eRAD RIS

# COMBINED CUSTOMER RELEASE NOTES

for all legacy versions of RIS
from Build 0.03
through Version 3.2017.6.14

UPDATED MARCH 9, 2022

# SUMMARY

This document re-publishes the previously released Customer Release Notes for all legacy eRAD RIS versions from Build 0.03 through Version 3.2017.6.14 as a single document.

The following documents have been merged:

1. eRAD RIS Customer Release Notes 0.03.pdf
2. eRAD RIS Customer Release Notes 0.04.pdf
3. eRAD RIS Customer Release Notes 0.05.pdf
4. eRAD RIS Customer Release Notes 0.06.pdf
5. eRAD RIS Customer Release Notes 0.07.pdf
6. eRAD RIS Customer Release Notes 0.08.pdf
7. eRAD RIS Customer Release Notes 0.09.pdf
8. eRAD RIS Customer Release Notes 0.10.pdf
9. eRAD RIS Customer Release Notes 0.11.pdf
10. eRAD RIS Customer Release Notes 0.12.pdf
11. eRAD RIS Customer Release Notes 0.13 & 0.14.pdf
12. eRAD RIS Customer Release Notes 0.15.pdf
13. eRAD RIS Customer Release Notes 0.16.pdf
14. eRAD RIS Customer Release Notes 0.17.pdf
15. eRAD RIS Customer Release Notes 0.18.pdf
16. eRAD RIS Customer Release Notes 0.19.pdf
17. eRAD RIS Customer Release Notes 0.20.pdf
18. eRAD RIS Customer Release Notes 0.21.pdf
19. eRAD RIS Customer Release Notes 0.22.pdf

# 1. Purpose

This document describes some of the new features and changes implemented in rRIS as of the end of Sprint 3. This pre-release version of rRIS is referred to as Build 1.03.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the rRIS Development team for the RADNET RIS management team.

# 3. Installing/Accessing the Application

The client installer for rRIS is still in the early development stages. For now, users can access the system by remoting to the rRIS test server in Baltimore as follows:

1. Start Remote Desktop Connection and specify IP 10.120.0.152
2. Username: TestRIS
3. Password: rRIS1234
4. Double click the rRIS icon on the desktop or go to Start→All Programs→rRIS
5. Login User: terry
6. Login Password: ris

If you experience difficulties accessing the application, please do not hesitate to contact Spencer MacDougall with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Login Screen

There has been a basic login screen developed which accepts a username and password. The system can be configured to validate the user with Windows Authentication or simply use the user credentials stored in the rRIS database.

**Figure 4.1 – Login Screen**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## GUI Framework

MainShell is the visual hub display of the GUI. It consists of an application menu, menu bar, toolbar, status bar, and tab control.

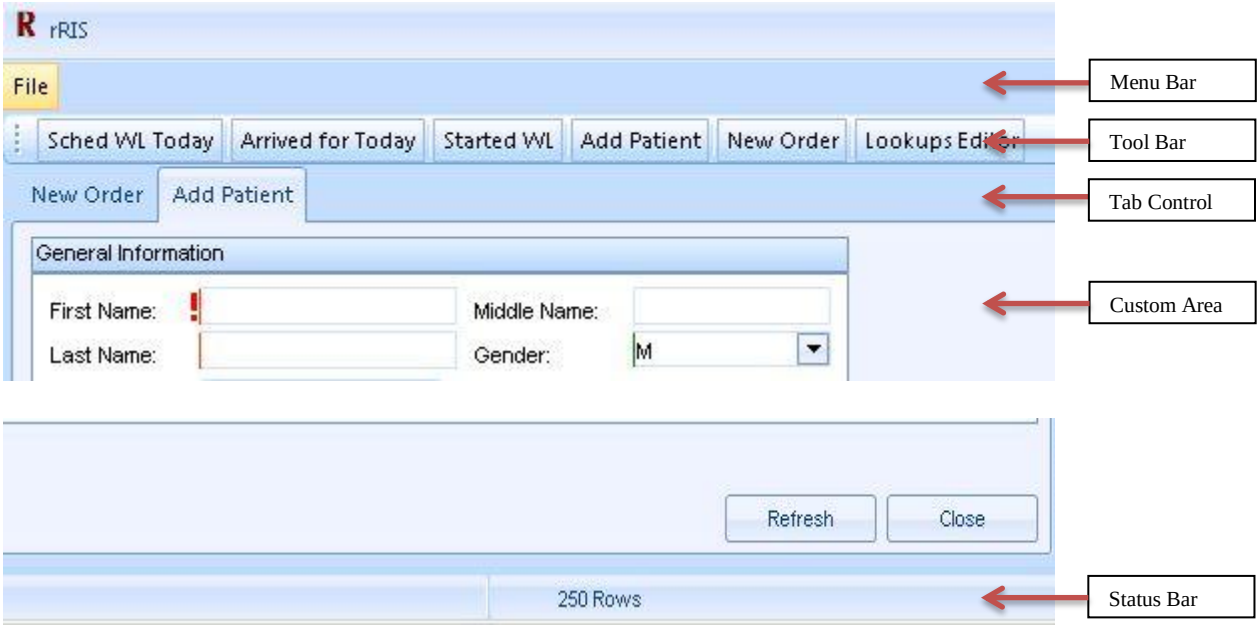

**Figure 4.2 – GUI Framework**

The user has the ability to navigate the application by clicking on the buttons in the menu bar such as “Add Patient”, “New Order”, or “Started Worklist”. The application has the can open multiple copies of content area forms such as “Edit Patient” but is configured to only open one copy of each worklist.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Worklist Framework

A framework has been developed that will allow the creation of worklists specifying status, double-click action, columns to display, and filter criteria. For example, clicking on the "Started Worklist" button in the Tool Bar will open up a worklist where the Status Code is equal to Started. This status is specified during the creation of the worklist. In the next build, this framework will be enhanced to accept one or more statuses.

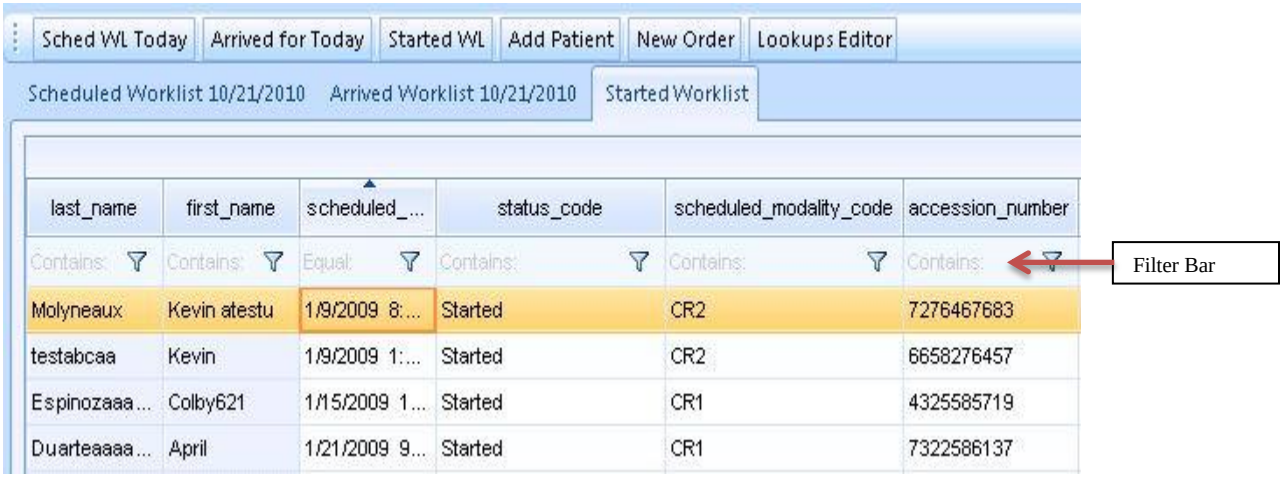

**Figure 4.3 – Started Worklist**

The user has the ability to specify filter criteria to quickly query the worklist. For example, with minimal clicks the "Started Worklist" can be filtered to show only studies for the CR1 modality, with the scheduled start date greater than 10/12/2010, and sorted by the scheduled start date.

| last_name | first_name | scheduled_start_date | status_code | scheduled_modality_code | accession_number |
|---|---|---|---|---|---|
| Contains: | Contains: | GreaterThan: 10/21/2010 12:00:00 AM | Contains: | Equal: CR1 | Contains: |
| Guzman | Christi | 10/23/2010 10:08:22 AM | Started | CR1 | 6116282588 |
| Hart | Lori79 | 10/26/2010 12:18:26 AM | Started | CR1 | 1425336486 |
| Blanchard | Eugene7 | 10/31/2010 10:14:30 AM | Started | CR1 | 3125671336 |
| Owen | Bill831 | 11/11/2010 8:00:26 PM | Started | CR1 | 7624311434 |
| Galloway | Kenneth471 | 11/21/2010 6:42:34 PM | Started | CR1 | 9251618925 |
| Barrett | Clayton | 12/7/2010 9:46:43 AM | Started | CR1 | 9966568277 |
| Pierce | Sheryl97 | 12/9/2010 11:13:41 PM | Started | CR1 | 1437815542 |
| Wilcox | | 12/23/2010 12:57:58 AM | Started | CR1 | 3383715377 |
| Mcgrath | Tonia9 | 12/26/2010 8:15:09 PM | Started | CR1 | 7738279825 |
| Monroe | Brian414 | 12/29/2010 3:04:49 AM | Started | CR1 | 1772475528 |

**Figure 4.4 – Started Worklist with filter criteria**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

In future builds, the user and RIS administrators will have the ability to save and reuse these filters at a worklist level.

## Patient Search

The application has a patient search screen, which can be launched by clicking on the search button. If there is search criteria in the search criteria text box (at the top of the screen) the parameters are parsed intelligently and placed in the appropriate sections on the patient search screen which is displayed and the search is automatically executed.

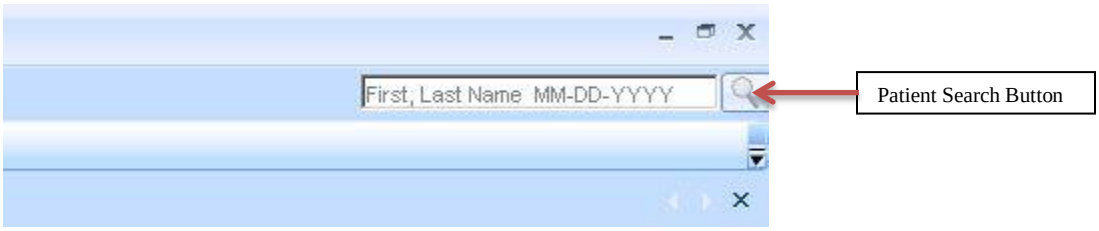

**Figure 4.5 – Patient Search button on Menu Bar**

Using the patient search on the menu bar, the user can quickly search for a patient by specifying a first and last names followed by a date of birth. In the future, this quick search will be configurable to specify other criteria like MRN.

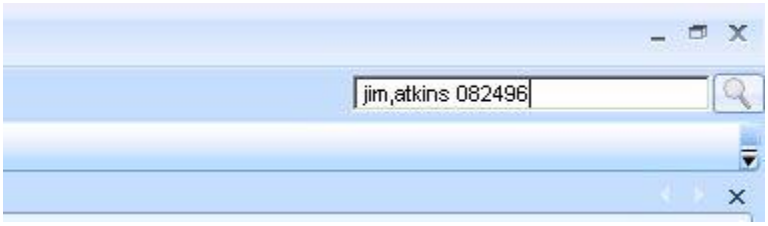

**Figure 4.6 – Patient Search with search criteria**

By selecting the search button, the user will be brought to the search screen and shown the returned results.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

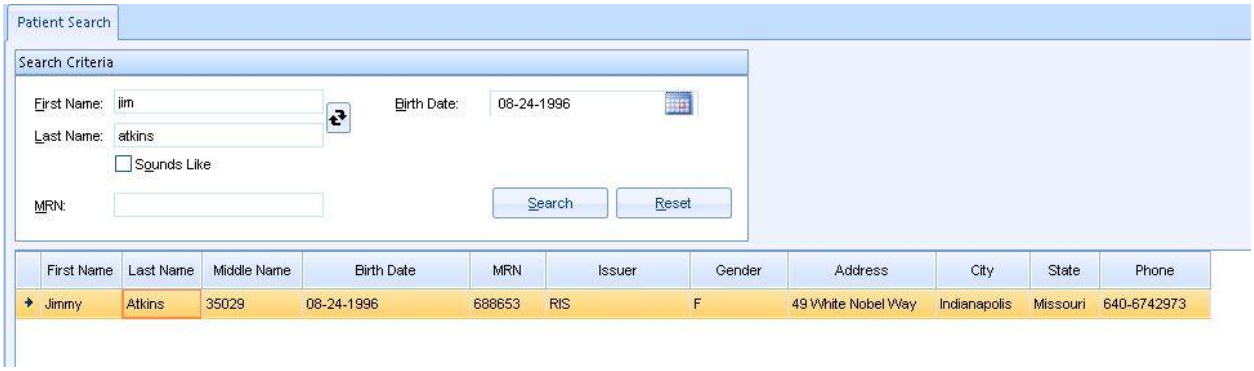

**Figure 4.7 – Patient Search Screen displaying search results**

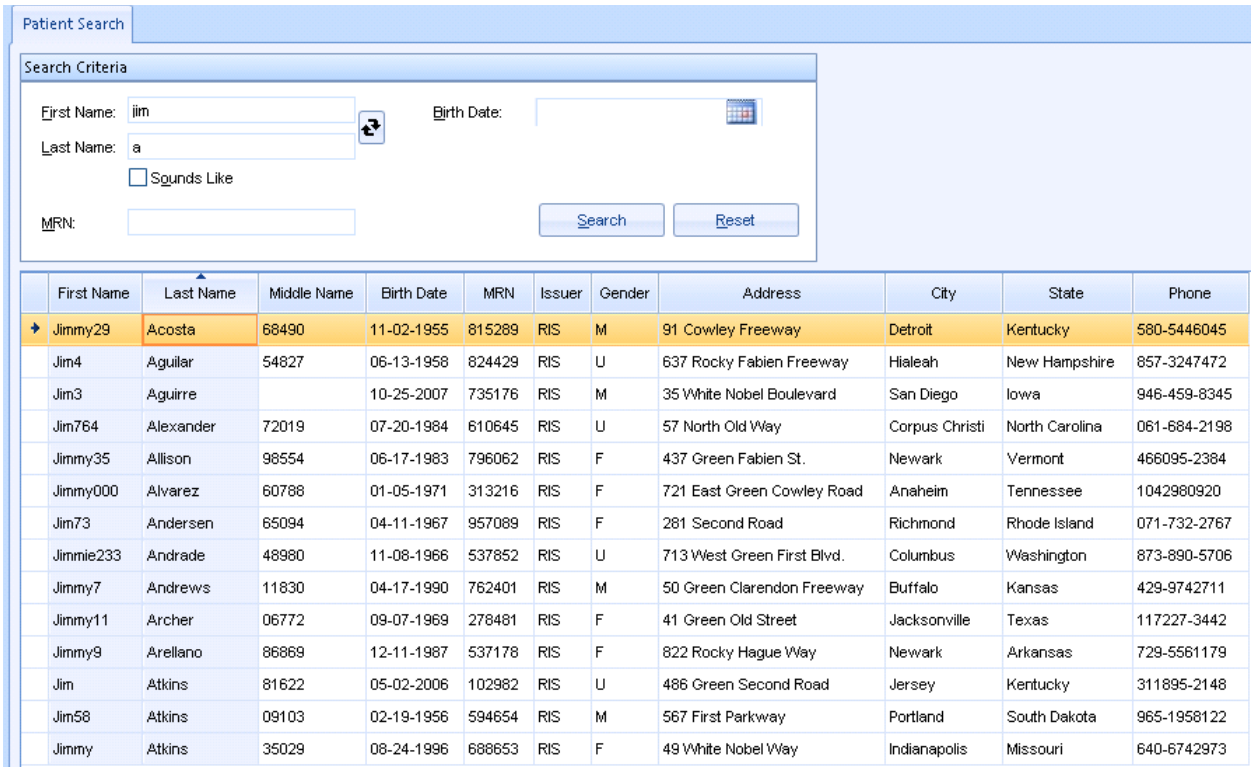
The Patient Search screen will allow the user to specify First Name, Last Name, Birth Date, and/or MRN as criteria. When querying the patient data table, the system will use a "Starts With" approach. For example, searching for First Name equals "jim" and last name equals "a" will return the following list of patients:



| First Name | Last Name | Middle Name | Birth Date | MRN | Issuer | Gender | Address | City | State | Phone |
|---|---|---|---|---|---|---|---|---|---|---|
| Jimmy29 | Acosta | 68490 | 11-02-1955 | 815289 | RIS | M | 91 Cowley Freeway | Detroit | Kentucky | 580-5446045 |

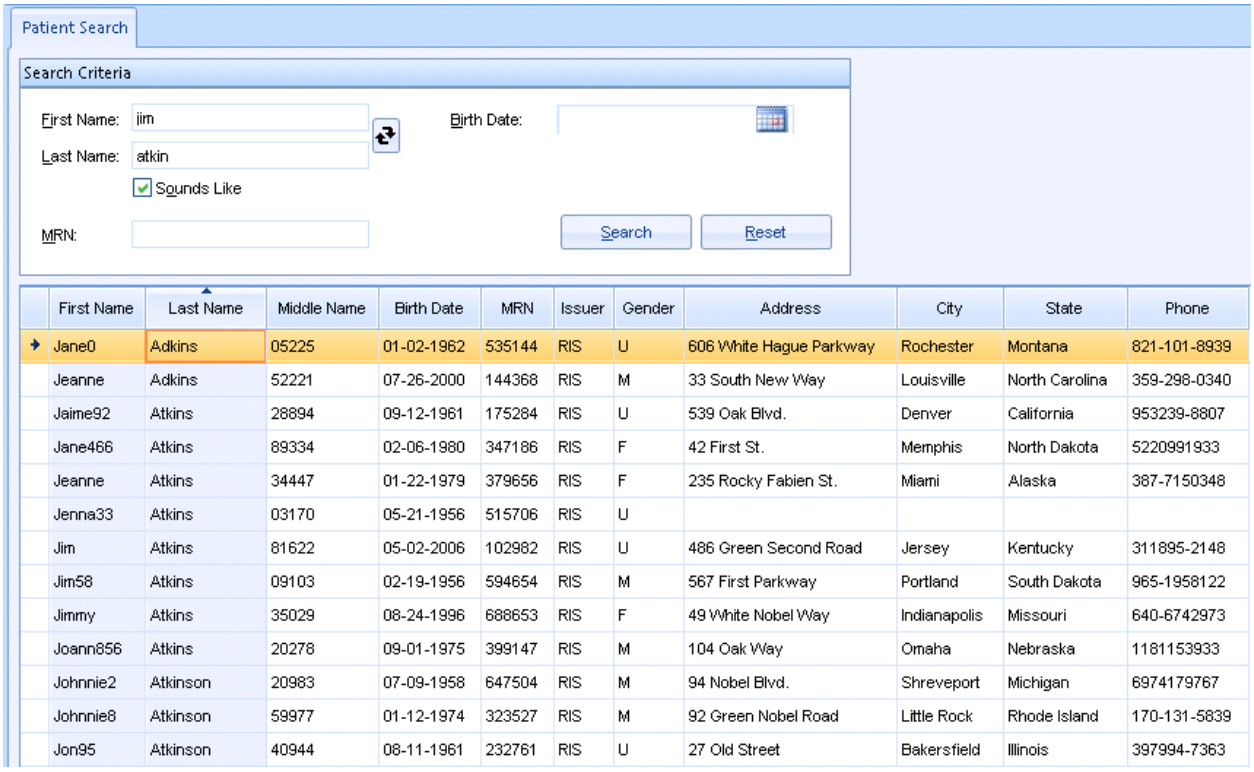
**Figure 4.8 – Specifying Search Criteria**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Patient Search supports a "Sounds Like" function. This is especially helpful if the user is having difficulties with the spelling of the patient's name. For example, searching for First Name equals "jim" and last name equals "atkin" with the Sounds Like feature enabled will return the following list of patients:



| First Name | Last Name | Middle Name | Birth Date | MRN | Issuer | Gender | Address | City | State | Phone |
|---|---|---|---|---|---|---|---|---|---|---|
| Jane0 | Adkins | 05225 | 01-02-1962 | 535144 | RIS | U | 606 White Hague Parkway | Rochester | Montana | 821-101-8939 |

**Figure 4.9 – Specifying Search Criteria using Sounds Like**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Custom Area Framework

There is a need for the ris system administrators to respond to the changing needs of the business and to make modifications to enhance operations. This level of customization will be accomplished through two editors:

1. The Data Model Editor, which will define which fields, their type, if they are required, validation rules, calculated fields in the model and default values.
2. The User View, which will define which control displays a piece of data and how it will look on the screen.

The Custom Area can be accessed by right-clicking on a custom form and selecting "Edit View".

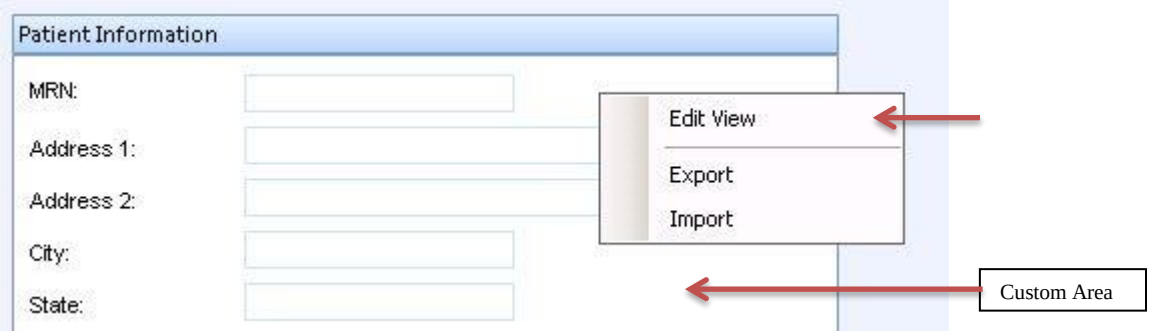

**Figure 4.10 – Editing Custom Area**

Editing a custom area will be based on the permission of the user and is typically a function of the RIS Administrator. The User View or Dynamic Form Editor allows the administrator to make modifications to the user screens of the application without having to affect the product source code. Here are some of the typical functions that will be performed with this editor:

1. Change the layout of the form such as tab order, field size, font size and color.
2. Add new controls such as Text Boxes and Check Boxes and map them accordingly to the proper field in the dataset.
3. Apply permissions to selected controls.
4. Apply business logic via default values, calculated fields, and specifying required fields.

An example could include a request to add an email field to the Patient Information custom area. Currently, the user must assume there is already a field in the ris database that will store an email at the patient level. In future releases, the ability to add custom fields separate from the ris core data model will exist. The following screen shots will illustrate adding a new Text Box and mapping it to the Patient table.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

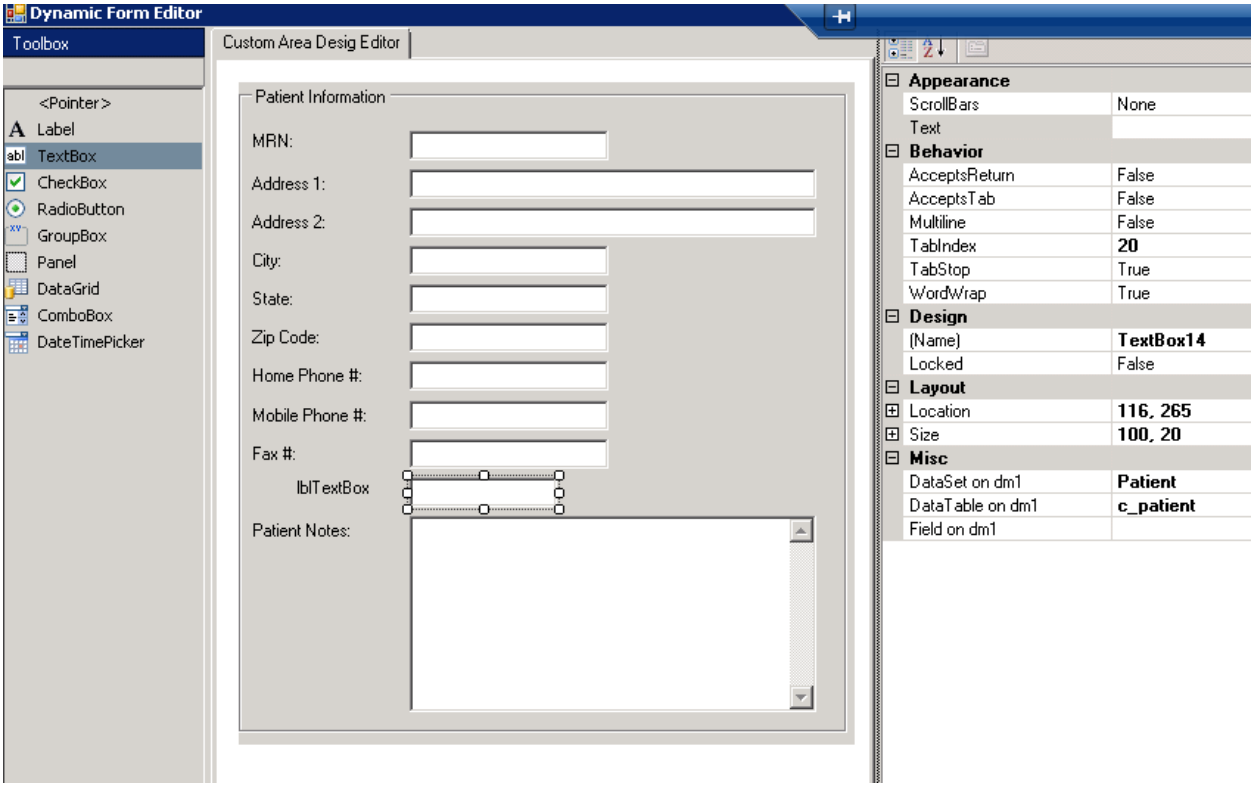

**Figure 4.11 – Adding a Text Box to a Custom Area**

By simply dragging a TextBox control from the Toolbox and placing it in the desired location on the custom area, the ris creates a new control with a corresponding label in the editor screen. To complete the control's configuration the user will complete the following:

1. Map the DataSet to Patient
2. Map the DataTable to c_patient
3. Map the Field to primary email address
4. Size the Text Box accordingly
5. Change the text of the label and align it
6. Adjust the TabIndex property
7. Save the changes

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

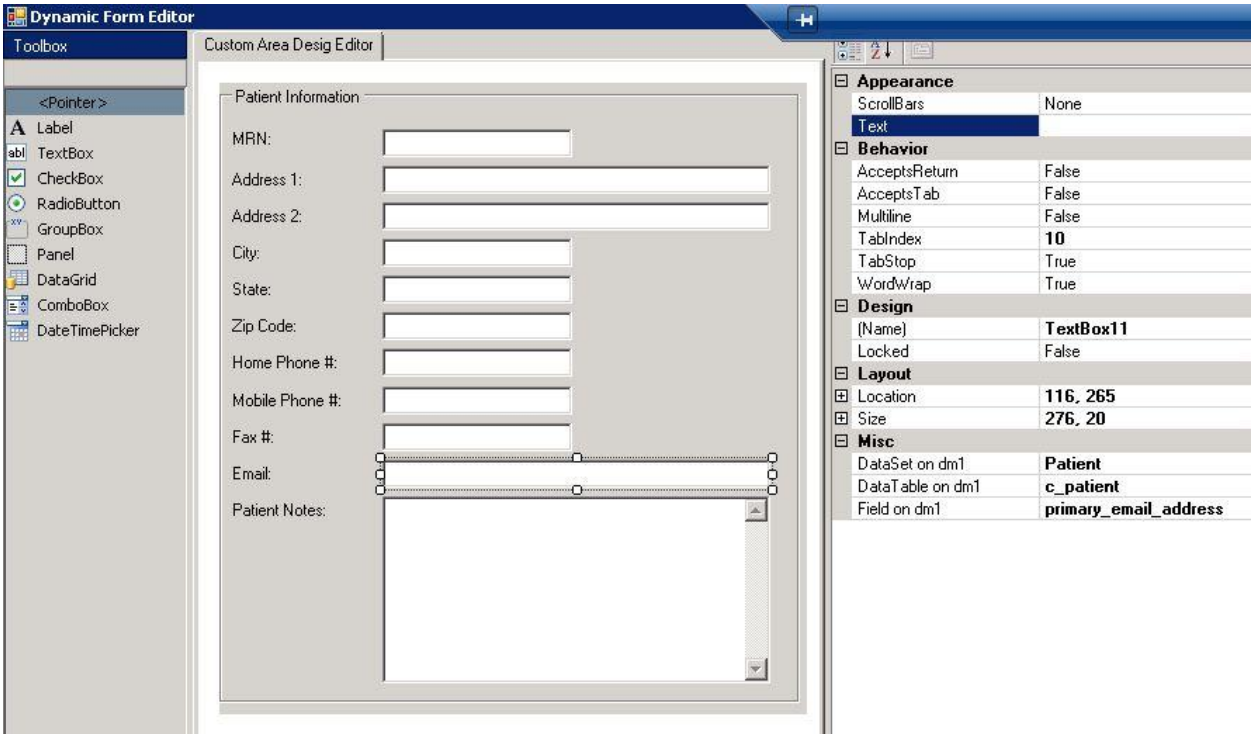

**Figure 4.11 – Configuring a Text Box**

Once the user has saved changes to the custom area, the system will display these changes in a preview mode so they can first be tested. Once validated, the user has the ability to publish the changes to the database so they are distributed to all ris users. The user also has the option to revert the changes.

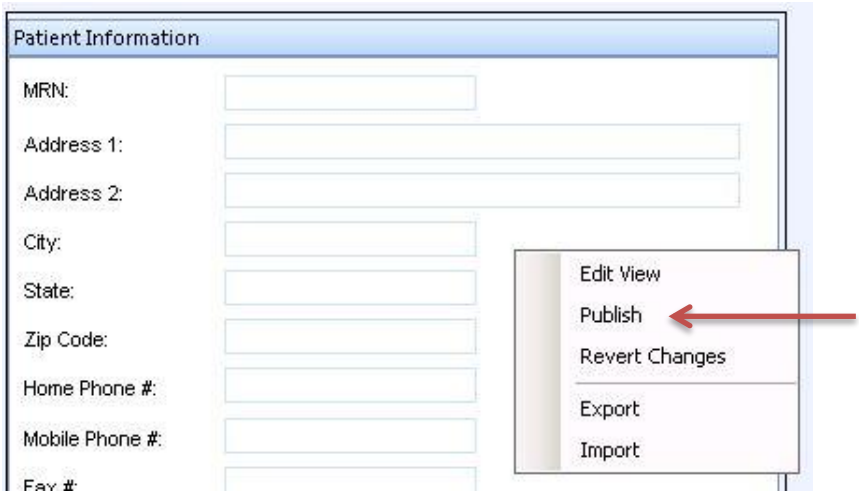

**Figure 4.11 – Publishing Custom Area modifications**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Adding a Patient

There is a framework in place for adding patients. Keep in mind that this is still in the early stages of development. By clicking on the "Add Patient" button, the user is presented with the Add Patient content area which as discussed previously is customizable. When adding the patient, the user can easily identify any required fields by the red line and exclamation mark on the left of the control. The system will prevent the user from committing the data until all required fields are filled in.

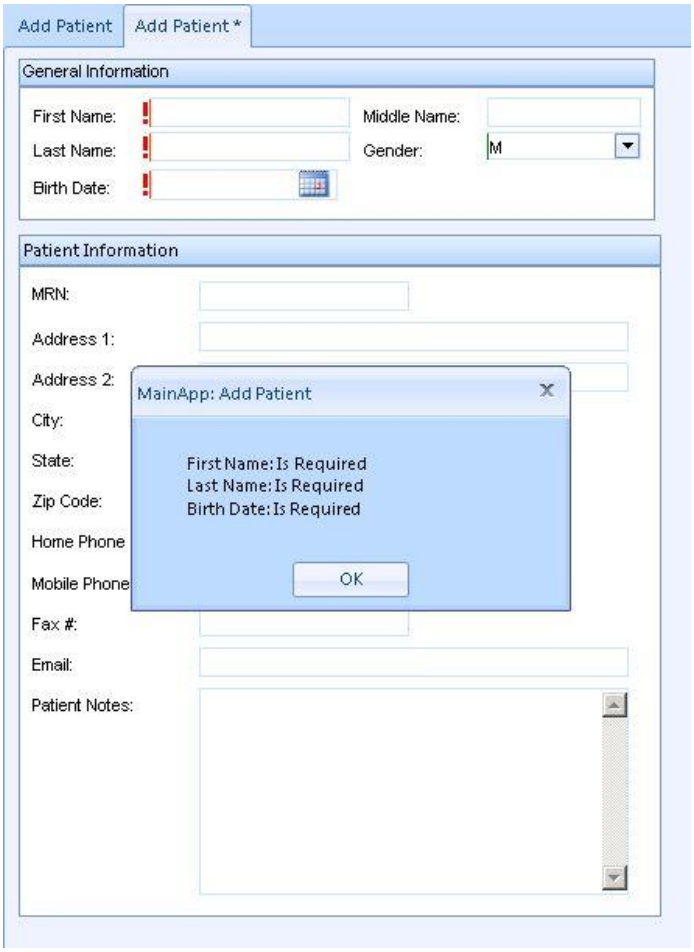

**Figure 4.12 – Required Fields**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

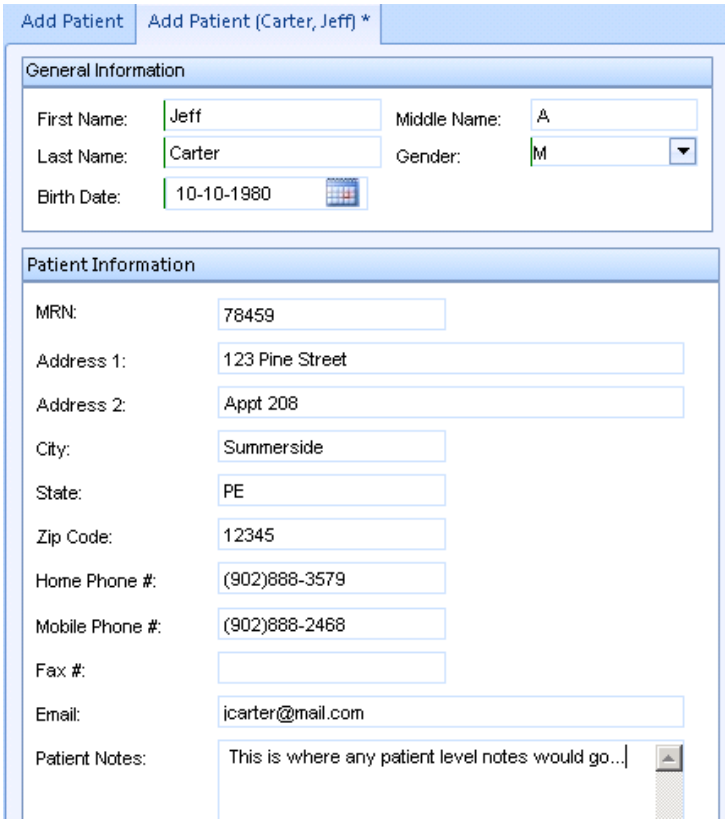

**Figure 4.13 – Add Patient Form**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Lookup Table Editor

The Generic Lookup Table Editor allows the user to edit cached lookup tables. It presents a list of lookups taken from the database. The user can edit a lookup by choosing an entry in the list and either double-clicking or pressing enter. The framework has been built in such a way that specialized editors can be added and launched on double-click instead of the standard grid, in this way the user will always visit the same place in the application to edit lookups, and there will be more consistency of look and feel.

The editor can be accessed by clicking on the "Lookups Editor" button on the application's Tool Bar. Here, the user is presented with the current list of lookup tables. This list will grow as the product matures. If for example the application requires a new status, it can be added here in the lookup table editor and then submitted to the database. The example below illustrates adding a "Confirmed" status to the status lookup table.

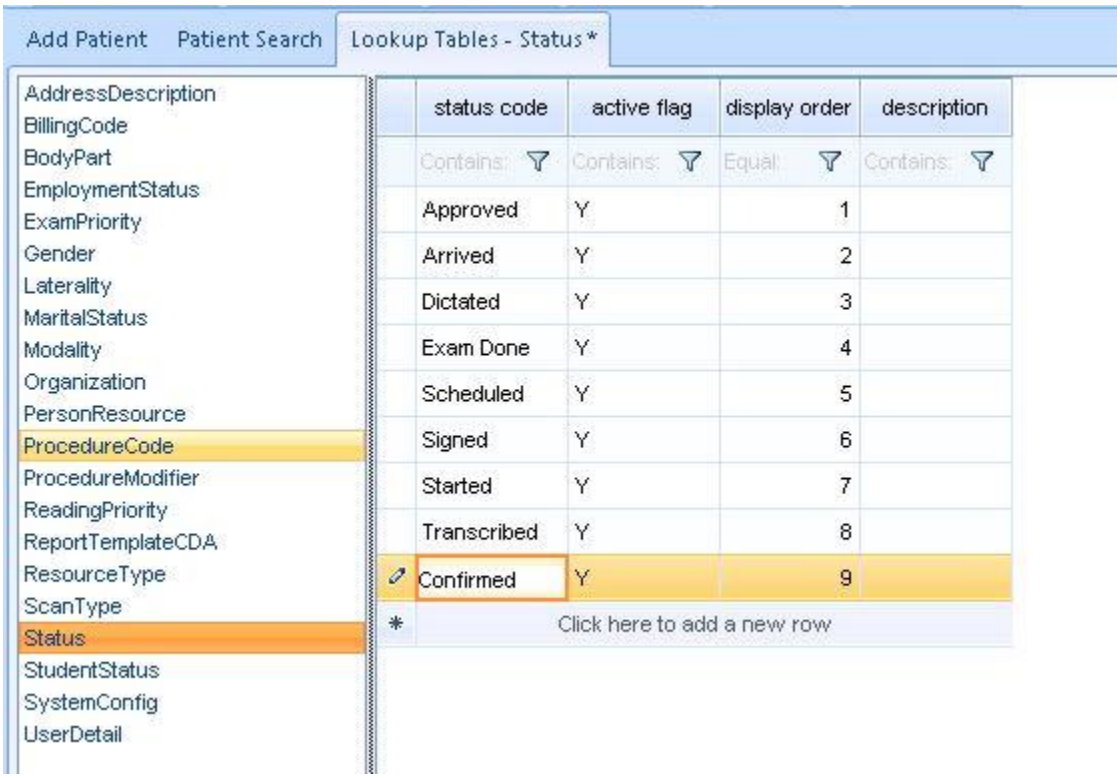

**Figure 4.14 – Add a new row to the Status lookup table**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Known Limitations

As rRIS is in the early development stages, there will be some known limitations to consider with pre-releases. Build 1.03 has the following limitations:

1. The user will receive an error if he or she performs a quick patient search while the main patient search screen is open.

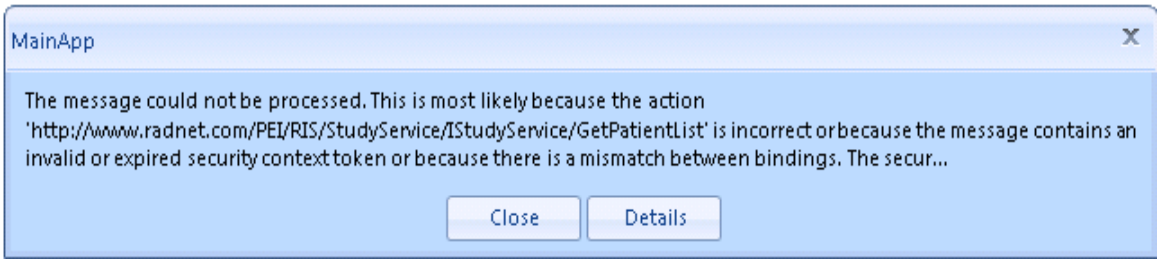
   This issue has been noted and resolved in Sprint 4. The user can simply select "Close" and proceed to use the application.

2. Cannot double-click on a selected row on the patient search results grid. This should bring up the Edit Patient screen but instead the following error occurs:

   This issue has also been noted and resolved in Sprint 4. The user can simply select "Close" and will be prompted to restart the application.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

3. There is an error that occurs on the Baltimore ris server that the development team does not experience in-house. If the user tries to use the ris after an extended time of inactivity, he or she may receive the following error:



This issue has been logged and is currently being reviewed by the development team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This document describes some of the new features and changes implemented in rRIS as of the end of Sprint 4. This pre-release version of rRIS is referred to as Build 1.04.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the rRIS Development team for the RADNET RIS management team.

# 3. Installing/Accessing the Application

The client installer for rRIS is still in the early development stages. For now, users can access the system by remoting to the rRIS test server in Baltimore as follows:

1. Start Remote Desktop Connection and specify IP 10.120.0.152
2. Username: Radnet domain account
3. Password: Radnet domain password
4. Double click the rRIS icon on the desktop or go to Start→All Programs→rRIS
5. Login User: terry
6. Login Password: ris

If you experience difficulties accessing the application, please do not hesitate to contact Spencer MacDougall with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Worklists

During this sprint, there has been considerable effort spent on building upon the existing worklist framework as it is a key area of the application. Some of the features areas which will be described in more detail below include:

- Custom toolbars per worklist
- Pass context of selected worklist row
- Support multiple filter criteria per worklist
- Support multiple statuses per worklist
- Patient driven worklist

### Custom Toolbars per Worklist

rRIS now has the ability to dynamically build what buttons are available for each worklist. For example, it makes sense to have the "Edit Order" button available for the Ordered Worklist but not for the Radiologist Worklist. When the Ordered Worklist is created, it can now be configured with what buttons should be available to the user.

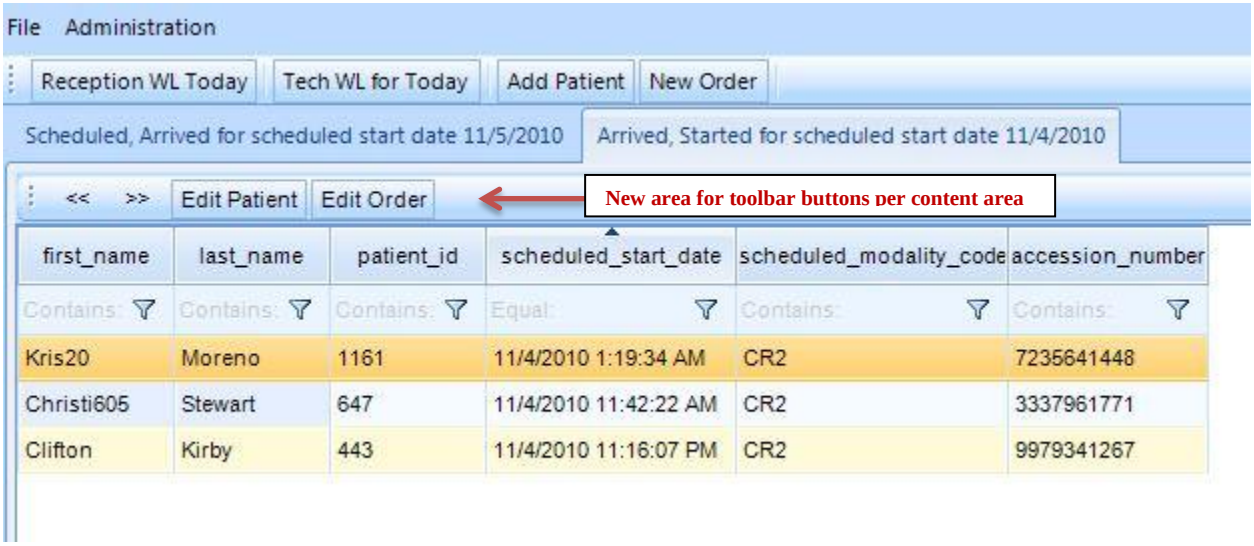

**Figure 4.1 – Worklist Custom Toolbar Buttons**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**Pass Context of Selected Worklist Row**

The application now has the ability to pass the context of the selected row to a screen. For example, selecting the "Edit Order" button from the worklist will open the Edit Order screen and load the dataset for the selected order. The ability to pass context from the worklist row is available from both a worklist button click and the worklist selected row double-click action.

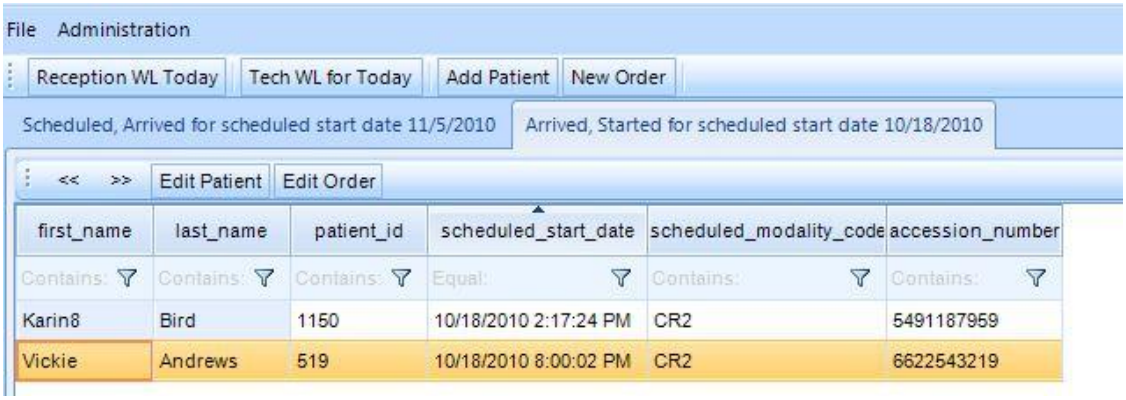

**Figure 4.2 – Arrived Worklist with Edit Order Button**

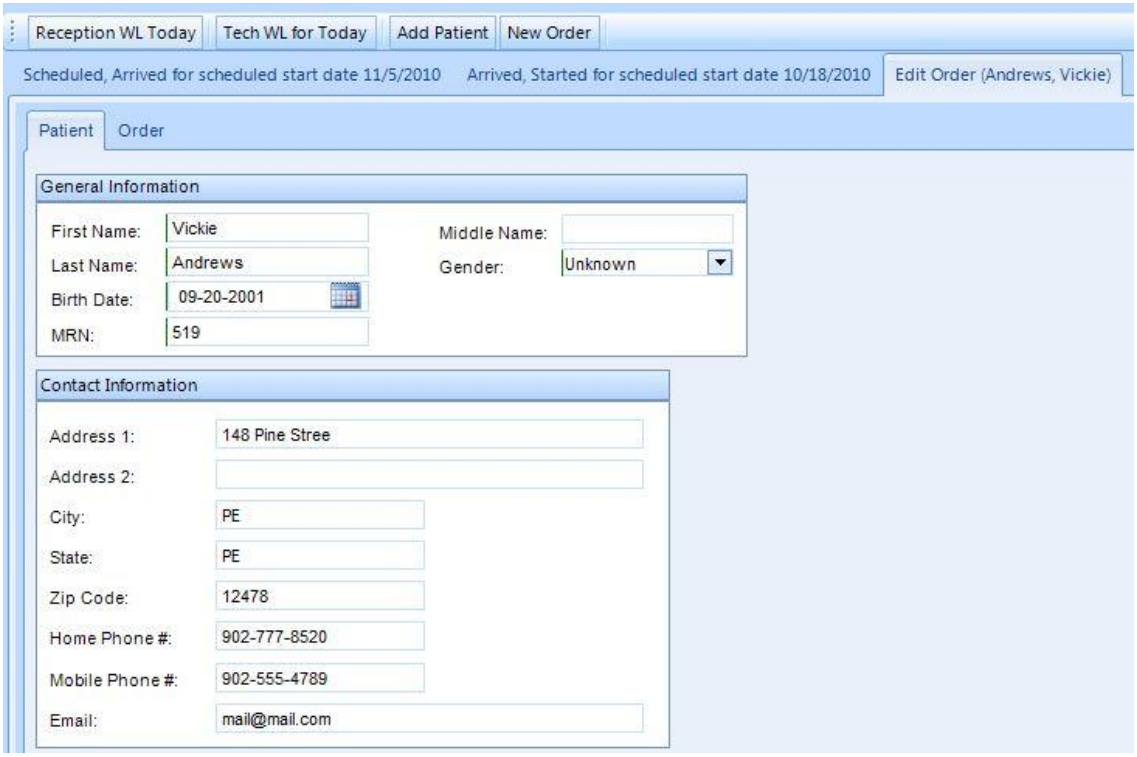

**Figure 4.3 – Edit Order Content Area with Patient and Order Context**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**Support Multiple Filter Criteria per Worklist**
This relates to the actual creation of the worklist. In the previous build worklists were limited to one filter (ex: Exam Priority = Stat). Now multiple criteria can be defined such as Modality Type = CT and Exam Priority = Normal as an example.

**Support Multiple Statuses per Worklist**
Currently, the following statuses have been defined in rRIS:

- OrderRequested
- OrderSigned
- OrderCancelled
- Scheduled
- Cancelled
- Arrived
- Started
- Discontinued
- ExamDone
- Dictated
- Transcribed
- Signed1
- Billed
- Approved

When worklists are defined, multiple statuses can be included in the worklist. For example, the Technologist worklist can be created to include Arrived, Started, and Discontinued statuses.

**Patient Driven Worklist**
Methods have been put in place that will allow the creation of a Patient Worklist. This method returns all patient exams regardless of study status or where the studies were performed.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Establish Core Screen Elements

In the previous build, all content areas were accessible and customizable by an administrative user at runtime. There is a requirement to lock down certain areas of these screens and establish these areas as the "Core" rRIS screens. For example, certain fields like a patient's name and gender will be required at all Radnet sites and will be locked down or coded into the content area screens. However, there will still be a customizable area on the content areas to allow for the unique needs across the Radnet organization. Below is an image of the Patient content area identifying both the core and customizable areas. Keep in mind that there is considerable effort remaining in the actual design of the screen.

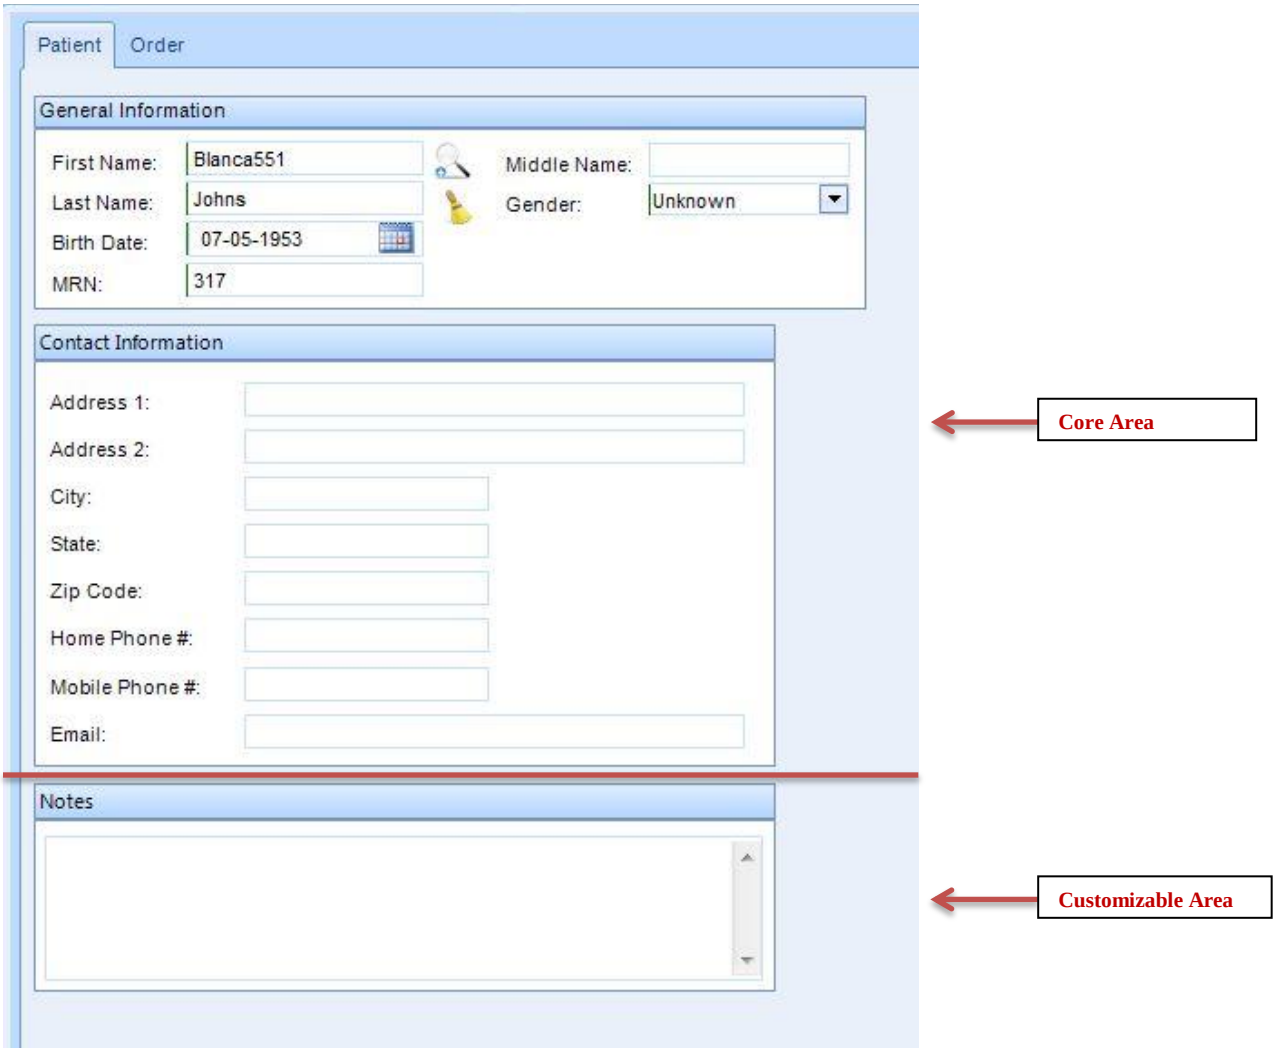

**Figure 4.4 – Patient Screen Showing Core and Customizable Areas**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Permissions Framework

A permissions framework has been created in this build that has been designed to accomplish the following:

- Establish permission levels (None, Full, and ReadOnly)
- The ability for developers to apply permission levels to rRIS controls suchs as screens, buttons, worklists, lookup tables, fields, etc.
- Apply permissions to user groups. A user can belong to one or more user group. If the user belongs to multiple groups then the user will have the highest level access to the item over all of the groups. So that if their 1st user group has Level.None and their second user group has Level.Full they will receive Level.Full access.
- Apply permissions to individual users. If the user doesn't belong to any groups or if the access_string hasn't been assigned to that group then the user will receive the default access level code as described in the l_access_string table for that access string.
- A lookup table (l_access_string) to store permission strings

For this build, any changes made to the AccessString lookup table will be applied to all users until the ability to apply permissions to users and user groups has been completed. For example, setting the "Clinical.NewOrder" string to None, will take hide the New Order button from the user.

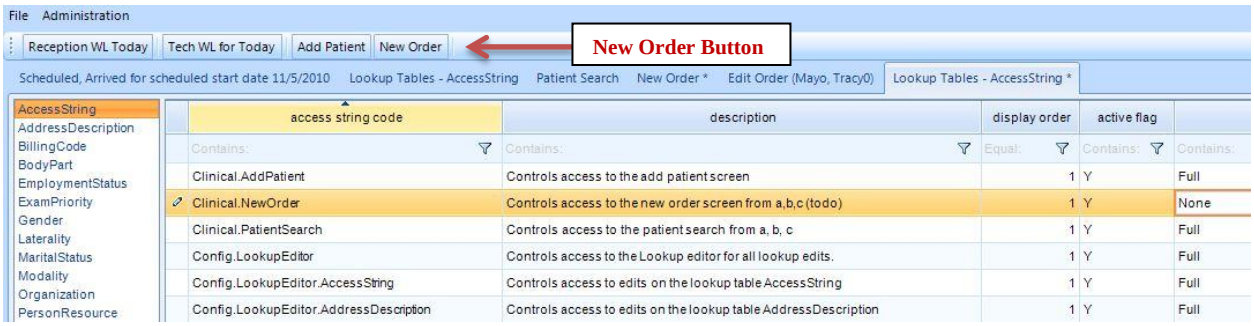

**Figure 4.5 – Disabling the New Order Screen Permission**

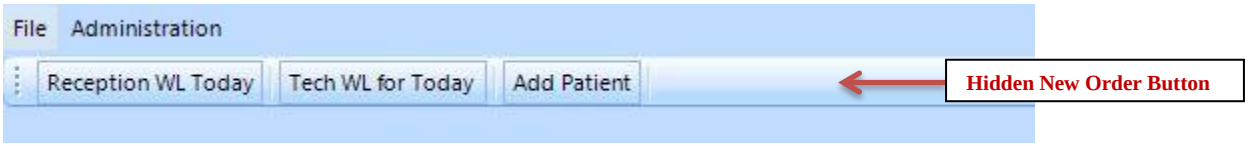

**Figure 4.6 – Hiding the New Order Button**

The permission framework can also grant read-only access to rRIS screens and fields. This is very useful for example if the radiologists group would like to have the ability to view the order or patient screens but administrators do not want them to have the ability to edit the data.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Locking Framework

rRIS requires a locking framework to prevent two users from editing the same study or order at the same time. The framework supports locking with automatic lock refreshes, releasing a lock when it is no longer required, and overriding the lock of another user. Additionally, the web services must throw an exception if a user tries to update data without the required lock.

The application will not retrieve the study data when a failure to obtain a requested lock occurs. The returned lock result will indicate the failure and the user_ID/workstation information for the current lock holder.

The GUI presents a message to the user indicating that a lock could not be obtained and prompts the user to specify whether they wish to view a readonly copy of the data, break the lock, or cancel. If the user clicks "Cancel" the form (e.g. EditOrder) will close. If the user chooses "ReadOnly", Edit Order will open a readonly copy of the data. If the user wishes to override the lock, the GUI will make an OverRideLock call using the LockItemCode and WorkstationID of the LockResult that was returned when the lock failed. After overriding the lock, the GUI will then make the initial GetStudyData call over again, and display the data as before.

**Figure 4.7 – Attempting to Obtain Lock Message**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## User Management Screen

A user management framework and a basic screen to manage users have been developed. The ability to add and configure users with this screen will be introduced in the next build.

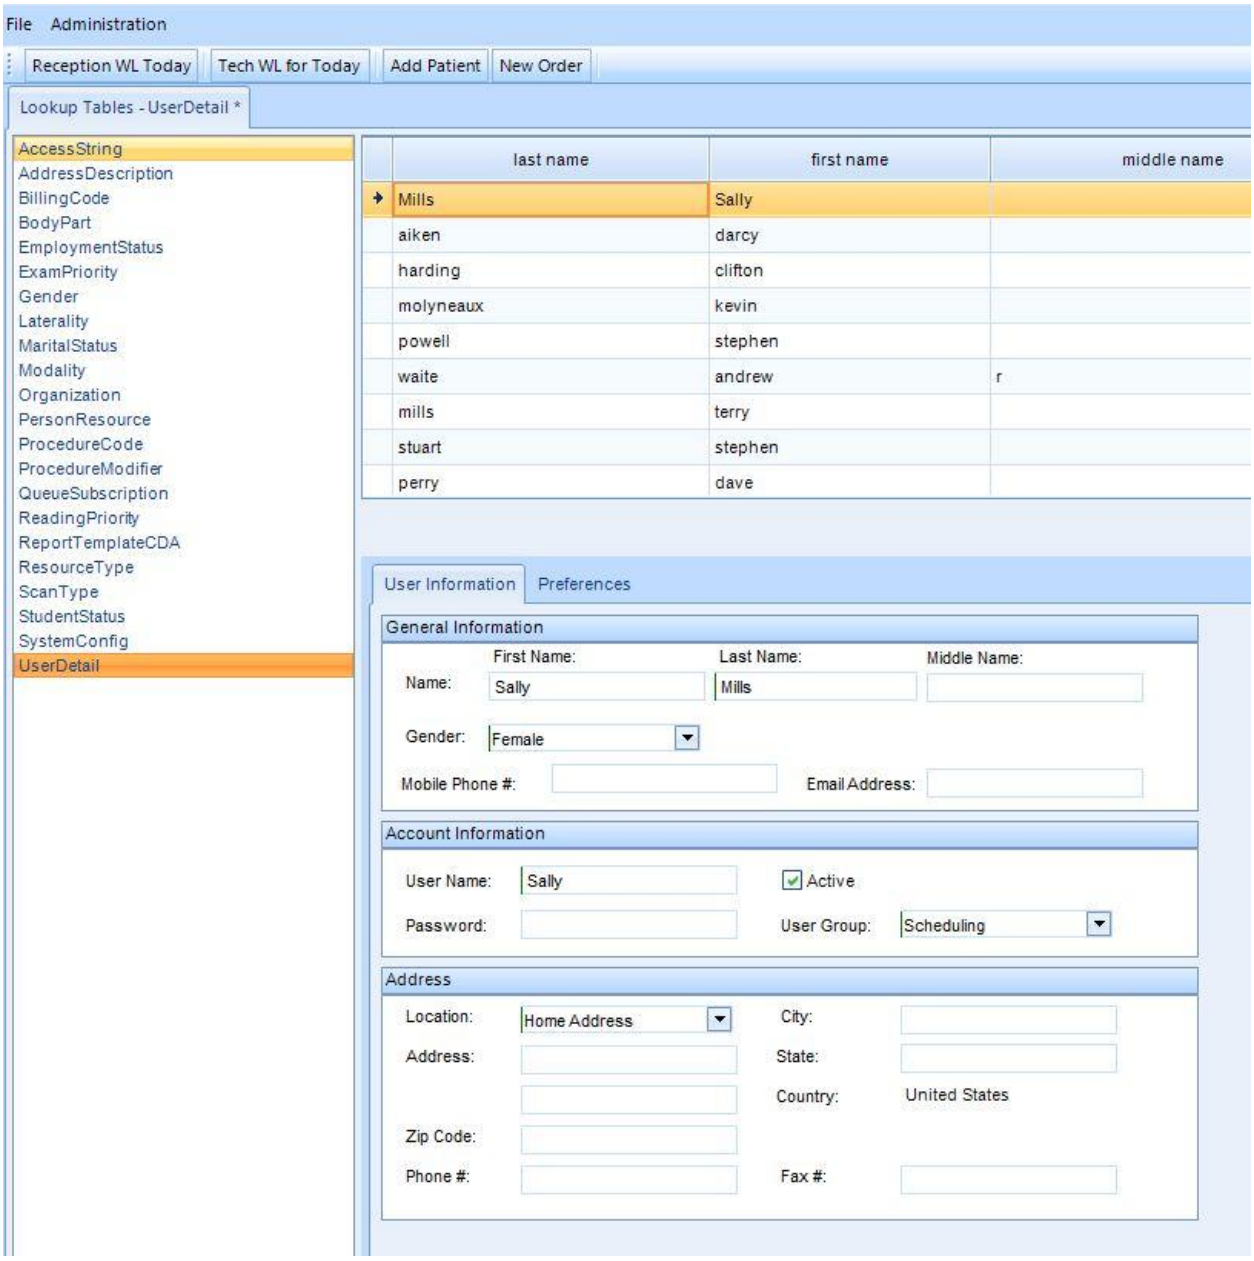

**Figure 4.8 – User Management Screen**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Known Limitations

Bugs, Suggested Features, and Support Issues are now tracked in a web based system called Redmine. The following is a snapshot of the issues list as of the end of Sprint 5.

| # | Status | Tracker | Priority | Subject | Assigned to | Category | Version |
|---|---|---|---|---|---|---|---|
| 13 | Resolved | Bug | Normal | Content Areas with missing required fields are getting marked as dirty | Kevin Molyneaux | Thick Client GUI | 1.04 |
| 12 | New | Bug | Normal | Modifying exisiting or adding a new user causes exception | Andrew Waite | Admin Tools | 1.04 |
| 11 | Resolved | Bug | Low | Selecting "Cancel" when trying to obtain a lock results in constant hour glass | Darcy Aiken | Thick Client GUI | 1.04 |
| 10 | Resolved | Bug | Normal | Clinical.PatientSearch permission is not functioning | Kevin Molyneaux | Thick Client GUI | 1.04 |
| 9 | Resolved | Bug | Normal | Closing Login Screen using "X" on the Control Box results in error | Darcy Aiken | Thick Client GUI | 1.04 |
| 8 | Resolved | Bug | High | Non-nullable fields are not being enforced by the GUI Custom Areas | Kevin Molyneaux | Thick Client GUI | 1.04 |
| 7 | Resolved | Bug | Normal | Prompted for required fields right away when adding a new user | Andrew Waite | Admin Tools | 1.04 |
| 6 | Resolved | Bug | High | Keep getting prompted to save Custom Area changes | Kevin Molyneaux | Thick Client GUI | 1.04 |
| 5 | New | Bug | Low | Calendar control is unuseable when running the application remotely | Stephen Powell | Thick Client GUI | 1.03 |
| 4 | Resolved | Feature | Normal | Patient Quick Search should be synchronized with Patient Search Screen | Kevin Molyneaux | Thick Client GUI | 1.03 |
| 3 | Resolved | Bug | Normal | Patient Quick Search needs to be configurable | Kevin Molyneaux | Thick Client GUI | 1.03 |
| 2 | Resolved | Bug | Normal | When WCF is down, require better message to user | Darcy Aiken | Web Services/DB | 1.03 |
| 1 | Resolved | Bug | High | Invalid or expired security token error | Darcy Aiken | Web Services/DB | 1.03 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Enhancements to Lookup Table Editor

The Lookup Table Editor has been expanded in Sprint 5 to account for the following improvements. Please note that these changes have been implemented in the UserGroup lookup table only for Sprint 5. Remaining tables will follow suit in future builds.

1. Validate the data so the user cannot save invalid data such as a duplicate name. The error is shown in the status bar and the user simply clicks on it and is taken to the row with the failed validation.

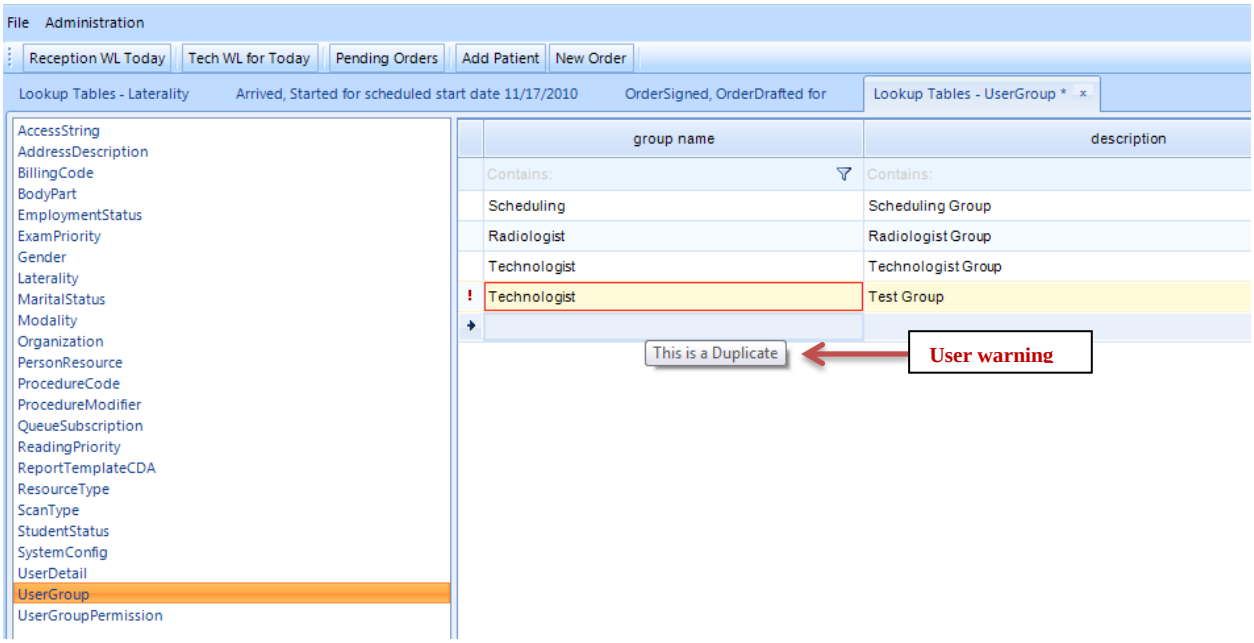

**Figure 4.1 – UserGroup Lookup Showing Duplicate Name Warning**

2. Default values have been applied to new rows so a field like Active can automatically be set to "Y" by default, saving the user from having to set it manually for every new row.

3. User is prompted when trying to save any rows with missing required fields.

4. When a user clicks on a new row by mistake, the system will not prompt the user to save changes if no changes have been made to the new row.

5. If a user attempts to filter the lookup and add a new row, the default value is based on the filter criteria.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

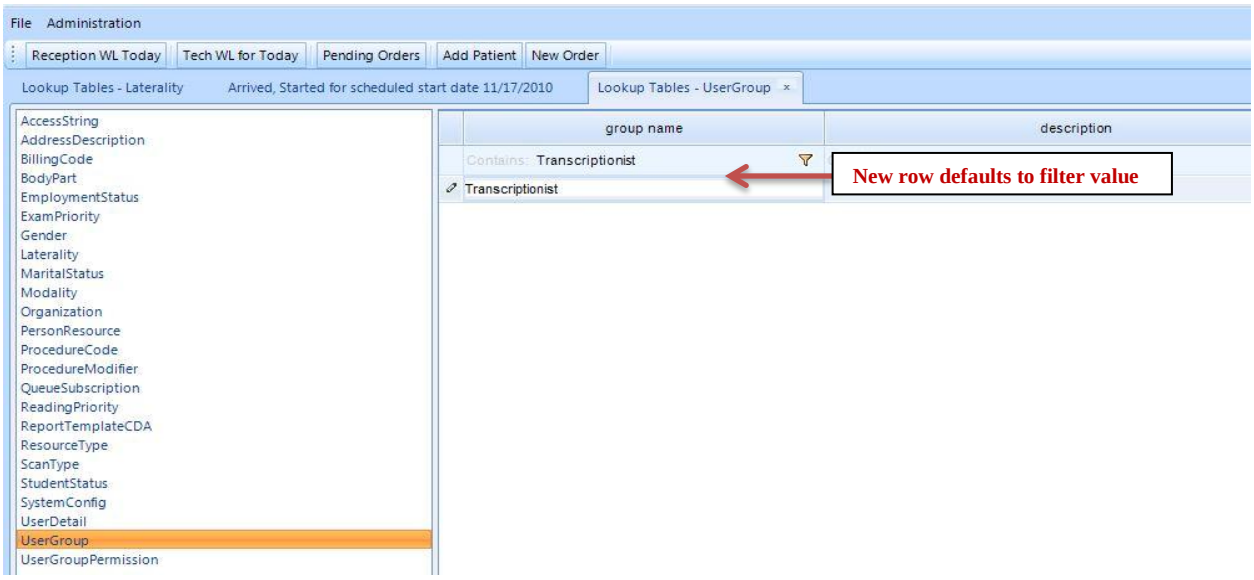

**Figure 4.2 – UserGroup Lookup Showing New Row Based on Filter Criteria**

6. User is prevented and displayed a message when trying to delete a lookup table row with entries that are referenced in the database.

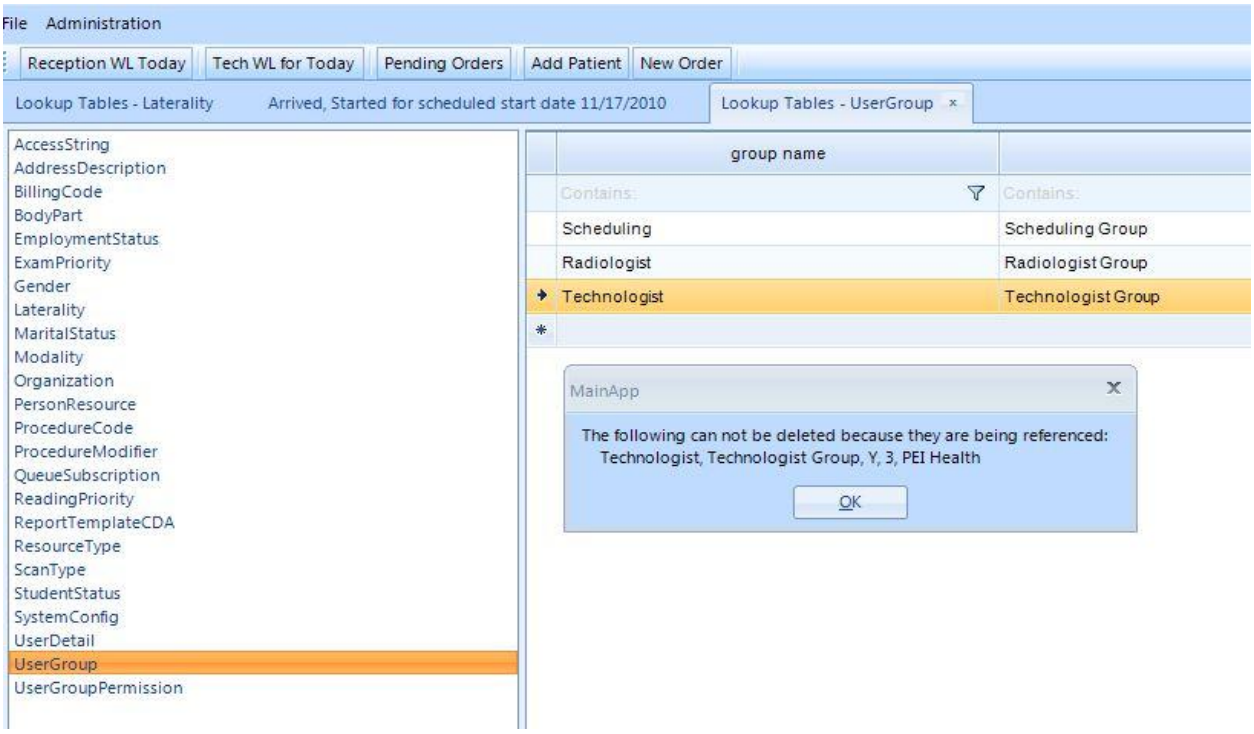

**Figure 4.3 – UserGroup Lookup Showing Referenced Row Message**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## User Manager

The UserDetail screen in rRIS is where the system administrator will add, modify, or mark users as inactive. In the rRIS data model there are Persons, Resources, and Users. A Person can be a User, Resource, or both. Examples of Resources are technologists, transcriptionists, or referring physicians. The UserDetail screen is limited to Users only and does not include Resources unless the Person is both a User and a Resource.

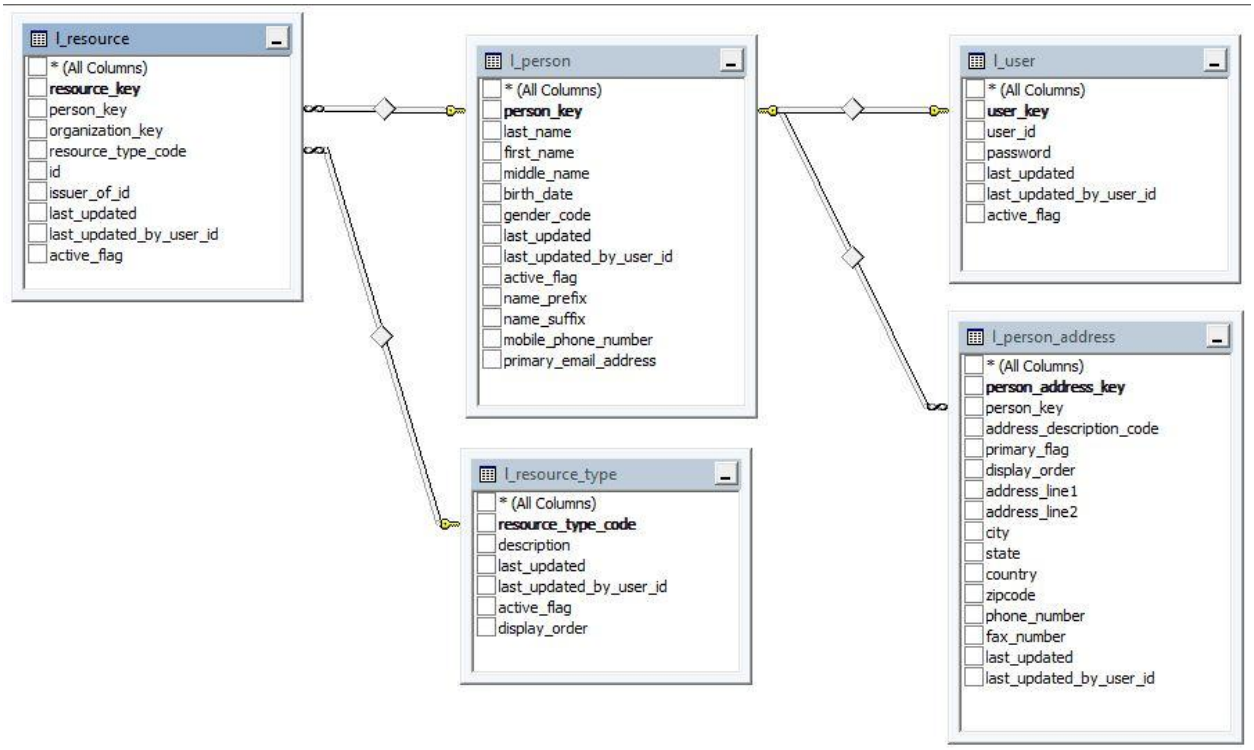

**Figure 4.4 – User Data Model**

Adding a new user can be accomplished by simply clicking the "New User" button on the UserDetail screen. The application will prompt the user to first search for the new user to see if he or she already exists in the system as a Person/Resource. For example when adding "Jim Smith" as a new user, the search will return Jim Smith as he is already set up as a referring doctor. Simply clicking "Add User" will populate the user screen with Jim Smith's information. Once required fields like User Name, User Group, and Password are completed Jim Smith is saved as a user and may begin using the application. The system can be configured to validate a user against Windows Active Directory or utilize the username and password stored in the rRIS database.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

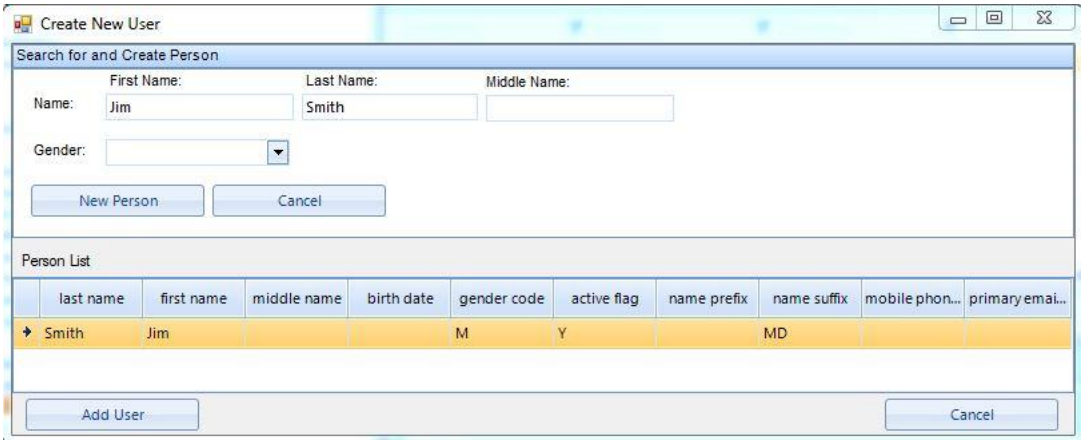

**Figure 4.5 – New User Person Search**

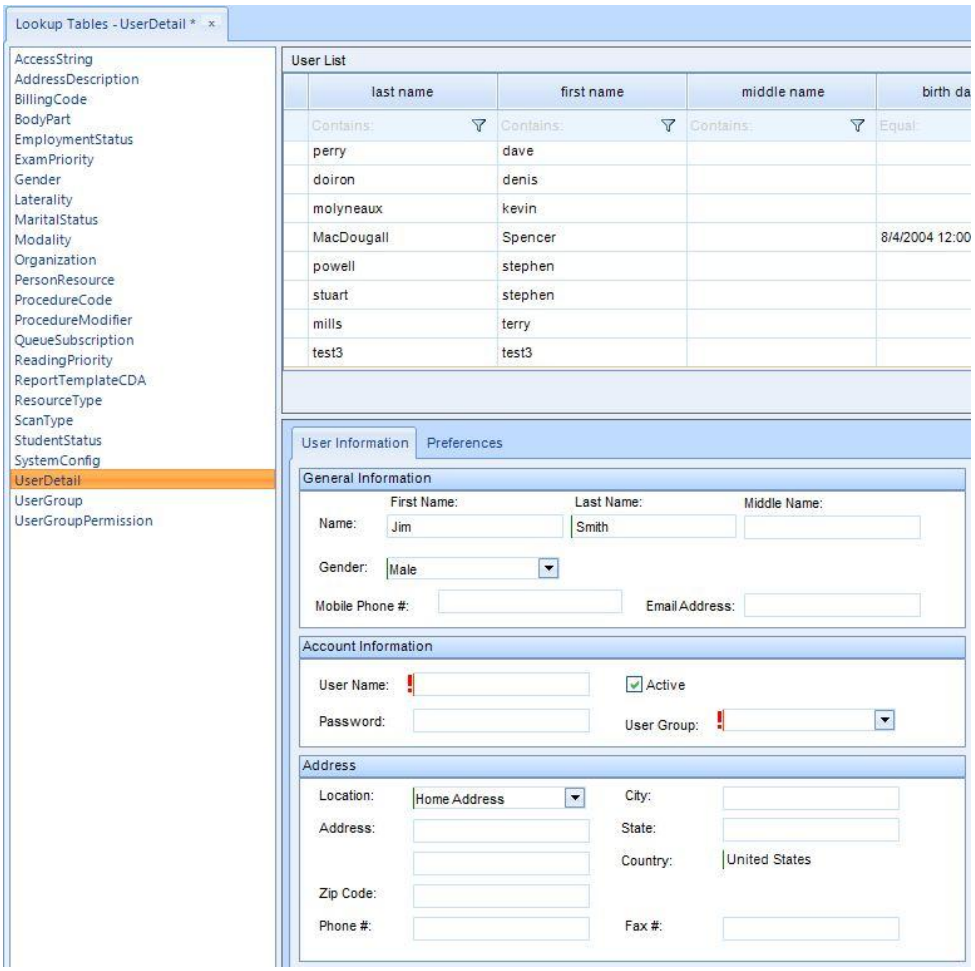

**Figure 4.6 – New User Details if Person Already Exists**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

If the Person Search does not return the person that needs to be setup as a user, simply clicking "New Person" will allow the setup of a new person and user details simultaneously.

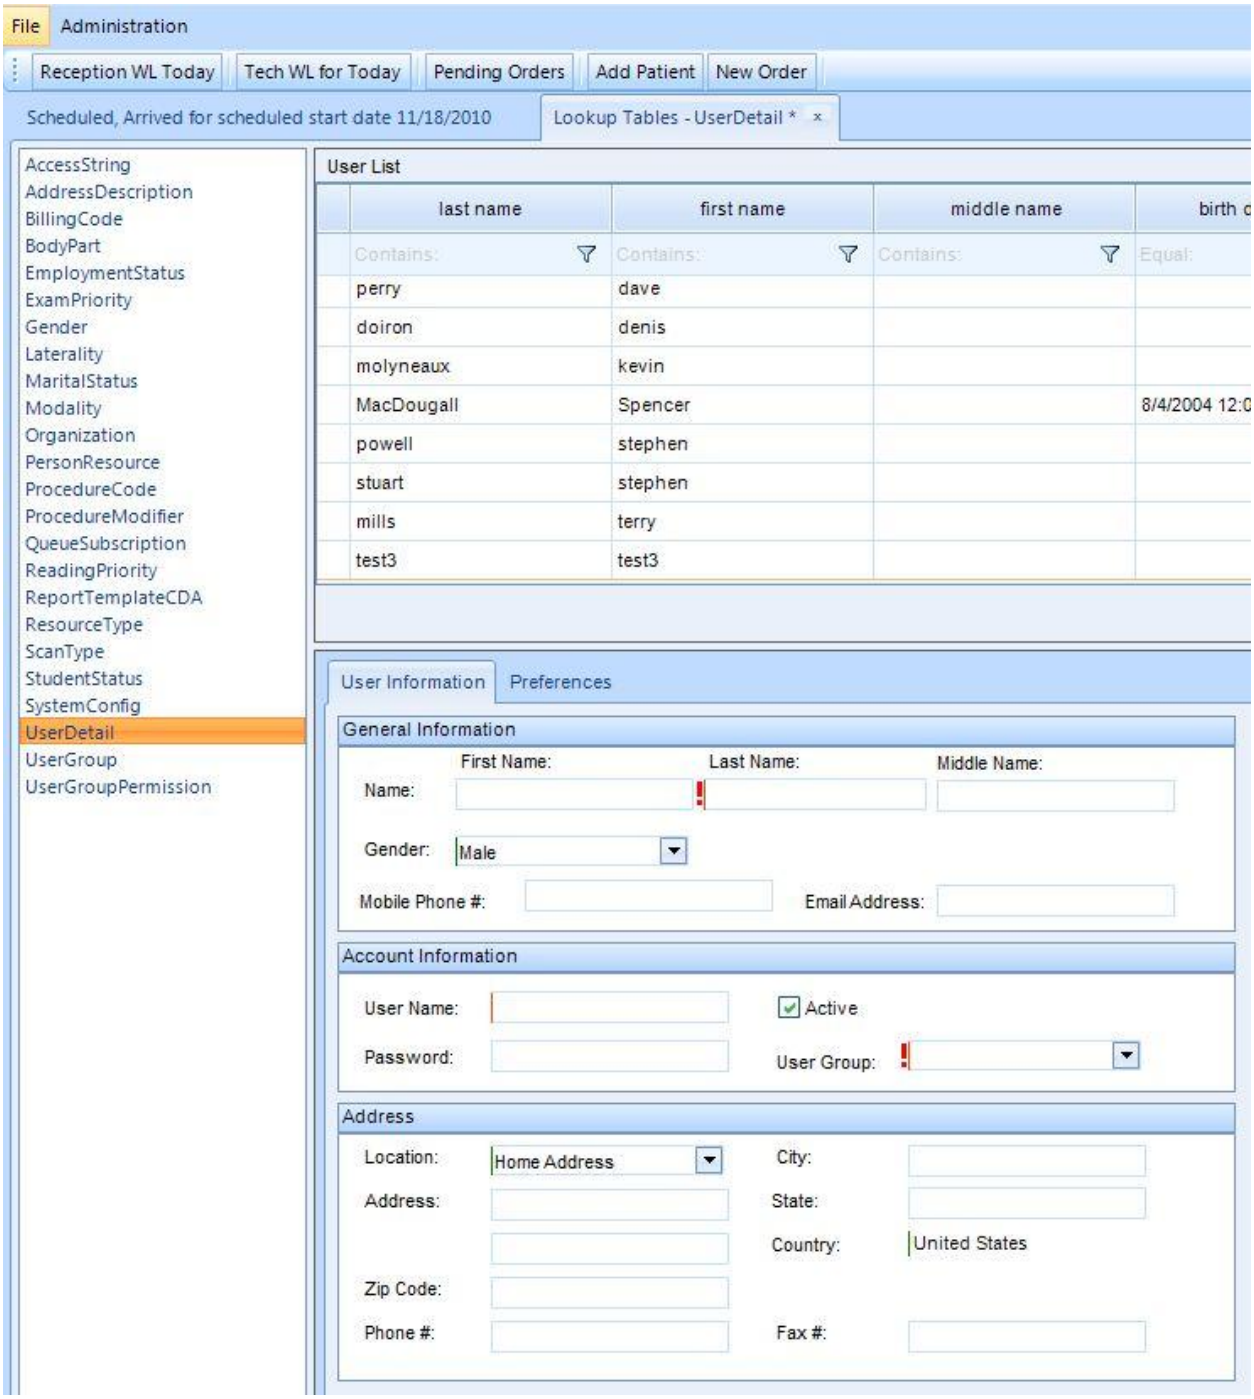

**Figure 4.7 – New User Details if Person Does Not Exist**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## User Groups and User Group Permissions

User Groups have been introduced in this release. Currently, a user can only belong to one user group set in the UserDetail screen. In a future release, this will be expanded so a user may belong to one or more user groups.

Permission overrides can be set at the User Group level using the UserGroupPermission lookup table. For example, if technologists are not permitted to create or edit orders then the appropriate access string codes can be set to "None" to hide the order functionality.

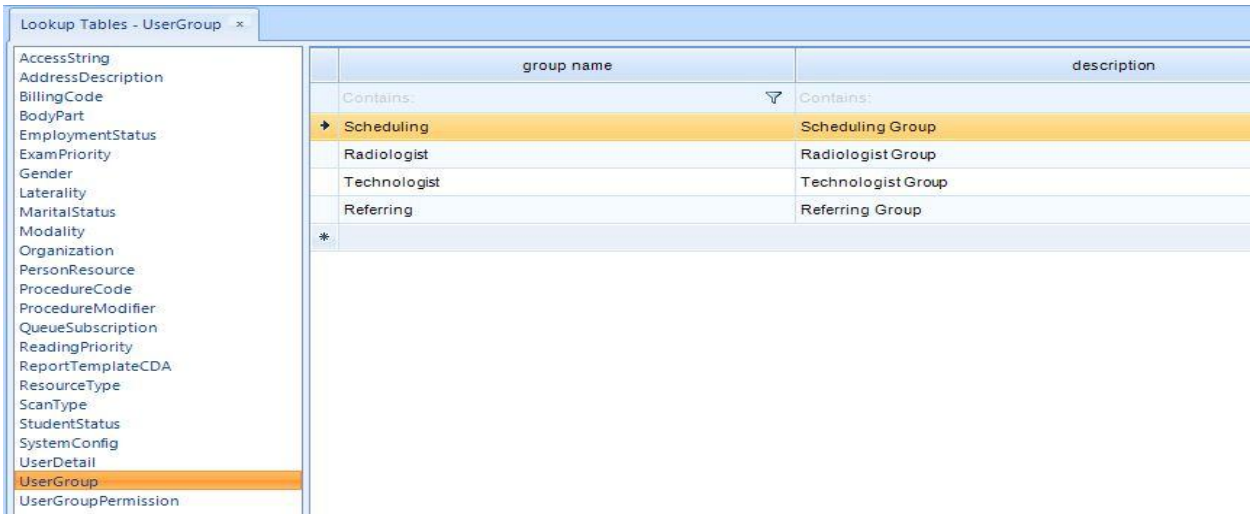

**Figure 4.8 – UserGroup Lookup Table**

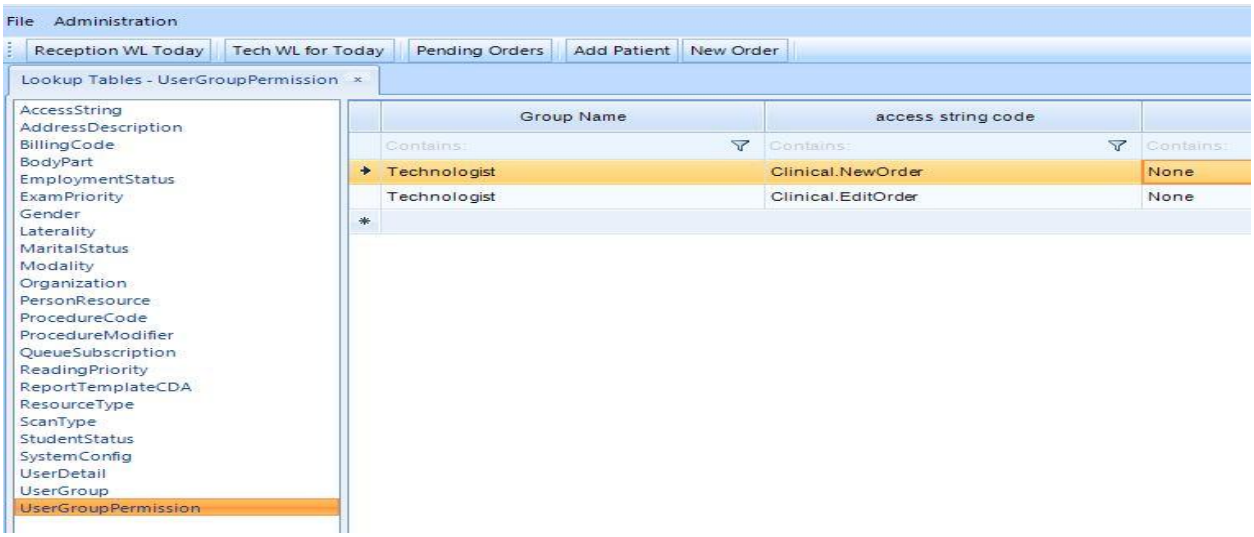

**Figure 4.9 – UserGroupPermission Lookup Table**

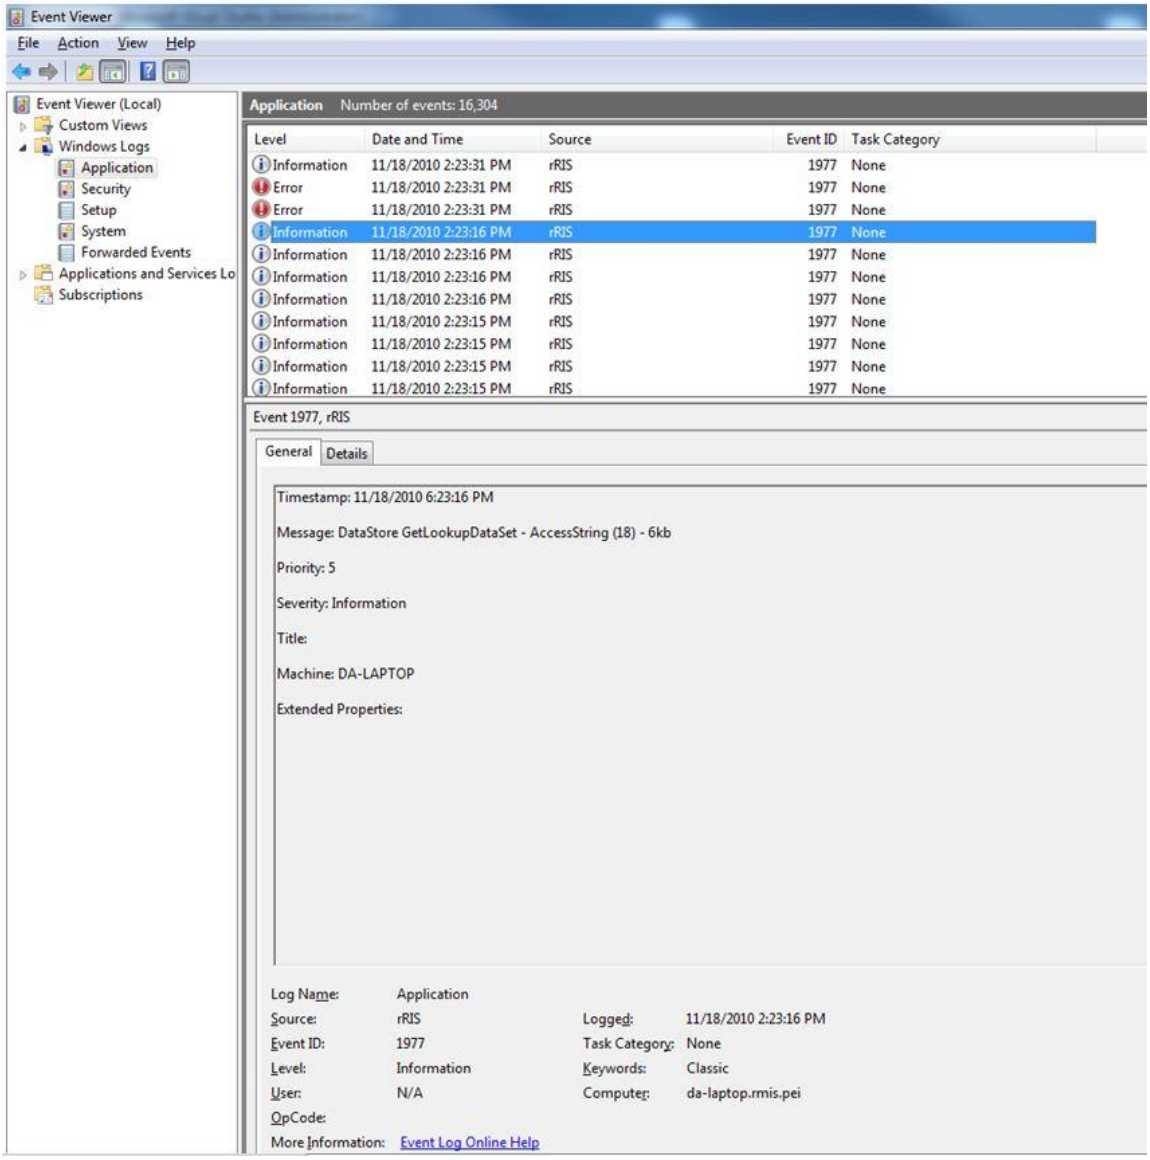
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Logging Framework

rRIS requires a logging framework to help administrators and the development team to troubleshoot the application. The client and the server will both utilize the logging framework to persist logging messages to the Windows Event Viewer. The development team have been coding the application with logging in mind to properly capture critical errors, warnings, relevant information, etc. Through configuration settings, logging can be disabled, the logging level can be set, or the destination of the log files (flat file, xml file, event viewer, database, etc.) can be set.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**Figure 4.10 – Event Viewer Showing rRIS Logging Information**

## Close Tab Button

Tabs now have a close button which will only show on the active tab or when the user hovers the mouse pointer over the tab. The tab is closed when the "x" button is pressed.

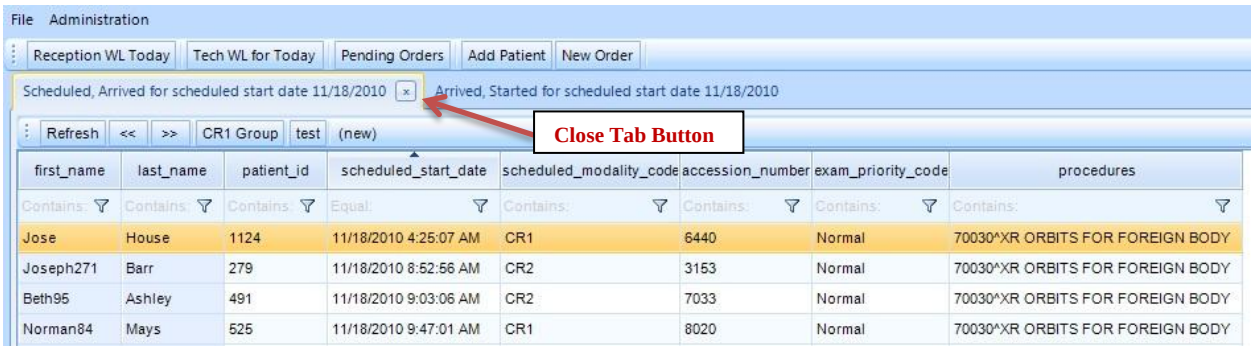


**Figure 4.11 – Close Tab Button on Scheduled Worklist**

## Procedure Picker

rRIS requires the ability to pick several procedure codes when placing an order or scheduling and for each procedure code to specify a laterality and/or body part. Some procedures will require the user to specify a laterality or body part as defined in the lookup table Procedure Codes. Also, some procedures will have a default laterality and or body part as described in the Procedure Codes table.

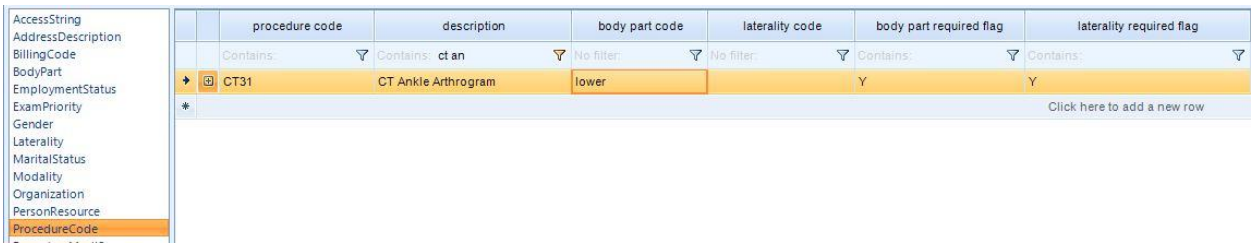

**Figure 4.12 – ProcedureCode Lookup with Body Part and Laterality Required**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

The control "MultiTypeAhead" was used in the orders screen such that the user can add procedures by typing in the name of the procedure. As the user types the possible matches are presented and can be selected from a dropdown. Selection can be made by:

- Tabbing away from the control
- Selecting the enter key
- Selecting the space bar
- Selecting the comma key

If the user has a selection made, it will appear in a square area with an 'x' on the end. Clicking on the 'x' at the end or pressing the "backspace" key will delete the existing procedure codes.

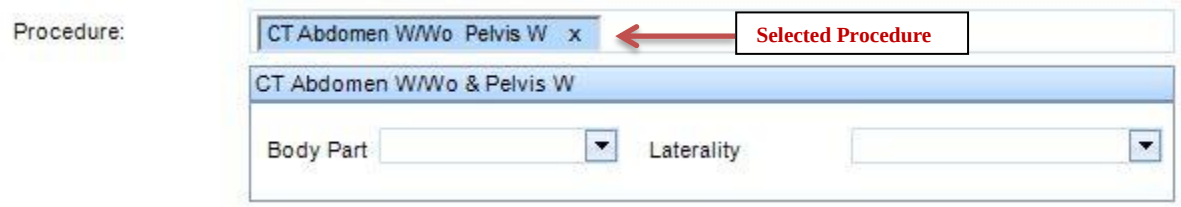

**Figure 4.13 – Procedure Picker with CT Abdomen Selected**

The user can also use the arrow keys to change the selected procedure code. When the selected procedure is changed the area below will show the laterality and body parts selected for that procedure and if any validation errors exist they will display and the user will be unable to move to another procedure till those validation errors are resolved. If there are any defaults specified for body part and laterality per procedure code, they will automatically display when that procedure code is selected.

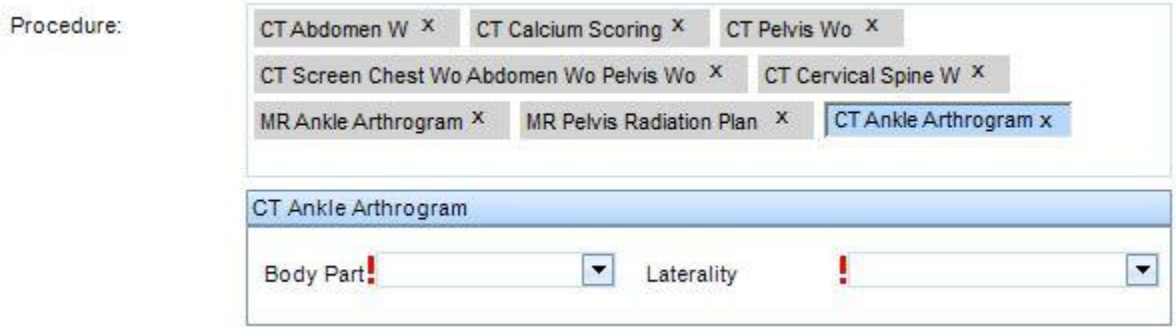

**Figure 4.14 – Procedure Picker with Body Part and Laterality Required**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

As the user adds additional values to the procedure code area the text entry box will grow and move other items on the screen down as needed.

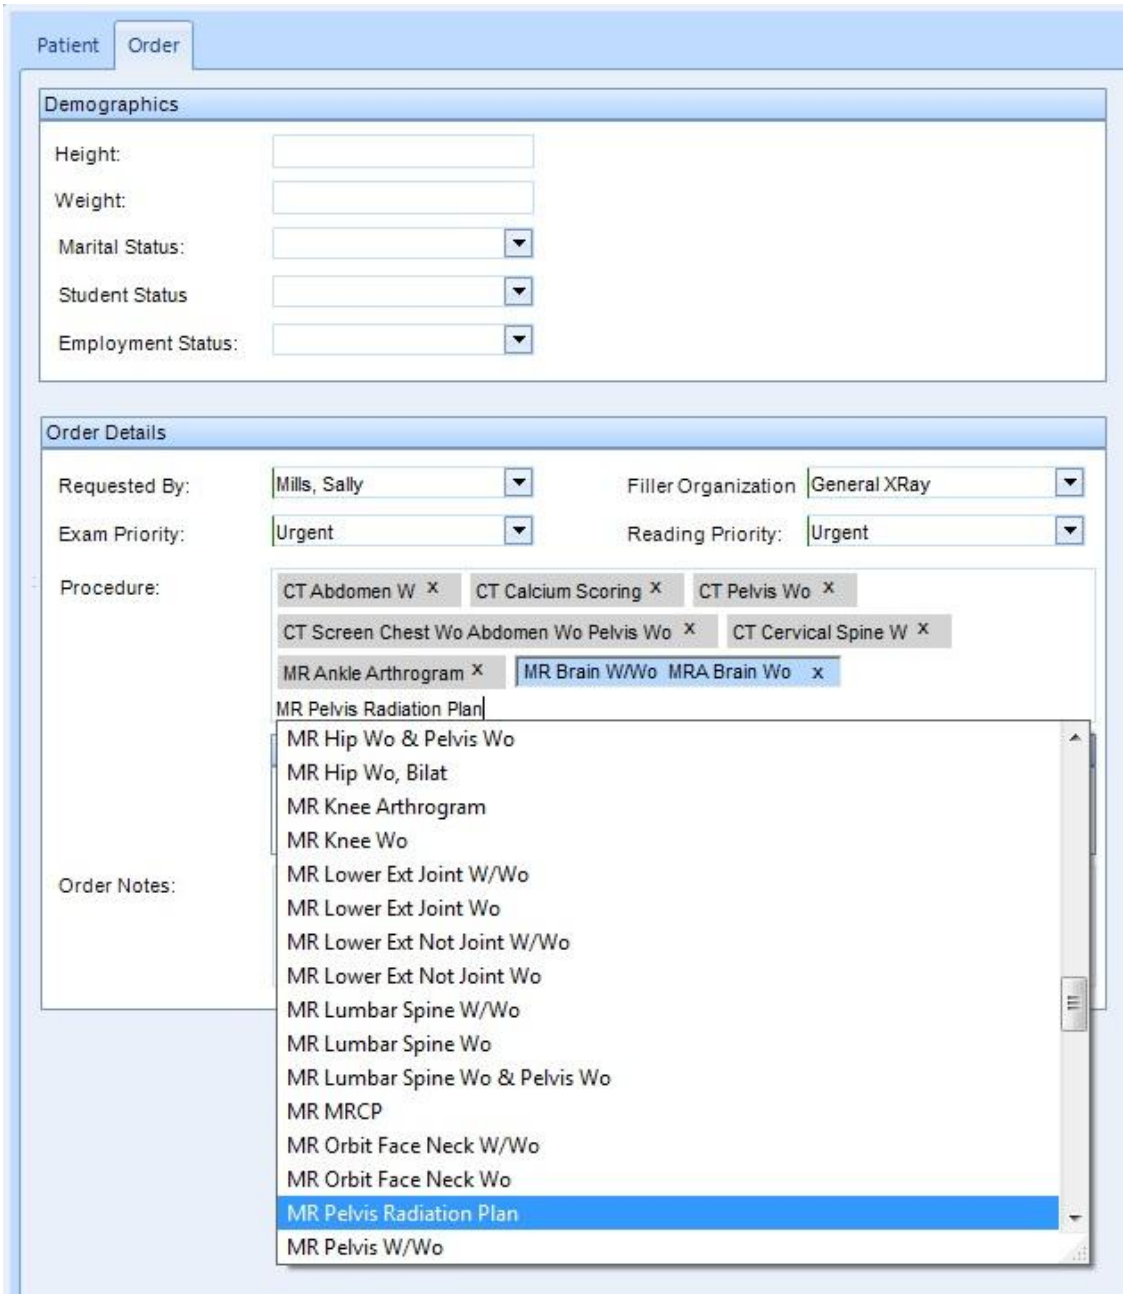

**Figure 4.15 – Procedure Picker with Multiple Procedures Selected**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Auditing Framework

An auditing framework has been developed to log all server retrievals and updates of patient, order, and study related data. A GUI screen is available for the user to view the audit log. This is accessible by right-clicking a worklist row and selecting "Audit History" (assuming the user has the necessary permissions).

User has the ability to view an audit trail based on patient, order, and study levels. In the details section of the audit history viewer there is a description showing what fields or statuses were changed by the user.

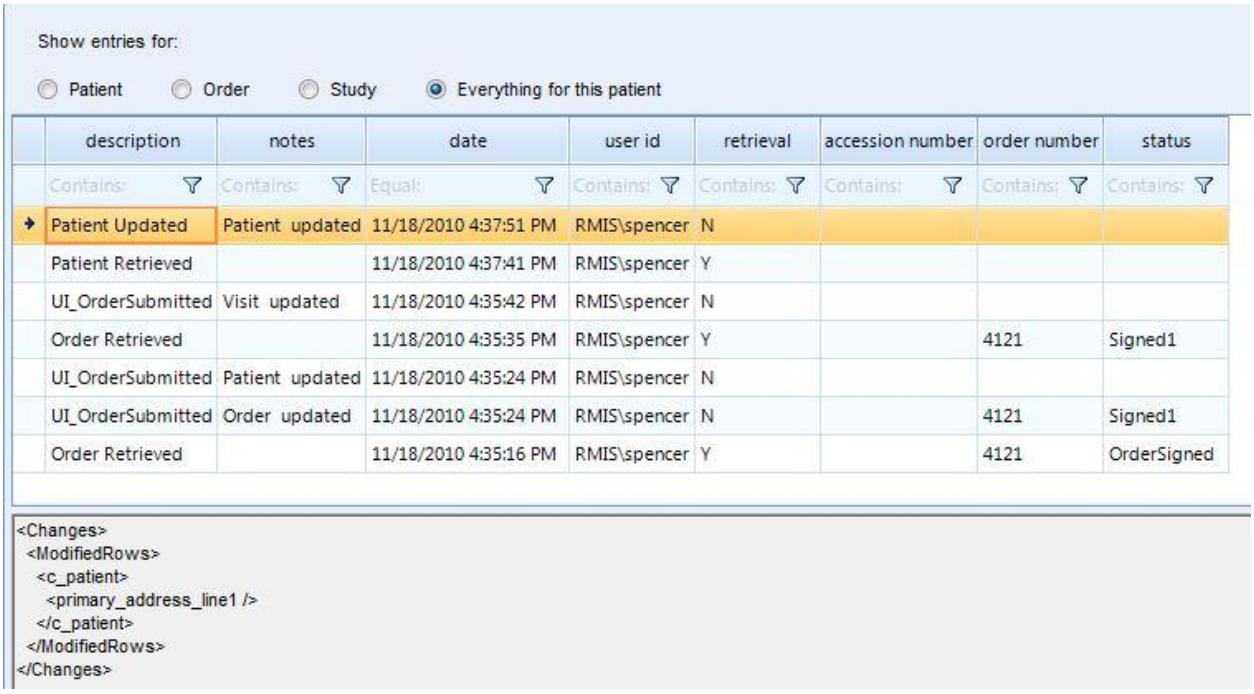

**Figure 4.16 – Audit Trail showing update to Patient Address**

## Password Encryption

Various password encryptions methods such as Triple DES, AES, SHA-1, SHA-2, and MD5 were researched during Sprint 5. SHA-1 and SHA-2 are secure hash algorithms required by law for use in certain U.S. Government applications. Recently, it has been identified that federal agencies should not use SHA-1 and should be upgraded to SHA-2.

SHA-2 has not been identified as having the same mathematical weakness as SHA-1 and therefore has been utilized in rRIS.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Worklist Context Menus

The rRIS worklist now has a right-click context menu feature which is configurable (through code) and fully supports user permissions.

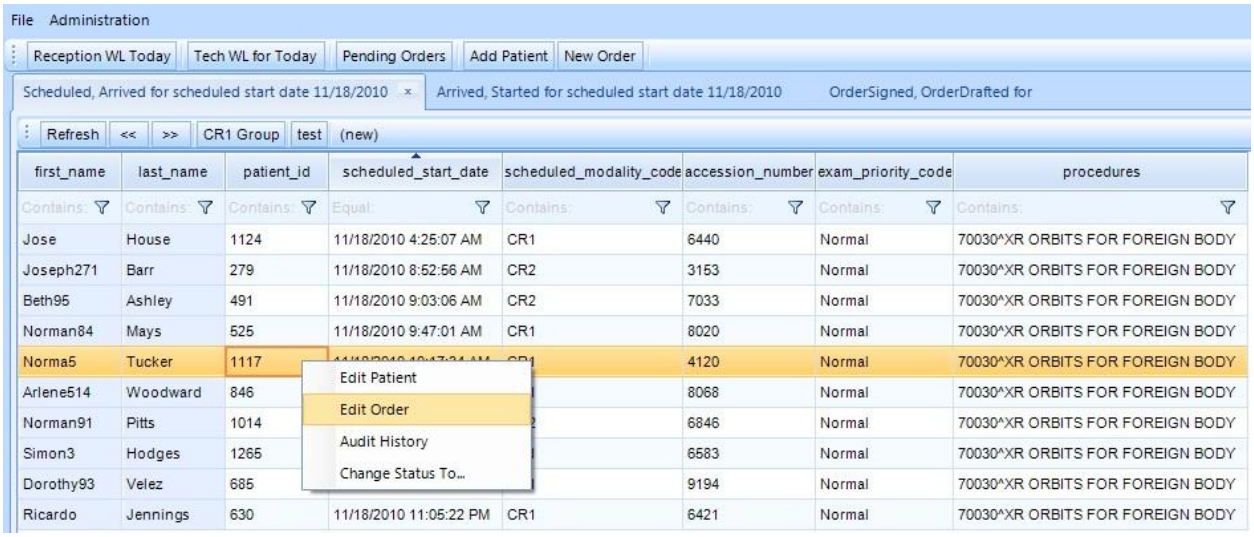

**Figure 4.17 – Reception Worklist showing Context Menu**

## Worklist Views

Worklist Views are buttons that reside at the top of a worklist and provide a convienent way of reusing saved filters. Here are some key features that have been implemented with rRIS worklist views:

- System has the ability to classify worklist views as:
  - Core Views – These are system views that will be released with and coded into the application.
  - Group Views – These are views that can be shared amongst a user group such as a group of schedulers or technologists.
  - Personal Views – These views are saved per user and may only be viewed by the user that owns them.
- Views are saved to the database and will be retrieved when the user logs on, therefore following the user no matter where he or she accesses the application.
- A different set of views can be maintained per worklist as they are based on worklist name.
- Views can be deleted by right-clicking the name of the view.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

This robust feature is still in the early stages of development. In future release, enhancements like permissions on creating views, renaming views, and better visual indicators will be introduced.

Accessing worklist views is as simple as clicking them on the worklist button bar. The example below illustrates a personal view called "Sorted by Name" where the patient's last name and first name are sorted ascending and saved as a view.

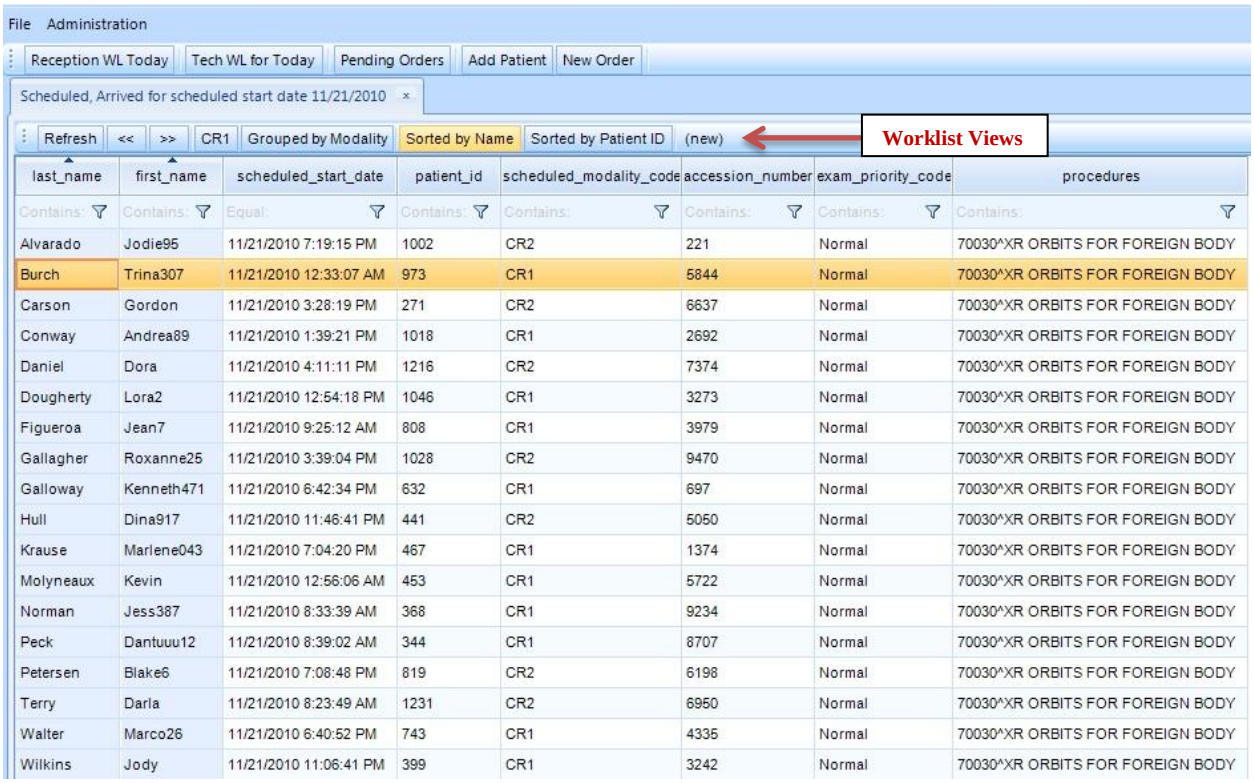

**Figure 4.18 – Reception Worklist showing Worklist Views**

To create a worklist view, the user should first filter the worklist to meet his or her needs and then select the "(new)" button. The user is then prompted to provide a name for the view and specify if it is a personal or group view.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

For example, a user that belongs to the Scheduling group filters the reception worklist based on a specified modality type and decides to save this view and share it with other schedulers. In this case the group worklist view is called "CR2". Once the view is saved, it will become accessible by other users belonging to the Scheduling group.

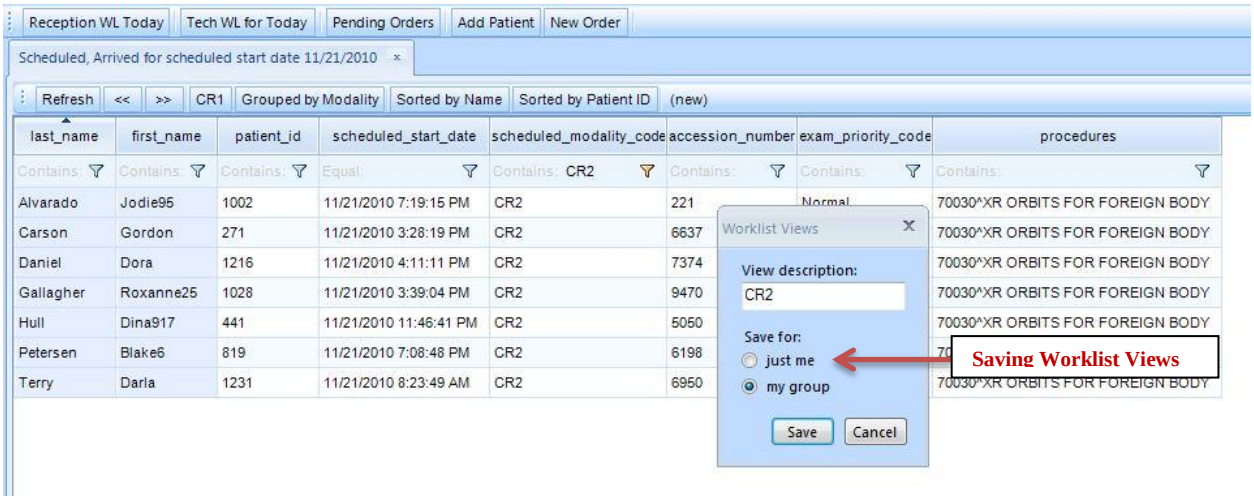

**Figure 4.18 – Creating a Worklist Group View**

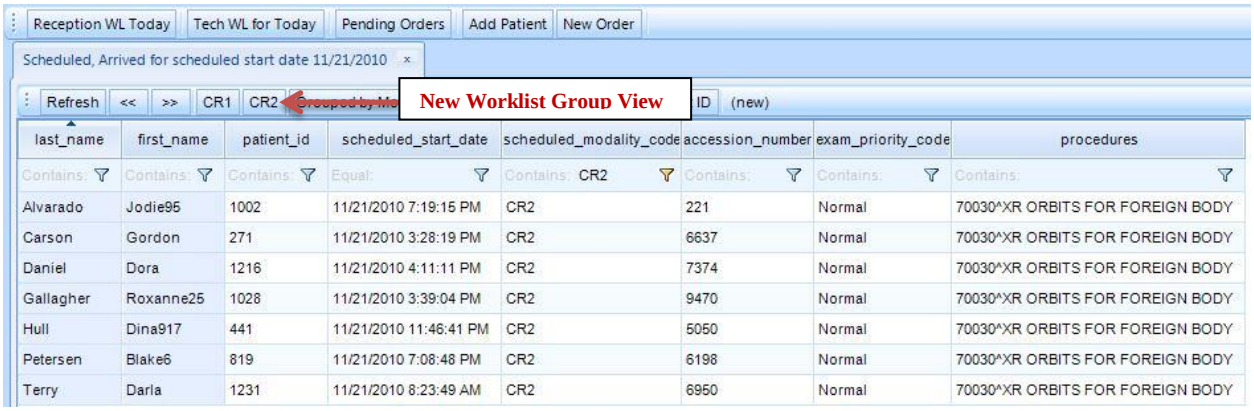

**Figure 4.19 – New Worklist Group View Displaying on Button Bar**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

If the user does not want the worklist view to be accessed by other user than he or she can simply select the "just me" radio button when saving the view. Group views and personal view will both exist on the worklist and are distinguished by a separator.

**Figure 4.20 – Scheduled Worklist with Group and Personal Views**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Known Limitations

Bugs, Suggested Features, and Support Issues are now tracked in a web based system called Redmine. The following is a snapshot of the issues found in Build 1.05 as of the end of Sprint 6. Note that the majority if these issues will be resolved in Build 1.06.

| # | Status | Subject | Category | Found | % Done | Resolved |
|---|---|---|---|---|---|---|
| 15 | Resolved | Opening a lookup table that is already open causes strange behaviour | Admin Tools | 1.05 | 100 | 1.06 |
| 16 | Closed | Adding a blank row to a lookup causes exception | Admin Tools | 1.05 | 100 | 1.05 |
| 17 | Closed | Issues with PersonResource and UserDetail lookups | Admin Tools | 1.05 | 100 | 1.05 |
| 18 | New | Rows in UserDetail are getting marked as dirty without any updates | Admin Tools | 1.05 | 0 | |
| 19 | Resolved | Problems adding a new user that is not a person resource | Admin Tools | 1.05 | 100 | 1.06 |
| 20 | New | Updates to PersonResource are reflected in database but not GUI | Admin Tools | 1.05 | 0 | |
| 21 | Resolved | Setting UserGroupPermission access level to None does not function properly | Admin Tools | 1.05 | 100 | 1.06 |
| 22 | Closed | Requested By: is misconfigured on the core Order screen | Thick Client GUI | 1.05 | 100 | 1.05 |
| 23 | New | Procedure Codes that are marked as Inactive are still included in the Procedure Picker | Thick Client GUI | 1.05 | 0 | |
| 24 | Resolved | Procedure Picker will not enforce Laterality and Body Part when multiple procedures are specified | Thick Client GUI | 1.05 | 100 | 1.06 |
| 25 | Resolved | Procedure Picker does not refresh screen when removing procedures with required fields | Thick Client GUI | 1.05 | 100 | 1.06 |
| 26 | Resolved | Procedure Picker should also be able to filter by Procedure Code | Thick Client GUI | 1.05 | 100 | 1.06 |
| 27 | Resolved | Changing patients does not re-validate required fields | Thick Client GUI | 1.05 | 100 | 1.06 |
| 28 | Resolved | Order Status when editing an order goes directly to Signed 1 | Web Services/DB | 1.05 | 100 | 1.06 |
| 29 | Resolved | Order Status does not update when scheduling an order | Web Services/DB | 1.05 | 100 | 1.06 |
| 30 | New | Issue with filtered worklists and launching screens with context | Thick Client GUI | 1.05 | 0 | |
| 31 | Resolved | Deleting rows from Audit History in GUI causes exception | Thick Client GUI | 1.05 | 100 | 1.06 |
| 32 | New | Some worklist slowness and flashing when updating status in RIS | Thick Client GUI | 1.05 | 0 | |
| 33 | Resolved | Context Menu on Pending Orders worklist | Thick Client GUI | 1.05 | 100 | 1.06 |
| 34 | New | Parent items in worklist context menus should be hidden if they have no child items | Thick Client GUI | 1.05 | 0 | |
| 35 | Resolved | Exception when saving group worklist view with name that already exists | Thick Client GUI | 1.05 | 100 | 1.06 |
| 36 | New | Exception when occurs when worklist views exceed the size of the tool bar | Thick Client GUI | 1.05 | 0 | |
| 37 | Resolved | The Code column in the SystemConfig lookup table allows duplicate values | Web Services/DB | 1.05 | 100 | 1.06 |
| 39 | Resolved | Loosing changes on lookup table if I try to reopen the same lookup table | Admin Tools | 1.05 | 100 | 1.06 |

# 1. Purpose

This document describes some of the new features and changes implemented in rRIS as of the end of Sprint 6. This pre-release version of rRIS is referred to as Build 1.06.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the rRIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The client installer for rRIS is still in the early development stages. For now, users can access the system by remoting to the rRIS test server in Baltimore as follows:

1. Start Remote Desktop Connection and specify IP 10.120.0.152
2. Username: Radnet domain account
3. Password: Radnet domain password
4. Double click the rRIS icon on the desktop or go to Start→All Programs→rRIS
5. Login User: terry
6. Login Password: ris

If you experience difficulties accessing the application, please do not hesitate to contact Spencer MacDougall with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Support Multiple Addresses in User Manager

The User Manager screen has been expanded in Sprint 6 to include a data grid to support one or more addresses per user. This pattern is required to support not only internal users but also referring doctors who quite often will have more than one office location resulting in multiple possibilities for report delivery.

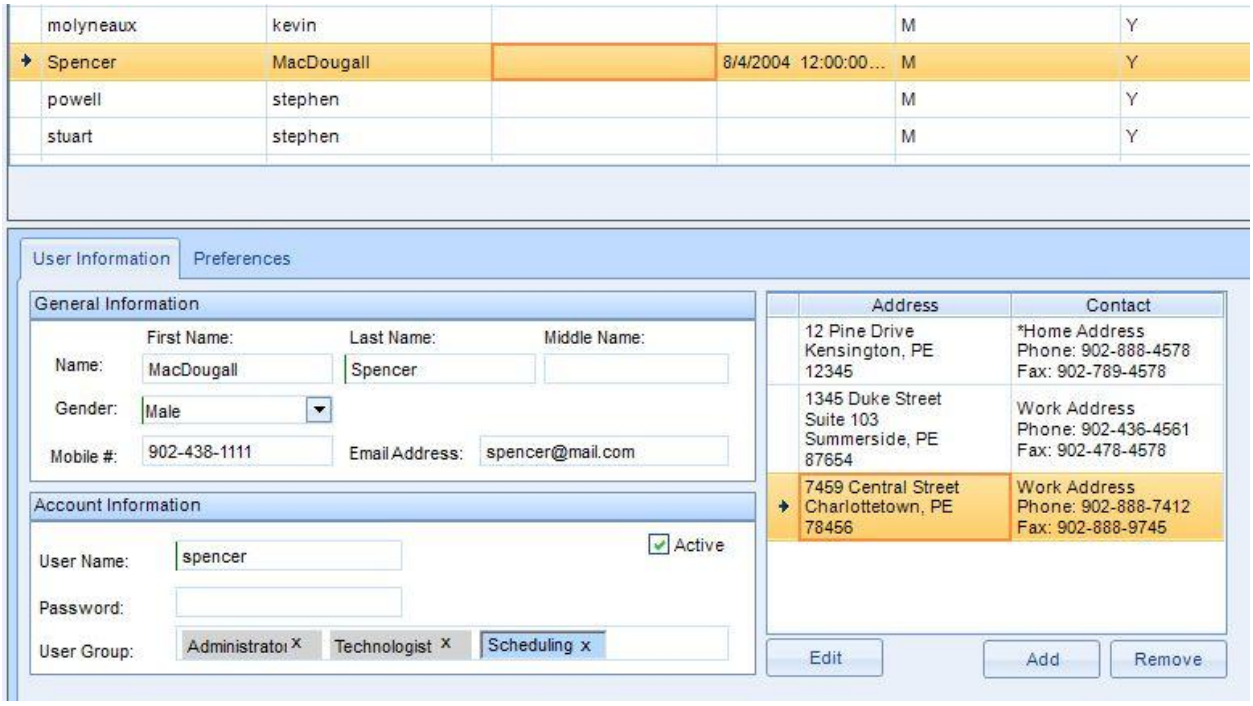

**Figure 4.1 – User Manager Screen with Address Grid**

The address grid will allow the user to see three to four addresses at a time without having to scroll. When editing or adding an address a modal popup window is displayed on top of the current screen so again no scrolling is required.

Each user can only have one primary address. In the above example, the Home Address is marked as primary and is visually identified with a "*". Required fields can also be enforced in the in the address grid. In the example, address type is required and the user is forced to complete it before he or she can save the entry.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

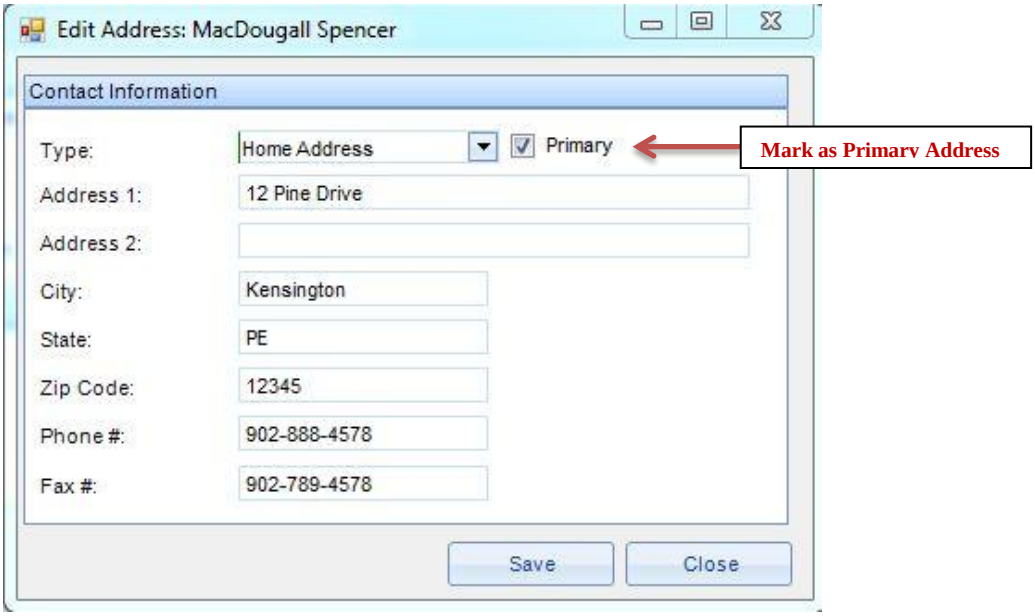

**Figure 4.2 – Modal Window to Add/Edit an Address in User Manager**

## Support Multiple User Groups in User Manager

Similar to addresses, there is also a requirement for a user to belong to one or more user group. This can now be defined in the User Manager screen. Many of the permissions in the application will be driven from user groups. Functionality that is available to a radiologist should not be accessible by a scheduler and vice versa. However, there will often be times where a user's job responsibility will span more than one group. For example, User A both schedules and arrives patients and therefore is required to belong to both the Scheduling and Registration user groups.

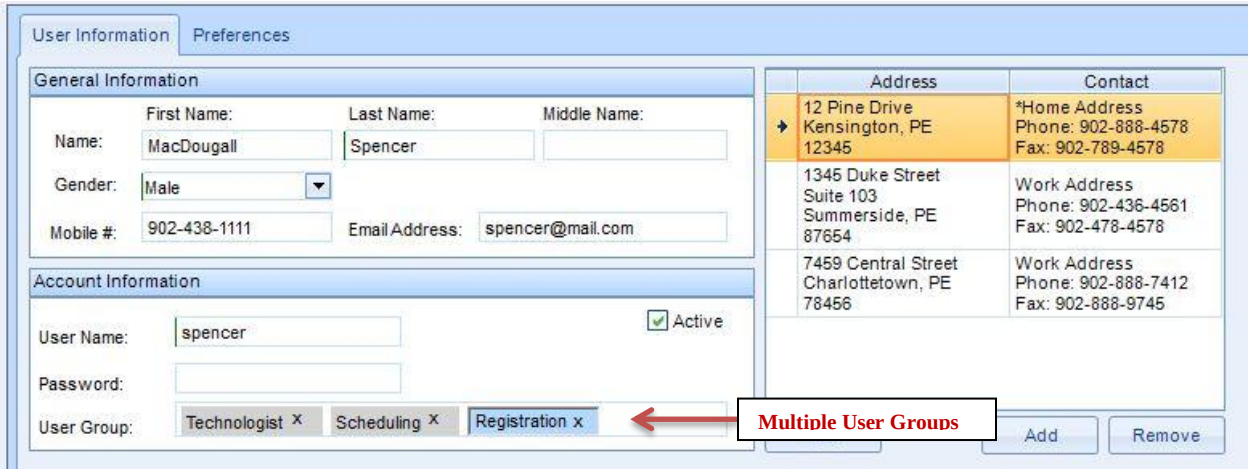

**Figure 4.3 – Multiple User Groups Applied to User**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## rRIS Client Installer

During both Sprint 5 and 6 there has been much effort invested in the development of the client installer. The installer functions under the assumption that there is a common shared network drive that is accessible by site users. The ris development team uses G:\RISDeployment as the shared drive but the location is configurable.

There are two main components to installing the application:

1. Core Install
2. Build Updates

The core install will require administrative rights and would typically need to be installed on each client pc before go-live. To install the core application, the user would simply run the Install.bat file located in the G:\RISDeployment\Core directory. By running the batch file all previous versions of rRIS are uninstalled and the new one is installed. This is all performed silently, without any required user interaction.

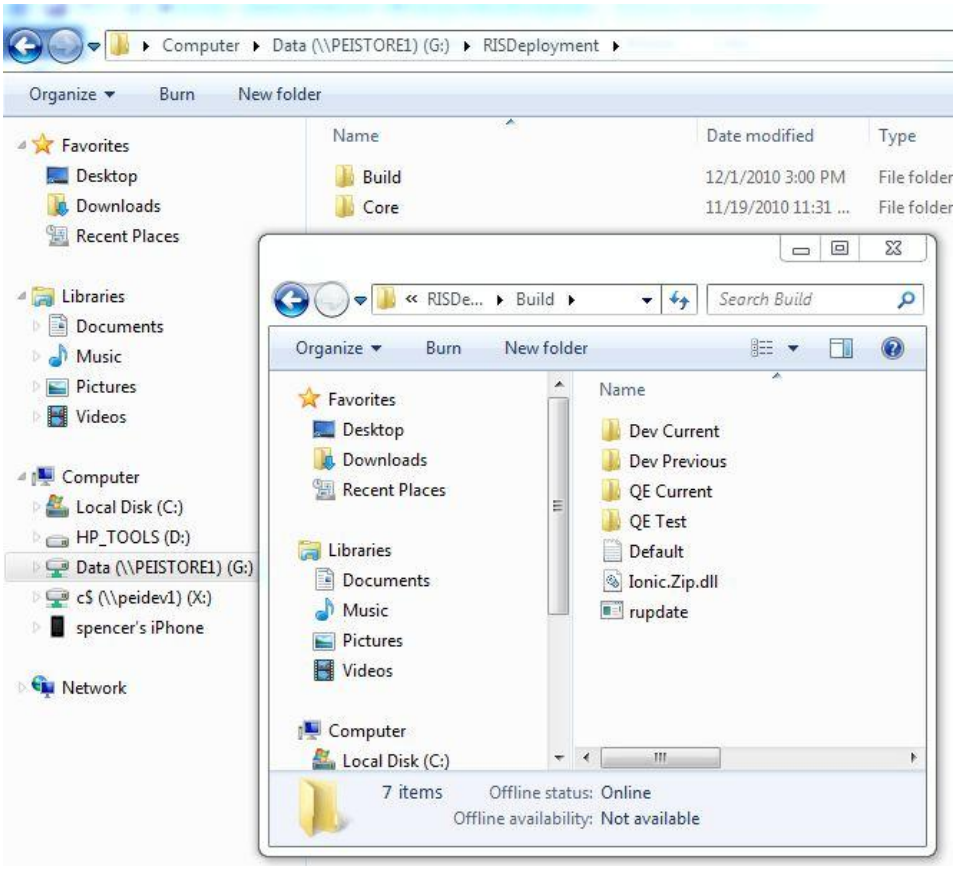

**Figure 4.4 – Installer Shared Drive**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

The Build directory will contain one or more builds available to the users. Consider the following requirements that have been satisfied with this approach:

1. This will allow a site to maintain multiple schemas, like one for production, training, and testing.

2. A default build can be specified. The login screen will automatically select the default build. Typically this will be the production build.

3. Users can be blocked from accessing builds by simply not granting permission to the subdirectories. If a site does not want users accessing the testing build, simply do not grant access to the testing directory. Testing will not show up on the System dropdown menu.

4. A user (with proper permission) is able to switch between different versions of the application with minimal effort required.

5. Current version number is displayed on the Login screen.

6. The ris administrator can easily push builds out to the users by simply overwriting the production files with the new release. The users will automatically install the new release on the next login.

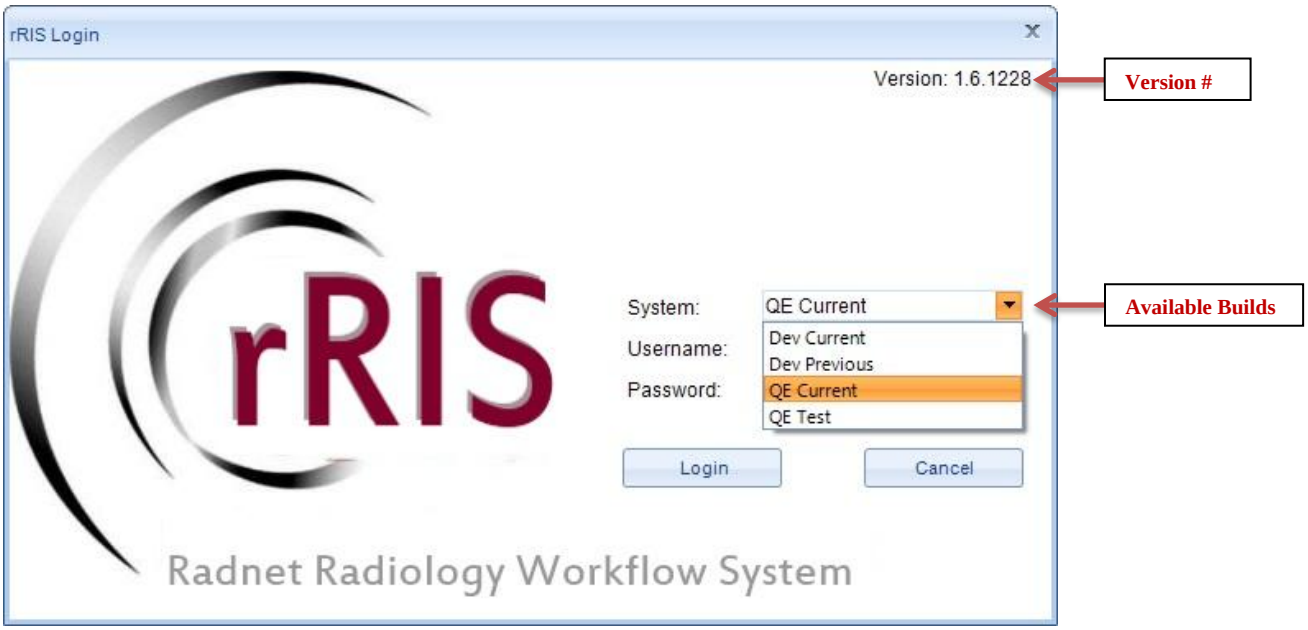

**Figure 4.5 – Login Screen showing Version and Available Builds**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Shortcut Keys

The development team has been ensuring that the application is keyboard friendly. The following is a list of shortcut keys that are currently supported:

**Typical Screens:**

| | |
|---|---|
| Ctrl+**W** | Close a Screen |
| Ctrl+**S** | Save and Close a Screen |
| Ctrl+**F** | Focus Patient Search Textbox |
| F4 | In a dropdown box, opens and closes the list<br>In a date input, opens the calendar selection popup<br>In a multi type ahead opens the type-ahead suggestions |
| Alt+**F4** | Closes the RIS Program |
| Alt+**Tab** | Standard Windows Keys to cycle though active windows programs |
| Ctrl+**Tab** | Cycles though active RIS Screens (such as Add Patient, WLs, etc.) |
| Ctrl+(↑ or↓) | Cycles though current RIS Screen's tabs |
| Ctrl+Shift+(↑ or↓) | Moves the selection up or down, in a screen's DataGrid (re: User Manager) |
| ESC | Closes a popup window (as a cancel) |
| O | Closes a popup window with OK |
| C | Closes a popup window with Cancel (similar for Y, N, etc). |
| Ctrl+**A** | Selects all text in a textbox |
| Ctrl+**C** | Copy selected text |
| Ctrl+**V** | Paste Selected text |
| Ctrl+**X** | Copy and delete selected text |
| Ctrl+N+… | Opens a data screen for a **N**ew item such as: |
| Ctrl+N+**P** | **N**ew **P**atient |
| Ctrl+N+**O** | **N**ew **O**rder |
| Ctrl+E+… | Opens a data **E**dit screen for an item such as: |
| Ctrl+E+**P** | **E**dit **P**atient |
| Ctrl+E+**O** | **E**dit **O**rder |
| Ctrl+**L**+… | Opens a Worklist screen such as: |
| Ctrl+L+**A** | Arrived Worklist (aka Reception WL) |
| Ctrl+L+**T** | Tech WL |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | |
|---|---|
| Ctrl+L+**O** | Orders WL |
| Ctrl+L+**S** | Scheduled WL |

**In a Worklist screen:**

| | |
|---|---|
| F5 | Refresh Worklist |
| Ctrl+← | Previous day in dated Worklists |
| Ctrl+→ | Next day in dated Worklists |
| Enter | TBD |

**In the Patient Search Screen:**

| | |
|---|---|
| ALT+**S** | Perform Search |
| ALT+**R** | Perform Reset |
| ALT+**L** | Goto Last Name |
| ALT+**F** | Goto First Name |
| ALT+**B** | Goto Birth Date |
| ALT+**M** | Goto MRN |
| ALT+**o** | Check Sounds Like |
| CTRL+**T** | Toggle/Swap First & Last Name |

## Additional Worklist View Features

The Worklist View framework has the following list of enhancements included in Build 1.06:

1. The ability to rename a view or change its type from a person to a group view or vice versa.

2. The ability to delete a view.

3. The ability to overwrite or update the filter criteria for the selected view.

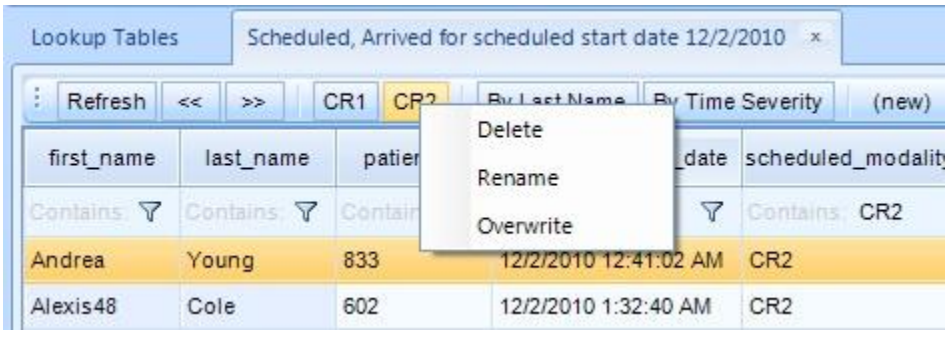

**Figure 4.6 – Worklist View Context Menu**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

4. Added permissions to access the editing features of both personal and group views. Permission can be enabled so only system administrators can update group views.

| Group Name | access string code | |
|---|---|---|
| Contains: | NotContain: Clinical.EditOrder | Contains: |
| Administrator | WorklistViews.Group.Edit | Full |
| Administrator | WorklistViews.User.Edit | Full |
| Scheduling | WorklistViews.User.Edit | Full |
| Technologist | WorklistViews.User.Edit | Full |

**Figure 4.7 – Worklist View Permissions**

5. The ability to load views from multiple user groups on the same worklist.

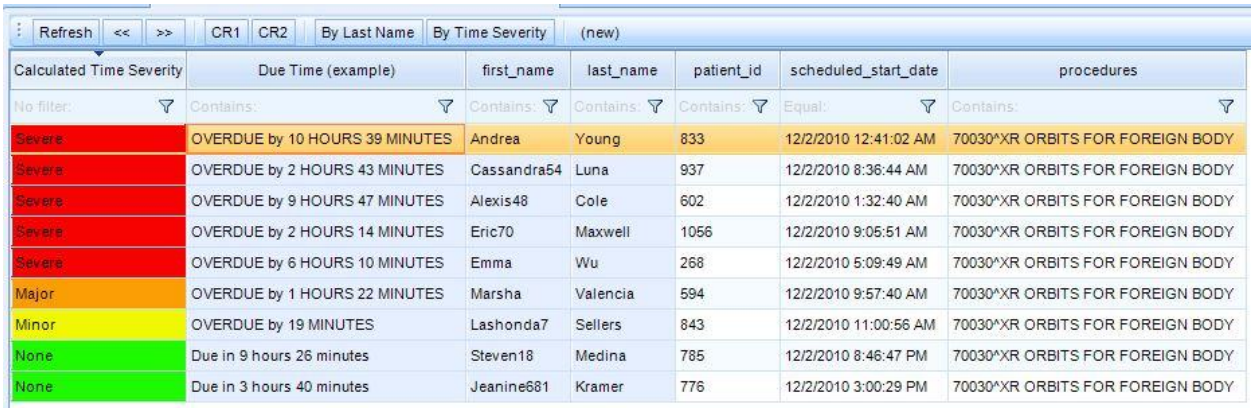
6. The ability to save views to a specific group if the user happens to belong to more than one user group.

**Figure 4.9 – Popup to Save Worklist Views**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Worklist Calculated Columns

There is a requirement to support columns to be calculated by the client workstation at runtime. For Build 1.06, a column which calculates patient Due Time has been added to the Scheduled/Arrived worklist. The calculation displays the difference in hours between the current time and the scheduled time. Another calculated column called Calculated Time Severity has been added which will classify the Due Time based on a set range.



| Calculated Time Severity | Due Time (example) | first_name | last_name | patient_id | scheduled_start_date | procedures |
|---|---|---|---|---|---|---|
| No filter: | Contains: | Contains: | Contains: | Contains: | Equal: | Contains: |
| Severe | OVERDUE by 10 HOURS 39 MINUTES | Andrea | Young | 833 | 12/2/2010 12:41:02 AM | 70030^XR ORBITS FOR FOREIGN BODY |
| Severe | OVERDUE by 2 HOURS 43 MINUTES | Cassandra54 | Luna | 937 | 12/2/2010 8:36:44 AM | 70030^XR ORBITS FOR FOREIGN BODY |
| Severe | OVERDUE by 9 HOURS 47 MINUTES | Alexis48 | Cole | 602 | 12/2/2010 1:32:40 AM | 70030^XR ORBITS FOR FOREIGN BODY |
| Severe | OVERDUE by 2 HOURS 14 MINUTES | Eric70 | Maxwell | 1056 | 12/2/2010 9:05:51 AM | 70030^XR ORBITS FOR FOREIGN BODY |
| Severe | OVERDUE by 6 HOURS 10 MINUTES | Emma | Wu | 268 | 12/2/2010 5:09:49 AM | 70030^XR ORBITS FOR FOREIGN BODY |
| Major | OVERDUE by 1 HOURS 22 MINUTES | Marsha | Valencia | 594 | 12/2/2010 9:57:40 AM | 70030^XR ORBITS FOR FOREIGN BODY |
| Minor | OVERDUE by 19 MINUTES | Lashonda7 | Sellers | 843 | 12/2/2010 11:00:56 AM | 70030^XR ORBITS FOR FOREIGN BODY |
| None | Due in 9 hours 26 minutes | Steven18 | Medina | 785 | 12/2/2010 8:46:47 PM | 70030^XR ORBITS FOR FOREIGN BODY |
| None | Due in 3 hours 40 minutes | Jeanine681 | Kramer | 776 | 12/2/2010 3:00:29 PM | 70030^XR ORBITS FOR FOREIGN BODY |

**Figure 4.10 – Worklist showing Calculated Column for Due Time and Severity**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Known Limitations

Bugs, Suggested Features, and Support Issues are now tracked in a web based system called Redmine. The following is a snapshot of the issues found in Build 1.06 as of the end of Sprint 7. Note that the majority if these issues will be resolved in Build 1.07.

| # | Status | Subject | Category | Found | % Done | Resolved |
|---|---|---|---|---|---|---|
| 38 | Closed | Lookup table editor - clicking close and they clikcing save causes an error on UserDetail | Admin Tools | 1.06 | 100 | 1.06 |
| 40 | Resolved | updating lookup table - delete row, re-add row can cause a duplicate constraint error | Web Services/DB | 1.06 | 100 | 1.07 |
| 41 | Closed | patient_class_code error on new order save | Web Services/DB | 1.06 | 100 | 1.06 |
| 42 | Resolved | Error accessing PatientClass lookup | Web Services/DB | 1.06 | 100 | 1.07 |
| 43 | Resolved | Stat checkboxes are required on core order details screen | Thick Client GUI | 1.06 | 100 | 1.07 |
| 44 | Resolved | Issue with combo-boxes and required fields | Thick Client GUI | 1.06 | 100 | 1.07 |
| 46 | Resolved | Should be a reference warning when trying to modify a lookup code that is referenced | Admin Tools | 1.06 | 100 | 1.07 |
| 47 | New | Concurrency violations when using more than one instance on the Lookup Table editor | Admin Tools | 1.06 | 0 | |
| 48 | Resolved | Primary or related keys not found when adding a new patient | Web Services/DB | 1.06 | 100 | 1.07 |
| 49 | Resolved | Improvements for "breaking lock" workflow | Thick Client GUI | 1.06 | 100 | 1.07 |
| 50 | Resolved | Exception creating new user - Column 'user_key' is read only | Admin Tools | 1.06 | 100 | 1.06 |
| 51 | New | Takes 2 clicks to Edit, Add, or Remove row from Address grid | Admin Tools | 1.06 | 0 | |
| 52 | Resolved | Users not marked as Active can still login to the application | Admin Tools | 1.06 | 100 | 1.07 |
| 53 | Resolved | Exception when reapplying user to user group | Admin Tools | 1.06 | 100 | 1.07 |

# 1. Purpose

This document describes some of the new features and changes implemented in rRIS as of the end of Sprint 7. This pre-release version of rRIS is referred to as Build 1.07.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the rRIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The client installer for rRIS is still in the early development stages. For now, users can access the system by remoting to the rRIS test server in Baltimore as follows:

1. Start Remote Desktop Connection and specify IP 10.120.0.152
2. Username: Radnet domain account
3. Password: Radnet domain password
4. Double click the rRIS icon on the desktop or go to Start→All Programs→rRIS
5. Login User: terry
6. Login Password: ris

If you experience difficulties accessing the application, please do not hesitate to contact Spencer MacDougall with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

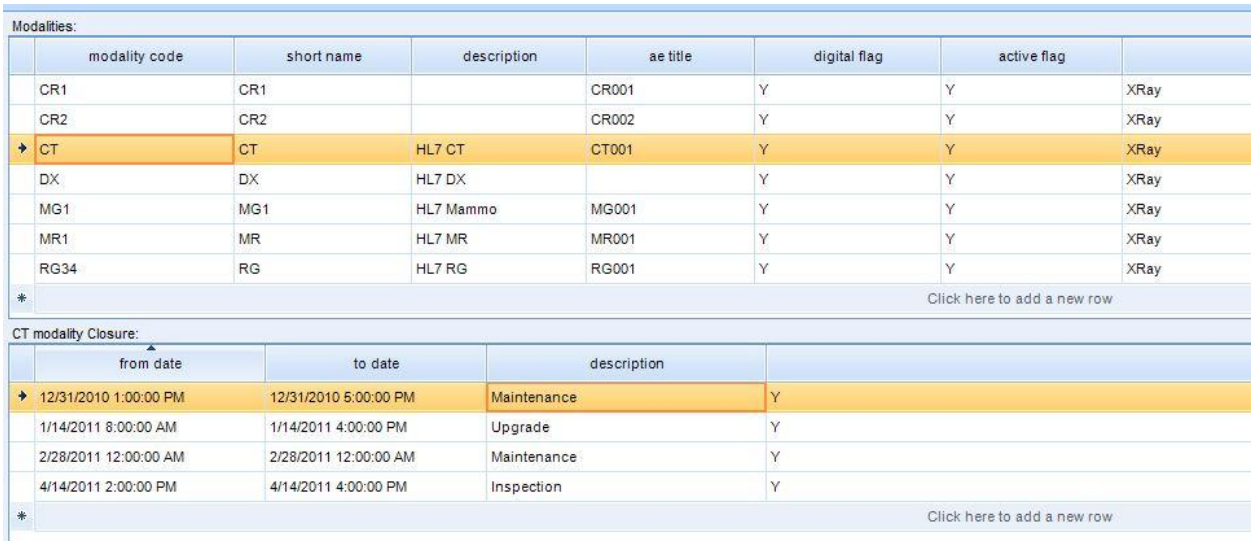
## Database Change Management

As the database for rRIS continues to develop and mature, there is a need to seamlessly upgrade it with each new release of the application. The DBGhost DB Change Management Process has been implemented to satisfy this requirement. The DBGhost solution will automatically generate a SQL file that will account for new and modified core database objects such as tables, views, stored procedures, and user defined functions. "Core" is what the rRIS R&D team refers to as critical components produced and maintained exclusively by the R&D team.

## Modality Closure

The modality maintenance screen has been expanded to include a section for modality closures. Modality maintenance is where all the scanners or rooms will be setup and maintained by the RIS system administrator. By filtering and clicking on the modality to be closed, the user can create a date range to define when the modality will not be available.

When scheduling, the list of available timeslots will not include any modalities that have been closed for the specified time period.



Modalities:

| | modality code | short name | description | ae title | digital flag | active flag | |
|---|---|---|---|---|---|---|---|
| | CR1 | CR1 | | CR001 | Y | Y | XRay |
| | CR2 | CR2 | | CR002 | Y | Y | XRay |
| ➔ | CT | CT | HL7 CT | CT001 | Y | Y | XRay |
| | DX | DX | HL7 DX | | Y | Y | XRay |
| | MG1 | MG1 | HL7 Mammo | MG001 | Y | Y | XRay |
| | MR1 | MR | HL7 MR | MR001 | Y | Y | XRay |
| | RG34 | RG | HL7 RG | RG001 | Y | Y | XRay |
| * | Click here to add a new row | | | | | | |

CT modality Closure:

| | from date | to date | description | |
|---|---|---|---|---|

| * | Click here to add a new row | | | |

**Figure 4.1 – Modality Maintenance Screen showing Modality Closure**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Procedure Modality Mapping

rRIS has the ability through configuration screens to define Procedure Codes, Modalities, and Modality Availability Templates. The purpose of the Procedure Modality Mapping screen is to tie all three together when determining scheduling solutions. This screen will define which procedures can be performed on each modality and what availability template the modality should utilize.

In rRIS, these procedures to modality mappings are referred to as scheduling groups. To create a new Schedule Group, the user opens the ScheduleGroup screen in the lookup table editor and selects the "Add" button.

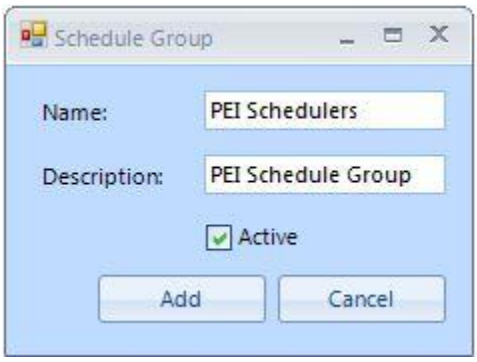

**Figure 4.2 – Popup to define new Schedule Group**

Once a new schedule group has been defined, the user can proceed to select procedures, modalities, and availability templates.

