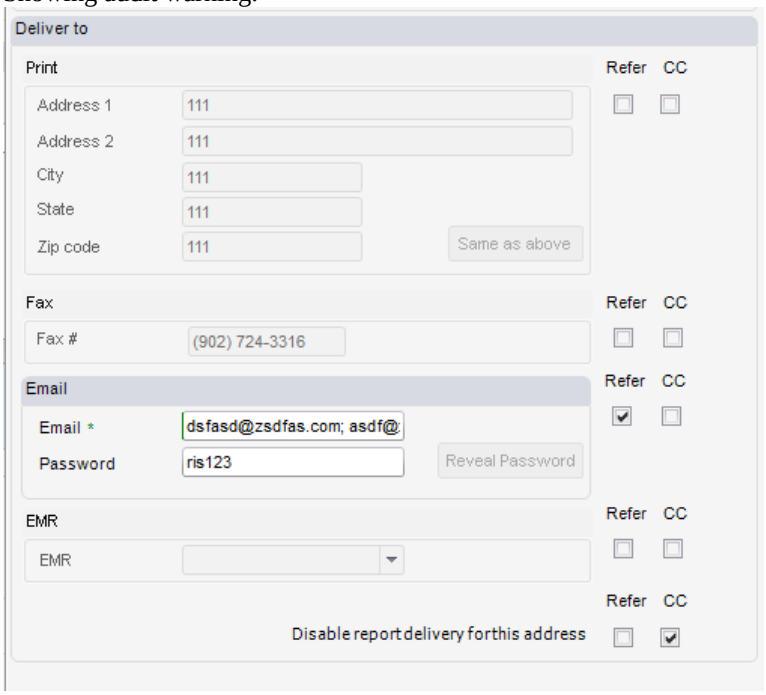


Showing new Email section of address config

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

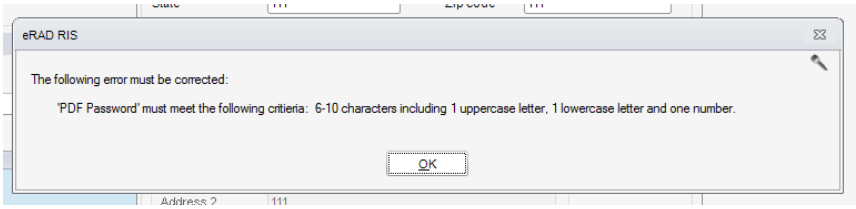


Showing audit warning.

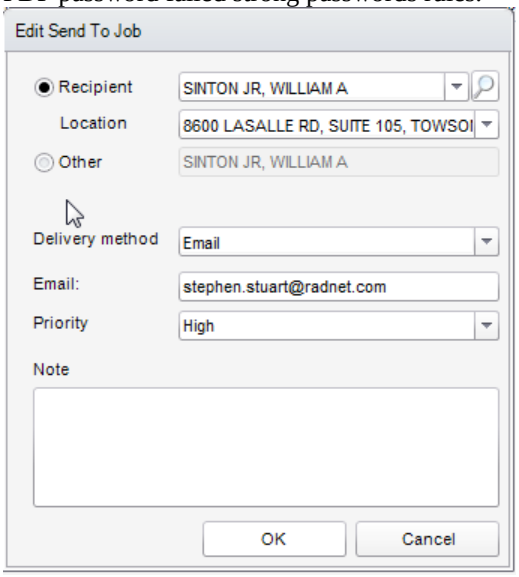


Showing clear text password

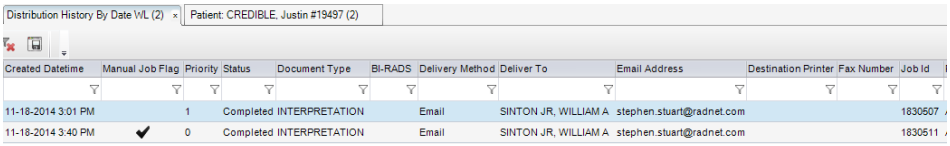
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.



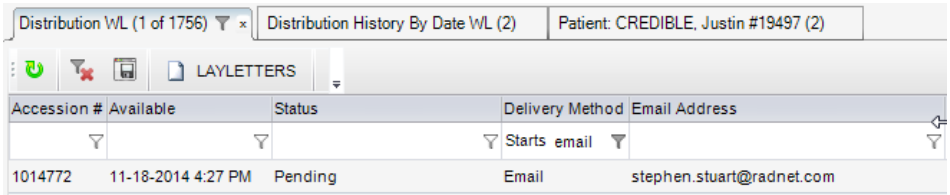
PDF password failed strong passwords rules.



Send Report dialog with Email in the Delivery method dropdown.



Distribution History By Date WL showing two completed Email jobs.



Distribution WL of active jobs, showing one Email job in Pending status

## b.) CD Burning - new custom fields and support for multiple disc producers

In addition to the existing discproducer labels:

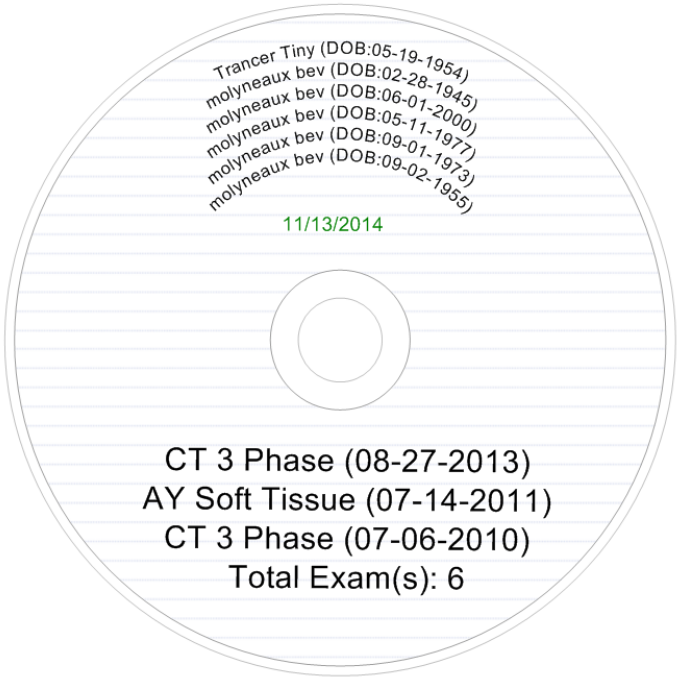
name, patient_id, site_code, site_description, deliver_to_first_name, deliver_to_last_name, deliver_to_address_lines, deliver_to_city, deliver_to_country, deliver_to_state, deliver_to_zip

We have added:

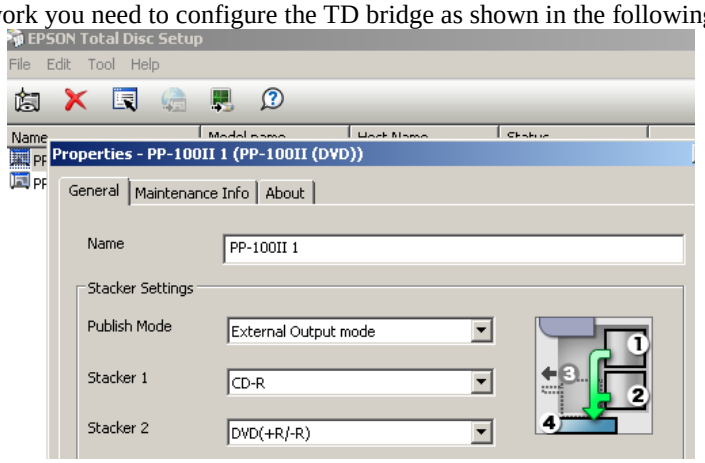
study_count, study1, study2, study3, study4, study5, study6, study7, study8, study9, study10

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

The name parameter now works and has the format <last_name><first_name> (DOB: <date>). An example label is shown in the following screen shot. Note in this example, I've burned a CD with data from several different PACS patients. As discussed in the previous RIS release, the format and design of the disc label is totally customizable by site.



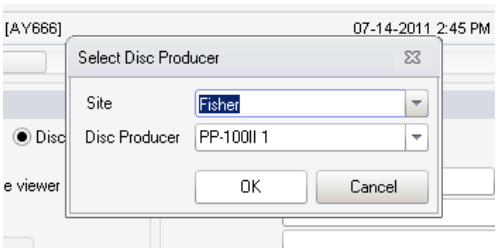
If the content to be written is greater than 650MB we now instruct the disc producer to burn to a DVD. For this to work you need to configure the TD bridge as shown in the following:



The disc producer's default share location has been added to the site configuration. With this setting, the disc producer location will default base on the site chosen in the "Select CD Burner" dialog. This popup, was previously titled "Select a label for the CD".

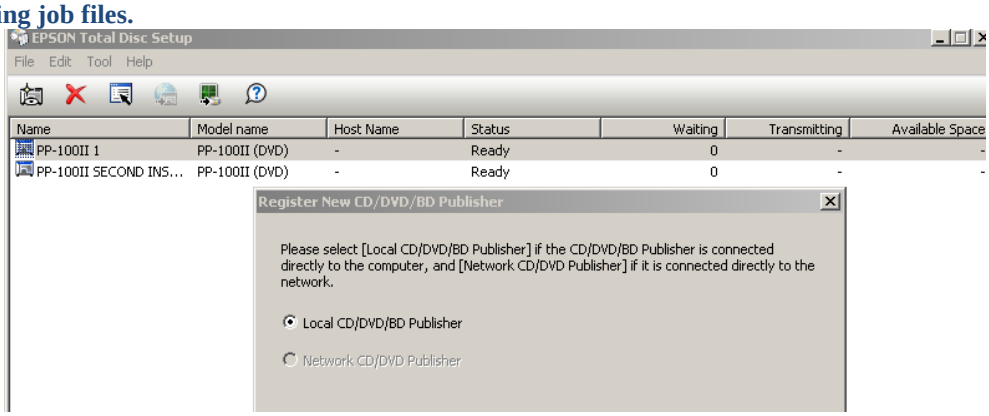
To support multiple burners we have modified the "Select Disc Producer" dialog to include an input for the burner at the selected site. If there is only one burner at the site, the burner dropdown is disabled; otherwise, it defaults to the last selection used for that site. If "Auto Select" is chosen, RIS will randomly pick one of the burners and will use that selection for the remainder of the RIS session. If the user specifically picks one of the burners, that selection will persist for that site.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

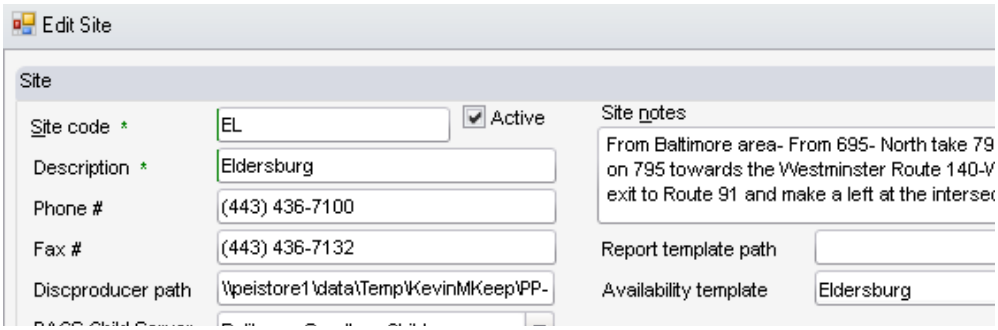


or

To configure more than one burner, go to the Epson Total Disc Setup as shown in the following screen shot. After setting up the additional instances you must restart the TD Bridge. **NOTE: DISC PRODUCER NAMES MUST BE TYPED IN UPPER CASE, lower case will case an error when submitting job files.**



The disc producer path is configurable in the Organization lookup for a Site, as shown in the following:



If you have used the discproducer with a previous B43 build, you will need to delete the label subfolder in all of your discproducer shares; otherwise, you will not have access to the new fields: study_count and study<n>.

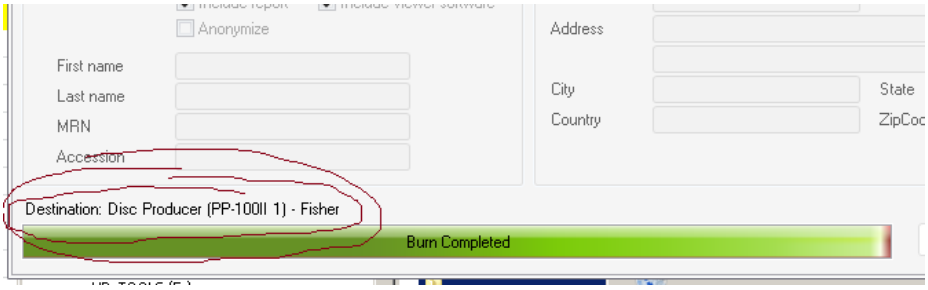
We have also added a text label at the bottom of the CD Burning screen to remind the user what they selected for the destination. A few examples are as follows:

Destination: Disc Producer (<name of burner>) – <site description>

Destination: File System - c:\<path>

Destination: CD\DVD - D:\

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.



***DB schema changes***

Added discproducer_path to the l_site table.

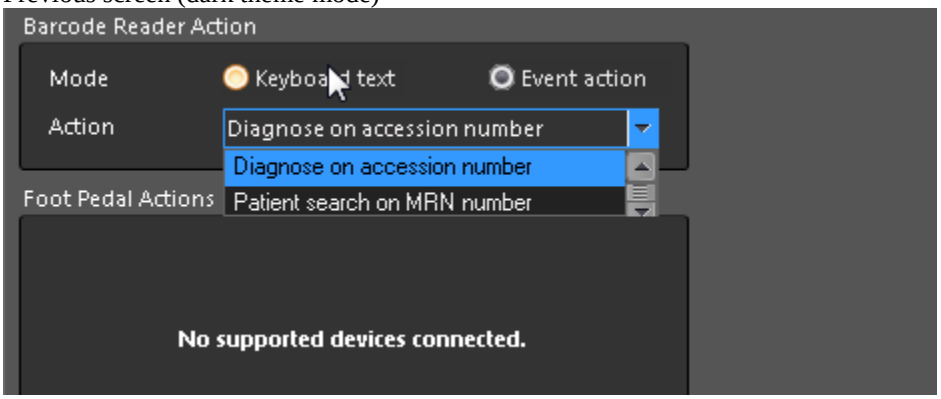
## c.) Radiology Reporting - Motorola Symbol Barcode Support

Motorola provides an SDK for tightly integrating with their devices. See miscellaneous for link info. Within the SDK we used the Interop.CoreScanner.dll file which we included in our main application as a reference. This allows us to call methods and subscribe to events coming from the barcoding device.

*Note at this time we are not undertaking the installation of the Motorola Symbol device. There are installation drivers available directly from Motorola for both 32 and 64 bit.*

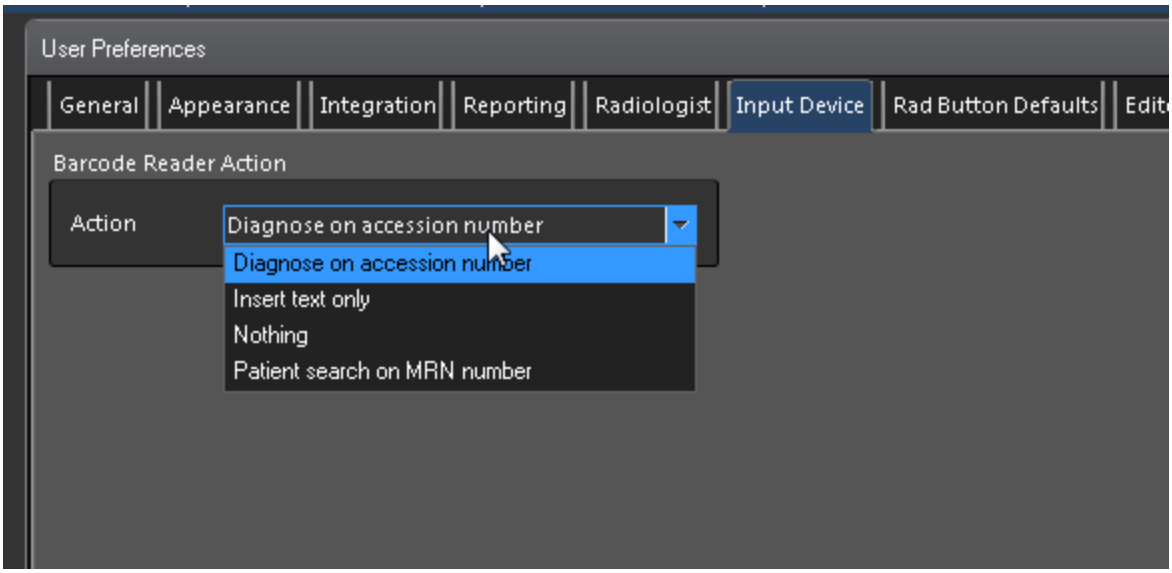
We will use the same Barcode control for Motorola Device as we do for the Philips Speech Mike device. We have also simplified the user preference control by eliminating the "Mode" option and adding a new action of "Insert Text Only" and "Nothing".

Previous screen (dark theme mode)



Current Screen (dark theme mode)

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.



As illustrated in the above image users can now choose two new options. This simplifies the choice for users.

- "Insert Text Only" will send the text of the barcode plus an <ENTER> press key to the current cursor location. This is not application specific.
- "Nothing" will simply swallow the event and take no action. This may be handy if another application is integrated with the barcoding device.

We now show the "Input Device" tab regardless of reporting mode. Previously we only presented the tab if you were in M*Modal reporting mode. We do hide the other (non barcode) group boxes when not in M*Modal mode as they are not relevant to other reporting modes. We don't initialize all devices (start them up) for particular reporting modes. We do attempt to initialize the Motorola Symbol Barcode scanner for all users. If the drivers exist it will start up if not the users will see no negative side effects.

***How to enable this feature***

The feature is enabled by default. To make the feature usable workstations will need to install the correct drivers for the Motorola Symbol Barcode device.

## d.) Support patient electronic signature on defined hardware (Lenox Hill)

RIS needs to support the ability to show a form (e.g. a consent form, etc) on the screen and allow the Patient to review the document and then sign their name with a stylus.

1. Functionality was designed around our current management report functionality. A special form category can be used to make RIS treat forms as a signature type form.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

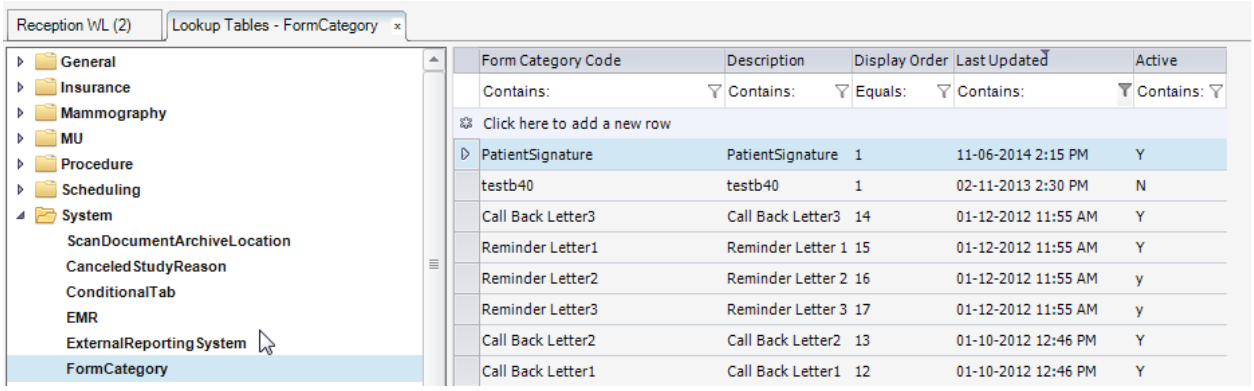


Figure 1 – Form Category editor allows the creation of a new form category.

Figure 2 – Assign a form category of PatientSignature to a form to drive the signature.

2. If the user tries to print a form that is signature driven, we collect the signature and then save the form as a scan document, currently using the Scan Document Type of "Consent", although the user can re-classify the document type afterwards. RIS allows the user to manually print a form by using one of 3 methods below.
    a. "Print Forms" on the "Patient" tab on Registration/PerformExam, ViewEdit, etc
    b. Using the right click/context menu from a worklist and choosing "Print Forms"
    c. Saving a screen in RIS and working with the "Print Forms" dialog to print specially configured forms (e.g. certain forms are configured to fire for different actions in RIS such as CheckingIn based on the modality type, procedure, practice, or other criteria)
3. When a form is previewed or sent to the printer, RIS will check to see if the form requires signature controls and show a maximized window with the report if this is the case.
4. If multiple forms meet the filter criteria when a patient is being checked in, RIS will first print the matching non-signature based forms and will then present the signature based forms one at a time.
5. The users at the front desk will have a WACOM monitor with stylus facing the patient and when they are ready to collect signatures they will press WindowsKey+P and choose Mirror Desktop to allow the patient to complete the forms.
6. The window that pops up with the patient form will have a Sign button to allow the signature to be collected, a reset button to clear the signature on the current page and start again, an accept signature button to save the form with signature as a scan document, and previous page / next page buttons. The buttons are disabled until the user clicks the Sign button. Prev Page / Next Page will be disabled if there is only one page, and are disabled where appropriate at the start and end of the document.

Figure 3 – Signature buttons

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

### *How to enable this feature*

Create form category as discussed above, associate category with forms in the forms and labels lookup editor

## e.) Support ability to enter preferences for a referring physician to receive films or CD based on procedure type performed

The Personnel configuration screen has been enhanced for setting up or modifying referring physicians. An additional tab called Referring Preferences has been added. The Referring Preferences tab is only enabled when the Referring Physician resource flag is enabled on the Resource tab.

The Preferred Radiologists control has been moved to the new Referring Preferences tab. The Image Request Preferences can also be found here.

The Image Request Preferences selection functions very similarly to the Preferred Radiologists. The user starts by selecting a format. The image request format is a combination of the image medium and delivery method. The image medium options are determined by the values in the ImageMedium lookup table. The delivery method options are limited to Mail, Courier, Pickup, and Other.

Once a format is specified, the user may further filter studies by selecting a modality type. The modality type listing is determined by the active types in the ModalityType lookup. To further filter the study selection for image requests, the user may specify one or more procedures by modality type. The procedure listing is determined by the mappings in the ScheduleGroup lookup.
If a referring physician wants all his or her studies burnt to a CD and sent by courier, simply adding a format of CD and Courier will accomplish this. As the patient is arrived by the front desk staff, a new image request will automatically be created for the study. If the referring physician only wants CDs sent by courier for all CT and US procedures, adding a modality type filter on the CD – Courier node will do this.
If the referring physician wants to pick up film copies of XR procedures, adding an additional node of Film – Pickup with a modality type of XR will accomplish this.
If the referring only wants image requests for certain procedures, this can be accomplished by adding one or more procedure nodes to the modality selection.
When a new image request is added based on the above preferences, the image request fields are defaulted as follows:

- Request Datetime - The date and time when the patient is arrived
- Requested by Type – Referring
- Requested by Contact Name – The first name and last name of the referring physician
- Requested by Phone Number – The phone number of the address matched to the order
- Image Medium Code – The image medium from the image request preference
- Delivery Method – The delivery method from the image request preference
- Deliver to Last Name – The last name of the referring physician
- Deliver to First Name – The first name of the referring physician
- Deliver to Name Suffix – The suffix of the referring physician
- Deliver to Name Prefix – The prefix of the referring physician
- Request Status – Pending
- Deliver to Type – Referring
- Site Code – The site code that the scheduled modality belongs to

If a “Deliver To” address is specified in the contact information of the referring physician, the following image request address fields will default to the specified address or they will default to the referring address that is matched to the order.

- Deliver to Address 1
- Deliver to Address 2

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

- Deliver to City
- Deliver to State
- Deliver to Country
- Deliver to Zipcode
- Deliver to Phone Number

## *Screen captures of screens / dialogs / screen changes*

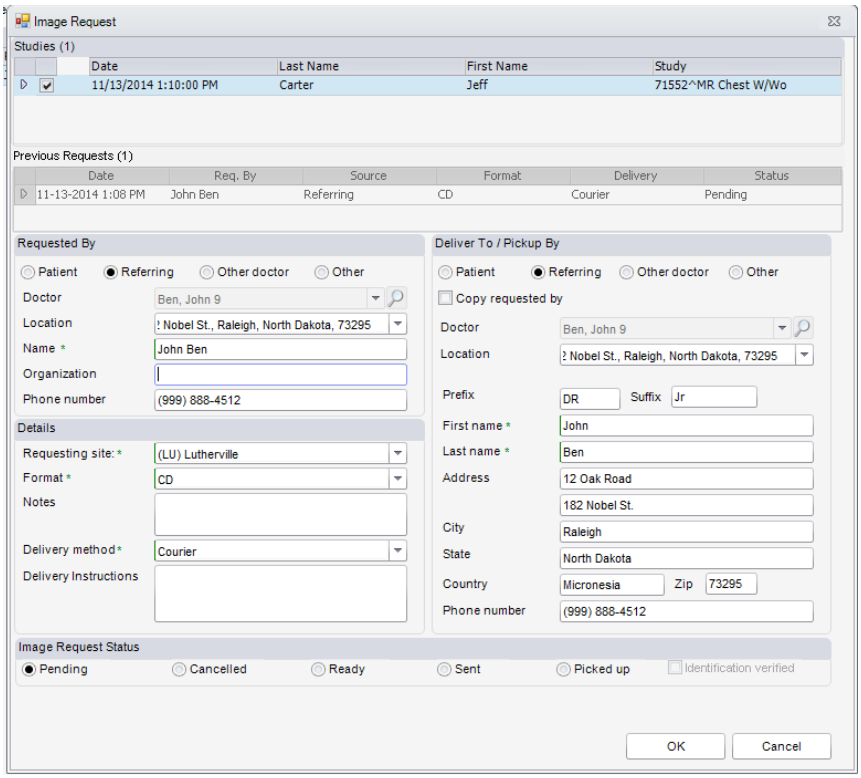

Figure 8 – New Image Request created on arrival for MR of the Chest

### *Impacts on other components*

This feature has changed the behaviour of the Personnel lookup by adding an additional tab called Referring Preferences. This new tab is enabled for Referring Physician resource types only.

### *DB schema changes*

Added l_image_preference
Added l_image_preference_x_study

## 2. Defects Resolved

| Redmine # | Tracker | Subject | Priority |
|---|---|---|---|
| 8000 | Feature | Distribution of Encrypted PDF via Email | High |
| 7648 | Feature | CD Burning - new custom fields and support for multiple disc producers | Normal |
| 8006 | Feature | Radiology Reporting - Motorola Symbol Barcode Support | Urgent |
| 7960 | Feature | DB upgrade scripts need to be accumulative | Normal |
| 7898 | Feature | Support patient electronic signature on defined hardware (Lenox Hill) | Urgent |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

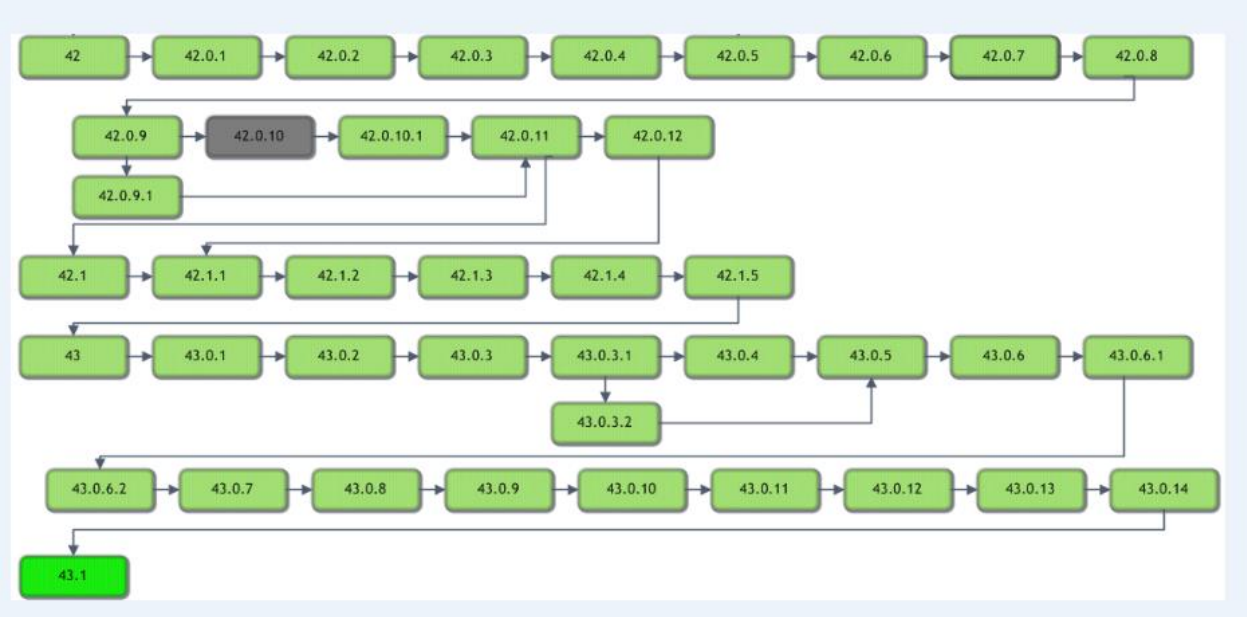
| | | | |
|---|---|---|---|
| 7797 | Feature | Support ability to enter preferences for a referring physician to receive films or CD based on procedure type performed. | Urgent |
| 8109 | Bug | Regarding Barcode scanning the file <Interop.CoreScanner.dll> is missing from the build. | High |
| 8039 | Bug | Users/Persons with no first names cause View/Edit screen to throw an error and not open | Normal |
| 8003 | Bug | Unable to suspend an addendum | Normal |
| 8001 | Bug | Epson Discproducer problem does not write DVDs | Normal |
| 7958 | Bug | Insurance Eligibility - Zotec TOS not returning payment amounts back to RIS | Normal |
| 7943 | Bug | Carestream PACS Integration - Accession Number being used instead of External Study Identifier | Normal |
| 7942 | Bug | Carestream PACS Integration - Password is stored in log file | Normal |
| 7926 | Bug | Timeout error while burning images to CD | Normal |
| 7856 | Bug | CD Burning - w discproducer the pt name is not printed | Normal |
| 7744 | Bug | CD Import - Windows 7 CD Burning via Explorer prevents us from scanning CD without DICOMDIR | Urgent |

## 3. Changes to Configuration

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Access string / User Group Permission tables | Config.LookupEditor.Personnel.EmailPassword | None | Full access to this enables users to view personnel address distribution email passwords |
| Applicationsettings.config | DDEEnableEmail | True | Must be set to True for the DD to process email jobs |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 4. Code Stream



**Legend:**

Light Green = Released software

Gray = Will not be released

Bright Green = Current Release

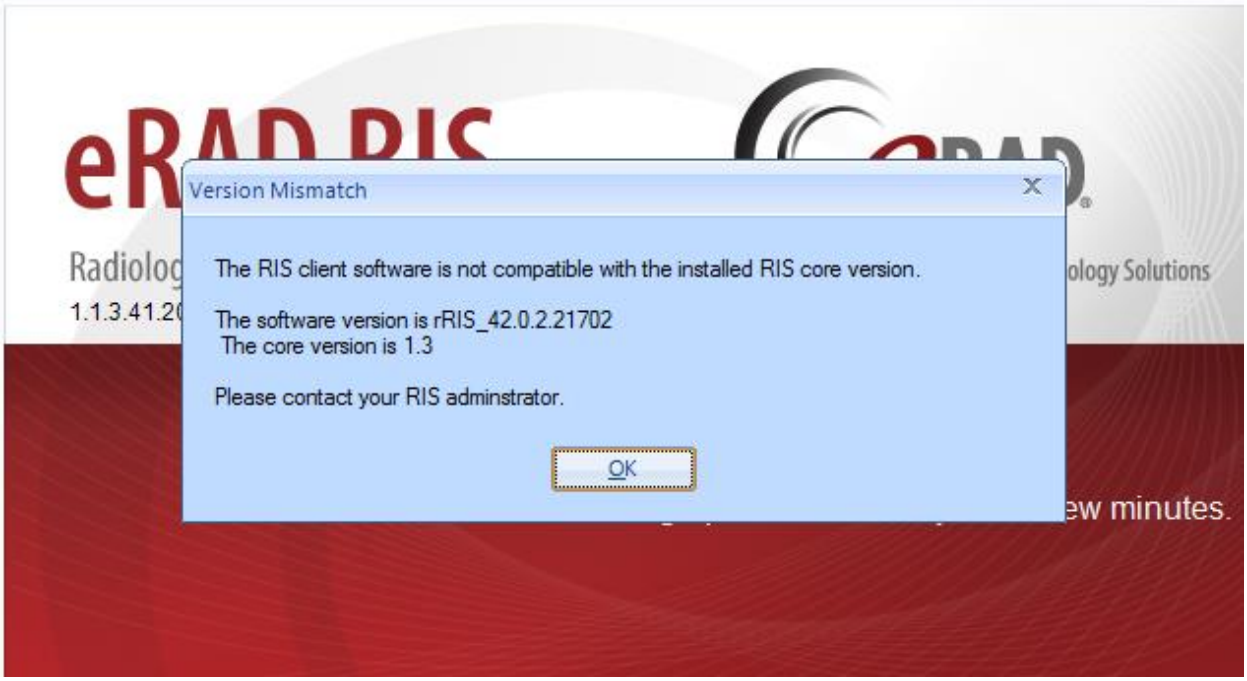
## 9. Installing

1. Copy and replace the current rRIS…zip file with the rRIS_1.3.43.1.0.25850.zip file provided with this release.

   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_43.1.0.25850→ rRIS_1.3.43.1.0.25850
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

2. Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.

   *rRISService directories include:*
   - *a) rRISService*
   - *b) CDS rRISService*

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

c) *Wedge rRISService*
d) *DDE rRISService*

**Restart each service.**

3. Data upgrade Instructions.

Always run the upgrade scripts in a test environment of the actual database to make sure they run cleanly. If any errors occur please contact development.

> *Note: There is a new upgrade program with B43.1 called "RunUpgrade.bat". This program will prompt you for the database server name, database name and authentication credentials. There is no need to run the database upgrade scripts manually as was done in previous releases.*

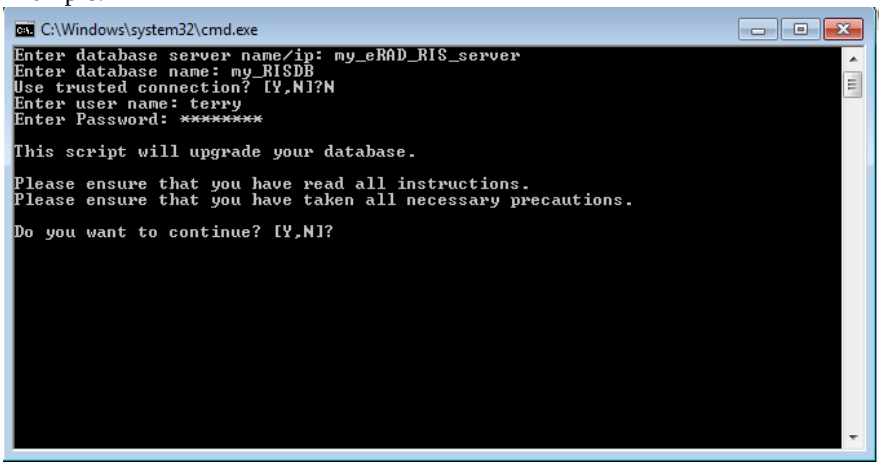
From the upgrade folder, double click the "RunUpgrade.bat" command file.

Enter the server name, database name and authentication credentials to the database. You have 2 choices for authentication credentials.

You can choose to use "Trusted connection". Using this option will pass the identity of the currently logged on user. If this user has "db_owner" access to the eRAD RIS database then feel free to use this options.

If you decide not to use "Trusted connection" then you will be prompted for user id and password.

Example:



After the upgrade program has finished you can find the upgrade logs in the "log" folder. The file name will be eRAD_RIS_db_upgrade_timestamp.log, where timestamp is a value representing the date and time the upgrade started. If you see any errors please contact the development team

## 1. New Features

The purpose of Build 43.2 is to add Remine bug number 9146 - Patient Name to be included in Email message to RADAR. The original feature to support emailing diagnostic reports was introduced in 43.1 and is described below. You will also find the configuration settings required to use the feature were re-added to this document as well.

# The following is from 43.1

## Distribution of Encrypted PDF via Email

1). Person/Address level configuration of email address and password
For now, this will be configured at the address level and later functionality will be provided to allow a default at the person level (see Outstanding Issues).
Passwords added at the address level are hidden from end users by default. If they have access they can click a button to view the password in plain text. Clicking this button audits their request for access and access to the password.
Changing a password is also an audited event.
Passwords are subject to a "strong password check" as a part of their data validation. The check is running the password against a regular expression. There is a system configuration item for EmailPDFPasswordRegex to house the regular expression, thus allowing it to be customized per install.

2). Queue Poller
Changes were made to the queue poller to pick up any referring or CC addresses that prefer to receive email and create a distribution job with the specified email address.
3). PDF Encryption
In order to password protect the PDF file, an open source PDF library called PDFSharp is being used. This library allows us to pass it a password and a byte array containing a non-encrypted PDF and it then returns the password protected PDF.

3). RADAR
After some discussion of using Mirth to encrypt the PDF and send the email, it was decided that PDFSharp would be used to encrypt the pdf and RADAR would be used to send the email. This required an enhancement to the RADAR dll in order to pass a file to the service so they could attach it to the email. Part of the message to RADAR involves an account name. RIS has always used the practice_code of the revelant practice for this. It is being determine based on the practice related to the_site_code of the study of the distribution job. RADAR uses the account name to determine who the sending message is from. Configuration of the email's format will be done in RADAR, including logos, header, footer, colors, and verbiage.

4). Email Sender
A configuration setting called DDEEnableEmail has been added to the applicationsettings.config file of the RIS services binaries. When this setting is True the main method of the Distribution engine will create a worklist working thread that will poll for Email jobs created by the queue poller. This setting was added in order to provide the ability to disable email functionality on a particular Distribution server, mostly for testing purposes. There is nothing preventing multiple Distribution services from processing email jobs at the same time for scalability purposes.
When the Distribution service finds an email job, it will create a PDF of the report using the Sql Server Reporting Services framework in the same way faxes and print jobs are done. It then encrypts the PDF using the PDFSharp library and sends it via RADAR using the dll the RADAR team has provided.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

5). Send Report Dialog
The Send Report dialog, also used to edit active Distribution jobs, has been enhanced to allow sending emails. The email portion is disabled when the Other radio button is selected. This is because the password used to encrypt the PDF file is set for the particular person and address.
Upon selecting an address with a delivery preference of Email the Email textbox will automatically populate based on the value from the person's address. For addresses with other default delivery preferences, changing the Delivery method dropdown to Email will cause the email textbox to populate if and Email has been specified for that address.
Note there are outstanding issues regarding this screen.

6). Worklists
The Document Distribution Worklists in the RIS client now show Email jobs with a Delivery Method value of "Email" and an Email Address column valued with the destination Email address. See screenshots below.

## *How to enable the Feature*

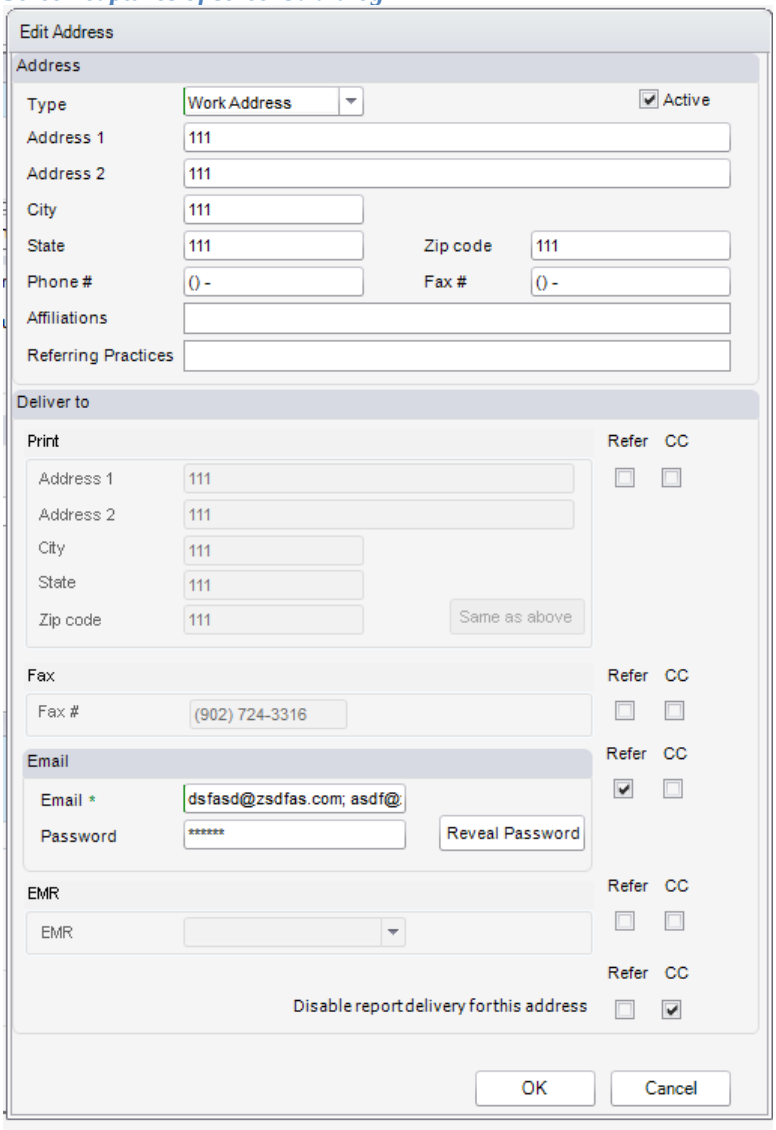
1) Personnel changes
    a. Any referring physicians that wish to receive reports via email when they are the referring or a CC doctor on a study must be configured with that preference via the Personnel editor.
2) Service setting changes
    a. The queue used by the Distribution Engine must be set up appropriately to subscribe to report related events. If the service is already set up for Fax and Print jobs the queue is already ready.
    b. The applicationsettings.config file for the Document Distribution service now contains a setting called "DDEEnableEmail" which must be set to True for the DD to process email jobs.
3) RADAR settings
    a. RADAR must have accounts for all practices which will be sending emails.

### *Permission Strings*

Config.LookupEditor.Personnel.EmailPassword = full access to this enables users to view personnel address distribution email passwords (Default == None)

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

*Screen captures of screens / dialog*



Showing new Email section of address config

## 2. Defects Resolved

| Redmine # | Tracker | Subject | Priority |
|---|---|---|---|
| 9146 | Bug | Patient Name to be included in Email message to RADAR | Urgent |

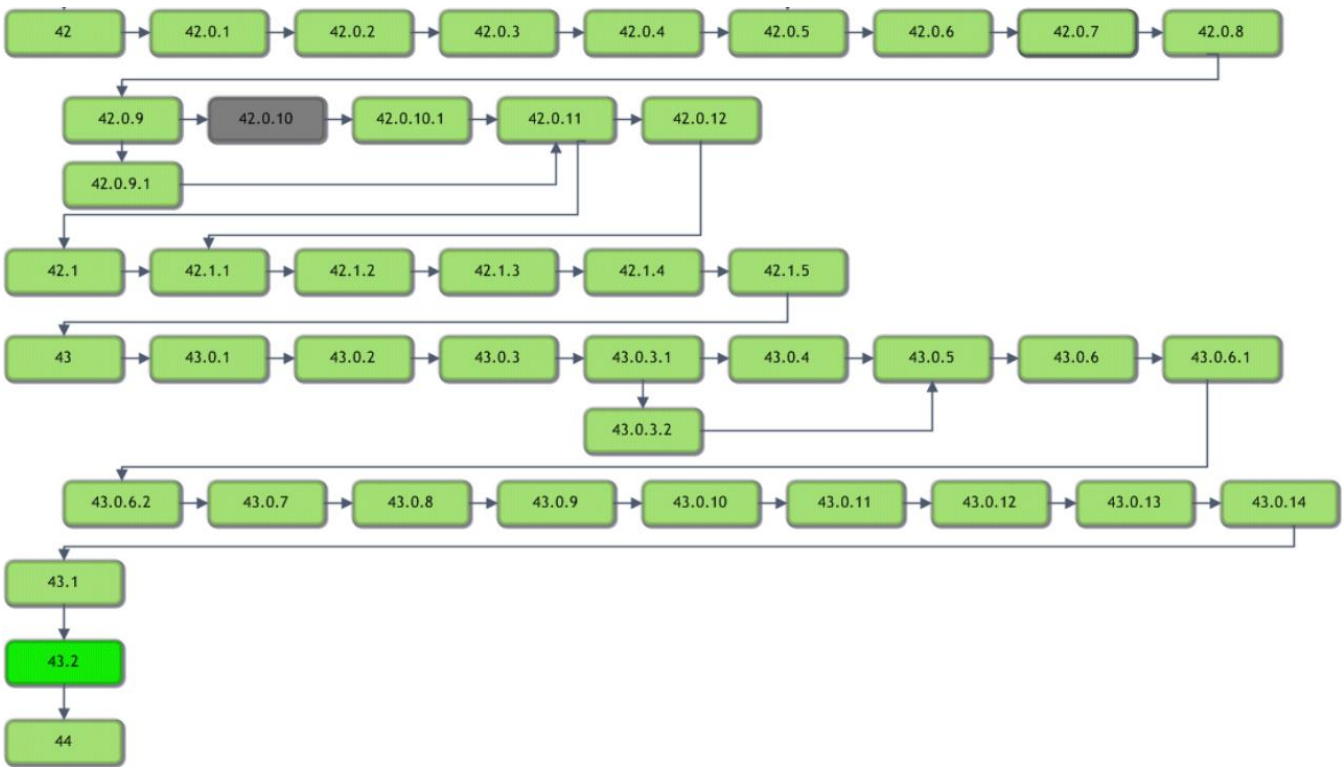
## 3. Changes to Configuration

**The following configuration changes are from 43.1**

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Access string / User Group Permission tables | Config.LookupEditor.Personnel.EmailPassword | None | Full access to this enables users to view personnel address distribution email passwords |
| Applicationsettings.config | DDEEnableEmail | True | Must be set to True for the DD to process email jobs |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 4. Code Stream



**Legend:**

Light Green = Released software

Gray = Will not be released

Bright Green = Current Release

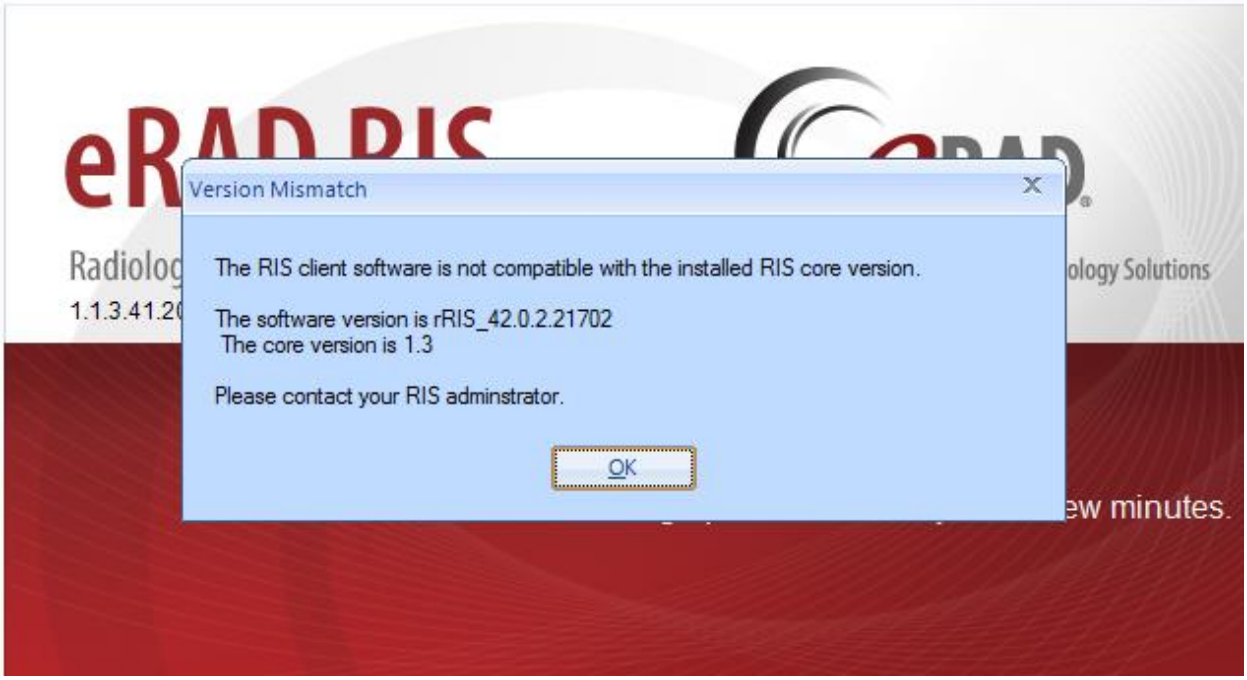
## 9. Installing

1. Copy and replace the current rRIS…zip file with the rRIS_1.3.43.2.0.26864.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_43.2.0.26864→ rRIS_1.3.43.2.0.26864
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

2. Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.

*rRISService directories include:*

*a) rRISService*
*b) CDS rRISService*
*c) Wedge rRISService*
*d) DDE rRISService*

**Restart each service.**

# Table of Contents

1. Purpose ..... 4
2. Intended Audience ..... 4
3. Installing/Accessing the Application ..... 4
4. New Access Strings and Configuration Settings 43 ..... 5
5. New Features and Enhancements ..... 16
Reporting – Peer Review (Phase 1) ..... 16
Export Images (Burn CD) ..... 22
County Option for Radiologist Signing Location ..... 32
IVT – Ability to Edit Patient Information ..... 35
ICD10 Support ..... 36
IMPORTANT: Radiologist ICD Support Uncomplete ..... 41
Secure Messaging ..... 43
Patient Portal Legal Documents ..... 47
Mammography – Suggest Manual Review ..... 49
Option to Not Allow Editing of Billing Codes by Technicians ..... 50
Patient "Not Yet Menstruating" Flag ..... 51
Exam Search Filter of BI-RADS ..... 52
Patient Search – New Patient Split Button Added ..... 53
Responsible Party MRN ..... 54
Scheduling – Patients Height and Weight Required at Time of Scheduling ..... 55
Patients Weight and Room Added to Weight Limit Message ..... 56
Ability to Add Longer Room Names ..... 57
Ability to Use a Closed Room from Registration Window ..... 58
Scheduling – Repeating Modality Closures ..... 59
Last Contact and Last Contacted Type Added to Work Lists ..... 60
Additional Columns Added to the Confirmation WL ..... 61
Additional Columns added to the Orders to Schedule WL ..... 61
Columns added to the Image Request WL ..... 62
Locked By Column Added to the CTRM WL ..... 62
Ability to Select Date Range for Confirmation WL ..... 63
Problem and QA Flags Added to Patient Folder WL ..... 64
Personnel Editor – Have City Populated by Zip Code ..... 65
Ability to Define Primary Specialty for Referring Physician ..... 66
Referring Practice Address Changes ..... 67
Management Report – Appointment Schedule by Procedure Group ..... 71
Management Report – Users in Usergroups ..... 72
Management Reports – Radiologist Productivity by User – Mammo ..... 73
Utilization Management – Addition of Medical Group Lookup Table ..... 74

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Utilization Management – Support Medical Group Contact Types ..... 76
Utilization Management – Support UM Coverage Type ..... 77
Utilization Management – Support UM Common Language ..... 78
Utilization Management – Support Default Review Times ..... 78
Utilization Management – Support UM Status ..... 79
Utilization Management – Authorization Rules for Medical Groups ..... 80
Utilization Management – Support Capitated Carriers ..... 81
Utilization Management – Mapping Carriers to Medical Groups ..... 82
Utilization Management – Addition of Utilization Management User Group ..... 82
Meaningful Use – Site Level MU Override ..... 83
Meaningful Use – Direct Messaging ..... 84
Meaningful Use – Additional Options for MU Fields ..... 90
Meaningful Use – Additional Medications for Quick Add Edit Window ..... 91
Meaningful Use – Laboratory Tests and Values / Results ..... 92
Meaningful Use – Office Visit ..... 93
Meaningful Use – Clinical Summaries ..... 94
Meaningful Use – Data Portability ..... 95
Meaningful Use – Alerts and Clinical Decision Support ..... 97
Meaningful Use – Clinical Quality Measures ..... 103
Meaningful Use – Preventative Care ..... 105
Meaningful Use – Automated Measures Management Report ..... 107
Meaningful Use – Reports by Radiologist Management Report ..... 110
Meaningful Use – Stage 2 Management Reports ..... 111
6. Code Stream ..... 113
7. RIS Release Version Numbers ..... 114
8. Resolved Defects ..... 115
9. Known Limitations ..... 127

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 43 and subsequent server releases. This version of eRAD RIS is referred to as Build 2.43.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 2.43 is considered a new core release of the application and will require a reinstallation of eRAD RIS. This is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 4. New Access Strings and Configuration Settings 43

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Access string / User Group Permission tables | Alert.AgeGreaterThan | Full | full access to this enables users to see the alert of the "AgeGreaterThan" type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.CDS_01_HighBP | Full | full access to this enables users to see the alert |
| Access string / User Group Permission tables | Alert.CDS_02_HighCholesteral | Full | full access to this enables users to see the alert |
| Access string / User Group Permission tables | Alert.CDS_03_PossibleReaction | Full | full access to this enables users to see the alert |
| Access string / User Group Permission tables | Alert.CDS_04_TobaccoUser | Full | full access to this enables users to see the alert |
| Access string / User Group Permission tables | Alert.CDS_05_PneumoniaBooster | Full | full access to this enables users to see the alert |
| Access string / User Group Permission tables | Alert.ExpiredInsurance | Full | full access to this enables users to see the alert of the "ExpiredInsurance" type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.HasAllergy | Full | full access to this enables users to see the alert of the "HasAllergy" type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.HasProblem | Full | full access to this enables users to see the alert of the "HasProblem" type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.InactiveCarrierAppliedToVisit | Full | full access to this enables users to see the alert of the "InactiveCarrierAppliedToVisit" type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.IndicationAndMedication | Full | full access to this enables users to see the alert of the "IndicationAndMedication" type when it is evaluated |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| | | | to be true |
| Access string / User Group Permission tables | Alert.IndicationAndSevereContrastAllergy | Full | full access to this enables users to see the alert of the "IndicationAndSevereContrastAllergy" type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.LabOrderWithEmptyValue | Full | full access to this enables users to see the alert of the "LabOrderWithEmptyValue " type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.MRI65PlusHeartDiseaseLipitorAndLDL100Plus | Full | full access to this enables users to see the alert of the "MRI65PlusHeartDiseaseLipitorAndLDL100Plus" type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.OnMedication | Full | full access to this enables users to see the alert of the "OnMedication" type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.PatientBirthChanged | Full | full access to this enables users to see the alert of the "PatientBirthChanged" type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.PatientDeceased | Full | full access to this enables users to see the alert of the "PatientDeceased" type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.PatientDrugAllergyWhenArrivedOrStarted | Full | full access to this enables users to see the alert of the "PatientDrugAllergyWhenArrivedOrStarted" type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.PatientFirstNameChanged | Full | full access to this enables users to see the alert of the "PatientFirstNameChanged " type when it is evaluated |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| | | | to be true |
| Access string / User Group Permission tables | Alert.PatientLastNameChanged | Full | full access to this enables users to see the alert of the "PatientLastNameChanged " type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.PatientMissingPhoneInfo | Full | full access to this enables users to see the alert of the "PatientMissingPhoneInfo" type when it is evaluated to be true |
| Access string / User Group Permission tables | Alert.ProcedureXAndHighBP | Full | full access to this enables users to see the alert of the "ProcedureXAndHighBP" type when it is evaluated to be true |
| | Clinical.AlertFramework | Full | Allows the user to see alerts, which by default should be set to full access. Added this to pass an MU test case which requires us to show we can configure alerts not to fire for a specific user group. |
| Access string / User Group Permission tables | Config.LookupEditor.AllergySeverity | Full | allows the user to see alerts, which by default should be enabled full for all users. Added this to pass an MU test case which requires us to show we can configure alerts not to fire for a specific user group. |
| Access string / User Group Permission tables | Clinical.Attachments | Full | Controls access to the standalown Attachments screen accessable in a worklist via Right Click / Attachments |
| Access string / User Group Permission tables | Clinical.BurnCD | None | Controls access to the "Burn CD" Image Request context menu, the "Burn CD" from the tech's Perform Exam screen and |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| | | | the patient folder's Burn CD menu items |
| Access string / User Group Permission tables | Clinical.DataField.Patient.Notes | None | Controls if the user has access to change previous patient notes |
| Access string / User Group Permission tables | Clinical.DeleteDictationAndResetStatus.ExternalReportVerified | None | When a external report is verified, this permission will allow the verified report to be reverted back to exam done so it can be either re-verified or changed to a non-external report. |
| Access string / User Group Permission tables | Clinical.DiagnosisCodes | None | Controls access for users to enter ICD Codes in the MU Tab's MU Extra Info Screen. |
| Access string / User Group Permission tables | Clinical.InfoButton | Full | allows user access to the MU Info button feature accessabel in the MU tab's grids for Medications, Medical History or Lab Results via a Right Click / View Medline Plus Info. |
| Access string / User Group Permission tables | Clinical.Insurance.Override | None | controls access to override Eligiblity/Eligible API results |
| Access string / User Group Permission tables | Clinical.Insurance.Reverify | None | Controls access to the Reverify button in the Manage Insurance groupbox |
| Access string / User Group Permission tables | Clinical.Labwork.AddEdit | None | limits users ability to add or edit labwork |
| Access string / User Group Permission tables | Clinical.Labwork.Request | None | limits users ability to request labwork |
| Access string / User Group Permission tables | Clinical.PeerReview | None | Access to Peer Review context menu item and buttons |
| Access string / User Group Permission tables | Clinical.Schedule.AssignIcdCode | None | Controls whether ICD codes can be assigned during scheduling, ordering, registering |
| Access string / User | Clinical.Schedule.Calendar | None | Schedule Calendar control |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| Group Permission tables | This is not a new access string but the default value has changed from **full to none** | | |
| Access string / User Group Permission tables | Clinical.ViewEditCanChangeDiagIndications | None | In View/Edit, the indications defined by the radiologist can be edited |
| Access string / User Group Permission tables | Clinical.ViewEditCanChangeTechIndications | None | In View/Edit, the indications defined up to the technologist workflow can be edited |
| Access string / User Group Permission tables | Config.AllowMModalConfig<br><br>This is not a new access string but the default value has changed from **none to full** | Full | Allows users access to turning on M*Modal workflow for themselves or other users if the current user has admin access |
| Access string / User Group Permission tables | Config.CreateMessage | None | Gives ability to create a new secure message for comunication between Patient Portal and RIS |
| Access string / User Group Permission tables | Config.LookupEditor.AllergySeverity | None | lookup table access for Allergy Severity |
| Access string / User Group Permission tables | Config.LookupEditor.EligibleConfig | None | controls access in the lookup table editor |
| Access string / User Group Permission tables | Config.LookupEditor.HL7v3Vocabulary | None | controls access in the lookup table editor |
| Access string / User Group Permission tables | Config.LookupEditor.InsuranceServiceType | None | Controls access to the lookup table editor |
| Access string / User Group Permission tables | Config.LookupEditor.LabObservation | None | Controls access to the lookup table editor |
| Access string / User Group Permission tables | Config.LookupEditor.LabProvider | None | Controls access to the lookup table editor |
| Access string / User Group Permission tables | Config.LookupEditor.LegalAuthenticator | None | controls access in the lookup table editor |
| Access string / User Group Permission tables | Config.LookupEditor.LegalDocument | None | Controls access to lookup table legal document |
| Access string / User Group Permission tables | Config.LookupEditor.MedicalGroup | None | lookup table access for Medical Group |
| Access string / User Group Permission tables | Config.LookupEditor.MedicalGroupContactType | None | lookup table access for Medical Group Contact Type. |
| Access string / User | Config.LookupEditor.MessageGrou | None | Controls access to the |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| Group Permission tables | p | | Message Group lookup table |
| Access string / User Group Permission tables | Config.LookupEditor.ObservationResult | None | Controls access to the lookup table editor |
| Access string / User Group Permission tables | Config.LookupEditor.ReferringAddresses | None | limits users ability to view or edit the Lookup editor for Referring Addresses. To have access users will also need to have access to the Config.LookupEditor.Personnel item. |
| Access string / User Group Permission tables | Config.LookupEditor.SpecimenAction | None | Controls access to the lookup table editor |
| Access string / User Group Permission tables | Config.LookupEditor.SpecimenCondition | None | Controls access to the lookup table editor |
| Access string / User Group Permission tables | Config.LookupEditor.SpecimenQuality | None | Controls access to the lookup table editor |
| Access string / User Group Permission tables | Config.LookupEditor.SpecimenType | None | Controls access to the lookup table editor |
| Access string / User Group Permission tables | Config.LookupEditor.UMCommonLanguage | None | lookup table access for UM Common Language |
| Access string / User Group Permission tables | Config.LookupEditor.UMCoverage | None | lookup table access for UM Coverage |
| Access string / User Group Permission tables | Config.LookupEditor.UMResolution | None | lookup table access for UM Resolution |
| Access string / User Group Permission tables | Config.LookupEditor.UMStatus | None | lookup table access for UM Status |
| Access string / User Group Permission tables | Config.MessageInbox | None | Gives ability to access the Secure message inbox |
| Access string / User Group Permission tables | ContentEnum.Reschedule | None | Reschedule Studies |
| Access string / User Group Permission tables | Flag.EligibilityApproved | Full | Access to see the flag |
| Access string / User Group Permission tables | Flag.EligibilityDenied | Full | Access to see the flag |
| Access string / User Group Permission tables | Flag.EligibilityError | Full | Access to see the flag |
| Access string / User Group Permission tables | Flag.EligibilityInProgress | Full | Access to see the flag |
| Access string / User Group Permission tables | Flag.EligibilityWarnings | Full | Access to see the flag |
| Access string / User | Flag.Problem | Full | Access to see the Problem |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| Group Permission tables | | | flag |
| Access string / User Group Permission tables | Flag.QA | Full | Access to see the QA flag |
| Access string / User Group Permission tables | MU.ExportAll | None | controls access for administrators to export all CCDA Data to the system config location MU_ExportALL_Path |
| Access string / User Group Permission tables | WL.DirectMessage | None | Gives ability to access the Direct message inbox |
| Access string / User Group Permission tables | WL.LabworkAdvisedWL | None | WL access for the LabworkAdvice context menu item. |
| Access string / User Group Permission tables | WL.LabworkRequestedWL | None | WL access for the Labwork Requested context menu item. |
| Access string / User Group Permission tables | WL.MT.PeerReviewPendingAction All | None | WL access to All Peer Reviews Pending QA under the Editor menu |
| Access string / User Group Permission tables | WL.Rad.PeerReviewPendingAction All | None | WL access to All Peer Reviews Pending QA under the Radiologist menu |
| Access string / User Group Permission tables | PowerScribe360.AllowAutofeed<br><br>This access string has been removed | removed | This access string has been removed. |
| SystemConfig lookup | APIServerUrl | | the URL for Webservice API services (ie: http://<your rRisService server><API Port>/API) |
| SystemConfig lookup | AuthorizationPrefix | | A prefix that will be added to the new Authorization numbers that are assigned |
| SystemConfig lookup | CallbackDeclinedValue | | The key in Follow Up Type system config table to be considered as 'Declined Callback Letter' |
| SystemConfig lookup | DDRemoveErroredFaxJobs | True | Determines if the Document Distribution Engine removes failed fax jobs after recording their status |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| SystemConfig lookup | DefaultAgeofMinor | 18 | The maximum number that would define a patient as being a minor |
| SystemConfig lookup | EnableContrastBillingRelation | True | Enables billing and contrast code syncing in the tech window |
| SystemConfig lookup | EnforceCountySelection | False | To force user to select a county for signing |
| SystemConfig lookup | HeightRequiredOnSchedule | False | Height is required when scheduling the patient |
| SystemConfig lookup | Icd10EffectiveDate | 07-16-2014 | (value = DateTime mm-dd-yyyy) The date on which ICD10 is effective. ICD9 will be used prior to this date. |
| SystemConfig lookup | InsuranceEligibleAPIString | | Verification account for billing. |
| SystemConfig lookup | InsuranceReVerifyInterval | 10 | (value = int in days) Determines how often we will reverify a patients insurance, before the study is preformed. Note: we will also re-verify on the day of service |
| SystemConfig lookup | InsuranceVerificationGroupNPI | | NPI for server initiated insurance eligiblity requests |
| SystemConfig lookup | MUExportAllPath | | Path where the MU feature to export all patient CCDA will be stored (Ex: c:\temp\muexport) |
| SystemConfig lookup | PeerReviewScoreToStartRequiringNotes | 2b | Determines the score at which we will start to require they enter notes. Possible values are - 1, 2a, 2b, 3a, 3b, 4a or 4b. |
| SystemConfig lookup | PeerReviewScoreToStartSendingToQa | 2b | Determines the score at which we will start to mark them as pending Qa. Possible values are - 1, 2a, 2b, 3a, 3b, 4a or 4b |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| SystemConfig lookup | RadarAPIURL | https://api.myradarconnect.com/v1/ | (value = URL) Determines the start of day to jump the calendar too. |
| SystemConfig lookup | RadMustProvideIcdCode | False | To force radiologist to provide diagnosis ICD code prior to signing. |
| SystemConfig lookup | TechMustProvideIcdCode | False | To force technologist to provide diagnosis ICD code prior to exam done. |
| SystemConfig lookup | UMRoutineReview | 30 | The maximum number of UM hours for a routine exam. |
| SystemConfig lookup | UMStatReview | 4 | The maximum number of UM hours for a STAT exam. |
| SystemConfig lookup | UMUrgentReview | 10 | The maximum number of UM hours for an urgent exam. |
| SystemConfig lookup | WeightRequiredOnSchedule | False | weight is required when scheduling the patient (value = True/False) |
| SystemConfig lookup | WeightUnitsAbbreviation | lbs | An abbreviation of the system's weight measurement unit (i.e. kg or lbs) Default is lbs. |
| SystemConfig lookup | WorklistDateRangeDays | 10 | Maximum number of days to filter date enabled worklists by. |
| rRISService.exe.config **and** rRISServicex64.exe.config | Setting <serviceThrottling> has been increased.<br><br>**Before**:<br><serviceThrottling maxConcurrentCalls="2000" maxConcurrentSessions="4000" maxConcurrentInstances="4000" /><br><br>**After**:<br><serviceThrottling maxConcurrentCalls="3000" maxConcurrentSessions="5000" maxConcurrentInstances="5000" /> | | This increase was added for larger implemenations.<br><br>The changes can be found in the deploy folder > rRISService.exe.config file. Compare with your current file in your rRISService folder. This applies to the rRISService.exe.config and the rRISServicex64.exe.config files<br><br>Manual edit required. |

| | | | |
|---|---|---|---|
| | <serviceThrottling maxConcurrentCalls="3000" maxConcurrentSessions="5000" maxConcurrentInstances="5000" /> | | Compare with your current file in your rRISService folder. This applies to the rRISService.exe.config and the rRISServicex64.exe.config files<br><br>Manual edit required. |
| Applicationsettings.config | UsePerCallInstanceContextMode | False | Will use PerSession mode by default but if UsePerCallInstanceContext Mode is True we use PerCall instead.<br><br>**PerCall** = the service creates resources, processes the client call, and then destroys the resources. This provides greater scalability as the resources are released sooner, but each call may experience more latency<br><br>**PerSession** = the service creates resources for a session which are then kept alive and re-used from one user call to the next. May provide less latency. |
| Applicationsettings.config | StartInsuranceEligibilityService | False | This is not completely implemented in this build and should remain as false. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 5. New Features and Enhancements

## Reporting – Peer Review (Phase 1)

In build 43 peer review options have been added to the Patient Folder and also from the Reporting windows Patient History data pane.

From the Patient Folder the study can be peer reviewed by selecting the Peer Review option from the context menu. The option will display for studies not signed by "you" and are in signed status.

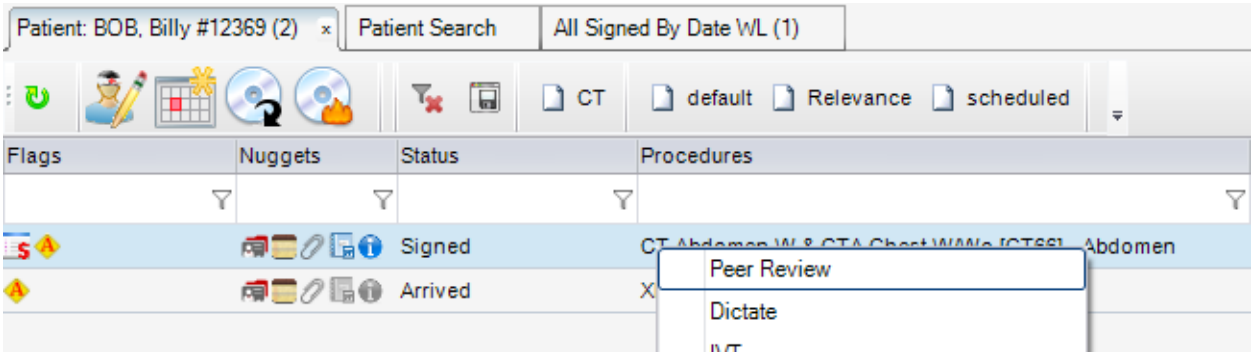

**Figure 5.1 – Peer Review context menu option from Patient Folder**

From the Reporting windows Patient History control the Peer Review button will be displayed in the "My Views" column.

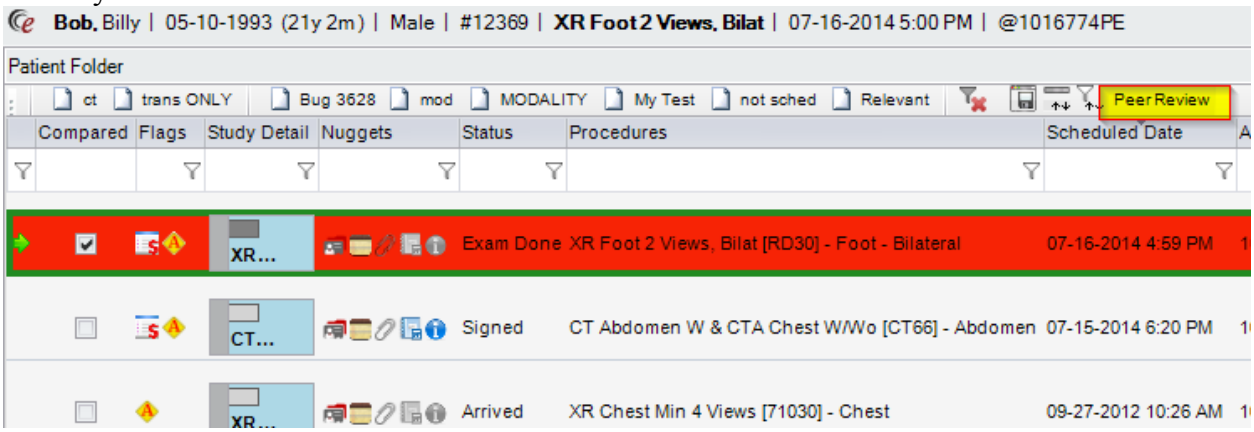

**Figure 5.2 – Peer Review button on Patient History control of reporting window.**

Again, only the studies in signed status that were not signed by you can be reviewed. Selecting a study in a status other than signed with inform the user that the current study status cannot be peer reviewed

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

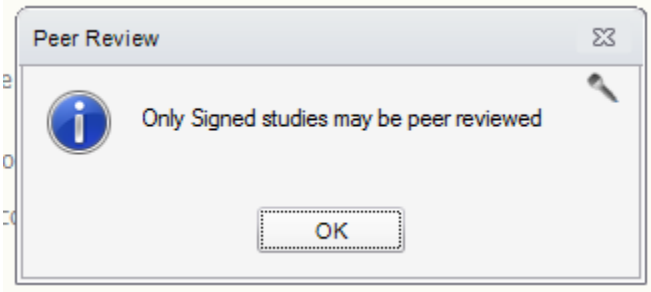

**Figure 5.3 – Attempt to peer review a study in status other than signed**

The options for peer review are controlled by an access string titled **"Clinical.PeerReview"** with a default level of None.

Upon selecting one of the options for peer review the Peer Review window will open. From this window the user can see the performed data, accession number, procedure performed, patients name, MRN and date of birth.

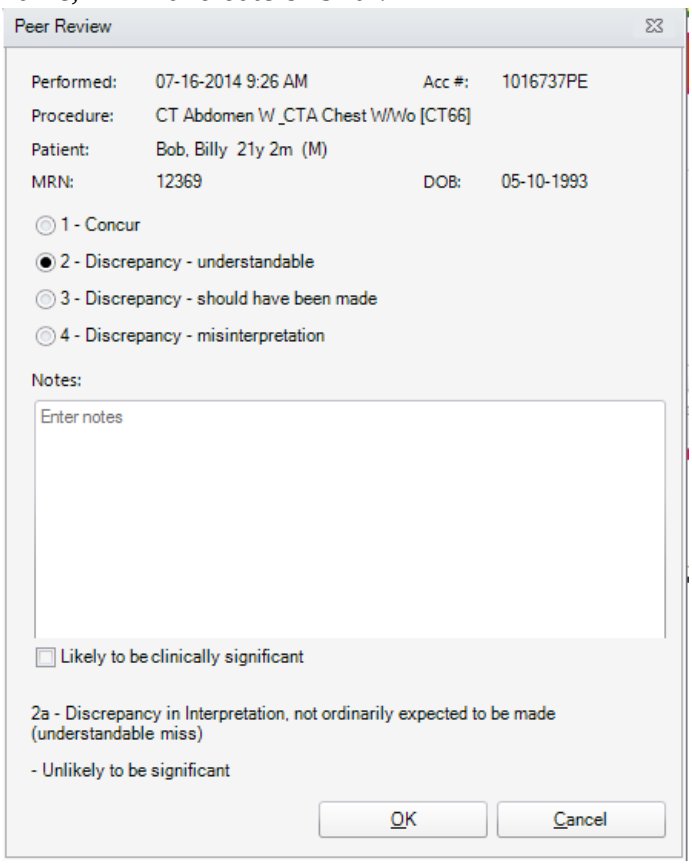

**Figure 5.3 – Peer Review window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The Peer Reviewer will have 7 scoring options. The values are 1-4 with the option to select the check box "Likely to be clinically significant". Selecting this check box if the difference of the study to be Unlikely significant and Likely significant, changing the score from 2a to 2b for example.
The scoring would look like this:

| Peer review score code | Description |
|---|---|
| 1 | Concur with interpretation |
| 2a | Discrepancy in Interpretation/not ordinarily expected to be made (understandable miss) - Unlikely to be significant |
| 2b | Discrepancy in Interpretation/not ordinarily expected to be made (understandable miss) - Likely to be significant |
| 3a | Discrepancy in Interpretation/should be made most of time - Unlikely to be significant |
| 3b | Discrepancy in Interpretation/should be made most of time - Likely to be significant |
| 4a | Discrepancy in Interpretation/should be made almost every time (misinterpretation of findings) - Unlikely to be significant |
| 4b | Discrepancy in Interpretation/should be made almost every time (misinterpretation of findings) - Likely to be significant |

**Table 5.1 – Peer review scores**

There is also a notes field for the user to add any notes pertaining to the studies peer review. Notes are required when the score passes a certain threshold, that threshold is configurable at the system and the practice level. The practice level overrides the system configuration setting if it is configured. This threshold identifies the score at which notes will start to be required. When notes are required, the OK button will be disabled until notes are entered. This is also set at the system and practice level. The system configuration setting it titled **"PeerReviewScoreToStartRequiringNotes"** with a default value of 2b.

The Add/Edit Practice window has been redesigned. To access the optional settings for Peer Review, select the appropriate tab as shown in the screenshot below.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

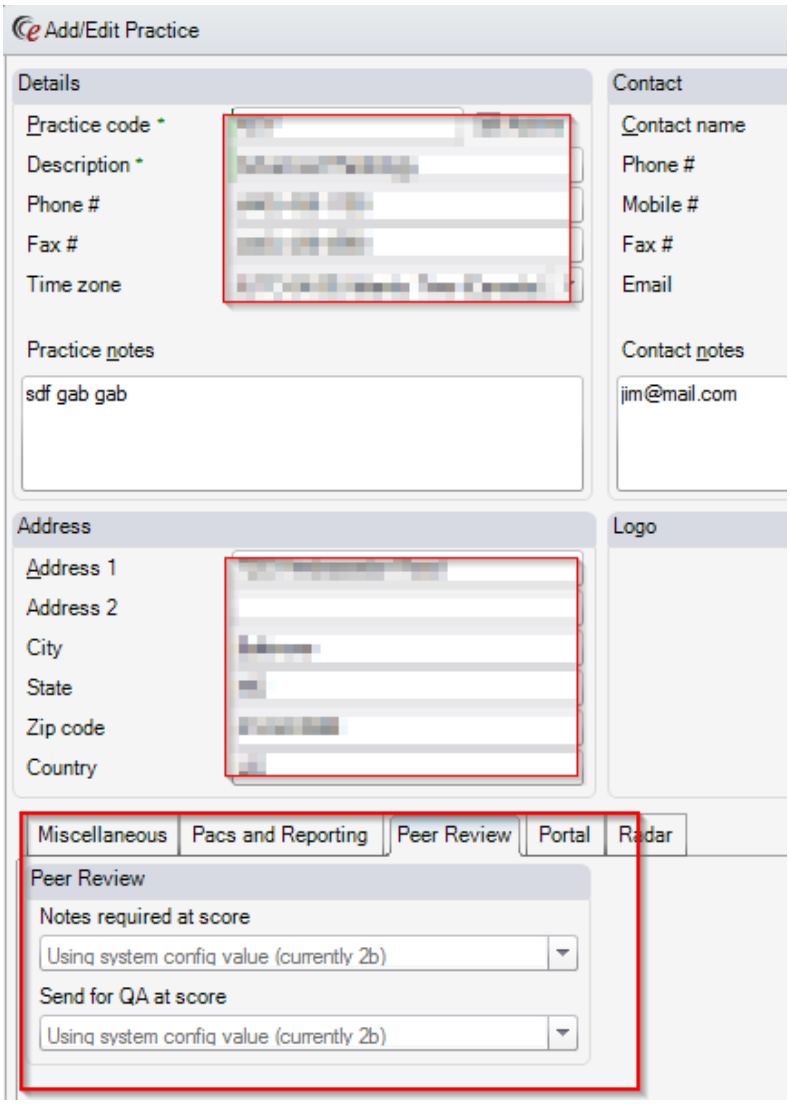

**Figure 5.4 – Peer Review tab of the Add/Edit Practice window**

Similar to the system configuration setting for notes, we have another setting titled **"PeerReviewScoreToStartSendinfToQA"** with a default value of 2b that determines if a peer review will then go to a "post peer review work list" where it can then be reviewed, or entered in an external system and marked as completed. This is also set at the system and practice level with the practice level overriding the system configuration setting.

Once a study is peer reviewed, if it meets the **"PeerReviewScoreToStartSendinfToQA"** settings, the peer review will be went to the "All Peer Review Pending Action WL". This worklist can be accessed from the Radiologist and Editor menus and each is controlled by its

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

own new access string. The All Peer Review Pending Action WL under the Radiologist menu is controlled by access string **"WL.Rad.PeerReviewPendingActionAll"** with a default of none. Access to the work list option under the Editor menu is controlled by access string **"WL.MT.PeerReviewPendingActionAll"** which also has a default of none.

This work list will show the score and score description along with some details attached to the peer review and the study itself. From this worklist, the user will have the option to "Mark as Completed" which will remove the item from the worklist, or "Open".

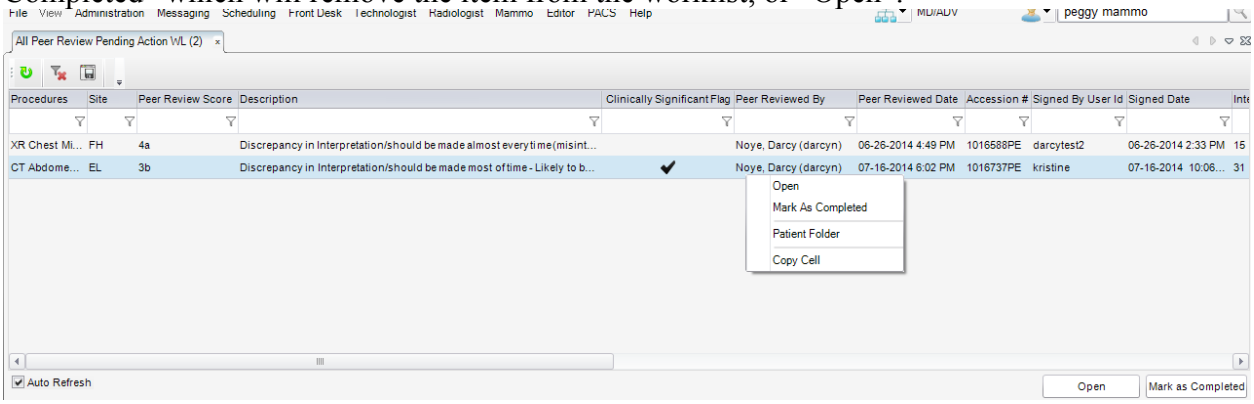

**Figure 5.5 – All Peer Review Pending Action WL**

Selecting Open will present the user with a read only version of the Peer Review window. The user can see the notes and score given by the peer reviewer. Options in this window are to Mark As Completed and Cancel. There is also an ICON in the upper right corner that will allow the user to copy and paste the details of the peer review. Data can also be copied from each row in the peer review window via a right click on the snippet of information.

## Export Images (Burn CD)

Burn CD option in eRAD RIS will be available from 3 locations in the application, the Image Request work list, the Patient Folder work list and the Technologists Perform Exam window. Access to Burn CD from all 3 locations is controlled by the access string tilted **"Clinical.BurnCD"** with a default value of Full.

Access from Image Request work list:
Image request work list now has the option to group requests. Default grouping is: Site, Media Type and Deliver To. This grouping makes it easier to multi select the items and completes the "Burn CD" in one step as shown in the following "Burn CD" context menu selection. Multiple studies can be selected from the Image request work list to be burned. From the Burn CD window the user can choose to include or not the studies for the CD. The Deliver To information in the Burn CD window will automatically be populated from the data entered on the Image Request. If there are different deliver to addresses, the user will be required to select one or can cancel and reselect the studies from the work list.

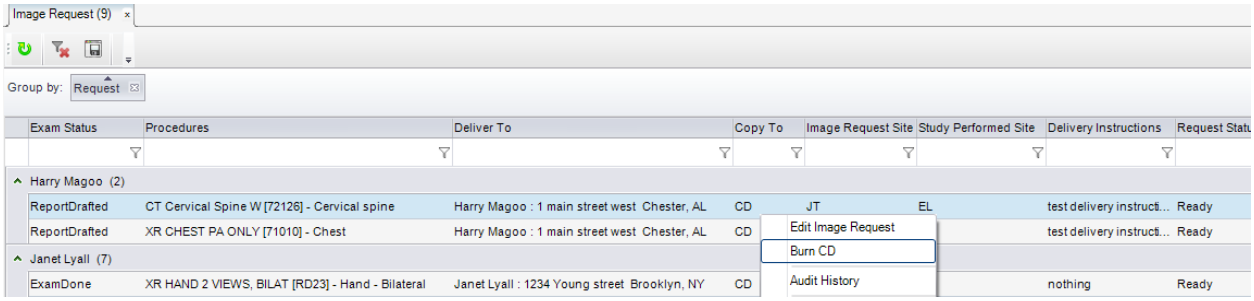

**Figure 5.7 – Image Request work list**

Access from Patient Folder work list:
From the Patient Folder work list the user can select a single or multiple studies. The Burn CD option is also in the context menu. When the Burn CD window opens the Deliver To information will be blank. These fields are not required to be completed. Again the user can decide in the Burn CD window if they want to include all of the studies that were selected.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

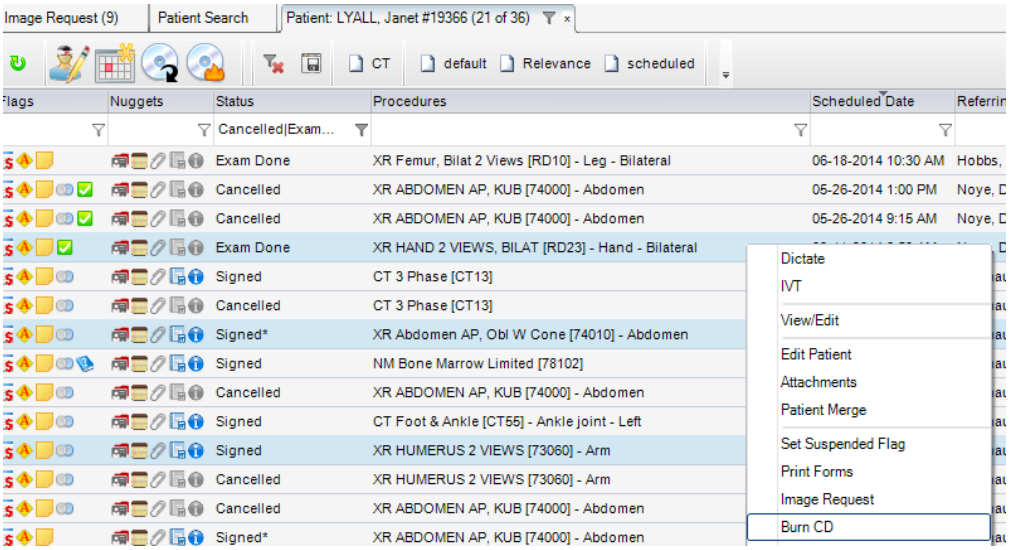

**Figure 5.8 – Patient Folder work list**

Access from Technologist's Perform Exam window:

The Perform Exam window will have access to the Burn CD window via the button of the same name in the lower left corner of the data window.

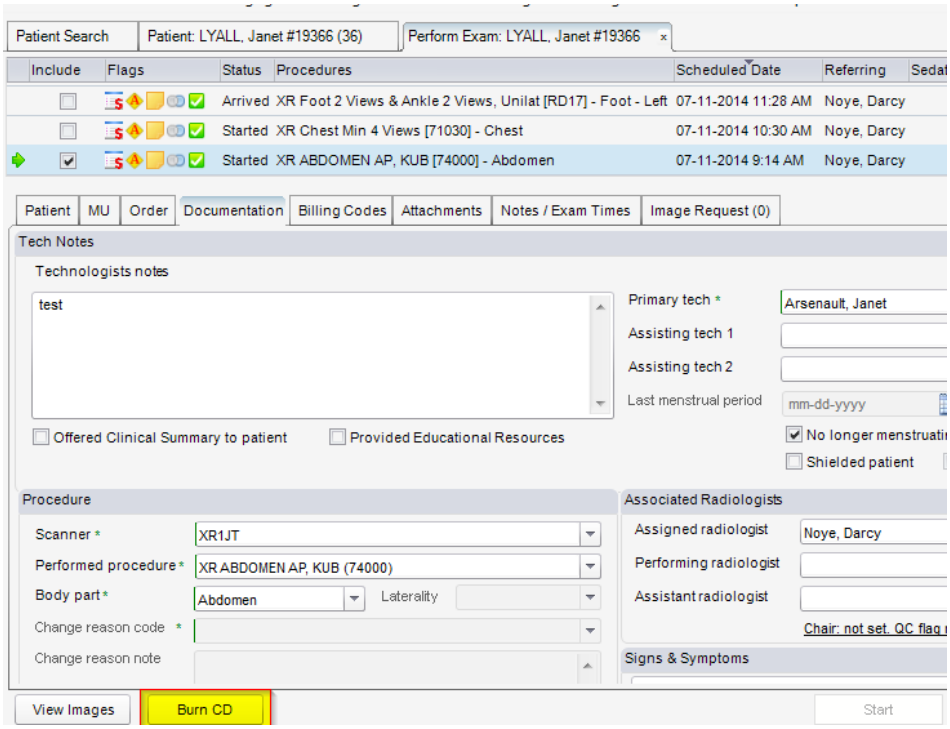

**Figure 5.9 – Perform Exam window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

As a precaution the user will be prompted with a message from the Perform Exam window to ensure all of the images have been uploaded to PACS.

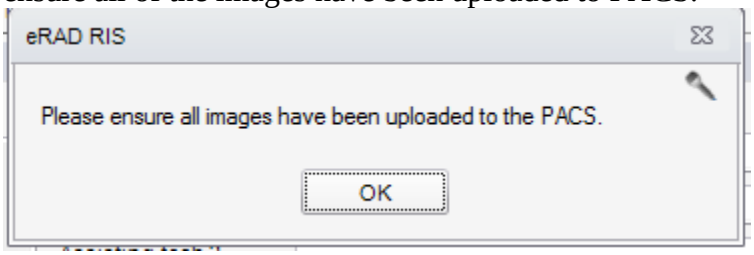

**Figure 5.10 – Message displayed from Perform Exam window when Burn CD is selected**

When the Burn CD window opens the Deliver To information will be blank. The user will have the option to select additional studies to burn that have been completed for that day.

Burn CD window:

The Burn CD window is the main dialog for this feature. It shows all the studies that were selected in the Image Request WL or Patient Folder WL (the exception is the Burn CD from Perform Exam) and allows you to uncheck items to exclude them from the CD. The checked items are included in an Image Request level lock so that if another user tries to export the same Image Requests they will be notified that another user is processing that request.

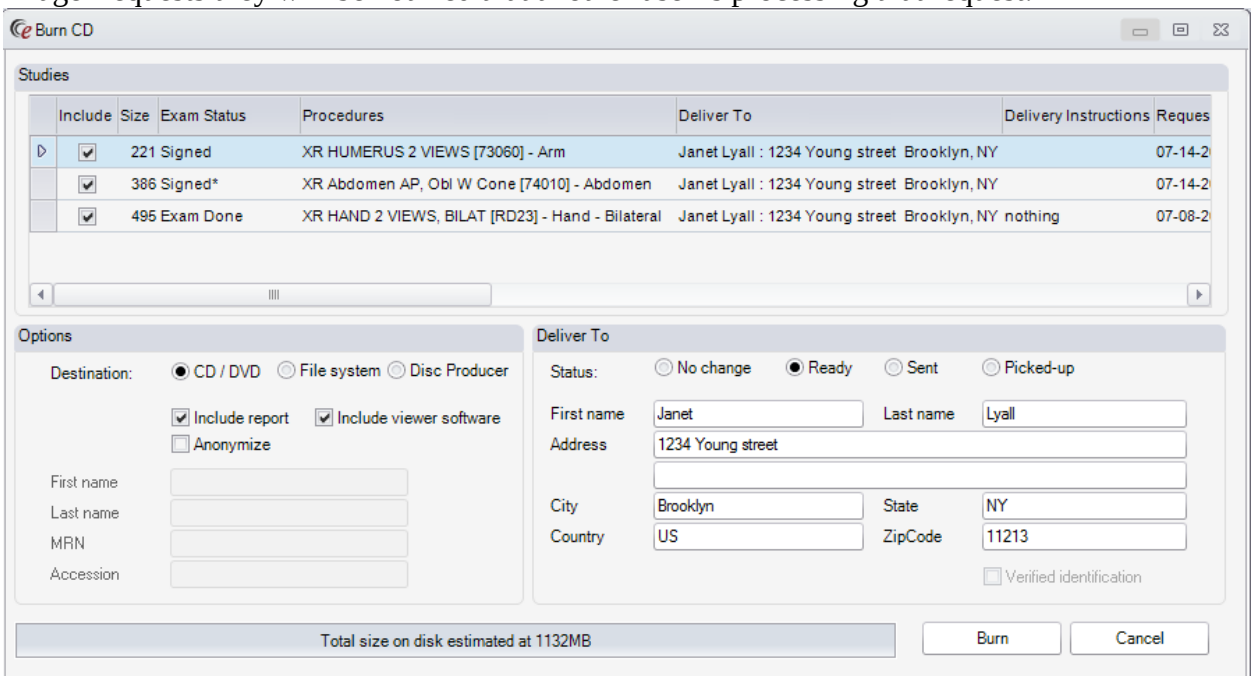

**Figure 5.11 – Burn CD window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

If actioned from the Image Request WL, successful burns will remove the selected studies requests from the WL.

Images for the selected studies are requested from PACS and the contents are written to the specified media type. If the media type is "CD/DVD", the contents will be written to the local burner. If the media type is Filesytem or Disc Producer, the contents will be written to the directory chosen. For disc producer the file format written is specific to the Epson JDF file format. After the JDF file is created, the progress can be monitored via the Epson TD Bridge software. The RIS will do an estimated size of the images to be burned.
When the Burn CD window opens, it queries each of the Requesting Site's local child PACS servers. If it does not have the study, it then queries the Practice's PACS WL server. The goal of this query is:

1. To obtain an approximate size of the study data
2. To identify which server has the images

The figure above of the Burn CD window shows the approximate sizes and in the progress bar area a total estimate of the size on disc.

If it exceeds 680MB it will present the user will message informing that the estimated size may not fit on one CD.

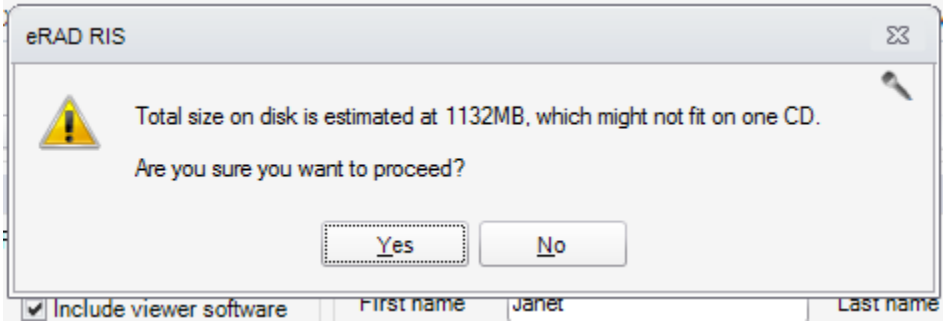

**Figure 5.12 – Are you sure?**

If they are actually burning to a DVD media, they should ignore this message and click "Yes" but if they only have CD's then they will need to click "NO" and include fewer studies.
If all of the selected studies are on the local child PACS server then the request for the CD contents will be made local. But if one or more of the studies are not local the request will be made to the practices PACS WL server.

When the media is successfully burned, the status and deliver to information for the "included" image requests will be updated. And before and after audit messages are written to the Audit log. The description in the audit entry is basically the entire contents of the CD's Readme file, which includes unique identifiers and even the CD's checksum.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

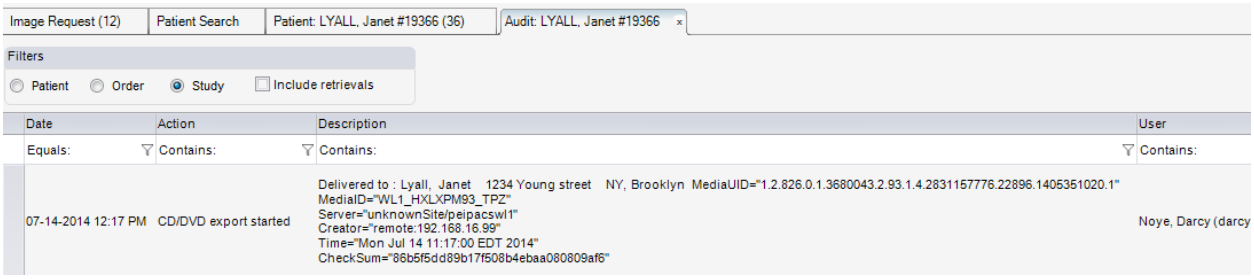

**Figure 5.13 – Audit history**

Change to Image Request:

With B43, when creating an image request there is a new required field "Requesting site".

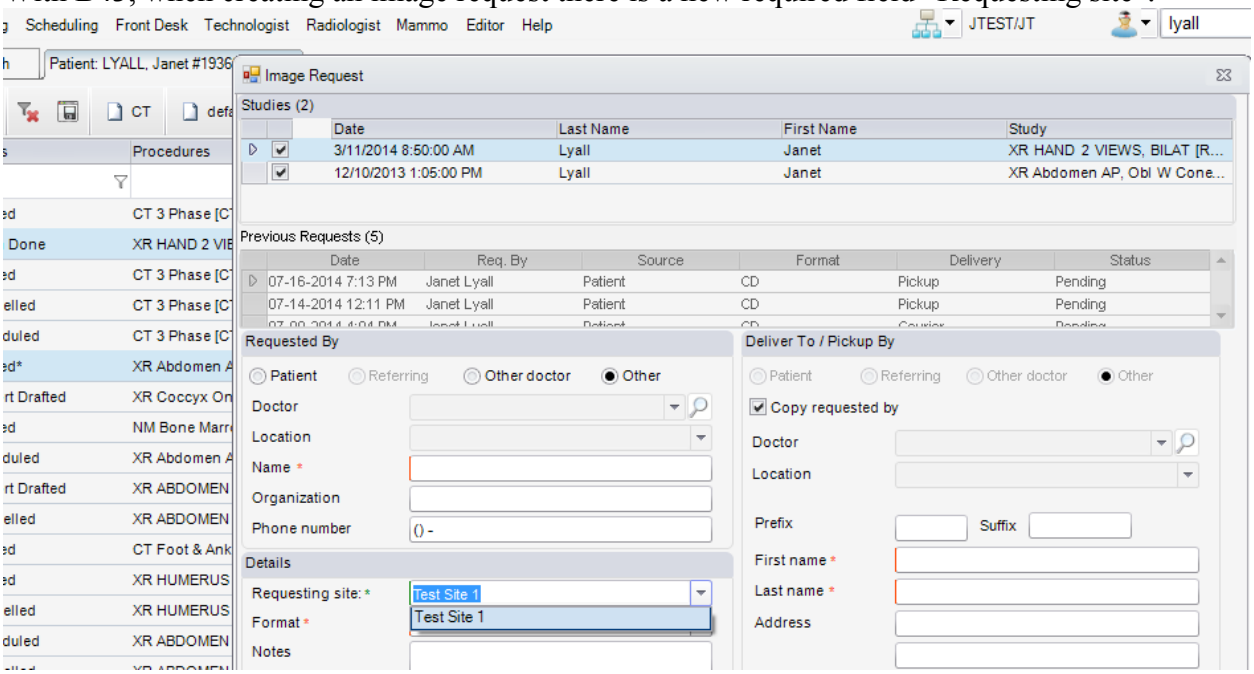

**Figure 5.14 – Image request has new required field of Requesting site**

The "Requesting Site" value is the site used when showing the Image Request WL. So when looking at the JTEST/JT WL as shown in the following screen shot, you see all the image requests that need to be completed at JT. Previous to B43, the JT WL would only show the image request's needed at a site such as JT if they were performed at JT.

We also changed the work list so (by default) it groups Requests by Patient, Meida Format and Deliver To. In the following screen you can see the default "Request" grouping. If the user clicks on the "Group by:" button the sorting changes between Ascending and Descending (by image request date).

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

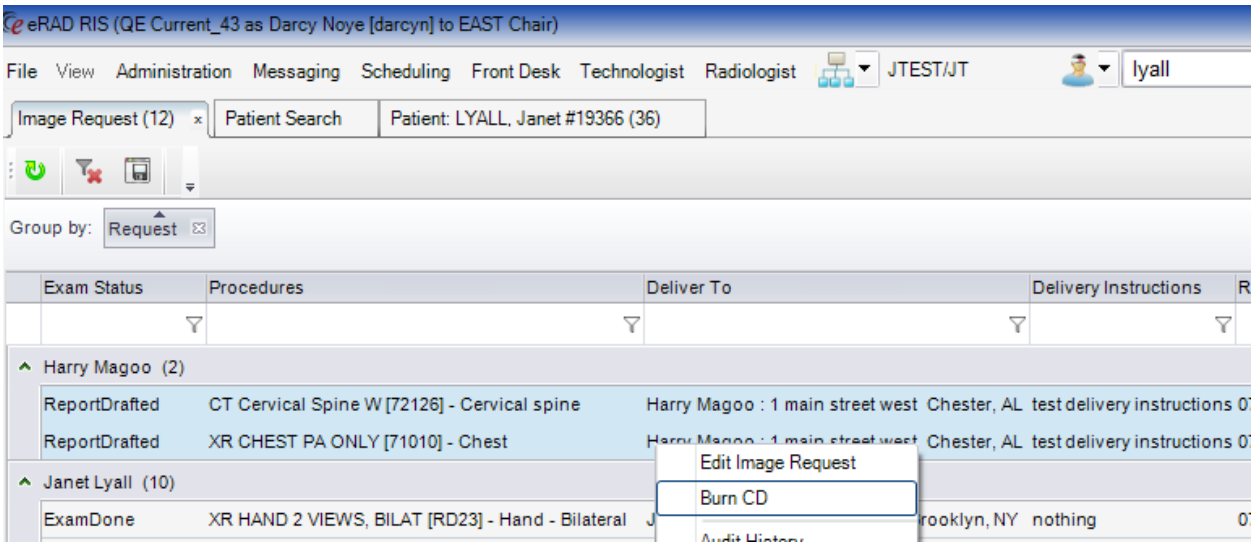

**Figure 5.15 – Image request work list group by Request**

**The remaining will explain how to set up the Disc Producers Epson TD Bridge Server**

When using an Epson Disc Producer you will need to dedicate a PC to host the hardware. On that PC you will need to install the EPSON TD Bridge software. The TD Bridge software and documentation is available at:

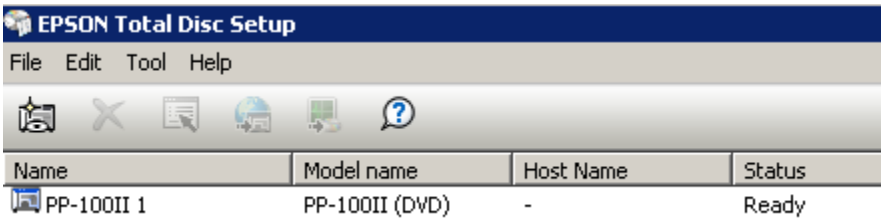
https://www.epsonexpert.com/login

https://www.epsonexpert.com/ee/techRes/index.htm?ProductId=598

In addition to the typical install you will need to:

1. Install the Epson Total Disc Maker Software, either download the latest from Epson or use the install disc that came with the burner.

2. Launch the "Epson Total Disc Setup" utility, which is in your "start/program" menu after the install. Add the local "PP-100" burner as shown in the following:



3. Install the TD Bridge software.

4. Launch the program "EPSON TD Bridge Environment Settings"

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

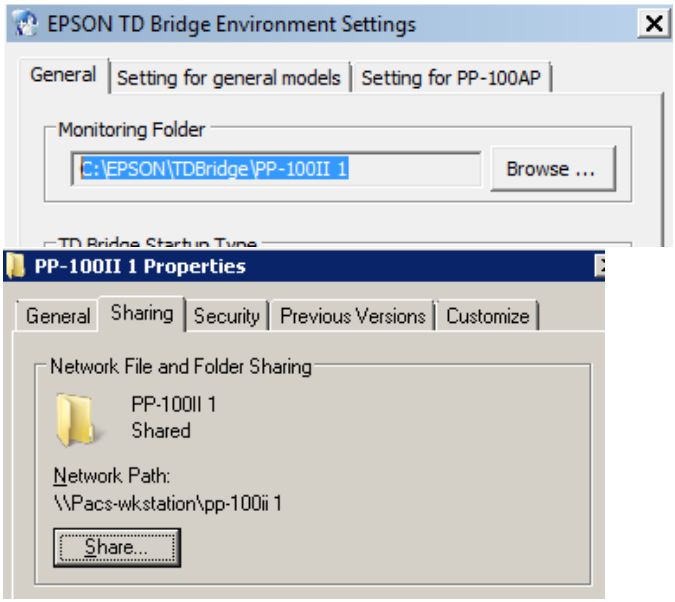
5. Setup the TD Bridge monitoring folder to use a network share, which users will have write access for submitting JDF files and data. Unfortunately, the monitoring folder must be on the host system's hard drive; therefore, will need to share the folder on the Epson Disc Publisher host.

6. **Make sure the subfolder name for that share location is the name of the EPSON Disc Publisher Instance**. For example, in my installation the hardware's name is "PP-100II 1" so:



7. Next, create a text file in the share called "**local_path.txt**", which contains the file path to the monitoring folder as seen by the TD Bridge.

   The reason for this is that users might access the share via g:\Public\PP-100II 1\ but on the server it is actually c:\EPSON\TDBridge\PP-100II 1\ and when the RIS creates the JDF file it needs the actual path as registered in the TD Bridge software

   The following screen shot illustrates what you need to do for this step:

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Finally, as an administrator of the TD Bridge host machine, you may want to consider a batch job that cleans up completed jobs and deletes their data.
When a user creates a Disc Producer Job by submitting a CD Burn request via the RIS, a JDF (Epson Job Definition File) will be created at the monitoring location. As the TD Bridge processes that file it's file extension will change JDF → RJD → IMP → STF → DON and if there is an error it will be renamed to ERR. In the case of an error you can re-submit the job by changing the extension back to "JDF" and lookup the error code in the TDBStatus.txt file. You can also monitor the JOB status in the Epson Total Disc Monitor application, which will tell you when you need to put more discs in the stacker or close the door to the device as shown in the following.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

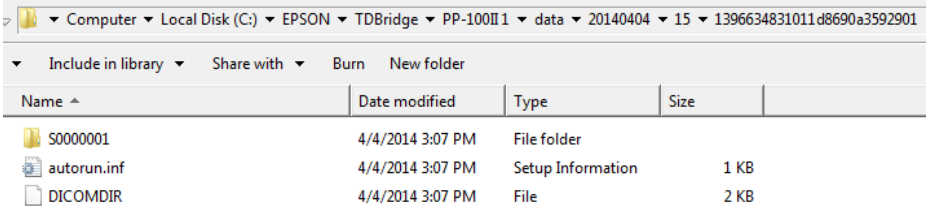
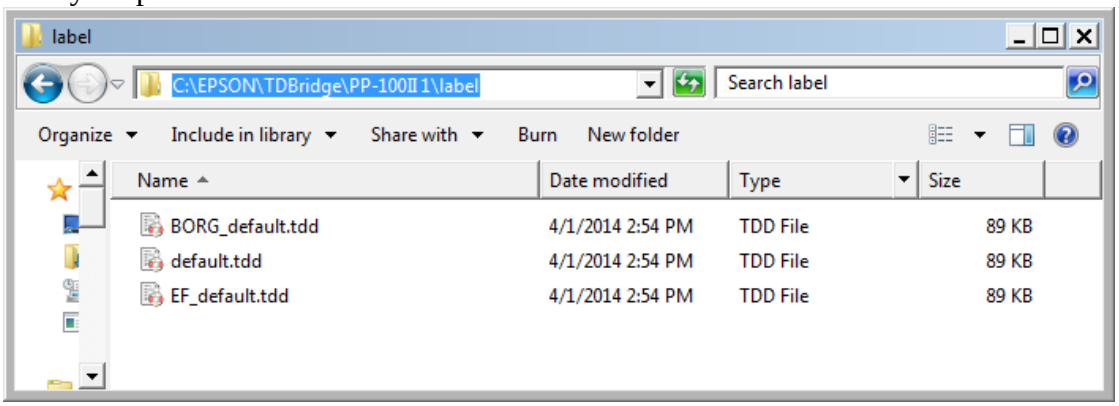
**IMPORTANT:** After the CDs are burned the data for the CD will remain on the TD Bridge share. Over time this will take up lots of drive space and it will be in your best interest to delete/clean out the old data on a daily bases. You just want to make sure the data you are deleting isn't for a job that is in the ".ERR" status.