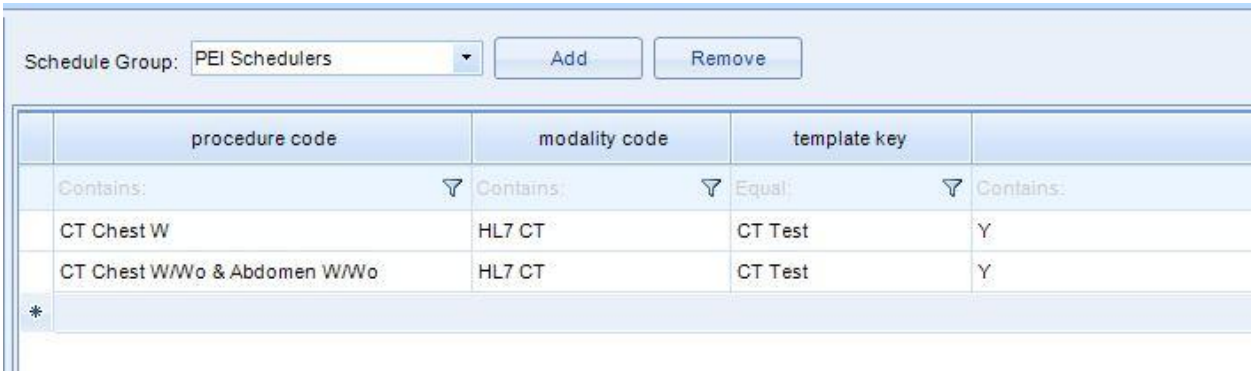

**Figure 4.3 – Schedule Group Configuration Screen**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

The administrator can select the "Add Multiple" button to easily add multiple procedures to a schedule group. This prevents the user from having to do this one row at a time.

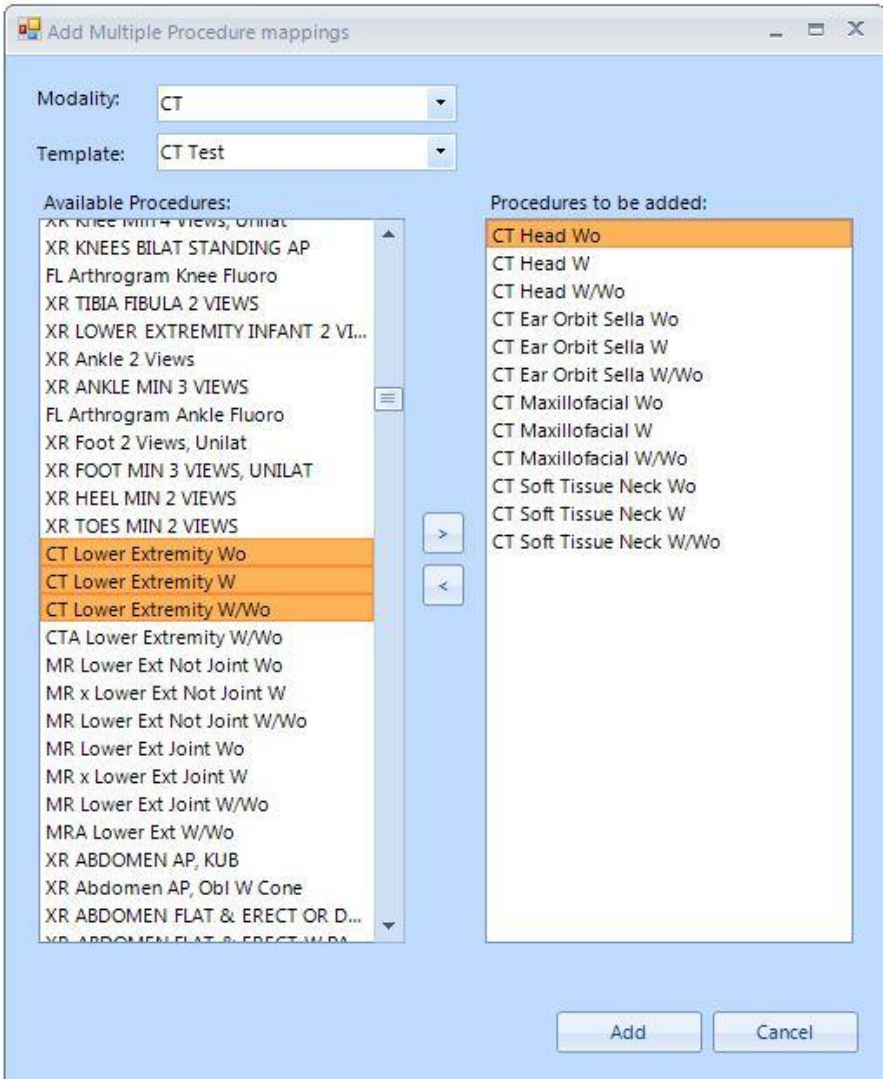

**Figure 4.4 – Adding Multiple Procedures to Schedule Group**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**Figure 4.5 – Sample Schedule Group Configuration**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## User Schedule Group

Once a schedule group has been defined, the rRIS system administrator has the ability to map users to it. This will limit a scheduling user to only have access to procedures, modalities, and templates that have been defined in the applied schedule group.

Schedule groups are set in the User Maintenance screen and are one per user. If a user does not require the ability to schedule, this value can be left blank.

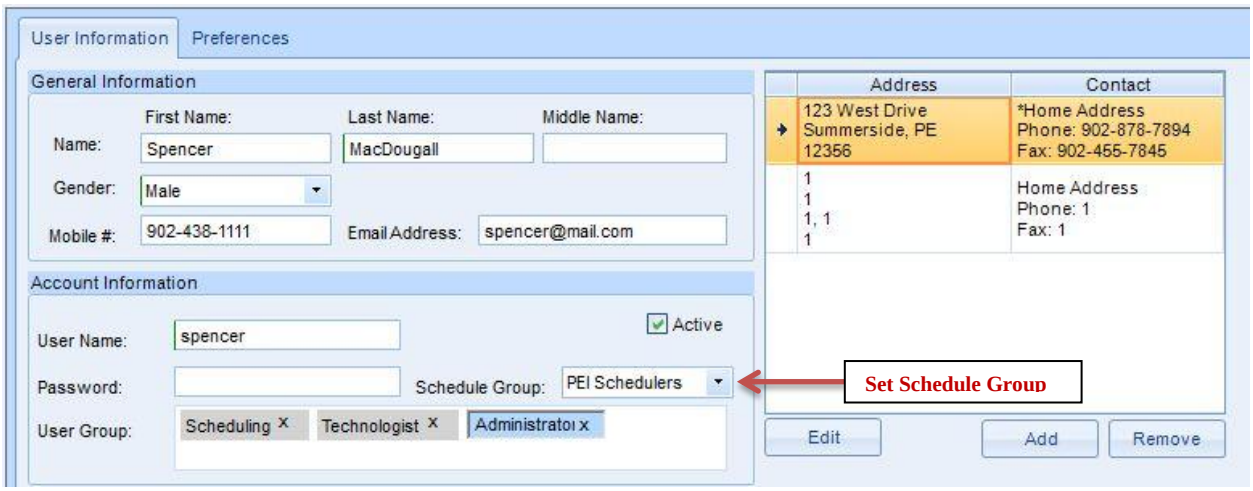

**Figure 4.6 – Setting Schedule Group in User Maintenance Screen**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Procedure Plan

Procedure plans are also referred to as series or composite codes. They are basically two or more procedure codes that can be saved in a predetermined sequence with a set wait time between each procedure. Procedure plans are added via the ProcedurePlan screen found in the Lookup Table Editor.

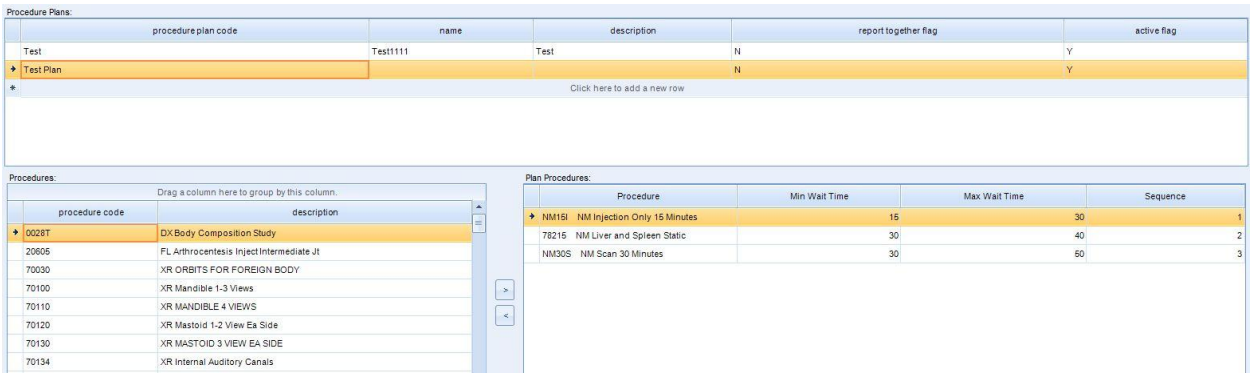

**Figure 4.7 – Sample Procedure Plan Configuration**

## Patient Merge

In rRIS, the user now has the ability to select an existing patient (source patient) and merge them into another patient record (destination patient).

The patient merge feature can be accessed if the user has permission by selecting File and Patient Merge from the menu bar. If the user opens patient merge from a worklist, the source patient will default to the patient that is selected. By using the "Patient Search" buttons within the source and destination patient group boxes, the user can add or change the patient selection. There is also a "< >" toggle button in the case where a user happens to get the source and destination patients entered in the wrong order. The toggle button switches the source and destination quickly so they don't have to re-search or re-enter data.

The data in the Patient Merge screen is read-only. Some basic information about the patient is displayed along with the patient worklist data, which summaries the clinical data that will be transferred to the destination patient's medical record. If the source and/or the destination isn't selected attempting a merge will display appropriate messages telling the user what is required. If the source and destination patients are the same an error message will also display when the user attempts a merge. Although the save button for this states "Merge" instead of the standard "Save", using the quick key "Ctrl+S" will perform the merge.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

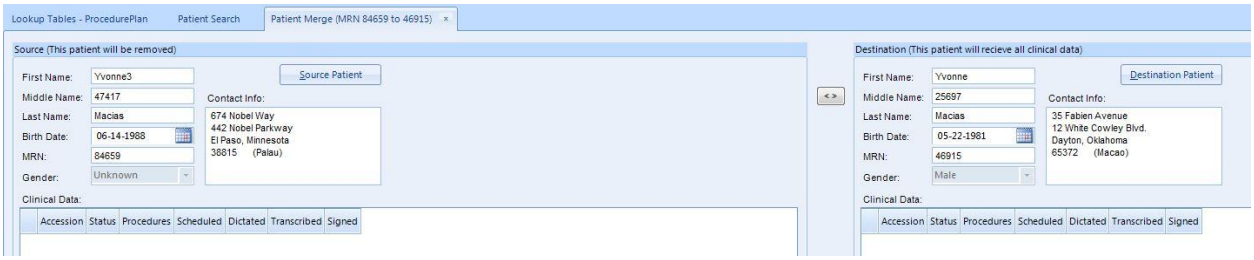

**Figure 4.8 – Patient Merge Screen showing Source and Destination Patient**

**Figure 4.10 – Audit History with Patient Merge Entry**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Display "Locked By" on the Worklist

The worklist framework has been expanded to now include a "Locked By" column. This column will display the User ID of the user that has a lock on the study on the worklist.

| first_name | last_name | patient_id | locked_by | scheduled_modality_code | accession_number |
|---|---|---|---|---|---|
| Contains: | Contains: | Contains: | Contains: | Contains: | Contains: |
| Angelina | Sexton | 876 | | CR2 | 262 |

| Shana768 | Nielson | 869 | | CR1 | 266 |

**Figure 4.11 – Worklist Displaying Locked Study**

## Improvements to Broken Lock Workflow

There have been some significant improvements made to the broken lock workflow pertaining to the messages that are displayed to the user that is breaking the lock or having their lock broken. The phone number is now presented to allow the user to contact the person that is holding the lock.

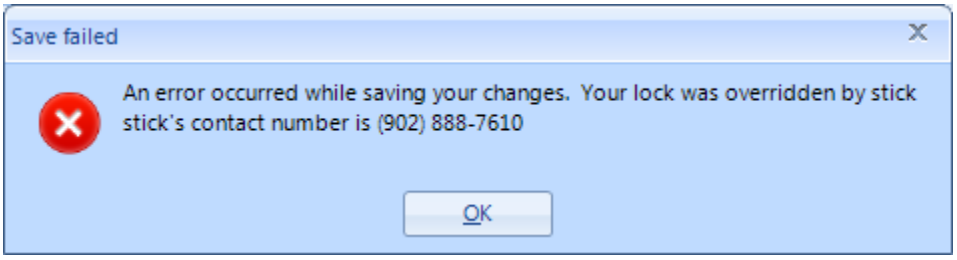

**Figure 4.12 – Error Message when Saving a Broken Lock**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

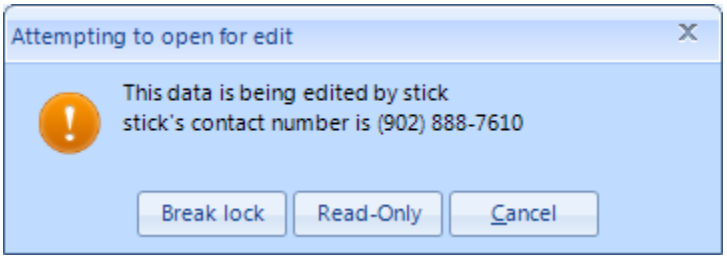

**Figure 4.14 – Error Message when Opening Locked Data**

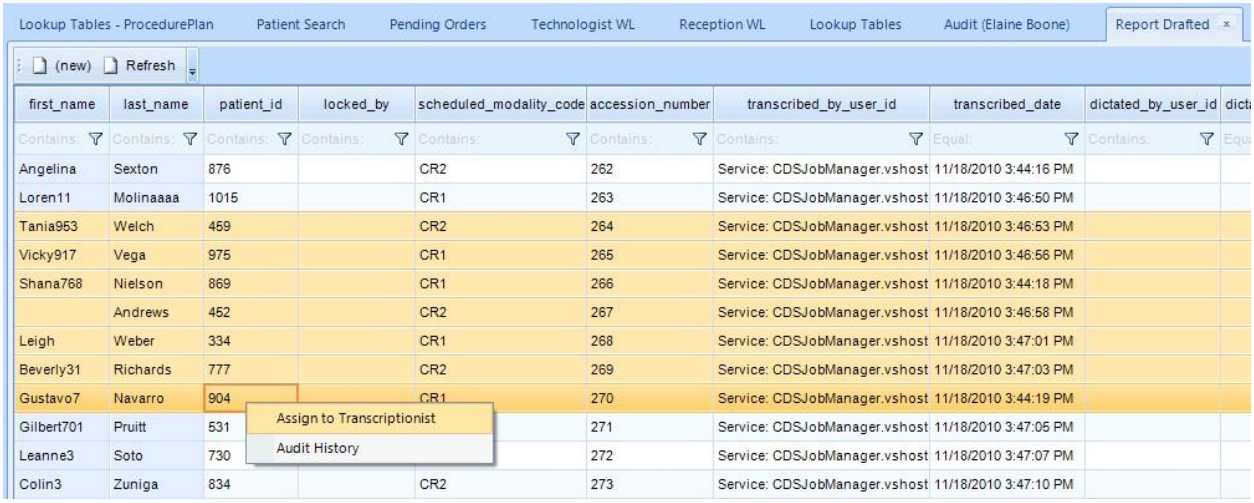
## Worklist Multi-Select

The ability to select multiple rows on a worklist and perform an action for each selected row has been implemented in this release. Only certain actions support this feature. For example, edit order is limited to only one selected row. The user will be prompted that this feature does not support multi-select from the worklist. However, selecting Assign to Transcriptionist from the Report Drafted worklist does support this feature as demonstrated below.



| first_name | last_name | patient_id | locked_by | scheduled_modality_code | accession_number | transcribed_by_user_id | transcribed_date | dictated_by_user_id |

**Figure 4.15 – Worklist Multi-Select Assign to Transcriptionist**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Patient Search Wild Card Support with Sounds Like

rRIS utilizes the "%" character for wild card support. This can now be used in conjunction with the "Sounds Like" feature to return search results. For example searching for First Name = a% and Last Name = smythe with Sounds Like enabled will look for patients where first name like "A%" (starts with A) and last name like "Smythe".

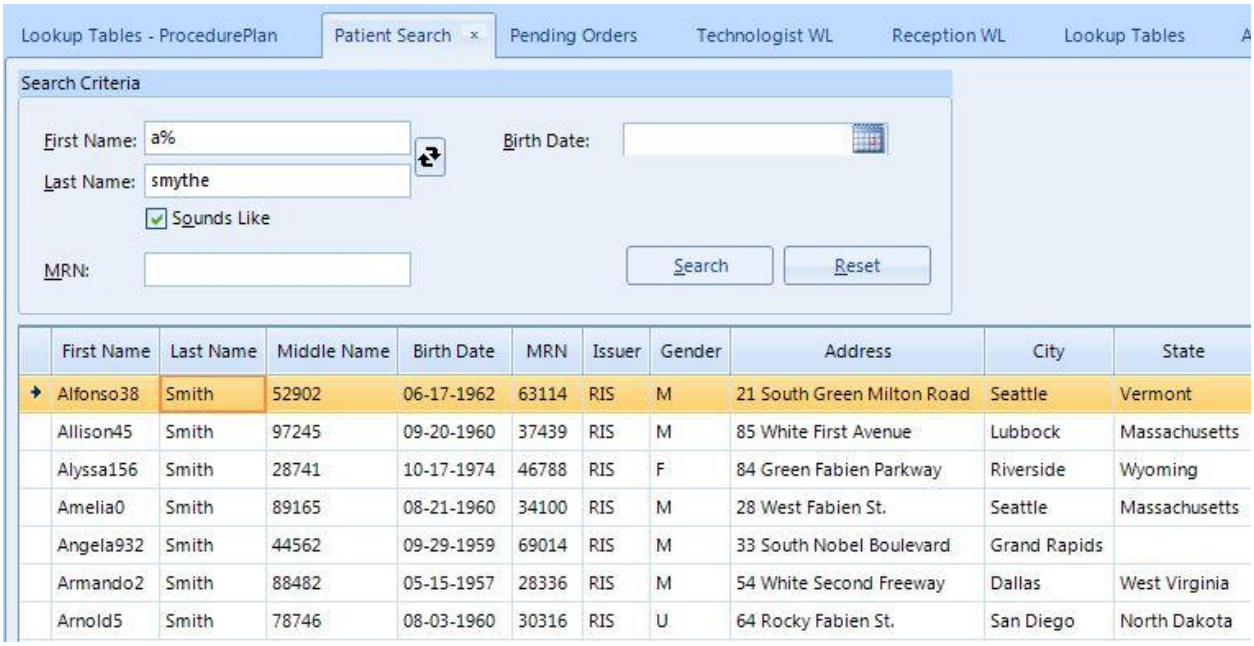

**Figure 4.16 – Patient Search Results Utilizing Wild Card and Sounds Like**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Known Limitations

Bugs, Suggested Features, and Support Issues are now tracked in a web based system called Redmine. The following is a snapshot of the issues found in Build 1.07 as of the end of Sprint 8. Note that the majority if these issues will be resolved in Build 1.08.

| # | Status | Subject | Category | Found | %Done | Resolved |
|---|---|---|---|---|---|---|
| 45 | Closed | Updates to Pending Order worklist are taking a long time | Thick Client GUI | 1.07 | 100 | 1.07 |
| 64 | Resolved | When removing an availability template, dropdown is not refreshing | Admin Tools | 1.07 | 100 | 1.08 |
| 65 | Resolved | Exception when removing an Availability Template | Admin Tools | 1.07 | 100 | 1.08 |
| 66 | Resolved | When saving a new Availability Template, focus is lost | Admin Tools | 1.07 | 100 | 1.08 |
| 67 | Resolved | When entering time ranges on templates, user can specify a start time later than an end time | Admin Tools | 1.07 | 100 | 1.08 |
| 68 | Resolved | When editing an availability template time range, values should default accordingly | Admin Tools | 1.07 | 100 | 1.08 |
| 69 | Resolved | When adding a date range to an availability template, button text should read Add instead of Edit | Admin Tools | 1.07 | 100 | 1.08 |
| 70 | Resolved | When adding a time range to an availability template, the day of week scrolls out of view | Admin Tools | 1.07 | 100 | 1.08 |
| 71 | New | Worklist filter description is no longer showing on tab | Thick Client GUI | 1.07 | 0 | |
| 72 | New | Shortcut keys to navigate a date worklist do not reference focused worklist | Thick Client GUI | 1.07 | 0 | |
| 73 | Resolved | Selecting Patient Merge on a worklist with no records result in exception | Thick Client GUI | 1.07 | 100 | 1.08 |
| 74 | New | Patients with deleted_flag = 'Y' are still showing up on worklists | Thick Client GUI | 1.07 | 0 | |
| 75 | Resolved | DateTime Exception when adding a User | Admin Tools | 1.07 | 100 | 1.08 |
| 76 | Resolved | There are columns on both PersonResource and UserDetail that are not editable | Admin Tools | 1.07 | 100 | 1.08 |
| 77 | Resolved | User is allowed to enter duplicate resource row in PersonResource causing exception | Admin Tools | 1.07 | 100 | 1.08 |
| 78 | Resolved | PersonResource - need validation on id field | Admin Tools | 1.07 | 100 | 1.08 |
| 79 | Resolved | PersonResource - Need max length set for both ID and Issuer of ID fields | Admin Tools | 1.07 | 100 | 1.08 |
| 80 | Resolved | When entering a new user or resource, gender defaults to Male for new persons | Admin Tools | 1.07 | 100 | 1.08 |
| 81 | Resolved | Adding a ScheduleGroup and removing it results in exception on save | Admin Tools | 1.07 | 100 | 1.08 |
| 82 | Resolved | ScheduleGroup Name is not being validated | Admin Tools | 1.07 | 100 | 1.08 |
| 83 | New | ScheduleGroups that are marked as inactive as still available under UserDetail | Admin Tools | 1.07 | 0 | |
| 84 | Resolved | ProcedurePlan - report together flag should be limited to Y or N value | Admin Tools | 1.07 | 100 | 1.08 |
| 85 | Resolved | ProcedurePlan - max length issue with grid | Admin Tools | 1.07 | 100 | 1.08 |
| 86 | Resolved | ProcedurePlan - Duplicate sequence error | Admin Tools | 1.07 | 100 | 1.08 |
| 87 | Resolved | UserDetail - Getting prompted to save without making any changes | Admin Tools | 1.07 | 100 | 1.08 |
| 88 | Resolved | Modality Closure - Warning appear to be referencing deleted rows. | Admin Tools | 1.07 | 100 | 1.08 |
| 89 | New | Need to standardize popup forms | Admin Tools | 1.07 | 0 | |
| 90 | Resolved | Lookup Editor - When rows are being validated, user loses changes. | Admin Tools | 1.07 | 100 | 1.08 |
| 91 | New | Worklist multi-select and Enter key | Thick Client GUI | 1.07 | 0 | |
| 92 | Resolved | Patient ID should be system generated only | Thick Client GUI | 1.07 | 100 | 1.08 |
| 95 | New | Worklist - User is able to select 2 rows and launch non-multiselect actions | Thick Client GUI | 1.07 | 0 | |
| 96 | Resolved | ProcedurePlan - user is able to enter null values in required fields | Admin Tools | 1.07 | 100 | 1.08 |
| 97 | Resolved | ProcedurePlan - Min and Max Wait Times allow negative values | Admin Tools | 1.07 | 100 | 1.08 |

# 1. Purpose

This document describes some of the new features and changes implemented in rRIS as of the end of Sprint 8. This pre-release version of rRIS is referred to as Build 1.08.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the rRIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

This build will not be available for remote access. The Baltimore server will be upgraded directly to Build 1.09

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Organization Editor

There is now an editor to accommodate the setup of the organization structure. It utilizes regions, practices, and sites. A region such as the East Coast can have multiple practices such as Advanced Radiology associated to it. A practice such as Advanced Radiology can have multiple sites such as St. Joseph Breast Center and St. Joseph Medical Center. A site can have multiple modalities or rooms associated to it. For example, here is the proposed hierarchy for a scanner located at St. Joseph Breast Center.

**Region:** East Coast (EAST)
**Practice:** Advanced Radiology (ADV)
**Site Group:** North Service Area
**Site:** St. Joseph Breast Center (SB)
**Modality:** Mammo Room 1 (MA1SB)

Please note that "Site Group" has not been included in this release and will be developed in a future sprint.

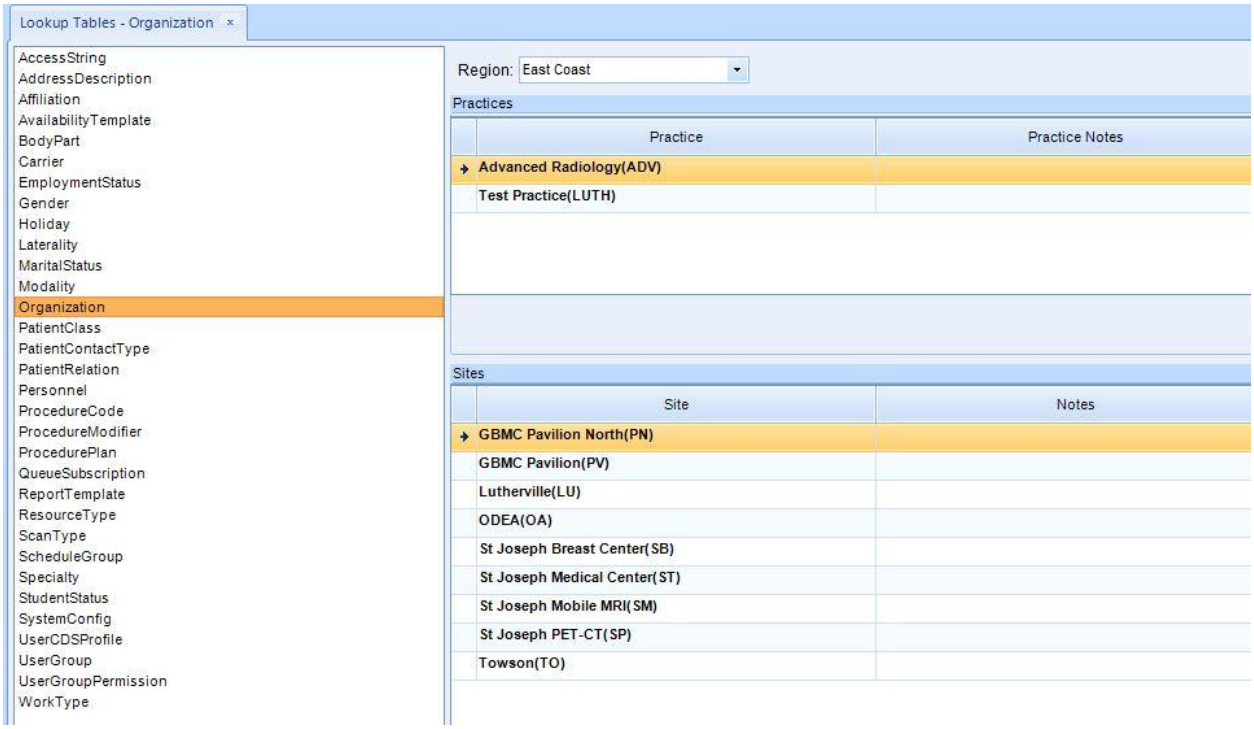

**Figure 4.1 – Organization Maintenance Screen**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

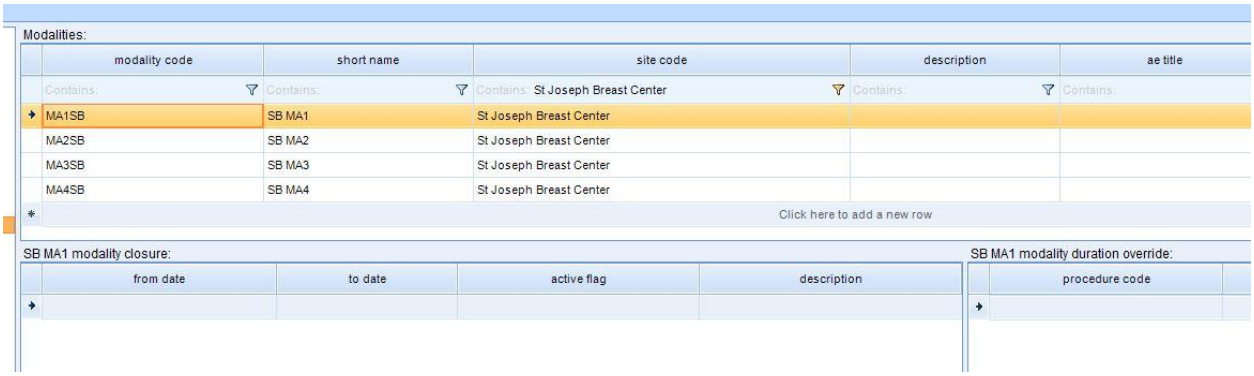

**Figure 4.2 – Modality Maintenance Screen Illustrating Site Mapping**

A system administrator can add or edit a region by simply right-clicking the Region dropdown. Given the fact that more detail is required at the Practice and Site level, data grids and popup forms have been utilized.

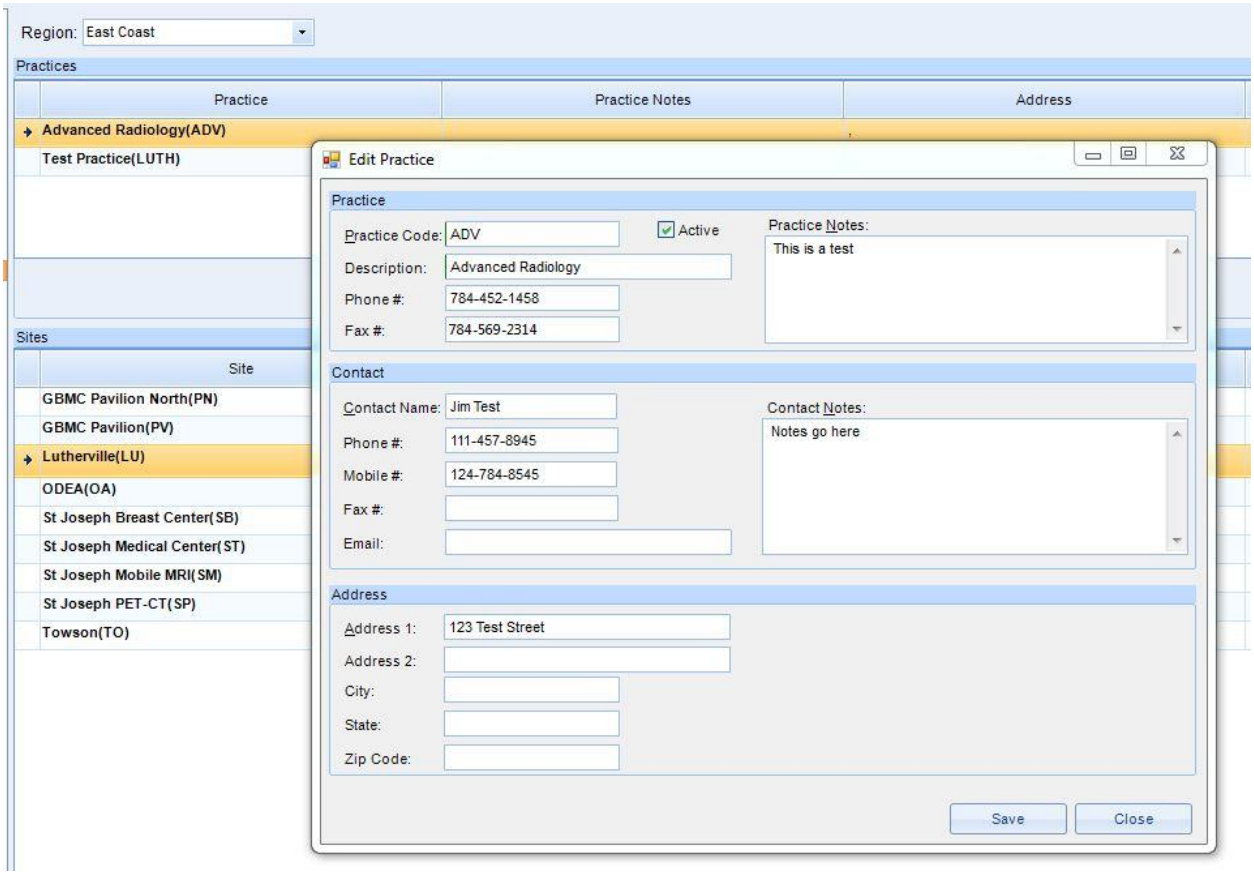

**Figure 4.3 – Editing a Practice**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Personnel Editor

The UserDetail and PersonResource editors have now been combined into one management screen called Personnel. The Personnel screen will be used by the system administrator to manage users and resources. A person may exist in the system as a resource such as a Referring Physician but not necessarily be a user.

Here is the current list of features implemented in the Personnel Editor:

1. The ability to add Persons (not patients) to the system. A Person can be a RIS User and/or a Resource.
2. Associate contact information and one or more addresses to a Person.
3. Associate one or more Resource Types to a Person. Current types supported are Referring Physician, Transcriptionist, Radiologist, and Technologist. This list will grow as more features are implemented.
4. Assign Resource Information such as NPI and Specialties.
5. Assign a User Name and Password to a Person.
6. The ability to deactivate a User.
7. Assign a Schedule Group to a User. A Schedule Group will define what sites and procedures a user can schedule against.
8. Assign one or more User Groups to a User. User Groups mainly dictate user permissions.
9. The ability to specify if User Account supports Voice Recognition.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

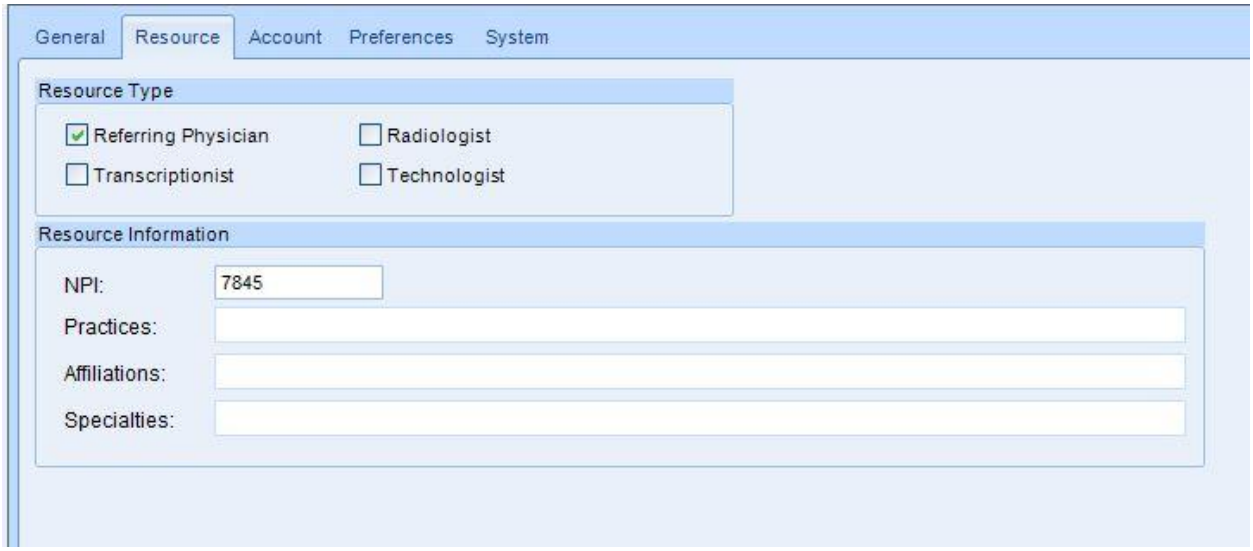

**Figure 4.5 – Personnel Editor showing Resource Tab**

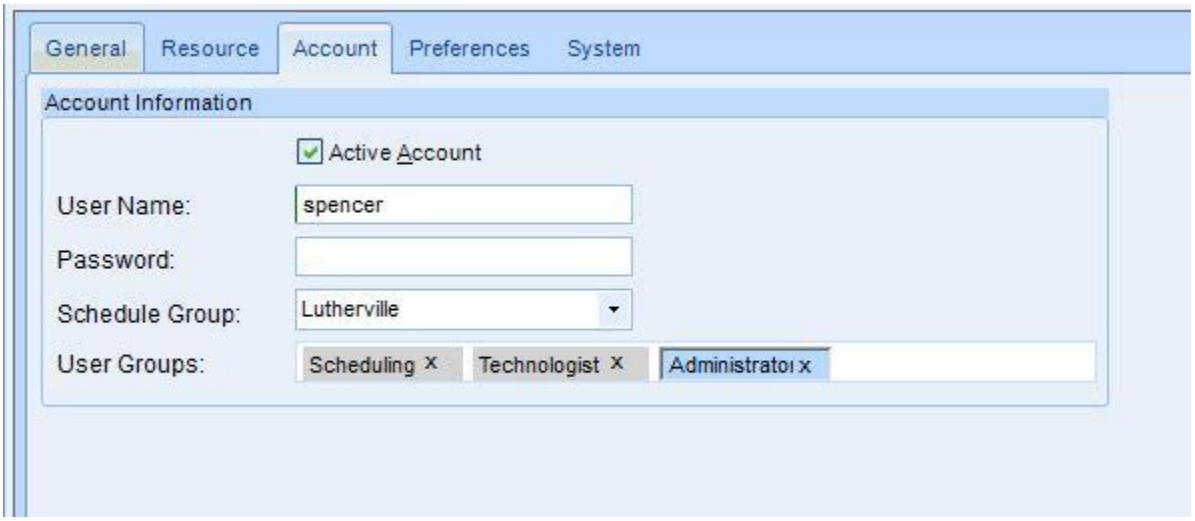

**Figure 4.6 – Personnel Editor showing Account Tab**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Modality Duration Override

In this release, the Modality management screen has been enhanced to include a section to account for duration overrides for scanners that are on average faster or slower than the standard procedure duration.

Default procedure durations are set at the Procedure Code level. To specify a duration override, the user simply specifies the modality, procedure code, and revised duration. In the sample below, an ultrasound scanner (US1LU) at the Lutherville site has a duration override set at 40 minutes for the US Chest procedure. The default duration for the US Chest procedure is 30 minutes. When scheduling a US Chest in room US1LU at Lutherville, the duration will now be 40 minutes.

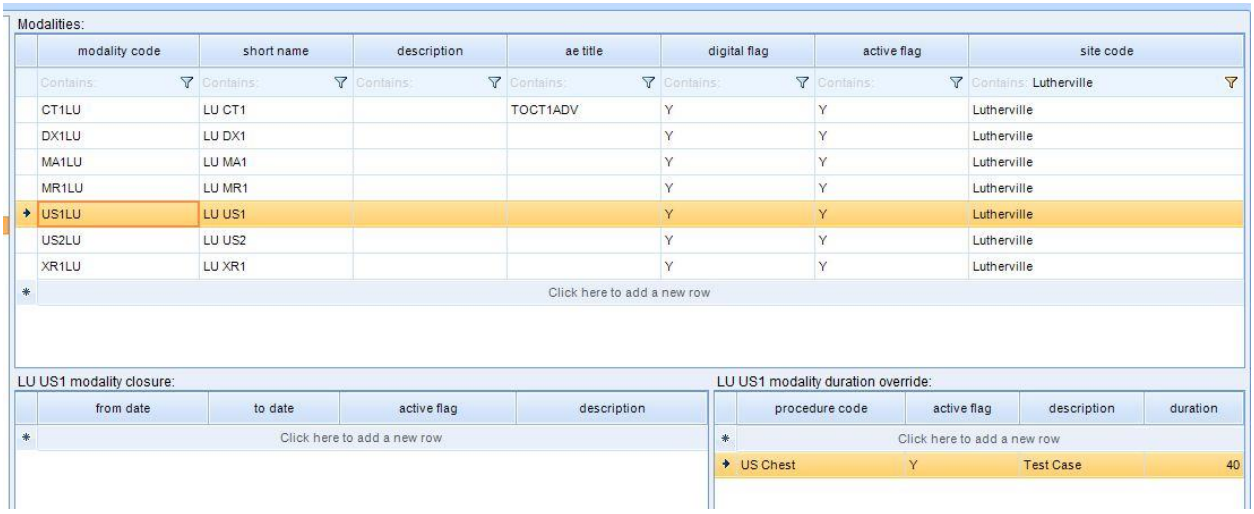

**Figure 4.7 – Modality Editor showing Duration Override**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Worklist Icons

In this release, steps have been taken to make the application more visually appealing to the user. For example, icons can now be associated to a worklist.

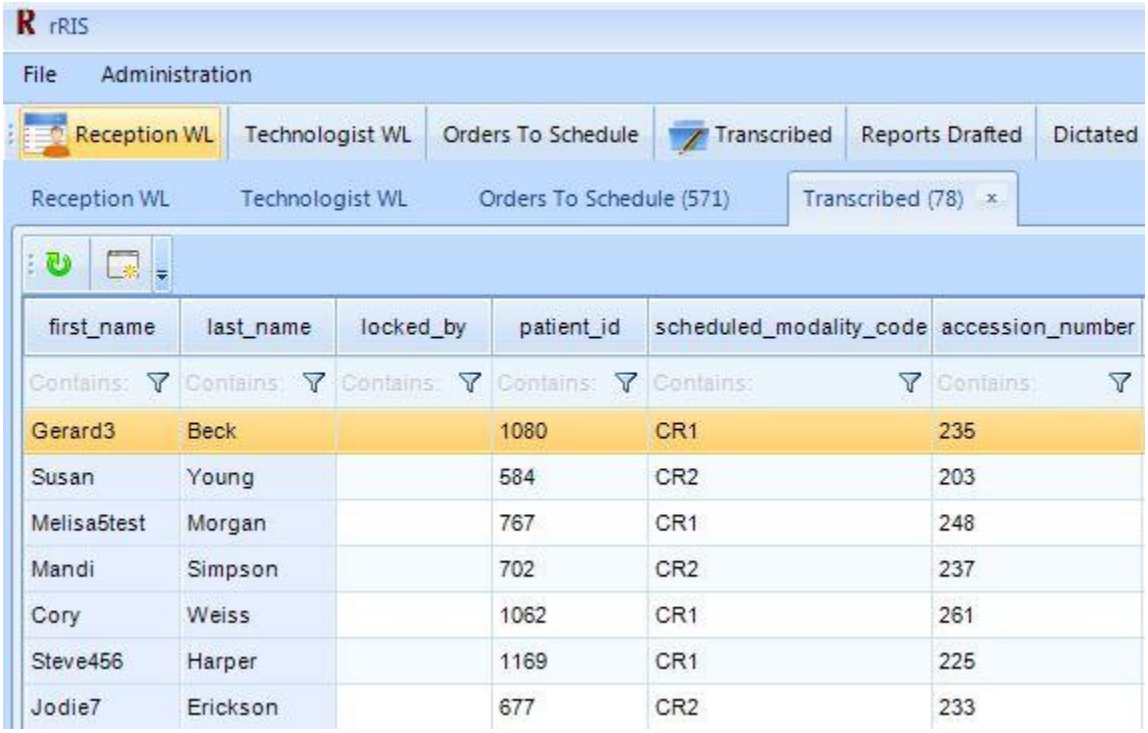

**Figure 4.8 – Reception and Transcribed Worklists with Icons**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Scheduling Procedure Picker

There is a great deal of configuration involved with scheduling. In previous releases, the management screens to configure scheduling solutions have been incorporated. These include Modality, AvailabilityTemplate, Organization, ProcedurePlan, ScheduleGroup, and Personnel. In this build, the system is starting to utilize these configurations in the scheduling workflow.

I release 1.09, there will be a great deal more to show regarding scheduling as this release concentrated a great deal on architecture. A scheduling screen has been constructed with a procedure picker to select procedures to schedule for a study. If a procedure or procedures have been specified at the order level, the procedure picker at the study level will default accordingly.

**Figure 4.9 – Scheduling Screen Illustrating Procedure Picker**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Known Limitations

Bugs, Suggested Features, and Support Issues are now tracked in a web based system called Redmine. The following is a snapshot of the issues found in Build 1.08 as of the end of Sprint 9. Note that the majority if these issues will be resolved in Build 1.09.

| # | Status | Subject | Category | Found | %Done | Resolved |
|---|---|---|---|---|---|---|
| 56 | Resolved | When Renaming a WorklistView, popup should default to current values | Thick Client GUI | 1.08 | 100 | 1.09 |
| 108 | Resolved | Organization - Inconsistent design with similiar admin screens | Admin Tools | 1.08 | 100 | 1.09 |
| 109 | Resolved | Organization - l_practice.contact_email_address field size needs to be increased | Web Services/DB | 1.08 | 100 | 1.09 |
| 110 | Resolved | Modality - Screen freezes after removing a modality | Admin Tools | 1.08 | 100 | 1.09.1 |
| 111 | Resolved | Random exception with DropDown controls | Admin Tools | 1.08 | 100 | 1.09 |
| 112 | Resolved | Order Screen - Site dropdown is not filtering by selected Practice | Thick Client GUI | 1.08 | 100 | 1.09 |
| 113 | Resolved | Scheduling - User can schedule procedures at a practice that is marked as inactive | Thick Client GUI | 1.08 | 100 | |
| 114 | Resolved | User is able to push tool bar out of view | Thick Client GUI | 1.08 | 100 | 1.09 |
| 115 | In Progress | Look and Feel - Pop up forms are inconsistent across application | Thick Client GUI | 1.08 | 90 | 1.09 |
| 116 | New | ScheduleGroup - new templates will not show up without app restart | Admin Tools | 1.08 | 0 | |
| 117 | Resolved | ScheduleGroup - Grid shows modality description while popup shows modality code | Admin Tools | 1.08 | 100 | 1.09.1 |
| 118 | Resolved | Organization - Issue with context menu on record selector | Admin Tools | 1.08 | 100 | 1.09 |
| 119 | Resolved | Personnel - Exception when adding a new user | Admin Tools | 1.08 | 100 | 1.09 |
| 120 | Resolved | ScheduleGroup - When adding multiples, the list box should be sortable | Admin Tools | 1.08 | 100 | 1.09.1 |
| 121 | Resolved | ScheduleGroup - Exception when adding multiple procedures | Admin Tools | 1.08 | 100 | 1.09.1 |
| 122 | Resolved | Personnel - Application crashes when adding address to existing user | Admin Tools | 1.08 | 100 | 1.09 |
| 123 | Resolved | Modality - Short name is not enough characters to support existing configurations | Web Services/DB | 1.08 | 100 | 1.09 |
| 124 | Resolved | Personnel - Resource type required in grid | Admin Tools | 1.08 | 100 | 1.09 |
| 125 | Resolved | Personnel - First Name should be a required field | Admin Tools | 1.08 | 100 | 1.09 |
| 126 | Resolved | Personnel - Exception when making an exisitng person a user | Admin Tools | 1.08 | 100 | 1.09 |
| 127 | New | Modality - Duration is not a required field in duration override | Admin Tools | 1.08 | 0 | |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | | | | | |
|---|---|---|---|---|---|---|
| 128 | New | Modality - Duration override procedures are not filtered by selected modality | Admin Tools | 1.08 | 0 | |
| 129 | New | ScheduleGroup - No validation for duplicate entries | Admin Tools | 1.08 | 0 | |
| 130 | New | Modality - No duration override default value | Admin Tools | 1.08 | 0 | |
| 131 | Resolved | Modality - duration grid AddNewRowPosition property | Admin Tools | 1.08 | 100 | 1.09 |
| 132 | New | Modality - modalities should be grouped by Modality Type | Admin Tools | 1.08 | 0 | |
| 133 | New | Modality - "To Date" should be defaulted when specifying closure | Admin Tools | 1.08 | 0 | |
| 134 | Resolved | Flag columns should be defaulting to "N" | Web Services/DB | 1.08 | 100 | 1.09 |
| 135 | New | GUI - Label sizing issue with patient search | Thick Client GUI | 1.08 | 0 | |
| 136 | New | GUI - Sizing issue with Edit Patient | Thick Client GUI | 1.08 | 0 | |
| 137 | New | Body Part and Laterality should only be enabled if required | Thick Client GUI | 1.08 | 0 | |
| 138 | Resolved | Personnel - When creating a new user, should default to first required field | Admin Tools | 1.08 | 100 | 1.09 |
| 139 | New | ProcedurePlan - When saving plan, focus moves to top of grid | Admin Tools | 1.08 | 0 | |
| 140 | In Progress | commandBarStripElement issue | Thick Client GUI | 1.08 | 0 | |
| 141 | New | Worklist - "Group By" should include record counts | Thick Client GUI | 1.08 | 0 | |
| 142 | Resolved | Worklist - User is able to save a worklist view without a valid name | Thick Client GUI | 1.08 | 100 | |
| 143 | Resolved | Procedure Picker - Procedure code instead of description shows on form load | Thick Client GUI | 1.08 | 100 | 1.09 |
| 144 | Resolved | Scheduling - Body Part and Laterality are not being carried forward from order item | Thick Client GUI | 1.08 | 100 | 1.09.1 |
| 145 | Resolved | Scheduling - Procedure picker is not expanding to show multiple procedures | Thick Client GUI | 1.08 | 100 | 1.09.1 |

# 1. Purpose

This document describes some of the new features and changes implemented in rRIS as of the end of Sprint 9. This pre-release version of rRIS is referred to as Build 1.09.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the rRIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The client installer for rRIS is still in the early development stages. For now, users can access the system by remoting to the rRIS test server in Baltimore as follows:

1. Start Remote Desktop Connection and specify IP 10.120.0.152
2. Username: Radnet domain account
3. Password: Radnet domain password
4. Double click the rRIS icon on the desktop or go to Start→All Programs→rRIS
5. Login User: terry
6. Login Password: ris

If you experience difficulties accessing the application, please do not hesitate to contact Spencer MacDougall with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Filter Sites by Practice when Creating Orders

When placing an order in rRIS, the user has the ability to assign the order to a practice. The order placer can go one organization level further and place the order for a site within the selected practice. Once the practice is selected, the list of available sites is then filtered accordingly. When the order is scheduled, the modality search will default to available rooms at the site specified on the order.

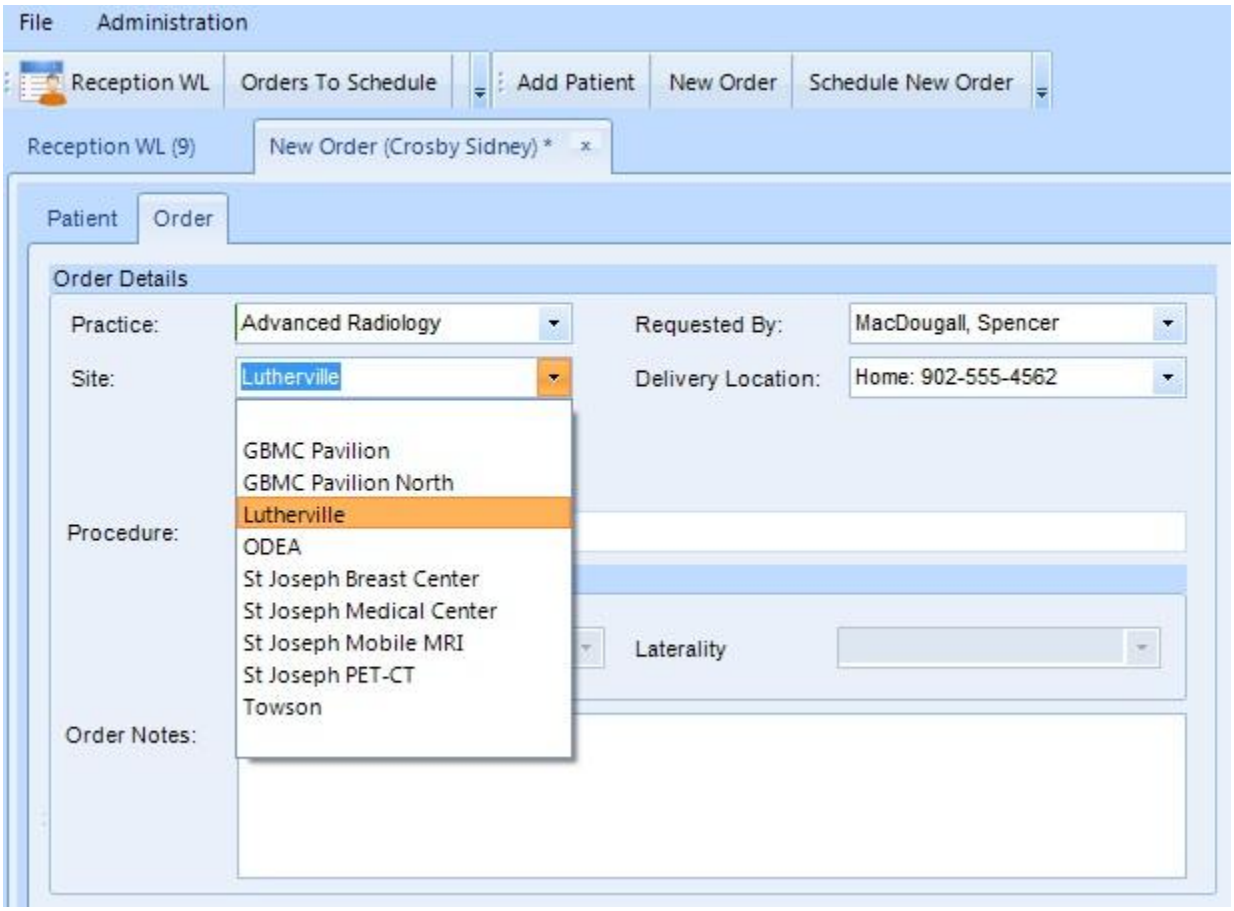

**Figure 4.1 – Filter Site Dropdown by Selected Practice**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Procedure Selector Enforces Body Part and Laterality

When placing or scheduling an order, the procedure selector will now enforce both Body Part and Laterality if it is specified as required at the Procedure Code level. If these values are not required for the selected procedure, then the dropdowns will be disabled. The example below illustrates an order for a CT Ankle Arthrogram where Laterality is required for the procedure.

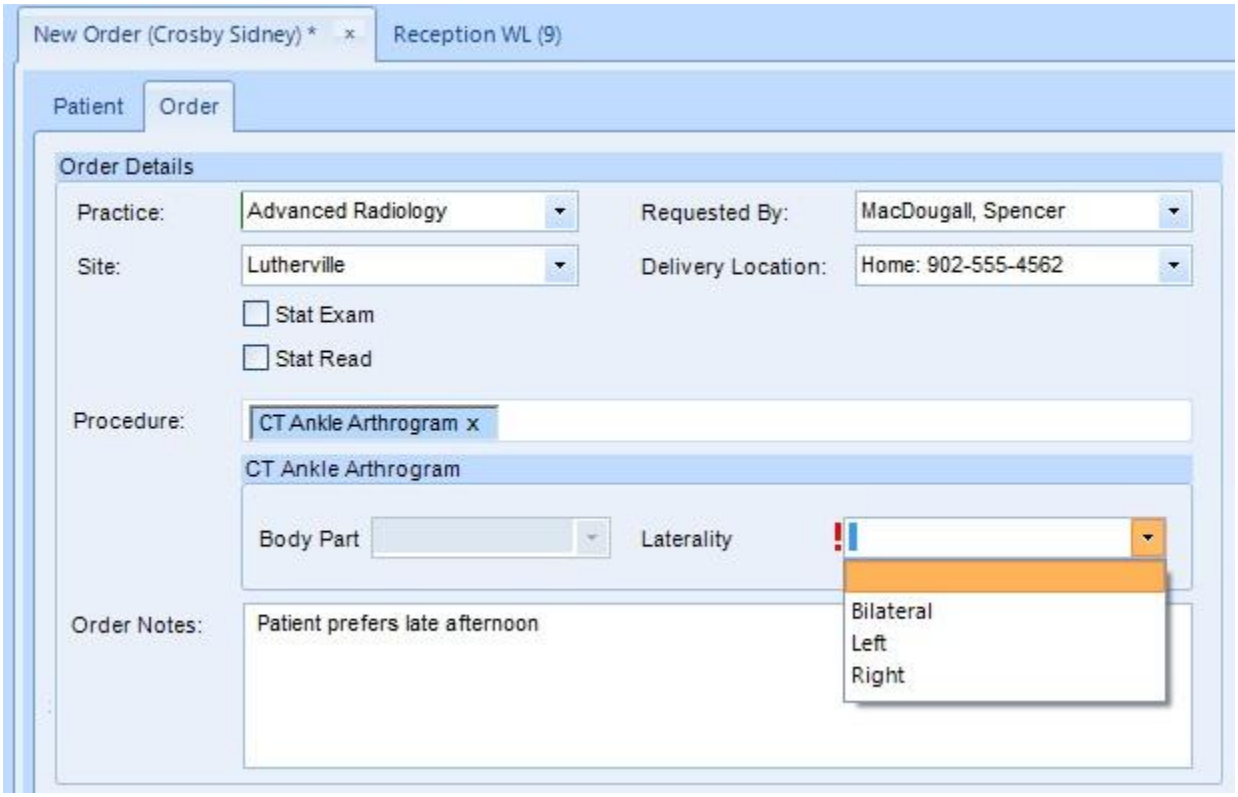

**Figure 4.2 – Ordered Procedure with Laterality Required**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Region/Practice/Site Picker

In Build 1.08, the Organization administration screen was introduced. Here the organizational structure of the site is configured to include regions, practices, and sites.

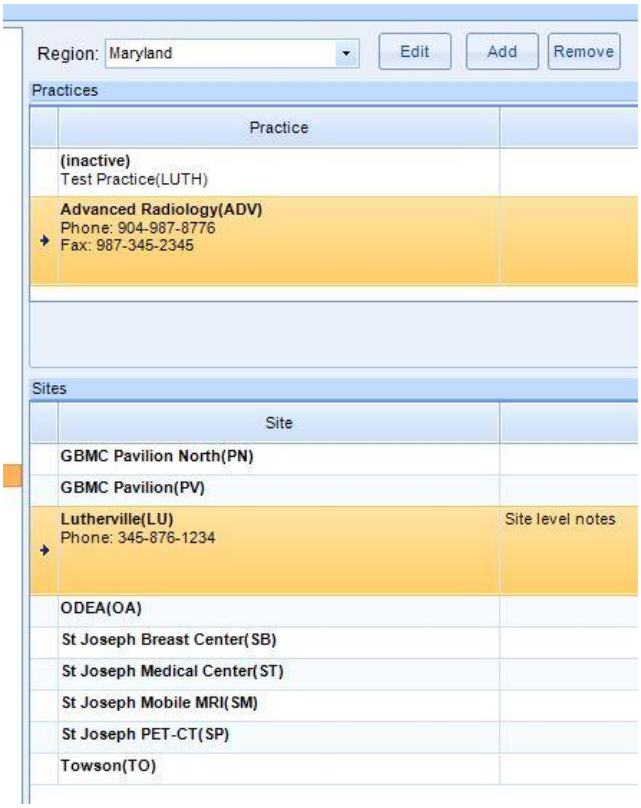

**Figure 4.3 – Sample Site Configuration**

When scheduling an order, the system utilizes the defined organizational structure in combination with the Schedule Group of the user to determine a possible room/scanner solution.

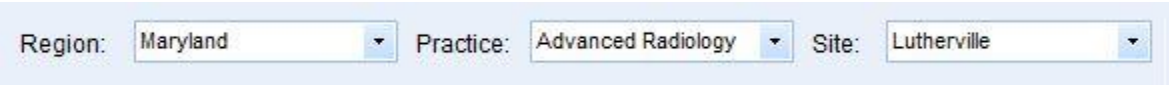

**Figure 4.4 – Scheduling Site Picker**

In the above example, there are multiple sites that belong to the Advanced Radiology practice but the user that is scheduling the procedure belongs to the Lutherville Schedule Group. Therefore, the user is only permitted to schedule procedures in rooms that belong to the Lutherville site. If the user is required to also schedule outside of Lutherville, then the Schedule Group can be adjusted to include other sites as well.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Scheduling Search

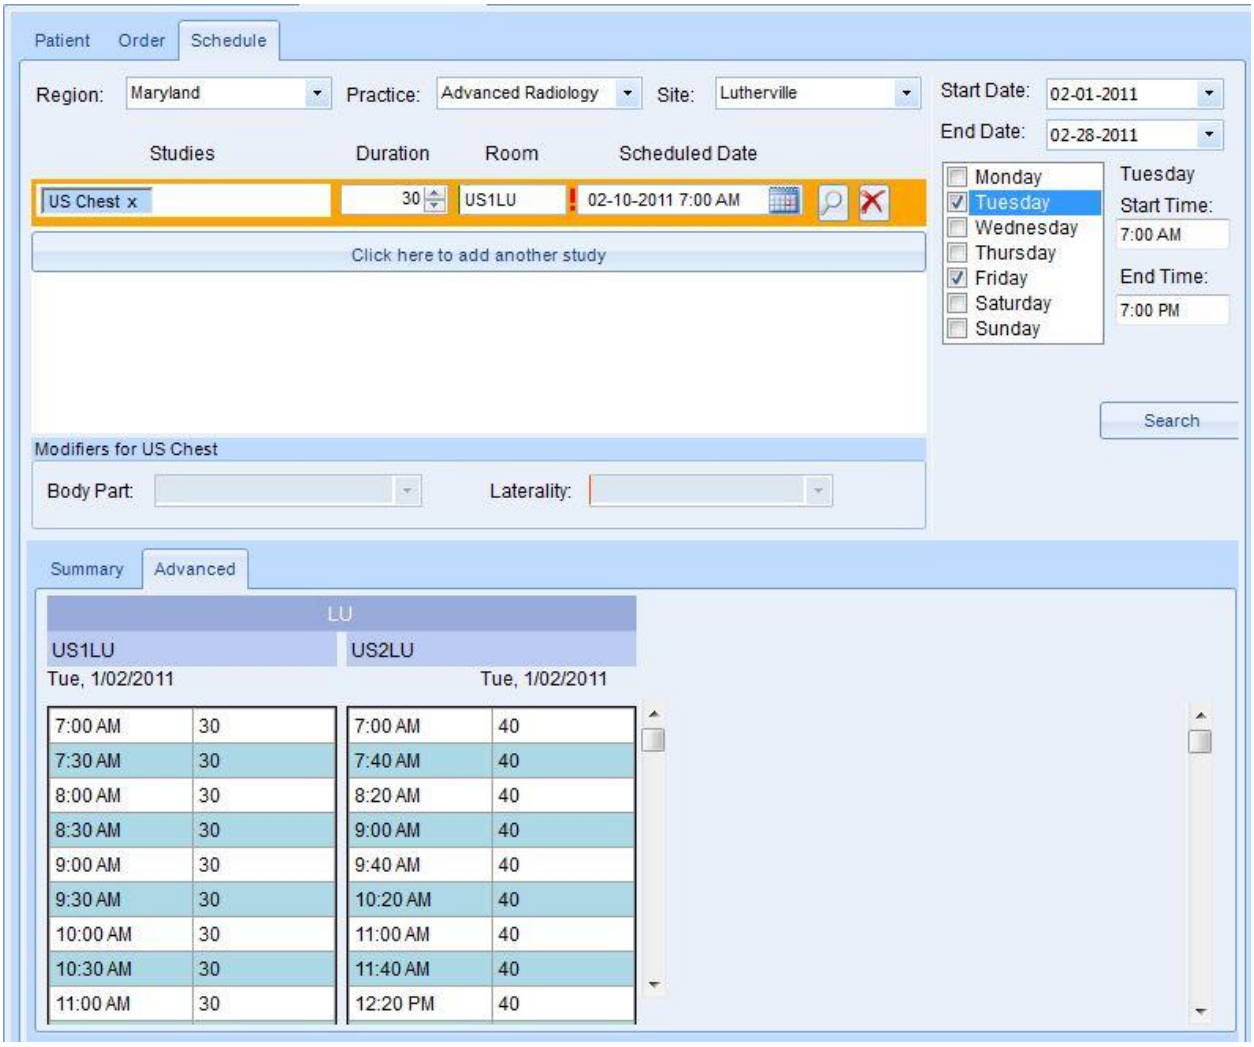

**Figure 4.5 – Scheduling Search**

In Build 1.09, Scheduling users now have the ability to search for scheduling solutions based on a specified site, procedure code, start date, end date, day of week, start time, and end time. Or the user can simply specify ALL to receive scheduling solutions from all sites in his or her Schedule Group.

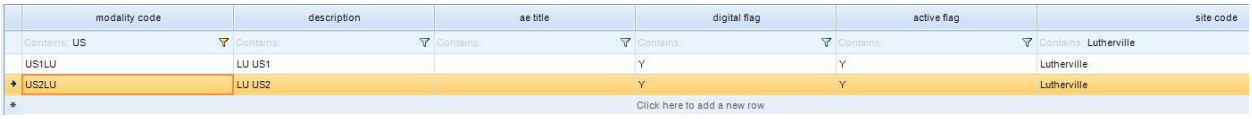
The above scenario is offering a solution for a patient requiring a US Chest procedure at the Lutherville site. The patient would like this procedure anytime in the month of February but is only available on Tuesday and Friday.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

The system shows that two rooms (US1LU and US2LU) are capable of performing this procedure at Lutherville. It also shows that 7:00AM on February 1st is available in both rooms. However, the US Chest takes 30 minutes in US1LU and 40 minutes in US2LU.

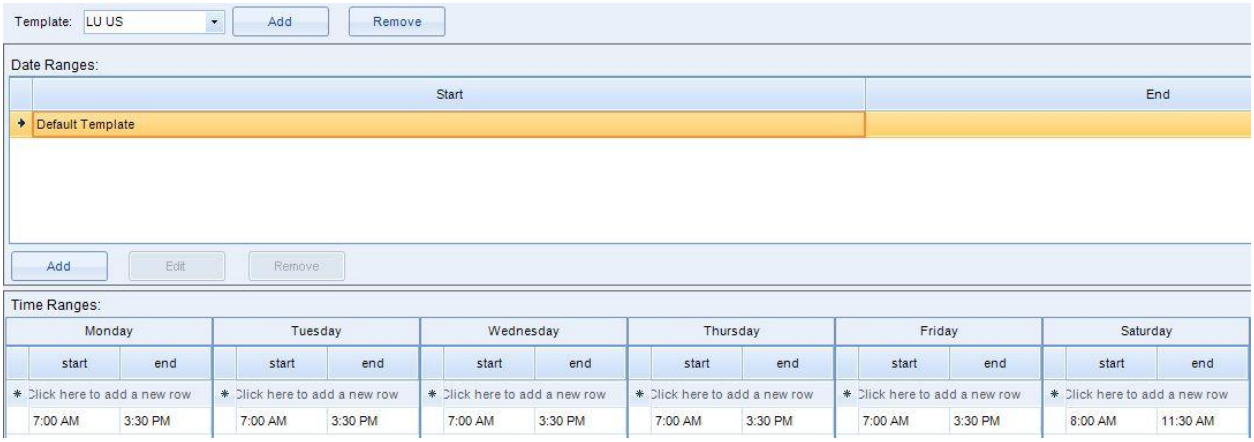
Example of configuration involved in the above scenario:

1. Modalities US1LU and US2LU created and assigned to Lutherville site.



| modality code | description | ae title | digital flag | active flag | site code |
|---|---|---|---|---|---|
| Contains: US | Contains: | Contains: | Contains: | Contains: | Contains: Lutherville |
| US1LU | LU US1 | | Y | Y | Lutherville |
| US2LU | LU US2 | | Y | Y | Lutherville |
| * | Click here to add a new row | | | | |

2. Availability Template (LU US) created stating that the rooms are available weekdays from 7:00AM to 3:30PM and Saturday from 8:00AM to 11:30AM.



Template: LU US | Add | Remove

Date Ranges:

| Start | End |
|---|---|
| Default Template | |

Add | Edit | Remove

Time Ranges:

| Monday | | Tuesday | | Wednesday | | Thursday | | Friday | | Saturday | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| start | end | start | end | start | end | start | end | start | end | start | end |
| * Click here to add a new row | | * Click here to add a new row | | * Click here to add a new row | | * Click here to add a new row | | * Click here to add a new row | | * Click here to add a new row | |
| 7:00 AM | 3:30 PM | 7:00 AM | 3:30 PM | 7:00 AM | 3:30 PM | 7:00 AM | 3:30 PM | 7:00 AM | 3:30 PM | 8:00 AM | 11:30 AM |

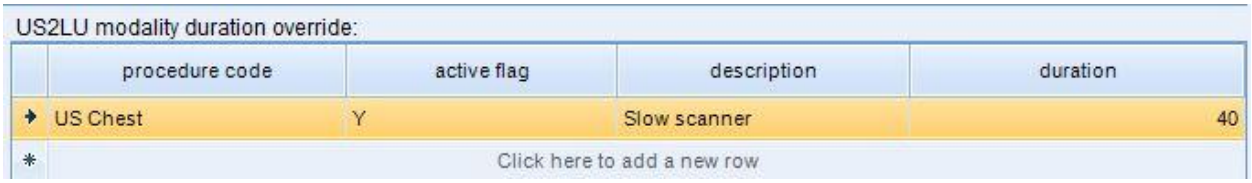
3. Schedule Group for Lutherville is created outlining that rooms US1LU and US2LU are both capable of performing an US Chest utilizing the LU US template.

Schedule Group: Lutherville | Add | Remove

| procedure code | modality code | template key |
|---|---|---|
| Contains: US Chest | Contains: | Equal: |
| US Chest | LU US1 | LU US |
| US Chest | LU US2 | LU US |
| * | Click here to add a new row | |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

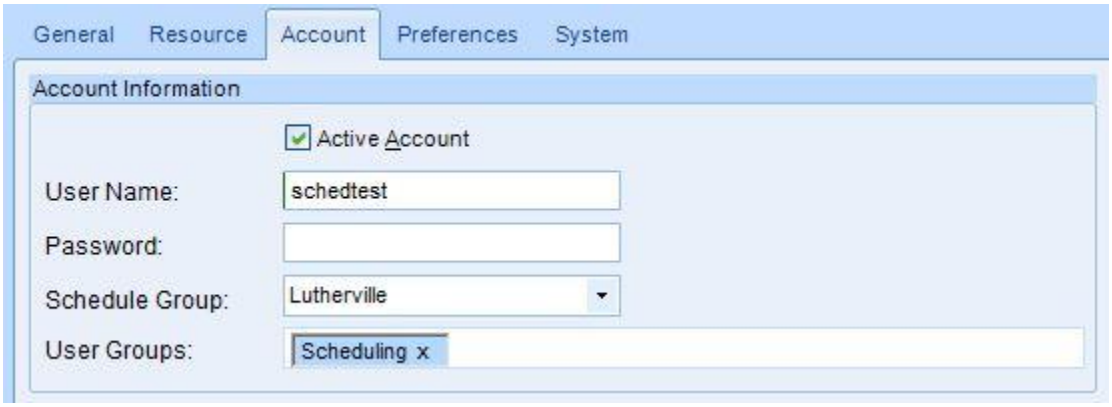
4. A modality duration override of 40 minutes is applied to US2LU for the US Chest procedure. The default duration for the procedure is 30 minutes.



US2LU modality duration override:

| | procedure code | active flag | description | duration |
|---|---|---|---|---|
| ➔ | US Chest | Y | Slow scanner | 40 |
| * | Click here to add a new row | | | |

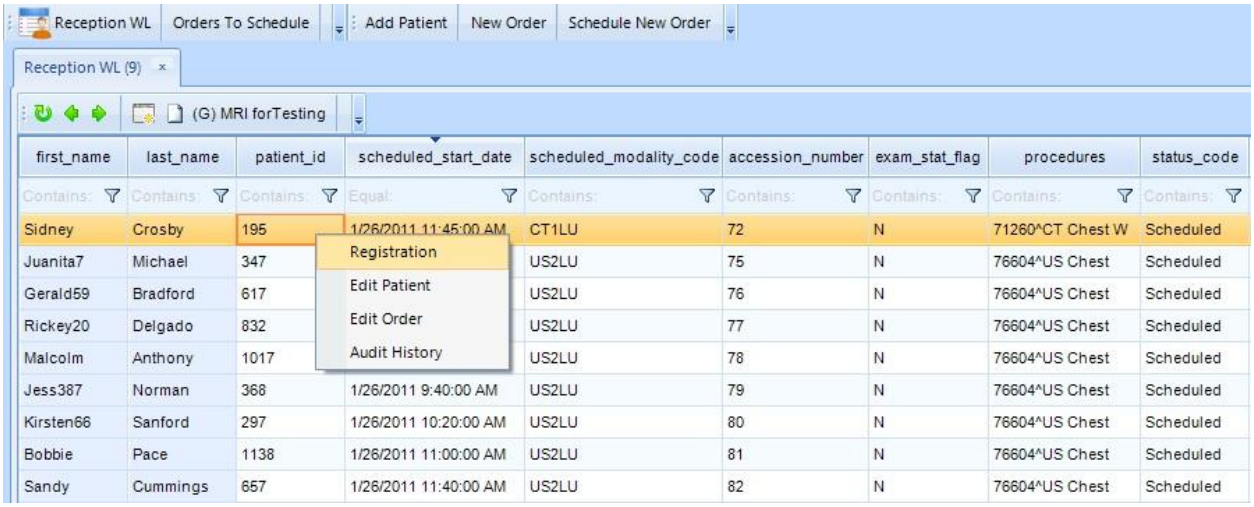
5. The Lutherville Schedule Group is applied to the scheduling user so he or she is permitted to schedule for the site.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Registration Workflow

In Build 1.09, reception users now have the ability to register a patient. The Reception is a date driven worklist that shows a listing of studies that are scheduled for the selected date. From here, the reception user can launch the registration screen and perform basic level workflow.



| first_name | last_name | patient_id | scheduled_start_date | scheduled_modality_code | accession_number | exam_stat_flag | procedures | status_code |
|---|---|---|---|---|---|---|---|---|
| Contains: | Contains: | Contains: | Equal: | Contains: | Contains: | Contains: | Contains: | Contains: |
| Sidney | Crosby | 195 | 1/26/2011 11:45:00 AM | CT1LU | 72 | N | 71260^CT Chest W | Scheduled |
| Juanita7 | Michael | 347 | | US2LU | 75 | N | 76604^US Chest | Scheduled |
| Gerald59 | Bradford | 617 | | US2LU | 76 | N | 76604^US Chest | Scheduled |
| Rickey20 | Delgado | 832 | | US2LU | 77 | N | 76604^US Chest | Scheduled |
| Malcolm | Anthony | 1017 | | US2LU | 78 | N | 76604^US Chest | Scheduled |
| Jess387 | Norman | 368 | 1/26/2011 9:40:00 AM | US2LU | 79 | N | 76604^US Chest | Scheduled |
| Kirsten66 | Sanford | 297 | 1/26/2011 10:20:00 AM | US2LU | 80 | N | 76604^US Chest | Scheduled |
| Bobbie | Pace | 1138 | 1/26/2011 11:00:00 AM | US2LU | 81 | N | 76604^US Chest | Scheduled |
| Sandy | Cummings | 657 | 1/26/2011 11:40:00 AM | US2LU | 82 | N | 76604^US Chest | Scheduled |

**Figure 4.6 – Reception Worklist showing Context Menu**

At this point, the registration screen is made up of Patient, Patient Contacts, Insurance, Exam, and Workers Compensation tabs. The Patient tab consists of patient level data and is common throughout other areas of the application. The Patient Contacts tab will be used to store responsible party and emergency contact information at the visit level. Most registration data elements are saved at the visit level as they can vary from one visit to the next.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**Figure 4.7 – Registration Screen showing Patient Contacts**

On the Insurance tab, the reception user can enter insurance policy information and payments related to the selected visit. Insurance carriers are maintained in the Carrier lookup table.

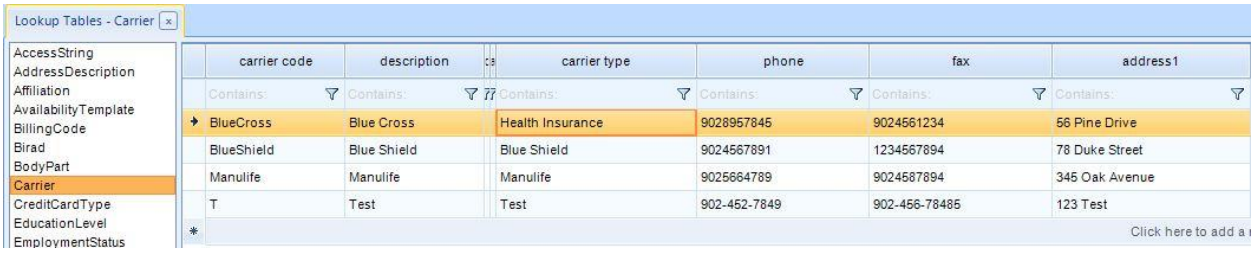


**Figure 4.8 – Carrier Lookup Table**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

When adding one or more insurance policies to the selected visit, it is important to note that the reception user can easily access a patient's insurance data from previous visits and reuse it if the policies have not changed. Policies can also be marked as expired if they are no longer relevant.

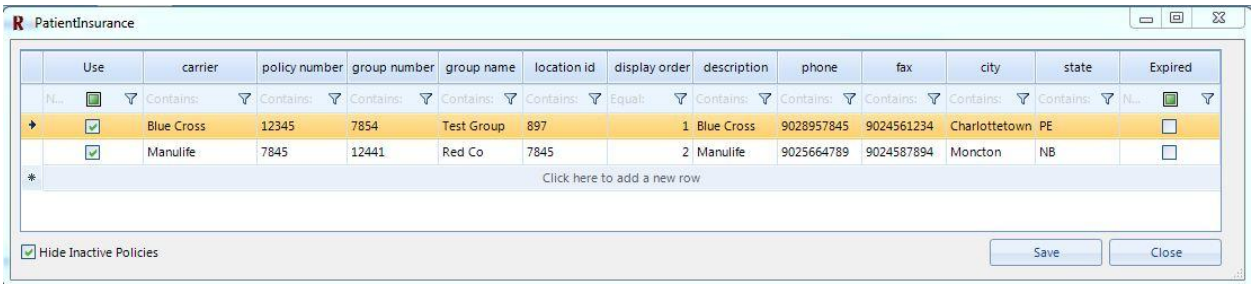

**Figure 4.9 – Popup to Use Insurance Patient's Insurance from Previous Visit**

From the registration screen, the user can add one or more payments that the patient has made on the selected visit. By selecting the Add Payment or Edit Payment buttons, the Front Desk Payment popup form will allow the user to add payments via Cash, Credit Card, or Check.

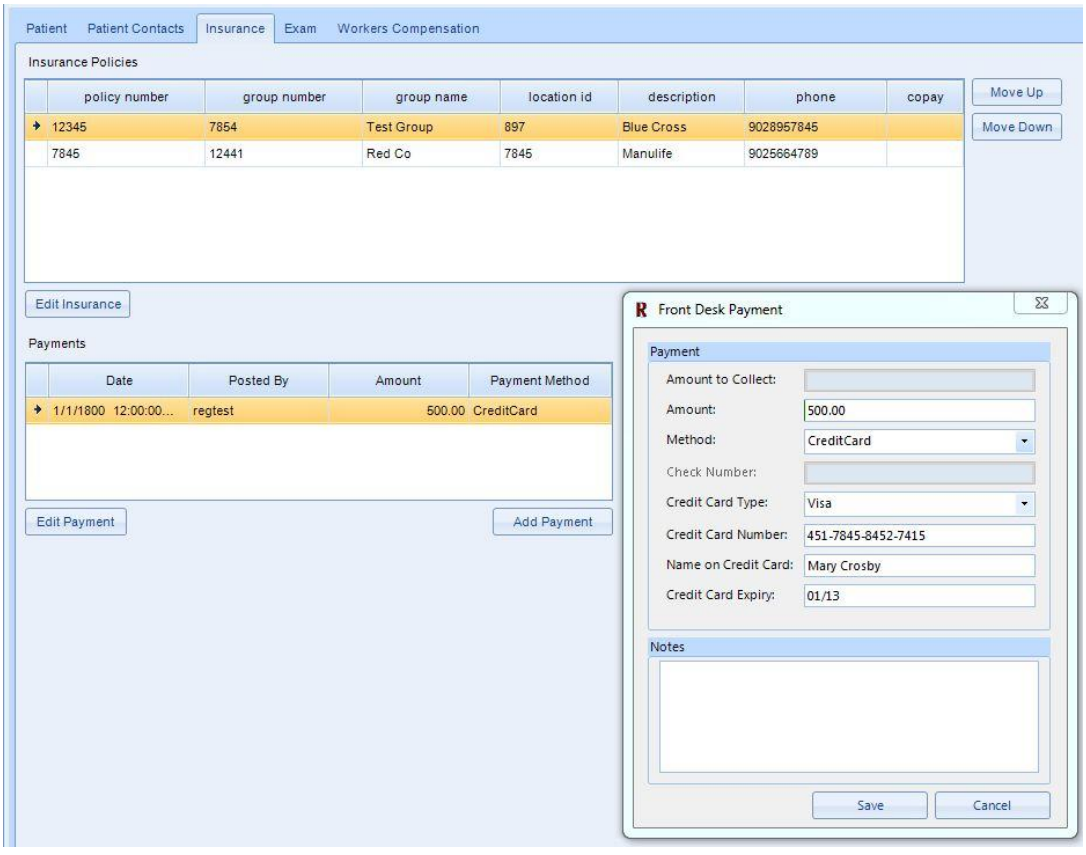

**Figure 4.10 – Registration Screen showing Insurance and Payment Entries**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

The Workers Compensation tab on the registration screen allows the user to enter injury related data required for a workers compensation claim.

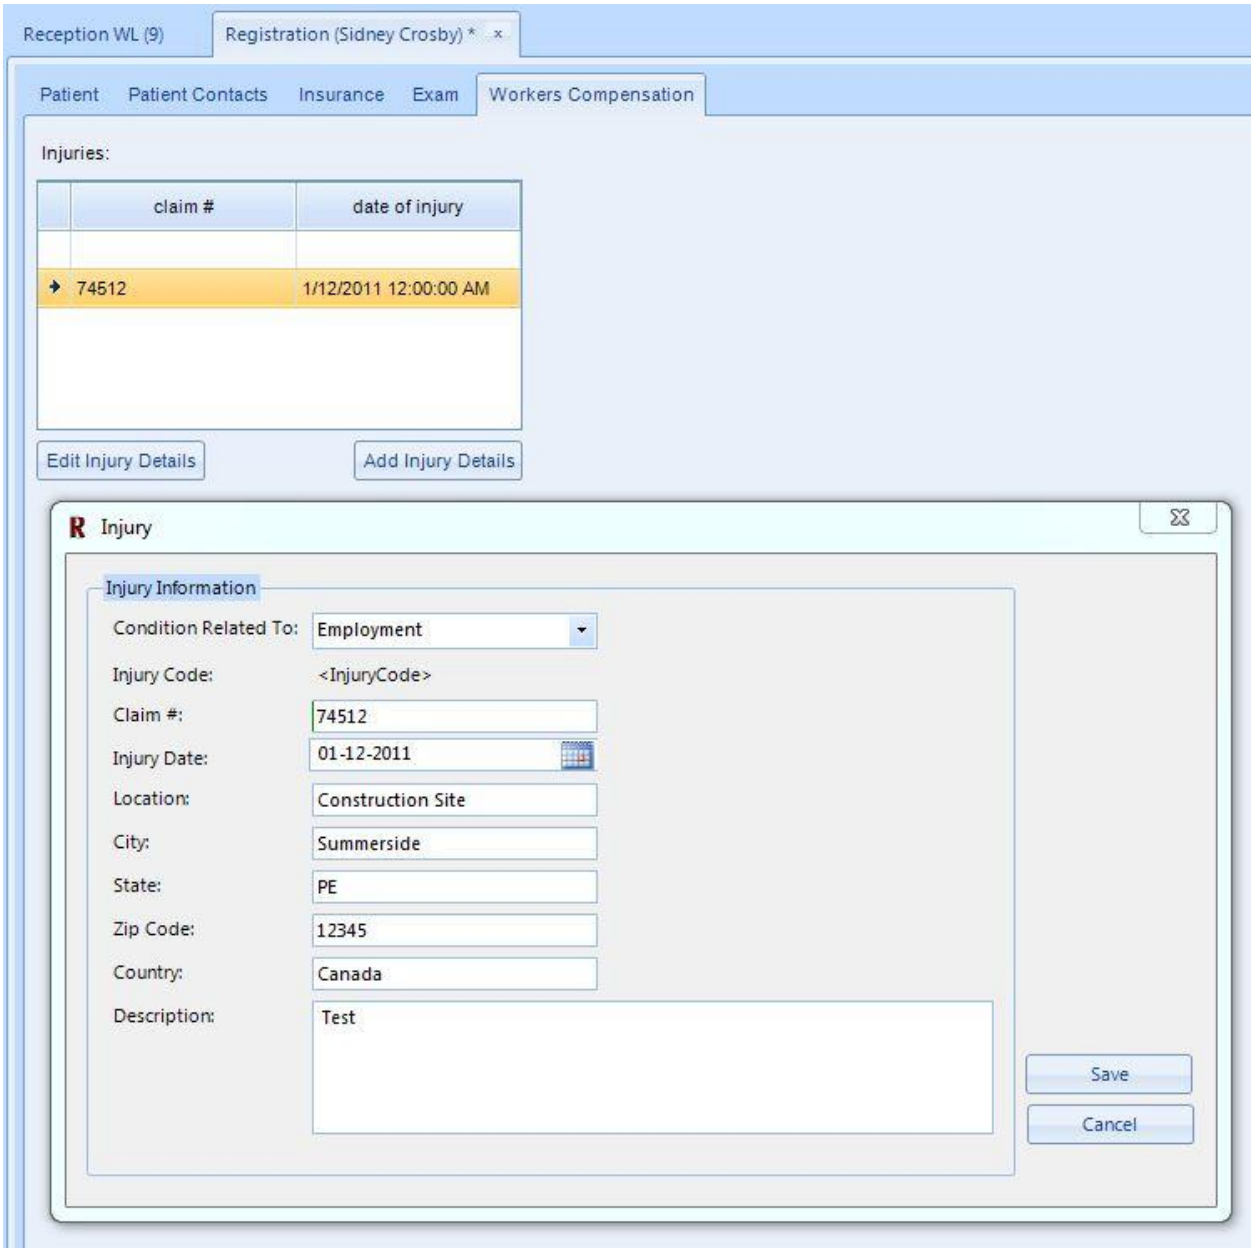

**Figure 4.11 – Registration Screen showing Workers Compensation entry**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Known Limitations

Bugs, Suggested Features, and Support Issues are now tracked in a web based system called Redmine. The following is a snapshot of the issues found in Build 1.09 as of the end of Sprint 10. Note that the majority of these issues will be resolved in Build 1.10.

| # | Status | Subject | Category | Found | %Done | Resolved |
|---|---|---|---|---|---|---|
| 185 | New | Registration - Missing field for Injury Code | Thick Client GUI | 1.09 | 0 | |
| 184 | New | Registration - Multiple payments should be in a calculated field | Thick Client GUI | 1.09 | 0 | |
| 183 | New | Organization - Region context menu | Admin Tools | 1.09 | 0 | |
| 182 | Resolved | Scheduling - Day label is showing up twice on the Advanced layout | Thick Client GUI | 1.09 | 100 | 1.10 |
| 181 | Resolved | Scheduling - Room text box on the study grid | Thick Client GUI | 1.09 | 100 | 1.10 |
| 180 | New | Registration - Exception when removing an Insurance policy | Thick Client GUI | 1.09 | 0 | |
| 179 | New | Registration - Time is showing on the Payments grid | Thick Client GUI | 1.09 | 0 | |
| 178 | New | Login - Issue when trying to lauch the app when it is already running | Thick Client GUI | 1.09 | 0 | |
| 177 | New | Worklist - No framework present to specify a default worklist | Thick Client GUI | 1.09 | 0 | |
| 176 | New | Worklist - Group does not default properly when renaming a group worklist view | Thick Client GUI | 1.09 | 0 | |
| 175 | New | Registration - Exception with sequence buttons on insurance grid | Thick Client GUI | 1.09 | 0 | |
| 174 | Resolved | Body Part and Laterality are not being enforced on Edit Order | Thick Client GUI | 1.09 | 100 | 1.10 |
| 173 | Resolved | Registration - Exception when registering a patient with no scheduled procedure | Thick Client GUI | 1.09 | 100 | 1.10 |
| 172 | New | Scheduling - Procedure code needs to be a required field | Thick Client GUI | 1.09 | 0 | |
| 171 | Resolved | Worklist - Orders are falling off the "Orders To Schedule" worklist without being scheduled | Thick Client GUI | 1.09 | 0 | |
| 170 | New | Worklist - Sorting issues on keys and dates | Thick Client GUI | 1.09 | 0 | |
| 169 | New | Permissions - Missing lookup table permissions | Admin Tools | 1.09 | 0 | |
| 168 | New | Permissions - Issue with lookup table permissions | Admin Tools | 1.09 | 0 | |
| 167 | New | Permissions - Missing permission on Administration menu item | Thick Client GUI | 1.09 | 0 | |
| 166 | Resolved | Scheduling - Issue applying availability templates to search results | Thick Client GUI | 1.09 | 100 | 1.10 |
| 165 | Resolved | Scheduling - Exception when using mouse scroll wheel to find time slot | Thick Client GUI | 1.09 | 100 | 1.10 |
| 164 | New | Scheduling - Exception when searching rooms for a study with multiple procedures | Thick Client GUI | 1.09 | 0 | |
| 163 | New | Scheduling - Issue when scheduling more than one study per order | Thick Client GUI | 1.09 | 0 | |
| 162 | Resolved | Worklist - Issue with permissions on worklist buttons | Thick Client GUI | 1.09 | 100 | 1.10 |
| 161 | Resolved | Scheduling - Exception when scheduling using search icon | Thick Client GUI | 1.09 | 100 | 1.10 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | | | | | |
|---|---|---|---|---|---|---|
| 160 | New | ScheduleGroup - Exception when adding multiple procedures | Admin Tools | 1.09 | 0 | |
| 159 | Resolved | ScheduleGroup - Exception when adding new schedule group | Admin Tools | 1.09 | 100 | 1.10 |
| 158 | Resolved | Registration - Missing permission is causing exception | Thick Client GUI | 1.09 | 100 | 1.10 |
| 156 | New | Worklist Views - Multi-select should be disabled | Thick Client GUI | 1.09 | 0 | |
| 155 | New | UserGroupPermission - Difficult assigning multiple access strings to a user group | Admin Tools | 1.09 | 0 | |
| 154 | Resolved | UserGroupPermission - missing access level dropdown | Admin Tools | 1.09 | 100 | 1.10 |
| 153 | New | ComboBoxes - Allow null selection on required fields | Thick Client GUI | 1.09 | 0 | |
| 152 | Resolved | Personnel - No error handling on duplicate User Names | Admin Tools | 1.09 | 100 | 1.10 |
| 151 | Resolved | Personnel - Exception when password is not specified | Admin Tools | 1.09 | 100 | 1.10 |
| 150 | New | Scheduling - Issue loading patient context on Schedule New Order | Thick Client GUI | 1.09 | 0 | |
| 149 | New | Registration - Exception when no relation is specified | Thick Client GUI | 1.09 | 0 | |
| 148 | New | Registration - MRN is editable | Thick Client GUI | 1.09 | 0 | |
| 147 | New | ScheduleGroup - Conflicting right-click events | Admin Tools | 1.09 | 0 | |
| 146 | Resolved | ScheduleGroup - Exception after marking a schedule group as inactive | Admin Tools | 1.09 | 100 | 1.10 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This document describes some of the new features and changes implemented in rRIS as of the end of Sprint 10. This pre-release version of rRIS is referred to as Build 1.10.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the rRIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The client installer for rRIS is still in the early development stages. For now, users can access the system by remoting to the rRIS test server in Baltimore as follows:

1. Start Remote Desktop Connection and specify IP 10.120.0.152
2. Username: Radnet domain account
3. Password: Radnet domain password
4. Double click the rRIS icon on the desktop or go to Start→All Programs→rRIS
5. Login User: terry
6. Login Password: ris

If you experience difficulties accessing the application, please do not hesitate to contact Spencer MacDougall with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Calculated Fields

In Build 1.10 a framework for supporting calculated fields has been introduced. Calculated fields are mapped to clinical data and behave in such a way that when the underlying data changes, they are updated and display the new information. The example below illustrates a calculated field called "Age" which reflects the age of the patient in years and months. If the patient is an infant less than one year old then the age will be displayed in months and days.

**Figure 4.1 – Age Calculated Field**

**Figure 4.2 – Age Calculated Field for Infant**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Multi Type Ahead Enhancements

The searching abilities for dropdowns have been enhanced so the user can easily navigate to the desired value. For example, in the procedure picker the user can now type "X" to quickly get a list of all XR procedures or by typing "X fin" the user will get a list of all XR Finger procedures. The parts matching in the type ahead are represented in the results by bolding the characters.

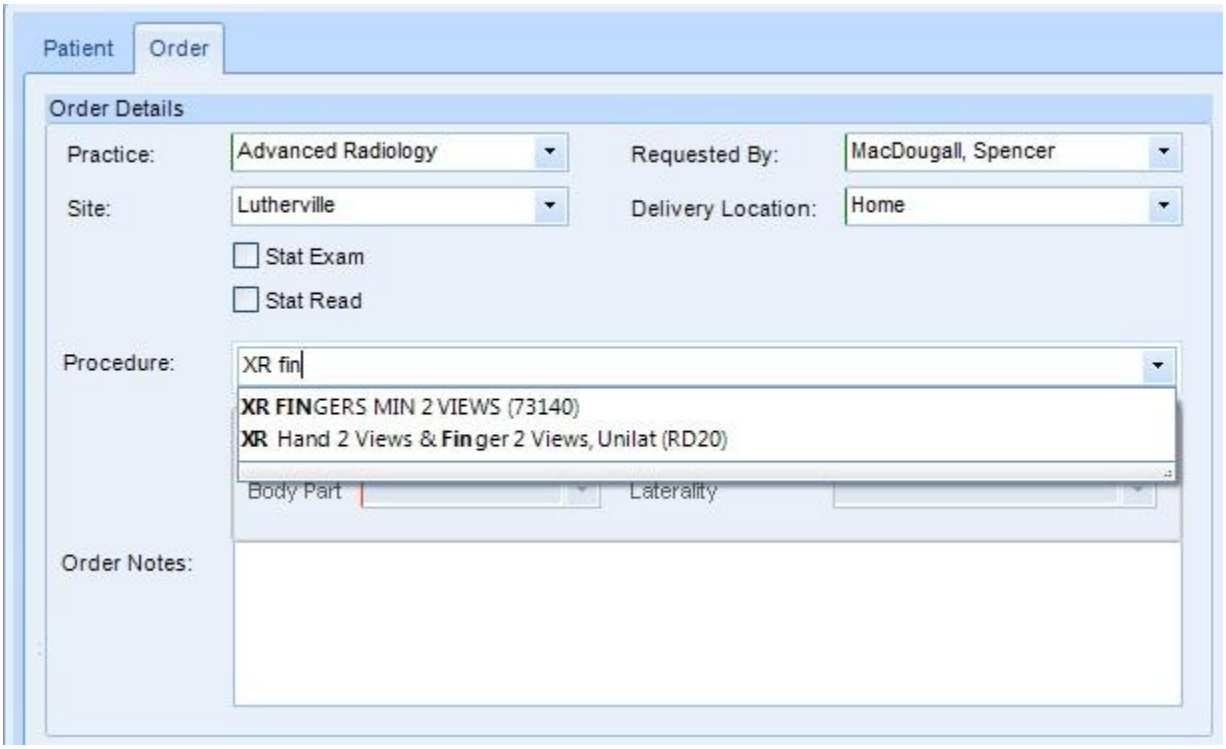

**Figure 4.3 – Type Ahead Results for Procedure like "XR fin"**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Prep Instructions

Prep Instructions are maintained in the PrepInstruction lookup table. From the lookup table, the user can simply right-click and select Edit to view/modify the selected prep instruction. This launches a multi-line popup window containing the prep instruction structured text.

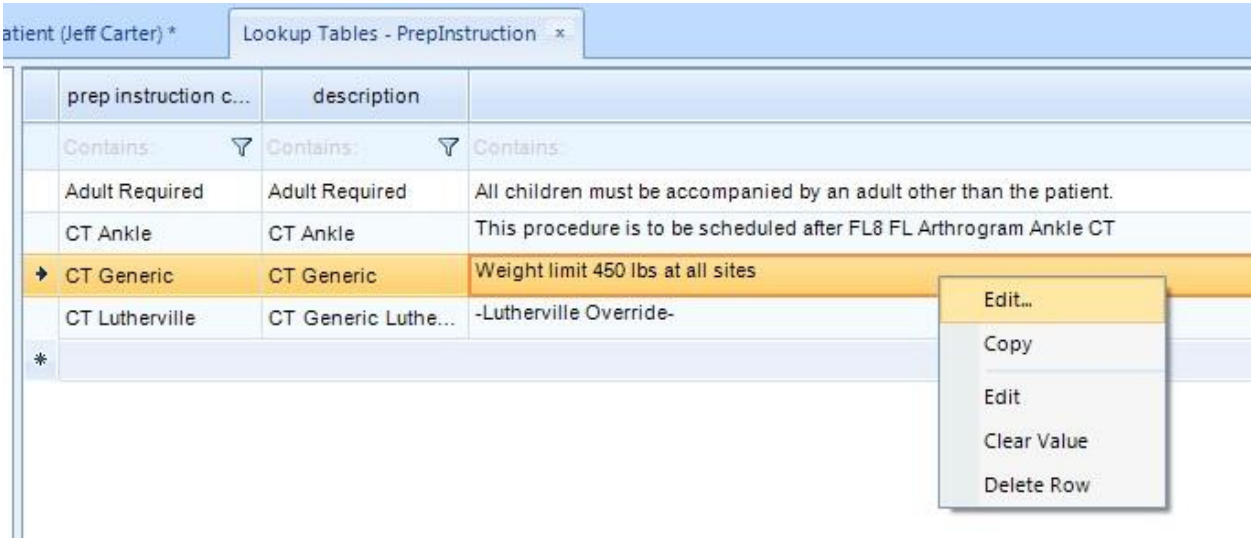

**Figure 4.4 – PrepInstruction Lookup Table**

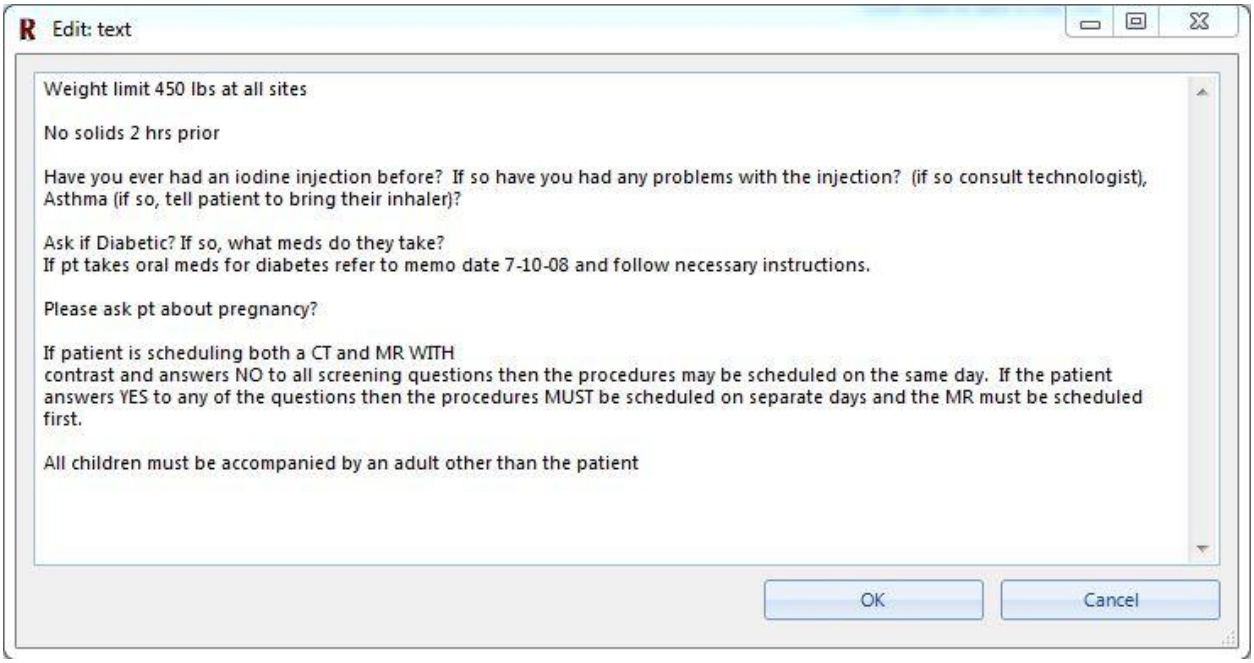

**Figure 4.5 – Text Entry Form for CT Generic Prep Instruction**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Prep Instructions are applied to procedure codes. This allows the system to use one prep instruction code against many procedure codes instead of having to maintain common instructions separately.

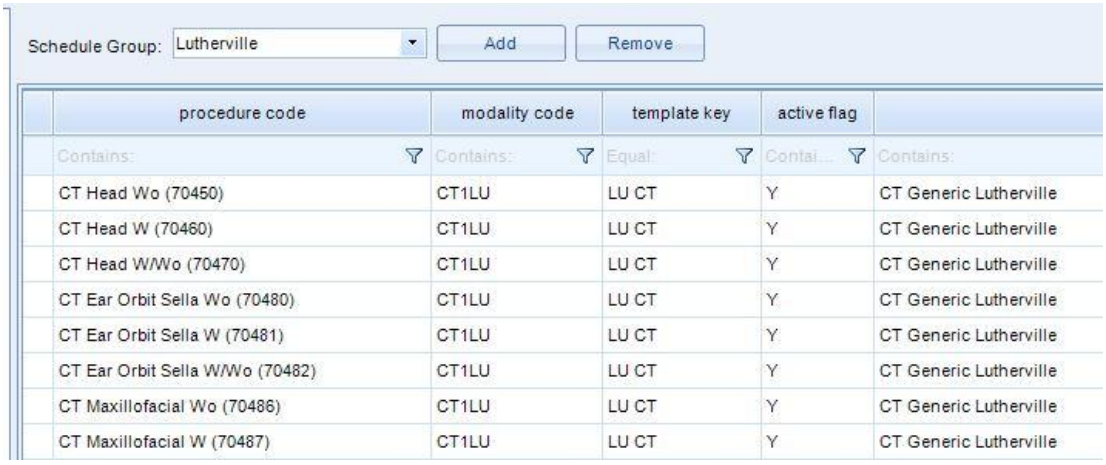
**Figure 4.6 – CT Procedure Codes with Applied Prep Instruction**

Because of the unique needs and/or regulations at each site, rRIS supports the ability to override the default prep instructions for a procedure code. This override exists by modifying the prep instruction for a particular procedure code at the Schedule Group level. For example, the Lutherville site may have a different set of prep instructions for CT's compared to the rest of the organization.



Schedule Group: Lutherville | Add | Remove

| procedure code | modality code | template key | active flag | |
|---|---|---|---|---|
| Contains: | Contains: | Equal: | Contai... | Contains: |
| CT Head Wo (70450) | CT1LU | LU CT | Y | CT Generic Lutherville |
| CT Head W (70460) | CT1LU | LU CT | Y | CT Generic Lutherville |
| CT Head W/Wo (70470) | CT1LU | LU CT | Y | CT Generic Lutherville |
| CT Ear Orbit Sella Wo (70480) | CT1LU | LU CT | Y | CT Generic Lutherville |
| CT Ear Orbit Sella W (70481) | CT1LU | LU CT | Y | CT Generic Lutherville |
| CT Ear Orbit Sella W/Wo (70482) | CT1LU | LU CT | Y | CT Generic Lutherville |
| CT Maxillofacial Wo (70486) | CT1LU | LU CT | Y | CT Generic Lutherville |
| CT Maxillofacial W (70487) | CT1LU | LU CT | Y | CT Generic Lutherville |

**Figure 4.7 – CT Generic Prep Instructions Applied to Lutherville Schedule Group**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Below is an example of how the prep instructions will be displayed to the user at the time of scheduling and registration.

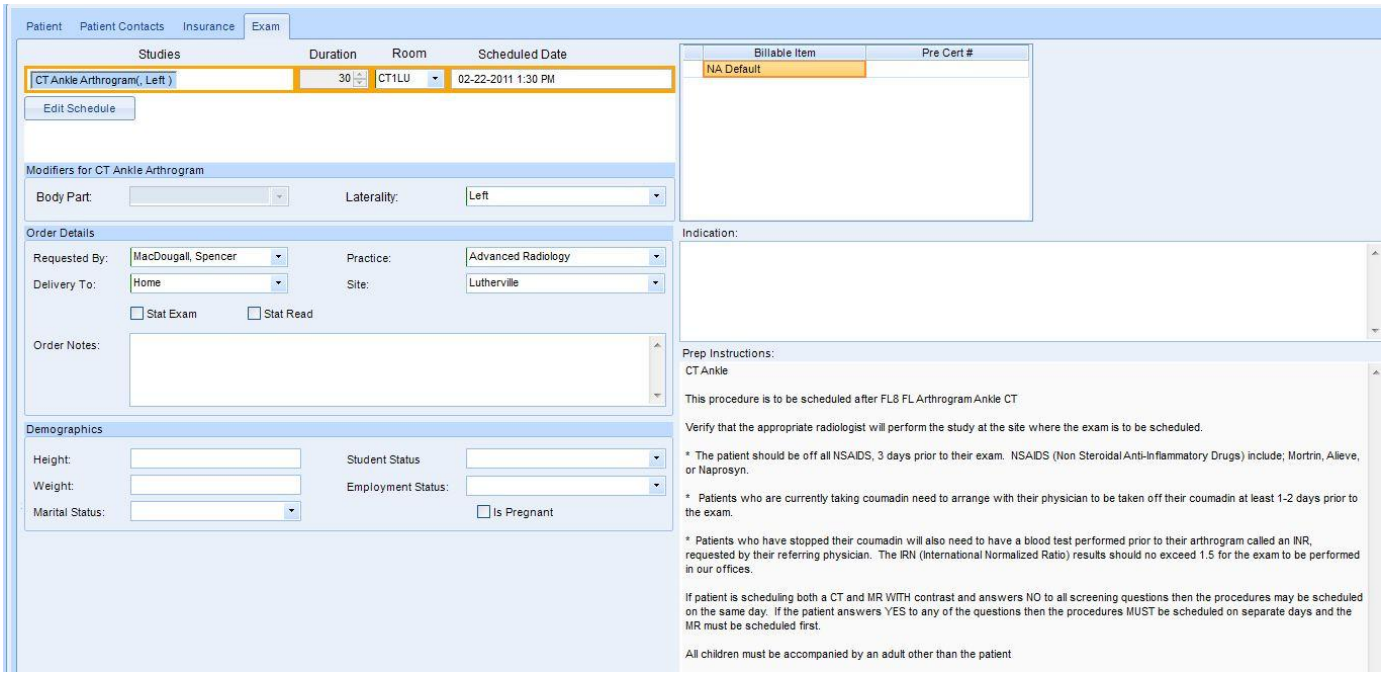


**Figure 4.8 – Registration Screen Illustrating Prep Instructions for CT Ankle**

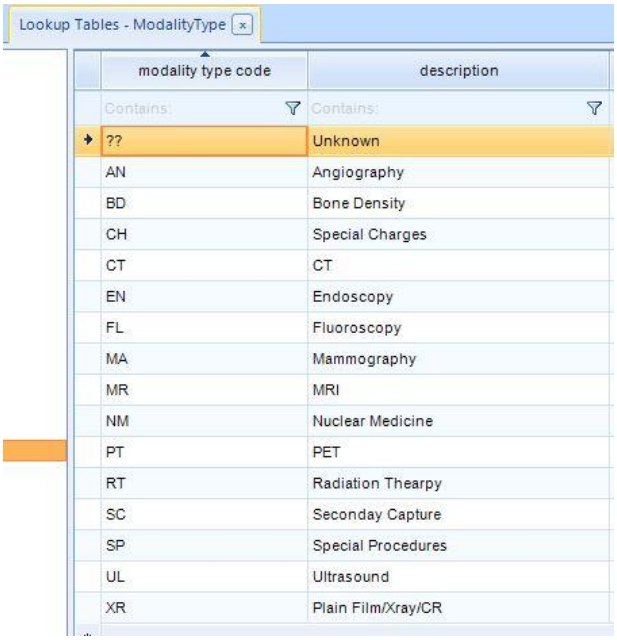
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

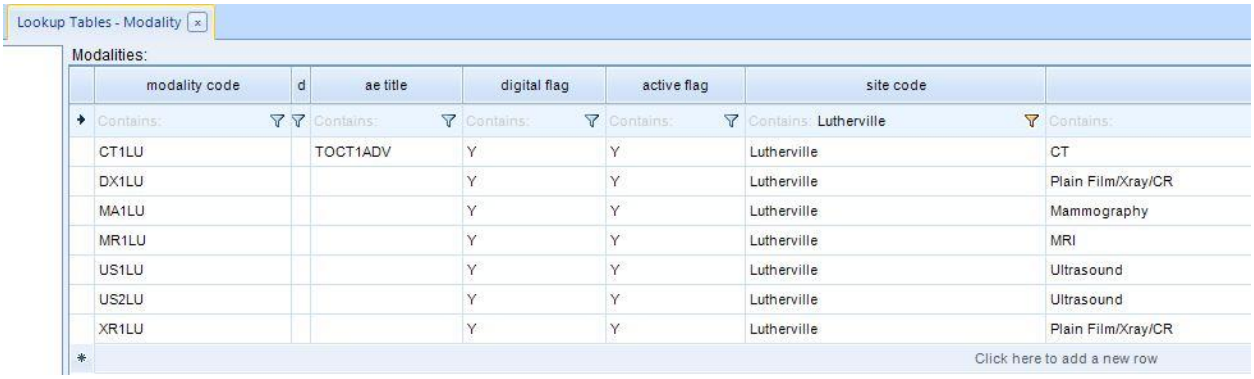
## Modality Type

In release 1.10 modality type has been added to allow for the categorization of modalities/rooms/scanners for management reports, worklists, etc.



| modality type code | description |
|---|---|
| Contains: | Contains: |
| ?? | Unknown |
| AN | Angiography |
| BD | Bone Density |
| CH | Special Charges |
| CT | CT |
| EN | Endoscopy |
| FL | Fluoroscopy |
| MA | Mammography |
| MR | MRI |
| NM | Nuclear Medicine |
| PT | PET |
| RT | Radiation Thearpy |
| SC | Seconday Capture |
| SP | Special Procedures |
| UL | Ultrasound |
| XR | Plain Film/Xray/CR |

**Figure 4.9 – Modality Type Lookup Table Values**



| modality code | d | ae title | digital flag | active flag | site code | |
|---|---|---|---|---|---|---|
| Contains: | | Contains: | Contains: | Contains: | Contains: Lutherville | Contains: |
| CT1LU | | TOCT1ADV | Y | Y | Lutherville | CT |
| DX1LU | | | Y | Y | Lutherville | Plain Film/Xray/CR |
| MA1LU | | | Y | Y | Lutherville | Mammography |
| MR1LU | | | Y | Y | Lutherville | MRI |
| US1LU | | | Y | Y | Lutherville | Ultrasound |

**Figure 4.10 – Modalities with Applied Modality Type**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## ID Verification at Registration

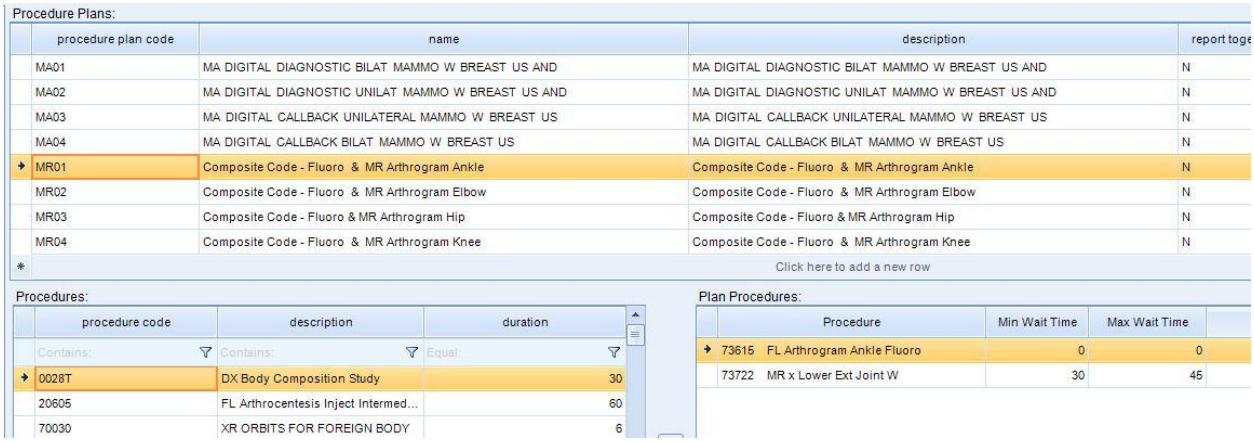
rRIS now has the ability to remind or alert the user. A good example of this is during the registration workflow where the user is prompted to verify the ID of the patient. Also, the user is prompted if the patient is marked as Arrived without any insurance policies applied.

**Figure 4.11 – Warning that Patient has not been verified during Registration**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Scheduling Composite Procedure Codes

Composite Codes/Series/Procedure Plans are configured in the ProcedurePlan lookup table. They consist of 2 or more procedure codes in a specified sequence with a defined minimum and maximum wait time between procedures.



Procedure Plans:

| procedure plan code | name | description | report toge |
|---|---|---|---|
| MA01 | MA DIGITAL DIAGNOSTIC BILAT MAMMO W BREAST US AND | MA DIGITAL DIAGNOSTIC BILAT MAMMO W BREAST US AND | N |
| MA02 | MA DIGITAL DIAGNOSTIC UNILAT MAMMO W BREAST US AND | MA DIGITAL DIAGNOSTIC UNILAT MAMMO W BREAST US AND | N |
| MA03 | MA DIGITAL CALLBACK UNILATERAL MAMMO W BREAST US | MA DIGITAL CALLBACK UNILATERAL MAMMO W BREAST US | N |
| MA04 | MA DIGITAL CALLBACK BILAT MAMMO W BREAST US | MA DIGITAL CALLBACK BILAT MAMMO W BREAST US | N |
| MR01 | Composite Code - Fluoro & MR Arthrogram Ankle | Composite Code - Fluoro & MR Arthrogram Ankle | N |
| MR02 | Composite Code - Fluoro & MR Arthrogram Elbow | Composite Code - Fluoro & MR Arthrogram Elbow | N |
| MR03 | Composite Code - Fluoro & MR Arthrogram Hip | Composite Code - Fluoro & MR Arthrogram Hip | N |
| MR04 | Composite Code - Fluoro & MR Arthrogram Knee | Composite Code - Fluoro & MR Arthrogram Knee | N |
| | Click here to add a new row | | |

Procedures:

| procedure code | description | duration |
|---|---|---|
| Contains: | Contains: | Equal: |
| 0028T | DX Body Composition Study | 30 |
| 20605 | FL Arthrocentesis Inject Intermed... | 60 |
| 70030 | XR ORBITS FOR FOREIGN BODY | 6 |

Plan Procedures:

| Procedure | Min Wait Time | Max Wait Time |
|---|---|---|
| 73615 FL Arthrogram Ankle Fluoro | 0 | 0 |
| 73722 MR x Lower Ext Joint W | 30 | 45 |

**Figure 4.12 – Sample Composite Code Configuration – Fluoro & MR Arthrogram Ankle**

In the above example, the MR01 Composite Code - Fluoro & MR Arthrogram Ankle consists of a 73615 FL Arthrogram Ankle Fluoro followed by a 73722 MR x Lower Ext Joint W. A minimum wait time of 30 minutes and a maximum wait time of 45 minutes are required between the two procedures.

When scheduling an MR01 Composite Code, the application will display the individual procedures that make up the code. Based on the user's Schedule Group combined with Availability Templates, the system will then create a scheduling solution across the defined modalities. The minimum wait time is also taken into consideration when presenting time slots.

In the screenshot below, the 73615 FL Arthrogram Ankle Fluoro (60 minutes) and 73722 MR x Lower Ext Joint W (30 minutes) are presented with timeslots in the XR1LU and MR1LU rooms with a wait time of 30 minutes for a total duration of 120 minutes.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

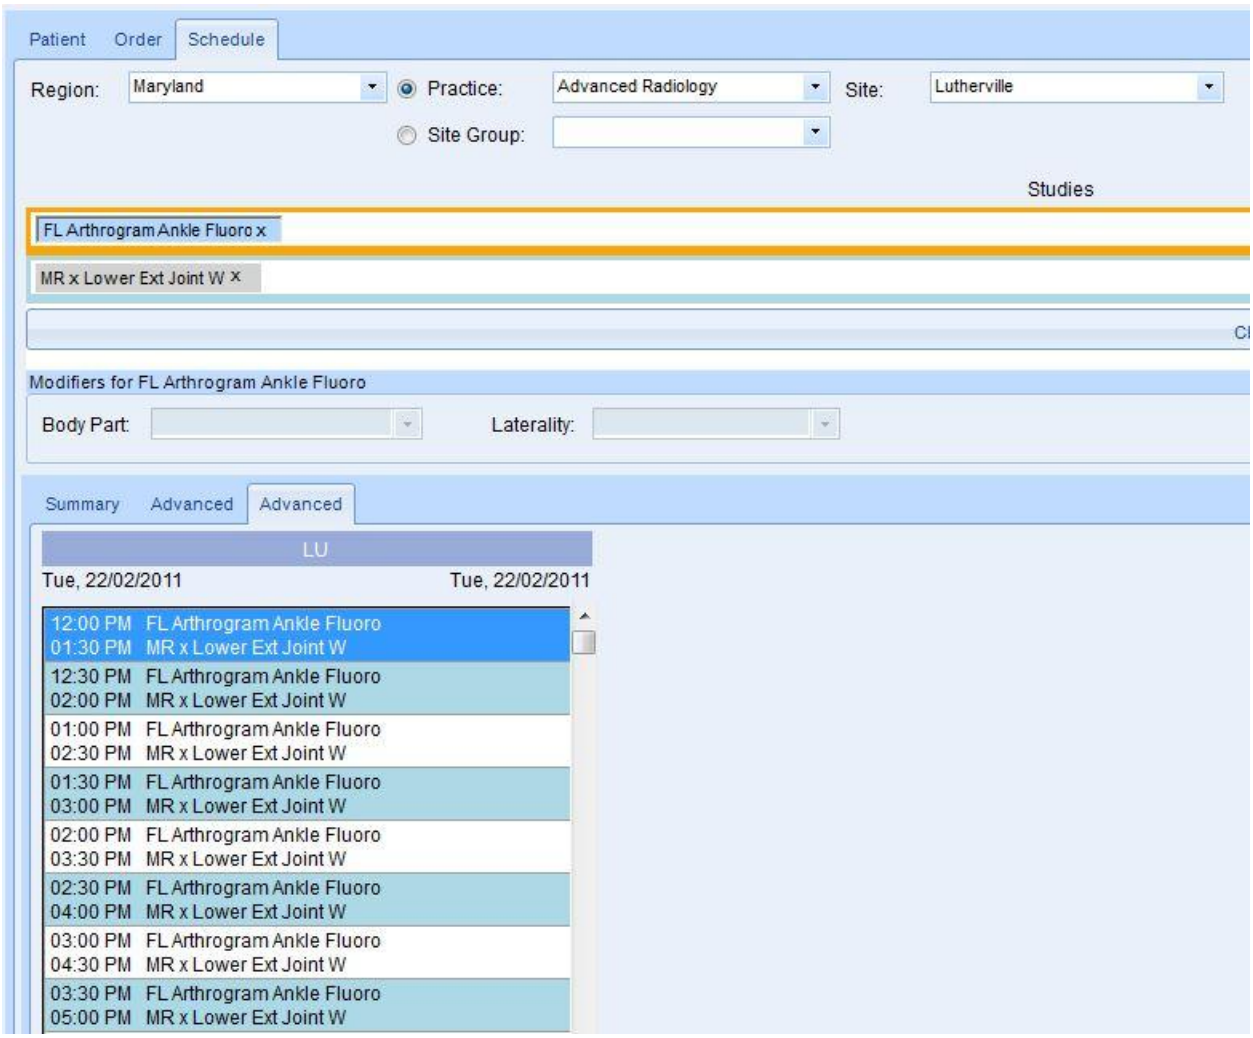


**Figure 4.13 – Scheduling Search Results for Composite Code**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Management Report Framework

rRIS utilizes Microsoft SQL Server Reporting Services to effectively communicate ris data to the organization at all levels. Some listed features of using this architecture include:

- **Managed Reporting.** Also often referred to as enterprise reporting - supports the creation of reports that span all aspects of the business and delivers them across the enterprise to provide every employee real time access to information relevant for their business area and enable better decision making
- **Ad-Hoc Reporting.** Enables users to create their own reports on an ad-hoc basis and provides them with the flexibility to quickly get the information that they need, in the format that they need it without submitting a request and waiting for a report developer to create the report for them.
- **Embedded Reporting.** Enables organizations to embed reports directly into business applications and web portals, enabling users to consume reports within the context of their business process. Deep integration with Microsoft Office SharePoint Server 2007 also enables organizations to deliver reports through a central report library or to use new web parts for thin rendering of reports directly within SharePoint enabling easy creation of dashboards. In this way organizations are able to bring all business critical data, structured as well as unstructured, from across the company together in one central location providing one common experience for information access so that users can see key business performance information at a glance.

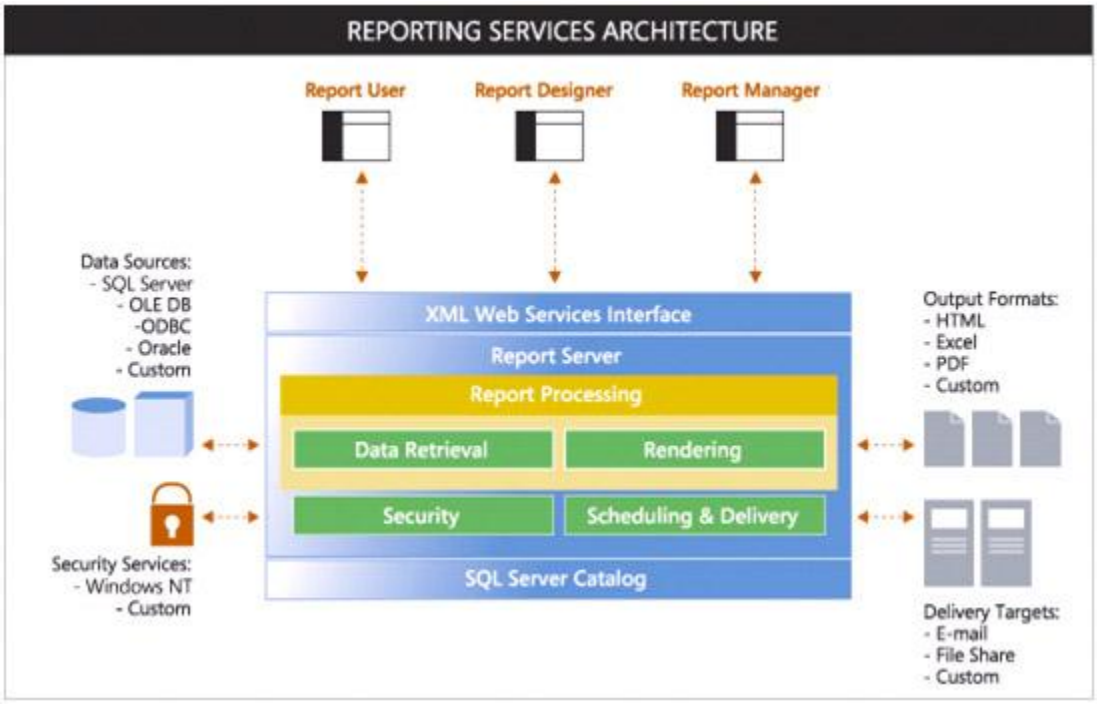

**Figure 4.14 – Diagram of Microsoft Reporting Services Architecture**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

In Build 1.10 the Microsoft Report Viewer has been introduced to allow users to view Management Reports in rRIS. Based on permissions and folder structure, users are presented with a list of published reports from the Report Server. By selecting the report and specifying the parameters, the report is rendered and displayed in the application.

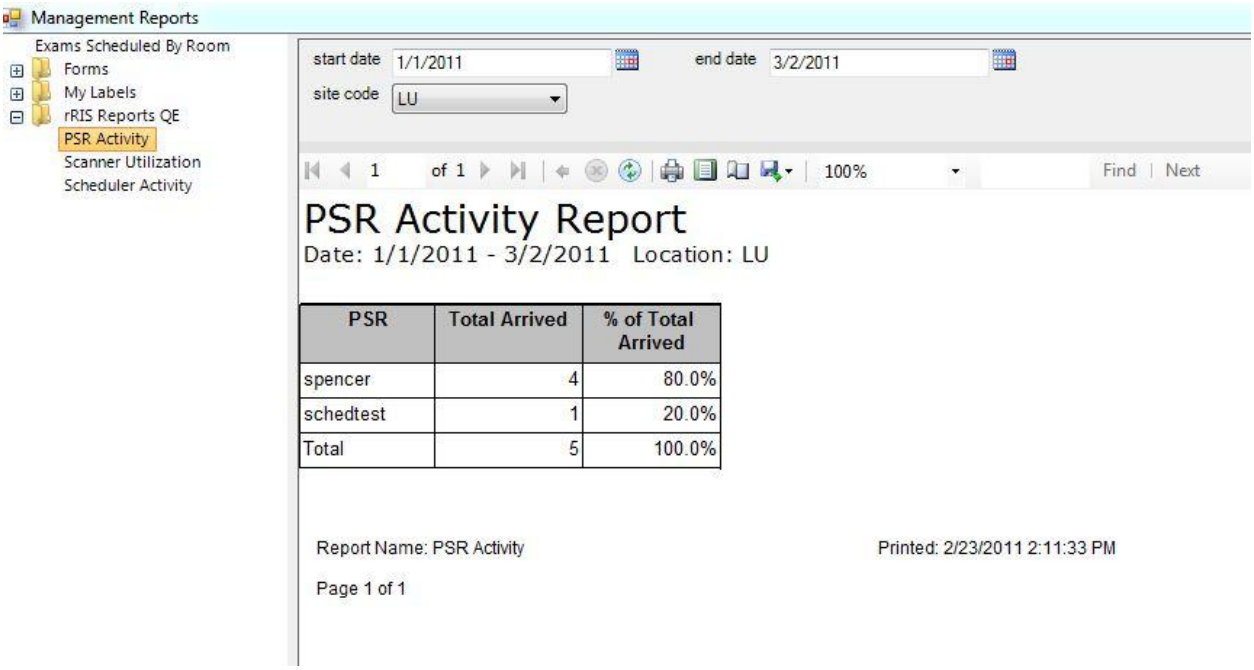

**Figure 4.15 – Sample Management Report available in rRIS**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Known Limitations

Bugs, Suggested Features, and Support Issues are now tracked in a web based system called Redmine. The following is a snapshot of the issues found in Build 1.10 as of the end of Sprint 11. Note that the majority of these issues will be resolved in Build 1.11.

| # | Status | Subject | Category | Found | %Done | Resolved |
|---|---|---|---|---|---|---|
| 221 | Resolved | ScheduleGroup - No means to multi-select and apply prep instuctions | Admin Tools | 1.10 | 100 | 1.11 |
| 219 | Resolved | Lookups - Issue removing child rows | Admin Tools | 1.10 | 100 | 1.11 |
| 218 | New | Lookups - Issue adding new child row | Admin Tools | 1.10 | 0 | |
| 217 | Resolved | Scheduling - Exceptions around removing study rows | Thick Client GUI | 1.10 | 100 | 1.11 |
| 216 | Resolved | Scheduling - When adding a new study row, room value is lost from previous study | Thick Client GUI | 1.10 | 100 | 1.11 |
| 215 | Resolved | Scheduling - Exception when scheduling more than one study | Web Services/DB | 1.10 | 100 | 1.11 |
| 214 | Resolved | Scheduling - Exception when scheduling a composite and a standard procedure code | Web Services/DB | 1.10 | 0 | 1.11 |
| 213 | Resolved | Scheduling - Issue when removing study rows | Thick Client GUI | 1.10 | 100 | 1.11 |
| 212 | Resolved | Scheduling - Composite codes are not scheduling across modalities | Thick Client GUI | 1.10 | 100 | 1.11 |
| 211 | Resolved | Scheduling - Procedure picker is not including composite code description | Thick Client GUI | 1.10 | 100 | 1.11 |
| 210 | New | Order - Procedure picker does not include Composite Codes | Thick Client GUI | 1.10 | 0 | |
| 209 | Resolved | ScheduleGroup - Need to be able to filter by procedure code | Admin Tools | 1.10 | 100 | 1.11 |
| 208 | New | Personnel - No means of identifying a default report delivery location | Admin Tools | 1.10 | 0 | |
| 207 | New | Order - Need to track the referring office the order was referred from | Thick Client GUI | 1.10 | 0 | |
| 206 | New | Reception Workflow - Additional status is required | Thick Client GUI | 1.10 | 0 | |
| 205 | Resolved | MRN - System allows duplicate Patient ID's | Web Services/DB | 1.10 | 0 | |
| 204 | Resolved | Patient Search - Issue when searching by MRN | Thick Client GUI | 1.10 | 100 | 1.11 |
| 203 | New | Registration - Exception with Manage Policies | Thick Client GUI | 1.10 | 0 | |
| 202 | Resolved | GUI - Broom icon on Patient tab | Thick Client GUI | 1.10 | 100 | 1.11 |
| 201 | New | GUI - Inability to share tabs across similar forms??? | Thick Client GUI | 1.10 | 0 | |
| 200 | Resolved | Order - Inconsistency on Patient tabs in New Order and New Order Schedule | Thick Client GUI | 1.10 | 100 | 1.11 |
| 199 | Resolved | Lookups - Display order is not reflected in the GUI | Admin Tools | 1.10 | 100 | 1.11 |
| 198 | Resolved | ModalityType - Display order does not default | Admin Tools | 1.10 | 100 | 1.11 |
| 197 | Resolved | PrepInstruction - Exception when adding instuctions | Admin Tools | 1.10 | 100 | 1.11 |
| 196 | Resolved | Edit and Add Patient - Age calculated field | Thick Client GUI | 1.10 | 100 | 1.11 |
| 195 | Resolved | Scheduling - Time slots are out of sync | Thick Client GUI | 1.10 | 100 | 1.11 |
| 194 | Resolved | ScheduleGroup - Exception when adding procedure codes to schedule group | Admin Tools | 1.10 | 100 | 1.11 |
| 193 | Resolved | UserGroupPermission - Exception when removing group permissions | Admin Tools | 1.10 | 100 | 1.11 |
| 192 | Resolved | AvailabilityTemplate - Can not change to another template after selecting save | Admin Tools | 1.10 | 100 | 1.11 |
| 191 | Resolved | Scheduling - Issue when Laterality is required | Thick Client GUI | 1.10 | 100 | 1.11 |
| 190 | Resolved | Scheduling - rRIS crashes when scheduling without a procedure | Thick Client GUI | 1.10 | 100 | 1.11 |
| 189 | Resolved | Personnel - Sizing issue with Contact Information | Admin Tools | 1.10 | 100 | 1.11 |
| 188 | Resolved | Personnel - Exception when creating new user | Admin Tools | 1.10 | 100 | 1.11 |
| 187 | Resolved | Personnel - Exception when opening screen and/or accessing user information | Admin Tools | 1.10 | 100 | 1.11 |
| 186 | New | ScheduleGroup - Refresh issue after editing a schedule group | Admin Tools | 1.10 | 0 | |

# 1. Purpose

This document describes some of the new features and changes implemented in rRIS as of the end of Sprint 11. This pre-release version of rRIS is referred to as Build 1.11.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the rRIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The client installer for rRIS is still in the early development stages. For now, users can access the system by remoting to the rRIS test server in Baltimore as follows:

1. Start Remote Desktop Connection and specify IP 10.120.0.152
2. Username: Radnet domain account
3. Password: Radnet domain password
4. Double click the rRIS icon on the desktop or go to Start→All Programs→rRIS
5. Login User: terry
6. Login Password: ris

If you experience difficulties accessing the application, please do not hesitate to contact Spencer MacDougall with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Unknown Referring Workflow

In Build 1.11 a workflow has been implemented that allows orders to be accepted by the system where the requesting referring physician is unknown. The user simply selects "Unknown, Unknown" from the Requesting dropdown. This will enable the Unknown Referring Info editable area where the user can fill in any details regarding the physician.

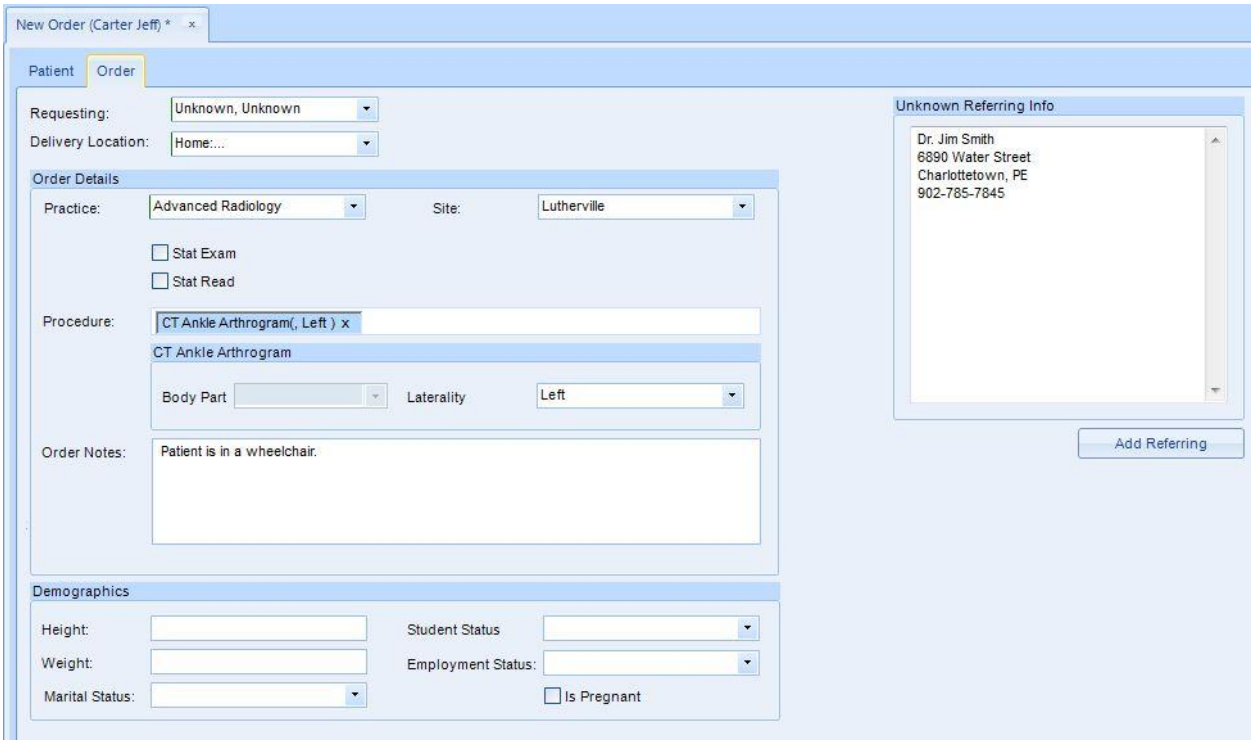

**Figure 4.1 – New Order with Unknown Referring as Requesting Physician**

If the user who placed the order has the proper permission, he or she can select the "Add Referring" button and access the Personnel screen which will allow the entry of the new physician directly into the application.

Typically, an administrative type user will manage the reconciliation of unknown referrings. Once orders are placed with a specified unknown referring doctor, they will be placed on the Unknown Referring WL regardless of status. From here, the administrator can add the new physician and correct the order. Once the order is adjusted, it will fall off the Unknown Referring WL.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

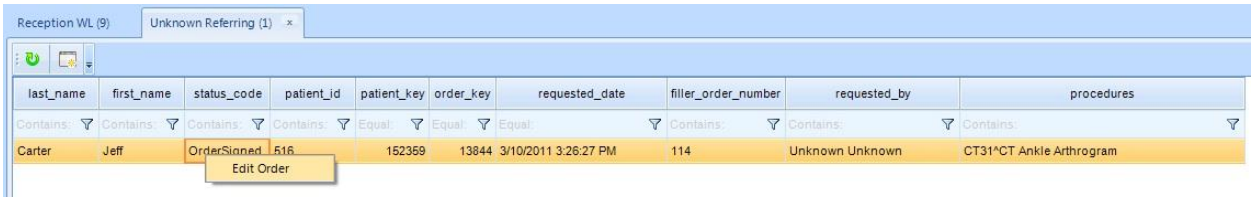

**Figure 4.2 – Unknown Referring Worklist**

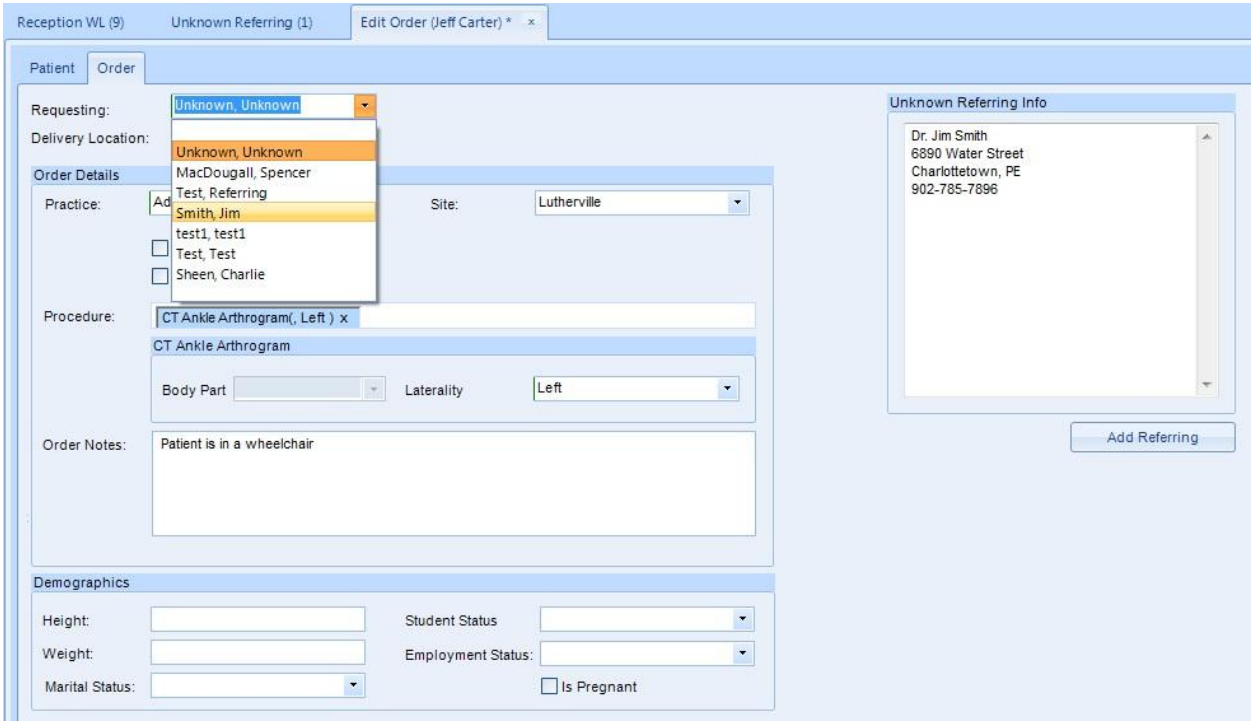

**Figure 4.3 – Updating Order with Proper Referring Physician**

## Phone Mask

Phone numbers follow a predefined pattern and therefore a mask such as (xxx) yyy-zzzz is enforced. If additional numbers are keyed in, such as an extension, then the mask will expand to accommodate it - (902) 436-8220 1234. If an international format is required, keying in a plus + at the start of the number will put the user in international phone number mode - +01 902 4368220.

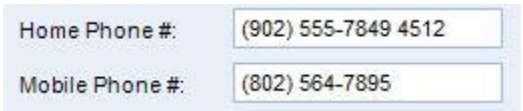

**Figure 4.4 – Patient Phone Numbers with Mask**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Calendar on Date Worklists

In Build 1.11 a calendar control has been added to date driven worklists to aid with filtering and navigation. The user can easily select a different date by using the arrow buttons or by clicking the calendar button and specifying the date. Date worklists will load with today's date as the default.

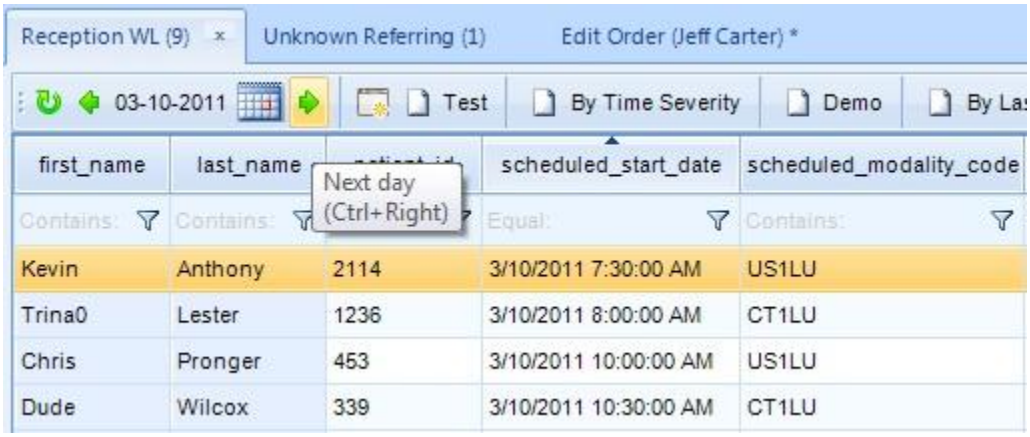

**Figure 4.5 – Navigating Reception WL using Next Day Button**

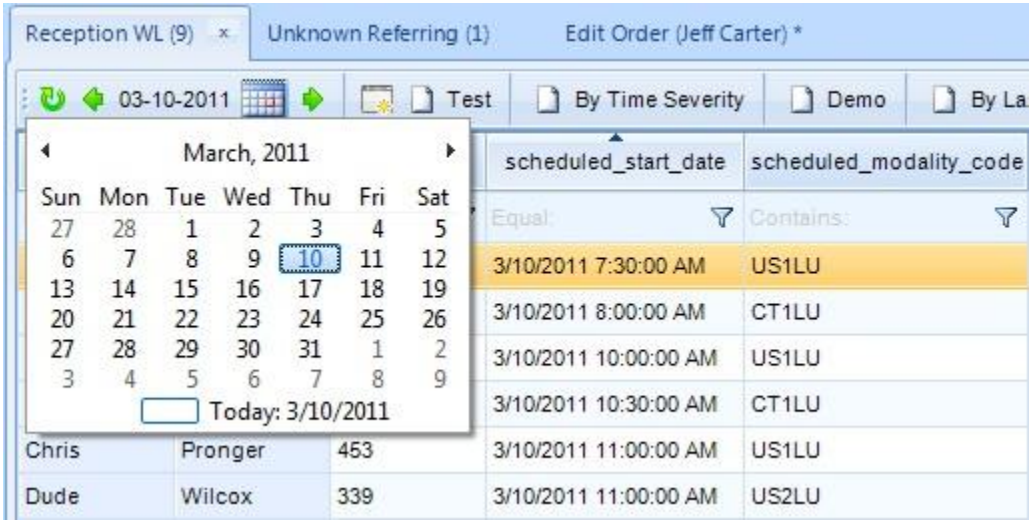

**Figure 4.6 – Navigating Reception WL using Calendar Control**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Applying Time of Day to Procedure Duration

There is a requirement for rRIS to account for varying procedure durations based on a specific or group of scanners and time of day. Availability Templates have been adjusted to accommodate this. For example, the standard duration for an ultrasound procedure is 30 minutes at site A however in the afternoon there is a shortage of staff resulting in an additional 10 minutes per procedure. This is accounted for in the availability template for the scanner and is reflected in the results when searching for a scheduling solution.

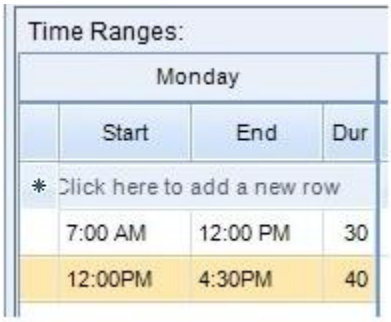

**Figure 4.7 – Applying Procedure Duration to Time of Day**

## Appointment Time Locking

rRIS now has the ability to lock a time block when scheduling a procedure. This will prevent multiple users from attempting to schedule against the same scanner and time. For example if User A has 9:00am on scanner US1LU selected and it is not locked by another user, a lock icon will appear showing that User A now has a lock on the time block. If User B attempts to select the same time block, he or she will be presented with an open lock icon. If User B tries to schedule the study without getting a lock on the time slot, a warning message appears which will force the user to cancel or select another time block.

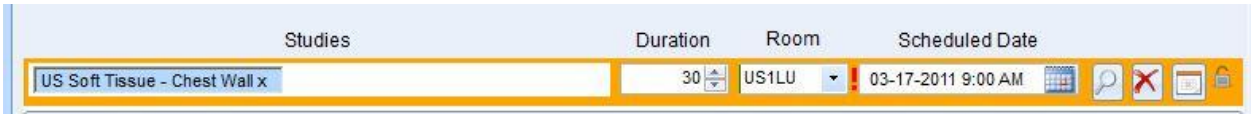

**Figure 4.8 – Study showing 9:00am Time Block as Unlocked**

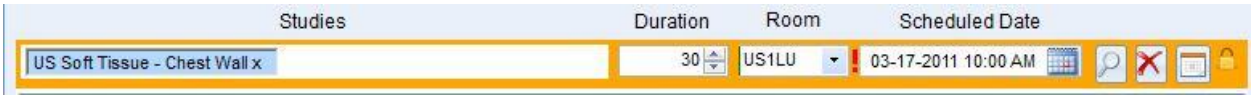

**Figure 4.9 – Study showing 10:00am Time Block as Locked**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Scheduling Procedure Plans

When scheduling a Procedure Plan (Composite Code) in rRIS, the system will maintain the sequence and wait times of the procedures and enforce these when searching for a scheduling solution. The user is also able to schedule studies before or after the Procedure Plan.

For example, the screen shot below shows a user scheduling an MR01 - Composite Code - Fluoro & MR Arthrogram Ankle which is 73615 - FL Arthrogram Ankle Fluoro and 73722 - MR x Lower Ext Joint W with a 30 minute minimum wait time. The user is also adding a 71550 – MR Chest Wo.

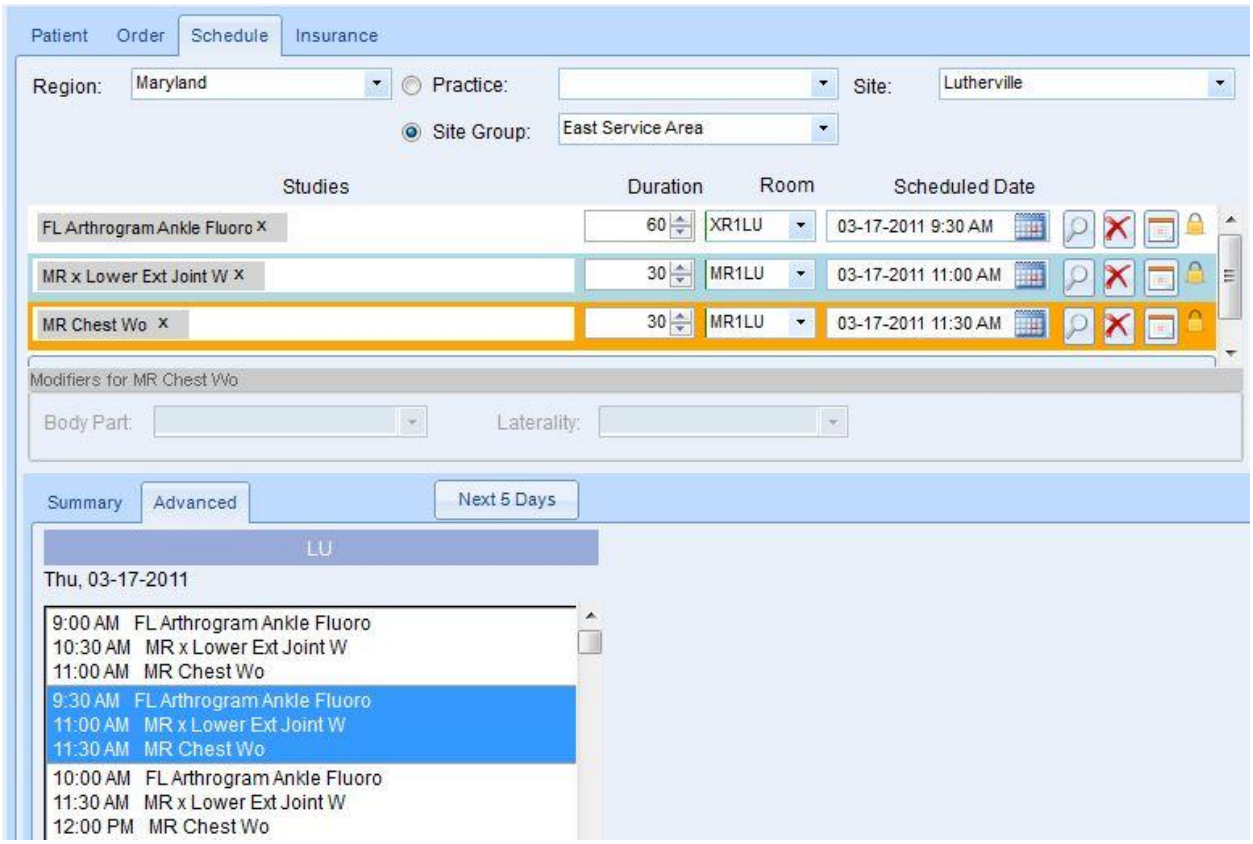

**Figure 4.10 – Scheduliing Procedure Plan followed by Procedure Code**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Patient Folder

Patient Folder or Patient Mode is a worklist that shows all activity for a selected patient. The Patient Folder worklist is accessible by double-clicking on a patient search results entry or in most other worklists by right-clicking on a patient record and choosing "Patient Folder" from the context menu. As in other worklists, the actions available to the user are dependent on the status of the selected row.

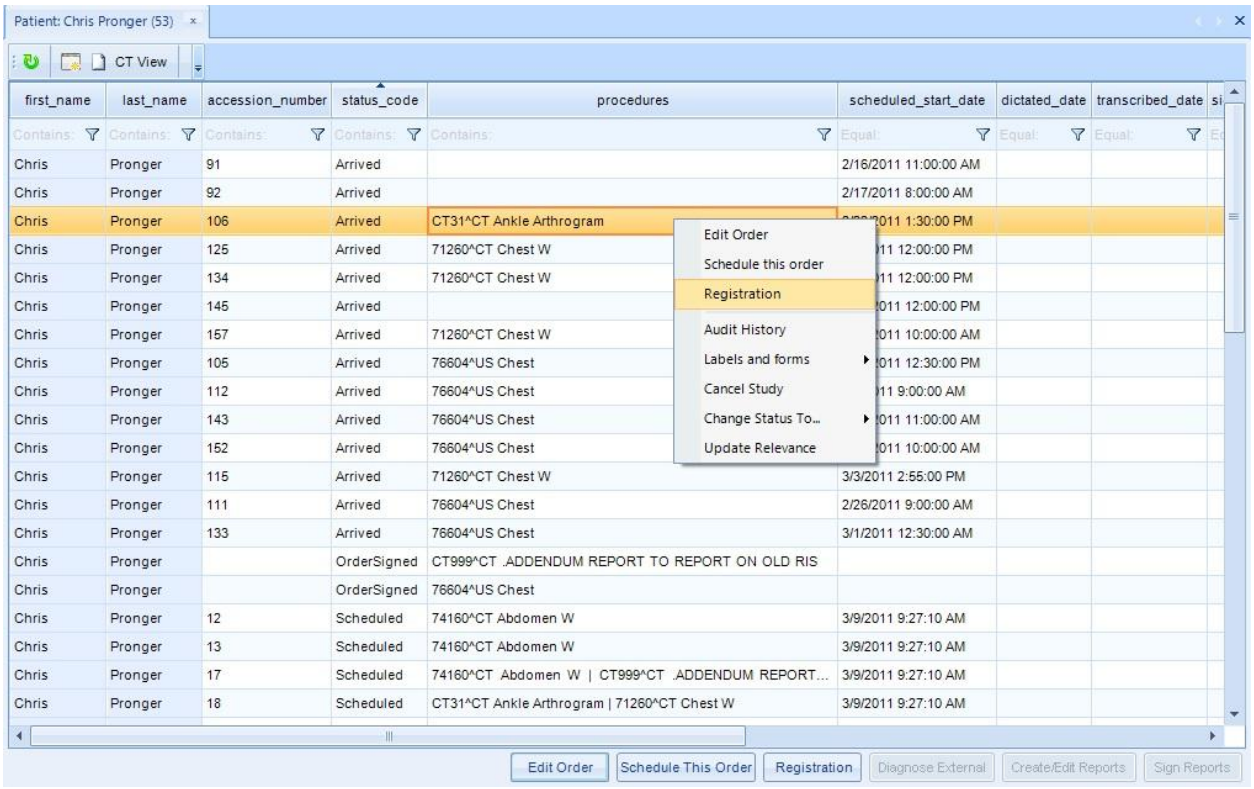

**Figure 4.11 – Patient Folder with Selected Row in Arrived Status**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Insurance Tab in Scheduling Screen

To provide rapid scheduling support for walk-ins, the Insurance tab has been added to the Schedule New Order screen. This will allow the user to select a new or existing patient, place a new order, schedule the order, collect insurance/payment information, and arrive the patient all in one step from the same screen.

The Insurance Policies will default to the previous visit if the patient has been to the site before.