The data directory is organized by date then by hour, then by JDF file name. The following example shows the job 1396634831011d8690a3592901, which was submitted on April 4th at the 15h and if you look closely at the job id a3592901 represents the accession number of the first study on the CD. The audit log for that study can be used to track down more information about the job.

>> C:\EPSON\TDBridge\PP-100II 1\data\20140404\15\1396634831011d8690a3592901



You can also create a label sub-directory and create default *.TDD files, which will get printed to your CDs. If the label directory and default tdd files don't exist, they will be created the first time RIS submits a job to the disc producer share. You can then edit the default.tdd file to meet the needs of your practice or site.



The fields available for the labels are:

name, patient_id, site_code, site_description, deliver_to_first_name, deliver_to_last_name, deliver_to_address_lines, deliver_to_city, deliver_to_country, deliver_to_state, deliver_to_zip

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

For reference, the following is a sample JDF file:

```
#
# JOB_ID ===  <PacsMediaRequestID>a<RISAccessionNumber>
# you can use the accession number to look at the RIS audit log and see more information about the job
#
JOB_ID=1396634831011d8690a3592901
#
# PUBLISHER === the name of the folder where this job file was written
#
PUBLISHER=PP-100II 1
#
# Only writing CDs, if you need to write a DVD you will need to use an attached burner or
# change this to DVD and change the job extension back to JDF
#
DISC_TYPE=CD
COPIES=1
FORMAT=ISO9660L2
#
# Note: location of data/label is relative to the share/UNC path that was used by the RIS user.
#       If you would like to use another path specific to the local TD Bridge software,
#       create a file named local_path.txt in the DiscPublisher share.
#       It should contain the full path to the share location as accessible by the TD Bridge software
#
DATA=c:\epson\tdbridge\pp-100II 1\data\20140404\15\1396634831011d8690a3592901\
#
# Fields available for the labels are:
#           name,patient_id,site_code,site_description,
#           deliver_to_first_name,deliver_to_last_name,deliver_to_address_lines,
#           deliver_to_city,deliver_to_country,deliver_to_state,deliver_to_zip
#
LABEL=c:\epson\tdbridge\pp-100II 1\data\20140404\15\1396634831011d8690a3592901_label.tdd
```

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## County Option for Radiologist Signing Location

Option to select the County for the Radiologist is controlled by a new system configuration setting titled **"EnforceCountySelection"** with a default of False.

If set to False, the application will behave as before and the user will not be required to select a county before dictation. If the site is Chair enabled at the practice level they will still be required to select a Chair, but the County and Zip Code options will note be presented.

If the site is not Chair enabled but requires County based on the above system configuration setting, they will be presented with a window that will allow them to select a County. They can also enter a Zip Code to shorten the list or select the County automatically. The following window is presented on login. The value entered is remembered on a workstation bases.

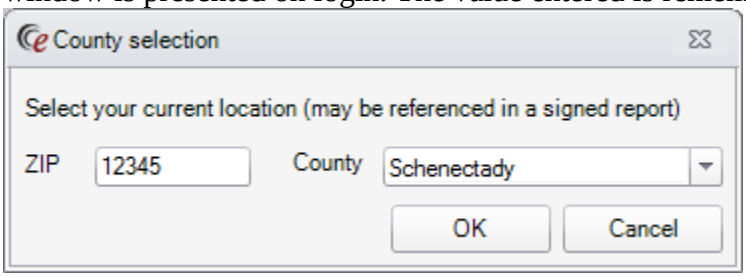

**Figure 5.16 – County selection window prompt**

If "EnforceCountySelection" is true and the chair workflow is enabled for the practice, then the chair selection dialogs with the additional county fields will be displayed

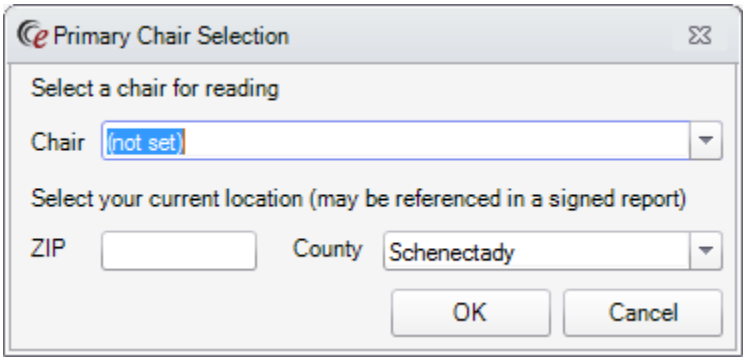

**Figure 5.17 – Chair selector with Zip and County fields**

If the user preference "Use detailed chair selector" is on the user will be prompted with the detailed chair selector window

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

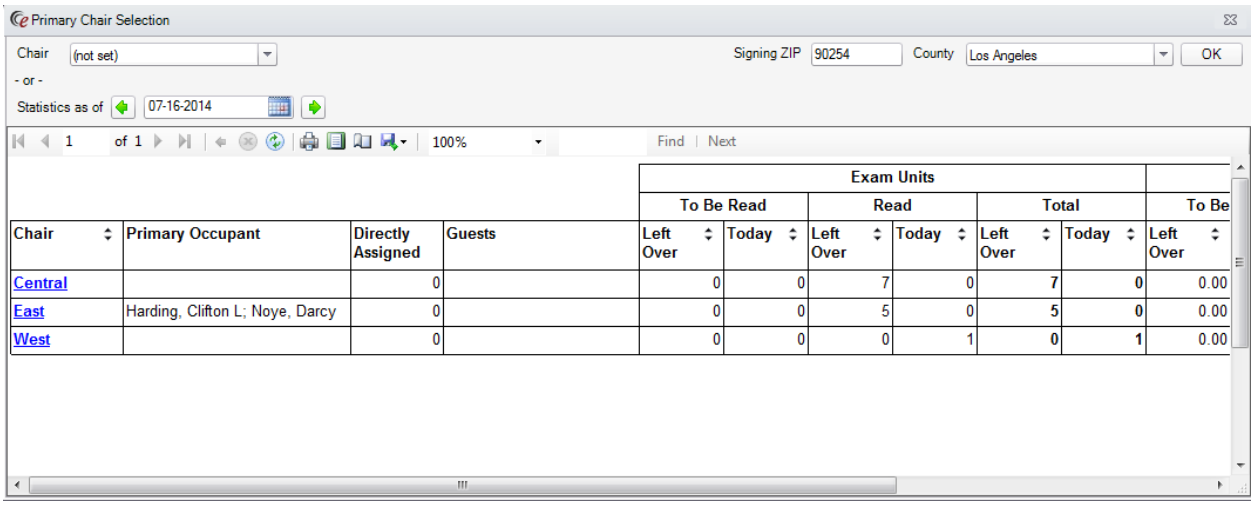

**Figure 5.18 – Detailed chair selector**

If the county selection is enforced, the county that is set at the time of signing is saved to the interpretation table's "signed_county" column.

If Chair is not enabled for the current user but county is enabled, a new status bar icon will be displayed allowing the user to open the County selector.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

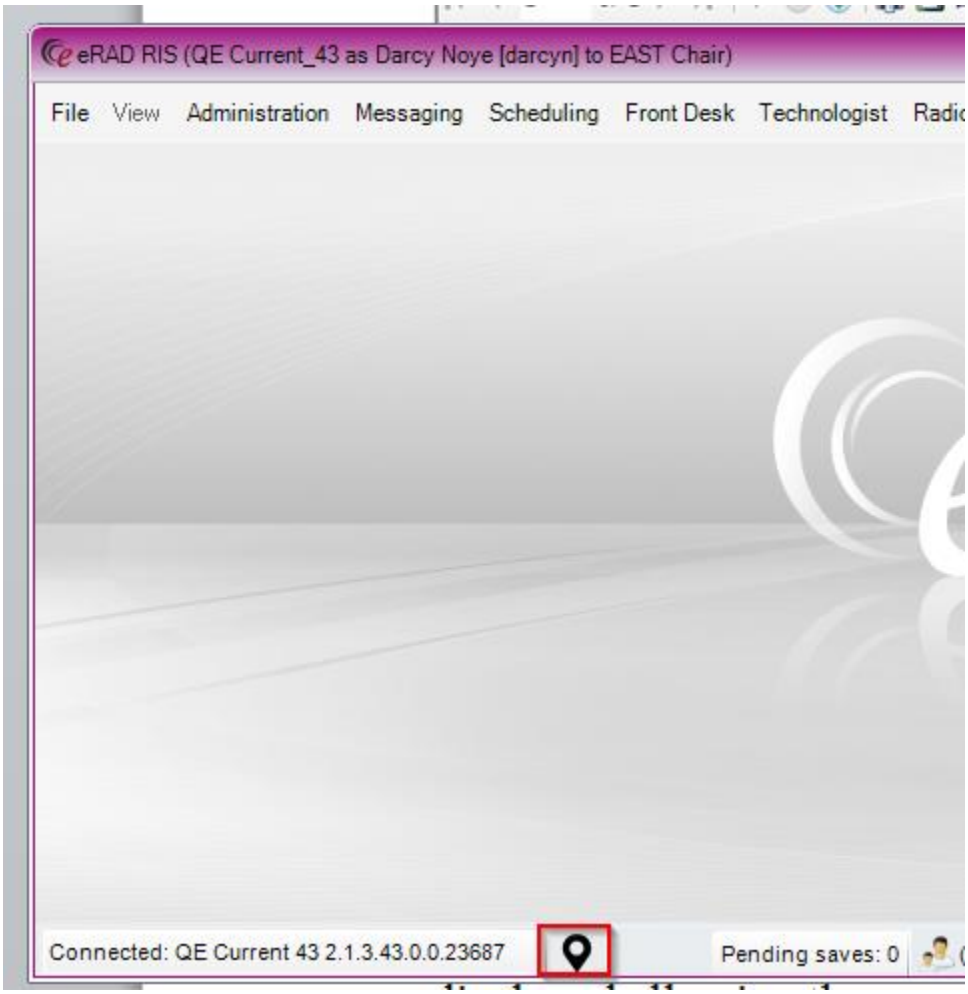

**Figure 5.19 – County selector**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# IVT – Ability to Edit Patient Information

Previous to Build 43, users had to access the Patient Folder – View Edit to alter patient information on the Patient tab. Now the patient tab is editable from the IVT window.

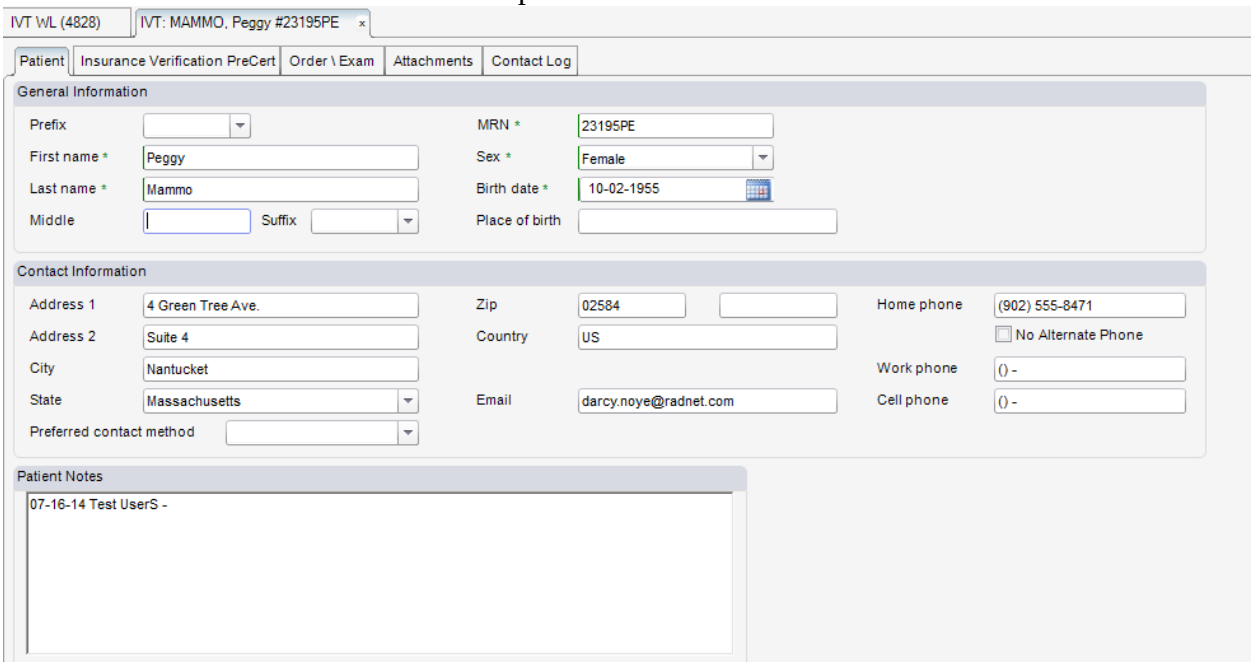

**Figure 5.20 – Patient tab fields editable from IVT window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## ICD10 Support

To support ICD-10, the RIS code table that current contains ICD9 must be upgraded to support ICD-10 and other coding schemes as necessary. A new table called l_indication that is similar to the current l_indication_code has been created. The new table employs a composite key consisting of coding scheme, release date, and code. Rather than the code itself being the primary key, a numeric primary key exists instead. This approach requires that any place in code/XSLT etc. that refers to the indication code explicitly must be updated to perform a reverse lookup to find the code/coding scheme based on the numeric key.

ICD10 codes can be downloaded from
http://www.cdc.gov/nchs/icd/icd10cm.htm#icd2014
Choose the ICD-10-CM XML Format Option

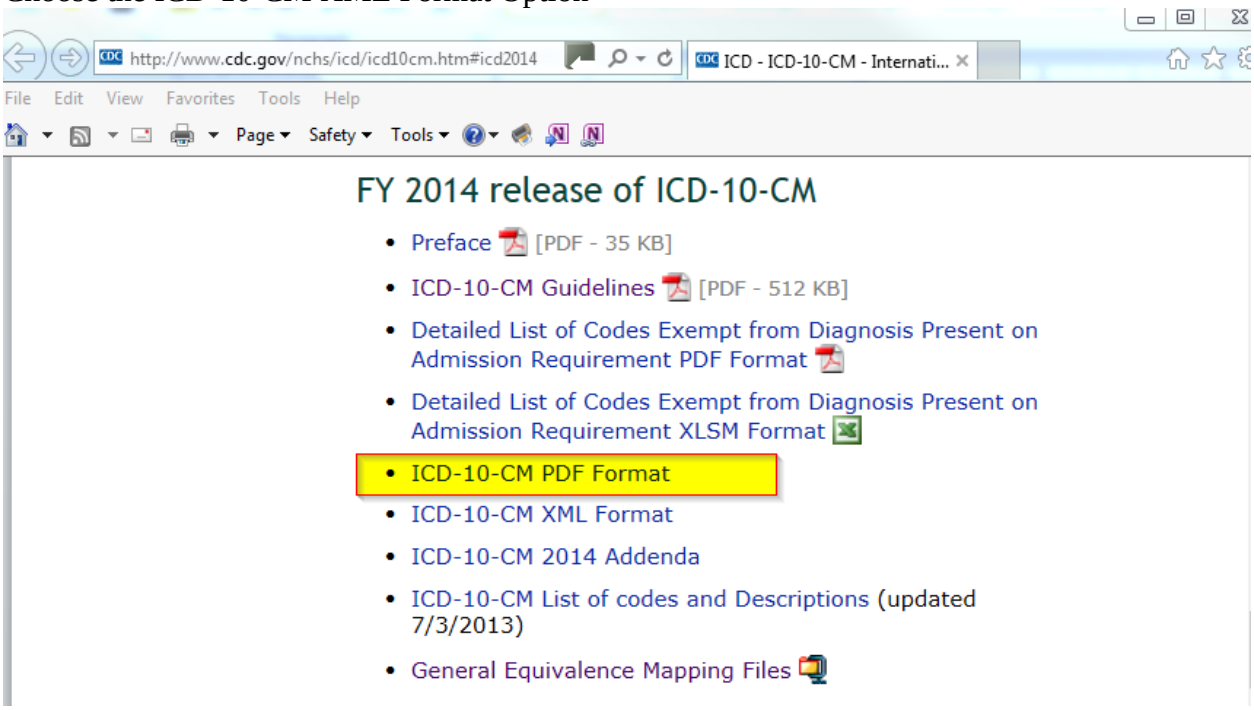

**Figure 5.21 – ICD-10 download**

This XML import file contained roughly 45,000 rows of ICD-10 Clinical Modification (CM) data. Procedure Coding System (PCS) that is also available seems to be for other purposes and not necessary for ICD-10 support. To manage importing of new versions of ICD-10, the indication code lookup has been enhanced with an "Import" button and associated screen for importing only rows in the import XML that do not already exist in the l_indication table. The placement of the "Import" button on the Indications lookup is shown below.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

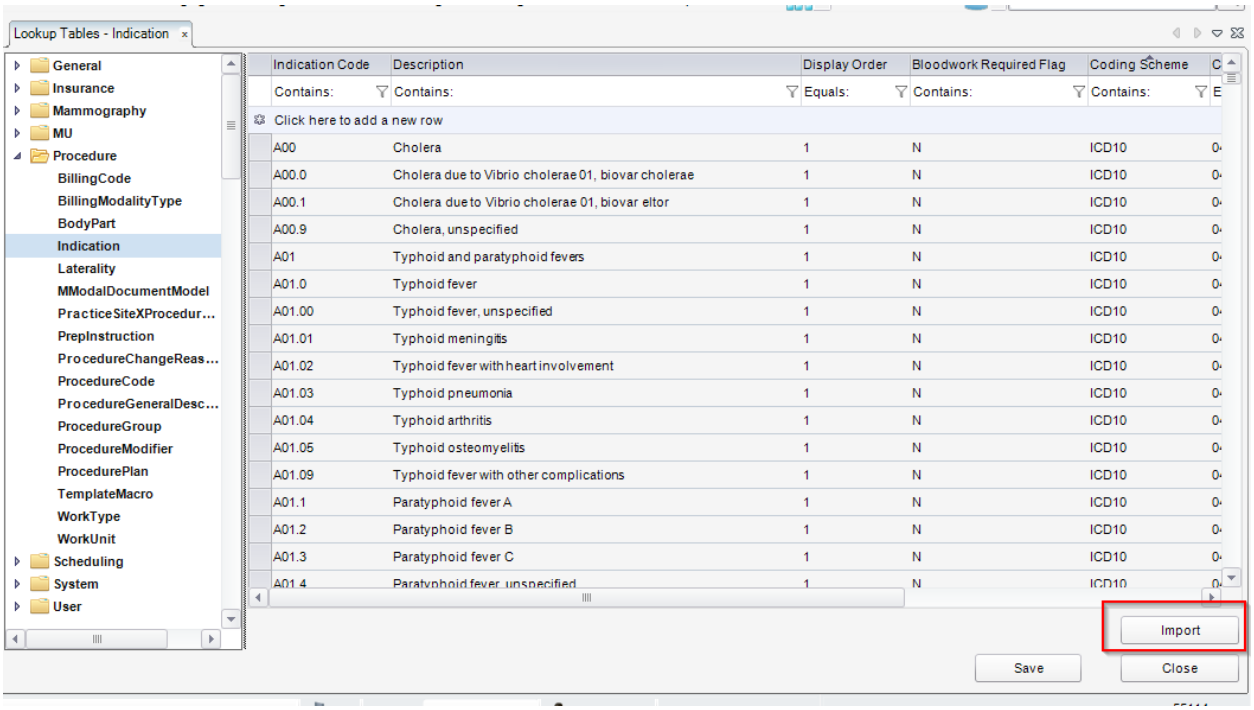

**Figure 5.22 – Indication table with option to Import codes**

To Import new codes select the "Import" button and this will present the Import ICD10 window.

Select the ellipsis button next to the File field. Locate the directory where the XML file was saved. With this folder select the ICD10CM_FY_Full_XML_Tabular.xml file (NOTE: this file will change as new versions are released. It will be the responsibility of the site to continually update with newest codes).
The File path will not be populated. Select the Load XML button. At this point, the user can enter keywords as required. Only the codes that are missing from your current indication list will be imported. In my example I was only missing ICD10 code A22.9, so this is the only one available for download. The "include" column is checked by default. Once editing is complete and all rows that are needed are checked, the "Import" button can be selected. Before selecting the Import button you can also change the effective date.

After import of new rows, RIS must be closed and re-opened for the newly-imported rows to be available in the lookup editor.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

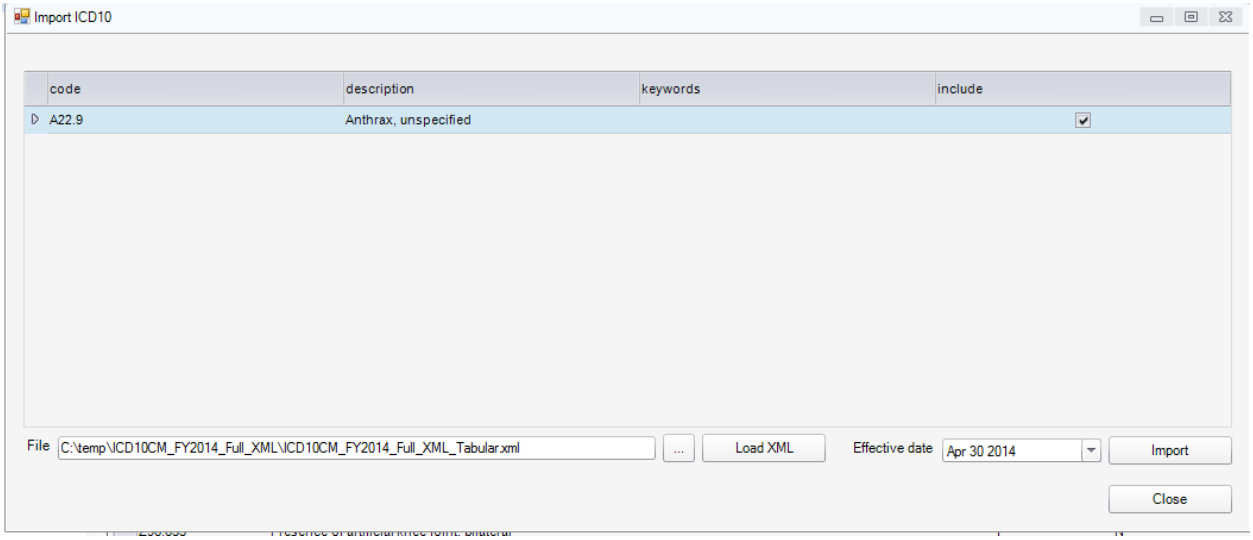

**Figure 5.23 – Import ICD10 window**

## Searching for ICD Codes:

The ICD Codes dialog facilitates searching and filtering of ICD codes in the Indication table. The form contains a textbox for the reason for the exam (from the Order tab) and then the search/results section.

ICD search can be performed from many areas of the application. A general search of a code can be performed from the 'Quick Search" field in the upper right corner of eRAD RIS.

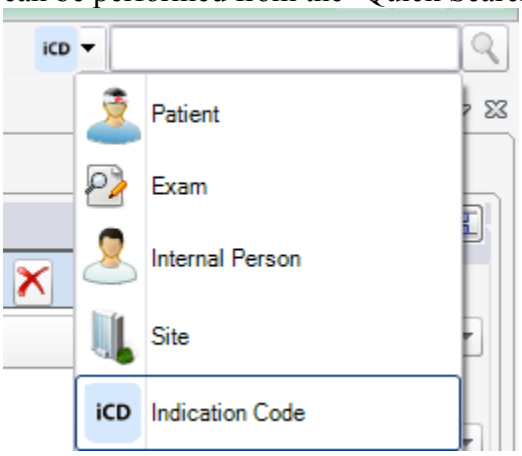

**Figure 5.24 – ICD Quick Search**

Enter the code or description in the field or leave it empty and select the search button to open the ICD Codes window. From this window you can select the Type of code being search for, this

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

can be a combination of ICD9 and ICD10. There is an option for SNOWMED codes, but by default there are no SNOWMED codes included. The box can be checked, but no data will be returned. By default, ICD9 will be checked until the date value in the System Config's **"ICD10EffectiveDate"** whereby ICD10 will be checked by default when the window opens.

Entering a partial or full code number or description will return the results. The search results will display the Code, the Type of code and the Description.

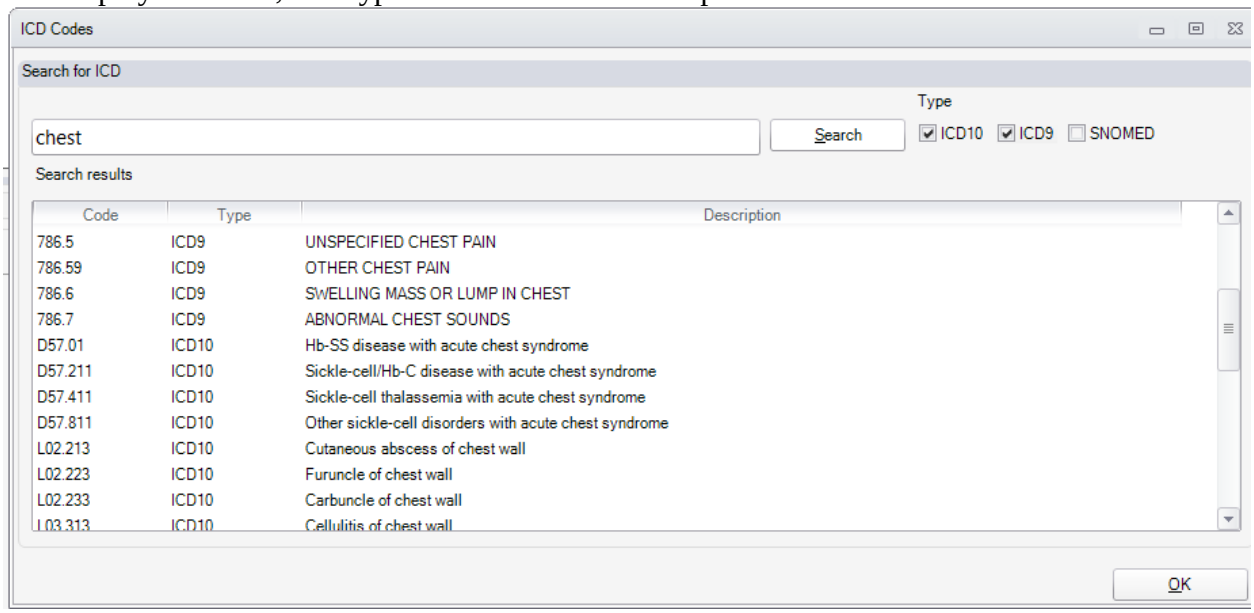

**Figure 5.25 – ICD Codes search window.**

From the Scheduling\Registration\Walk-In windows the user can add Indication codes. The window is accessed on the Schedule\Exam tab, with a new button labeled ICD on the procedure picker row. The button is enabled after the Study is entered. This button is controlled by new access string **"Clinical.Schedule.AssignIcdCode"** with a default of none.

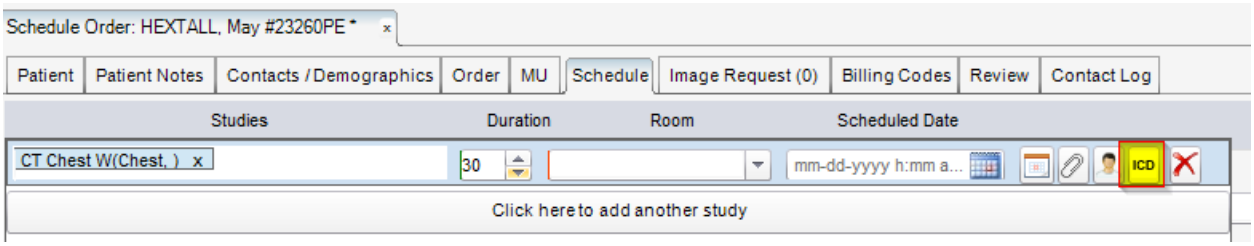

**Figure 5.26 – Add Indication code in Scheduling**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

When the ICD Codes window opens, the Reason for exam will be pre-populated from Order tab. Perform search and from the Search results you can double click a row to insert in the selected codes section of the window. Multiple codes can be entered. When finished, select OK.

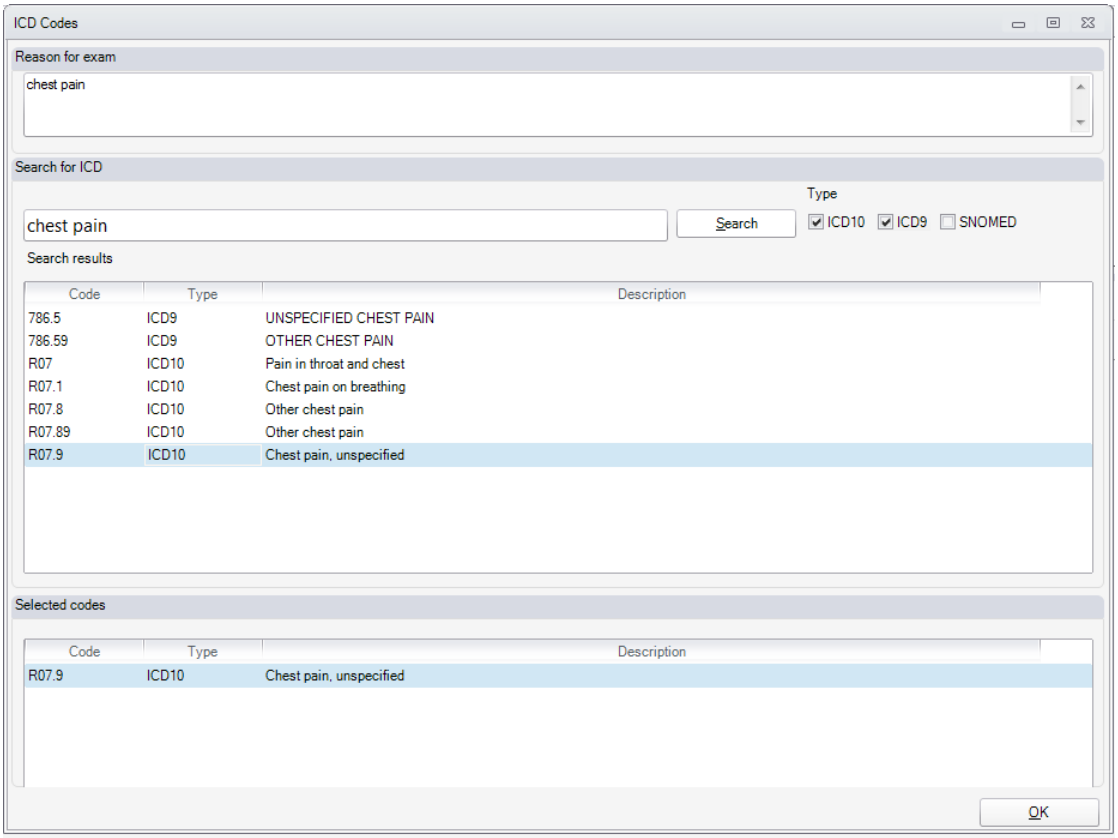

**Figure 5.27 – ICD Codes window accessed from Scheduling\Registration\Walk-in windows.**

In the Technologist workflow, and in View/Edit, The Documentation tab contains two grids that display the ICDs captured up to exam done, and those captured by the radiologist. The buttons to the right of each grid are enabled based on whether the current context should allow editing.
If the new access string titled **"Clinical.ViewEditCanChangeTechIndications"** Is set to full then the Indications button is enabled allowing changing of indications set up to Exam Done.
It can be enforced that a code must be entered by the Tech is the system configuration setting of **"TechMustProvideIcdCode"** is set to True. The default is False
If the new access string titled **"Clinical.ViewEditCanChangeDiagIndications"** is set to full, then the Diagnostic Indications button is enabled, allowing changing of indications set by the radiologist.
The default for both of the above mentioned access strings is none.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

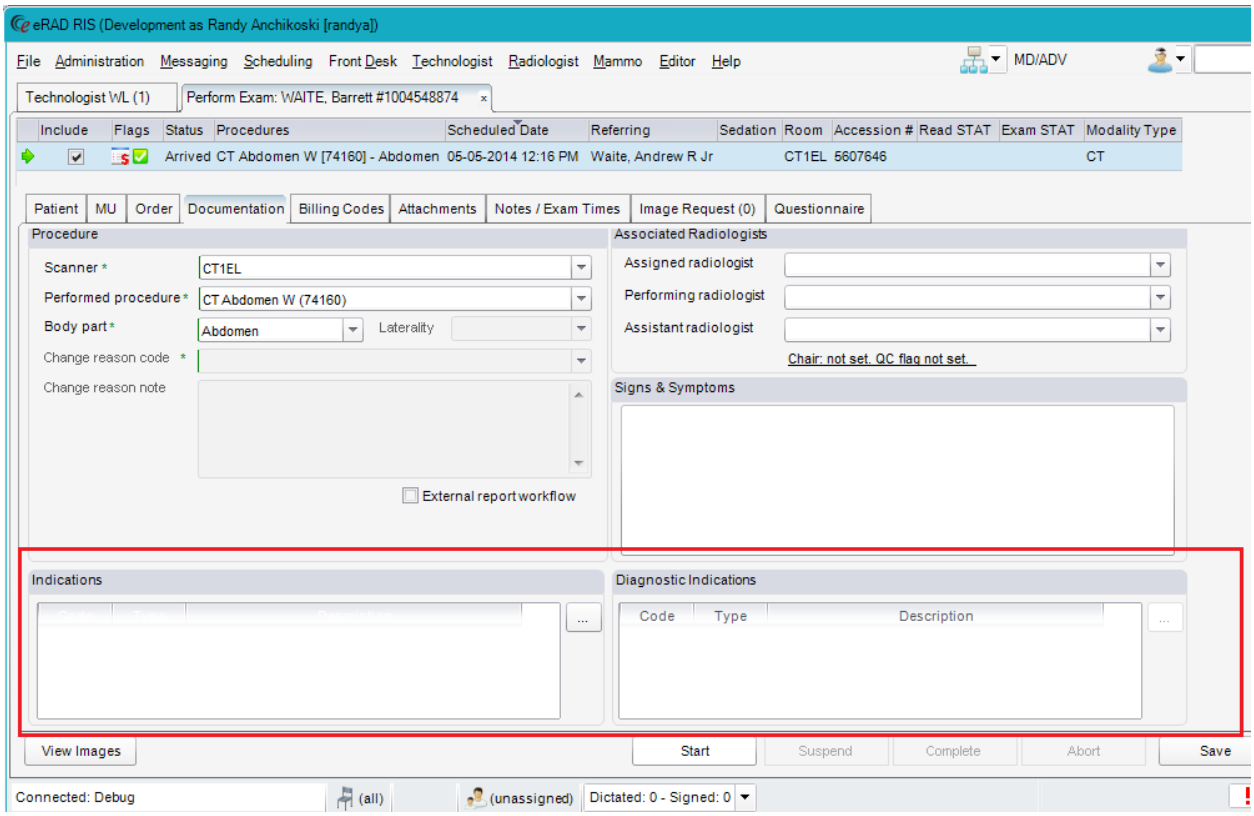

**Figure 5.28 – Indication grids. Left for Technicians and right for Radiologist**

# IMPORTANT: Radiologist ICD Support Uncomplete

**The Radiologist portion of this feature is not complete. It is recommended that the system configuration setting "**RadMustProvideIcdCode**" be left to the default of "False" and the access string of "**Clinical.ViewEditCanChangeDiagIndications**" be left to the default of None.**

The Reporting window also has a new ICD button. The button is enabled with the system configuration setting of **"RadMustProvideIcdCode"** that has a default of False. This button will open the same ICD Codes search window. The data for the indications defined here are saved to c_interpreation_indication.
For the Radiologist to view the Tech workflow defined ICDs, viewing the Exam Details from the View menu will display indications defined in that workflow.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

On the MU tabs Medical History pane the problem codes added are ICD codes and the same search window is provided allowing the user of both ICD9 and ICD10 codes. The user can select the search icon in the problem field o the Medical History grid to open the ICD Codes window, or can enter partial or full value in the problem field and search.

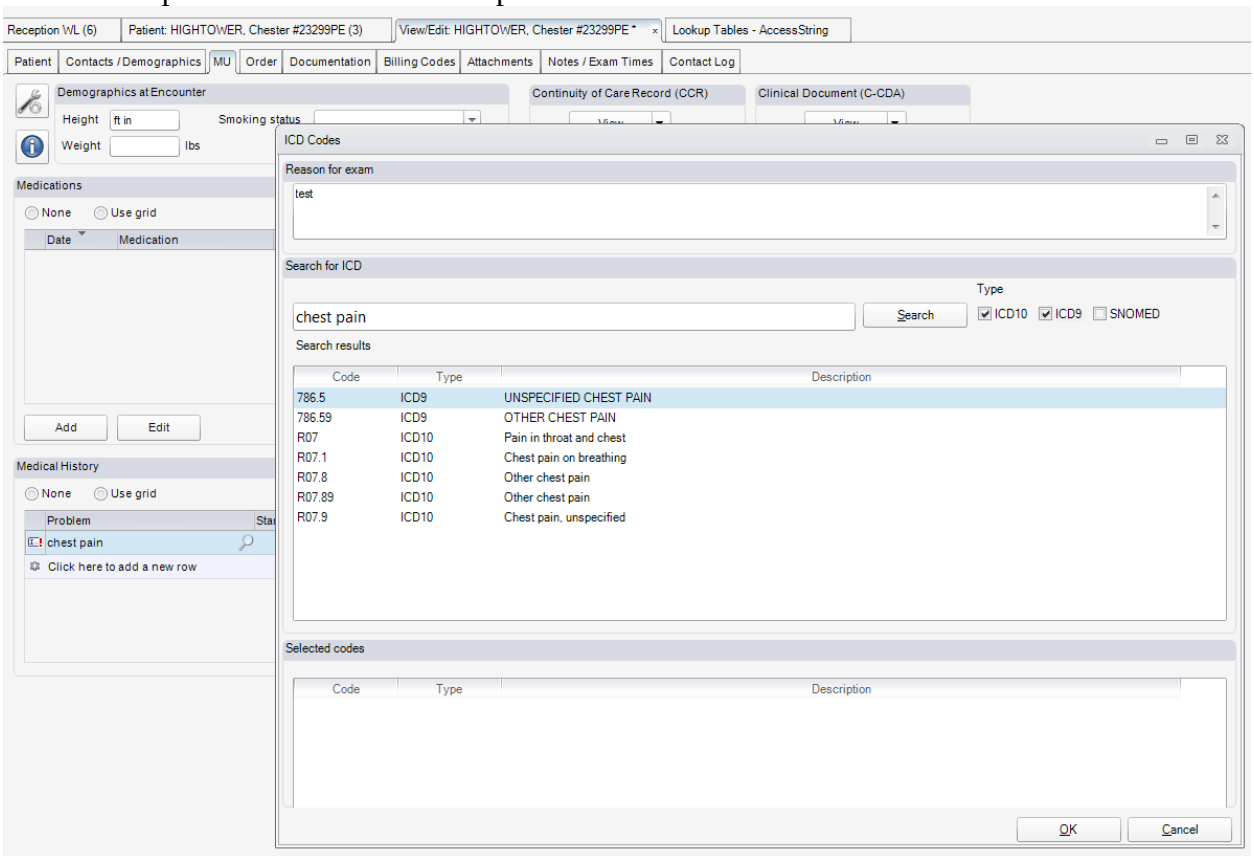

**Figure 5.29 – MU ICD Code search**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Secure Messaging

Secure Messaging has been added in Build 43. This allows RIS users to send secure encrypted messages to other users in the RIS and also to patient that can access the message via the Patient Portal.

To start a new Lookup table titled MessageGroup was created and located under the General list of lookup tables. Columns of the table include the Message Group Code, Description, Display Order, Last Updated and Active column.

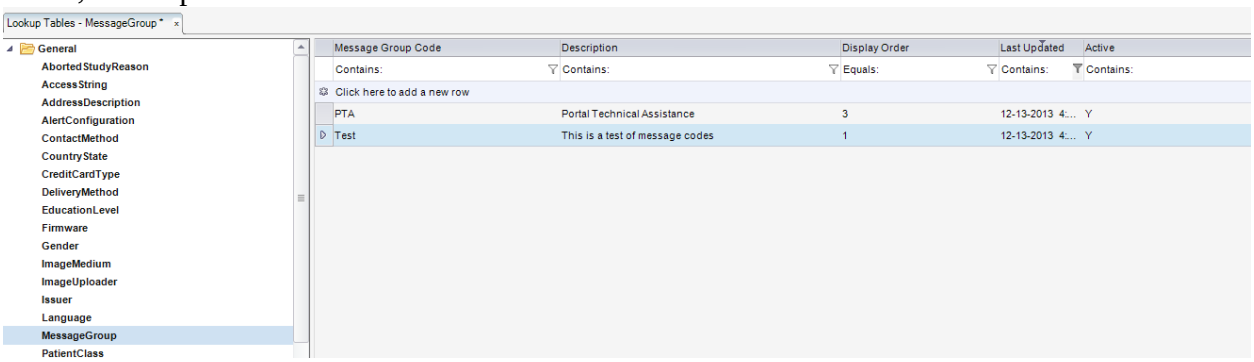

**Figure 5.30 – Message Group lookup**

Values entered in this table will appear in a new field in the Personnel editors Account tab. This field is similar to the other fields on this tab. It is a type ahead field that can contain multiple values.

Having the messaging groups would allow a patient to send a message to a group if they don't know an individual to send it to. The RIS users who have access to this group would then get the messages.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

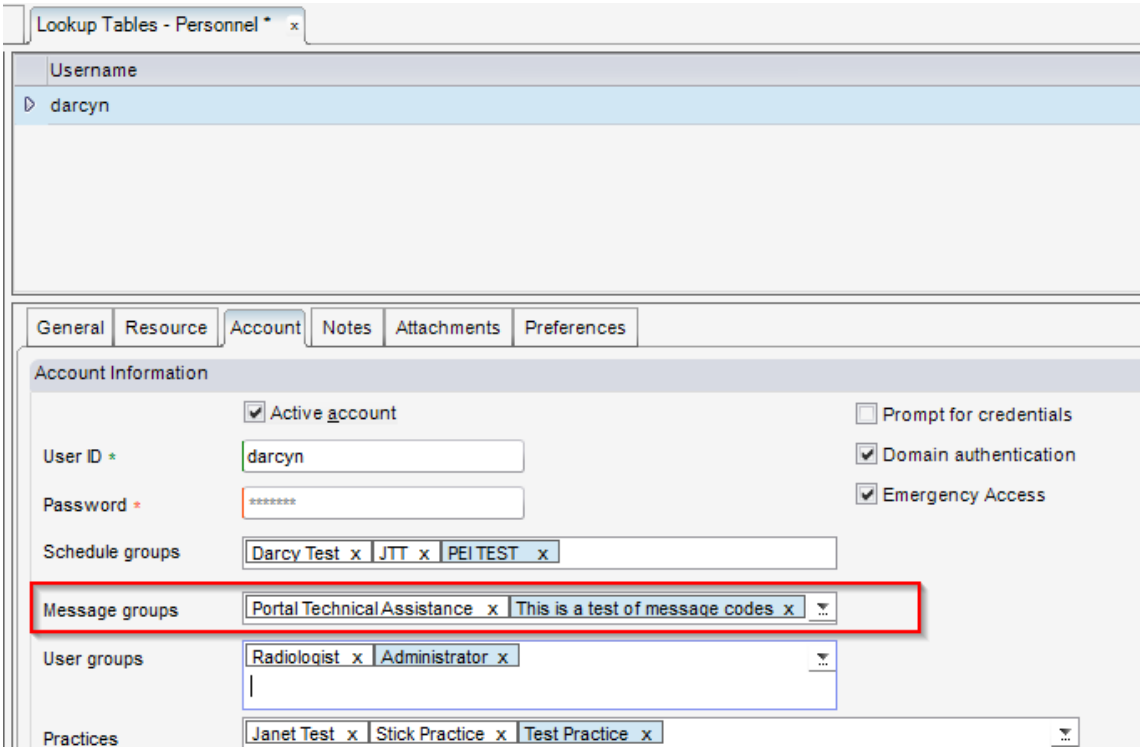

**Figure 5.31 – Assigning message groups to users**

From within the RIS messages are sent/received from under a new Menu option titled Messaging. The Messaging work list access is controlled by access string **"Config.MessageInbox".** This access string also controls access to the Menu option of Secure Message Inbox that is under this Messaging menu. Default is none.

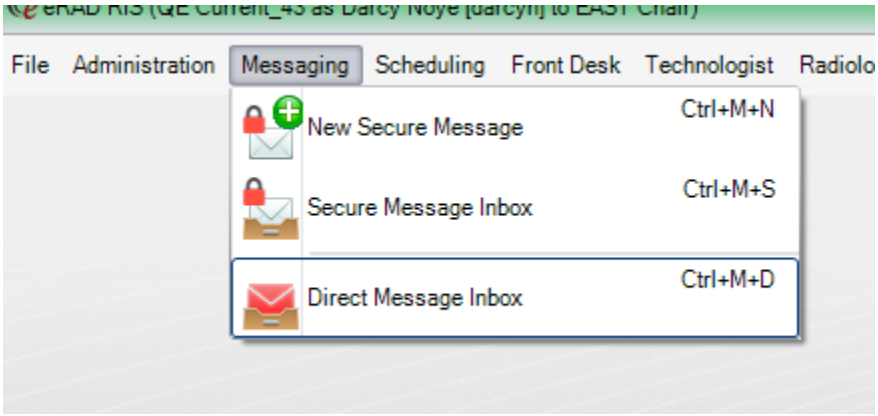

**Figure 5.31a – Message menu and menu options**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

To create a new message select the menu option of New Secure Message that is controlled by the new access string of **"Config.CreateMessage"** that has a default of none. In this window the user can select to send to one of the messaging groups created, or they can send to a patient or another RIS user. The other RIS user would also need access to the Secure Messaging in order to receive the message in their inbox.

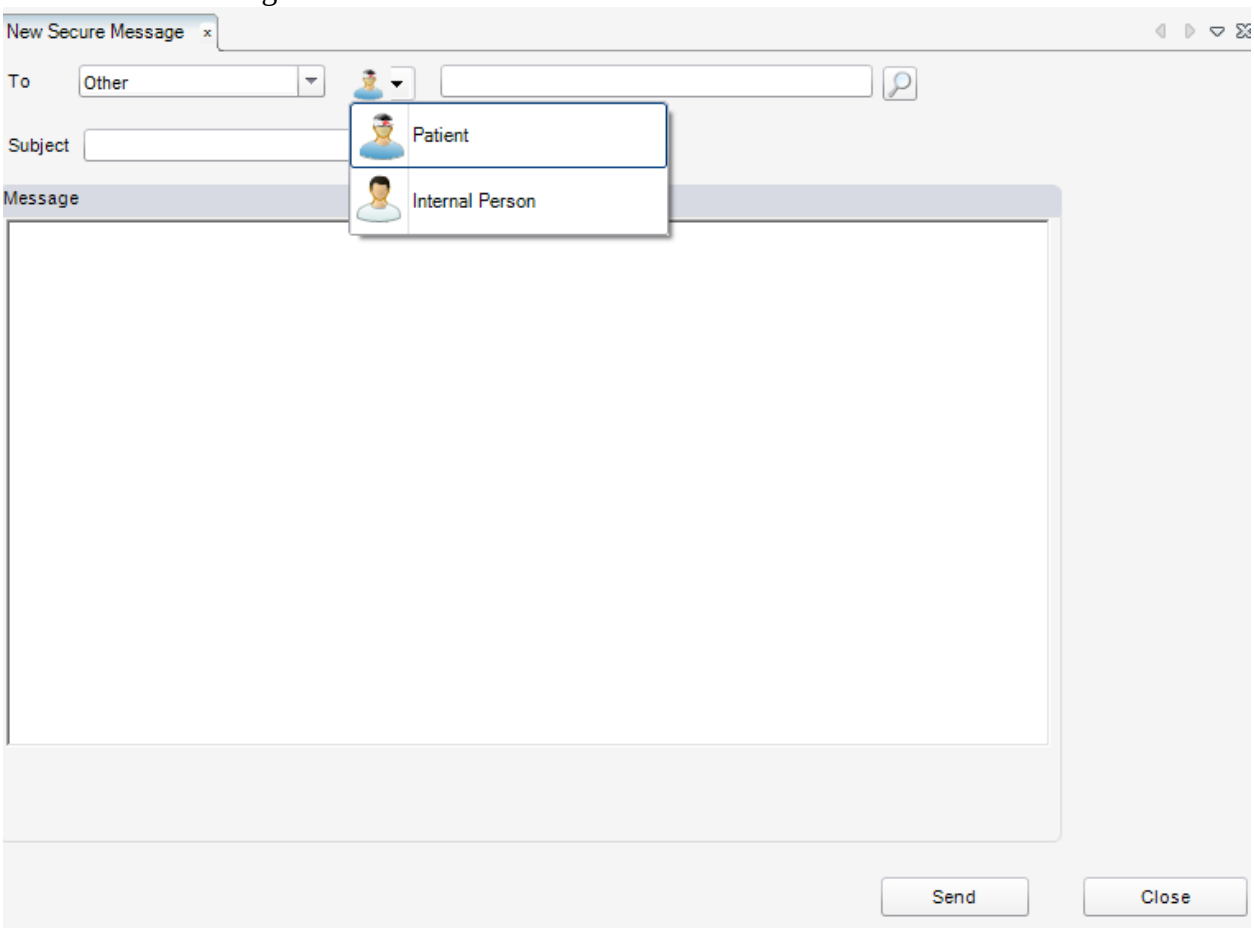

**Figure 5.32 – New Secure Message**

The RIS user can search for a patient or internal person, enter a message and send.

Messages sent to the user can be viewed / reviewed in the Message Inbox. This is accessed from the menu option Secure Message Inbox. Columns of Subject of the message, if the message has been Read, if the message has been replied, Date Sent, Date Read and From and To columns.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

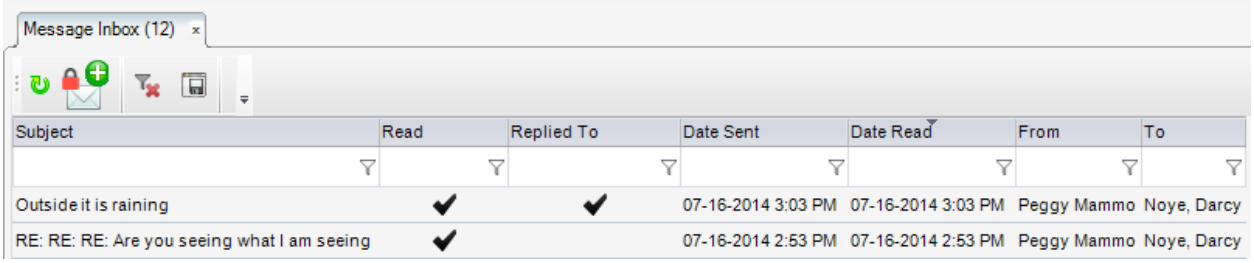

**Figure 5.33 – Secure message inbox**

The Direct Message aspect of this menu will be covered later in this document with the Meaningful Use updates.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Patient Portal Legal Documents

Legal documents were required for the Patient Portal. A new lookup table was created titled LegalDoucment that resides under the System folder of the Administration>Configure menu.

Document types that can be created include:
Terms and Conditions
Privacy Statement
Notice of Privacy Practices
Patient Portal Terms and Conditions
Patient Privacy Notes
Patient Service Agreement
Patient Consent Agreement

The user can define the Document Title and the Description of the Document to be displayed in the Patient Portal.

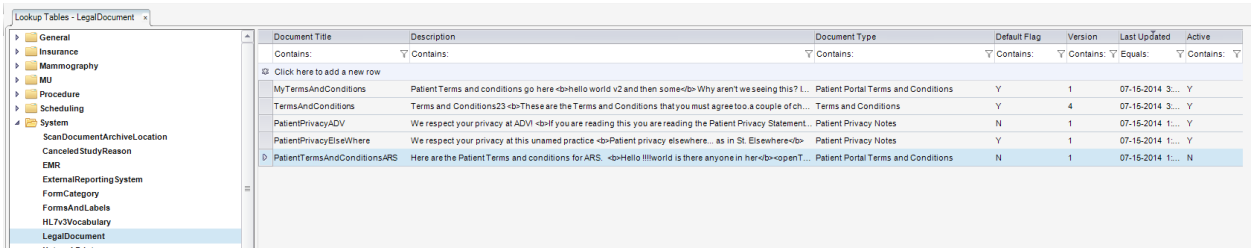

**Figure 5.34 – LegalDoucment look up**

Each type is allowed to have one default of that type, which would be used in the case when a practice cannot be determined or the practice does not have the desired legal document.

The Add\Edit Practice window accessed from the Organization lookup can have Legal Documents defined for a specific practice. Select the Portal tab and use the type ahead feature to add the legal documents.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

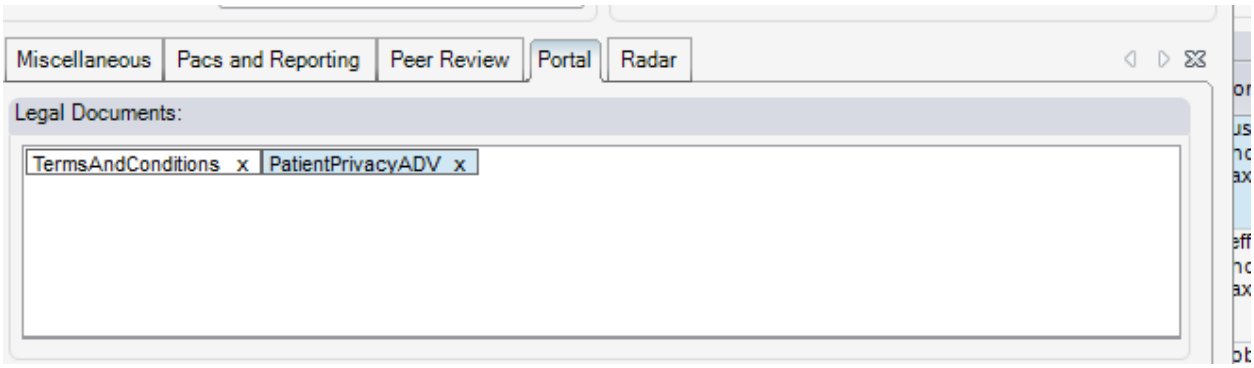

**Figure 5.35 – Legal document specified for a practice**

When logging into the Portal the system will check to see if the document has changed based on the last updated date, and display to the user before they will be able to access the site, if they have already approved that version then the site will load as normal.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Mammography – Suggest Manual Review

Manual review has been addressed by adding a new column to the Mammo Letters WL. The column titled "Suggest Manual Review Reason" will display reasons for a manual review.
If the patient has multiple follow up orders that have not been scheduled the column will inform the user.

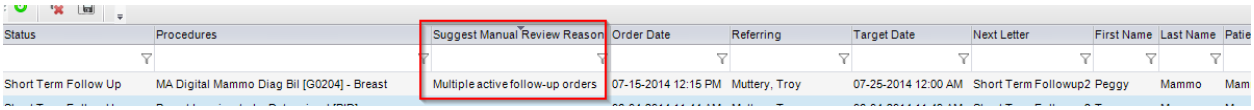

**Figure 5.36 – Mammo Letters work list displaying new column for patient with multiple follow up orders.**

If the patient has a follow up letter on the Mammo Letters WL and the patient has another mammo exam scheduled within 30 days of the target date of the follow up, this column will also inform the user with a reason of another breast exam.

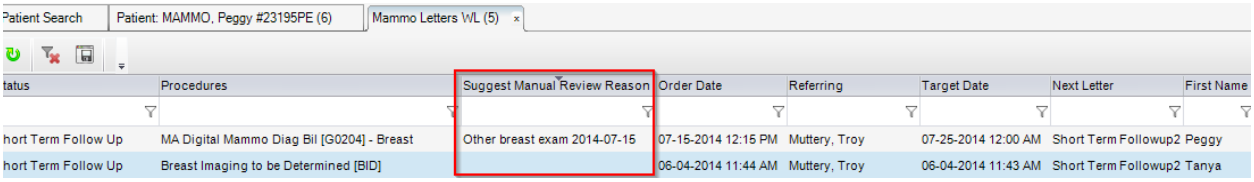

**Figure 5.37 – Mammo Letters work list displaying new column for patient with a breast exam scheduled.**

Also from this work list the user can access the Patient Folder and Cancel Order from the context menu.

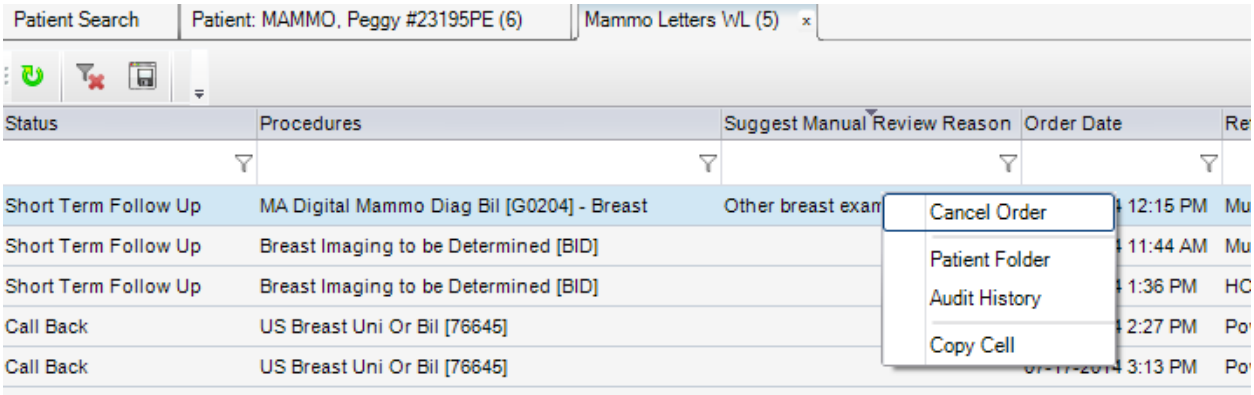

**Figure 5.38 – Context menu options from Mammo Letters WL**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Option to Not Allow Editing of Billing Codes by Technicians

Currently in the RIS we have an option on the procedure code that will allow\disallow the editing of the amount of units for a billing code. This works great for billing codes that are associated to the procedure, but doesn't prevent the tech user from adding a different code and change the units.

For this we have added a new column on the Billing Code table titled Allow Edit Units Flag. If the value of this column is set to Y the user will be able to edit the value on the Billing Code tab of the Perform Exam window. Alternately, if it is N, the user will be prevented from changing the unit value.

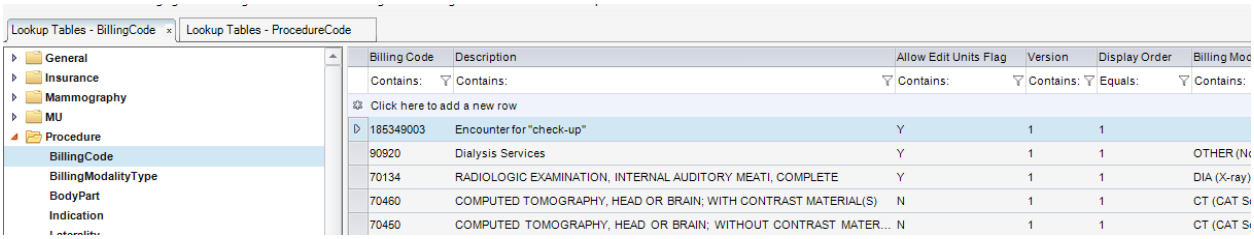

**Figure 5.39 – Billing code lookup showing new column Allow Edit Units Flag**

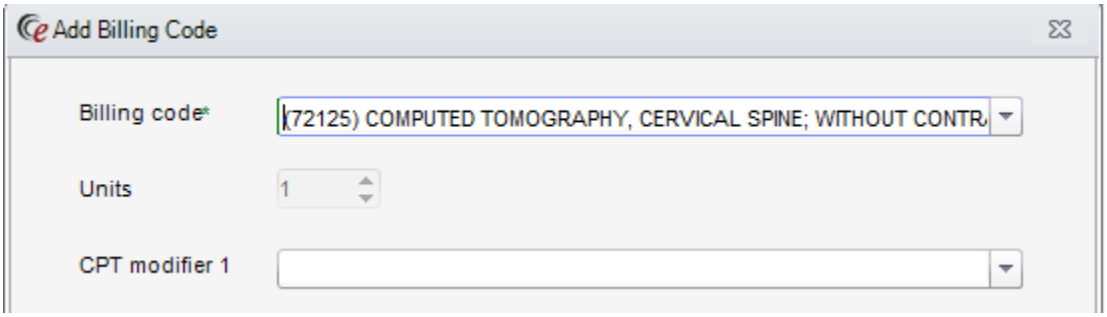

**Figure 5.40 – Unit that cannot be edited**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Patient "Not Yet Menstruating" Flag

In the Perform Exam window there was a flag of No longer menstruating that would disable the LMP and Pregnant fields. For cases of patients that have not starting menstruating but were over the age in which we active the LMP and Pregnant fields, there was no mechanism to disable.

We have added another flag of "Not yet menstruating".

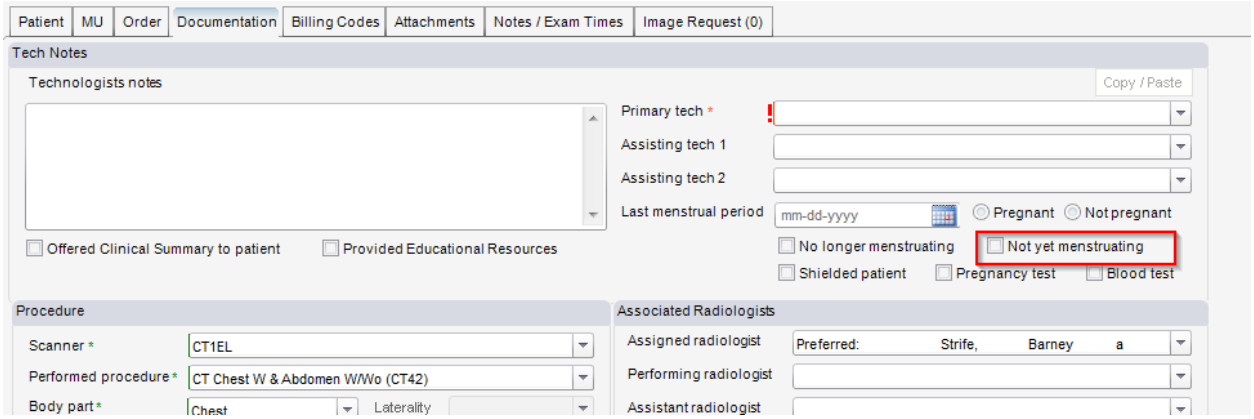

**Figure 5.41 – Not yet menstruating flag**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Exam Search Filter of BI-RADS

The exam search window now has the BI-RADS option filter that can be added for search criteria

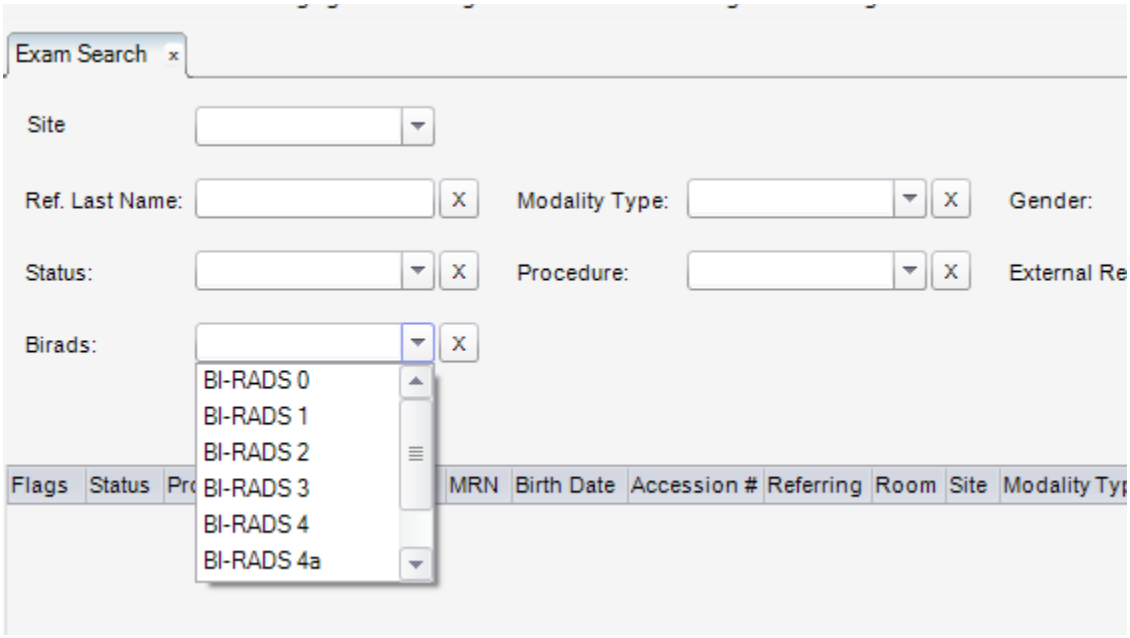

**Figure 5.42 – Exam search capability of searching on BI-RAD levels**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Patient Search – New Patient Split Button Added

The New Patient button has been updated with a new split button. Options within the split button are New patient / New appointment, New appointment and New patient.

**Figure 5.43 – Patient search**

If the user wishes to create a new appointment and performs a search and no results are found the New patient / New appointment option can be selected. This will open the Schedule Order window with for a new patient. If they wish to just create a new patient in the system the New patient option can be used

If the user performs a search and the results list does have a match or multiple results returned, they can select a patient from the list and select the New appointment option. This will open the Schedule Order window with the patient details pre-populated.

In the case of orders from external systems that have to matched with an eRAD RIS MRN, the patient search window will open with only the option of New patient.

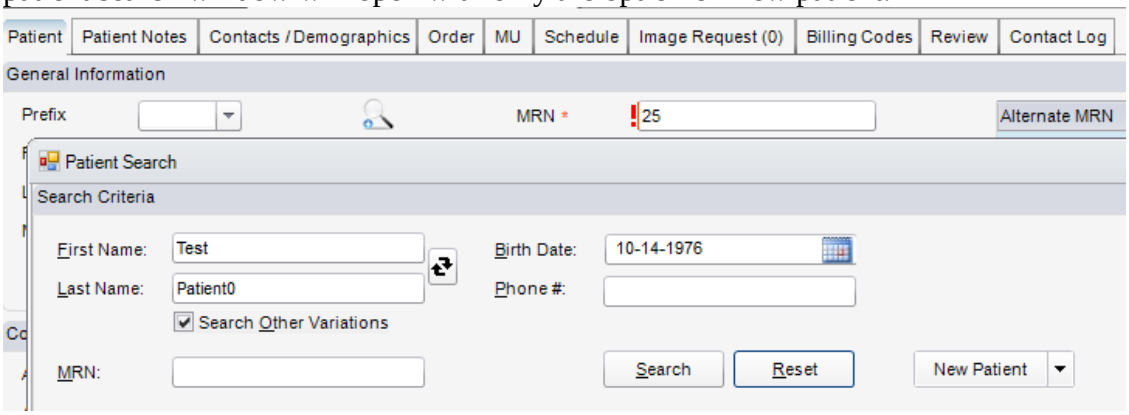

**Figure 5.44 – Patient search for external order**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Responsible Party MRN

Two new fields have been added to the Responsible Party's information on the Contacts / Demographics tab. The fields are not required to be completed. The fields are Relation's ID and ID Issuer.

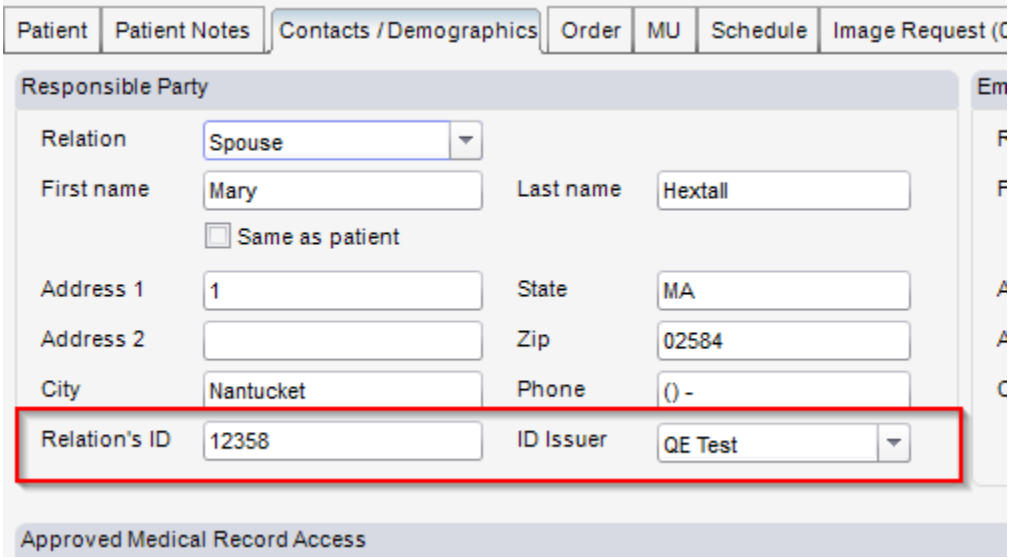

**Figure 5.45 – Responsible Party fields added**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Scheduling – Patients Height and Weight Required at Time of Scheduling

**In previous** versions we had the ability to turn on/off if the patient's height and weight were required at the time of "arriving" the patient. We have added to the ability to turn on/off is the patient's height and / or weight is required at the time of scheduling.

Two new system configuration settings have been created. For patient's height required at scheduling the setting is **"HeightRequiredOnSchedule"**

For the patient's weight required at the time of scheduling the new setting is **"WeightRequiredOnSchedule"**

Both have a default value of none.

| System Config Code | Value | Default | Description |
|---|---|---|---|
| Contains: onsche | Contains: | Contains: | Contains: |
| HeightRequiredOnSchedule | False | False | (value = True/False) height is required when scheduling the patient |
| WeightRequiredOnSchedule | False | False | (value = True/False) weight is required when scheduling the patient |

**Figure 5.46 – new system configuration settings for height/weight required at scheduling.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Patients Weight and Room Added to Weight Limit Message

The message box that is presented to the user informing them that the current selected scanner has a weight limit that the patient exceeds has had the weight of the patient and the room name added to the message.

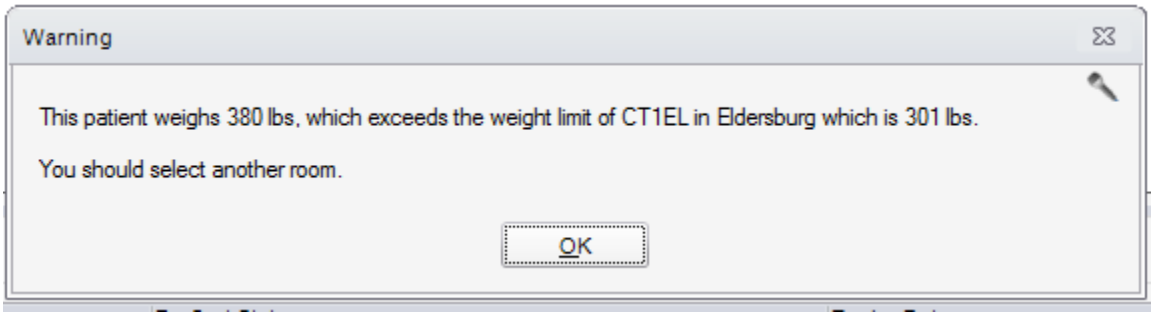

**Figure 5.47 – Message includes patients weight and room**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Ability to Add Longer Room Names

Currently in the scheduling window the names of the rooms come from the Modality Code of the Modality table. A new column was added to the Modality lookup titled Short Description that has a character length of 50. If this field has a value it will be displayed.

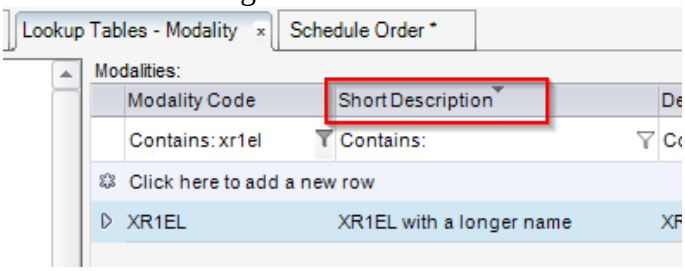

**Figure 5.48 – Short description column added to the modality lookup**

Admins can enter in a longer description name of the room and have it display in the scheduling windows details section.

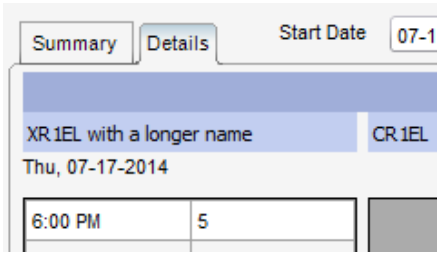

**Figure 5.49 – Details showing short description**

Also displayed in the Calendar of the Scheduling window

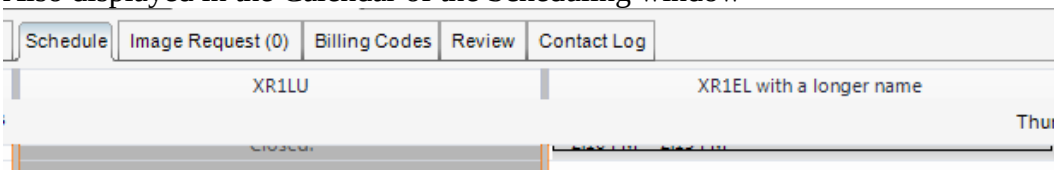

**Figure 5.50 – Calendar control of the new appointment window**

Lastly in the procedure picker rows Room list box

**Figure 5.51 – Room list box on the procedure picker row**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Ability to Use a Closed Room from Registration Window

Registration screen will now allow the use of a closed room/holiday, but on checking-in and arriving they will be prompted to ensure they would like to still use the selected modality.

For checking in a patient, the user will be presented with the following message

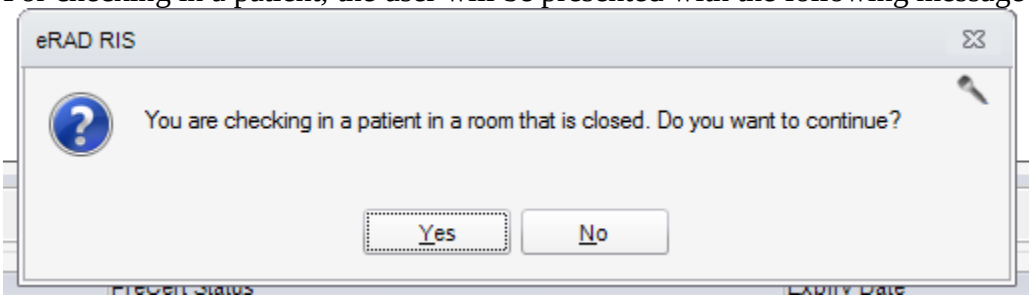

**Figure 5.52 – Message on closed room for checking in a patient**

When arriving the patient in a closed the room the message is:

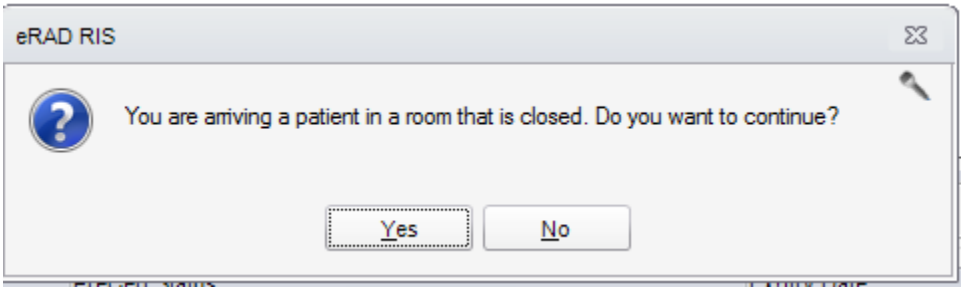

**Figure 5.53 – Arriving a patient in a closed room**

The message will be presented when completing a walk in to a closed room as well.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Scheduling – Repeating Modality Closures

The modality lookup table has an additional option added to the modality closures grid. The Repeat column has a list of values that include days of the week, weekday, weekend, all week and full range.

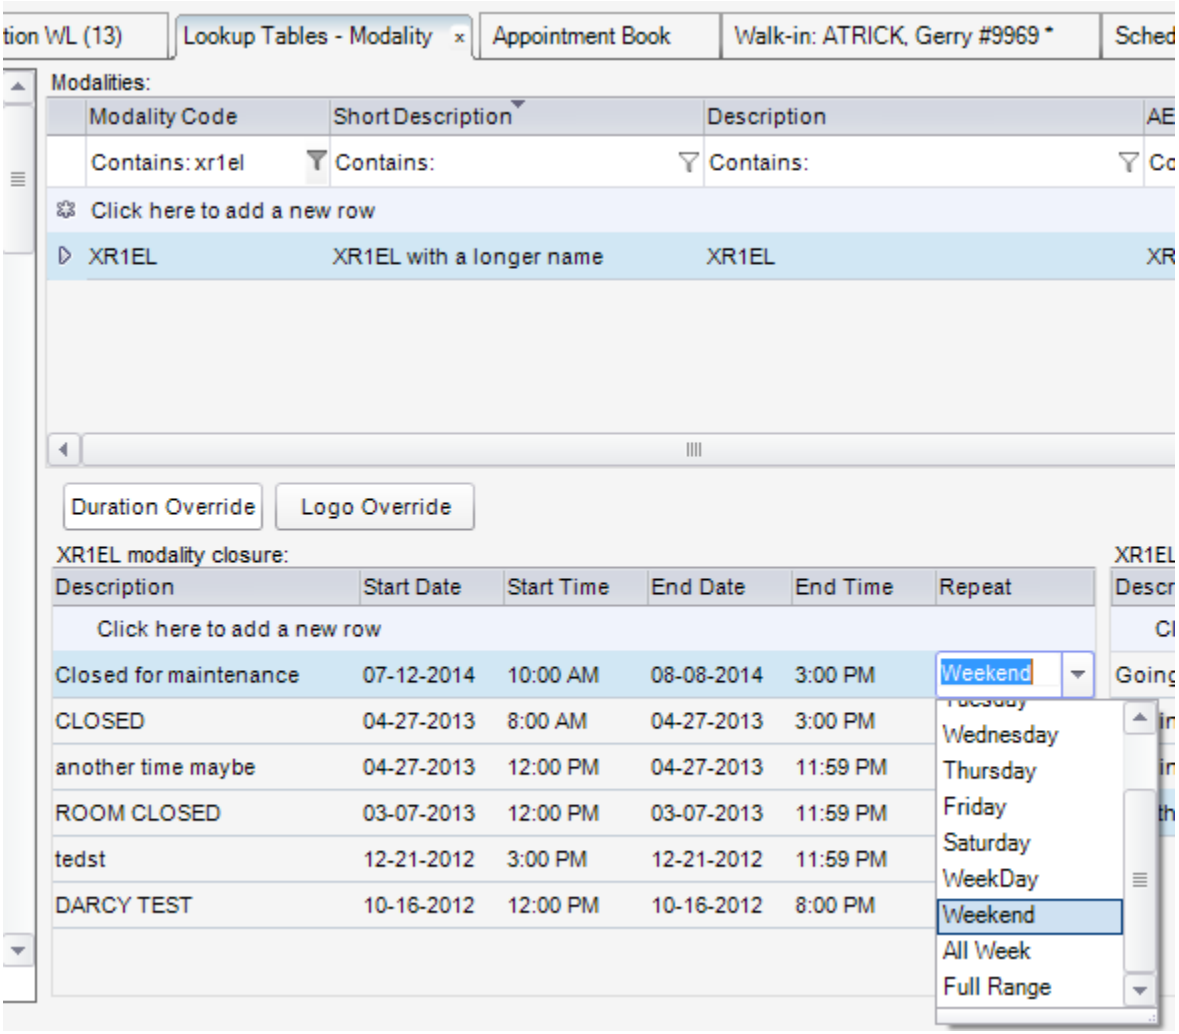

**Figure 5.54 – Repeating room closures**

An example of this would be closure on the weekend between 7am – 5pm, selecting the Weekend option would apply the closure to Saturdays and Sundays in your specified date range.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Last Contact and Last Contacted Type Added to Work Lists

The columns of Last Contact and Last Contacted Type have been added to the following work lists.

- Confirmation
- Reception
- Technologist
- No Show
- Closed Room

Example of the columns from the Reception work list:

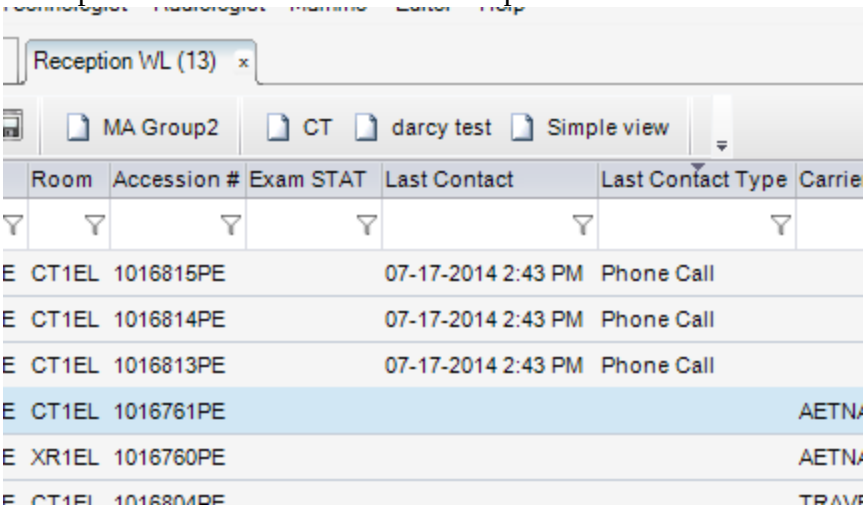

**Figure 5.55 – Last contact and last contact type added to work lists**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Additional Columns Added to the Confirmation WL

The IV Status and PreCert Required columns have been added to the Confirmation WL.

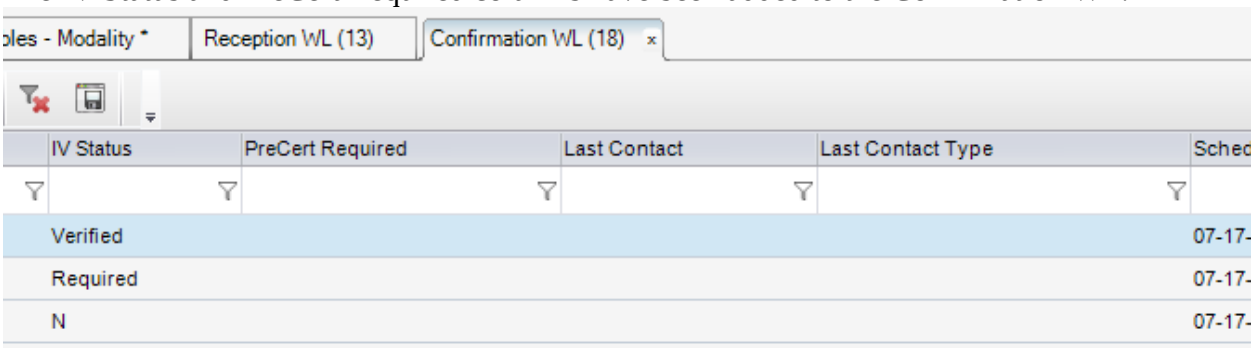

**Figure 5.56 – Columns added to the Confirmation WL**

## Additional Columns added to the Orders to Schedule WL

The columns Birth Date, Abort Reason and Carrier Type have been added to the Orders to Schedule WL

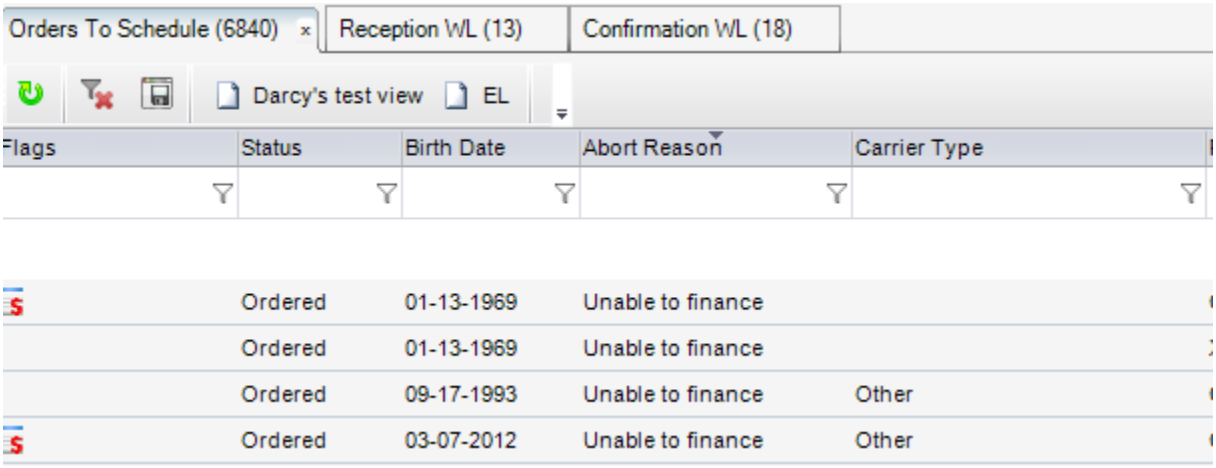

**Figure 5.57 – Columns added to the Orders to Schedule WL**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Columns added to the Image Request WL

The columns of Date of Service and Site columns of Study Performed Site and Image Request site are included on the Image Request WL.

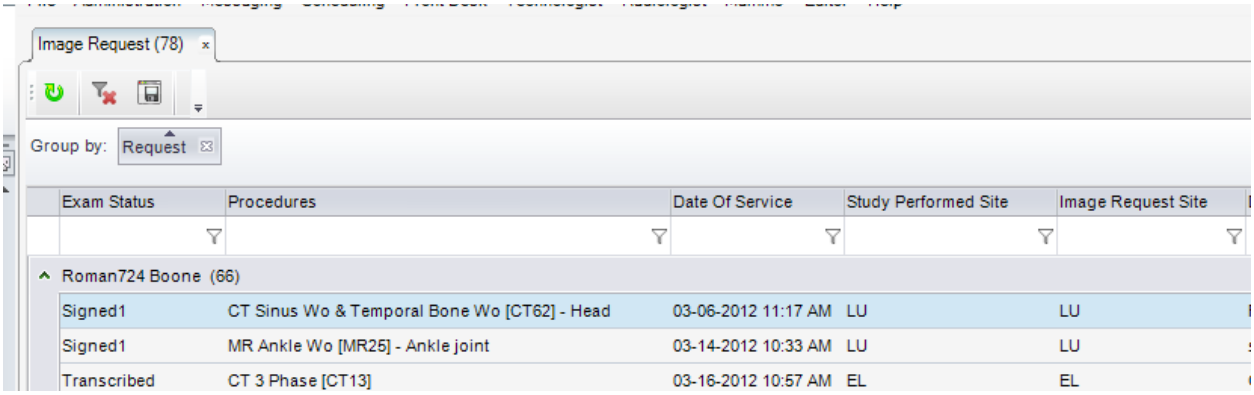

**Figure 5.58 – Columns added to the Image Request WL**

## Locked By Column Added to the CTRM WL

The locked by column has been added to the Critical Results WL and the All Critical Results WL

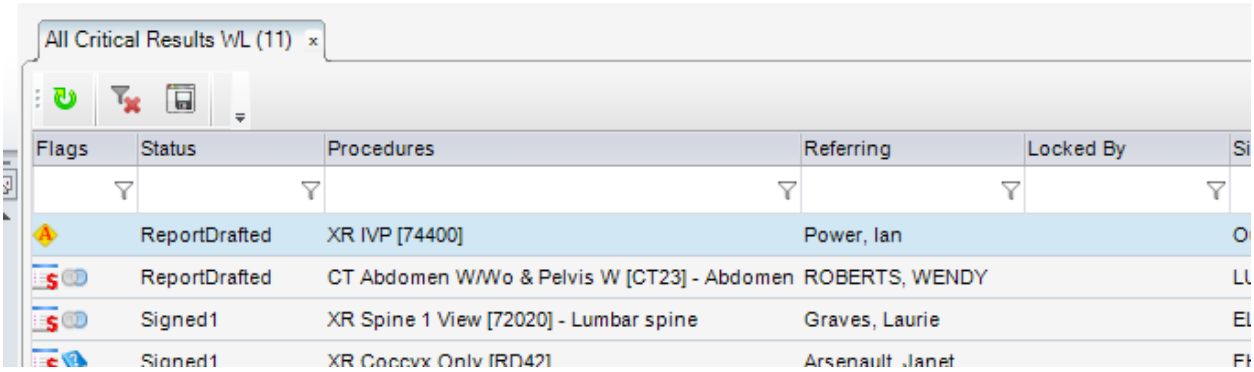

**Figure 5.59 – Locked by column added to Critical Results WL**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Ability to Select Date Range for Confirmation WL

There Confirmation WL is a daily work list in which the user must select each day to see the studies for a specific day. In build 43 we have added to the ability to select a date range from the calendar control to a maximum of 10 days.

This is accomplished by opening the calendar. Focus will be on the current date. Holding down the shift key on the keyboard and select the day in which you would like to end the range. To change back to a single day, double click the day from the calendar.

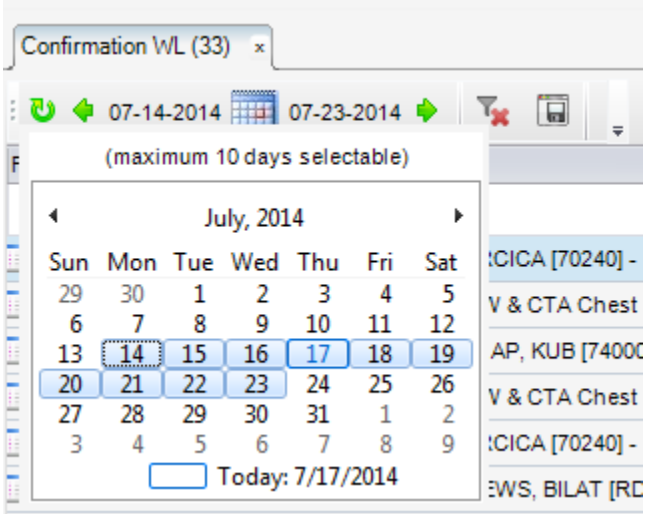

**Figure 5.60 – Selecting a date range on Confirmation WL**

The previous/next arrows cause dates to slide by one day but maintain the selected number of days in the range.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Problem and QA Flags Added to Patient Folder WL

Two new flags have been created for display on the Patient Folder WL. The flag for Problem, with an ICON of a red exclamation point ! and the flag for QA with an ICON of a check mark have been added. The Problem flag is controlled by a new access string titled **"Flag.Problem"** with a default access of full.
The QA flag is controlled by a new access string titled **"Flag.QA"** and it also have a default access of full

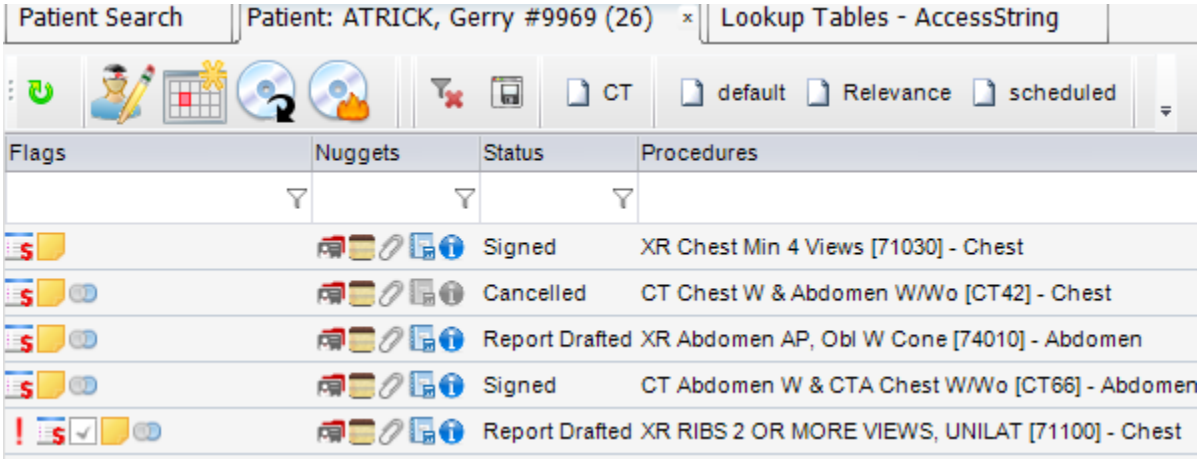

**Figure 5.61 – Problem and QA flags added to Patient Folder**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Personnel Editor – Have City Populated by Zip Code

The common zip code lookup to both the Address section and Deliver To section has been added. The functionality is the same as other areas where this feature exists: when tabbing away from the zip code textbox, if the zip code exists then the city/state will be automatically populated. If more than one entry exists, then the popup shown below will be displayed.

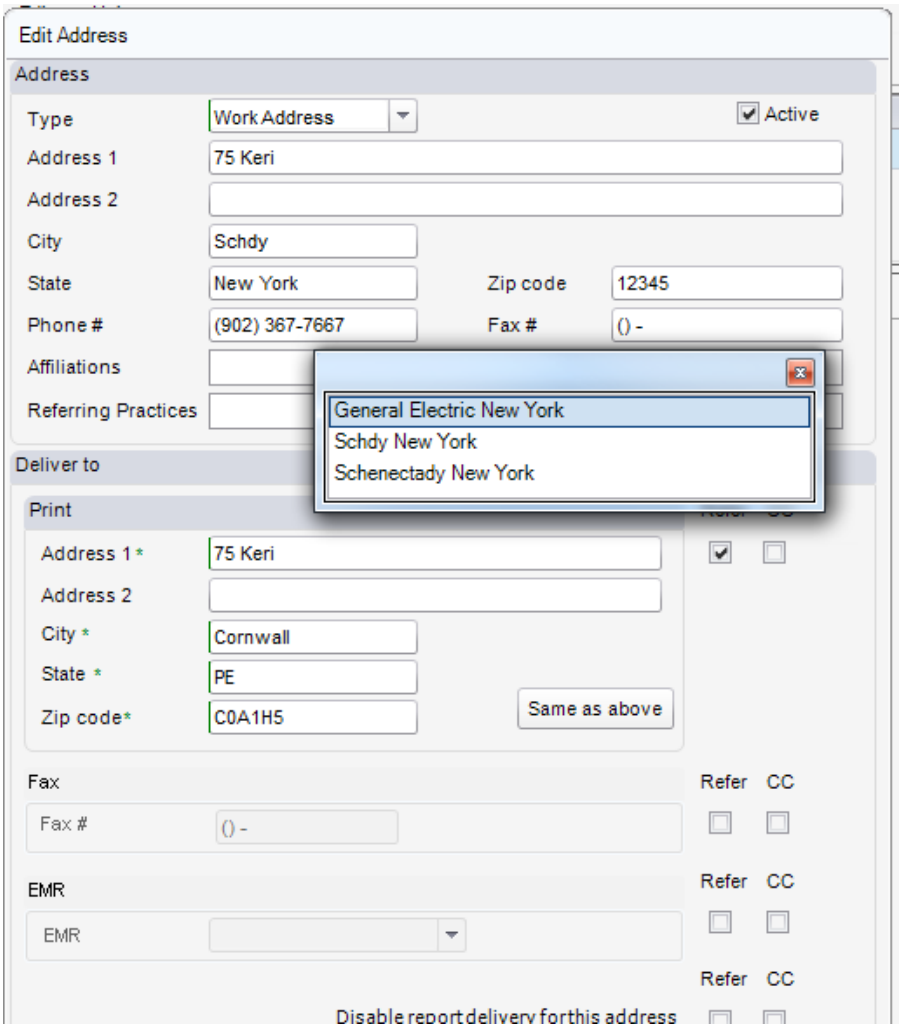

**Figure 5.62 – Personnel editor with zip code lookup**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Ability to Define Primary Specialty for Referring Physician

To set a specialty to 'primary', right click on the item in the multi-select Specialties box and select 'Set as primary'. Only the specialities multi-select should allow this right-click functionality. Only one primary should be allowed.

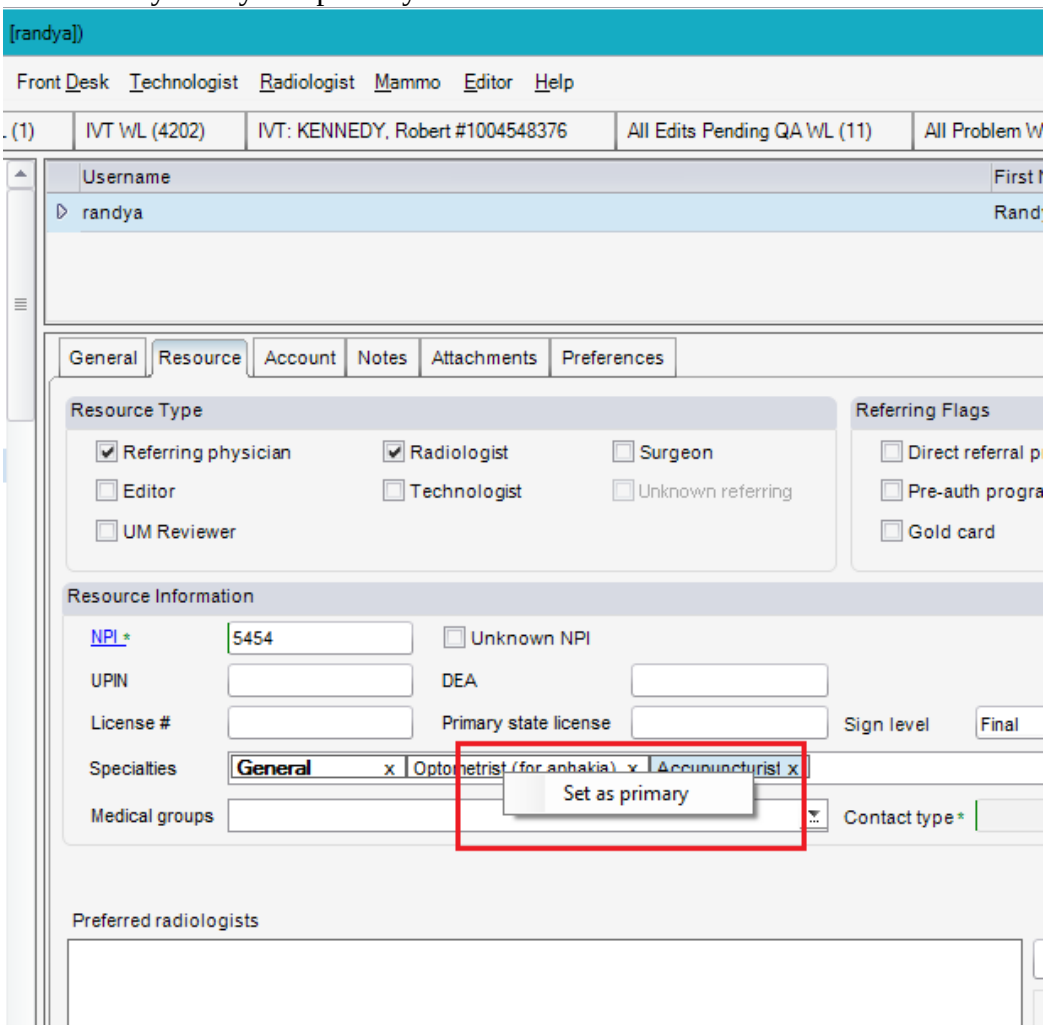

**Figure 5.63 – Set specialty as primary in personnel editor**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Referring Practice Address Changes

Instead of adding a referring practice at the Personnel Level we now have the ability to add 1 or more referring practices when adding or editing addresses as shown in the following:

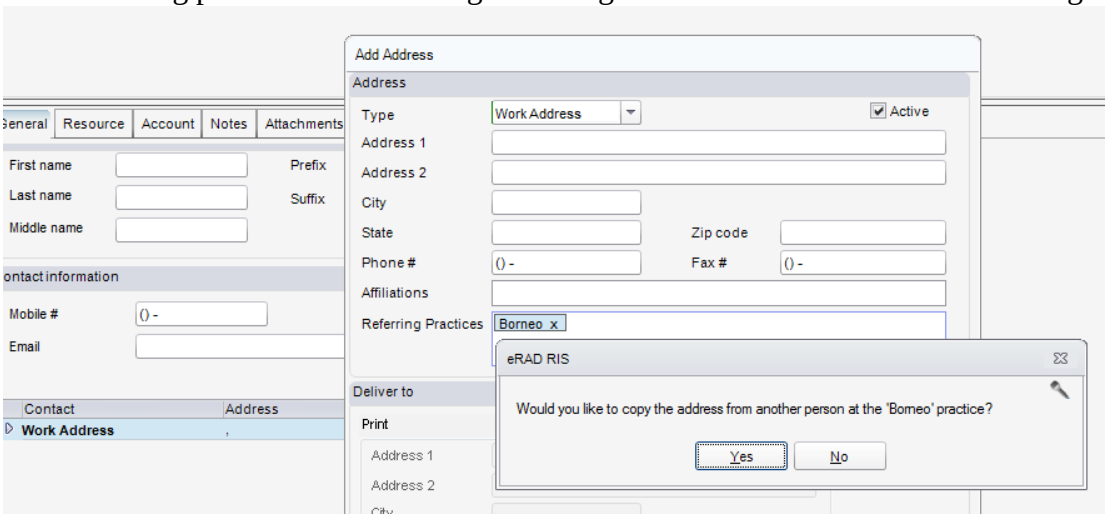

**Figure 5.64 – Add address in Personnel editor**

When a referring practice is added, the user is prompted, "to copy the address from another person at the selected practice". If they choose "Yes" to that question they get a list of person's addresses to use as the address/delivery information, as shown in the following screen capture:

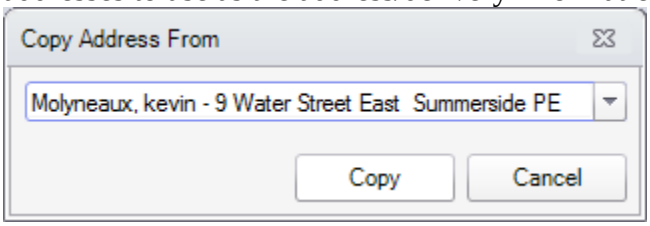

**Figure 5.65 – Copy Address From prompt**

The Personnel editor allows the user to add addresses and edit them individually. To make managing referring addresses easier, we have introduced the following "- Referring Address" editor:

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

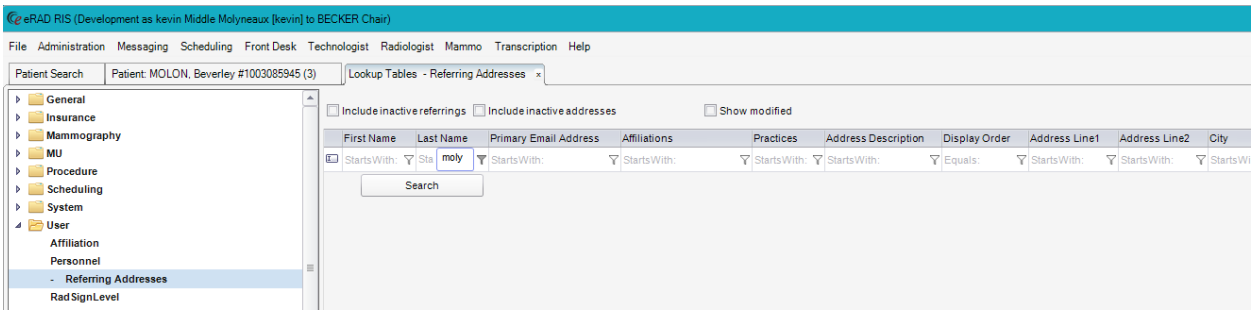

**Figure 5.66 – Referring Addresses lookup**

When you open this screen the first thing you must do is to specify at least one filter value and then click the "Search" button. In this example, I've search for all users with the last name 'molyn'.

Using the context menu option 'Copy/Paste Referring Address" the user can copy an entire address row and paste it to another person/address row.