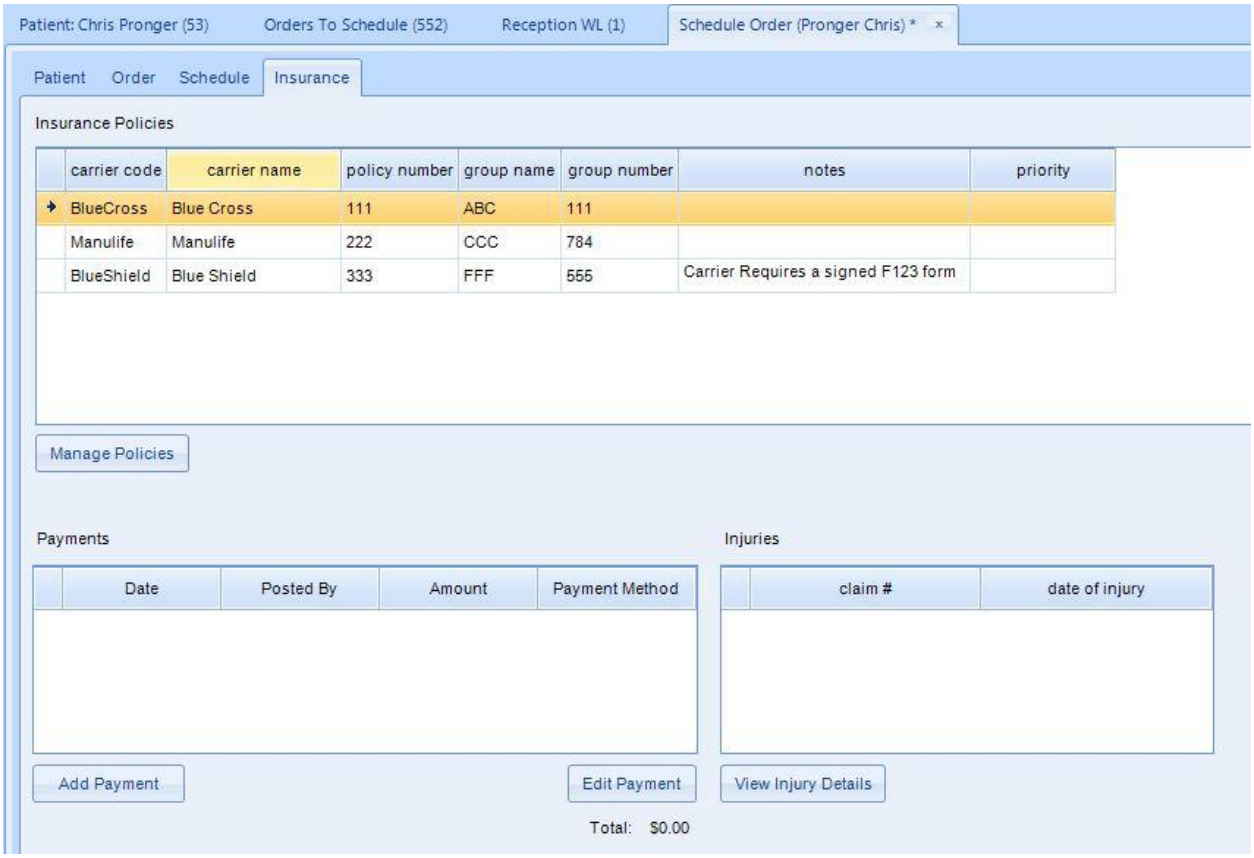

**Figure 4.12 – New Order Schedule with Insurance Tab**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Known Limitations

Bugs, Suggested Features, and Support Issues are now tracked in a web based system called Redmine. The following is a snapshot of the issues found in Build 1.11 as of the end of Sprint 12. Note that the majority of these issues will be resolved in Build 1.12.

| # | Status | Subject | Category | Found | %Done | Resolved |
|---|---|---|---|---|---|---|
| 270 | New | Scheduling - Exception when scheduling Procedure Plan | Thick Client GUI | 1.11 | 0 | |
| 269 | New | Locking - Application crash when opening a locked order | Thick Client GUI | 1.11 | 0 | |
| 268 | New | Scheduling - Better message required for locked time slot | Thick Client GUI | 1.11 | 0 | |
| 267 | New | AvailabilityTemplate - Adding time ranges should be top down | Admin Tools | 1.11 | 0 | |
| 266 | Resolved | Lookups - Using the "Edit..." popup does not consider field length | Admin Tools | 1.11 | 100 | 1.12 |
| 265 | New | Scheduling - Removing study disables Save button | Thick Client GUI | 1.11 | 0 | |
| 264 | Resolved | Scheduling - When Laterality is required, warning states Body Part | Thick Client GUI | 1.11 | 100 | 1.12 |
| 263 | New | Scheduling - Workflow allows scheduling an order without a procedure | Thick Client GUI | 1.11 | 0 | |
| 262 | Resolved | Worklist - Sorting on large worklist (>500 rows) crashes application | Thick Client GUI | 1.11 | 100 | 1.12 |
| 261 | New | Scheduling - Adding more than one procedure to a study results in exception | Thick Client GUI | 1.11 | 0 | |
| 260 | New | Site Picker - Allows null selection resulting in exception | Thick Client GUI | 1.11 | 0 | |
| 259 | New | null reference error when re-ordering insurances with the priority column sorted | Thick Client GUI | 1.11 | 0 | |
| 258 | Resolved | Registration - Exception when presented with locked record | Thick Client GUI | 1.11 | 100 | 1.12 |
| 257 | Resolved | Scheduling - Two users scheduling the same order crashes RIS | Thick Client GUI | 1.11 | 100 | 1.12 |
| 255 | New | Scheduling - Site picker is not properly justified | Thick Client GUI | 1.11 | 0 | |
| 254 | New | Worklist - Add or Remove Buttons is enabled | Thick Client GUI | 1.11 | 0 | |
| 253 | New | ScheduleGroup - Wrong group loads after Edit | Admin Tools | 1.11 | 0 | |
| 252 | New | ScheduleGroup - Slowness when saving lookup | Web Services/DB | 1.11 | 0 | |
| 251 | New | Unknown Referring - Editing more than one Personnel screen causes exception | Admin Tools | 1.11 | 0 | |
| 250 | New | Unknown Referring - Add Referring button launches multiple instances. | Thick Client GUI | 1.11 | 0 | |
| 249 | New | Unknown Referring - Saving unknown referring info causing exception | Thick Client GUI | 1.11 | 0 | |
| 248 | Resolved | Personnel - After saving new resource, form is still marked as dirty | Admin Tools | 1.11 | 100 | 1.12 |
| 247 | New | Unknown Referring - Notes are not easily accessible when adding new doc | Admin Tools | 1.11 | 0 | |
| 246 | Resolved | Registration - Name should be required when relationship is specified | Thick Client GUI | 1.11 | 100 | 1.12 |
| 245 | Resolved | Registration - User can enter a new policy without selecting a Carrier | Thick Client GUI | 1.11 | 100 | 1.12 |
| 244 | Resolved | Registration - Patient info should auto-populate when relation is set to "Self" | Thick Client GUI | 1.11 | 100 | 1.12 |
| 243 | Resolved | Registration - No logic behind priority of insurance policies | Thick Client GUI | 1.11 | 100 | 1.12 |
| 242 | New | Registration - Specifying dates is inconsistent with rest of app | Thick Client GUI | 1.11 | 0 | |
| 241 | New | Registration - No means to remove insurance row accidentally added | Thick Client GUI | 1.11 | 0 | |
| 240 | New | AvailabilityTemplate - Cannot add multiple time ranges per day | Admin Tools | 1.11 | 0 | |
| 239 | New | Scheduling - Duration reduces when moving composite codes | Thick Client GUI | 1.11 | 0 | |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | | | | | |
|---|---|---|---|---|---|---|
| 238 | Resolved | Scheduling - Search solutions spanning multiple rooms are incorrect | Thick Client GUI | 1.11 | 100 | 1.12 |
| 237 | New | Scheduling - Templates are not being represented correctly in the GUI | Thick Client GUI | 1.11 | 0 | |
| 236 | New | Scheduling - Issue with procedure plans, prompted that Schedule Date is required | Thick Client GUI | 1.11 | 0 | |
| 235 | Resolved | Registration - Form gets marked as dirty when clicking on the Exam tab | Thick Client GUI | 1.11 | 100 | 1.12 |
| 234 | New | Scheduling - Rooms are not being filtered on orders with a specified procedure | Thick Client GUI | 1.11 | 0 | |
| 233 | New | Scheduling - System allows over booking of time slots | Thick Client GUI | 1.11 | 0 | |
| 232 | Resolved | Worklist - Requested_date in Ordered WL is showing UTC time | Thick Client GUI | 1.11 | 100 | 1.12 |
| 231 | New | Scheduling - User is able to override schedule group and availability templates | Thick Client GUI | 1.11 | 0 | |
| 230 | Resolved | Registration - trying to save text in the copay or payment fields hangs app | Thick Client GUI | 1.11 | 100 | 1.12 |
| 229 | New | Order - Cannot change patient on Edit Order in OrderSigned status | Thick Client GUI | 1.11 | 0 | |

# 1. Purpose

This document describes some of the new features and changes implemented in rRIS as of the end of Sprint 12. This pre-release version of rRIS is referred to as Build 1.12.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the rRIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation instructions for the rRIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu, click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

If you experience difficulties accessing the application, please do not hesitate to contact Spencer MacDougall with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Automatic Form and Label Generation

In Build 1.12, the application now supports the ability to automatically generate labels and forms based on the following criteria:

- A specified RIS Action
  - Patient Created
  - Patient Updated
  - Patient Arrived
  - Order Created
  - Order Updated
  - Study Cancelled
  - Study Scheduled
  - Study Completed
  - Study Updated
  - Report Signed
  - Report Approved
- The Gender Code of the patient
- The Carrier Code of the patient's insurance carrier
- One or more Procedure Codes

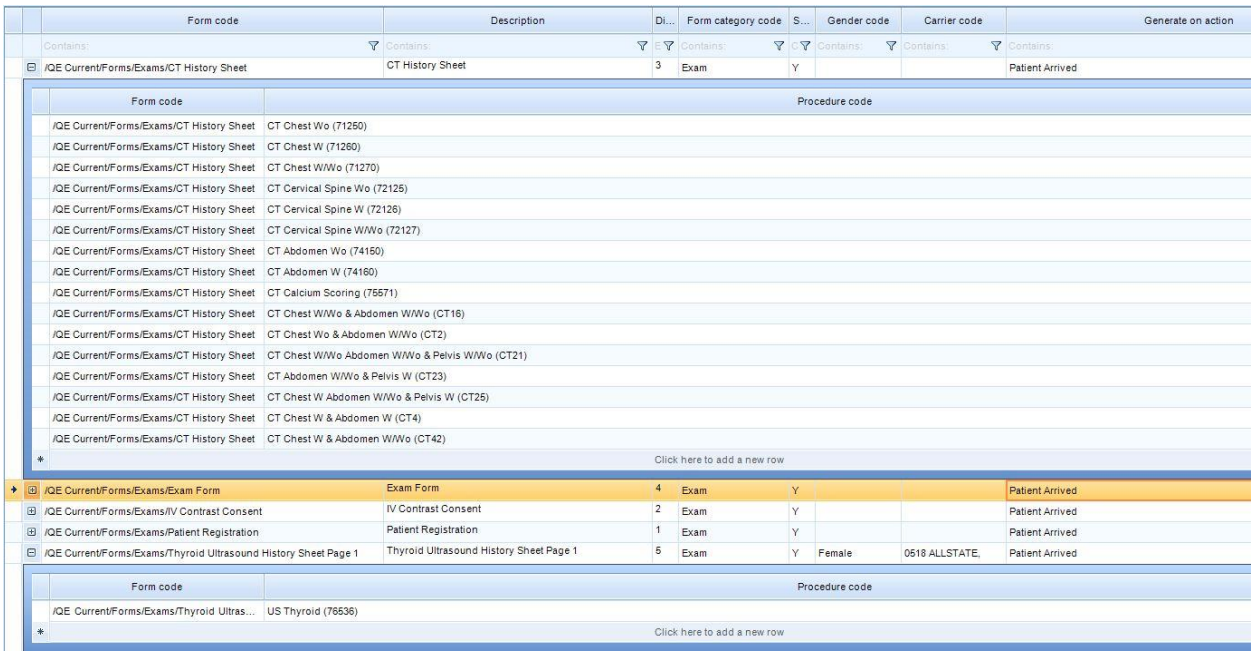

**Figure 4.1 – Example of Mapping Labels and Forms**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

In the example above, the following Forms and conditions have been implemented for testing:

- CT History Sheet – Configured to print when the patient arrives for CT procedures
- Exam Form - Configured to print when the patient arrives
- IV Contrast Consent - Configured to print when the patient arrives. Could easily be expanded to only print for procedures that require contrast
- Patient Registration - Configured to print when the patient arrives
- Thyroid Ultrasound History Sheet Page 1 – Configured to print when the patient arrives, when the procedure is a US Thyroid, when the Gender Code is female, and when the Insurance Carrier is Allstate.

**Figure 4.3 – Example of a CT Work Sheet generated when Patient Arrived**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

rRIS utilizes Microsoft Reporting Services to generate Labels/Forms and Management Reports. Below is a screenshot of Microsoft's Report Builder 3.0 showing the Patient Registration in design mode. The form is assigned a Data Source which points to the database schema. The form is built on a dataset which in this case is using a database view. The parameter being passed to the form from rRIS is study_key.

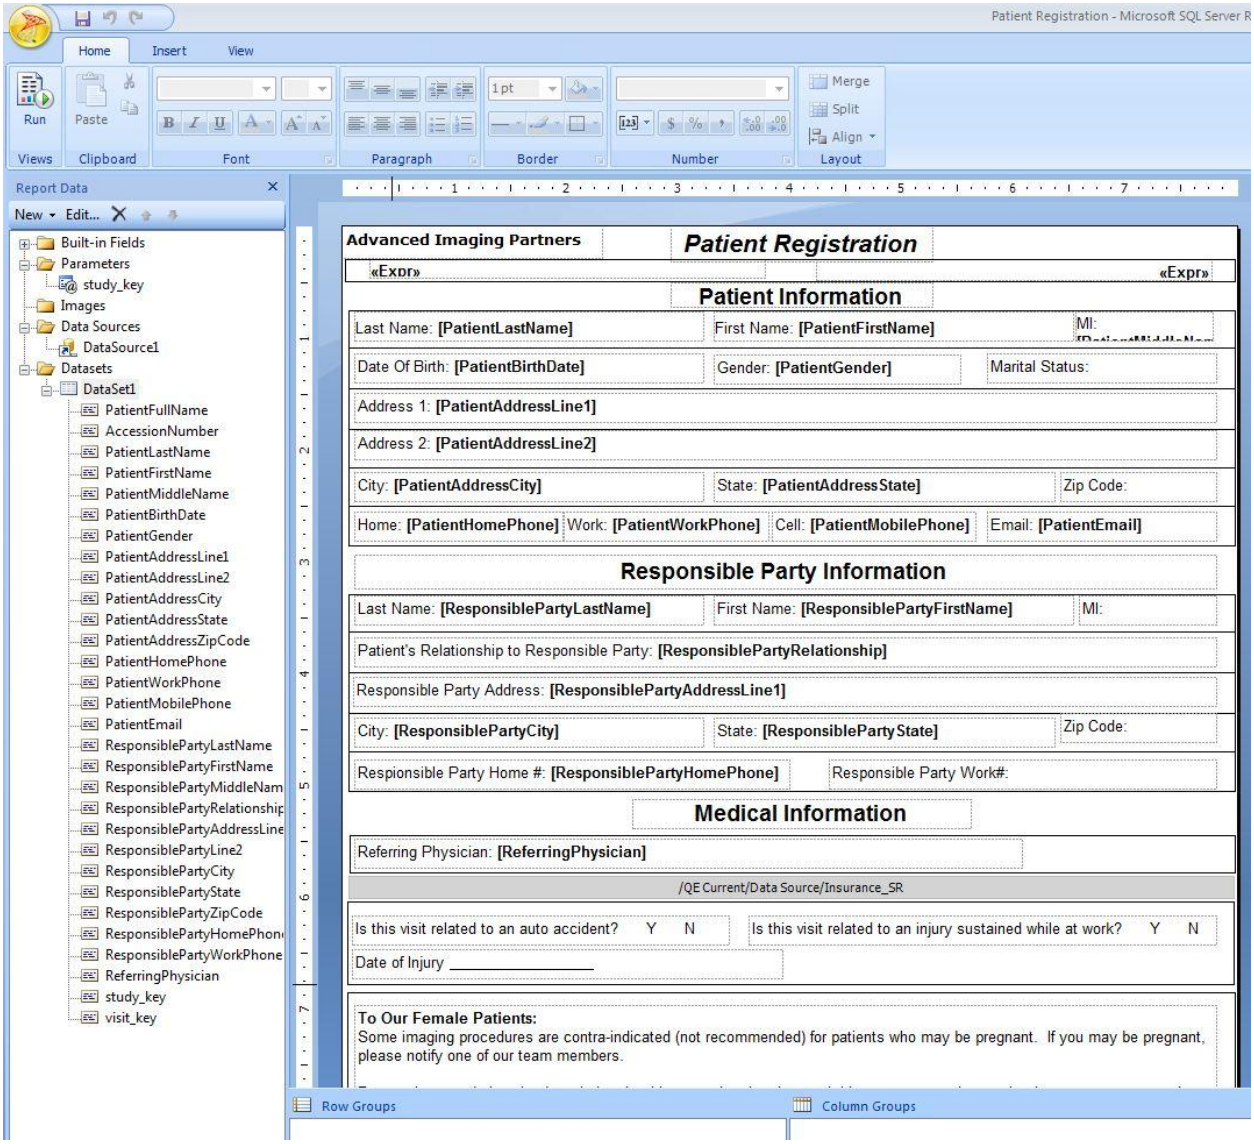

**Figure 4.4 – Editing Patient Registration Form in Report Builder**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Referring Physician Location

At the order level, rRIS will now capture where the patient visited the referring physician at. This will be utilized if the referring doctor has more than one office location. If the referring is setup in the system with only one address, then the field will default accordingly. In the example below, Dr. Joshua Aaron has four different office locations. The patient visited at 201 Milford Road but Dr. Aaron would like the report faxed to 410-296-5535.

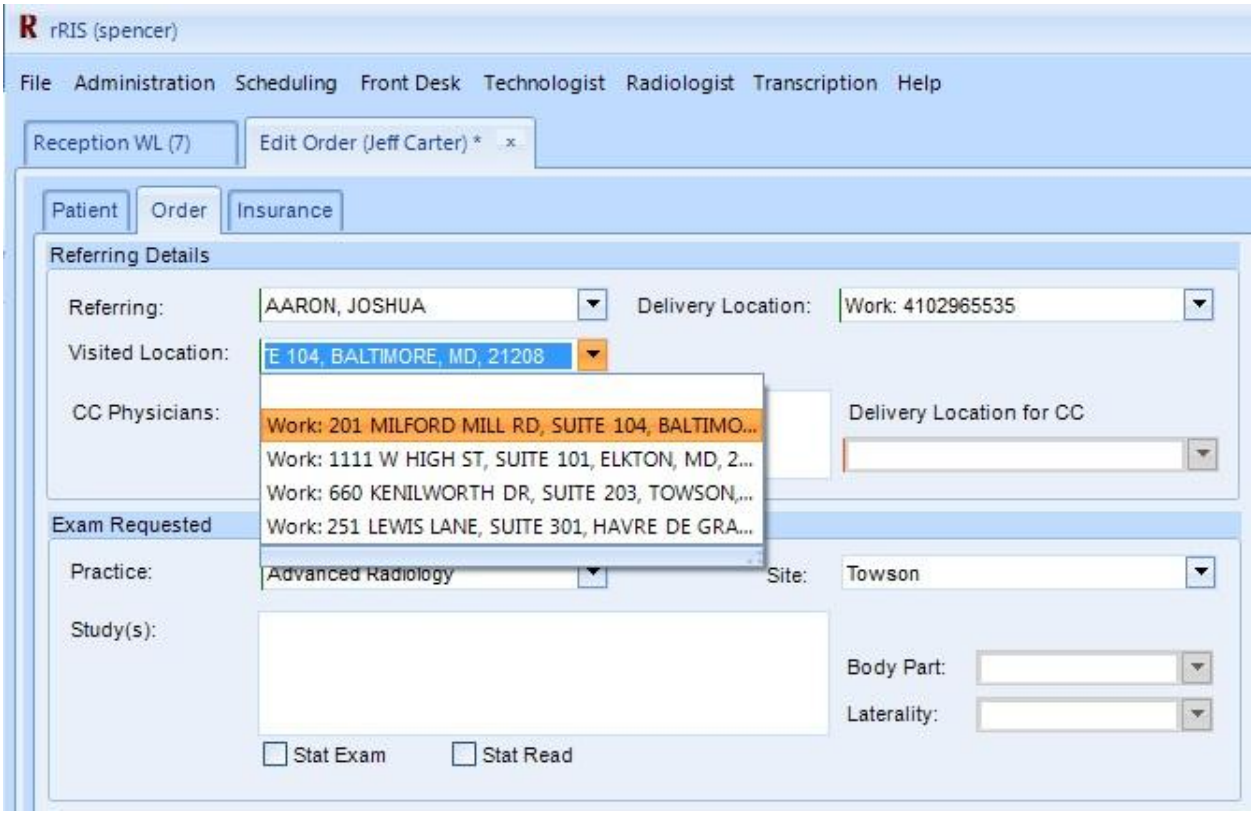

**Figure 4.5 – Edit Order showing Delivery and Visited Locations**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## CC Physicians

rRIS will support an unlimited number of CC Physicians specified at the order level. The CC Physician picker behaves similar to other pickers in the application. As each doctor is selected via a type ahead search, a report delivery location is specified or defaulted if there is only one.

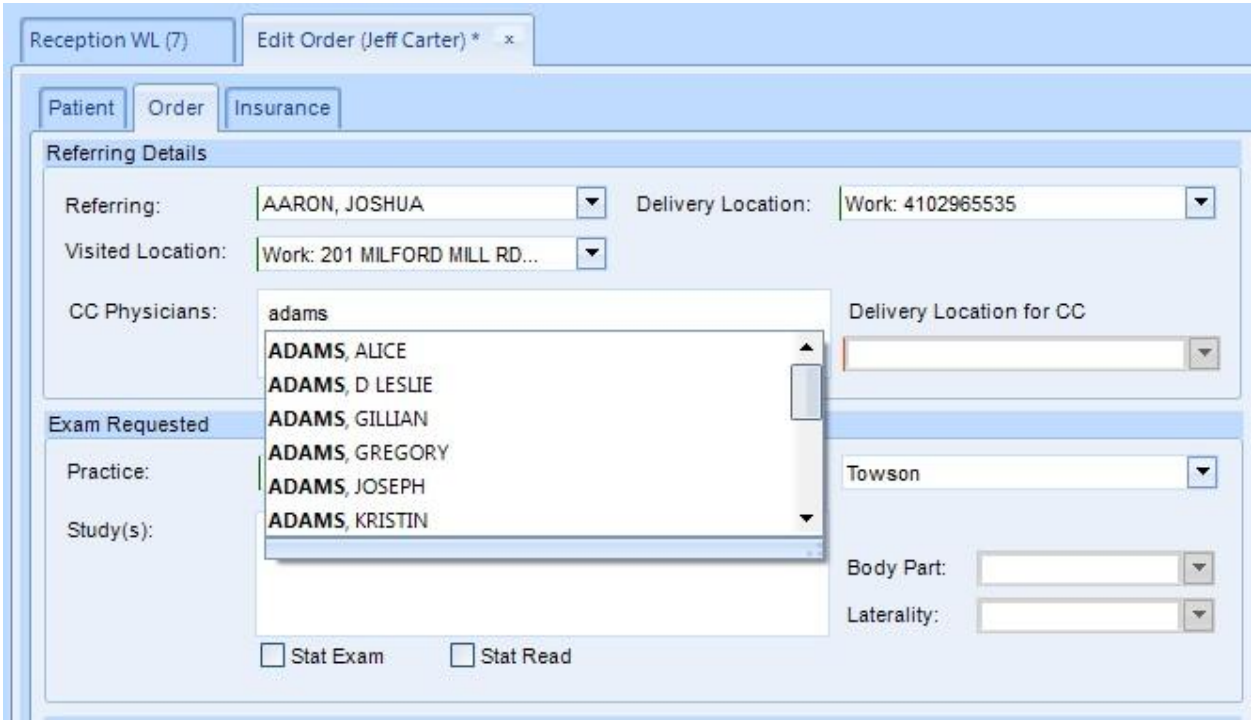

**Figure 4.6 – Edit Order showing CC Physician Dropdown**

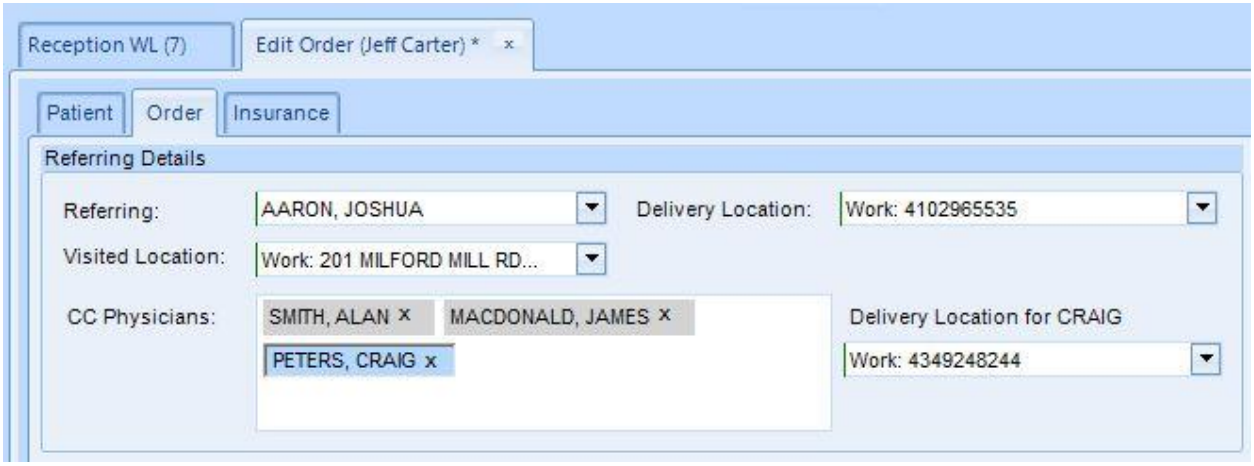

**Figure 4.7 – Edit Order showing multiple CC Physicians with Report Delivery Locations**

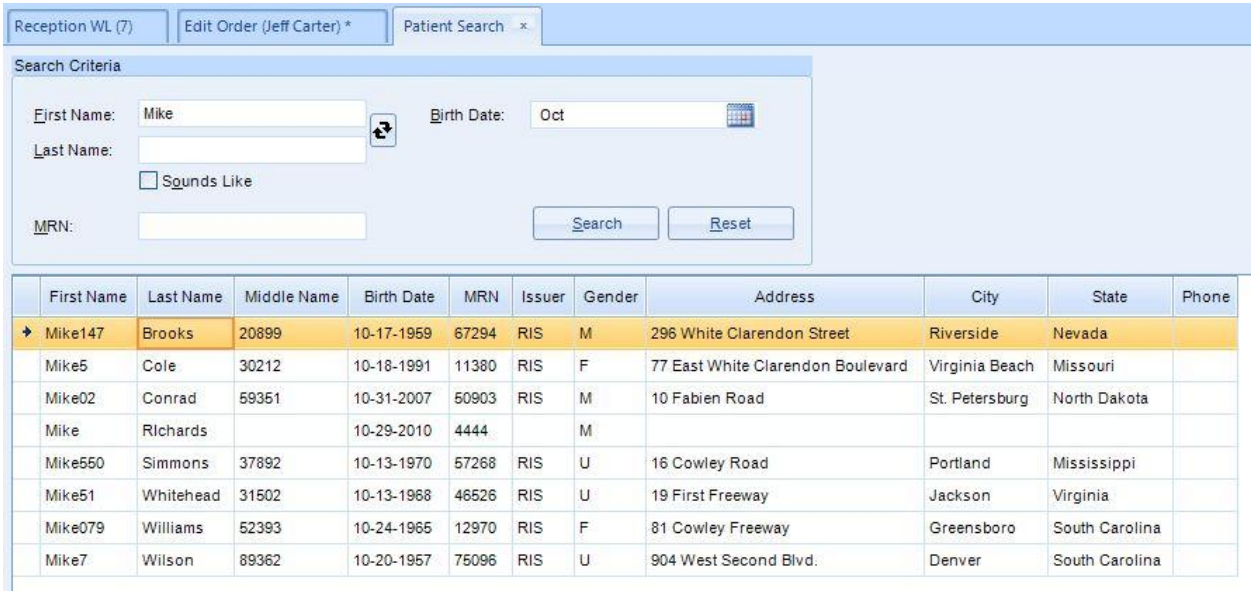
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Patient Search without Birth Year

Patient Search has been enhanced to allow the user to search for a patient with birth day and/or birth month without having to specify a birth year. In the example below, the user is searching for all patients with a first name of Mike that were born in the month of October.



| First Name | Last Name | Middle Name | Birth Date | MRN | Issuer | Gender | Address | City | State | Phone |
|---|---|---|---|---|---|---|---|---|---|---|
| Mike147 | Brooks | 20899 | 10-17-1959 | 67294 | RIS | M | 296 White Clarendon Street | Riverside | Nevada | |
| Mike5 | Cole | 30212 | 10-18-1991 | 11380 | RIS | F | 77 East White Clarendon Boulevard | Virginia Beach | Missouri | |
| Mike02 | Conrad | 59351 | 10-31-2007 | 50903 | RIS | M | 10 Fabien Road | St. Petersburg | North Dakota | |
| Mike | RIchards | | 10-29-2010 | 4444 | | M | | | | |
| Mike550 | Simmons | 37892 | 10-13-1970 | 57268 | RIS | U | 16 Cowley Road | Portland | Mississippi | |
| Mike51 | Whitehead | 31502 | 10-13-1968 | 46526 | RIS | U | 19 First Freeway | Jackson | Virginia | |
| Mike079 | Williams | 52393 | 10-24-1965 | 12970 | RIS | F | 81 Cowley Freeway | Greensboro | South Carolina | |
| Mike7 | Wilson | 89362 | 10-20-1957 | 75096 | RIS | U | 904 West Second Blvd. | Denver | South Carolina | |

**Figure 4.8 – Patient Search with a Partial Birth Date**

## Additional Search Providers

The search framework in rRIS has been expanded to include more than just patients. Users (with the proper permissions granted) now have the ability to search for staff, sites, and utilize Google. All search providers have been implemented with associated permissions.

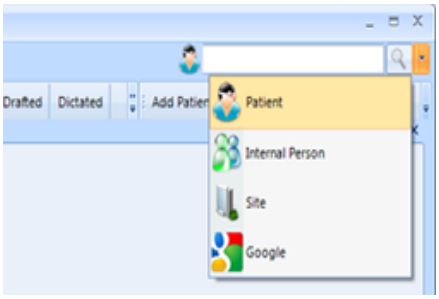


**Figure 4.9 – Internal Person, Site, and Google Quick Search**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

The internal person search is a great utility to quickly find resources such as referring doctors, technologist, radiologists, etc. in the application. In the example below, a scheduling user needs to contact Dr. David Powers regarding a patient. The user simply types "power" with Internal Person selected. The system acts as a rolodex and quickly returns all resources in the system with a last name like Power. The user has the ability to modify the internal person if he or she has the proper permission granted.

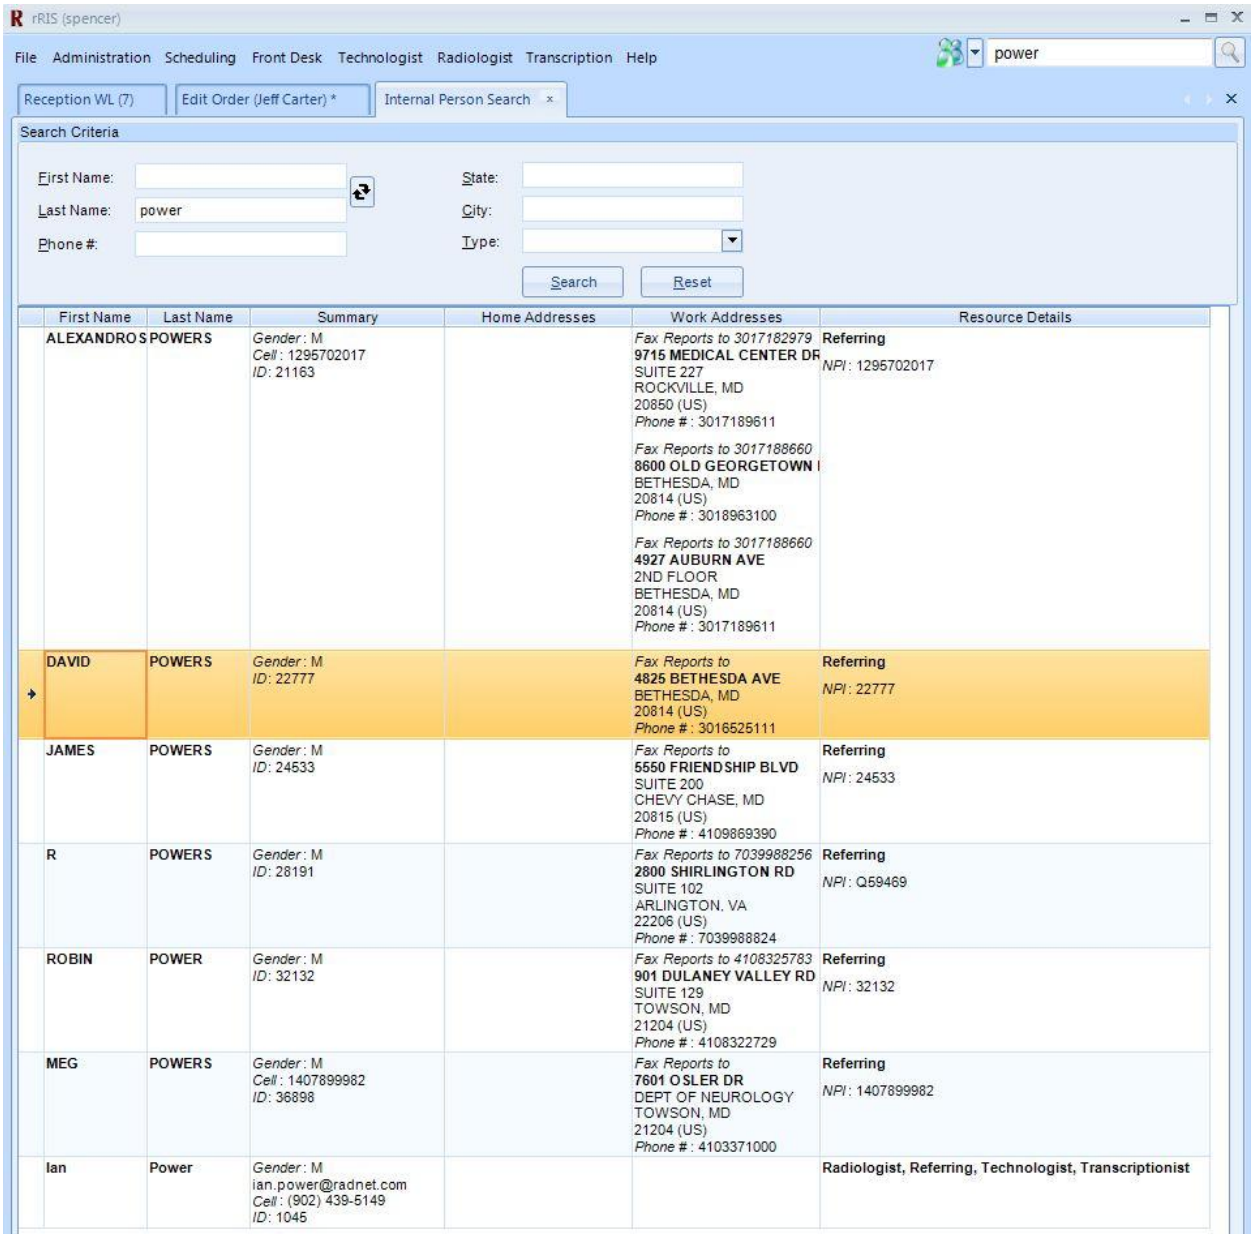

**Figure 4.10 – Internal Person Search on Last Name**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

The site search allows the user to lookup contact information for other sites within the organization. For example if a user needs the fax number for the Lutherville site, he or she can simply use "Luth" as search criteria with the Site search option selected to get a list of matching sites. Users can also use state, city, manager, and phone number as search criteria.

**Figure 4.11 – Site Search on Site Name**

Search engines like Google are used often throughout the workday for finding necessary information. In rRIS, the user can click on the Google search button to quickly launch their default web browser and navigate to the Google search page.

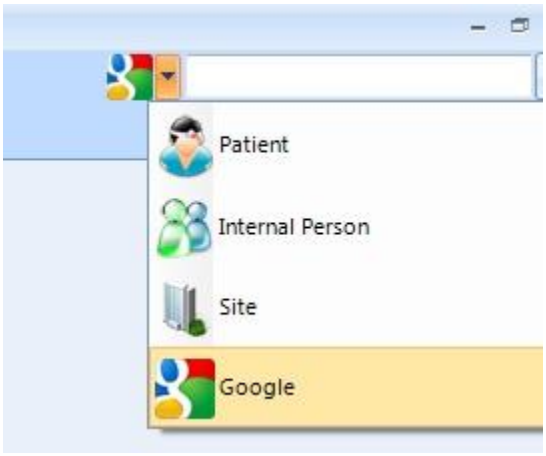

**Figure 4.12 – Shortcut to Google Search**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Filter Body Part Based on Procedure

There is a requirement to filter the list of applicable body parts based on the procedure code. This is useful if the procedure code is generic like a CT Lower Extremity W (73701). For a CT Lower, it does not make sense to present the user with a list of body parts like arm or shoulder that are not considered lower. In the example below the list of available body parts for a CT Lower include Hip Joint, Ankle Joint, Knee, Leg, Foot, and Pelvis. A default can still be specified from this list.

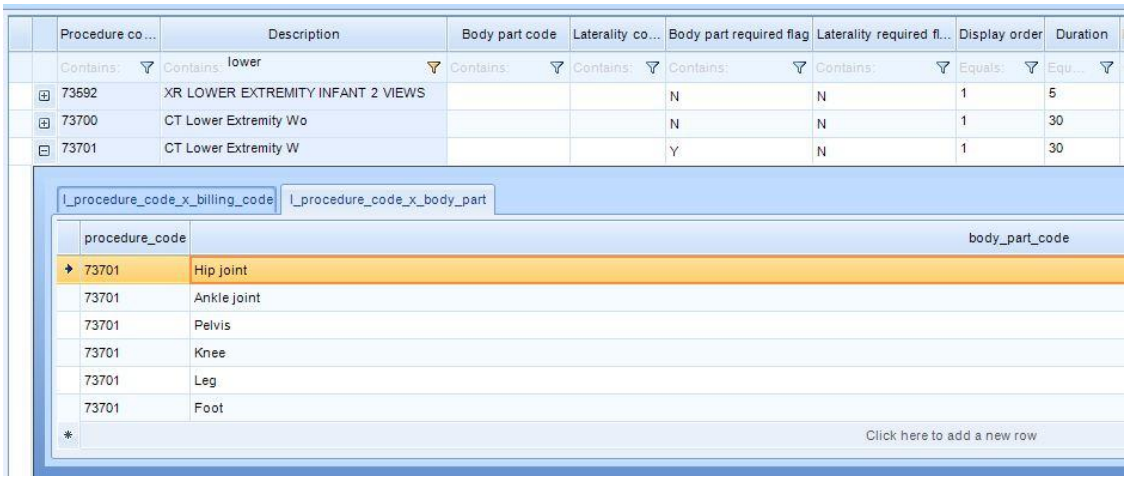

**Figure 4.12 – Available Body Parts for Procedure CT Lower Extremity W**

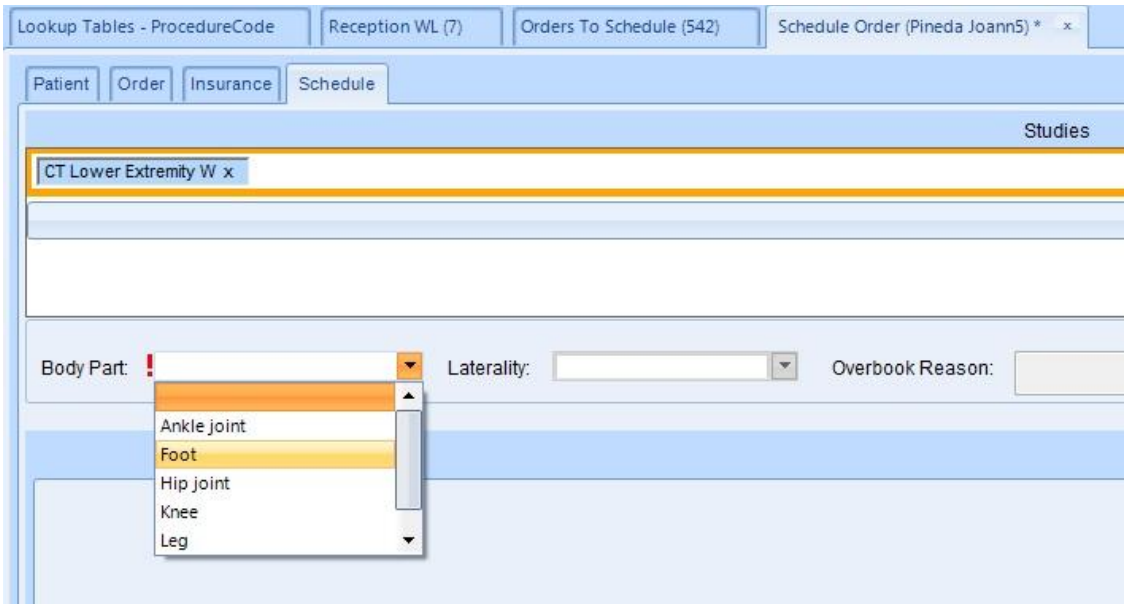

**Figure 4.13 – Filtered Body Parts during Scheduling**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Cloning Rooms, Availability Templates, and Schedule Groups

A large amount of administrative time can be spent on creating and editing rooms, availability templates, and schedule groups. rRIS allows the administrative user to clone these areas to save valuable time. For example, a user is setting up a CT room at the Townson site and it operates on the same or similar working hours to the CT room at the Lutherville site. The use simply highlights the Lutherville CT template, clicks the Clone button, and enters a new name. Now a new template has been created that is already configured and ready to be applied to a Schedule Group.

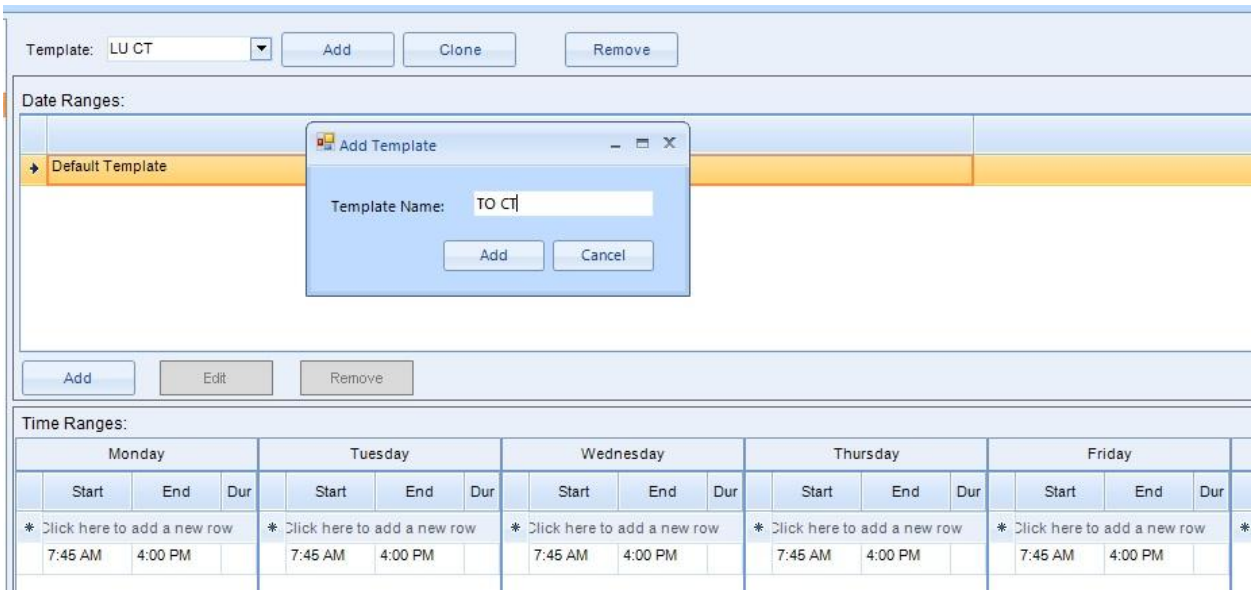

**Figure 4.14 – Cloning an Availability Template**

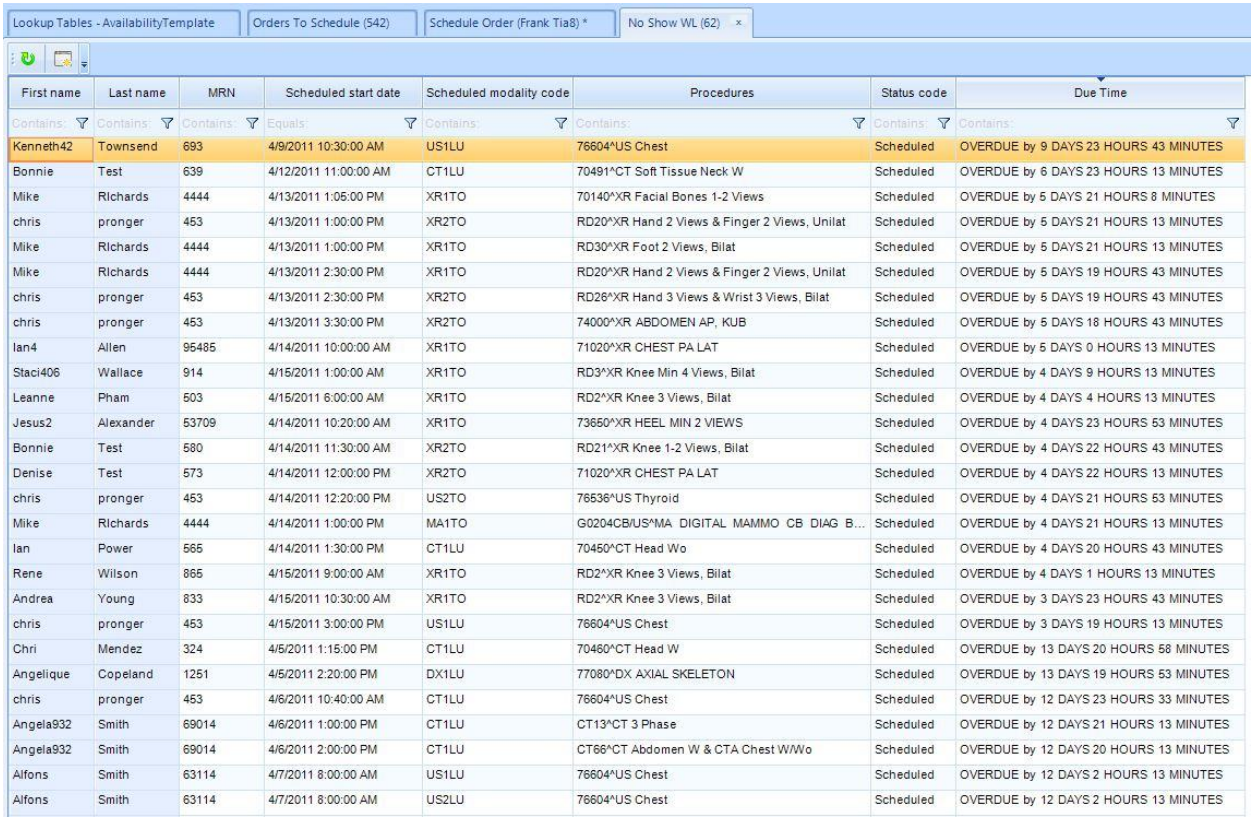
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## No Show Workflow

In Build 1.12, a No Show worklist has been added to the application. The purpose of this worklist is to track all overdue patients. This worklist has been configured to include all studies that are still in a scheduled status and were scheduled between yesterday and fourteen days prior. From the worklist, a scheduling user can track No Show patients and easily contact them to reschedule or cancel the appointment.



| First name | Last name | MRN | Scheduled start date | Scheduled modality code | Procedures | Status code | Due Time |

**Figure 4.15 – No Show Worklist**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Advanced Scheduling Search – Next # of Days

The Advanced Search Criteria screen used when searching for scheduling solutions has been enhanced to include Next and Previous buttons represented below by green arrows. If the user has a defined date range set at 7 days, simply clicking the Next Arrow will automatically advance the search by the next 7 days. The Previous Arrow will search the previous 7 days.

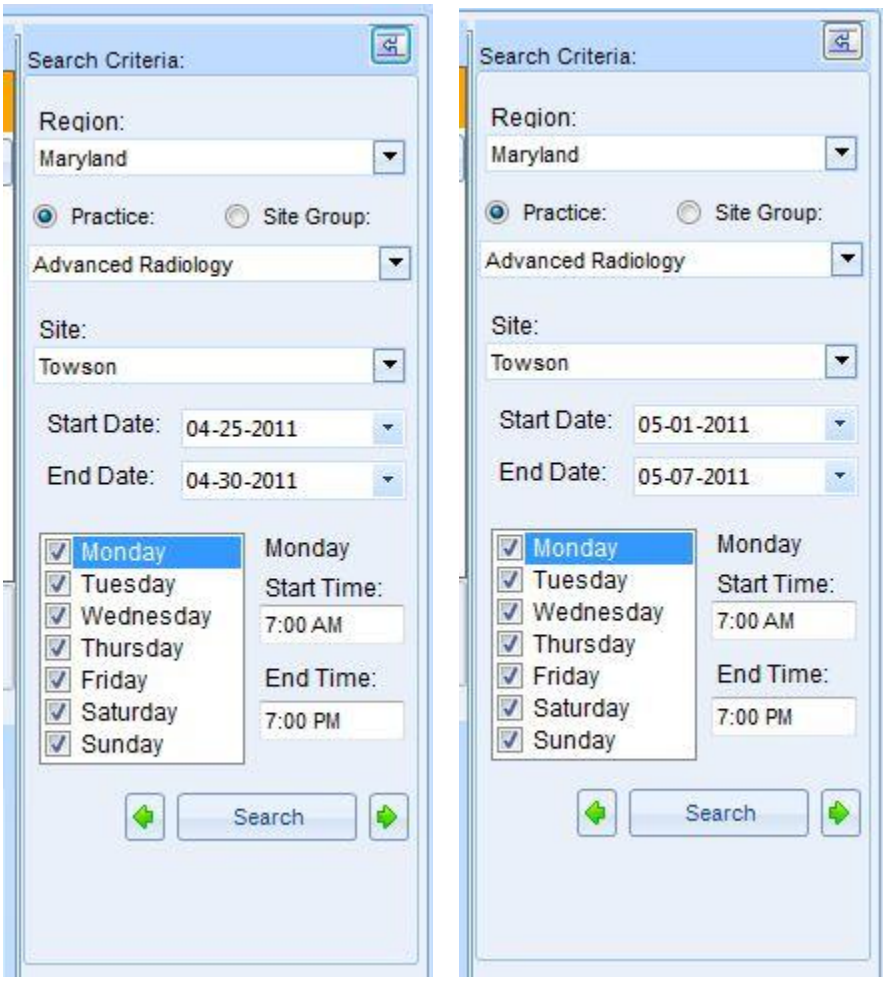

**Figure 4.15 – Advanced Search Criteria showing Next and Previous Days**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Appointments Booked

The Appointments Booked screen is a visual representation of schedule activity for scanners/rooms. The user has the ability to filter by:

- Region
- Practice
- Site Group
- Site
- Modality Type
- Room
- Schedule Date

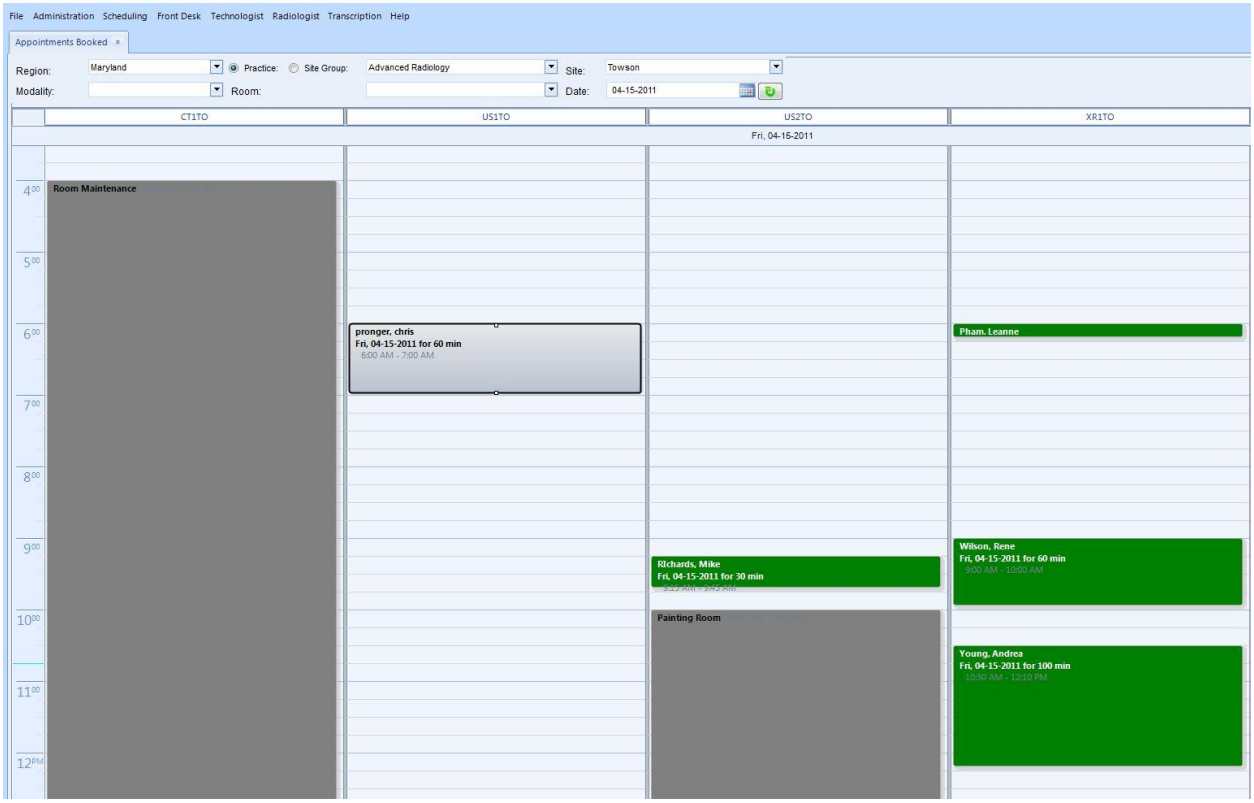

**Figure 4.16 – Appointments Booked Screen filtered by Site and Date**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

With the proper permissions granted, users have the ability to create new or edit existing scheduled studies simply by clicking on the desired timeslot. Room Closures and the Availability Template are reflected in the layout.

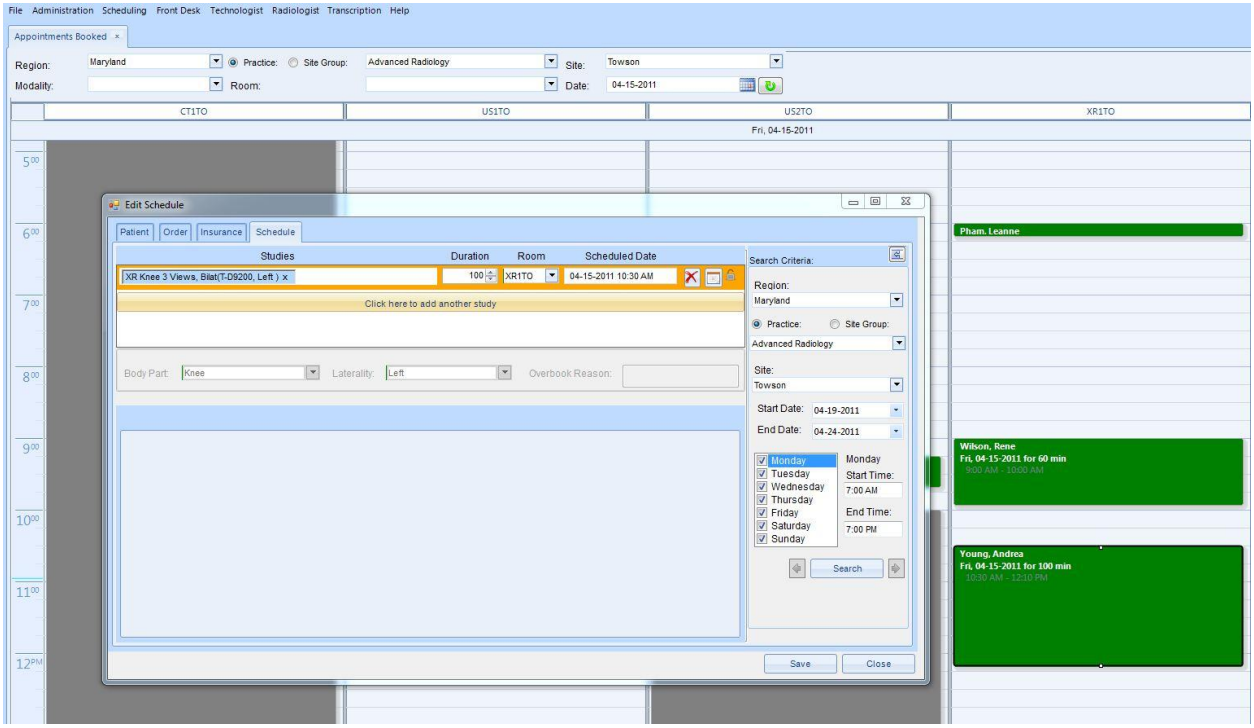

**Figure 4.17 – Edit Appointment via Appointments Booked Screen**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Known Limitations

Bugs, Suggested Features, and Support Issues are now tracked in a web based system called Redmine. The following is a snapshot of the issues found in Build 1.12 as of the end of Sprint 13. Note that the majority of these issues will be resolved in Build 1.13.

| # | Status | Subject | Category | Found | %Done | Resolved |
|---|---|---|---|---|---|---|
| 343 | New | Idle Time Error - Error Creating Window Handle | Thick Client GUI | 1.12 | 0 | |
| 342 | New | Modality Closure - Inactive closures are still reflected in search results | Admin Tools | 1.12 | 0 | |
| 341 | New | Worklist - Issue with multi-select and Enter key | Thick Client GUI | 1.12 | 0 | |
| 339 | New | Scheduling - User can launch appointment book without room selected | Thick Client GUI | 1.12 | 0 | |
| 338 | New | Scheduling - Modalities marked as Inactive are shown in search results | Thick Client GUI | 1.12 | 0 | |
| 337 | Closed | Scheduling - Defaulting Room | Thick Client GUI | 1.12 | 100 | 1.13 |
| 336 | Resolved | Required Fields - Validation is not refreshing on scheduling screen | Thick Client GUI | 1.12 | 100 | 1.13 |
| 335 | Resolved | Scheduling - Exception when scrolling search results | Thick Client GUI | 1.12 | 100 | 1.13 |
| 334 | New | Scheduling - Insurance tab | Thick Client GUI | 1.12 | 0 | |
| 333 | New | Lookups Editor - Forms and Labels to Procedure mappings | Thick Client GUI | 1.12 | 0 | |
| 332 | New | Scheduling - Room closures are not being reflected in the GUI timeslots | Thick Client GUI | 1.12 | 0 | |
| 331 | New | Scheduling - Issue with procedures with less than 30 minute duration | Thick Client GUI | 1.12 | 0 | |
| 330 | New | Scheduling - Issue when searching over multiple days | Thick Client GUI | 1.12 | 0 | |
| 329 | New | Scheduling - Issue with times in search criteria | Thick Client GUI | 1.12 | 0 | |
| 328 | New | Scheduling - Edit Schedule | Thick Client GUI | 1.12 | 0 | |
| 327 | Resolved | Scheduling - Templates are not being stored as default | Admin Tools | 1.12 | 100 | 1.13 |
| 326 | Resolved | AvailabilityTemplate - Issue adding date ranges | Admin Tools | 1.12 | 100 | 1.13 |
| 325 | New | No Show - Workflow issues/suggestions | Thick Client GUI | 1.12 | 0 | |
| 324 | New | Insurance - No consideration for field length when entering policies | Thick Client GUI | 1.12 | 0 | |
| 323 | New | Search Providers - Missing Access String for Google Search | Thick Client GUI | 1.12 | 0 | |
| 322 | New | Search Providers - Missing Access Strings after upgrade | Admin Tools | 1.12 | 0 | |
| 321 | New | DataSet Visualizer - Does not show for Studys and CC Physician | Thick Client GUI | 1.12 | 0 | |
| 320 | New | Internal Person Search - Ignores permissions | Thick Client GUI | 1.12 | 0 | |
| 319 | Closed | Labels and Forms - Require ability to specify full path to forms | Admin Tools | 1.12 | 100 | 1.12 |
| 318 | New | Data Visualizers - Periodically the data visualizers on one tab carry over to another tab | Thick Client GUI | 1.12 | 0 | |
| 317 | New | Scheduling - Search results don't seem to be returning all timeslots comapred to Appointment Book | Thick Client GUI | 1.12 | 0 | |
| 316 | Closed | Appointment Book - Issue with new appointment on empty timeslot | Thick Client GUI | 1.12 | 0 | |

# 1. Purpose

This document describes some of the new features and changes implemented in rRIS as of the end of Sprints 13 and 14. This pre-release version of rRIS is referred to as Build 1.14.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the rRIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation instructions for the rRIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu, click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

Build 1.14 is considered a new core release of the application and will require a reinstallation of rRIS.

If you experience difficulties accessing the application, please do not hesitate to contact Spencer MacDougall with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Export to Microsoft Excel for Worklist Printing

In Build 1.14, users now have the ability to export worklists to Microsoft Excel. This is available through the right-click export option on the worklist. This feature allows the user to not only print the worklist via page setup in Excel, but also perform analysis on the data.

**Figure 4.2 – Worklist shown in Microsoft Excel**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Read-Only Notes Field

A common problem with the current RadNet RIS applications is having notes on the order and patient totally editable. Notes from past edits can be modified and removed as the order progresses through the system making it impossible to understand what happened to the patient and upsets users as notes they added are getting removed.

In Build 1.14 a new notes control has been introduced which allows any user to add notes in the top area of the control and everyone can see the past notes as read-only. Each log entry is prefixed with the date followed by the user's initials. Super users will have the ability to edit the notes so invalid data can be cleaned up.

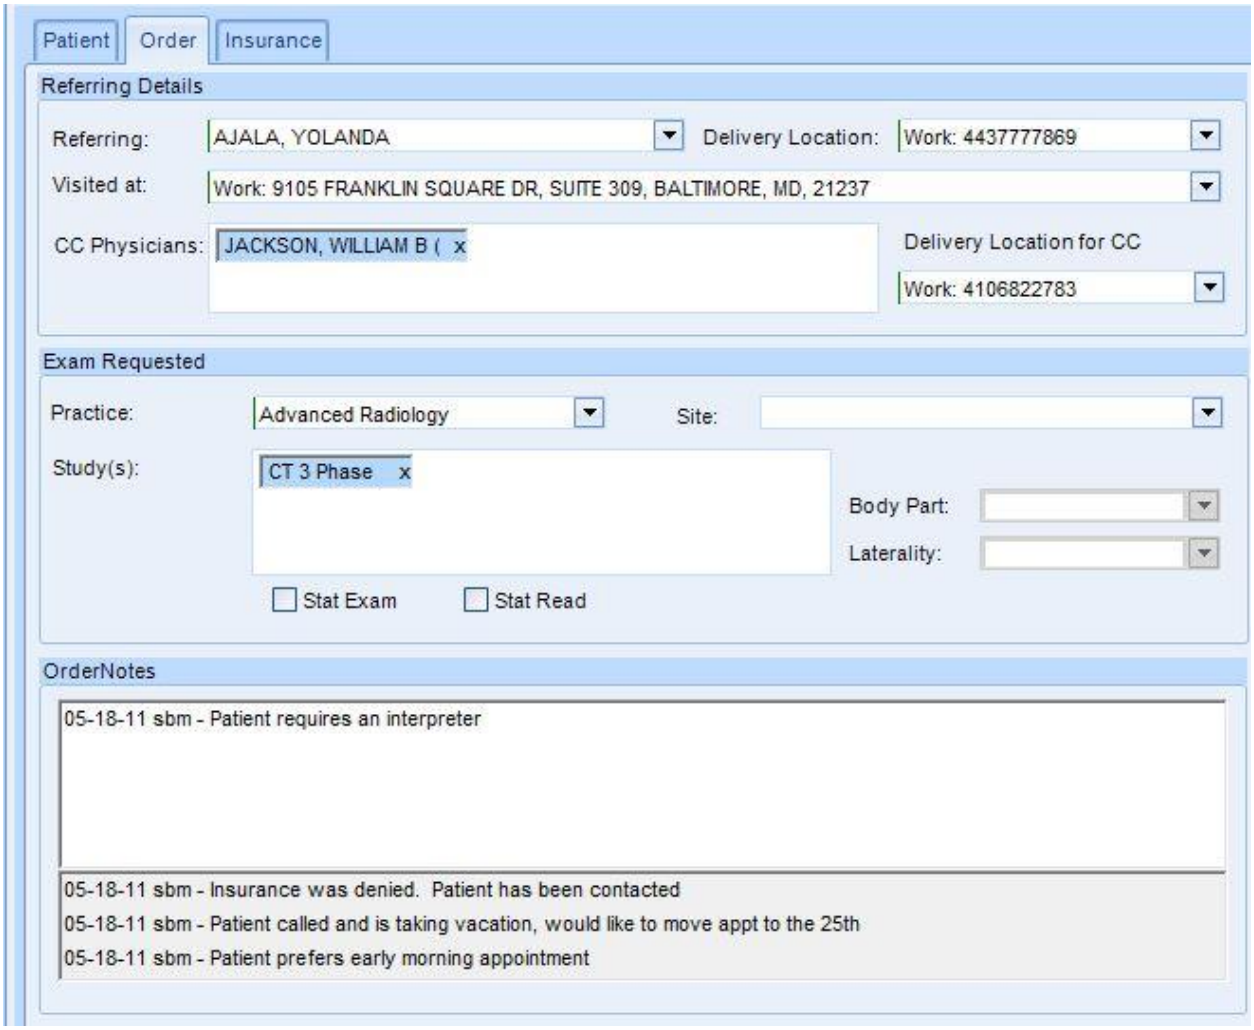

**Figure 4.3 – Read-Only Past Notes**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Availability Templates on the Schedule Calendar

The availability template that is mapped to a scanner/room is now reflected in the calendar view when scheduling procedures. Available timeslots are shown in white while unavailable are represented by blue. In the example below, the ultrasound rooms are open at 7:45am.

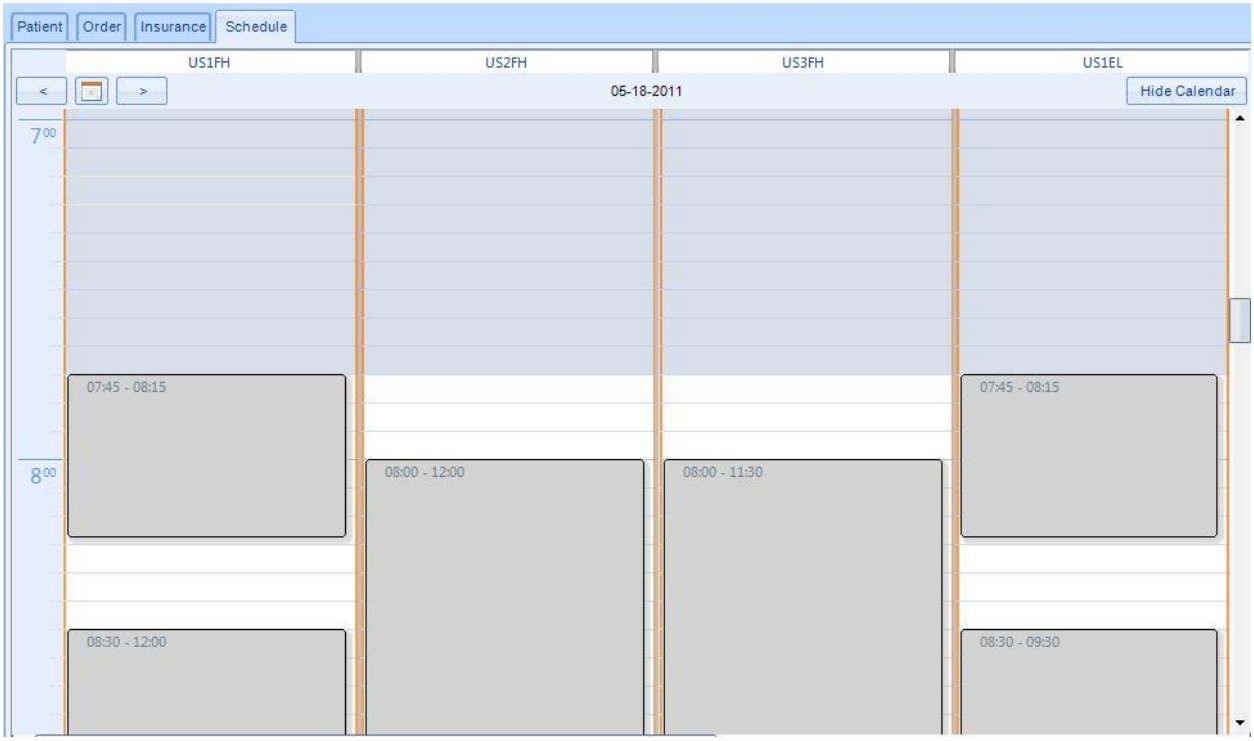

**Figure 4.4 – Availability Template reflected in Scheduling Calendar View**

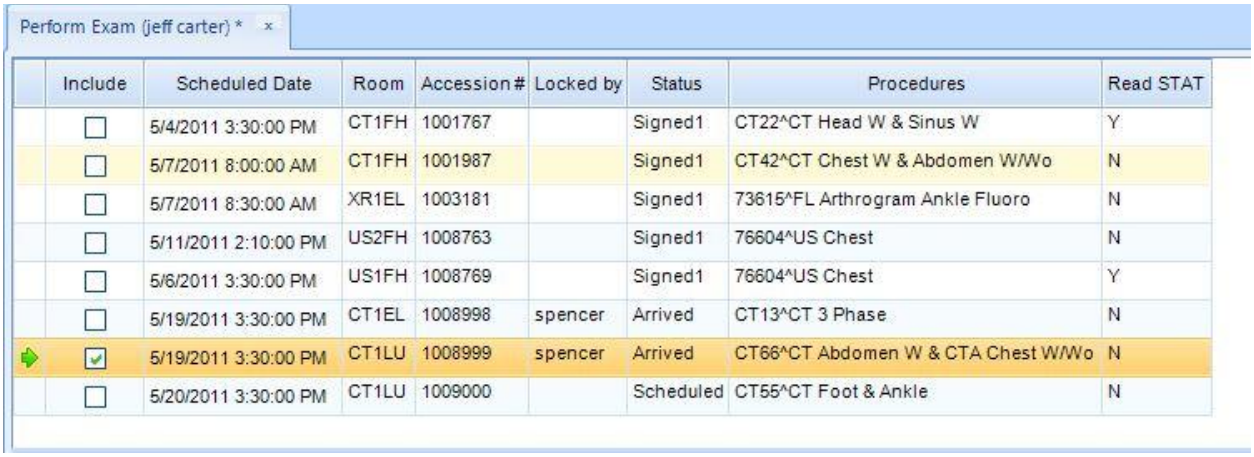
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Patient History Control

There is now a patient context aware history control that can be placed on user forms. Users like technologists and radiologists will have easy access to a patient's prior exams with the embedded patient history control.



| Include | Scheduled Date | Room | Accession # | Locked by | Status | Procedures | Read STAT |

**Figure 4.5 – Patient History Control shown on Technologist Screen**

## Scanning Control

A scanning control has been implemented to give rRIS users the ability to scan and view scanned documents. The scan control depends on pre-defined scan document types. A scan document type has the following properties:

| **Property** | **Description** |
|---|---|
| Width | The width in inches of the document. |
| Height | The height in inches of the document. |
| Resolution | The resolution to scan the document at. |
| Colour | Whether colour should be capture in the scan document or use gray scale. |
| Duplex | Whether the scanner or the scanner control should scan both sides of the document. |
| Document association type | PatientLevel or ExamLevel. If PatientLevel, then this scanned document will be pinned to the patient. If ExamLevel, then this scanned document will be pinned to the patient and the exam. |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

A Scan control has been implemented as a user control. The screen shot below shows the scan control embedded in the registration screen.

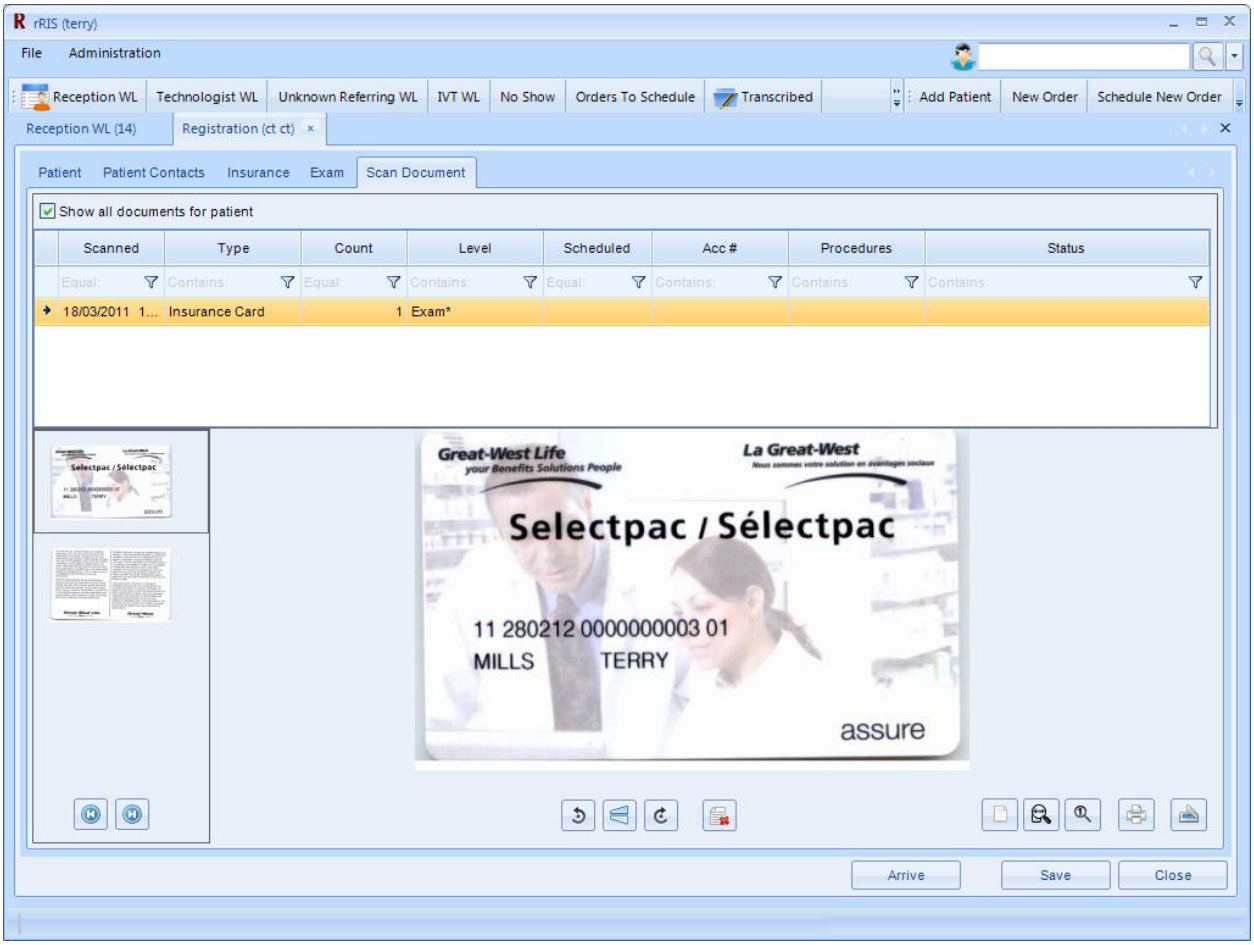

**Figure 4.6 – Scan Control on Registration Screen**

Screen Geography:

- The top of the control contains a grid of the scan documents for the patient and/or exam. If the scan control is instantiated at the exam level, then by default the list will include scan documents for the exam and scan documents for the patient that are not associated to other scanned documents (i.e. patient level scan documents)
- There is a "Show all documents for patient" check box at the top of the control. When checked, this will show all scan documents for the patient, including scanned documents from other exams. When not checked, it will show exam documents for this exam only plus patient level scan documents.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

- The bottom 2/3 of the control contains the thumbnail strip and the image.
- The thumbnail strip is only visible when the scan document has more than one image, for example a front and back, multiple pages or combinations of both.

**Figure 4.7 – Scan Control Thumbnail Strip**

- At the bottom of the thumbnail strip contains some navigation buttons that allow the user to move up and down the thumbnail list.
- A user can also click the thumbnail image to change the displayed image.
- At the bottom of the scan control contains image controls.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | |
|---|---|
| | Rotate the image 90 degrees to the right. This will always be enabled for newly acquired images to allow the user to correctly orient the image. However, it depends on permission if the button will be enabled for previously scanned documents. |
| | Flip the image on the horizontal axis (same as rotating it 180 degrees). This will always be enabled for newly acquired images to allow the user to correctly orient the image. However, it depends on permission if the button will be enabled for previously scanned documents. |
| | Rotate the image 90 degrees to the left. This will always be enabled for newly acquired images to allow the user to correctly orient the image. However, it depends on permission if the button will be enabled for previously scanned documents. |
| | Delete the image. This will always be enabled for newly acquired images to allow the user to remove unwanted images. However, it depends on permission if the button will be enabled for previously scanned documents. |
| | Zoom out to fit the full image within the control |
| | Zoom out or in to fit the page width within the control (i.e. no horizontal scroll bars, but may include a vertical scroll bar) |
| | Show the original image size. |
| | Print the scan document. |
| | Scan or import new documents. This button is enabled based on a permission. |

When the user acquires new scan documents, the following screen appears.

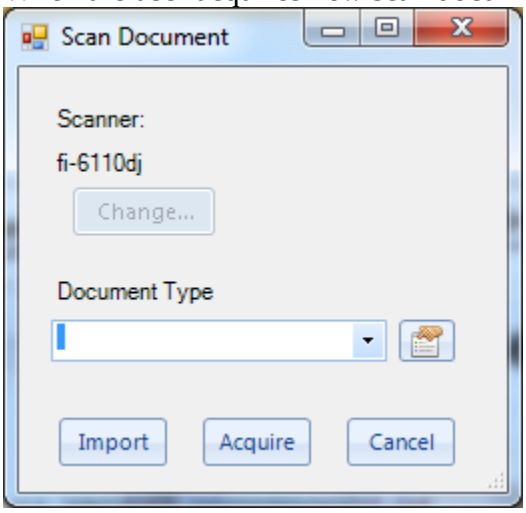

**Figure 4.8 – New Scan Document Form**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

The "Change" allows the user to switch to a different scanner. If there is zero or only one scanner connected to the computer then the button is disabled. If there is only one scanner connected then the control will default to use that scanner. If there is more than one scanner, the button is enabled and there is no scanner selected by default. The document type combo is use to identify the type of document to be scanned or imported. The properties button is used to allow the user to see the document type properties and change them if necessary. This button is only enabled if the user has permission. When pressed, the screen changes to the following:

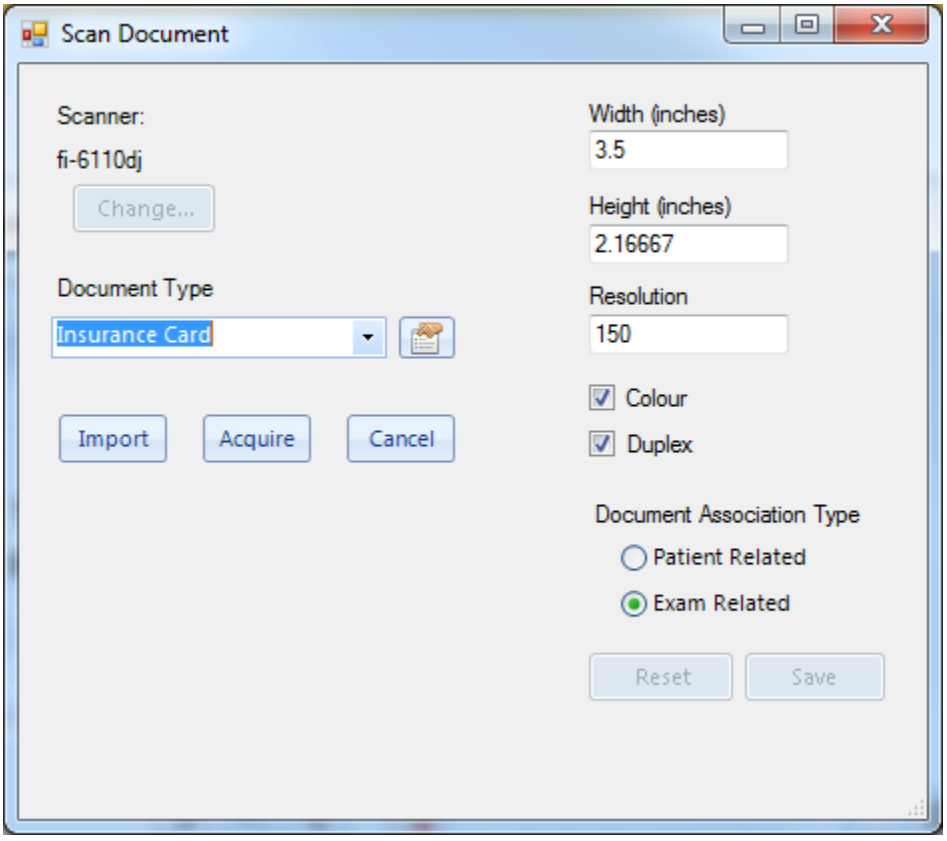

**Figure 4.9 – Scan Document Properties Screen**

The user now has the ability to change the scan document properties and save them back to the database. The scan document properties are discussed below:

- The "Import" button is used to import an image from the file system.
- The "Acquire" button initiates the scanner to scan a document.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

If the scanner has an auto sheet feeder, the scanner will continue until all pages are scanned. When finished the "Scan Document" window will close and return to the scan control. If the scanner is a flatbed scanner then each document will have to be scanned separately. If the scanner is a flatbed scanner and the document t type is duplex, the user will be prompted to flip the page.

The image area of the control has the following context menu:

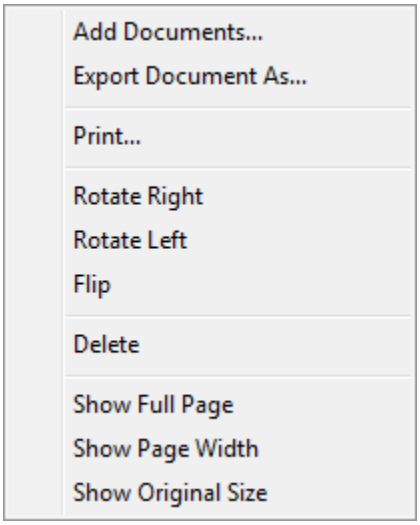

**Figure 4.10 – Scan Document Context Menu**

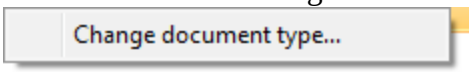
Most of the items on the menu match a button on the control. Like the buttons on the scan control these menu items will be visible, invisible, enabled and/or disabled based on permissions. The only feature on the context menu not included via a button is the "Export document as…" item. This item is also permission based. When clicked, the user is prompted with the file save dialog and asked to choose a path and file to save the current image to.

The scan document list grid also has a context menu.



This allows the user to change the document type of a newly acquired or existing document. This is also enabled/ disabled based on permission.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Associating Scanned Documents

There are two ways to associate a scanned document to more than one exam:

1. During acquisition
2. Post-acquisition in the scan document list

### During Acquisition

The acquire scan screen was modified to include the patient jacket.

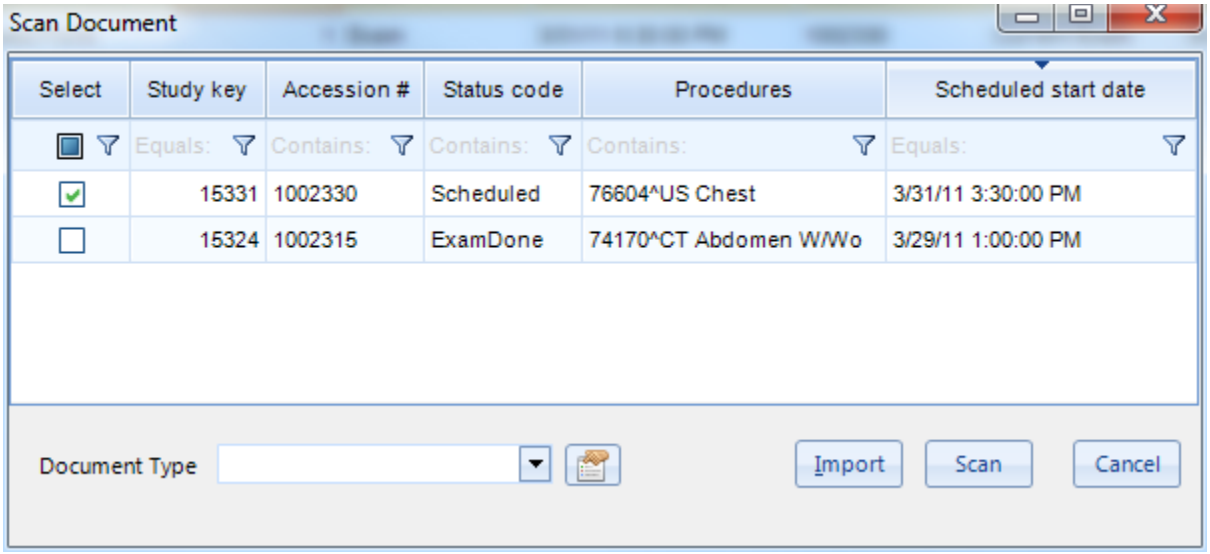


**Figure 4.11 – Associating a Scanned Document to a Study during Acquisition**

The patient jacket contains a complete list of the patient exams. A check box was added for each row. The current exam is always checked and cannot be unchecked. The user can check other exams. The newly acquired or imported image will be linked to every exam "checked" in the patient jacket. However, there is one exception. If the scan document acquired or imported is at the patient level, then the "checked" exams will be ignored as the scanned document will be related to all of the patient exams.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

### Post-Acquisition in the Scan Document List

If the user wants to "link" a scan document to other exams they can use the right click "Edit links…" menu items. Also available is the "Move to patient level" and "Move to exam level".

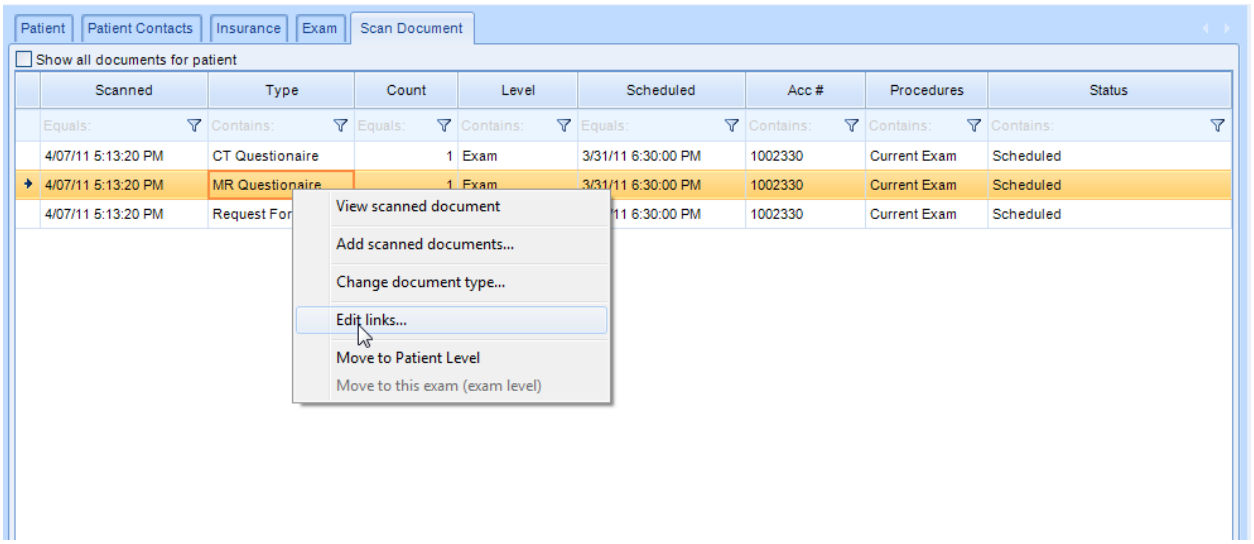

**Figure 4.12 – Scan Document Context Menu**

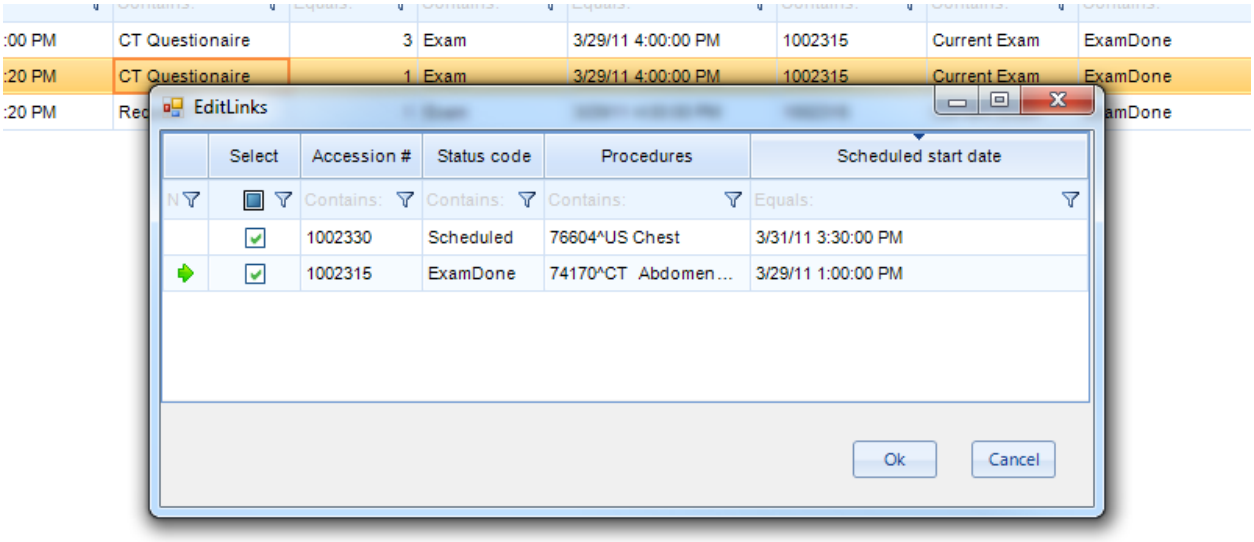

**Figure 4.13 – Associating a Scanned Document to a Study after Acquisition**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Below is a detailed explanation of the menu items available on the scan document context menu.

| Function | Description |
|---|---|
| Edit Links… | This menu option is only enabled when the user has the "Clinical.ScanDocs.AllowModifyScanDocuments" permission.<br><br>This menu option is only enabled for exam level scan documents.<br><br>The Edit Links feature will allow the user to link this scan document to one or more exams. It is very similar to the control on the "Acquire Documents" screen. The user must have one exam selected before pressing the "Ok" button. |
| Move to patient level | This menu option is only enabled when the user has the "Clinical.ScanDocs.AllowModifyScanDocuments" permission.<br><br>This menu option is only enabled for exam level scan documents.<br><br>The "move to patient level" will promote the scan document to the patient level and therefore will be shown in the scan document list for all of the patient exams.<br><br>There is no undo function once the user promotes to the patient level. The user will need to "move to exam level" and then pin to each individual exam. However, the user can choose to close the form and not save changes, but this will also ignore any and all changes in the form. |
| Move to exam level | This menu option is only enabled when the user has the "Clinical.ScanDocs.AllowModifyScanDocuments" permission.<br><br>This menu option is only enabled for patient level scan documents.<br><br>The "move to exam level" will demote the scan document to the current exam. |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Bulk Printing of Forms

Build 1.14 supports the ability to select multiple rows in a worklist and print a form or label for each row. Instead of generating many instances of the same form, the application will generate one form with many pages.

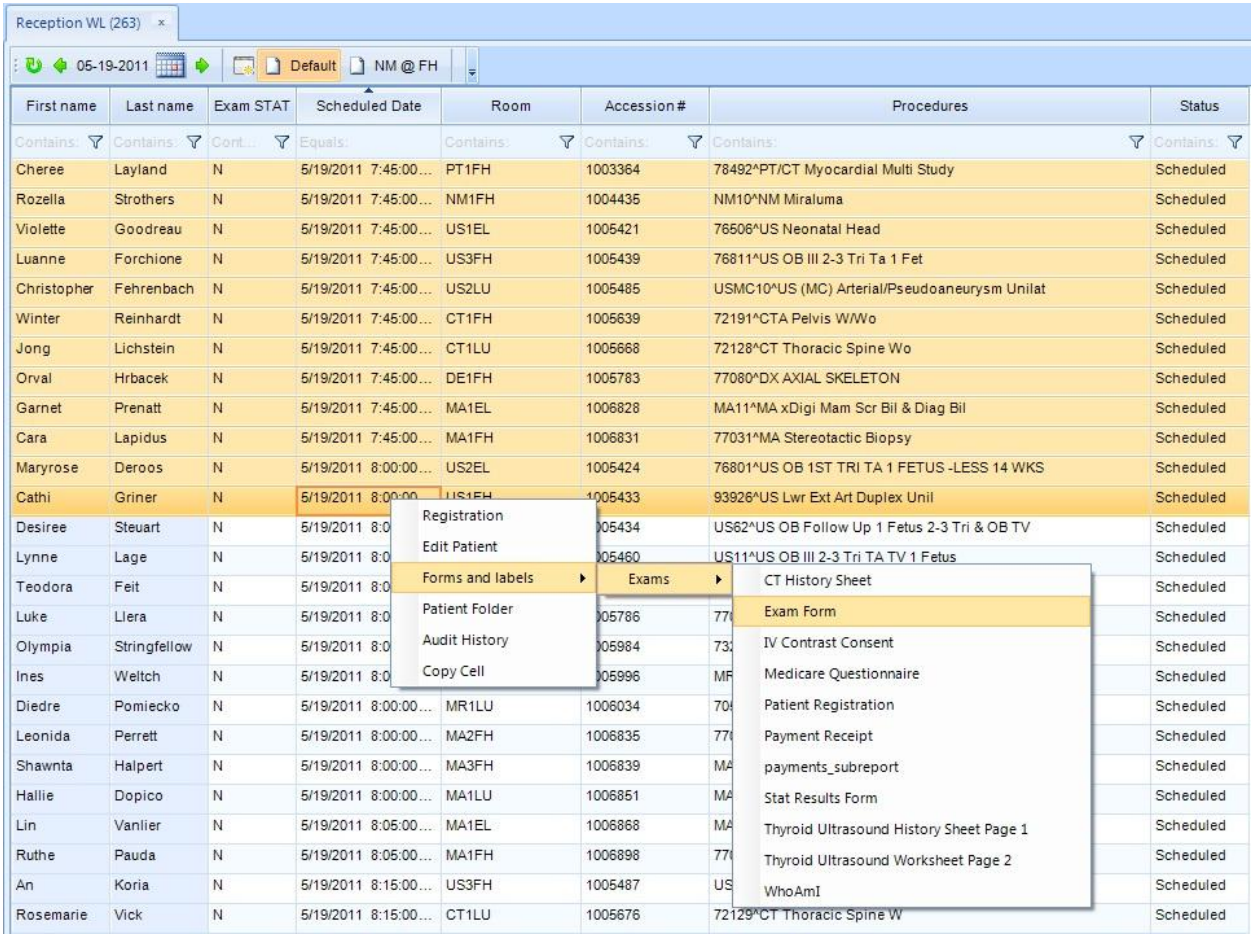

**Figure 4.14 – Dynamic Worklist Context Menu showing Forms and Labels**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Mapping Forms and Labels

Below is a screen show of the configuration screen for specifying form criteria and mapping to procedure codes.

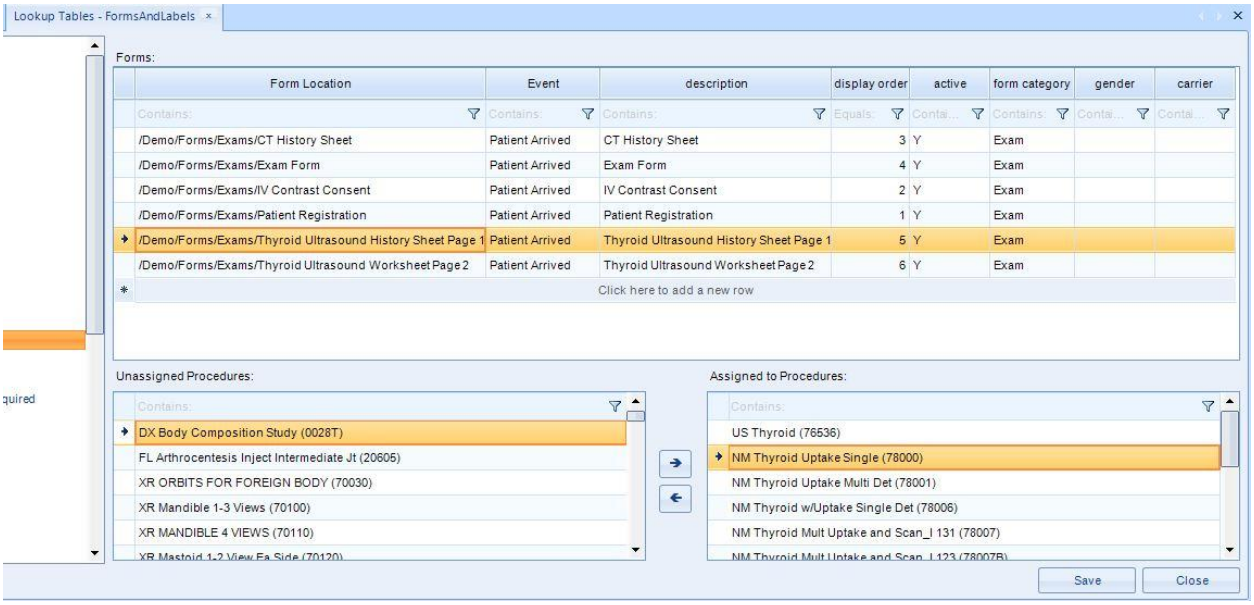

**Figure 4.16 – Mapping Thyroid History Sheet to Procedures**

The upper grid displays a list of all of the forms that are available for On Demand printing from a Content Window (e.g. registration) or event driven forms generation. The form location field uniquely identifies the form. The entries in this column are a drop down list of forms that have been published to the report server. The event column has a dropdown list of events that are eligible for automatic form generation (e.g. OrderCreated, PatientArrived, etc). The description column is for freeform text to add additional descriptive information to a form. Form category is used to help classify a form that may be useful for filtering to find the appropriate form. There is a form category lookup table that an administrator can use to specify additional values for the categories.

Gender and Carrier are fields that are used to help determine when a form should be generated. For example, an administrator may choose to configure the system to generate a specific form whenever a female patient is arrived. For an event of "PatientArrived", the system will generate a form for all patients as they are arrived if no gender filter is specified. If a gender filter is specified, the system will look for the PatientArrived event AND a patient matching the specified gender.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

With the insurance carrier dropdown, the system can apply an additional criteria (again using AND logic). The system can be configured to generate a certain form on Patient Arrived when the patient is a female and the patient has a specific insurance carrier.

The last criteria that can be applied is on procedure code. The system can be configured to generate forms only for particular procedures (for a given event, gender, and/or carrier). The assigned procedure and existing procedure lists are used to associate forms with procedures. If no procedures are specifically assigned to a form, the form is considered to be general purpose and is eligible to be generated whenever any type of exam is used.

## Data Nuggets

Data Nuggets are buttons which are enabled on the worklist that show a small summary amount of clinical data for each worklist row. The data will pop-up in a window, which the user can move around and dock. The windows can be moved and closed though the standard windows actions; however, the user can also single click and drag a data nugget to open it in an alternate position and if he or she clicks on the button for a data nugget a second time the popup closes.

In addition the data nuggets for a particular worklist row will show as highlighted in a particular color when activated, which will match the outline of the popup window.

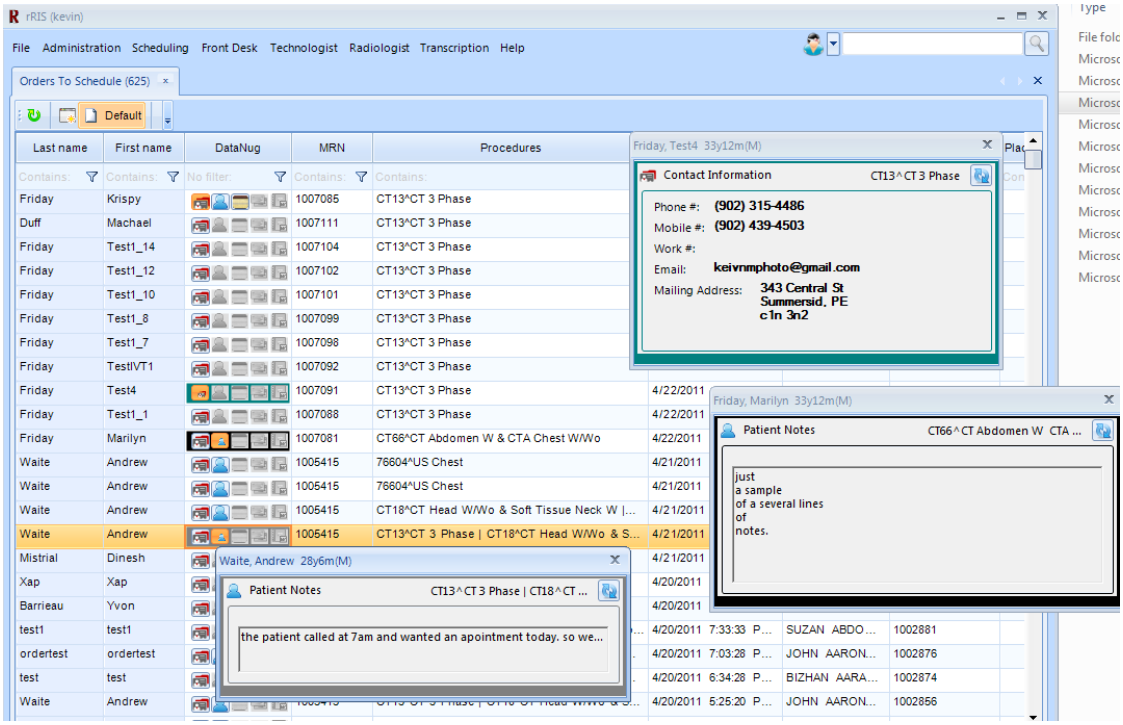

**Figure 4.17 – Data Nuggets on the Orders To Schedule Worklist**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## IVT Workflow

There are two separate but combinable workflows to consider in IVT. The first is insurance verification (IV). The second is pre-certification (authorization) (PC).

**IV (Insurance Verification)** is based on an insurance carrier, along with a modality type. If a procedure is ordered or scheduled and it meets the carrier to modality type rule, then it will be flagged for IV. This flagging must occur if the order is a single study, multiple studies, or composite code of studies. The flagging of these orders will be done completely by the RIS, transparent to the scheduler/order taker. It will immediately appear on the screen, so that the scheduler will know if IV is required before the screen is even saved. On save, the order will appear on the IVT worklist. A worklist will be created that contains these orders (IVT Worklist), and a data collection screen will be created where the IVT person will see sufficient information to be able to contact the insurance company and determine if the patient has insurance.

The data collection screen is where the IVT specialist can enter notes, and have a checkbox where they can indicate when the IV is complete. If necessary, insurances can be added/changed/deleted while that screen is open, and the system will immediately show if IV is required for the newly entered insurance. If insurance is ultimately denied, the order will likely be manually cancelled, which will remove it from the worklist. The worklist can be filtered by practice.

Whether or not an order requires and/or meets IV is stored at the Visit level, which for Radnet is perceived at the order level, since typically there is a 1-1 relationship of visit to order.

The three "statues" for IV are **Not Required**, **Required**, and **Done**. The system sets **Required** and **Not Required** automatically, and the user sets the status to **Done** by selecting the Verification Complete checkbox. Note that these statuses are completely distinct from study statuses, and the order can be in any status while going through the IV workflow simultaneously. There are no rules to stop workflow based on the lack of IV.

**Pre-cert (PC)** is the collection of a pre-cert (also called authorization) number from the insurance company. Whether or not a study requires PC is based on rules configured in the insurance table. The relationship is Insurance Carrier to (Modality Type(s) and/or CPT code(s)) and Practice.

Whether or not a CPT code requires pre-cert will be determined automatically by rRIS, but unlike IV, it does not need to be immediately presented on the scheduler's screen. It will be determined as the order is saved or scheduled, and sent to the IVT worklist. It is determined and stored at the CPT code level. Note that an order can have multiple procedure codes, and each procedure code can have one or more CPT codes, any of which could require pre-cert based on

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

the rules above and each pre-cert needs to be stored at that same (CPT) code level. To avoid overload on the worklists however, an order that contains multiple required PC's should appear on the worklist only once per order, but within the order all required PC's should be clear.

It is also a requirement that the system be able to collect PC when the study is in any status. The way that rRIS stores the order before it is scheduled adds internal complexity, however this is in no way visible to the user.

It is also a requirement that during the initial stages of the workflow (ordering, checking in, tech workflow) that studies and/or insurances may be altered. This may invalidate PC numbers and must be able to automatically send these orders back to the IVT worklist without losing any data that was already collected. Note that these rules apply to single studies, multiple studies, and composite codes. For example, if a study is removed from an order and a new series added instead, the pre-cert (if captured) for the original study pre-cert number must be maintained by the system, but (if necessary) the newly added studies may require pre-cert numbers of their own.

A configuration screen called Insurance Verification Required allows the administrator to correlate an insurance carrier and a modality type.

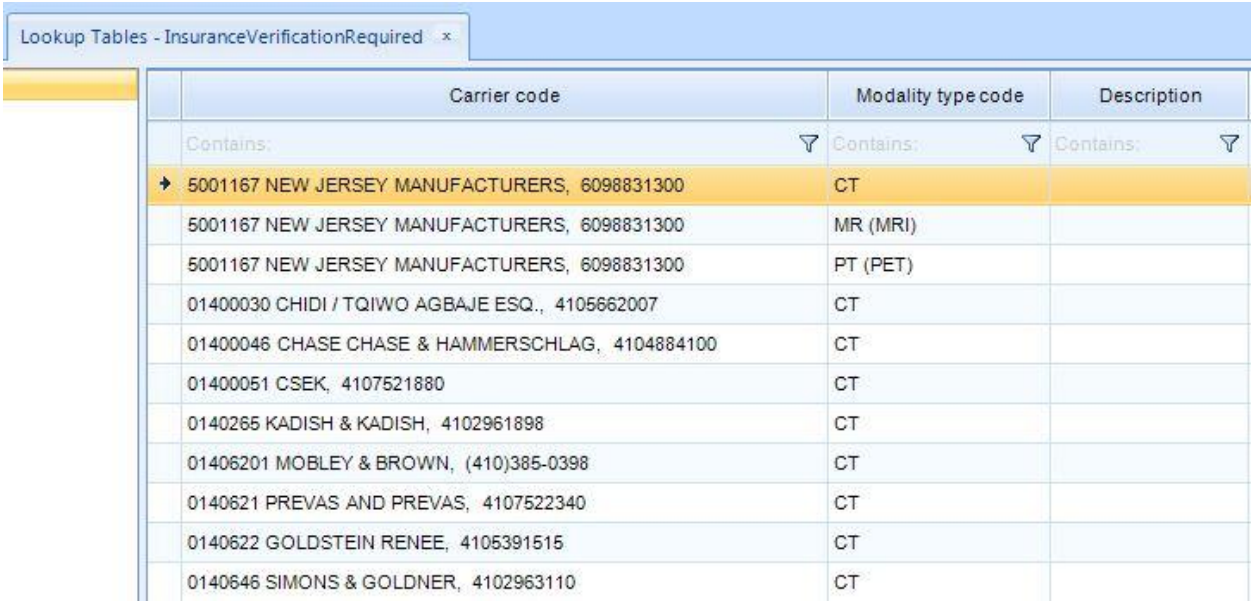

**Figure 4.18 – Insurance Verification Required matching Carrier to Modality Type**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

A new admin screen was also built to configure the rules under which a study may require a pre-cert. The relationship is Insurance carrier to Modality type (or CPT code) and practice. This is found in Configuration – Carrier. The user selects a carrier then right-clicks and selects "Pre-Cert Rules".

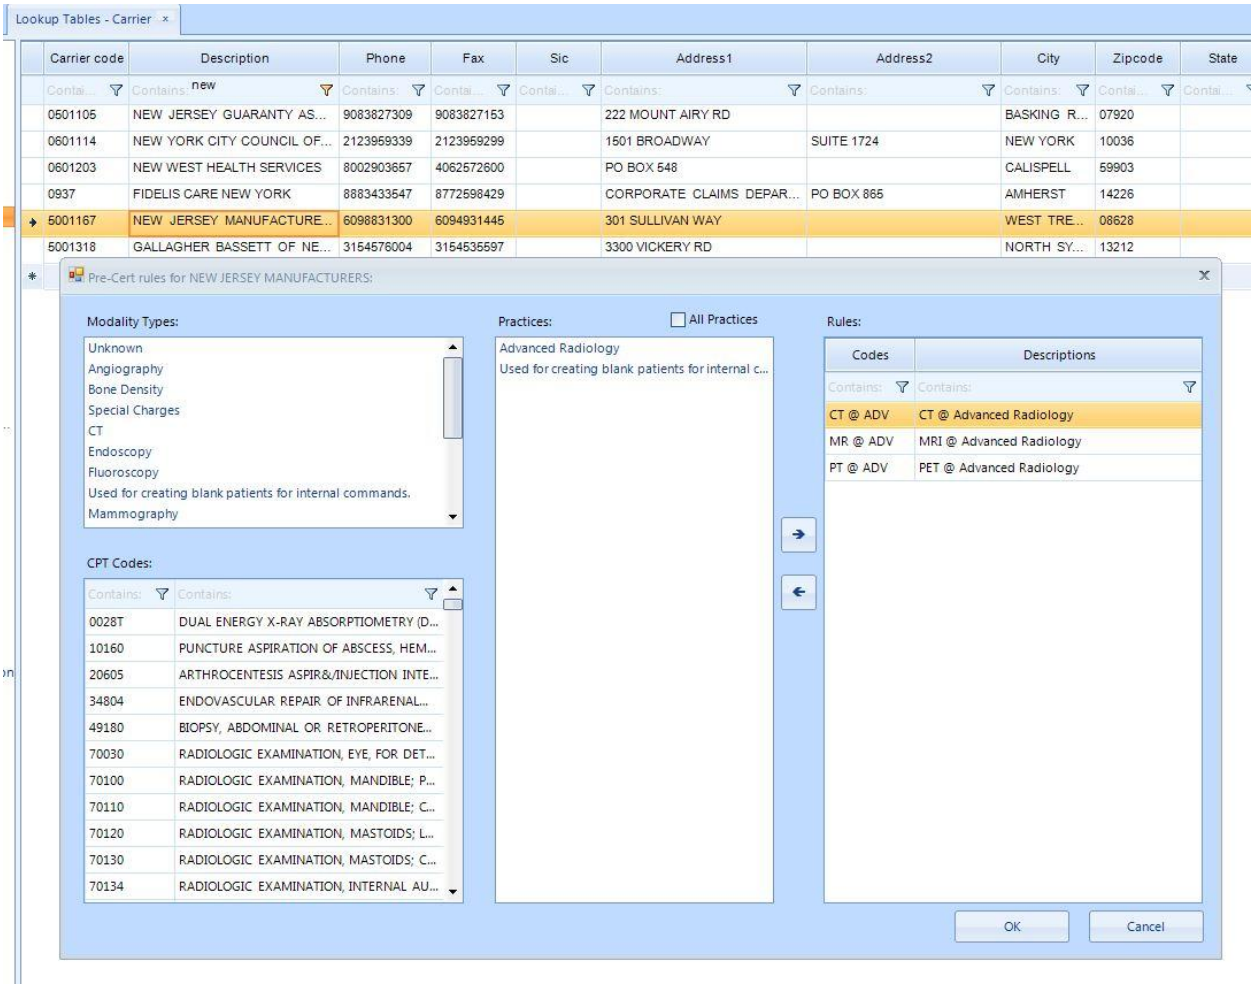

**Figure 4.19 – Defining Pre Cert Rules at an Insurance Carrier Level**

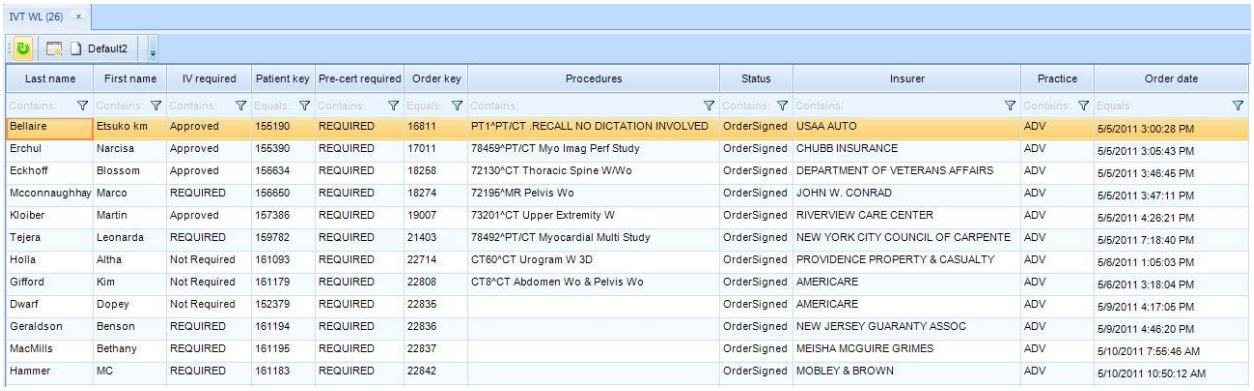
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

The IVT worklist contains columns for Patient name, Practice, Procedure(s), Insurance Carrier, Pre-cert Status, Insurance Verified Status , Requested Date, and Study Status. Items appear on this worklist by having a pre-cert status of anything other than Done, or a Verify Insurance status of Pending Confirmation.



IVT WL (26)

**Figure 4.20 – IVT Worklist showing Insurance Verification Required**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

The IVT screen uses a patient tab and an IVT tab. On the IVT tab there is a grid of insurances for the selected order. One column of this grid is "Insurance verification required", which will show the Y/N based on the Insurance Carrier and Modality Type. There is a text box for IVT notes where the user can enter any notes and checkbox to indicate that the verification is complete. Once the user enters that verification complete and the study is saved, this item will fall off the IVT worklist. If the screen is later re-opened, the IV checkbox will be greyed out so that it cannot be un-checked. There should never be a reason on un-set IV.

The CPT codes are listed in the grid named "Billing Code Information". This will show all CPT codes for the selected order. Each grid row has a data collection field for the pre-cert number. It also has a pre-cert status, which is a drop down list box which contains the statuses "REQUIRED", "Approved", "Denied", and "Pending response". It is the job of the user to collect the pre-cert number per CPT code, and change the status as appropriate. Only when the status is Approved or Denied does this item fall off the IVT worklist. There is a checkbox below this grid "Show inactive CPT codes". If a CPT code was pre-certed and then the study was later changed, rRIS must maintain the original pre-cert codes but also allow the new codes to be pre-certed. Setting this checkbox on will show the other CPT codes and their pre-cert statuses.

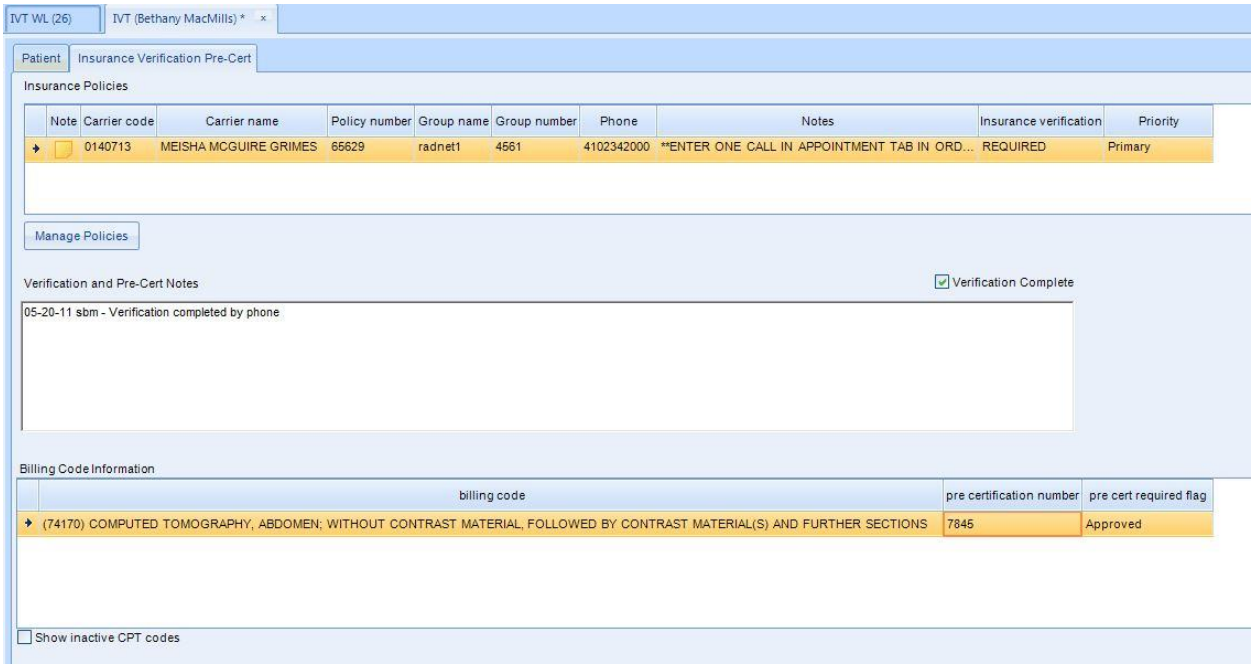

**Figure 4.21 – Updating IVT with Verification Notes and Authorization Number**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Technologist Workflow

A technologist workflow has been introduced in Build 1.14. The Technologist Worklist is a date-driven worklist that shows patients that are marked as Arrived, Started, Suspended, and Discontinued for the day. The Perform Exam screen is the main data form for the technologist. It consists of an embedded Patient History Worklist at the top of the screen, Patient tab, Documentation tab, Billing Codes tab, Scan Documents tab, and Notes/Exam Times tab.

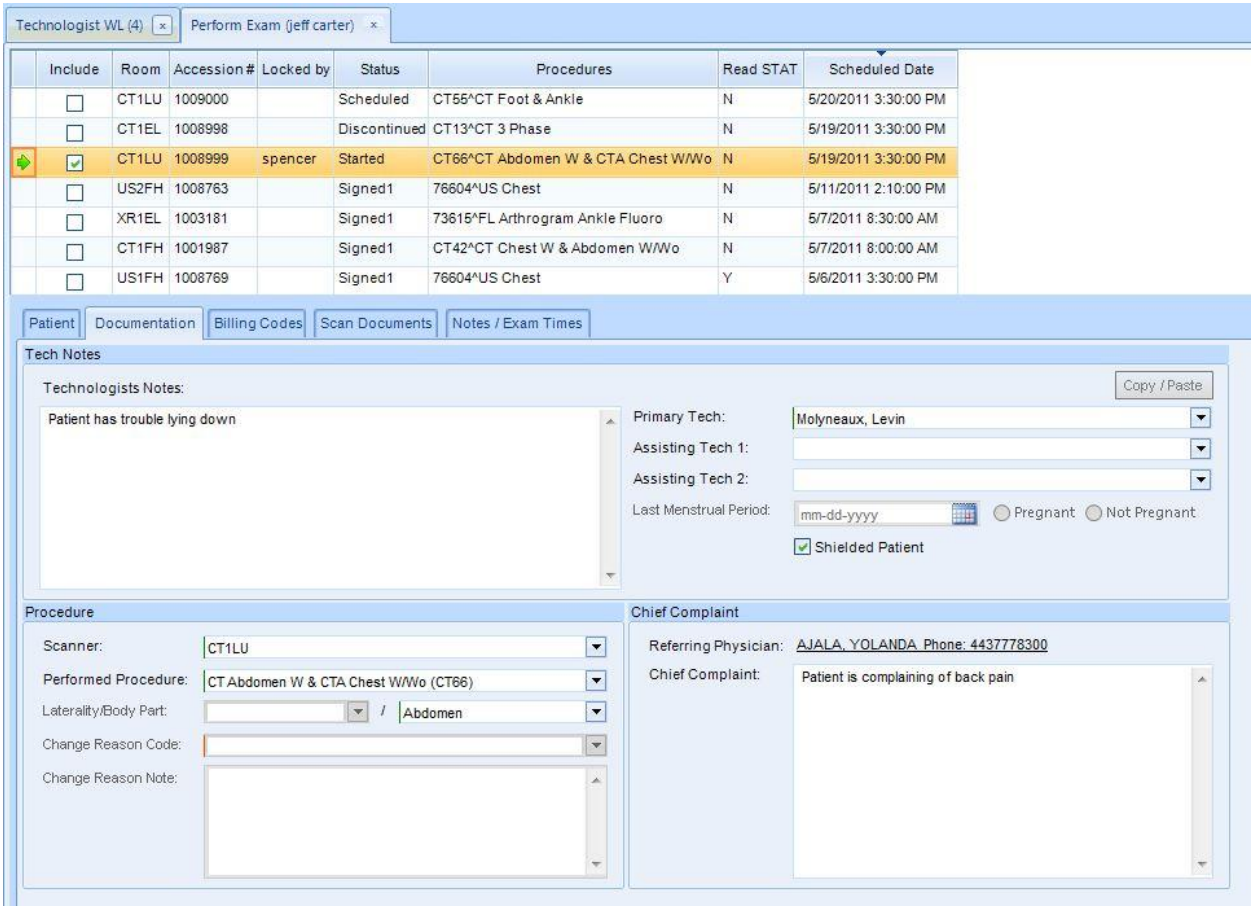

**Figure 4.22 – Technologist Perform Exam Screen – Documentation Tab**

**The Technologist Notes** text box is a simple mapping to a tech notes field that allows the technologist to enter notes.

The **Primary Tech**, assisting tech 1, and assisting tech 2 are study level attributes. They are filtered to include all Techs in the Practice in which the study was scheduled. The Primary Tech field is mandatory if the status is Started.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**Last Menstrual Period** – this field is disabled if the gender is "Male". There is a configuration value that indicates which gender represents Male.

**Pregnancy** – these are represented as radiobuttons so the application can force the tech to answer the question before advancing the study to started.

**Shielded Patient** – a yes/no flag that indicates whether the tech shielded the patient. This is not a required field.

**Scanner** – defaults to the scheduled modality. The list is filtered to all modalities of a particular type for a particular site. E.g. if the study is scheduled on a CT in the Summerside clinic, the tech cannot choose either an MRI in Summerside or a CT in Charlottetown. Scanner is a required field.

**Performed Procedure** – defaults to the scheduled procedure. The list is filtered to show only procedures that can be performed on the modality that was specified when the exam was scheduled. If the Performed Procedure changes, the change reason code dropdown box becomes enabled. This will also restart the Insurance Verification Process.

**Change Reason Code –** required, but only enabled if the procedure changes.

**Change Reason Note –** freeform text that only becomes enabled if the procedure changes.

**Referring Physician (hyperlink) –** show the name and phone number of the referring physician for the current order. The link performs a personnel search so that the user sees more contact detail for the physician

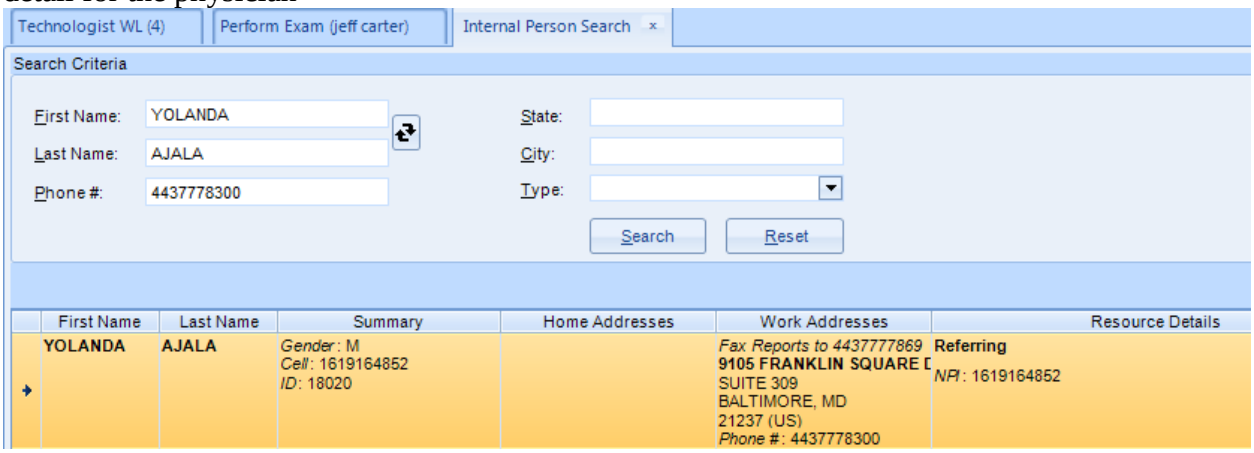

**Figure 4.23 – Referring Physician Search**

**Chief Complaint –** this is mapped to Order Indication.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

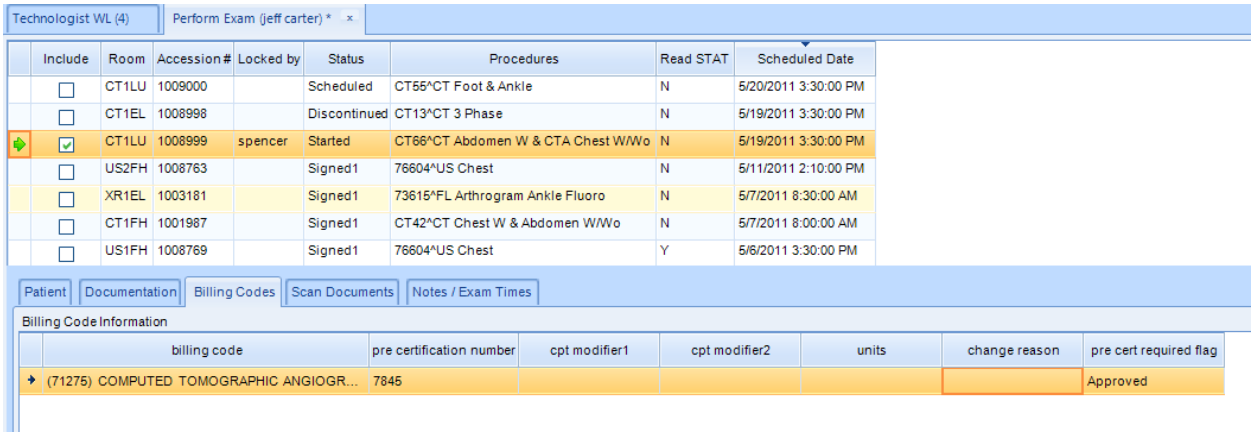

**Figure 4.24 – Technologist Perform Exam Screen – Billing Codes Tab**

This grid will show all active billing/CPT codes for the studies that the tech is currently documenting. In the event that the tech is working on two studies at once, CPT codes from both will be displayed – the tech does not need to switch rows on the patient history grid to see the different bill codes.

**Billing Code** – billing codes relate to procedures, the tech screen does not directly add new rows to this grid, but does call out to other IVT code libraries when the procedure changes.

**Precert #/ precert required flag.** – Shows the pre-cert status of the study.

**CPT Modifiers** – Factors that could affect the cost of the procedure (extra surgeons required, etc).

**Units –** the number of units of contrast used.

**Change reason** – a hard coded list that explains the reason for the CPT modifiers. This will be lookup table driven later.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

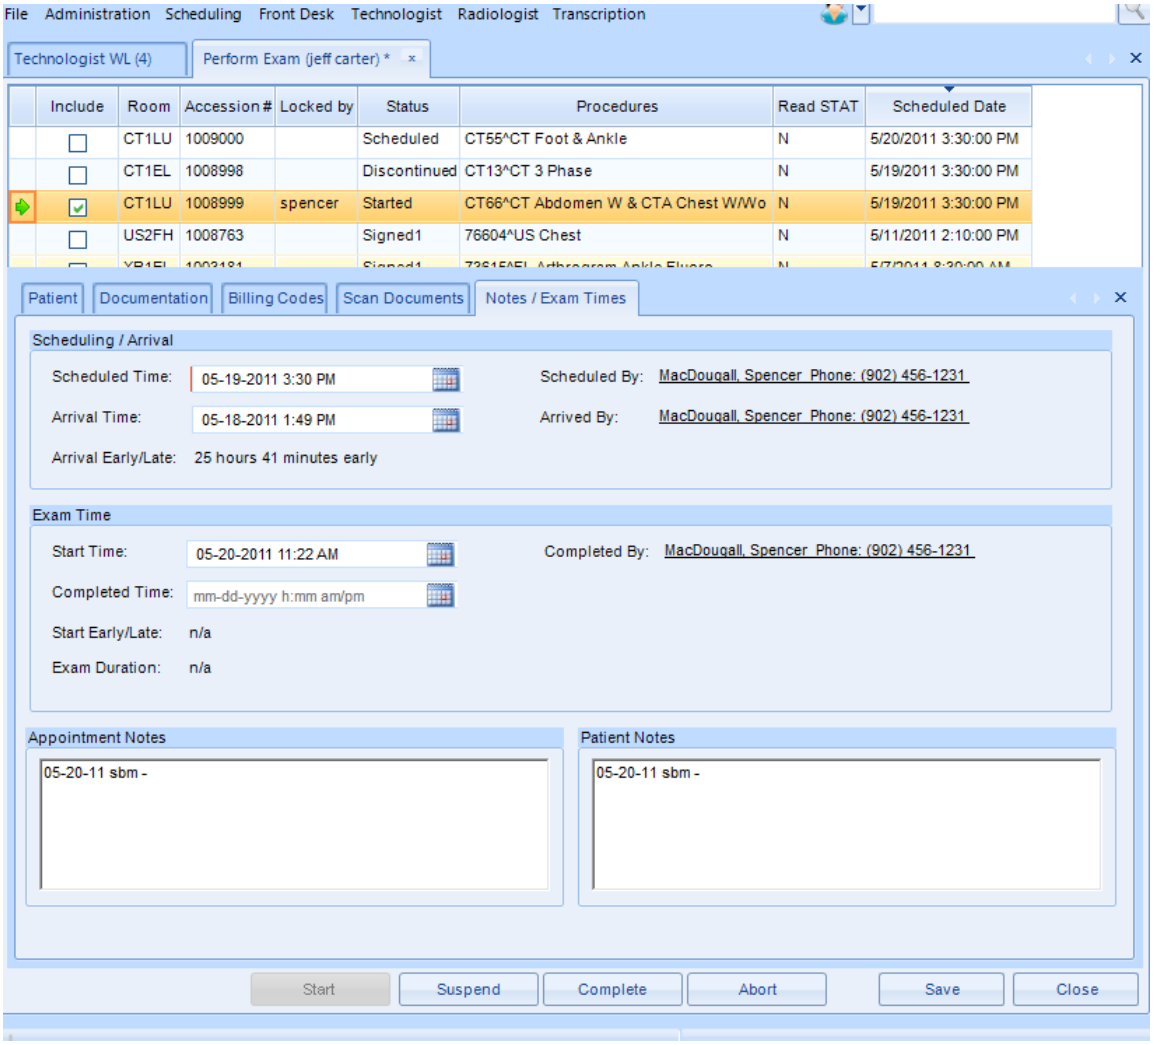

**Figure 4.25 – Technologist Perform Exam Screen – Notes/Exam Times Tab**

This tab shows the Scheduled Time, Arrival Time, Start Time and completed time for the study. It also shows a hyperlink for the user that scheduled, arrived, or performed the exam (the behaviour matches the behaviour for the referring physician hyperlink). There are some calculated fields that show whether the patient arrived early or late, whether the exam was started early or late, and whether the exam duration was greater than or less than the duration indicated for that procedure. The appointment notes and patient notes are mapped to notes columns at the visit and patient level respectively.

The status buttons available to the tech at the bottom of the screen are conditionally enabled based on the current status of the study. For example, the tech cannot Start an exam after it has already been set to Discontinued.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Known Limitations

Bugs, Suggested Features, and Support Issues are now tracked in a web based system called Redmine. The following is a snapshot of the issues found in Build 1.13 and 1.14. A number of issues had been found and immediately resolved as part of the clean-up process in preparation for the demos during the week of May 9th.

| # | Status | Subject | Category | Found | %Done | Resolved |
|---|---|---|---|---|---|---|
| 368 | New | Tech - Patient History should be scrollable | Thick Client GUI | 1.14 | 0 | |
| 367 | New | Scan Document - Form does not cascade properly | Thick Client GUI | 1.14 | 0 | |
| 366 | New | Scan Document - Missing scroll bar on patient history grid | Thick Client GUI | 1.14 | 0 | |
| 365 | New | ProcedureCode - Procedure group code should be a required field | Admin Tools | 1.14 | 0 | |
| 364 | New | Insurance - Prompted for Claim Number when not using carrier | Thick Client GUI | 1.14 | 0 | |
| 363 | Resolved | Order DW - Patient Height | Thick Client GUI | 1.13 | 100 | 1.15 |
| 362 | Resolved | When cancelling a study it does not free up the booked time in the booking summary | Web Services/DB | 1.13 | 100 | 1.15 |
| 361 | In Progress | changing a scheduled procedure causes multiple rows in c_study_item and the gui and service does not know which code is active | Web Services/DB | 1.13 | 0 | |
| 357 | Resolved | Lookup table filters with dropdown datatype don't work | | 1.13 | 100 | 1.14 |
| 356 | Closed | Edit Order - Same user can Edit and Schedule the same order causing exception | Thick Client GUI | 1.13 | 0 | |
| 355 | Resolved | Edit Order - Does not retrieve or save CC Physicians | Thick Client GUI | 1.13 | 100 | 1.14 |
| 354 | New | Context Menus ignore access strings | Thick Client GUI | 1.13 | 0 | |
| 353 | New | Labels and Forms - System does not check to see if parameter is available | Thick Client GUI | 1.13 | 0 | |
| 352 | Resolved | Registration - User can Arrive patient again late in the workflow | Thick Client GUI | 1.13 | 100 | 1.14 |
| 351 | Resolved | Technologist Workflow - Scanner not displaying for Exam | Thick Client GUI | 1.13 | 100 | 1.14 |
| 350 | Resolved | Scan Error - Move to Patient Level | Thick Client GUI | 1.13 | 100 | 1.14 |
| 349 | Resolved | Scanning - Technologist WL | Thick Client GUI | 1.13 | 100 | 1.14 |
| 348 | Resolved | Scanning - Click Patient Folder Error | Thick Client GUI | 1.13 | 100 | 1.14 |
| 347 | Resolved | Scheduling - ReadOnly Notes strategy | Thick Client GUI | 1.13 | 100 | 1.14 |
| 346 | Resolved | Roles should not display if there are no child items | Thick Client GUI | 1.13 | 100 | 1.14 |
| 345 | Resolved | Exam Done WL - Export to Excel | Thick Client GUI | 1.13 | 100 | 1.14 |
| 344 | Resolved | Order - CC Physicians show key values on refresh | Thick Client GUI | 1.13 | 100 | 1.14 |

# 1. Purpose

This document describes some of the new features and changes implemented in rRIS as of the end of Sprint 15. This pre-release version of rRIS is referred to as Build 1.15.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the rRIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation instructions for the rRIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu, click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.15 is considered a new core release of the application and will require a reinstallation of rRIS. This is accomplished by navigating to the rRIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application, please do not hesitate to contact Spencer MacDougall with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Enhancements to Audit Log

The rRIS Audit History has been enhanced to show a before and after version of modified columns. In the example below, a correction was made to the name of a patient. The patient was listed in the system as Tommy Smith but his name is actually Timmy Smith. The Audit Trail now shows that first_name was changed to "Timmy" from "Tommy" as well as the date and user that performed the modification.

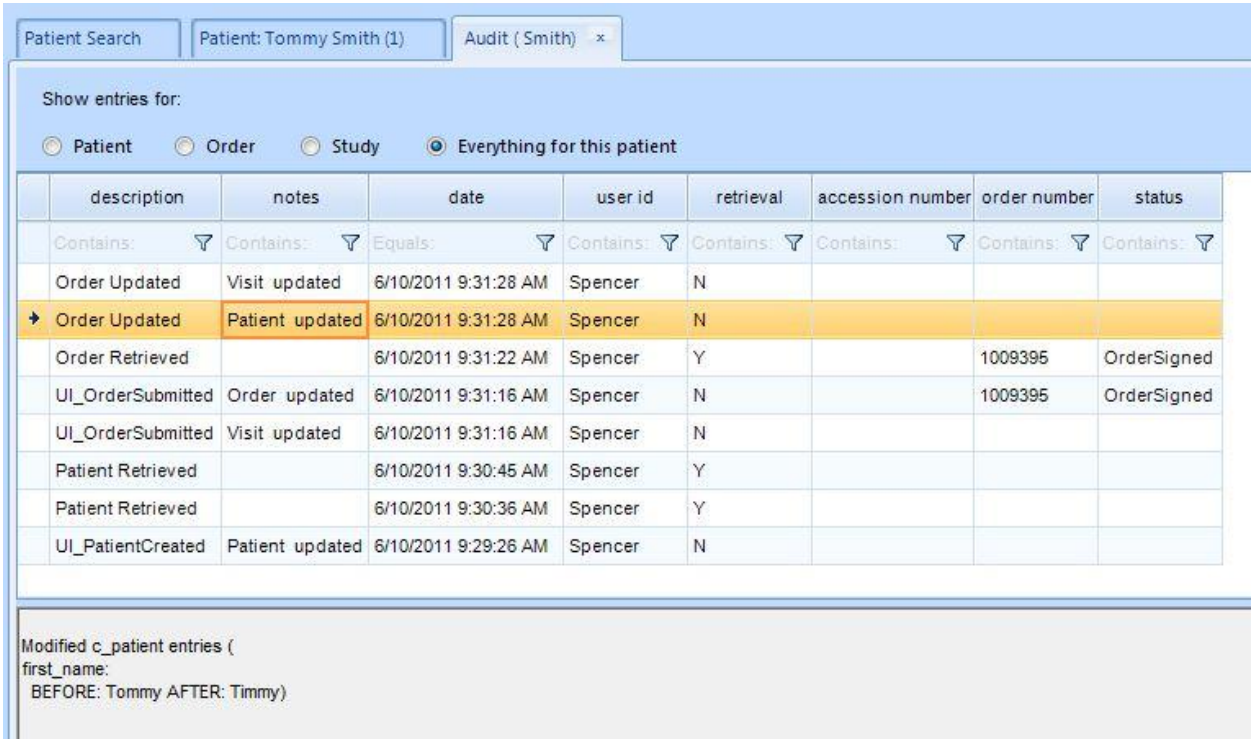

**Figure 4.1 – Audit History showing Before and After Changes**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Insurance Verification at the Practice Level

Whether or not Insurance Verification is required is now determined by the combination of Modality Type and Practice. This had been set at the Insurance Carrier level but has been adjusted after feedback. The configuration screen below illustrates that both CT and US procedure types require insurance to be verified at the Advanced Radiology practice.

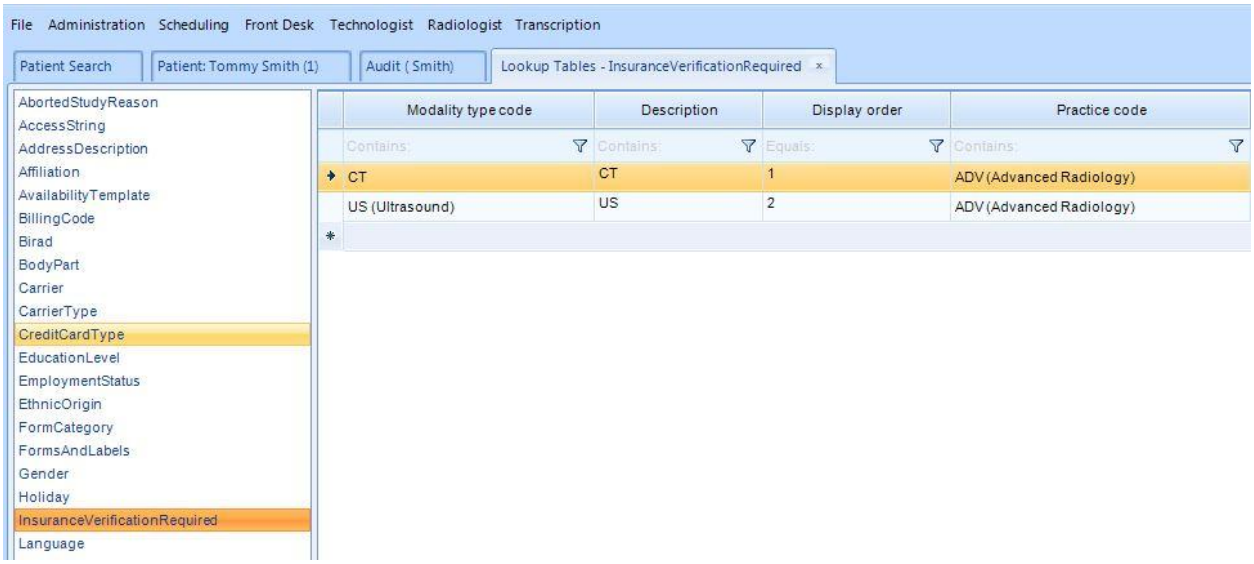

**Figure 4.2 – Insurance Verification set at Practice and Modality Type**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Prep Notes Available on the Schedule Screen

A "Review" tab has been added to the Schedule screen. This will display one or more prep instructions to the scheduler that can easily be communicated to the patient. In the example below, the patient is scheduled for both a CT and XR procedure. As a result, the Review tab displays both sets of prep instructions.

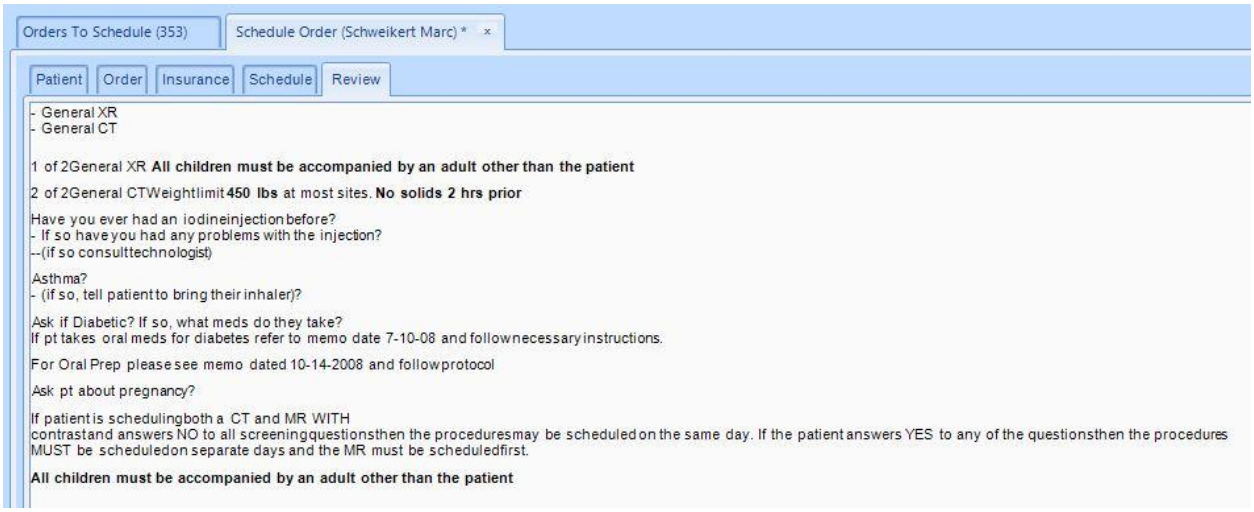

**Figure 4.3 – Multiple Prep Instructions available on the Schedule Screen**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Ability to Add/Edit Procedures from the Registration Screen

The front desk now has the ability to add or modify scheduled procedures without having to navigate to the Edit Schedule screen. This functionality has been added to the Registration screen. In the following example, the patient has arrived for a CT Chest but has an additional order request for an XR as well. The registration user can add the XR Chest to the same visit/encounter and select a scanner and timeslot.

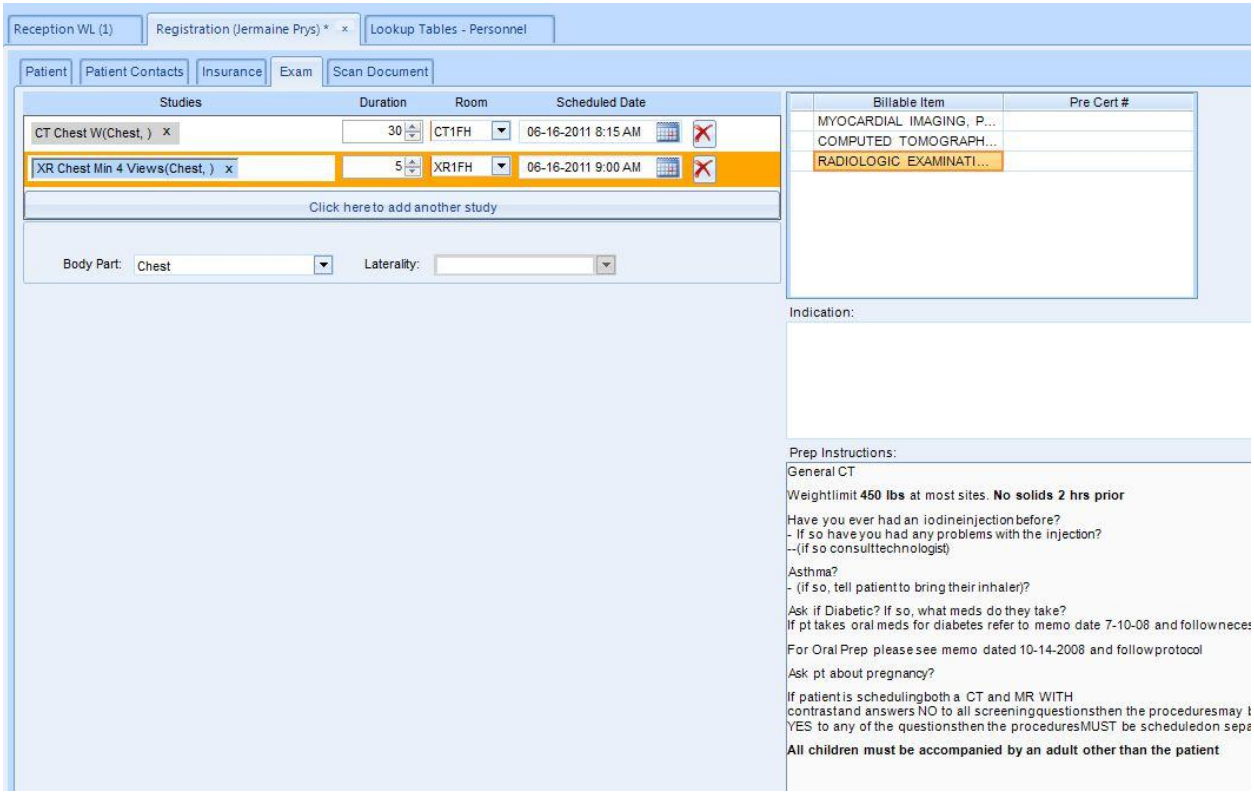

**Figure 4.4 – Adding an additional scheduled procedure from the Registration Screen**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Appointment Details on Schedule Calendar

When scheduling, the calendar view has been enhanced to show additional study information. By clicking on the "Show Details" checkbox the patient name, procedure code, study status, and scheduled time will appear in the study's timeslot.

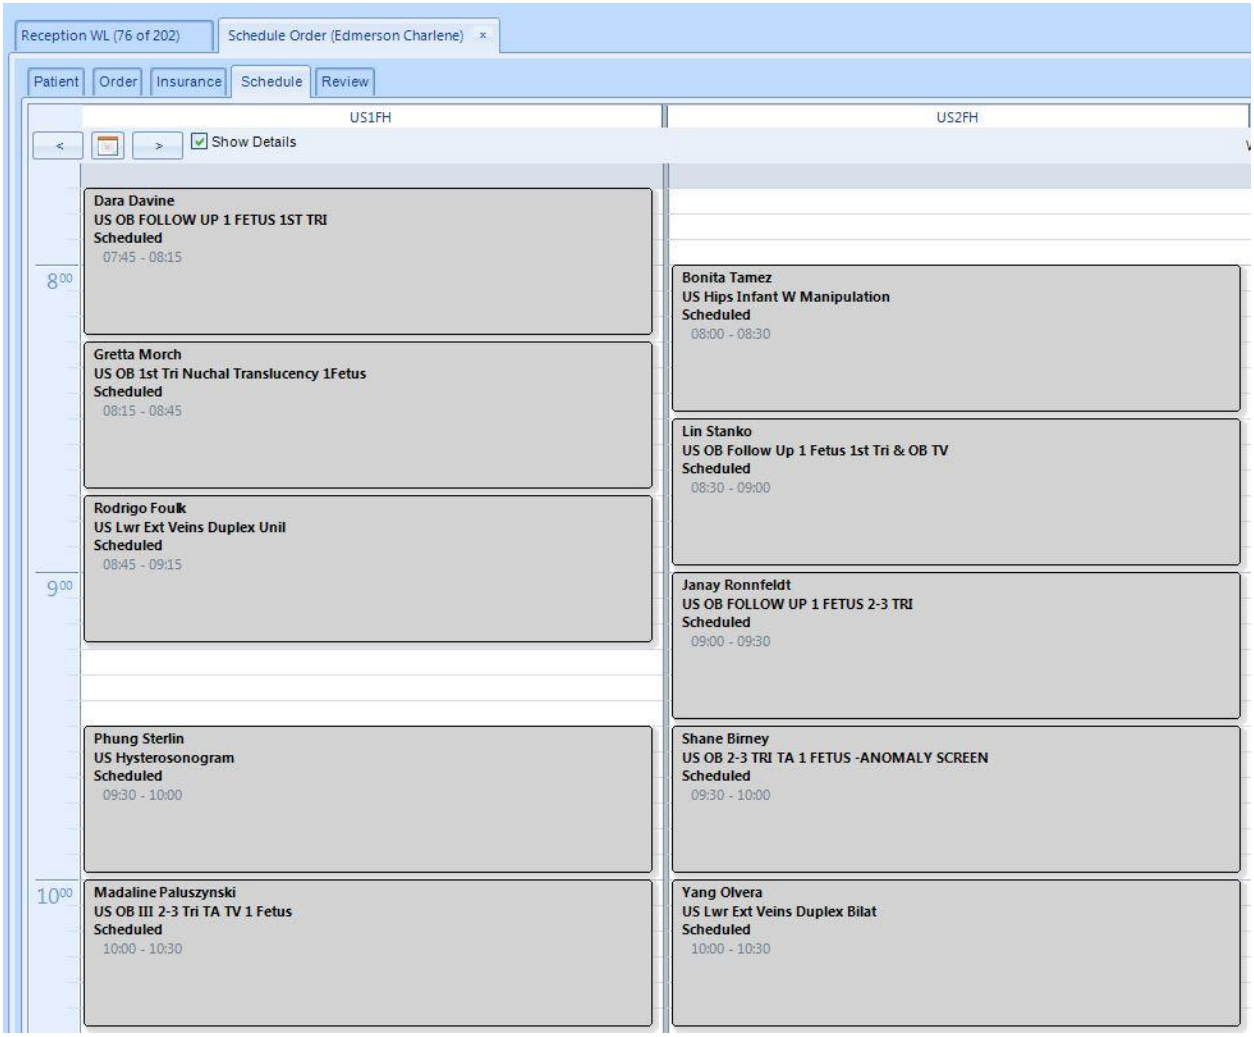

**Figure 4.5 – Calendar View showing Appointment Details**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Enhancements to Label and Form Printing

The application has been modified to allow front desk users to print all associated forms simultaneously instead of one at a time. In the example below, the user is arriving (changing to arrived status) a patient for an US Thyroid procedure. The system is configured to generate an exam form, history sheet, and worksheet on patient arrival. Therefore once the patient is marked as arrived, the user is prompted to print or preview one or more of the mapped forms.

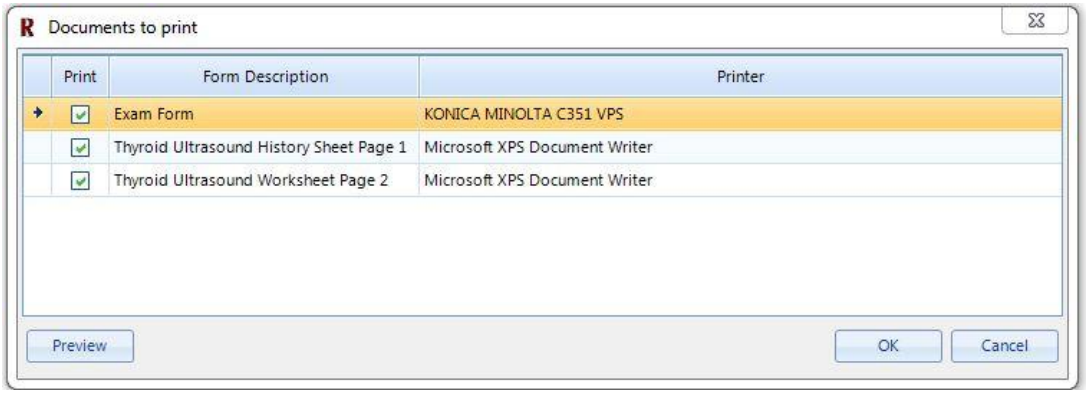

**Figure 4.6 – Popup with Mapped Forms to be Printed**

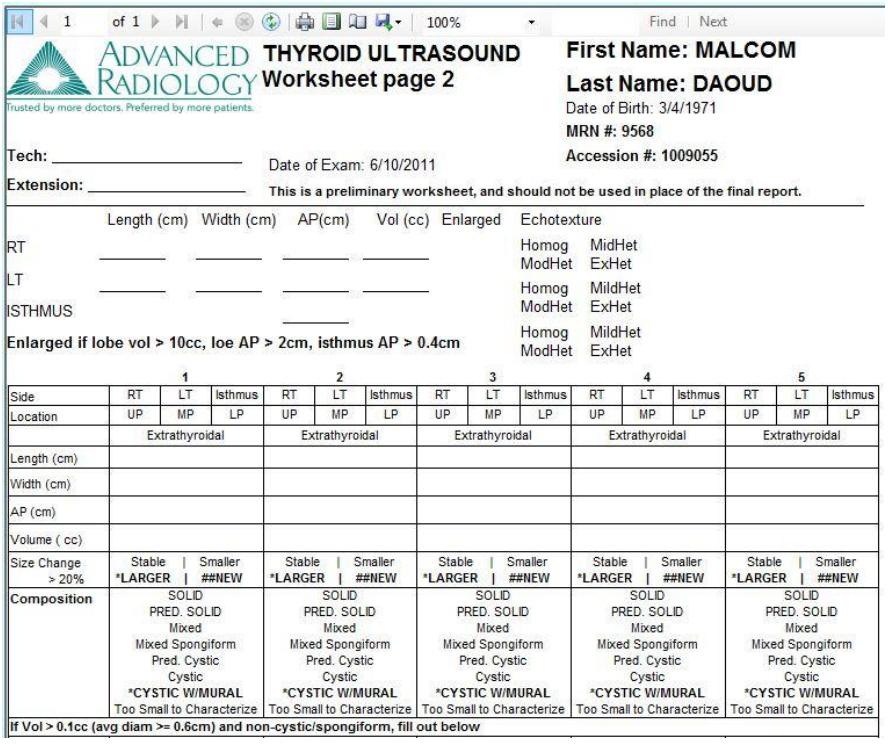

**Figure 4.7 – Example of a Thyroid Worksheet**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

The printer can be different for each form listed in the grid. The application will default to the default printer for the workstation, and if the user chooses a different printer for a particular form, rRIS will persist that preference to the workstation's disk cache and use that as the default printer for that form in the future.

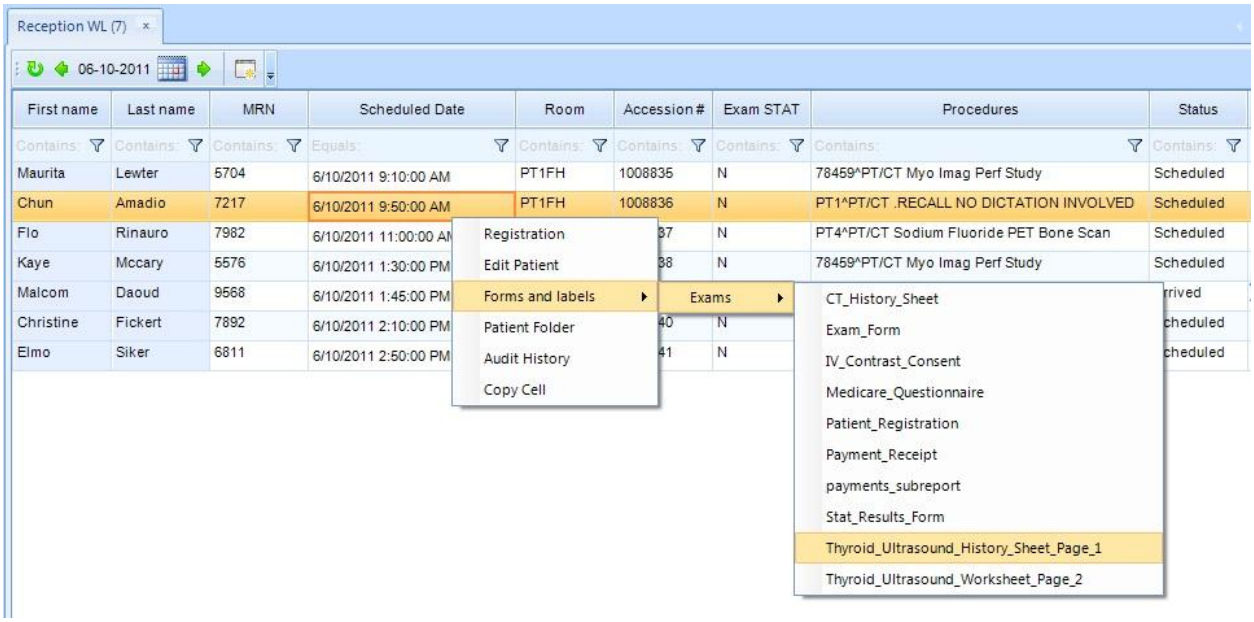

**Figure 4.8 – Print Forms directly from the Worklist**

If the user chooses to print a form directly from the worklist, they will be presented with a similar dialog box.

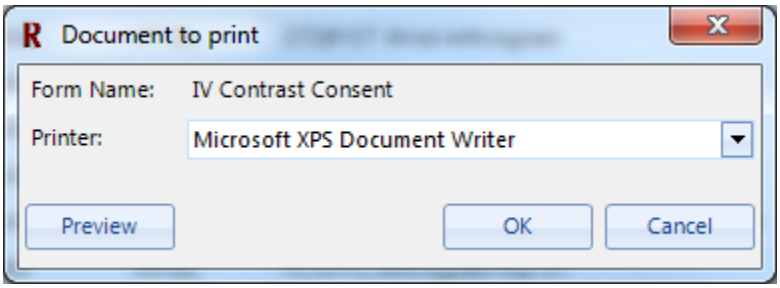

**Figure 4.9 – Popup to specify Form Printer**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## "Checking-In" Status

An additional status is required between Scheduled and Arrived. Checking-In was added to allow the registration user to mark a patient as checking-in while he or she is filling in the required paperwork. Once all documentation has been completed, the registration user can mark the patient as arrived so the technologist will know to come and receive the patient. The Checking-In status will also be used for Management Reporting to determine wait room turnover.

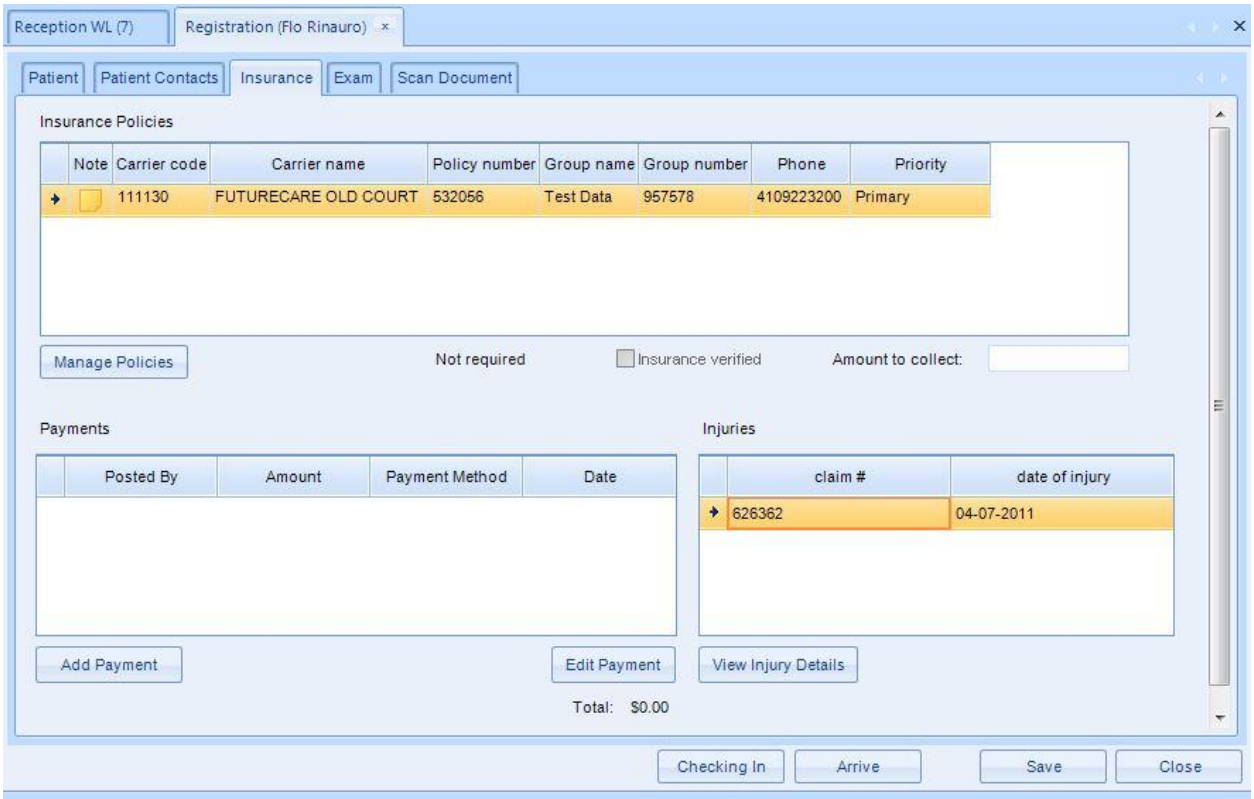

**Figure 4.10 – Registration Screen with Checking In Button**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Receipt Printing

Build 1.15 allows registration users to print receipts and void payments. The system will detect if a payment has been made and prompt the user to print or preview the receipt.

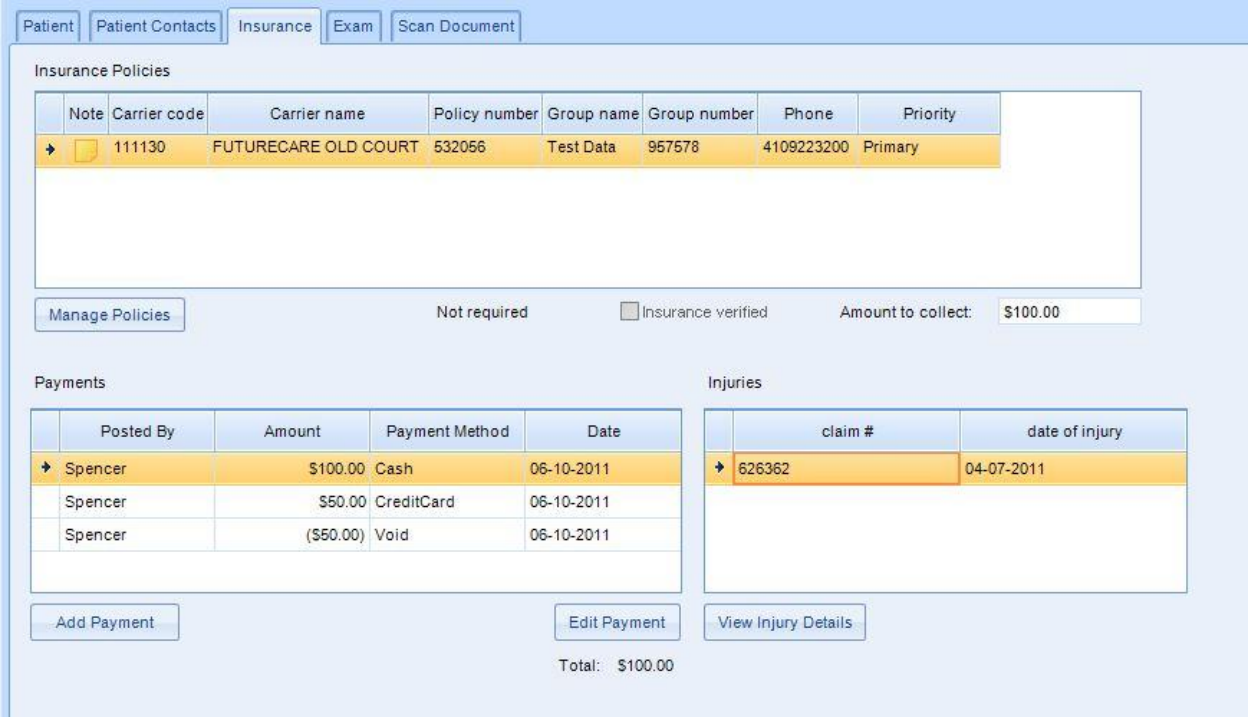

**Figure 4.11 – Registration Screen with Multiple Payment Entries**

In the example above, the patient has paid a $100 co-pay amount. Two payments have been recorded, but the $50 credit card payment has been voided. Once the form is saved and the patient is arrived, the user is prompted to print the receipt.

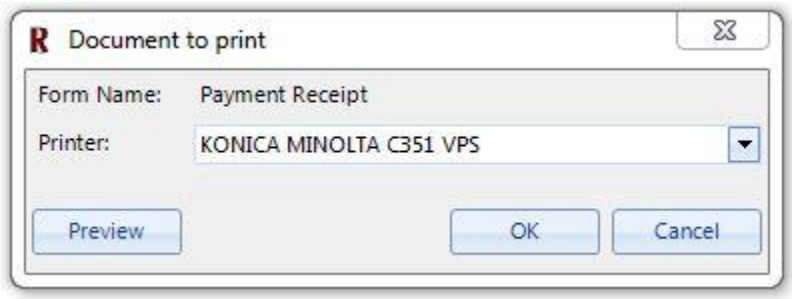

**Figure 4.12 – Popup Prompting User to Print Receipt**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

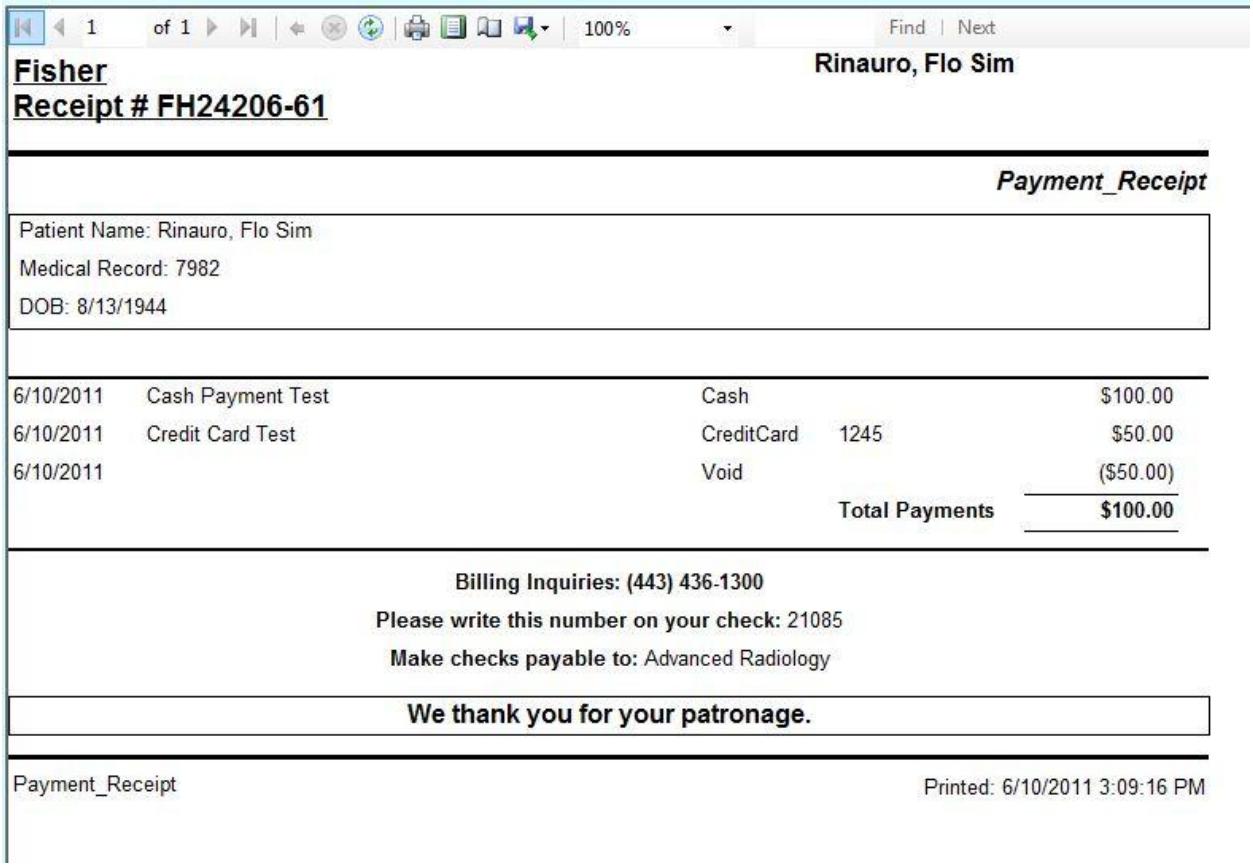

**Figure 4.13 – Example of a Receipt Preview**

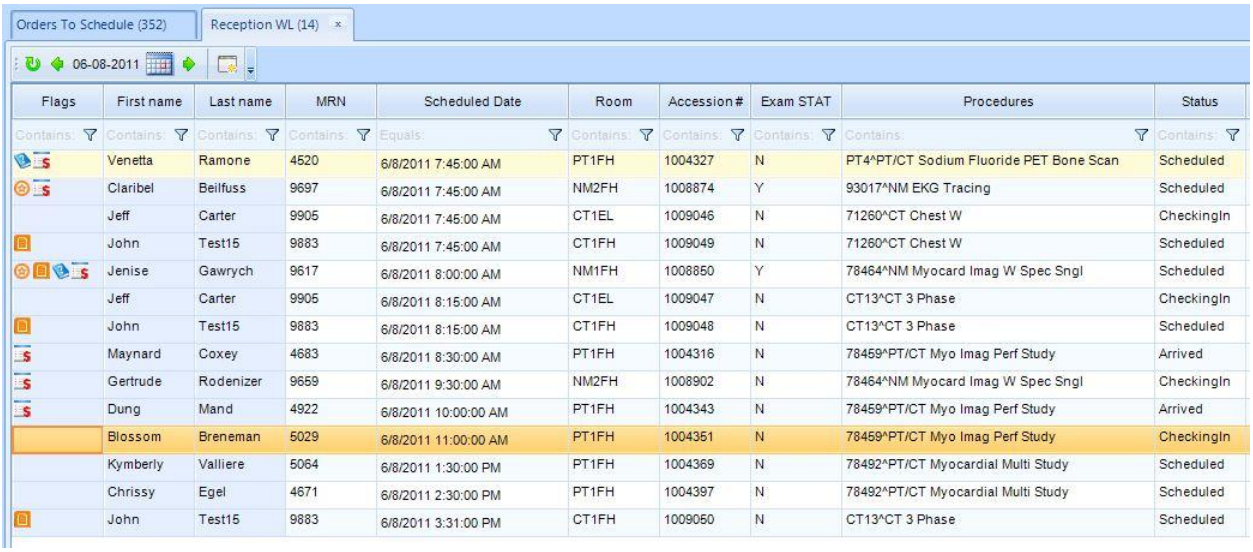
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Flags Framework

A Flags column has been added to the worklist framework for Build 1.15. Flags are a quick visual indication of relevant data. Four flags have been added to the system:

1. IVT Required
2. Stat Exam
3. Stat Read
4. Special Accommodations

So basically if an order is marked as Stat, the row in the worklist will show the Stat Exam flag. Since flags are sortable and filterable, the user could easily sort his or her worklist so that all Stat cases are at the top. The user could also create a filtered worklist based on a flag. If the user's function was to verify insurance, he or she could filter the worklist to only show studies where the IVT Required flag is enabled.



| Flags | First name | Last name | MRN | Scheduled Date | Room | Accession # | Exam STAT | Procedures | Status |

**Figure 4.14 – Reception Worklist Filtered to only show IVT Required Flag**

## Storing Time Zone at the Practice Level

One instance of rRIS is required to span across more than one time zone. Because of this, many dates like order date and schedule date are stored in the database in UTC (Coordinated Universal Time) format with an offset in hours. This can allow a group of schedulers or transcriptionists to work in the system from another time zone without having to adjust their local computer's time zone to match the server's.

When setting up Practices in rRIS, the user is now able to specify what time zone the practice exists in. This is how the offset to UTC is determined.

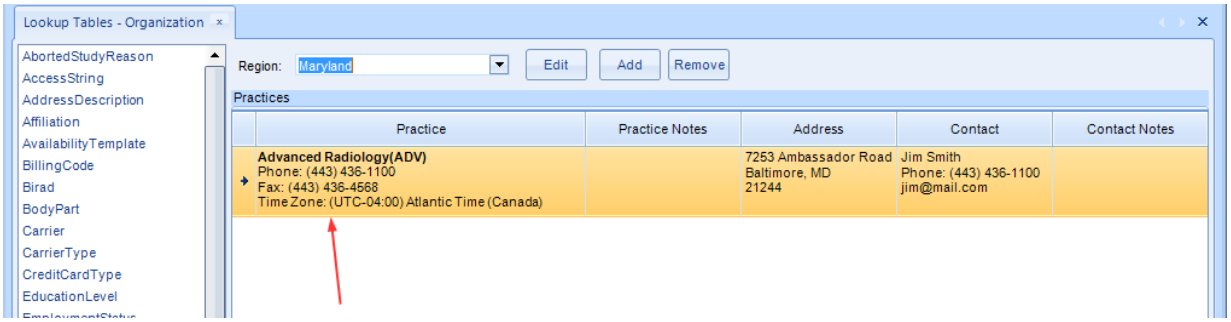

**Figure 4.15 – Organization Editor showing Time Zone of Practice**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

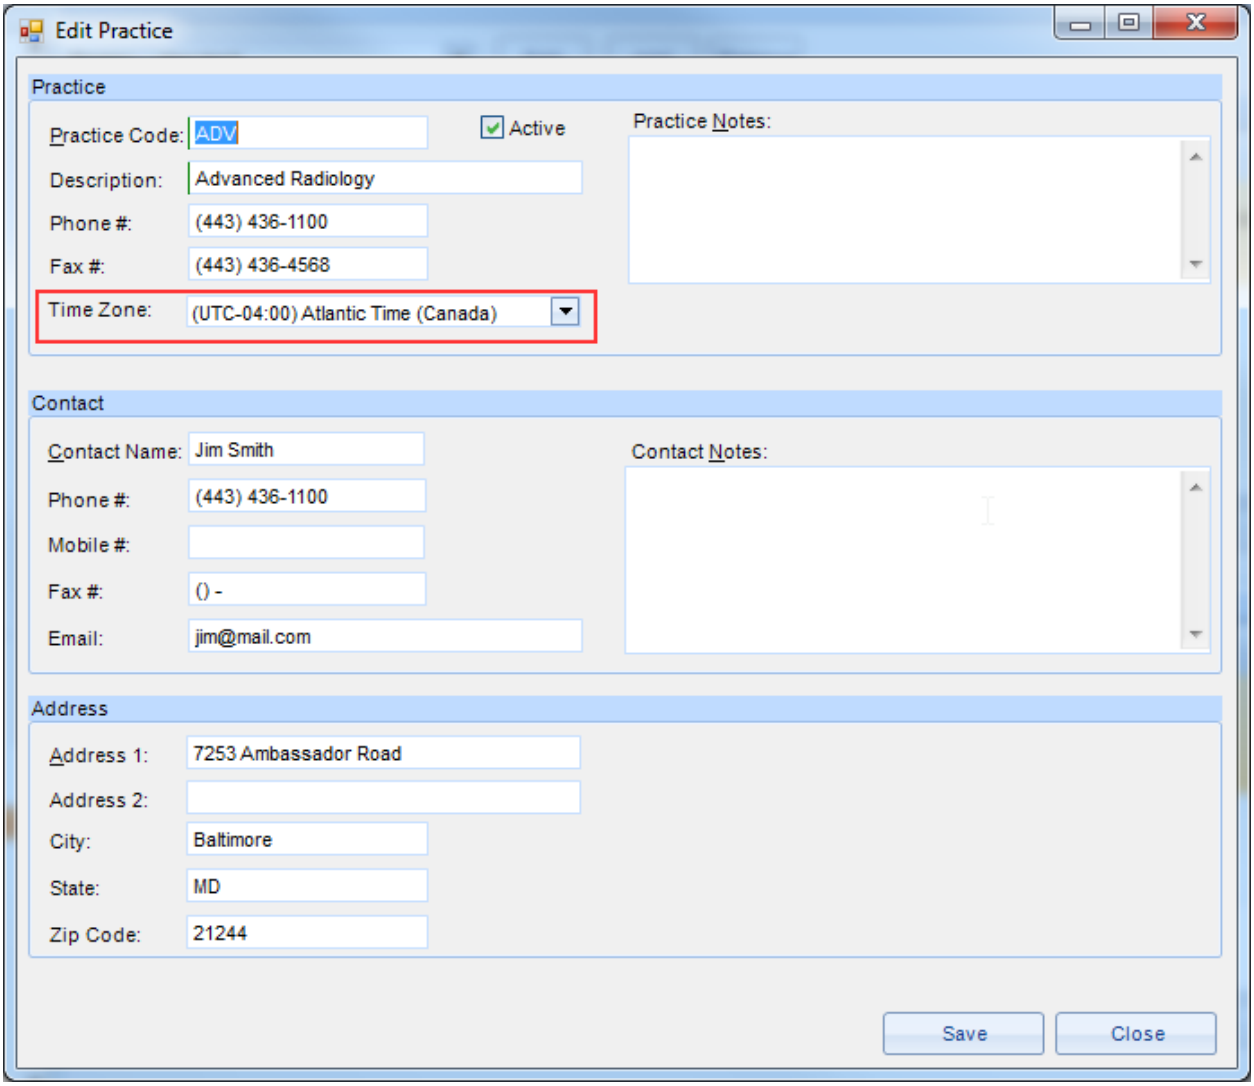

**Figure 4.16 – Specifying Time Zone at the Practice Level**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Known Limitations

Bugs, Suggested Features, and Support Issues are now tracked in a web based system called Redmine. The following is a snapshot of the issues found in Build 1.15.

| # | Status | Subject | Category | Found | %Done | Resolved |
|---|---|---|---|---|---|---|
| 416 | New | Flags - exception loading flags | Thick Client GUI | 1.15 | 0 | |
| 415 | Resolved | Edit Schedule - Remove study row exception | Thick Client GUI | 1.15 | 100 | 1.16 |
| 414 | New | Scheduling - Exception when removing and adding study row | Thick Client GUI | 1.15 | 0 | |
| 413 | New | Review Tab - Shouldn't show if it is null | Thick Client GUI | 1.15 | 0 | |
| 412 | New | Labels and Forms - Performance issues sending directly to printer | Thick Client GUI | 1.15 | 0 | |
| 411 | Resolved | Appointment Book - A few differences between calendar view and appointment book | Thick Client GUI | 1.15 | 100 | 1.16 |
| 410 | Resolved | Scheduling - Issue with changing procedure code | Thick Client GUI | 1.15 | 100 | 1.16 |
| 409 | New | IVT Worklist - status column is order status | Thick Client GUI | 1.15 | 0 | |
| 408 | New | Checking In - Missing time stamp in database | Thick Client GUI | 1.15 | 0 | |
| 406 | New | New Appointment - Unhandled WCF exception | Web Services/DB | 1.15 | 0 | |
| 405 | New | Registration - Issue removing policy from study | Thick Client GUI | 1.15 | 0 | |
| 404 | New | Insurance Verification Required - Exception with lookup table | Admin Tools | 1.15 | 0 | |
| 403 | Resolved | Locking - Cancelling a lock causes exception | Thick Client GUI | 1.15 | 100 | 1.16 |
| 402 | New | Registration Workflow - Locking Issues | Thick Client GUI | 1.15 | 0 | |
| 401 | New | Reception WL - No ability to change status | Thick Client GUI | 1.15 | 0 | |
| 400 | New | Checking In - Not consistent with Perform Exam screen | Thick Client GUI | 1.15 | 0 | |
| 399 | New | Audit History - Issue with tab name when opened from Patient History | Thick Client GUI | 1.15 | 0 | |
| 398 | New | Audit Log - rRISServices entries | Thick Client GUI | 1.15 | 0 | |
| 397 | New | Forms and Labels - Lookup missing splitter | Admin Tools | 1.15 | 0 | |
| 396 | New | Audit Log - System related updates should be excluded | Thick Client GUI | 1.15 | 0 | |
| 395 | Resolved | Registration - Exception adding blank study row | Thick Client GUI | 1.15 | 100 | 1.16 |
| 394 | Resolved | Login - Issue with Version name | Thick Client GUI | 1.15 | 100 | 1.16 |
| 393 | New | Login - System will not detect disconnected state | Thick Client GUI | 1.15 | 0 | |
| 392 | Resolved | Dropdowns - Still showing as required when completed | Thick Client GUI | 1.15 | 100 | 1.16 |
| 391 | New | Forms - Reverse Tab Order | Thick Client GUI | 1.15 | 0 | |
| 390 | Resolved | Lookup - InsuranceVerificationRequired does not check for duplicate entries | Admin Tools | 1.15 | 100 | 1.16 |

# 1. Purpose

This document describes some of the new features and changes implemented in rRIS as of the end of Sprint 16. This pre-release version of rRIS is referred to as Build 1.16.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the rRIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation instructions for the rRIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu, click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.16 is considered a new core release of the application and will require a reinstallation of rRIS. This is accomplished by navigating to the rRIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application, please do not hesitate to contact Spencer MacDougall with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Patient Search on Previous MRN, First Name, and Last Name

Build 1.16 supports the ability for a user to perform a search on the patient's previous MRN and/or name. For example, Jennifer Anthony (95079) has been merged into Jennifer Griffin (95576). Jennifer had been married and a new MRN had been improperly added for her and the merge had to take place. The user is still able to search for "Jennifer Anthony" or "95079" and Jennifer Griffin will be returned in the search results. The Previous MRN is also included in the search results.

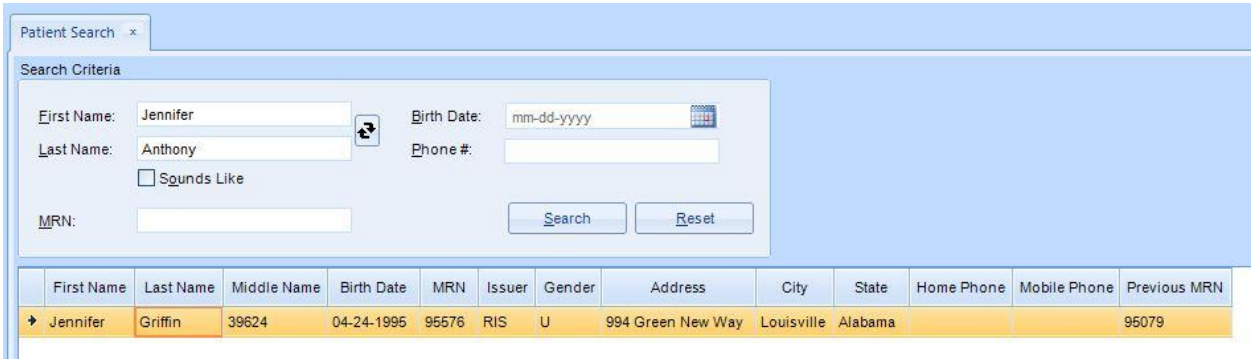

**Figure 4.1 – Patient Search on Previous Name**

## Patient Search on Phone Number

The application now supports the ability to search for a patient using phone number as search criteria. In a future release rRIS will support a partial phone number search (ex: the last 4 numbers) but currently the user will be required to enter all 10 digits.

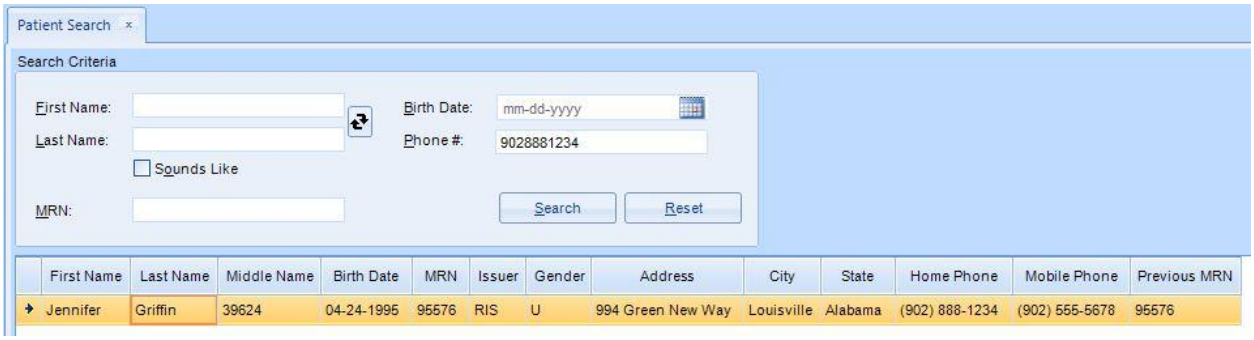

**Figure 4.2 – Patient Search on Phone Number**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Patient Name Prefix and Suffix

rRIS is required to support the storing of the patient's prefix and/or suffix. The patient tab has been updated with dropdowns for both prefix and suffix to accommodate this feature. Lookup tables have been added for both PatientPrefix and PatientSuffix, making the lists configurable.

**Figure 4.3 – Patient Tab showing Prefix and Suffix Dropdowns**

**Figure 4.4 – Patient Prefix Lookup**

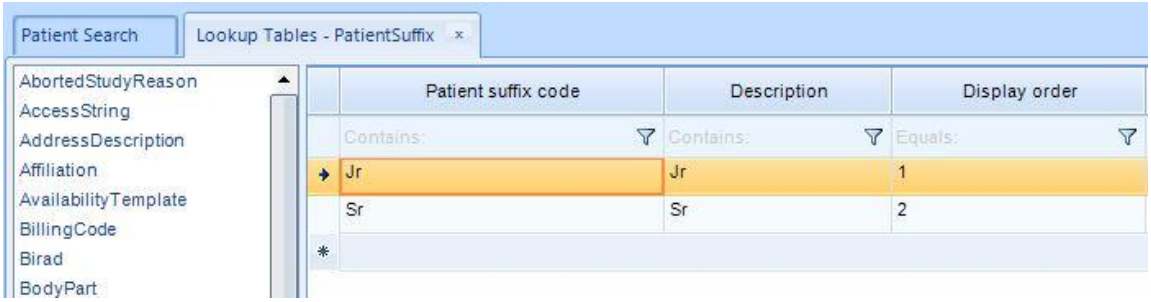

**Figure 4.5 – Patient Suffix Lookup**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Smoking Status

rRIS is required to meet all Meaningful Use Requirements. One requirement is tracking smoking status for 50% of patients that are thirteen years old and older. A Smoking Status lookup has been added to the system and will eventually be reflected on the Patient Tab via a dropdown selection. Storing this data will allow administrators to run the required statistics to meet Meaningful Use Certification criteria.

| Smoking status code | Display order | Description |
|---|---|---|
| Contains: | Equals: | Contains: |
| ED | 1 | Current Every Day Smoker |
| FS | 3 | Former Smoker |
| NS | 4 | Never Smoked |
| SD | 2 | Current Some Day Smoker |
| SM | 5 | Smoker |
| SU | 6 | Current Status Unknown |
| UN | 7 | Unknown if Ever Smoked |

**Figure 4.6 – SmokingStatus Lookup**

## Open Versus Closed Enclosure Modalities

When a patient is claustrophobic, it is important to distinguish between open modalities and closed modalities (confined space) when scheduling. rRIS now supports this with data flags at both the Modality and Visit level. When configuring rooms, the Confined Space Flag need to be set to "Y" to specify it as a closed modality.

Modalities:

| Modality code | Description | AE title | Dig... | Site code | Modality type code | Weight | Confined space flag |
|---|---|---|---|---|---|---|---|
| Contains: | Cont... | Contains: | C | Contains: | Contains: | Equ... | Contains: |
| MA2FH | MA2FH | MA2FH | N | FH (Fisher) | MA (Mammography) | | |
| MA2LU | MA2LU | MA2LU | N | LU (Lutherville) | MA (Mammography) | | Y |
| MA3FH | MA3FH | MA3FH | N | FH (Fisher) | MA (Mammography) | | |
| MR1EL | MR1EL | MR1EL | N | EL (Eldersburg) | MR (MRI) | | |
| MR1FH | MR1FH | MR1FH | N | FH (Fisher) | MR (MRI) | | Y |
| MR1LU | MR1LU | MR1LU | N | LU (Lutherville) | MR (MRI) | | Y |

**Figure 4.7 – Modality Configuration showing Confined Space Flag**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

There is now a Claustrophobic checkbox available on the Patient tab. When this is specified, the system will know to describe the rooms as open or closed modalities.

**Figure 4.8 – Patient Tab showing Claustrophobic Checkbox**

In the example below, the scheduling user is attempting to schedule a MR Chest for a Claustrophobic patient. The system will present three rooms as a scheduling solution, but two of the rooms will be listed as "Confined Space".

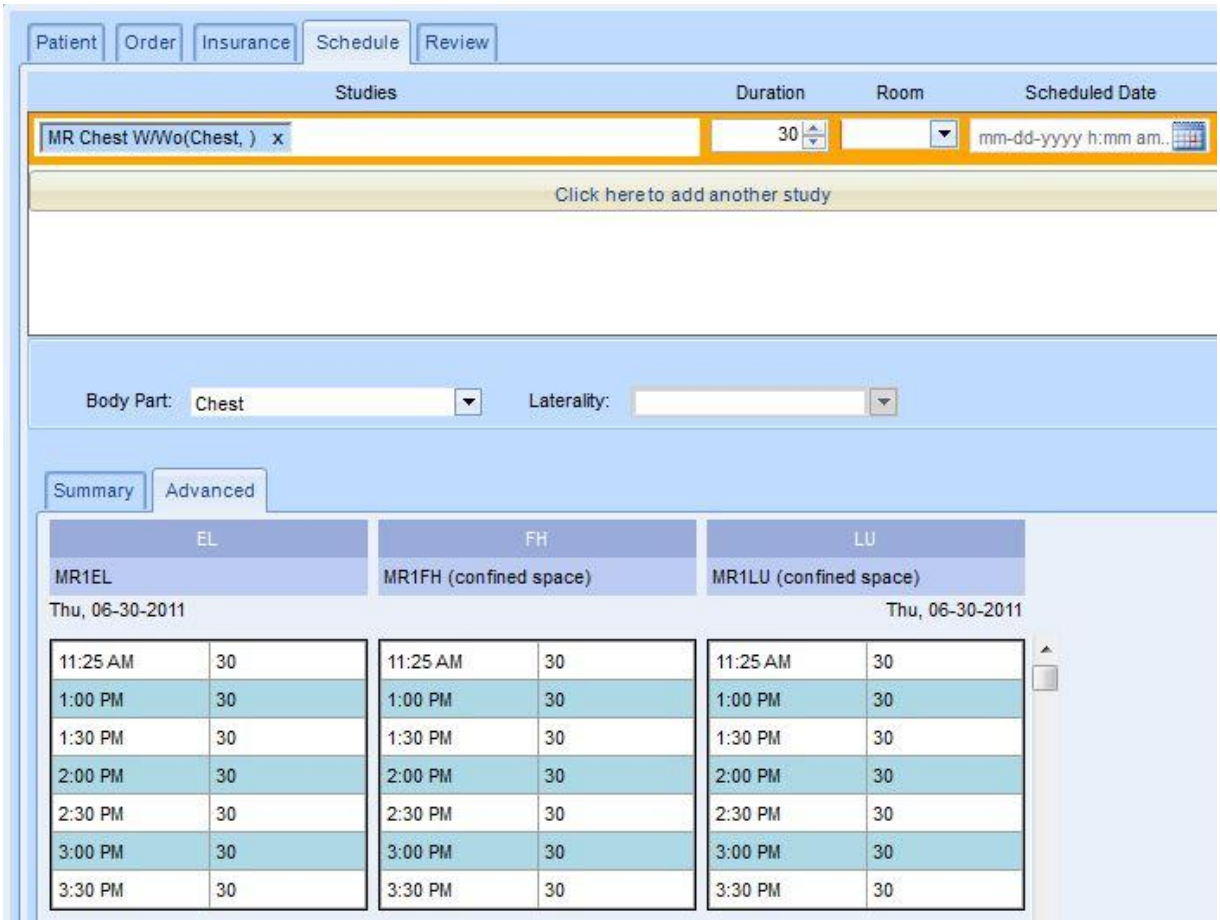

**Figure 4.9 – Scheduling Solution showing Rooms Flagged as Confined Space**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Additional Details on the Appointment Book

The Appointment Book has been enhanced to also show the referring physician with the patient name, procedure, status, and time.

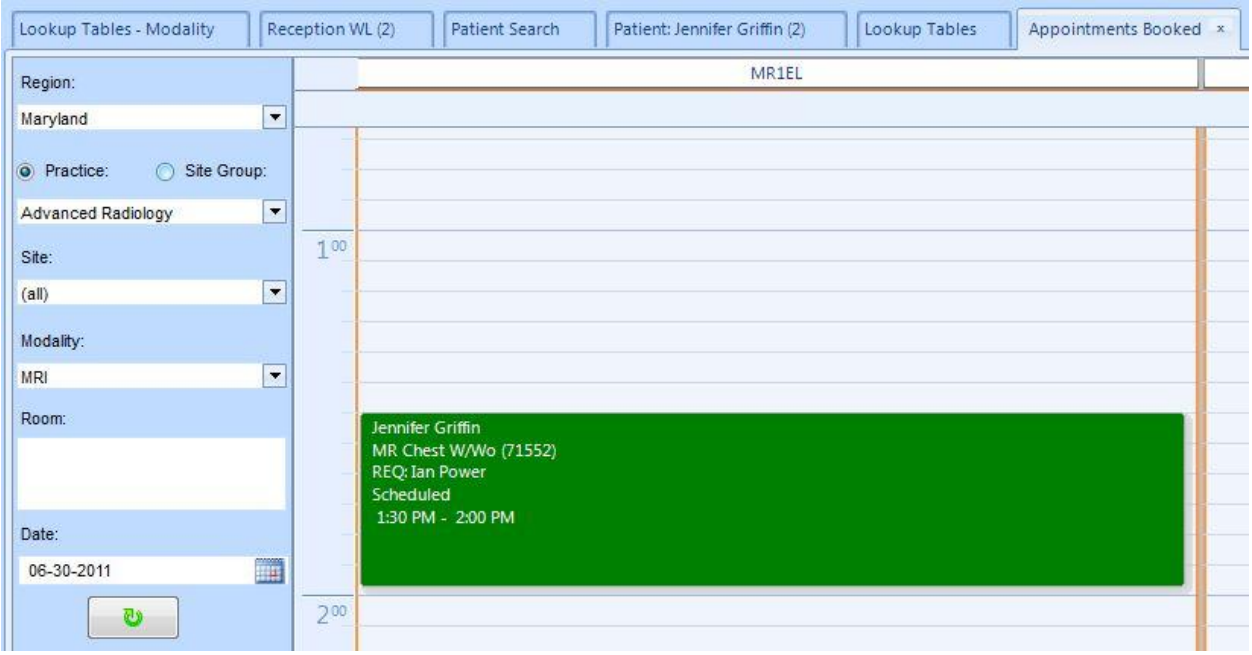

**Figure 4.10 – Appointment Book showing Referring Doctor in Appointment Details**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Study Suspended Flag

In the previous release when the technologist suspended a study, the study's status would change to Suspended. It has been determined that Suspended is better suited as a Flag and not a Status. In the example below, the technologist has Started the procedure and then Suspended it. The procedure remains in the Started status, with the Suspended flag enabled on the worklist. Once the technologist clicks the Resume button, the Suspended flag will be removed.

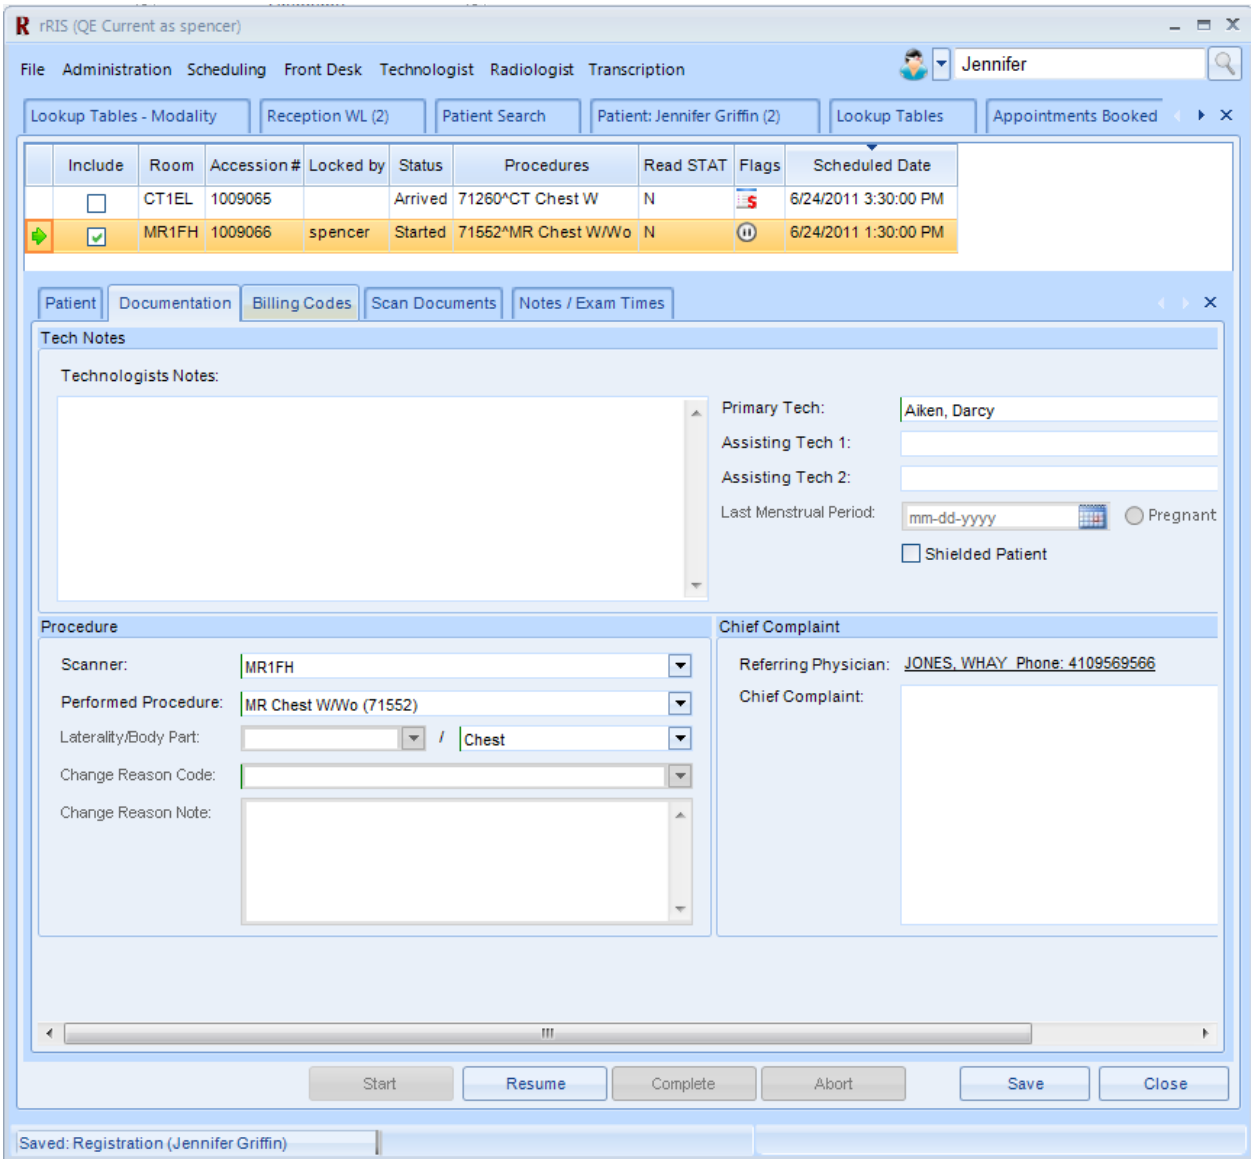

**Figure 4.11 – Study Started but Flagged as Suspended**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Enhanced Form Generation Criteria

Additional criteria were identified as requirements for Label and Form generation. Forms can now be associated with one or more of each of the following:

- Actions - Patient Arrived, Order Created, Study Completed, etc.
- Carrier(s) – The insurance carrier of the patient
- Carrier Type(s) – The type of insurance carrier such as Blue Cross, Tricare, etc.
- Modality Type(s) – The modality type of the scheduled procedure such as MR, CT, etc.
- Procedure(s) – The actual procedure code such as 76536 – US Thyroid
- Gender(s) - The gender of the patient

With the additional criteria stated above, rRIS can be configured to take much of the guess-work out of labels and forms and greatly reduce the chances of user error. This will also reduce the amount of wasted paper as only the required forms will be generated.

Consider the following test case. A Medicare Questionnaire should only be generated if:

- The patient is being checked in
- The carrier type is Medicare
- All modality types and procedure codes
- All genders

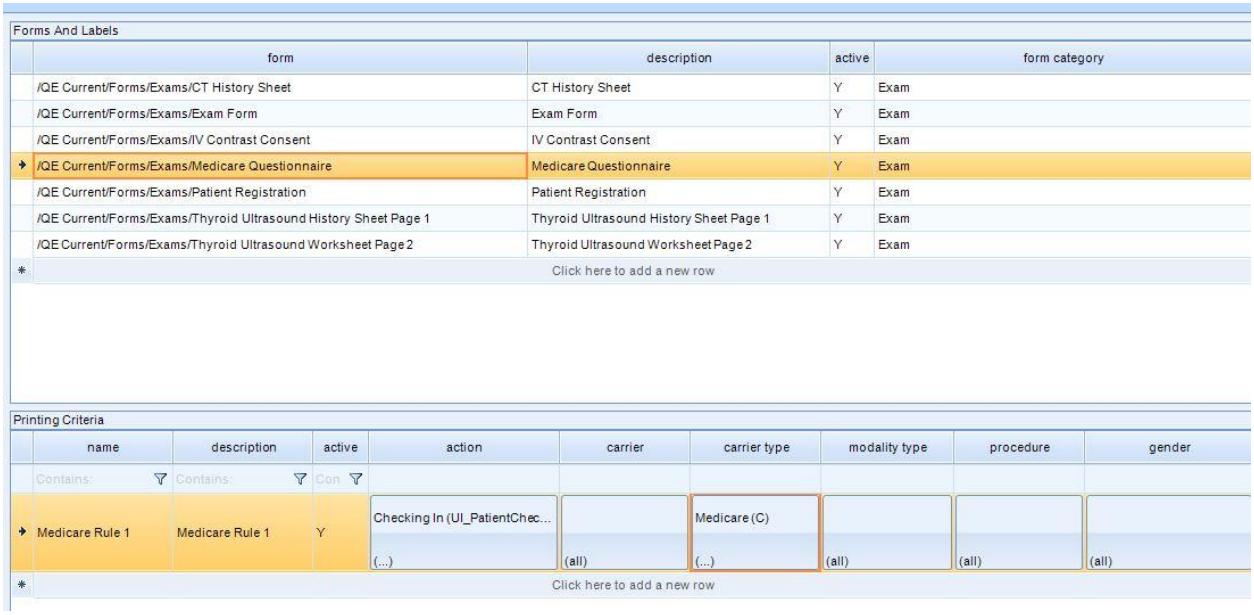

**Figure 4.12 – Configuring Rule to Generate Medicare Questionnaire**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

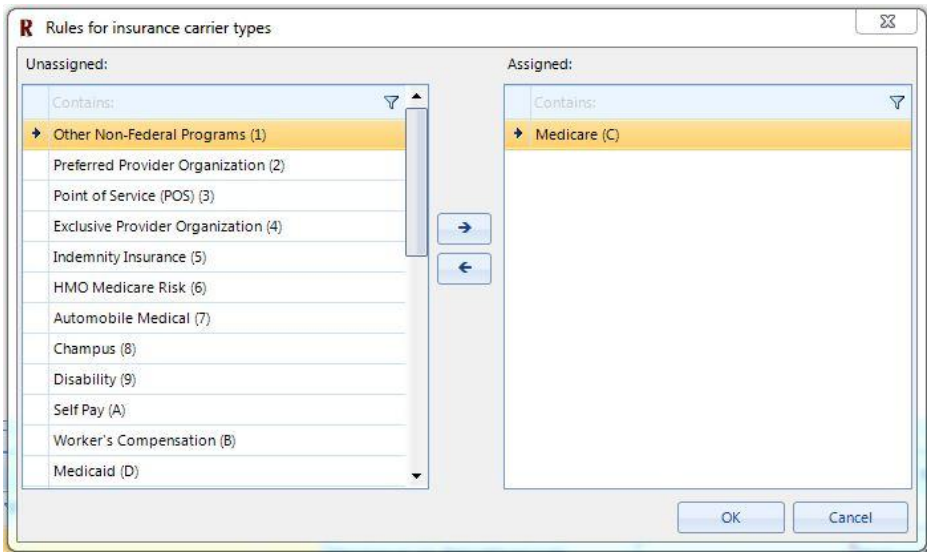

**Figure 4.13 – Assigning an Insurance Type to the Medicare Form Rule**

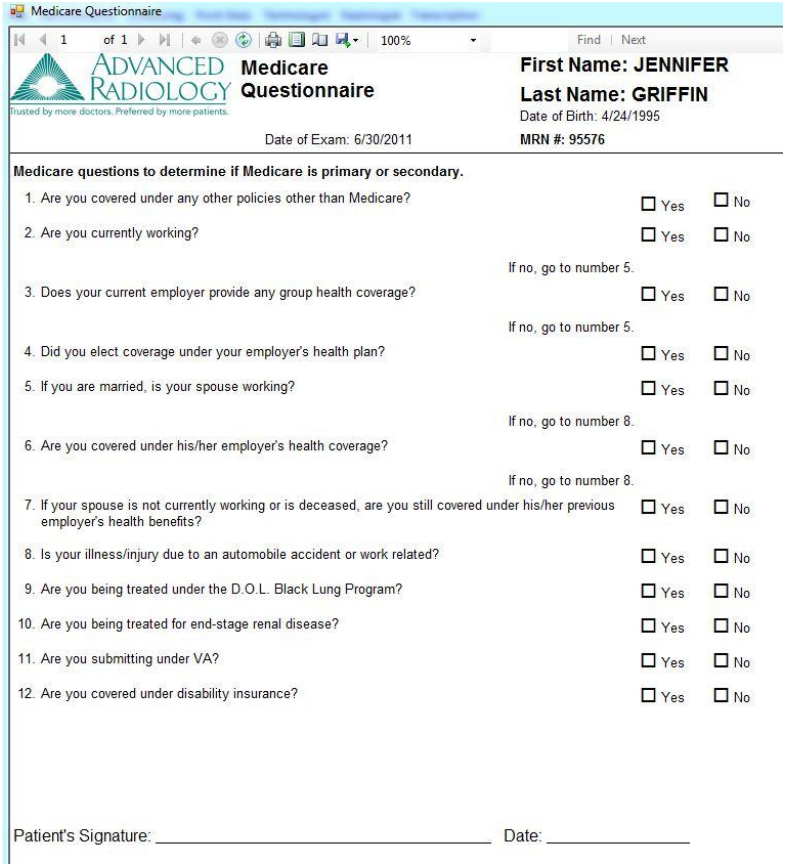

**Figure 4.14 – Medicare Questionnaire Automatically Generated**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Foot Pedal Support and Configuration

rRIS supports the use of foot pedals to playback and navigate dictations. It also allows the configuration of the foot pedals at a user level. For example, a transcription user may want Pedal 1 to be Fast Rewind, Pedal 2 to be Play, and Pedal 3 to be Fast Forward.

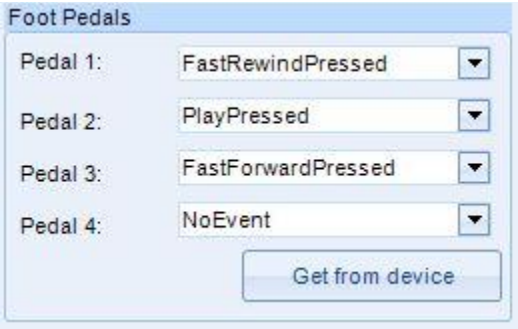

**Figure 4.15 – Foot Pedal User Configuration**

To help the ris administrator configure the foot pedals, the rRIS user preference screen will indicate which pedal is being pushed by highlighting the event in green.

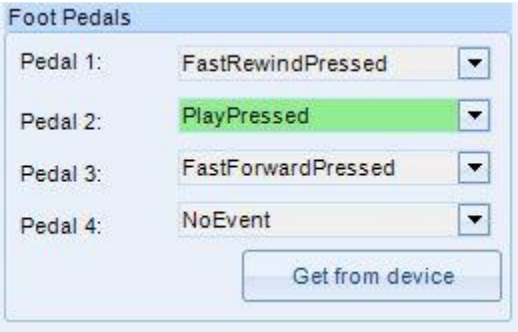

**Figure 4.16 – User Selecting Pedal 2**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## SpeechMike Configurable Buttons

Similar to foot pedals, rRIS also supports the configuration of the Philips SpeechMike buttons at a user level.

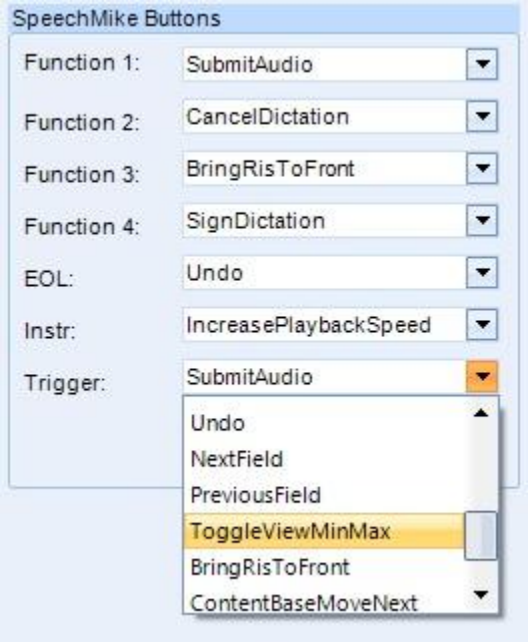

**Figure 4.17 – Sample SpeechMike Configuration**

## Optimizing Dictation Playback

When a radiologist is dictating sometimes they have long pauses between words which create "dead" space in the dictation. This dead space is useless and time consuming to the transcription user. rRIS has the ability to skip this dead space in the dictation during editing and playback for transcriptionists.

On the reporting control there is an Optimize Playback toggle button . When this button is enabled, rRIS will skip any dead space in the report/dictation. The button state is stored at the user level so the application will remember the setting when the next report is loaded.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

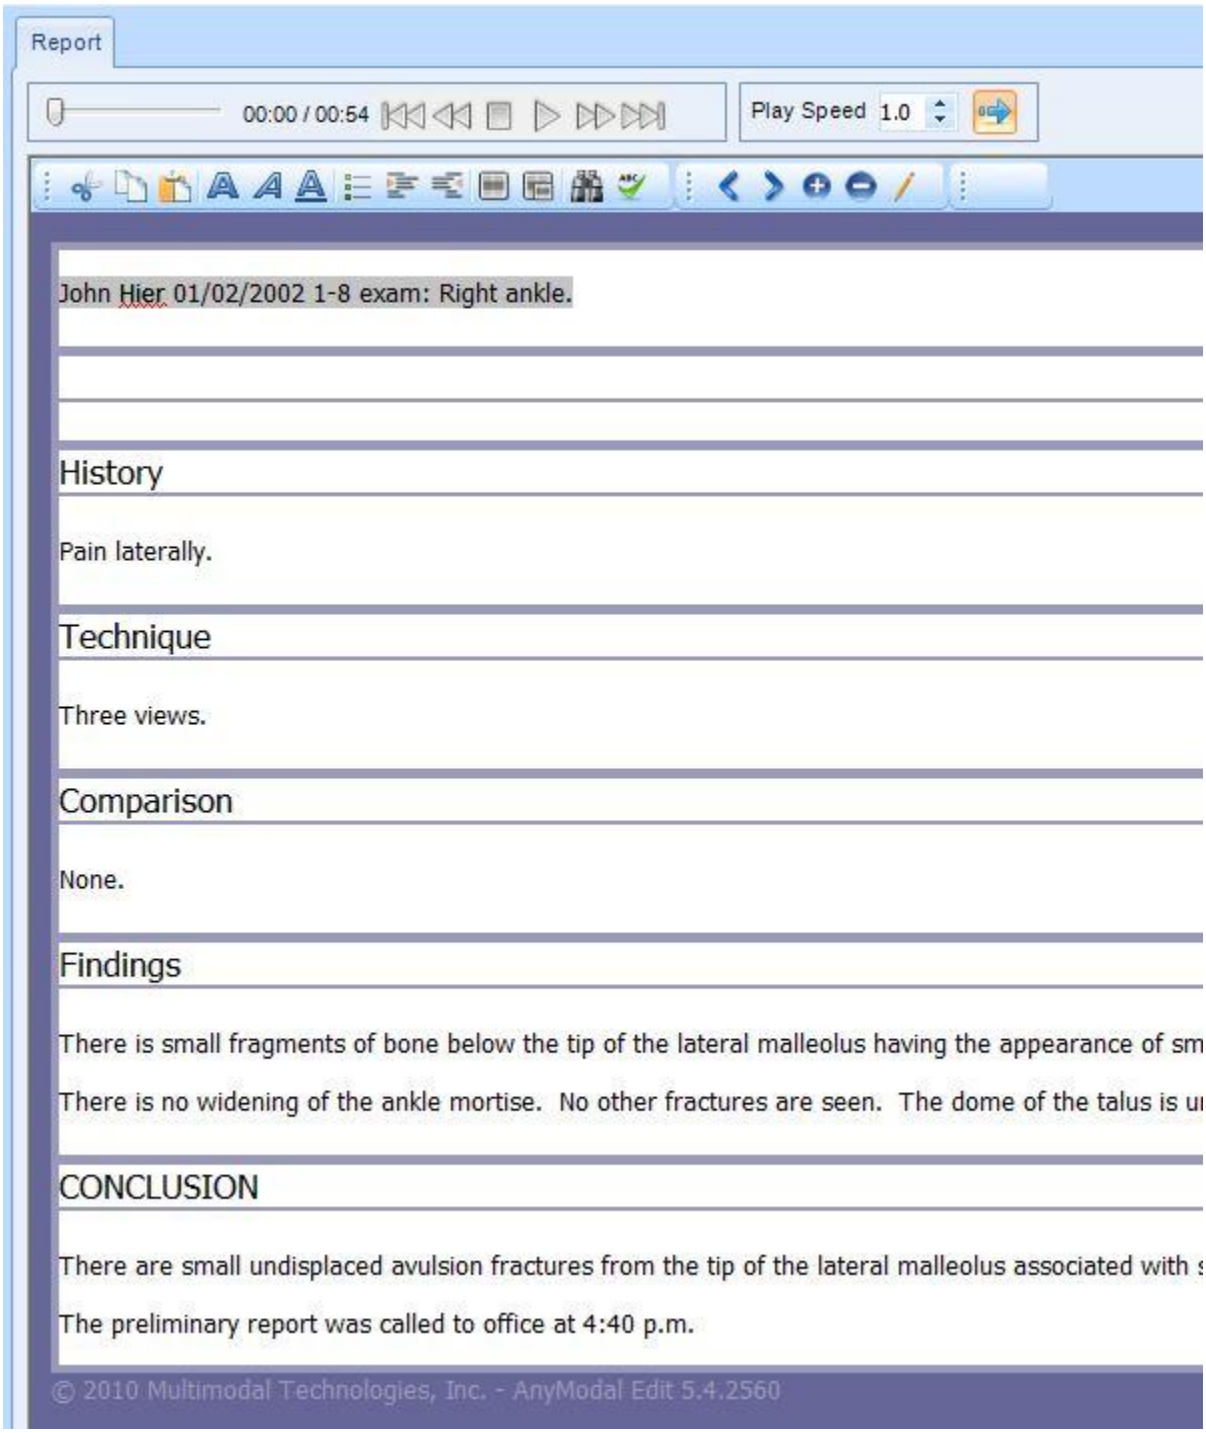

**Figure 4.18 – Drafted Report with Optimize Playback Button Enabled**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Playback Speed per Radiologist

Each radiologist talks at a different speed while dictating. Some very fast and others too slow. The transcription user will need to adjust the playback speeds to optimize editing performance in rRIS. This setting is stored per author. A transcriptionist can have a playback speed of 1.5 for radiologist A and a separate speed of 1.7 for radiologist B. The system will recognize the author and automatically playback at the specified speed saving the transcriptionist from having to change the playback with each dictation.

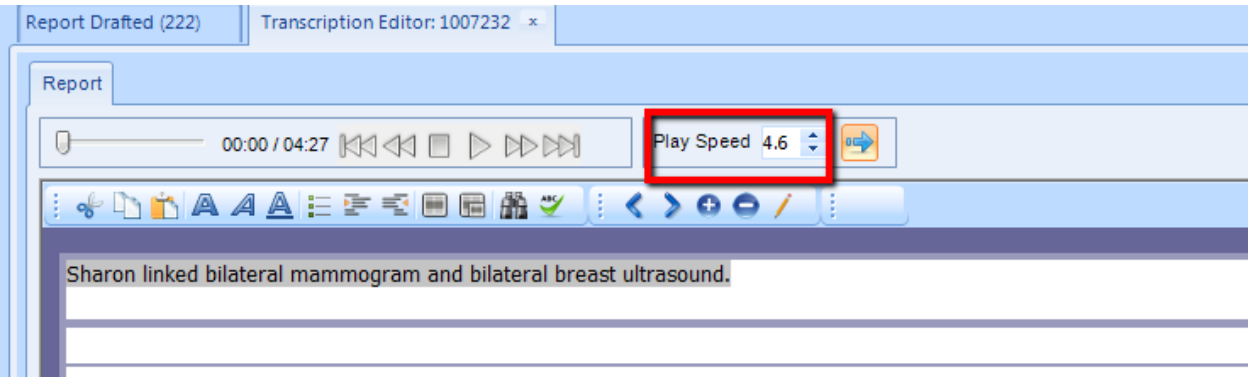

**Figure 4.19 – Drafted Report showing Playback Speed Control**

## Show Paragraph Line Breaks in the Report Editor

In Build 1.16, a user preference for showing paragraphs in the report editor has been added to the application. This is stored at a user level and is disabled by default.

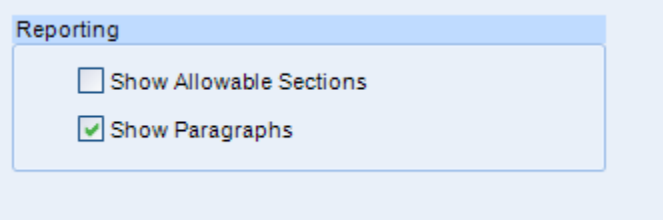

**Figure 4.20 – Show Paragraphs User Preference**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

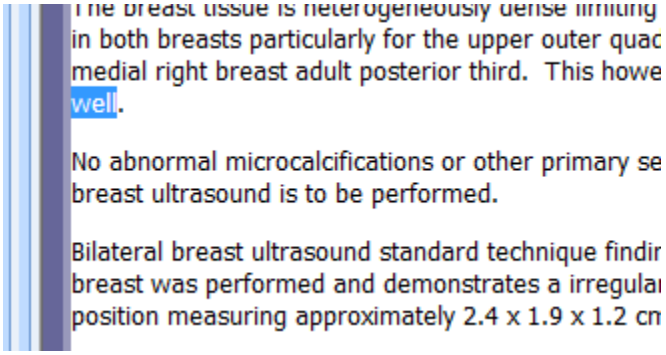

**Figure 4.21 – Show Paragraphs Enabled**

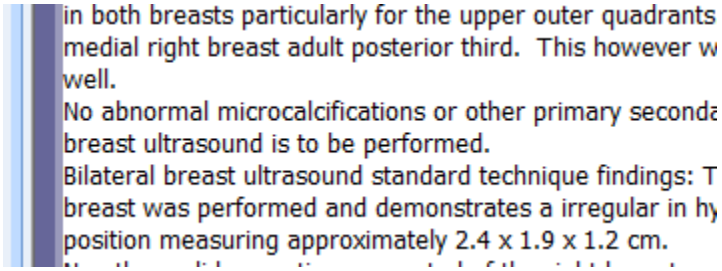

**Figure 4.22 – Show Paragraphs Disabled**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Known Limitations

Bugs, Suggested Features, and Support Issues are now tracked in a web based system called Redmine. The following is a snapshot of the issues found in Build 1.15.

| # | Status | Subject | Category | Found | %Done | Resolved |
|---|---|---|---|---|---|---|
| 441 | New | Add Patient - Age calculation | Thick Client GUI | 1.16 | 0 | |
| 440 | New | Forms and Labels - Exception adding printing criteria | Admin Tools | 1.16 | 0 | |
| 439 | New | User Preferences - Foot pedal config modification requires application restart | Admin Tools | 1.16 | 0 | |
| 438 | New | User Preferences - Should enable or disable speech preferences based on resource type | Admin Tools | 1.16 | 0 | |
| 437 | Resolved | Personnel - Search Issues when searching by "Type" only | Admin Tools | 1.16 | 100 | 1.17 |
| 436 | Resolved | Personnel - Exception when adding multiple addresses | Admin Tools | 1.16 | 100 | 1.17 |
| 435 | Resolved | Personnel - Exception when searching with no criteria specified | Admin Tools | 1.16 | 100 | 1.17 |
| 434 | Resolved | Personnel - Exception when searching | Admin Tools | 1.16 | 100 | 1.17 |

# 1. Purpose

This document describes some of the new features and changes implemented in rRIS as of the end of Sprint 17. This pre-release version of rRIS is referred to as Build 1.17.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the rRIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation instructions for the rRIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu, click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.17 is considered a new core release of the application and will require a reinstallation of rRIS. This is accomplished by navigating to the rRIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application, please do not hesitate to contact Spencer MacDougall with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Arbitration Signed

In Build 1.17 an Arbitration Signed Checkbox has been added to the patient form for study level data. The checkbox will not be visible if there is no associated study data.

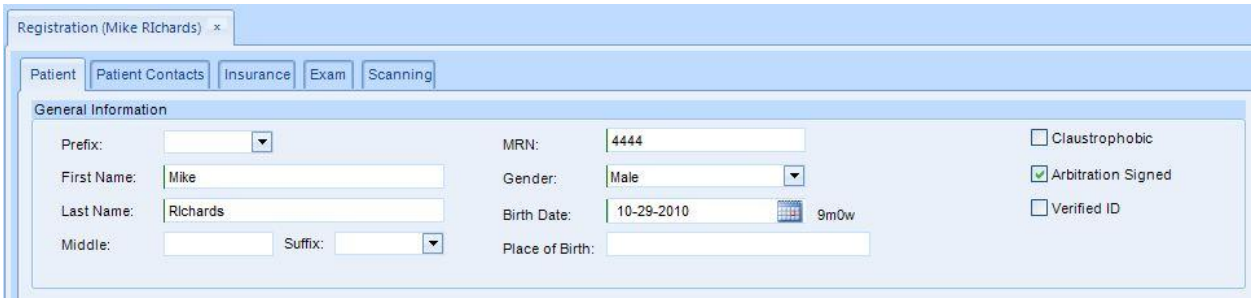

**Figure 4.1 – Arbitration Signed Checkbox on the Registration Screen**

## Consecutive Receipt Numbers

Receipt Numbers are now generated based on the following criteria:

1. Payment Receipts have unique receipt numbers that are consecutive per site.
2. Receipts are generated when a payment is saved.
3. If a single payment is saved by itself, the system will assign it a unique receipt number.
4. If multiple payments are saved at once, they are assigned the same unique receipt number.
5. The same receipt number cannot be assigned to multiple visits.

The example on the next page will show a consecutive receipt number based on the concatenation of Site Code, Payment Number, and Visit Key.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Payment Receipt — Printed: 7/19/2011 11:53:41 AM

**Figure 4.2 – Receipt Showing Consecutive Number Per Site "LU-16-26062"**

## Dataset Visualizer Change

The Dataset Visualizer is a tool that has been developed to aid support personnel in the field. It is automatically available to Super Users or can be added with an additional permission (Config.DataSetVisualizer). It basically allows the user to see the underlying datasets that belong to the current screen and is available by clicking Administration and DataSet Visualizer.

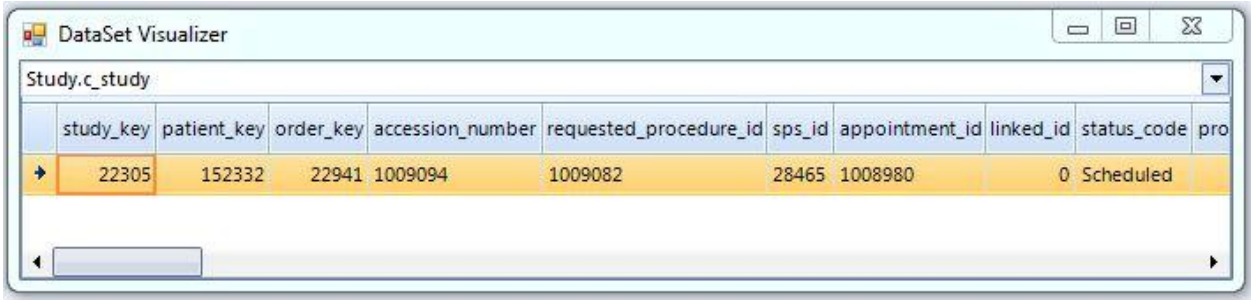

**Figure 4.3 – Dataset Visualizer Showing Study Data**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Delete Dictation/Report and Reset Status

If a dictation has been submitted in error, the user requires the ability to delete the dictation and set the status of the exam back to either Signed or Exam Done status depending on the last known good state of the diagnostic report.

In Build 1.17 there is a context menu option on the Report Drafted, Dictated, and Patient Folder worklists that will allow a user to right-click on the selected exam and perform the delete dictation/report and reset status.

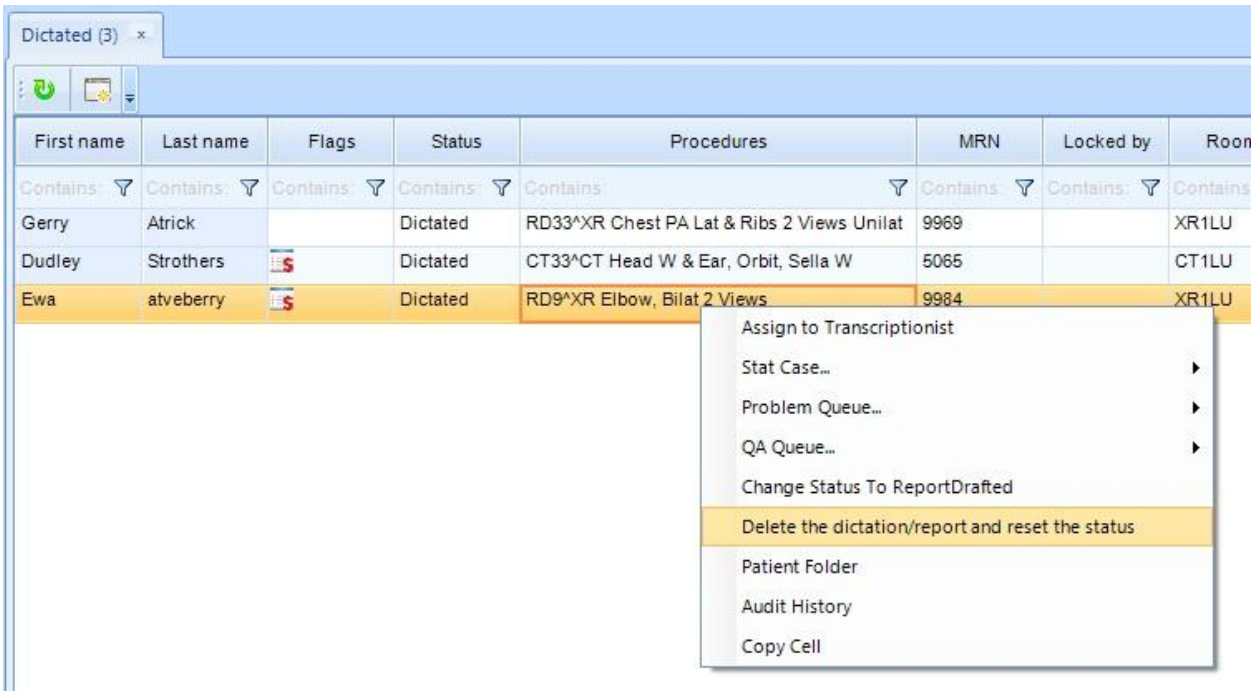

**Figure 4.4 – Context Menu for Deleting a Dictation**

When the delete dictation/report happens the system will remove the current dictation and set the status back to exam done with the exception of an addendum. If the dictation is for an addendum then the application will reset the status back to Signed where it can be dictated on once again if needed.

A dictation deletion can only be performed when the study is in Dictated, ReportDrafted or Transcribed status. There is a permission called "Clinical.DeleteDictationReportAndReset" with the default access level is set to "None". Currently this permission is only enabled for Super User and Transcription Admin user groups.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

When trying to delete a dictation, the system will prompt the user before completion. This action cannot be reversed and once the dictation and report are deleted there is no turning back.

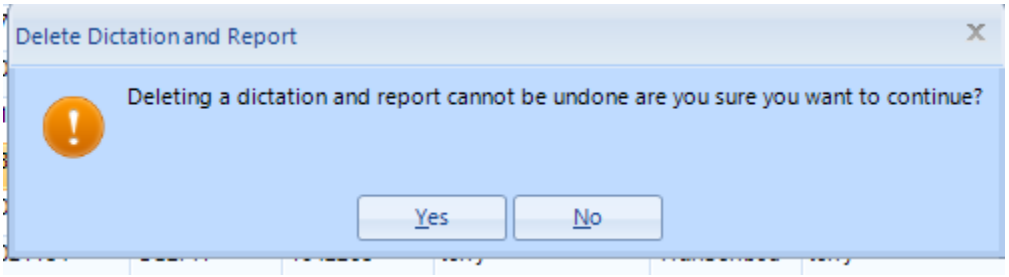

**Figure 4.5 – User Prompt when Deleting a Dictation**

## Dictation Purge

There is a requirement for rRIS to have the ability to clean up dictations in the database based on a configurable number of days. The DaysToKeepDictation system configuration value is currently set at seven days. Dictations are deleted only for the exams that are signed.

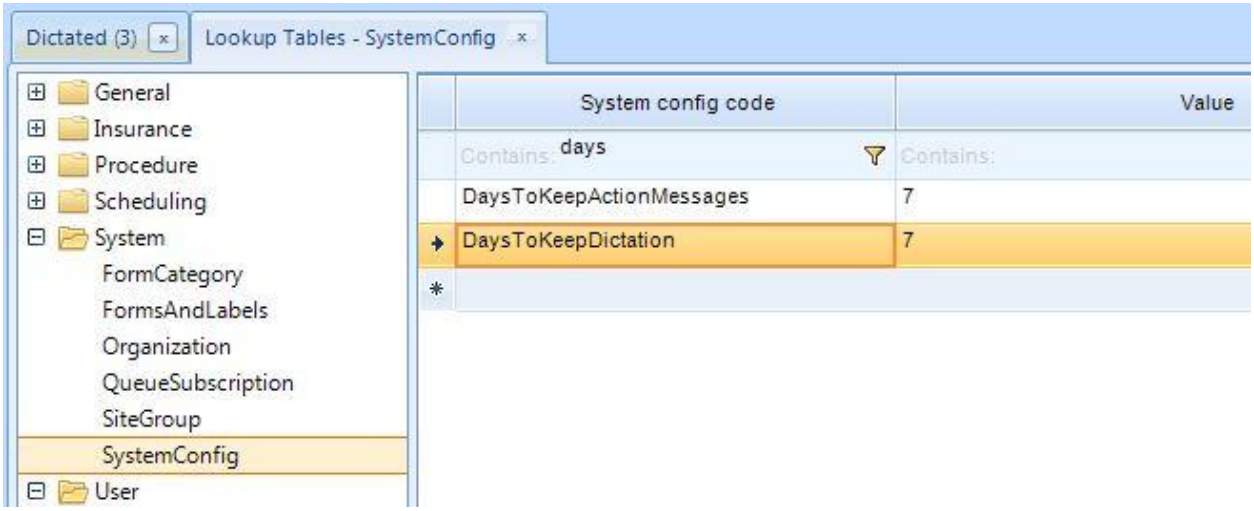

**Figure 4.6 – System Config Value for the Number of Days to Keep Dictations**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

A user is still able to review a signed diagnostic report even if the dictation has been removed. The user is simply presented with a "No Audio Available" message.

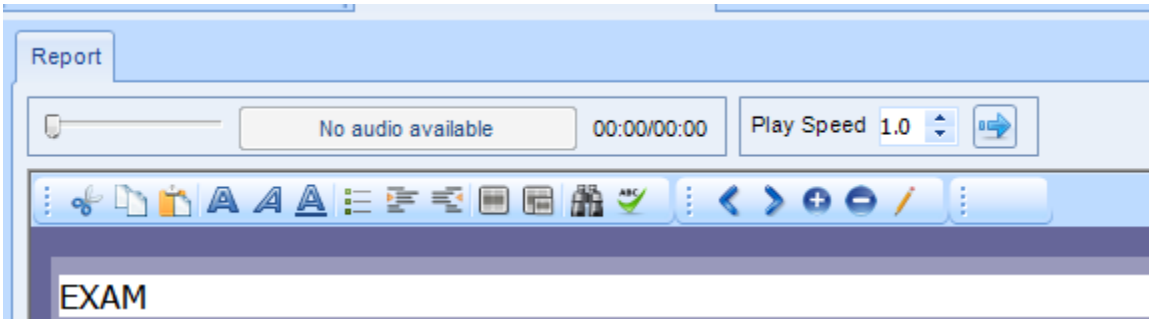

**Figure 4.7 – Diagnostic Report Preview Indicating that No Audio is Available**

## Change Status to ReportDrafted

If a study happens to get hung or stuck in Dictated status, it may be necessary for the system administrator to advance it to the ReportDrafted status. He or she may only move the study to ReportDrafted from Dictated, Suspended, or Transcribed statuses.

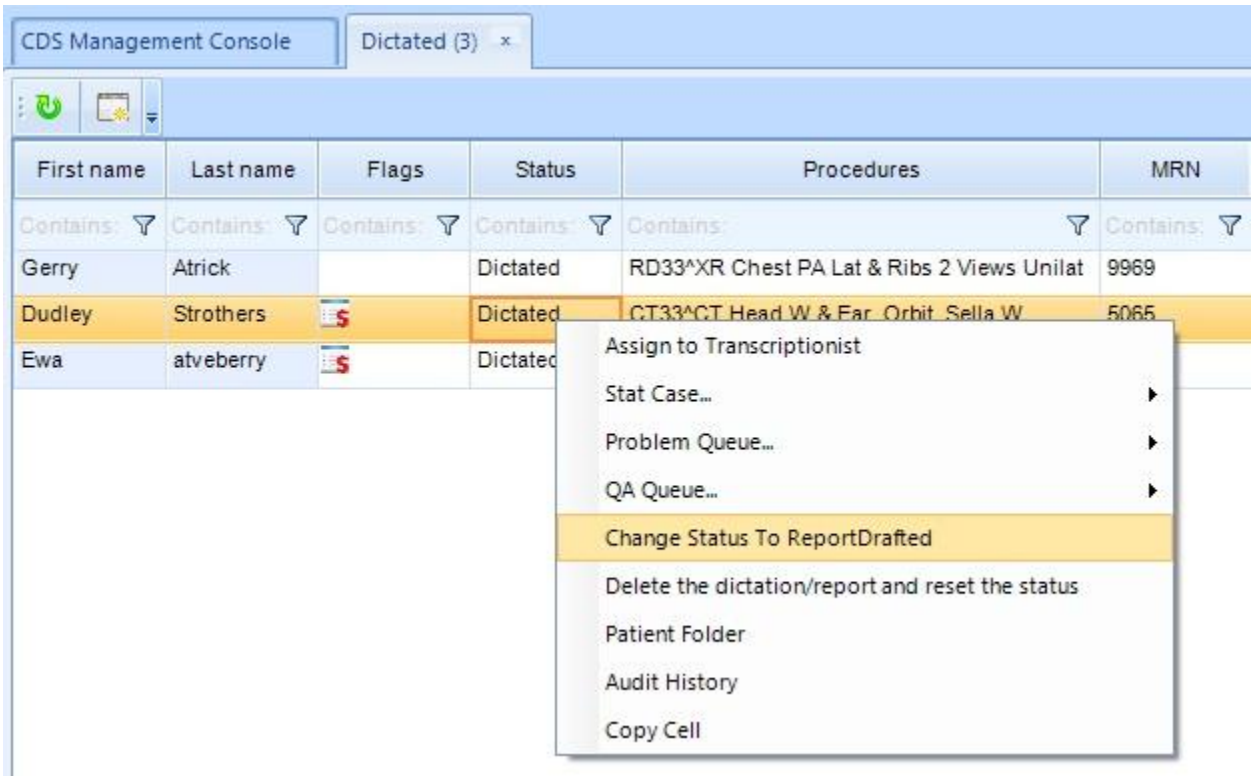

**Figure 4.8 – Manually Advancing Study from Dictated to ReportDrafted Status**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Forms and Labels Context Menu Refactor

In previous releases of rRIS, the Forms and Labels context menu was presenting a complete list to the user. In this release, the list is filtered by procedure code and modality type so only the appropriately mapped forms and labels will be presented to the user.

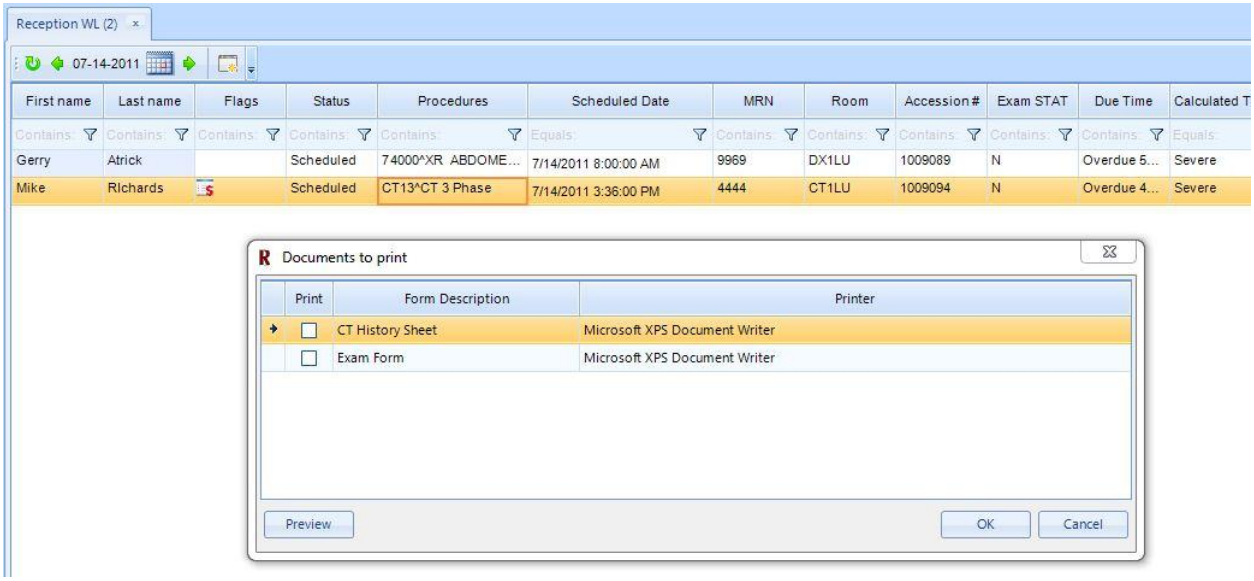

**Figure 4.9 – Labels and Forms Selection Mapped to CT 3 Phase**

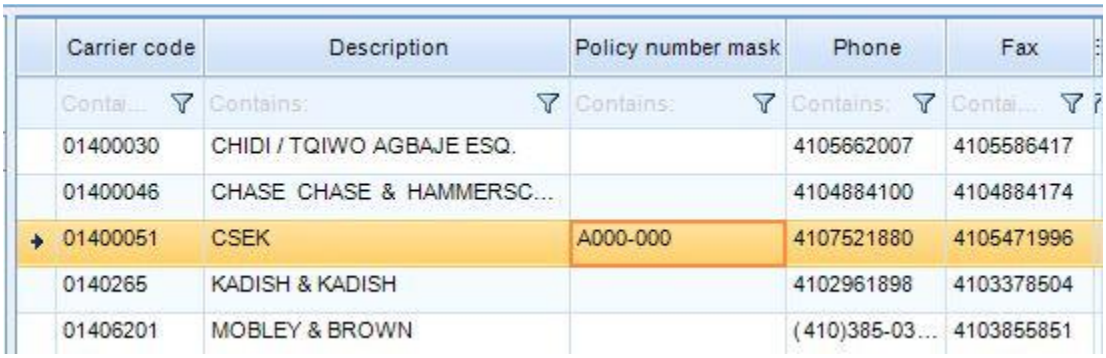
If there are no modality type filters, the form will match any modality; otherwise it will only match the types on the list. Similarly, if there are no procedure code filters, the form will match any procedure; otherwise it will only match the procedure codes on the list. The application caches these modalities and procedures in hash tables the first time they are processed to improve performance.

If multiple rows are selected, the application will find the list of forms that match at least one row on the list. A form will only be printed for the selected rows that match the procedure and/or modality type criteria.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Insurance Policy Mask

Some insurance carriers have a policy that must conform to a known mask; the user should not be allowed to add a policy without specifying a valid policy number for these carriers that conforms to the mask.



| Carrier code | Description | Policy number mask | Phone | Fax |
|---|---|---|---|---|
| Contai... | Contains: | Contains: | Contains: | Contai... |
| 01400030 | CHIDI / TQIWO AGBAJE ESQ. | | 4105662007 | 4105586417 |
| 01400046 | CHASE CHASE & HAMMERSC... | | 4104884100 | 4104884174 |
| 01400051 | CSEK | A000-000 | 4107521880 | 4105471996 |
| 0140265 | KADISH & KADISH | | 4102961898 | 4103378504 |
| 01406201 | MOBLEY & BROWN | | (410)385-03... | 4103855851 |

**Figure 4.10 – Policy Mask set at Carrier Level**

Masks can be created based on the following criteria:

- A – any letter/character is required
- 0 – any number/digit is required
- Any Character(ex: -) – a matching character is required

In the example above, A000-000 would match a policy of Z123-456 but not A123-45.

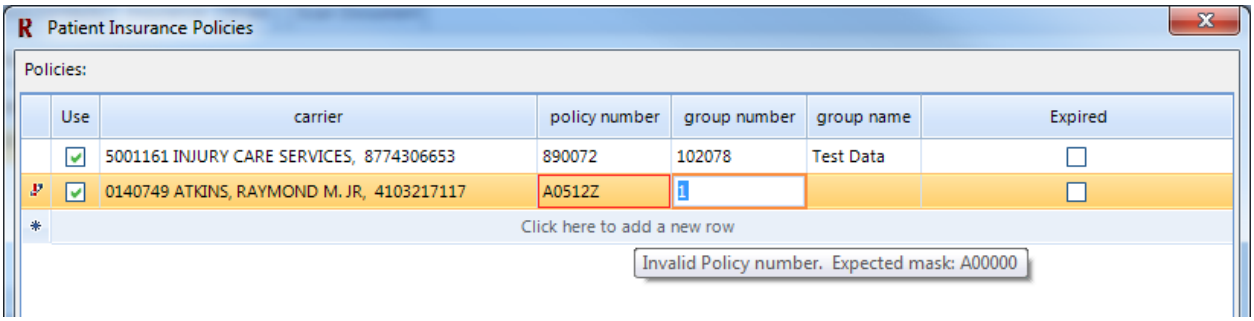


**Figure 4.11 – Message Presented to User when Mask does not Pass Validation**

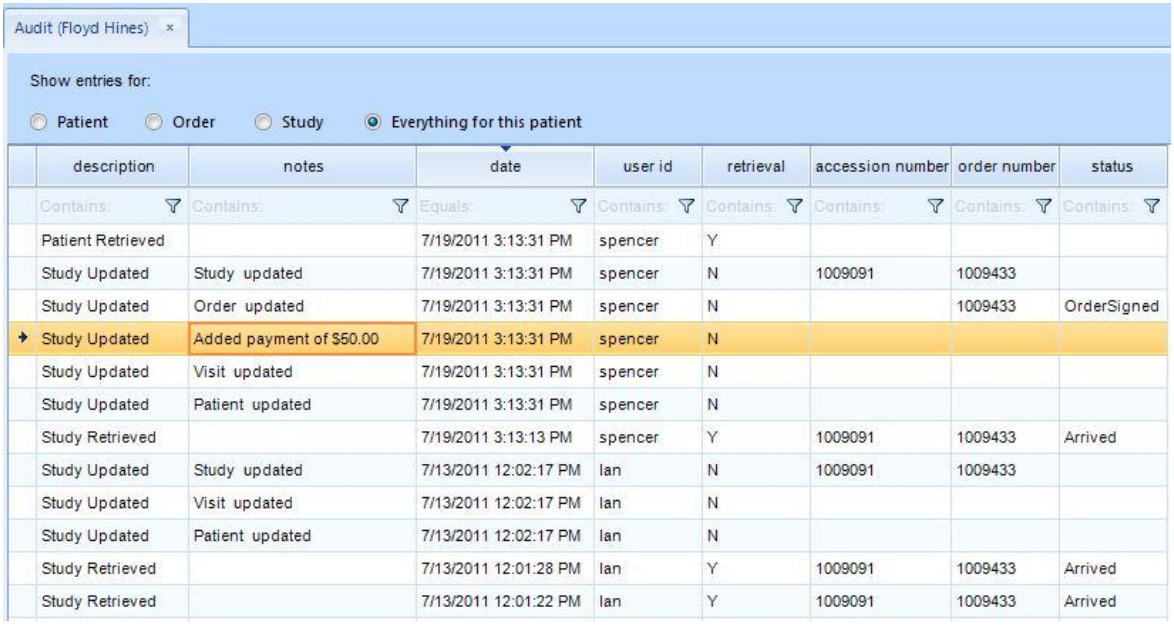
In the event that the mask is wrong and has not yet been updated by an administrator, the policy number can be prefixed with a "+" to bypass the mask validation.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Log Payments to Audit Trail

rRIS will now add payments to the audit log whenever a payment is posted or voided. The payment is visible in the Audit History viewer in the GUI under "Patient" or "Everything for this patient".



| description | notes | date | user id | retrieval | accession number | order number | status |
|---|---|---|---|---|---|---|---|
| Patient Retrieved | | 7/19/2011 3:13:31 PM | spencer | Y | | | |
| Study Updated | Study updated | 7/19/2011 3:13:31 PM | spencer | N | 1009091 | 1009433 | |
| Study Updated | Order updated | 7/19/2011 3:13:31 PM | spencer | N | | 1009433 | OrderSigned |
| Study Updated | Added payment of $50.00 | 7/19/2011 3:13:31 PM | spencer | N | | | |
| Study Updated | Visit updated | 7/19/2011 3:13:31 PM | spencer | N | | | |
| Study Updated | Patient updated | 7/19/2011 3:13:31 PM | spencer | N | | | |
| Study Retrieved | | 7/19/2011 3:13:13 PM | spencer | Y | 1009091 | 1009433 | Arrived |
| Study Updated | Study updated | 7/13/2011 12:02:17 PM | lan | N | 1009091 | 1009433 | |
| Study Updated | Visit updated | 7/13/2011 12:02:17 PM | lan | N | | | |
| Study Updated | Patient updated | 7/13/2011 12:02:17 PM | lan | N | | | |
| Study Retrieved | | 7/13/2011 12:01:28 PM | lan | Y | 1009091 | 1009433 | Arrived |
| Study Retrieved | | 7/13/2011 12:01:22 PM | lan | Y | 1009091 | 1009433 | Arrived |

**Figure 4.12 – Audit Trail showing Payment of $50.00**

## Categorize the Lookup Editor

The Lookup Table Editor has been simplified by adding categories which will make navigation easier for the administrative user.

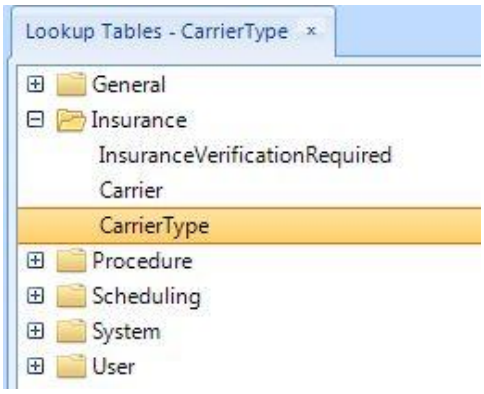


**Figure 4.13 – Lookup Table Editor with Categories**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Meaningful Use – Record Patient Demographics

This feature is to comply with Meaningful Use requirement 107.304.c for Patient Demographics. The system must allow a user to electronically record, modify, and retrieve patient demographic data including preferred language, gender, race, ethnicity, and date of birth for 50% of recorded patients. The race and ethnicity is to be recorded in accordance with the standard specified at §170.207(f).

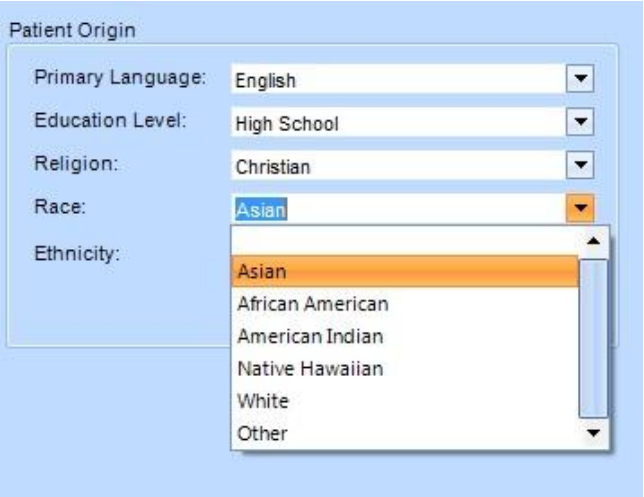

**Figure 4.14 – Patient Tab Showing Race Dropdown**

## Meaningful Use – Record Vital Statistics

Meaningful use requirement for vital signs is for a user to electronically record, modify, and retrieve a patient's vital signs including, at a minimum, the height, weight, and blood pressure (170.302.f.1_vitalsigns_v1.0.pdf). The system also needs to calculate body mass index automatically and display body mass index (BMI) based on a patient's height and weight (170.302.f.2_BMI_v1.0.pdf). The system will need to supply the means to plot and display growth charts for children 2-20 years, including BMI.

**Figure 4.15 – Order Tab Showing Vital Signs and Calculated BMI**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## SpeechMike Bar Code Support

Build 1.17 has support for the SpeechMike Barcode scanner to perform specified actions in the application. The system supports two modes for barcode input:

1. Simple text entry - Takes the scanned barcode and essentially keyboards it into whatever field is active. This is the standard barcode implementation.
2. Trigger event action - This will cause the Barcode to trigger a configurable event to be fired in rRis and a corresponding action will be taken.

To configure this functionality the user will navigate to user preferences. There are two settings that they can change. One determines the mode the application will run in (keyboard text or event action). The other will determine which action will be triggered if event action mode is selected.

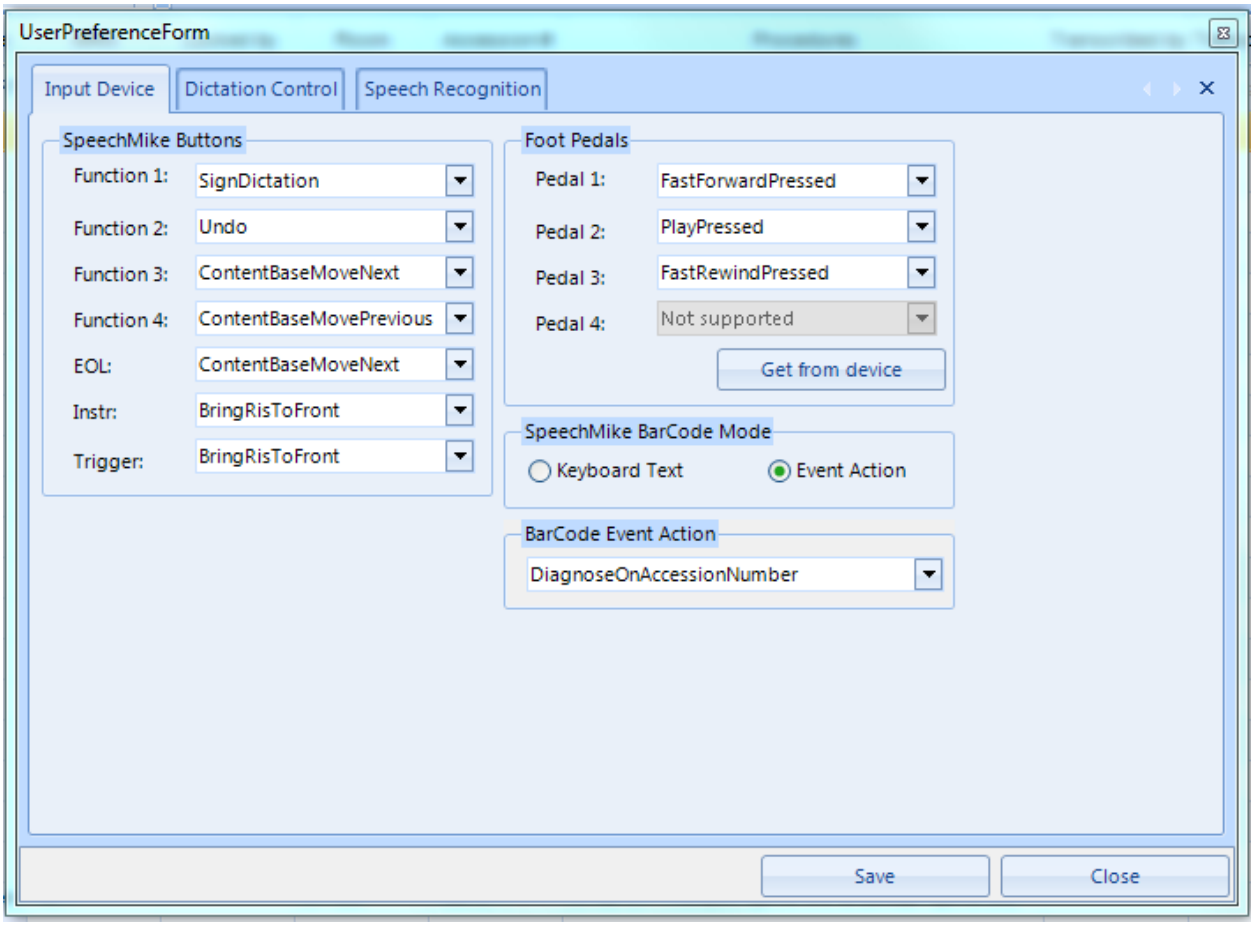

**Figure 4.16 – User Preference Form Showing SpeechMike BarCode Mode**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Inbound TCP Reporting

Build 1.17 now supports Inbound Transmission Control Protocol (TCP) Accession Numbers for Diagnostic Reporting. This will enable rRIS to accept an Accession Number from an external system (ex: PACS or HIS) and enable Reporting workflow.

## Launch rRIS to System Tray

To support Radiologist workflow, there is a requirement that rRIS may have to run as a slave system to another system like the PACS. In order to satisfy this requirement, rRIS needs to be able to be configured to launch to the system tray.

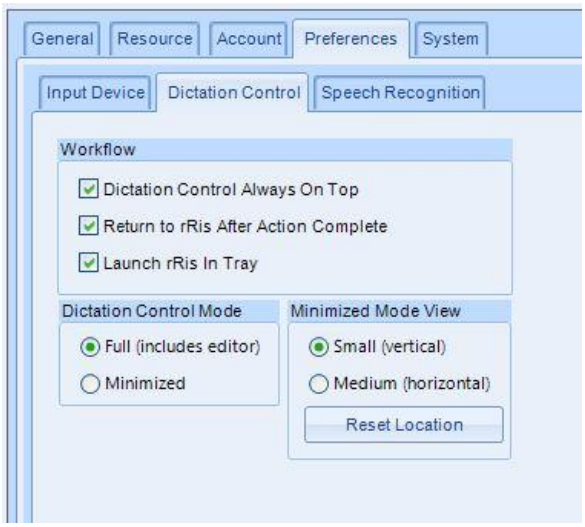

**Figure 4.17 – "Launch rRIS In Tray" User Preference Enabled**

If rRIS is configured to launch in tray, immediately after loging in the application will not show on the screen as usual but appear in the system tray as a small "R" icon.

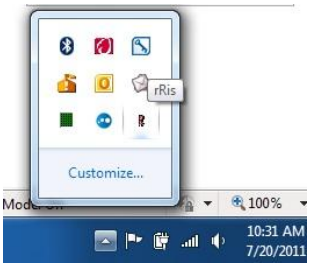

**Figure 4.18 – rRIS Running on Windows System Tray**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

In this mode, the application can be brought on the screen by double clicking the tray icon or by using the icon's right-click context menu.

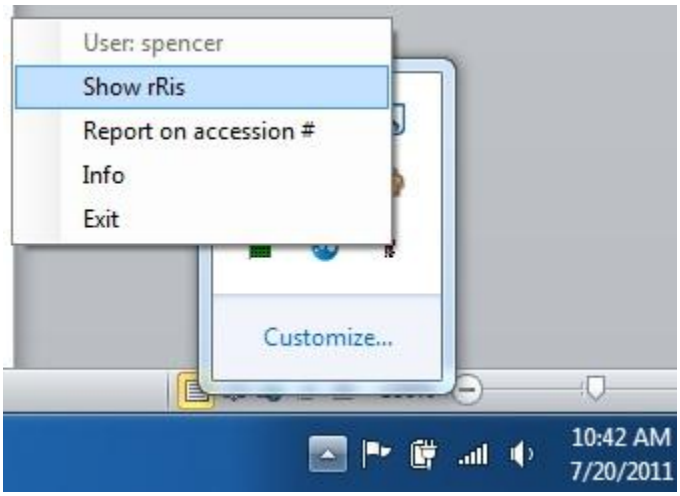

**Figure 4.19 – rRIS System Tray Context Menu**

Using the tray icon's context menu the user can use the following items:

- **User id** - identifies currently logged in user
- **Show rRis** - Will bring rRis on the screen, same as double clicking
- **Report on accession #** - Prompt user for the accession number
- **Info** - Will display information about rRis such as version
- **Exit** - Will exit rRis completely

When rRis is shown and this mode is configured, minimizing or closing rRis using the icons at the top right of the application window will simply return rRis to the tray icon. To actually exit rRis the user needs to select File -> Exit from the file menu when rRis is onscreen, or using the tray icons context menu -> Exit.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Report on Accession Number

This feature will allow the user to open the Diagnose screen on a study based on a specified accession number. This provides the user with the ability to bypass the worklist type workflow and run rRis in a "slave" type mode. The input of this accession number can come in different forms as tcp listener, file watcher, etc. These are all used as methods to drive workflow from another system such as a PACS system.

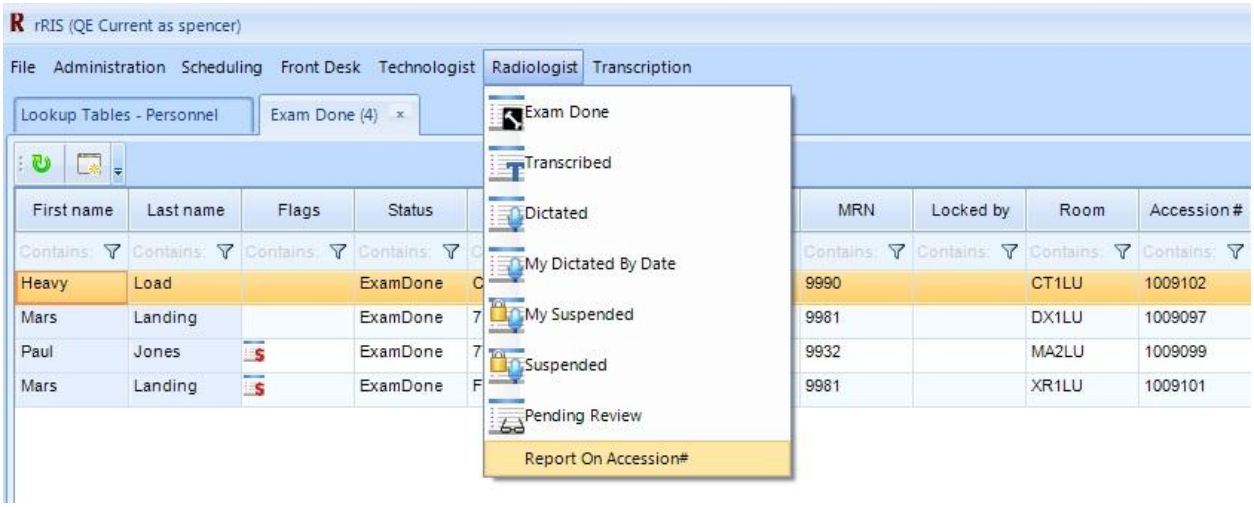

**Figure 4.20 – Report On Accession# Menu Option in rRIS**

The user also has the ability to manually enter an Accession Number and let rRIS search for it. This can be done by using the menu option or the right-click context menu on the system tray icon. If the Accession Number is not found, the user is prompted accordingly.

**Figure 4.21 – Report on Accession Number Prompt and Accession Not Found Popup**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Small and Medium Sized Dictation Control

Build 1.17 provides the radiologist user both small and medium dictation controls as a user preference for dictating on Accession Numbers outside of rRIS.

Two different dictation control layouts have been implemented; a vertical (small) and a horizontal (medium). These controls exist outside of the rRis GUI. They have the ability to float on the screen and can be place where they interfere the least with the radiologist's existing RIS/PACS workstation.

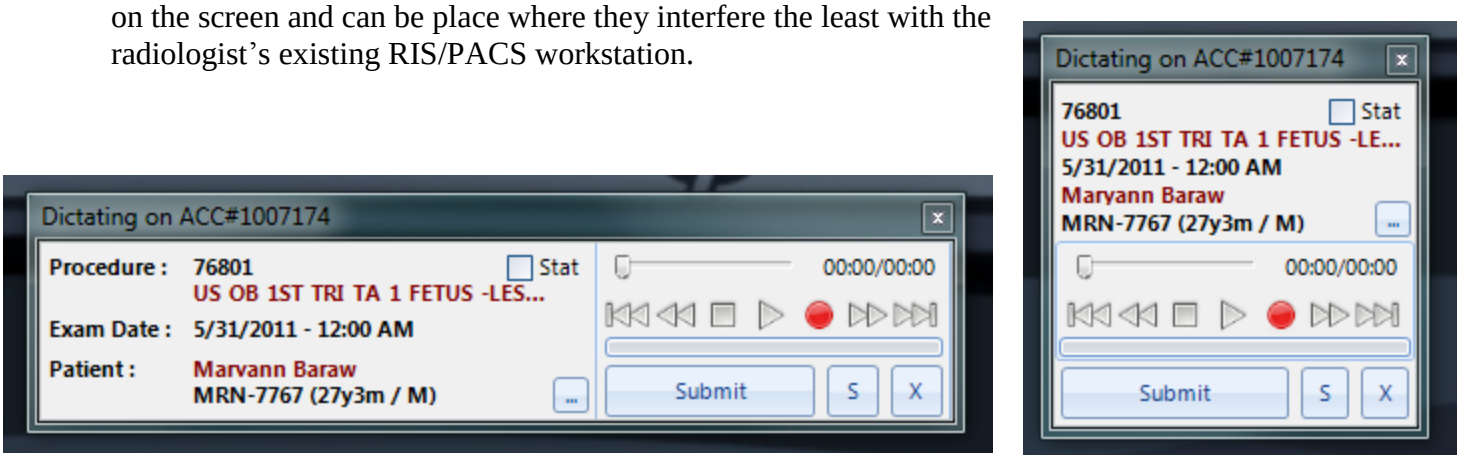

**Figure 4.22 – Dictation Control Layouts**

The radiologist has the option to use any of these two controls and he or she also has the option of using the full reporting screen. This is configured using the user preferences. There are two available options:

1. Dictation control mode (full or minimized)
2. Minimized Mode View (small or medium)

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

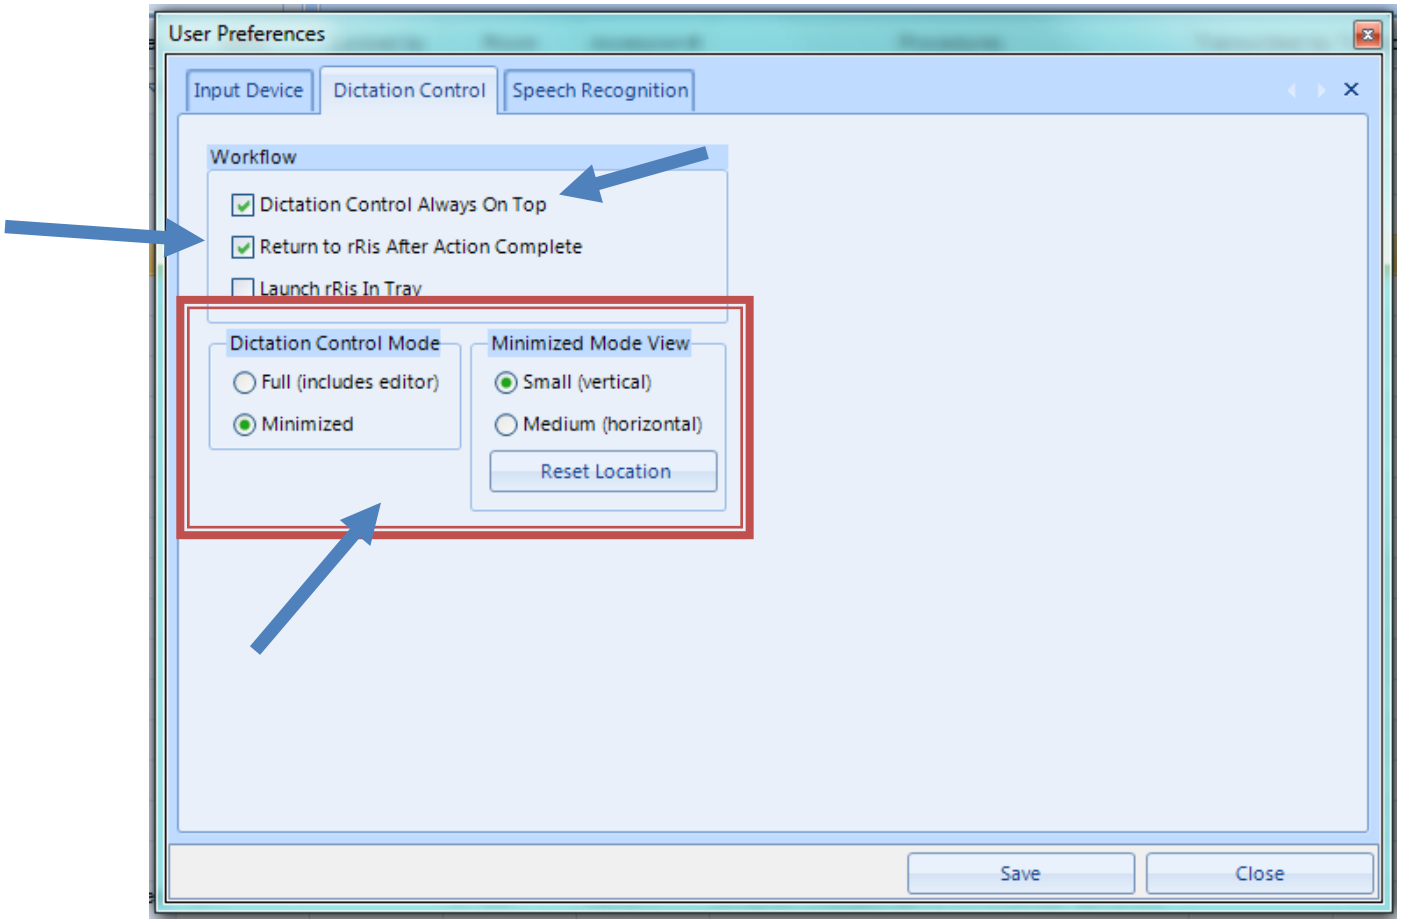

**Figure 4.23 – Dictation Control User Preference**

The minimized views can be placed anywhere on the screen and their location will be remembered forever. In the unlikely event that the location was saved to make them appear in an area which is not visible, in the user preferences the user can select "Reset Location" which will reset the control's location to position 0,0 (top left of screen 1).

The "Dictation Control Always On Top" when turned on will force the control to remain on top of other windows even if the other window has focus.

When the radiologist has rRis open and diagnoses a study, if he or she is using the minimized mode, rRis will minimize and the dictation control will appear.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## No Report Required Workflow

There are certain exams in rRIS that the radiologist will not be required to dictate on. These exams may need to be reported on in another system like a DEXA or not at all. There has been a new column added to the Procedure Code lookup table called No Report Required. When this column is set to "Y", the system will not allow the radiologist to open the exam for dictation.

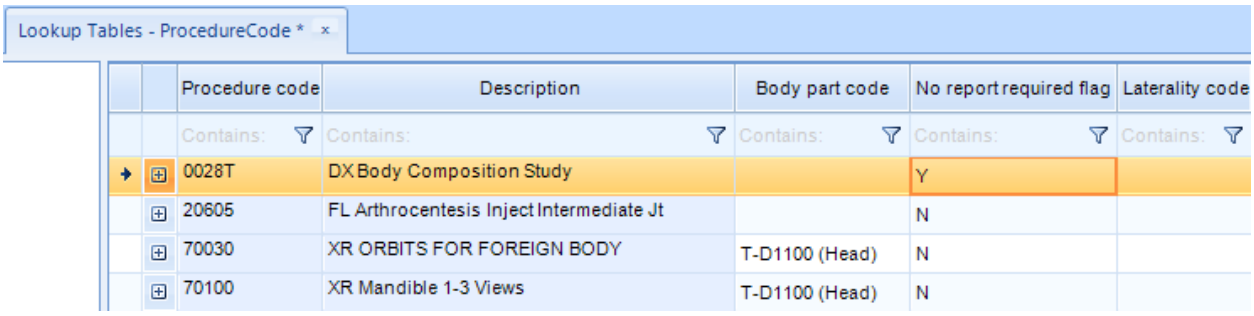

**Figure 4.24 – No Report Required Specified at the Procedure Code Level**

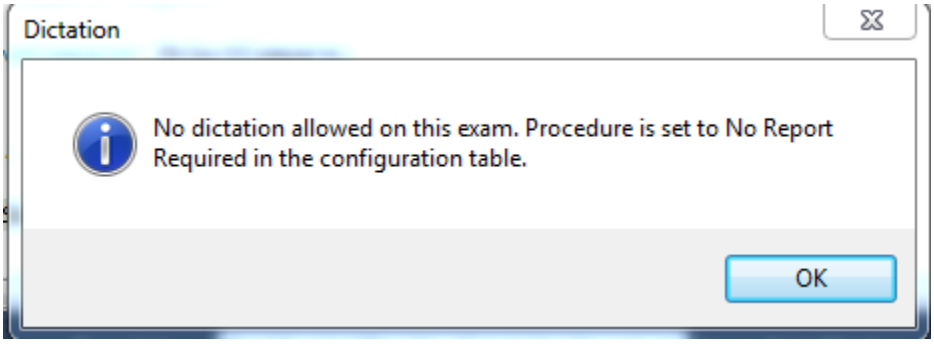

**Figure 4.25 – Radiologist Prompt when No Report Required**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Tech Notes Required

In Build 1.17, the "Technologists Notes" field is now required to be filled in before the technologist can make the procedure as Complete.

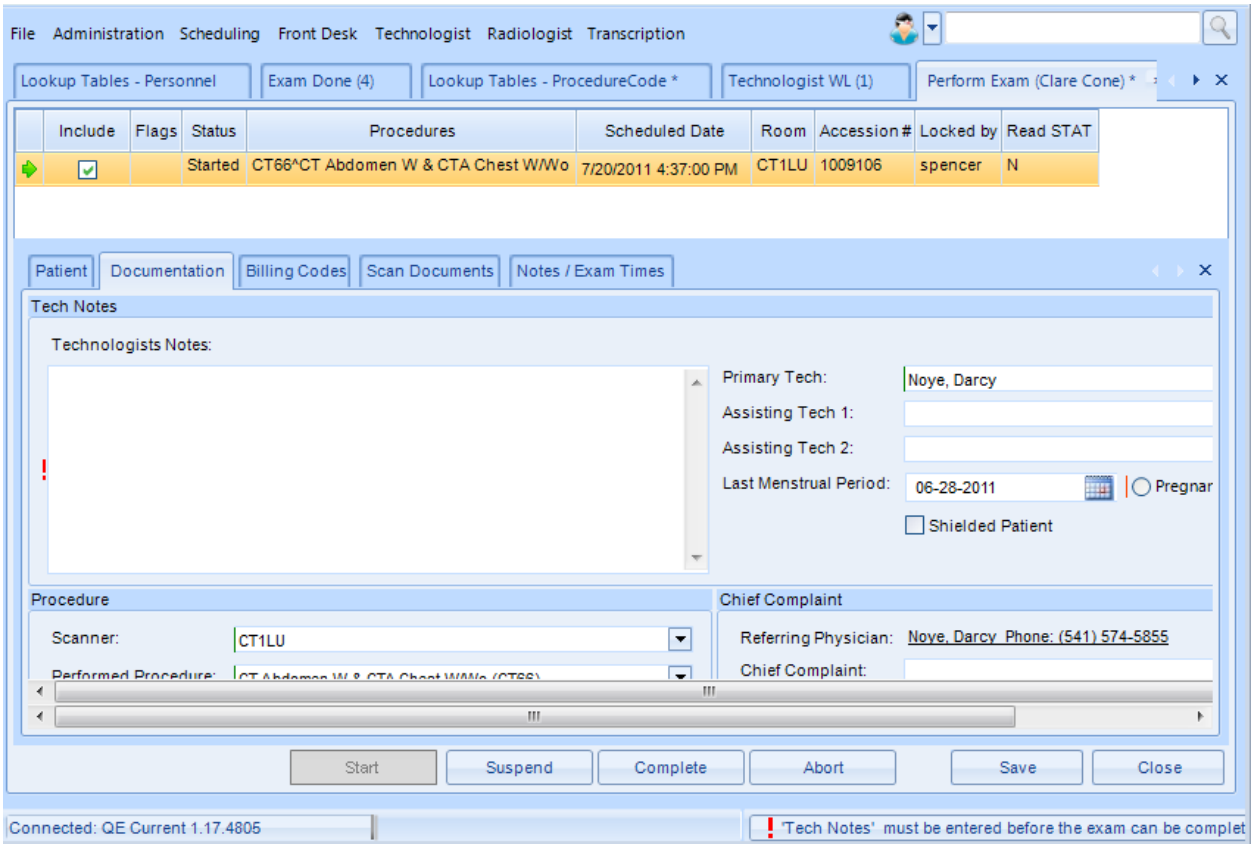

**Figure 4.26 – Technologists Notes as a Required Field**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Closed Modality Worklist

There is a requirement for rRIS to support the ability to notify administrators and schedulers of any studies that are affected by room closures. A new Closed Rooms Reschedule worklist has been added to the application. When a room is closed for a time period and there are procedures scheduled for time slots in the closed time frame, the affected studies will appear on the Closed Rooms Reschedule worklist. This will allow the user to easily identify the affected studies and reschedule them.

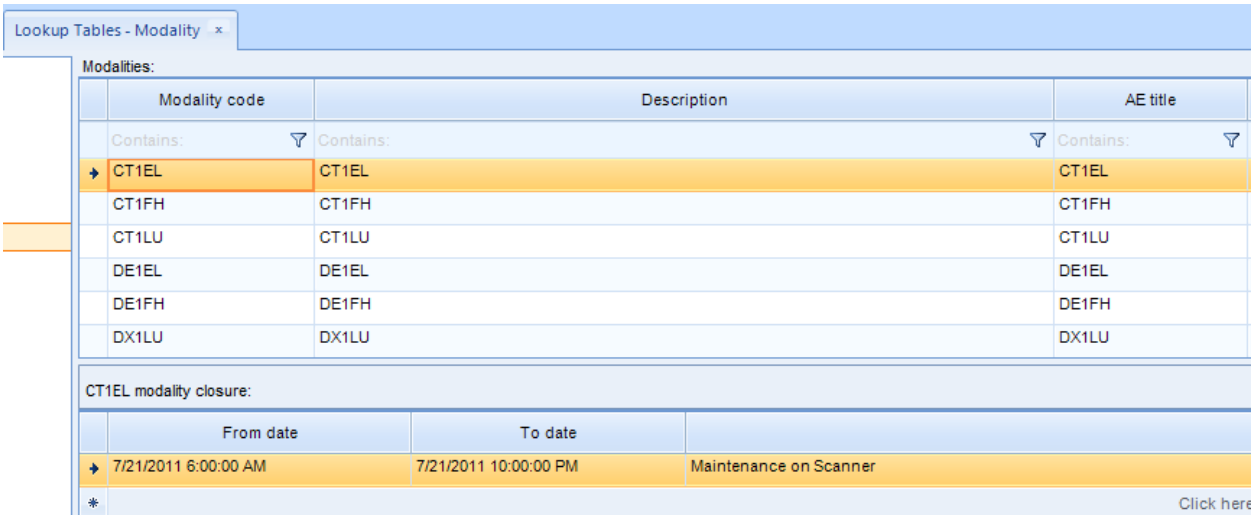

**Figure 4.27 – Room CT1EL Closed for Maintenance**

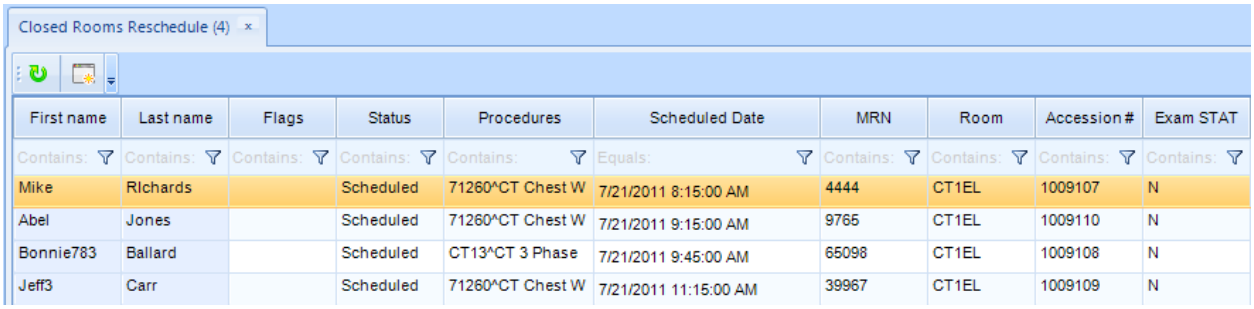

**Figure 4.28 – Studies from Room CT1EL that Require Reschedule**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Database Cleanup Procedures

A procedure is required to clean up old unwanted data from the rRIS database. The 2 areas to date that have been identified requiring data cleaning are:

1. Audio dictations –The audio dictation is no longer needed when a report is "signed" or "action completed". After a configurable retention period the audio should be purged.

2. Action Messages – Used by the application's external interfaces, they should be purged when the messages are no longer referenced by a queue. Purging should happen after a configurable retention period.

To fulfil this requirement two new stored procedures have been added the database. CleanupSignedDictations will delete the dictation rows for all studies that are signed and have been signed for a configurable amount of days. CleanupActionMessages will delete the action rows for all messages that are no longer referenced in the message queue and are older than a configurable amount of days.

Both of these stored procedures can be scheduled to run by the database server.

## Interval Change for Appointment Book

The Appointment Book in Build 1.17 now supports the ability to alter the size of the intervals between time slots so more hours can be displayed on the screen.

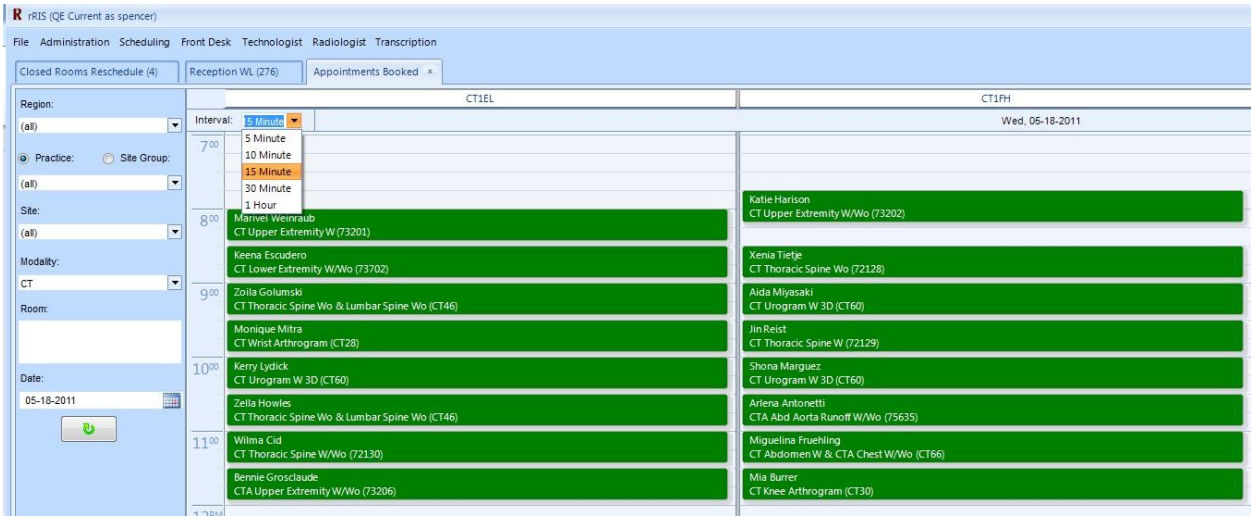

**Figure 4.29 – Appointment Book showing Time Slot Intervals**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## LMP for Females Age 12-55

The technologist screen in this release of rRIS will now only force LMP (Last Menstrual Period) to be required for females age 12 to 55 years. In the example below, the technologist is documenting a procedure for a female patient age 21 years. The system will not allow the user to save changes until LMP has been specified.

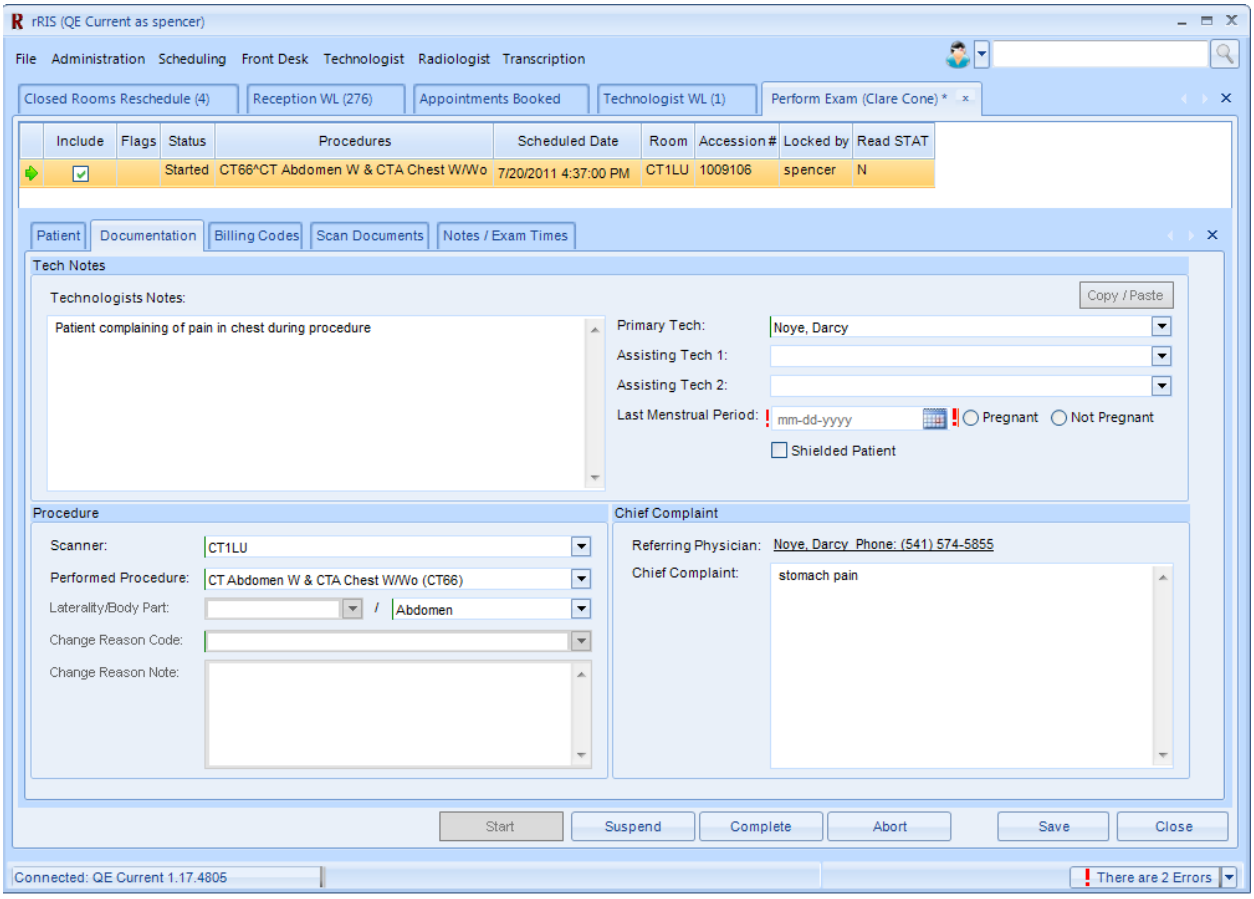

**Figure 4.30 – Technologist Screen showing LMP as Required for 21 Year Old Female**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Weight Mask and Restriction

Because certain modalities have weight restrictions, the system will now prompt the user when scheduling a procedure in a room that has a weight restriction that the patient's weight is violating. A Weight field has been added to the Modality lookup to support this.

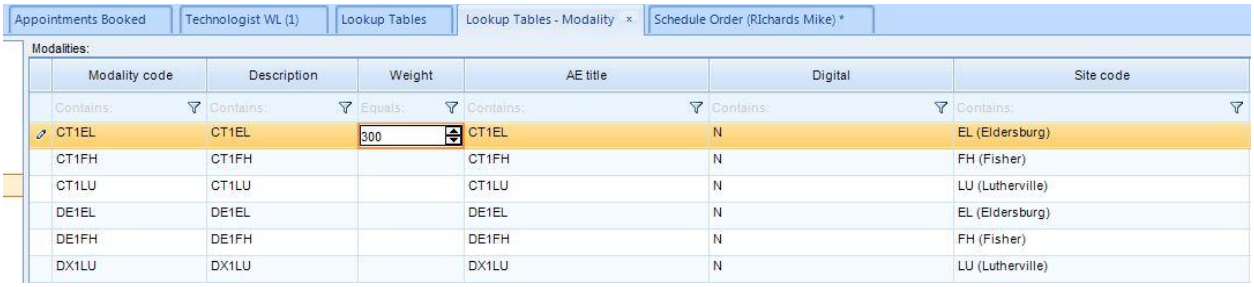

**Figure 4.31 – Weight Limit of 300 Pounds set on Room CT1EL**

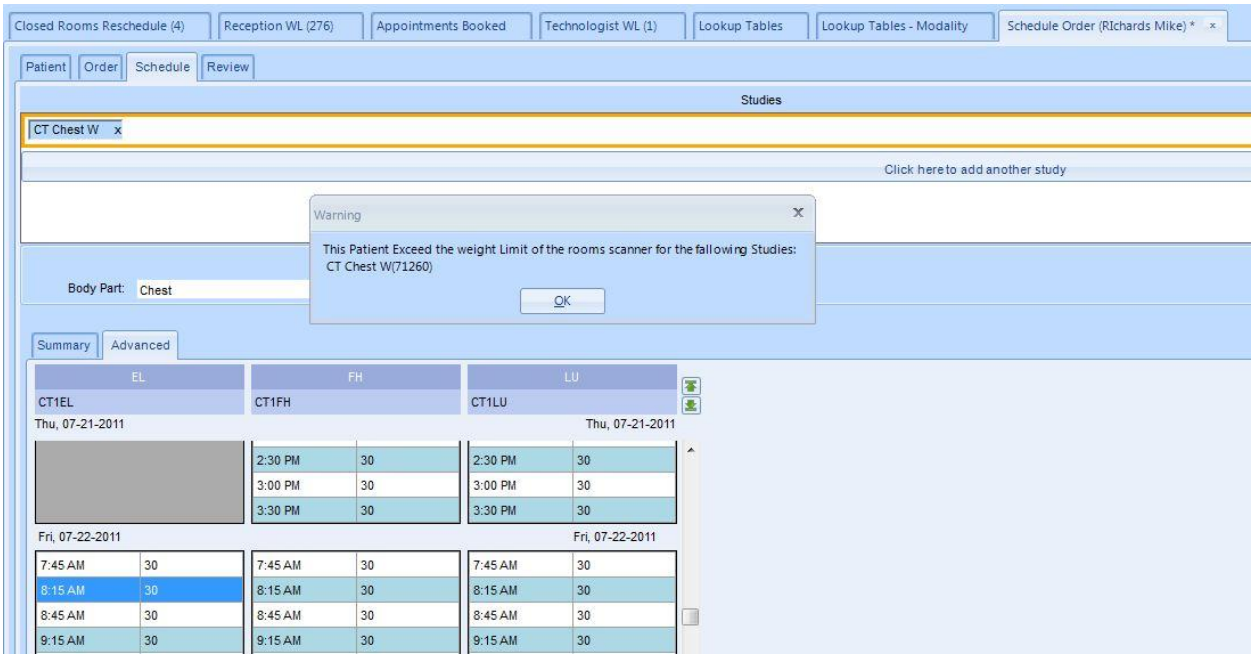

**Figure 4.32 – Scheduler Prompted that the Patient Exceeds the Weight Limit of the Room**

**Figure 4.33 – Patient Weight at the Time of the Order/Request**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Void Payments Permission

In Build 1.17 a new permission has been added to the application so not just any user can void a payment. The new permission is called Clinical.VoidPayment. If the user does not have this permission granted, then the Void Payment option will not be enabled on the payment context menu.

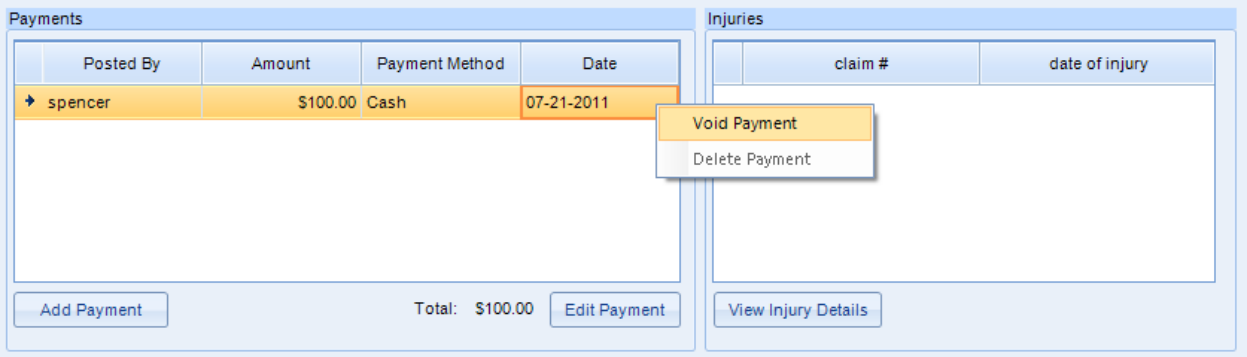

**Figure 4.34 – Void Payment Option on Registration Screen**

## ZIP Code to City and State

When a ZIP Code is entered for a new or existing patient, the system will now automatically populate the patient's city, state, and country. The complete list of ZIP Codes is supplied to rRIS by a third party and will be updated periodically as new ZIP Codes are added.

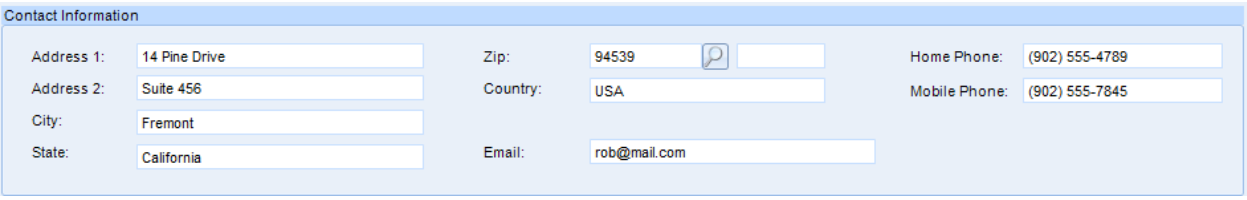

**Figure 4.35 – Patient Contact Information with ZIP Code Lookup**

In the example above, the user entered "94539" into the Zip field and clicked the Search button or pressed the Enter key. The City, State, and Country automatically populated for the user.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Personnel Improvements

The Personnel/User Management screen has been refactored to improve performance. Because of the potential large number of referring doctors and system users that will live in the system, it made more sense to force the user to search first rather than loading all user information into memory. In the screenshot below the system administrator is returning a list of all Referring doctors with Last Name starting with "w".

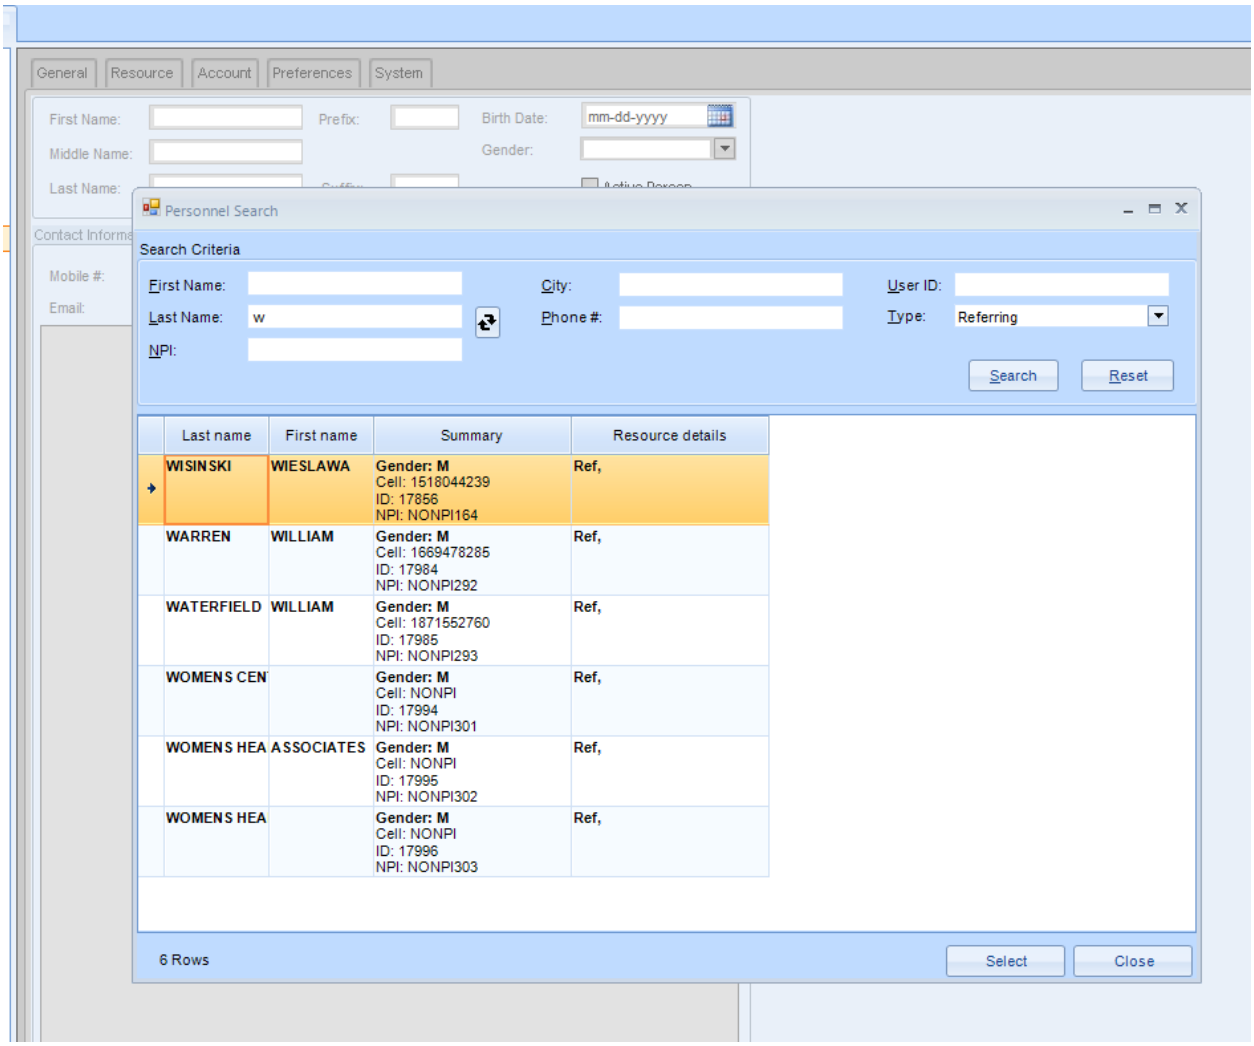

**Figure 4.36 – Personnel Search Screen**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Once the search results are returned, the administrator can select one of the returned rows or add a new user.

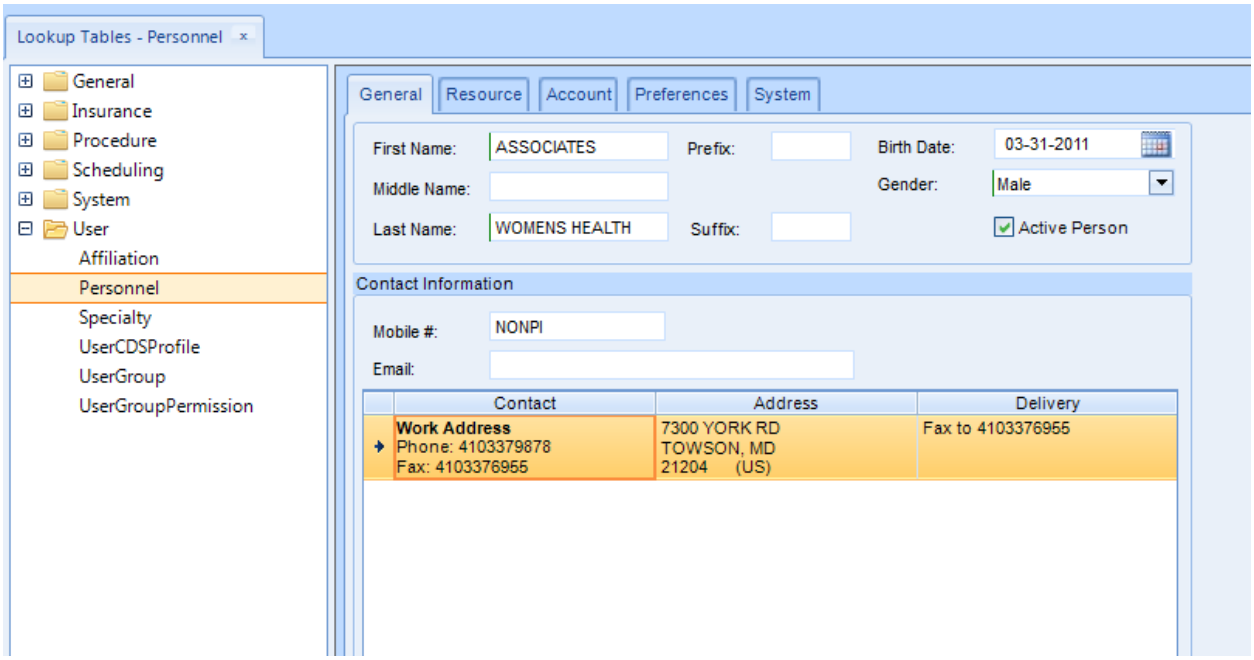

**Figure 4.37 – Personnel Screen Showing Selected Referring User**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Scanning – Auto Deskew and Auto Enhance

Auto Deskew - The scan control has been enhanced to automatically detect if the scanned document/image is smaller than the scan surface and if so crop, rotate (if needed), and then crop again so that the final image fits better on the screen and less wasted area is captured and saved. The purpose of this feature is so users will be able to scan batches of documents and categorize them later.

Auto Enhance - Several image processing algorithms where introduced. Mainly some scanners such as flatbed scanners introduce a lot of noise into the image such that dust or a hair could be detected as document content and affect the crop and rotation logic. For this reason a medium filter is applied to a copy of the image, which removes random and dust noise, then the crop and rotation calculations are based on that temporary (less noisy) version of the image.

The first of the following screen shots shows a document scanned directly into Photoshop without any enhancements, while the second shows the same document exported from an rRIS Scan. The histogram in the right of each of these images shows the stretching that has occurred in the data. This enhancement is dynamic based on the first occurrences of black and white in the image and has a major improvement on readability and the quality of re-prints.

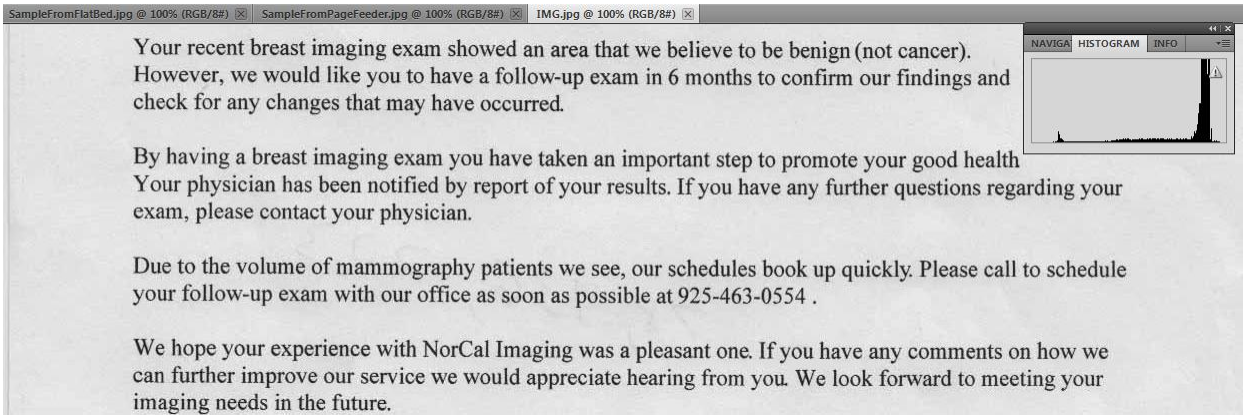

**Figure 4.38 – Scanned Image with AutoEnhance Disabled**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

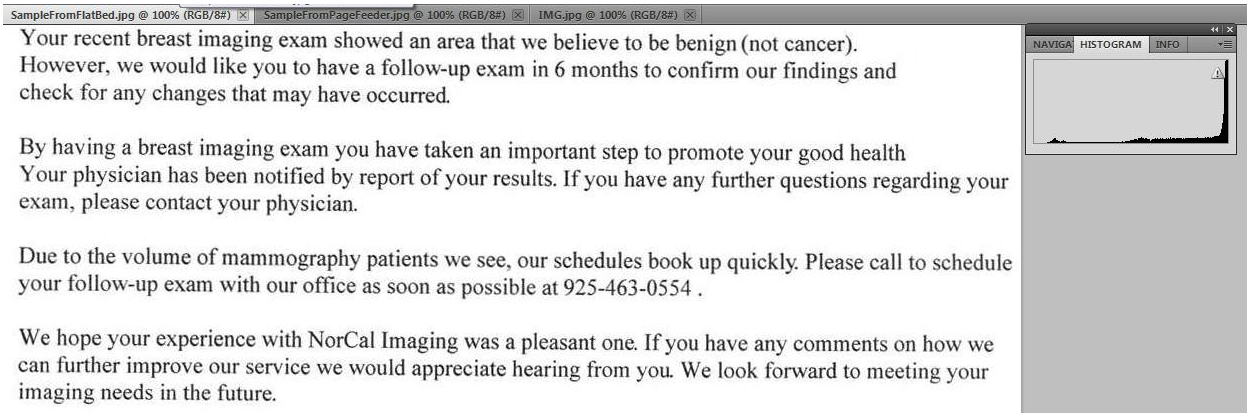

**Figure 4.39 – Scanned Image with Auto Enhance Enabled**

These two new options are configurable by document type and can be turned on or off at the time of scanning as shown in the following acquire scan dialog:

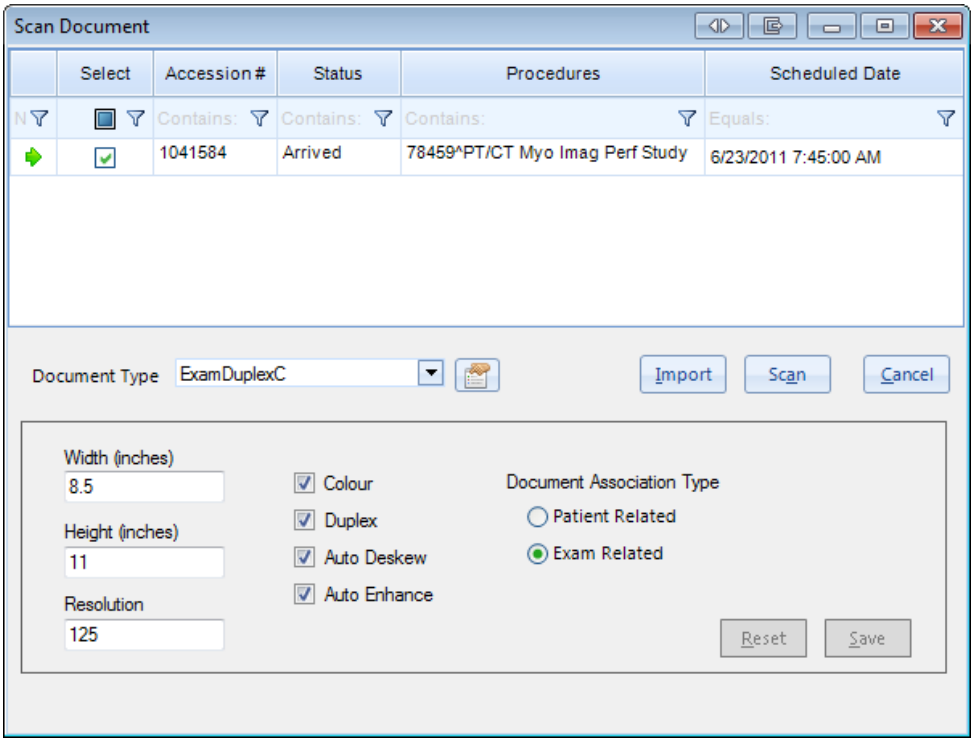

**Figure 4.40 – Scanned Document Type with Auto Deskew and Auto Enhance Specified**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Also to improve fixing rotations after a batch scan, keyboarding shortcuts such where tweaked to include tool tips such as <Page Down> for previous image, <Page Up> for next image, <R> for rotate right, <Shift>+<R> for rotate left, <F> for flip and <Enter> to accept the changes and close the window. In addition, the space bar will change the view type between "Fit To Screen", "Fit To Width" and "Original". The up and down arrows will also flip between pages; however, if the scroll bar is shown the up and down arrows will move you up and down though the document (same as mouse wheel).

Print "ALL" was introduced as a standard option in the print dialog box so that "Selection" is now the default and will only print the image the user has selected, while the "All" option, which previously didn't function will print all the images.

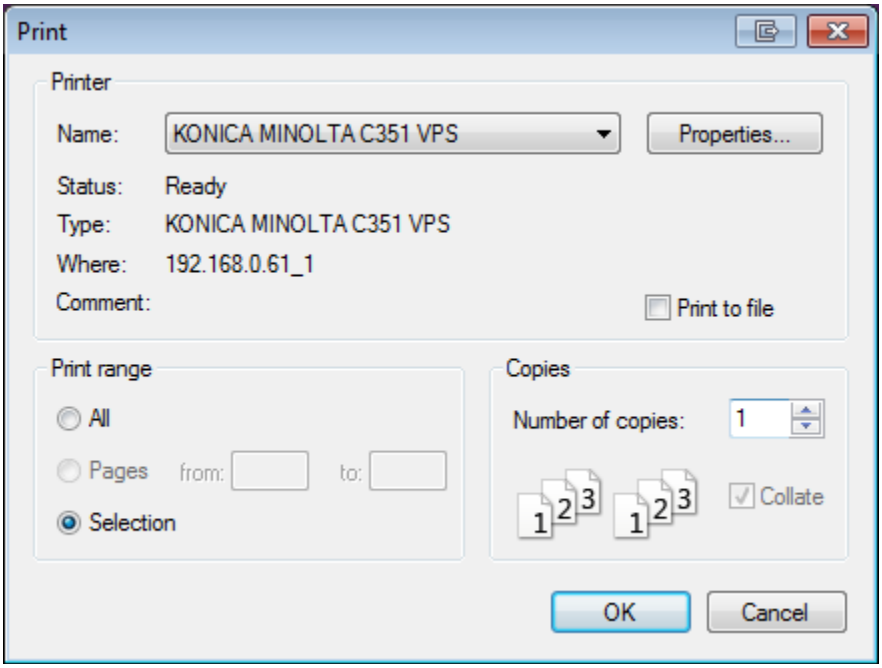

**Figure 4.41 – Printing Scans Dialog Box**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Known Limitations

Bugs, Suggested Features, and Support Issues are now tracked in a web based system called Redmine. The following is a snapshot of the issues found in Build 1.17.

| # | Status | Subject | Category | Found | %Done | Resolved |
|---|---|---|---|---|---|---|
| 463 | New | Concurrency error on scheduling | Web Services/DB | 1.17 | 0 | |
| 462 | New | Error attempting to save an edited scheduled exam from Appoointment Book | Thick Client GUI | 1.17 | 0 | |
| 461 | New | Editing Order Notes | Thick Client GUI | 1.17 | 0 | |
| 460 | New | Order / Scheduling > Schedule This Order button is active on scheduled exam in Patient mode | Thick Client GUI | 1.17 | 0 | |
| 459 | New | Admin tools > cannot view entire tool tip | Admin Tools | 1.17 | 0 | |
| 458 | New | Add payment error - WCFClient Receipt_number error | Thick Client GUI | 1.17 | 0 | |
| 457 | New | Edit User - Account > Account Information > User Groups > not all user groups are displayed when more than one line of user groups assigned. | Thick Client GUI | 1.17 | 0 | |
| 456 | New | GUI dictation control visualization | Thick Client GUI | 1.17 | 0 | |
| 455 | New | Report history button is active when there is no report history | Thick Client GUI | 1.17 | 0 | |
| 454 | New | Add / edit user - Contact information edit button active when no enteries to edit! | Admin Tools | 1.17 | 0 | |
| 452 | New | Add / edit user - Contact information - problem with phone/fax number field | Admin Tools | 1.17 | 0 | |
| 451 | Resolved | Data Nuggets - Can cause multiple instances or rRIS | Thick Client GUI | 1.17 | 100 | 1.18 |
| 450 | Resolved | Data Nugget - Exception loading report | Thick Client GUI | 1.17 | 100 | 1.18 |
| 449 | New | Reporting - Exception deleting dictation | Thick Client GUI | 1.17 | 0 | |
| 448 | New | Receipt - Registration screen should stay in foreground when prompted for receipt | Thick Client GUI | 1.17 | 0 | |
| 447 | New | Dictation - User is able to start dictating with SpeechMike when it is not the recording device | Thick Client GUI | 1.17 | 0 | |
| 446 | New | Receipt - No means to reprint a receipt | Thick Client GUI | 1.17 | 0 | |
| 445 | New | Checkbox - When selecting, forms do not get marked as dirty | Thick Client GUI | 1.17 | 0 | |
| 444 | New | Worklist - Issue with dates when adjusting row height | Thick Client GUI | 1.17 | 0 | |
| 443 | Closed | Save As Order - Exception on Save | Thick Client GUI | 1.17 | 100 | 1.17 |
| 442 | New | Edit Order - Payments will not save to database | Thick Client GUI | 1.17 | 0 | |
| 430 | Resolved | Patient Search - Issue when searching by phone number | Thick Client GUI | 1.17 | 100 | 1.18 |

# 1. Purpose

This document describes some of the new features and changes implemented in rRIS as of the end of Sprint 18. This pre-release version of rRIS is referred to as Build 1.18.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the rRIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation instructions for the rRIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu, click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.18 is considered a new core release of the application and will require a reinstallation of rRIS. This is accomplished by navigating to the rRIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application, please do not hesitate to contact Spencer MacDougall with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Aborted Study Workflow

In previous versions we could abort a study and reschedule but if the user chose not to reschedule, the study was left in aborted status. In build 1.18 we have taken it a step further. Instead of leaving the study in aborted status we now make a copy of the visit and order and mark them as new, resulting in the study being moved back to the Orders to Schedule work list. A pop up in the Perform Exam screen informs the user that the order has been returned to pending orders work list.

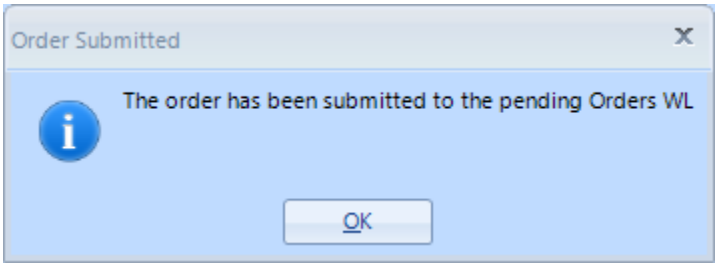

**Figure 4.1 – Aborted Study Confirmation box.**

## Ability to add Assigned, Performing and Assisting Radiologists

In build 1.18 three new list boxes were added to the Perform Exam allowing the Technologist to capture the Assigned Radiologist, Performing Radiologist and Assisting Radiologist.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

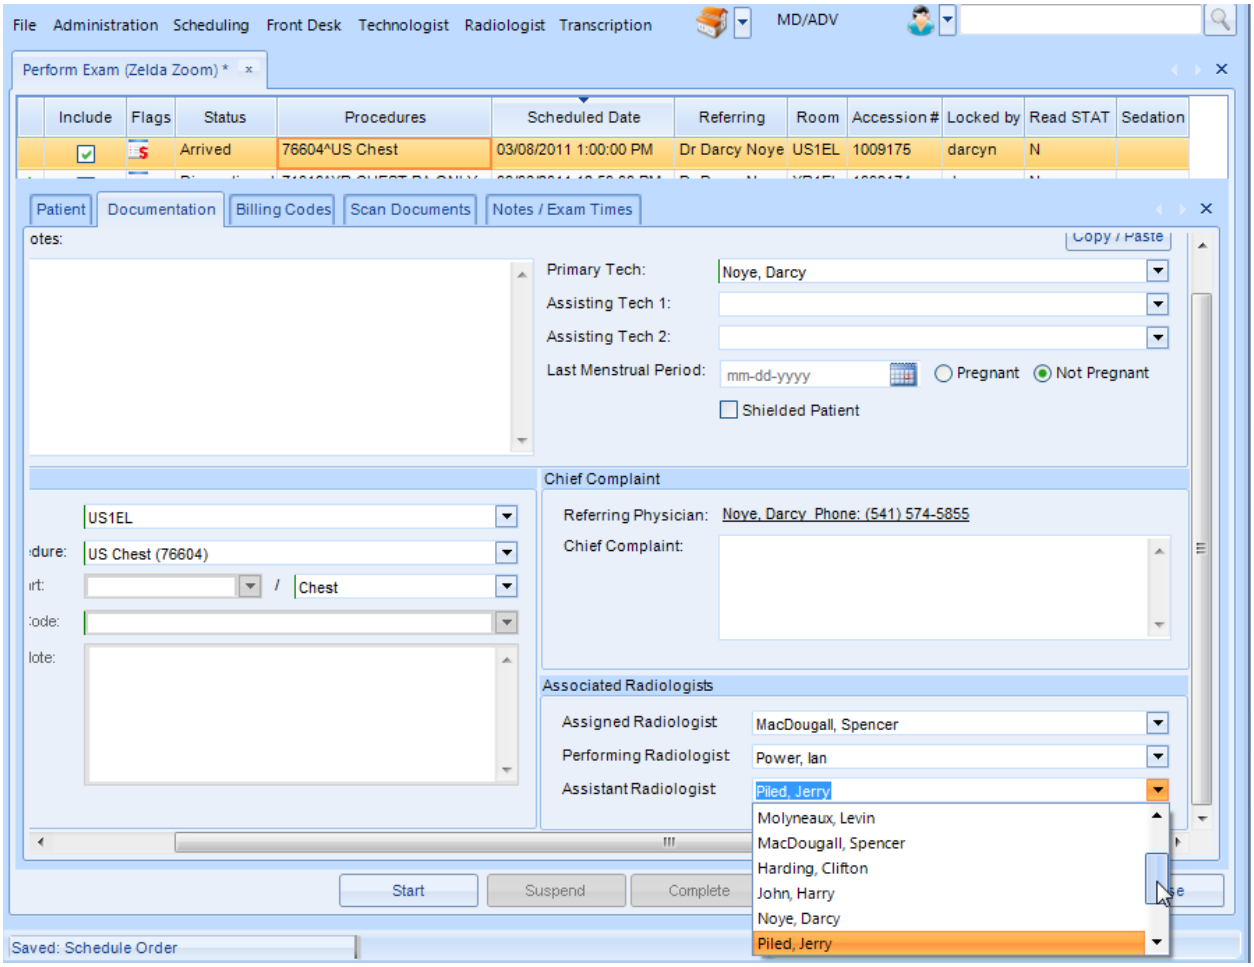

**Figure 4.2 – Associated Radiologists list boxes**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Capture Injury / Adjustor Info

In build 1.18 the Adjustor's first and last names and also adjustor's phone number can be captured in the Manage Policies / Patient Insurance Policies window.