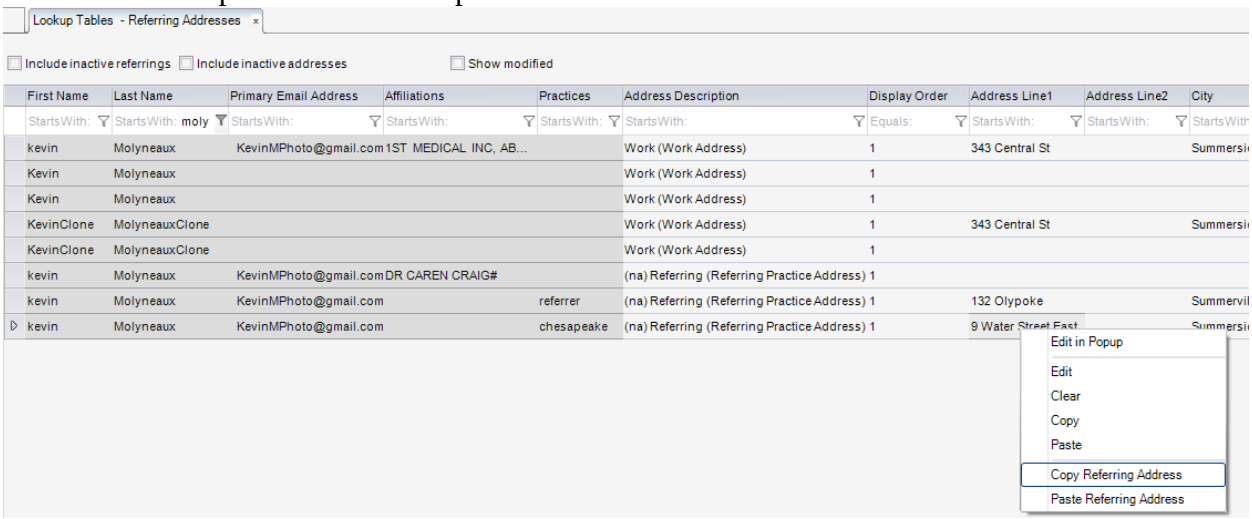

**Figure 5.67 – Referring Addresses context menu options**

Note, the columns shown in the darker shading are non-address fields, which are not included in the "Paste Referring Address" operation and are not editable directly in the gird. Consider these darker columns as read-only, except for the Practice and Affiliations columns which can be edited via the "Add/Remove Practice" context menu as shown in the following screen capture:

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

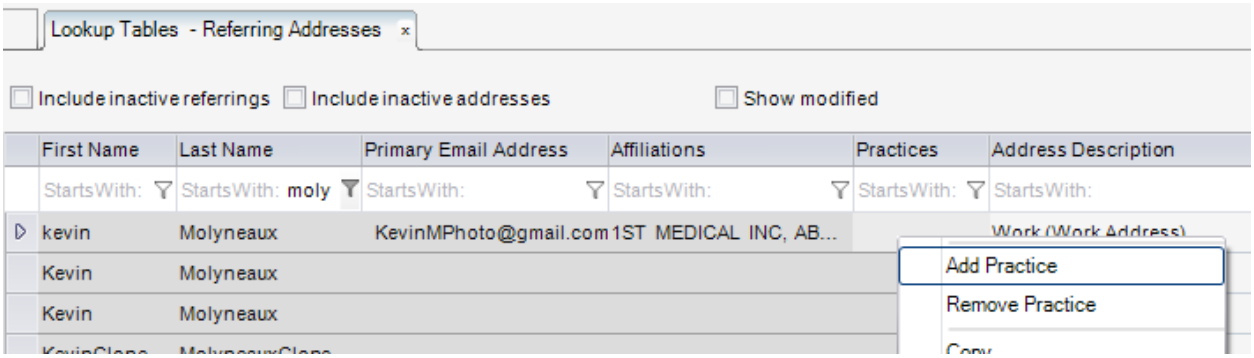

**Figure 5.68 – Add or remove practice**

The grid also support multi cell selection so you could add a practice to more than one address in the same operation as shown in the following screen capture, where I used the keyboard or mouse plus the <CTRL> key to selected multiple Practice cells:

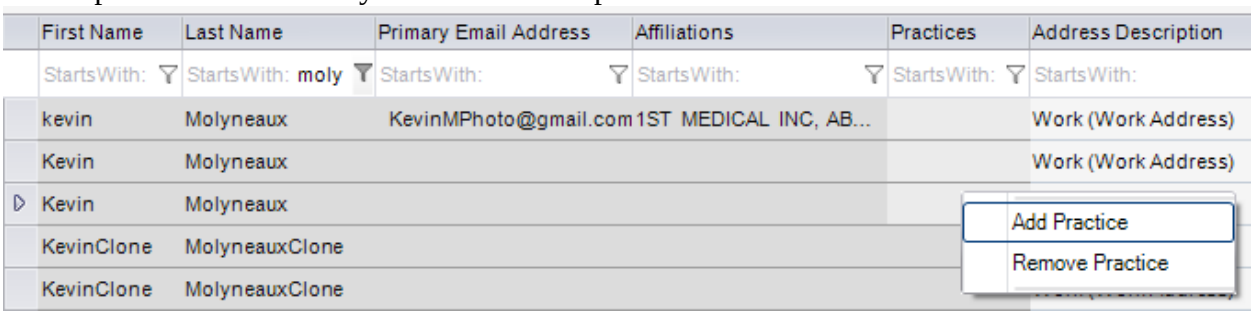

**Figure 5.69 – Multi select cells**

The user can also select multiple cells and paste the same value to all of them as shown in the following example where I am pasting the '343 central st' to all of the selected cells:

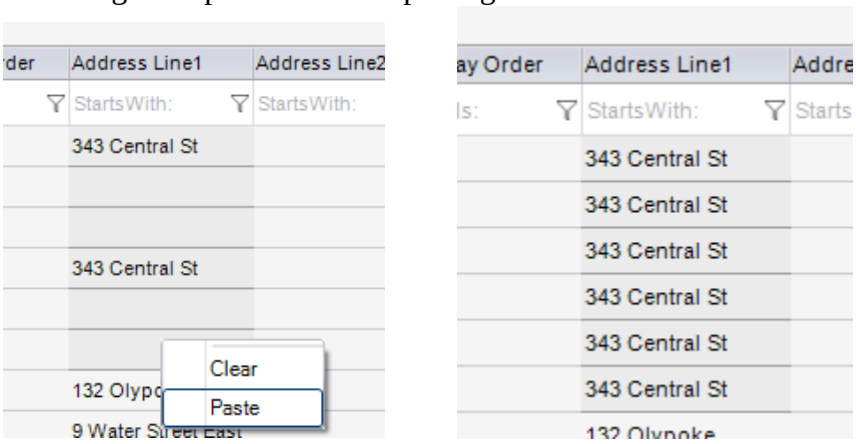

**Figure 5.70 – Before and after copy / paste**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Checking the "Show Modified" checkbox will remove all filters and show all the rows that have been modified and not yet been saved:

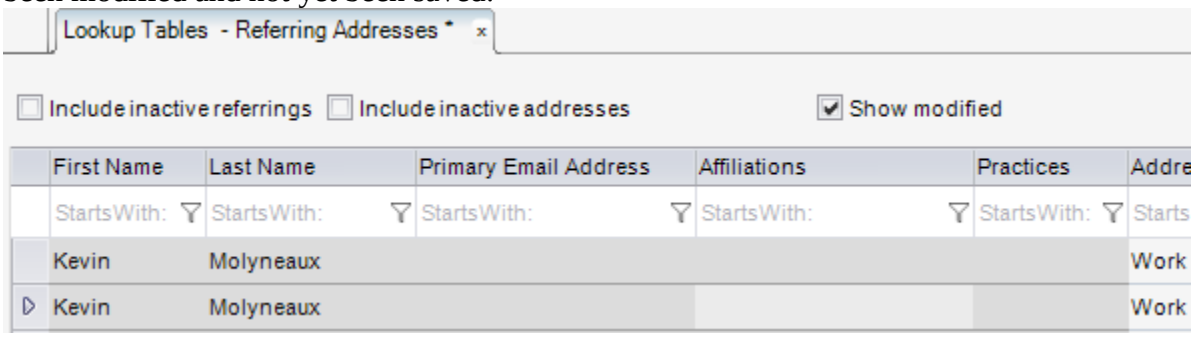

**Figure 5.71 – Show modified**

Then after unchecking the "Show Modified" the filters you had before checking it will be re-applied. If your search returns too many rows (~1000), then the amount returned will be limited and you will see a message explaining that partial results are being displayed. You will also notice that at all times the row count is displayed in the bottom right corner of the RIS screen as shown in the following:

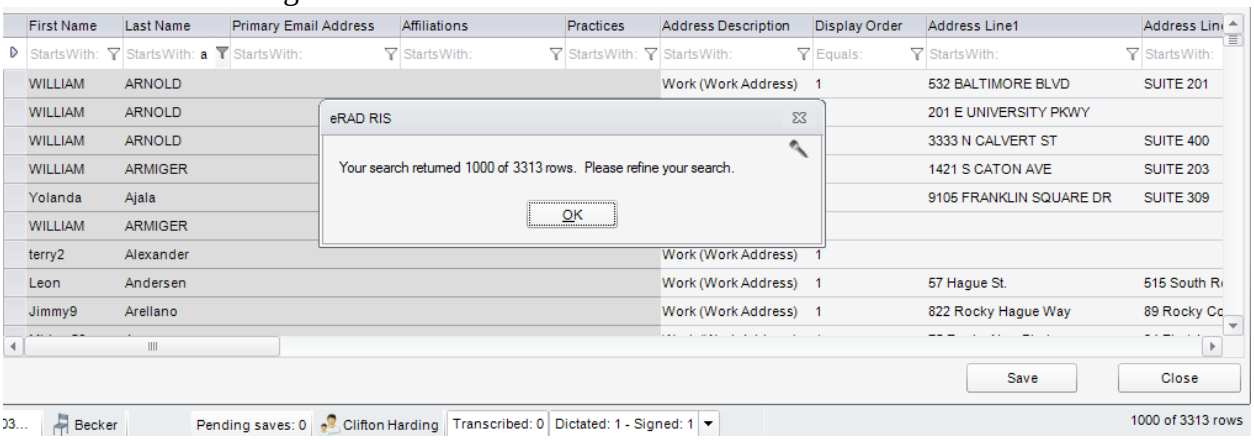

**Figure 5.72 – Unselecting Show Modified results**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

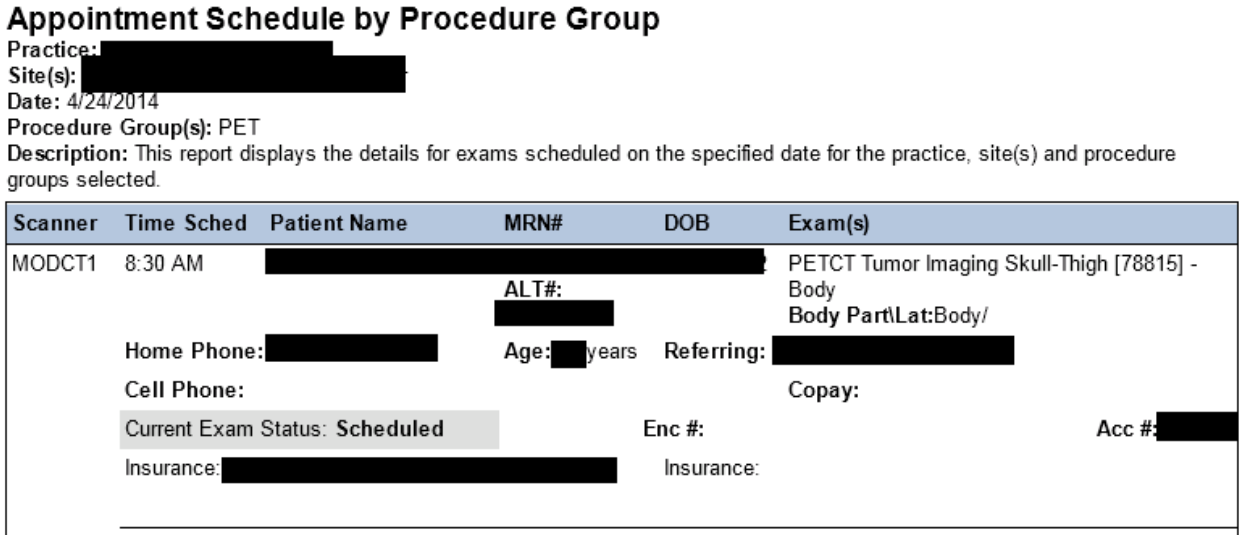
## Management Report – Appointment Schedule by Procedure Group

The Appointment Schedule by Procedure Group management report will display the details for exams scheduled on the specified date for practice, site(s) and procedure groups selected.



**Appointment Schedule by Procedure Group**

**Practice:** [redacted]
**Site(s):** [redacted]
**Date:** 4/24/2014
**Procedure Group(s):** PET
**Description:** This report displays the details for exams scheduled on the specified date for the practice, site(s) and procedure groups selected.

| Scanner | Time Sched | Patient Name | MRN# | DOB | Exam(s) |
|---|---|---|---|---|---|
| MODCT1 | 8:30 AM | [redacted] | ALT#: [redacted] | | PETCT Tumor Imaging Skull-Thigh [78815] - Body<br>**Body Part\Lat:**Body/ |
| | **Home Phone:** [redacted] | | **Age:** [redacted] years | **Referring:** [redacted] | |
| | **Cell Phone:** | | | | **Copay:** |

**Figure 5.74a – Radiologist Productivity by User – Mammo Management report**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

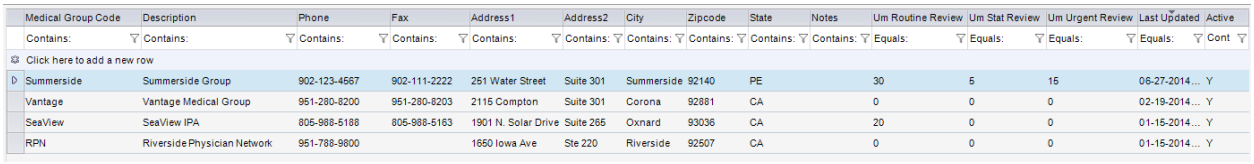
## Utilization Management – Addition of Medical Group Lookup Table

A lookup has been added called Medical Group has been added under the Insurance directory of the Administration>Configure menu. This contains the name and demographics of the medical group. The table includes the column for UM Routine Review, UM Stat Review and UM Urgent Review



| Medical Group Code | Description | Phone | Fax | Address1 | Address2 | City | Zipcode | State | Notes | Um Routine Review | Um Stat Review | Um Urgent Review | Last Updated | Active |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Contains: | Contains: | Contains: | Contains: | Contains: | Contains: | Contains: | Contains: | Contains: | Contains: | Equals: | Equals: | Equals: | Equals: | Cont |
| Click here to add a new row | | | | | | | | | | | | | | |
| Summerside | Summerside Group | 902-123-4567 | 902-111-2222 | 251 Water Street | Suite 301 | Summerside | 92140 | PE | | 30 | 5 | 15 | 06-27-2014... | Y |

**Figure 5.75 – Medical Group lookup table**

Access to this new lookup table is controlled by the access string **"Config.LookupEditor.MedicalGroup"** with a default of none.

From the Personnel editor the user can be mapped to one or multiple Medical Groups. The option is found on the Resource tab.

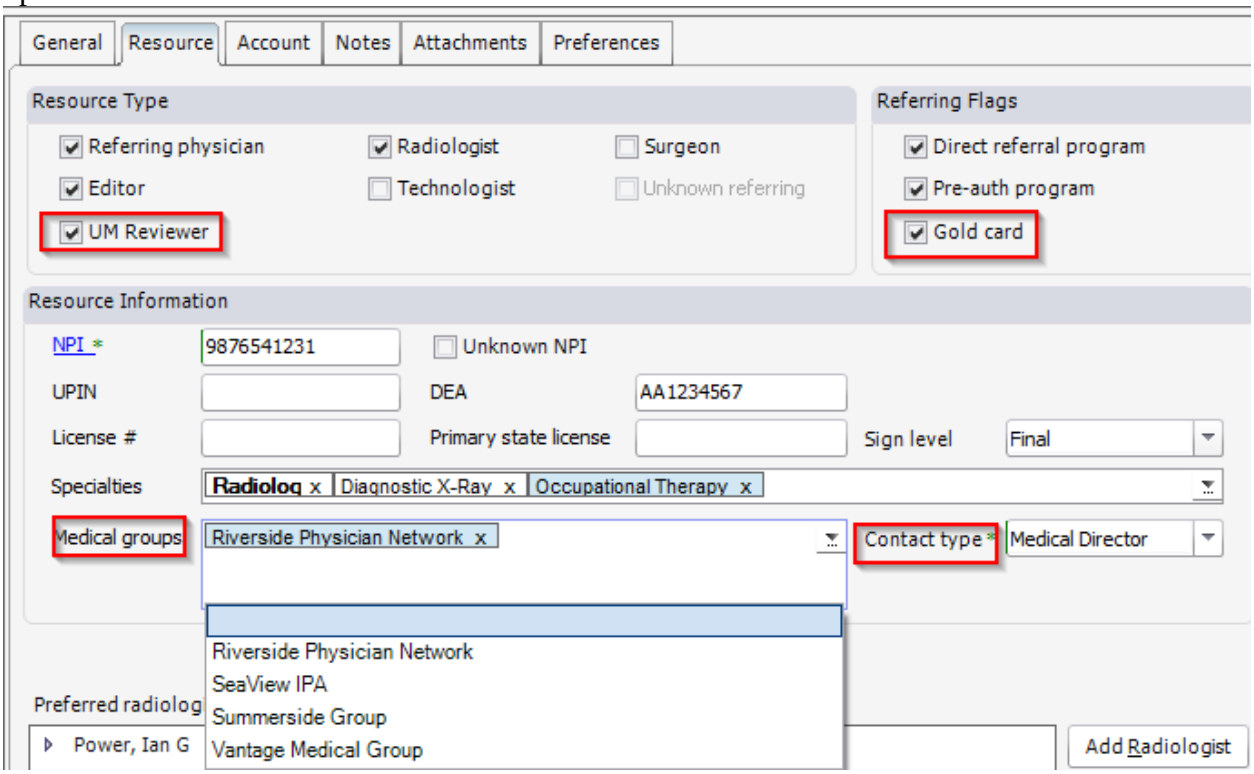

**Figure 5.76 – Map person to medical group**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Also in the Personnel Editor on the Resource tab is the Referring Flag of Gold Card. The gold card flag is only available if the resource type is referring physician. If the gold card flag is checked, then the utilization management notes field, located on the Notes tab, becomes required.

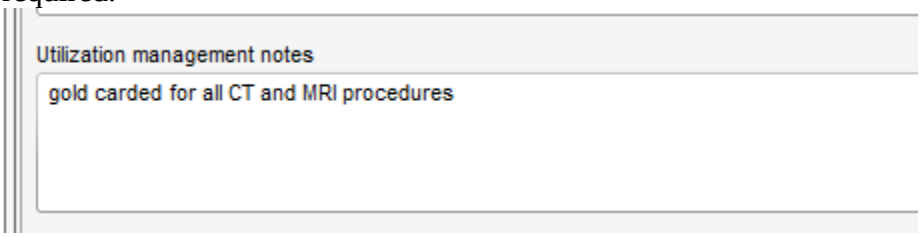

**Figure 5.77 – Utilization management notes**

The end user will need to know why the requesting physician is marked as gold carded. If the utilization notes field is not completed, the user will be promoted with an error message.

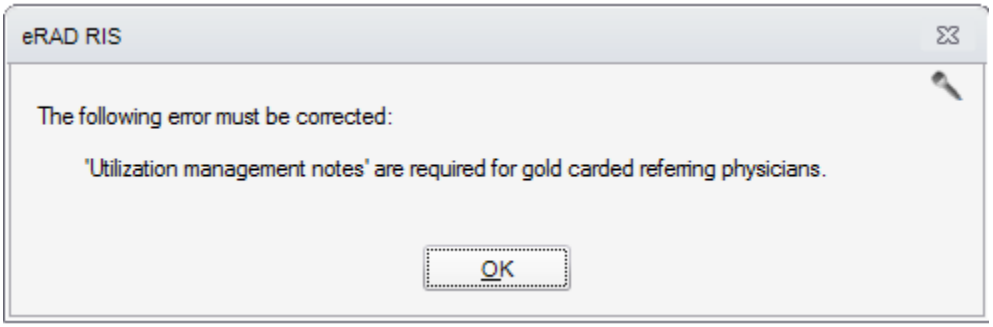

**Figure 5.78 – Prompt is Utilization management notes are not completed**

Again on the Resource tab, the Resource Type of UM Receiver has been added. The Internal Person Search has been modified to include "UM Reviewer" as a Type filter.

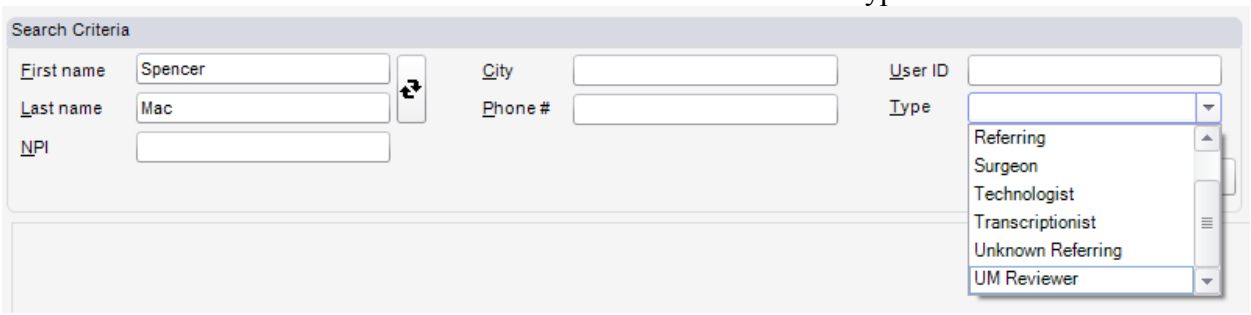

**Figure 5.79 – Internal person search with type of UM Reviewer added**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Utilization Management – Support Medical Group Contact Types

The lookup table Medical Group Contact Type has been added under the Insurance directory of the Administration>Configure menu. This new lookup table is controlled by access string **"Config.LookupEditor.MedicalGroupContactType"**

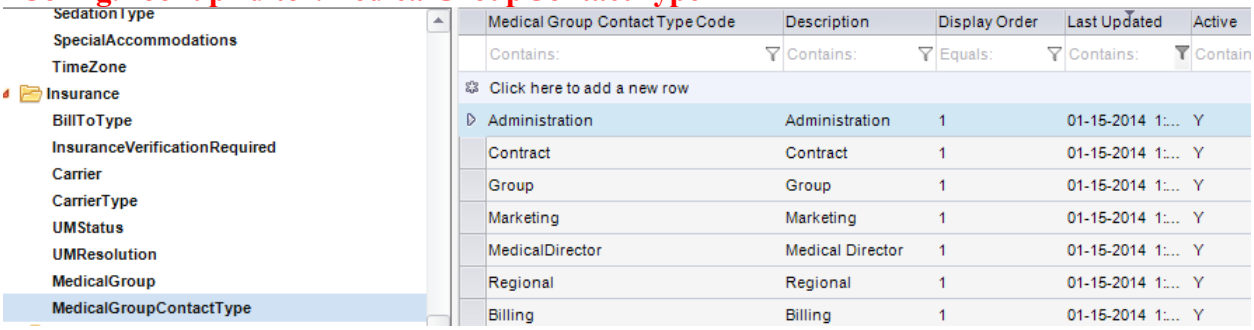

**Figure 5.80 – Medical Group Contact Type lookup table**

The values from this table are used in the Resource tab on the Personnel editor, which has been enhanced to contain a multi type-ahead control for medical groups as well as a corresponding drop-down for medical group contact type. If a medical group is selected, the contact type is a required field.

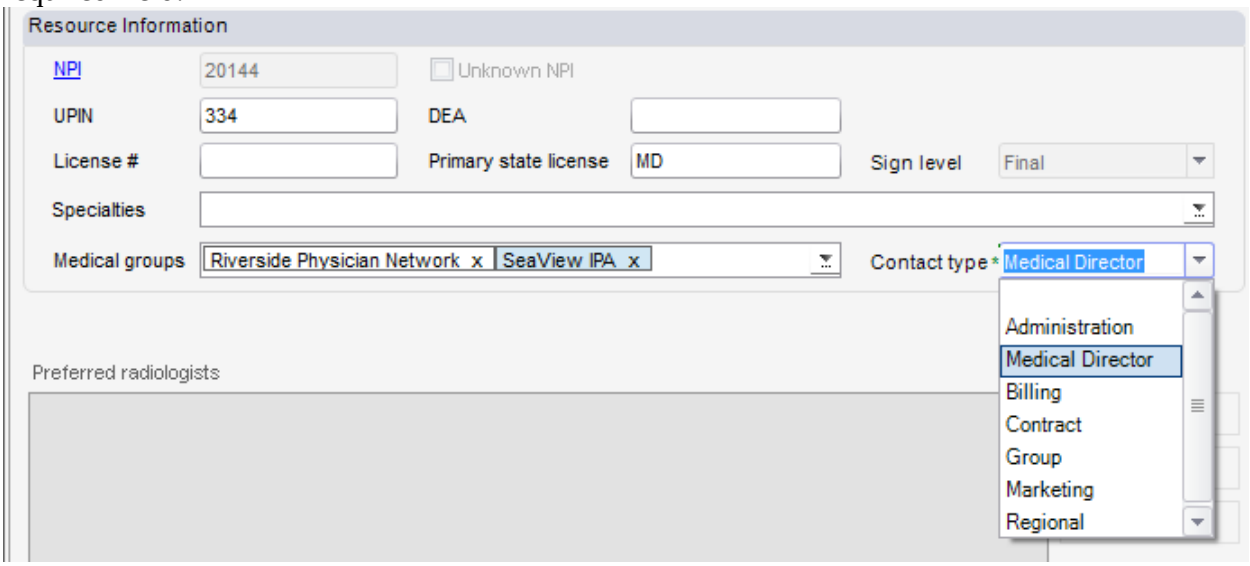

**Figure 5.81 – Adding Contact Type to a user account in Personnel editor**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Utilization Management – Support UM Coverage Type

A lookup called UMCoverage will hold the coverage types that will eventually be applied to a CPT Code level. These coverage types are displayed on the matrix for each medical group so staff can determine which CPT Codes require authorization. The Authorization Flag column will specify which coverage types require review.

| Matrix Name | Effective Date | Revision Date |
|---|---|---|
| ADP - 2013 Matrix - Alliance Desert Physicians | 1/1/2013 | 2/18/2013 |

**Disposition Legend**

A - Capitated service, authorization required

EX - Exclude

FFS - Fee for service, authorization required

IN - Include

TBD - To be determined

X - Capitated service, direct referral (no authorization required)

| EXAM | Body Part | General Comments | CPT | Group Comments | ADP |
|---|---|---|---|---|---|
| **Computed Tomography** | | | | | |
| CT HEAD W/O CONTRAST | Head | | 70450 | | A |
| CT HEAD WITH CONTRAST | Head | | 70460 | | A |
| CT HEAD W/O AND W/CONTRAST | Head | | 70470 | | A |
| CT ORBIT W/O CONTRAST | Head | | 70480 | | A |
| CT ORBIT WITH CONTRAST | Head | | 70481 | | A |
| CT ORBIT WITH&WITHOUT CON | Head | | 70482 | | A |
| CT FACIAL BONES W/O CONTRAST | Head | | 70486 | | A |

**Figure 5.82 – Matrix showing coverage type legend**

The lookup table access is controlled by a new access string titled **"Config.LookupEditor.UMCoverage"** with a default of none.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

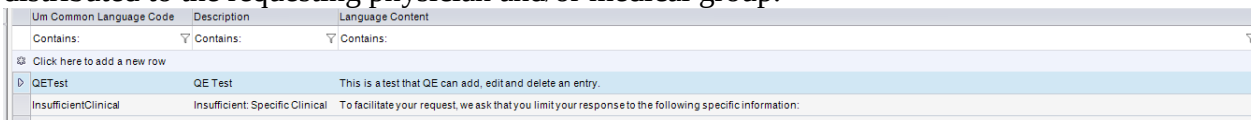
## Utilization Management – Support UM Common Language

A lookup called UMCommonLanguage will hold the list of common language items which will be accessed by the utilization management staff when performing reviews. Each common language item stores the content which will appear in the external comments which will be distributed to the requesting physician and/or medical group.



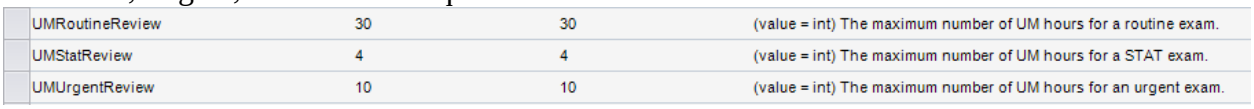
| Um Common Language Code | Description | Language Content |
|---|---|---|
| Contains: | Contains: | Contains: |
| Click here to add a new row | | |
| QETest | QE Test | This is a test that QE can add, edit and delete an entry. |
| InsufficientClinical | Insufficient: Specific Clinical | To facilitate your request, we ask that you limit your response to the following specific information: |

**Figure 5.83 – UM Common Language lookup**

Access to this lookup table is controlled by access string **"Config.LookupEditor.UMCommonLanguage"** with a default of none.

## Utilization Management – Support Default Review Times

A key component of Utilization Management workflow is review time. This is the amount of time (in hours) that it took the UM team to review and finalize the request. Although times can differ based on the contract with the Medical Group, the system is required to have default times for STAT, Urgent, and Routine requests.



| | | | |
|---|---|---|---|
| UMRoutineReview | 30 | 30 | (value = int) The maximum number of UM hours for a routine exam. |
| UMStatReview | 4 | 4 | (value = int) The maximum number of UM hours for a STAT exam. |
| UMUrgentReview | 10 | 10 | (value = int) The maximum number of UM hours for an urgent exam. |

**Figure 5.84 – system configuration settings**

Three new system configuration settings have been added. These values will be used when calculating review time in future releases. Based on a 10 hour workday

- **"UMRoutineReview"** that has a default of 30 hours
- **"UMStatReview"** that has a default of 4 hours
- **"UMUrgentReview"** that has a default of 10 hours

The Medical Group lookup table has 3 columns that will allow for an override to the above system configuration settings to allow for contracts or arrangement differences with the groups.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Utilization Management – Support UM Status

Two lookup tables called UMStatus and UMResolution have been added that are under the Insurance grouping in the lookup table editor. UMStatus contains a list of UM Statuses. This lookup table's access is controlled by the access string "Config.LookupEditor.UMStatus" with a default of none.

| | Um Status Code | Description | Form Content | Final Flag | Display Order |
|---|---|---|---|---|---|
| | Contains: | Contains: | Contains: | Contains: | Equals: |
| | Click here to add a new row | | | | |
| ▷ | QE_Test | QE Test | We're sorry your claim cannot be viewed, processed, approved, declined or rejected at this time. We are doing the... | N | 1 |
| | Approved | Approved | | Y | 11 |

**Figure 5.85 – UMStatus lookup table**

The UMResolution look up is controlled by the access string "Config.LookupEditor.UMResolution"

| | Um Resolution Code | Description | Form Content | Um Status Code | Display C |
|---|---|---|---|---|---|
| | Contains: | Contains: | Contains: | Contains: | Equals: |
| | Click here to add a new row | | | | |
| ▷ | QE_Approved | QE Approved | Please contact QE Test Department for approval process. | QE_Test (QE Test) | 1 |
| | QE_Declined | QE Declined | We're sorry your claim cannot be declined at this time. Please try agai... | QE_Test (QE Test) | 1 |
| | DirectReferral | Direct Referral | No prior review necessary for the requested exam procedure. Please | ReturnedNotInitiat... | 1 |

**Figure 5.86 – UMResolution lookup table**

Each UMResolution is mapped to one UMStatus. A field called Form Content contains the text that will be displayed on the authorization letter when that status and resolution is selected.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Utilization Management – Authorization Rules for Medical Groups

From medical group lookup table the user can create the authorization rules. Each medical group has a set of authorization rules which is available on the right-click context menu. Typically authorization rules will be created by CPT Code and not procedure code or modality type. The rules are access from the context menu.

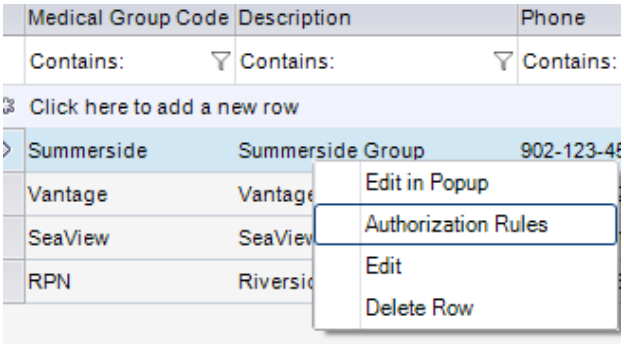

**Figure 5.87 – Accessing Authorization Rules**

The user must select one or more CPT Codes. The user must then specify if this rule is for all practices or a specific one (Matrices will usually apply to all practices however; there are some medical groups where the authorization rules can vary across geographical areas). A coverage type must be specified. These are based on the UM Coverage lookup values.

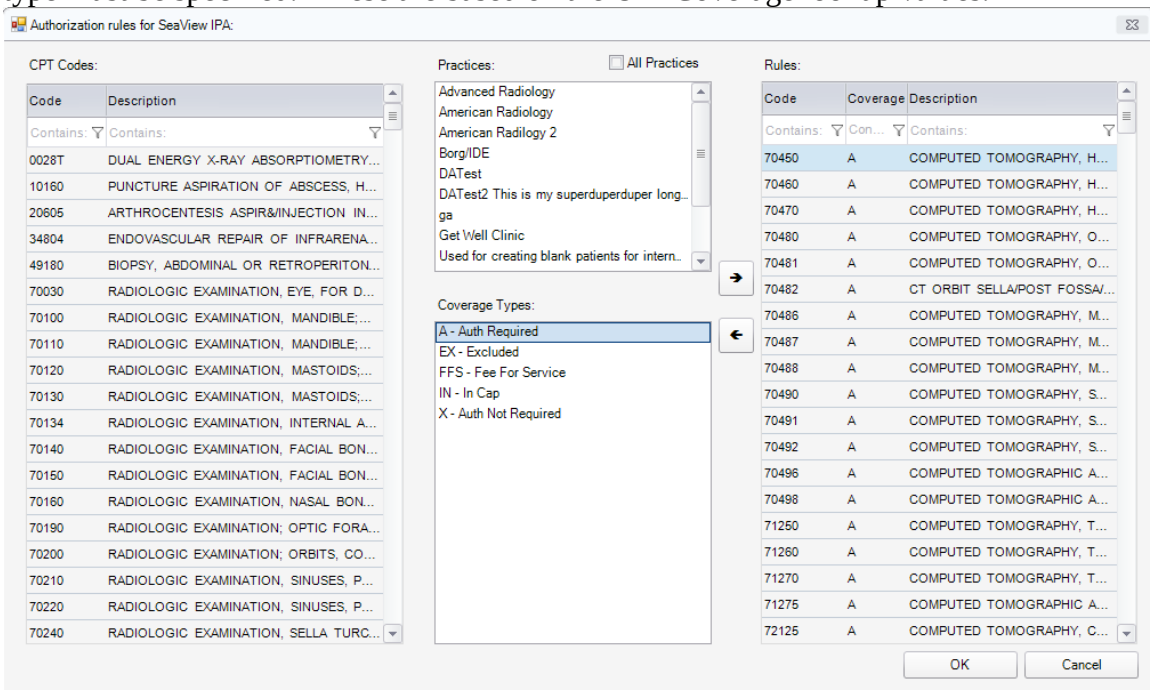

**Figure 5.88 – Authorization rules form**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

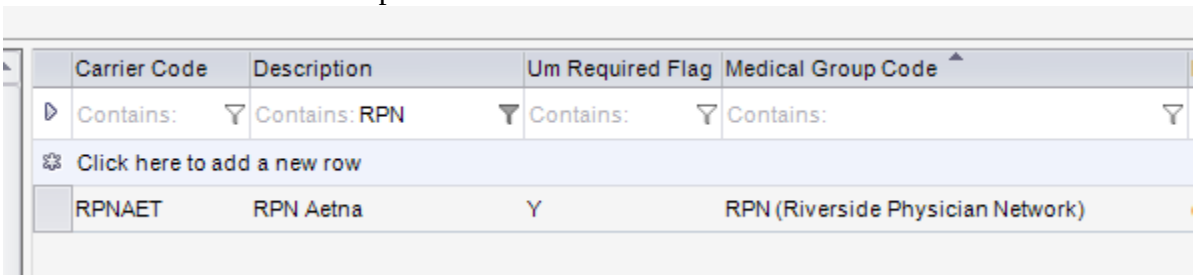
## Utilization Management – Support Capitated Carriers

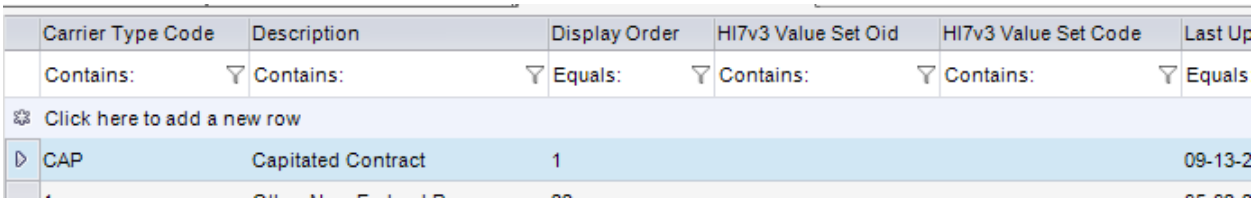
A new column has been added to the Carrier lookup tabled titled UM Required Flag. All current rows in this the Carrier lookup will have a default of N.



| Carrier Code | Description | Um Required Flag | Medical Group Code |
|---|---|---|---|
| Contains: | Contains: RPN | Contains: | Contains: |
| Click here to add a new row | | | |
| RPNAET | RPN Aetna | Y | RPN (Riverside Physician Network) |

**Figure 5.89 – Carrier showing UM required flag**

In addition, the Carrier Type lookup table has a new Carrier Type of CAP has been added to further categorise the carriers requiring utilization review.



| Carrier Type Code | Description | Display Order | HI7v3 Value Set Oid | HI7v3 Value Set Code | Last Up |
|---|---|---|---|---|---|
| Contains: | Contains: | Equals: | Contains: | Contains: | Equals |
| Click here to add a new row | | | | | |
| CAP | Capitated Contract | 1 | | | 09-13-2 |

**Figure 5.90 – New carrier type code**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Utilization Management – Mapping Carriers to Medical Groups

From within the Carrier lookup table there is a new column titled Medical Group Code. If the "UM Required Flag" is enabled, then the Medical Group Code field is required. The user will be prompted with "medical group is required for utilization management" if the Medical Group Code is not specified and the UM Required Flag is enabled.

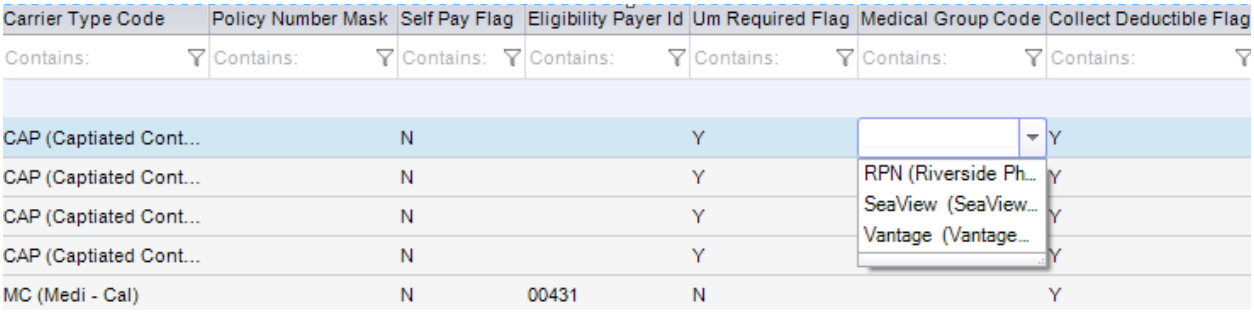

**Figure 5.91 – Specifying Medical Group Code for Carrier**

## Utilization Management – Addition of Utilization Management User Group

This can be done via configuration. A new user group called "Utilization Management" was added to the UserGroup lookup. All utilization review access strings will be mapped to this group.

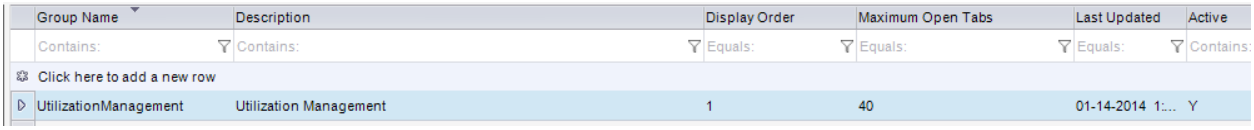

**Figure 5.92 – User Group with new group of UtilizationManagement**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – Site Level MU Override

Currently the MU Required flag is set at the Practice level the sites that fall under that practice will also be MU Required. It has been requested that we allow for a site to disengage from collecting MU data. For this we have added an MU Required check box at the site level so an Administrator can remove the site. This however doesn't work the opposite way. You can't have a site that MU Required when the practice is not.

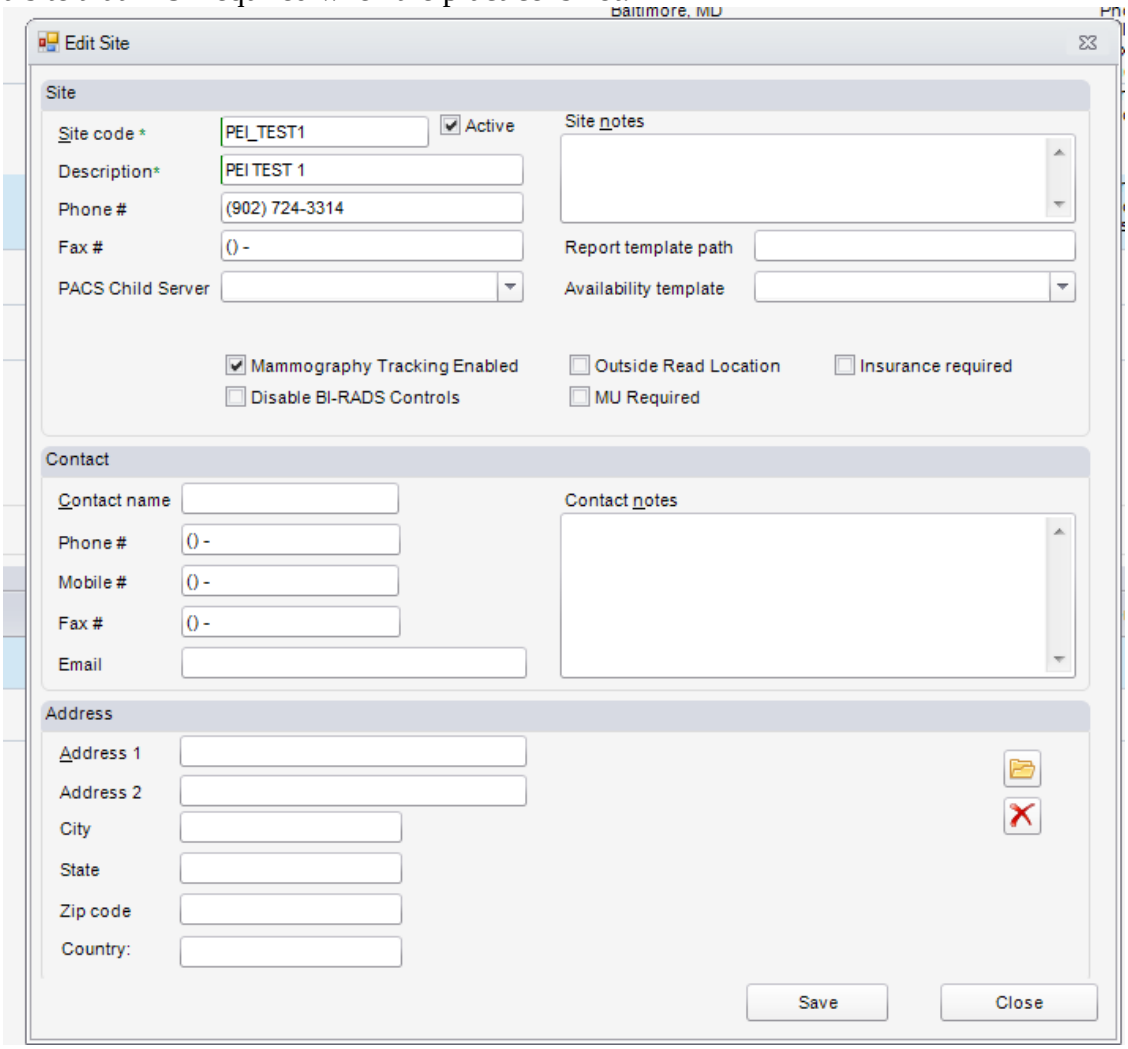

**Figure 5.93 – Site with MU Required flag**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – Direct Messaging

Worked with RADAR, to create an API call to secure exchange (Direct Message) email provider.
During the configuration of each practice a radar login information will need to be provided, it is intended currently for each box to have a RADAR account, with the same info on every practice, but will allow for a practice to have their own RADAR account and direct message address.
The RADAR account is the same account that would be used for Appointment Reminder and CTRM.

Direct Email Address can be requested through RADAR and Secure exchange, which will have to be verified.

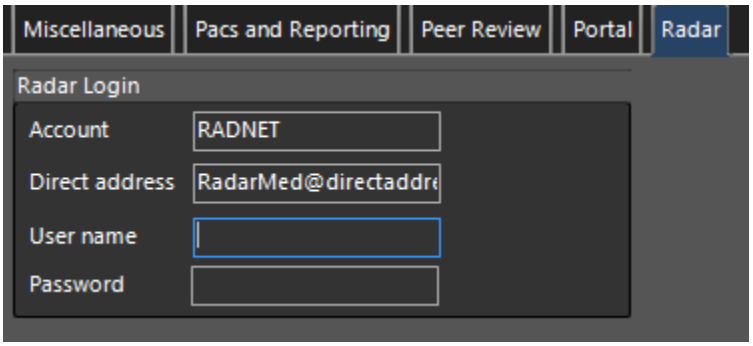

**Figure 5.94 – Practice Radar tab**

This Direct message address and RADAR login is used for sending messages from the Patient Portal as well as sending and receiving Direct message from RIS. When sending a Message the system will first check for a provided value in the practice specific "Direct address" (which does need to be a qualified direct message address), if there is no value specified then we will look at the configuration variable "DirectMessageFromAddress".

### Sending RIS Direct Messages

From within the RIS you are able to send a direct message that will contain the CCDA document by means of opening a patients study through View/Edit, under the MU tab, the process to view the CCDA document will also contain the transmit process for the CCDA document

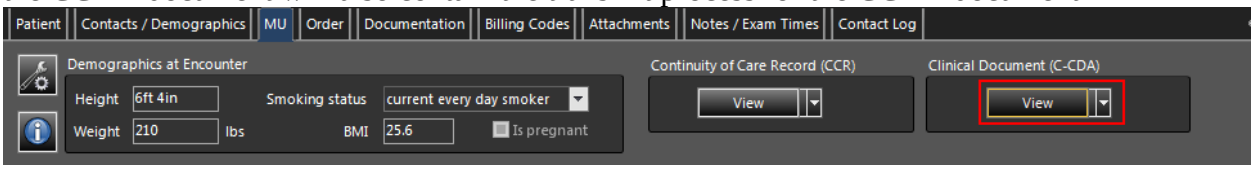

**Figure 5.95 – MU tab Clincal Document access**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

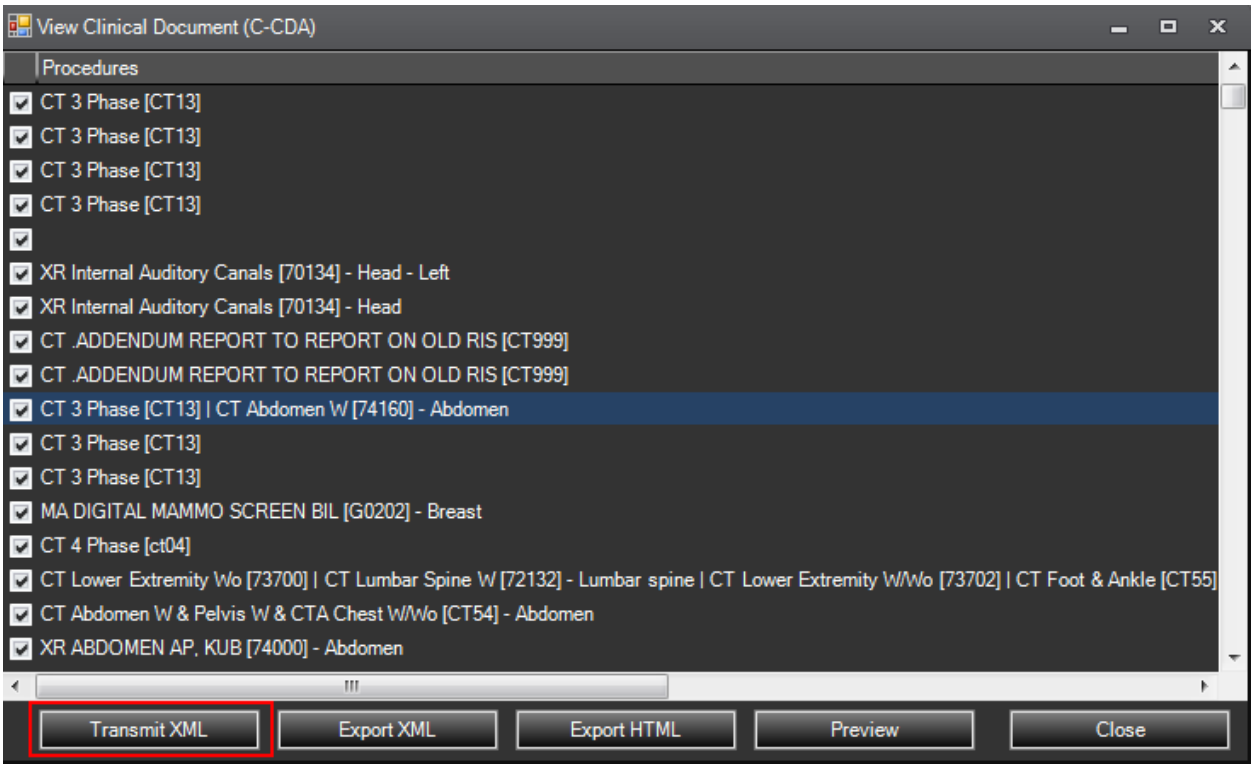

**Figure 5.96 – View Clinical Document**

Transmitting (sending) the CCDA document will allow two version of the document HTML and system(xml) format, where the user will be required to provide a valid Direct message address.

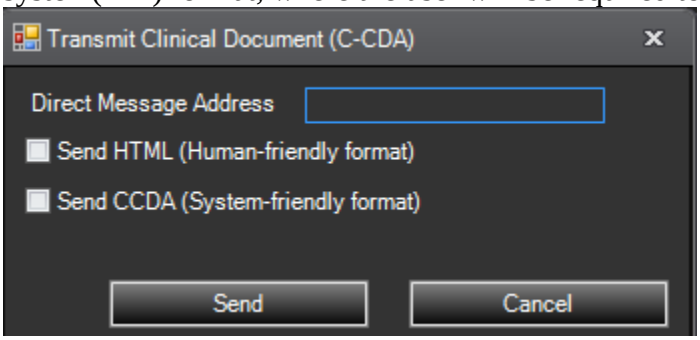

**Figure 5.97 – Transmit Clinical Document**

### Sending Portal Direct Messages

From within the Patient portal, the patient has the ability to send there CCDA document through Direct Message to any desired Direct Message address. When the user has successfully logged

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

into the portal, when there CCDA document is available, the tab will be visible, opening this tab will enable the send button.

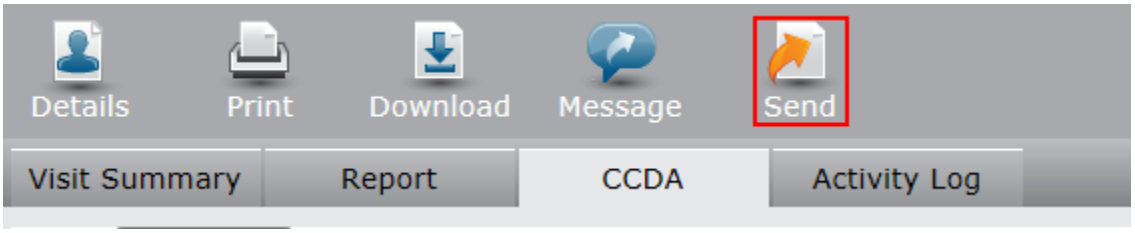

**Figure 5.99 – Sending via Patient Portal**

Click on this will allow for a similar process to the RIS transmit process, where the patient will be prompted for a direct message address, the patient will be required to confirm the address, and then be able to choose what version of the document they would like to send.

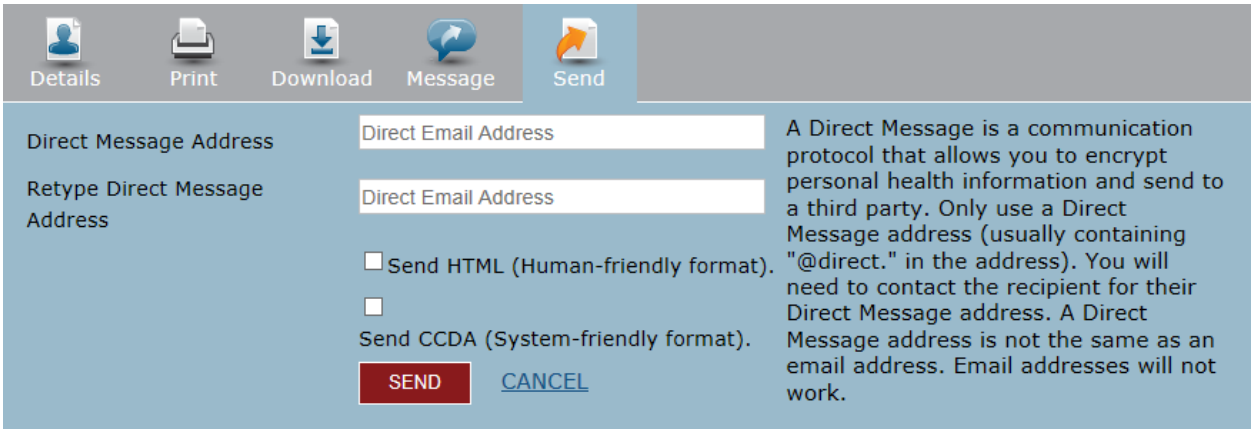

**Figure 5.100 – Entering sender information**

### Receiving Direct Messages

RIS is the only location that is able to receive messages (outside the Direct message provider controlled tools).

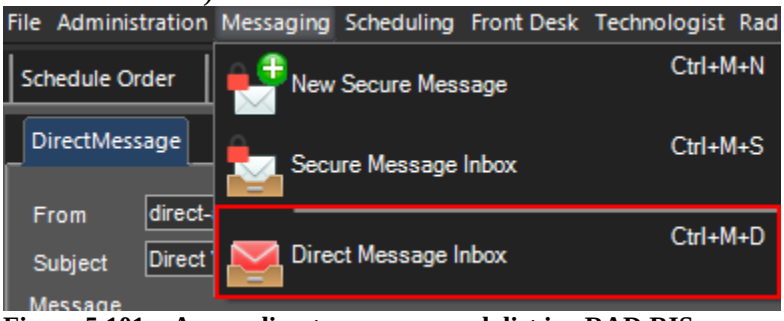

**Figure 5.101 – Access direct messages work list in eRAD RIS**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

From the direct message inbox will list all non-archived messages that for the practices Direct message address.