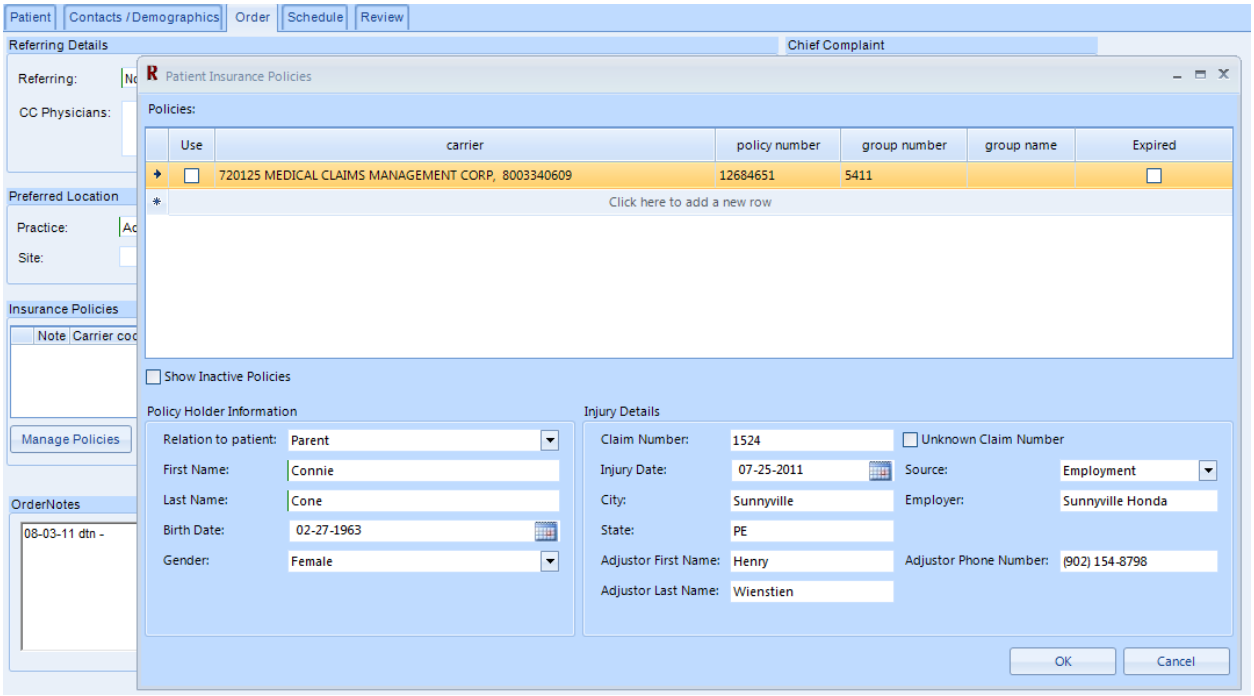

**Figure 4.3 – Manage Policies – Injury details with new fields to capture Adjustor info and Unknown Claim Number.**

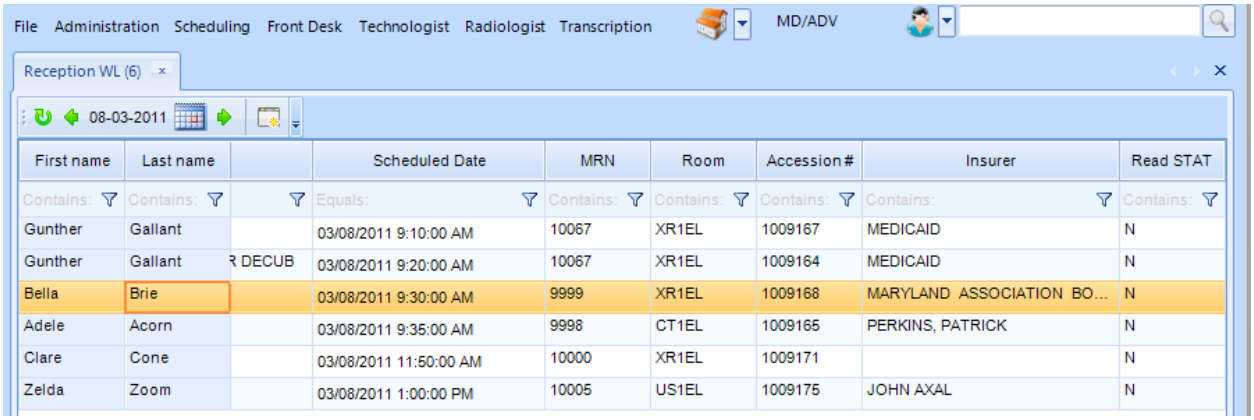
## Unknown Claim Number Flag

Some carriers require that a claim number be captured. If the claim number is not known at the time of entering insurance information, the user had no way to proceed. In build 1.18 we have added a check box "Unknown Claim Number" so the work flow can proceed (see Figure 4.3 of this document). Other injury information can be captured, and selecting Unknown Claim Number will allow the user to save Policy and Injury details.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Carrier Information on Registration Work List

Build 1.18 the carrier name will be displayed on the Reception work list listed in a new column for each patient. If the patient does not have carrier information, the column is left blank. If the patient has more than one carrier policy, only the primary carrier will be displayed.



| First name | Last name | | Scheduled Date | MRN | Room | Accession # | Insurer | Read STAT |
|---|---|---|---|---|---|---|---|---|

**Figure 4.4 – Carrier Information displayed on Reception work list.**

## Insurance Policy Carrier notes popup

Previous to build 1.18 the user had to double click on the carrier to see the Insurance Carrier Notes. New in this build when Insurance Carrier information is added or edited we will now automatically display in a popup message displaying the Carrier notes when one of the following conditions are met.

1. The Carrier has associated notes configured
2. The "Use" check box is selected for that Carrier.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

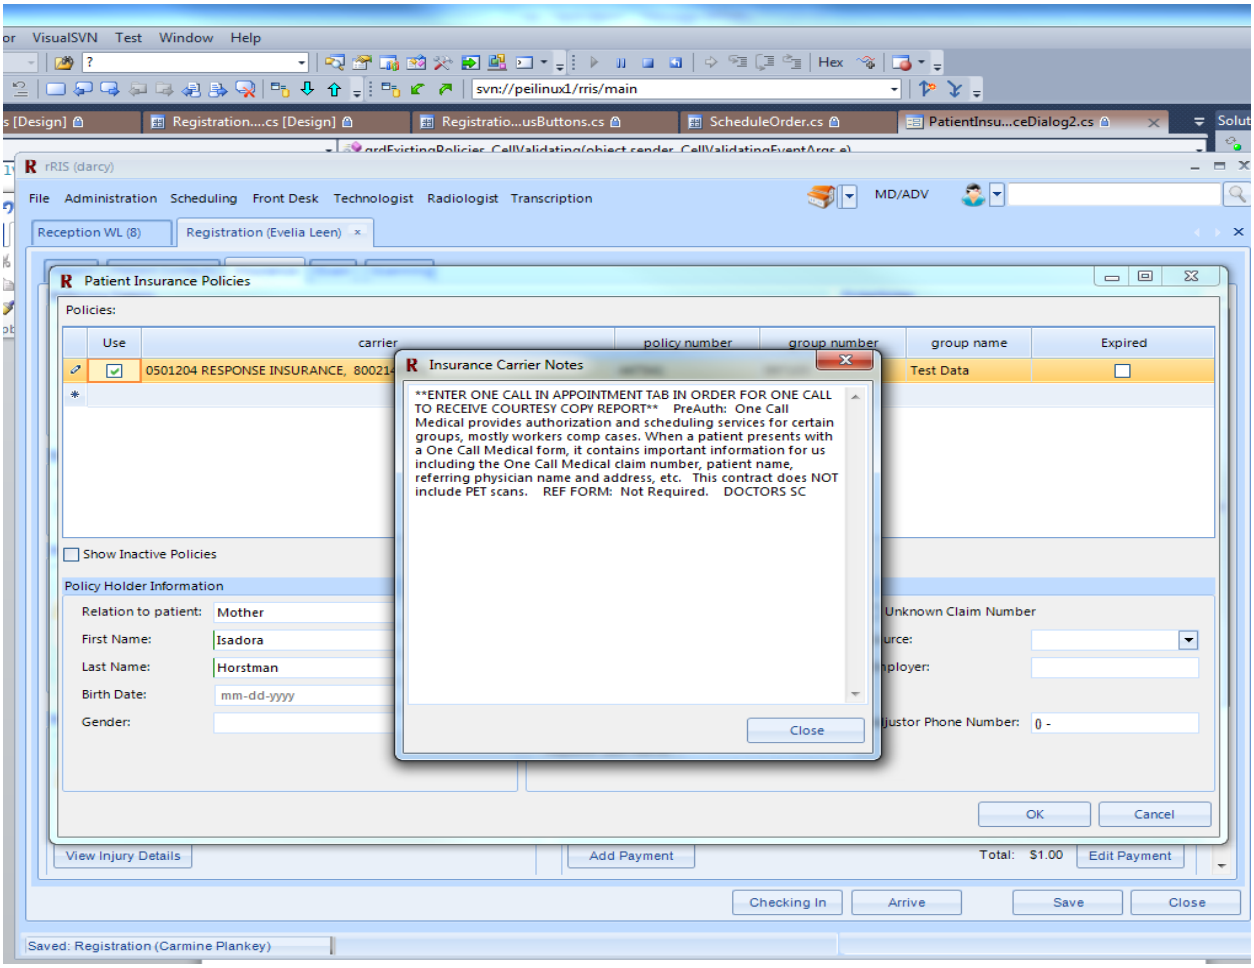

**Figure 4.5 – Carrier Notes Popup displays when adding or editing Carrier information**

## Clone Personnel

Build 1.18 has the added ability to clone personnel allowing an Administrator to copy the settings of an existing user. A drop down list box has been added under the Create New button (see figure 4.6).

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

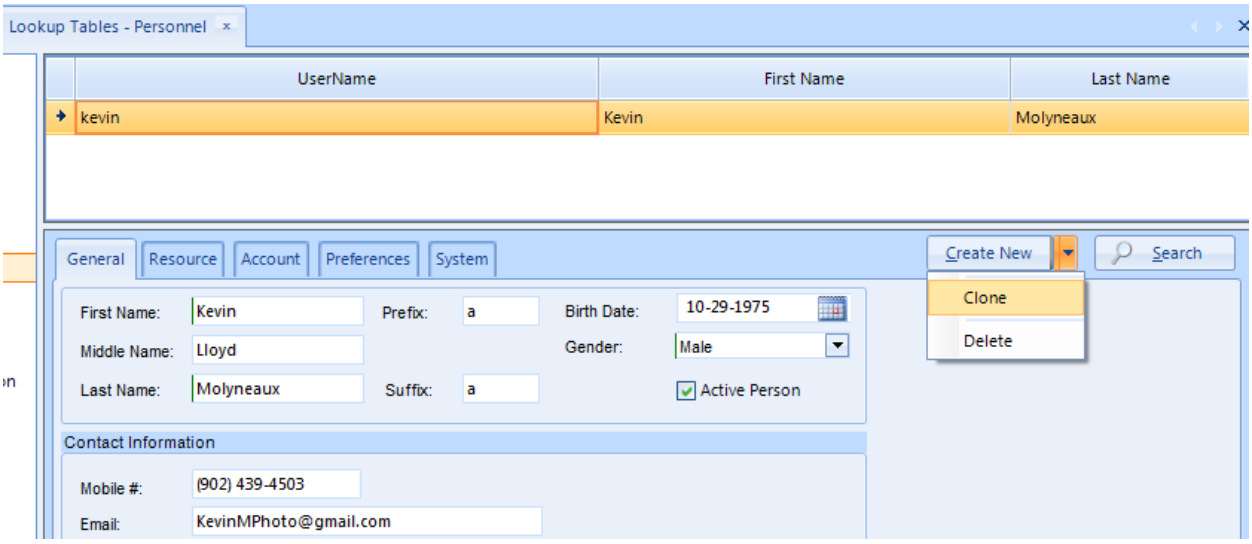

**Figure 4.6 – Create New Clone option**

Selecting Clone will open a new window where the user can then choose which options they would like to have pre-configured for the new user.

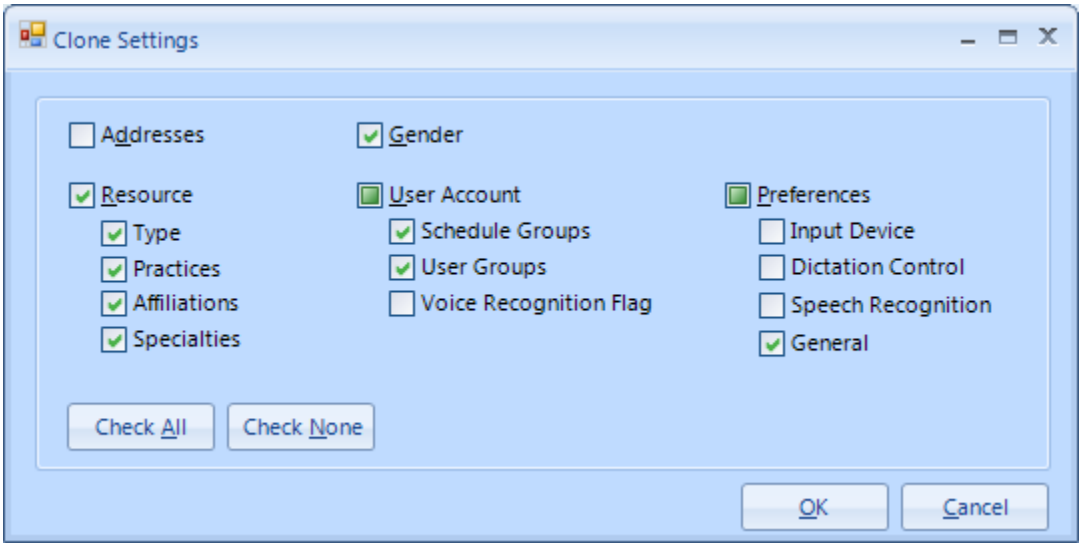

**Figure 4.7 – New Clone setting window.**

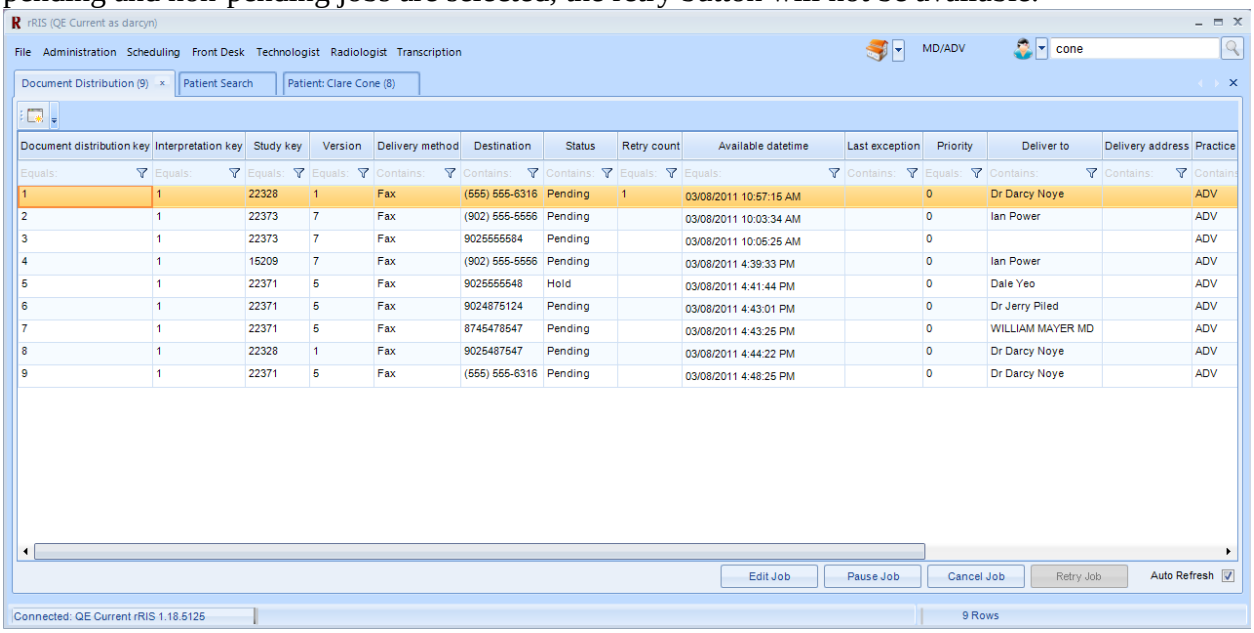
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Document Distribution Management

The ability to view and manage document distribution was added to the application in build 1.18. Accessed from the Administration menu - Document Distribution Manager, a new work list will show all documents in an "active" status (jobs that are cancelled or completed will not show in this work list).

The WL is auto refreshed. Buttons to edit, pause and cancel are available for all jobs listed in work list. The retry button is only enabled for jobs **not** in pending status. If a combination of pending and non-pending jobs are selected, the retry button will not be available.



| Document distribution key | Interpretation key | Study key | Version | Delivery method | Destination | Status | Retry count | Available datetime | Last exception | Priority | Deliver to | Delivery address | Practice |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| 1 | 1 | 22328 | 1 | Fax | (555) 555-6316 | Pending | 1 | 03/08/2011 10:57:15 AM | | 0 | Dr Darcy Noye | | ADV |
| 2 | 1 | 22373 | 7 | Fax | (902) 555-5556 | Pending | | 03/08/2011 10:03:34 AM | | 0 | Ian Power | | ADV |
| 3 | 1 | 22373 | 7 | Fax | 9025555584 | Pending | | 03/08/2011 10:05:25 AM | | 0 | | | ADV |
| 4 | 1 | 15209 | 7 | Fax | (902) 555-5556 | Pending | | 03/08/2011 4:39:33 PM | | 0 | Ian Power | | ADV |
| 5 | 1 | 22371 | 5 | Fax | 9025555548 | Hold | | 03/08/2011 4:41:44 PM | | 0 | Dale Yeo | | ADV |
| 6 | 1 | 22371 | 5 | Fax | 9024875124 | Pending | | 03/08/2011 4:43:01 PM | | 0 | Dr Jerry Piled | | ADV |
| 7 | 1 | 22371 | 5 | Fax | 8745478547 | Pending | | 03/08/2011 4:43:25 PM | | 0 | WILLIAM MAYER MD | | ADV |
| 8 | 1 | 22328 | 1 | Fax | 9025487547 | Pending | | 03/08/2011 4:44:22 PM | | 0 | Dr Darcy Noye | | ADV |
| 9 | 1 | 22371 | 5 | Fax | (555) 555-6316 | Pending | | 03/08/2011 4:48:25 PM | | 0 | Dr Darcy Noye | | ADV |

**Figure 4.8 – Document Distribution Work List**

The work list allows for multi selection, enabling the user to select a range of jobs for a specific action button. Cancelling jobs will move the jobs status to Cancelled and remove the job from the work list.

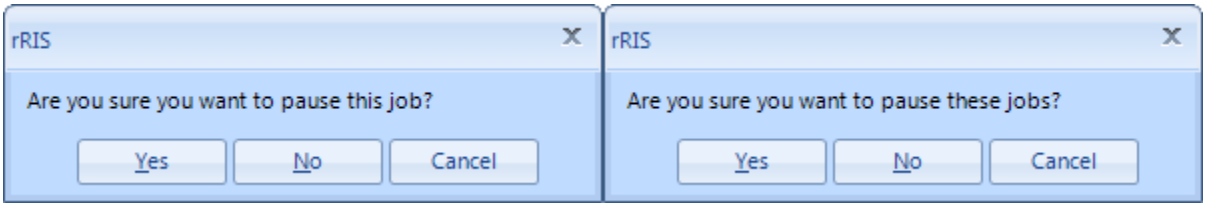


**Figure 4.9 – Confirmation message on left for single job. Confirmation message on right for multiple jobs.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

The edit job button opens another dialog form with the fields for Recipient, Location and Delivery Method disabled. If the user wants to modify these values they will have to cancel this job and create a new one with the desired Recipients information. The Destination and Priority fields are editable. If multiple jobs are selected that belong to the same recipient, the Destination field will be enabled, otherwise the Destination field will not be editable.

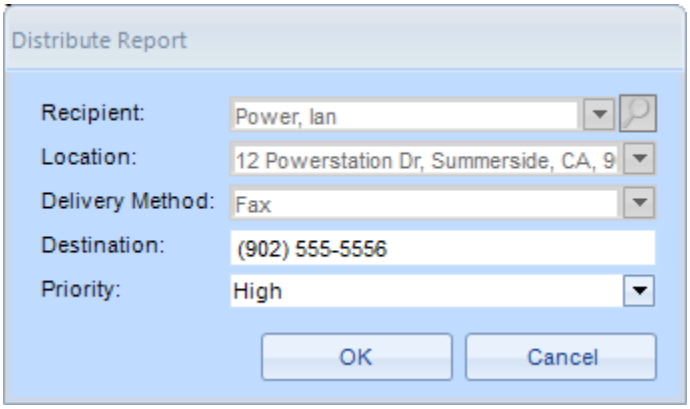

**Figure 4.10 – Edit Job popup dialog**

In Figure 4.10 you can see that a Location was chosen. This auto-populates the delivery and destination values. If job that has a Location value is edited and the Destination value is changed, the user will be prompted asking if they would like to update fax delivery for this address.

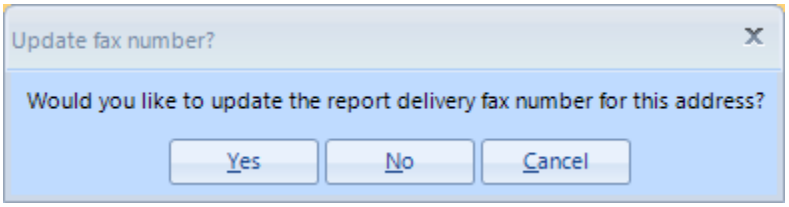

**Figure 4.11 – Edit destination information on job that has Location key value.**

## NPI Required for Radiologists and Referring Physicians.

In build 1.18 the NPI number will now be required for any users created that have Resource Type of Referring Physician or Radiologist checked under the Resource tab. The Resource

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Information section of this tab is where you will find the NPI field that is now required.

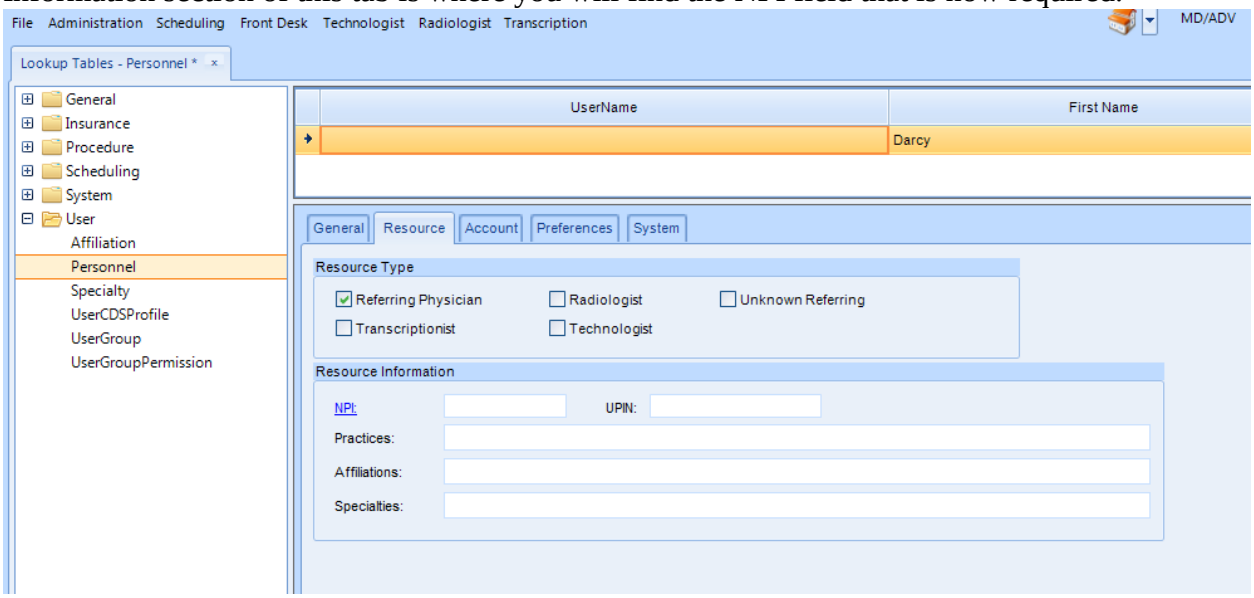

**Figure 4.12 – NPI required and NPI hyperlink**

For convenience the NPI: label is hyperlinked to the NPI registry. The First and Last name fields are passed to the NPI site opening a new window with the available results from the criteria searched.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

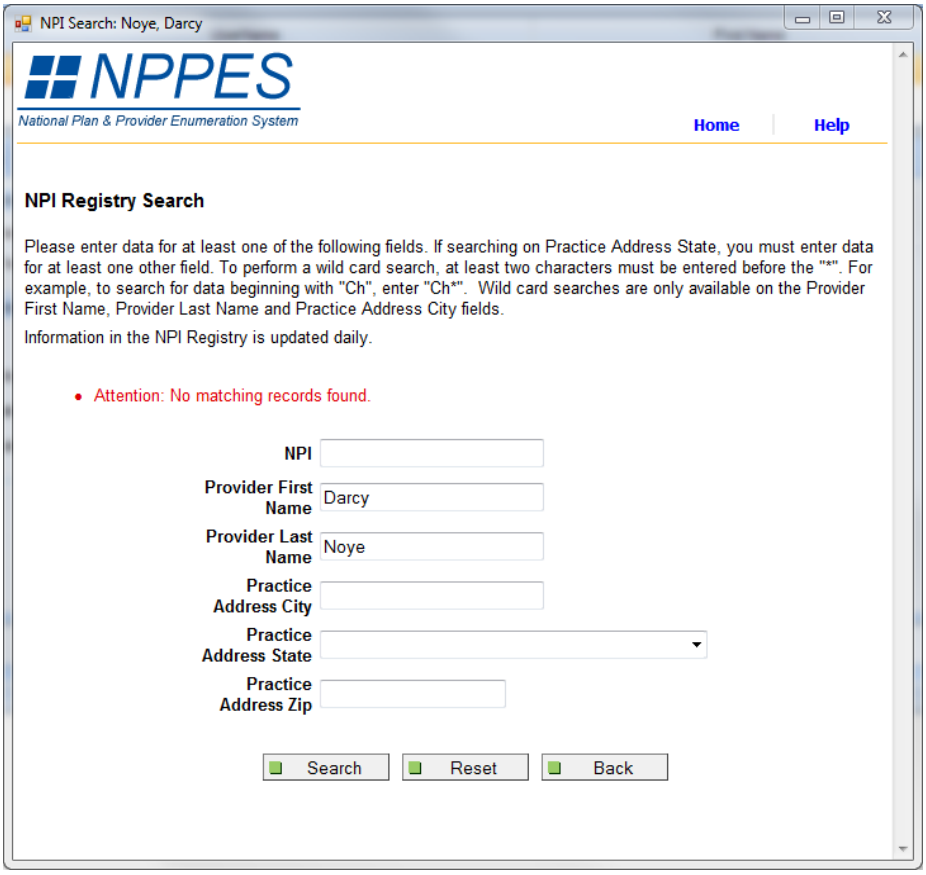

**Figure 4.13 – Search window opened from hyperlink**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Assign to Radiologist

Build 1.18 has the ability to assign Radiologist to a study. This is achieved by selecting a row or a range of rows from the Exam Done work list and from the right click short cut menu selecting Assign to Radiologist.

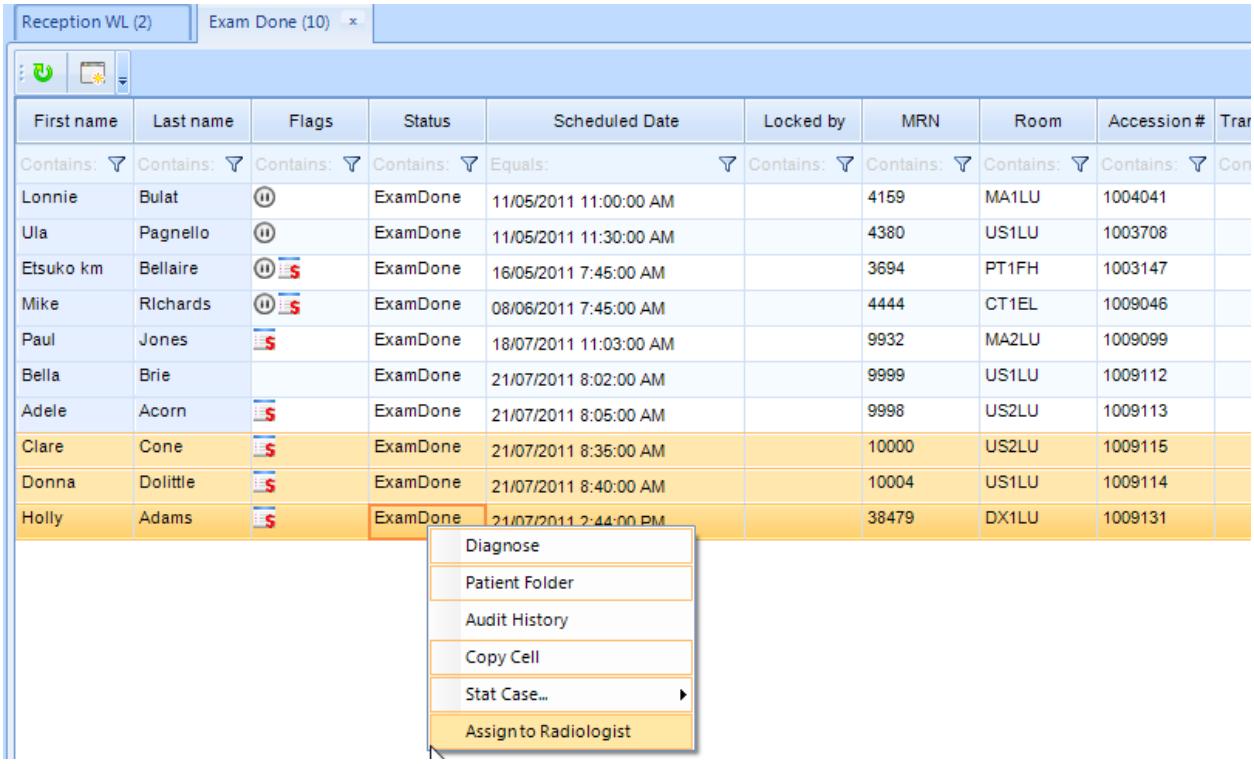

**Figure 4.14 – Assign to Radiologist from right click on Exam done work list.**

Selecting Assign to Radiologist will spawn a new window displaying the available Radiologists.

Note: The list of Radiologists displayed will be filtered by Practice based on the exam selected.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**Figure 4.15 – Assign to Radiologist**

## Audible Sound on Record Dictation Start

A user preference called Beep when ready was added to the Dictation Control tab. This feature will play and audible sound to alert the user as to when the control is ready for recording.

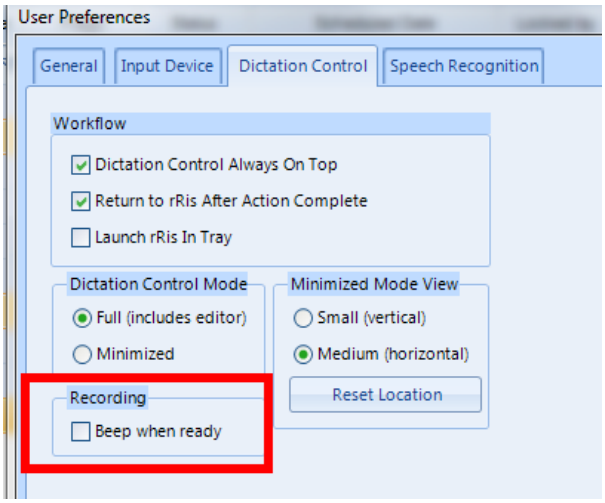

**Figure 4.16 – Patient Tab Showing Race Dropdown**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Organization Picker

The ability to change between organizations has been built into the application in Build 1.18. A new ICON (looks like an office building) was added to the menu bar. Selecting the arrow next to the ICON will expand to a drop down list enabling the user to change from current site. Expanding the list will display all the Orgs and Sites the current logged in user is configured for. When the selected Org or site changes, work lists will refresh as will the label next to the ICON. The org and site codes of your currently selected Organization and site are displayed to the right of the ICON.

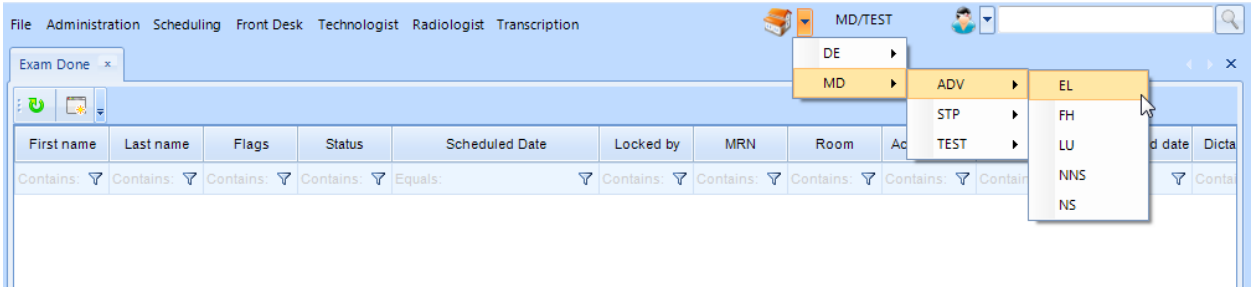

**Figure 4.17 – New Organization Picker ICON and visual representation of you current organization.**

## Sedation Type Added to Work list

Build 1.18 has a column called Sedation added to the Technologist work list. The sedation type will be captured at Reception. The code for Sedation type will be displayed in this column.

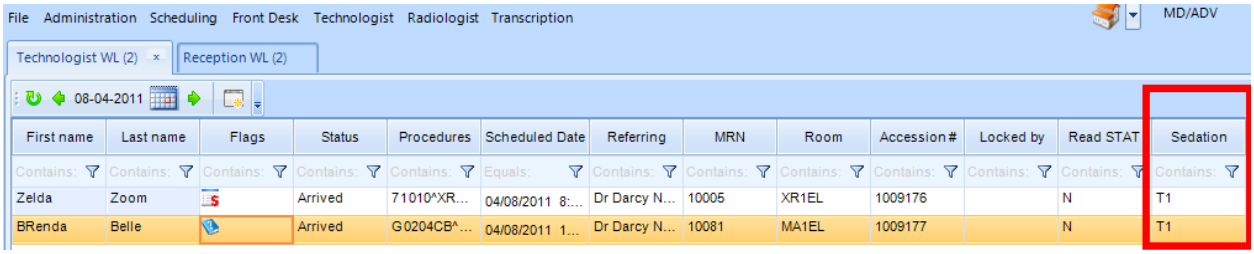

**Figure 4.18 – Sedation column added to Technologist work list.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Delivery Location vs Visited Location Cleanup

A change was made for configuring the delivery location of where the report should be sent. Now the user can be configured to have a different "Delivery To" location than the address or fax number listed for contact information. As you can see in the figure 4.19 below the Delivery information can be completely different and separate from the contact information. The delivery information can be specified for each address added for the user.

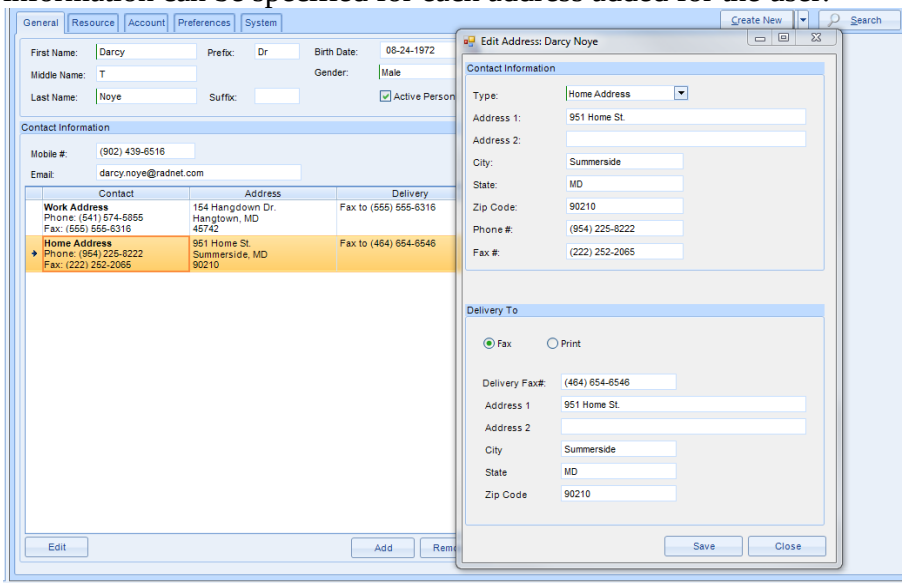

**Figure 4.19 – "Delivery To" changes in Add/Edit Address**

This is carried over to the Orders tab. The drop down list for Delivery location was removed from this tab. The address selected for "Visited at" will use the Delivery To method configured for that contact information.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

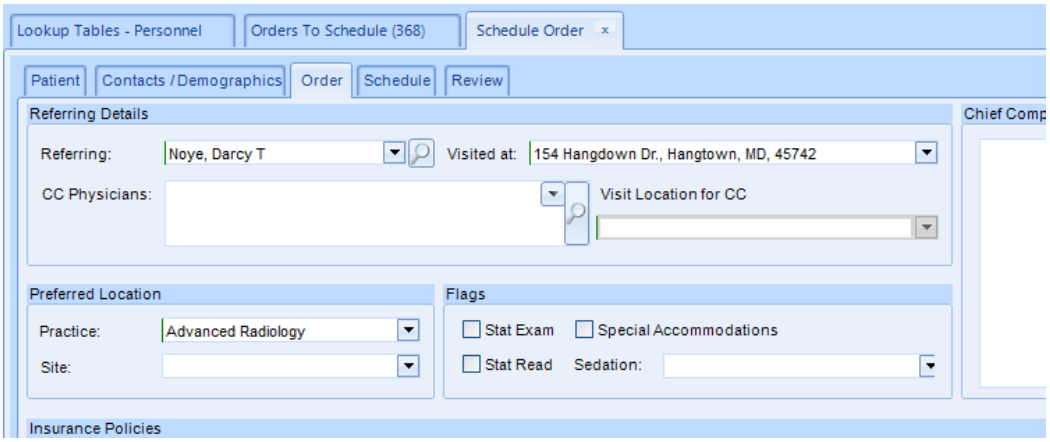

**Figure 4.20 – Reorganized order tab**

## Book X Continued – Arrive Multiple same day orders for patient,

Reception will be prompted with the window displayed below if the patient they selected for registration has multiple orders scheduled for that day within the user's organization. The window displayed in Figure 4.21 shows all the exams scheduled for Sally Mills for today. The user can select which scheduled orders they would like to arrive with the current one or they can cancel and only arrive the current scheduled order. All orders are selected by default.

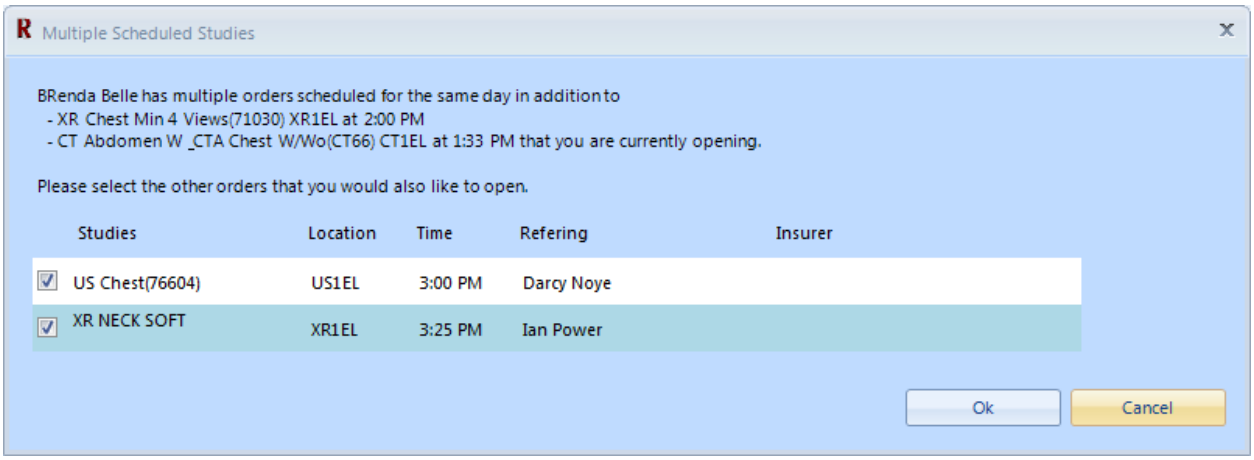

**Figure 4.21 – Arriving a patient with multiple scheduled orders will prompt user.**

If the user chooses to Arrive more than one, the registration window will open an order tab for each scheduled order.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

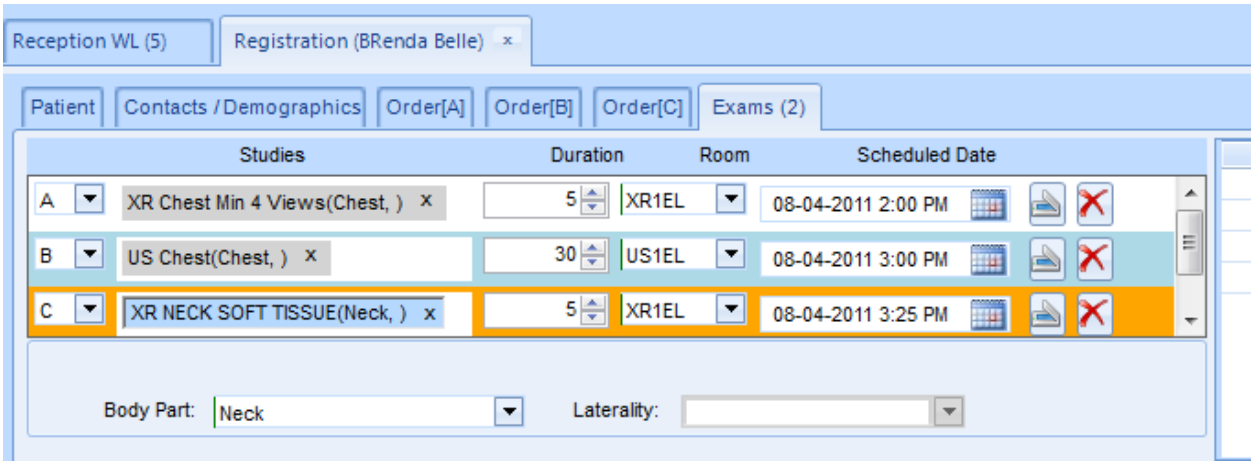

**Figure 4.22 – Arriving multiple scheduled orders**

## Preview for Diagnostic Report

Build 1.18 provides the radiologist and the technologist the ability to preview diagnostic reports. From within the diagnose or create reports windows a new button "Preview" will display a print layout view of the report even when the interpretation is not saved to the DB.

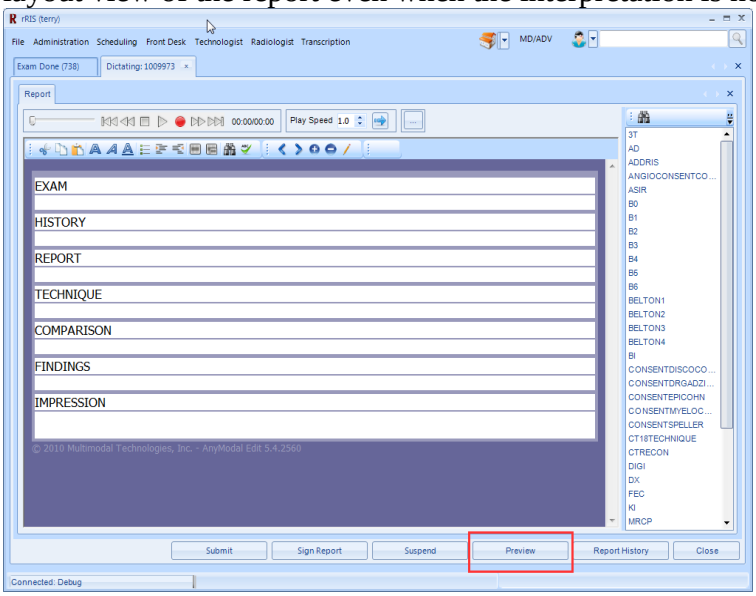

**Figure 4.23 – Preview button**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

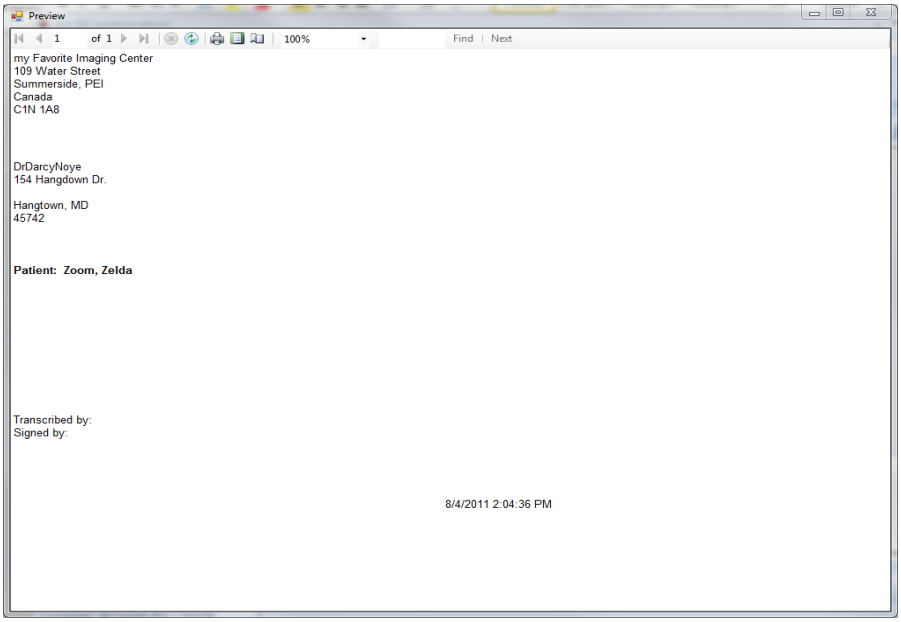

**Figure 4.23 – Preview of report**

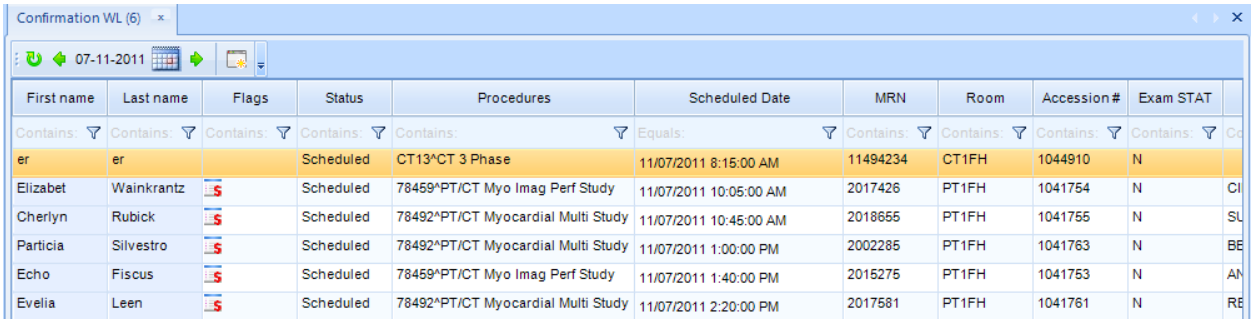
## Study Confirmation Work List.

A new work list has been added to verify the currently selected day's exams have been confirmed. The new work list is opened from under the Scheduling menu.



| First name | Last name | Flags | Status | Procedures | Scheduled Date | MRN | Room | Accession # | Exam STAT |
|---|---|---|---|---|---|---|---|---|---|
| Contains: | Contains: | Contains: | Contains: | Contains: | Equals: | Contains: | Contains: | Contains: | Contains: |
| er | er | | Scheduled | CT13^CT 3 Phase | 11/07/2011 8:15:00 AM | 11494234 | CT1FH | 1044910 | N |
| Elizabet | Wainkrantz | S | Scheduled | 78459^PT/CT Myo Imag Perf Study | 11/07/2011 10:05:00 AM | 2017426 | PT1FH | 1041754 | N |
| Cherlyn | Rubick | S | Scheduled | 78492^PT/CT Myocardial Multi Study | 11/07/2011 10:45:00 AM | 2018655 | PT1FH | 1041755 | N |
| Particia | Silvestro | S | Scheduled | 78492^PT/CT Myocardial Multi Study | 11/07/2011 1:00:00 PM | 2002285 | PT1FH | 1041763 | N |
| Echo | Fiscus | S | Scheduled | 78459^PT/CT Myo Imag Perf Study | 11/07/2011 1:40:00 PM | 2015275 | PT1FH | 1041753 | N |
| Evelia | Leen | S | Scheduled | 78492^PT/CT Myocardial Multi Study | 11/07/2011 2:20:00 PM | 2017581 | PT1FH | 1041761 | N |

**Figure 4.24 – Confirmation Work List.**

Selecting a study and hitting the Confirm button will check to see if the patient has multiple studies scheduled for that day. If multiple studies are found, a prompt will display asking which studies are to be confirmed.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

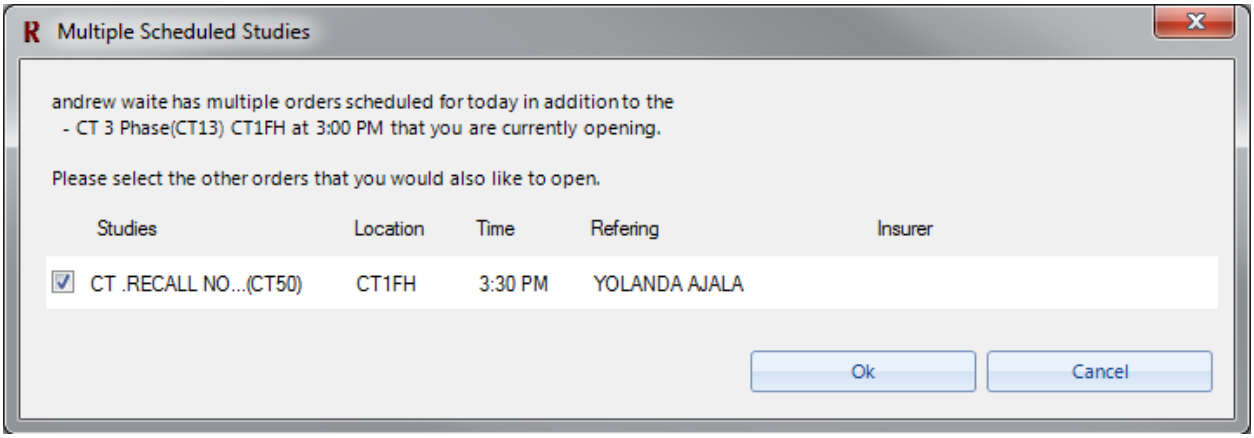


**Figure 4.25 – Multiple Scheduled Studies found for today.**

Choosing all or none of the extra exams, the user selects Ok on the prompt displayed in Figure 4.25, which will then open the confirmation window. The Confirm window is open to allowing exam or patient data changes. Once the study is confirmed it is removed from the Confirmation work list, but remains in the Reception work list.

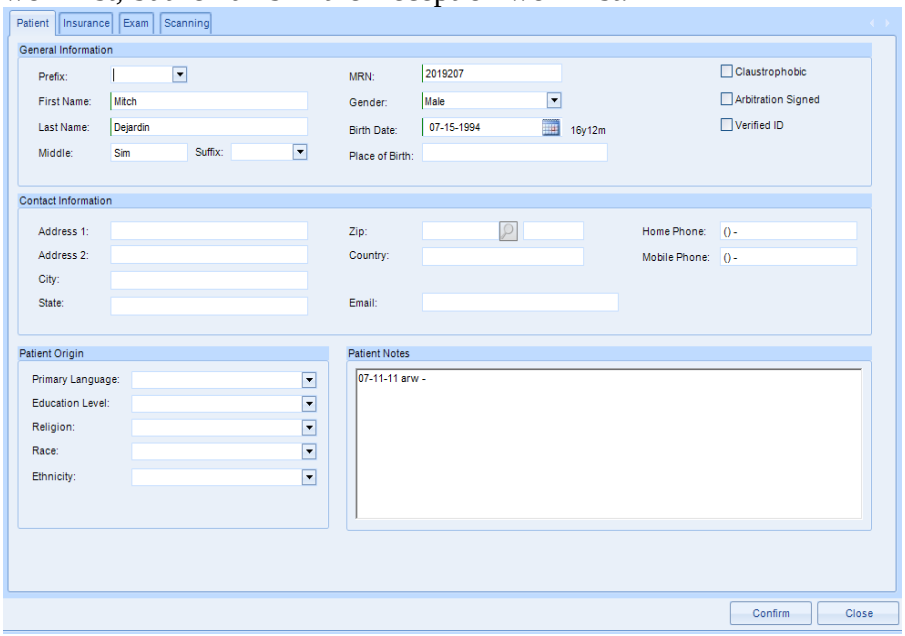

**Figure 4.26 – Confirmation window**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Ability to Create Unknown Referring Physician

In Build 1.18 a scheduler will have the ability to create an Unknown Referring Physician if their search for a referring physician comes up empty. From within the search window selecting the Create New button will open a scaled back version (by permissions) of the personnel editor. The flag for Unknown Referring is defaulted and cannot be changed at this point. If the visit information is required on Orders tab, the creator of the unknown referring physician will have to make sure this information is added at this time. Upon completion of create the unknown Referrer, the order screen is populated with the new data. The referring name will be appended with (unknown)

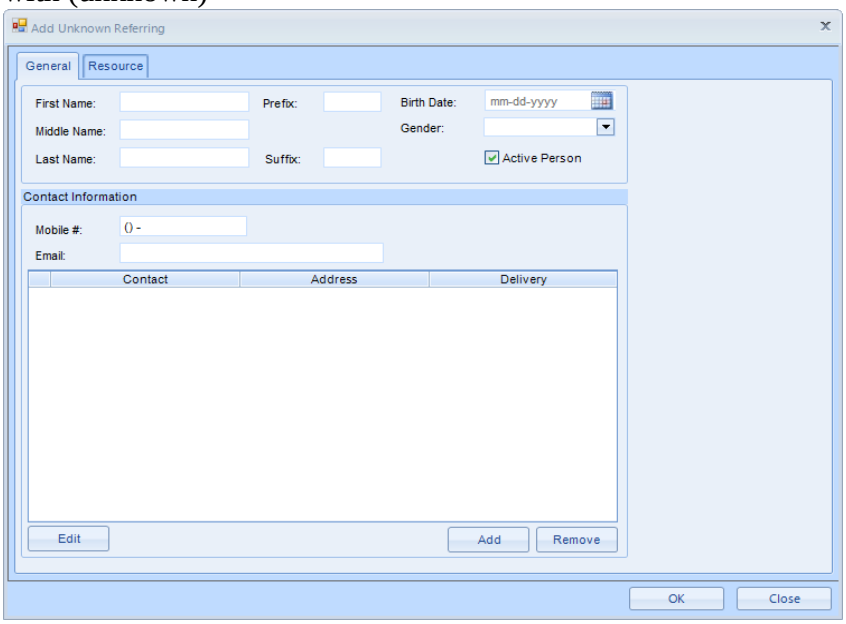

**Figure 4.27 – Add Unknown Referring Physician**

An administrator has access to an Unknown Physician work list. This work list will contain the orders that currently have referrers flagged as unknown. The action from this work list is to edit the orders that have unknown referrers. The administrator can right-click on the physician in the order tab, and can select a new context menu items called “Reconcile Unknown Referring”. A new screen will launch that displays the existing unknown referring data, and has a referring search control built in.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

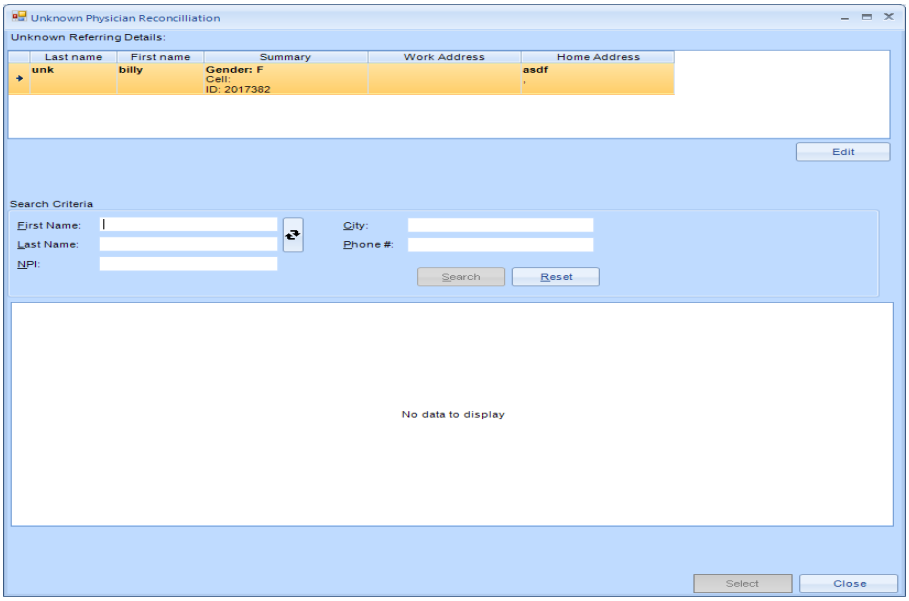

**Figure 4.28 – Unknown Physician Reconciliation window.**

The administrator can search for a referring. If they find and select one and close the screen, the new physician will replace the original unknown referring, and the unknown referring will be deleted.
If the administrator cannot find a suitable match, they can select an Edit button beside the unknown referring's information. This will launch the personnel editor, and will allow the admin to update this physician to a known physician (by changing the flag) , and can add or edit any other data about the referring.

## Scanning Documents on Scheduling Screens

Scanning documents for orders, scheduled exams or arriving patients will be controlled via a scan button located in the procedure picker's window study row. Selecting this button will open the Scan Document Viewer window, and then also launch the Scan Document window. At this point the user can choose to scan or import a document. Selecting Cancel on Scan Document window will take the user back to the Scan Document Viewer window where the user can view already scanned documents for this order or select check box to show all documents for patient.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

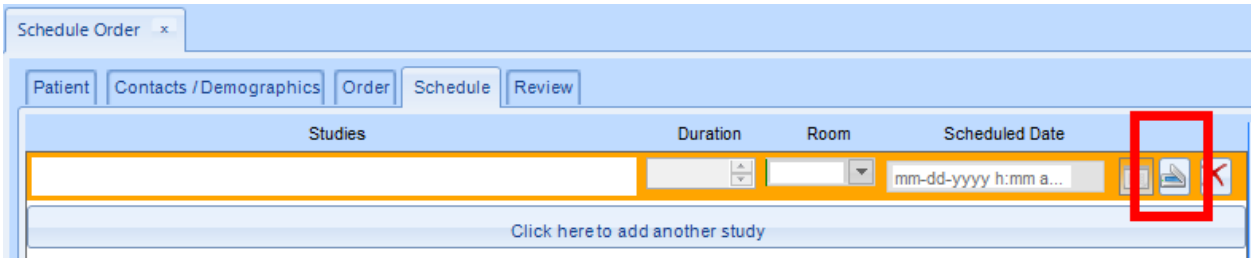

**Figure 4.29 – Scan ICON on Schedule tab**

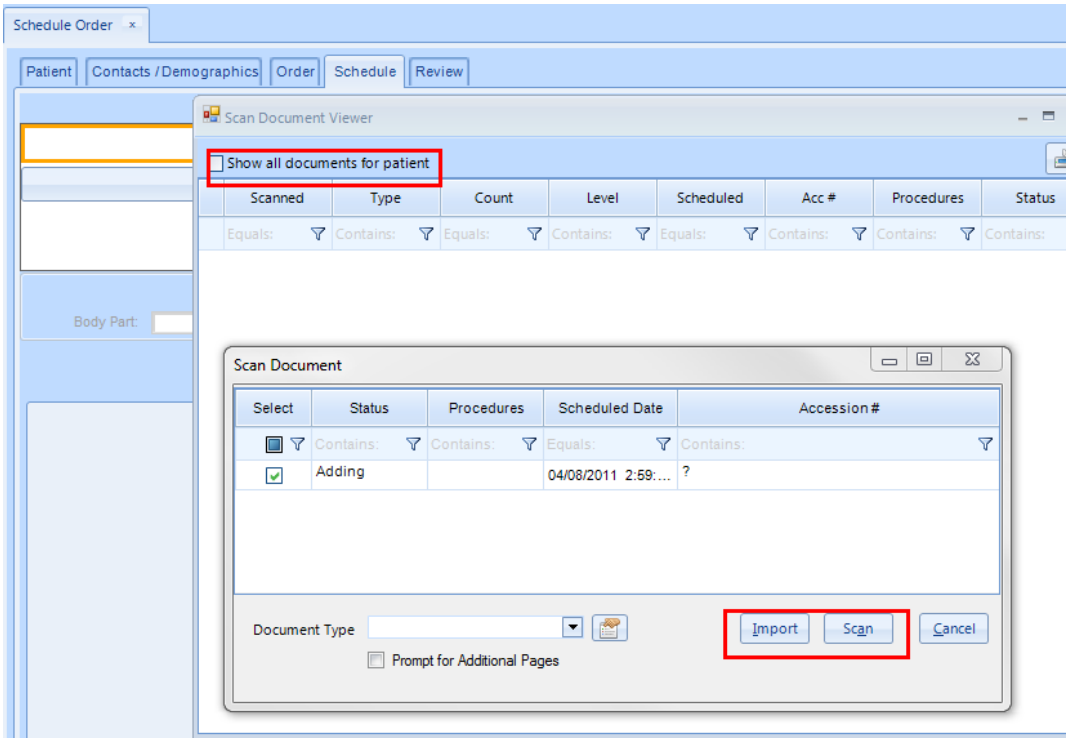

**Figure 4.30 – Scan Document View and Scan Document windows.**

Note: possible future change. Upon selecting the Scan Document ICON on the schedule tab it opens the Scan Document Viewer window only with focus put on the Scan ICON in this window. This way if the user only wants to view scan documents they are not required to always close the Scan document window. With the focus put on the Scan ICON in the Scan Document Viewer, the user can select Enter on keyboard to launch the Scan Document window to complete or import scans.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Known Limitations

Bugs, Suggested Features, and Support Issues are now tracked in a web based system called Redmine. The following is a snapshot of the issues found in Build 1.18.

| # | Status | Subject | Category | Target version | % Done | Resolved Version |
|---|---|---|---|---|---|---|
| 483 | New | Distribute document - error is returned if recepient does not have fax number | Thick Client GUI | 1.18 | 0 | |
| 482 | New | Enhancements for scanning work flow | Thick Client GUI | 1.18 | 0 | |
| 481 | New | Carrier notes pop up is displayed when Carrier does not have any notes associated | Thick Client GUI | 1.18 | 0 | |
| 480 | Resolved | Edit schedule, the room is not retained | Thick Client GUI | 1.18 | 100 | 1.19 |
| 479 | Resolved | Scheduling double order will give error from Calendar | Thick Client GUI | 1.18 | 100 | 1.19 |
| 478 | Resolved | Scan document work list. | Thick Client GUI | 1.18 | 100 | 1.19 |
| 477 | Resolved | Removing Scan doc returns error on save of Perform Exam window | Thick Client GUI | 1.18 | 100 | 1.19 |
| 476 | New | Receipt error after abort study by tech and do not want to reschedule | Thick Client GUI | 1.18 | 0 | |
| 457 | Resolved | user groups are displayed when more than one line of user groups assigned. | Thick Client GUI | 1.18 | 100 | 1.19 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This document describes some of the new features and changes implemented in rRIS as of the end of Sprint 19. This pre-release version of rRIS is referred to as Build 1.19.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the rRIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation instructions for the rRIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu, click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.19 is considered a new core release of the application and will require a reinstallation of rRIS. This is accomplished by navigating to the rRIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application, please do not hesitate to contact Spencer MacDougall with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Document Distribution History Screen

The document distribution history screen is a new work list that displays the list of all distributed jobs for a particular study. The work list is accessed via a context menu (right click on mouse) from the Patient Mode work list.

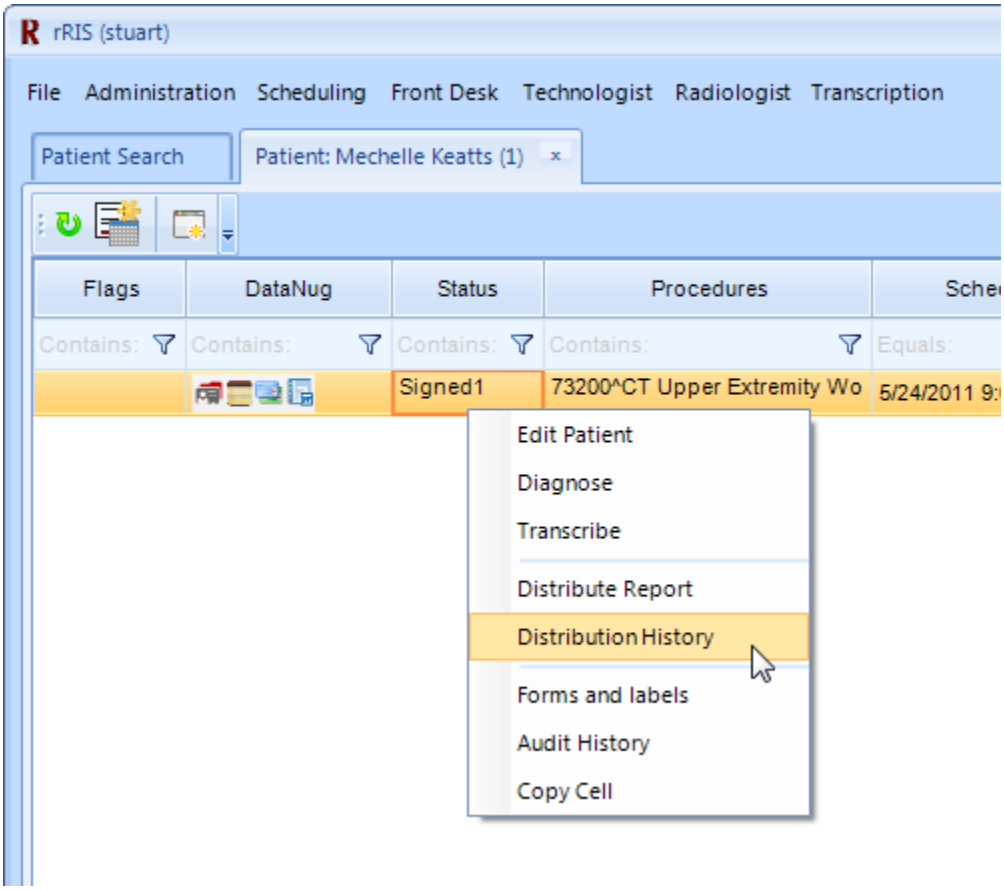

**Figure 4.1 – Accessing Distribution History work list from context menu**

This new work list will allow the user to not only view jobs for a particular study but the user also has the ability to edit, pause, retry, cancel and create new jobs. Jobs in cancelled or completed status can be retried, but the original job stays in the work list as part of its history. If a job is in Pending or In Progress, the retry button is not an option.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

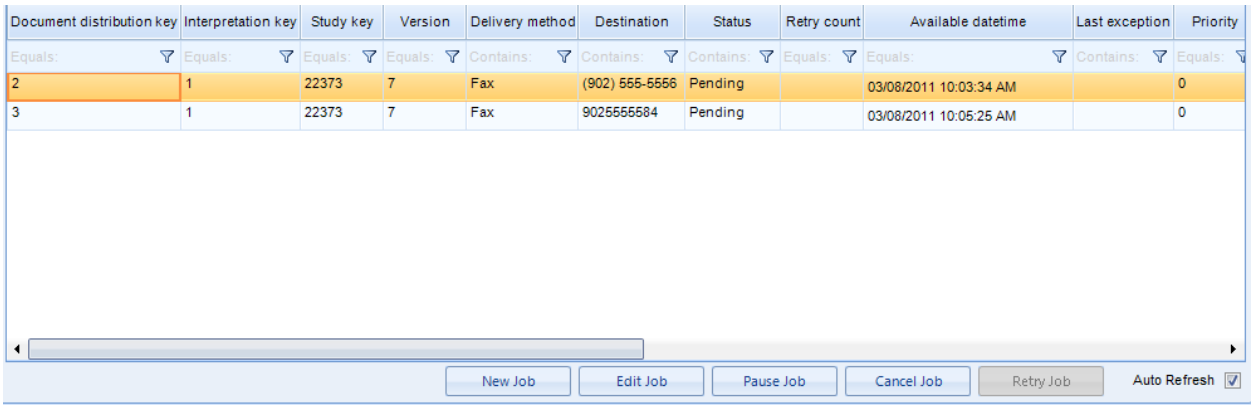

**Figure 4.2 – Document Distribution History Work List**

Creating a new job will open the Distribute Report window with all fields blank. Search option is available for locating a recipient. Selecting an address will populate the users default delivery information into the remaining fields.

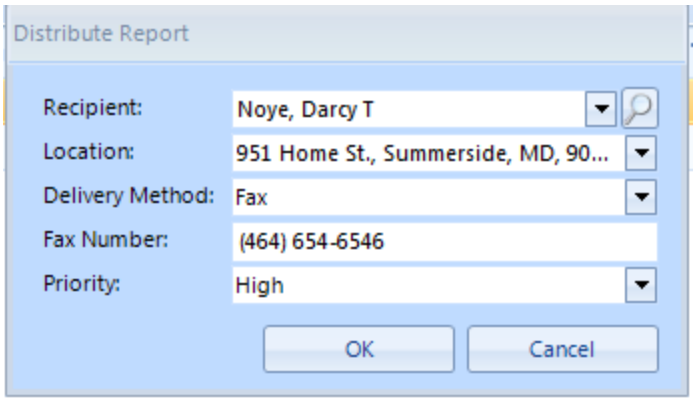

**Figure 4.3 – Distribute Report**

## Duplicate Patient Safety Net

To reduce the risk of creating a duplicate patient, patient search has been modified to increase a user's chances of finding an existing patient. A background search will be completed for the patient once 3 key fields of *first name, last name, and birthdate* are populated. The results window will popup if there are close matches found. If there are no close matches, the search result window will not be displayed.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Patient search will now also support searching on other variations of name and birthdate. When the *Search Other Variations (keyboard shortcut = Alt + O)* is checked the following name and birthdate characteristics will also be searched.

1. Starts with search is performed
2. Then a sounds like search (name is Stuart, but user entered Stewart)
3. Then a sounds like and a transposed birthdate (DOB entered 12-01-1970, but patients actual DOB is 01-12-1970)
4. If a name component entered is only one character it will perform a starts with instead of a sounds like. (EX: . firstname sounds like s, lastname sounds like smith will be converted to firstname starts with s, lastname sounds like smith)

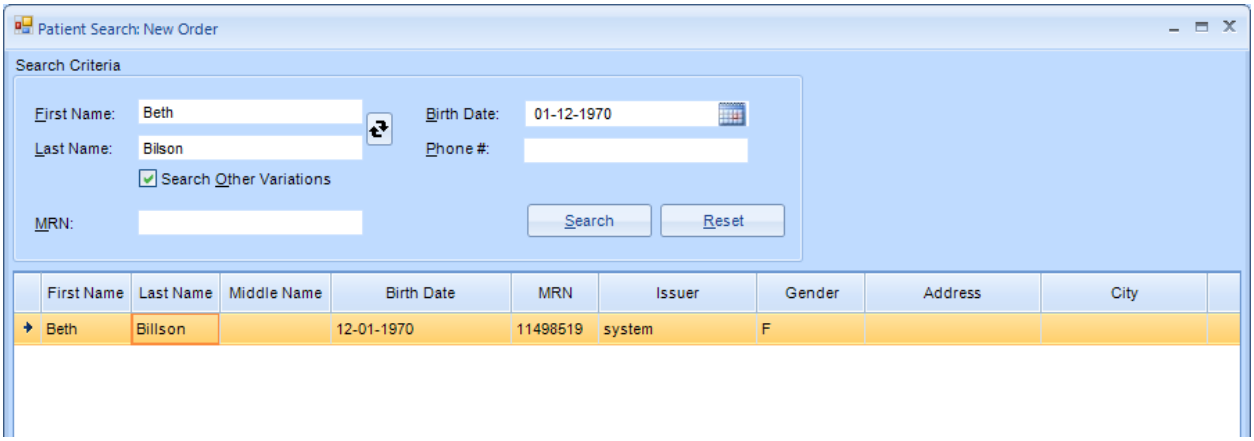

**Figure 4.4 – Patient Search window with "Search other variations" checked. In this example it matched on approximate last name and transposed birthdate.**

## Enhance Special Accommodations

A check box for Special Accommodations has been added to the order tab. When the box is checked a drop down list box and free text field becomes enabled. The list box has Yes/No values, and the text box allows for a maximum of 100 characters. A flag is added under the Flags column on main work lists, and also in patient history on Perform Exam data window.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

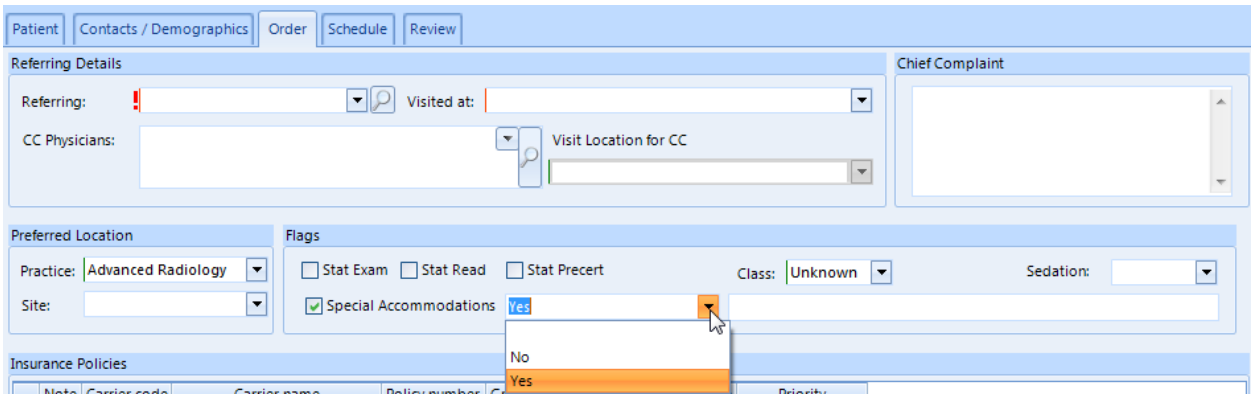

**Figure 4.5 – Special Accommodations.**

## Indication Code Search Provider

An easy way to search indication codes was required for the user. In Build 1.19 a menu item was added to the provider list.

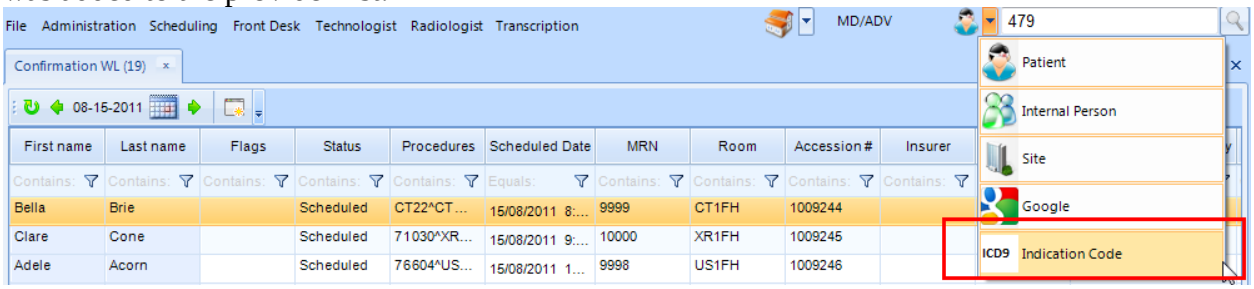

**Figure 4.6 – Ability to search for Indication Code.**

Selecting Indication Code from search list will open a new window. The user can search by code and full or partial description.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

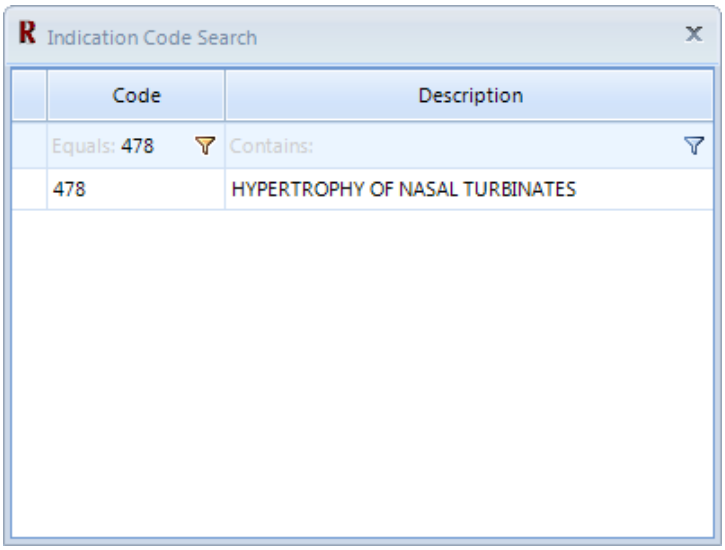

**Figure 4.7 - Indication Code Search window**

## Inpatient Workflow

Patients can be identified at the visit level as to whether they are outpatients, inpatients, emergency, etc. A new combo list box was added to the order tab for the scheduler, registration and technologists. This is a mandatory field.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

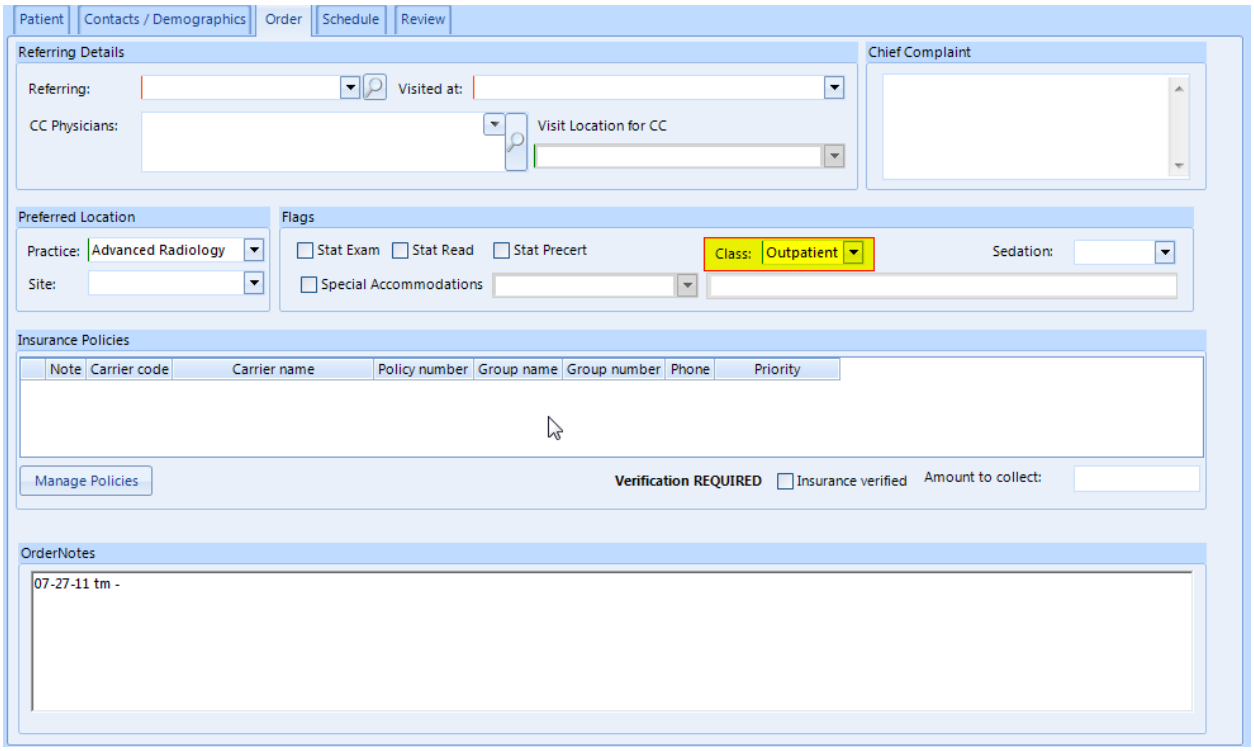

**Figure 4.8 – Patient Class**

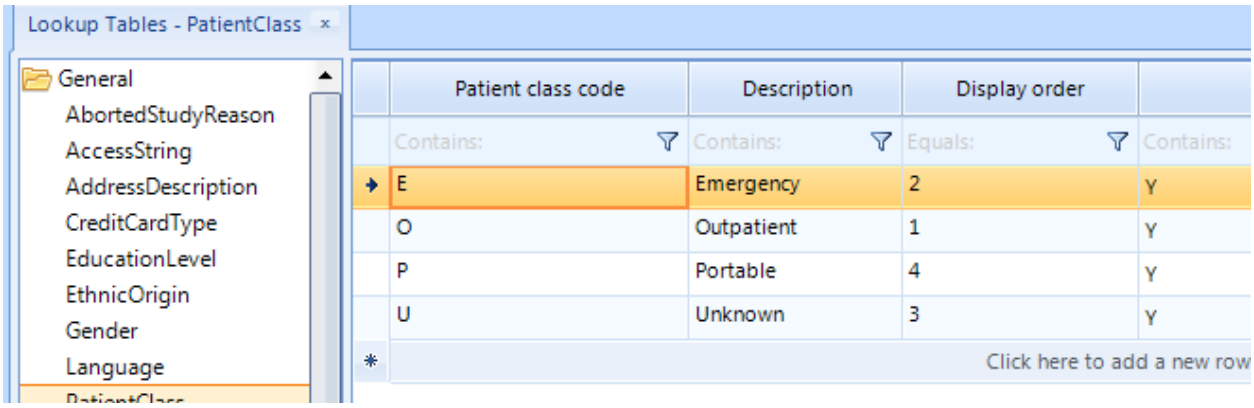
A new system configuration setting "PatientClassDefaultCode" has been added to default the value in the Class list box field on the order tab. The value can be any active Patient Class Code from the PatientClass lookup table. In figure 4.9 below shows the PatientClass lookup table codes and descriptions as well as the new systemconfig setting with the patient class code value for Outpatient making it the default value for the Class field on Order tab as displayed in Figure 4.8.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

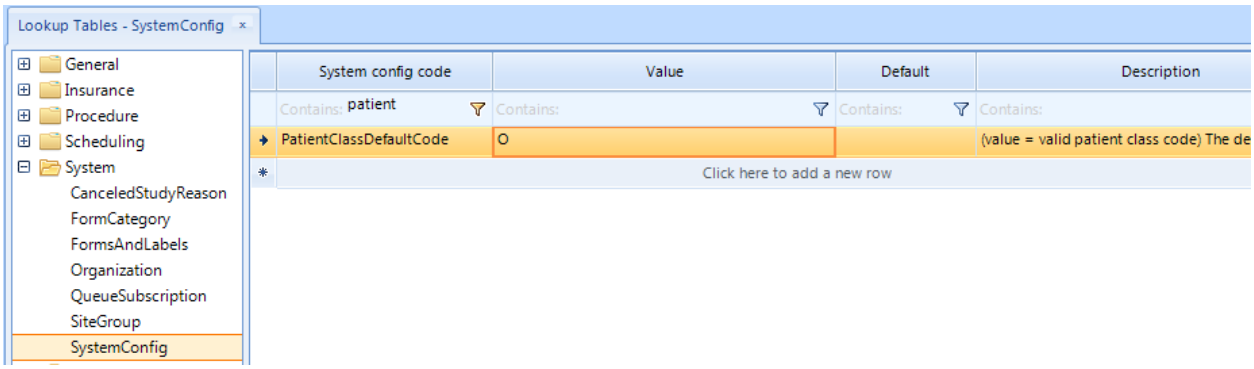


**Figure 4.9 – PatientClass lookup and SystemConfig setting for defaulting Class field.**

## Medical Record Access

The ability to capture who has access to a patient's medical records, and the duration the persons access is valid has been added. Located on the Contacts / Demographics tab the user will have the option to Add, Edit, and Remove access. The previous button will display expired medical record access for this patient. If a patient is merged, medical record access entries are carried over to the "new" patient's demographics.

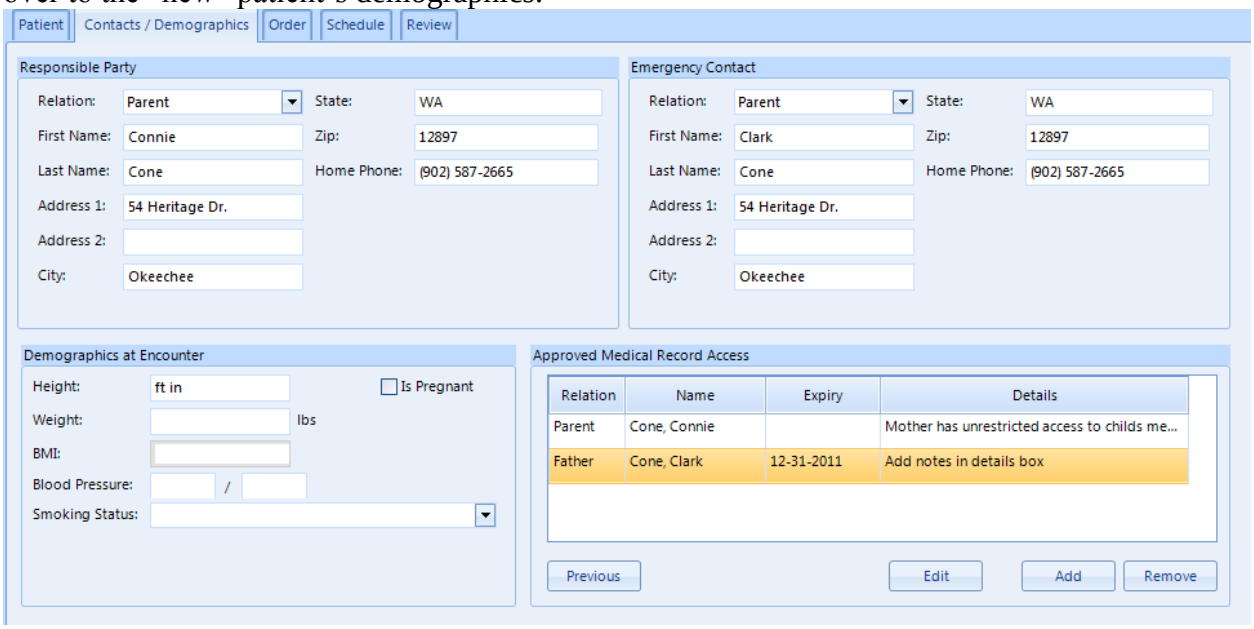

**Figure 4.10 – Approved Medical Record Access data pane**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

The Add (or edit) Medical Record Access window captures the approved parties demographic details, relationship to patient, expiration of access, and details text box to capture notes. If an expiration date is not selected, that person's access will not expire.

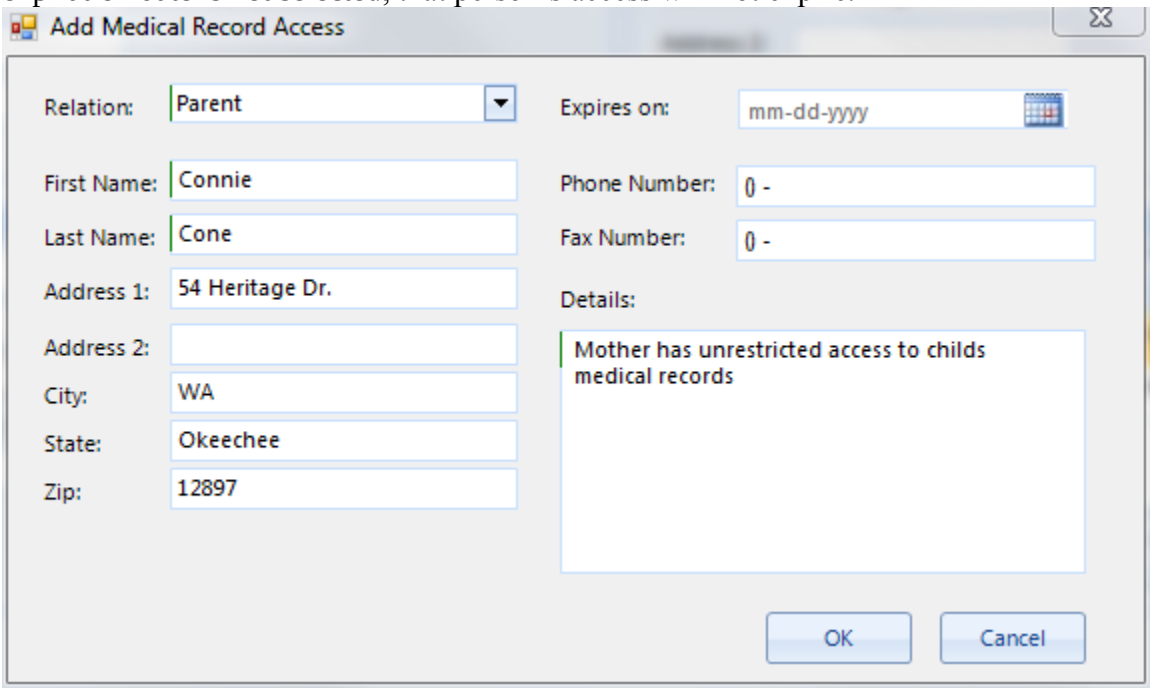

**Figure 4.11 – Medical Record Access window.**

## No Alternate Phone Flag

Users needed the ability to capture if the patient has an alternate phone number, and if no alternate phone number is available mark the patient as such. A new check box "No Alternate Phone" was added. When this checked box is selected the Work Phone and Other Phone fields are disabled. In Figure 4.12 the Other Phone Alternate number was entered before the check was added to "No Alternate Phone" box. As you can see the phone number is retained just in case the check box is selected by accident there is no risk of lost data.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

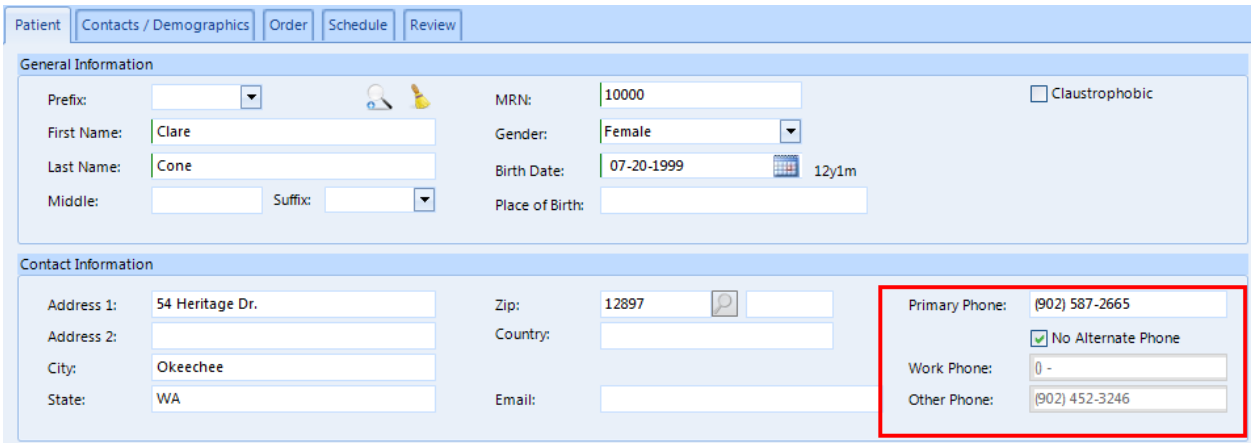

**Figure 4.12 – No Alternate Phone check box**

## PreCert Expiration Date.

In some cases Precertification numbers have expiration dates. In build 1.19 the IVT, Confirmation, Registration, and Perform Exam data windows, the user now has the ability to add or edit the PreCert expiration date.

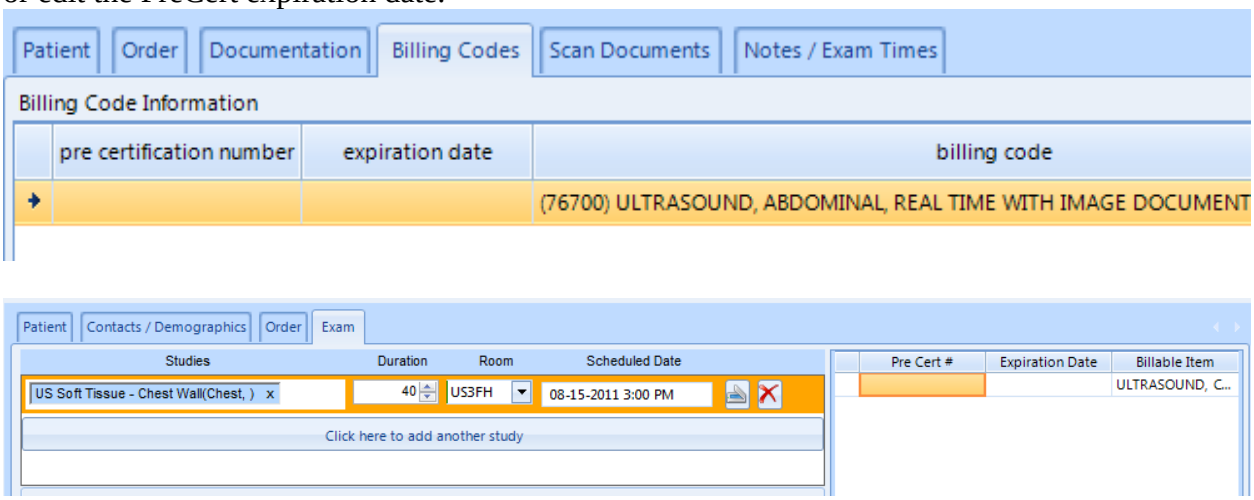

**Figure 4.13 – Perform Exam and Registration windows with Pre Cert Expiration added.**

## Reschedule Studies

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

When rescheduling a study the user will now be prompted with a popup window and have to provide a reason from a pre-configured list to enable the OK button to continue with rescheduling. If the patient has multiple studies scheduled for that day, the user will have the option to select which studies are to be rescheduled. The study that was selected from the work list is selected by default. If cancel is selected the user is returned to work list and no action is taken on any of the studies.

If the patient has a scheduled series, each study of the series will be listed with series named displayed. They may choose to select all or only some of the studies that belong to the series. If they choose to only select some of the studies, the series rules will be broken and will now follow normal scheduling procedures.

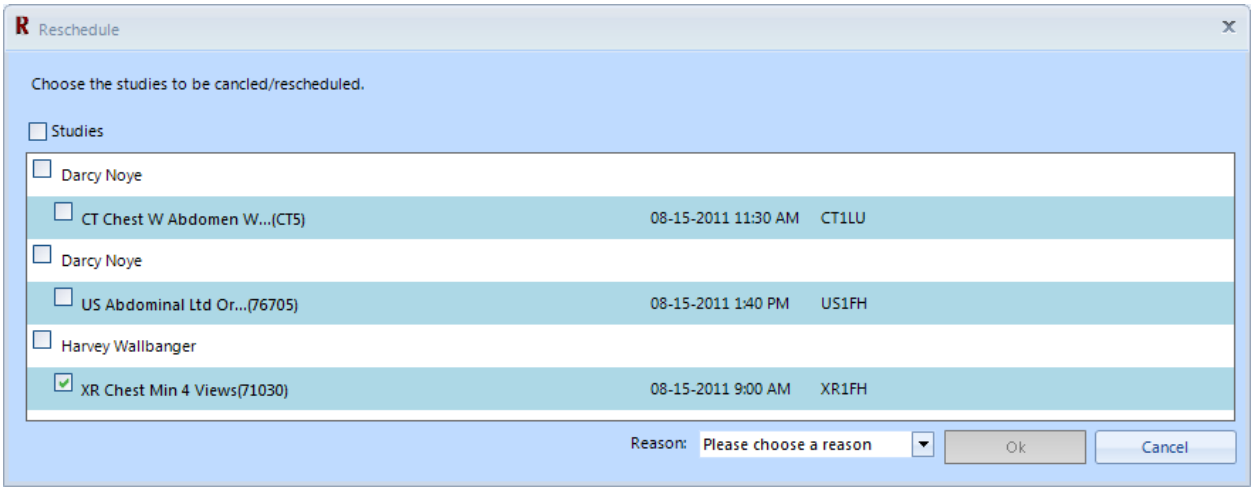

**Figure 4.14 – Rescheduling studies for patient with multiple studies in one day.**

Selecting the Studies check box will select all studies listed. Selecting Referrer (in Figure 4.14 the referrers are Darcy Noye and Harvey Wallbanger) will auto select all studies listed directly for that order. If 2 separate orders were scheduled from the same referrer, the second scheduled orders studies will not be selected. If more than one study is selected to be rescheduled, each study will have its own order tab, and multiple procedure rows will be displayed on the exam tab.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

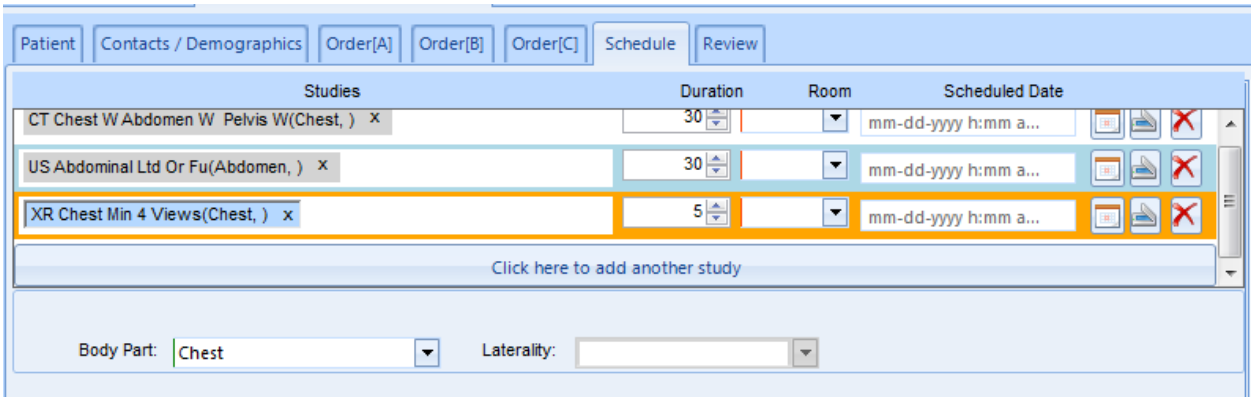

**Figure 4.15 – Multiple studies selected for reschedule from different referrers but originally scheduled for same day.**

## Review Scheduled Information

The review tab will display a summary of information for the study(s) to be scheduled, or that has already been scheduled. Captured in this new text area is the scheduled procedure name, date and time of the schedule, study duration, site name, CPT code and description for each study. Also the address for the site is also displayed.

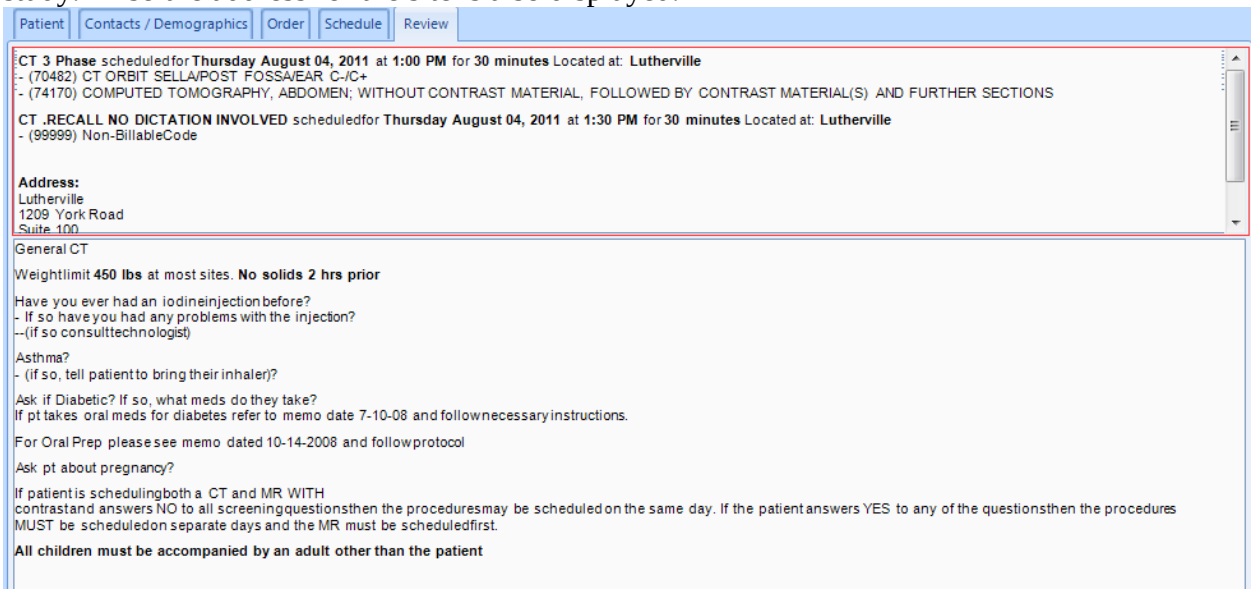

**Figure 4.16 – Review tab**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Scanned By Displayed in Scanning Grid

After a document is scanned, the user that scanned the document in now displayed under a new column in the work list called “Scanned By”.

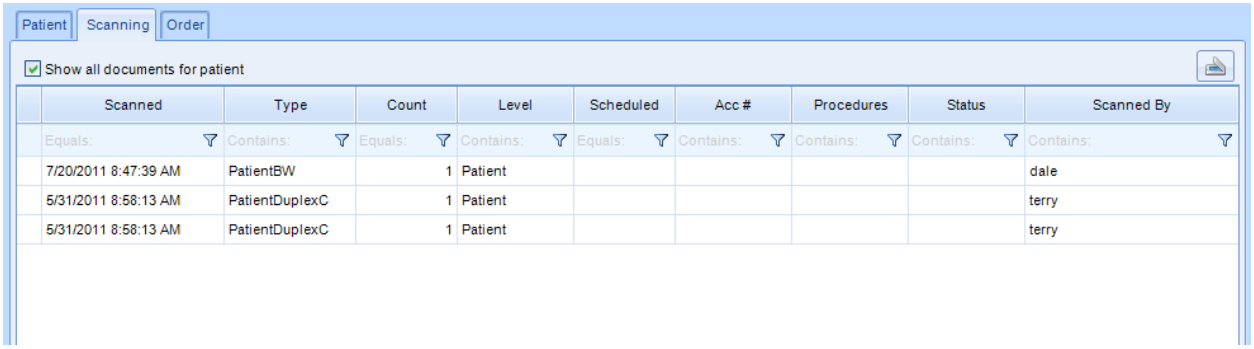

**Figure 4.17 – Scanning tab grid.**

## Schedule Walk In

A new menu option called Walk-in located under the Front Desk menu added.

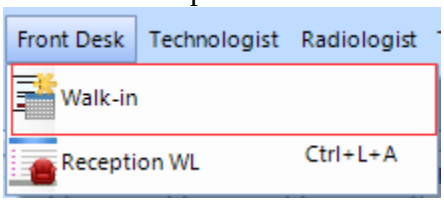

**Figure 4.18 – New Walk-in menu option**

The window that opens is the Registration window without any patient data. This gives the user the ability to create order, schedule, and arrive or check-in patient without selecting a pre-existing scheduled study from the work list. A new MRN is defaulted for creation of a new patient. If an existing patient is used, the MRN will change to that of the patient selected.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

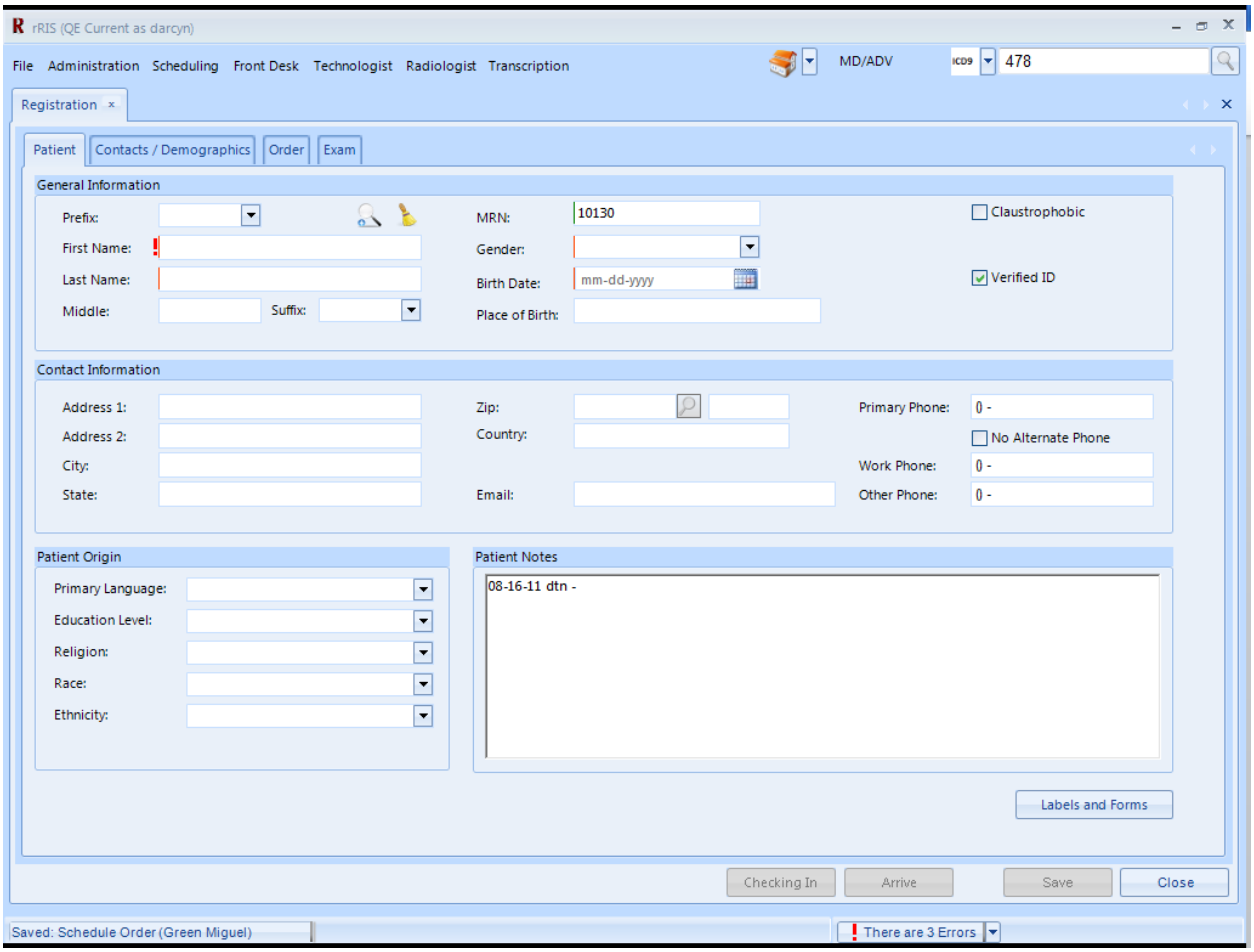

**Figure 4.19 – Walk-in data window**

## Restricted Modality Times (Soft Block)

A new method of marking a modality as unavailable had been introduced in build 1.19. This "soft block" will inform a user that a modality may not be available, or may have restrictions for specified period of time. Figure 4.20 displays where the block is configured. Selecting the modality, and a new data pain on the bottom right will allow the user to configure a specified time (From date → To date and time of day is captured). The description entered is what the user will see when scheduling.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

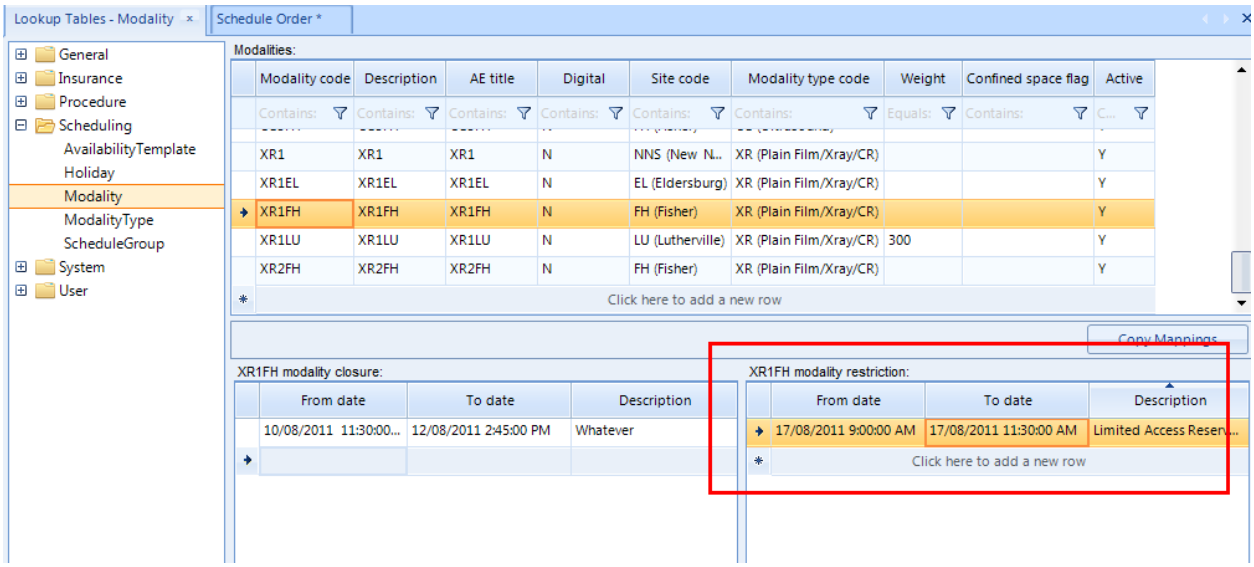

**Figure 4.20 – Add or Edit Restricted Modality Times**

When scheduling you perform an appointment search. The time results returned that fall in the time frame specified for modality restriction will have a red colored background. Hover the mouse pointer over the red colored time slot will display the description entered for the Modality restriction.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

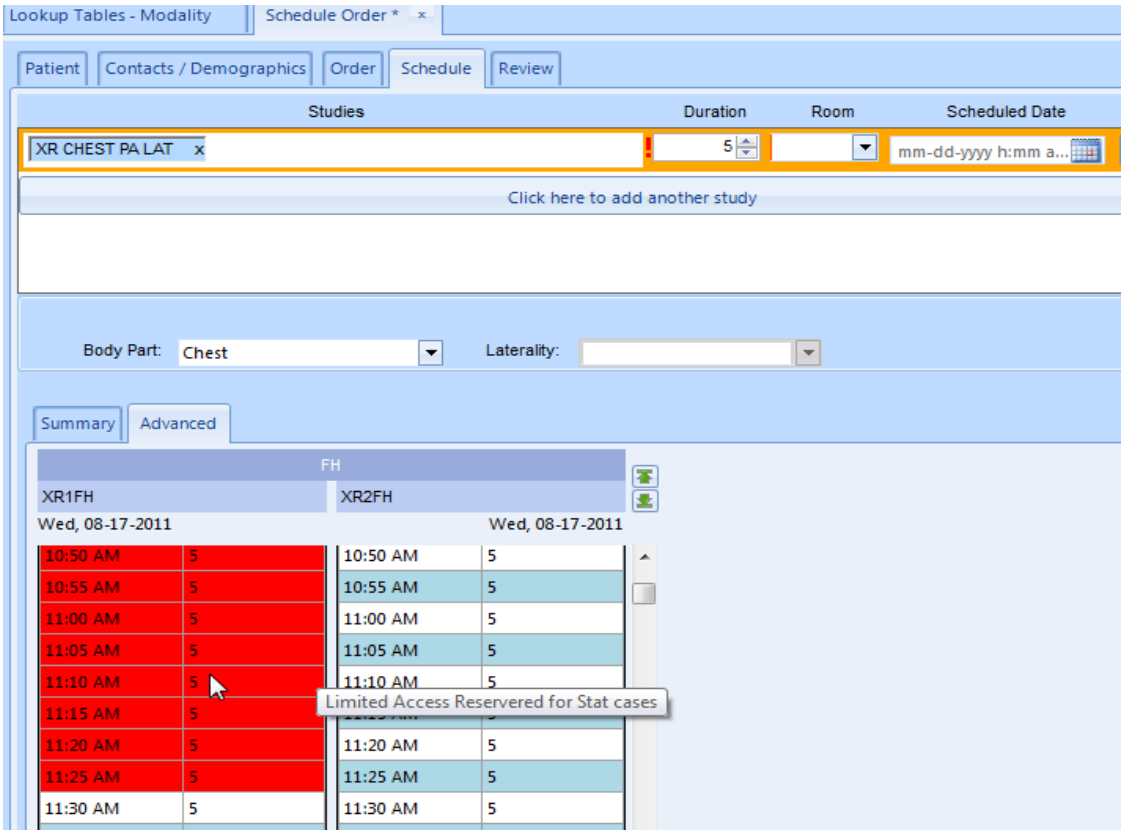

**Figure 4.21 – Restricted time in search with description**

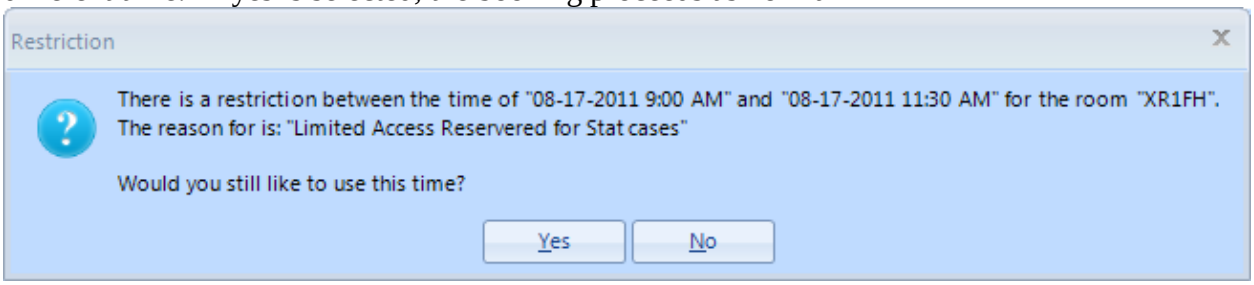
Selecting a restricted time slot will prompt the user informing that this time is restricted giving the user the option of proceeding in selecting the current time slot, or cancelling and selecting a different time. If yes is selected, the booking proceeds as normal



**4.22 – Message prompt informing user that restricted time was selected.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Stat Precertification Flag

A new check box "Stat Precert" has been added to the order tab so the user may flag studies that require pre-certification ASAP are first to be processed. The default sort order for the IVT work list has been configured so precert stat items show at the top. A new flag for precert stat items will now also display in the flag column.

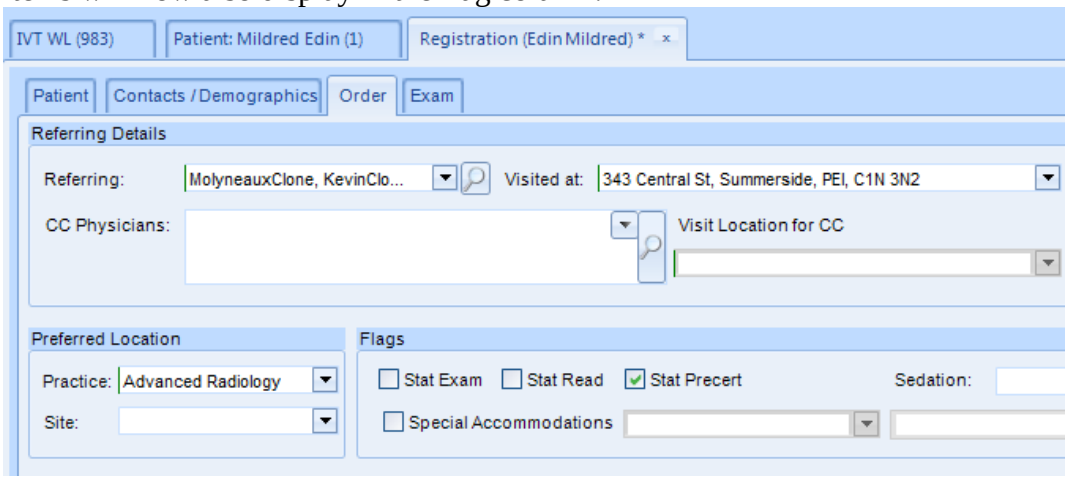


**Figure 4.23 – Stat Precert flag check box.**

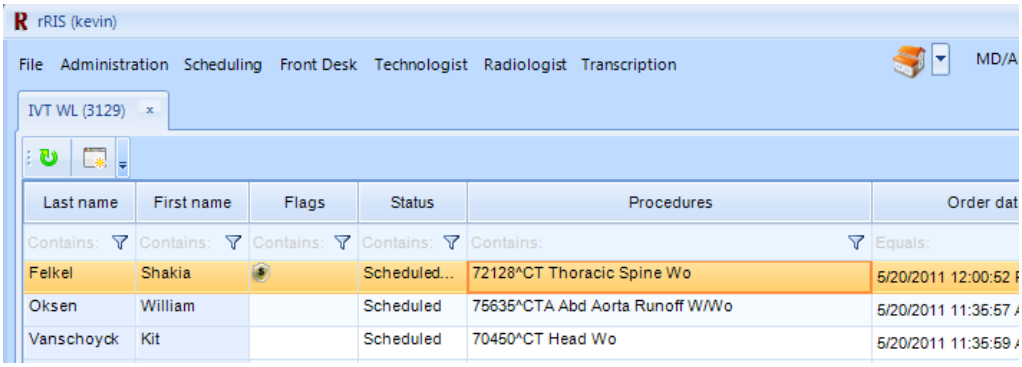

**Figure 4.24 – IVT worklist Stat Precert flag**

## Diagnostic Reporting Text Expander

To enhance and improve productivity a Text Expander is available for diagnostic reporting. This feature can be turned on / off with a user preference. If the user has this option on, a base file is downloaded from the database at first time use. They can add and remove text stored in their

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

file. When changes are made, it is saved back to the database. The client machine will be updated if the stored copy is newer than the local copy. The text expander can be edited by selecting the option from a context menu (right click) within the report.

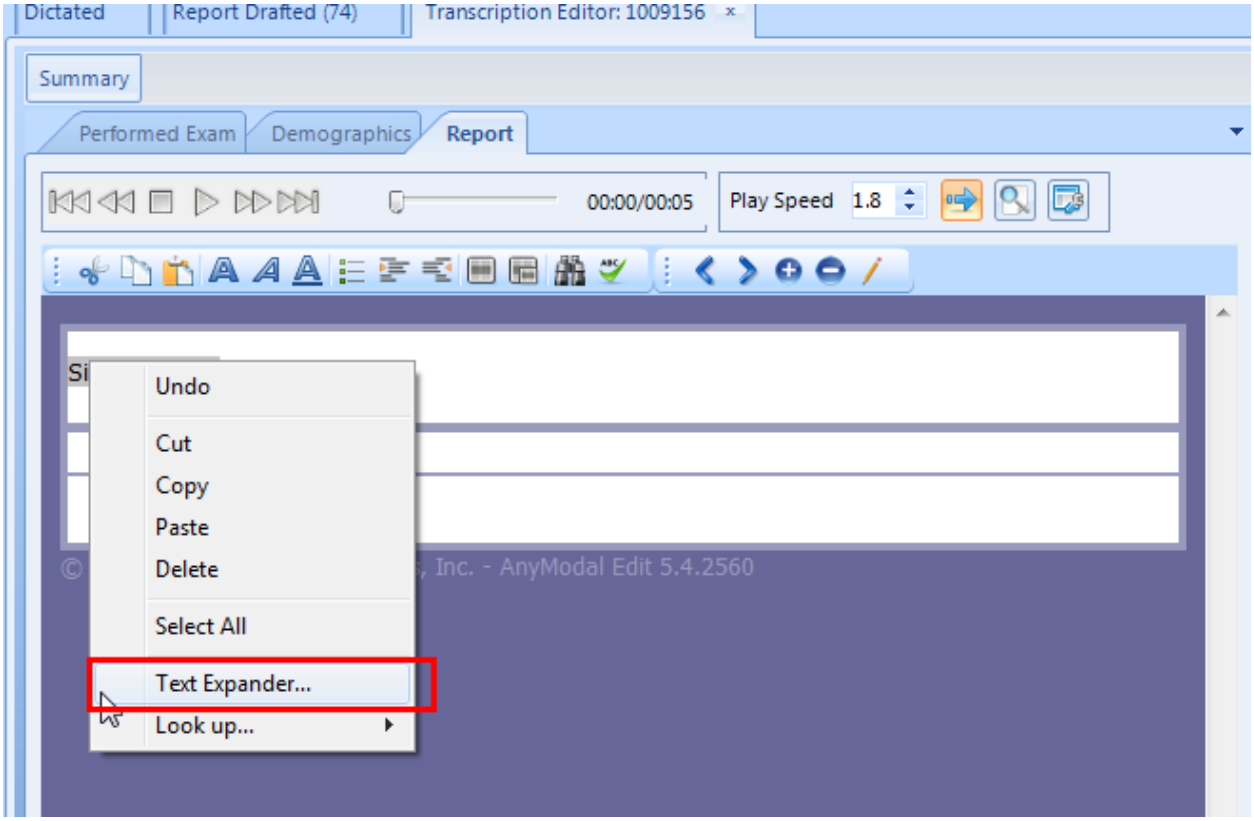

**Figure 4.25 – Accessing Text Expander**

The dialog box will open displaying a pre-defined list from the base file. The user can add additional text and save for future entries. The next time the user enters text that matches with text in the "Replace" column, it will recognize that the text entered is to be replaced with the expanded or corrected text specified.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

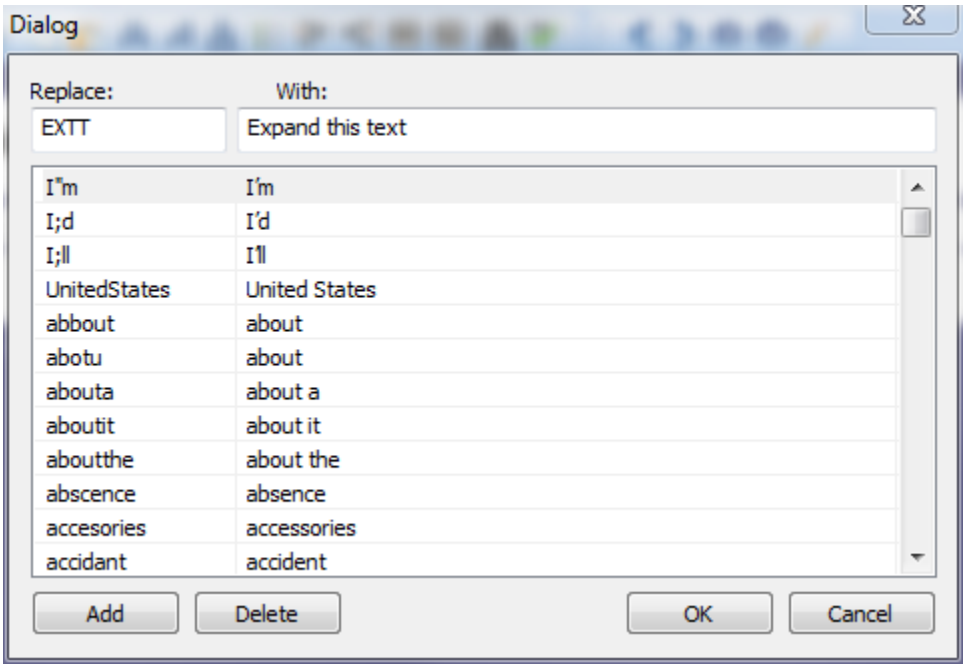

**Figure 4.26 – Text Expander Dialog window**

The following is additional information from MModal help file:

> *"AME comes with a builtin text expander. This expander is disabled by default to prevent conflict with 3rd party text expanders used by the MT (like for example InstantText, Shorthand, Shortcut, ...). To enabled it call ICdsEditorCtrl.SetProperty("TextExpanderEnabled", "true"). If the MT has a version of MS Word installed on their machine then AME will import the MT's Word AutoCorrect text mappings the first time TextExpanderEnabled is set to true. After setting TextExpanderEnabled the MT can right click a word in AME and click "Text Expander..." to edit text mappings: the MT can delete mappings, add new mappings, and replace existing mappings. AME will replace text whenever the user types one of her abbreviations followed by a spacebar press or punctuation symbol keystroke (period, comma, colon).*
>
> *The text expander functionality somewhat overlaps with AME's context-dependent Auto Completion. MTs have to decide on their own in which situations they want to use which technology: the text expander make sense for the most frequent and longer phrases consisting of multiple words - like for example mapping "tpi" to "the patient is", whereas auto-complete makes sense for long but less frequent individual words."*

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Report Utility

In build 1.19 a Report Utility has been added for use by Radiologists and Transcription so they may see the history of the report, what was changed, and who changed it. Figure 4.27 shows the ICON to open the utility.

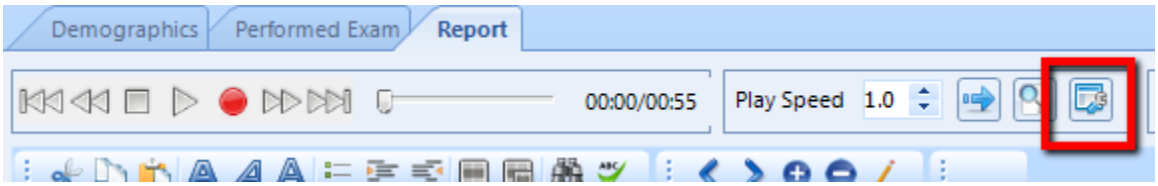

**Figure 4.27 – Report Editor Control**

Upon load, a tree view will display the history of the report. The user can select which version they would like to view as well as play back the dictation for that interpretation. The user may also enter another accession number to view the report and play back the dictation. The study info panel displays information about the patient and specific history of the study.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

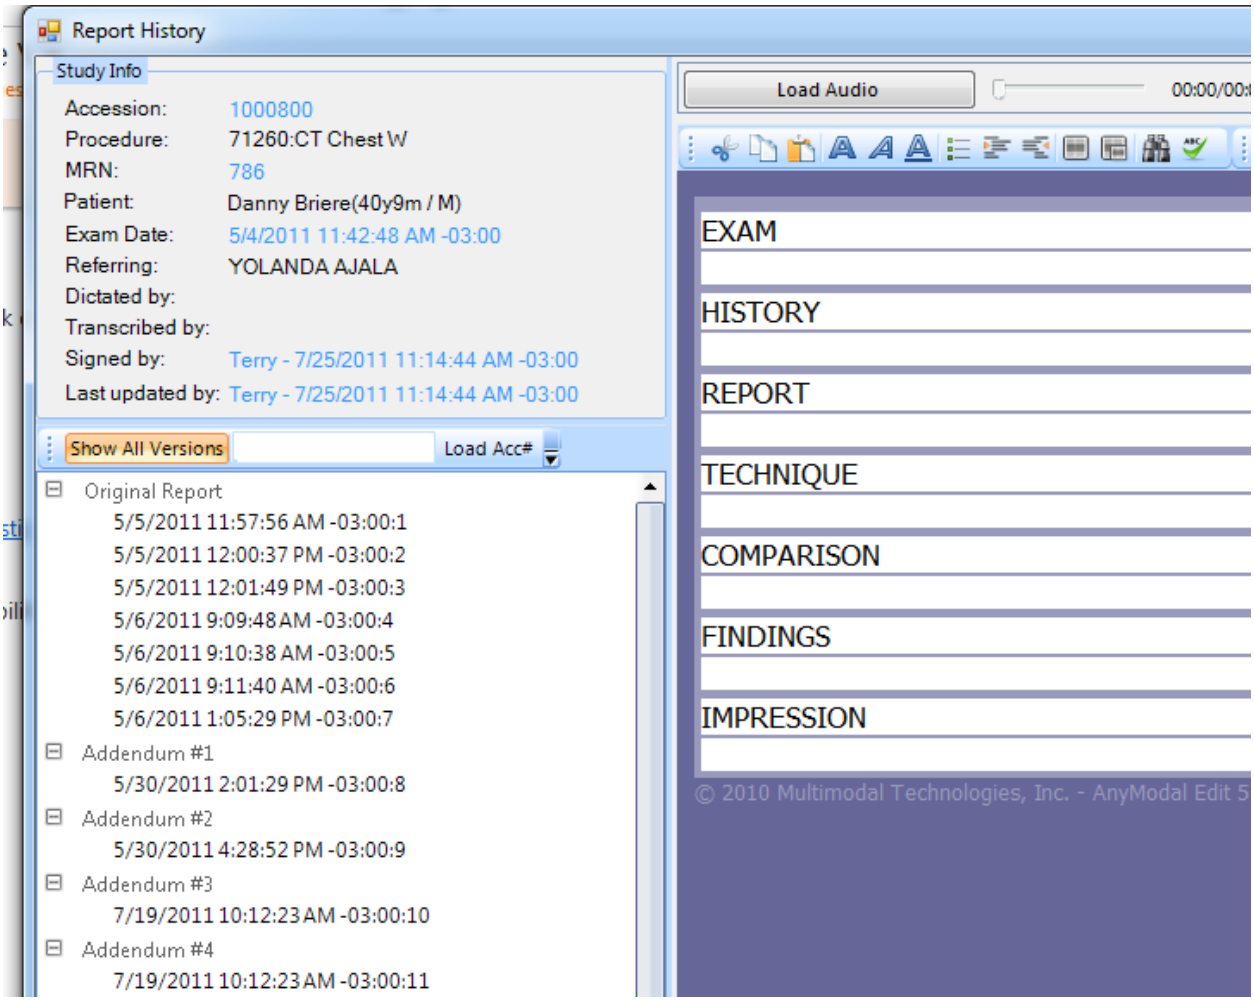

**Figure 4.28 – Report History**

## Reporting Screen Refactor (Configurability)

In build 1.19 comes with a redesigned reporting screen. The users may customize the reporting screen to fit their individual needs and preferences.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

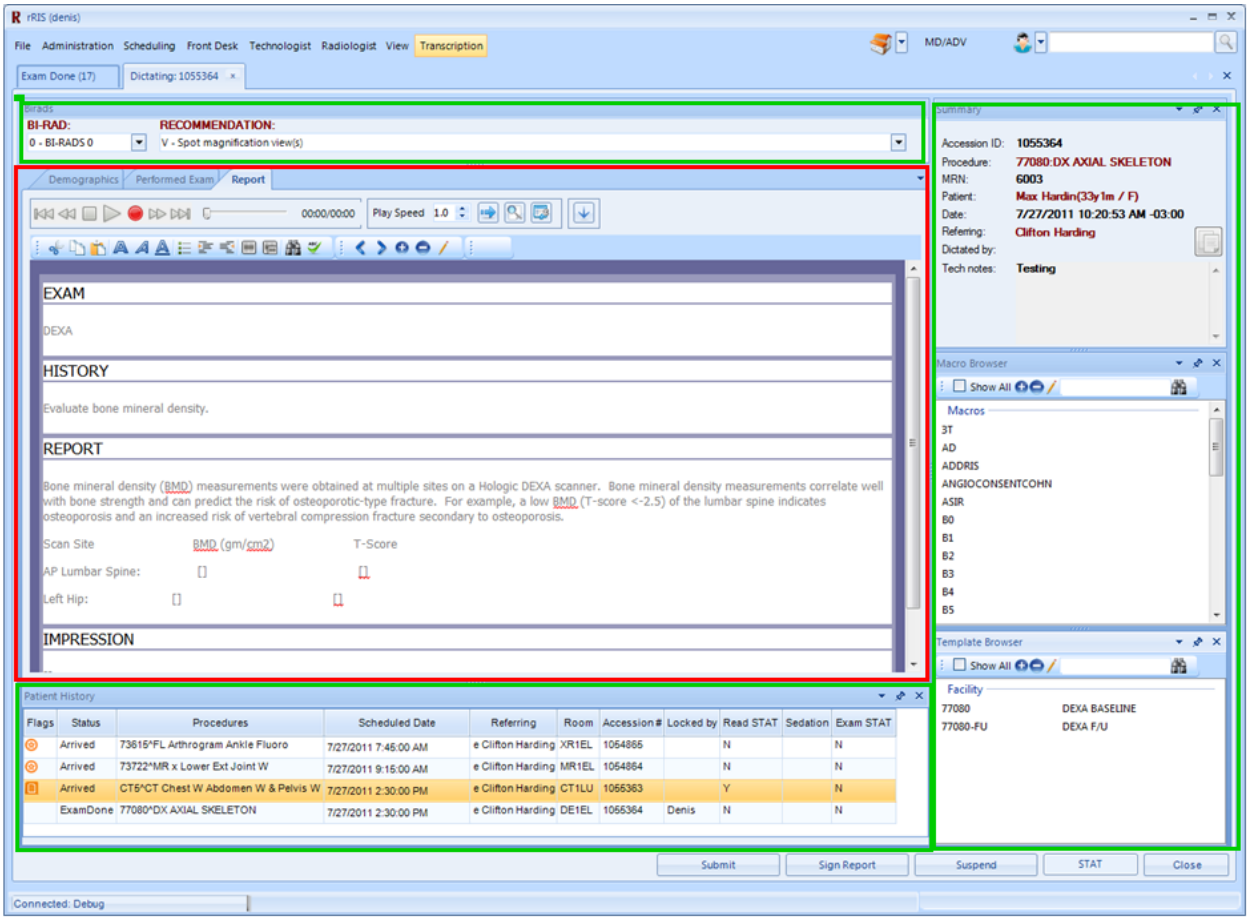

**Figure 4.29 – Reporting window**

**Document Window: (red outline figure 4.29)**
This is the main part of the screen, the report and the data panes. These controls have limited flexibility, they can be moved around and docked in different ways, but they cannot be floated or closed. They can also only be tabbed documents within the main document area (red). They cannot be docked on the perimeter with the tool windows (green).

**Tool Window: (green outline figure 4.29)**
These controls are much more flexible, they can be docked anywhere in the bounds of the reporting screen, they can be displayed as a tabbed document window next to the document window as if it was one. It can be floating above the rRIS, or on another screen. They can be pinned so that they stay visible or they can be unpinned so that they auto hide to a small tab.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

One exception is the BIRAD control, when it is required for the study it cannot be hidden or auto hidden.

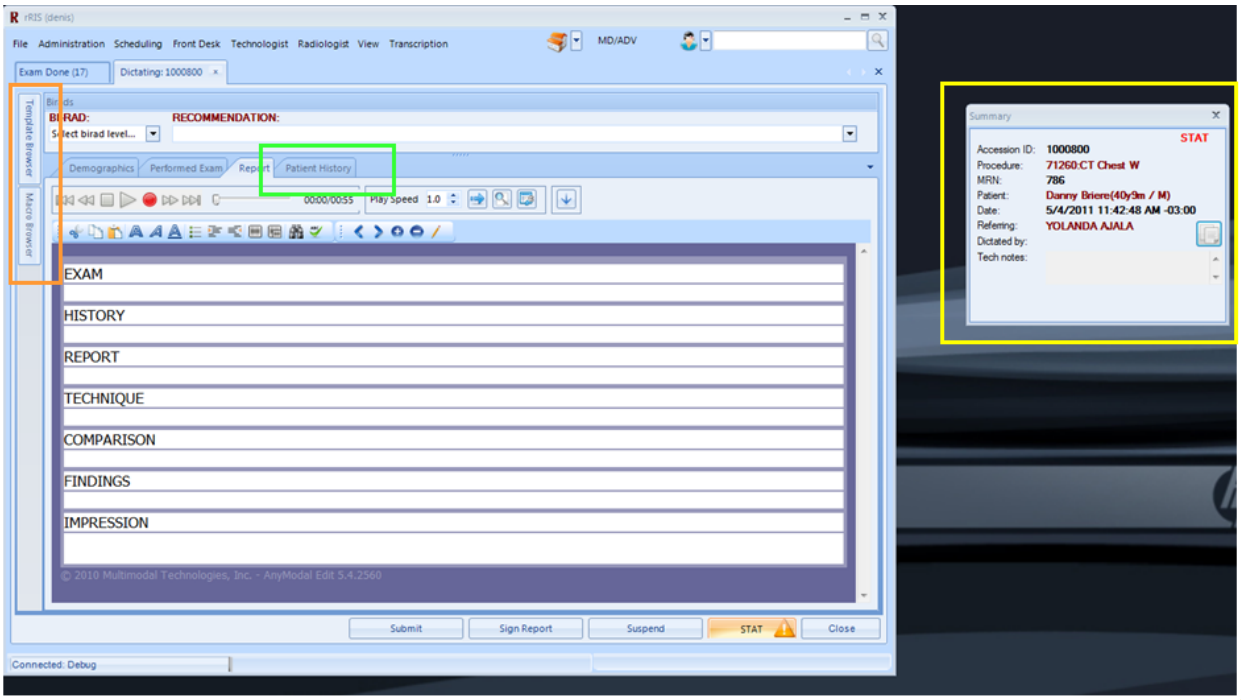

**Figure 4.30 – Various configurations of reporting screen.**

In Figure 4.30 we have the summary screen that is floating on the desktop on the right of the rRIS. Patient history is a tab next to the report tab (sequence of tabs can be re-arranged), and the macro and template browser are unpinned to make them auto hide on the left side of the window. Hover the mouse over the unpinned data panes (template browser and macro browser) will expand that data pane into view.

In Figure 4.31 you will see a new "View" menu. This menu is present in the dictate and reporting windows. Expanding the menu allows the user to select which data panes they wish to view. If one of the data panes is accidently closed, it can be re-opened from this menu. You will also notice that you can "Save Layout" changes and "Reset Layout" changes. Adjusting the layout during the session doesn't automatically save the layout on exit of the window. If the user adjusts the layout to their liking, select Save Layout will retain the layout for all future sessions. Reset layout will remove any changes made and revert back to the default layout.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

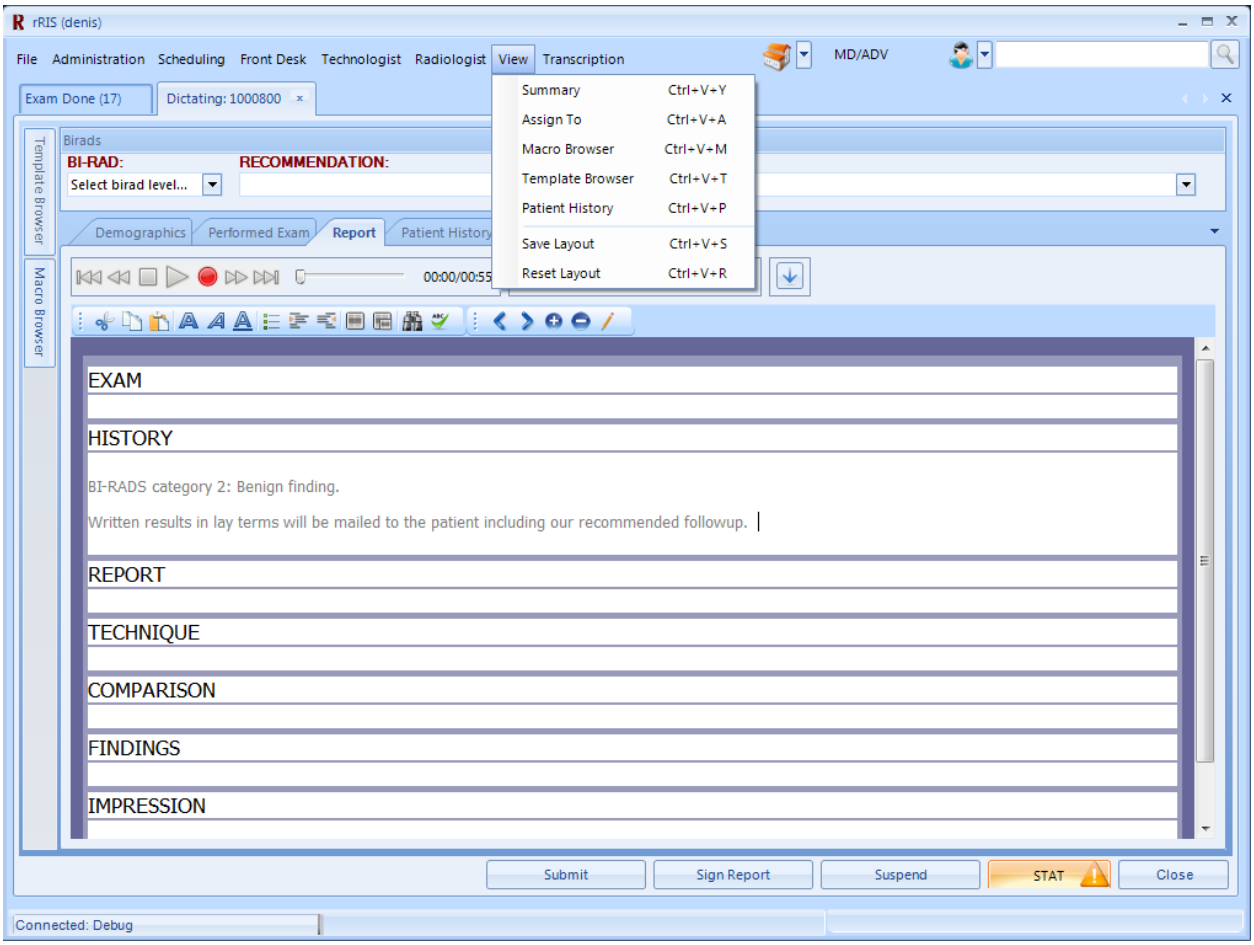

**Figure 4.31 – View menu**

## Letter of Intent Added to Precert Status

Letter of Intent was added as a Precert status with the item still being considered at "required". Figure 4.32 displays the new addition to the Precert status flag list.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

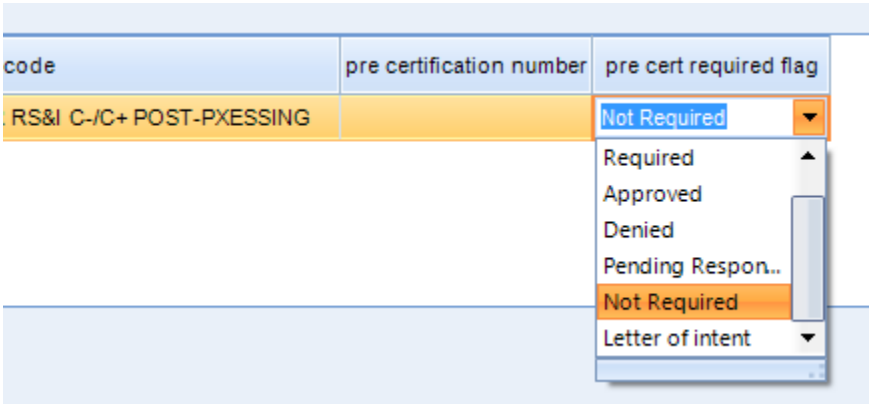

**Figure 4.32 – Pre Cert Required Flag addition (letter of intent)**

## Stat Prelim Form

A new form was added in Build 1.19. A study is flagged as a stat exam the Stat Prelim Form will be an option to select to print. Figure 4.33 shows an example of the form.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This document describes some of the new features and changes implemented in rRIS as of the end of Sprint 20. This pre-release version of rRIS is referred to as Build 1.20.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the rRIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation instructions for the rRIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu, click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.20 is considered a new core release of the application and will require a reinstallation of rRIS. This is accomplished by navigating to the rRIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application, please do not hesitate to contact Spencer MacDougall with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Checklist for Scheduling

A new check box, “Prep Instructions Reviewed”, has been added to the Review tab for orders and the Exam tab for scheduled studies data windows. The check box provides a visual confirmation that the Prep Instructions have been read. The new flag is added at the order level. If a new procedure is added to the order / exam, the flag is removed, as this will often require an additional review of the prep instructions.

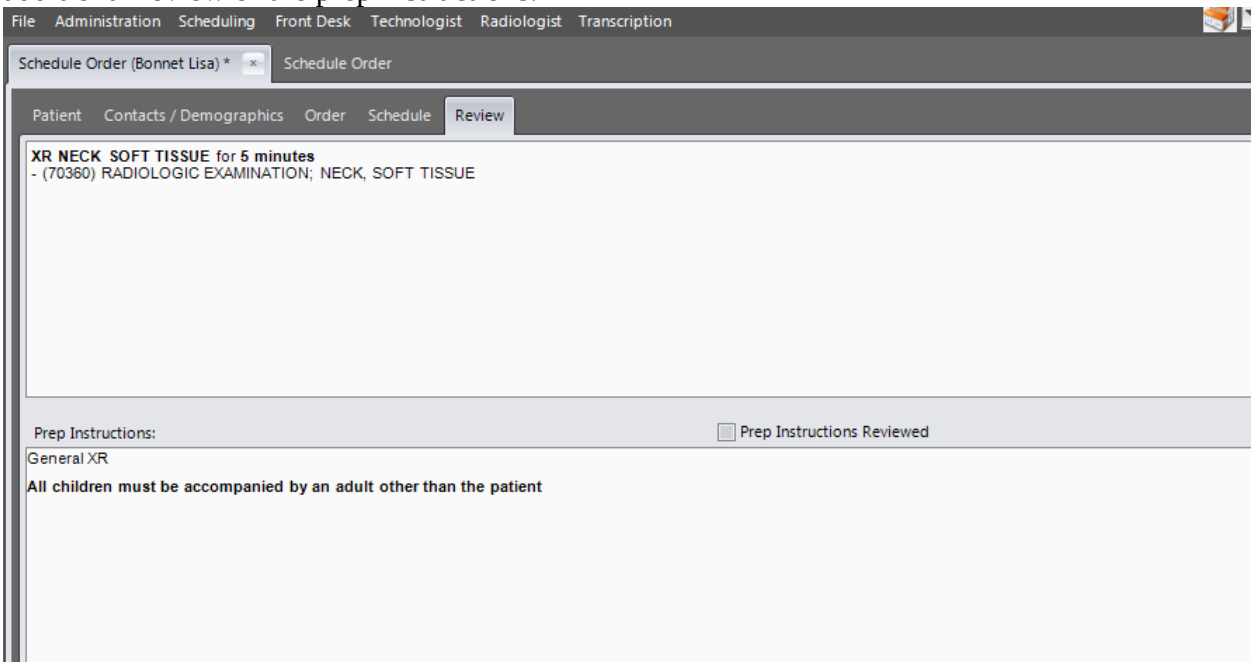

**Figure 4.1 – Prep Instructions Reviewed check box location on Schedule Order.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

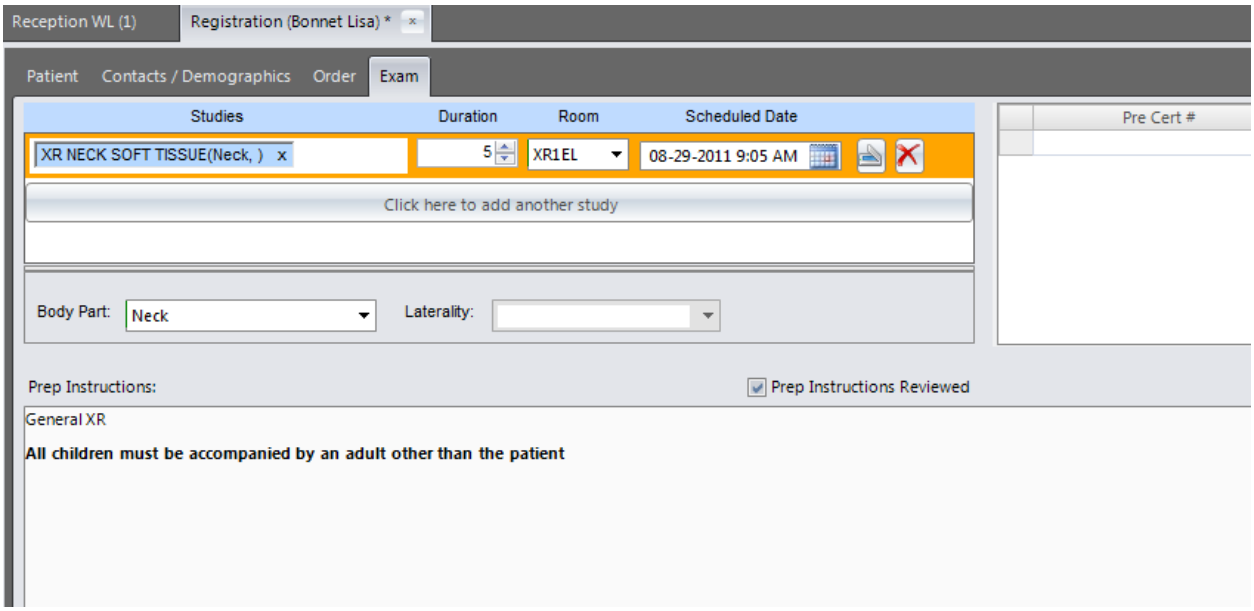

**Figure 4.2 – Prep Instructions Reviewed check box location Registration.**

## Credential Switch

To assist in auditing in shared workstation environments where a common login may be used, Credential Switch has been added in build 1.20. The Credential Switch flag is added at the personnel level.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

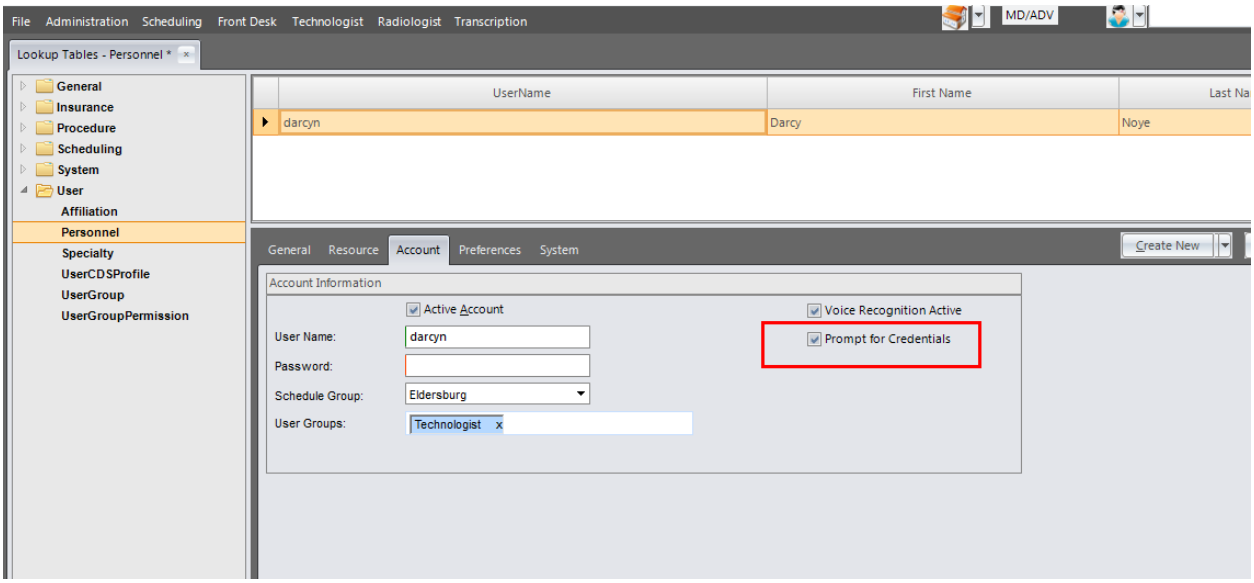

**Figure 4.3 – Prompt for Credentials flag**

If the users account has this flag checked, they will receive prompt. Build 1.20 will prompt users who are attempting Perform Exam or Edit Patient. If valid credentials are entered the user will be permitted to continue workflow.

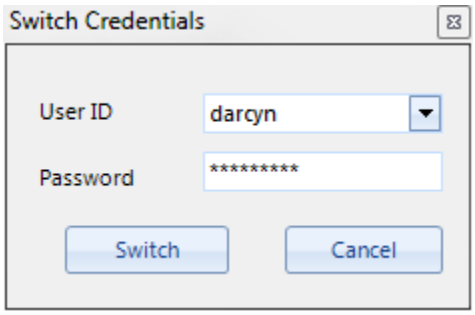

**Figure 4.4 – Prompt for Credentials dialogue box**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

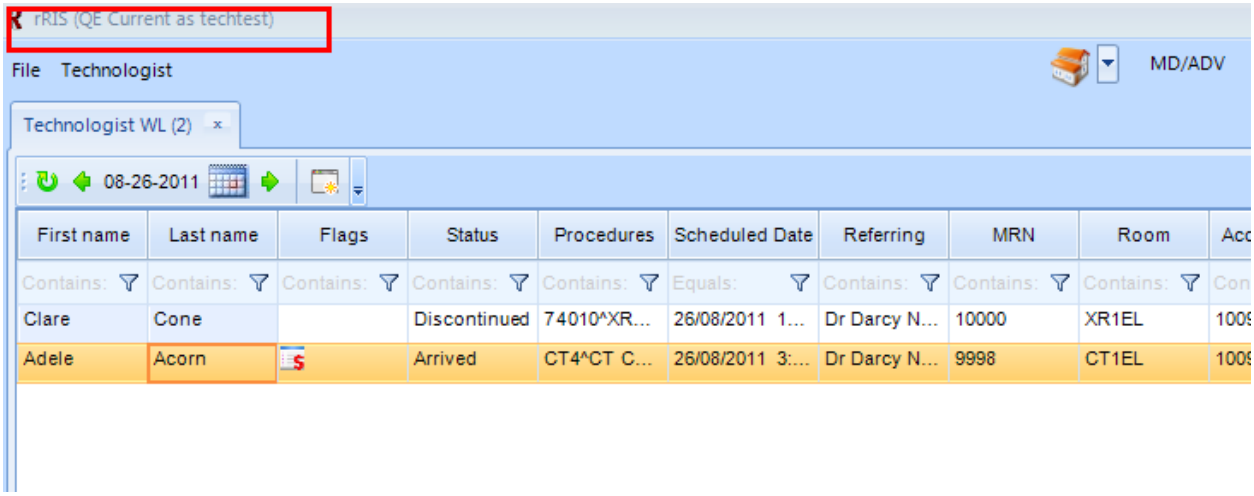

**Figure 4.5 – Prompt for Credentials dialogue box**

Figure 4.5 shows a common login (techtest). Performing exam on the highlighted row will prompt user with dialogue box in Figure 4.4. If valid credentials are entered, the Perform Exam data window will open with the title bar displaying the user logged into this Data window. Toggling back to the Technologist work list will show the title bar once again as the "common logged in user" as shown in figure 4.6
The same is true for Edit Patient.

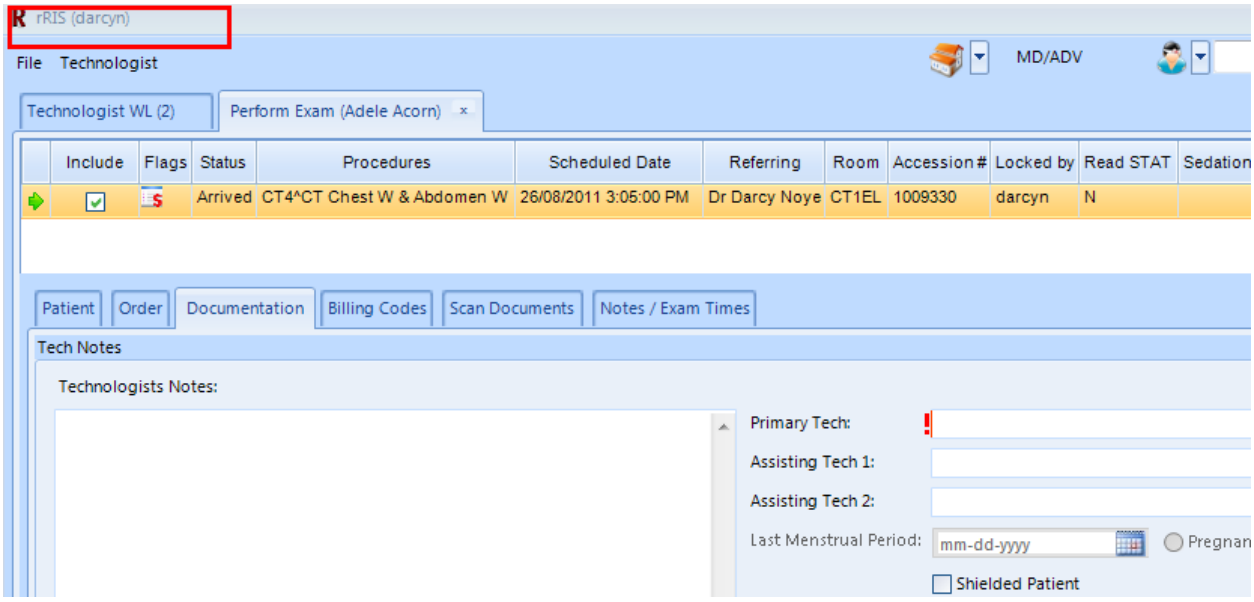

**Figure 4.6 – Prompt for Credentials dialogue box**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

The user will be prompted every time either of these Data Windows is accessed, even when the user may currently have a data window open where credentials have been passed. If a second user clicks on the first user's tab, rRIS will allow them to see the tab, without being prompted for credentials again. In this manner, it is possible for the second user to save the data of the first user, and it will be saved under the credentials of the first user. This was preferred to having the system prompt yet again for credentials. When the user leaves the Perform Exam or the Edit Patient, the credentials will be set back to the generic user account

The dialogue box will keep a history of User ID's enter as long as the current rRIS session is active.

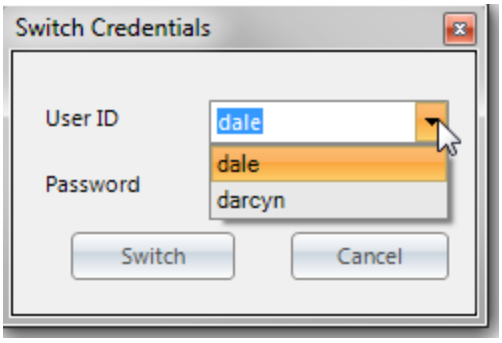

**Figure 4.7 – Switch Credentials dialogue box user history.**

## Direct Referral Program

A flag has been added at the personnel level for Referring Physicians. If this user's account has the Resource Type of Referring Physician, the flag for Direct Referral Program will become active.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

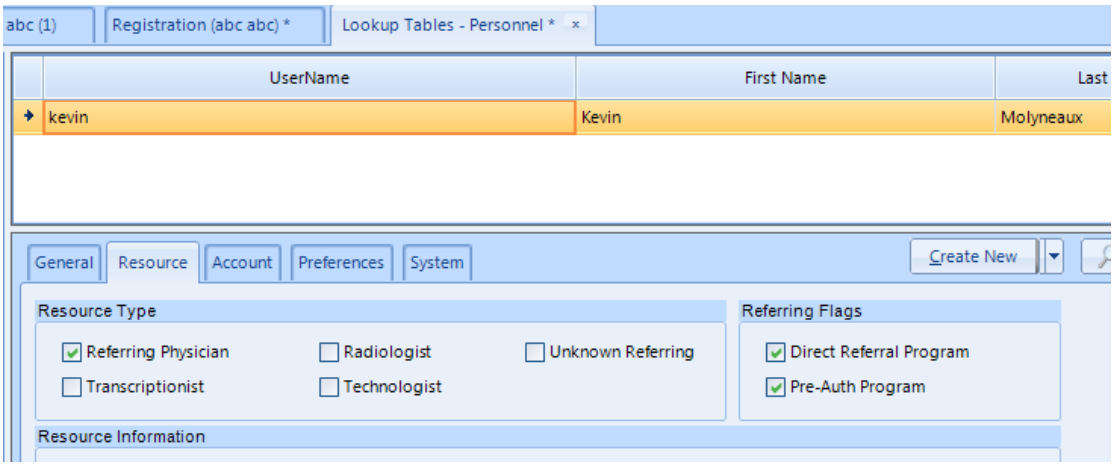

**Figure 4.8 – Direct Referral Flag at personnel level.**

When a Referring Physician has this flag, an additional check box is added to the New Appointment / Schedule Order data windows when this referrer is selected.

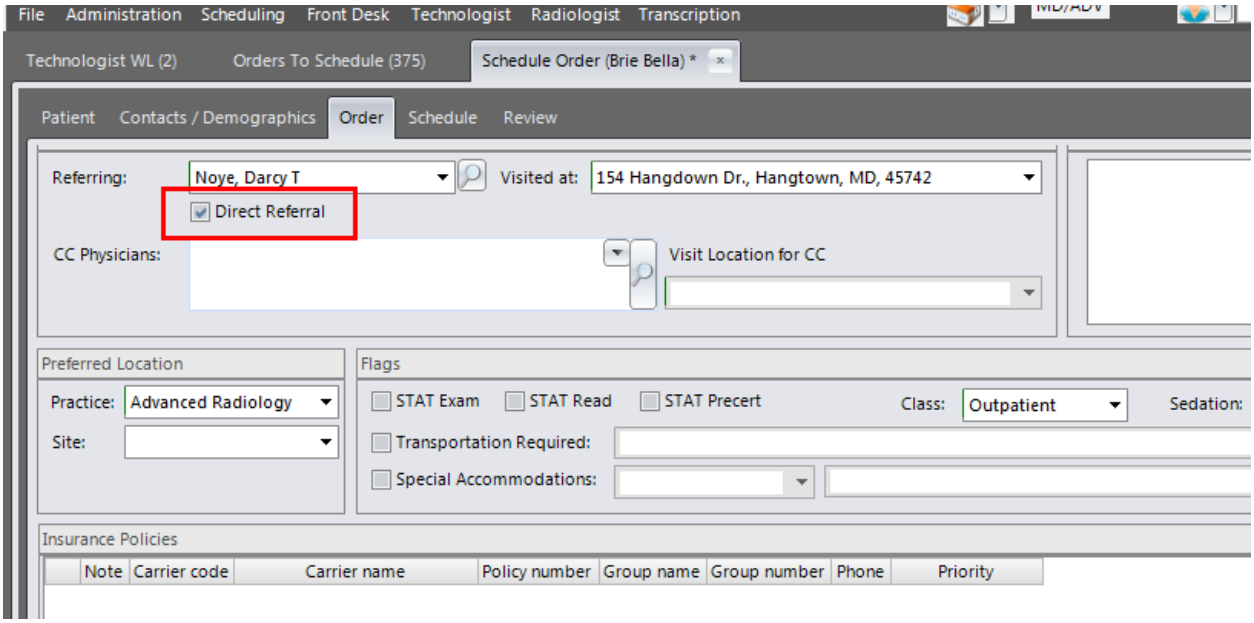

**Figure 4.9 – Direct Referral Flag at order level.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Pre-Auth Program

Similar to the Direct Referral Program flag, the Pre-Auth Program is a new flag added to Personnel that becomes active when the resource type Referring Physician flag checked.

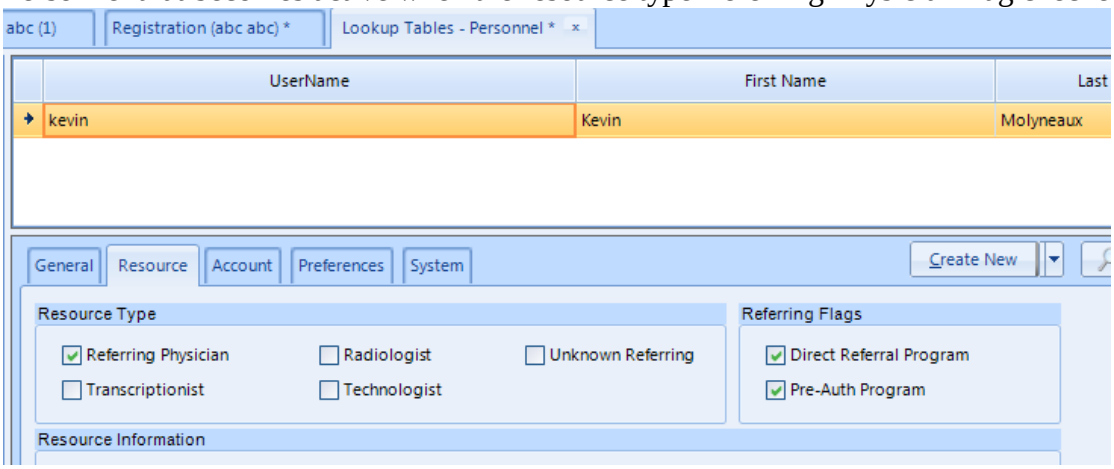

**Figure 4.10 – Pre-Auth Program check box.**

If the ordering referring physician selected has the Pre-Auth Program flag, it will display directly under the Referring box on the order tab. The Referrer may or may not have the Direct Referral flag.

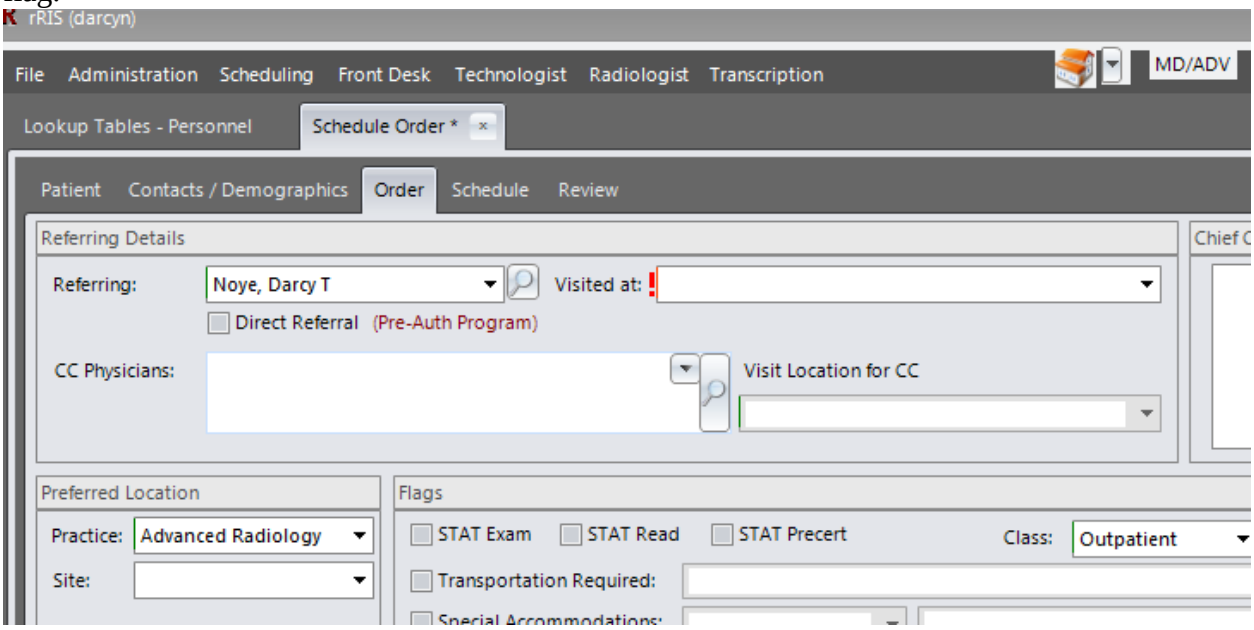

**Figure 4.11 – Pre-Auth Program displayed on order. (In this example the Referrer also has the Direct Referral flag)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Report Delivery Options

It is now possible for a user to have delivery methods of print and fax selected for a particular "Type" address. Previous to build 1.20 the "Delivery To" was a list box with only one selection possible. Check boxes are now used in place of the list box.

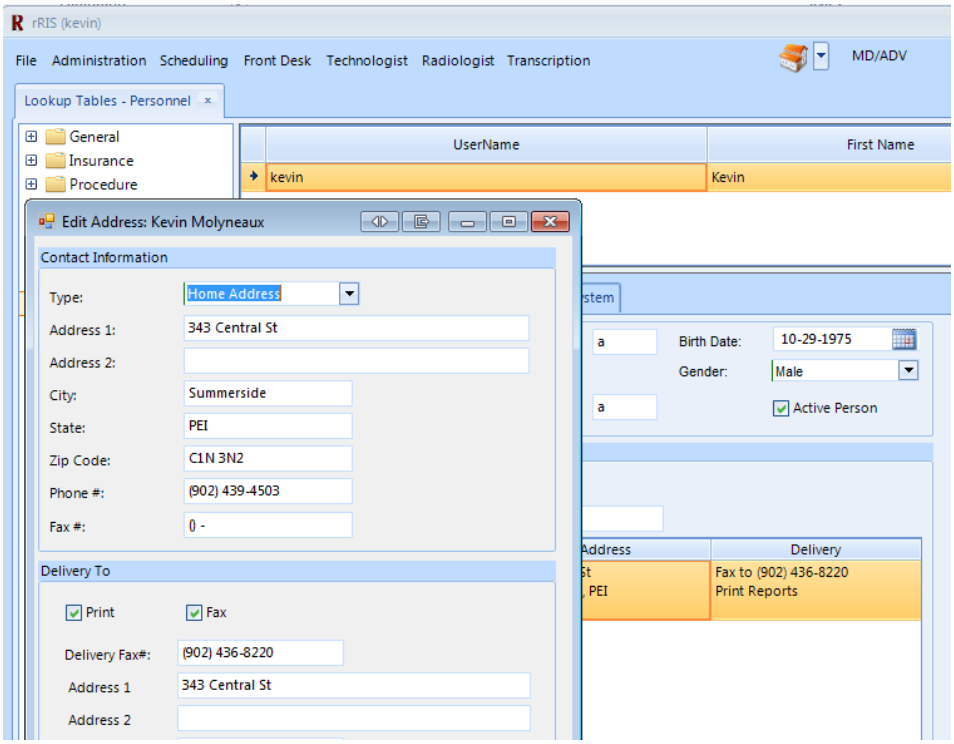

**Figure 4.12 – Personnel contact information – Delivery To**

## Scanned Document Notes

The ability to attach notes to a scanned document has been introduced in build 1.20.

After scanning a document the Scan Document Viewer Control opens to view the completed scan. A new ICON displayed in Figure 4.13 has been added. Selecting this ICON will open the Scan Document Notes window. See Figure 4.14

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**Figure 4.13 – Notes ICON in Scan Document Viewer Control.**

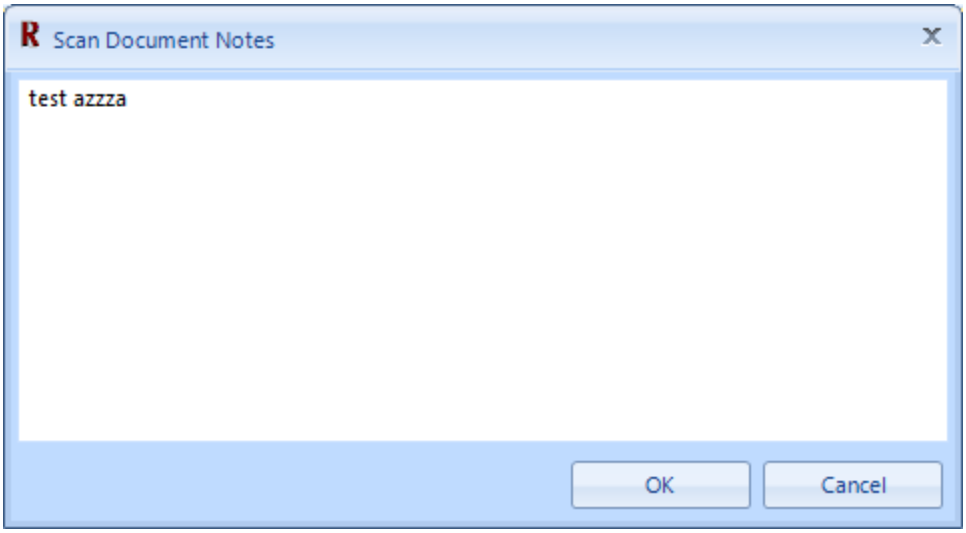

**Figure 4.14 – Scan Document Notes window.**

Entering notes in the above window, selecting OK will attach the note to scanned document. The note ICON will display in a new column titled “notes” on the Scan Document Viewer work list.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

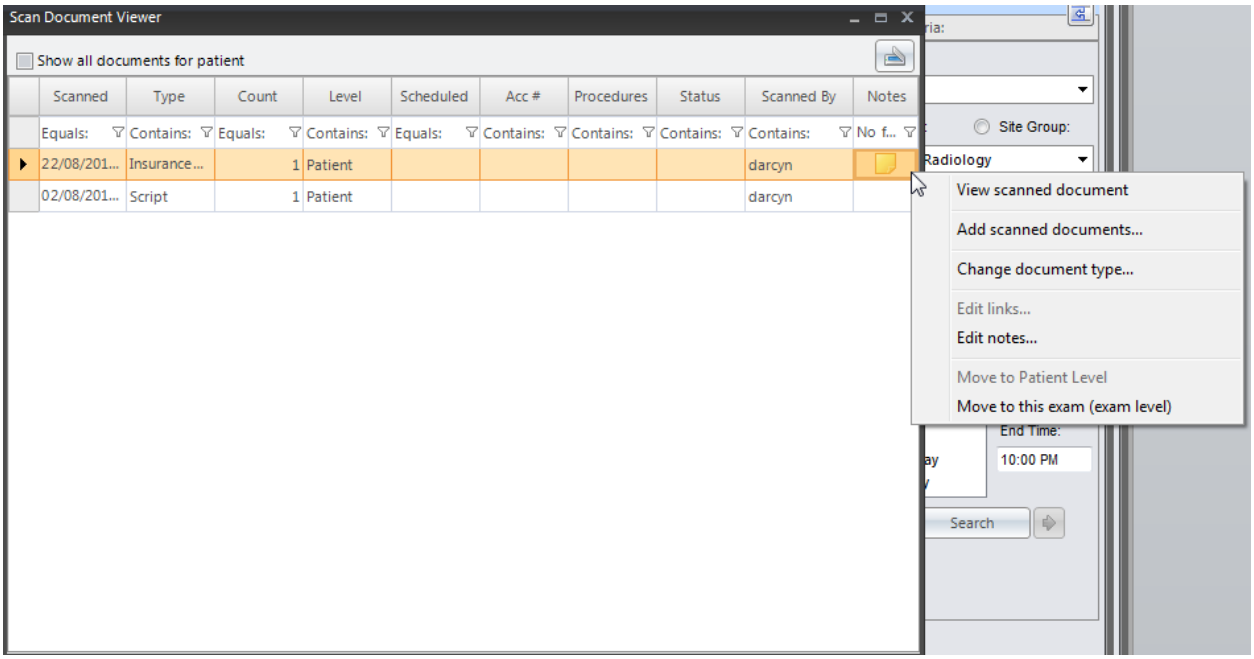

**Figure 4.15 – Notes column added to Scan Document Viewer work list**

The scan document notes can be edited from the work list via a right click menu from the notes ICON.

## Transportation Required

A flag was added to document if transportation is required. This is something that practices may offer as a service to patient's that don't have reliable means of transportation.
The field for transportation is a yes or no field and if yes, it will require the user to fill out the patient address and phone numbers at the time of scheduling. The text box is enabled when the flag is added

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

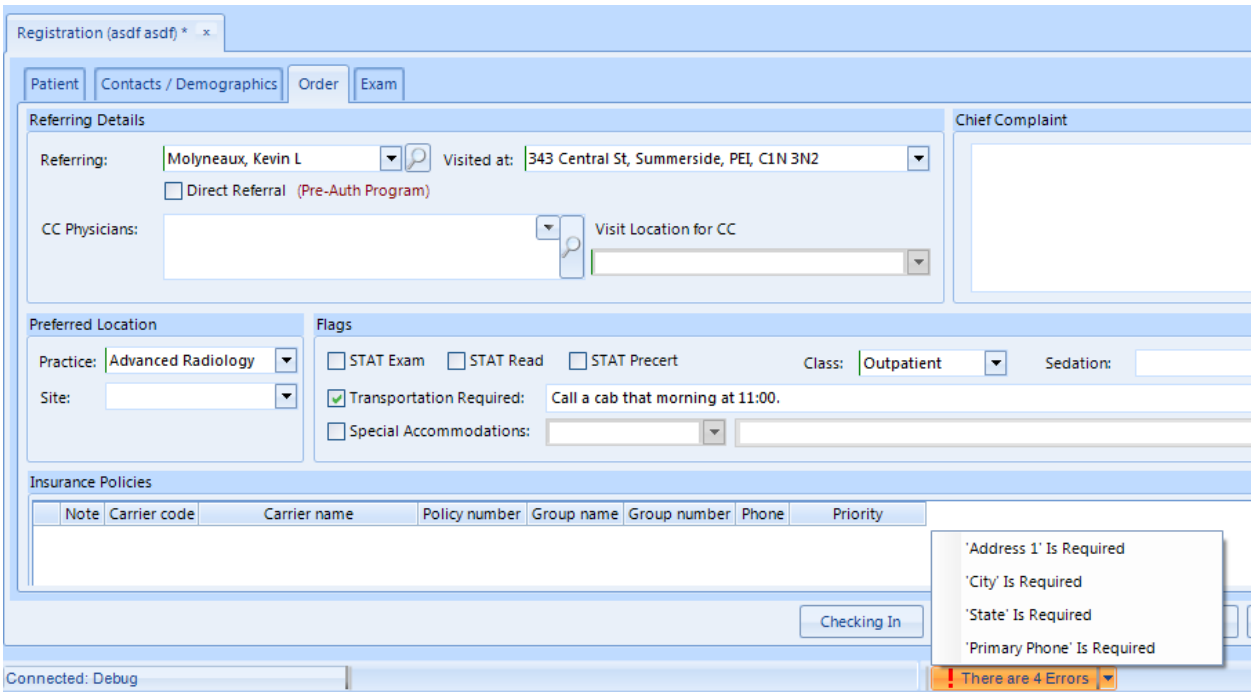

**Figure 4.16 – Transportation required flag and text box.**

## Site Logos

The ability to add a logo to the practice and /or the site has been added in build 1.20. The logo can be added, edited or removed via the configure Organization – Edit practice or edit site windows. The user will only be able to load picture format logos. For example the user would not be able to load a .pdf file.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

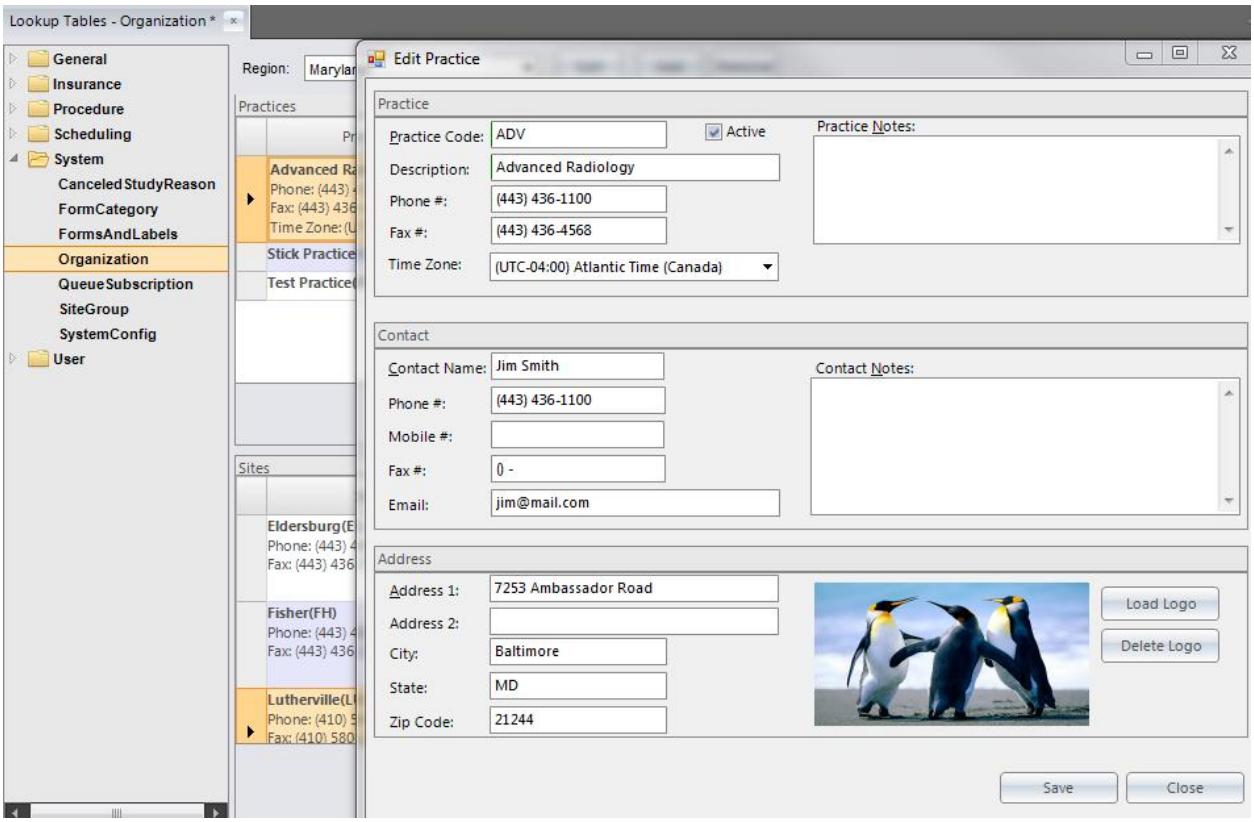

**Figure 4.17 – Adding logo to practice and / or site.**

## Expiring Time Block Exceptions

The expiring time block indicators will allow the administrator to ability to hide specific time periods from scheduling search until a pre-determined time. The time is calculated in days, so the earliest a time block would display would be 24 hours before that block would be available. The time block is setup from the Availability template window. Select the template, and to add a time block select the Exception button. See figure 4.18

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

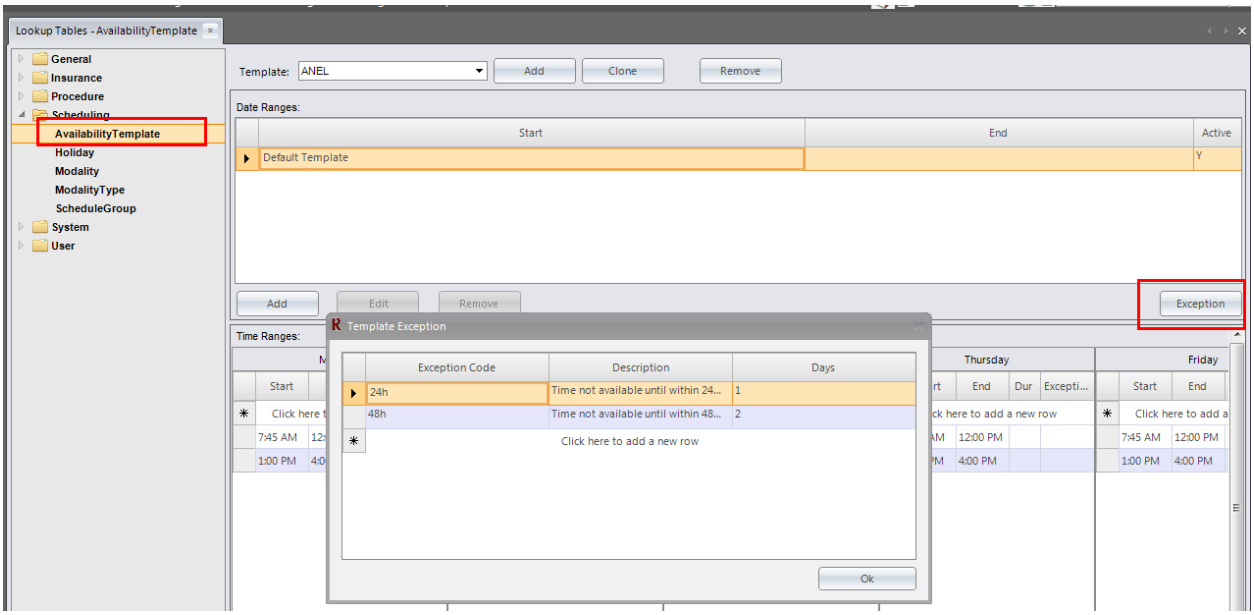

**Figure 4.18 – Time Block Exception setup.**

Once the exception has been defined, the time range(s) must be edited to indicate what exception is to be used. Under the Time Ranges section of this window, a new "exception" column has been added to this window that requires the Exception Code configured in the Template Exception window. In the example displayed in Figure 4.19 the time range of 6-9 on Monday will be available for schedule at any given time. The same time range for Tuesday and Wednesday would not be available via scheduling search until 24 hours before, and Thursdays time range of 7:10-9 is available 48 hours before.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

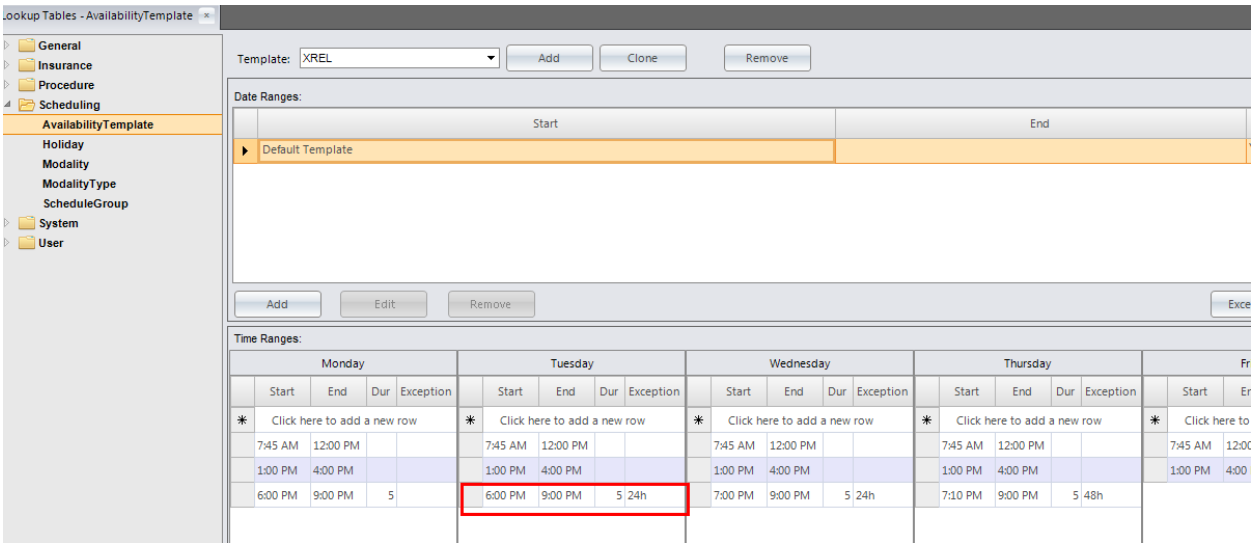

**Figure 4.19 – Specifying time range exceptions**

## Pre_Auth Referring Physician Management Report

A new management report is available with build 1.20. The report is accessed via the Administration – Management Reports menu and displays the modality counts for Pre-Auth Referring Physicians.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**Figure 4.20 – Pre-Auth Referring Physician Report**

## Composite Code Min – Max Site Override

In build 1.20 procedure plans may be overridden for specified site(s). The Procedure Plan window has been modified by adding an ICON in the lower right corner of the window.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

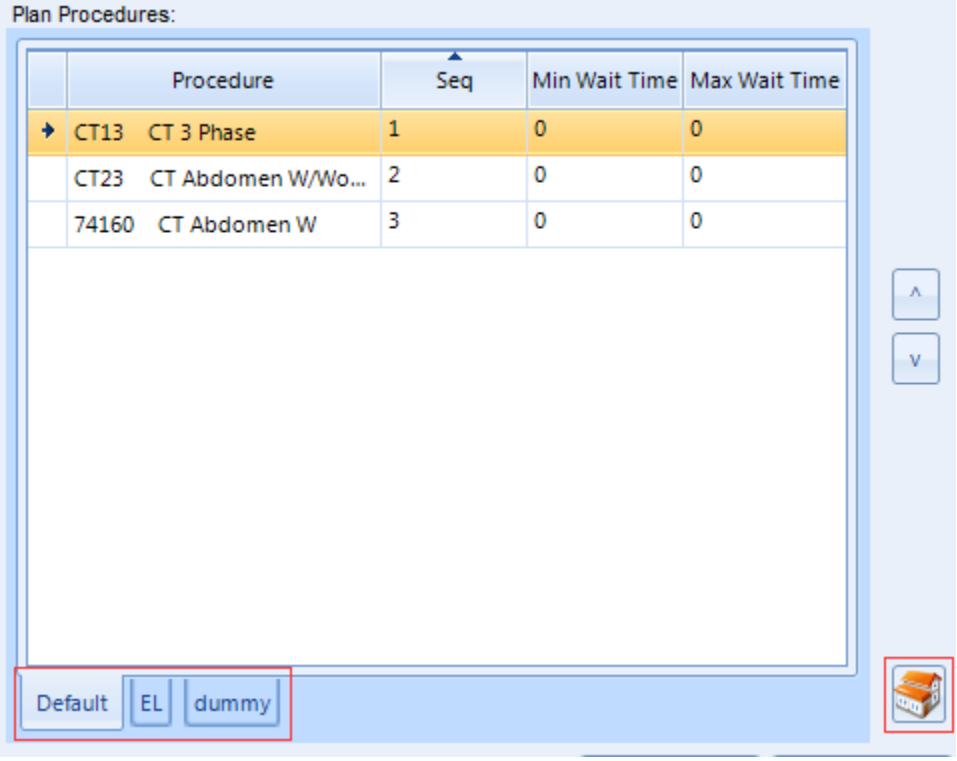

**Figure 4.21 – ICON to add, edit, or remove sites to be exempt from a procedure plan.**

Selecting this ICON will spawn a new window where the user may select the site(s) that are to override this procedure plan**.**

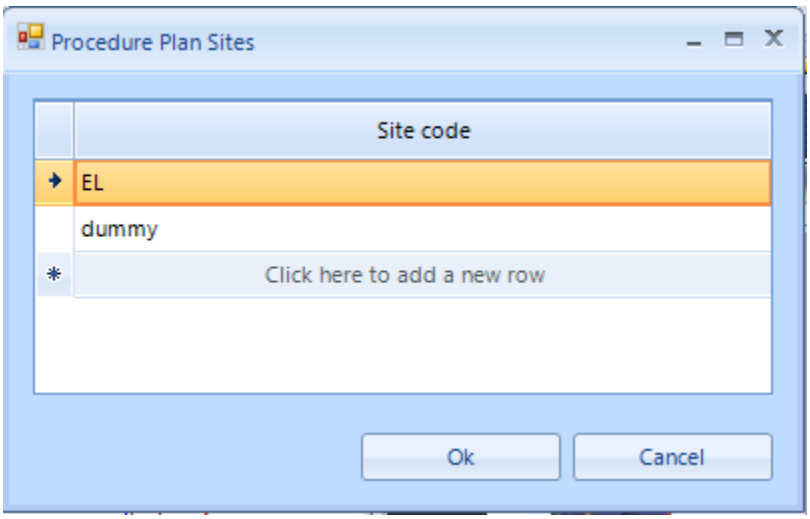

**Figure 4.22 – Add, edit and delete sites to override procedure plan**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Known Limitations

Bugs, Suggested Features, and Support Issues are now tracked in a web based system called Redmine. The following is a snapshot of the issues found in Build 1.20.

| # | Status | Subject | Category | Target version | % Done | Resolved Version |
|---|---|---|---|---|---|---|
| 522 | New | Search for available times incomplete based on criteria | Thick Client GUI | 1.20 | 0 | |
| 521 | New | Exception thrown at login if user is not associated to a practice | Admin Tools | 1.20 | 0 | |
| 520 | Resolved | Scheduler gets exception when selecting procedure | Thick Client GUI | 1.20 | 100 | 1.21 |
| 519 | New | Scheduling Planned Procedures does not adhere to min/max times | Thick Client GUI | 1.20 | 0 | |
| 518 | New | Config - User groups added don't have "x" to remove | Admin Tools | 1.20 | 0 | |
| 516 | New | Exception on reschedule | Thick Client | 1.20 | 0 | |
| 515 | New | Exception on closing edit patient window | Thick Client | 1.20 | 0 | |

   Verbal Order Work Flow ..... 19
5. Known Limitations ..... 23

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This document describes some of the new features and changes implemented in rRIS as of the end of Sprint 21. This pre-release version of rRIS is referred to as Build 1.21.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the rRIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation instructions for the rRIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu, click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.21 is considered a new core release of the application and will require a reinstallation of rRIS. This is accomplished by navigating to the rRIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application, please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Apply Document Type after Scanning

Build 1.21 gives the user the ability to assign or change the document type after the document has been scanned. Additionally the user has the option to change the type of the document selected and also the documents that follow the currently selected document.

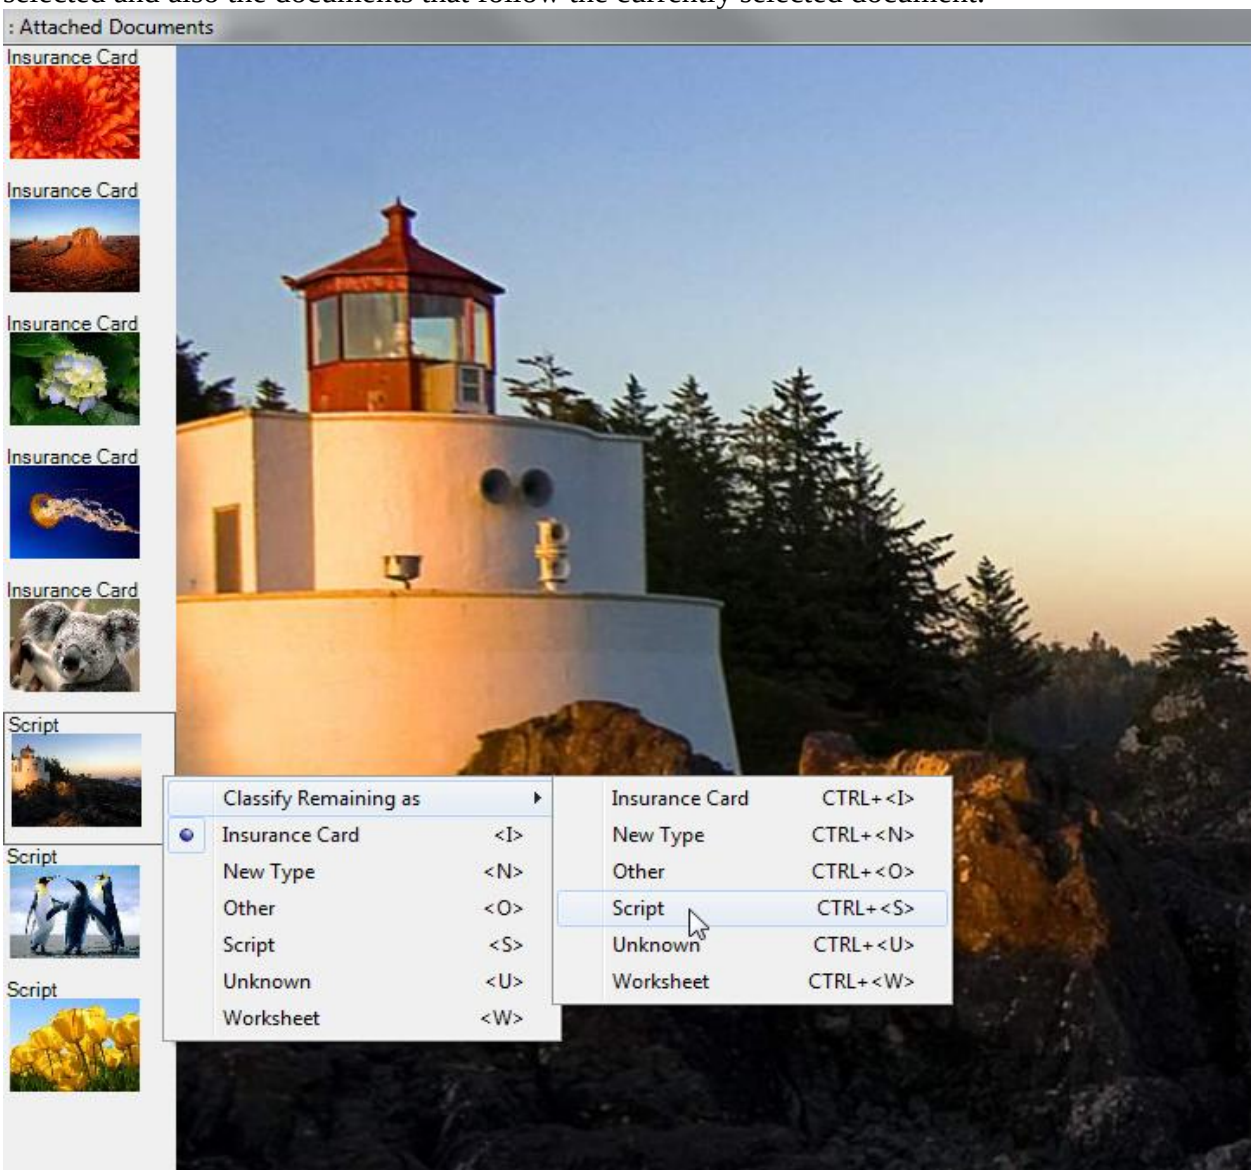

**Figure 4.1 –Attached document selection type.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

In the view attachment window, thumbnails are displayed on the left side. A right click on a thumbnail will open the list displayed in Figure 4.1. The first menu item "Classify Remaining as" expands the menu to show the available document types. The user can change the currently selected document as well as the all of the documents that follow the document in thumbnail view below it.
The document types available from this context menu are only those of the same document type of the scanned or imported image. For example, if the document scanned has a document type that is at the Patient Level, the context menu will only show active document types at Patient Level.

Changing the document type as shown in Figure 4.1 a new record is created and a new row will display in the Attachment Viewer. The original attachment "Insurance Card" has 8 pages. Three of those pages are changed to Type "script", creating a new row for "script" document with 3 pages and "Insurance Card" has the remaining

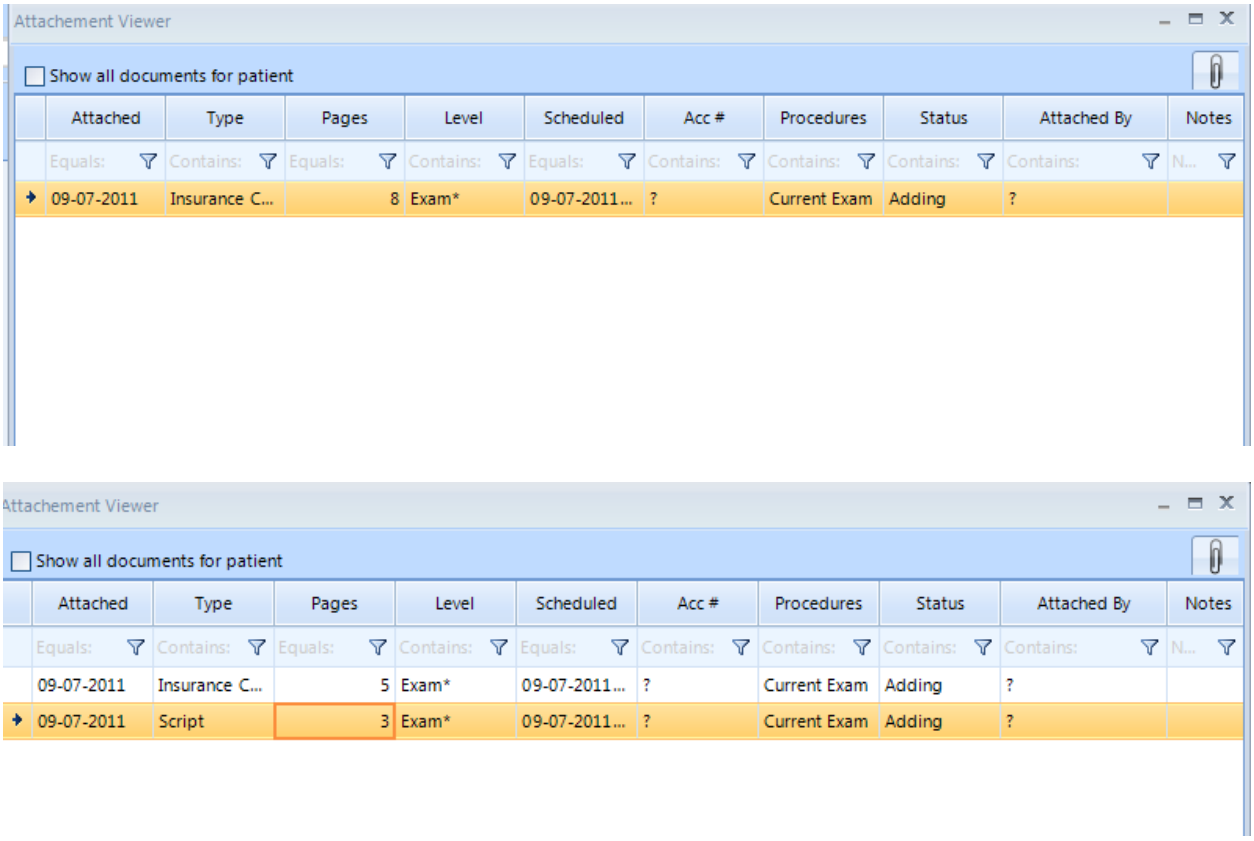

**Figure 4.2 – Before and after changing document type for multiple documents**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Also from Figure 4.1 you will notice that the document types may have shortcut keys assigned. To change the document type for a single document, you only need to select the shortcut key itself. For example, to change the document type to Unclassified, highlight the thumbnail and select **U** on the keyboard. To change the document type for the currently selected thumbnail and the documents below it, you must also select <Ctrl> in addition to the shortcut key.

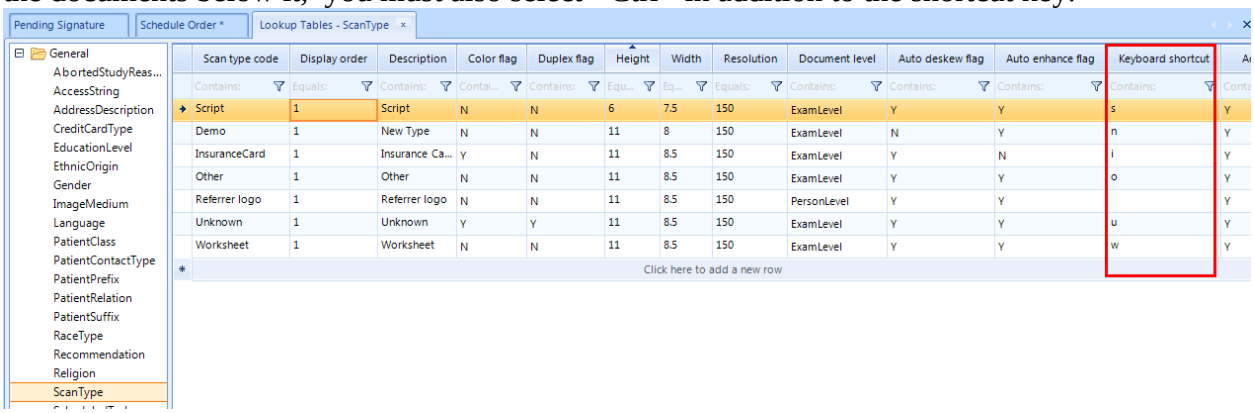

**Figure 4.3 – Lookup table ScanType. Keyboard shortcut column added**

## Assign Affiliation at Referring Address

Affiliation to a referring was already an option in rRIS. In this build it has been moved to be associated at the referrers address level. Users may be configured with multiple addresses. Each address may have different and multiple affiliations.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

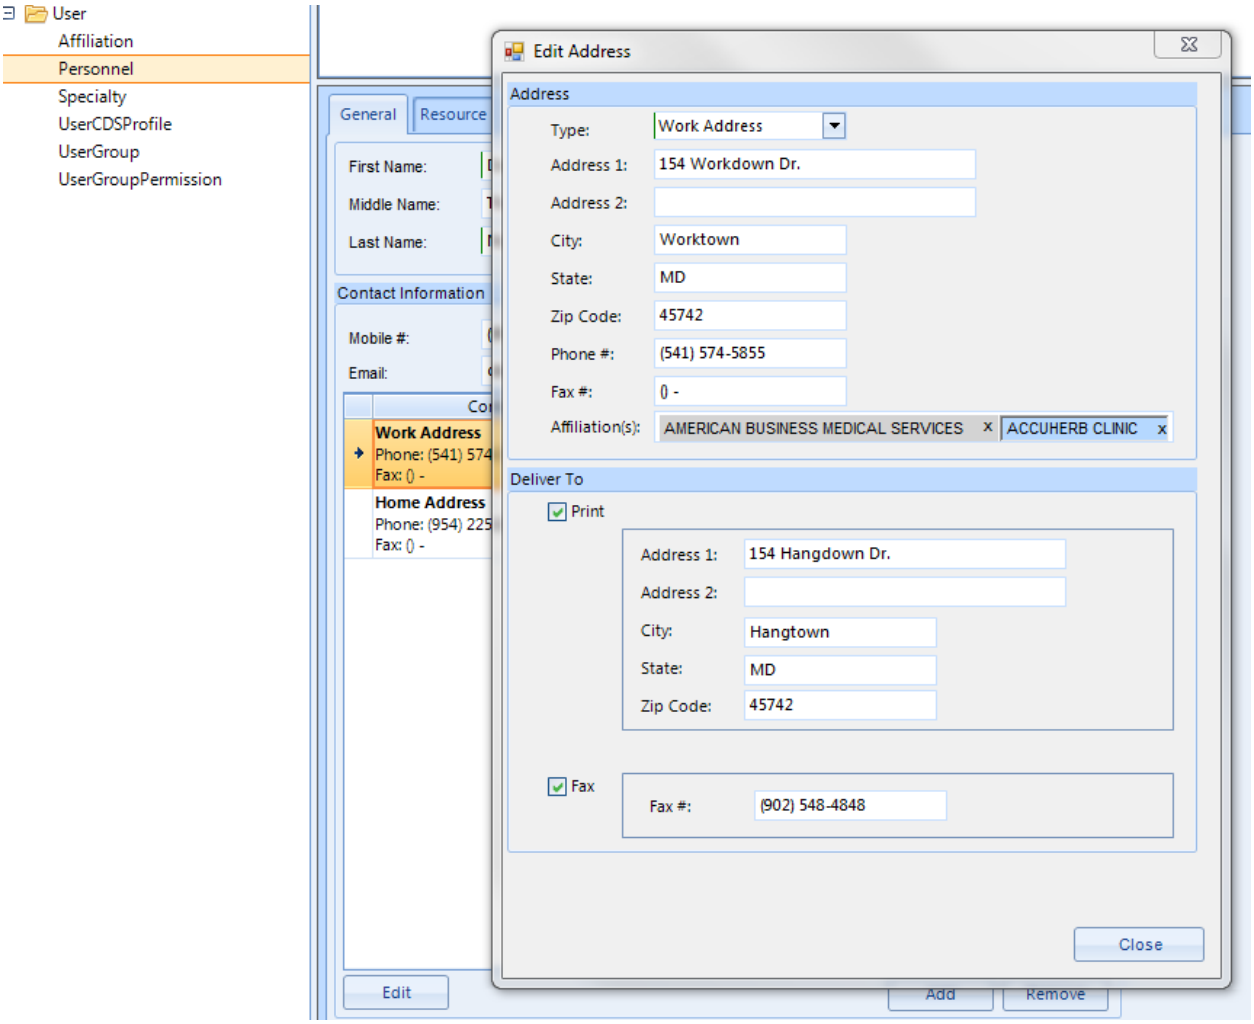

**Figure 4.4 – Affiliation moved to Address level**

## Modality Procedure Duration Override

In build 1.21 the ability to add study duration has been added to the modality level. In previous builds each procedure was assigned a default duration time. In addition to the procedure level, the duration could also be set for specific time blocks in the Availability Template.

The Duration Override is configured via the Modality lookup table. Choosing a modality code, then selecting this new button will spawn a new window. In this window the user may choose a

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

procedure and enter in the duration override to be used for this procedure in this specific modality.

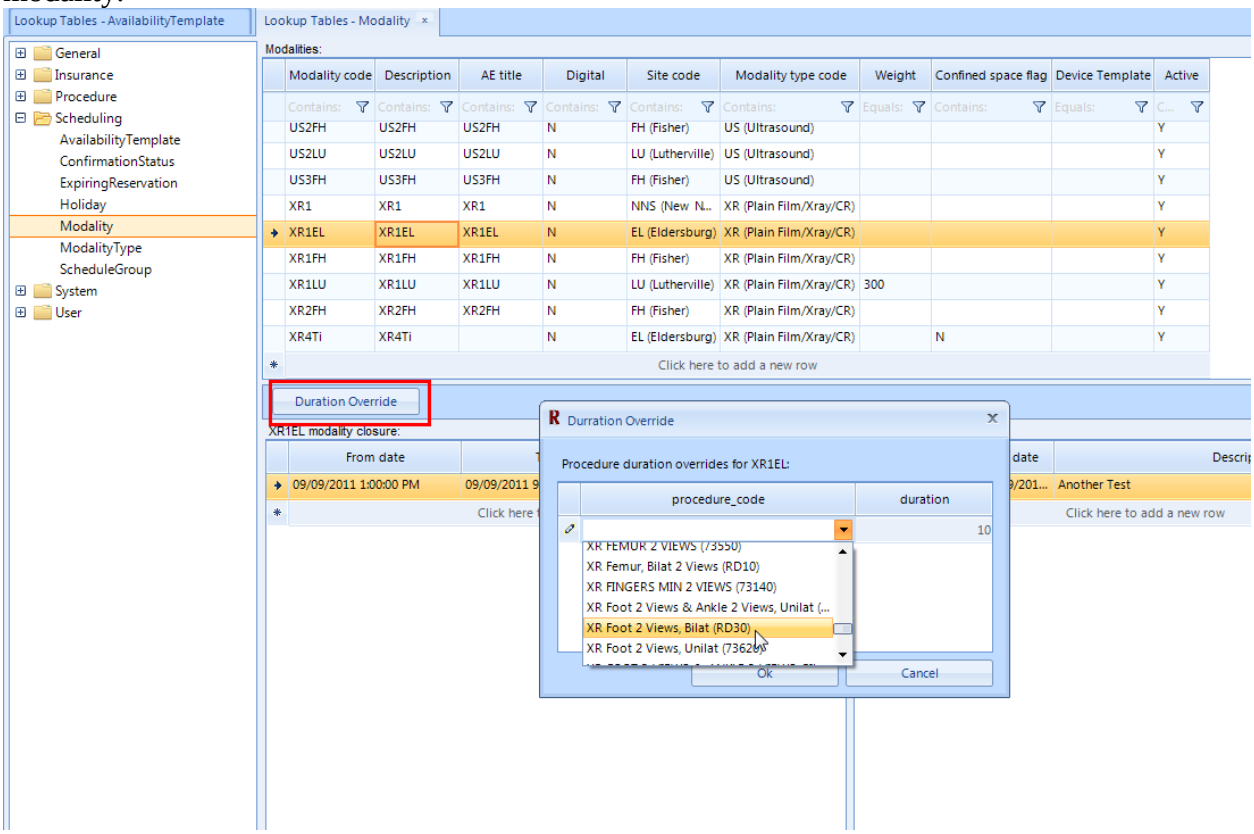

**Figure 4.5 – Duration Override at modality level**

With the duration override configured, procedure XR Foot 2 Views, BILAT (RD30) in modality XR1EL will be 10 minutes, overriding the procedures default duration of 5 minutes.

The order of process for procedure duration is as follows.

1. The procedure default duration is checked first
2. If a modality duration override is present it takes precedence over procedure level
3. The availability template may have a duration configured for a particular time block(s). The duration set here will take precedence over modality and procedure levels.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

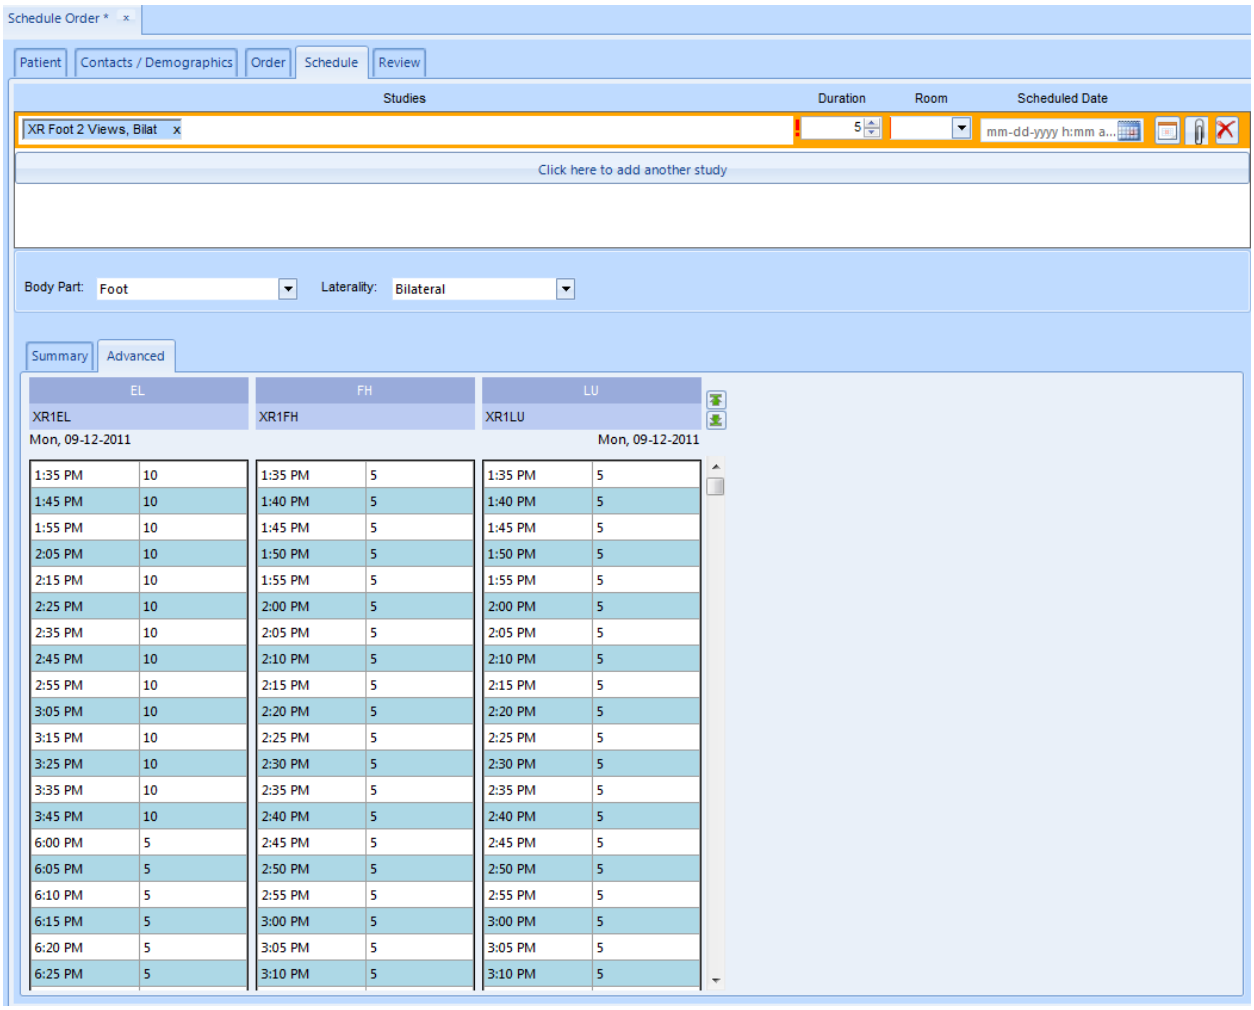

**Figure 4.6 – Scheduling window displaying duration override for XR1EL modality**

## Outside Reads (Tech Only and Professional Only)

Tech Only work flow. The tech will have the ability to mark a study as "No Report / Tech Only". . When a check is added the user will be prompted with confirmation message and the label "No Report / Tech Only" will be bolded red. Selecting "Yes" to confirm will add flag. Once the study is flagged and saved, it will move from the Technologist work list and flagged to skip professional services part of the workflow.

NOTE: currently this study will be sent to exam done work list and is not marked as a "no report" study. In next build the exam status will be informative (Ex: exam done / No Report)

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

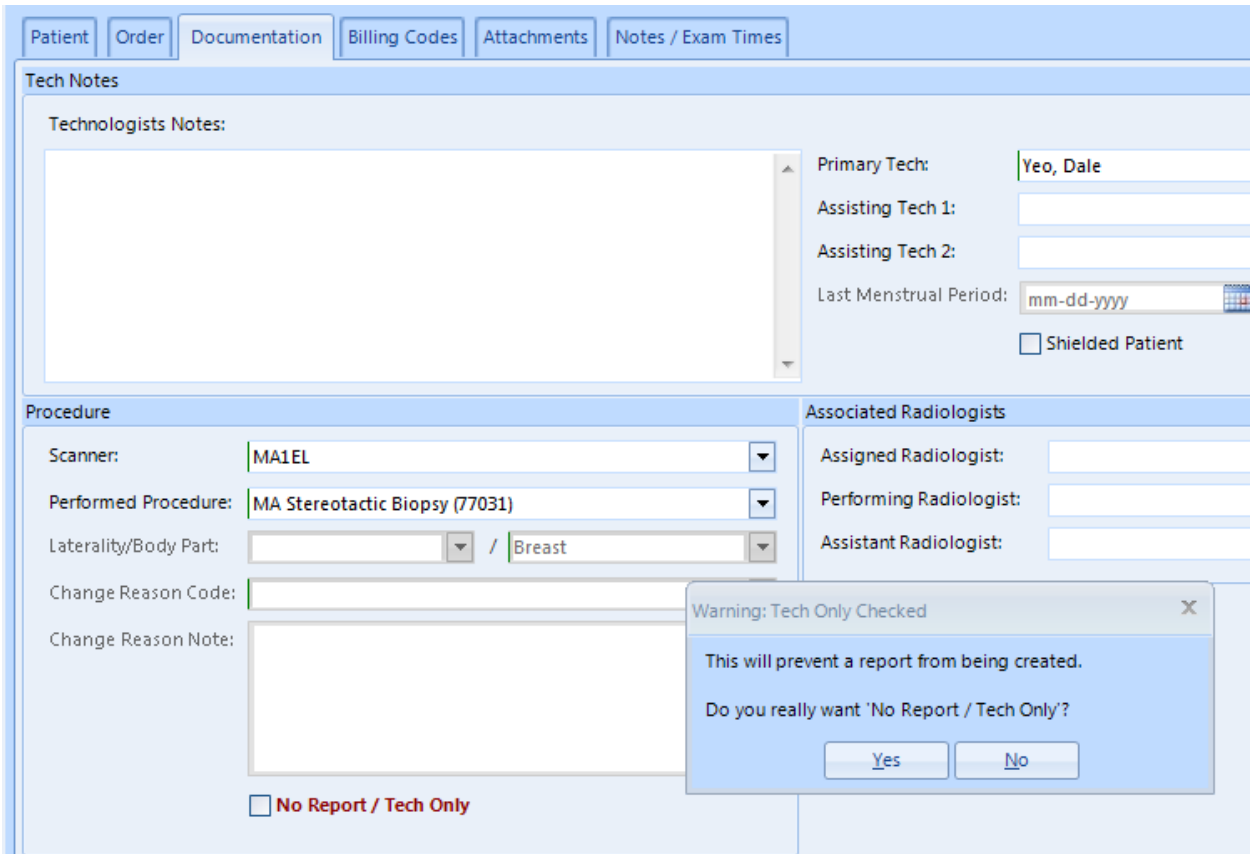

**Figure 4.7 – Tech Only work flow**

Procedures may also be pre-configured as No report required flag from the Procedure Code lookup table.

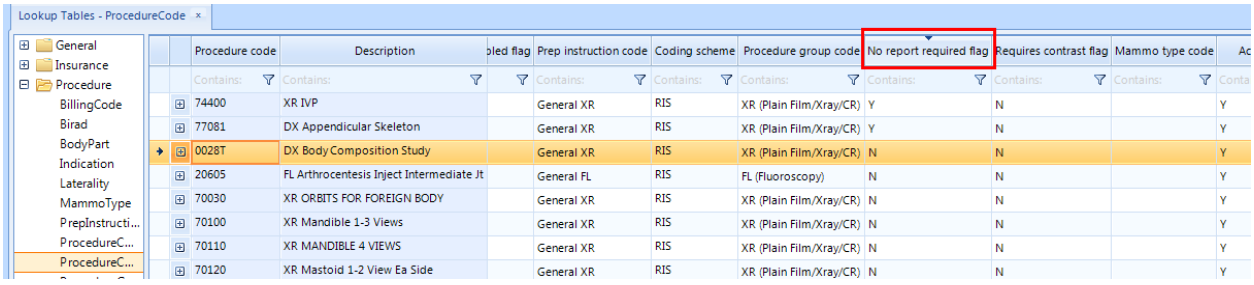

**Figure 4.8 – Procedure codes with No report required flag.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Tech performing exam on a procedure that has the No report required flag pre-configured will automatically have the Check box for No Report / Tech Only pre-selected, and disabled so the user cannot remove flag as displayed in Figure 4.9.

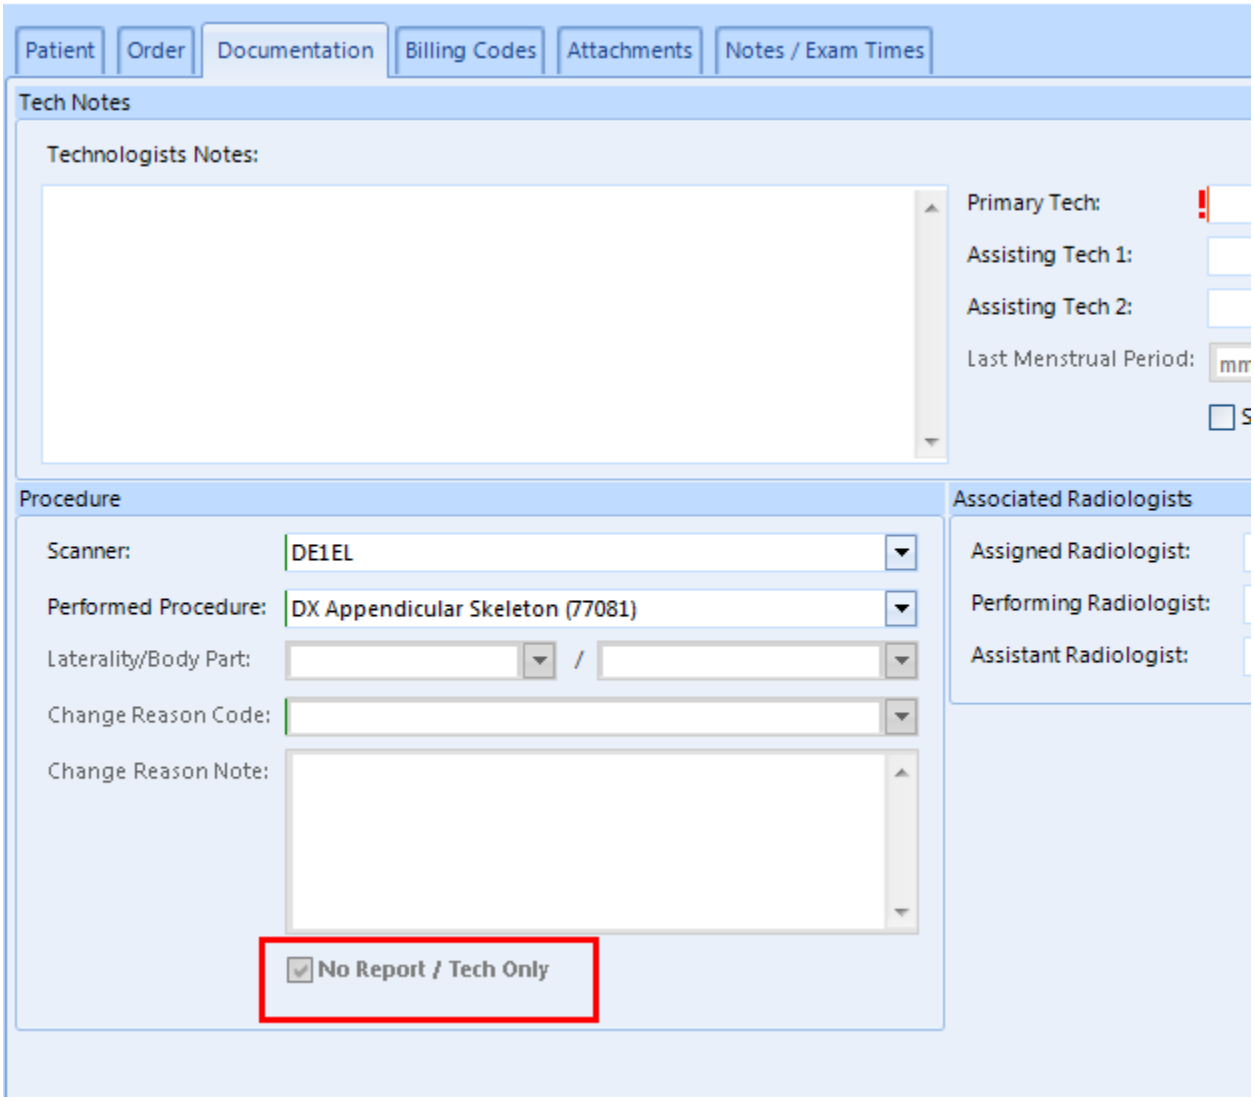

**Figure 4.9 – Procedure defaulted for no report**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Professional Only workflow outside reads – a new data window was added under the Administration menu.

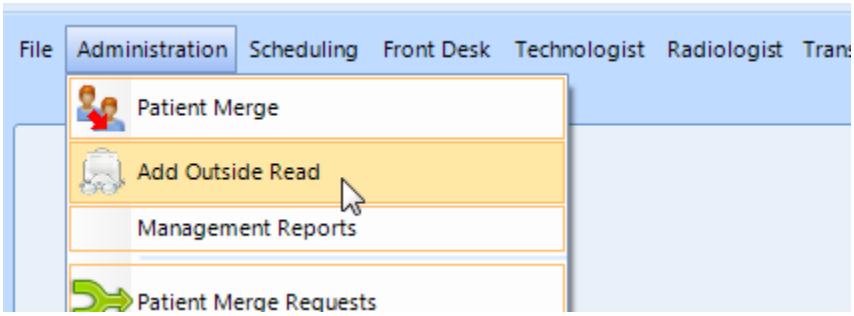

**Figure 4.10 – Add Outside Read**

"Add Outside Read" will open a new window that will allow the user to:

- Search or add a new patient.
- Data entry for exam date, order notes, stats, indications, referring, practice, etc.
- Entry for the exam location using the site field (required).
- Enter a list of studies for the order.
- Scan Documents for each study.

Once the information for the Outside Read has been added to the data window, the study will be moved directly to Exam Done status and are ready for dictation, transcription and signing.
NOTE: currently have outstanding issue of tech workflow fields required data at time of dictation.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

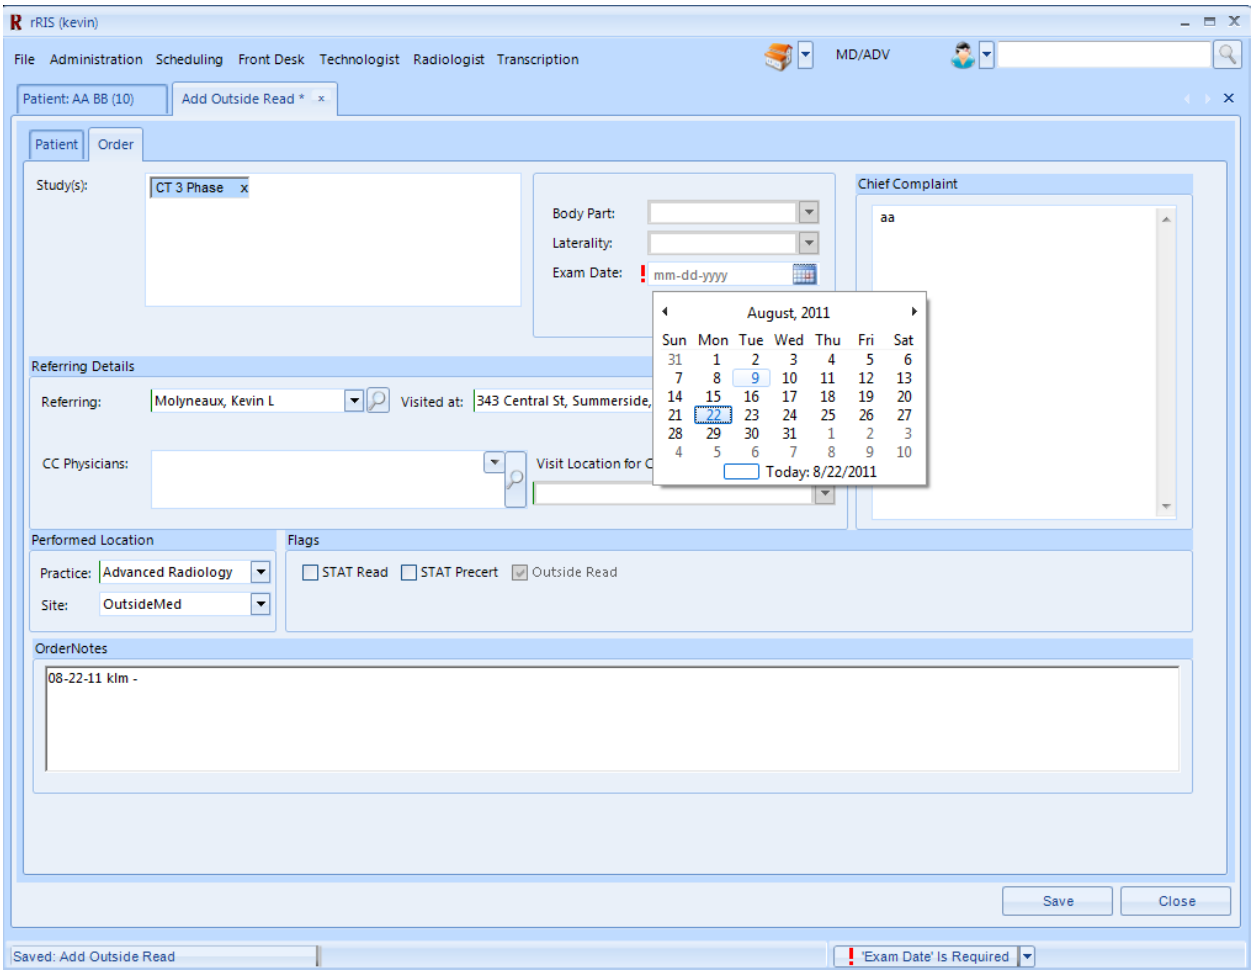

**Figure 4.11 – Outside read data window**

Administrators will need to create one modality for each modality type. These modalities created do not have to be assigned to scheduling groups (sites) also the Outside Read Modalities can marked as inactive. If the modality does not exist a message will inform the user with a list of modalities the administrator will need to create.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

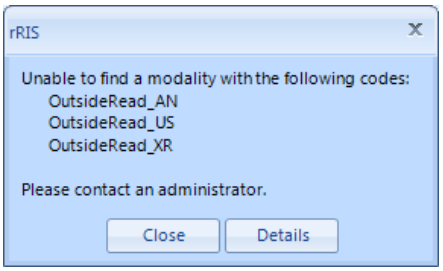

**Figure 4.12 – Informative message instructing Modalities to be created**

In the organization screen for site, the field "outside_read_location_flag" has been added. When this flag is set those sites will not show up in the other Scheduling screen's schedule/reschedule inputs for site. And on the "New Outside Read" only the sites for outside reads will be displayed

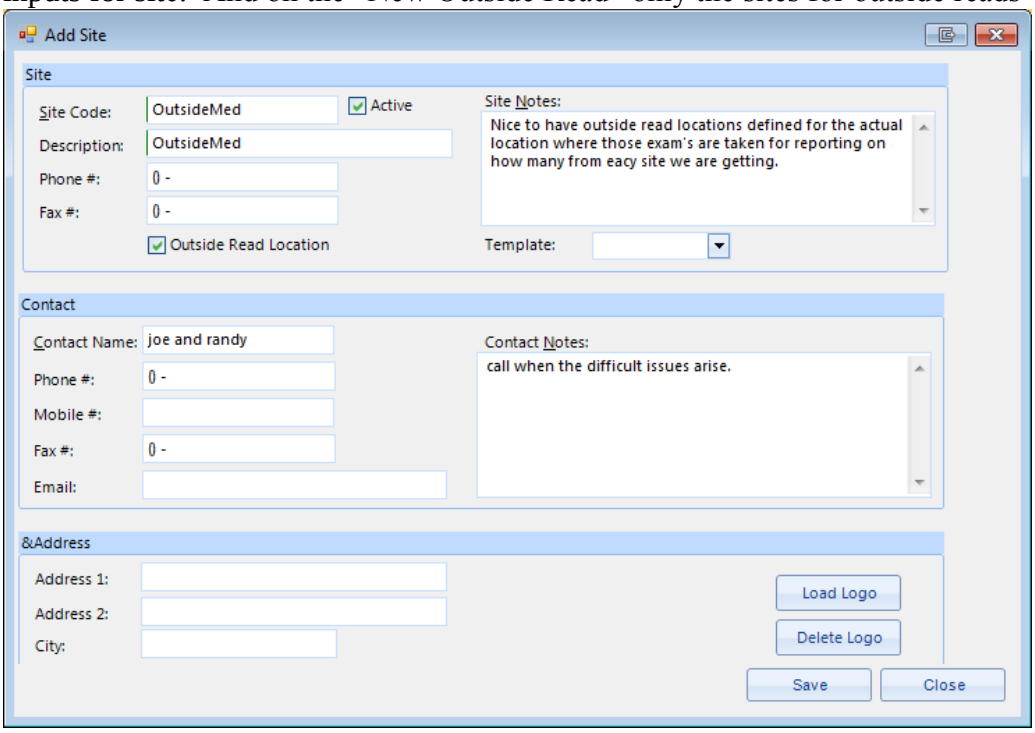

**Figure 4.13 – Add site Outside Read Location Flag**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Preferred Reader

In build 1.21 a radiologist can be assigned as a preferred reader. Referring physicians may have one or more preferred radiologists to read a specific modality type or specific procedure.

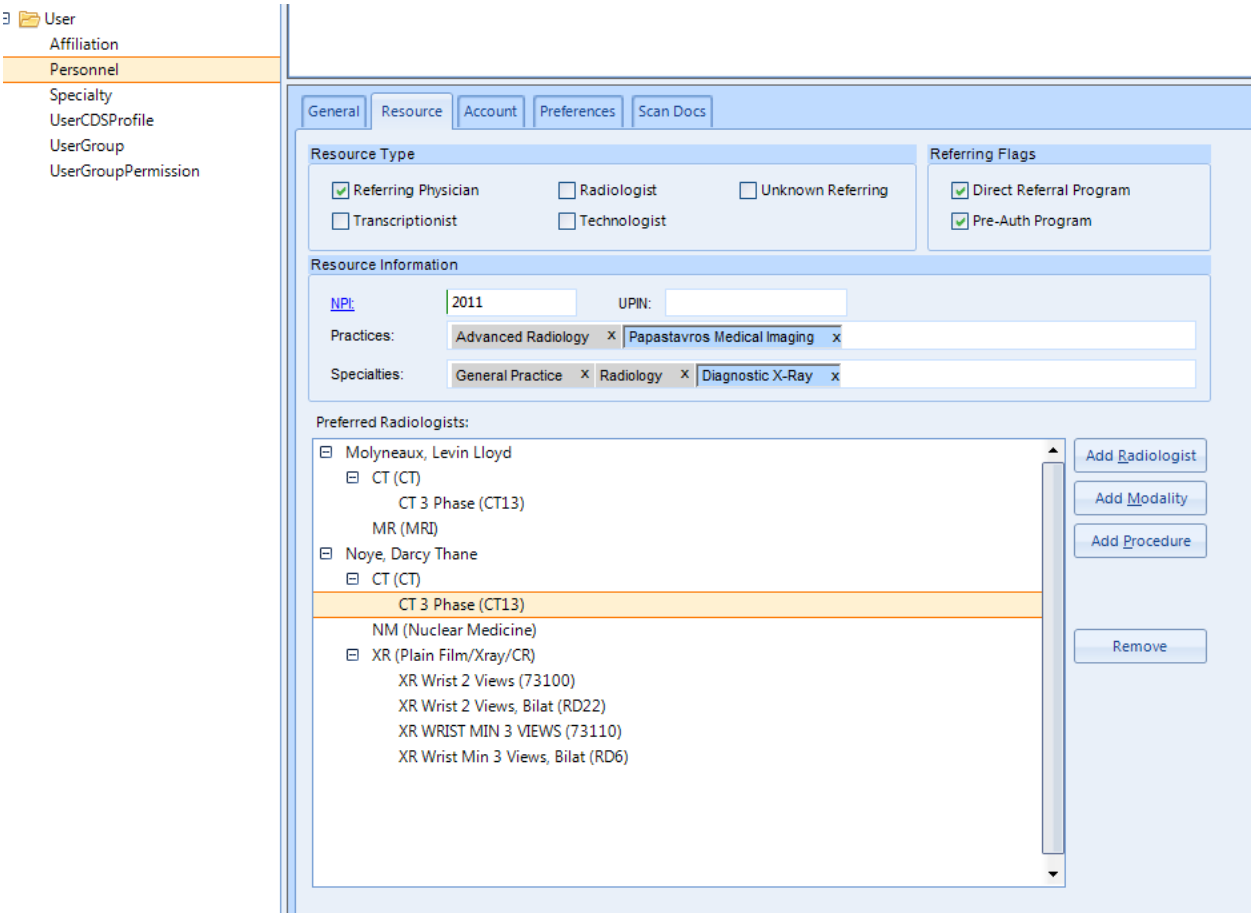

**Figure 4.14 – Preferred reader(s) added to referrers Personnel profile**

In the example above for this particular referrer, Molyneaux is the preferred reader for all MR (MRI) and CT 3 Phase (CT13). Noye is also a preferred reader CT 3 Phase (CT13), as well as all NM (Nuclear Medicine) and XR Wrist 2 views, XR Wrist 2 views, Bilat, XR Wrist min 3 views and XR Wrist Min 3 Views, Bilat.

When this referrer is selected for an order and the exam to be completed is of the Modality MR, Molyneaux will be defaulted as the Assigned Radiologist for the Technologist performing the exam.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

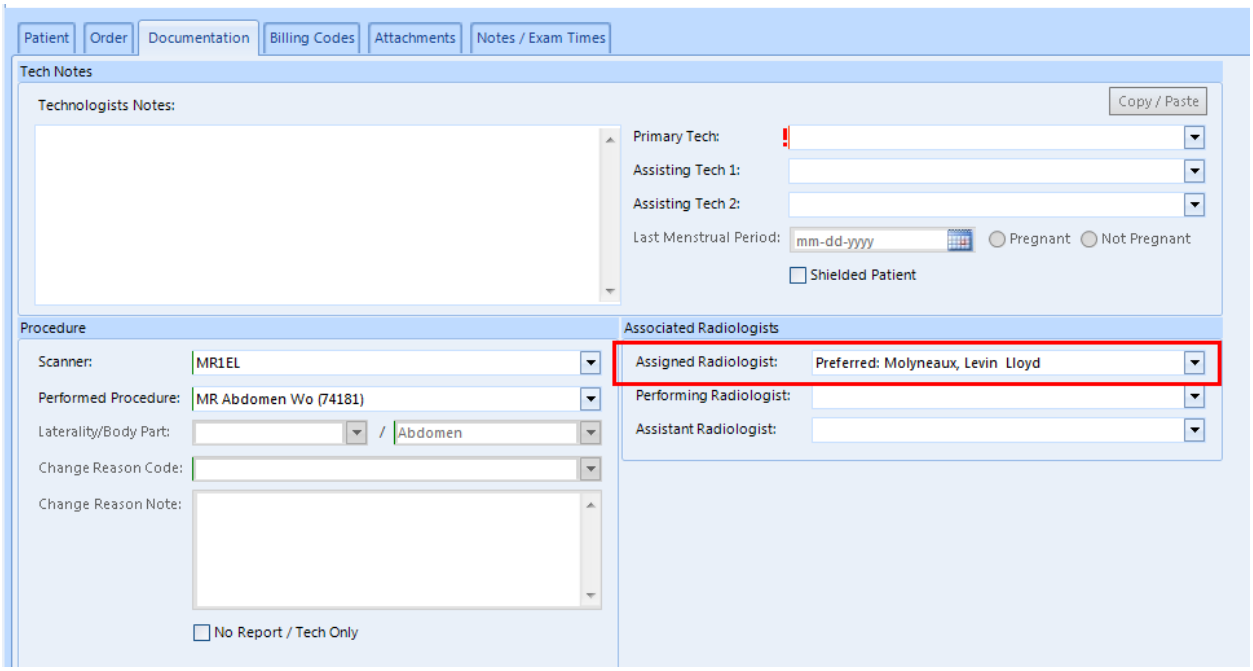

**Figure 4.15 – Preform exam with preferred reader defaulted**

In a case where there is more than one preferred reader, the Assigned Radiologist field will not have a default value, but is marked with **!** indicating that a preferred radiologist is configured and may be selected. The preferred radiologists will be prefixed with Preferred: as displayed in Figure 4.15

## Scanned Documents at the Referring level

Storing scan documents for a referring doctor at the Personnel level has been implemented in build 1.21. A new document type of person level was added to scan types and will be the only available option for attachments within the Personnel Editor.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

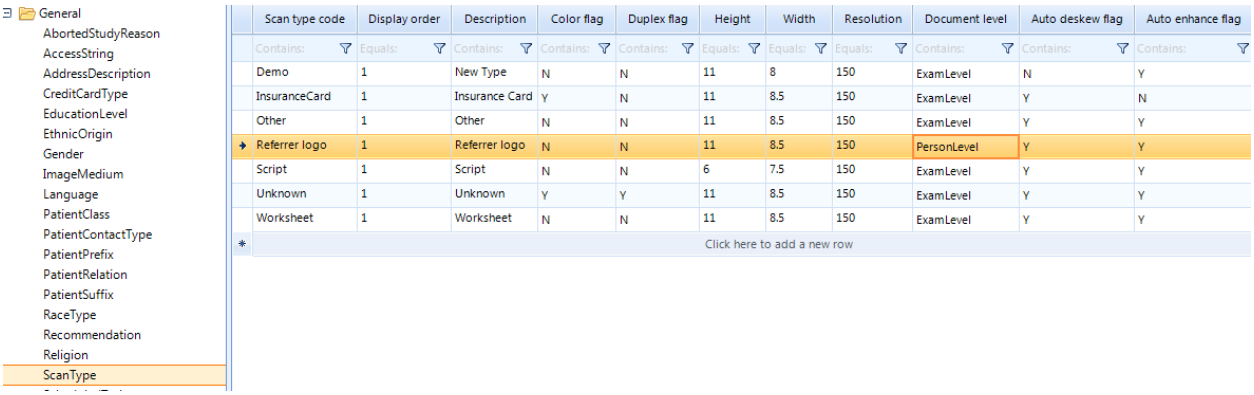

**Figure 4.16 – Scan type at PersonLevel.**

A new tab has been added to the personnel editor window conveniently labeled “Scan Docs”. Attachments are saved when you the person’s profile you are editing. The list of scanned attachments is downloaded to the person’s profile only when the scan docs tab is selected and the attachment itself is downloaded on a double click of the document row. Attachments can be scanned in or imported from file

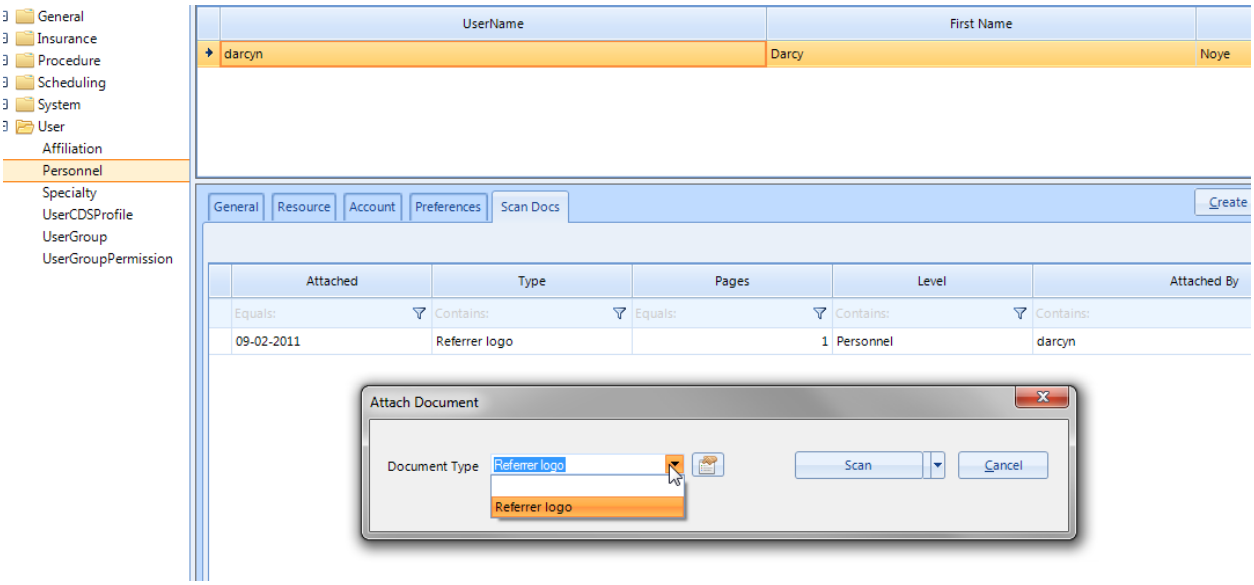

**Figure 4.17 – Scan Docs tab in Personnel Editor**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Separate Permissions for Editing Users vs. Referrers

The ability for non admins to add / edit referring physicians has been added in build 1.21. The access string "Config.LookupEditor.PersonnelReferring" controls this ability. A look at the access string lookup table displays the new access string code Config.LookupEditor.PersonnelReferring with default access level to full as well as access to the Personnel Editor Config.LookupEditor.Personnel default access level to full. This currently gives all users access.

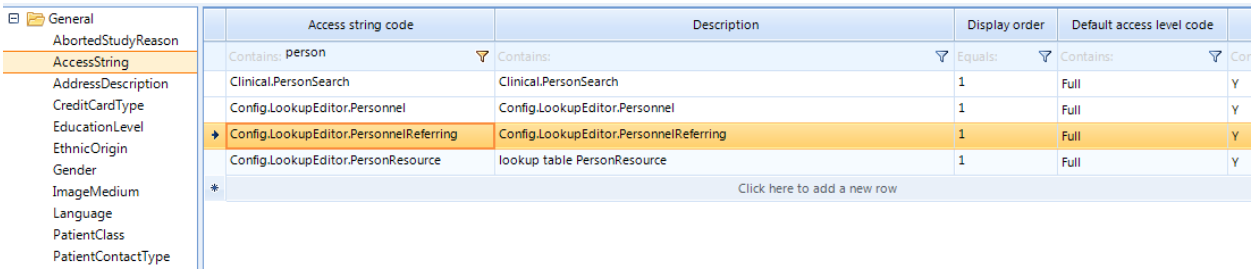

**Figure 4.18 – Access String lookup table highlighting new access string code**

If we look at the lookup table for User Group Permission we see the User Group "Scheduling" is permitted access to edit Referrers, but will not be able to search for users that are not of the referring group.

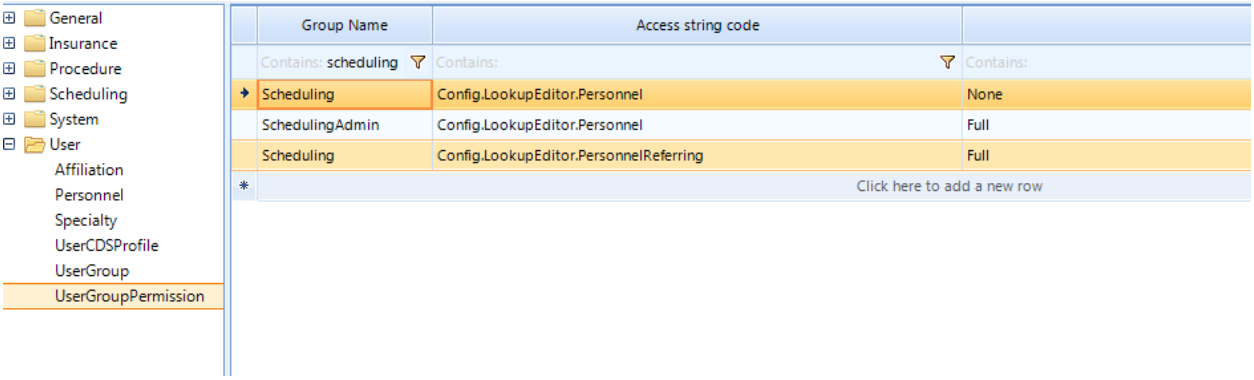

**Figure 4.19 – User Group Permission for Scheduling only has access to edit Referrers in Personnel editor.**

Logged in as a user of the Scheduling user group, you can see from Figure 4.20 that they do not have access to the Personnel Editor, but they can perform an Internal Person search for referrers. The user will only have the ability to change data on the General, Resource (resource type will be un-editable) and Scan Docs tabs. Fields on the Account and Preferences tabs are disabled to this user. If they search for a user that is not flagged as a referrer Resource type, the results will

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

be returned to the Internal Person search window, but they will not be permitted to view this user in the Personnel Editor.

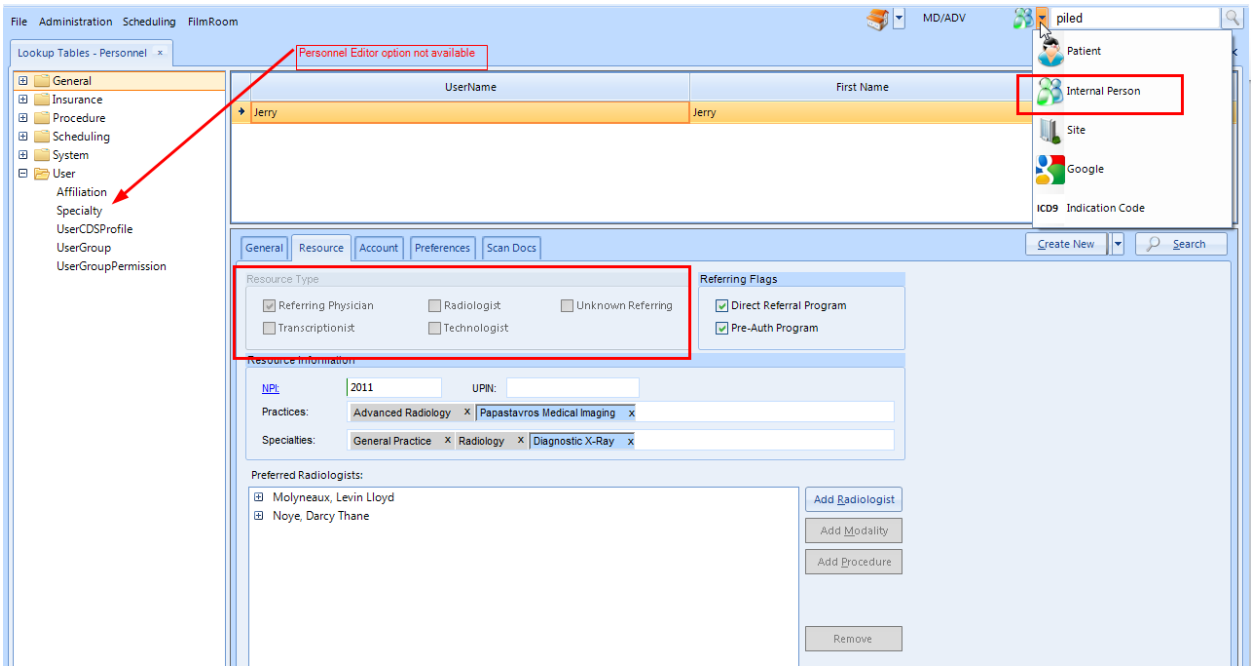

**Figure 4.20 – Locked down Personnel Editor for editing Referring Physician only**

## Verbal Order Work Flow

Patients may arrive at registration / walk-in without a written order from a referring physician, or perhaps the tech needs to change it. To add this work flow to rRIS, Verbal order work flow has been added to build 1.21. Since all downstream users may want or need to see the verbal order, it has been created as an attached document (scan doc).

A button called “Verbal Order” has been added to the Attach Document window as displayed in Figure 4.21. The button is accessed via the drop down button to the immediate right of the Scan button in the Attach Document window.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

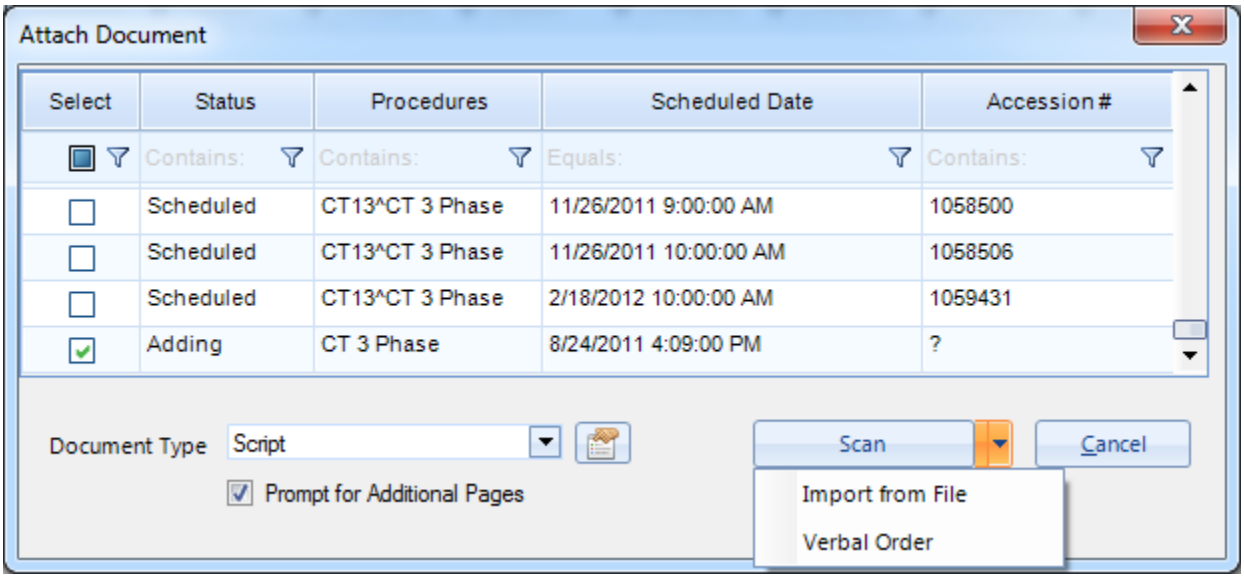

**Figure 4.21 – Verbal order.**

Selecting the Verbal Order button will open the Verbal Order window. Before the Verbal Order window opens, it checks for the patients data. If there is insufficient information a pop up window informs the user of the missing information.

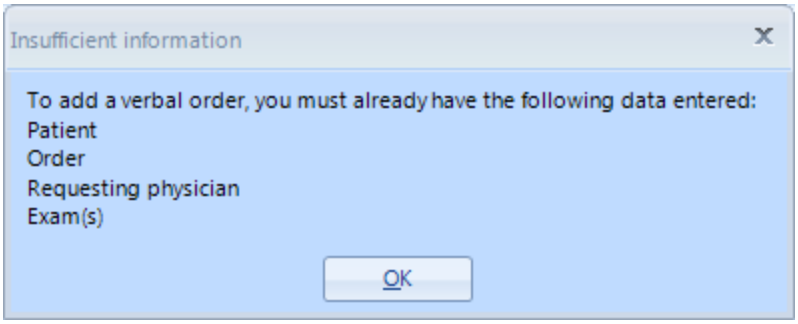

**Figure 4.22 – Verbal Order missing data**

Once sufficient information has been entered the user is prompted to complete information in the Verbal Order data window. The create order button is enabled when all of the fields have data and the check box is selected.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

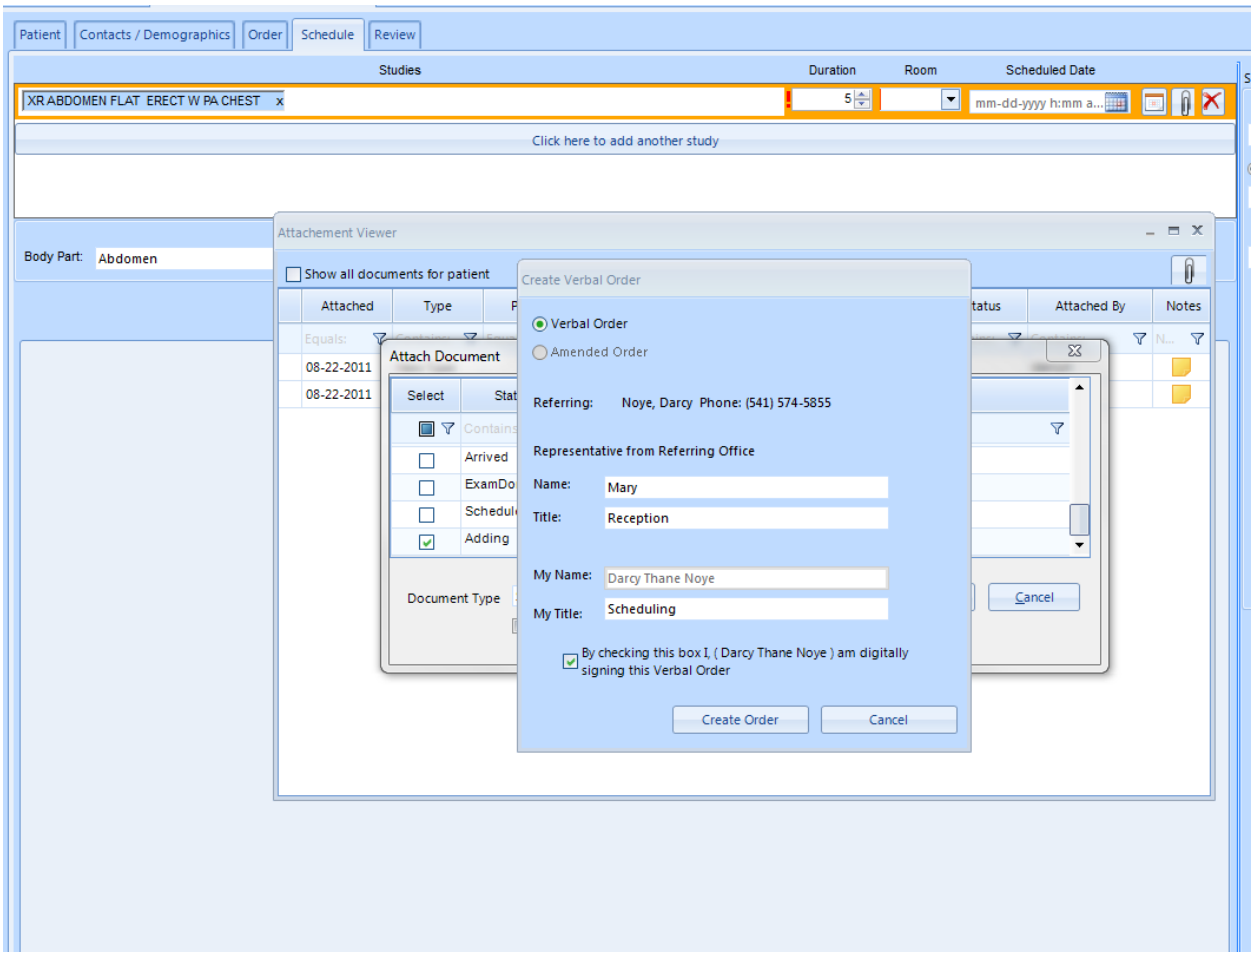

**Figure 4.23 – Creating Verbal order**

Selecting the Create Order button will render the data and saves it as a scanned document. The document is attached to the current order with a scan type of script. The regular attachment viewer will allow the order to be viewed

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

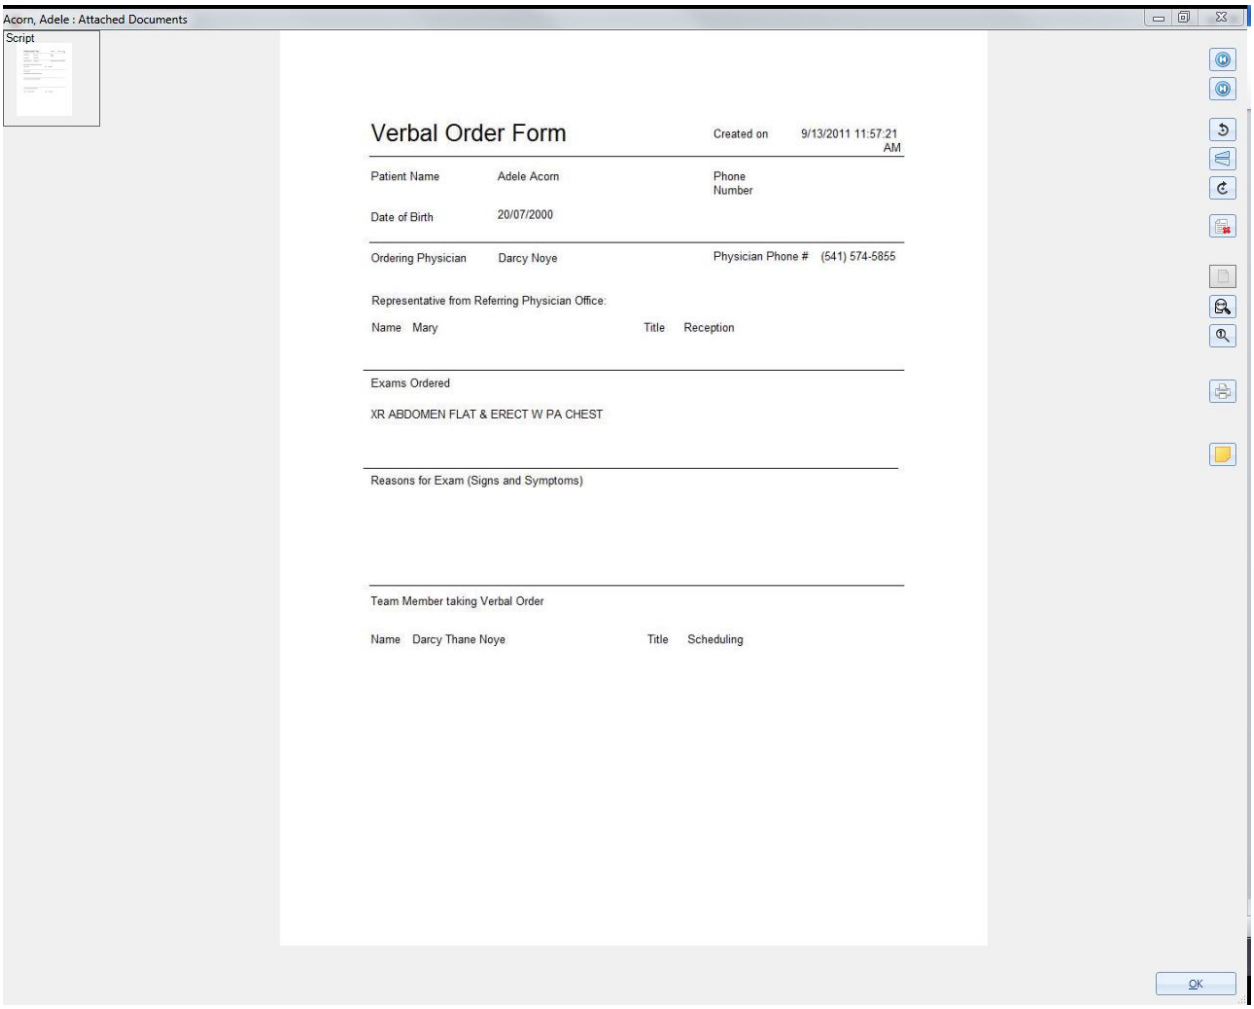

**Figure 4.24 – Verbal Order Form complete.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Known Limitations

Bugs, Suggested Features, and Support Issues are now tracked in a web based system called Redmine. The following is a snapshot of the issues found in Build 1.21.

| # | Status | Subject | Category | Target version | % Done | Resolved Version |
|---|---|---|---|---|---|---|
| 514 | Resolved | Refresh issue on save personnel | Admin Tools | 1.21 | 100 | 1.22 |
| 523 | New | Apply Document type after scanning only showing patient level document types | Thick Client GUI | 1.21 | 0 | |
| 524 | Resolved | Scan docs - Classify Remaining - Scan notes on incorrrect document | Thick Client GUI | 1.21 | 100 | 1.22 |
| 526 | New | Exception on diagnose / dictate | Thick Client GUI | 1.21 | 0 | |
| 528 | New | Create new report distribution job from Distribution History throws error | Thick Client GUI | 1.21 | 0 | |
| 529 | New | Reschedule study search returning incorrect times | Thick Client GUI | 1.21 | 0 | |
| 531 | Resolved | Availability template - adding time ranges start date not formatted | Admin Tools | 1.21 | 100 | 1.22 |
| 532 | Resolved | Time slot not released on reschedule | Thick Client GUI | 1.21 | 100 | 1.22 |
| 534 | New | Creating verbal order needs a user friendly message when missing DOB | Thick Client GUI | 1.21 | 0 | |
| 535 | New | Installer errors | Admin Tools | 1.21 | 0 | |
| 536 | New | Exception thrown for new user created | Thick Client GUI | 1.21 | 0 | |
| 537 | New | Preferred reader - cannot multi select when removing | Admin Tools | 1.21 | 0 | |
| 538 | New | Cannot edit modality code in modality lookup table | Admin Tools | 1.21 | 0 | |
| 539 | Resolved | Patient information - phone fields extention not retained | Thick Client GUI | 1.21 | 100 | 1.22 |
| 540 | New | Outside Read - Exception thrown on save | Thick Client GUI | 1.21 | 0 | |
| 541 | New | Error on perform exam when referrer has preferred reader assigned. | Thick Client GUI | 1.21 | 0 | |
| 542 | Resolved | Creating an Outside Read returns error | Thick Client GUI | 1.21 | 100 | 1.22 |
| 543 | New | Distribute report - can save distribute report | Thick Client GUI | 1.21 | 0 | |
| 544 | New | User with read only rights to Personnel cannot view their own account | Admin Tools | 1.21 | 0 | |
| 545 | New | User who has appropriate permissions cannot create unknown referring physician | Admin Tools | 1.21 | 0 | |
| 546 | New | Exception throw submitting appended dictation | Thick Client GUI | 1.21 | 0 | |
| 547 | Resolved | Diagnose window hides pop ups behind application | Thick Client GUI | 1.21 | 100 | |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | | | | | |
|---|---|---|---|---|---|---|
| 548 | New | Error logging in with some of our test users | Thick Client GUI | 1.21 | 0 | |
| 549 | Resolved | Duration Override - procedures added are not displayed and other suggestions | Admin Tools | 1.21 | 100 | 1.22 |
| 550 | Resolved | Issues when viewing available times when duration override applied | Thick Client GUI | 1.21 | 100 | 1.22 |
| 551 | Resolved | Removing a procedure from procedure picker that has a modality duration override will thrown exception | Thick Client GUI | 1.21 | 100 | 1.22 |
| 552 | New | Issues will editing time ranges on AvailabilityTemplate lookup. | Admin Tools | 1.21 | 0 | |
| 553 | Resolved | Diagnose window opening with incorrect patient information. | Thick Client GUI | 1.21 | 100 | |
| 554 | Resolved | Procedure plan min/max values ingnored when duration override applied. | Thick Client GUI | 1.21 | 100 | 1.22 |
| 555 | Resolved | Procedure plan throwing an error on schedule | Thick Client GUI | 1.21 | 100 | 1.22 |
| 556 | New | Add Outside Read missing required fields from tech workflow | Thick Client GUI | 1.21 | 0 | |
| 557 | New | Preferred Reader - user is able to assign non radiologists as preferred reader. | Admin Tools | 1.21 | 0 | |
| 558 | New | Verbal Order form - patient phone number | Thick Client GUI | 1.21 | 0 | |
| 559 | New | Personnel - Add / Edit address - Scrolling needed | Thick Client GUI | 1.21 | 0 | |
| 560 | New | Column filter range of same day - no results returned | Thick Client GUI | 1.21 | 0 | |
| 561 | New | Exporting audit history throws exception | Thick Client GUI | 1.21 | 0 | |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This document describes some of the new features and changes implemented in rRIS as of the end of Sprint 22. This pre-release version of rRIS is referred to as Build 1.22.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the rRIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation instructions for the rRIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu, click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.22 is considered a new core release of the application and will require a reinstallation of rRIS. This is accomplished by navigating to the rRIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application, please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

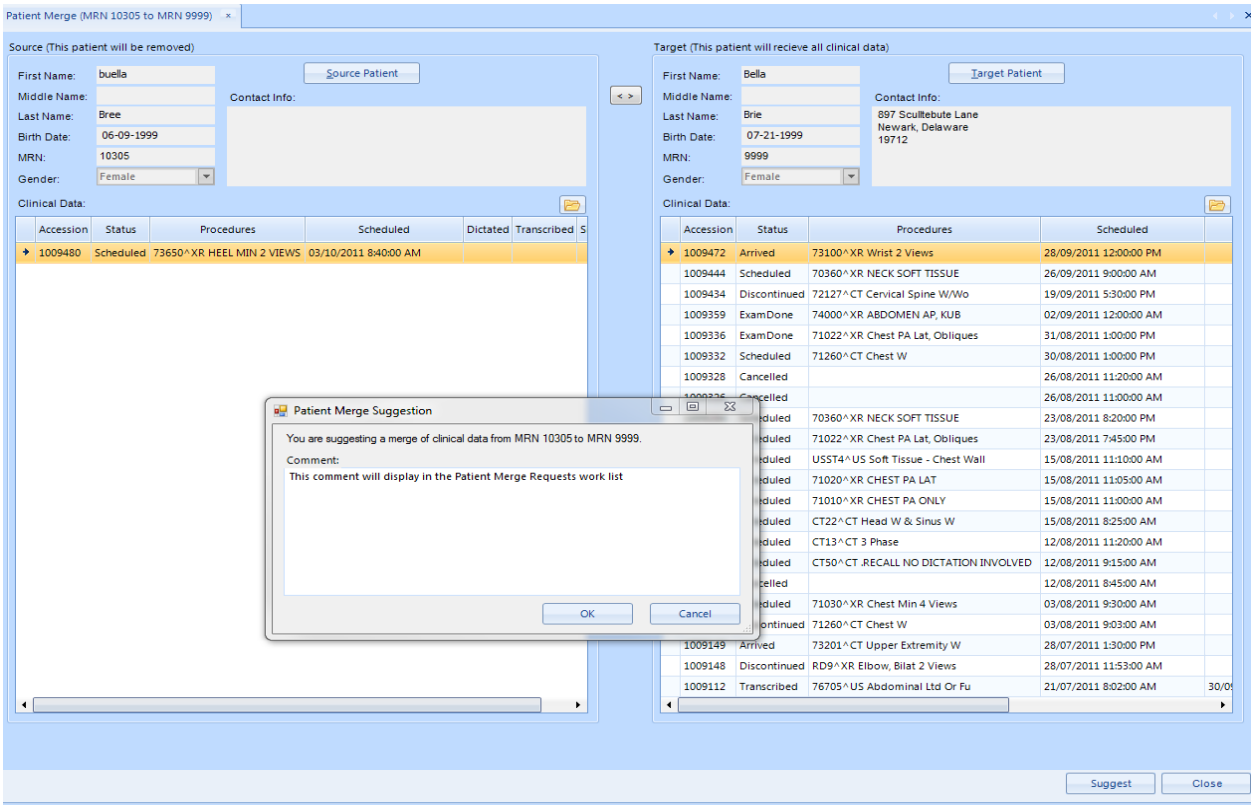
# 4. New Features and Enhancements

## Patient Merge Request Work List

Patient Merge has been enhanced in this build, to make it more accessible to all users. Not all users will have the ability to complete a patient merge. Who can perform a patient merge and who may only be able to suggest a patient merge will be controlled by the following access strings:

- Clinical.PatientMerge - All users should have this access string set to full. This will give them access to the patient merge screen but only for "Suggesting" merges, not submitting them.
- Clinical.PatientMergeAdmin – given to a specific admin type. Permits users to complete patient merge, or reject the suggestion
- WL.PatientMergeRequest – allows access to the patient merge request work list

The system allows users to recommend multiple or duplicate merge requests since the reason for a second request might include a different or additional comment.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**Figure 4.1 – Patient merge data window for non admin users. Permitted to "Suggest" merge only.**
**Clinical.PatientMerge = full.**

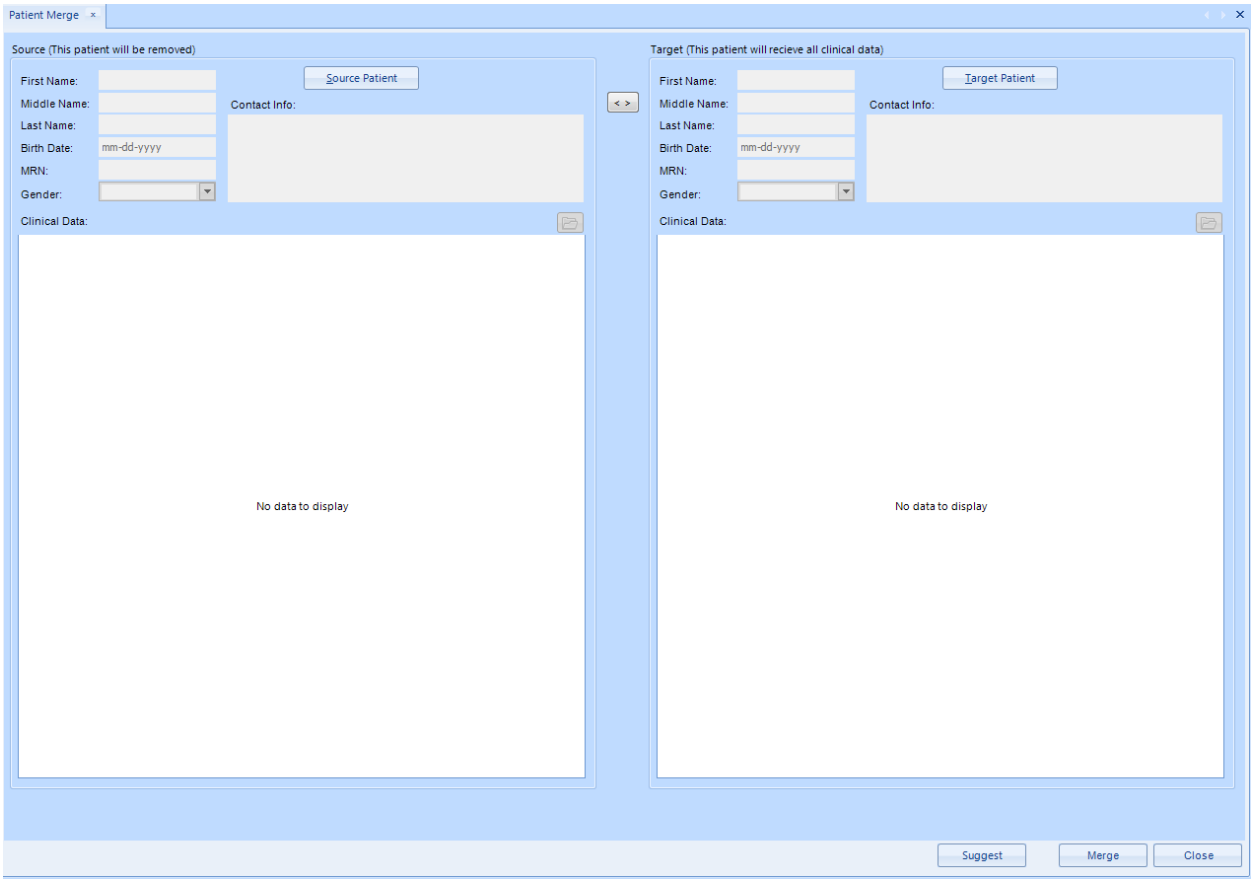


**Figure 4.2 – Patient Merge data window for an Admin user that has Clinical.PatientMergeAdmin = full. Permitted to Merge as well as Suggest.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

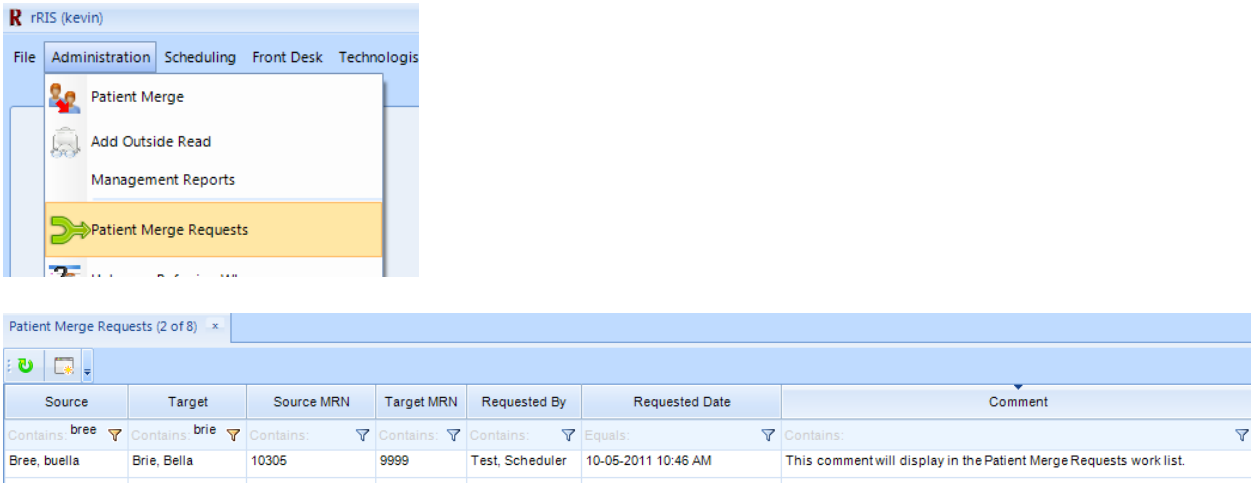

**Figure 4.3 – Patient Merge access and work list.**

Figure 4.3 above shows how to access the Patient Merge Requests work list. It is recommended that all users that have access to suggest patient merges as well as complete a merge have access to this work list. Figure 4.4 displays that Patient Merge data window for an admin user. The admin has the ability to "Reject" the suggestion, "Merge" the suggestion, or do additional searching, change source / target patient and complete merge or simply close the window.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

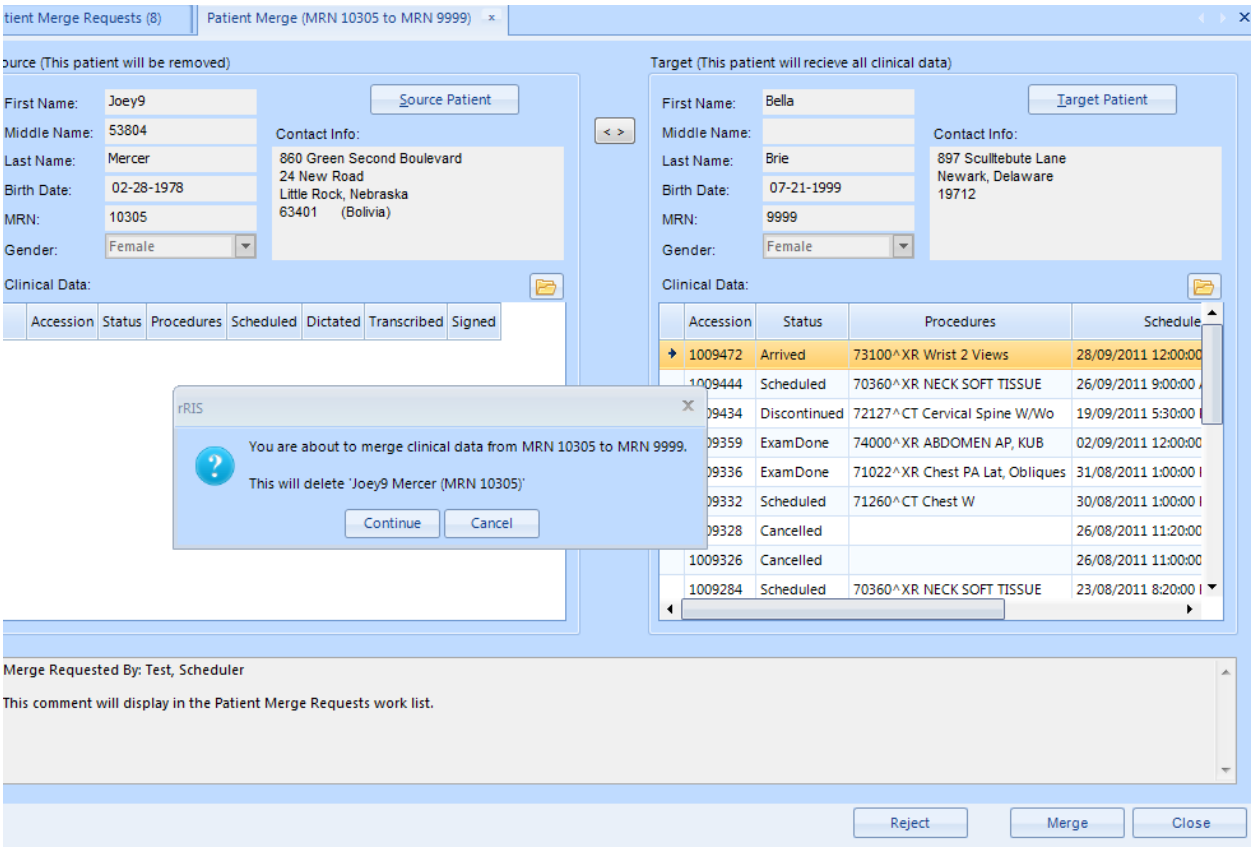

**Figure 4.4 – Data window opened from figure 4.2. This admin type user can complete merge, reject or complete their own search for source and target patient.**

If more than one merge request is created for a particular patient the admin must choose which one to select from the work list. If an admin completes a merge for the first request, the second request drops off the list.

## Patient Search for Outside Orders

In Build 1.22 the rRIS application will determine if the order to be scheduled was received from an external system. It will compare the "Issuer of ID" with our internal, configurable value.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

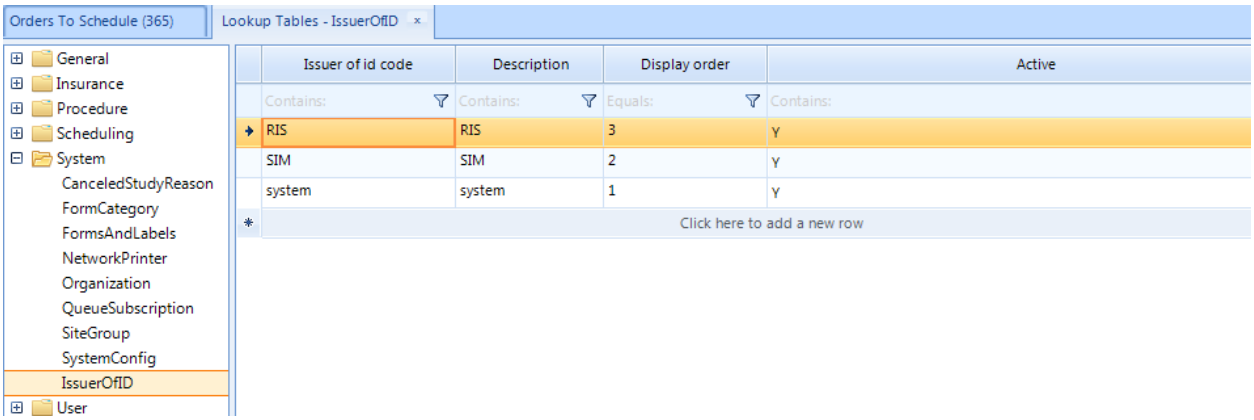

**Figure 4.5 - IssuerOfID lookup table**

If the "issuer of ID" does not match, the user is prompted with a message displayed in figure 4.6.

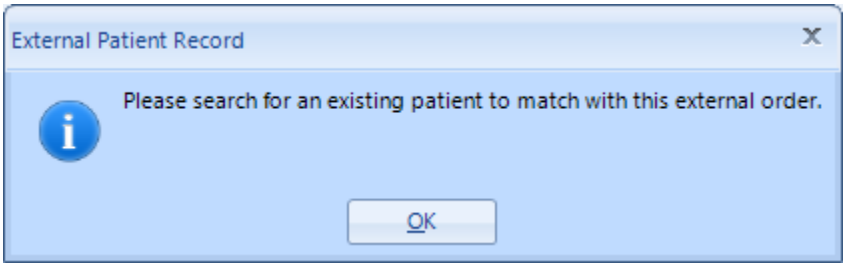

**Figure 4.6 – External Patient Record – user is informed that the order is from an external system**

Selecting OK will automatically open the patient search window displaying any matches and will also search for "Other Variations" of the name. As with the previous build, the user can try alternate search criteria (e.g. reversing the first and last name), if no patient matches are found the user may create a new patient from the "Patient Search New Order" window.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

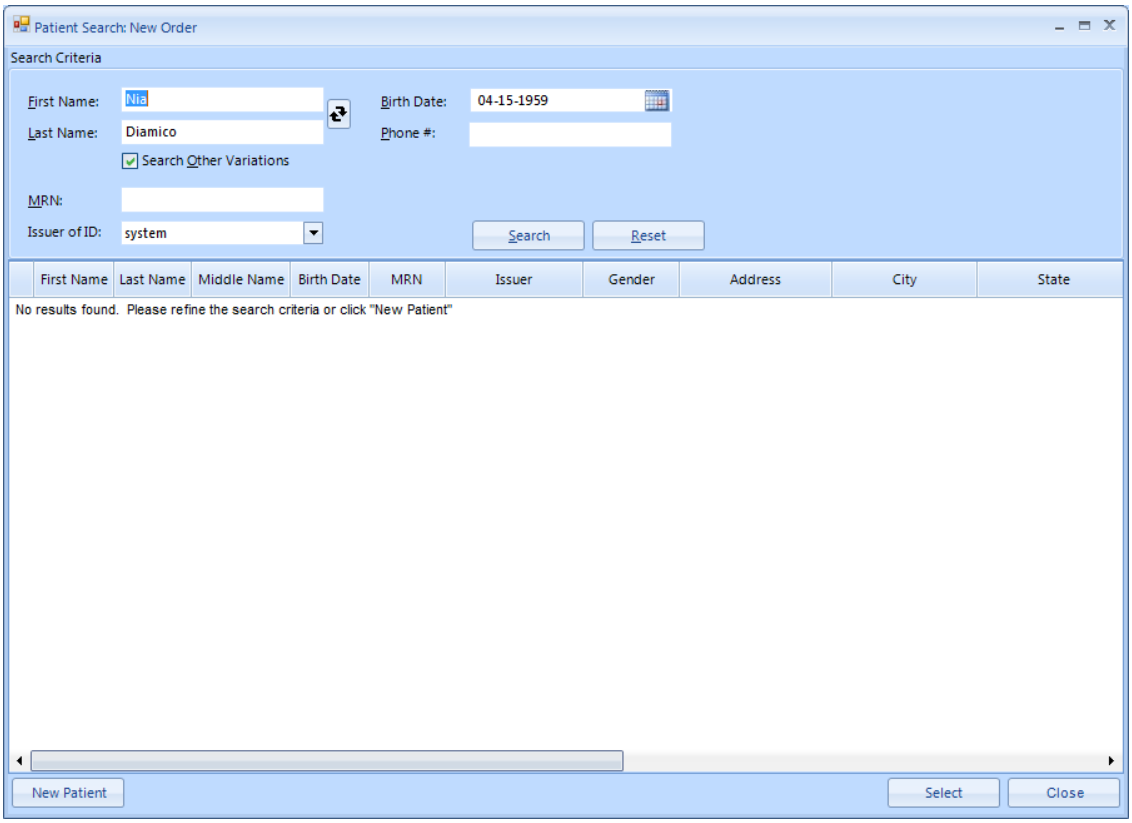

**Figure 4.7 – Patient Search New Order**

If the "New Patient" option is selected, the Schedule Order (patient name) will open. The user may proceed as if they were creating a new patient. This will issue an rRIS MRN for future orders. The patient record provided from the EMR is retained, and future messages coming in from the EMR will automatically reference the newly created internal patient. **Note**: if the user closes the search screen without selecting or creating a patient, the Schedule Order screen will close and the user will be returned to the "Orders to Schedule" work list.

If the Patient Search New Order does find a match to an existing patient record, the user must determine if they are indeed the same person.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

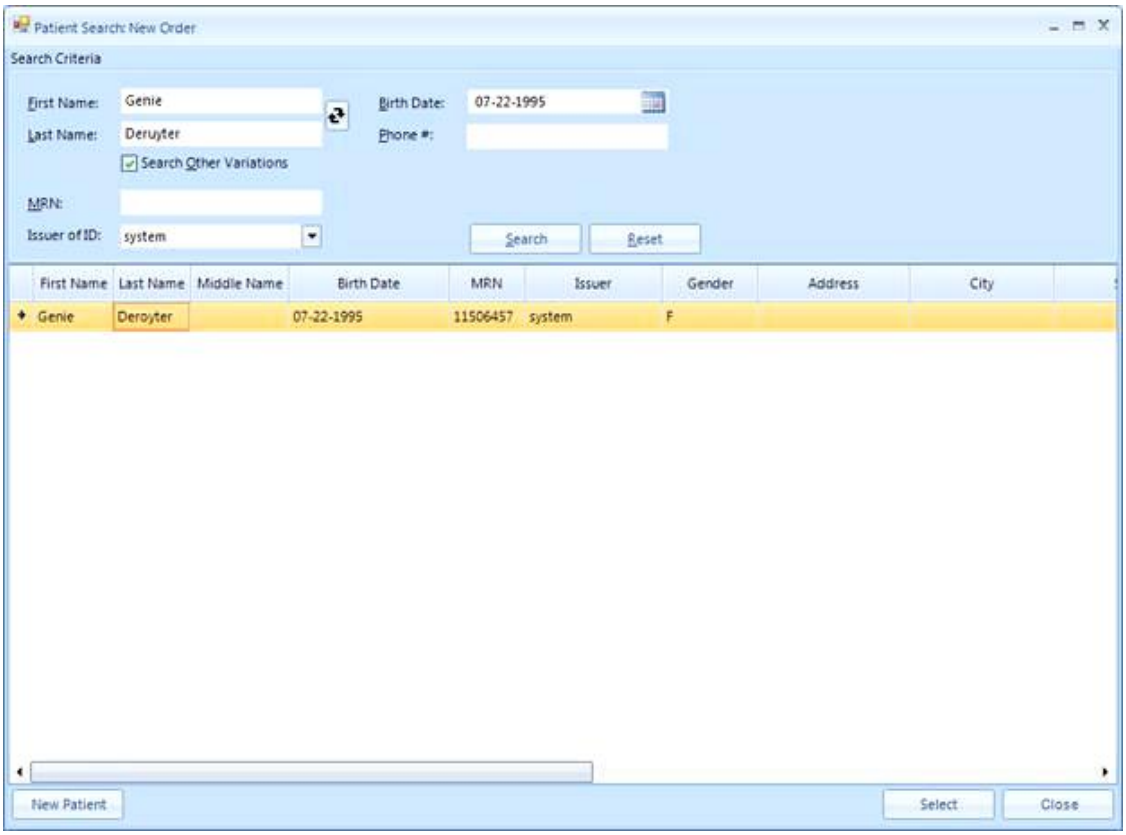

**Figure 4.8 – Patient Search New Order finding a matching external order patient with internal patient with a similar name.**

In this case, "Genie **Deruyter**" from the external system was a close match to internal patient "Genie **Deroyter**". The user can press select to associate the current order with our internal patient and establish a link between "Genie Deruyter" and "Genie Deroyter" (based on the patient ID sent in from the external system). If the user selects an existing patient record, they will be presented with the following prompt to confirm:

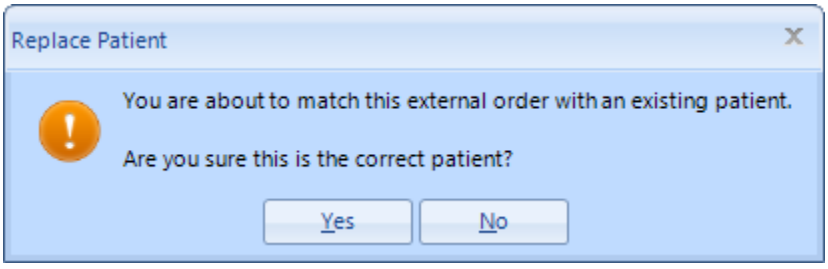

**Figure 4.9 – Confirmatory message**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Closing Pending Signature Option Removed

When a Radiologist logs into rRIS the Pending Signature window launches automatically displaying his/her list of exams to be signed off. In build 1.22 closing the Pending Signature window has been removed (except for one defect. See bug 565 in Section 5 of this document)

The X has been removed from the tab. The Pending Signature tab itself has had context menu items (right click on tab name) "Close" and Close All" removed. When "Closing All" or "Closing All But This" is initiated from another tab, it will not close the Pending Signature work list.

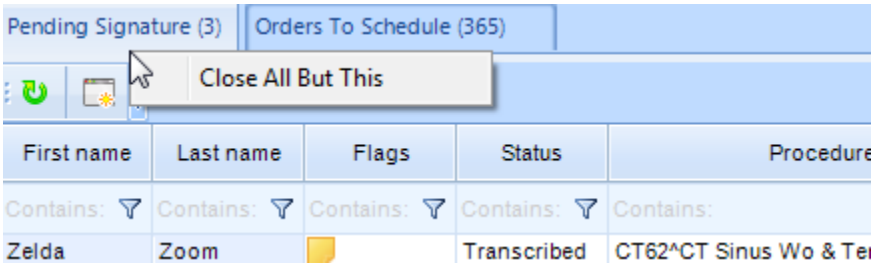

**Figure 4.10 – Context menu on Pending Signature tab**

## Emergency Access

Emergency access to authorized users has been implemented in build 1.22. A flag has been added at the Personnel level

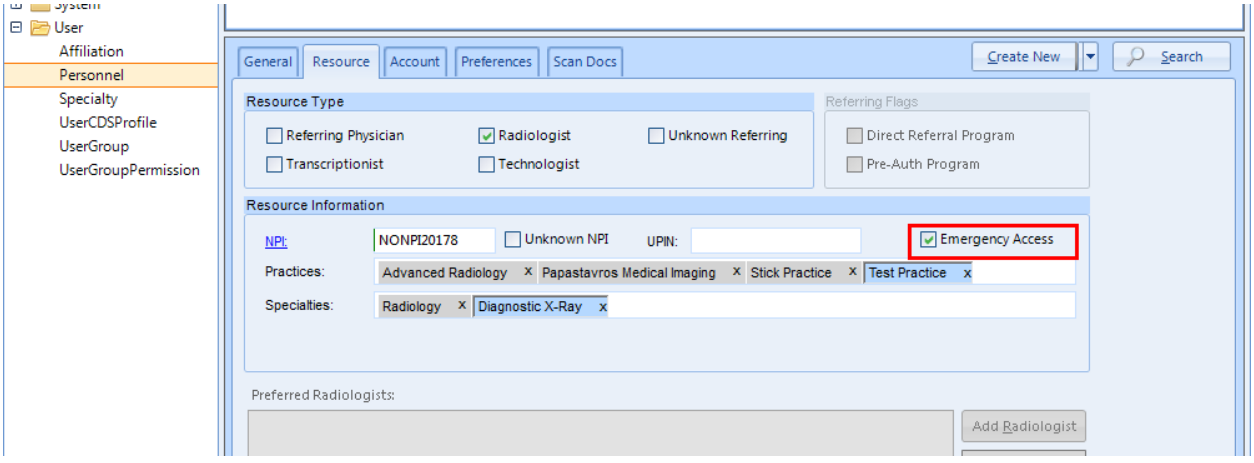

**Figure 4.11 – Emergency Access flag in Personnel editor**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

If the user has the Emergency Access flag, they will be permitted to override a lock to an exam and continue workflow. Figure 4.11 shows the Dictate window open by a user that has the Emergency Access flag. This exam is not owned by this particular user. Selecting the Emergency Access button will enable the "Submit, Sign, and Suspend" buttons, permitting the user to continue workflow for this exam.

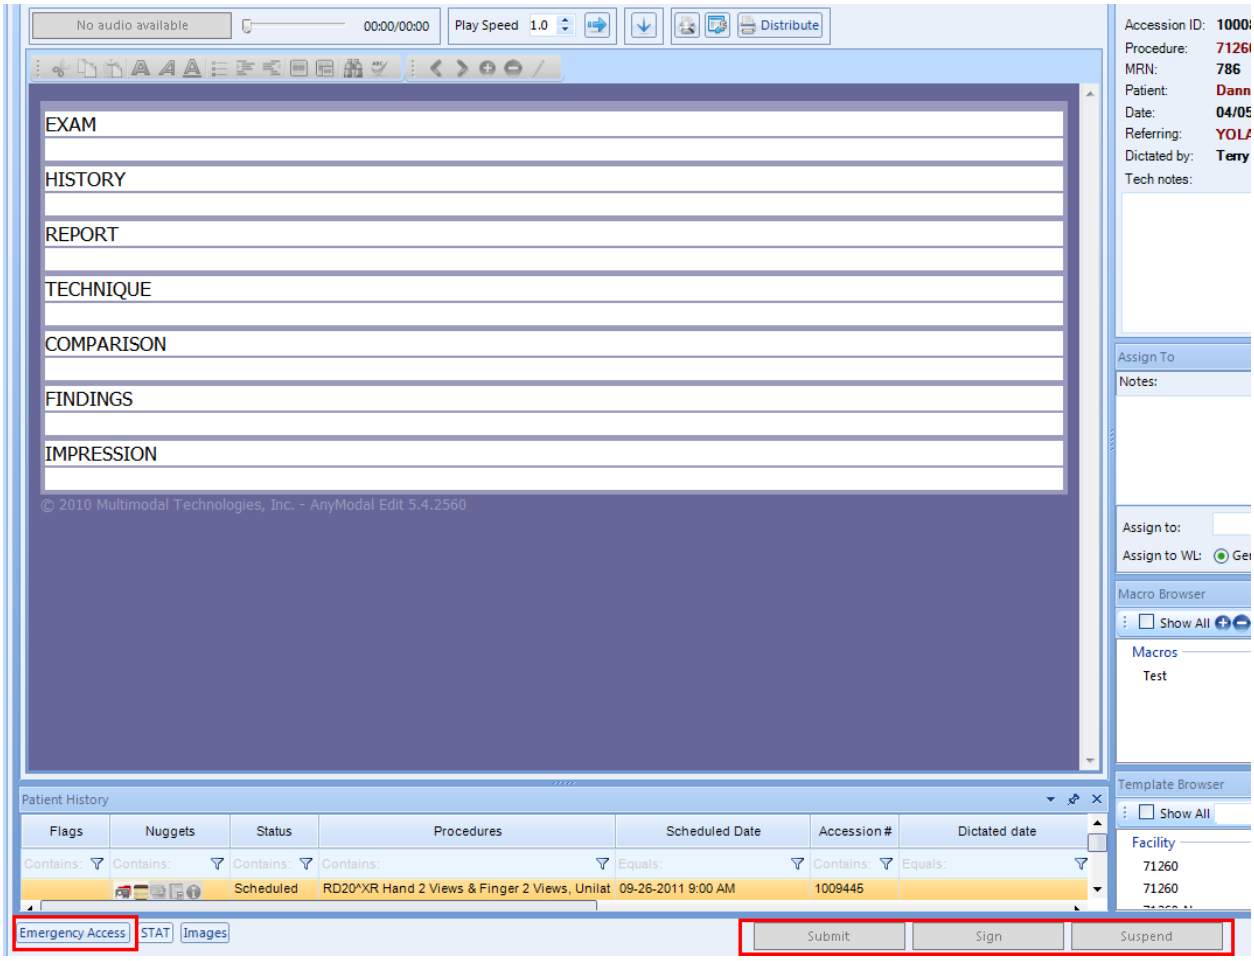

**Figure 4.12 – Example of exam that may require Emergency Access**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## External Reporting Flag

In build 1.22 further enhancements have been made to "Outside Read" workflow. In the last build Tech Only workflow was added. In addition we have added "Reporting External to rRIS". The tech data window Perform Exam will have checkboxes for

- No Report (Tech Only)
- Report External to rRIS

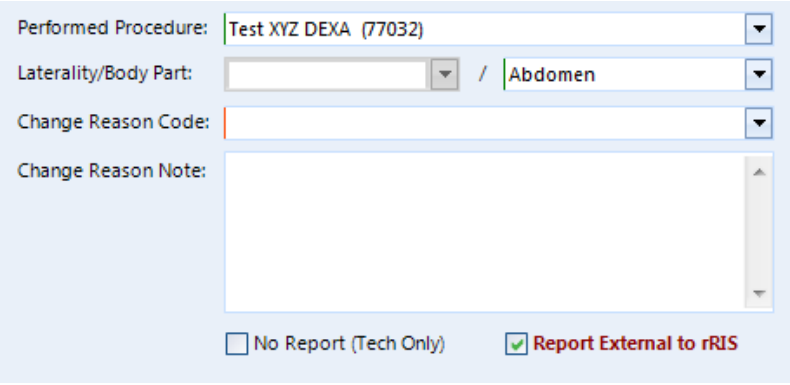

**Figure 4.13 – Report External to rRIS in Perform Exam data window**

If both of these check boxes are present when Performing Exam, only one will be permitted to be checked as they contradict one another. A warning message will be presented to the user when one of the checkboxes is selected.

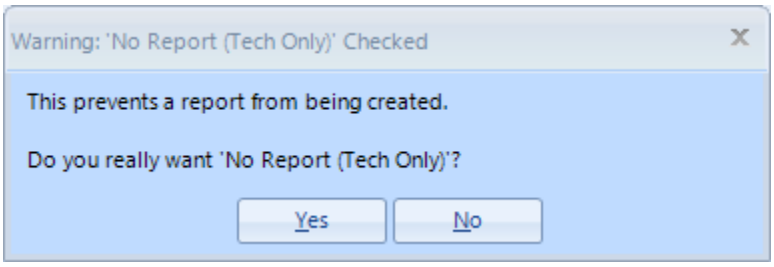

**Figure 4.14 – Selecting No Report (Tech Only) checkbox**

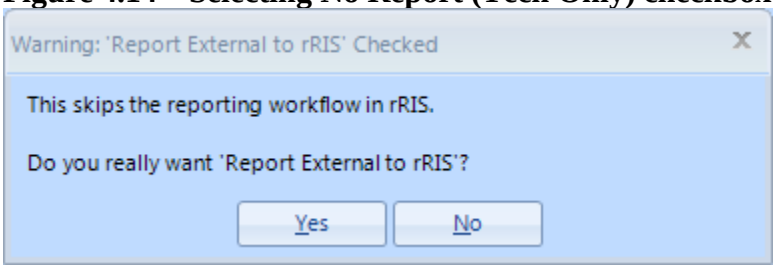

**Figure 4.15 – Selecting Report External to rRIS checkbox**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

The “Report External to rRIS” flag will only appear if the “ no_report_required_flag for the procedure is “Y”.

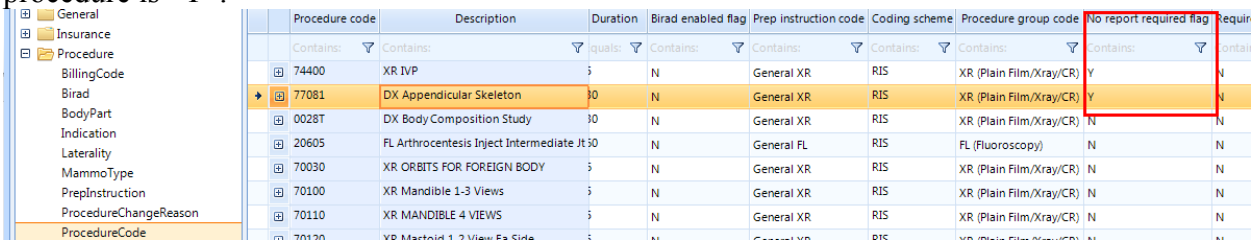

**Figure 4.16 – Flag “No Report required flag” flag added to procedure**

Completing an exam with either “No report (Tech Only)” or “Report External to rRIS” will send the exam to a status of “ExamDoneTechOnly” and will not be added to the Radiologists work list of Exam Done.

## Document Distribution Enhancements

Enhancements have been made for Distributing Reports and later editing Document Distribution. A lookup is still available for finding Referring personnel that already exist in the rRIS system. The “Other” text box is enabled by selecting the corresponding radio button. This is a free form text field allowing the user to enter the name of the recipient. The user is able to submit the job when the Destination / Fax field has a value.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

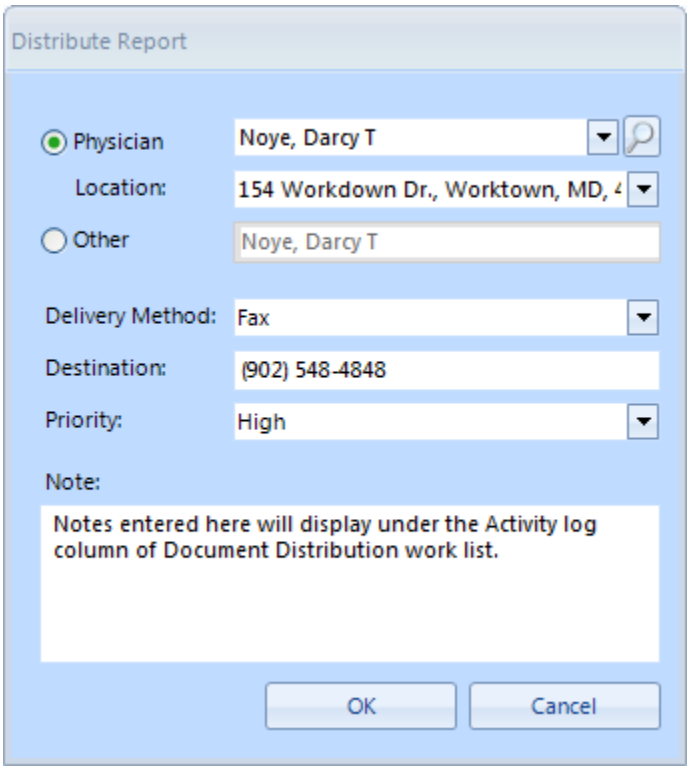

**Figure 4.17 – Distribute Report**

The Document Distribution work list displays all of the existing jobs that have not been completed or cancelled. A user may multi-select rows from this work list and change values that each job has in common. In the example in Figure 4.18, all three of the jobs presently selected have the same Physician, location and delivery method, all three of these jobs can have all of these fields edited at the same time. If two jobs exist for the same accession number and were sent to the same physician, but at different locations, then only the Priority and Note fields are enabled.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

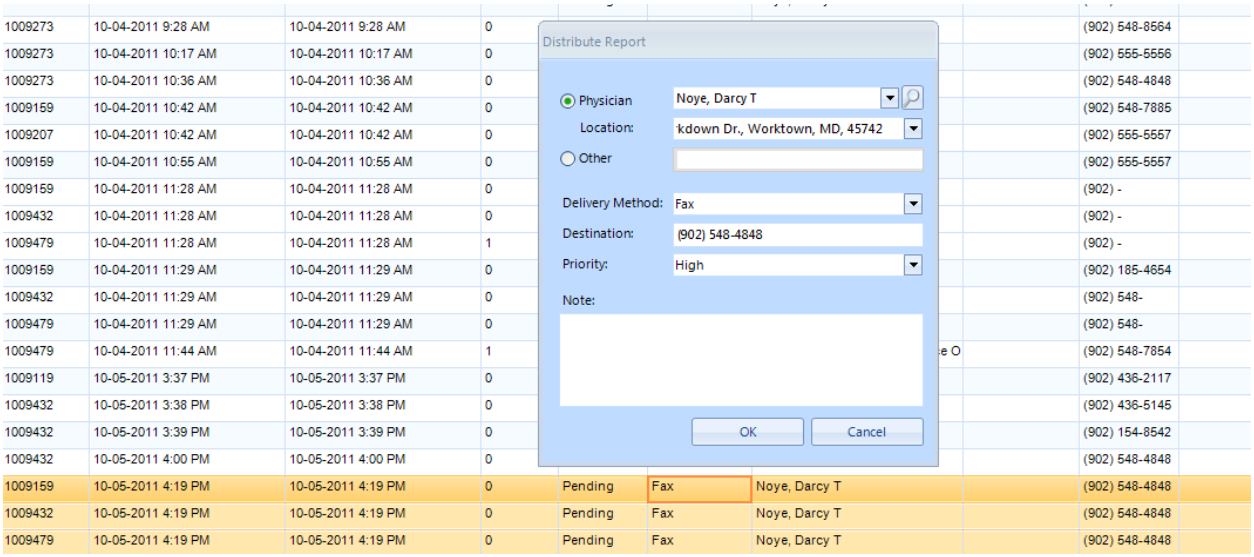

**Figure 4.18 – Document Distribution work list editing multiple jobs from for different reports but sent to the same Physician, location and fax number**

## Unknown NPI Flag

In recent builds users that had the resource type of Referring Physician or Radiologist were required to have NPI identifier complete. The user can select the NPI label on the Resource tab and it will complete a NPI Registry Search. It became apparent that in some cases, an NPI number may not be found. To assist the user in completing the task at hand of creating the user account we have added an additional check box "Unknown NPI". When this check box is selected the required NPI field may be by-passed and the user account may be created.

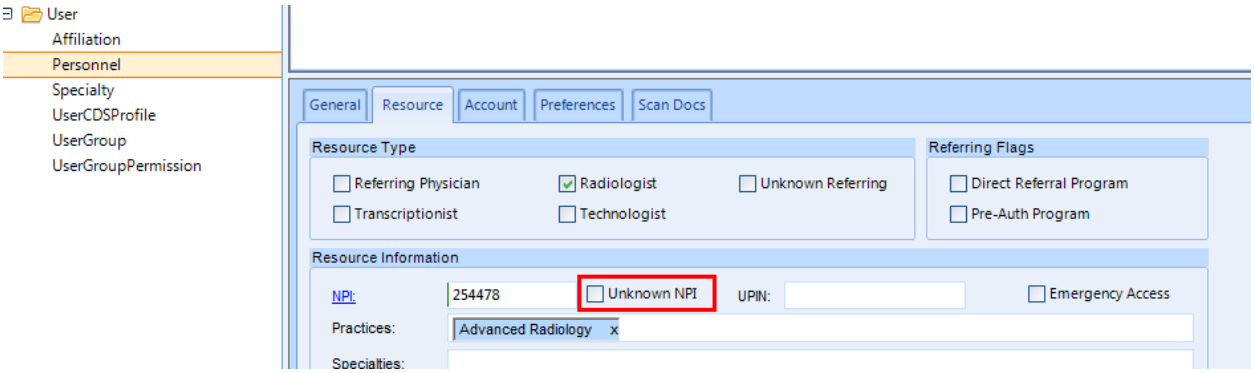

**Figure 4.19 – Unknown NPI flag**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Diagnostic Reporting Forms

Using the Forms and Label editor, Diagnostic report forms may be configured to be used with a particular practice, procedure, etc. If a report does not exist under Label and Forms, the default report template will be used from the system config value. When previewing the report from Diagnose / Create report data windows, the report form specified will be used.

First a form category must be created.

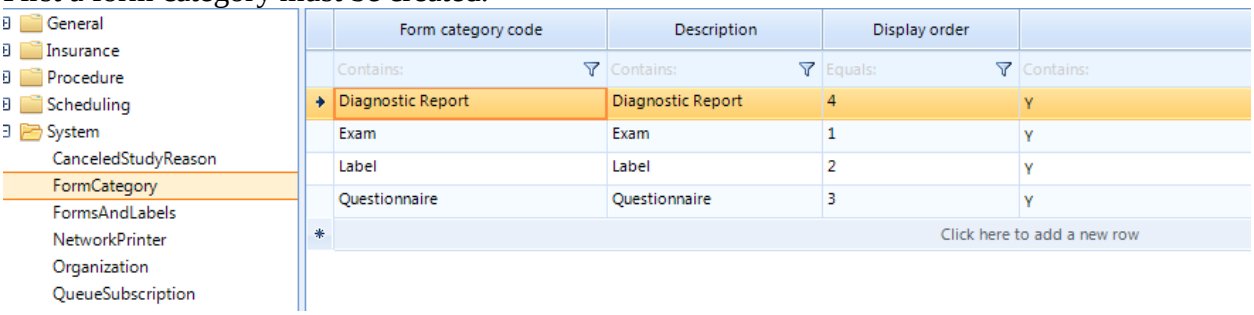

**Figure 4.20 – Creating Form Category**

Open the Forms and Label editor and add the form. The form must first exist on the report server

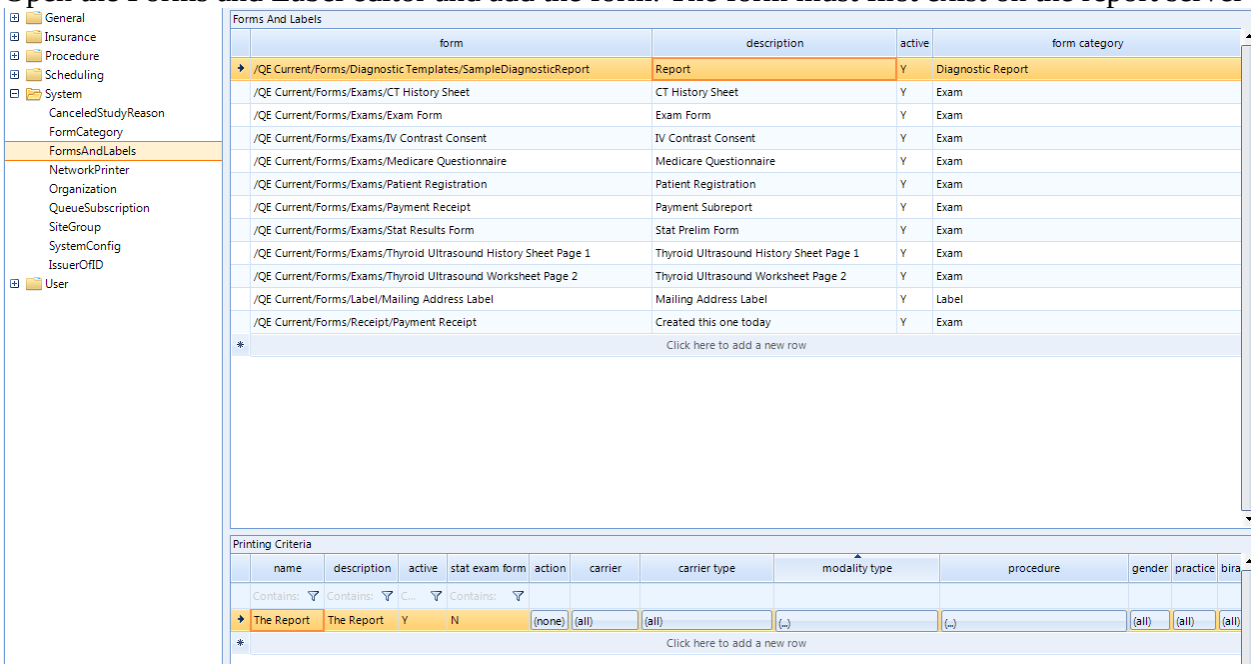

**Figure 4.21 – Creating Diagnostic Report Form**

NOTE: Although this functionality has been added QE has not been successful in getting the report form to be applied to only a particular Modality or Procedure. As a result when a report template exists and specified from Forms and Label lookup editor, all studies will use this report template. Defect 608 has been logged.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Diagnostic – Note to Radiologist

Note to Radiologist has been added in this build. Utilizing the pre-existing "Transcription Notes" data pane in the reporting data window, a checkbox was added. When checked it marks the notes are meant for the radiologist to review. Also when this checkbox is selected the "Assign to:" and Assign to WL:" are disabled.