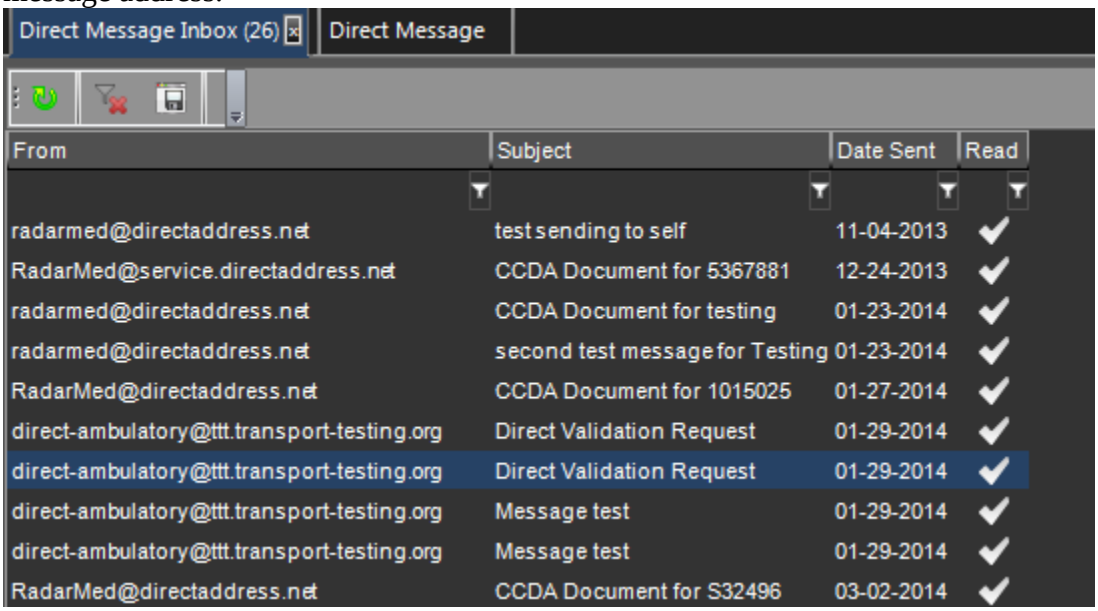

**Figure 5.102 – Direct Message inbox**

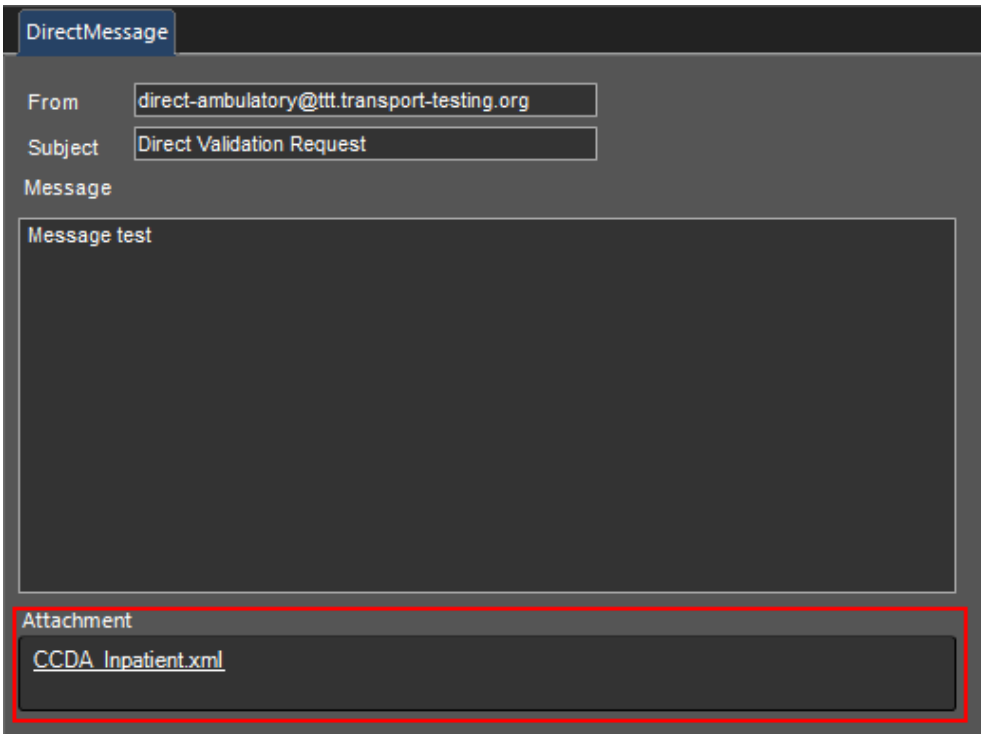

**Figure 5.103 – Accessing direct message**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Depending of the file type will dictate on how the attachment will handled, if the file is an xml or html we will try to display the attachment, otherwise we will just prompt the user to download the file.

When display the attachment, if it is an xml document type, and we detect that it is a CCDA document we will also provide the user with the ability to link the information from the CCFA document to a desired patient;

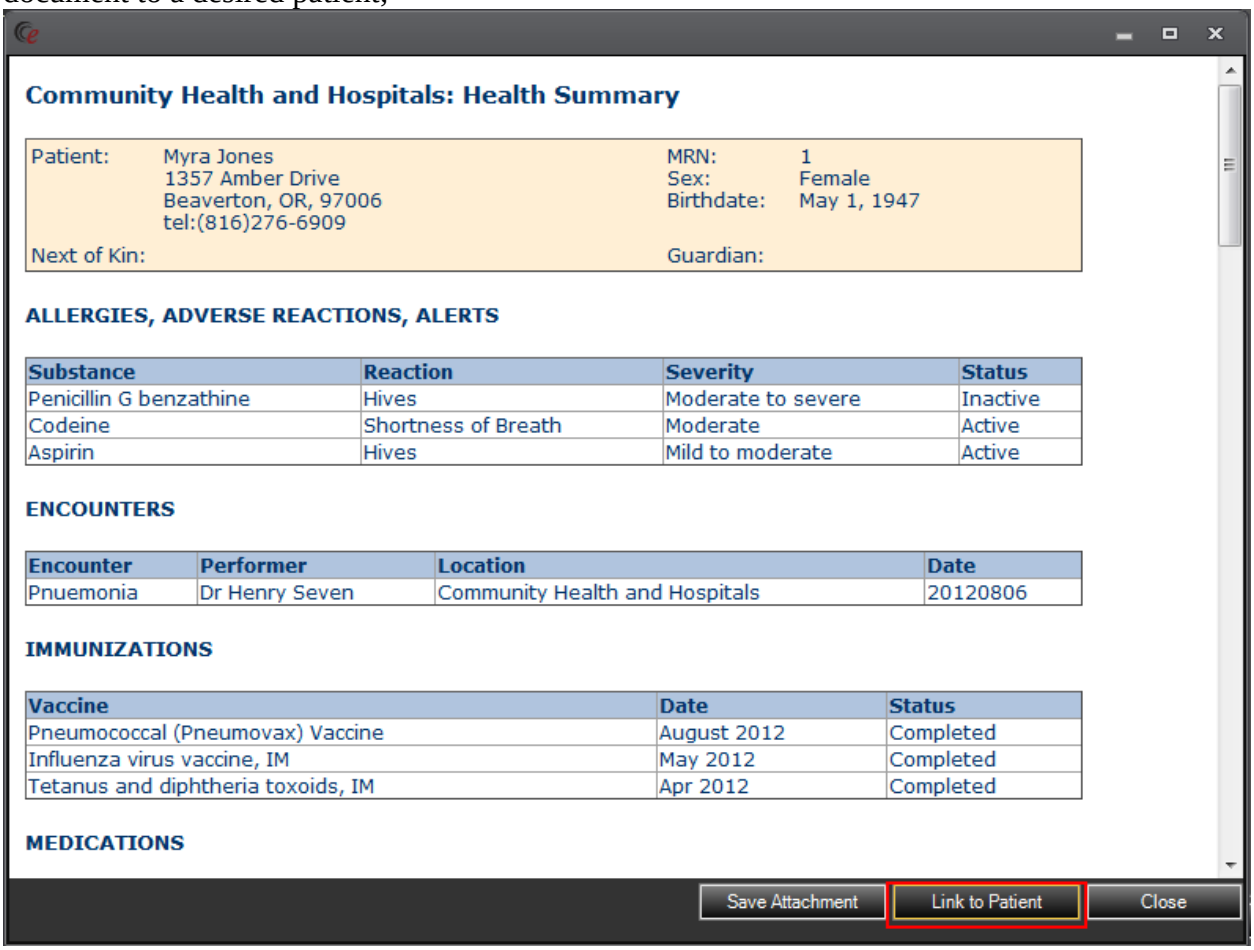

**Figure 5.104 – Viewing CCDA document from link in direct message**

Clicking the link to patient, we will do an initial patient search based on the information we are able to extract from the document, the user is able to modify the search criteria if need be.

Upon selecting a patient, all information from the CCDA document will be merged into the desired patient, and a new patient tab will be added.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

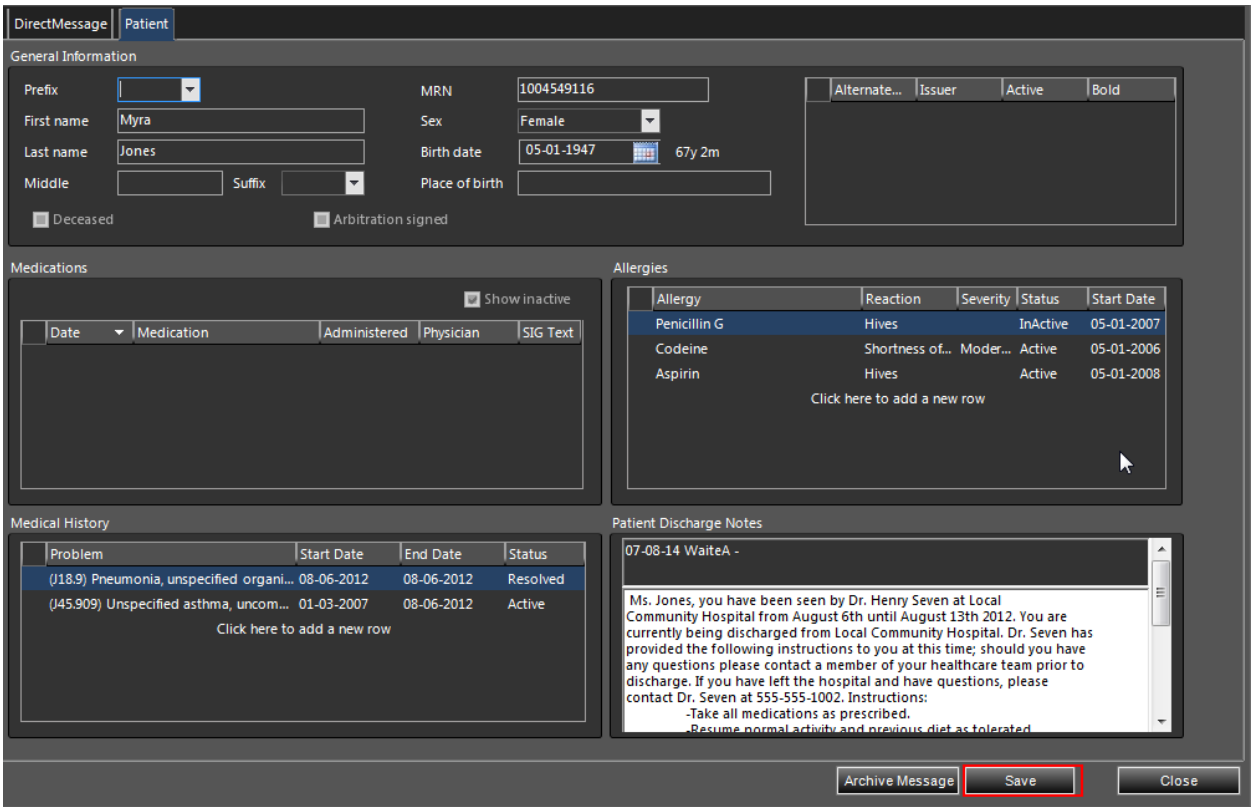

**Figure 5.105 – Patient tab created**

Once all information is imported and confirmed saving will save all imported data. Clicking the archive message is used for once a messages has been completed with, it will remove the message from the direct message inbox WL.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – Additional Options for MU Fields

On the patient tab the field for Race type, Ethic origin and Language now have a value of "Declined to Specify".

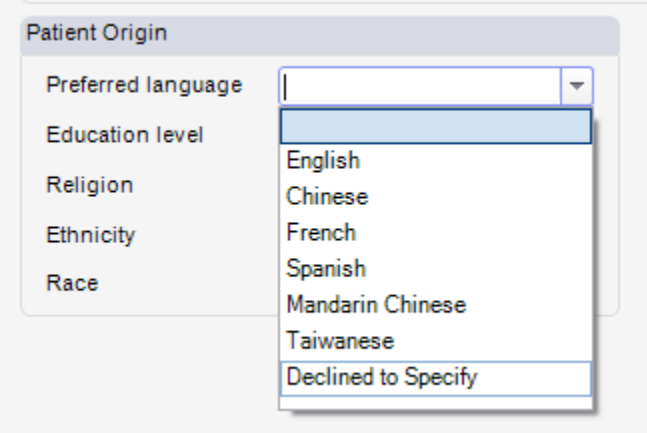

**Figure 5.106 – Declined to specify option**

The Smoking status field on the MU tab also has 2 additional options of Heavy tobacco smoker and Light tobacco smoker.

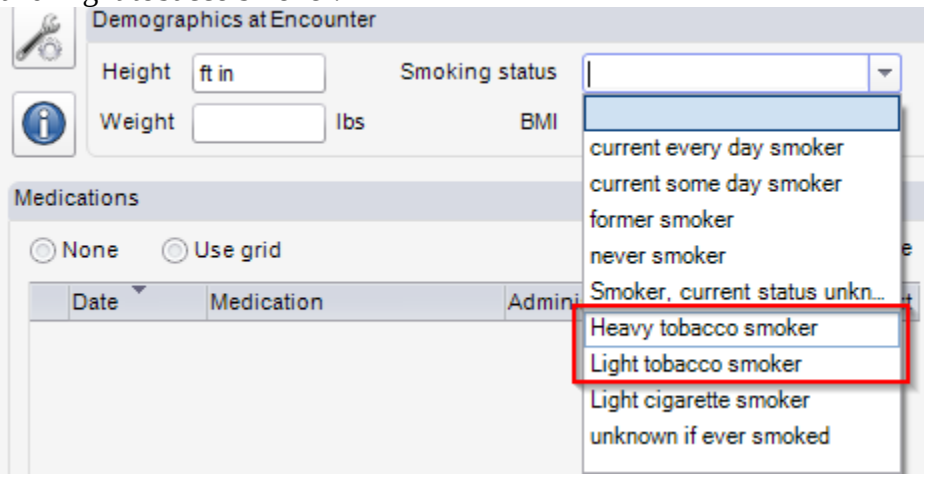

**Figure 5.107 – New smoking status options**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# Meaningful Use – Additional Medications for Quick Add Edit Window

On the MU quick Add/Edit form we modified the code to add the two requested medications (Glycomet and Kombiglzexr).

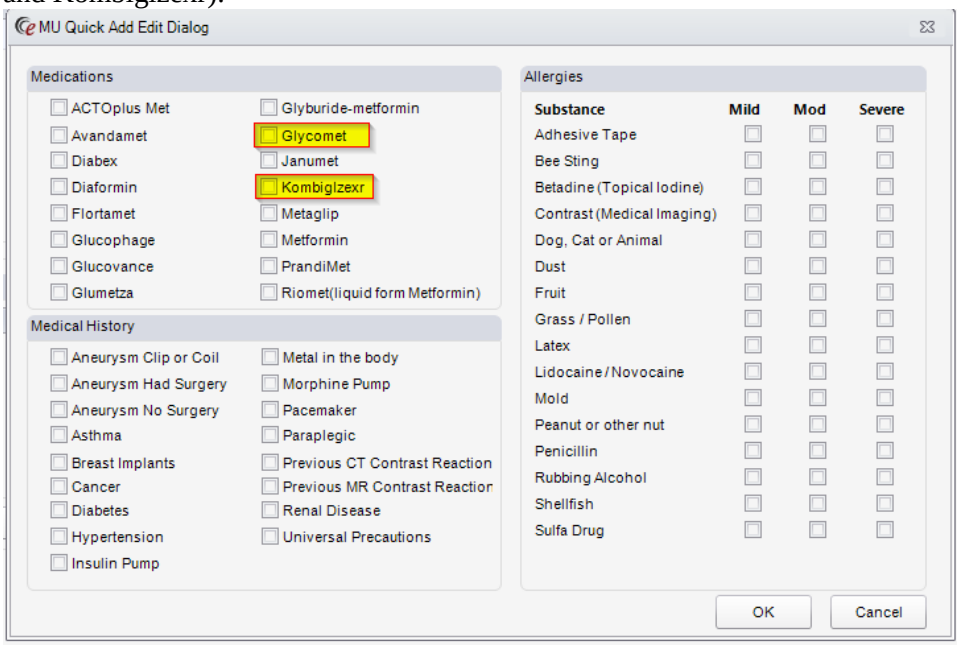

**Figure 5.108 – MU Quick Add Edit window**

Note, in order for these to show enabled on the mu quick add/edit form these two codes will have to be added to the Medication lookup table.

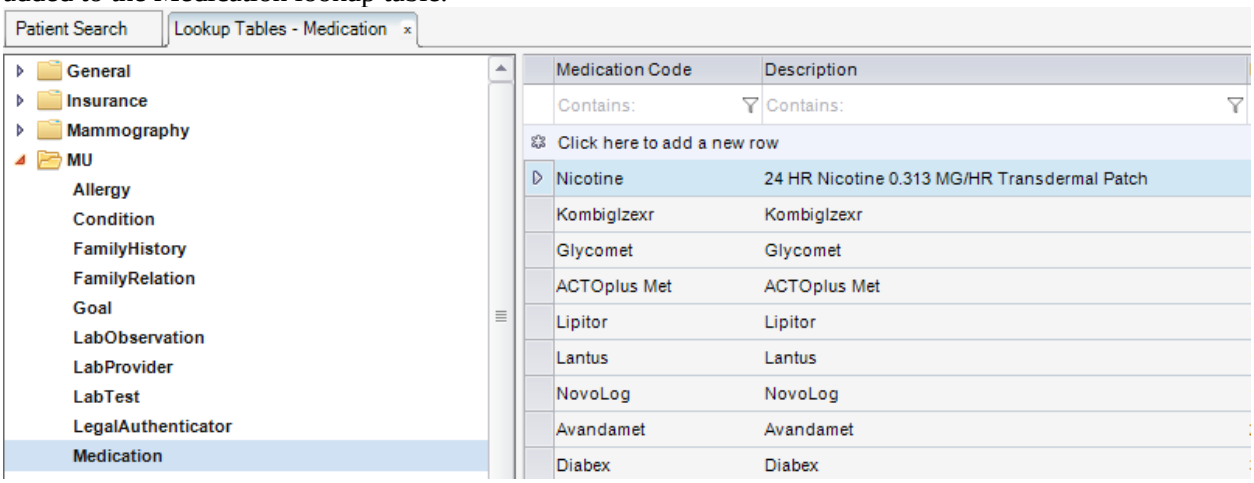

**Figure 5.109 – Medication lookup with new addtions**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – Laboratory Tests and Values / Results

In order to incorporate MU2 laboratory test results we needed to modify the lab value framework and separated the lab order from the lab results. The screen shot below shows the newly designed form. The User has the ability to add lab order information in the top part of the form and the results will be completed in the results grid. A new button was added that allows the user the ability to add child labs to the lab entry.

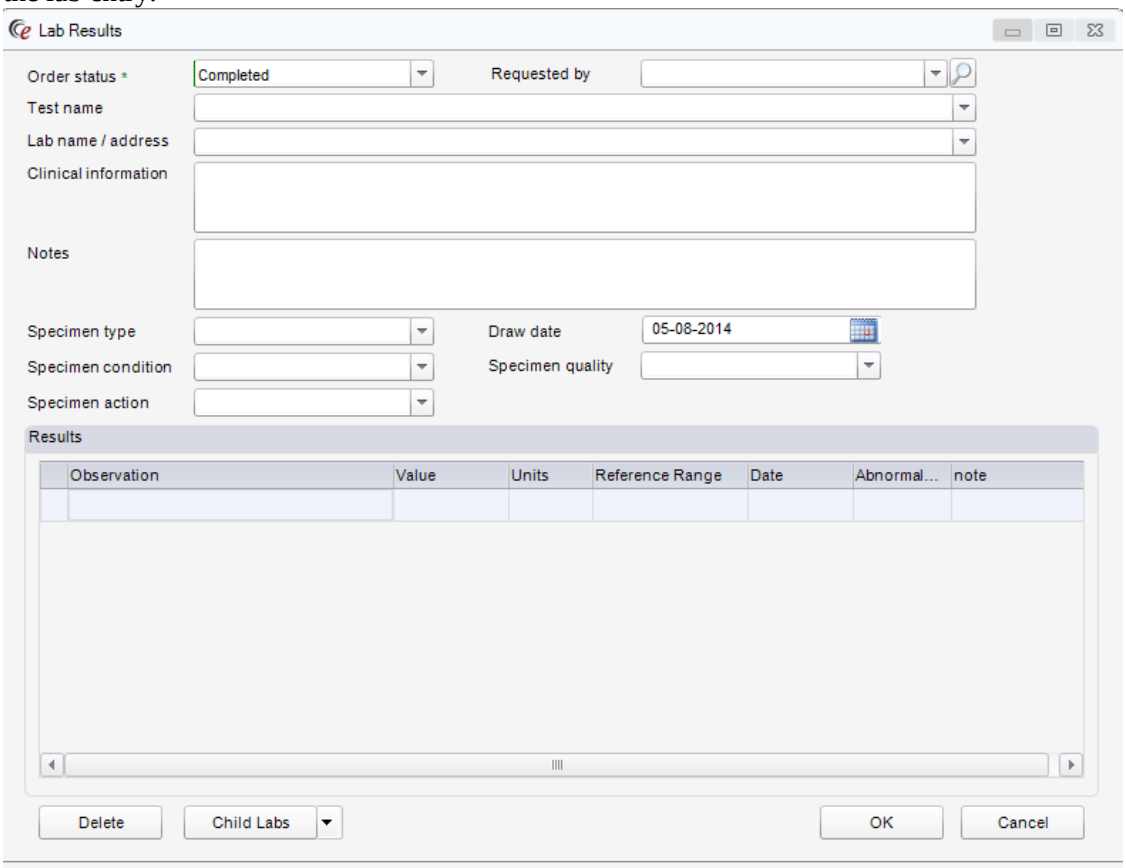

**Figure 5.110 – Lab results window from MU tab**

We created a script (Lab_value_changes.sql) to the build process to migrate over MU values into the new lab framework.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – Office Visit

The Billing Code table has a new column titled MU Office Visit Flag. It will be used by the automated measures management report when applicable to determine if the mu measure is an office visit and calculate the numerator and denominator based on the performed procedure being an office visit. By default the value is set to N.

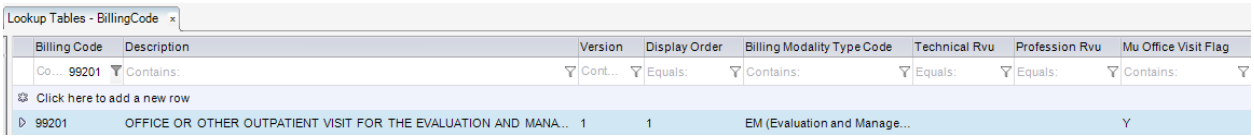

**Figure 5.111 – Billing code table**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – Clinical Summaries

Added to the MU tab is a new section called Clinical Documentation (C-CDA). The button contains 2 new options of "View" which will view all exams for the patient and "View Current Exam" which will only view the current exam. Normally for Clinical Summary we will select "View Current Exam" to generate the CCDA/human readable format since we are mainly concerned about the current visit.

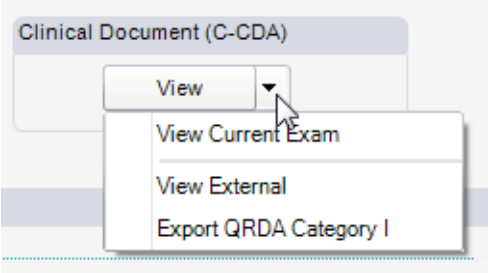

**Figure 5.112 – New options for C-CDA button**

Clicking the View Current Exam will launch a new dialog which will allow the user the ability to customize data. The user will have the option to removed sections for example uncheck Medications will remove medications from both the CCDA and human readable. The user also will have the ability to uncheck specific items they wish not to appear in either the CCDA or human readable format. To generate the CCDA the file format the user will click the Export XML, while the human readable is generated by clicking the Export HTML.

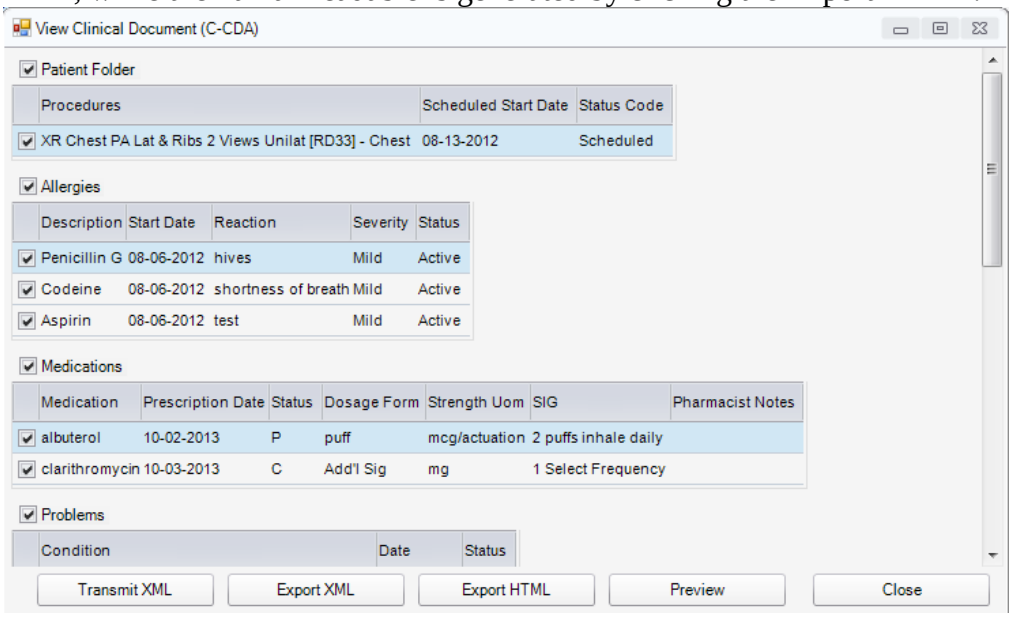

**Figure 5.113 – View Clinical Document (C-CDA)**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – Data Portability

The data portability feature is really the ability to export all CCDA patient records and therefore this story will be referred to as the MUExportAll feature.

When exported the results will be written to the location specified by the system configuration setting **"MUExportAllPath".** This setting doesn't have a default value. When complete the file will be updated with the date it was completed. If an error occurs the error details are captured.

The UI's Meaningful use form under "Administration / Meaningful Use" shows the progress of the current or previous export operation. It shows how many records have been exported and how many in total are to be processed. It also allows the user to start a new export and gives them the option to suspend or resume the latest export.

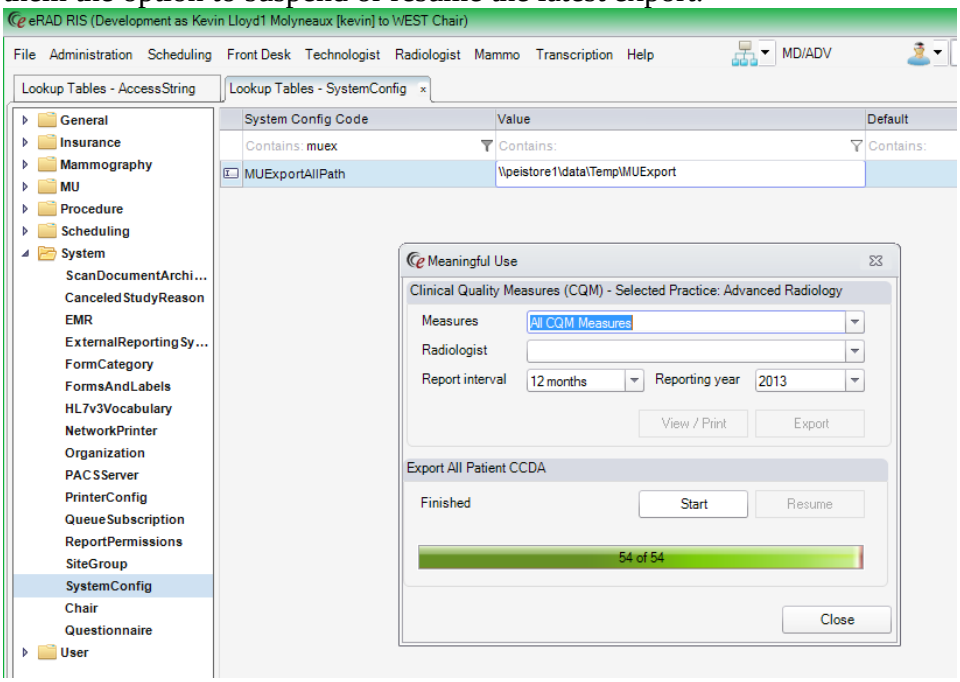

**Figure 5.114 – System config setting and Meaningful Use window display progress**

When clicking the start button the user is asked to confirm the export operations.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

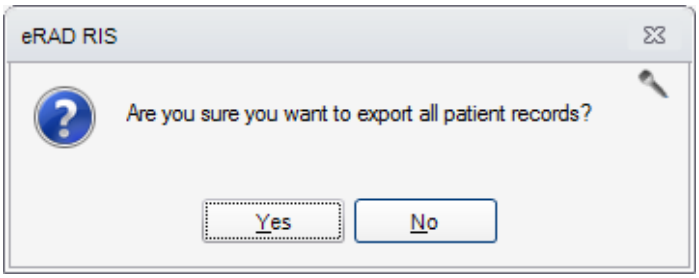

**Figure 5.115 – Confirmatory message**

Choosing Yes will export **all patient** records to the MUExportPath and will overwrite any pre-existing exports at that location. The files are written to the MUExportPath in the format

*Birthyear\birthmonth\birthday\<patient_id>_<issuer_of_id>_<first_name>_<last_name>.xml*

If there is less than 1 GB available at the MUExportPath the status of the export will change to "InsufficientSpace" and after space is made available the user can restart the process by clicking the "Resume" button.

The export progress is completely asynchronous and is executed on the server. There is only one export processing thread per server instances, which on our test instance was exporting about 1 million patients in a week. If you need to process 2 million in a week all you have to do is scale the solution by adding additional WS instances.

Access to this feature is control via the access string **"MU.ExportAll"** with a default of none.

When and export is started, the Start button then becomes the Stop button. If the Stop button is selected the current job will be put in a status of stopped, which in turn will change the stop button to start again. Stopping or suspended the job will terminate the existing export thread (which will take a few seconds to terminate). The count will be refreshed when you decide to Start the export process again which is only available when in stopped state.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

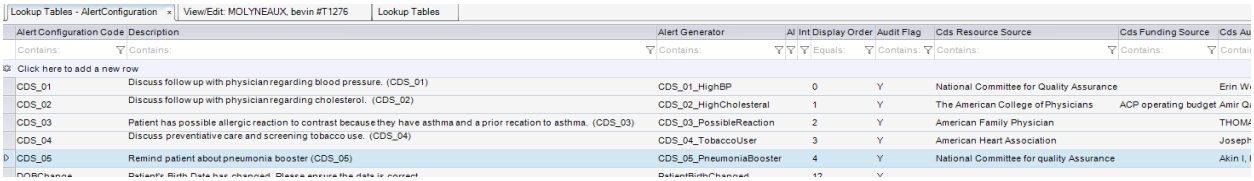
## Meaningful Use – Alerts and Clinical Decision Support

The MU alerts we have provided to meet these MU requirements are as follows:
• MRI65PlusHeartDiseaseLipitorAndLDL100Plus
• **LabOrderWithEmptyValue**
• **HasAllergy** (*allergy_code, contrast_procedure_flag)
• **HasProblem** (*indication_code, contrast_procedure_flag)
• **OnMedication** (*drug_name, contrast_procedure_flag)
• **ProcedureXAndHighBP** (procedure_code, BP) // we will allow * from procedure_code
• **AgeGreaterThan** (age, contrast_procedure_flag)



Lookup Tables - AlertConfiguration | View/Edit: MOLYNEAUX, bevin #T1276 | Lookup Tables

| Alert Configuration Code | Description | Alert Generator | Al | Int Display Order | Audit Flag | Cds Resource Source | Cds Funding Source | Cds Au |
|---|---|---|---|---|---|---|---|---|
| Contains: | Contains: | Contains: | | Equals: | Contains: | Contains: | Contains: | Contai |
| Click here to add a new row | | | | | | | | |
| CDS_01 | Discuss follow up with physician regarding blood pressure. (CDS_01) | CDS_01_HighBP | | 0 | Y | National Committee for Quality Assurance | | Erin W |
| CDS_02 | Discuss follow up with physician regarding cholesterol. (CDS_02) | CDS_02_HighCholesteral | | 1 | Y | The American College of Physicians | ACP operating budget | Amir Q |
| CDS_03 | Patient has possible allergic reaction to contrast because they have asthma and a prior recation to asthma. (CDS_03) | CDS_03_PossibleReaction | | 2 | Y | American Family Physician | | THOM |
| CDS_04 | Discuss preventiative care and screening tobacco use. (CDS_04) | CDS_04_TobaccoUser | | 3 | Y | American Heart Association | | Joseph |
| CDS_05 | Remind patient about pneumonia booster (CDS_05) | CDS_05_PneumoniaBooster | | 4 | Y | National Committee for quality Assurance | | Akin I, |
| DOBChange | Patient's Birth Date has changed. Please ensure the date is correct | PatientBirthChanged | | 12 | Y | | | |

**Figure 5.116 – Alert configuration table**

**contrast_procedure_flag** is either a Y or N value. if Y, then the alert only fires if the procedure requires contrast. * are parameters that can be more than one separated by a comma.
To deal with **Clinical Decision Support** the alert text for several of these entries is customizable via the AlertConfiguration lookup table and supports links to external web sites via the a href syntax such as:

<a href='http://www.med.unc.edu/…'>Heart Disease</a>

With the above, when the user clicks on the "Heart Disease" link, the web page www.med.unc.edu will be displayed in a web browser form. The form will be model and when they close the form they will return to the RIS.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

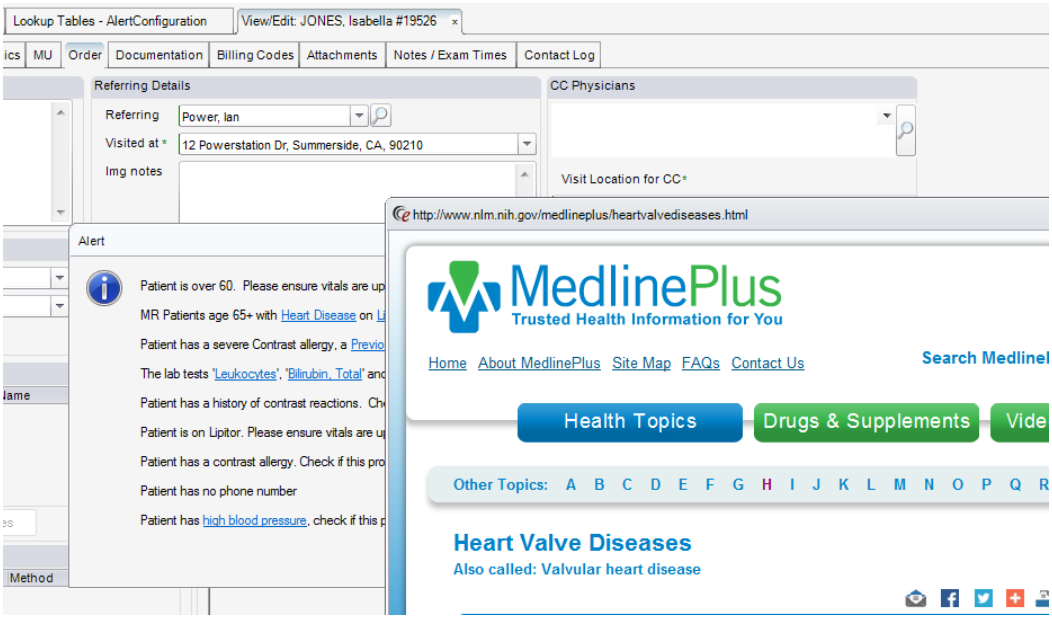

**Figure 5.117 – Clinical decision support**

If the LINK is prefixed with #MUProvidedEducation# and the patient hasn't been provided with CDS information for the current visit, the user will get prompted when they close the web info window with a dialog such as:

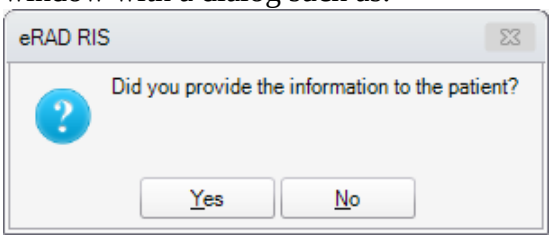

**Figure 5.118 – Confirmatory messge for CDS**

If they choose Yes, it will be marked as "provided educational resources" for the visit.

Here is another example of an alert description, which is set to provide CDS information and record if we provided education resources to the patient:

Patient has <a href='#MUProvidedEducation#https://www.med.unc.edu/im/patients/Resources/high-blood-pressure'>high blood pressure</a>, check if this procedure should be done in an imaging center.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Then in our first round of MU certification testing we realized we needed Clinical Resource Sourced rules for CDS such as the American Family Physician backed rules for our MU alerts. Based on this we produced the following MU rules:

#1 Alert patient to follow up with physician regarding BP

1) Condition that triggers the alert
   - High BP age 18-85
   - Noted hypertension
   - BP is over 140/90
2) The Clinical resource source
   - National Committee for Quality Assurance
3) The funding source
4) The author of the CDS
   - **Erin Weireter,** Released January 17,2012
5) The link to the clinical resource
   - http://www.qualityforum.org/News_And_Resources/Press_Releases/2012/NQF_Endorses_Cardiovascular_Measures.aspx

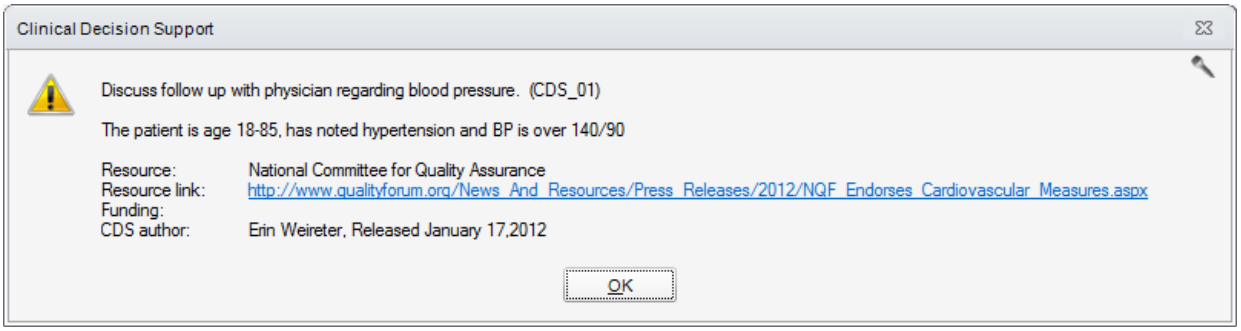

**Figure 5.119 – Alert 1**

#2 Alert patient to follow up with physician regarding cholesterol

1) Conditions that triggers the alert
   - Patient over 65
   - On Lipitor
   - Cholesterol reading over 100
2) The Clinical resource source
   - The American College of Physicians
3) The funding source

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

- Financial support for the Performance Measurement Committee comes exclusively from the ACP operating budget

4) The author of the CDS
   - Amir Qaseem, MD, Robert Centor, MD and Andrew Dunn, MD
5) The link to the clinical resource:

http://www.acponline.org/clinical_information/performance_measurement/ckd.htm

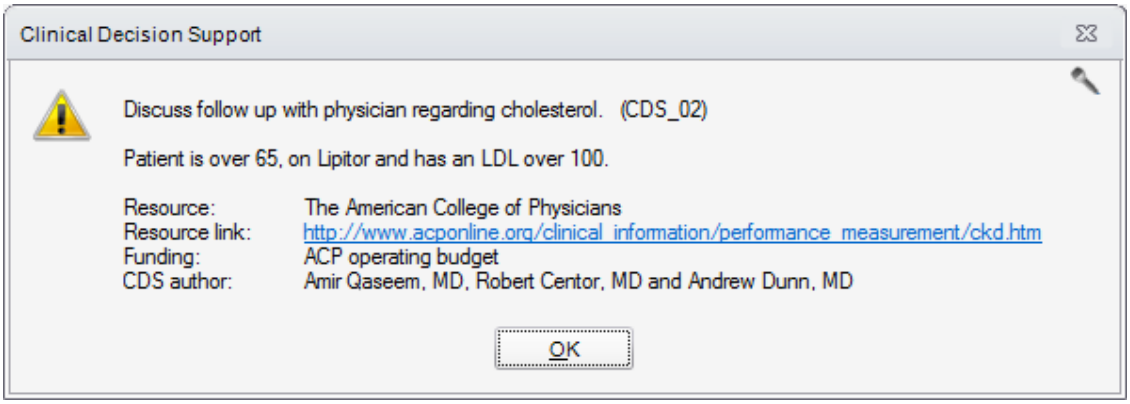

**Figure 5.120 – Alert 2**

#3 Alert patient as to possible allergic reaction to contrast

1) Conditions that triggers the alert
   a. Patient has asthma
   b. Prior reaction to contrast
2) The clinical Resource Source
   a. American Family Physician
3) Financial Source
   a. n/a
4) The author of the CDS
   a. THOMAS G. MADDOX, M.D.,
5) The link to the clinical resource:
   a. http://www.aafp.org/afp/2002/1001/p1229.html

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

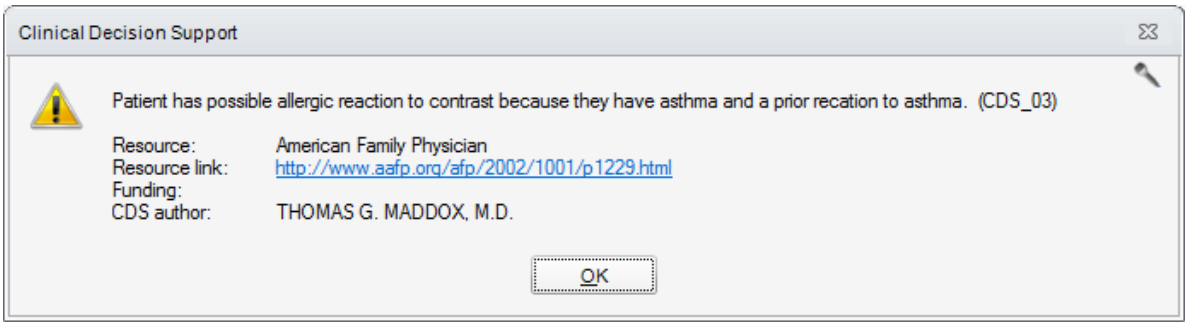

**Figure 5.121 – Alert 3**

#4 Discuss Preventative Care and Screening Tobacco Use

1) Conditions that triggers the alert
    a. Aneurysm /no surgery/smoker
    b. Men over 50 years old higher risk of infection
2) The Clinical Resource Source
    a. American Heart Association
3) Financial Source
    a. n/a
4) The Author of the CDS
    a. Joseph P. Broderick, M.D.,
5) The link to the clinical resource

www.sciencedaily.com/releases/2010/02/100226093207.htm

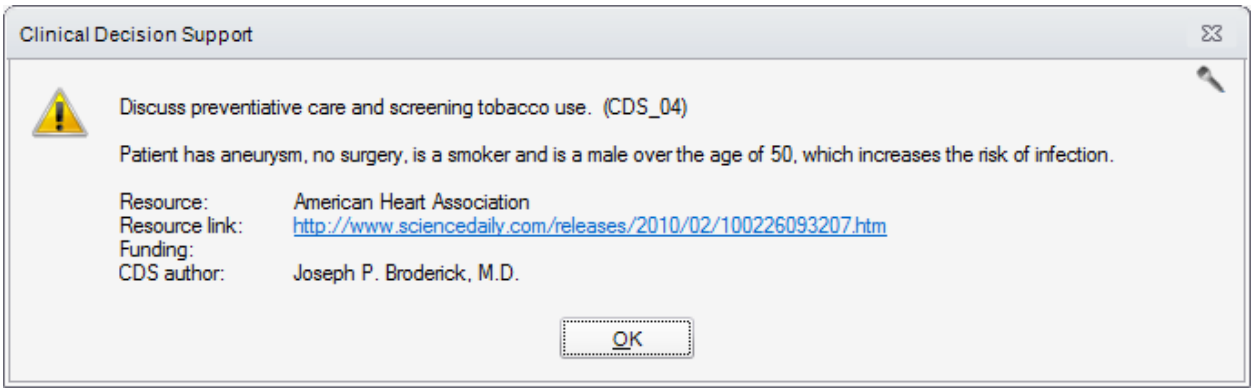

**Figure 5.122 – Alert 4**

#5 Patient Reminder for Pneumonia Booster if Criteria is met

1) Conditions that trigger alert:
    a. Pneumonia Vaccination (PPV23)
    b. Adults 65 and older
    c. Smoke, asthma, heart disease

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

2) The Clinical Resource Source
    a. National Committee for quality Assurance
3) Financial Resource
    a. n/a
4) The author of the CDS
    a. Akin l, Kaya M. Altinel S. & Durand L.
5) The link to the clinical resource
    a. *www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id...*

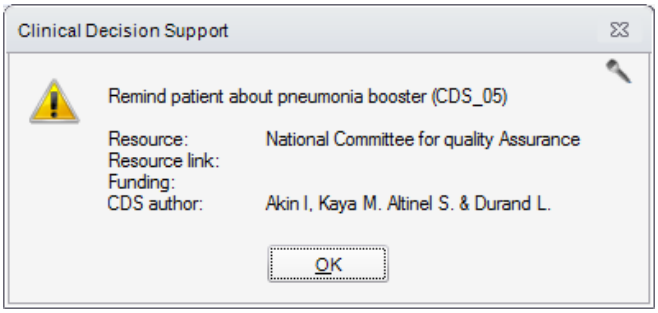

**Figure 5.123 – Alert 5**

**Configuration for new Alerts:**

Alert access strings have been created in the application and can be configured so users whose clinical role allows or does not allow them to see clinical decision support interventions rules. By default the alerts in the system will be set to **Full** access so they will fire for all users. In order to not fire the CDS rule an admin user that has the rights to configure user's rights would have to set the user group to NONE.

Alert #1 is controlled by the access string **"Alert.CDS_01_HighBP"**

Alert #2 is controlled by the access string **"Alert.CDS_02_HighCholesteral"**

Alert #3 is controlled by the access string **"Alert.CDS_03_PossibleReaction"**

Alert #4 is controlled by the access string **"Alert.CDS_04_TobaccoUser"**

Alert #5 is controlled by the access string **"Alert.CDS_05_PneumoniaBooster"**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – Clinical Quality Measures

To resolve this feature we need to use the cypress tool [v2.4.1]. Radnet has selected the following CQMs measures for Meaningful Use stage 2. Documentation to generate QRDA Category I and III use **CDAR2_QRDA_DSTUR2_2012JUL.docx** which can be downloaded from HL7 Implementation website.

**Radnet 9 CQMs measures**

**CMS50** - Closing the referral loop: receipt of specialist report
**CMS65** - Hypertension: Improvement in blood pressure
**CMS69** - Preventive Care and Screening: Body Mass Index Screening and Follow-Up
**CMS117**- Childhood Immunization Status
**CMS125**- Breast Cancer Screening
**CMS138**- Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention
**CMS147**- Preventive Care and Screening: Influenza Immunization
**CMS155**- Weight Assessment and Counseling for Nutrition and Physical Activity for Children and Adolescents
**CMS165**- Controlling High Blood Pressure

1) Clinical Quality Measures – capture and export.
   - Retrieve the patient data from Cypress based on the chosen CQMs
     HTML FILE - G:\Documents\RADNet\rRis Product Requirements\Meaningful Use\2014\CQM\QRDA\Samples\NewFolks
   - Create the QRDA Category I output data for evaluation.

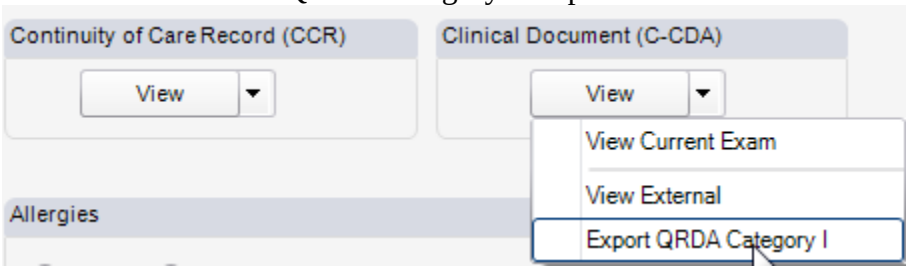

**Figure 5.124 – Capture and export**

User must select the legal authenticator which is used in the QRDA file. (These values are populated from a lookup legal authenticator).

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

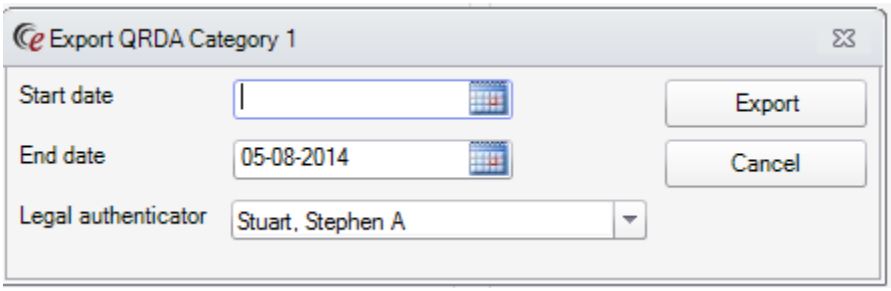

**Figure 5.125 – Export QRDA Category 1**

2) Clinical Quality Measures – Import and calculate
   - Create the patient test deck from Cypress using the specific CQMs selected.
   - Proctor will instruct the Vendor to use the EHR functions to perform the CQM calculations and evaluate them against the expected results.

3) Clinical Quality Measures – electronic submission
   - The CQM calculation results in both QRDA Category I and III format.
   - In order to upload the QRDA Category III results into Cypress for evaluation we added the Quality Reporting Document (QRDA) to the Meaningful Use form for users to generate QRDA Category III results.

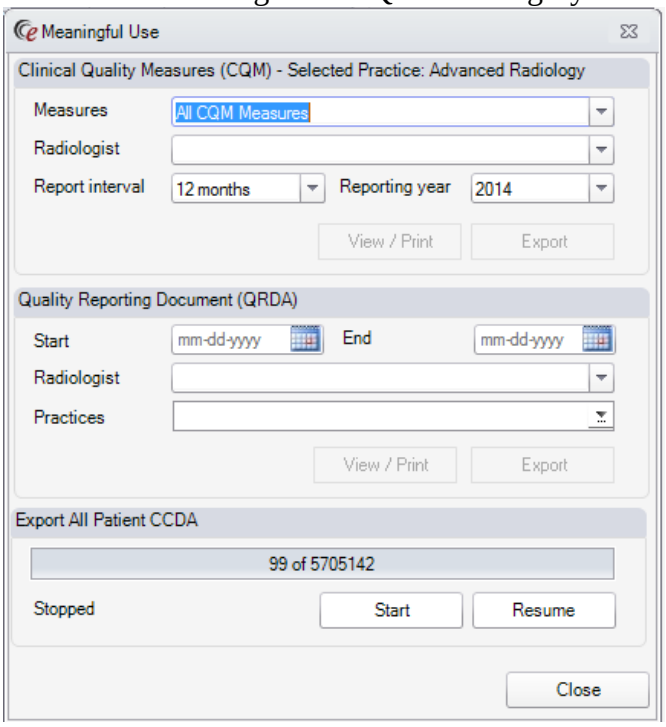

**Figure 5.126 – Meaningful use window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – Preventative Care

A new option has been added to the Contact Method of "Declined" has been added to the ContactMethod lookup table.

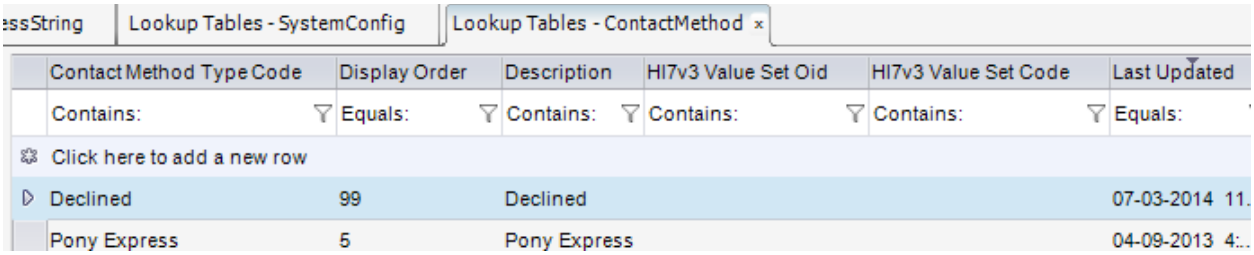

**Figure 5.127 – Declined added to the ContactMethod lookup**

This value will appear in the Preferred Contact Method list box of the Patient tab.