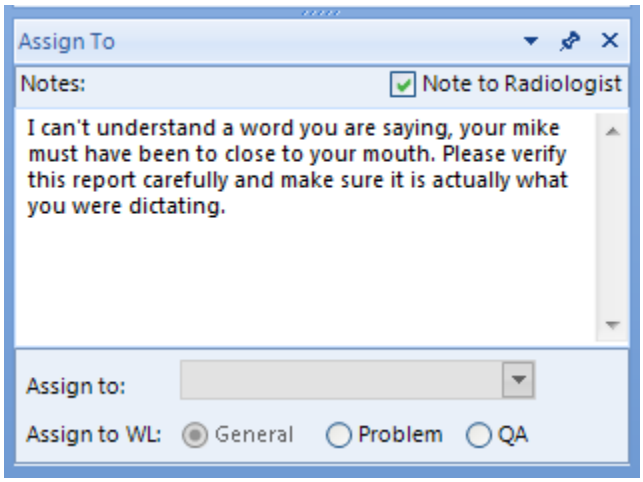

**Figure 4.22 – Note to Radiologist selecting, disabling Assign to and Assign to WL**

When the transcriptionist submits this study with "Note to Radiologist" checked, the Radiologist must acknowledge the note before the study can be signed off.

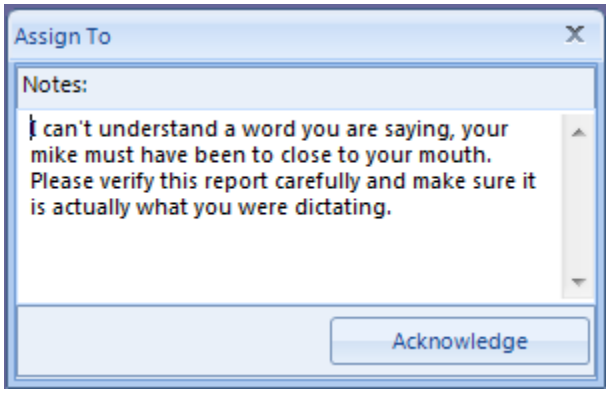

**Figure 4.23 – Note to Radiologist – Note to be acknowledged.**

The Radiologist can choose to re-dictate, edit report, or edit data window fields without having to acknowledge the "Note to Radiologist". If the exam is moved to a status of Dictated or Report Drafted, the flag for "Note to Radiologist" is retained. The radiologist still has to acknowledge

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

the note before it can be signed. If the exam status was changed to Report Drafted by a radiologist, the transcriptionist can remove the "Note to Radiologist" flag and the exam will no longer have to be acknowledged by the Radiologist.

If the Radiologist attempts to sign off a report that has not been acknowledged, they will be presented with a confirmatory message that provides the option to acknowledge and sign off, or select No and return to the data window.

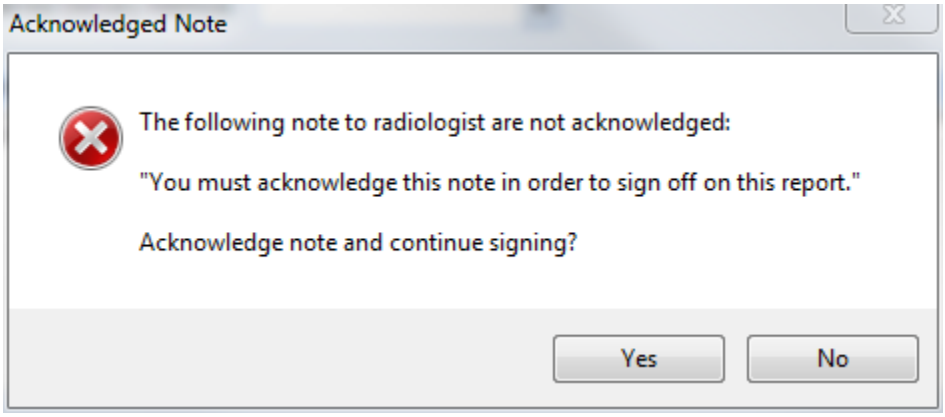

**Figure 4.24 – Confirmation of signing before acknowledging Note To Radiologist**

## Toggle States for Dictation Buttons

A new dictation control has been added to the Dictate and Create Report windows and along with the new control the buttons in use will be lit to easily identify the current state. The buttons will light up in a blue color, with the exception of the record button which will be red. When no buttons are selected from either the Speechmike, or the dictation control, the stop button will be lit blue.

**Figure 4.25 – Dictation control in a stopped state**

**Figure 4.26 – Dictation control in record state**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Film Image Request (preliminary)

In the last sprint, Film Image Request was started but only included a data window. In build 1.22 additional functions have been added. The feature is not complete and a few outstanding bugs have been logged against this feature during Sprint 22 and can be seen in Section 5 of this document.

The request for images screen now includes a study list and an image request history list. The study list includes all studies that this request is being generated for. A user can check or uncheck studies that they do not want to request copies of images for.
The image request history list shows a list of requests for the "selected" study in the study list. Note this is "selected" or the "highlighted" row and not necessarily the "checked" row. The user now has the ability to see if there is already an existing request before create a new request.

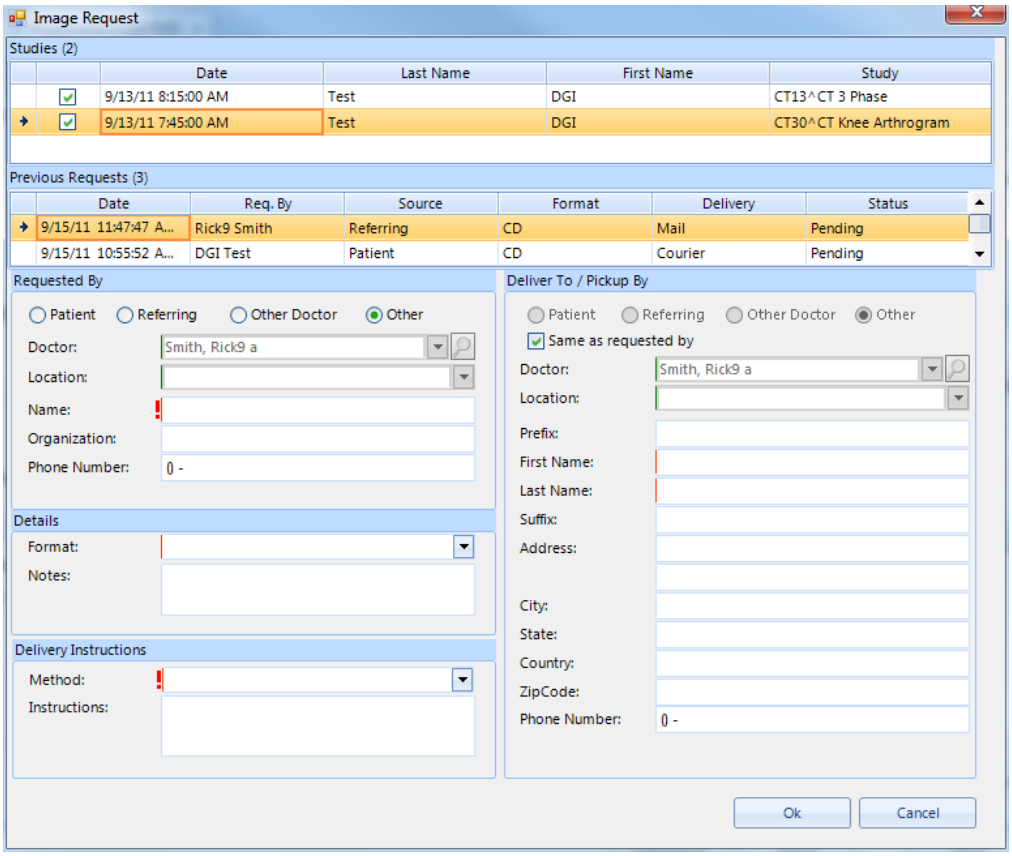

**Figure 4.27 – Image Request data window**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Also, on this request form, a new radio button was added to allow the user to choose another doctor from the rRIS personnel database. This button behaves similarly to the "referring" radio button, but now the user can select another doctor instead of the referring.
This request form has the ability to have the requestor different from the delivery to. By default, the form behaves as if the delivery to is the same as the requestor. However, we can have the deliver to person different by un-checking the "Same as requested by" check box.
An "Image Request" tab page was added to the registration screen. This tab shows a list of image requests for the studies included in this registration process. From here, the user can choose to "Delete" image requests that are "New". They will not be able to delete image requests that have been saved to the db. This will have to be done via the Image Request Worklist – Edit Request function.

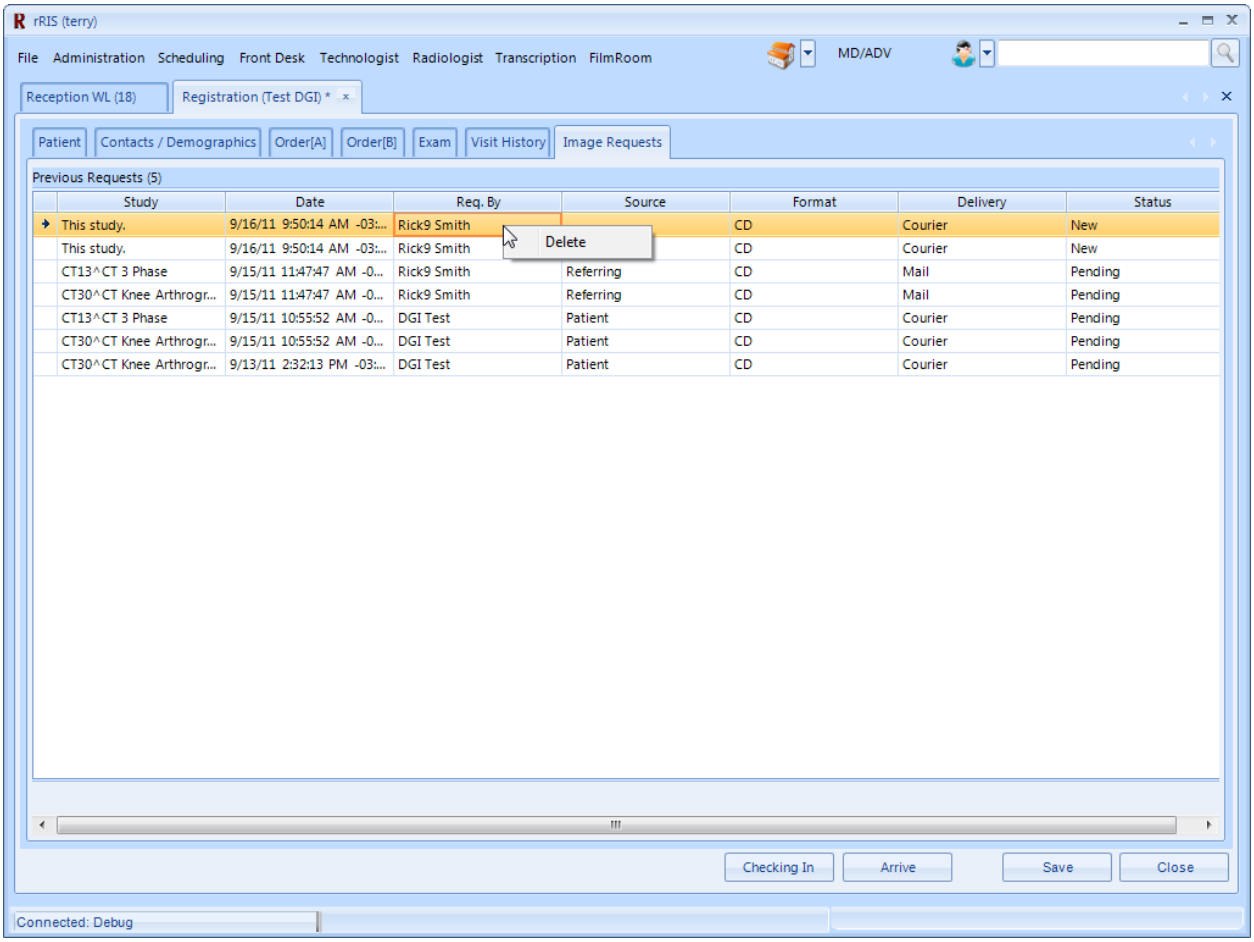

**Figure 4.28 – New tab "Image Request" for Registration**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

The film request worklist now contains all images requests where the examination status is not "Scheduled" and the image request status is not "Cancelled" or "Completed".
From the "Film Request" worklist, we can "Edit" an image request. This opens the "Request Copies" content form.

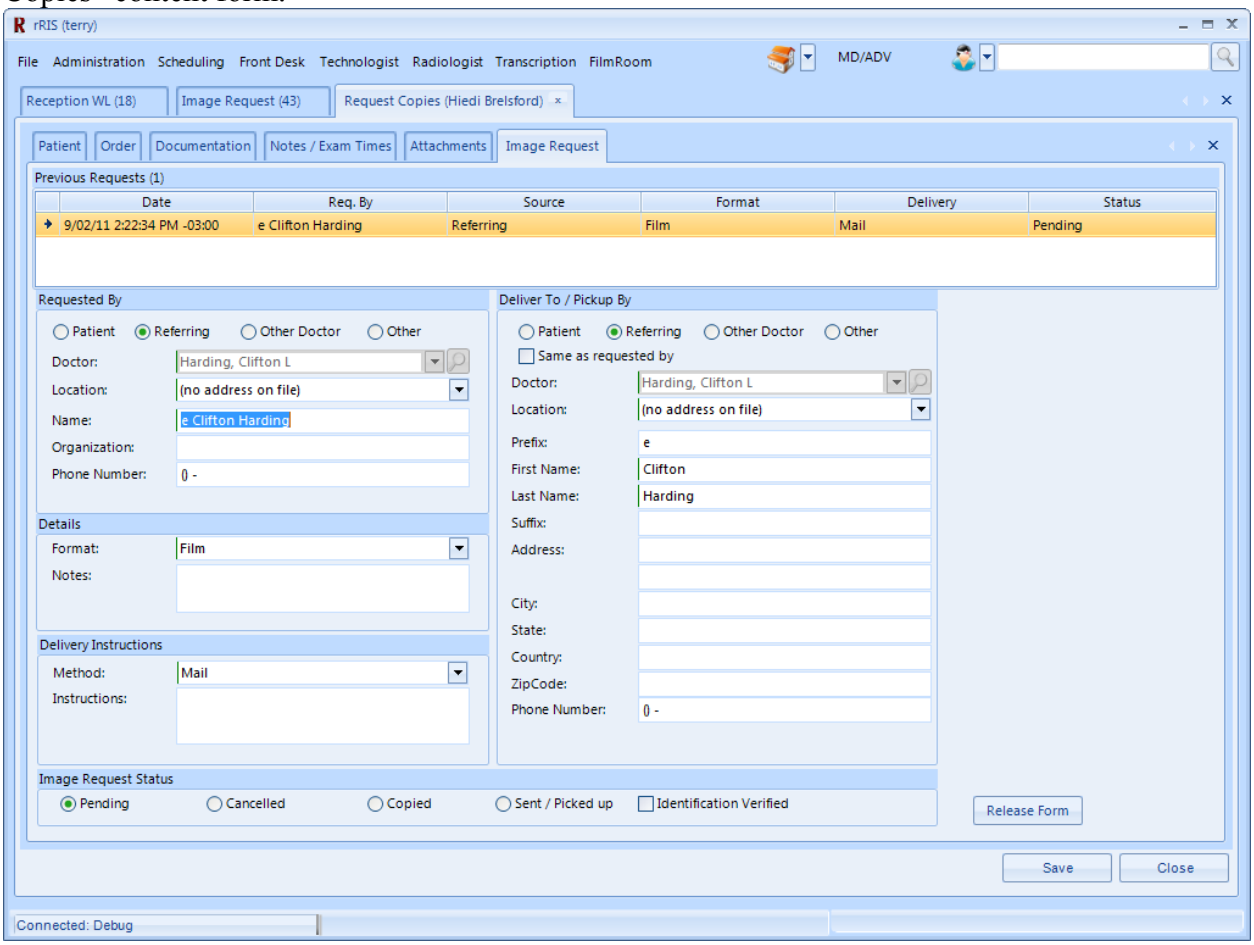

**Figure 4.29 – Edit Image Request**

Here the user can change any data element on the request and/or change it status. Changing the status to "Cancelled" or "Send / Picked up" will remove the item from the worklist.
This form also includes the request history for this study.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Known Limitations

Bugs, Suggested Features, and Support Issues are tracked in a web based system called Redmine. The following is a snapshot of the issues found in Build 1.22.

| # | Status | Subject | Category | Target version |
|---|---|---|---|---|
| 607 | New | Disbritute report - OK button enable with incomplete fax field | Thick Client GUI | 1.22 |
| 606 | New | Distribute Report - Selecting "Other" radio button from Physician will copy the Physician name to other text box | Thick Client GUI | 1.22 |
| 605 | New | Cannot remove some practices in Personnel editor | Admin Tools | 1.22 |
| 604 | New | Confirmation message for rejecting patient merge | Thick Client GUI | 1.22 |
| 603 | New | Add patient > Search returns existing patient and throws error | Thick Client GUI | 1.22 |
| 602 | New | My Dictated By Date worklist has duplicate column | Thick Client GUI | 1.22 |
| 601 | New | Document Distribution > Destination does not change to Fax | Thick Client GUI | 1.22 |
| 600 | New | Error scheduling order merging on patient search from outside order | Web Services/DB | 1.22 |
| 599 | Resolved | Patient merge must consider "Issuer of ID" as MRN are only unique if Issuer is the same | Thick Client GUI | 1.22 |
| 598 | New | Configure > Report Template > Selecting practice that does not have "cds_object_id" returns error | Web Services/DB | 1.22 |
| 597 | New | rRIS google search not working | Thick Client GUI | 1.22 |
| 596 | New | Dictate > Template Browser list cannot be expanded to see complete template name | Thick Client GUI | 1.22 |
| 595 | New | Request Image - MainApp error returned requesting image from Report Drafted work list. | Thick Client GUI | 1.22 |
| 594 | New | Request images from IVT work list throws error | Thick Client GUI | 1.22 |
| 593 | New | Edit image request workflow issue | Thick Client GUI | 1.22 |
| 592 | Resolved | Error message pop up can be hidden behind application | Thick Client GUI | 1.22 |
| 591 | New | Error replacing exteranl order with existing patient | Thick Client GUI | 1.22 |
| 590 | Resolved | Attempt to edit an order that is locked for scheduling returns error | Thick Client GUI | 1.22 |
| 589 | Resolved | Creating outside read that has laterality is not carried to Exam done. | Thick Client GUI | 1.22 |
| 588 | New | User is able to request images on order. Message returned is not user friendly | Thick Client GUI | 1.22 |
| 587 | New | Resuming a suspended study does present message with options to continue | Thick Client GUI | 1.22 |
| 586 | New | Cannot access "CLosed Rooms Reschedule" work list if it has data. | Web Services/DB | 1.22 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | | | |
|---|---|---|---|---|
| 585 | Resolved | Exam done work list Changes sort order when refreshed | Thick Client GUI | 1.22 |
| 584 | New | Dictation is not selecting the next patient in the work list. | Thick Client GUI | 1.22 |
| 583 | New | Exception thrown trying to access Unknown Referring work list. | Web Services/DB | 1.22 |
| 582 | New | Error returned trying to reschedule from appointment book | Thick Client GUI | 1.22 |
| 581 | New | Dictate > Report history > Add remove buttons > Names to be changed | Thick Client GUI | 1.22 |
| 580 | Resolved | Edit patient > returns error(s) | Thin Client GUI | 1.22 |
| 579 | New | IVT PreCert column does not update | Thick Client GUI | 1.22 |
| 578 | Resolved | Cannot dictate / diagnose or create / edit reports | Thick Client GUI | 1.22 |
| 576 | Resolved | Personnel > Edit User > removing resource types, no users can log in. | Web Services/DB | 1.22 |
| 575 | Resolved | Modality duration override ignored if the duration override is less than procedures default time | Thick Client GUI | 1.22 |
| 574 | Resolved | Schedule order > Remove procedure will throw error. | Thick Client GUI | 1.22 |
| 573 | New | Order can be created without Laterality when it is required. | Thick Client GUI | 1.22 |
| 572 | Resolved | Exception on reschedule | Thick Client GUI | 1.22 |
| 571 | New | Occassionaly receive error attempting to perform exam | Thick Client GUI | 1.22 |
| 570 | New | Image Request | Thick Client GUI | 1.22 |
| 569 | Resolved | Cannot create new user in Personnel | Thick Client GUI | 1.22 |
| 568 | New | Cannot request copies of images from patient folder | Thick Client GUI | 1.22 |
| 567 | Resolved | User can check both Outside read flags | Thick Client GUI | 1.22 |
| 566 | Resolved | No Report Required flag | Thick Client GUI | 1.22 |
| 565 | New | DisAllow closing pending signature work list still has "X" on the tab page | Thick Client GUI | 1.22 |
| 608 | New | Diagnostic Reporting Forms - assign to modality, procedure, etc... not working | Admin Tools | 1.22 |

# 1. Purpose

This document describes some of the new features and changes implemented in rRIS as of the end of Sprint 23. This pre-release version of rRIS is referred to as Build 1.23.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the rRIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation instructions for the rRIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu, click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.23 is considered a new core release of the application and will require a reinstallation of rRIS. This is accomplished by navigating to the rRIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application, please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Radiologist Menu Changes

The radiologist menu has seen some changes in Build 1.23. As displayed in Figure 4.1 the menu options have been updated. Before we had "Exam Done" we now have "Pending Dictation" and "Transcribed" is now "Pending Signature".

Also instead of prefixing user specific work list with "My xxx" work list we now simply state "xxx" work list To indicate a work list that is non-user specific we suffix the name with "(all)", which would likely be seen by admin type users. The user specific work list would usually be the norm, and always be visible. This has the effect of reducing visual clutter on the items most likely visible and used by the user.

The new Pending dictation work list will show all items in exam done that are assigned to the user or not assigned to anyone AND suspended by the user or not suspended by anyone.
In previous versions the current selected row was the starting point with the next exam in the work list loaded in Dictate window next. Now it will always start at the top available row, moving to the next available in the work list.

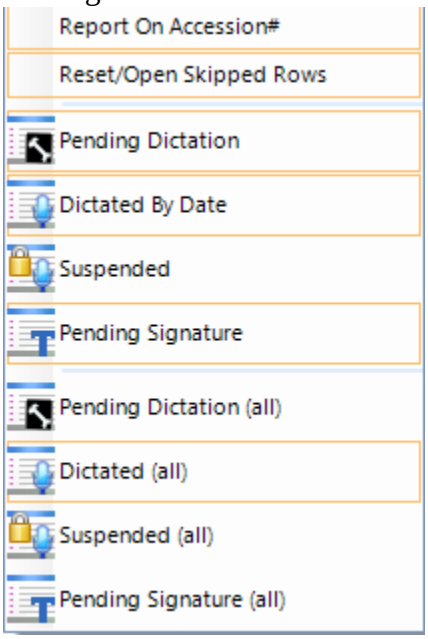

**Figure 4.1 – Radiologist menu**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Rad Drop Down Buttons with Ability to Assign Skip / Continue Session

New button controls have been added in Dictate and Sign Reports data windows for build 1.23. Next to the buttons is a downward arrow indicating that there is more than one potential action that can be completed on a particular button control. Figure 4.2 displays these buttons, with the Submit button menu expanded showing alternate actions. Hover the mouse pointer over the button will show its default value. Clicking directly on the button will perform the assigned default action.
You can see in Figure 4.2 that two option from this buttons drop down list have bypass VR. Selecting one of this menu options will submit the dictation skipping voice recognition.

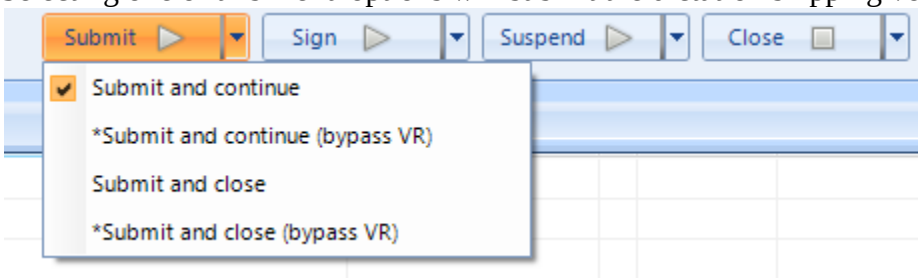

**Figure 4.2 – Radiologist drop down buttons**

To change the default action of the button, hold down the CTRL key on the keyboard and select the action from the drop down list. The option selected from the list will be performed as well as change the default setting for the button. When the default action is changed for a button, the text on the button will also change.

Some actions are preceded by an '*' (as displayed in figure 4.2), these are the actions that cannot be defaulted. If the user attempts to default that action a message box would be displayed.

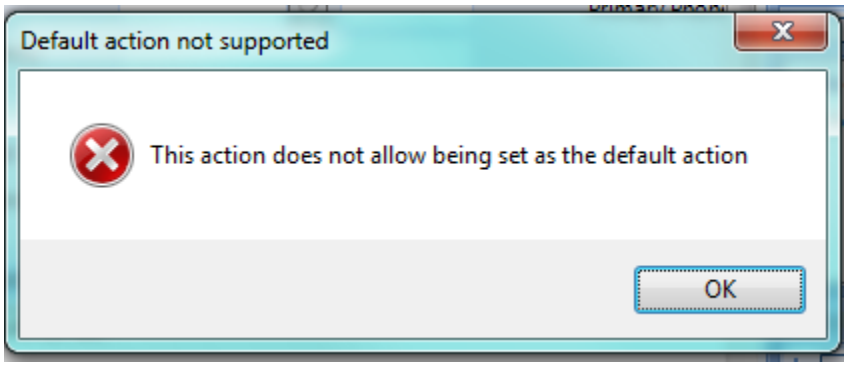

**Figure 4.3 – Message informing user the action cannot be defaulted to the button**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Actions are defined as “button action” and continue or “button action” and close. Referring to Figure 4.4, you will notice ICONS on the buttons as play or stop . Assigning actions that are to continue to the next record on the work list display the play ICON, and actions that are to complete action and close data window to return to the work list will have the stop ICON.

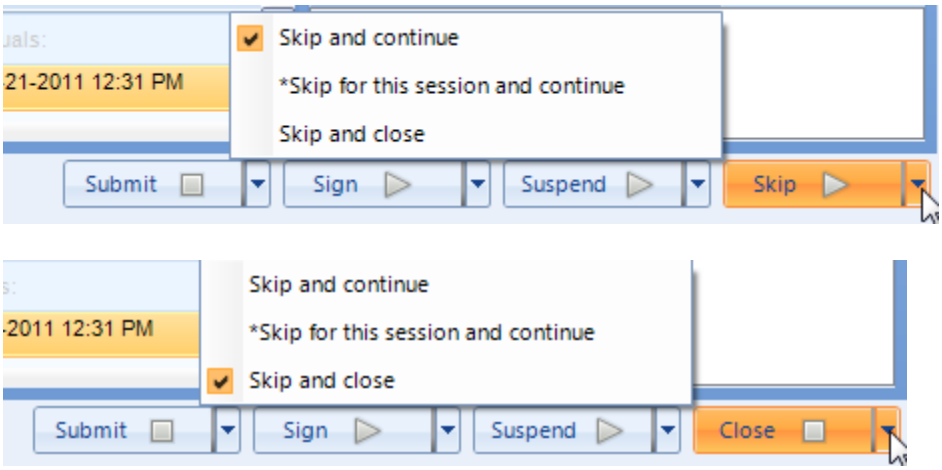

**Figure 4.4 – Default button changed. Default action checked in drop menu with text on button also changed.**

In figure 4.4 the menu options are to skip the current exam and a specified following action. In this example Skip and Close if defaulted with the action being to simply close the Dictate window.
Skip and continue will skip the item for the current workflow instance. To access this exam in the Dictate window again, it can be opened directly from the work list as normal, or if the user completes the entire work list, then the skipped rows are accessed next.
The final menu option of “*Skip for this session and continue” will mark this exam as such. Unlike “Skip and Continue” once the user completes the work list, exams flagged “*Skip for this session and continue” will not be accessed during the normal “next available exam” work flow. If the user so chooses, they can access the exam via the work list, or if the exam(s) are to be added back into the “next exam” work flow, the user does have the ability to manually add these skipped exams back into the workflow by resetting skipped rows via the Radiologist menu option displayed in Figure 4.5. Also in Figure 4.5 is the window that opens. The user can reset individual rows or all of the skipped rows in this list.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

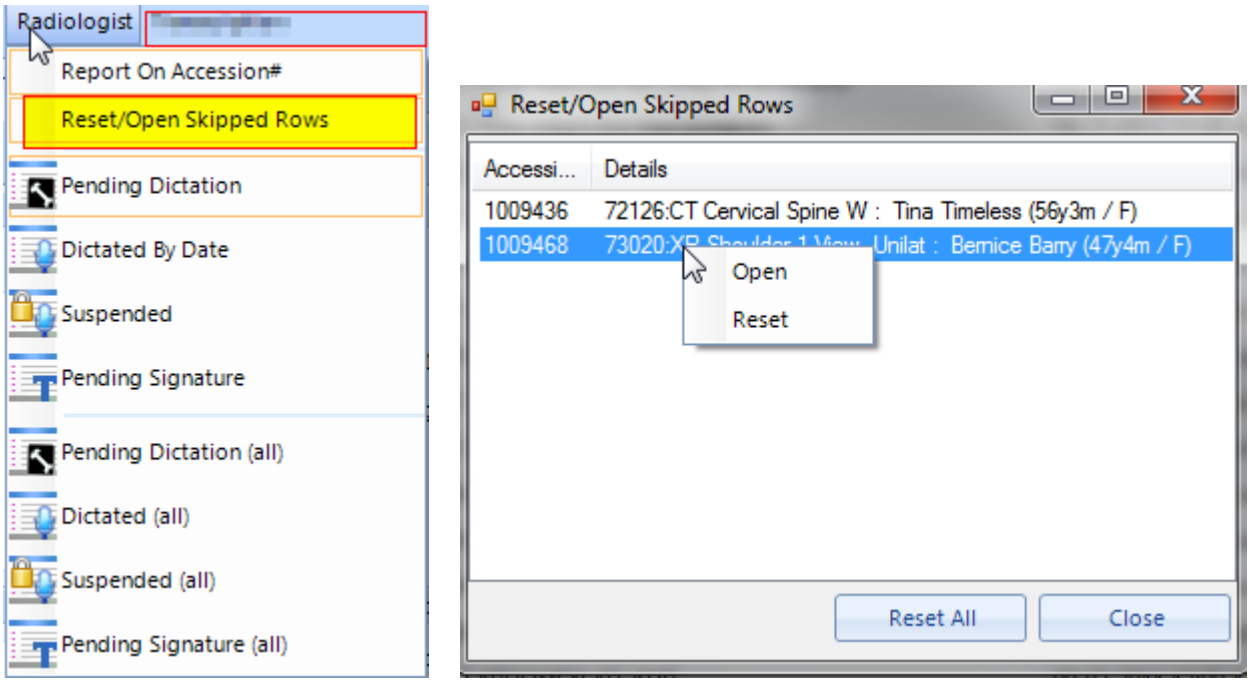

**Figure 4.5 – Reset/Open Skipped Rows menu option and Window**

## Insurance Policy Mask

In build 1.23, the insurance policy number mask has been changed. The "@" sign now represents any letter and the "#" sign now represents any number.
As before, in the event that the policy mask is wrong and the patient insurance policy does not fit the mask, the user can prefix the policy with a "+" character to bypass the policy mask. Any study with an insurance policy that begins with a "+" will be flagged as a billing exception and held until the "+" is removed

| Carrier code | Description | Phone | Fax | Address1 | Policy number mask |
|---|---|---|---|---|---|
| Contains: | Contains: | Contains: | Contains: | Contains: | Contains: |

**Figure 4.6 – Insurance Policy Mask**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Multiple "Contains" Column Filter

A new work list filtering addition has been added in Build 1.23. The user can now filter a column within a work list by entering multiple search criteria. The separator "or" (case insensitive) or "|" (pipe) will separate multiple search criteria and apply a "contains". Note the search string '' (single quotes) will match empty entries or null. This can also apply to the "does not contain" filter if specified in the filtering list of options. This is achieved by selecting the filter ICON on the column header and selecting the "does not contain" option.

Orders To Schedule (19 of 361)

**Figure 4.7 – Multiple contains filter on procedure column. Notice "or" and "|" (pipe) is used.**

Also implemented in this build is the ability to specify filter values via a multi select window. Currently this has only been applied to the Modality type column as displayed in figure 4.8. To

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

access the Filter Values for Modality Type window double mouse click the area of the column where the filter value would be entered.

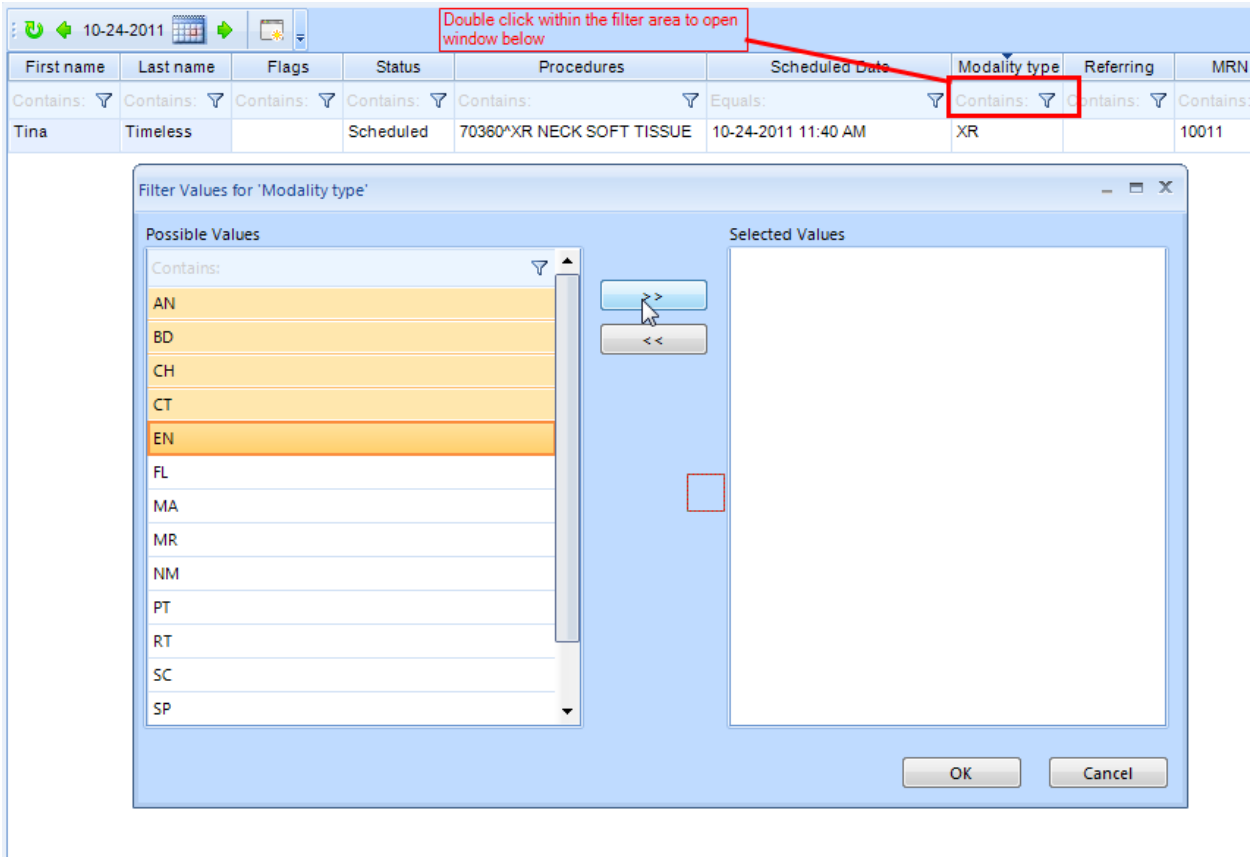

**Figure 4.8 – Adding multiple filter values.**

## Verbal Order Changes

Verbal order was added in build 1.21. This build introduces a few changes. A multi-type control was added and mapped to our list of procedures. A checkbox was also added that allows the user to manually type free-form text instead of using the multi-type ahead

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

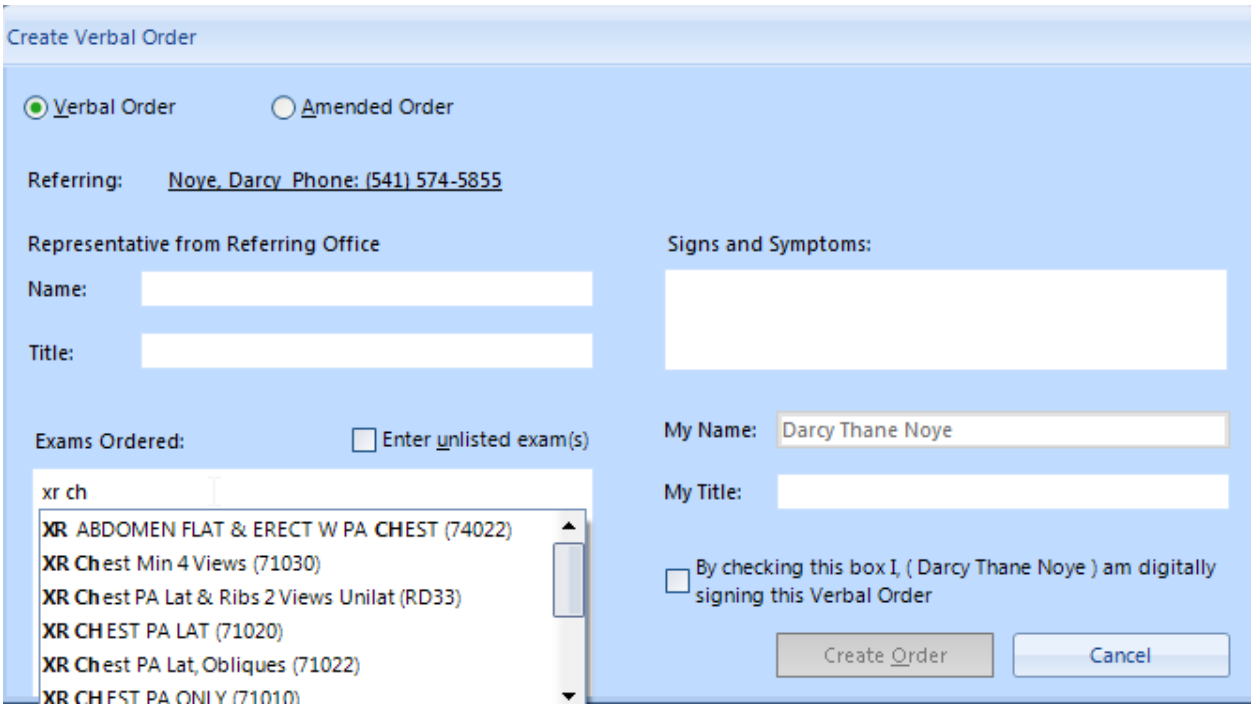

**Figure 4.9 – Create Verbal Order Exam selector. Adding check to "Enter unlisted exam(s)" allows for free form text.**

## Amended Order

Utilizing the Verbal Order feature, Amended Order will also have a fill-in form type of feature that is stored as a scanned document. A radio button will be added to the verbal order screen to allow it to be switched to an amended order. Upon selecting the Amended Order radio button the label for "Signs and Symptoms" (see figure 4.9 above) changes to "Comments" (See figure 4.10 below). The rest of the workflow is the same as Verbal Order. Of course the rendered document is altered to say "Amended order" at the top, and it also has the comments field, and does not have a signs and symptoms page

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

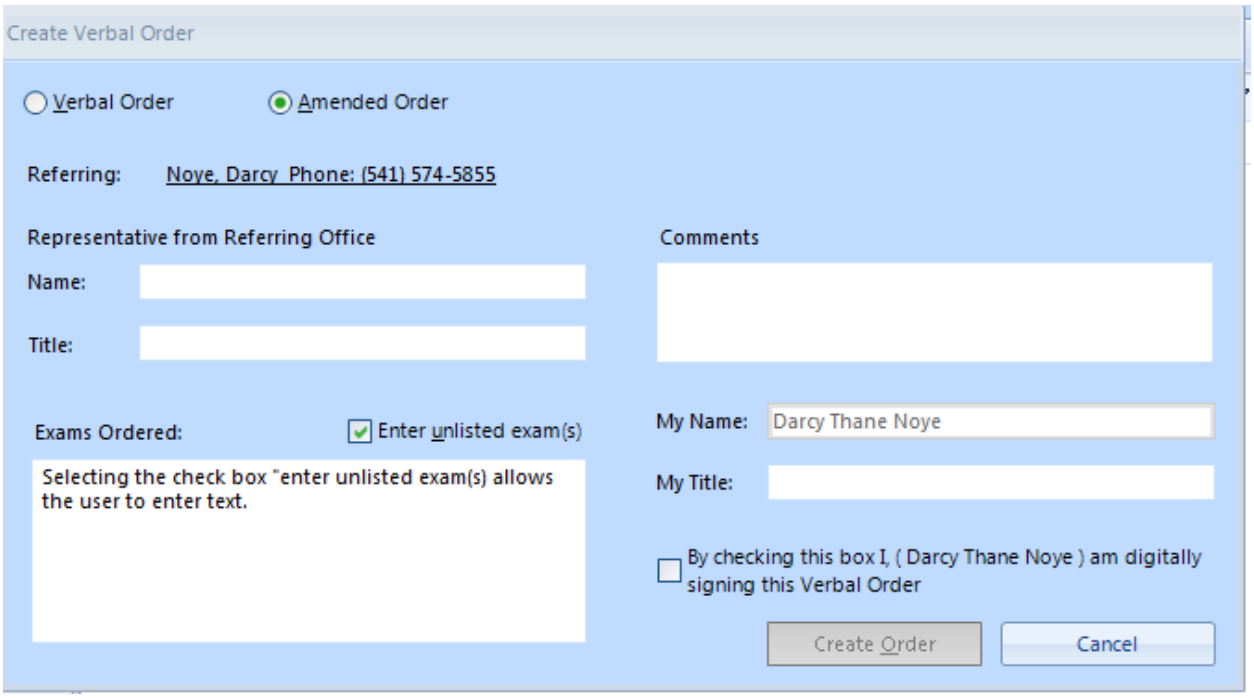

**Figure 4.10 – Report External to rRIS in Perform Exam data window**

## Film-Image Request Work Flow.

Additional enhancements have been made to Film – Image Request work flow in build 1.23. When the user is completing the Image Request they will now have the ability to change its status when creating a request. This will allow a user create and complete the request in one step. The "complete" status has been split. . Now there are "Sent" and "Picked Up". This will allow the system to differentiate how a request was completed. Also, when a request is picked up, the "Identification Verified" check box is enabled and becomes required.

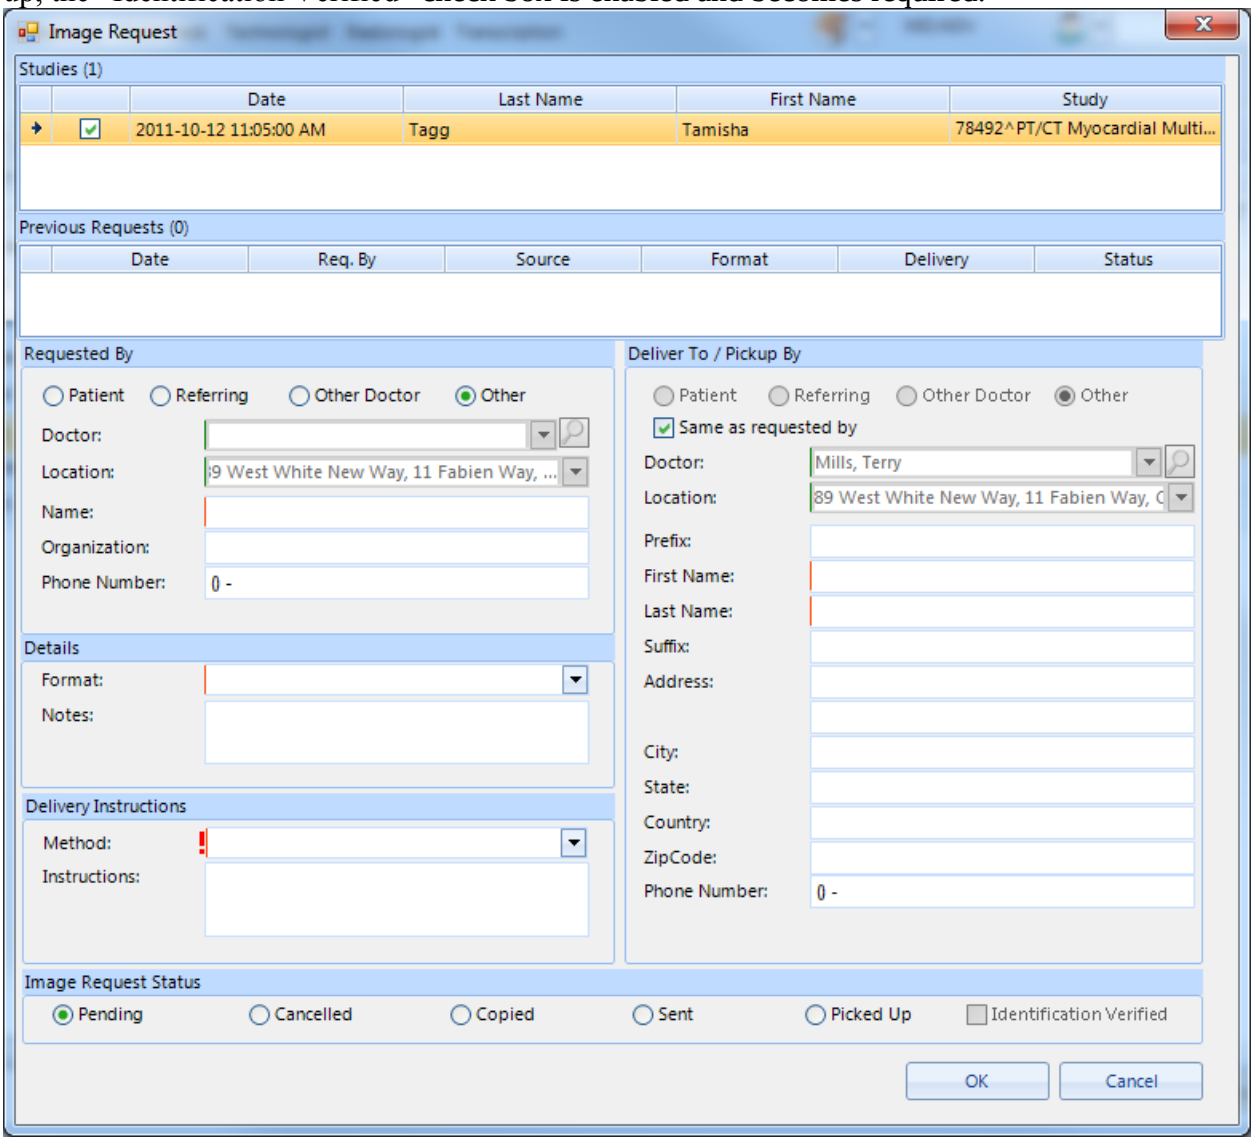

**Figure 4.12 – Image Request**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

A user can edit request for images from the scheduling, registration and technologist screens. A new tab called "Image Request" has been added to aforementioned user's windows. The tab will contain the number of image requests for the study. A study with no requests for images with show "Image Request (0)" in the tab page title.

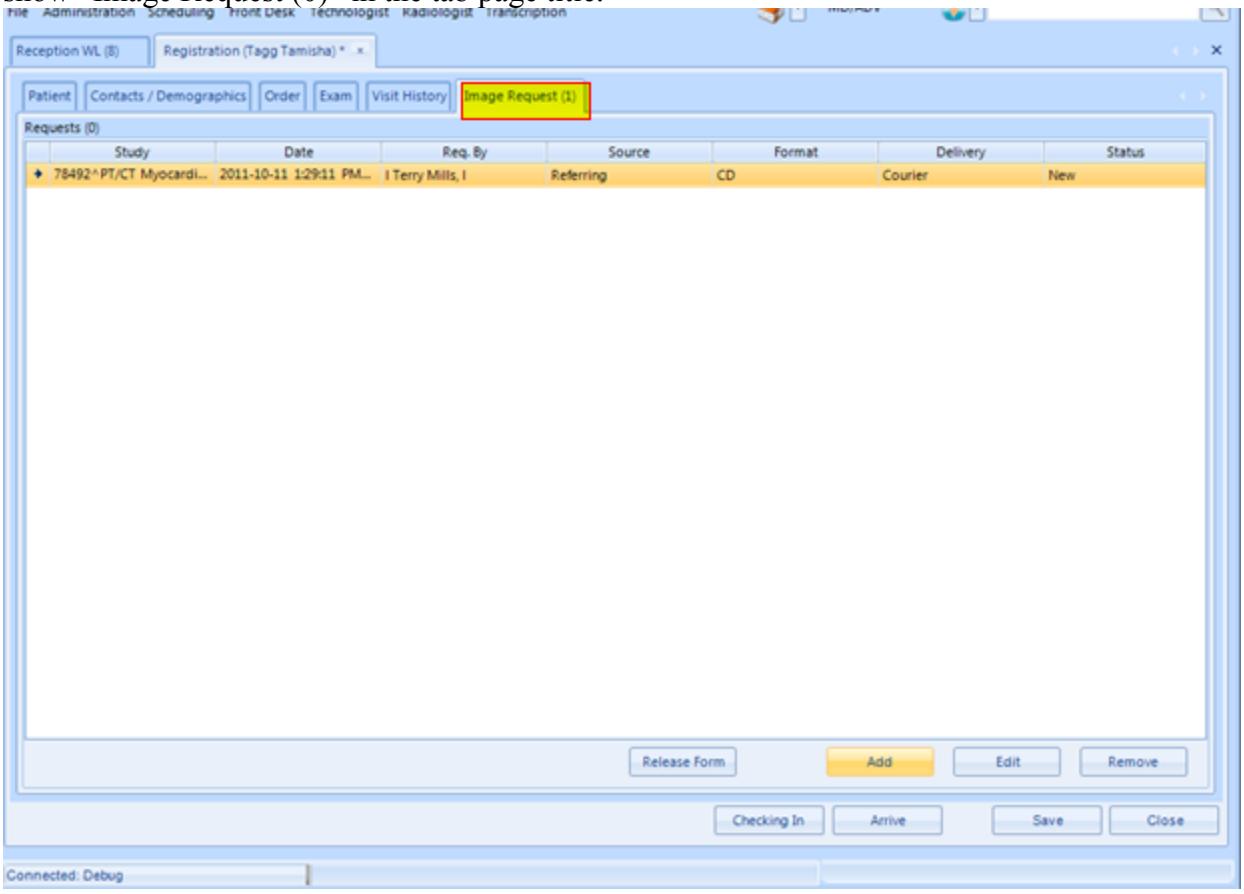

**Figure 4.13 – Image Request tab in Registration data window**

Only new requests can be removed (i.e. not save to the db). In order to "remove" other requests they have to be cancelled. This can be accomplished via the Image request tab or by editing the request from the Image Request work list.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Patient Relation Behavior Changes

When entering Insurance Policy Information, the Policy Holder Information fields must be completed. To help ease of use, when selecting "Self" from the list, all fields will be copied over from the patient record, provided the data exist.

If the user chooses "Spouse" or "Child", all fields except the first name will be pre-populated. Any other relation type selected will have the field left blank.

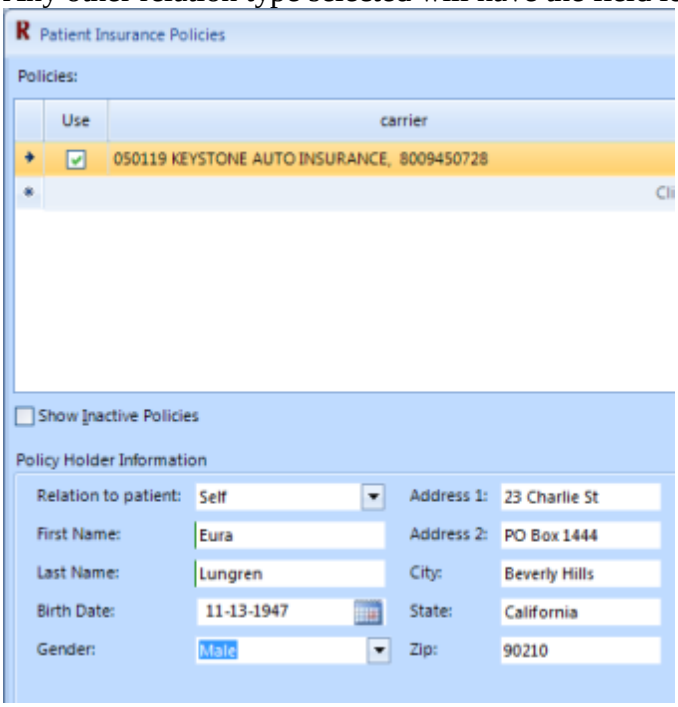

**Figure 4.14 – Insurance Policy Holder Information**

Two other areas of the application also currently use this feature. The Contacts/Demographics tab / Responsible Party section will utilize the same features. Also approved medical access will use this feature with the exception of Self which is not an option.

## Attachment / Scan Document Enhancements

In build 1.23 enhancements and clean up items were addressed for Attachment / Scan documents.
Clean up issues are:

- Re-classifying an attachment back to its original classification, it will join the attachment document entry for any other of that type that were scanned or attached at the same time.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

- Re-ordering can now be accomplished when viewing scans through dragging and dropping the thumbnails.
- Previously, the popup's for the scan document list only closed with the 'x' in the top right corner, now we also have an ok button at the bottom of the screen.
- Notes added to the attachment are displayed in the lower left when viewing the attachment.
- The Attachment viewer list now has buttons to scan, import, verbal order, and a button for advanced scanning options.

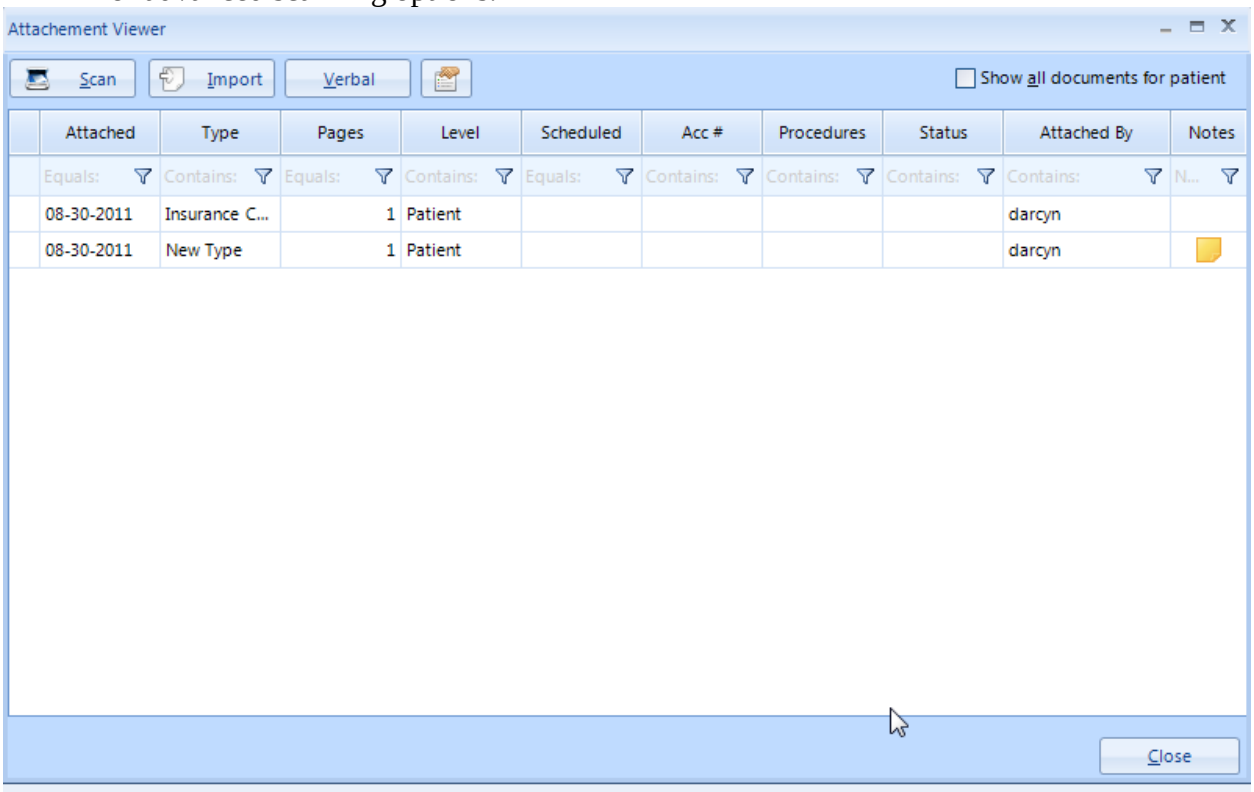

**Figure 4.15 – Attachment Viewer button changes**

Enhancements for Scanning / Attaching documents are:

- To **optimize the import workflow**, if the directory you are importing from contains in its name "**AutoDeleting**", then all the images in the directory will be auto selected when you open up the Import dialog and they will be deleted after the import.
- When viewing the scanned image or attachment the user can right click on an image and choose **Straighten**, next they are asked to underline a word in the image. The user has option to apply or cancel changes. When they choose Apply, the image will be rotated making the line they drew strait. An undo option is also available from context menu or keyboard shortcut <Ctrl>+ Z

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

- Also from the context menu an image cropping feature has been added. The user selects the menu option, click and drags the desired area, and select Apply or Cancel. Once applied the cropping can be reverted back by using the same Undo options for Straighten.

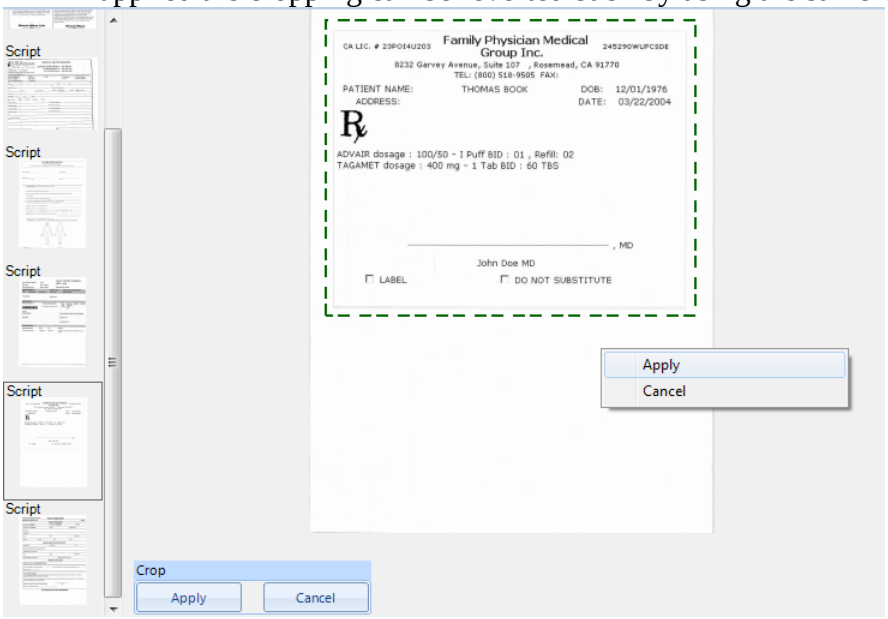

**Figure 4.16 – Displaying scanned document using cropping feature.**

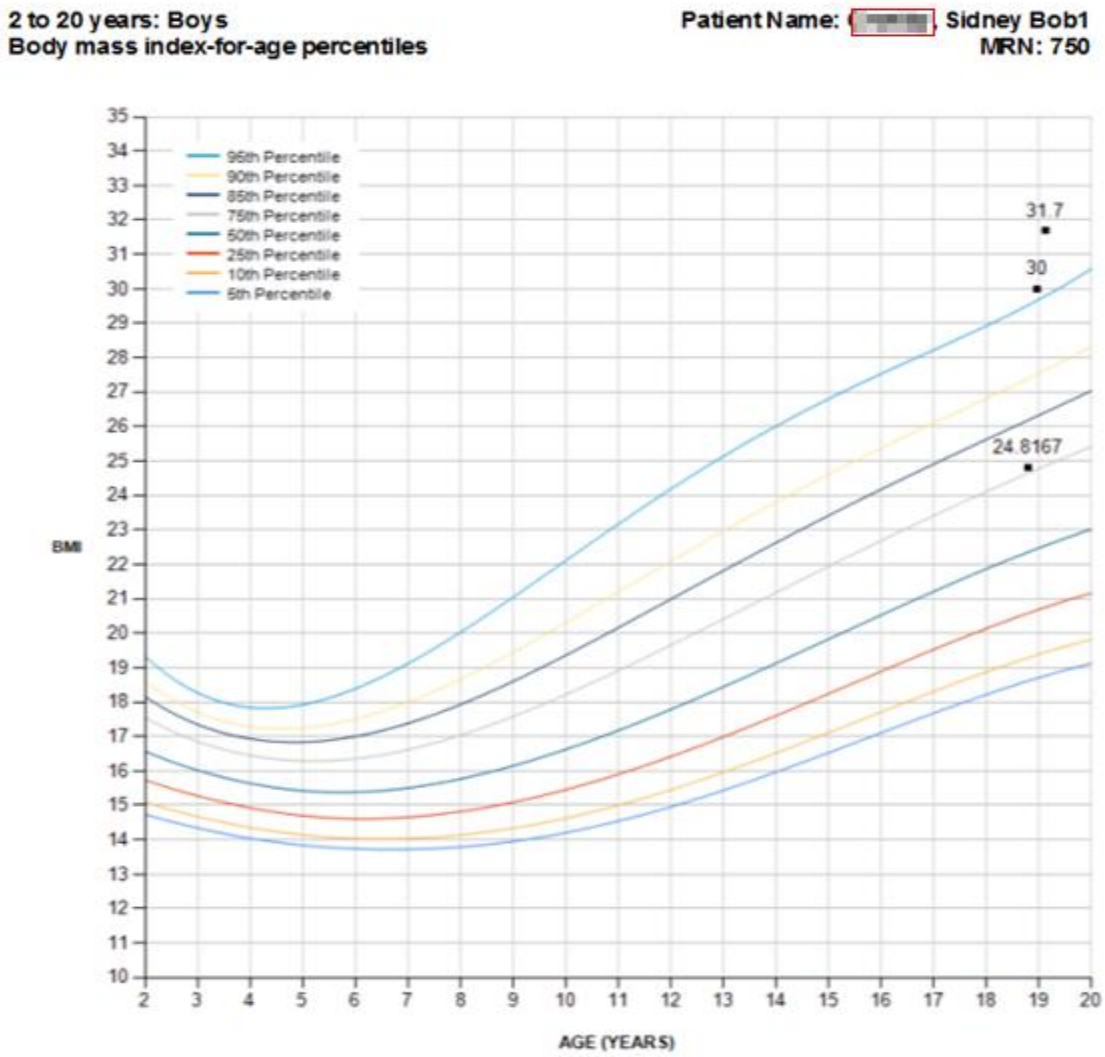
## Patient Growth Chart

A part of the Meaning Use requirement 170.302 part of Vital Signs, the patient growth chart has been added in build 1.23. A new table called l_bmi_percentiles to hold the data table from the CDC in Atlanta, GA. This table provides the BMI to percentile values based on age and sex of the patient.

A management report has been created to first provide the standard values based on the patient sex. Applied plot marks to indicate the patient BMI on the grid against the CDC values as displayed in figure 4.17. If the patient has multiple visits and the age in months is the same then the calculation provides an average of those results for plotting to the chart.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.



| Exam Date | Age (years) | Age (Month) | Weight (lbs) | Height | BMI |
|---|---|---|---|---|---|
| 5/2/2011 1:02 PM | 19 | 225 | 180 | 5ft 4in | 30.9 |
| 5/3/2011 6:25 AM | 19 | 225 | 30 | 2ft 10in | 18.2 |
| 5/3/2011 10:44 AM | 19 | 225 | 70.4 | 4ft 3in | 19 |
| 5/3/2011 10:44 AM | 19 | 225 | 70.4 | 4ft 3in | 19 |
| 5/6/2011 11:14 AM | 19 | 225 | 165 | 5ft 1in | 31.2 |
| 5/30/2011 1:48 PM | 19 | 225 | 173 | 5ft 3in | 30.6 |
| 7/20/2011 2:19 PM | 19 | 227 | 180 | 5ft 5in | 30 |
| 9/16/2011 1:36 PM | 19 | 229 | 157 | 4ft 11in | 31.7 |

**Figure 4.17– Patient Growth Chart Management Report**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Though not a requirement, the patient specific data in a table below the chart for data validation will also be displayed.

## Educational Resources

Part of the Meaningful Use requirement 170.302 (m) Patient Education, Educational Resources. Previous versions had Google search functionality. The search has been extended, becoming configurable supporting multiple search providers.

| Search providers code | Description | Display order | Url | Access string code | Launch external flag | Active |
|---|---|---|---|---|---|---|
| Contains: | Contains: | Equals: | Contains: | Contains: | Contains: | Contains: |
| google | Google | 1 | http://www.google.com/search?q={0} | | Y | Y |
| webmd | WebMD | 2 | http://www.webmd.com/search/search_results/default.aspx?query={0}&sourceType=undefined | | N | Y |
| Click here to add a new row | | | | | | |

**Figure 4.18 – Lookup table SearchProviders entries**

When adding a new search provider it is important to replace the search parameters with the placeholder {0} as this will be substituted for the text box on the main app when the search is called.

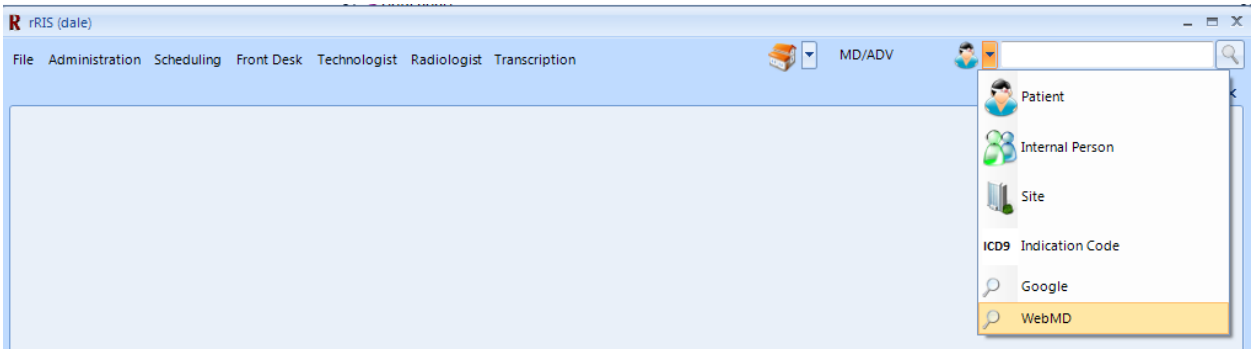


**Figure 4.19 – Displaying Search Provider options**

## Prep Instructions Hyperlink

A hyperlink has been added to the Prep Instructions sections of the scheduling, registration, technologist windows

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

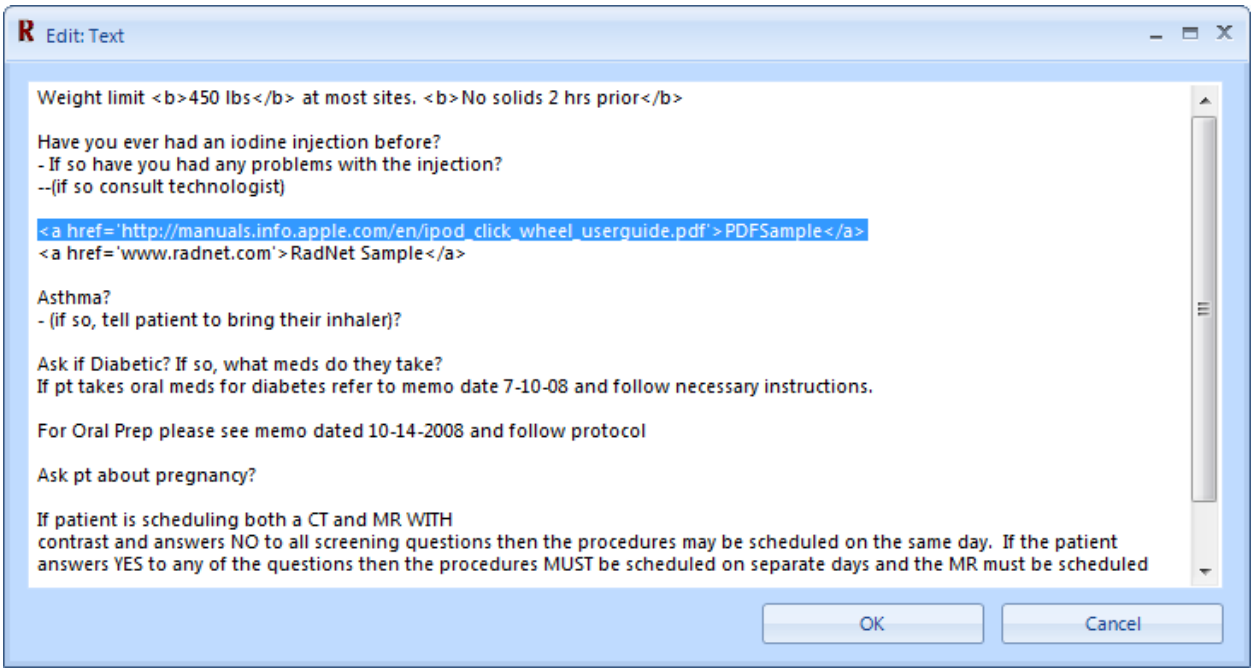

**Figure 4.20 – Adding hyperlink to prep instructions**

Hyperlinks are edited in the lookup editor for the prep instructions and are coded as shown above as standard a href (html) tags.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

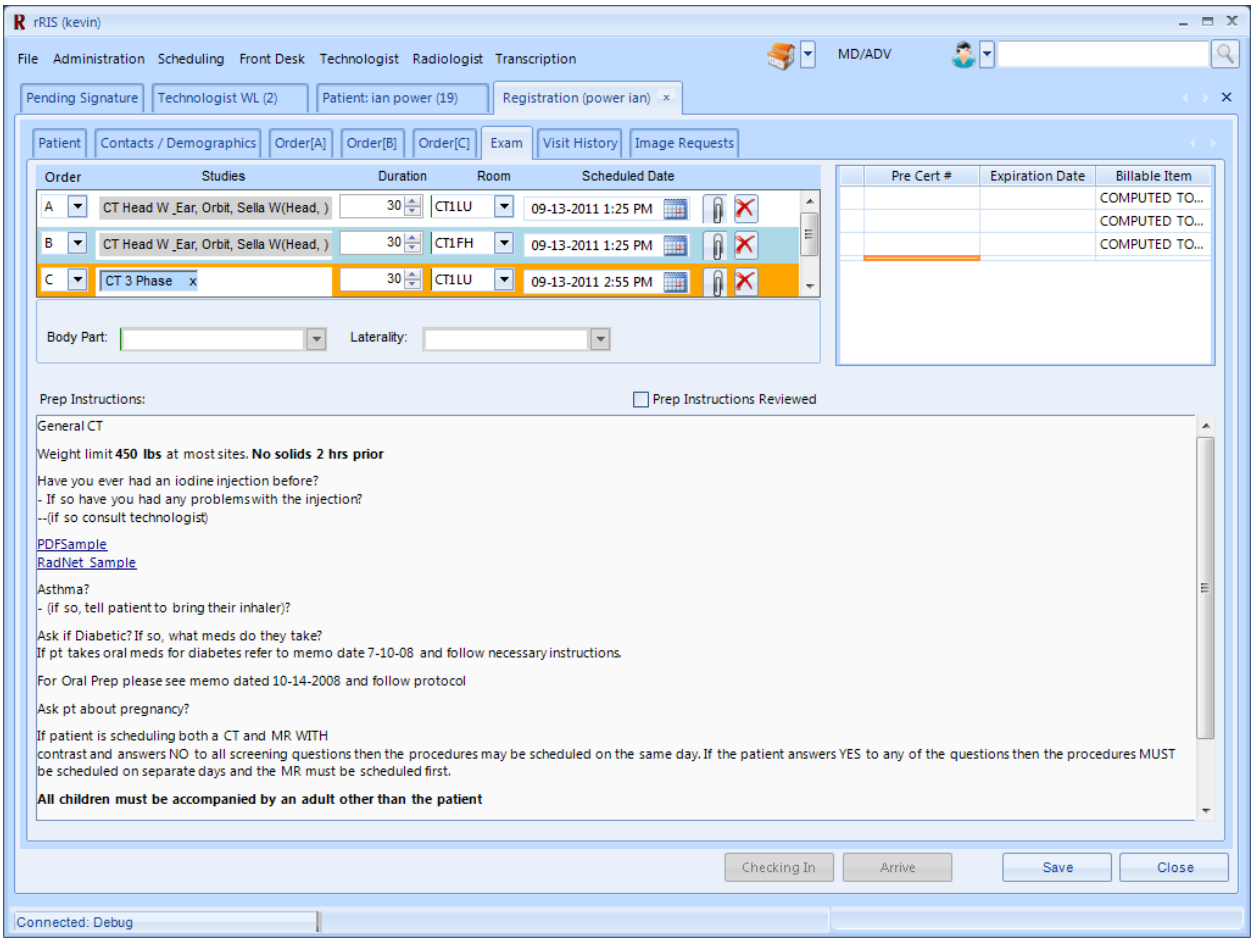

**Figure 4.21 – Sample displaying hyperlinks in Prep Instructions.**

## Proxy Signing User Preference

A new user preference "Proxy Signing" has been added. Users can specify who will be able to proxy sign on their behalf. Also as a display only, it will inform who you (the user preferences of the user logged in) that you may sign for.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

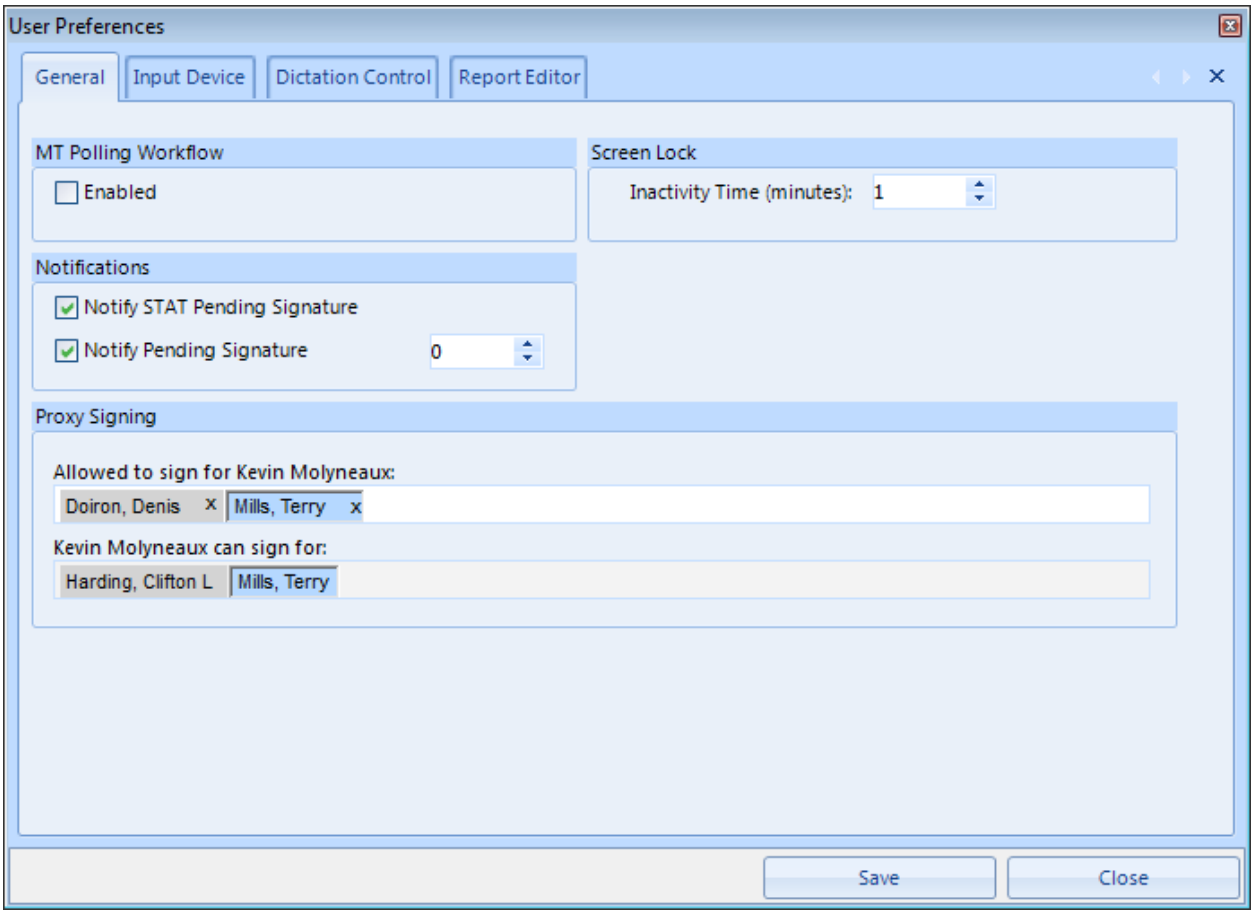

**Figure 4.22 – Displaying User Preferences, Proxy Signing. Notice that the "Can sign for" is read only.**

For admins, Proxy Signing can also be administered from the Personnel editor.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

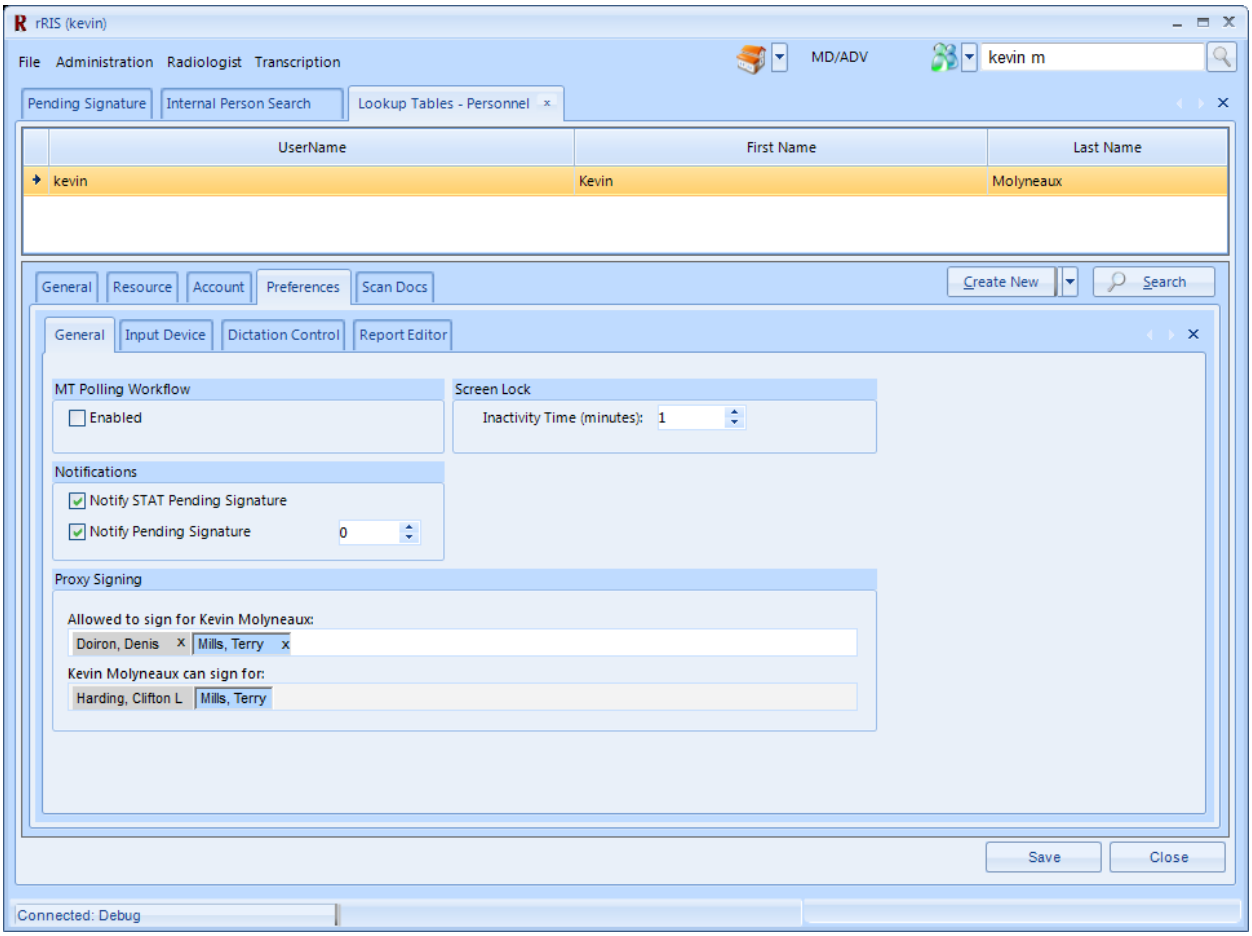

**Figure 4.23 – Personnel editor**

# 5. Known Limitations

Bugs, Suggested Features, and Support Issues are tracked in a web based system called Redmine. The following is a snapshot of the issues found in Build 1.23.

| # | Status | Subject | Category | Target version |
|---|---|---|---|---|
| 630 | New | Manage policies that have policy number that begins with + symbol are not added to Billing Exception work list | Thick Client GUI | 1.23 |
| 629 | Resolved | Manage Policies - Policy Holder information fields don't populate everytime | Thick Client GUI | 1.23 |
| 628 | Resolved | IVT - Selecting a carrier returns error | Web Services/DB | 1.23 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | | | |
|---|---|---|---|---|
| 626 | New | Removing procedure will delete all attachments associated with procedure stored at exam level | Thick Client GUI | 1.23 |
| 625 | Resolved | Changing order at the time of scheduling | Thick Client GUI | 1.23 |
| 624 | New | Schedule exam, selecting time from Advance tab can make available times "jump" | Thick Client GUI | 1.23 |
| 623 | Resolved | Edit order > Attachments > selecting Scan or Import prompts to select document type. | Thick Client GUI | 1.23 |
| 621 | New | Attempting to create an order with a newly created unknown referrer throws exception | Thick Client GUI | 1.23 |
| 619 | New | Orders to Schedule > Attempt to Schedule on locked order then cancel throws exception | Thick Client GUI | 1.23 |
| 618 | New | Orders to Schedule > Attempt to Mark Order on locked order then cancel returns error on getdata | Thick Client GUI | 1.23 |
| 617 | New | Registration / scheduling / edit order open in read only mode from orders to schedule prompts to save changes | Thick Client GUI | 1.23 |
| 616 | Resolved | Radiologist > Diagnose > Skip and continue | Thick Client GUI | 1.23 |
| 615 | Resolved | Reset/Open skipped rows | Thick Client GUI | 1.23 |
| 611 | Resolved | Personnel > Edit contact information > Edit address can go blank if user removes text | Admin Tools | 1.23 |
| 610 | Resolved | Personnel Editor - Exception thrown from closing without saving first | Admin Tools | 1.23 |
| 609 | Resolved | Closing Personnel Editor throws exception | Admin Tools | 1.23 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This document developed as an overview of the work lists, data windows, features and user preferences available in rRIS.

# 2. Intended Audience

This document has unrestricted internal use and is intended for all users.

# 3. Work lists

The rRIS application has many work lists available for the multiple rolls within a Diagnostic Medical Imaging center. Below is a brief description of the work lists under the Administration menu. The columns available in work lists may be difficult to display. Because of this, some of the data in the screenshots may not be visible as I try to capture all columns for display in this document.

## 3.1 Application Work Lists

The application has work lists that can be of a daily view, patient view, or a view that contains all records that need to processed for a particular role. The columns may be sorted, filtered and arranged to the user's preference. Columns can be sorted by selecting the column header. Columns may be filtered by entering text in the columns filter header. Also the filtering criteria may be specified by selecting the Icon located at the top of each column in the filter row.

In Figure 3.1.1 below, selecting the Icon outlined in Red will open the Work list Views window. The user can sort, filter, arrange and / or hide the columns as they choose, then select this Icon, create a unique name and save the view. The view can be saved for the user only, or for the user group they belong to. The next time this work list is accessed, simply select the view to the right of the Work list Views Icon. The current selected view will be highlighted in blue.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

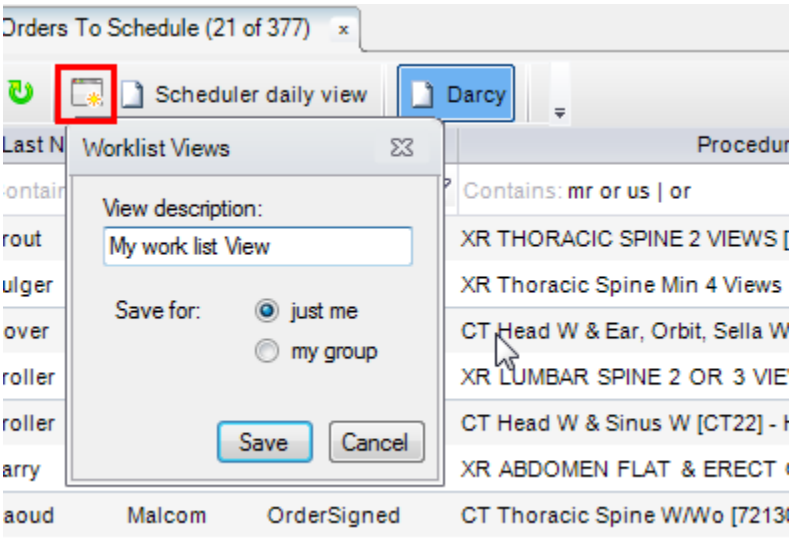

**Figure 3.1.1 – Creating Custom views**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

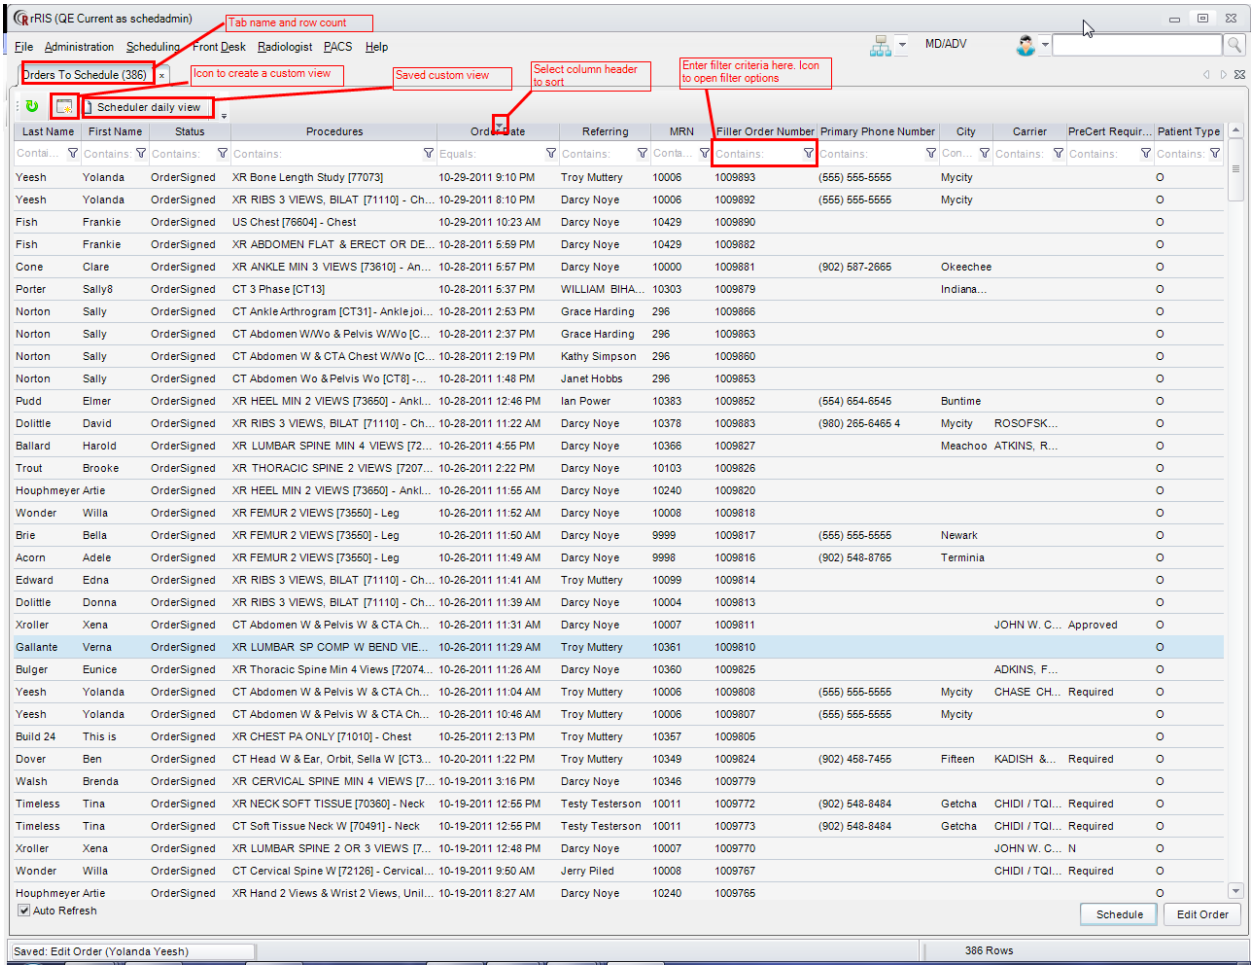

**Figure 3.1.1 – Work list features.**

Additional filtering options are to filter a column within a work list by entering multiple search criteria. The separator "or" (case insensitive) or "|" (pipe) will separate multiple search criteria and apply a "contains". Note the search string '' (single quotes) will match empty entries or null. This can also be applied to the "does not contain" filter if specified in the filtering list of options. This is achieved by selecting the filter ICON on the column header and selecting the "does not contain" option.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**Figure 3.1.2 – Column filtering on multiple criteria**

A right mouse click on a column header gives the user a context menu. The options include to Clear the filter of the column selected, clearing all filters applied to work list, conditional formatting, column chooser which allows the user to select from a defined list which columns they would to view on the work list. Hiding a column will add the column to the list window that is opened when selecting Column chooser. Pinned state allows the user to have the column displayed to the left, right or removing the pinned options. Lastly an option to export the work lists contents to an .xml file.

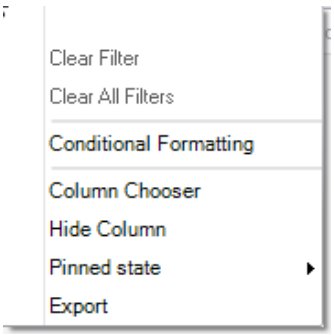

**Figure 3.1.3 – Context menu from column header**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 3.2 Billing Exception work list

The billing exception work list contains all studies requiring action due to incorrect billing details. Only a single action can be completed from this work list which is Edit Billing. Selecting the Edit Billing button opens the data window. The user is able to correct any inaccuracies in the billing details as required.

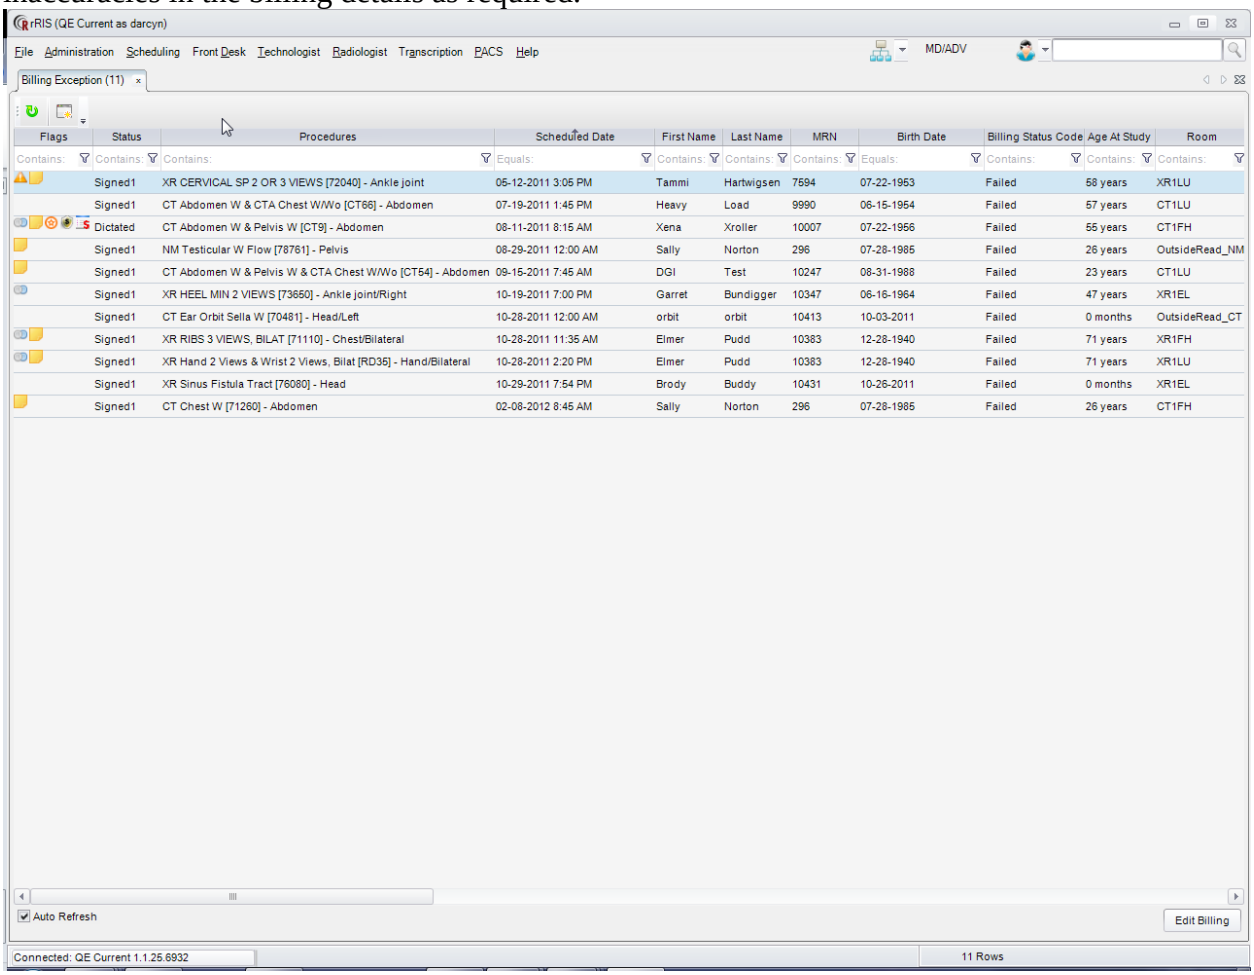

**Figure 3.2.1 – Billing Exception work list**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 3.3 Patient Merge work list

Some application users may only have the option to suggest a merge and not have the ability to complete the merge process. Suggestions are placed in the Patient Merge work list for a user who has the ability "Merge" and take action on the request. The patient merge suggestion can be completed or rejected. Each of these actions will remove the record from this work list.

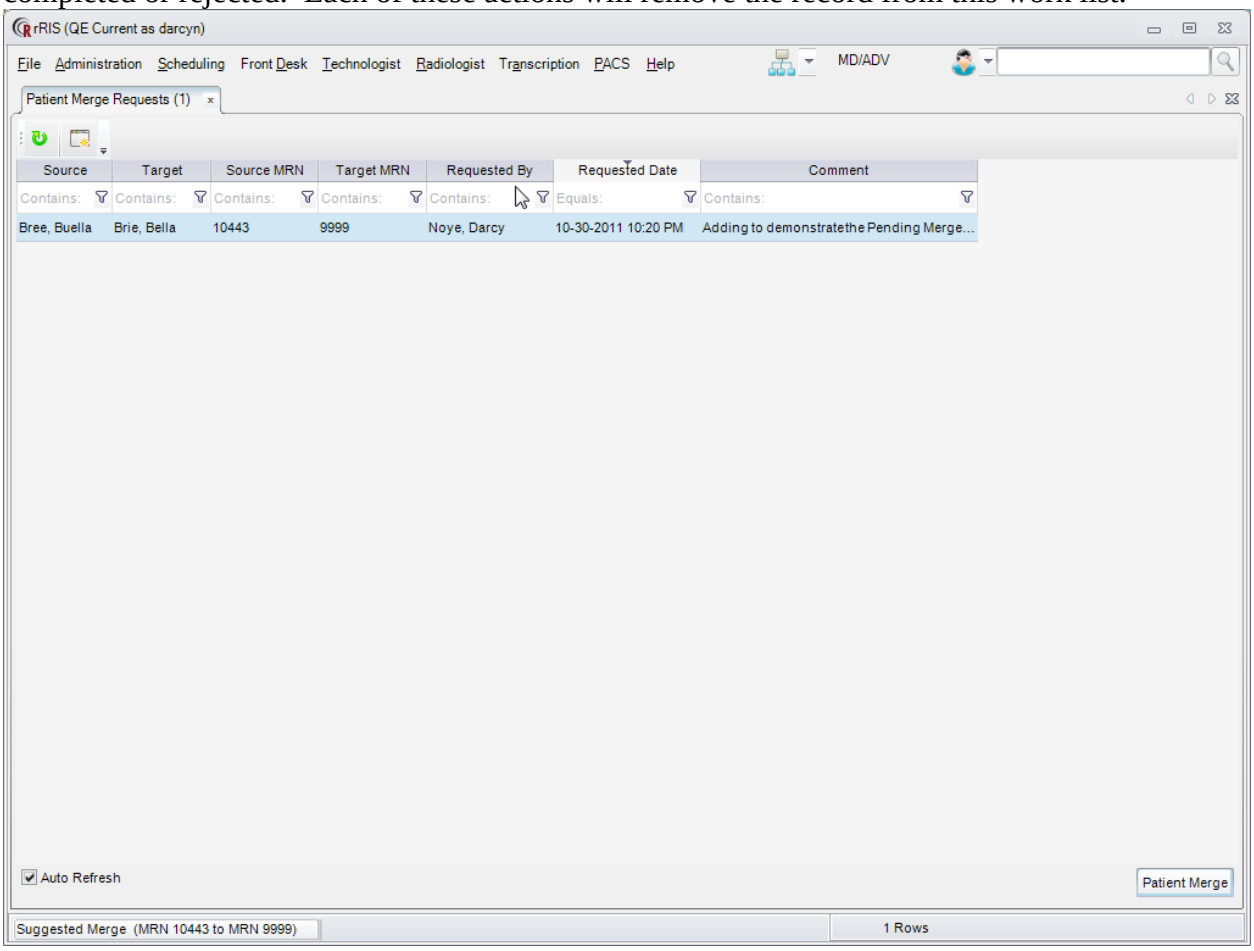

**Figure 3.3.1 – Patient Merge work list**

### 3.3.1 Patient Merge

The patient merge feature in rRIS allows users who have access to complete a "Merge" the ability to search for the Source Patient (to be merged) as well as search for the Target Patient (merging to). Once the patient search has been completed the Clinical Data section will display

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

the patient's history. Selecting the Folder Icon will open the patient's folder so the user may complete a more thorough investigation before the merge is completed.
Users who don't have access to complete a patient merge should be given the rights to "Suggest" a merge. Suggested merges are added to the Patient Merge work list for an admin type user to action the suggestion. The suggested merge can either be completed or rejected.

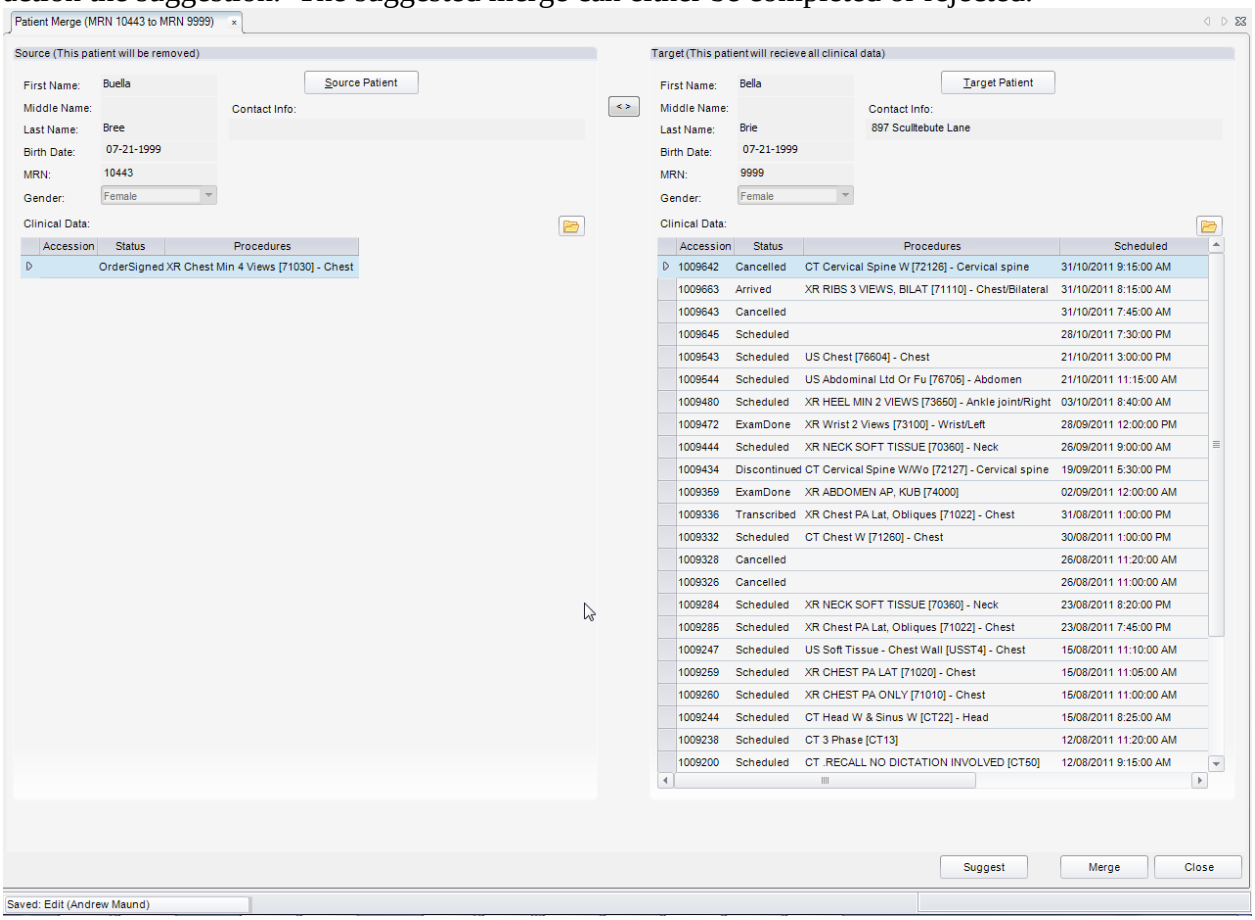

**Figure 3.3.1.1 – Patient Merge data window**

If the user suggests a patient merge a dialogue box will be displayed for the user to enter notes for the suggestion. The notes are captured in the comment column of the Patient Merge work list and will also display as a note at the bottom of the Patient Merge window once action is taken to complete or reject the merge.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

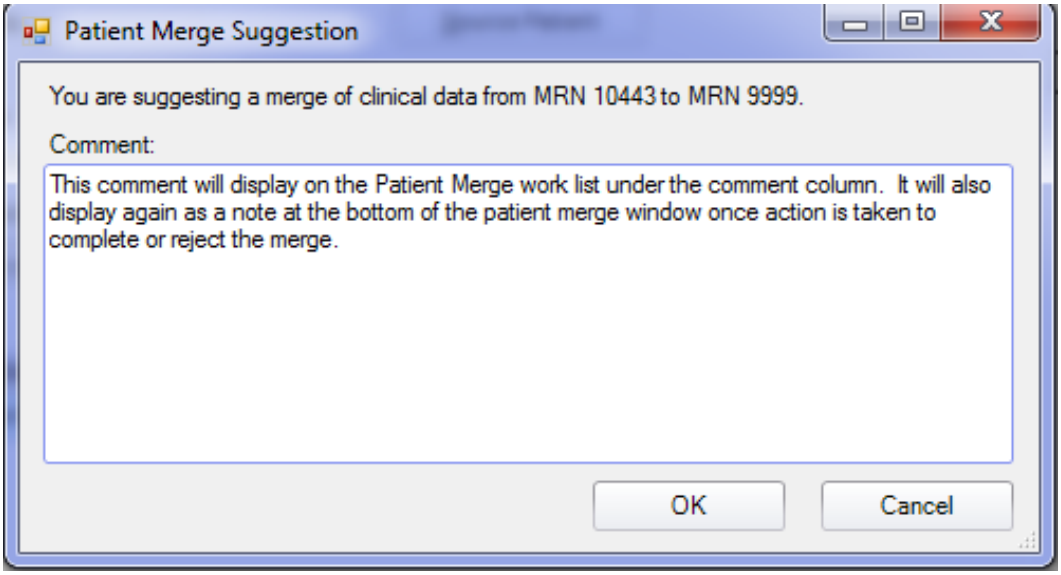

**Figure 3.3.1.2 – Patient Merge Suggestion**

Once the suggestion has been submitted it now appears on the Patient Merge work list. The admin type user who administers this task will open the suggestion in the Patient Merge window again. They will action the suggestion by completing the merge if they determine the suggestion to be accurate, or they will reject it. Both actions remove it from the Patient Merge work list.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

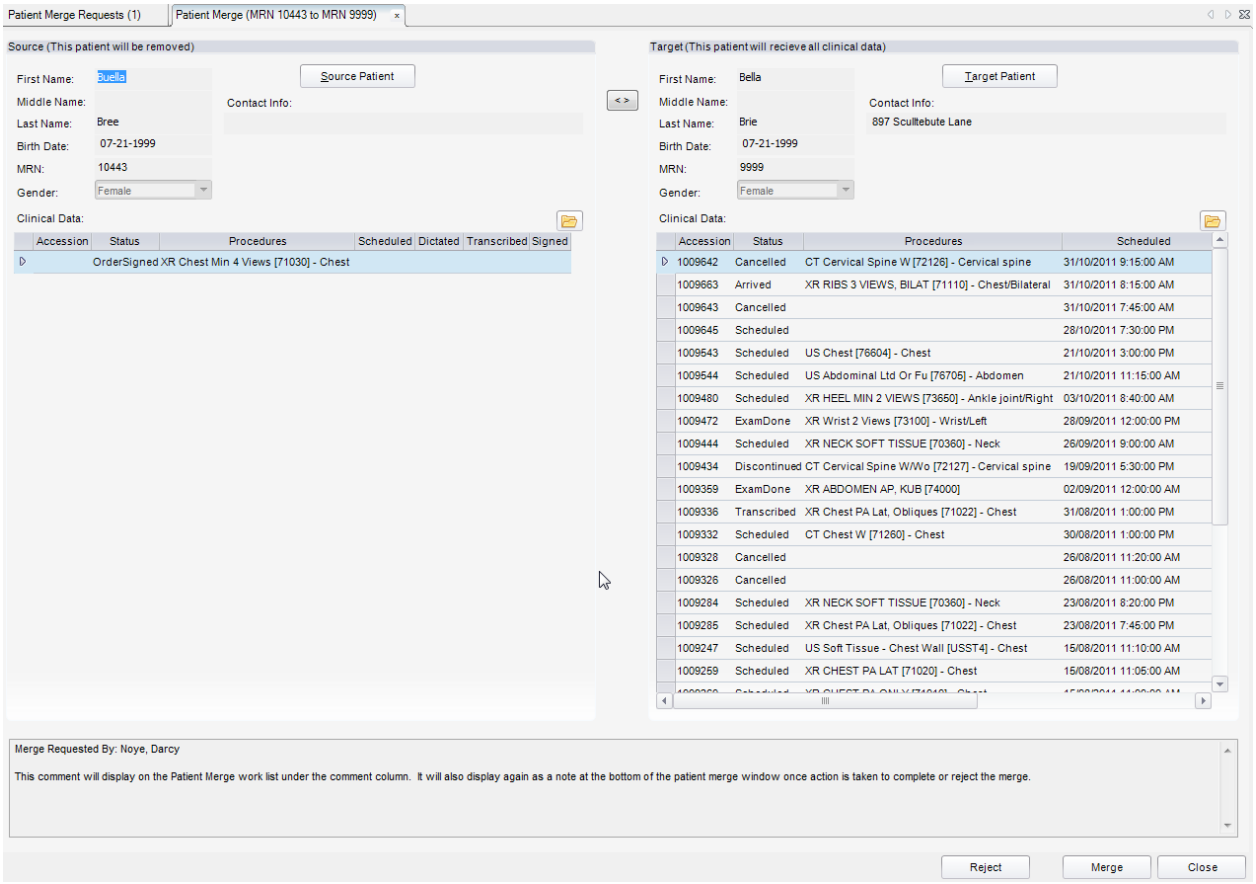

**Figure 3.3.1.3 – Admin user to complete action on Patient Merge suggestion.**

Selecting Reject, the user is returned to the Patient Merge Requests work list. Selecting Merge will display a confirmatory message.

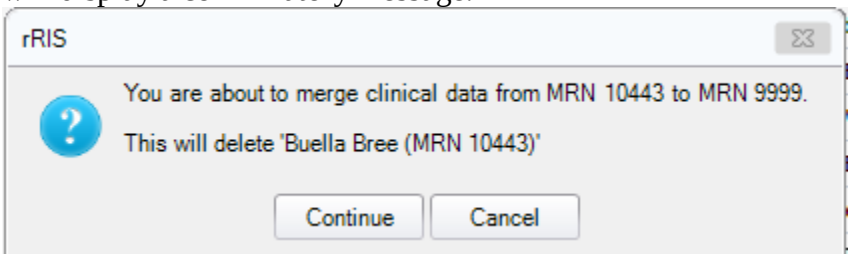

**Figure 3.3.1.4 – Merge action confirmatory message**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 3.4 Unknown Referring work list

Orders created or scheduled with an Unknown Referring Physician will be placed in the work list. The order itself is not impeded from workflow. A user with proper rights can action the orders in this work list. Button action is edit order only. Context menu options are edit order, audit history and copy cell.

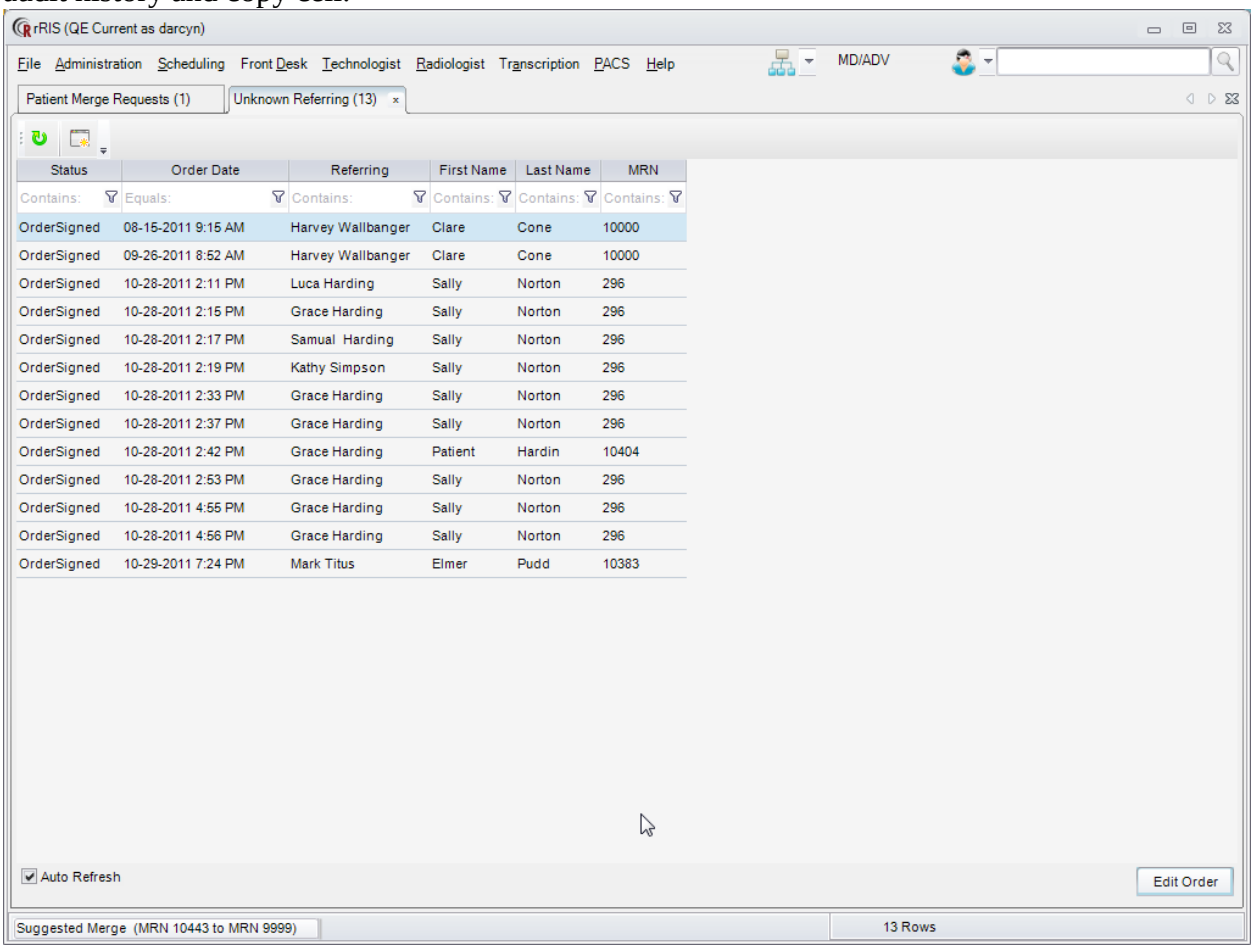

**Figure 3.4.1 – Unknown Referring work list**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 3.5 IVT work list

Orders that require insurance verification are added to this work list. Button actions are insurance verification (IVT) and Schedule. The context menu also contains IVT and Schedule as well as Audit History and Copy Cell.

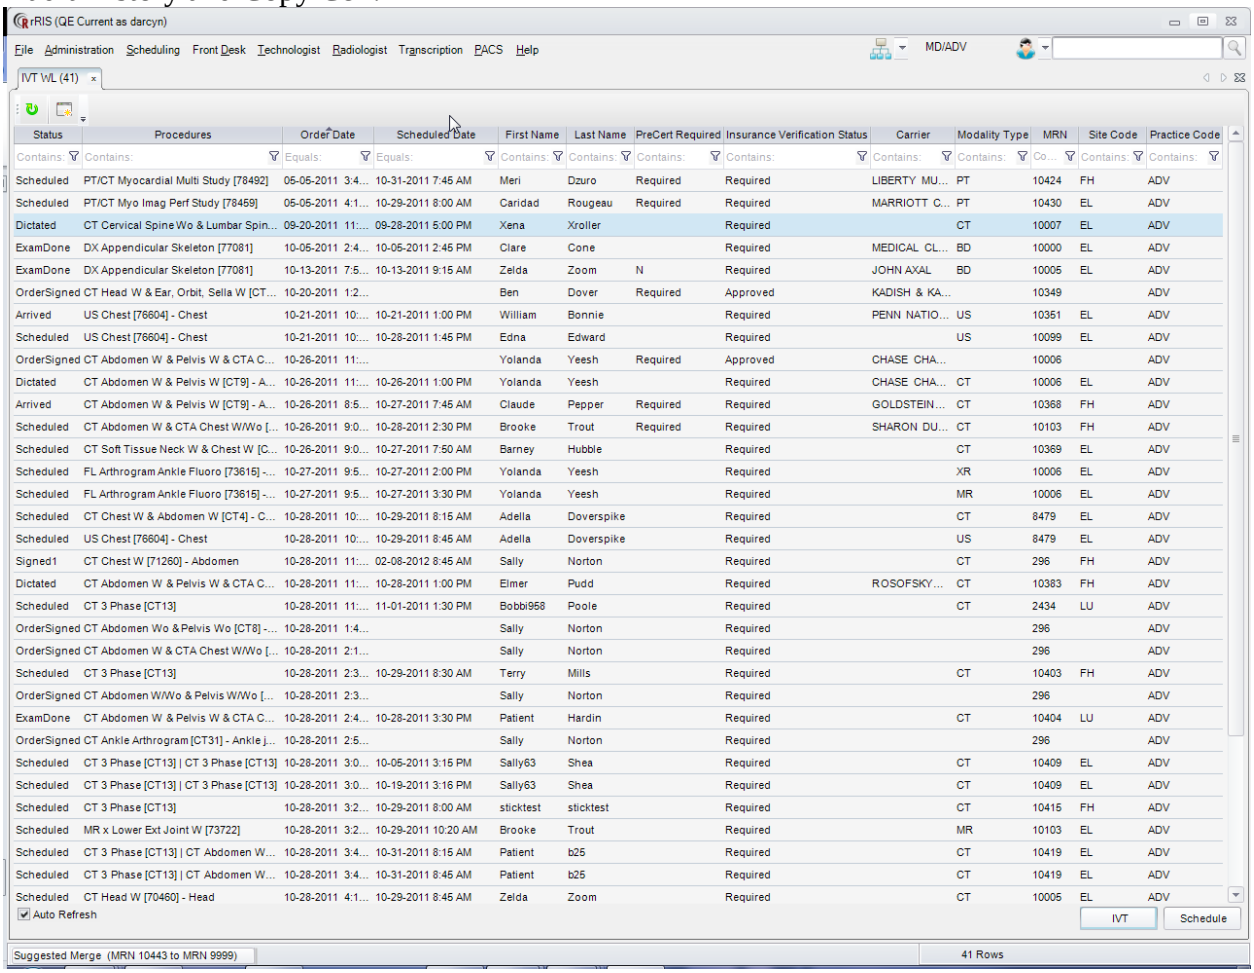

**Figure 3.5.1 – IVT work list**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 3.6 IVT data windows

Below are examples of the IVT data window. Included are the patient and Insurance Verification Precert tabs. The attachments tab is a standard window used in other data windows and is covered in detail later in this document.

### 3.6.1Patient tab

The user has the ability to add or edit data on the Patient tab. This tab provides the user with general information about the patient.

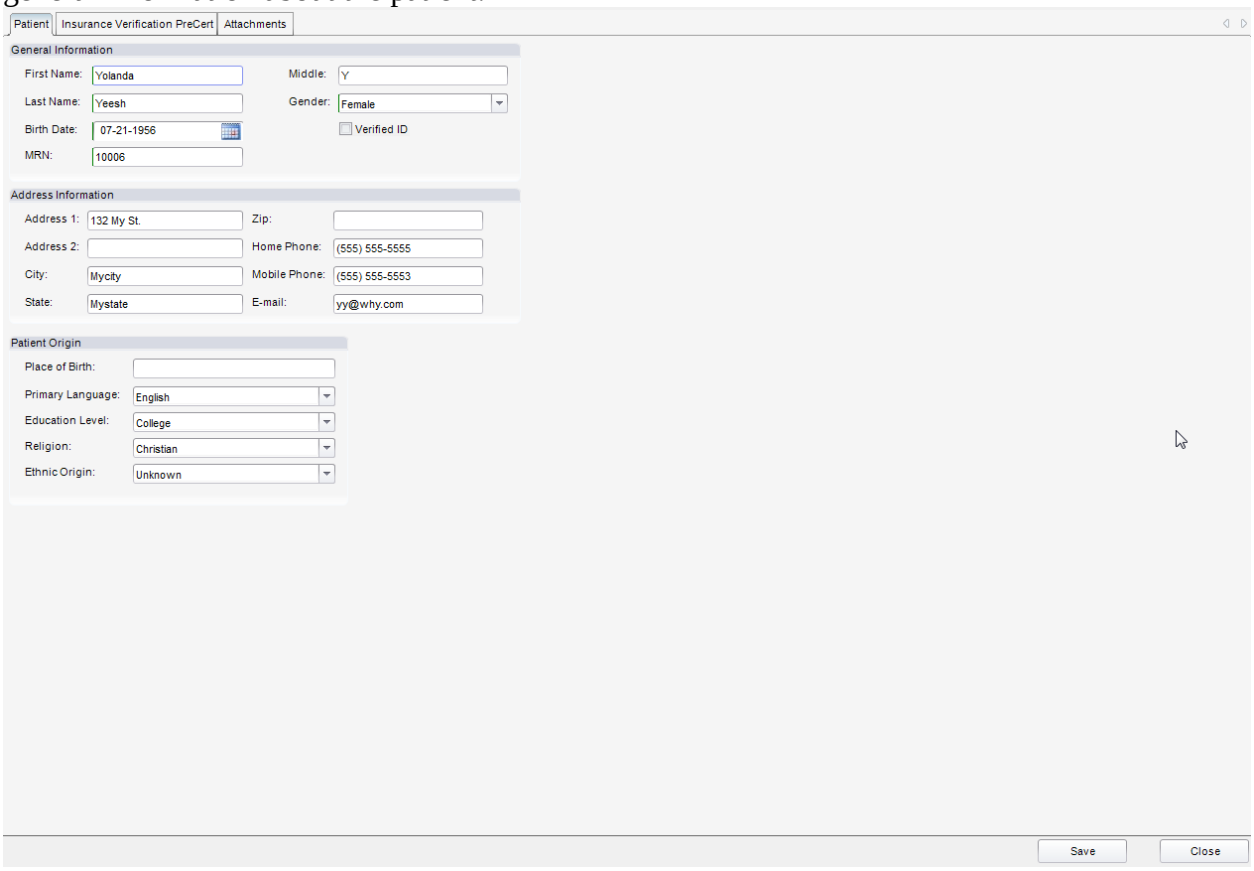

**Figure 3.6.1.1 – IVT Patient Tab**

### 3.6.2 Insurance Verification PreCert

On the Insurance Verification PreCert, the users have the ability update the insurance information and add / edit billing code information

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

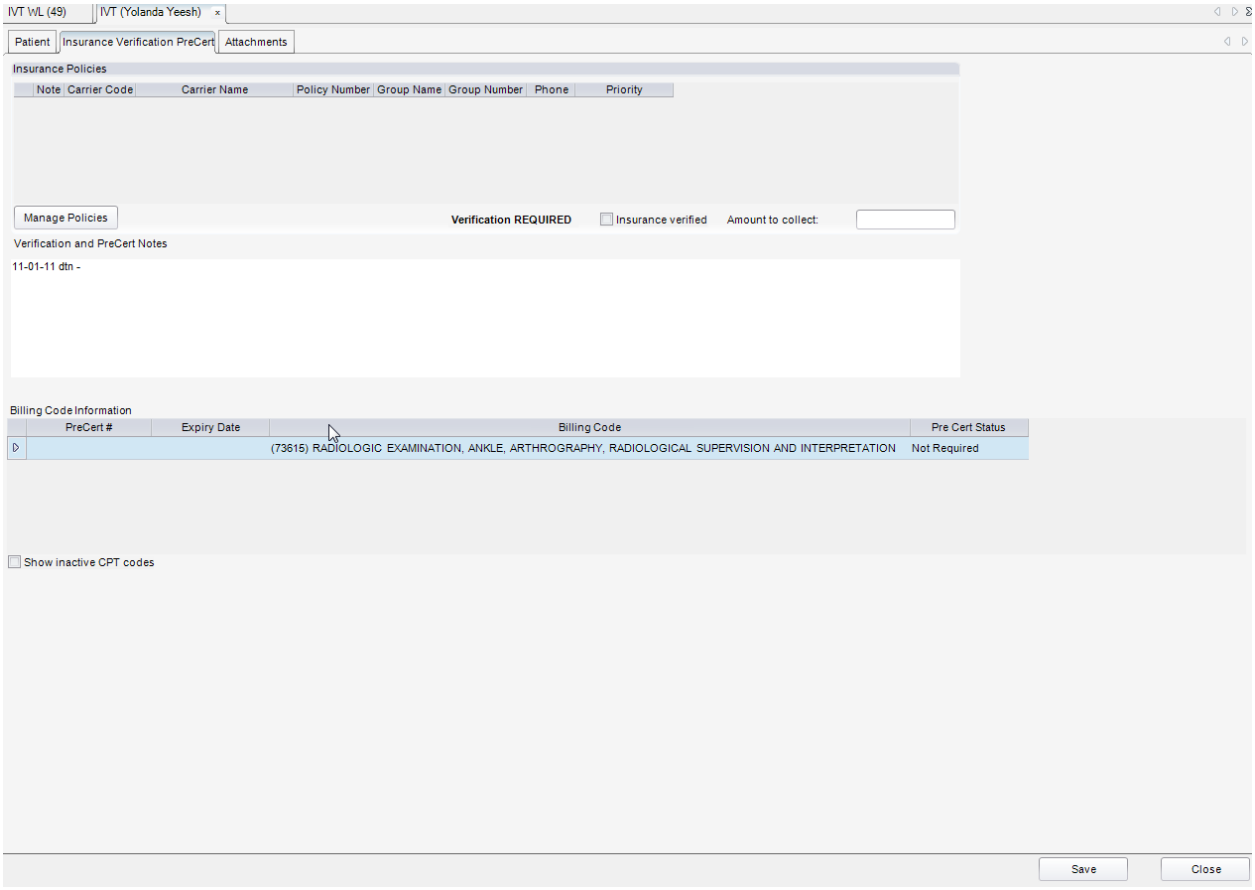

**Figure 3.6.2.1 – IVT Insurance Verification PreCert Tab**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 3.7 No Show work list

The No Show work list contains the exams that have been flagged as no show at the time of cancelling the order or scheduled exam. Button actions that can be completed is Reschedule only. Context menu options are Audit History, Copy Cell, Reschedule, and Change Status which contains is own sub menu.

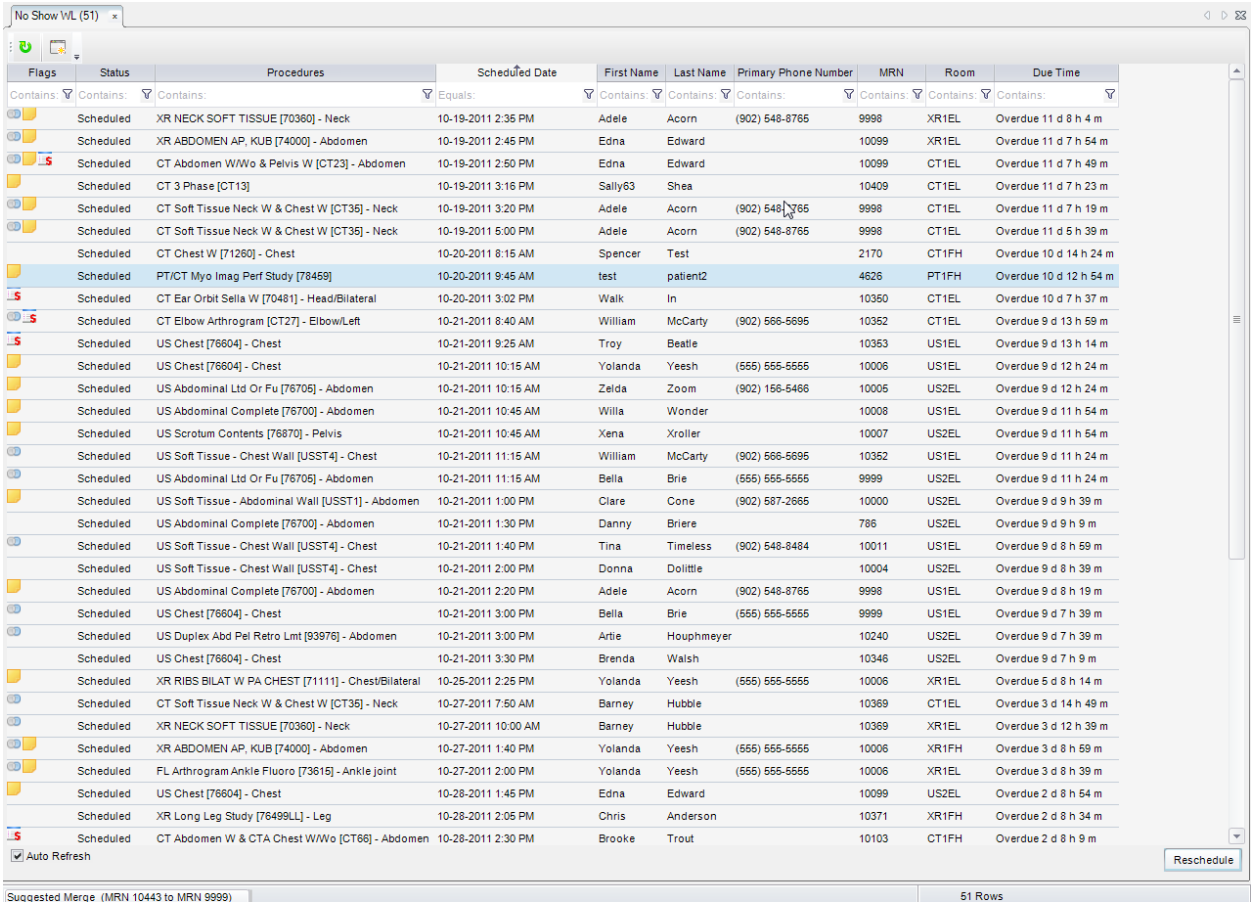

**Figure 3.7.1 – No Show work list**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 3.8 Image Request work list

From other work lists user have the ability to enter request for images. Each request is added to the Image Request work list. The button and context menu actions from this work list are to edit the image request. Once a request is flagged as completed, it is removed from the work list.

**Figure 3.8.1 – Image Request work list**

### 3.8.1 Image Request Data Window

If the image request needs to be updated after it has been requested, the user can complete the request from the exam itself on the Image Request data tab, or they can access the request from the Image Request work list, select the row and select the Edit Request button. The user has the ability to edit other data on the patient, but this main purpose of Edit Request from the Image Request work list is to update the status of the image request.

The user may also access and print the release form from with the data window.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

From the radio buttons displayed the user can specify who requested the images and where the images are to be delivered. Selecting patient will populate the name and address. The referring completes the same field. If there is more than one address on file for the referrer the user will need to select it from the list provided. Other required fields are the Format and Method of delivery. If the status Picked Up is selected, the Identification Verified check box becomes required.

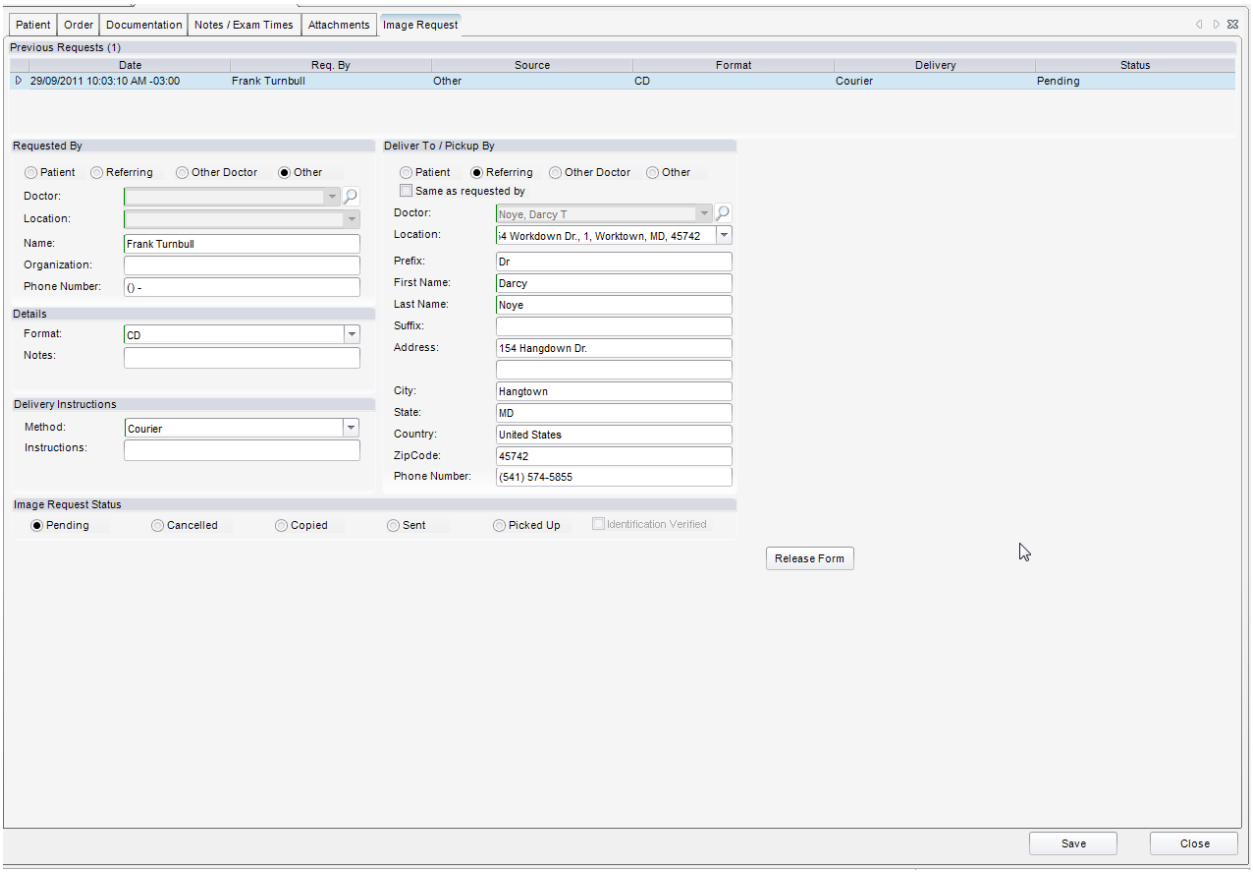

**Figure 3.8.1.1 – Image Request data window**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 3.9 Document Distribution work list

Reports documents that have been marked for distribution are added to the Document Distribution work list. Button actions from this work list are to Edit, Pause, Cancel, and Retry jobs. There is no context menu from this work list.
The Retry button is only available if the status is not Pending. All other buttons are always available. Cancelling a job will set the status to Cancelled and the item will drop off the work list.
Pause, Cancel, and Retry all prompt for confirmation.
All buttons allow multi-select. If a combination of Pending and non-pending jobs are selected, the Retry button will be unavailable. The action will apply to all selected rows after confirmation at the prompt. The prompt will change to plural when multiple rows are selected

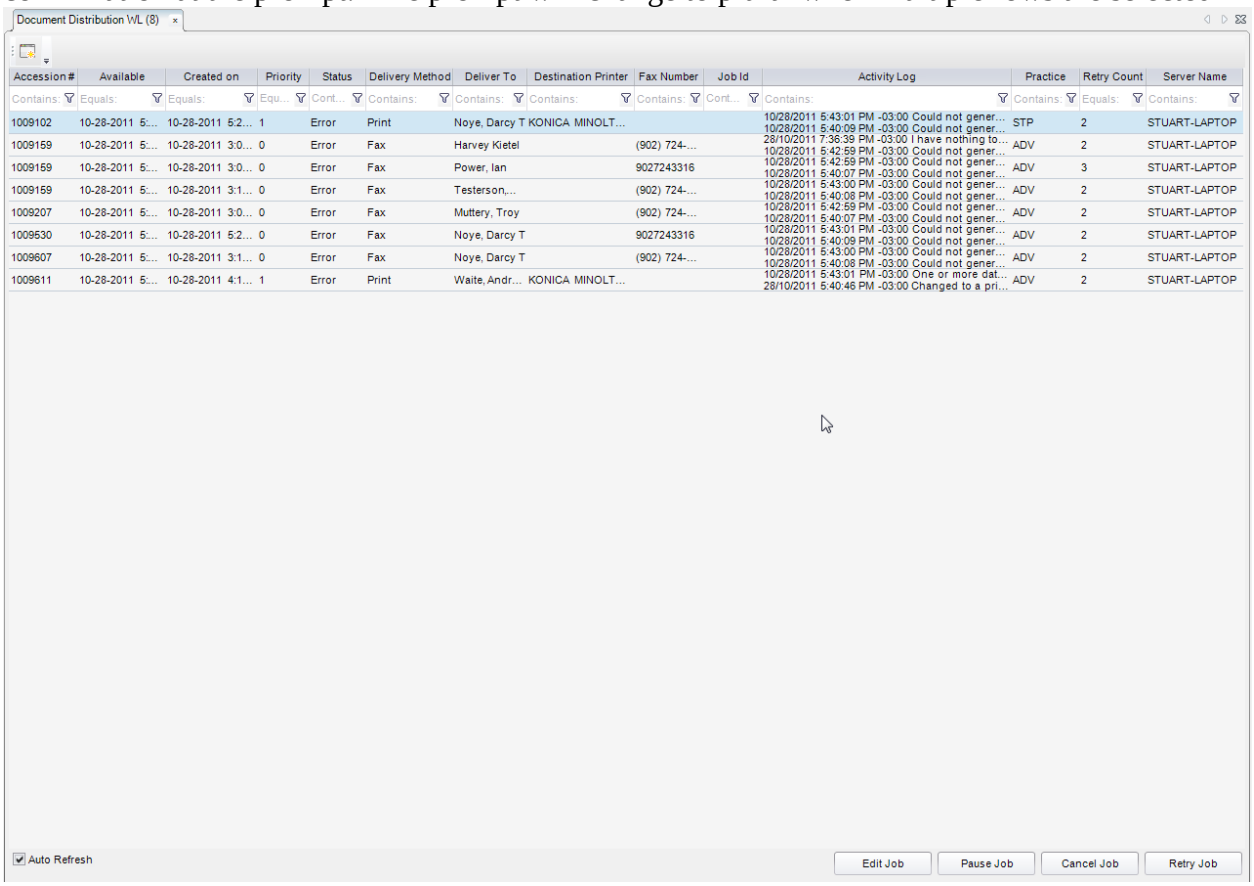

**Figure 3.9.1 – Document Distribution work list**

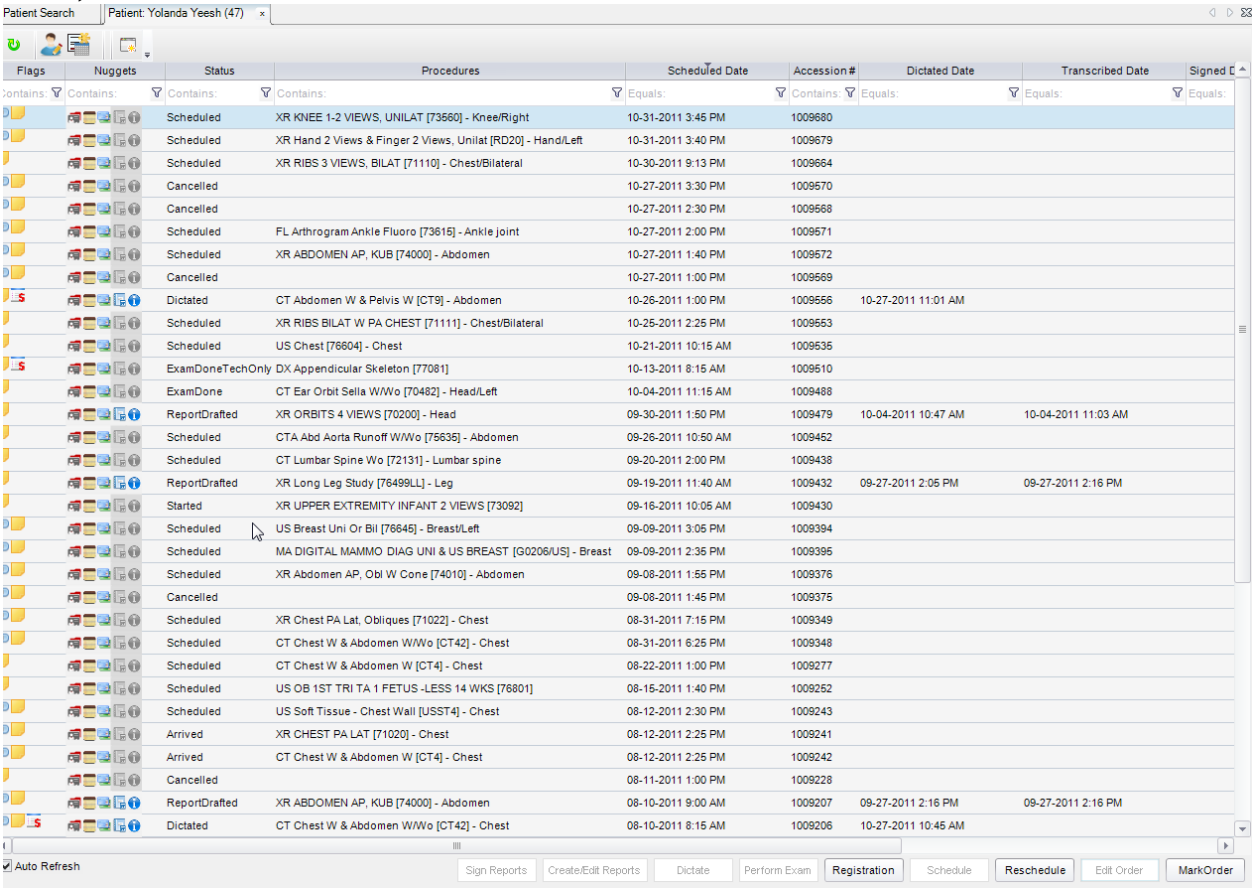
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 3.10 Patient Folder

The user has complete system functions on patient records (if they have permissions) from the patient folder.
Depending on the status of the exam will depend on what buttons become enabled at the bottom of the work list.
The button actions available from within this window are from left to right in figure below Sign Reports, Create/Edit Reports, Dictate, Perform Exam, Registration, Schedule, Reschedule, Edit Order, Mark Order.



| Flags | Nuggets | Status | Procedures | Scheduled Date | Accession # | Dictated Date | Transcribed Date | Signed D |

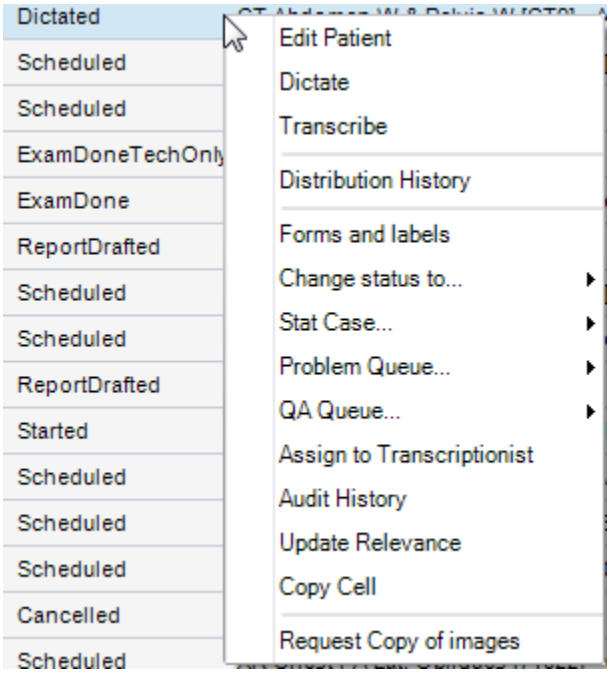
**Figure 3.10.1 – Patient Folder work list**

The context menu also has many options available. Below is an example screenshot of the context menu. Again depending on the status of the exam and allowable permissions to the user, will depend on what is available from the context menu.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.



**3.10.2 – Patient Folder context menu. In this example the exam status is dictated.**

### 3.10.1 Data Nuggets

Data nuggets are available only from the patient folder. If the patient record has a specific nugget available it will be in an enabled state, otherwise it will be disabled (grayed out). Each nugget has an assigned shortcut key, which is displayed when hoving the mouse pointer over the nugget in a tooltip. The nugget can be closed by selecting the same Icon from the Nuggets column again for that record, selecting the shortcut key for that nugget (provided focus is on that patient record row), or by pressing the X in the upper right corner of the nugget window. All of the Nuggets will have the patient name age and gender in the upper left, and procedure, procedure code and body part in the lower right corner of the nugget.

Summary – Selecting the Summary Data nugget will open the Summary view of the patient

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

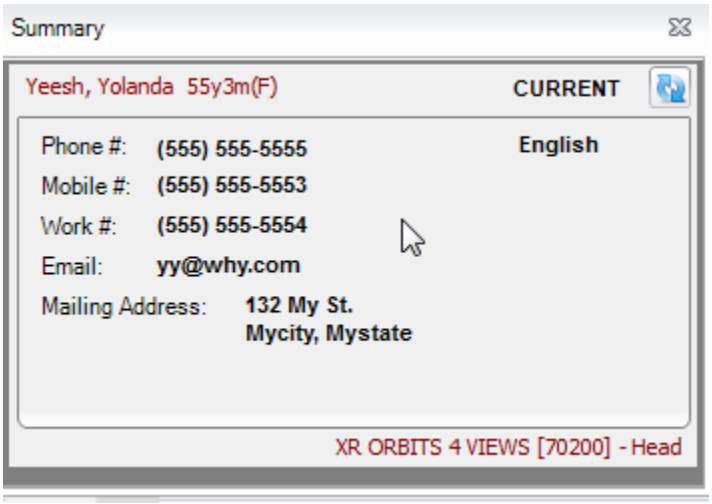


**Figure 3.10.1.1 – Summary Data Nugget**

Notes – displays the patient and study (order) notes

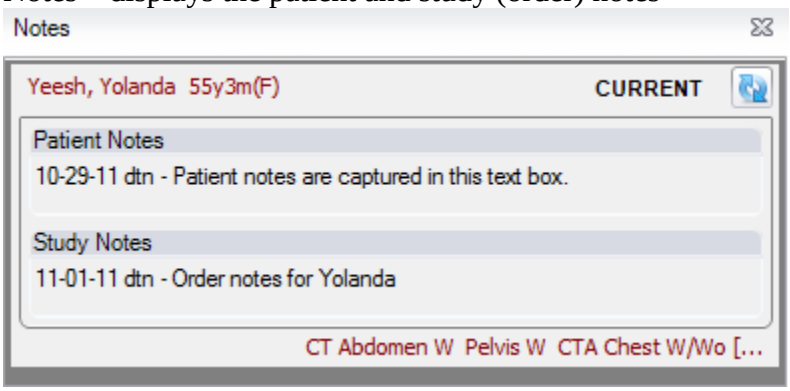

**Figure 3.10.1.2 – Notes Data Nugget**

Documents – Attached (scanned) documents. All documents scanned for the patient are in list box at top and can be viewed by selecting it from the list. Document notes can be viewed. Document type can be changed. Document can be printed.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

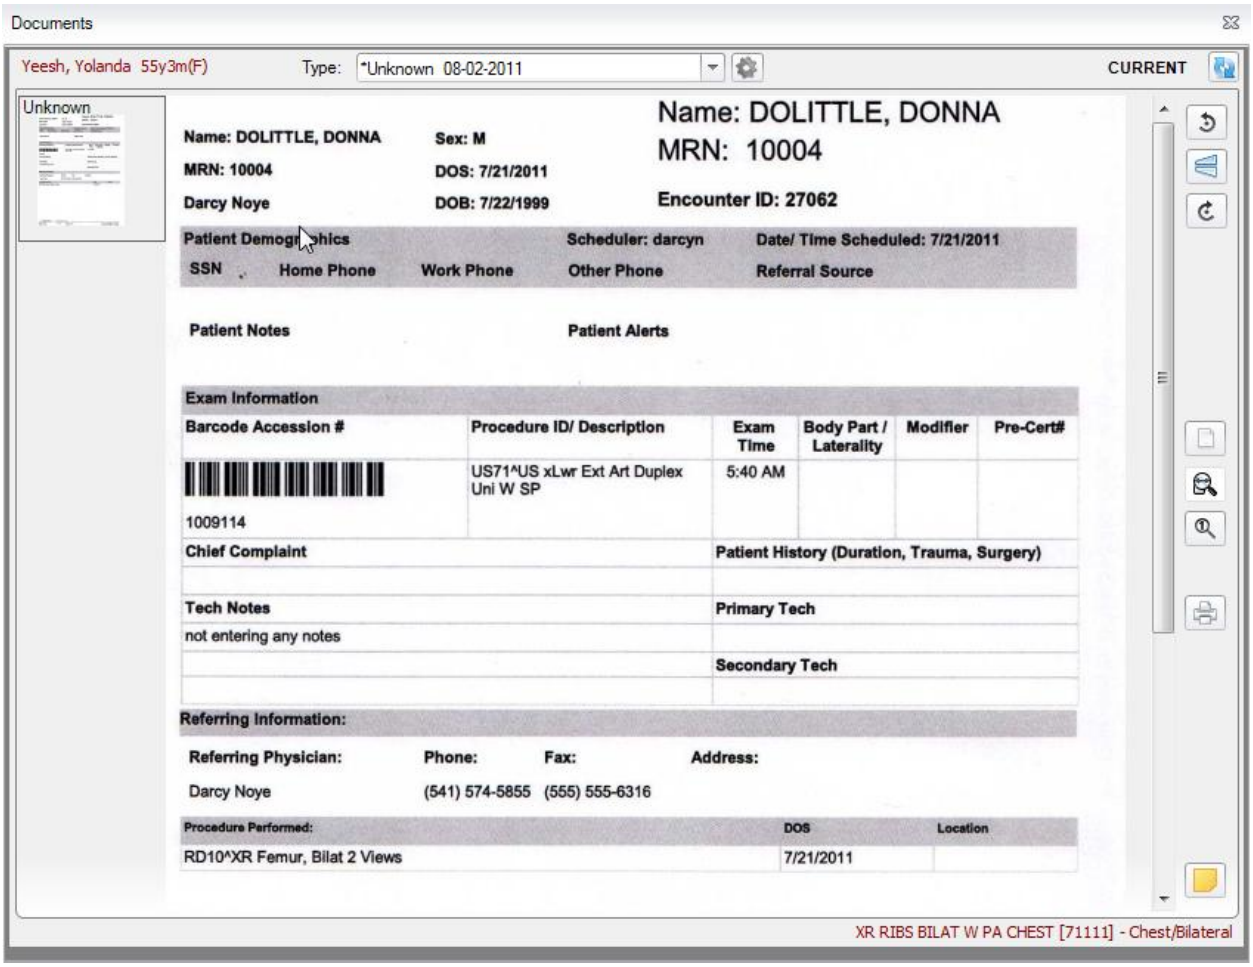

**Figure 3.10.1.3 – Document nugget (sample only)**

Report Nugget –Patients diagnostic report. User can load and play back audio, distribute the report, view report history and preview report

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

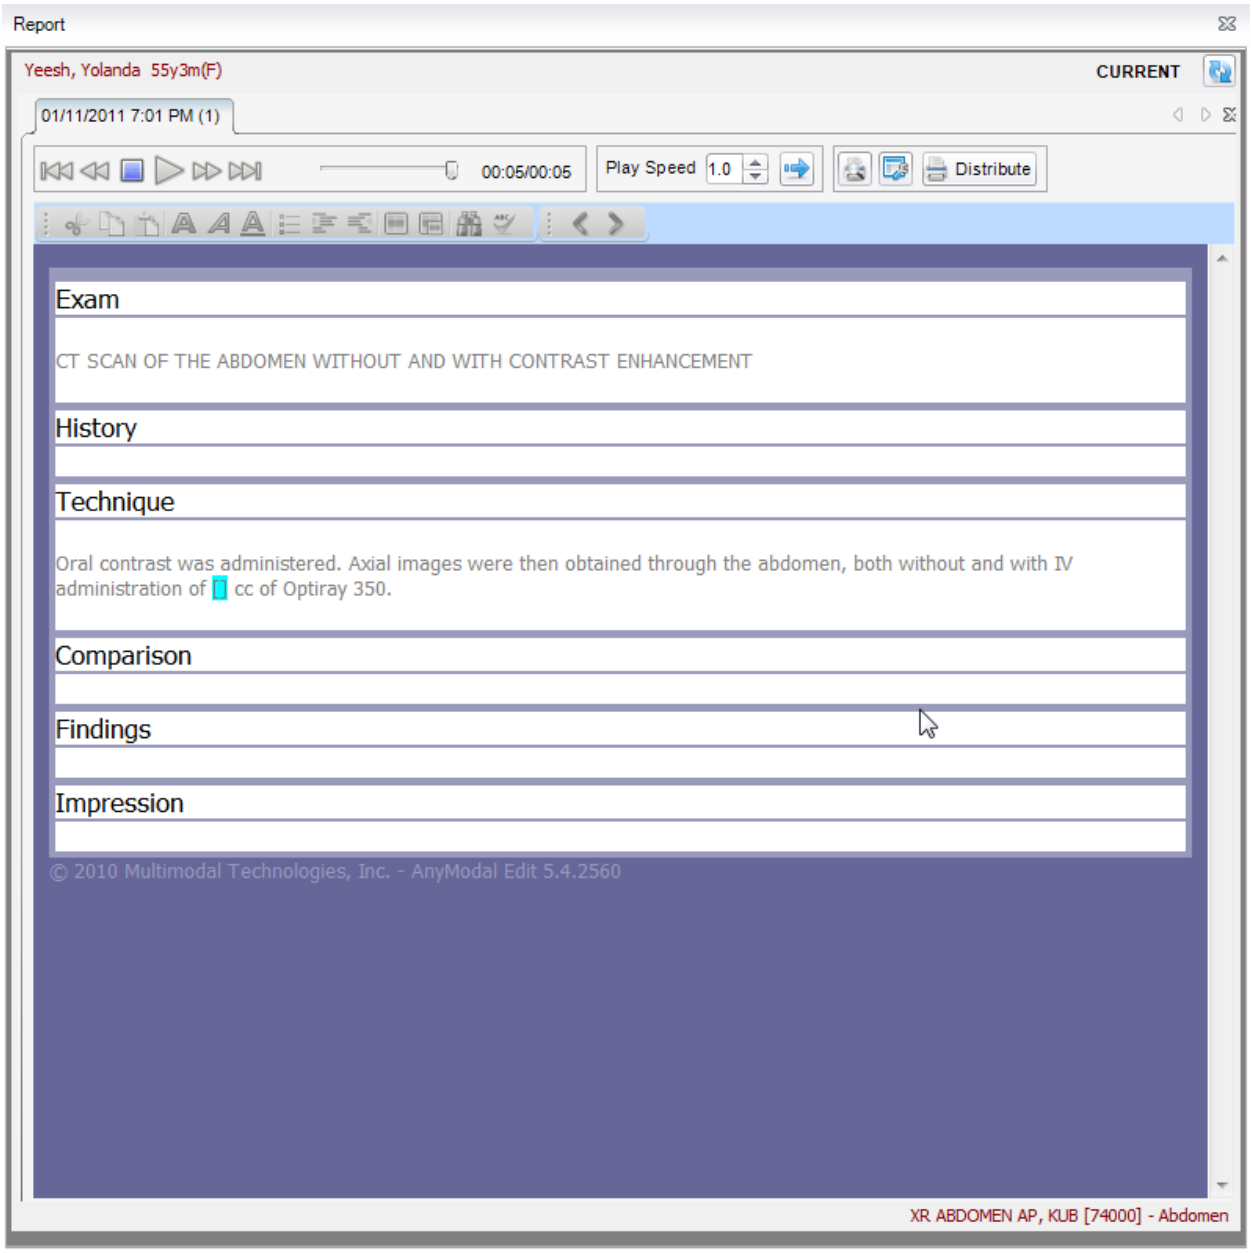

**Figure 3.10.1.4 – Report Nugget**

Interpretation – Open data nugget of the interpretation

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

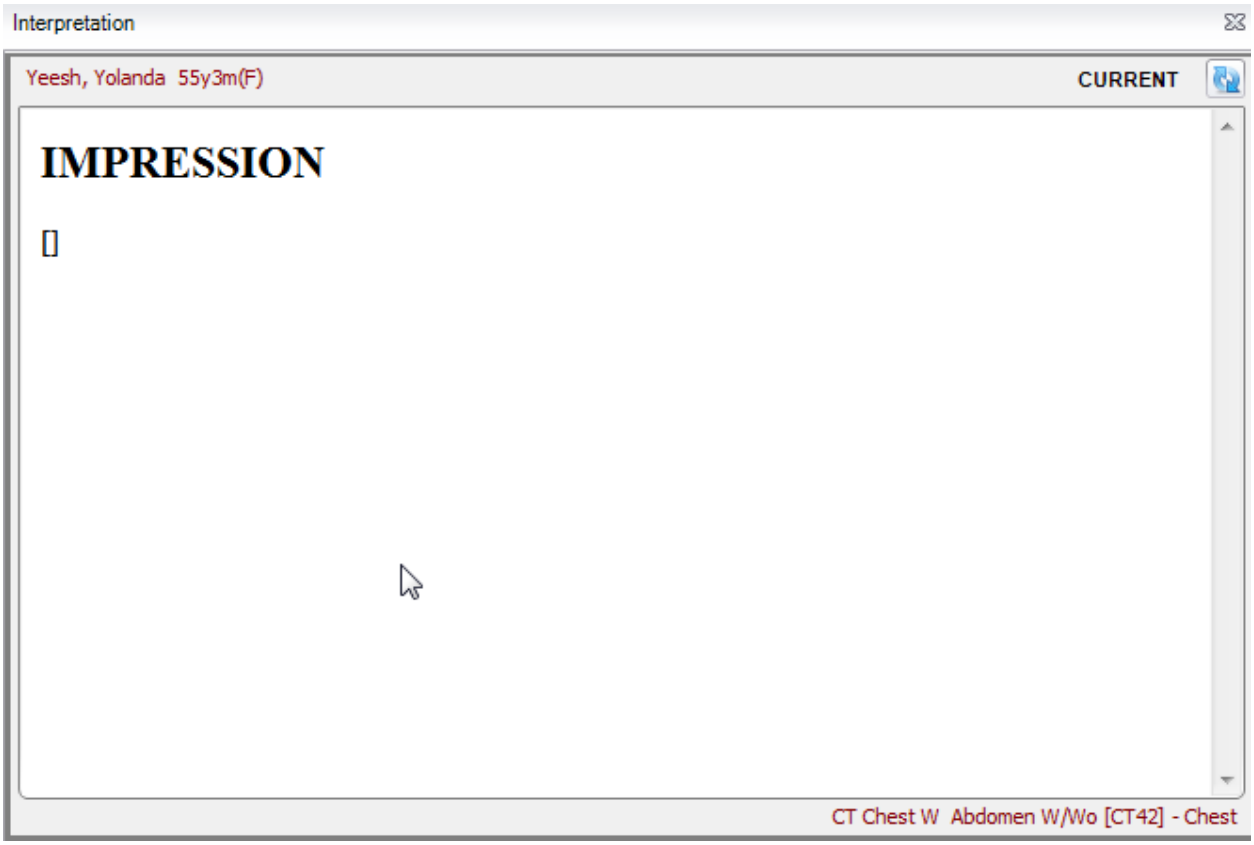

**Figure 3.10.1.5 – Interpretation Nugget**

### 3.10.2 Audit History

The audit history is available from the context menu of the patient folder. It is also available from the context menus of the following work lists. Unknown Referring, IVT, No Show, Orders to Schedule, Cancelled Orders, Confirmation, Closed Rooms Reschedule, Reception, Technologist, Pending Dictating, Dictated by Date, Suspended, Pending Signature, Reports Drafted, and Pending Review.