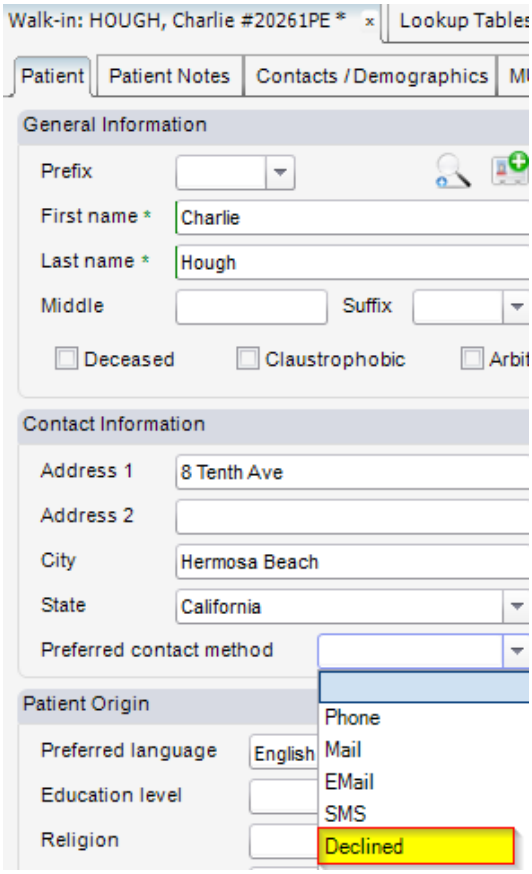

**Figure 5.128 – New preferred contact method**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Also a new system configuration setting of **"CallbackDeclinedValue"** has been added. This value references the item in the ContactMethod lookup that is used to trigger whether the order's last_letter field should be flagged as 'Declined Callback' in the web services. There is no default value set for this config setting.

If contact method is set to decline value, we will set the order's last letter to '*Declined Callback'* and set the order's last letter date to now when a follow-up order is about to be created.

When configuring this setting, users must take a precaution when selecting the value of Declined as the Preferred Contact Method when the System Configuration setting of "CallbackDeclinedValue" is set to Declined or any other value from the ContactMethod lookup.

For example, a patient that has the Preferred Contact Method of Declined and the System Configuration setting has a value of Declined. If this study is a Mammo study in which a follow up letter will be sent, the letter would not appear on the Mammo Letters WL as the contact method of Declined will be filtered out of the work list.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use – Automated Measures Management Report

Automated Measures – A management report that can accurately adjust the reporting period for all the required types and that the numerator and denominator information are accurate and complete for each reporting period and meaningful use stage for a specific Radiologist.

### Automated Measures - Stage 1

**Radiologist: Power MD, Ian**
**Date Range:** 1/1/2014 - 12/31/2014
**Practice(s):** Get Well Clinic
**Description:** This report displays the percertage of patients where the mu requirement was recorded.
*Click ***here*** to get the details.

| Description | Numerator | Denominator | MU measure | Percentage |
|---|---|---|---|---|
| Demographics | 5 | 8 | 50 | 62.50 % |
| Patient reminders | 5 | 14 | 20 | 35.71 % |
| Medication reconciliation | 4 | 8 | 50 | 50.00 % |
| Problem list | 6 | 8 | 80 | 75.00 % |
| Medication list | 7 | 8 | 80 | 87.50 % |
| Allergy list | 6 | 8 | 80 | 75.00 % |
| Vitals and BMI | 4 | 7 | 50 | 57.14 % |
| Vitals and BMI (alt) | 5 | 8 | 50 | 62.50 % |
| Vitals - BP Out of Scope | 6 | 8 | 50 | 75.00 % |
| Vitals - Ht/Wt Out of Scope | 4 | 7 | 50 | 57.14 % |
| Smoking status | 5 | 7 | 50 | 71.43 % |

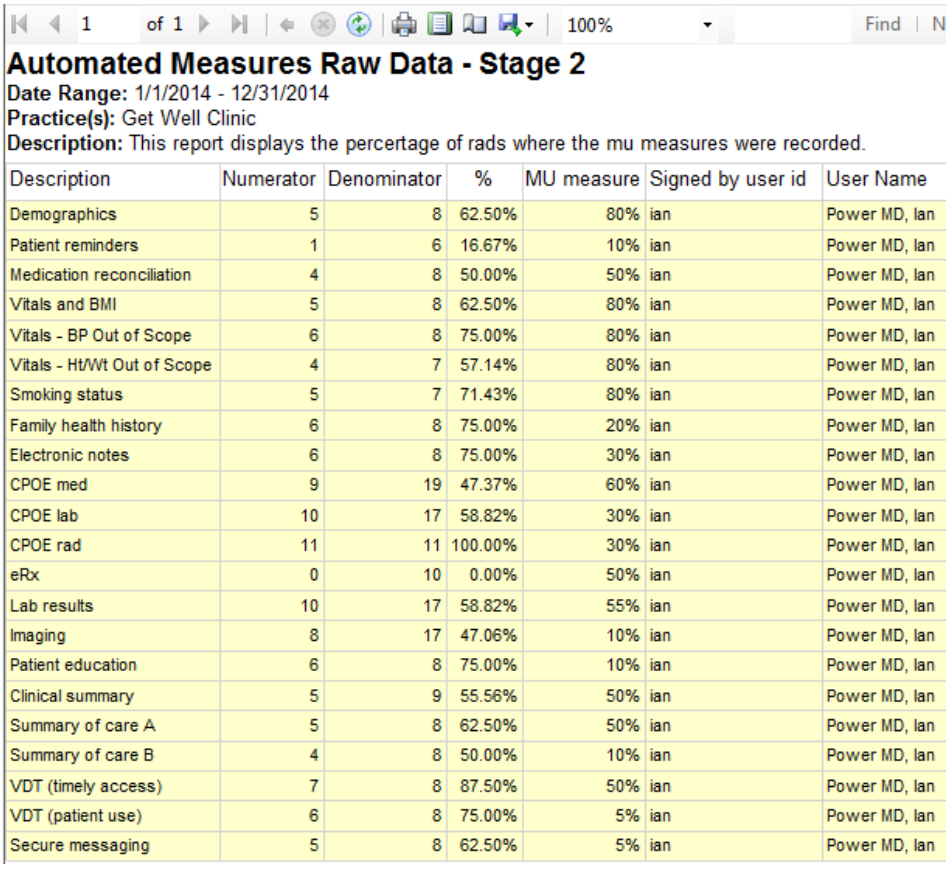
Automated Measures Raw Data - A management report that can accurately adjust the reporting period for all the required types and that the numerator and denominator information are accurate and complete for each reporting period and meaningful use stage for multiple Radiologist. The main purpose of this report will be used to export results to csv or excel so administrators can monitor the progress of individual Radiologist with regards to MU measures.



1 of 1 100% Find | N

**Automated Measures Raw Data - Stage 2**

**Date Range:** 1/1/2014 - 12/31/2014
**Practice(s):** Get Well Clinic
**Description:** This report displays the percertage of rads where the mu measures were recorded.

| Description | Numerator | Denominator | % | MU measure | Signed by user id | User Name |
|---|---|---|---|---|---|---|
| Demographics | 5 | 8 | 62.50% | 80% | ian | Power MD, Ian |
| Patient reminders | 1 | 6 | 16.67% | 10% | ian | Power MD, Ian |
| Medication reconciliation | 4 | 8 | 50.00% | 50% | ian | Power MD, Ian |
| Vitals and BMI | 5 | 8 | 62.50% | 80% | ian | Power MD, Ian |

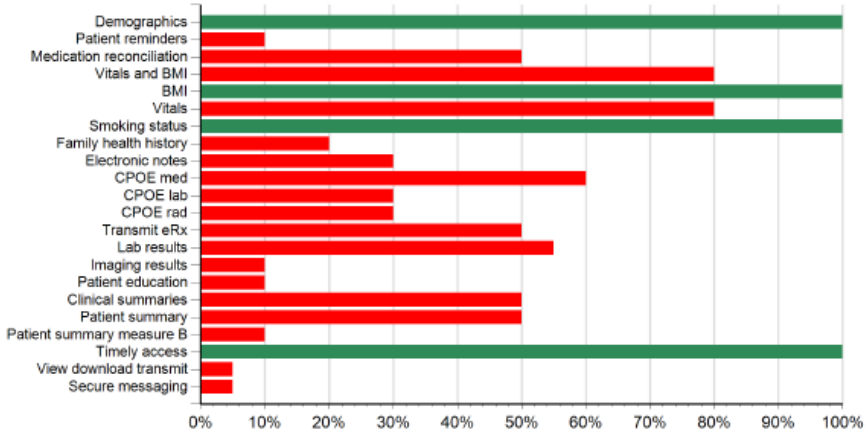
## Meaningful Use – Reports by Radiologist Management Report

Created a new management report that will allow the user to select a specific reporting period as well will allow the user the ability to select either stage 1 or stage 2 MU stats to show for a practice or multiple practices.

**1dd88bbf-d70b-4593-8d11-e6241defb297 Stage 2**
**Radiologist:** County, Mister
**Reporting Period:** Jan-01-2014 - Dec-31-2014



| Meaningful Use Meaure | Numerator | Denominator | % | Goal | Pass/Fail |
|---|---|---|---|---|---|
| Demographics | 2 | 2 | 100.00% | 80% | |

## Meaningful Use – Stage 2 Management Reports

MU 2014 requires that the automated measures report be capable of selecting either stage 1(2011) or stage 2(2014) MU statistics; and be able to select date ranges for 90 continuous days within a calendar year, including 90 day periods that span across more than 3 months (e.g. Beginning May 12th); or be able to select a specific calendar year quarter (first, second, third, fourth); and finally be able to select the entire calendar year.

MU 2014 requires a management report(Patient Lists) that will generate a list of patients that can be selected by date and time and based on each data element including: Problems, Medications, Medication Allergy, Demographics, Lab tests and values/results, and Patient communication preference.

To resolve we archived the following MU 2011 management reports.
• Automated Measures.rdl
• CQM Measures.rdl
• MU Automated Measures Details.rdl
• MU Scorecard.rdl
• Patient Lists.rdl
• Patient Reminder List.rdl

We moved all of these reports to a newly created folder "Archive" under Meaningful use on the reporting server. These reports will be used for auditing purposes for previously submitted attestation reports. To ensure these reports are deployed correctly we modified the script for deploying management reports to include the Archive folder structure and reports.

For MU 2014 we created three new management reports and a new SubReport.

1) **Automated Measures** – A management report that can accurately adjust the reporting period for all the required types and that the numerator and denominator information are accurate and complete for each reporting period and meaningful use stage for a specific Radiologist.
   - Automated Measures Details - we created to help troubleshoot MU measure problems in the field a new report that will be used to display summary details which make up the numerators and denominators found in the Automated Measures Report. This report can be found in the "SubReport" folder.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

2) **Automated Measures Raw Data** - A management report that can accurately adjust the reporting period for all the required types and that the numerator and denominator information are accurate and complete for each reporting period and meaningful use stage for multiple Radiologist. The main purpose of this report will be used to export results to csv or excel so administrators can monitor the progress of individual Radiologist with regards to MU measures.

3) **Patient Lists** - Lists of patients are selected by date and time and based on each data element including: Problems, Medications, Medication Allergy, Demographics, Lab tests and values/results, and Patient communication preference

# 8. Resolved Defects

Bugs Suggested Features and Support Issues resolved in build 2.43. The extract is taken from Redmine bug tracking system and only displays defects resolved in 2.43.

| Bug # | Priority | Subject | Category | Found Version |
|---|---|---|---|---|
| | | | | |
| 6701 | Urgent | When a popup window is open in RIS and user actions a report in PS360, Ris crashes. | Powerscribe Integration | 2.42.1 |
| 6678 | Urgent | PAC IW Out of sync problem | PACS Integration | 2.42.0.9 |
| 6534 | Urgent | original_interpretation_version should be stamped on dictated (currently just on signed reports) | Web Services/DB | 2.42.0.11 |
| 6436 | Urgent | Potential for studies to be orphaned in a way as they won't appear on worklists | Thick Client GUI | 2.42.0 |
| 6255 | Urgent | Slow Mammo Letters WL is impacting DB query times | Worklists | 1.42 |
| 7061 | High | MQSA Outcome Report + and - title values should be reversed | Mgt Reports | 42 |
| 6993 | High | RRR - Orders to Schedule Worklist and Procedure Plans | Thick Client GUI | 42.0.9 |
| 6938 | High | Reporting - insert report template with automacros will remove the technique section | Embedded Reporting | 2.42.1 |
| 6926 | High | paitnet folder for previously unlinked external patient does not get reassociated when the patient is mapped. | EMR | 1.4 |
| 6823 | High | Mulitple scanned images do not get sent to PACS | Thick Client GUI | 42.02 |
| 6774 | High | Callback reminder letters print as diagnostic reports instead of using the proper reminder letter | Document Distribution | 2.42.2 |
| 6700 | High | PS360 integration is opening when it doesn't need to causing unnecessary delays and flicker. | Powerscribe Integration | 2.42.1 |
| 6685 | High | Object reference error when opening transcription screens in read only mode | Radiology Reporting | 2.42.1 |
| 6683 | High | Verbal order is hard-coded to associate to a known scan document type - this should be | Thick Client GUI | 1.4 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| | | configurable | | |
| 6681 | High | bi-rads info not reset when using screen re-use on dictate screen. | Mammography | 2.42.11 |
| 6680 | High | ReportTemplateEditor not being cleaned up when ReportingRadiologist closes | Radiology Reporting | 2.42.09 |
| 6679 | High | referring physician "visited at" drop down list contains only numbers, not human readable addresses | Thick Client GUI | 2.42.0.11 |
| 6517 | High | excessive network traffic generated by transfer of dictations and other data | Web Services/DB | 2.42 |
| 6479 | High | BI-RADS 0 and BI-RADS 4/5 stored procedure causes issues with an implicit conversion of birad_code to an integer | DB | 2.42 |
| 6463 | High | Reschedule - Can reschedule studies in exam done status and outside reads | Scheduling | 2.42.0.11 |
| 6462 | High | Order level IVT - billing codes inactive on reschedule save as order | IVT / Precert | 1.41.1 |
| 6447 | High | _max_interpretation_version does not update when an addendum is deleted | Radiology Reporting | 2.42 |
| 6432 | High | Tech screen - procedures list is not alphabetical | Technologist | 1.42 |
| 6189 | High | Hidden text in editor counts as text when validating fields and section. | Radiology Reporting | 1.4 |
| 6106 | High | error opening merge suggestions due to patient search results | Web Services/DB | 1.41 |
| 5963 | High | MU - Medical History grid, cannot delete a row | Thick Client GUI | 1.42 |
| 5950 | High | MU - CCDA preview - the Allergies (Medications) section is messed up. | Thick Client GUI | 1.42 |
| 5847 | High | Dark mode - BMI on MU tab is white on white and unreadable | Thick Client GUI | 1.42 |
| 5800 | High | parameter is not valid and/or out of memory error while viewing thumbnails | Thick Client GUI | 1.42 |
| 5787 | High | RadNet - Western Operations - Breast Density dropdown order not consistent with the config table settings | Thick Client GUI | 41.1 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 5783 | High | Dark mode login box impossible to see | PACS Integration | 1.42 |
| 5732 | High | issues with sorting exam search results when max row count is reached | Thick Client GUI | 1.42 |
| 5720 | High | referring practice address patern has many issues when migrating referring legacy data. | Thick Client GUI | 1.4 |
| 5711 | High | Using two procedures at scheduling, and patient is claustro - it is showing an option for a closed modality when it should not | | 1.42 |
| 5664 | High | When dictating, losing your lock, and save failed with screen recovered, you won't be able to save | Radiology Reporting | 1.42 |
| 5513 | High | index outside the bounds of the array when saving scan documents | Thick Client GUI | 1.41.002.1 |
| 5496 | High | Scanning - Document Viewer Quick Key Issue | | 1.41 |
| 5459 | High | right click change status to cancel does not refresh worklist afterwards | Thick Client GUI | 1.42 |
| 5447 | High | Reporting - RIS allows the addendum workflow on Legacy PDF reports. | | 1.41 |
| 5420 | High | some messageboxes improperly sized | Thick Client GUI | 1.42 |
| 5406 | High | concurrency violation on save of UserPrefs can crash RIS | Thick Client GUI | 1.42 |
| 5393 | High | confirmation screen does not save scan documents | Thick Client GUI | 1.42 |
| 5335 | High | If a study is in a closed room, it should not appear on the confirmation WL | Thick Client GUI | 1.41 |
| 5291 | High | Operational Management Report - Payments Details | Mgt Reports | 1.4 |
| 5289 | High | Operational Management Report - Performed Procedures Count | Mgt Reports | 1.4 |
| 5287 | High | Operational Management Report - Front Desk Activity | Mgt Reports | 1.4 |
| 5258 | High | Multi-type ahead: control is too tall | | 1.42 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 5257 | High | Multi-type ahead: Dropdown button should have a ... in the icon | | 1.42 |
| 5234 | High | Outside Read screen will not open | | 1.4 |
| 5232 | High | For Truxtun DataMigration only, we need a tool to extract diagnostic report from the Intergy DB | DB | 1.41 |
| 5230 | High | Need to enhance our ImportLegacy utility to include diagnostic reports formated as MS-Word and WordPerfect | DB | 1.41 |
| 5192 | High | Outside Read - requires "Reason for Exam" field to be completed in view edit window` | Thick Client GUI | 1.41.003 |
| 4980 | High | Unknown CC flag never re-set if CC referring is removed from the order. (RRR) | | 40.17 |
| 4936 | High | Default lock workstation value should be 60 minutes. | Thick Client GUI | 1.41 |
| 4928 | High | Darkmode misses | | 1.41 |
| 4843 | High | RRR - Scheduling/Front Desk - Verbal Offer - child row has multiple parents | Thick Client GUI | 1.4 |
| 4840 | High | IVT - PreCert Status Update - PreCert Field Changing | Thick Client GUI | 1.4 |
| 4838 | High | RIS Admin - HL7 | HL7 | 1.4 |
| 4836 | High | IVT - IVT Worklist - Error retrieving the IVT worklist | Thick Client GUI | 1.4 |
| 4830 | High | Carrier search error if carrier name is not found | Thick Client GUI | 1.42 |
| 4755 | High | HL7 ReportSigned could produce duplicate addendum | HL7 | 1.41.001 |
| 4742 | High | scan document documents are saved in the db as null | Thick Client GUI | 1.4 |
| 4658 | High | Scheduling --> modality restriction = no warning | Thick Client GUI | 40.17 |
| 4620 | High | Referring without a first name, erroring when multiple orders are available for patient in reception worklist. | Thick Client GUI | 1.1.3.41.19052 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 4598 | High | RRR - Prep Instructions - when prep instructions exceed maximum visible space, scroll bars do not appear as they should, and user cannot read the bottom of the page of instructions. | Thick Client GUI | 40.18127 |
| 4593 | High | WPR - Send To button causes error | Thick Client GUI | 1.42 |
| 4576 | High | Personnel - Internal person notes | Admin Tools | 1.41 |
| 4548 | High | CTRM - Notes field isn't read only | Thick Client GUI | 1.41 |
| 4464 | High | RRR - IVT - when user adds "-01" to the end of the policy number for a patient, upon saving the change to the policy, the billing code exam information disappears. | Thick Client GUI | 40.18127 |
| 4450 | High | Auto-open worklist won't open if you cancel the chair selection prompt | | 1.41 |
| 4412 | High | WL Filter filtering out all rows when no filter value is specified | Thick Client GUI | 1.4 |
| 4356 | High | Critical Result - CTRN - Unknown referrers added in critical result window display as invalid | Thick Client GUI | 1.41 |
| 4349 | High | Worklist filters ending with a pipe "\|" symbol causes error | Thick Client GUI | 1.40.015 |
| 4284 | High | Mammo - generated followup order not setting default patient type | Thick Client GUI | 40.15 |
| 4278 | High | RRR - Responsible party - "Same As Patient" flag not recognized, and orders are hitting the BEWL that should not be there. | Thick Client GUI | 40.16 |
| 4241 | High | Printer Config - Display Order should have a default | Thick Client GUI | 1.4 |
| 4095 | High | Selected report pane showing "Legacy Report' that doesn't work | Thick Client GUI | 40.14 |
| 4035 | High | RIS Client --> Login Failed | Thick Client GUI | 40.12 |
| 3904 | High | removing alternate MRN does not remove all references | Web Services/DB | 1.4 |
| 3877 | High | Walk In - Object Reference Error | Thick Client GUI | 40.1 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 3852 | High | IVT : ?The ?IV required? flag on the worklist said IV was not required, but when I opened it, it says Verification is required? (it was correctly on the worklist as pre-cert was required however) | Thick Client GUI | 1.40.008 |
| 3847 | High | ConfigFile upload everytime a screen is closed. | Thick Client GUI | 1.4 |
| 3798 | High | Worklist refreshes at different scroll positions (Fisher site visit) | Thick Client GUI | 40.006 |
| 3749 | High | RadNet - ADV Call Centre - can not type in order notes field. | Thick Client GUI | 1.40.006 |
| 3738 | High | Perform exam - perform exam completed time is not be saved if Exam Times tab is accessed | Thick Client GUI | 1.40.008 |
| 3688 | High | wsnocertificate Endpoint does not require authentication | Web Services/DB | 1.4 |
| 3661 | High | Availability template lookup table usability | Admin Tools | 1.4 |
| 3644 | High | Removing procedure then procedure row at arriving throws exception | Thick Client GUI | 1.40.006 |
| 3431 | High | RRR - When you choose 'Self' from responsible party dropdown, then update the patient's address information, you have to uncheck then recheck the 'Same as Patient' check box to get the information to update | | 39.1 |
| 3375 | High | RRR Image Request WL - When status is 'Hold Code Completed' and user presses 'Edit' RIS is throwing an error | | 39.1 |
| 2999 | High | When report is viewed from the Billing Exceptions Work List, via Edit Billing it is showing an Addendum line, even though no addendum exists for the exam | Thick Client GUI | 38 |
| 2982 | High | inactive CPT codes are showing up when you check 'Show Previous Pre-cert CPT codes' option. | | 38 |
| 2230 | High | Cannot create Alternate MRN when creating new patient | Thick Client GUI | 1.2.38.14486 |
| 2142 | High | Reschedule permission does not make 'reschedule' appear in context menu | | 1.38 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 1225 | High | Scheduling - Image Request WL --> Edit Image request ( new patient icon) | Thick Client GUI | 1.36 |
| 6986 | Normal | Reporting - going from a non BIRADS enabled study to a BIRADS enabled study will throw an exception | Radiology Reporting | 2.42.1 |
| 6939 | Normal | Reporting - create template from when the current template has automacros will raise an exception | Embedded Reporting | 2.42.1 |
| 6924 | Normal | scheduling using external MRN ( does not consistently display alternate MRN in grid) | EMR | 42.1 |
| 6923 | Normal | Appointment book cannot be accessed if user doensn't have scheduling group assigned. | Appointment book | 2.42.1 |
| 6922 | Normal | There is no way to register individual studies at different sites that are on one order. | | 2.42.2 |
| 6846 | Normal | When tentative sign is disabled through access string, user preference is half visible | Radiology Reporting | 2.42.0.9 |
| 6839 | Normal | Mgmt Report - IVT Canceled (deprecated report) | Mgt Reports | 2.42 |
| 6806 | Normal | A user/person can be cloned even if they have an address with no cc delivery preference. | Administration | 2.42.0 |
| 6773 | Normal | Using PS360: An exam is assigned to a resident and that resident assign a supervising rad, once the exam in in transcribed status, it is not in the supervising rad's Pending Signature WL | Powerscribe Integration | 2.42.1.2 |
| 6751 | Normal | Error on multi procedure schedule after one study is removed | Scheduling | 2.42.1.2 |
| 6735 | Normal | Management Report Deployment - Radnet specific reports deploying to eRAD | Mgt Reports | 2.42 |
| 6711 | Normal | Clicking the close or skip button on the eRAD RIS window doesn't save the values in Assigned to window | Powerscribe Integration | 42.1.1 |
| 6689 | Normal | RadNet - Monthly Variance Raw Data reports needs to be modified to use cpt_Radnet_counts as well add referring practice functionality | Mgt Reports | 2.42 |
| 6688 | Normal | Error: "Deleted row information cannot be accessed through the row" when updating | Thick Client GUI | 2.42.09 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| | | insurances | | |
| 6686 | Normal | Scanner - users are having to re-scan documents | | 1.42 |
| 6682 | Normal | Reporting - screen reuse and pending save items may hang around on the worklist | Radiology Reporting | 2.42.0.11 |
| 6675 | Normal | PACS Caching - The RIS is failing to clear out the cache field properly when it is to no longer be cached. | PACS Integration | 2.42.0 |
| 6611 | Normal | Mgmt Report - Marketing numbers skewed when c_study_item_certification.units is null | Mgt Reports | 2.42.0.11 |
| 6582 | Normal | Unable to create unknown referring | Scheduling | 42.1 |
| 6547 | Normal | Document distribution does not recover InProgress jobs that do not have a job id when it starts up | Document Distribution | 0 |
| 6546 | Normal | Fax Console Outbox grows too large over time and slows faxing down significantly | Document Distribution | 0 |
| 6545 | Normal | Reporting - Access string PowerScribe360.AllowAutofeed doesn't control user preference | Powerscribe Integration | 2.42.1 |
| 6531 | Normal | PACS images are loaded even if reporting window ultimately does not open. | PACS Integration | 2.42 |
| 6526 | Normal | CD Import - Duplicate MRNs resulting in missing images after the import | Patient Search | 1.42 |
| 6525 | Normal | CD Import - null exception opening a CD, which has a empty patient record | PACS Integration | 1.42 |
| 6516 | Normal | c_frm_core_view - cleanup the view | Web Services/DB | 2.42 |
| 6473 | Normal | Print Forms dialog does not appear when checking-in/arriving patients after removing insurance policy | Thick Client GUI | 2.42.09 |
| 6464 | Normal | MU Clinical Summary Form Needs modified to look at the new c_patient_problem_list2 and the new l_indication tables for handling MU problems(medical history). | Meaningful Use | 42 |
| 6452 | Normal | service throttling is not sufficient for large implementations | Web Services/DB | 2.42 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 6331 | Normal | detailed chair selector does not display - print an error message indicating dataset is incorrect. | DB | 2.42 |
| 6330 | Normal | Re-deployment of reports loses folder specific permission | Mgt Reports | 2.42 |
| 6296 | Normal | CD Import - Everything is sent but study can't be found in PACS. | PACS Integration | 1.42 |
| 6268 | Normal | PACS Server lookup the URL can have new line characters which will cause CD Imports to fail | PACS Integration | 1.42 |
| 6251 | Normal | RIS service "Server" garbage collection | Web Services/DB | 1.42 |
| 6242 | Normal | RIS Service Installation document is out of date | Documentation | 42.0.6 |
| 6239 | Normal | RADNET - MU - Problem list - problem with no start date can be added again via Meaningful Use Quick Add Edit window | Thick Client GUI | 2.42.0.6 |
| 6233 | Normal | RADNET - Reporting - Pregnant field displayed in Exam Details for all patients | Radiology Reporting | 2.42.0.6 |
| 6194 | Normal | Report history and dark mode have some visual issues | Radiology Reporting | 1.42 |
| 6187 | Normal | CDS Service  does not start in  x64 mode | Documentation | 42.003 |
| 6185 | Normal | RRR - Error when creating outside reads | Thick Client GUI | 42.02 |
| 6126 | Normal | Scheduling - Calendar view does not display business hours or device availability template | Thick Client GUI | 2.42 |
| 6115 | Normal | Vague descriptions on Referral reports | Mgt Reports | 1.41 |
| 6113 | Normal | Referring Physician Volumes - missing description | Mgt Reports | 1.41 |
| 6109 | Normal | Language, Race and Ethnicity not in the core view for forms | Mgt Reports | 1.42 |
| 6107 | Normal | MU changed Provided Cinical Summaries to Offered Clinical Summary to patient | Meaningful Use | 2.42 |
| 6091 | Normal | Management reports - IVT Turnaround - Total turnaround time is incorrect | Mgt Reports | 2.42 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 6087 | Normal | Management reports - IVT management reports looking for Approved, but status is now Verified | Mgt Reports | 42.0.1 |
| 6080 | Normal | CD Import via patient folder can match with the wrong patient. | Thick Client GUI | 1.42 |
| 6077 | Normal | Relevance Override does not allow assignment of inactive procedures | | 1.42 |
| 6064 | Normal | Scheduling - Procedure Plans Error | Thick Client GUI | 42.0.0.21577 |
| 6052 | Normal | RadNet - Patient Folder - column missing | Thick Client GUI | 1.42 |
| 6051 | Normal | RadNet - Schedule Existing Order - uncheck not working | Thick Client GUI | 1.42 |
| 6015 | Normal | create a function to coalesce site and practice logo | Web Services/DB | 1.42 |
| 6003 | Normal | Management Reports - Automatic Measures - Missing Parameter | Mgt Reports | 2.42.0.0.21410 |
| 5988 | Normal | re-selecting and blanking out the Referring combo box | | 42 |
| 5984 | Normal | Deleted row error saving attachments | | 1.42 |
| 5982 | Normal | Negative values in Dictated to Drafted on the RTAT portion of the Transcription Dashboards. | Mgt Reports | 1.41 |
| 5944 | Normal | Cloning a person "may" impact orginal person being cloned | Thick Client GUI | 1.41 |
| 5861 | Normal | unhandled exception logging in as a rad but without permission to some WL. | Thick Client GUI | 1.42 |
| 5843 | Normal | MU - When editing the date in Lab results get error. | Thick Client GUI | 1.42 |
| 5837 | Normal | Reporting - Open study in dictate window and get C++ Exception | Radiology Reporting | 2.42 |
| 5814 | Normal | If lab test code matching systemconfig's CPOELabTestCode value doesn't exist for procedure who's CPOE Pathology flag is set, misleading exception occurs | Thin Client GUI | 1.42 |
| 5735 | Normal | The query to get radilogist and transcriptionist statistics in taking over 5 | DB | 1.4 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| | | second on SE | | |
| 5603 | Normal | recent activity message list shows Assign To as Dictated | Radiology Reporting | 1.42 |
| 5495 | Normal | Scanning - "Scanner is not responding" can lock up RIS for about 1 minute | | 1.41 |
| 5450 | Normal | RRR - Confirmed Appointments Report Customization | Mgt Reports | 2.41 |
| 5422 | Normal | Scheduling - Assign to Rad is first name, last name | Thick Client GUI | 1.41.002 |
| 5252 | Normal | Reporting - Verify edits context menu option from All Edits Pending QA opens Create Edit report window | Radiology Reporting | 1.41 |
| 5156 | Normal | can't update performed modality (RRR) | Thin Client GUI | 40.17 |
| 4950 | Normal | Race type code | DB | 1.41.002 |
| 4555 | Normal | When opening a study in read only, user should get a prompt | Radiology Reporting | 1.41 |
| 4326 | Normal | Reporting - Multiple Pending Signature notifications raised | Radiology Reporting | 1.41 |
| 4308 | Normal | Patient Folder - Selected Summary not resizing properly when dragging the pane | Radiology Reporting | 1.41 |
| 4116 | Normal | Error on Sign Next or Submit Next in the field | Thick Client GUI | 1.3.40.18063 |
| 3878 | Normal | GUI - procedure code lookup ( laterality dropdown display) | Thick Client GUI | 40.1 |
| 3814 | Normal | Already Transcribed prompt when in signing workflow (Fisher site visit) | Thick Client GUI | 40.006 |
| 3639 | Normal | Reporting - Index out of range | | 1.4 |
| 3521 | Normal | MU - Calculating MU statistics of Void Exams | Meaningful Use | 1.4 |
| 3273 | Normal | Patient Folder Worklist - Default filter applied results in side scrolled WL on open | Radiology Reporting | 1.4 |
| 3099 | Normal | Documentation window - futuristic menstrual periods.... | Thick Client GUI | 1.4 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 2759 | Normal | Distribution WL - Message box should display in the center of the screen | Thick Client GUI | 1.39 |
| 2635 | Normal | Unchecking No Longer Menstruating doesnt enable pregnancy fields | Thick Client GUI | 1.39 |
| 665 | Normal | fk error when adding new order | Thick Client GUI | 1.25 |
| 357 | Normal | Lookup table filters with dropdown datatype don't work | | 1.13 |
| 6940 | Low | Reporting - apply style formatting to automacro inserted text will break create template from | Embedded Reporting | 2.42.1 |
| 4733 | Low | Spelling mistake in details message (Cannot "adden" an interpretation when previous interpretation is not signed off. ) | Thick Client GUI | 1.41 |
| 3991 | Low | Reporting - Exam Details and Summary panes - Text can be entered in notes' fields, but does not save. | Thick Client GUI | 1.40.013 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 9. Known Limitations

The following are Bugs Suggested Features and Support Issues found in build 2.43. Bugs reported in previous versions are not captured as Known Limitation in this document.

| # | Status | Priority | Subject |
|---|---|---|---|
| | | | |
| 7065 | New | High | ICD button is overlaid by the stat button in minimized dictation mode |
| 7195 | New | High | System config setting RadMustProvideIcdCode doesn't force rad to enter ICD code |
| 7196 | New | Normal | When registering a patient with multiple procedures,and then deselecting the procedure checkbox, an error is produced |
| 7186 | New | Normal | Transportation req'd validation issue |
| 7160 | New | Normal | IVT - Issue with "Parent Procedure" on billing code grid |
| 7153 | New | Normal | ICD Codes - Issue removing codes |
| 7086 | New | Normal | Internal Person search doesn't have default field |
| 7029 | New | Normal | AccessionXMLDrop button showing up all the time if configured, regardless of reporting mode |
| 6991 | New | Normal | Reporting - Exam details data pane can open with scroll bar hidden and window can be resized to have scroll bar hidden |
| 6989 | New | Normal | Secure Messaging - Able to send an empty message |
| 6863 | New | Normal | Inconsistent grid behaviour with new ICD functionality. |
| 6840 | New | Normal | Holiday Lookup missing practice code required field check |
| 6807 | In Progress | Normal | Create template causes Object Reference Not set error |
| 6793 | New | Normal | distribution wl - Activity log column is crowded |
| 6790 | New | Normal | Personel Merge - reject takes user to a blank page |
| 6785 | New | Normal | Administration - Patient search window on patient merge, 'New Pt +Apt' button does nothing |
| 6784 | New | Normal | tech screen - able to complete an exam on a body part different than defined by procedure |
| 6726 | New | Normal | View menu not disabled after Report on Accession # |
| 6592 | New | Normal | Required Notes Fields accept whitespace as input |
| 6908 | In Progress | Normal | MU Quick Add Edit Dialog makes 30 consecutive service calls each time it is opened |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 7182 | New | Normal | Menu item Messaging doesn't have an access string |
| 7172 | New | Normal | Reconcile Form - Issue with layout of Order and Scheduling Notes |
| 7164 | New | Normal | Cannot delete indictation codes from the Indication lookup table via GUI |
| 7023 | New | Normal | Selected attachments navigating when user selects text. |
| 6972 | New | Normal | BI-RADS picker set tissue density to inactive value |
| 6834 | New | Normal | QA workflow, error when saving opens the wrong screen. |
| 6821 | New | Normal | Reschedule can show incorrect procedure if procedure was changed in Register window |
| 6750 | New | Normal | MU - CCDA Error when generating XML when Allergy is NULL |
| 6671 | New | Normal | Right-click "Confirmation" in Patient Folder for Follow up order throws multple exceptions |
| 7127 | New | Normal | MT polling when waiting for jobs and none exist, can't close tab or visit another tab. |
| 6987 | New | Normal | Fields in scheduling screen not showing as required until you try to save, or tab out of the control. |
| 6792 | New | Normal | Filtering work lists |
| 6081 | New | Normal | If patient has multiple orders on same day ( procedure changed) --> registration confirmation does not reflect it |
| 7188 | New | Normal | County selection screen requires user to click or tab to county field. |
| 7181 | New | Normal | County/ZIP - county getting saved with data but dialog doesn't show one selected |
| 7179 | New | Normal | County/ZIP - possible wrong county selecting automatically. County drop down changing when nulling out ZIP textbox |
| 7165 | New | Normal | Special characters in custom fields for templates can cause the report to not be openable. |
| 7159 | New | Normal | Reporting - PACS integration |
| 7138 | New | Normal | Mammo letter config save button doesn't save changes |
| 7015 | New | Low | MU - A requested lab order can be entered with a blank observation and return an error |
| 6865 | New | Low | Personnel - Referring addresses - Address open double clicking on scroll bar arrows |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 7178 | New | Low | County/ZIP allows typing in County but doesn't changes value when clicking ok |
| 7177 | New | Low | County/ZIP textbox persists invalid data |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# User Release Notes

for eRAD RIS
Version 2
Build 44

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# Table of Contents

1. Purpose ..... 4
2. Intended Audience ..... 4
3. Installing/Accessing the Application ..... 4
4. New Access Strings and Configuration Settings 44 ..... 5
5. New Features and Enhancements ..... 12
Mammo Drawing Tool ..... 12
Notes Field Added to Mammo Biopsy window ..... 16
User Friendly Names for Mammo Follow-Up Order Statuses ..... 17
Mammography – Prior Report from Scheduling Window ..... 19
Reporting – Mammography – Disable Scrolling Function on BI-RADs Picker ..... 20
Reporting – PowerScribe 360 – Custom Exam Title and Technique ..... 21
Configurable Auto Close Delay for Work List Notifications ..... 24
Ability to Change Status Tentatively Signed to Report Drafted ..... 25
Reporting - Peer Review ..... 26
Reporting – Peer Review – Review and Override Peer Reviews ..... 27
Reporting – Peer Review – Request Addendum ..... 29
Reporting – Peer Review – Create Addendum from Peer Review Window ..... 31
Reporting – Assign Radiologist Picker Redesign ..... 32
Contrast, Sedation and CT Dosage Tracking ..... 33
Send Copy of Diagnostic Report to Patient on Request ..... 41
STAT Read changes ..... 43
PACS Server Override From PACS Menu ..... 44
Hologic Integration Changes ..... 45
Track Registered in PECOS ..... 46
Preferred Location Site Field on Order Tab Configurable ..... 47
MRN for Responsible Party ..... 48
Patient Weight Added to Review Tab ..... 49
Meaningful Use Tab Available in Confirmation ..... 50
Registration – Hyperlink to Scanned ID Card ..... 51
Improved Error Messages for Payments ..... 53
Insurance Policies Enhancements ..... 54
Perform Exam – LMP Start and End Age Configurable ..... 58
Perform Exam – Additional Copy Paste options ..... 58
Retain Pre-Cert Approval on Reschedule ..... 59
User Management – Internal Person Search ..... 59
User Management – Helpdesk Reset Password ..... 61
User Management – Enhanced Password Requirements ..... 64
Track Viewing of Audit Log ..... 66

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 44 and subsequent server releases. This version of eRAD RIS is referred to as Build 2.44

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 2.44 is considered a new core release of the application and will require a reinstallation of eRAD RIS. This is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 4. New Access Strings and Configuration Settings 44

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Access string / User Group Permission tables | Clinical.AllowPeerReviewChanges | None | Allows the user to make modifications to peer reviews |
| Access string / User Group Permission tables | View.Preset.Administration.PresetPeerReview | None | Access to preset layout administration for Peer Review |
| Access string / User Group Permission tables | View.PresetPeerReview | Full | Access to see the main menu item "View/LoadLayout.../Peer Review" (on dictation screens) |
| Access string / User Group Permission tables | View.BreastDrawing | Full | Access to see the Breast Drawing menu item from View menu (visible when dictate window is open on a mammo study) |
| Access string / User Group Permission tables | View.SelectedBreastDrawing | Full | Access to see the Selected Breast Drawing menu item from View menu (visible when dictate window is open on a mammo study) |
| Access string / User Group Permission tables | Config.TechSupportChangePassword | None | Allows the user to change other user's password. Intended for helpdesk users who do not require full access to the Personnel Editor |
| Access string / User Group Permission tables | Config.LookupEditor.ProcedureExamTitle | None | Controls access to the ProcedureExamTitle lookup table |
| Access string / User Group Permission tables | Config.LookupEditor.ProcedureTechnique | None | Controls access to the ProcedureTechnique lookup table |
| Access string / User Group Permission tables | Config.LookupEditor.Personnel.EmailPassword | None | full access to this enables users to view personnel address distribution email passwords |
| Access string / User Group Permission tables | Config.LookupEditor.Contrast | None | Controls access to the Contrast lookup table |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| Access string / User Group Permission tables | Config.LookupEditor.DosageUnit | None | Controls access to the DosageUnit lookup table |
| Access string / User Group Permission tables | Config.LookupEditor.Sedative | None | Controls access to the Sedative lookup table |
| Access string / User Group Permission tables | NOTE: Change to Access String Name<br><br>Clinical.ReportingTranscription<br><br>IS NOW<br><br>Clinical.ReportingEditor | None | Access to the Create/Edit Reporting window |
| Access string / User Group Permission tables | NOTE: Change to Access String Name<br><br>Menu.Transcription<br><br>IS NOW<br><br>Menu.Editor | None | Controls access to the Editor Menu |
| Access string / User Group Permission tables | NOTE: Change to Access String Name<br><br>Clinical.AssignTranscriptionist<br><br>IS NOW<br><br>Clinical.AssignEditor | None | Assign To Editor context menu option for work lists in which the option is available |
| Access string / User Group Permission tables | NOTE: Change to Access String Name<br><br>Clinical.UserPreferences.TranscriptionPolling<br><br>IS NOW<br><br>Clinical.UserPreferences.EditorPolling | None | Enables access to the User Preferences Editor Polling User Preferences |
| Access string / User Group Permission tables | The following access string has been removed as it wasn't being used.<br><br>Config.LookupEditor.Macro | N/A | The access string Config.LookupEditor.TemplateMacro will provide access to the TemplateMacro lookup table. |
| | | | |
| SystemConfig lookup | AllowedPasswordFailAttempts | -1 | Number of allowed failed consecutive attempts |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| | | | before locking account. 0 or less disables feature and will never lock out a user." |
| SystemConfig lookup | EmailPDFPasswordRegex | (?=^.{6,10}$)^\S*(?=.*[a-z])\S*(?=.*[A-Z])(?=.*[0-9])(?!./s*)\S*$ | (value = string) Used to configure the regex for detecting what is a strong password for email PDF |
| SystemConfig lookup | EmailPDFPasswordRegexHint | 6-10 characters including 1 uppercase letter, 1 lowercase letter and one number | 6-10 characters including 1 uppercase letter, 1 lowercase letter and one number |
| SystemConfig lookup | EnableContrastBillingRelation | True | True enables billing and contrast code syncing in the tech window |
| SystemConfig lookup | EnableNotRegisteredInPECOSWarning | False | (value = True/False) Determines if the system will warn scheduler if referring physician is not in PECOS and patient is using Medicare. |
| SystemConfig lookup | ExpirePasswordInDays | -1 | Number of days before you must change your password. 0 or less disables feature and passwords do not expire. |
| SystemConfig lookup | LMPEndingAge | 56 | When the patient reaches this age, the LMP checker will no longer be enabled on the technologist screen. |
| SystemConfig lookup | LMPStartingAge | 12 | When the patient reaches this age, the LMP checker will be enabled on the technologist screen. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| SystemConfig lookup | PasswordLockedMessage | "Account locked. Please contact your administrator." | Message to display to users who have had their accounts locked out." |
| SystemConfig lookup | RecentPasswordRestrictionCount | -1 | Number of times you have to change a password before you can reuse an old password. 0 or less disables feature and password history is not saved |
| SystemConfig lookup | ScheduleUsePreferredSite | True | True to require a preferred site and attempt to pre-select preferred site on schedule search. |
| SystemConfig lookup | InsuranceEligibleAPIString | | Verification account for billing. |
| Applicationsettings.config | <setting name="**StartInboundDocumentService**" serializeAs="String"><br><value>false</value><br></setting> | False | |
| Applicationsettings.config | <setting name="**InboundDocumentFolderLocation**" serializeAs="String"><br><br><value>C:\InBoundDocuments</value><br></setting> | C:\InBoundDocuments | |

## Changes to RIS.exe.config file

The section <listeners> in the ris.exe.config file has been changed in this release. Below you will see the before and after. In the "before" section, if the text is highlight grey, it is to indicate that it has been removed. Text highlight green in the "after" section will indicate new configuration. Any text in Yellow in before section will indicate values that have changed. The corresponding value will be highlighted Yellow in the After section

# 5. New Features and Enhancements

## Mammo Drawing Tool

The technologist required a drawing tool for mammo studies to represent the existence and location of Moles, Pain, Palpable Masses, and Scars.

A new tab with the title Breast Diagram has been added to the Perform Exam and View/Edit screen. The Breast Diagram tab will only be visible for procedures with the "Birad Enabled Flag" set to "Y".

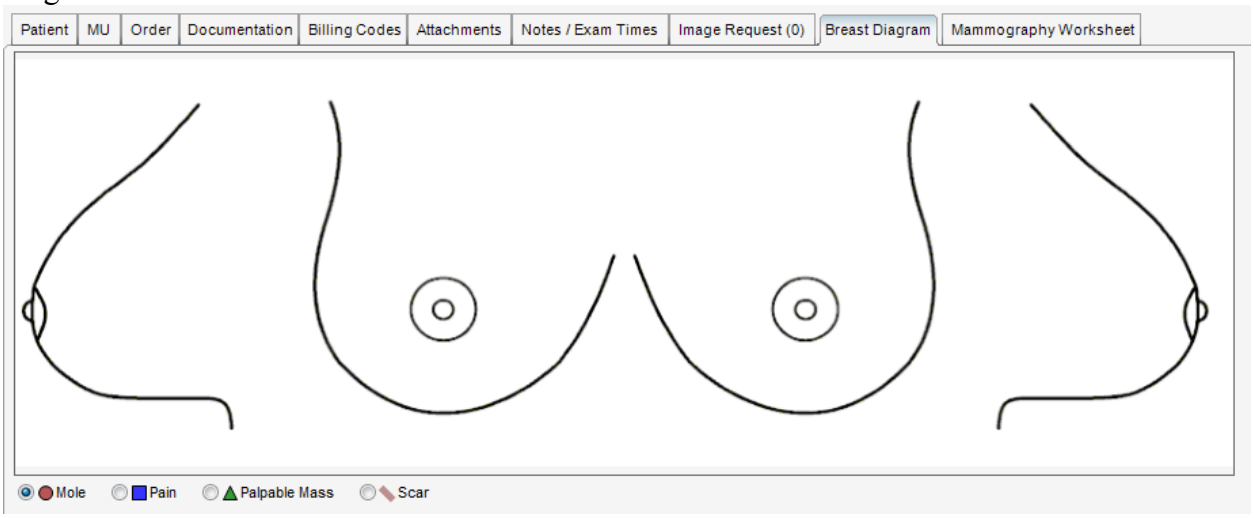

**Figure 5.1 – Breast Diagram tab for female patients**

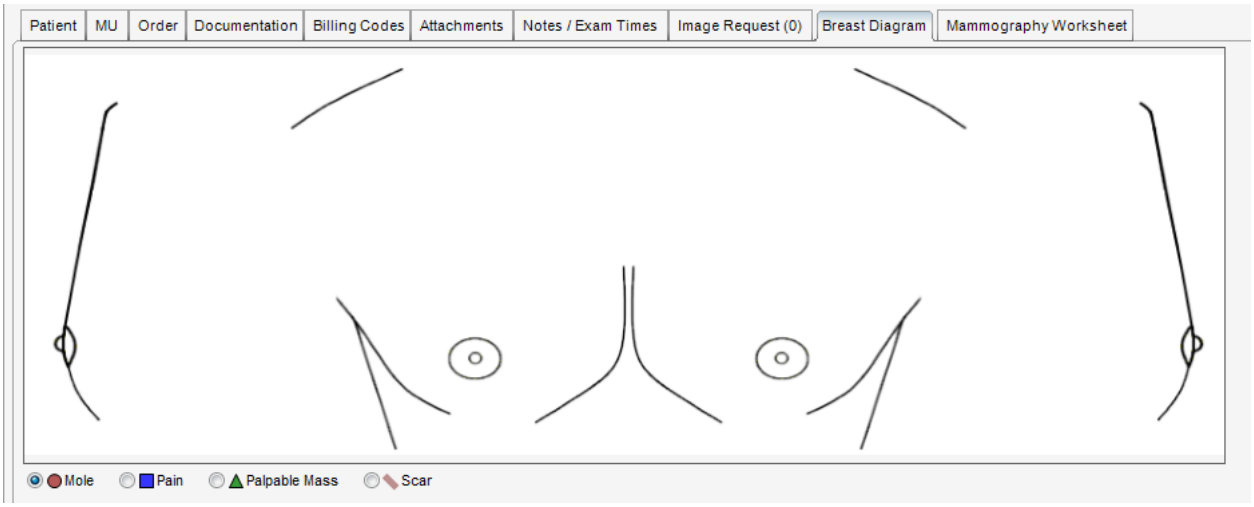

**Figure 5.2 – Breast Diagram tab for male patients**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The technologist can use the radio buttons along the bottom of the drawing tool to select a shape and then click on the image to place the shape.

Once placed, a circle (mole), square (pain), or triangle (palpable mass) can be moved by placing the mouse over the center of the shape and dragging the shape to a new location.

A cross style mouse pointer will appear if the user places the mouse pointer over the edge of a circle, square, or triangle and the user can then drag the mouse away from the shape's center to enlarge the shape, or closer to the center to make the shape smaller.

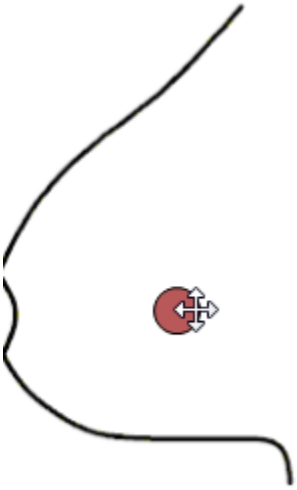

**Figure 5.3 – Mouse pointer appearance for resizing shapes added to breast diagram**

To delete a shape, the user can right click the center of the shape and then choose "Delete" from the context menu
To discard the shapes on the drawing, the user can right click the center of the shape and choose "Clear All".
A breast drawing can be exported using right click -> Save Image and specifying a file name.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

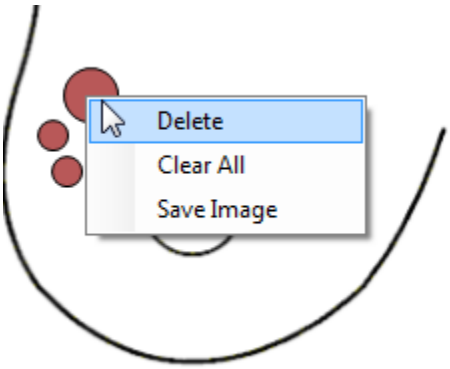

**Figure 5.4 – Context menu options of Breast Diagram**

The scar pen allows the user to draw a free form line across the breast drawing which will be decorated with cross hatches. The scar pen lines cannot be moved once placed so if changes are required, the user must right click the scar, choose delete, and then place a new scar in the appropriate place.

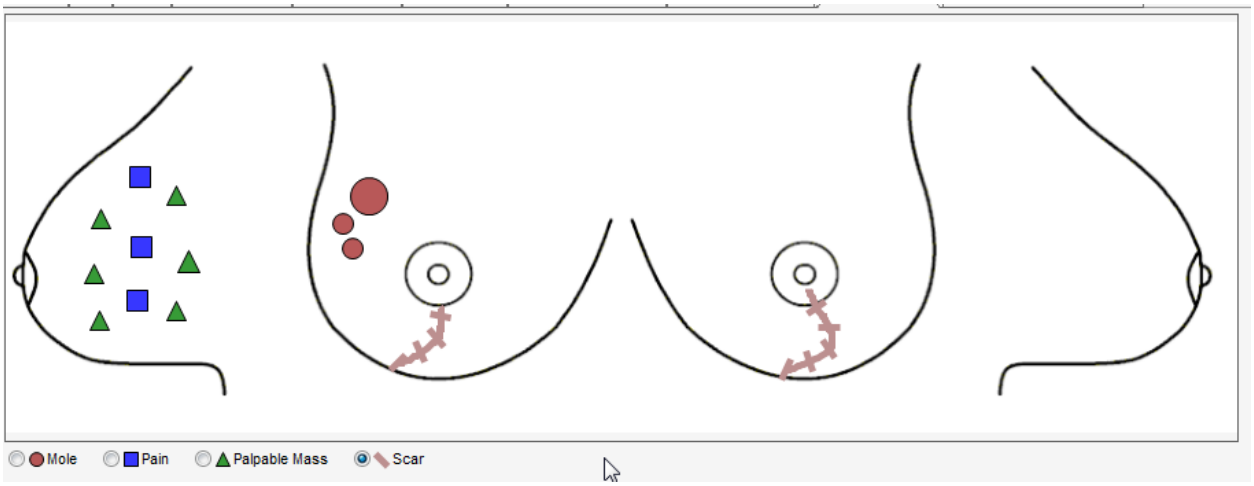

**Figure 5.5 – Breast Diagram displaying all shapes that can be added**

When saving the breast drawings to the database, we save information on the placement of each shape (type, size, and location on the drawing) and a rendered JPG of the background with the shapes on top. If a technologist creates a drawing, their changes can be edited at a later date from Perform Exam or ViewEdit (e.g. existing shapes can be deleted or resized, or the user can add more shapes).

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Breast Drawing on the Reporting Windows

The breast drawing that is presented to the radiologist is a read only .jpg version of the drawing saved by the technologist.

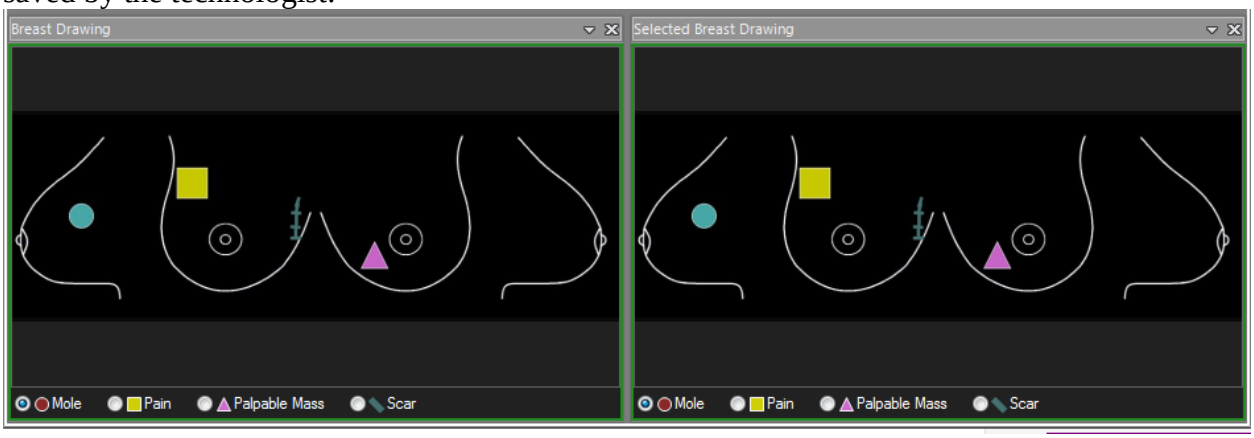

**Figure 5.6 – Breast Drawing and Selected Breast Drawing data panes in reporting window**

The radiologist can enable the Breast Drawing pane from the View menu when the Dictate screen is open on a BI-RADS enabled exam. The menu options are controlled by 2 new access strings titled "**View.BreastDrawing**" and "**View.SelectedBreastDrawing**" with defaults of Full.

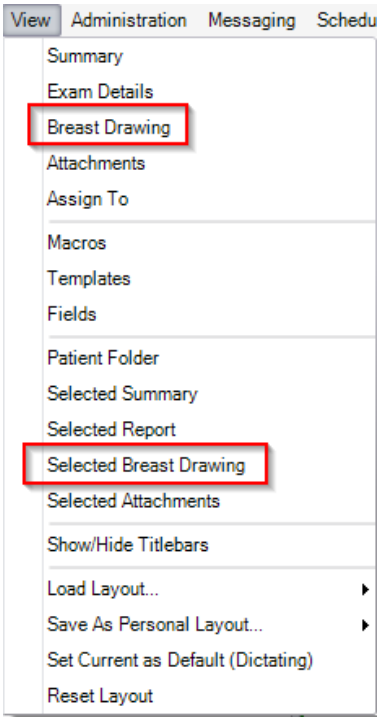

**Figure 5.7 – View menu options to access breast drawing and selected breast drawing**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Notes Field Added to Mammo Biopsy window

When performing a follow up from the ACR Category 0 or the ACR Category 4/5 follow up work lists, or accessing the View/Edit window on a mammo study, users can access the Mammo Biopsy window. In the biopsy window a new notes field has been added.

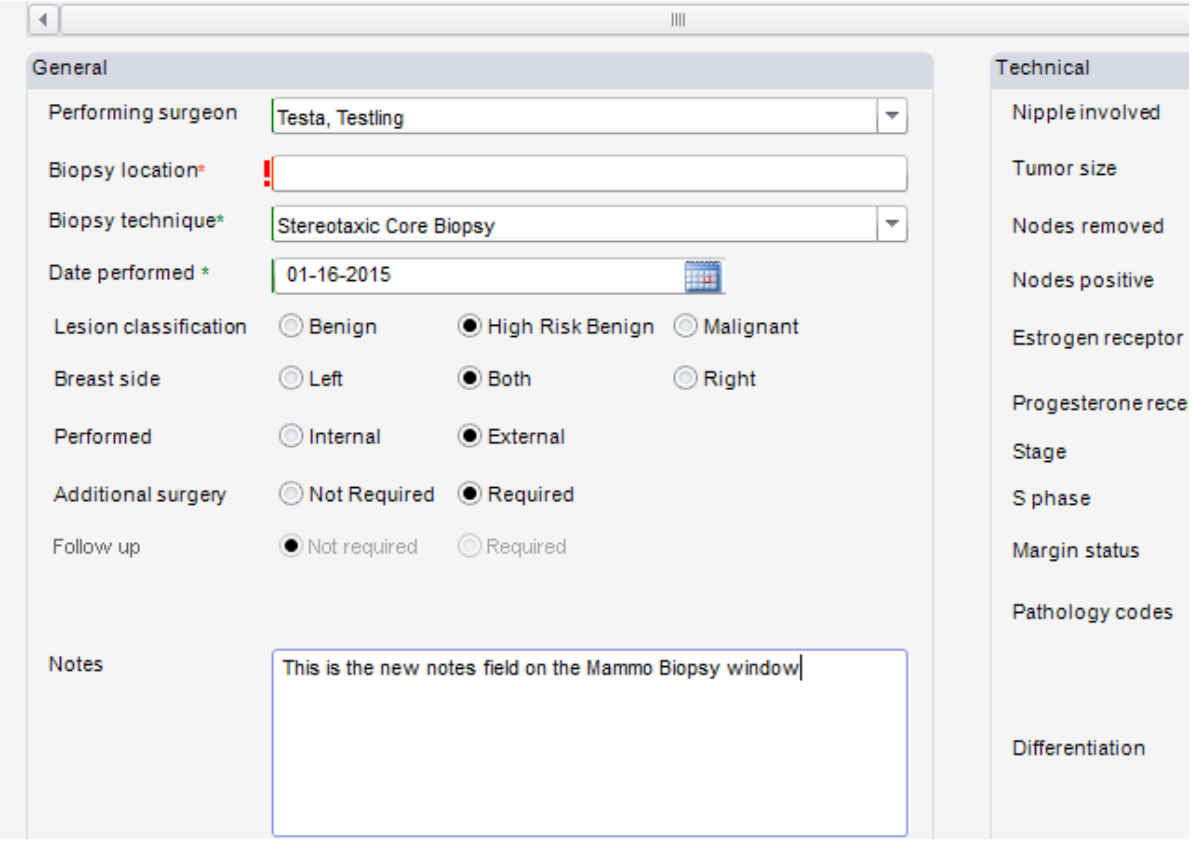

**Figure 5.8 – Mammo biopsy window with added notes field**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## User Friendly Names for Mammo Follow-Up Order Statuses

Mammo follow-up orders had 3 statuses of Callback, Short Term Follow Up and Invitation. These statuses will now be prefixed with Reminder with subtle changes to the order status names as well. They will now display as “Reminder – Callback”, “Reminder - Short Term” and “Reminder – Annual”.

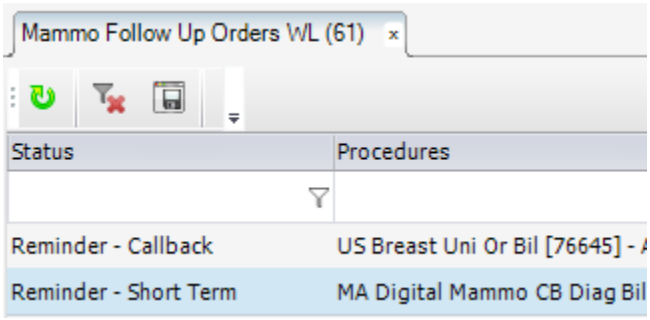

**Figure 5.9 – New order status for Mammo Follow-Ups**

The name changes will apply to the work lists, audit history and scheduling pop-ups.

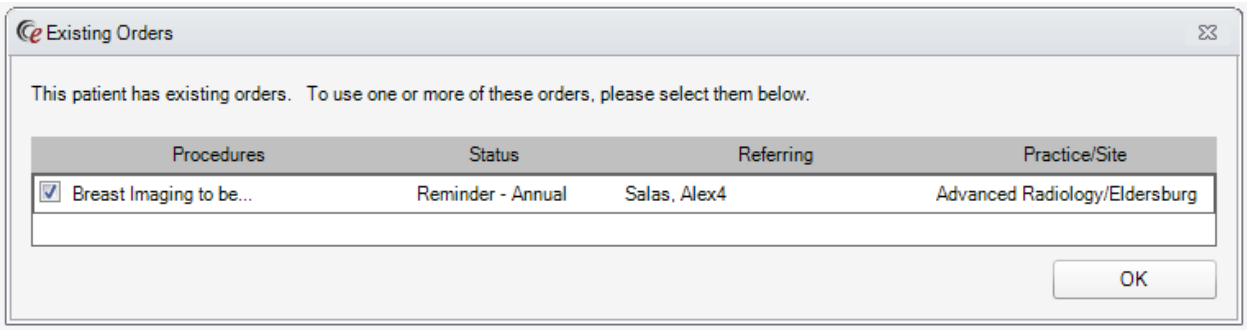

**Figure 5.10 – Existing orders window**

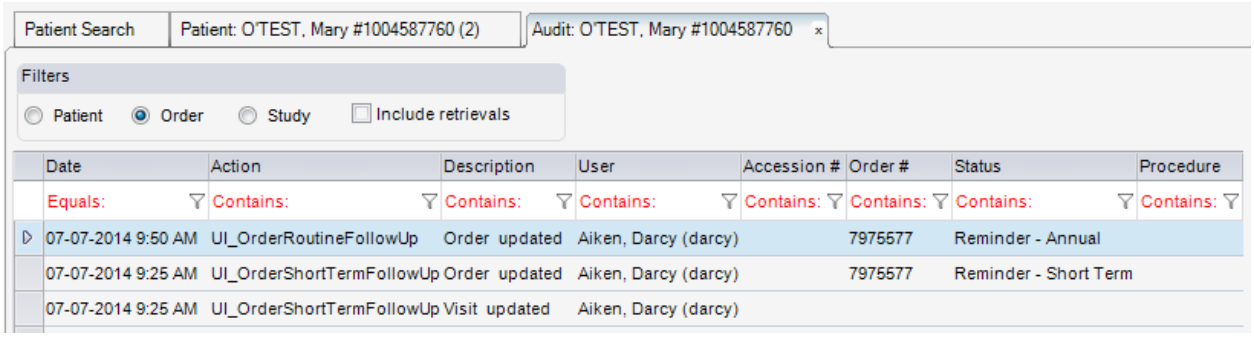

**Figure 5.11 – Audit History window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The administration > Configure lookup tables will still be displaying the previous names. Example such as the MammoLetterConfig and SystemConfig values for default letters.

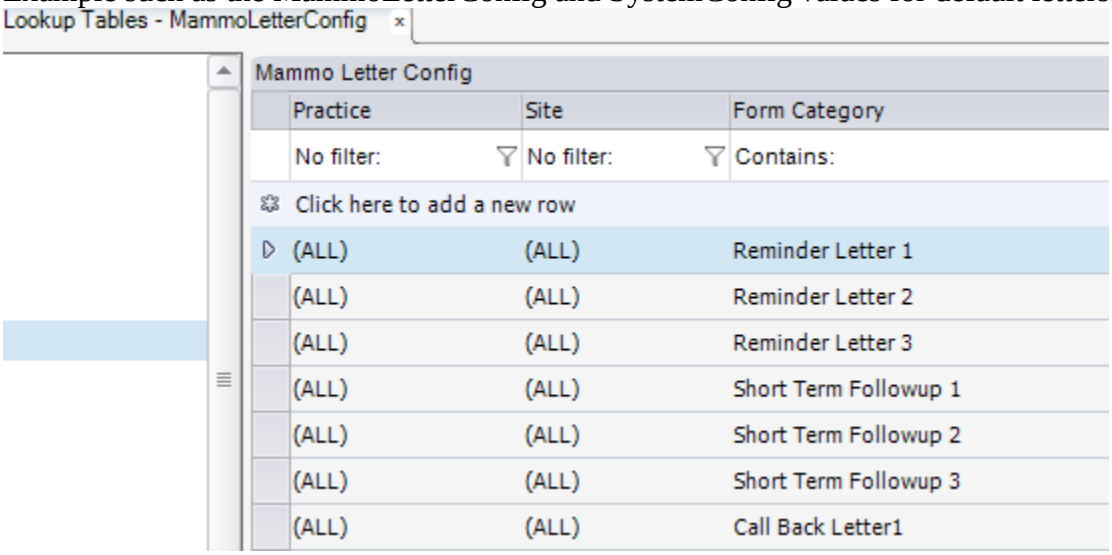

**Figure 5.12 – Mammo letter config lookup will use the old names as well as other lookups**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Mammography – Prior Report from Scheduling Window

In previous versions users accessing the prior report from within the scheduling window on mammo follow up studies would see the report open in a .pdf format. This was undesirable because text could not be copied from the report.

The viewing of the report has changed in Build 44. The user will now see the report open in a window that is similar to data nugget of the report accessed from the Patient Folder WL.

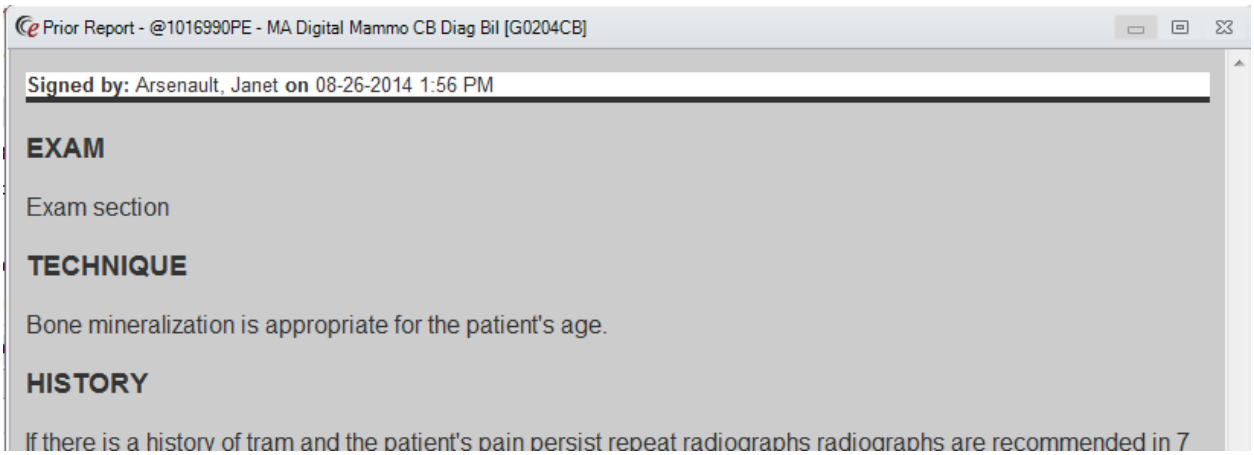

**Figure 5.13 – Prior Report accessed from scheduling window**

The Prior Report window will display the accession number, procedure name, laterality and procedure code in title bar.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Mammography – Disable Scrolling Function on BI-RADs Picker

In the reporting window after a user chose a BI-RAD value from the list box, the control stayed active. The scroll wheel on the mouse has been deactivated from the BI-RAD list box. The user now must click and selected from the available options.

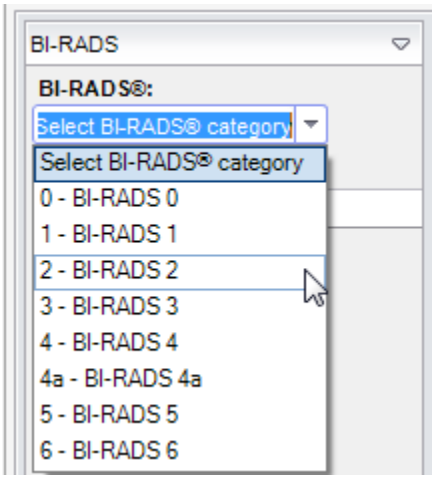

**Figure 5.14 – Scrolling feature disabled on BI-RADs picker in Reporting window.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – PowerScribe 360 – Custom Exam Title and Technique

The Exam Title and Technique will now be able to be used with PowerScribe 360. Two new tables called "ProcedureExamTitle" and ProcedureTechnique" have been created and added to give users the ability to send a custom technique and exam title for the procedure being performed to PowerScribe 360 so that it can be populated automatically into the report. These new lookup tables live under the Procedure list of lookup tables where access to the lookup tables are controlled by access strings "**Config.LookupEditor.ProcedureExamTitle**" and "**Config.LookupEditor.ProcedureTechnique**" both with defaults of None.

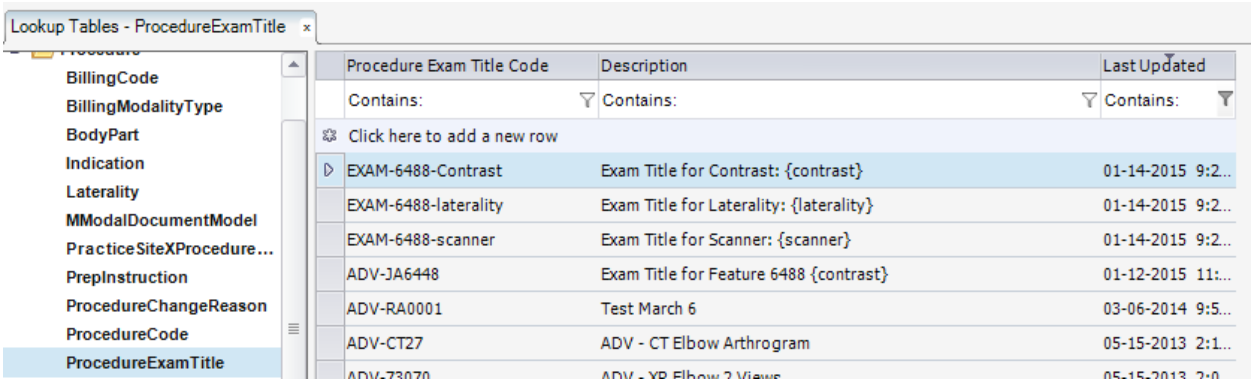

**Figure 5.15 – New lookup for ProcedureExamTitle**

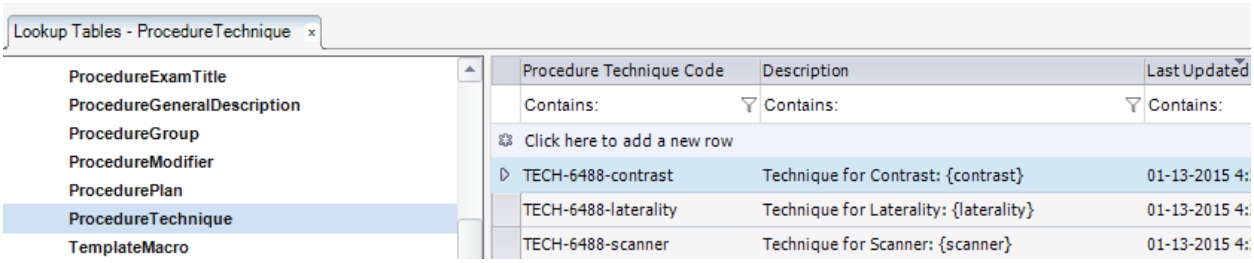

**Figure 5.16 – New lookup for ProcedureTechnique**

These fields will be coded within our custom field helper class in such a way that when the description contains {contrast}, {scanner} or {laterality} it will find those values and inject them into the field description. {scanner} looks at the report_description in the l_modality table for its value.

If the system currently has values in the ProcedureGeneralDescription lookup table these values will be automatically moved to the ProcedureExamTitle lookup table, but will also still remain the ProcedureGeneralDescription lookup table.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Once the ProcedureExamTitle and ProcedureTechnique have been added they will then need to be referenced on the procedure code.

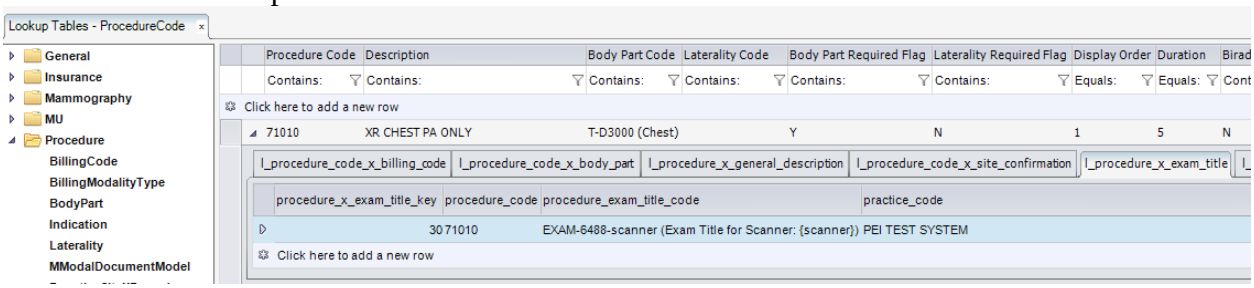

**Figure 5.17 – Adding ProcedureExamTitle to procedure code**

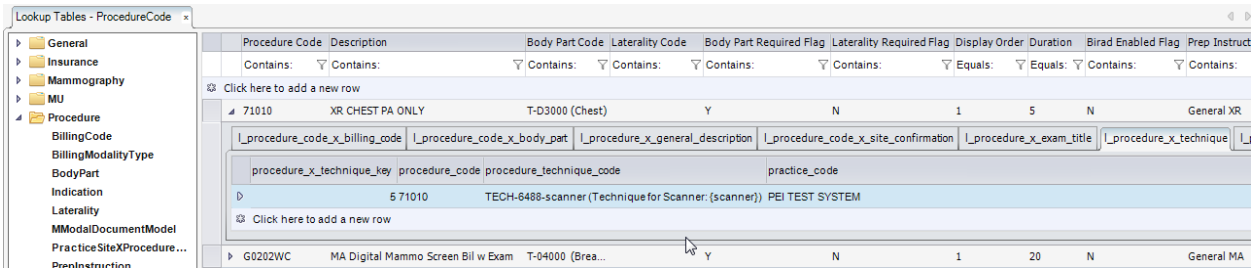

**Figure 5.18 – Adding ProcedureTechnique to procedure code**

Once the procedure exam title and procedure technique have been added to the procedure code To enable this feature a ris admin would have to populate the new tables with exam titles and techniques and link those to procedure codes. Then mirth will take care of sending these over to PowerScribe 360 once it's run some preprocessing on them to convert the inner fields with actual values ({contrast}, {scanner} or {laterality})

1. Make sure user has access to permission strings
    a. Config.LookupEditor.ProcedureExamTitle
    b. Config.LookupEditor.ProcedureTechnique
2. Open Configuration screen and open either ProcedureExamTitle or ProcedureTechnique lookup editor in the Procedure folder
    a. Add entries to the table as required
3. Open the ProcedureCode lookup editor
    a. Find the procedure code to link to exam title or technique
    b. Expand the row using the little arrow on the left of the row
    c. Find the tab for either l_procedure_exam_title or l_procedure_technique
    d. Add rows here to link the procedure code to the exam title or technique
4. Open the macro editor and create fields that are custom fields and link them to either one of these new fields.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

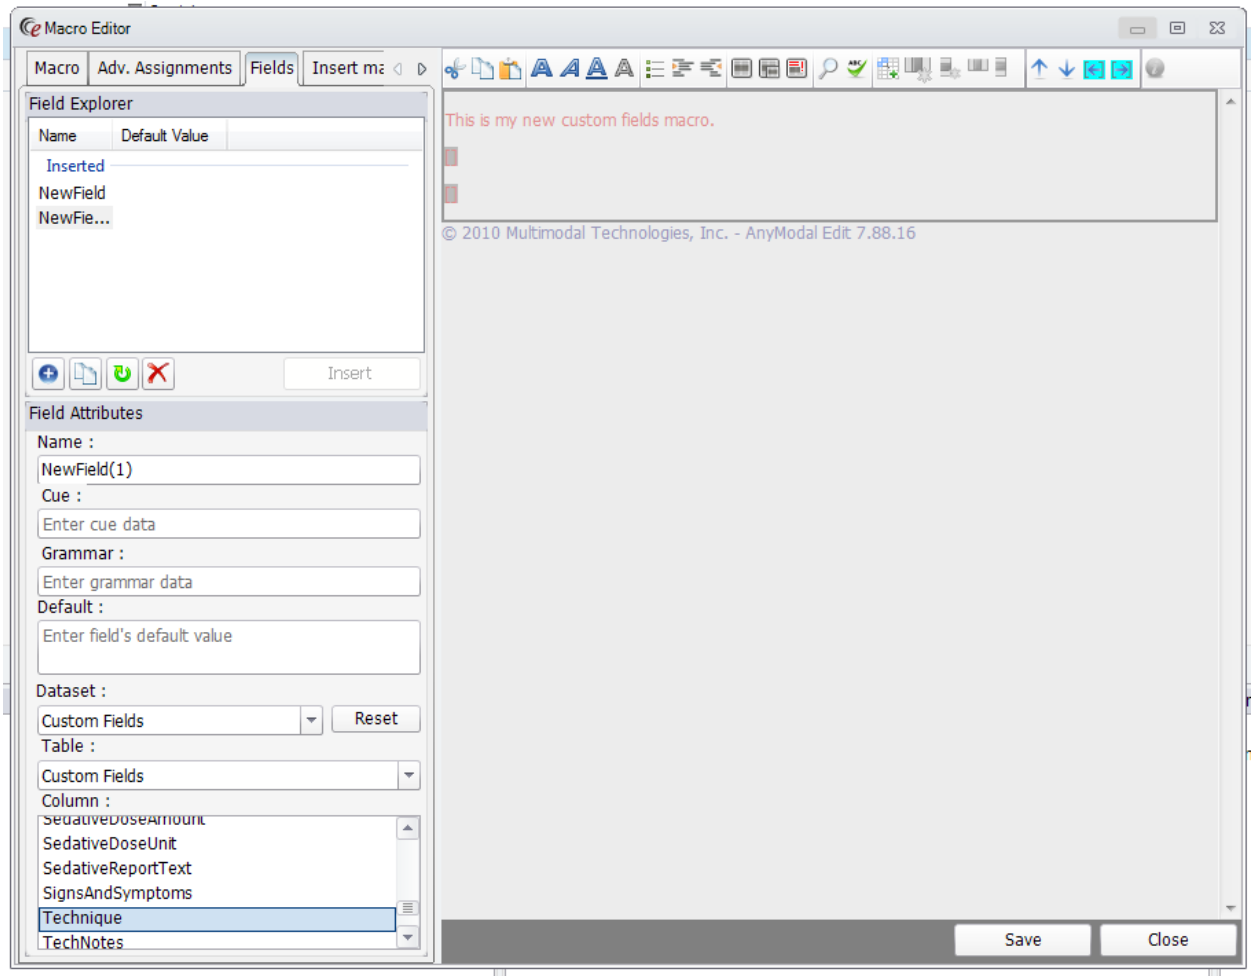

**Figure 5.19 – Adding ProcedureTechnique and ProcedureExamTitle to Macros and Templates**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Configurable Auto Close Delay for Work List Notifications

There is a new spin control on the user preferences screen. This is located under the feedback section of the radiologist tab.

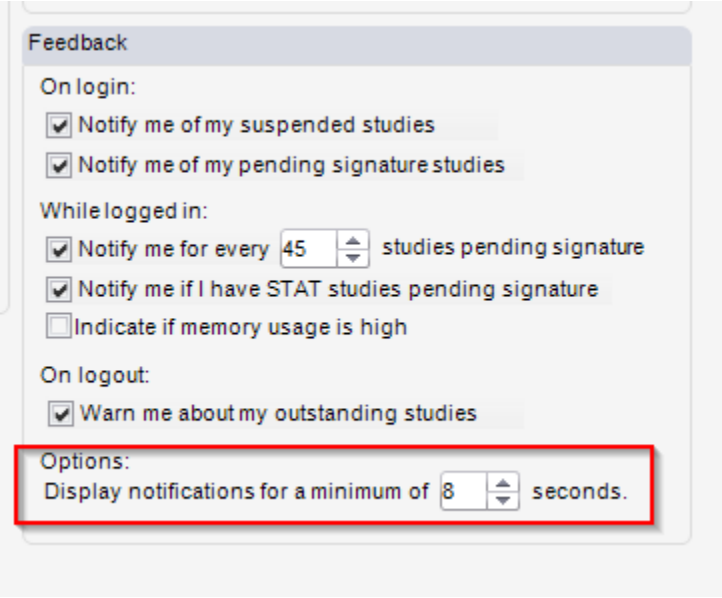

**Figure 5.20 – New User Preference**

"Display notifications for a minimum of ____ seconds" - Is there the user enters their preferred value.

The user can select between a range of 3 - 60 seconds. The value selected will be the amount of seconds the notification will display on the screen before it begins to fade out.
The default setting is 8 seconds. This matches the systems previous default functionality.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Ability to Change Status Tentatively Signed to Report Drafted

Users will now be able to change an exam with a status of Signed* to Report Drafted. The context menu option of Change Status to Report Drafted has been added to the Signed, Pending Release WL, All Signed, Pending Release WL, All Signed Pending QA WL and All Pending QA WL.

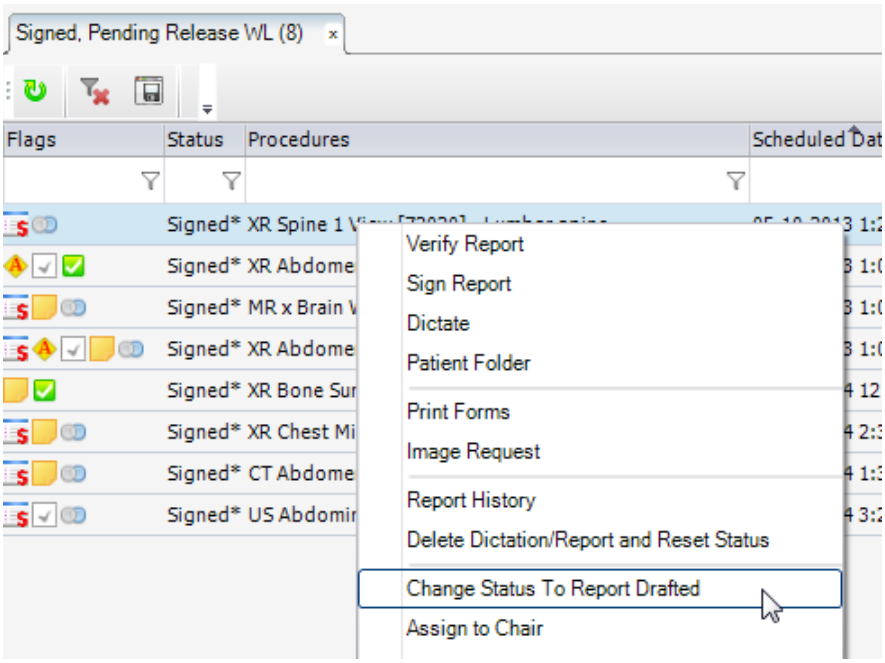

**Figure 5.21 – Change Status To Report Drafted context menu item**

The context menu option of Change Status To Report Drafted has been added to the sub menu of the context menu item of Change Status to… of the Patient Folder WL.

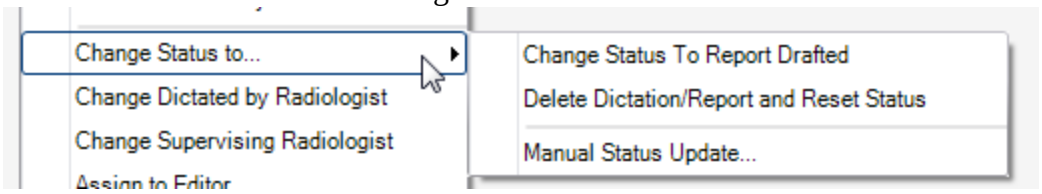

**Figure 5.22 – Context menu item from Patient Folder WL**

We set the tentatively signed by user id, tentatively signed date and the automatic sign date to null for the study being altered.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting - Peer Review

The look, feel and usage of Peer Review has changed in Build 44. Previous versions would allow users to Peer Review a study; add a value and notes which would then go to the All Peer Review Pending Action WL. This is still true today. Once it is on this work list however, the action to complete has changed.

From the All Peer Review Pending Action WL a user will 2 Peer Review action options. The first is to Review the study and the other is to Mark as Completed. Selecting the Mark as Complete will remove the study from the work list as to "mark as complete". The Review option will open the study in a Peer Review QA tab. This new tab will display the report in a read only HTML view similar to viewing Prior Reports.

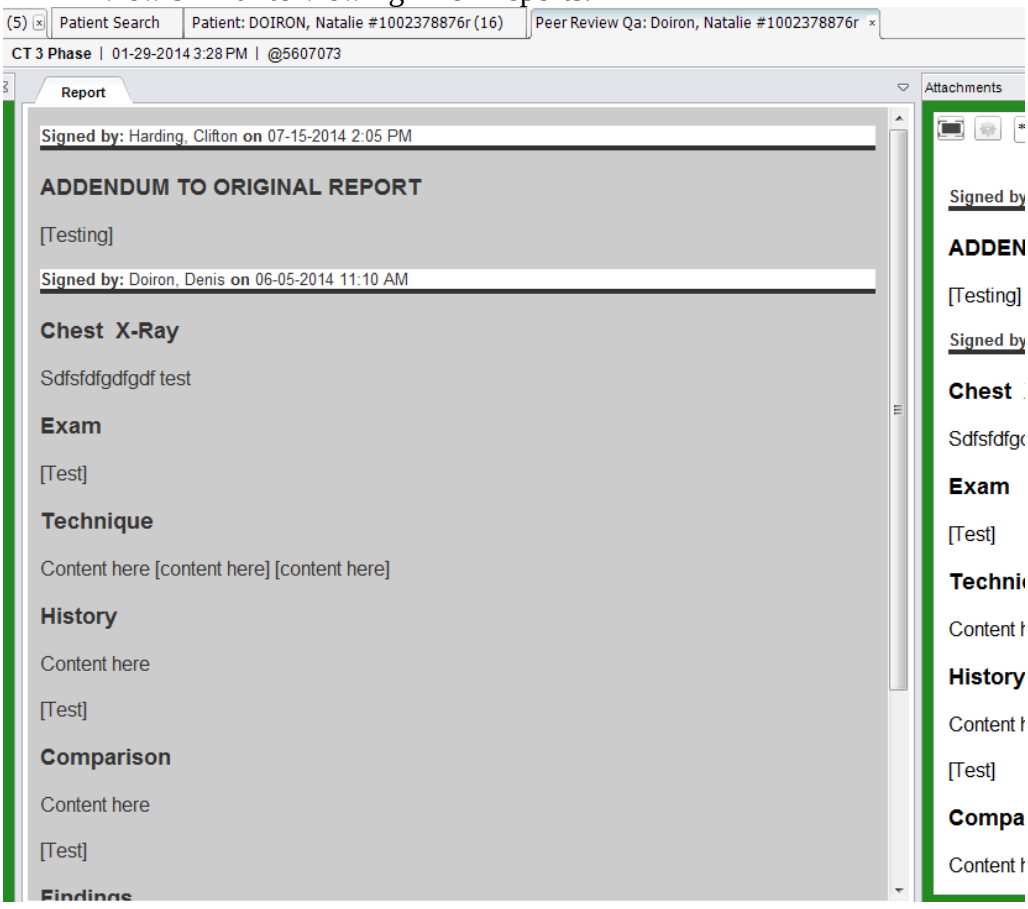

**Figure 5.23 – Peer Review QA window displaying read only version of report**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Peer Review – Review and Override Peer Reviews

When reviewing a study from the All Peer Review Pending Action WL the user will also see the Peer Review data pane, which is the same as the Peer Review window the user would have been presented with in prior versions.

If the user agrees with the Peer Review they can select the Complete button and move on to the next study or close the Peer Review QA window. If there is a discrepancy and the reviewer wants "reject" the peer review they can do so in the Peer Review data pane. The user will select the "I disagree with this review" check box which will enable the Peer Review controls.

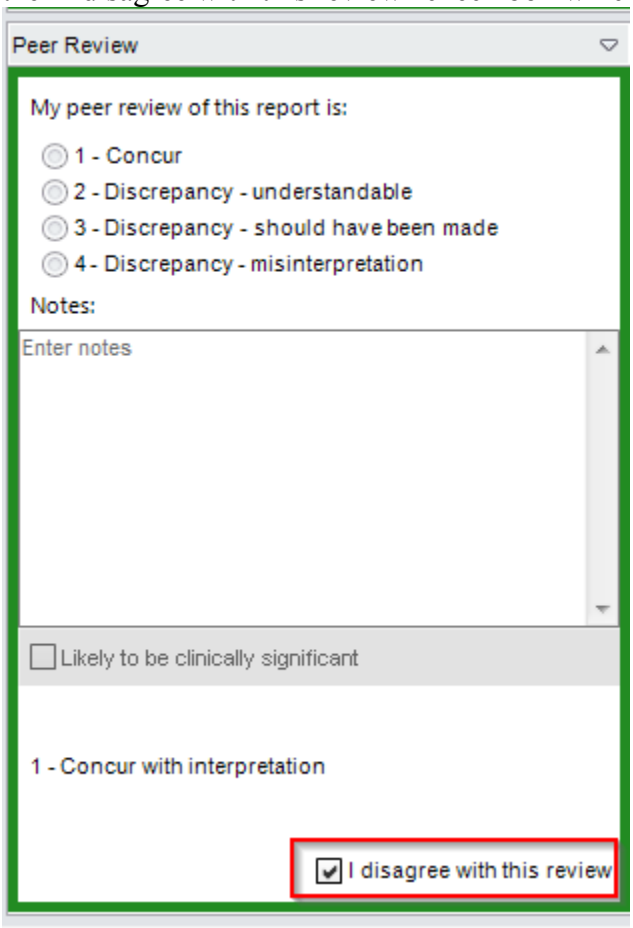

**Figure 5.24 – Peer Review control from Peer Review QA window**

The radiologist will get to choose a score, and enter notes very much like he would if he was doing a normal peer review. At any time he can revert back and uncheck the box. While the box

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

is unchecked, any information entered in the peer review box will be ignored and will not be saved. Only when the box is checked, and the information is visible will it get saved.

Also the Complete button on the Peer Review QA window will be disabled. It will stay disabled until the criteria for the controls are met, meaning there must be notes entered if the score meets a predefined criteria as it would in the normal peer review control, which is based on the "**PeerReviewScoreToStartRequiringNotes**" setting. So whether the score meets this setting, notes will or will not be required, and once the peer review details passes validation, the complete button will be enable.

This control can also exist for transcriptions, since some sites might have them enter there peer reviews into another system. In this case they should not have the option to disagree with the peer review, the access string that controls this is "**Clinical.AllowPeerReviewChanges**", this will hide the panel that contains the "I disagree with this review" checkbox.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Peer Review – Request Addendum

Studies that have been peer reviewed can have an addendum requested from the All Peer Review Pending Action WL context menu. Alternatively if the study has an addendum request the context menu will have the option to Cancel Addendum Request.

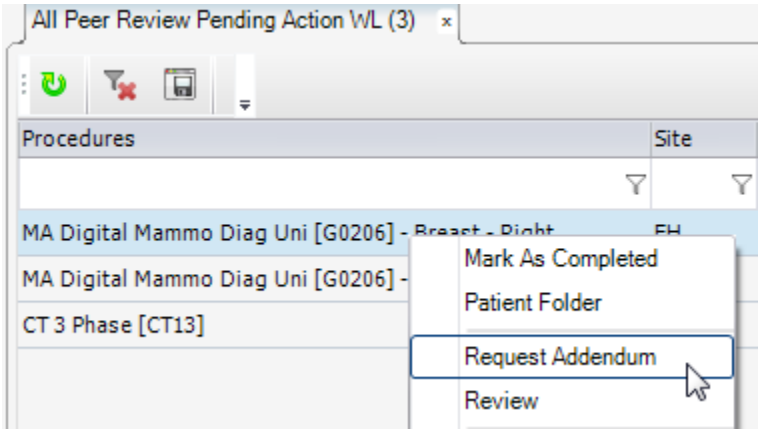

**Figure 5.25 – Request Addendum from All Peer Review Pending Action WL**

They can also have an addendum requested from within the Peer Review QA window. Another new data pane has been added with 2 options, Request Addendum and Create Addendum. Create Addendum will be discussed in the next feature description.

Notes are always required on addendum requests, so the button will only enable once notes are entered. The user also gets to choose who the addendum request should be assigned to, by default it will be the signing radiologist.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

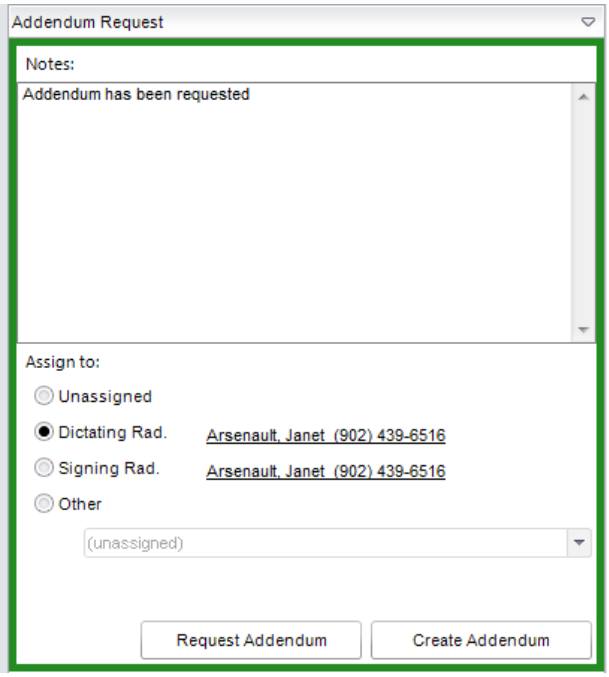

**Figure 5.26 – Request Addendum from within Peer Review QA window**

When the user clicks the "Request Addendum" button, the addendum request will be made immediately, without closing the screen, or completing the peer review. It is a separate action, run as if it was run from the worklist. When the user does this the screen will refresh to show that an addendum was requested.

In this mode it will show the notes for the addendum request, who it is assigned to and a button to cancel it. This is also the way it will open up on a peer review that has already had a addendum requested.

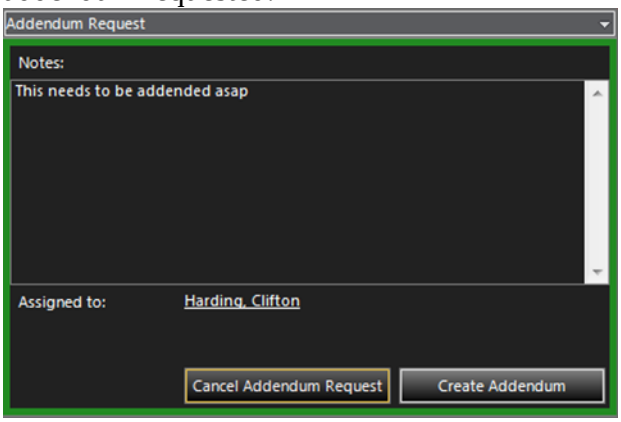

**Figure 5.27 – Ability to Cancel Addendum Request from Peer Review QA window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Peer Review – Create Addendum from Peer Review Window

As seen in the previous feature, the user will have the ability to create an addendum immediately from within the Peer Review QA window. The button to create an addendum is found in the Addendum Request data pane.

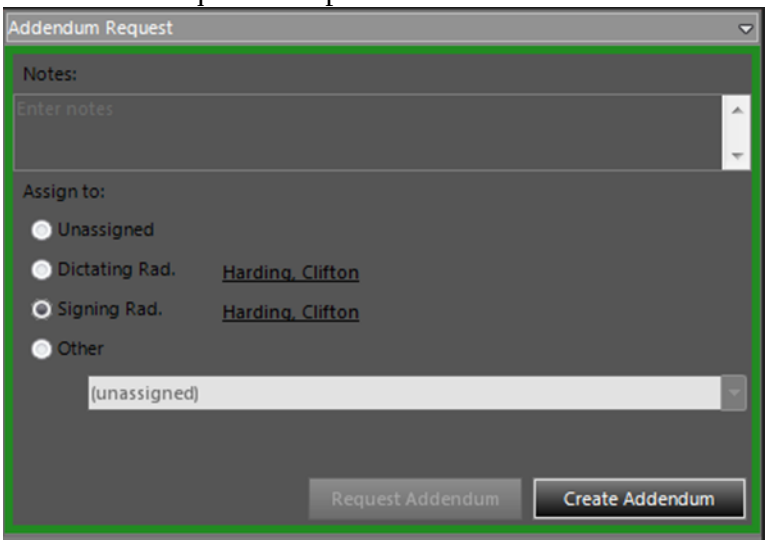

**Figure 5.28 – Create Addendum from Peer Review QA window**

When it is clicked, it will get disabled, and it will open a dictate screen in another tab, and leave the Peer Review screen as is. When the radiologist closed the create addendum screen, assuming he hasn't been bouncing back and forth between tabs, it will return him to the Peer Review screen where he can complete it and move on to the next one.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Assign Radiologist Picker Redesign

We redesigned the existing user picker control and provided all existing functionality while adding some desirable functionality.

1. If you already have an assignment we will display this at the top of the dialog in the currently assigned label.
2. The OK button will save the selected assignment. It will enable when a valid item is selected.
3. We now inherit from the popup dialog base class now and display the icon on the form and in the windows tool bar.
4. We added functionality to save super rad as your preference. Previously if you want to change it you would have to open user preferences also. This option is only available when selecting a supervising rad. Not available for example when changing dictating rad or super rad in the summary screen.
5. When showing all we will load all practices and associated radiologists for each. If a radiologist is associated to more than one practice we will list that user in each practice.
6. Now using Telerik controls entirely.
7. When opening to select super rad users will first get the list of radiologists for their currently selected practice. Show all will show all practices, and only practices, they are associated with. Previously users could see a list of all practices even if they were not associated with them.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# Contrast, Sedation and CT Dosage Tracking

## Contrast

The ability to add contrast and sedation values and track CT dosage has been added to the Documentation tab of the Technologists Perform Exam window and also available on the same tab of the View/Edit and Billing Exception windows.

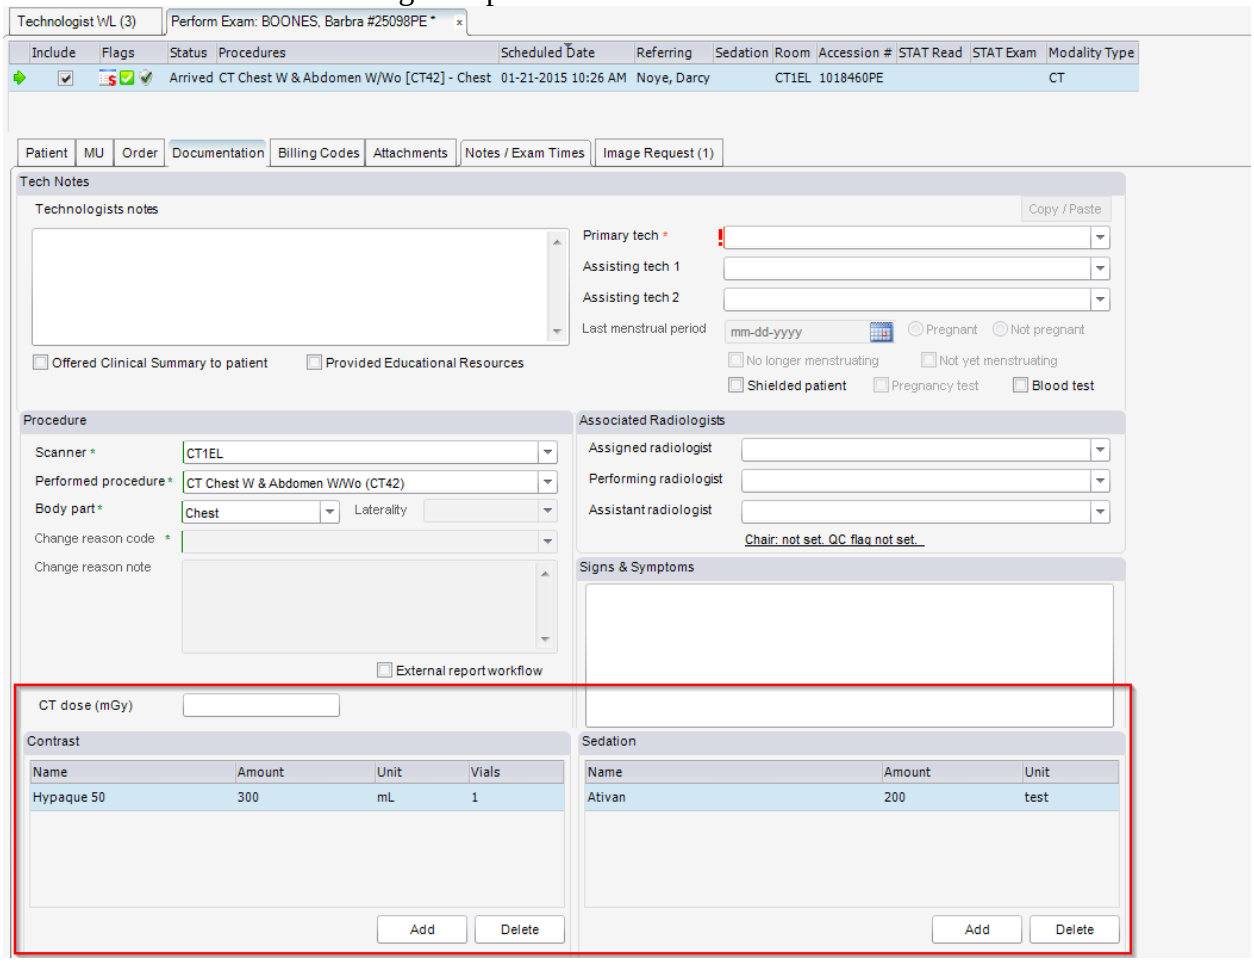

**Figure 5.29 – Contrast and Sedation fields and CT Dosage field**

Contrast is tracked with a grid control that captures the contrast type, amount, units and vials. The controls to capture this data is in their own section on the screen and will be required for procedure codes that are flagged as requiring contrast.

The contrast grid will have records added and removed via Add and Delete buttons.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

To add a Contrast to the grid, the user will click the Add button. Upon clicking, the user is presented with a pop up input box that contains a drop down list of available contrasts. The list will only contain available contrasts that are not already present in the grid.

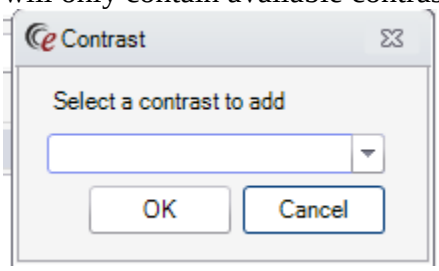

**Figure 5.30 – Add contrast**

Since inventory is not managed, the amount/dosage may not directly correlate to a vial size. Example: Site A may have small 10cc vials of Contrast XYZ while Site B may have 50 cc vials of Contrast XYZ. The default dosage may be 30ccs. At Site A we would have used 3 vials but Site B would have used just 1.

The value in the Vials column can have a direct relation to the billing codes. The system config setting of "**EnableContrastBillingRelation**" is true (true is the default), the values in the Vials column will populate in the Units column on the Billing Codes tab if the Billing Code has the Contrast Code assigned. As billing codes are billed based on unit count (in the case of contrast a vial is a unit) the system will make sure these two values match up. If you change one of these values the other will update. Think of vials and units as tied together or even one in the same. Also when "EnableContrastBillingRelation" is true, removing the contrast code will remove the associated billing code and vice versa.

If the relation is not enabled, the vials column is manually entered and does not affect anything else.

The contrast can also be pre-populated into the grid. The Billing Code can have a contrast type assigned. The Procedure Code will then have the Billing Code assigned to it. When performing exam on this procedure the contrast and its default values will pre-populate the Contrast grid.

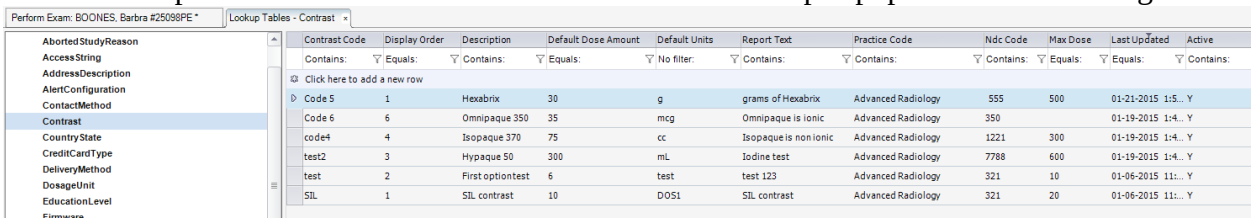

**Figure 5.31 – Contrast lookup table**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Contrast values will come from the Contrast lookup table. This table is controlled by access string "**Config.LookupEditor.Contrast**" that has a default of None. As mentioned the Contrast Code can have a default dose amount, default units and be associated to a practice. The description is what the user will see in the data windows. Report Text will be used when a field is mapped to a diagnostic report template. The Ndc code column will contain the National Drug Code value and the Max Dose column will provide an alert if this threshold is meet.

Contrast data will be accessible to the radiologist report via fields. The value in the Report Text field in the screen capture above will be used in the report.

There is a master "ContrastField" field, which will concatenate the contrast record(s) for the study into a sentence. Also there are options to manually pull the contrast data items one at a time. However this manual option only pulls the first contrast record for each data item.

Example of ContrastField :: ***Patient was administered 4g of Contrast Type A, 47cc of Contrast Brand X, 250ml of Contrast Type 5 and 8g of Contrast Brand XYZ***.

In this example, we are looking at "Patient was administered" + dose + unit + "of" + "contrast name". This pattern repeats for each record. Contrast data will be packaged and sent to third party integrated applications as needed through configuration.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.