The audit history gives the user important information of the history of the patients procedure. Filters on Patients Order, and Study can be applied. The user can also include system retrievals.

Selecting a row will present the details in the form below.

The audit history list can be sorted and filtered. The standard system wide context menu from the column header is available.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

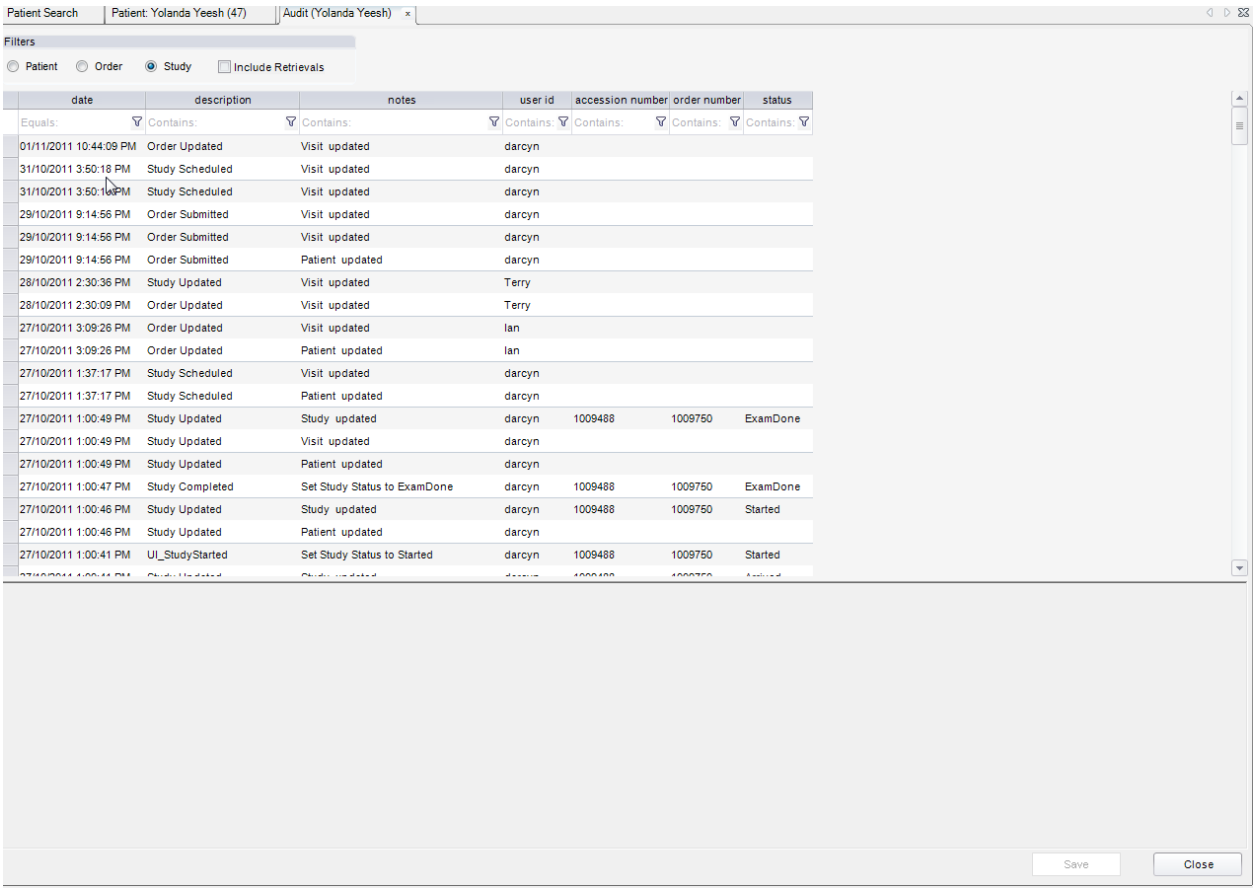

**Figure 3.10.2.1 – Audit History**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. Attachments

Attachments can be added to an order from different areas of the application. From New Appointment, Schedule Order and Registration data windows there is a paperclip Icon Located on the procedure picker row.

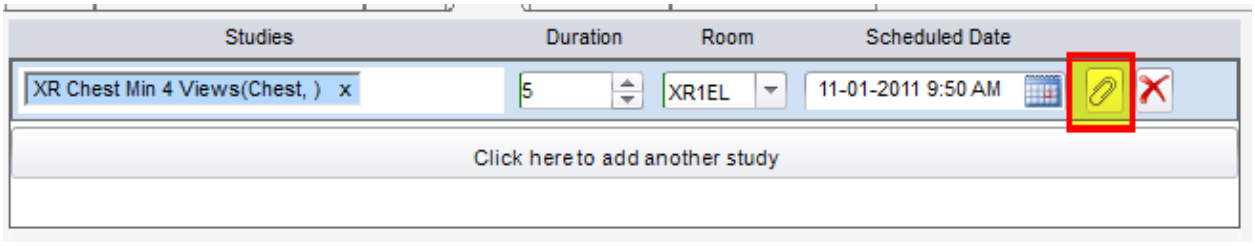

**Figure 4.1 – Displaying the location to access the attachment viewer work list**

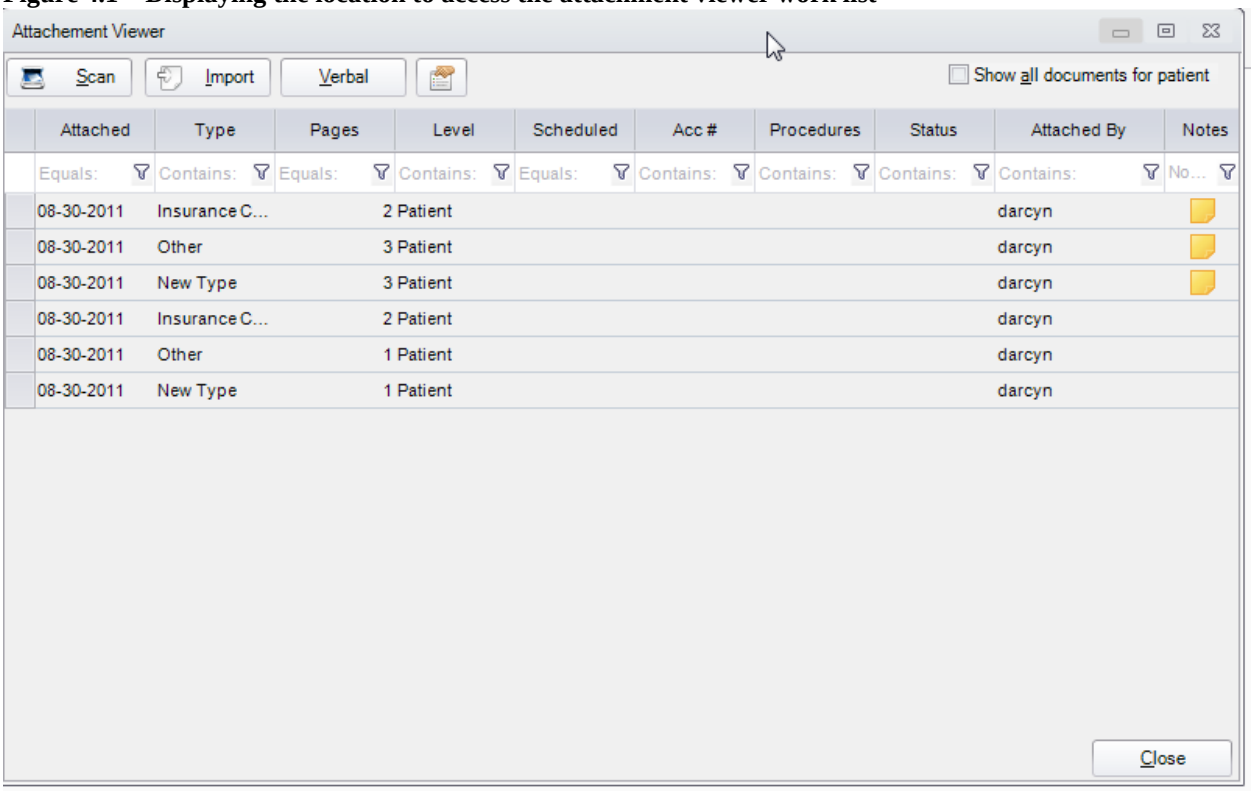

**Figure 4.2 – Attachment Viewer window**

The user can select the Scan button to scan and attach a new document or script. The Import button allows the user attach a pre-existing file saved on the local system or shard drive. The

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Verbal button allows the user to create verbal or amended order document. The last Icon is to access the advanced properties for scanning.

When the scan or attachment is complete, the Attached Document window will automatically open. Also double clicking on a row in the attachment viewer will also open this window.

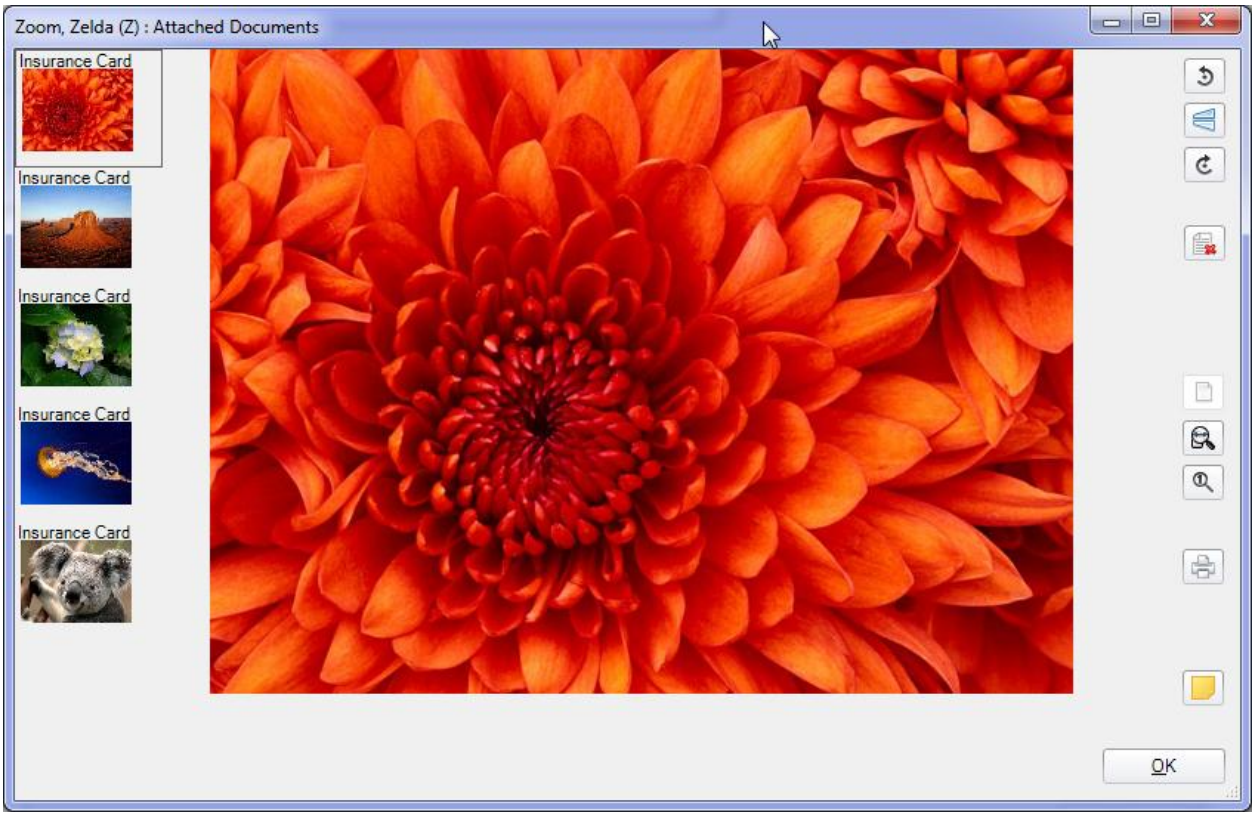

**Figure 4.3 – Attachment Documents window**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 4.1 Change Document Type

In the example above the document type is insurance card. The user has the ability to assign or change the document type after the document has been scanned. Additionally the user has the option to change the type of the document selected and also the documents that follow the currently selected document.

In the view attachment window, thumbnails are displayed on the left side. A right click on a thumbnail will open the list displayed in Figure 4.4. The first menu item "Classify Remaining as" expands the menu to show the available document types. The user can change the currently selected document as well as the all of the documents that follow the document in thumbnail view below it.
The document types available from this context menu are only those of the same document type of the scanned or imported image. For example, if the document scanned has a document type that is at the Patient Level, the context menu will only show active document types at Patient Level.
The order of the thumbnails can be changed by dragging and dropping.

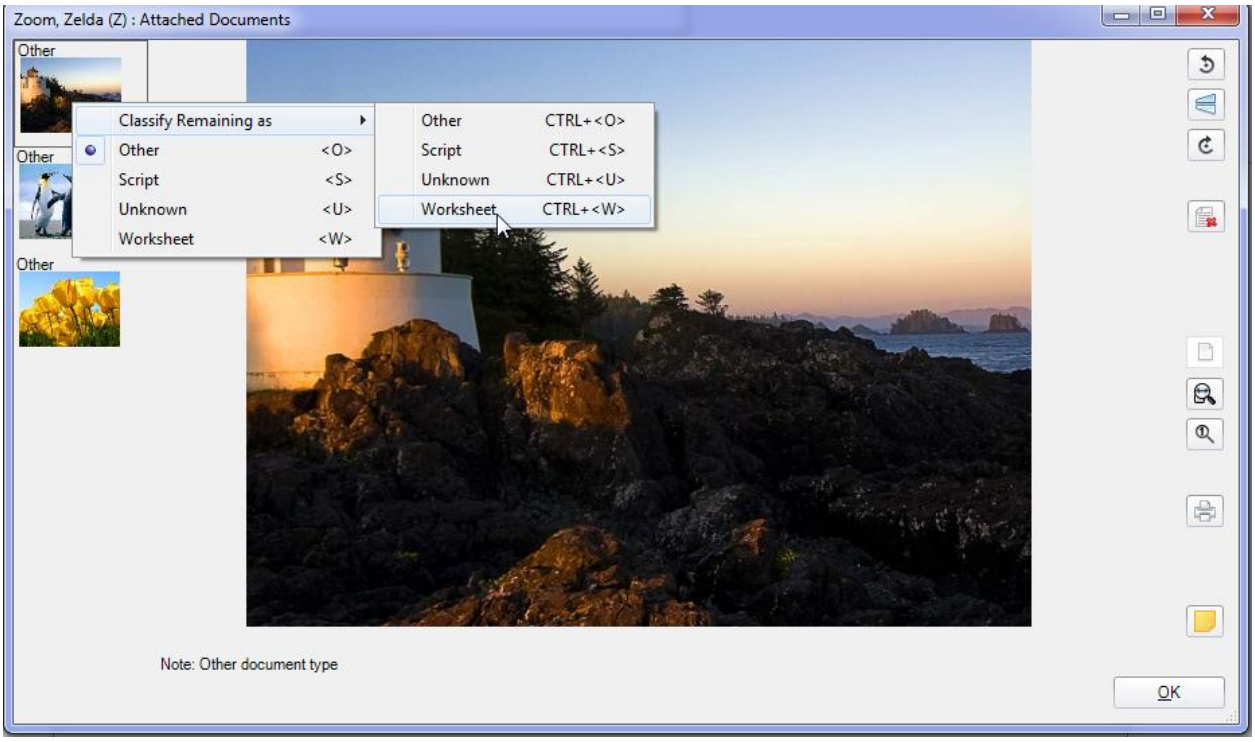

**Figure 4.4 – Attached Documents window showing context menu.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Changing the document type as shown in Figure 4.4 a new record is created and a new row will display in the Attachment Viewer. The original attachment "other" has 3 pages. One of those pages is changed to Type "worksheet", creating a new row for "worksheet" document with 1 page and "other" has the remaining.
Re-classifying an attachment back to its original classification, it will join the attachment document entry for any other of that type that were scanned or attached at the same time.

Also from Figure 4.4 you will notice that the document types may have shortcut keys assigned. To change the document type for a single document, you only need to select the shortcut key itself. For example, to change the document type to Unclassified, highlight the thumbnail and select **U** on the keyboard. To change the document type for the currently selected thumbnail and the documents below it, you must also select <Ctrl> in addition to the shortcut key.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 4.2 Attach Document Notes

Looking at figure 4.2.1, you will notice a yellow “notebook” Icon in the lower right above the OK button. Selecting this Icon will open the Scan Document Notes window. Entering notes in the above window, selecting OK will save the note to the attachment and is displayed in the lower left when viewing the attachment. The note ICON will display in a new column titled “notes” on the Attachment Viewer work list (see figure 4.2). The scan document notes can be edited from the work list via a right click menu from the notes ICON.

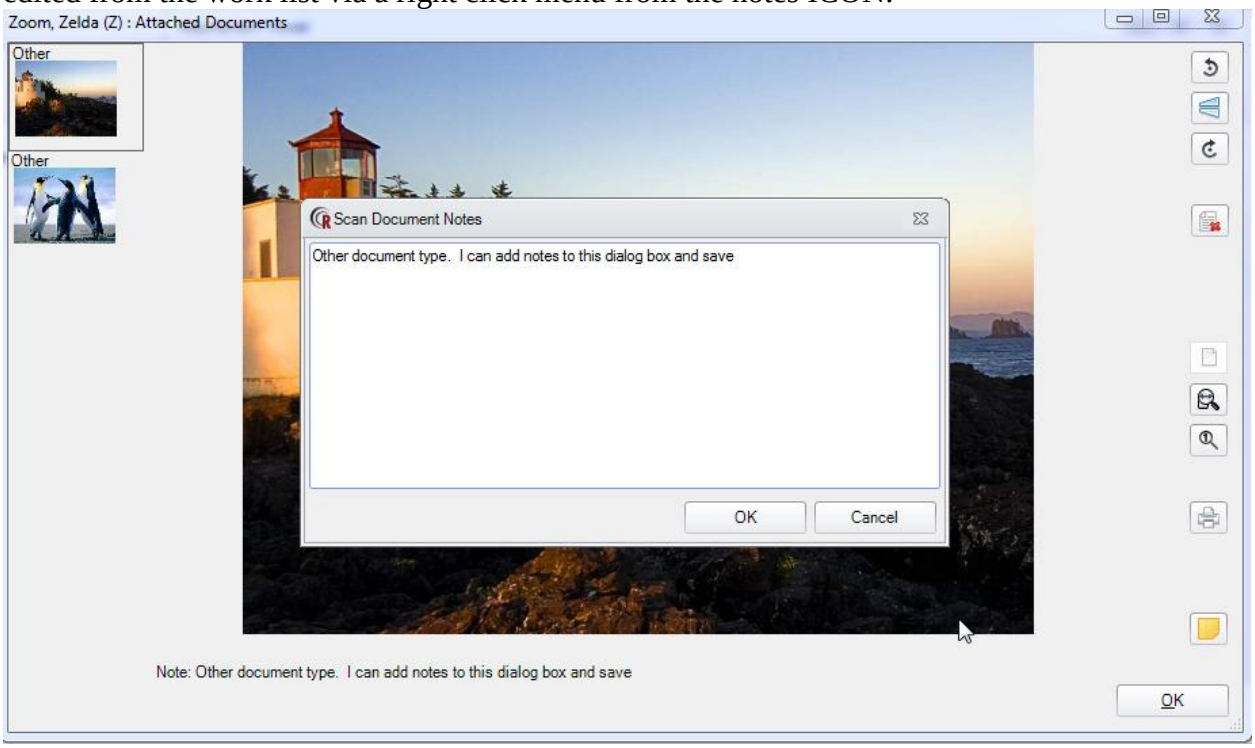

**Figure 4.2.1 – Adding document notes.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 4.3 Straighten Tool

When viewing the scanned image or attachment the user can right click on an image and choose **Straighten**, next they are asked to underline a word in the image. The user has option to apply or cancel changes. When they choose Apply, the image will be rotated making the line they drew strait. An undo option is also available from context menu or keyboard shortcut <Ctrl>+ Z.

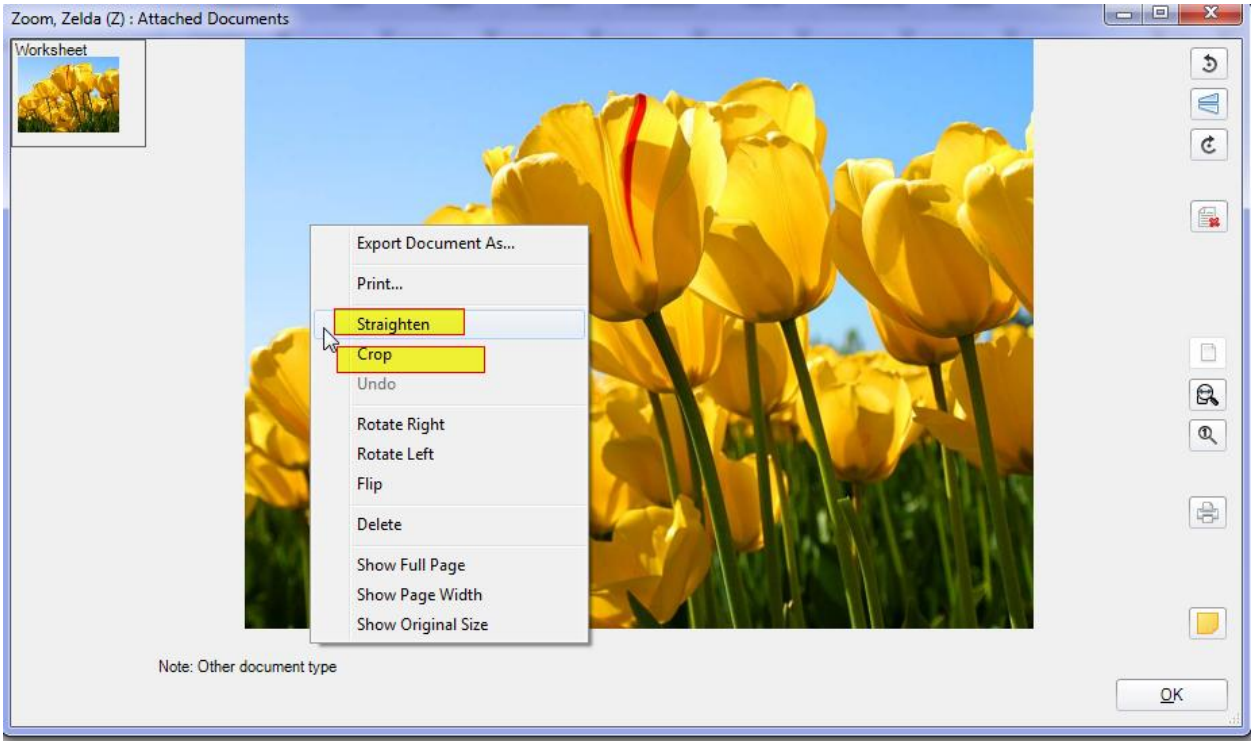

**Figure 4.3.1 – Context menu showing Straighten and Crop**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 4.4 Cropping Tool

Also from the context menu an image cropping feature has been added. The user selects the context menu option, click and drags the desired area, and select Apply or Cancel. The cropping can be reverted back by using the same Undo options for Straighten.

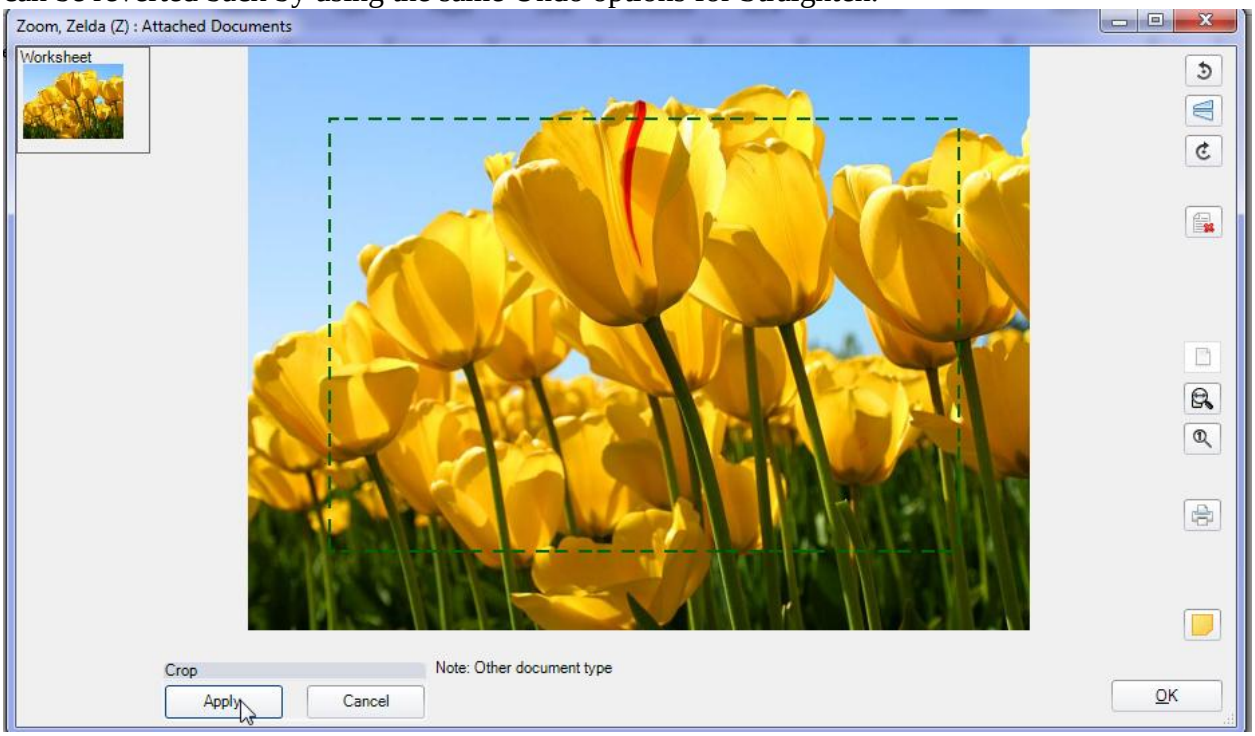

**Figure 4.4.1 – Cropping attachment**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 4.5 Verbal Order

Patients may arrive at registration / walk-in without a written order from a referring physician, or perhaps the tech needs to change it. Since all downstream users may want or need to see the verbal order, it has been created as an attached document.

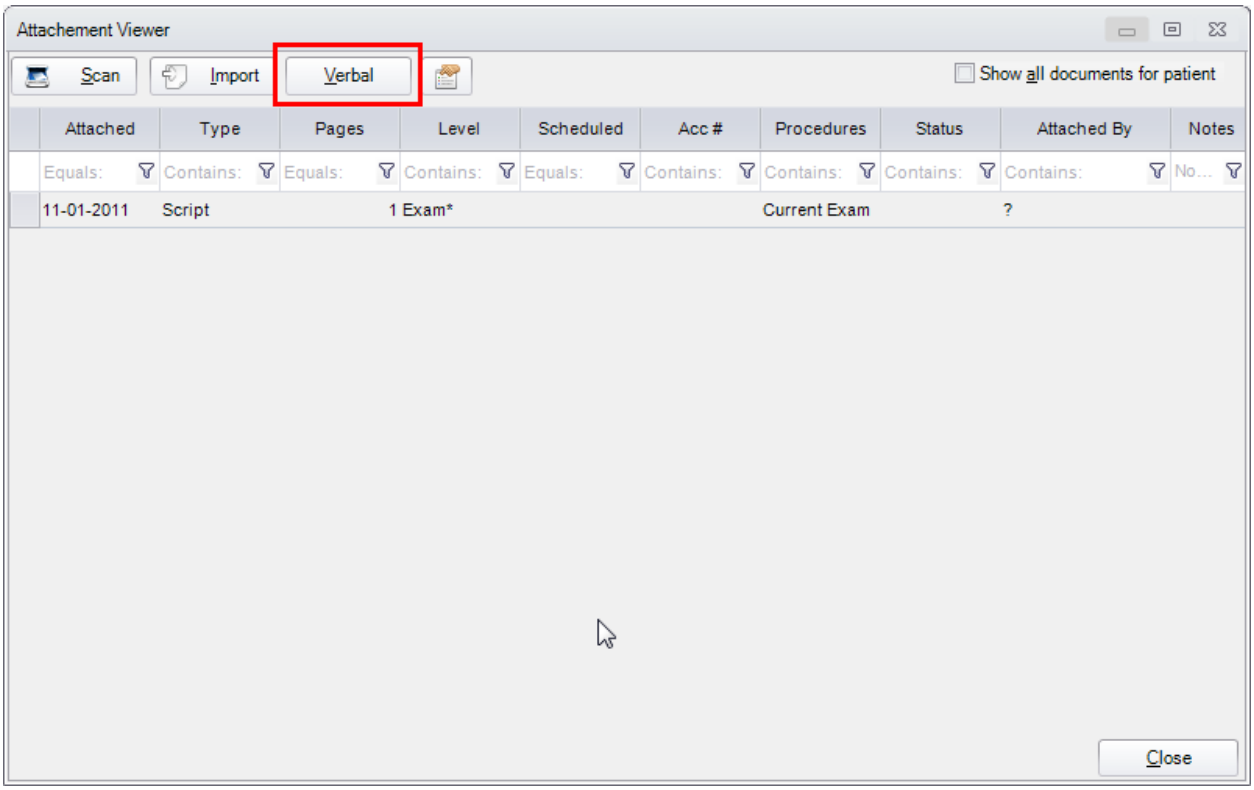

**Figure 4.5.1 – Access to Verbal Order window**

A Verbal Order is created by selecting the Verbal Order button from the attachment viewer. Selecting the Verbal Order button will open the Verbal Order window. Before the Verbal Order window opens, it checks for the patients data. If there is insufficient information a pop up window informs the user of the missing information.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

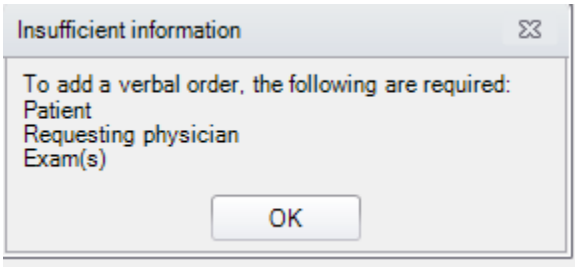

**Figure 4.5.2 – Insufficient Information for Verbal Order Dialog**

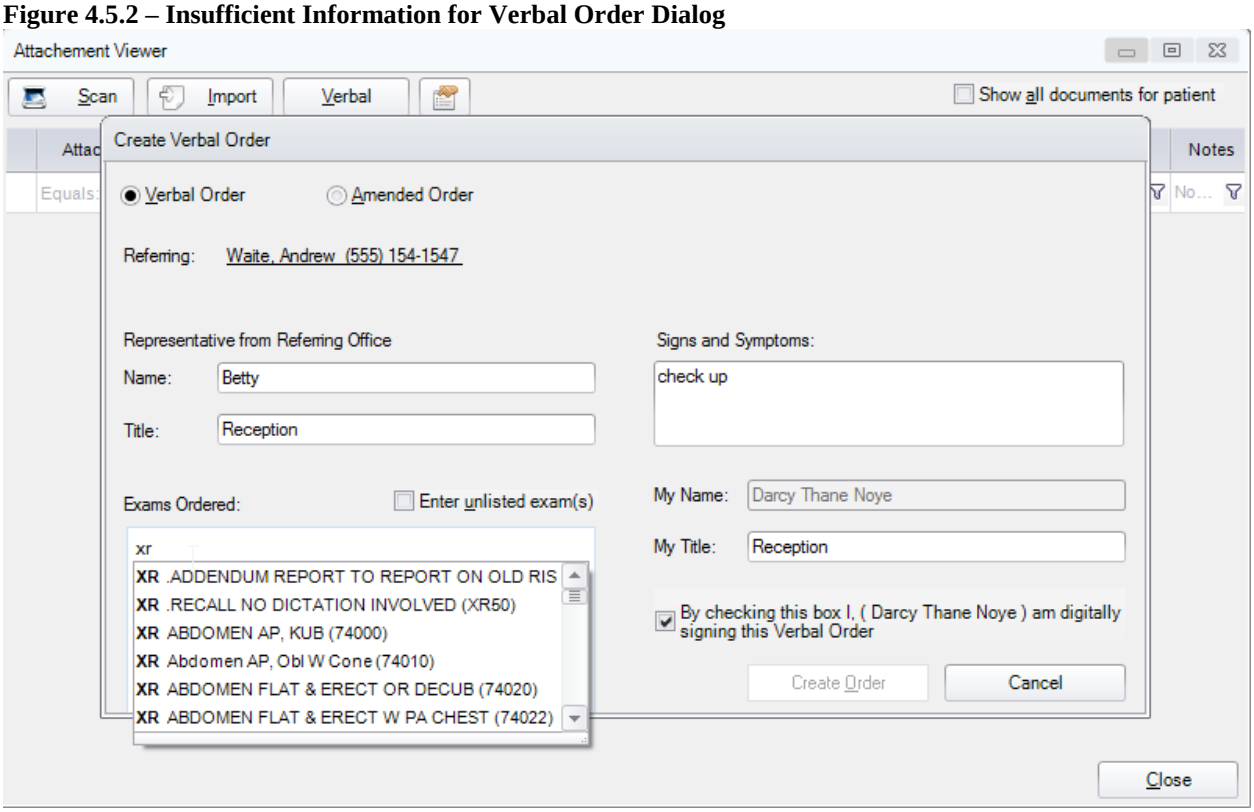

**Figure 4.5.3 Creating Verbal Order**

Selecting the Create Order button will render the data and save it as an attachment. The document is attached to the current order with a scan type of script. The regular attachment viewer will allow the order to be viewed.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

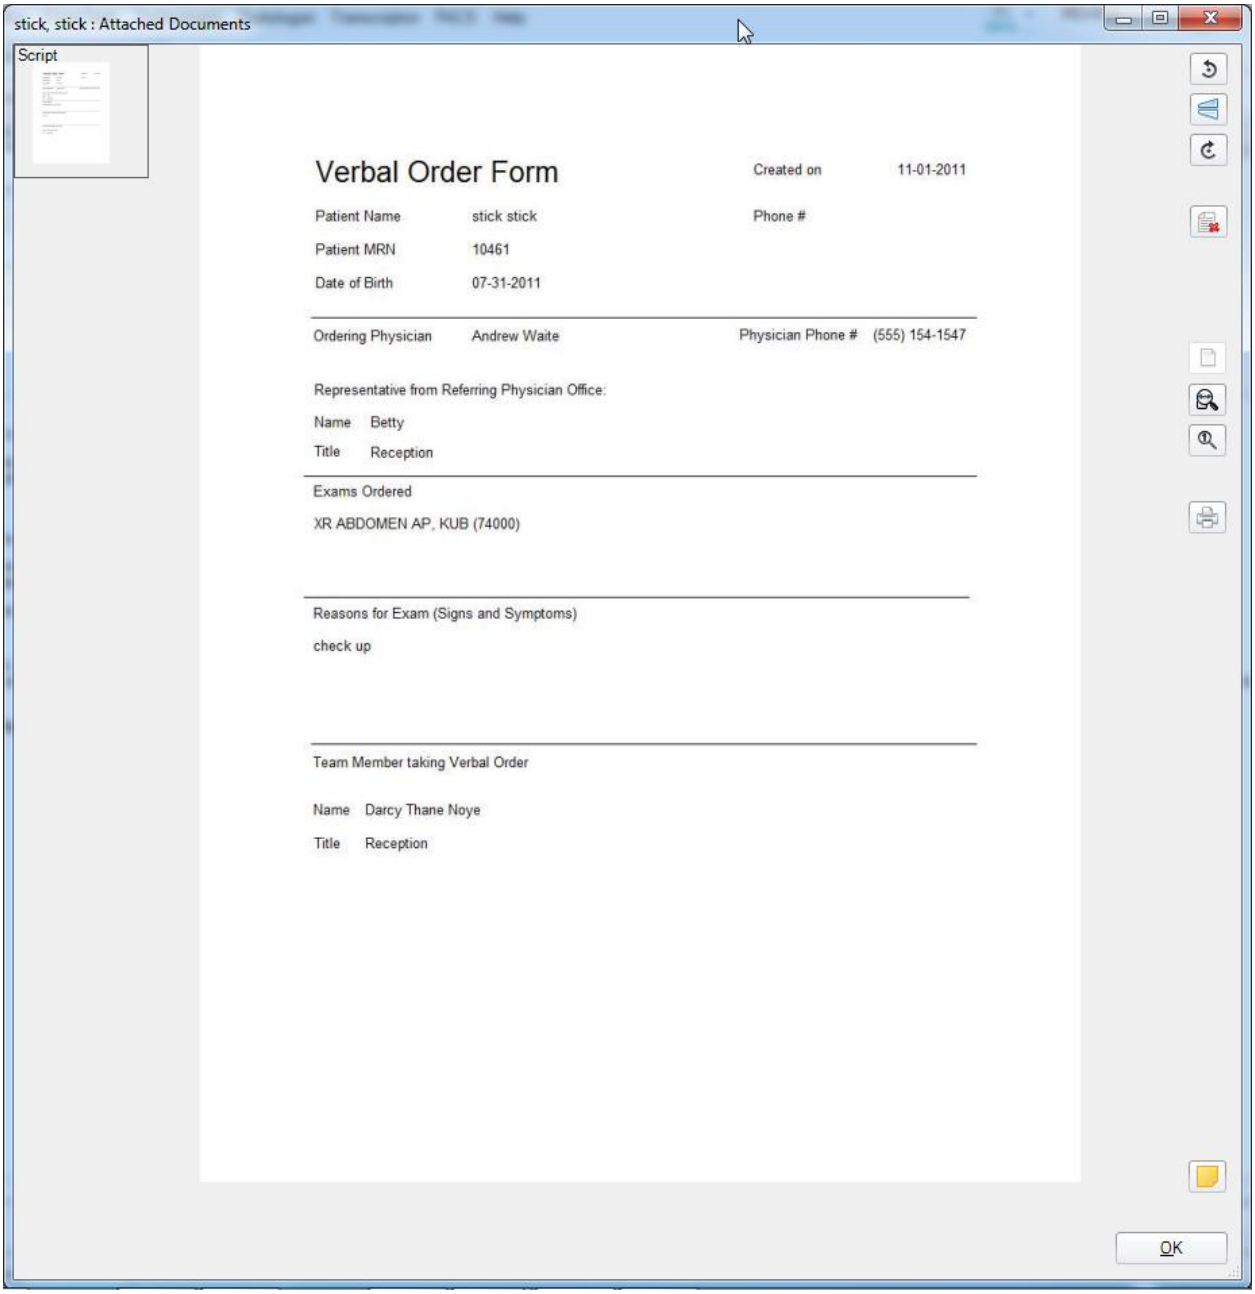

**Figure 4.5.2 – Verbal Order saved as attachment**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 4.6 Amended Order

Utilizing the Verbal Order feature, Amended Order will also have a fill-in form type of feature that is stored as a scanned document. A radio button has been added to the verbal order screen to allow it to be switched to an amended order. Upon selecting the Amended Order radio button the label for "Signs and Symptoms" (see figure 4.5.3 above) changes to "Comments" (See figure 4.6.1 below). The rest of the workflow is the same as Verbal Order. Of course the rendered document is altered to say "Amended order" at the top, and it also has the comments field, and does not have a signs and symptoms page.

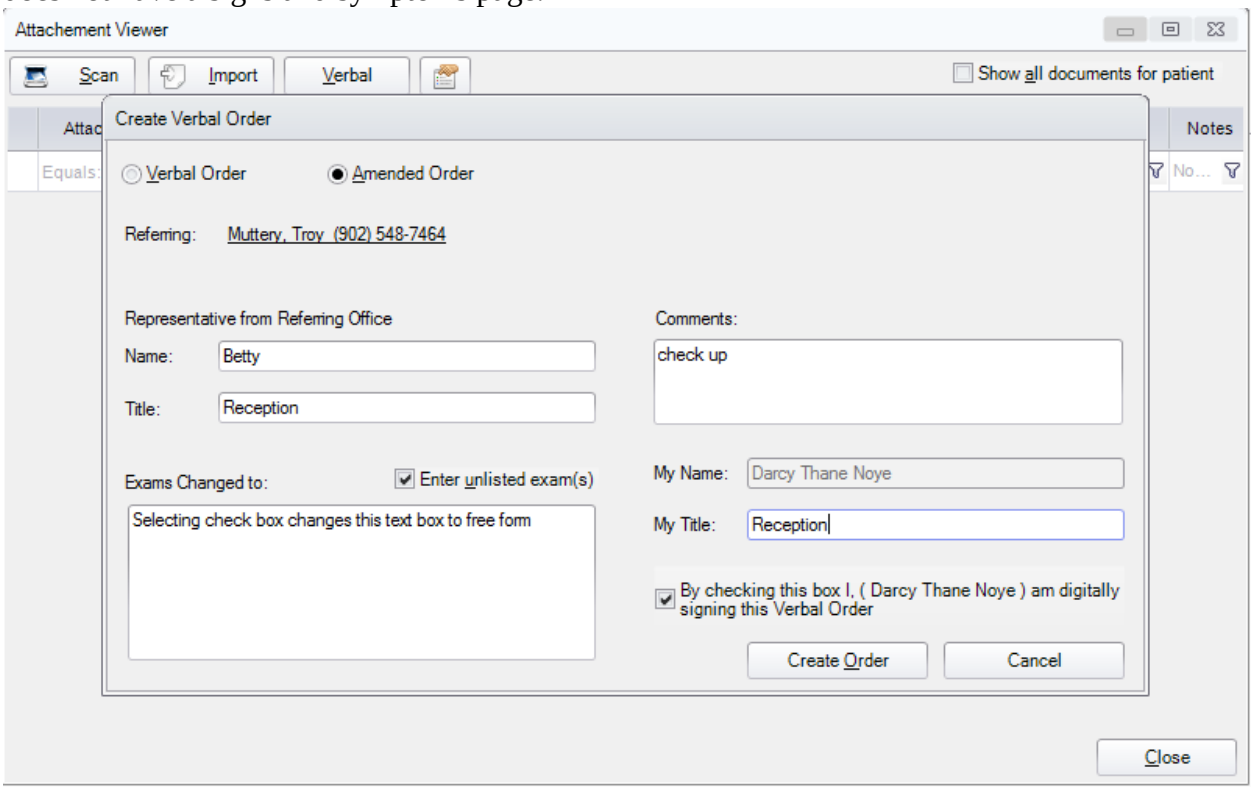

**Figure 4.6.1 – Creating Amended Order**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

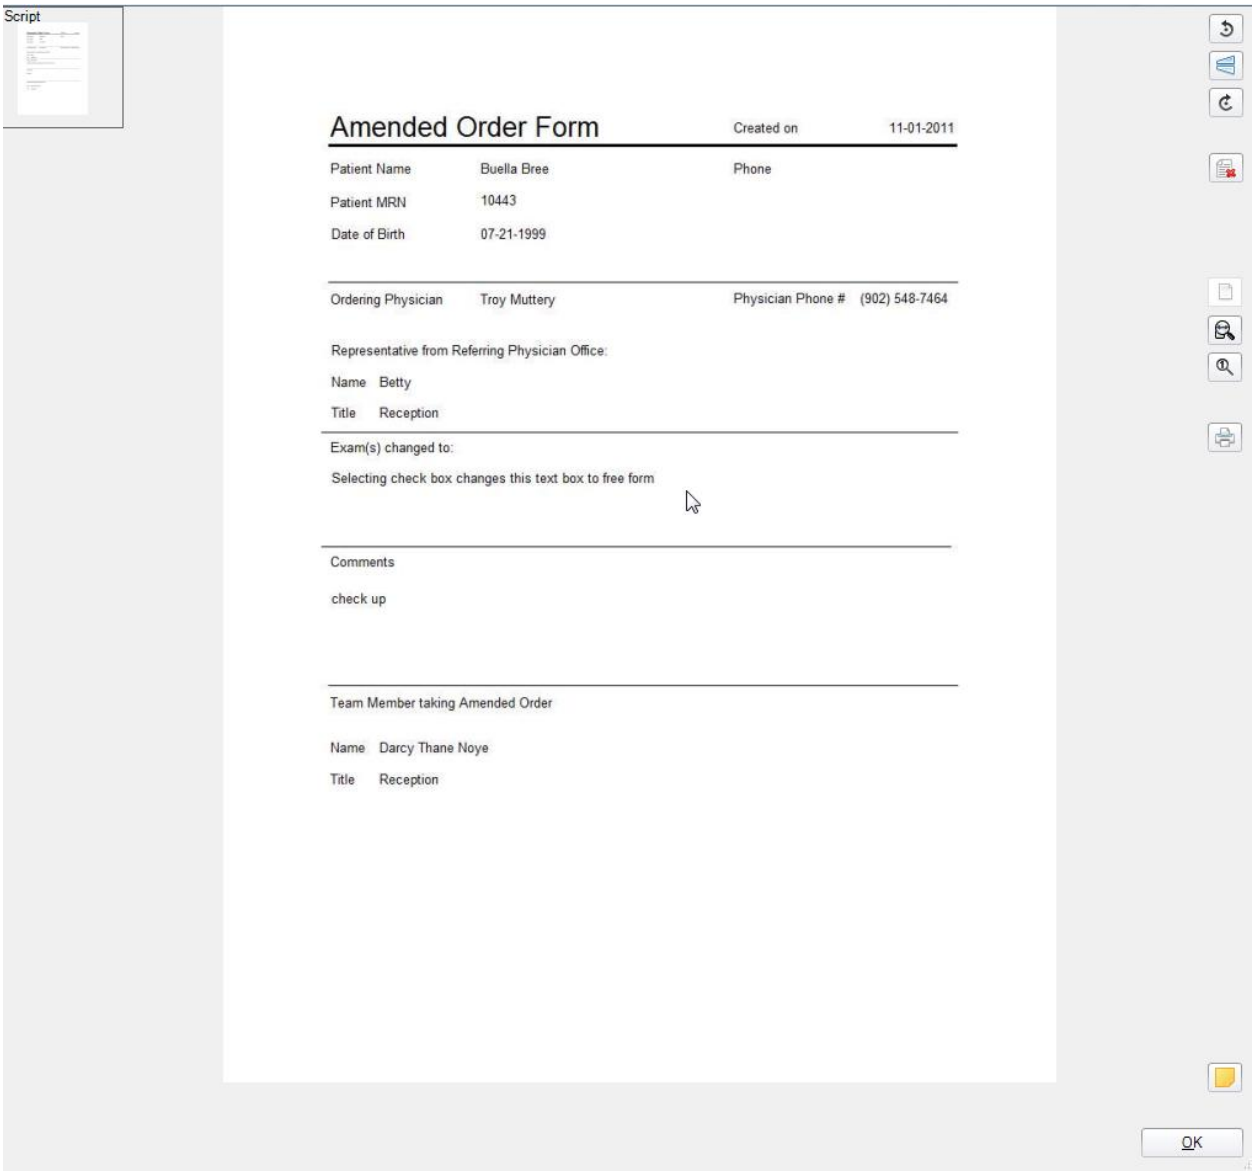

**Figure 4.6.2 – Amended Order saved as attachment**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Scheduling

The scheduling role consists of numerous work lists and data windows. The following is a summary of each.

## 5.1 New Appointment

The New Appointment data window is accessed under the Scheduling menu.

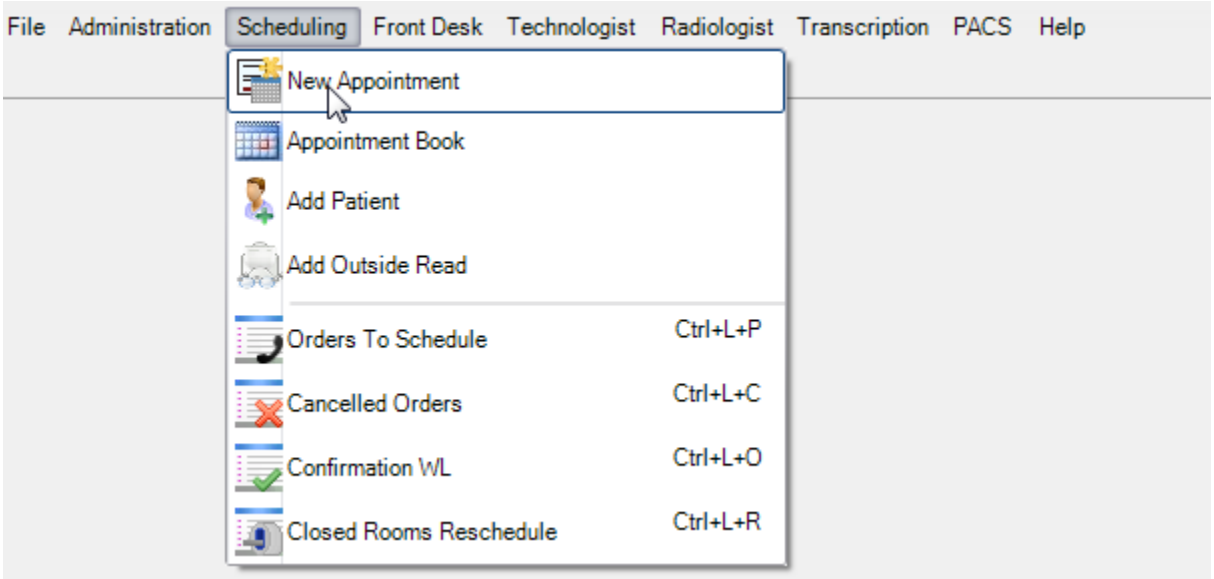

**Figure 5.1 – Accessing New Appointment**

The New Appointment data window is used to create new orders or scheduled appointments. Within the data window numerous pieces of information is captured about the patient, patient demographics, order details, procedure to be order/scheduled, scanned docs or attachments, image requests and also an overall review of the procedure details.

### 5.1.1 Patient Tab

New or pre-existing patients can be added. A search function can be used via the search Icon, or by entering patient details (first / last name or birth date) and with the focus in the last name field, hitting the enter key. Required fields on the tab are the patients first and last name, gender, and birth date. The patient MRN is a unique system generated ID.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

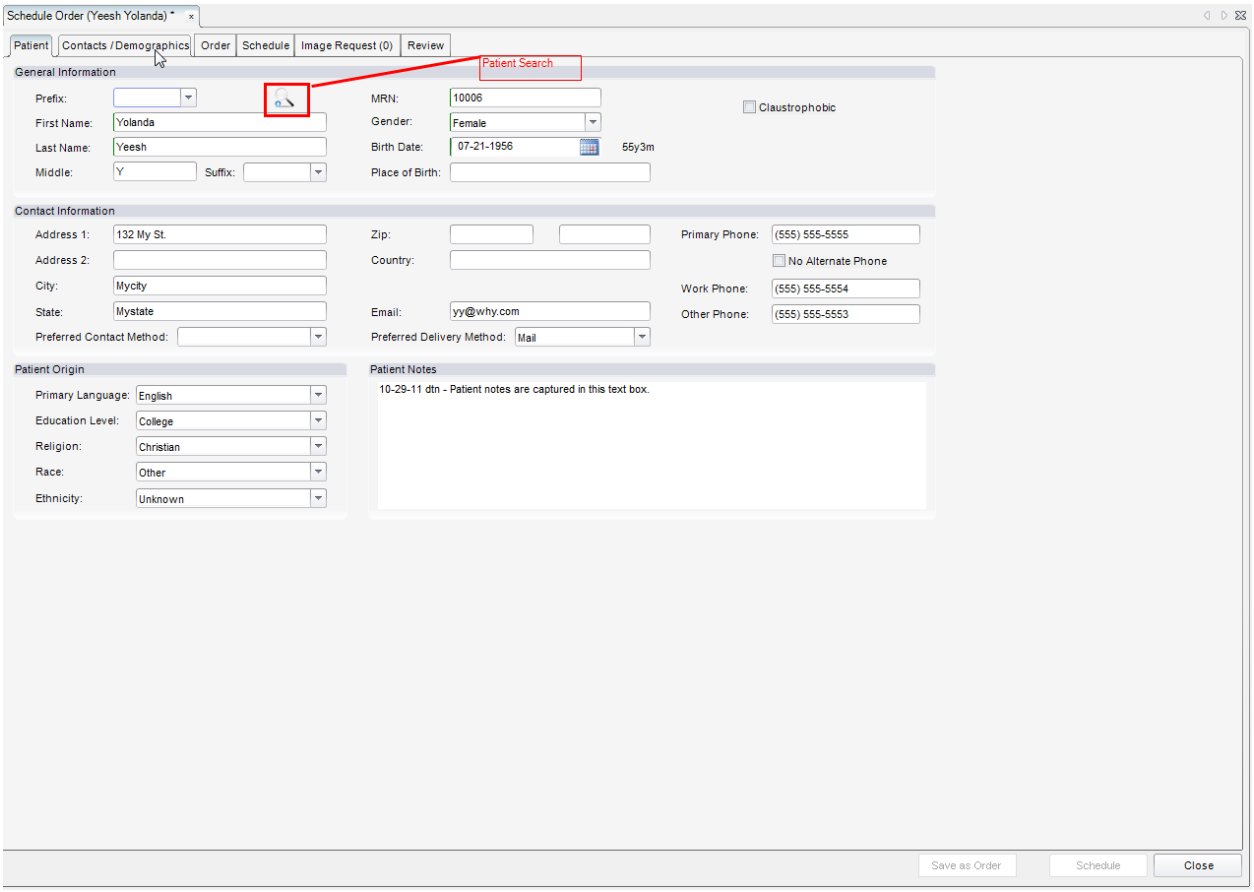

**Figure 5.1.1 – New Appointment – Patient tab**

## Patient Search

Selecting the patient search Icon spawns a new window. If data entered is the first name, last name or birth date fields, this data is passed to the patient search window and a list of patients matching the criteria entered will be displayed. The patient search window can be opened by selecting the Icon or entering a value and hitting the enter key while the focus is in the last name field. Select the check box "Search Other Variations" will complete a more extensive search. Patients name "starts with" Search first, then a "sounds like" search as well as search for birthdate variations ('12/01/1970', '01/12/1970')

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

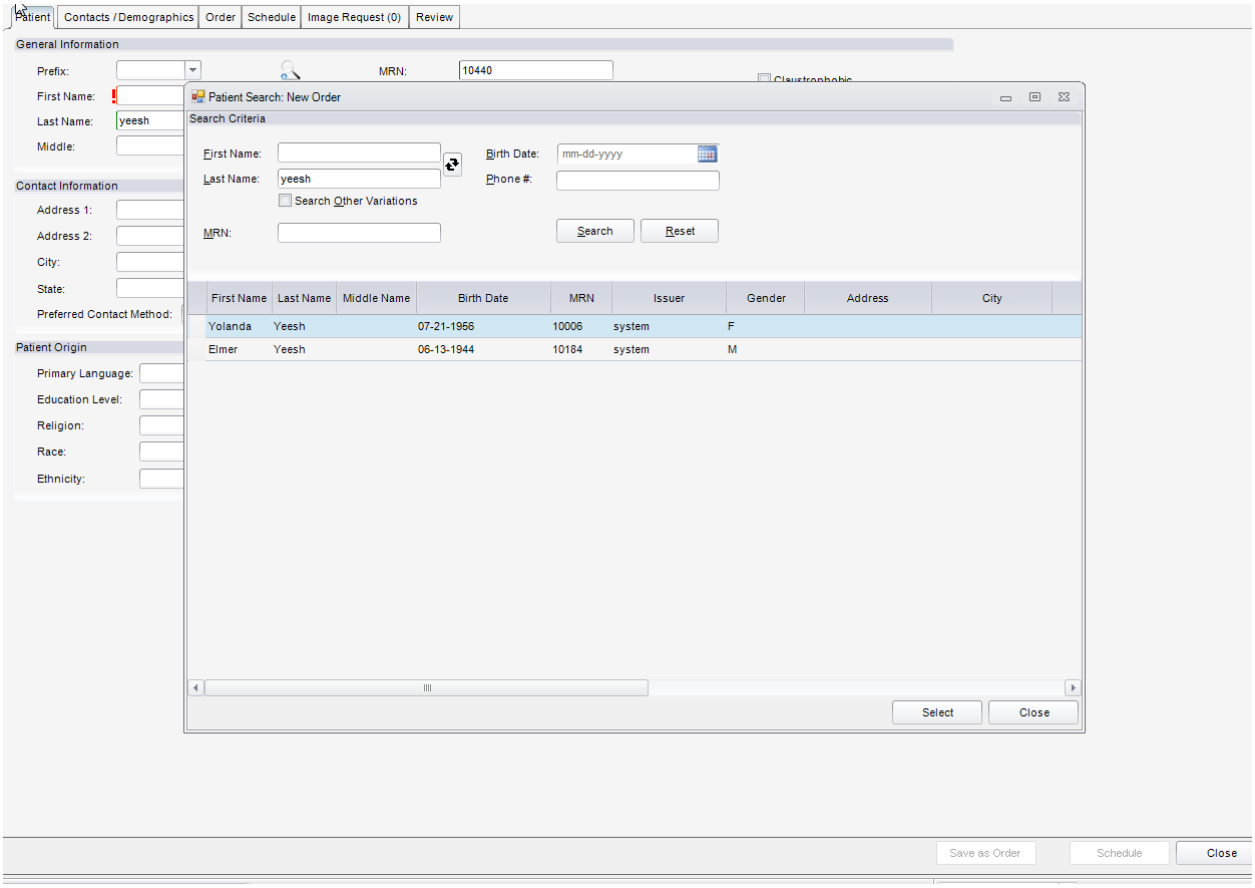

**Figure 5.1.2 – Patient Search**

### 5.1.2 Contacts/Demographics

This tab captures emergency contact information, patient demographics and people who are granted access for obtaining medical records on behalf of the patient. Starting with Responsible Party and Emergency Contact, the list box for relation contains a preconfigured list of possible relations for the responsible party. Selecting Self, will auto populate all the fields, provided the corresponding field on Patient Tab has the data completed. Spouse and child will complete all fields with the exception of First Name. The responsible part data is not required at this point, but will be required at the time of registration.

The next section on this tab called Demographics at Encounter captures patient's specifics such as height and weight. BMI is auto calculated based on the values entered for height and weight. The pregnant flag is active for female and unknown patients. Blood pressure, smoking status and if educational resources were requested / provided may also be captured.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

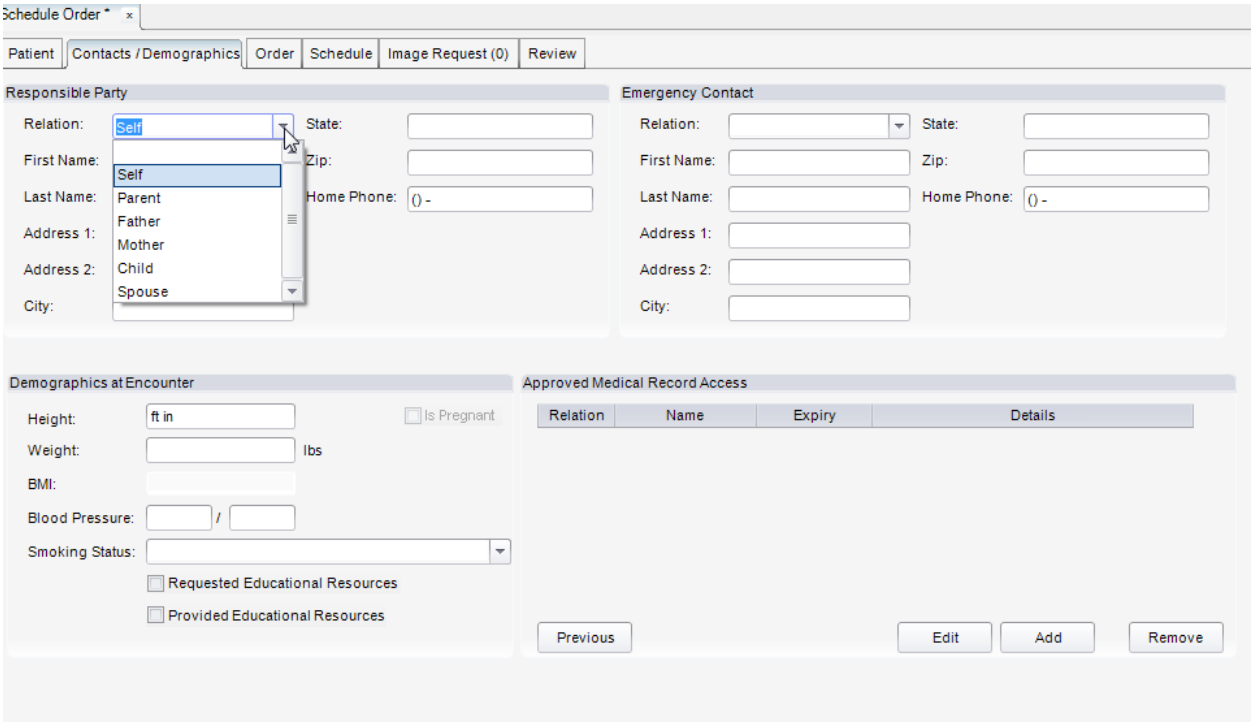

**Figure 5.1.2 - Contacts / Demographics tab**

Approved medical access is a visual confirmation for staff informing who has access to the patient's medical records. Those approved for a patient's medical access may be added, edited and removed from this list. The previous button will show those with expired access.
The relation to patient, first and last name, addresses / phone number, expiry date for access, and details are captured in this window. Again in the relation list box, selecting spouse or child will populate the last name and address / phone number fields. If the expiry date field is left blank, this person will remain on this approved list indefinitely.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

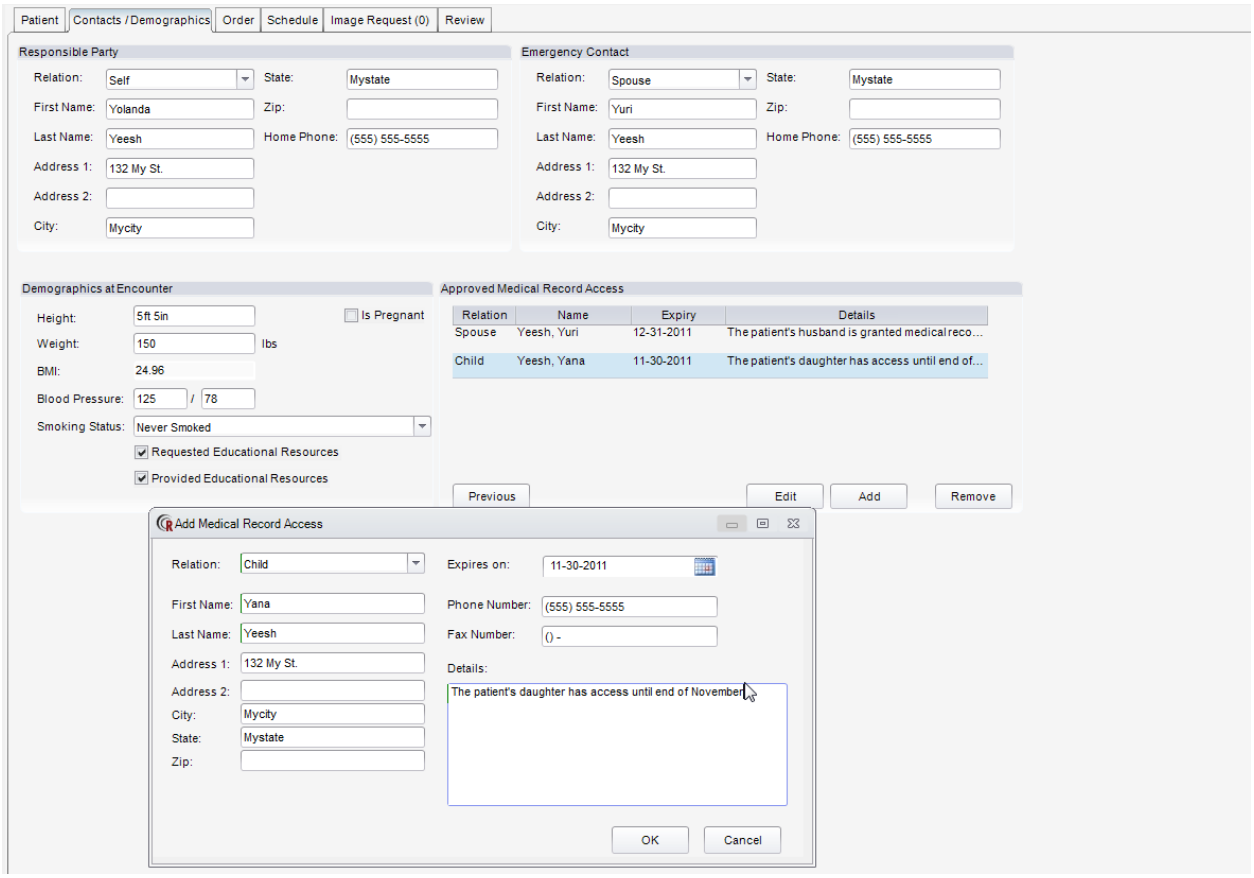

**Figure 5.1.3 – Add Medical Record Access**

### 5.1.3 Order Tab

The order tab captures Referring Details, Chief Complaint, Preferred Location, Order Flags, Insurance Policy Details, and Order Notes. The referring field keeps of history of all referrers captured in previous orders for this patient and will be available for selection from the down arrow on the referrer's field. If the referrer has one address associated, it will auto populate in the Visited At: field. If multiple addresses exist for the referrer selected, the user must select one of the possible values for that referrer. If the referrer of the Order has not been associated with this patient before, the user may search for the referrer.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

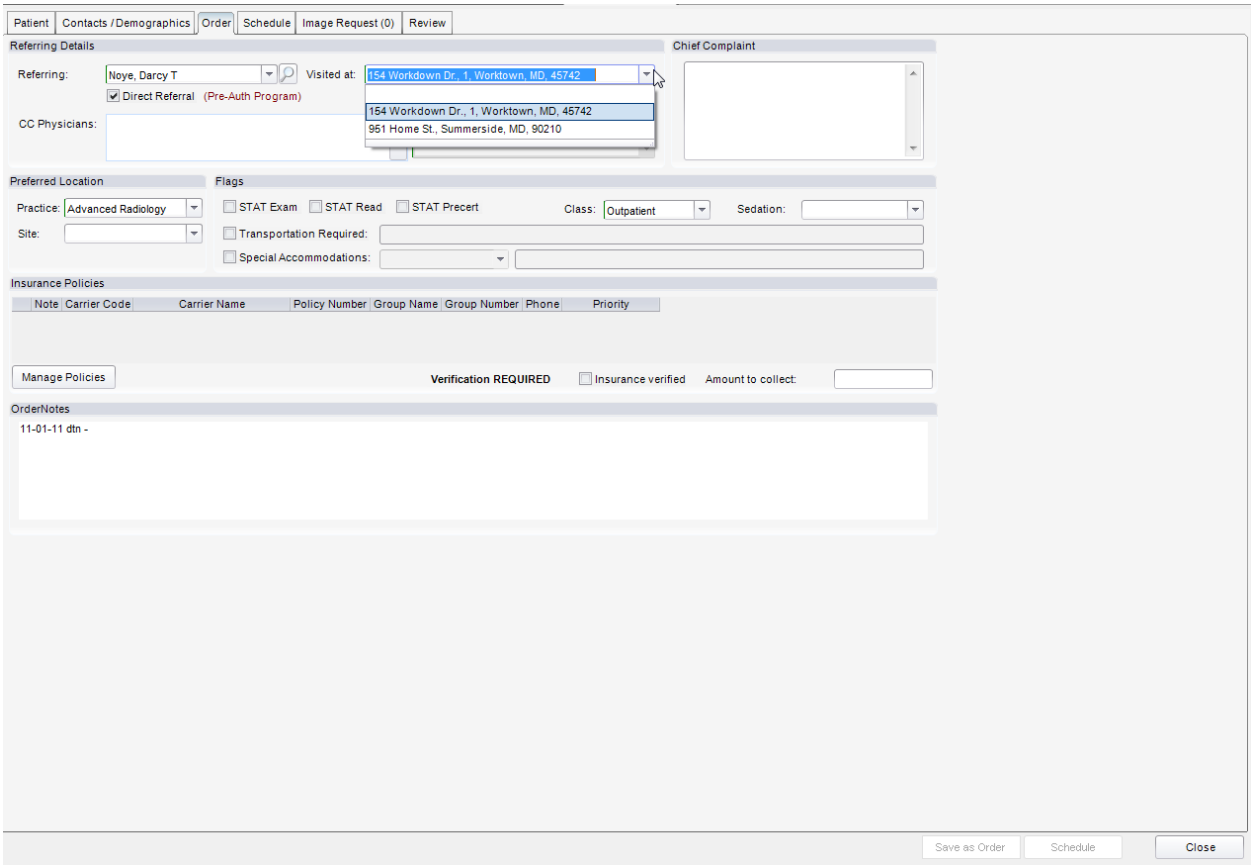

**Figure 5.1.3.1 – Order Tab**

The referring search window can be opened via the search Icon located to the right of the Referring field, or the name may be entered in the Referring text field and tabbing out will also open the Referring search window. If no match is found for the referrer a new "Unknown Referring Physician" can be created. Unknown referrers created are added to the Unknown Referring Work List, which is discussed later in this document. The CC Physicians and visit details work the same as the Referring Details and Visit.

You will notice below the Referring list box a check box for Direct Referral as well as (Pre-Auth Program). When a Referring Physician has this flag, the box is added to the New Appointment / Schedule Order data windows when this referrer is selected.

Similar to the Direct Referral Program flag, the Pre-Auth Program is a new flag added to Personnel that becomes active when the resource type Referring Physician flag is checked. If the ordering referring physician selected has the Pre-Auth Program flag, it will display directly under the Referring box on the order tab. The Referrer may or may not have the Direct Referral flag.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

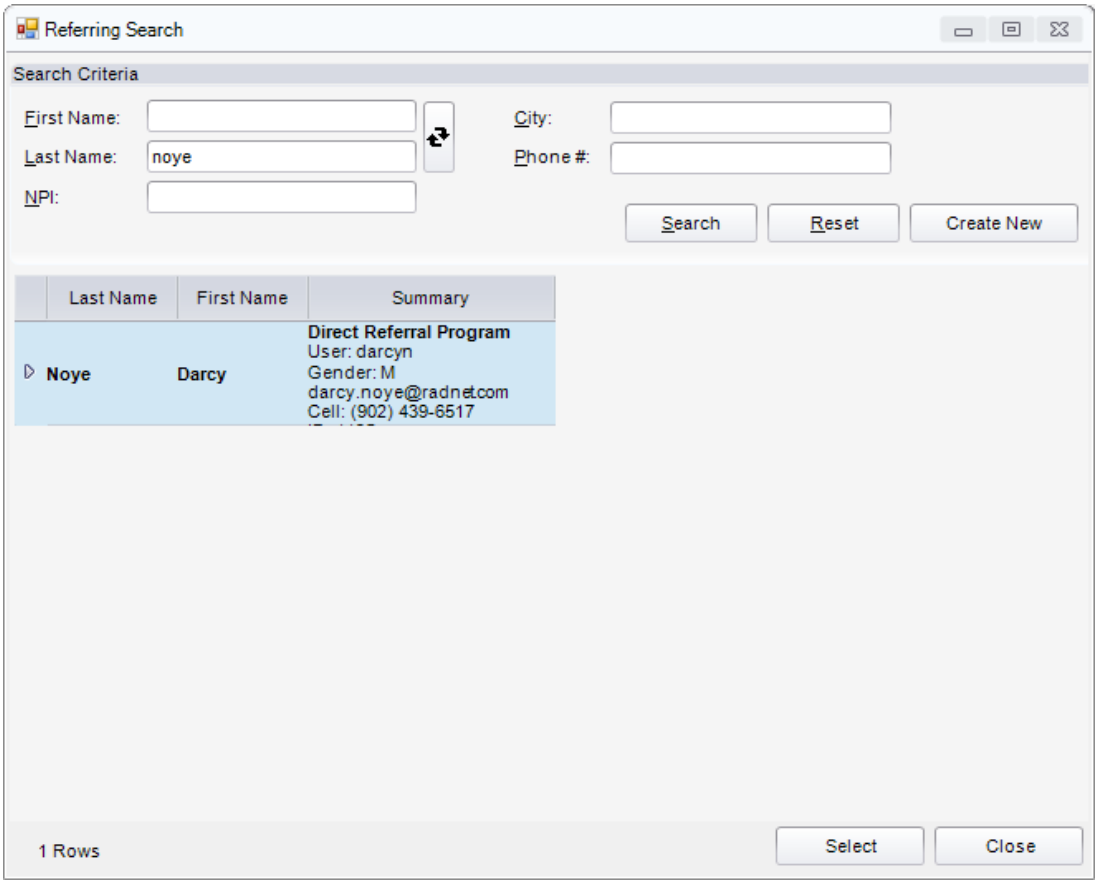

**Figure 5.1.3.2 – Referring Search accessed from Order tab of New Appointment window**

Next to the Referring Details is Chief Complaint. This is a free form text box.

Preferred location captures the Practice and Site requested.

Patient order flags that may be captured are STAT Exam, STAT Read, STAT Precert, Class of patient, Sedation type, Transportation Required and Special Accommodations. STAT Exam, Read and Precert are flags that will appear as an Icon in the flag columns of work lists.

Depending on the work list being viewed, there may also be a column. For example, the Reception work list has columns for Exam Stat and Read Stat. Patient Class code will appear in the Patient Type column of work lists. Sedation code will appear in the Sedation column of the Technologist work list. When the Transportation Required check box is selected the associated text box will become enabled. This is free form text box. If this flag is selected the patients address and primary phone number will become required fields. Selecting the Special Accommodations check box enables the associated list box and free form text box. A flag will appear in the Flags column.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Insurance policies section will display the insurance policies selected for use with this order. Selecting the Manage Policies button will open the window in Figure below

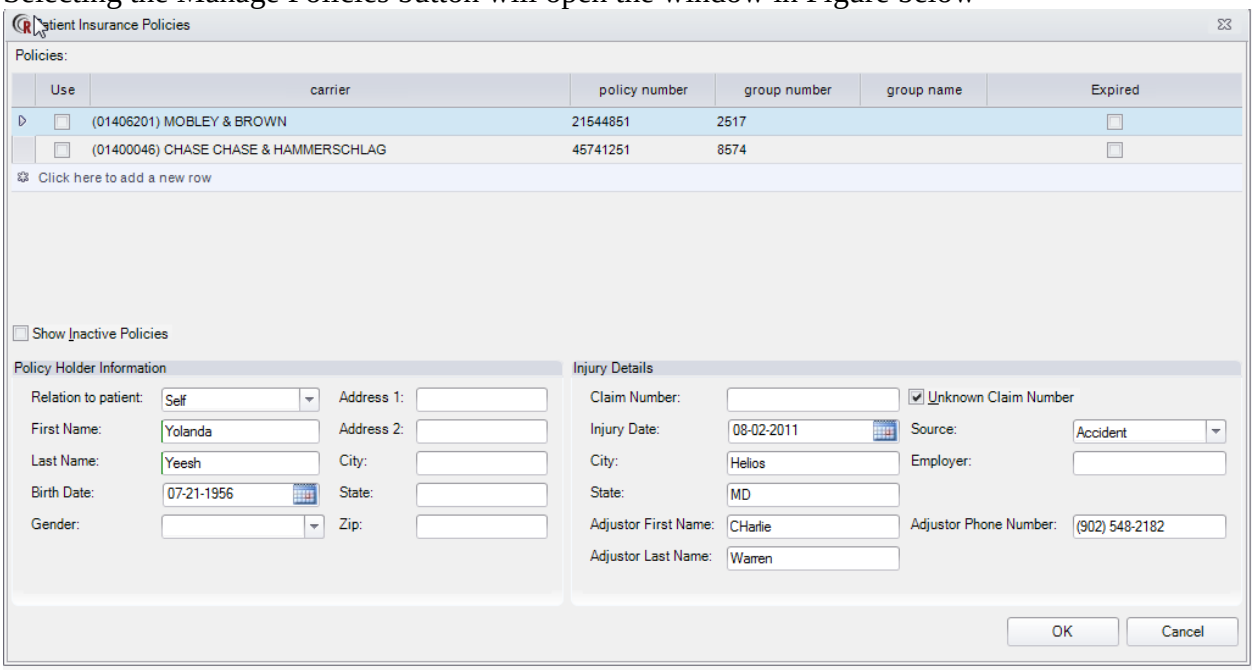

**Figure 5.1.3.3 – Patient Insurance Policies window**

Carriers can be entered manually or by using the search function. To enable the search Icon the user must first select a row under the Carrier column or entering a partial name and hitting the enter key will also open the search window. If the user knows the Carrier code or phone number, this also can be entered and upon hitting the Enter key, the Carrier name will populate the Carrier column. For each carrier selected for the patient a policy number must also be entered. The policy number mask may have a mandatory mask. In the event that the policy mask is wrong and the patient insurance policy does not fit the mask, the user can prefix the policy with a "+" character to bypass the policy mask. Any study with an insurance policy that begins with a "+" will be flagged as a billing exception and held until the "+" is removed.

For each carrier added the Policy Holder Information details are to be completed. The only required fields are the patients first and last name. As like other areas of the application the list box Relation to patient has values such as Self that will auto populate the remaining fields based on the data existing for the patient. Select spouse or child will complete all field with the exception of first name.

Some carriers will require that the Injury details are captured. If this is standard for the carrier, the Claim number is a must. If at the time the order is being placed the claim number is not known, the user may temporarily bypass it by selecting the Unknown Claim check box.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

The adjustors first and last name as well as phone number can also be captured in this section.

### 5.1.4 Schedule Tab

The schedule tab captures the order the procedure belongs to, the procedure to be completed , a daily calendar view which can be used to pick the time for the exam and Icon to open the attachment viewer. The information added can be saved as an order or as a scheduled exam. Depending on the procedure selected, the Laterality may be required. If the time(s) selected are available the scheduled date will have a green outline. If the time slot(s) are locked by another user on the system, the outline of the scheduled date will be red. Once the exam is scheduled the time will no longer display in the search.

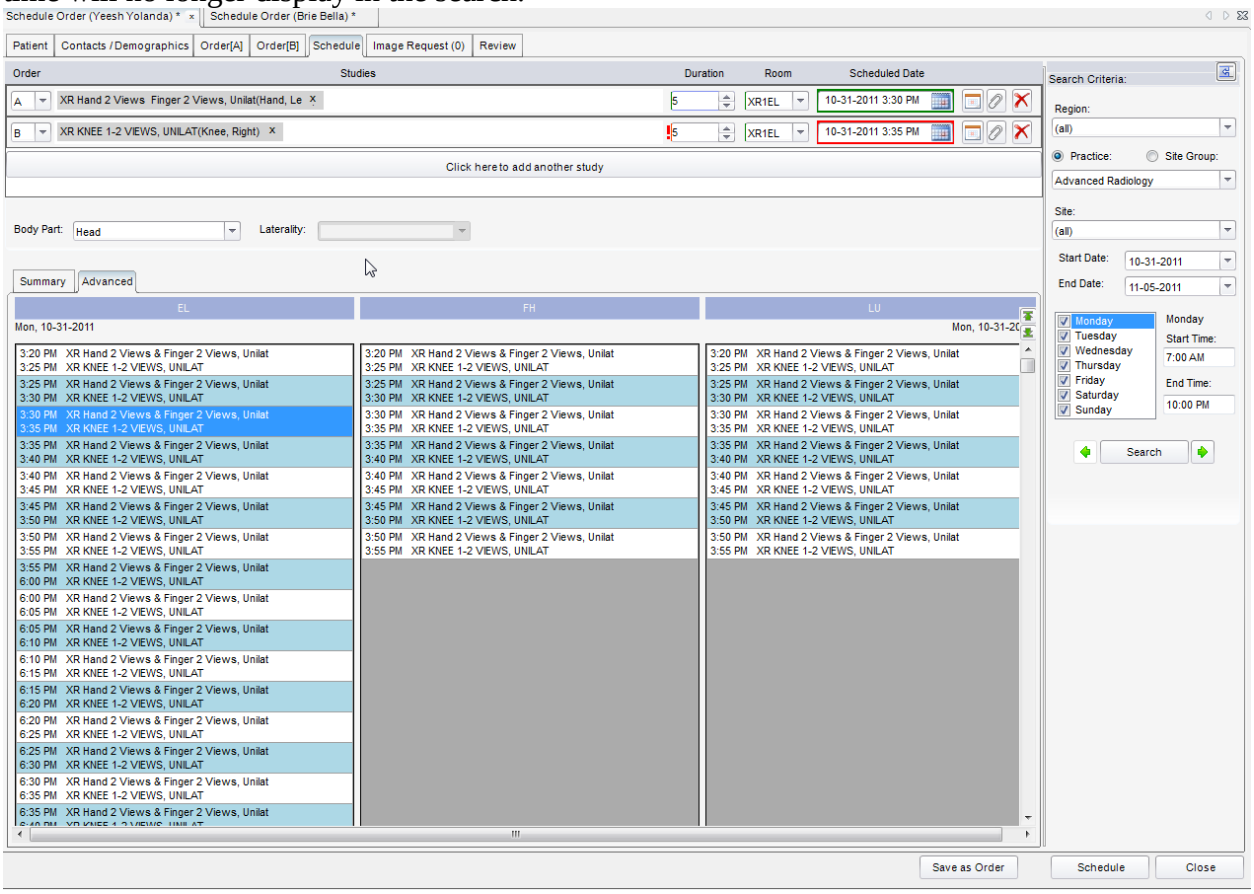

**Figure 5.1.4.1 – Schedule tab**

The user has the option to select the calendar view (calendar Icon next the scheduled date on procedure picker row) and select the date and time the exam is to be completed or they can use the advanced search criteria on the right of the data window. Selecting the search button will populate the rooms and time available on the advanced tab. The summary tab will give an overview of the times available based on morning, afternoon and evening.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

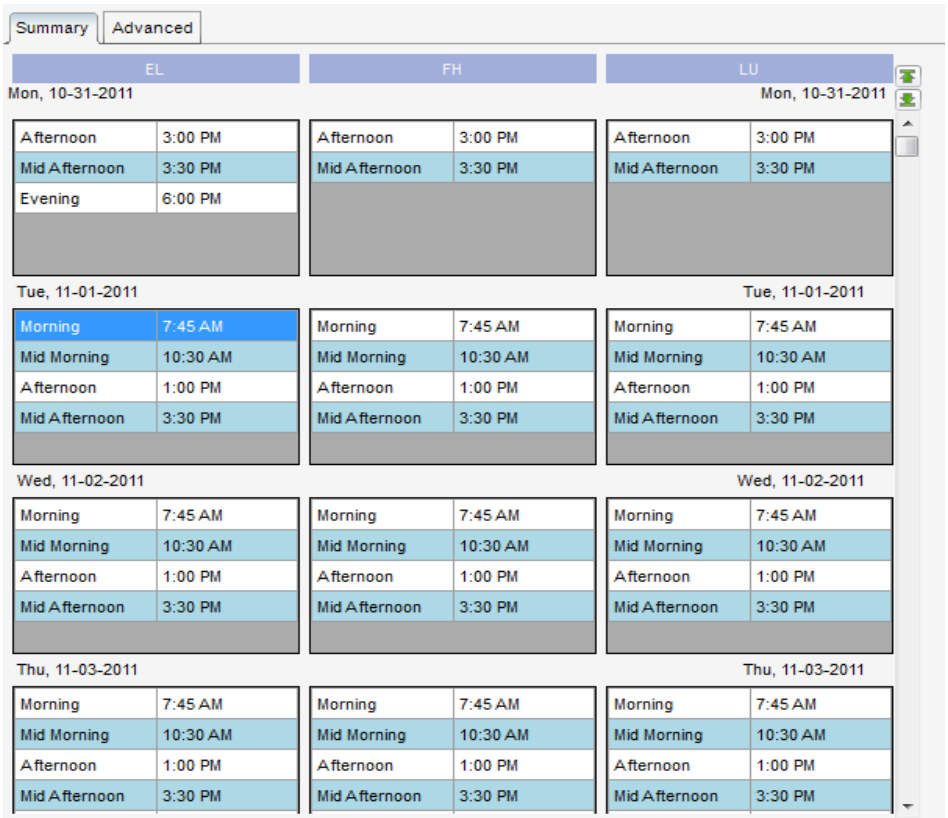

**Figure 5.1.4.2 – Summary tab of advanced search**

The paper clip Icon located on the procedure picker row will open the attachment view window. Attachments are covered in Section 4 of this document.

### 5.1.5 Image Request Tab

The Image Request tab is a work list view displaying the request for images for the current scheduled procedure. When creating a new appointment, the image requests will only be saved if the procedure is scheduled. If the procedure is saved as an order a message prompt will inform the user that if saved as order all image requests will be removed. From this tab the user may add, edit or remove edit requests. The user may also print the release form. Creating Image requests will be covered later in this document.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

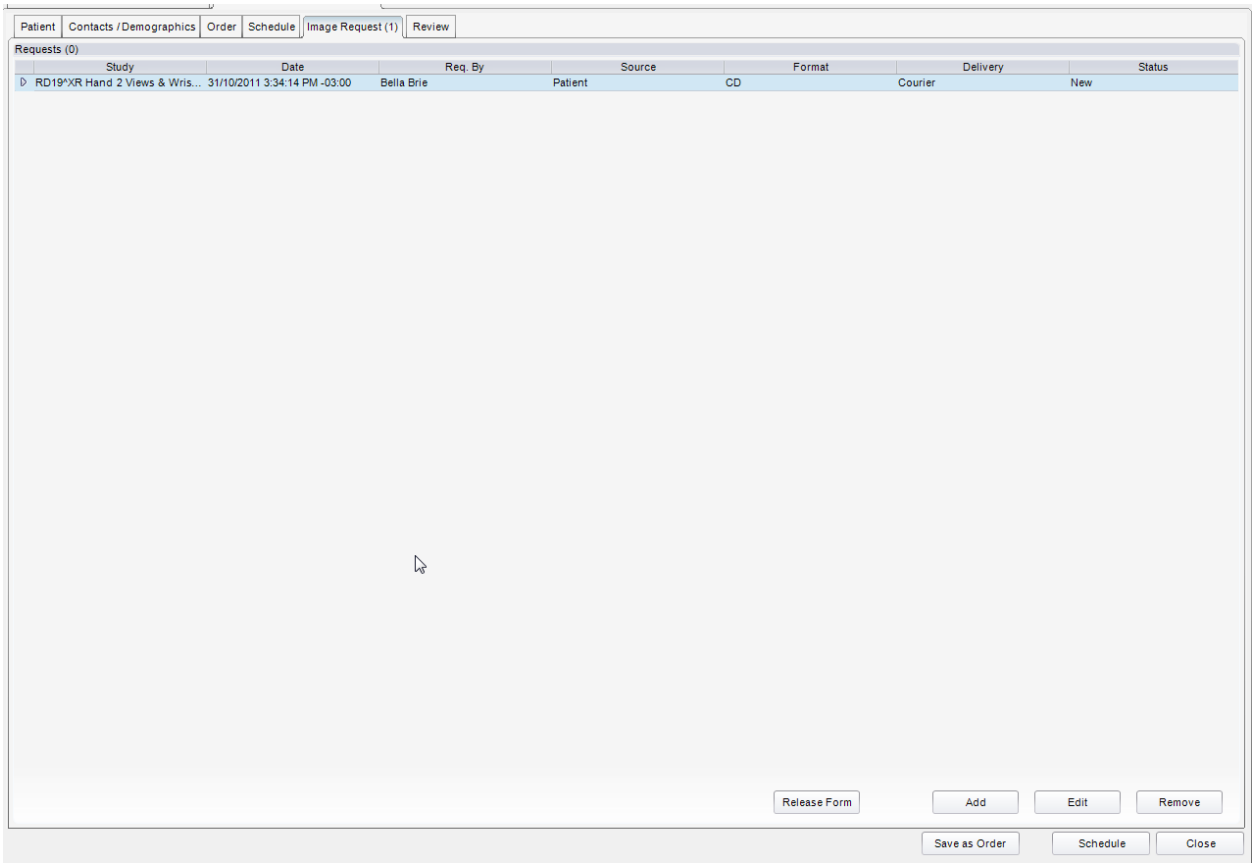

**Figure 5.1.5.1 – Image Request tab**

### 5.1.6 Review Tab

The review tab is a convenience tab that allows the user to get an overall view of the order that is to be placed. The patient name, procedures, procedure codes, the site address where the procedure is to take place, and the prep instructions.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

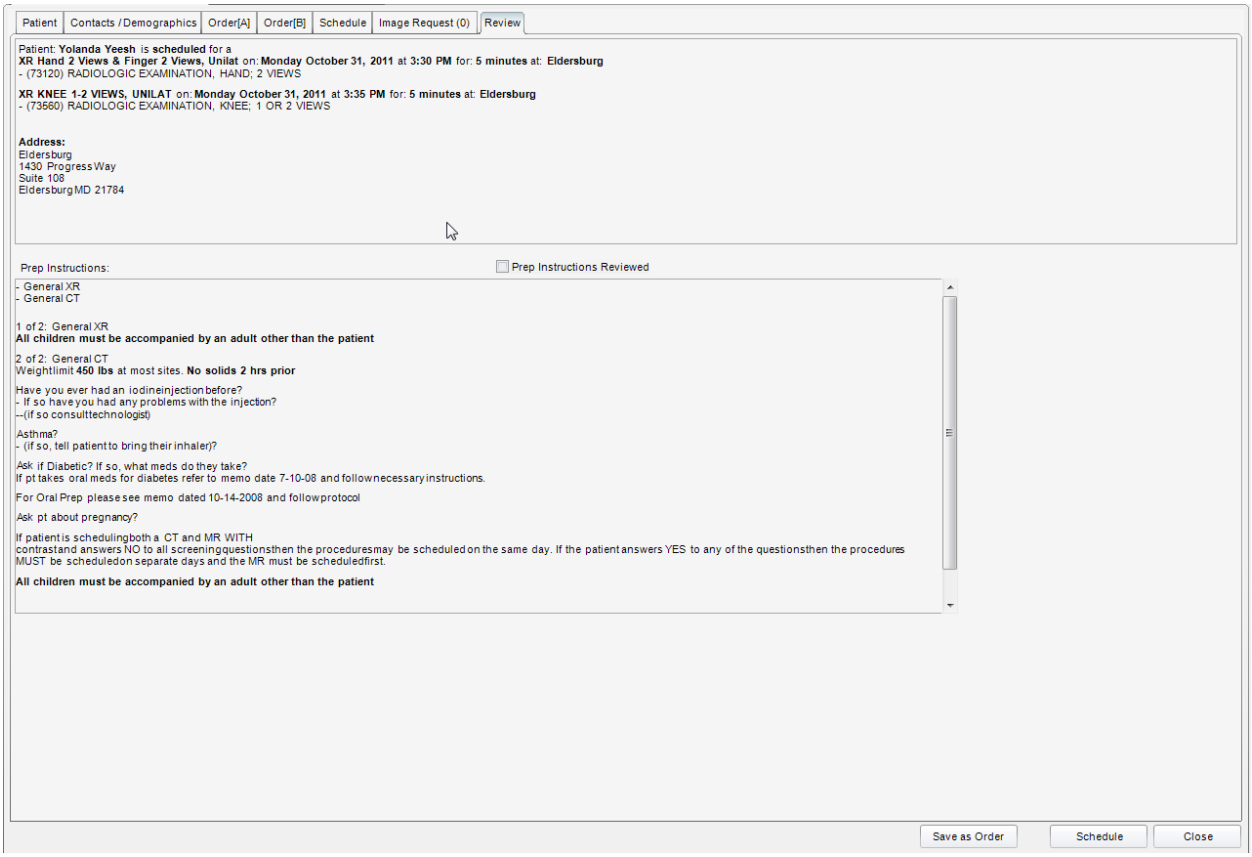

**Figure 5.1.6.1 – Review tab**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 5.2 Orders to Schedule work list

Figure 5.2.1 shows the Orders to schedule work list. This work list contains a complete list of orders in the rRIS system to be processed to scheduled studies. Actions that may be completed from the buttons in lower right of this work list are to schedule the order, Registration to "check in" or "arrive" the patient, Edit Order and Mark Order. The context menu provides a few more options to the user. Schedule, Mark Order, Edit orders are also options as well as the ability to cancel the order, access patient folder, an audit history of the order, and copy the contents of a particular cell.

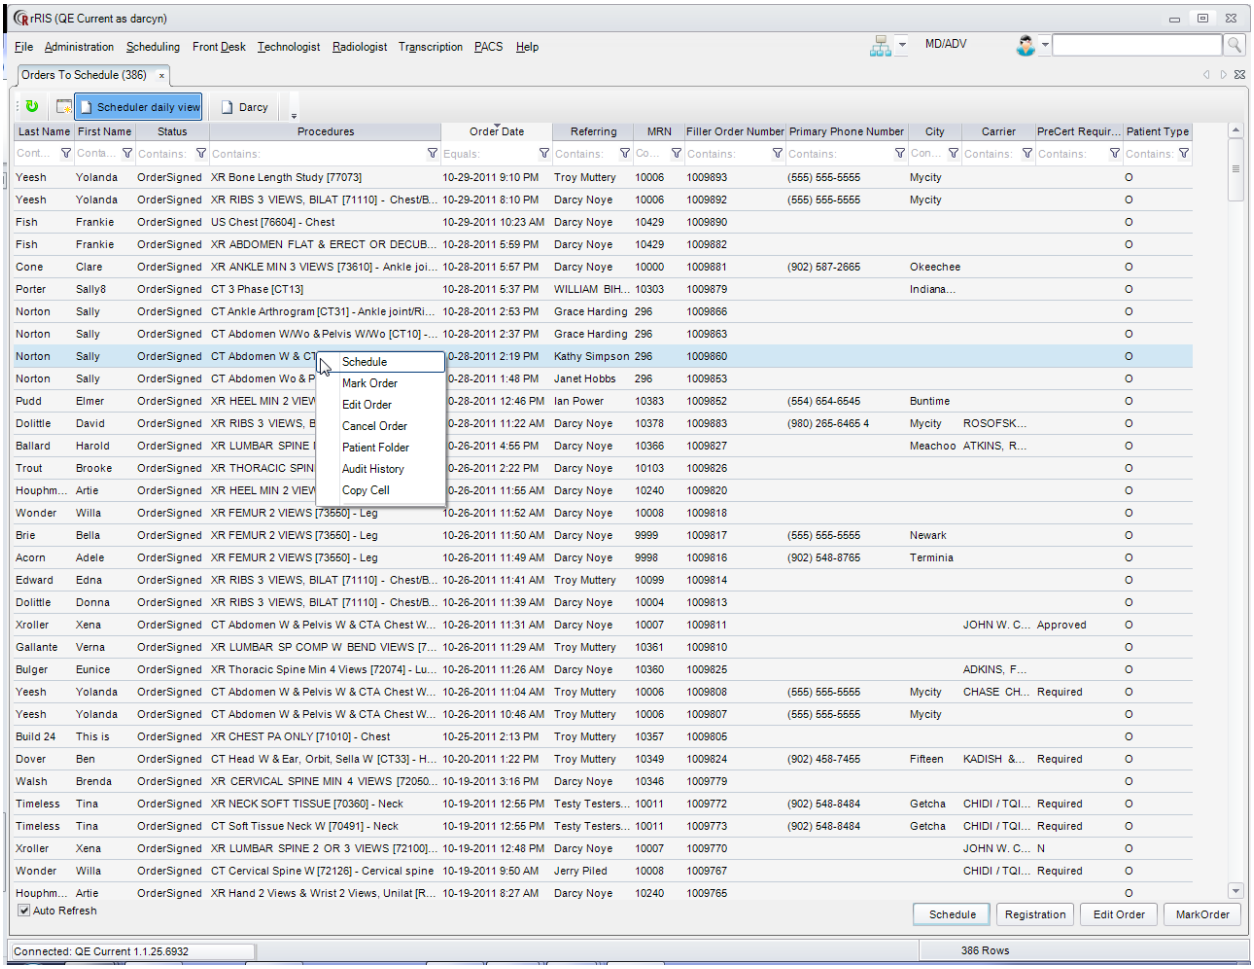

**Figure 5.2.1 – Orders to Schedule work list.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

### 5.2.1 Schedule from Orders to Schedule

Selecting the schedule button from the Orders to Schedule work list will open the Schedule Order data window. The tabs and fields are the same as New Appointment with a few differences.

The first difference you will notice is the data window tab is appended with the patient's name. In figure 5.2.1.1 you will see the Schedule Order window open on a patient record from the Orders to Schedule work list. To compare I have opened New Appointment data window next to it. Notice the tab name is Schedule Order.

Another difference is button actions at the bottom of the data window. The Schedule Order (patient name) data window has the option to "Save" or "Cancel", where New Appointment they are "Save as Order", "Scheduled" and "Close"

The final difference you will notice is that the Schedule Order (patient name) already contains the data for patient, order, and the procedure selected.

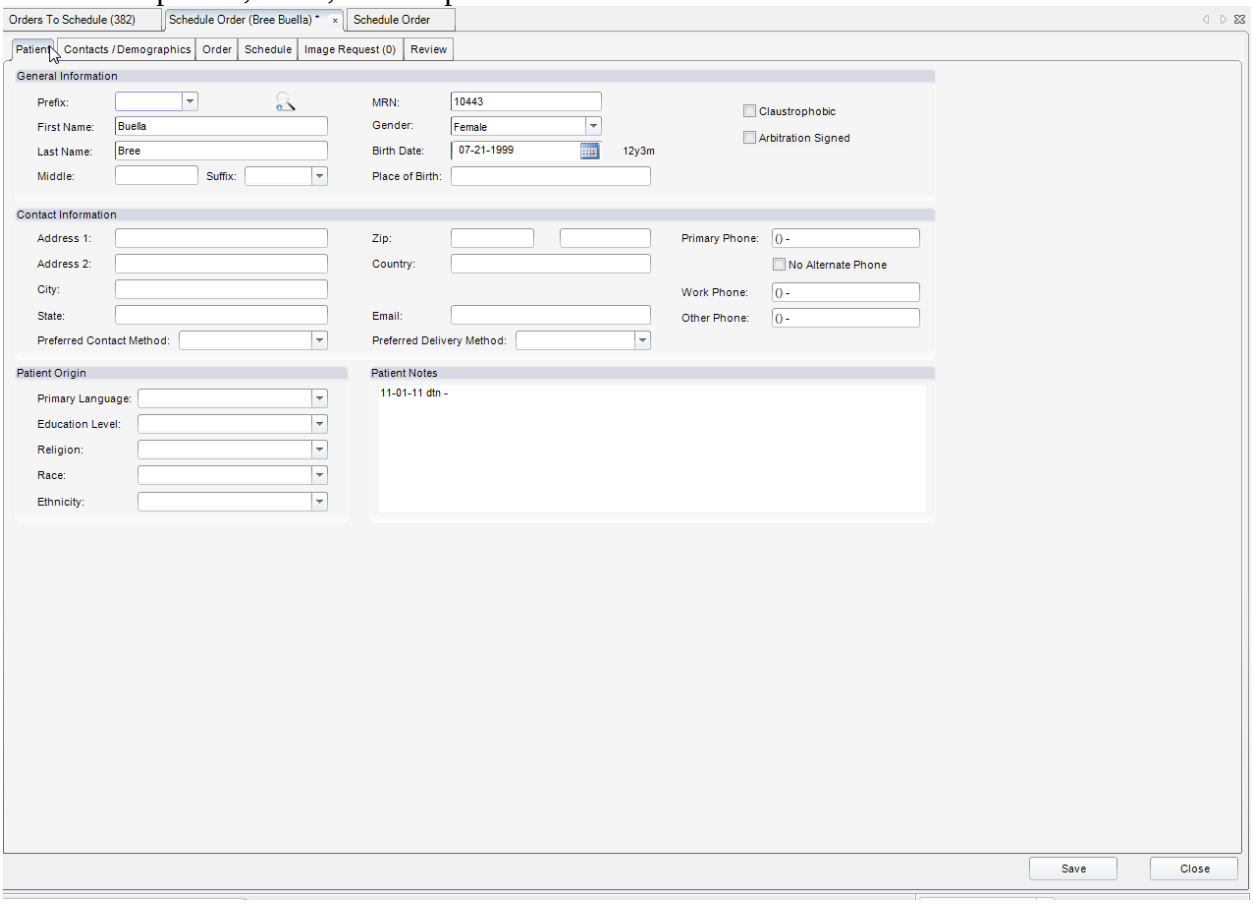

**Figure 5.2.1.1- Schedule Order data window from Orders to Schedule**

If the Order being scheduled is from an outside ordering system the application will determine if the order to be scheduled was received from an external system. It will compare the "Issuer of

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

ID" with our internal, configurable value. If the "issuer of ID" does not match, the user is prompted with a message

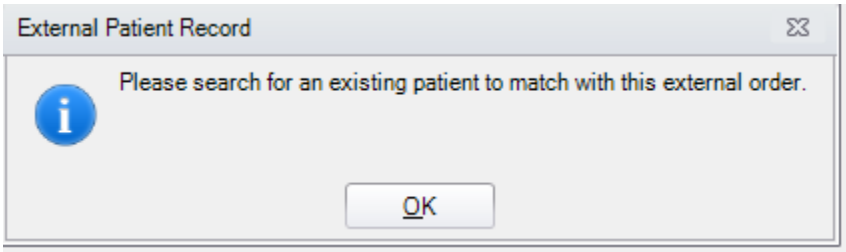

**Figure 5.2.1.2 – External Patient Record – User is informed the order is from an external system**

Selecting OK will automatically open the patient search window displaying any matches and will also search for "Other Variations" of the name. As with the previous build, the user can try alternate search criteria (e.g. reversing the first and last name), if no patient matches are found the user may create a new patient from the "Patient Search New Order" window.

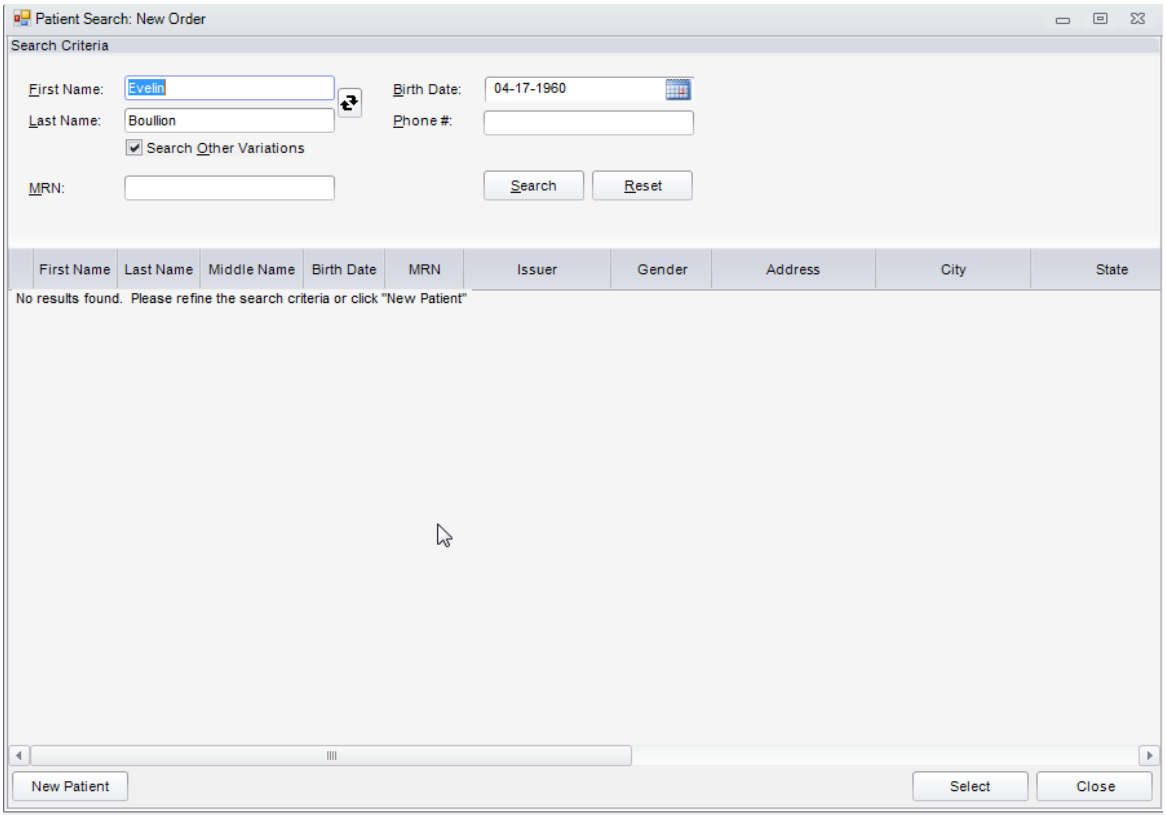

**Figure 5.2.1.3 – Patient Search New Order**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

If the "New Patient" button is selected, the Schedule Order (patient name) will open. The user may proceed as if they were creating a new patient. This will issue an rRIS MRN for future orders. The patient record provided from the EMR is retained, and future messages coming in from the EMR will automatically reference the newly created internal patient. **Note**: if the user closes the search screen without selecting or creating a patient, the Schedule Order screen will close and the user will be returned to the "Orders to Schedule" work list.

If the Patient Search New Order does find a match to an existing patient record, the user must determine if they are indeed the same person. If an internal match is found, it will appear in the search window. The user can press select to associate the current order with our internal patient and establish a link between them. If the user selects an existing patient record, they will be presented with be prompted to confirm.

### 5.2.2 Edit Order

The Edit Order action button opens the data window. Within this data window the user has the ability to view or edit the Patient tab information, Attachments (or scan docs), and the Order information.

#### 5.2.2.1 Patient Tab

The Patient tab is exactly the same as Schedule Order

#### 5.2.2.2 Attachments Tab

The Attachments tab is a work list view of the imported or scanned documents. The user can view the attachments for this order, or view all attachments for this patient by adding a check to the "Show all documents for patient". Actions from this tab are Scan, Import or access advance properties for attachments.

The work list view of the attachments informs the user of the date, type, number of pages, the level of the attachment (such as Patient level, Exam level), who attached the document, and notes associated with the attachment. This is indicated by a notepad Icon. A double mouse click on the Attachment row will open the attachment. The complete function and how to use Attachments is covered in Section 4 of this document.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

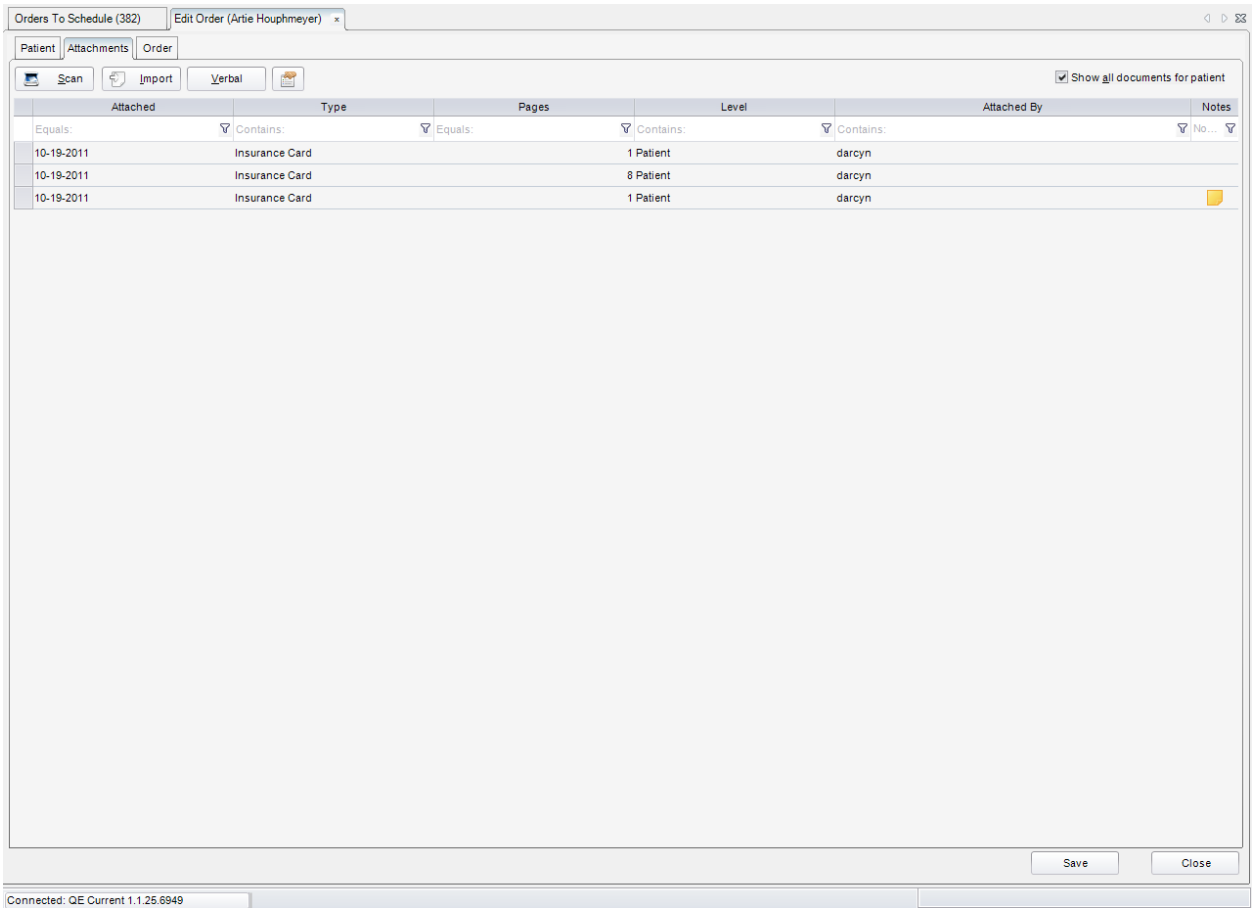

**Figure 5.2.2.2.1 – Edit Order - Attachments tab**

### 5.2.2.3 Order tab

The Order tab from Edit Order has the same fields as Schedule Order with the addition of the Exam Requested where studies may be added and removed, and Body Part and Laterality specified.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

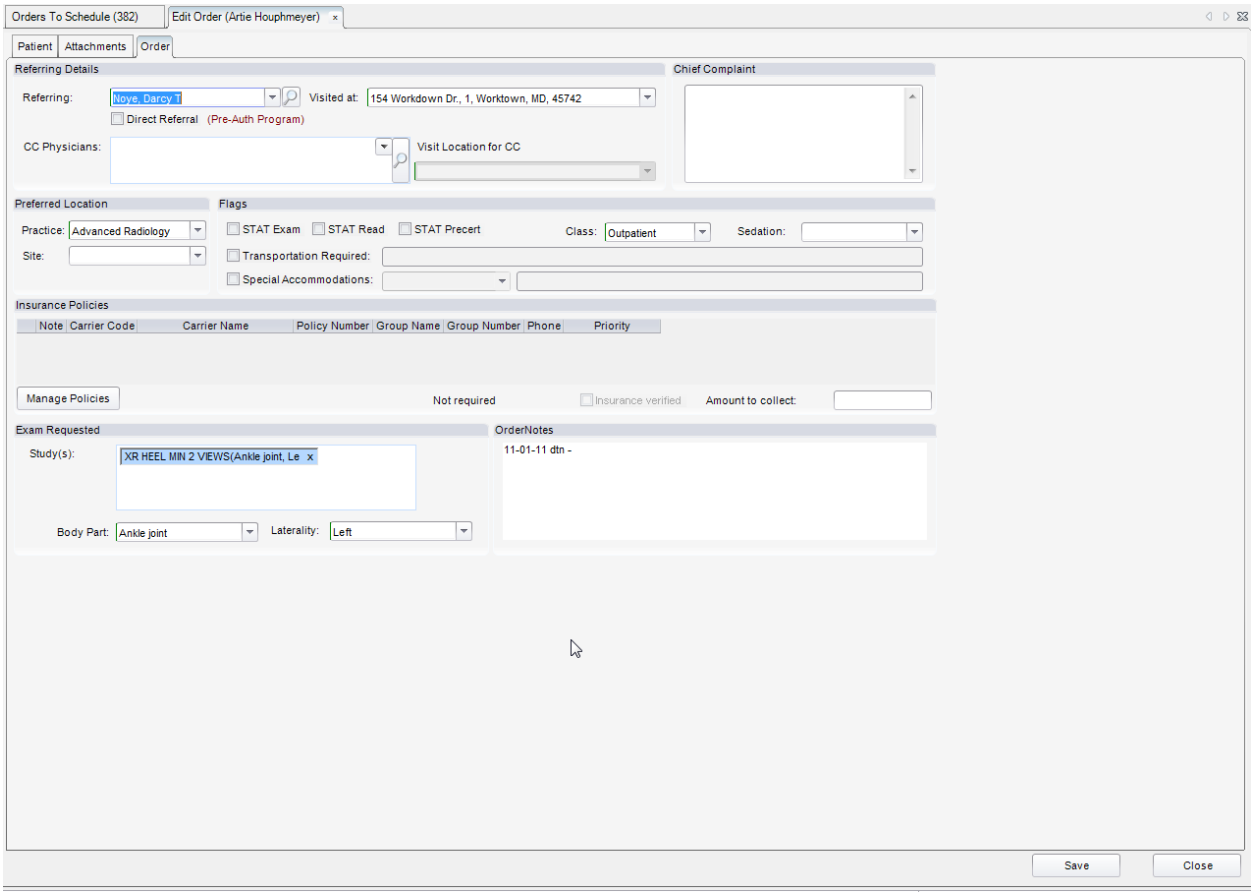

**Figure 5.2.2.3.1 – Order Tab from Edit Order**

### 5.2.3 Registration

The Registration data windows from Orders to Schedule are the same as Registration from the Reception work list. This is covered in section 5.3 of this document.

### 5.2.4 Mark Order

The Mark Order data window is a limited use data window designed for a few select sites that utilize this work flow. Most users will not have access to this work flow as it will be disabled. The actions from this data window are limited as what can be added / edited. Selecting the save button will schedule the Order with the current time and date.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

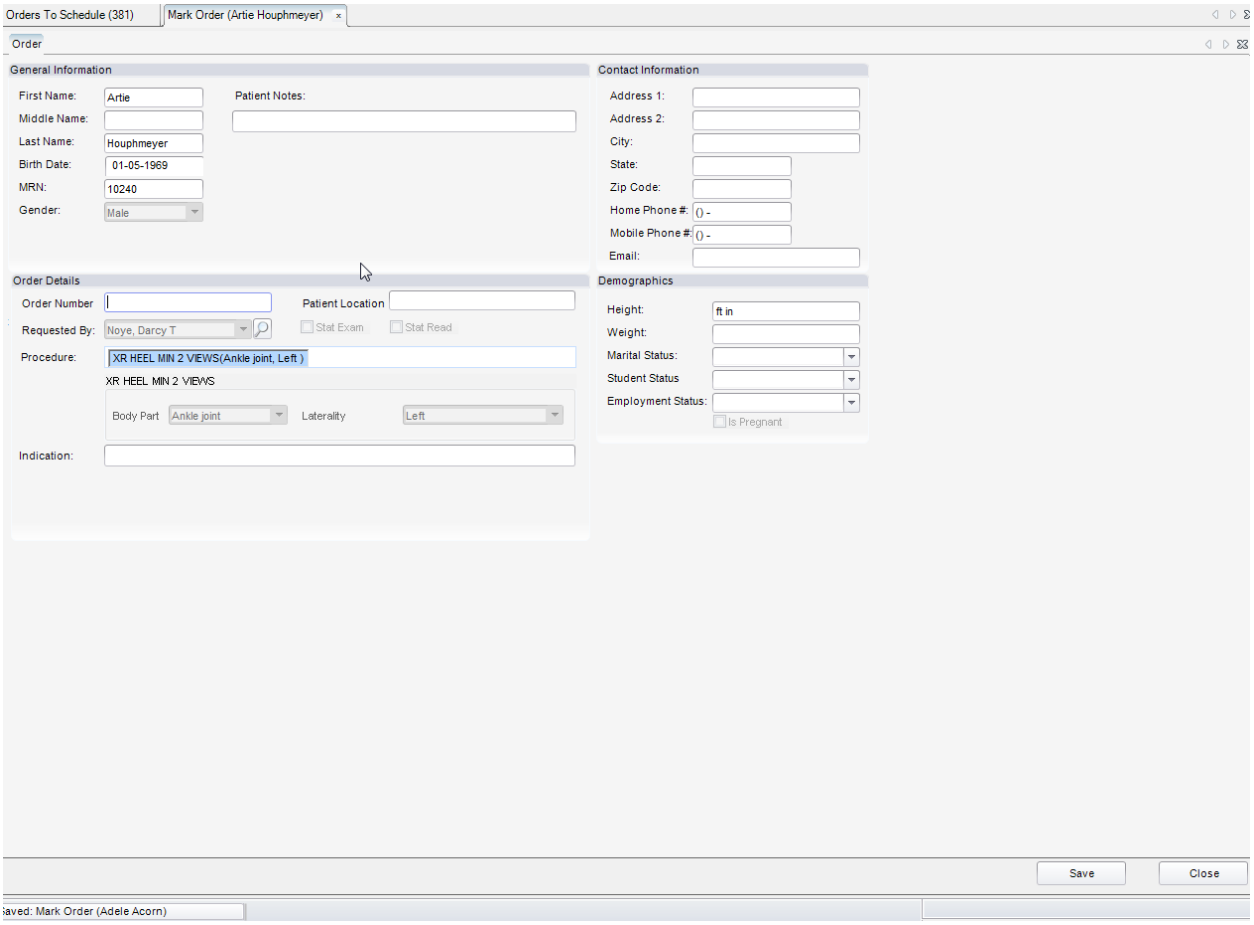

**Figure 5.2.4.1 – Mark Order**

## 5.2.5 Context Menu

The context menu offers the actions of the buttons discussed above, as well as the ability to Cancel Order, Patient Folder, Audit History, and Copy Cell. Schedule, Mark Order and Edit Order have already been discussed. Patient Folder and Audit History will be discussed later in this document.

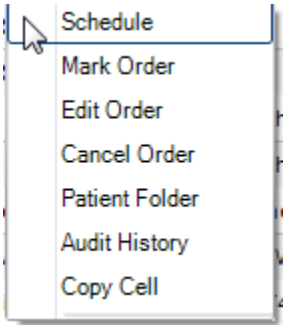

**Figure 5.2.5.1 – Orders to Schedule Context Menu**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

### 5.2.5.1 Cancel Order

Selecting Cancel Order from context menu will open the Cancel Order data window as shown in Figure 5.2.5.1.1. The message in the window displayed informs you of the patient and exam for the patient selected. A reason for cancelled the order must be chosen from the list provided to enable the OK button. Upon selecting OK this order will be removed and added to the Cancelled Orders work list.

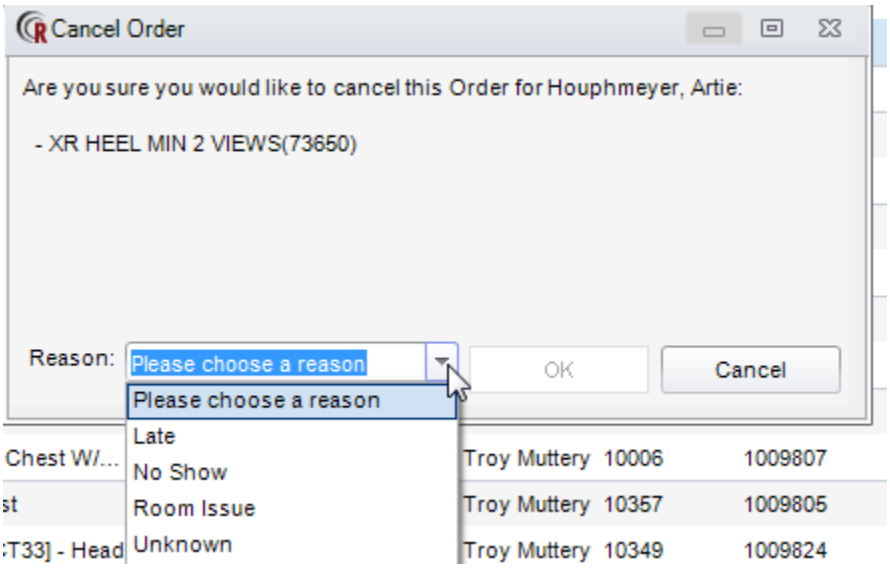

**Figure 5.2.5.1.1 – Cancel Order**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 5.3 Appointment Book

The Appointment Book gives a view of the scheduled exams by day. The calendar view data window may be filtered by Region, Practice or Site Group, Site, Modality, Room and of course Date. The view of the calendar can be compressed using the Interval option. The exams in the view are color coded giving the user an easy reference of the status for each. A legend of the colors can be found on the bottom of the work list.

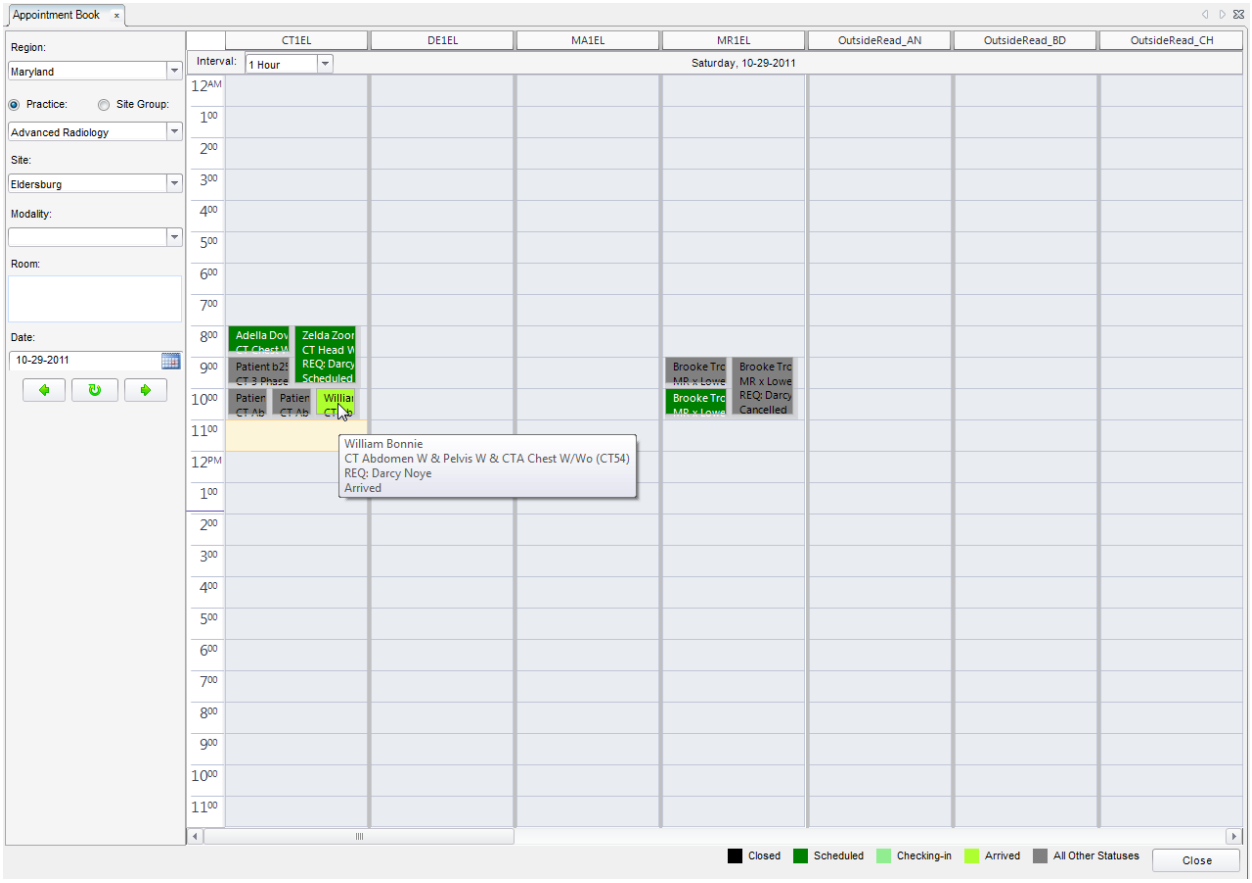

**Figure 5.3.1 – Appointment Book view**

If the time interval is increased it becomes difficult to read the entirity of the exam. Hovering the mouse over the exam will display a tool tip so the information may be read.

A user may schedule a new exam or reschedule an existing exam from this work list. A double mouse click on a blank time slot will open the Edit Schedule window and a new exam can be scheduled. Double mouse click on an already existing exam will also open the edit exam window. Changes can be made to the exam and saved as a new scheduled exam , save it as an order, or cancel.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 5.4 Add Patient

Add patient is a simple data window that accepts user input, with no search functionality. The user will have to perform a patient search before taking the action to create a new patient. The MRN is a unique system generated ID.
The patient tab has 4 different sections capturing patient data.
The General Information section captures the patients name, gender and date of birth.
Contact Information section captures address, phone numbers, email address, and preferred methods of contact and delivery method.
Patient Origin section captures the patient's primary language, education, religion, race and ethnicity.
Lastly Patient Notes are captured in a free form text box.

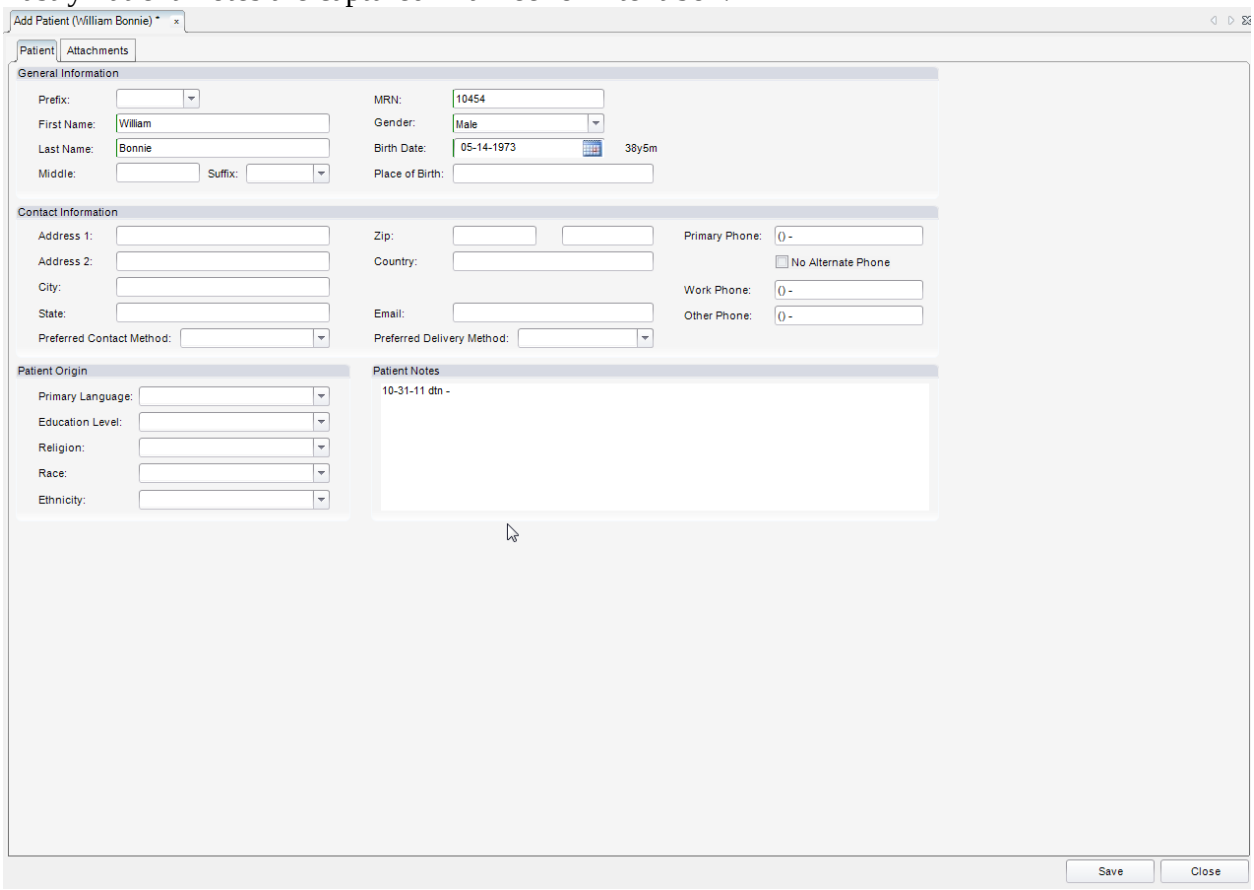

**Figure 5.4.1 – Add Patient data window displaying Patient tab**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

The attachments tab allows the user to scan or import any relevant documents. Each document attached to the patient will display in a work list fashion on this tab. The patient and Attachment tabs are very similar throughout the application.

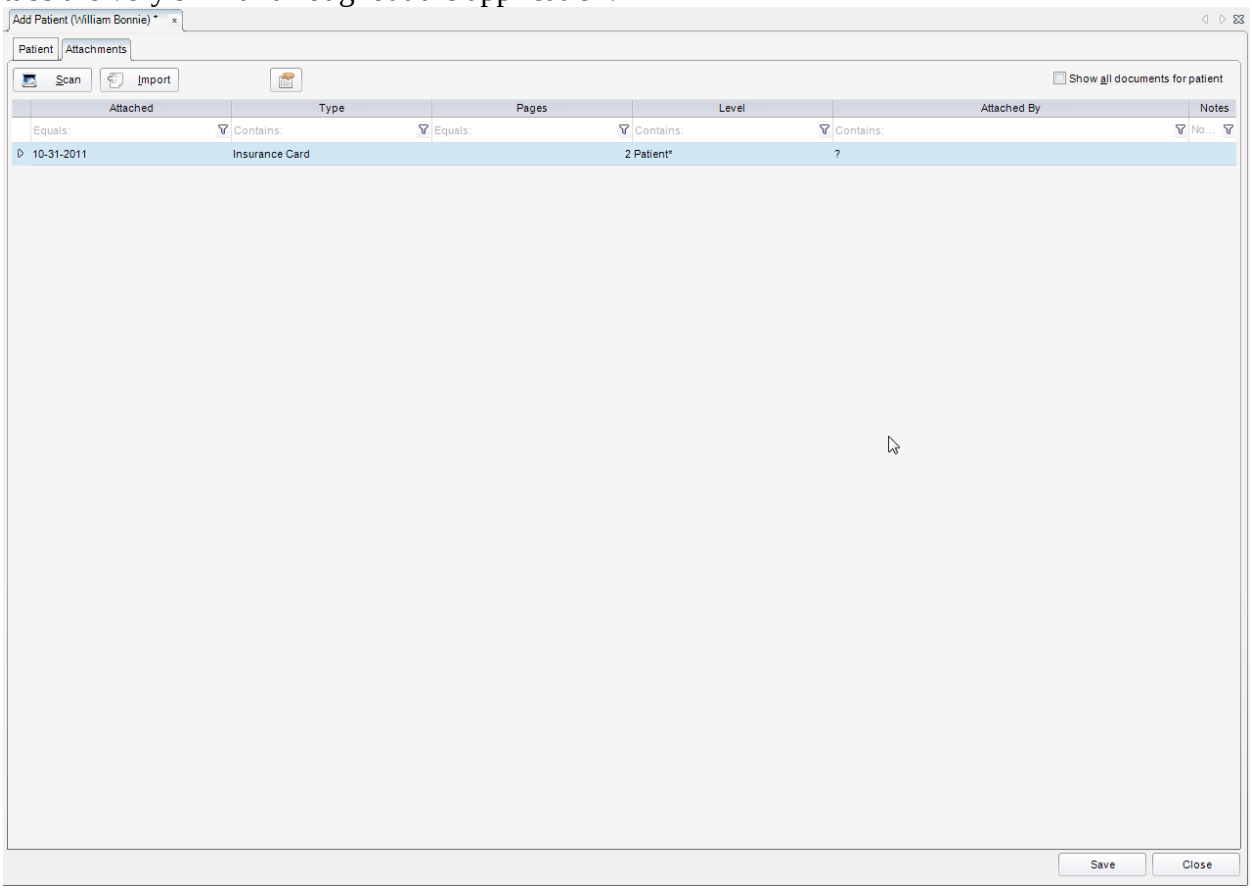

**Figure 5.4.2 Add Patient data window displaying Attachments tab**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 5.5 Add Outside Read

Professional Only workflow outside reads – a new data window was added under the Scheduling menu.
"Add Outside Read" will open a new window that will allow the user to:

- Search or add a new patient.
- Data entry for exam date, order notes, stats, indications, referring, practice, etc.
- Entry for the exam location using the site field (required).
- Enter a list of studies for the order.
- Scan Documents for each study.

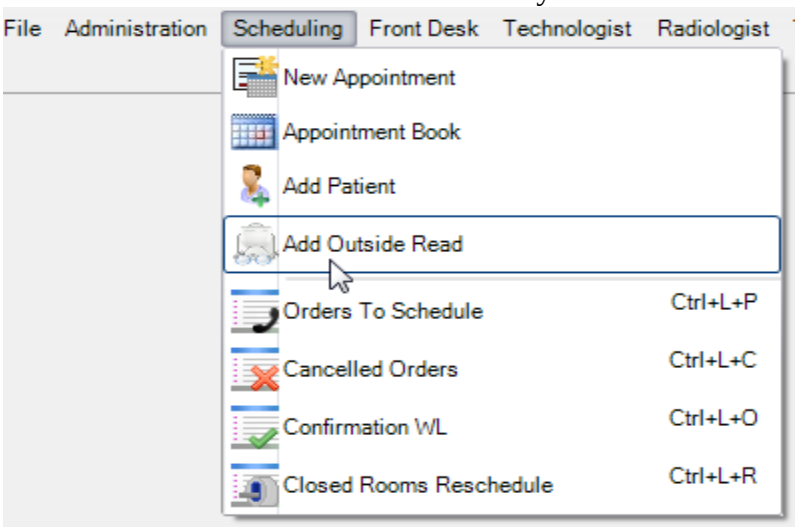

**Figure 5.5.1 – Add Outside Read menu option**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

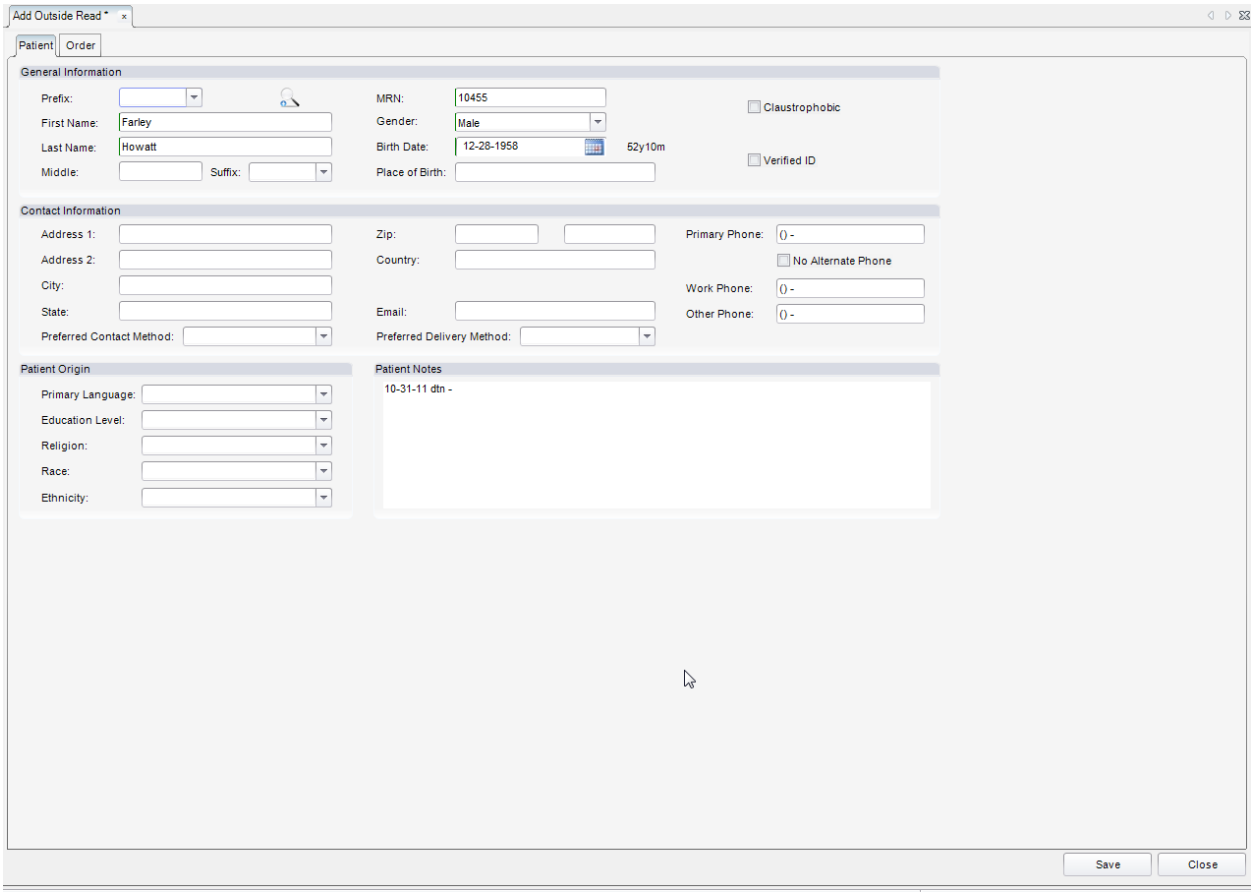

**Figure 5.5.2 – Patient tab of Add Outside Read data window**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

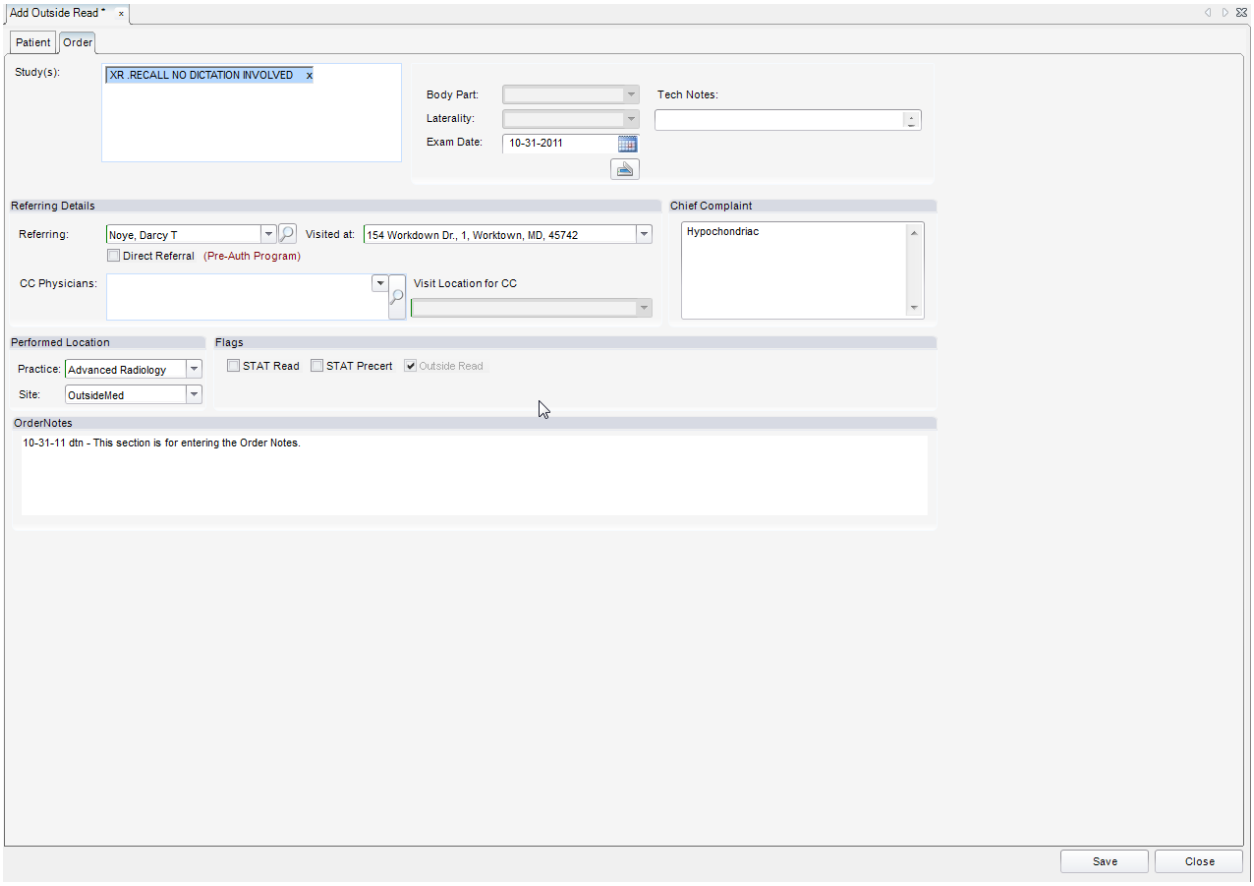

**Figure 5.5.3 – Order tab of Add Outside Read data window**

Once the information for the Outside Read has been added to the data window, the study will be moved directly to Exam Done status and are ready for dictation, transcription and signing.

Administrators will need to create one modality for each modality type. These modalities created do not have to be assigned to scheduling groups (sites) also the Outside Read Modalities can marked as inactive. If the modality does not exist a message will inform the user with a list of modalities the administrator will need to create.

In the organization screen for site, the field “outside_read_location_flag” has been added. When this flag is set those sites will not show up in the other Scheduling screen’s schedule/reschedule inputs for site. And on the “New Outside Read” only the sites for outside reads will be displayed.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

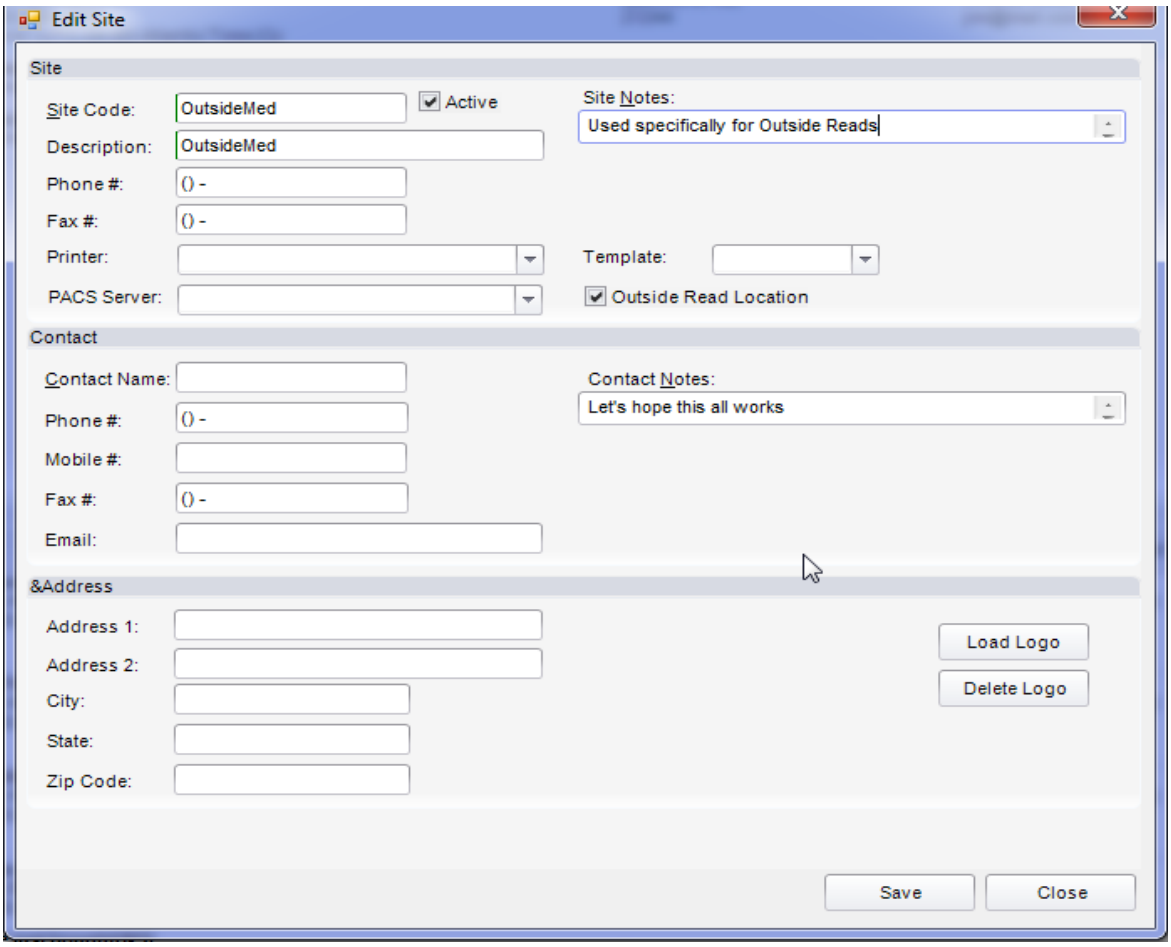

**Figure 5.5.4 – Outside Read Site needs to be created.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 5.6 Confirmation work list

The Confirmation work list is a daily view work list that displays the contents of the days scheduled procedures. As a patients is confirmed the record will be removed from the work list, but remains on the days Reception work list. The options from this work list are Confirmation and Reschedule using the buttons in the lower right of the work list. A context menu also gives the user options to edit patient, access forms and labels, access patient folder, audit history, and to copy the contents of a cell.

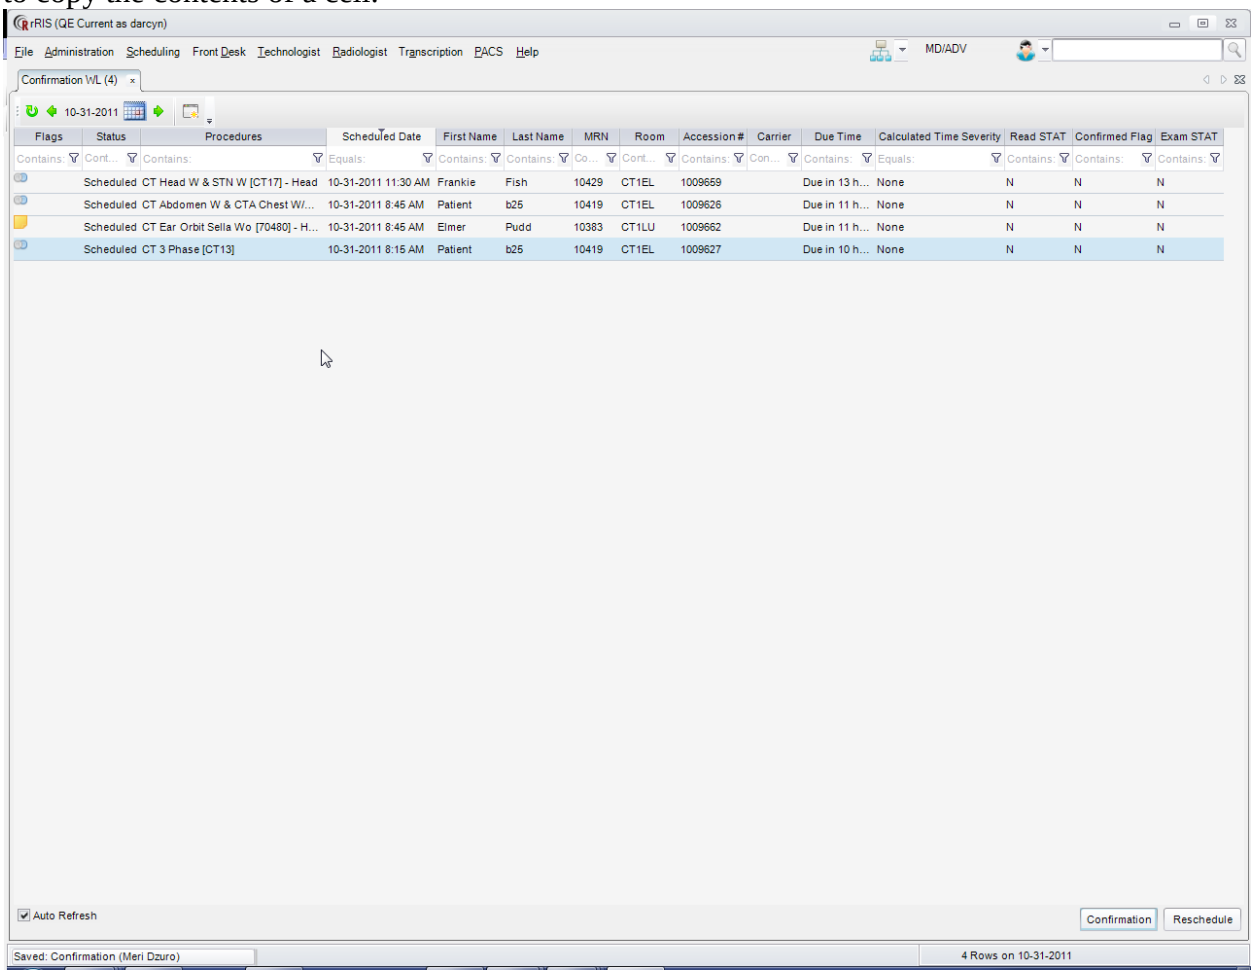

**Figure – 5.6.1 – Confirmation work list**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

### 5.6.1 Confirmation data window

Selecting the Confirmation button from the work list will open the Confirmation (patient name) data window. If patient has multiple exams scheduled for that day the user will be prompted with message asking if they would like open the other order along with the one you are currently opening.

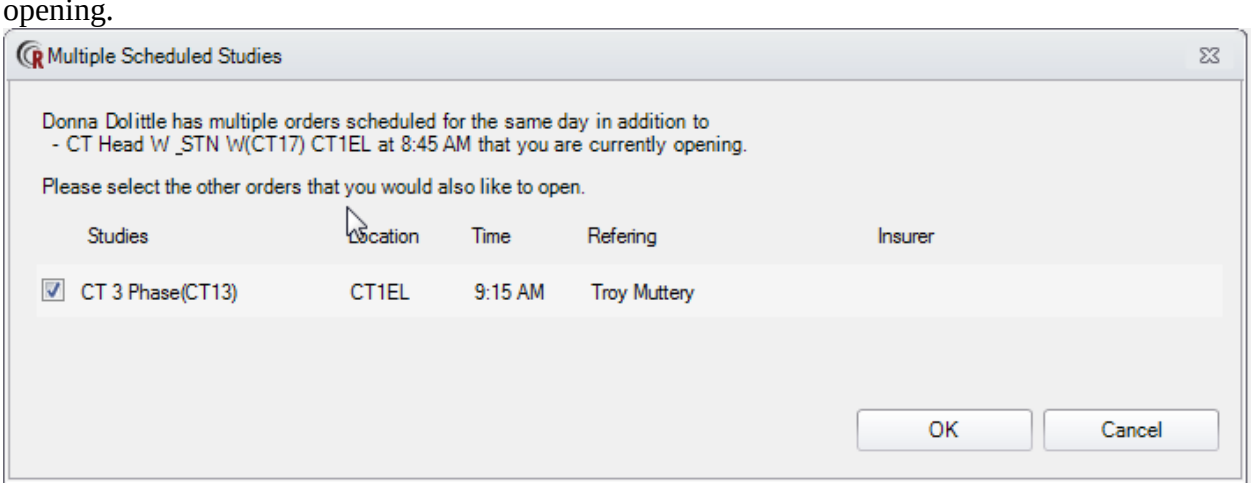

**Figure 5.6.1.1 – Confirmation – Multiple Scheduled Studies**

If the user chooses so they can open the other study(s) for confirmation. The data windows have the same fields as scheduled order, with the exception of the Exam tab which doesn't have the advance search options. Selecting the Confirmation button will remove this patient's study(s) form the Confirmation work list. The exams will remain on the Reception work list.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

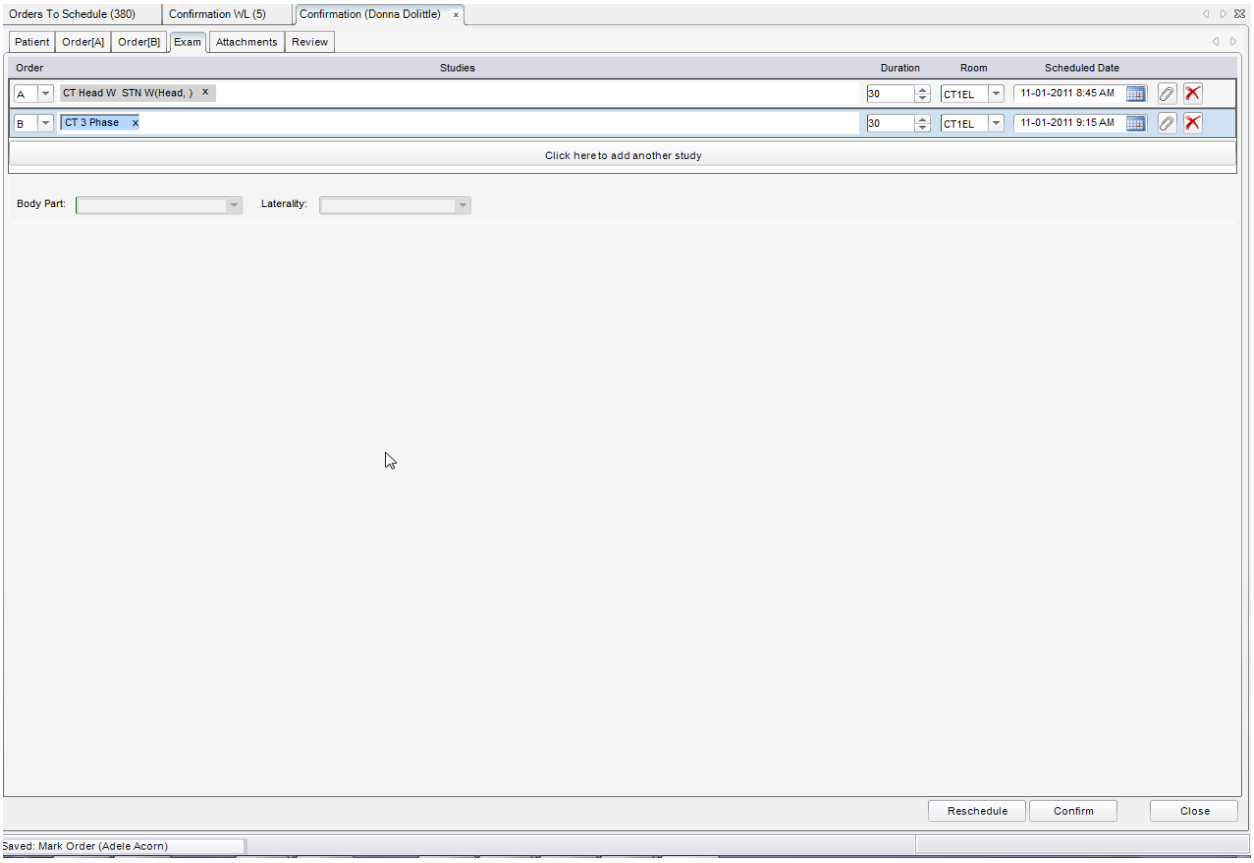

**Figure 5.6.1.2 – Confirmation Data Window**

The user also has the option to Reschedule, or to simply close the data window without saving any changes and the patient's study(s) will remain on the work list.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 5.7 Closed Rooms Reschedule work list

The cancelled orders work list will contains all scheduled orders that are scheduled in a room that has been closed. The button options from this work list are to reschedule the order. The context menu also has the reschedule option as well as the option to change the status of the exam. The exams will drop off the work list as they are rescheduled or when the time of the original exam has passed.

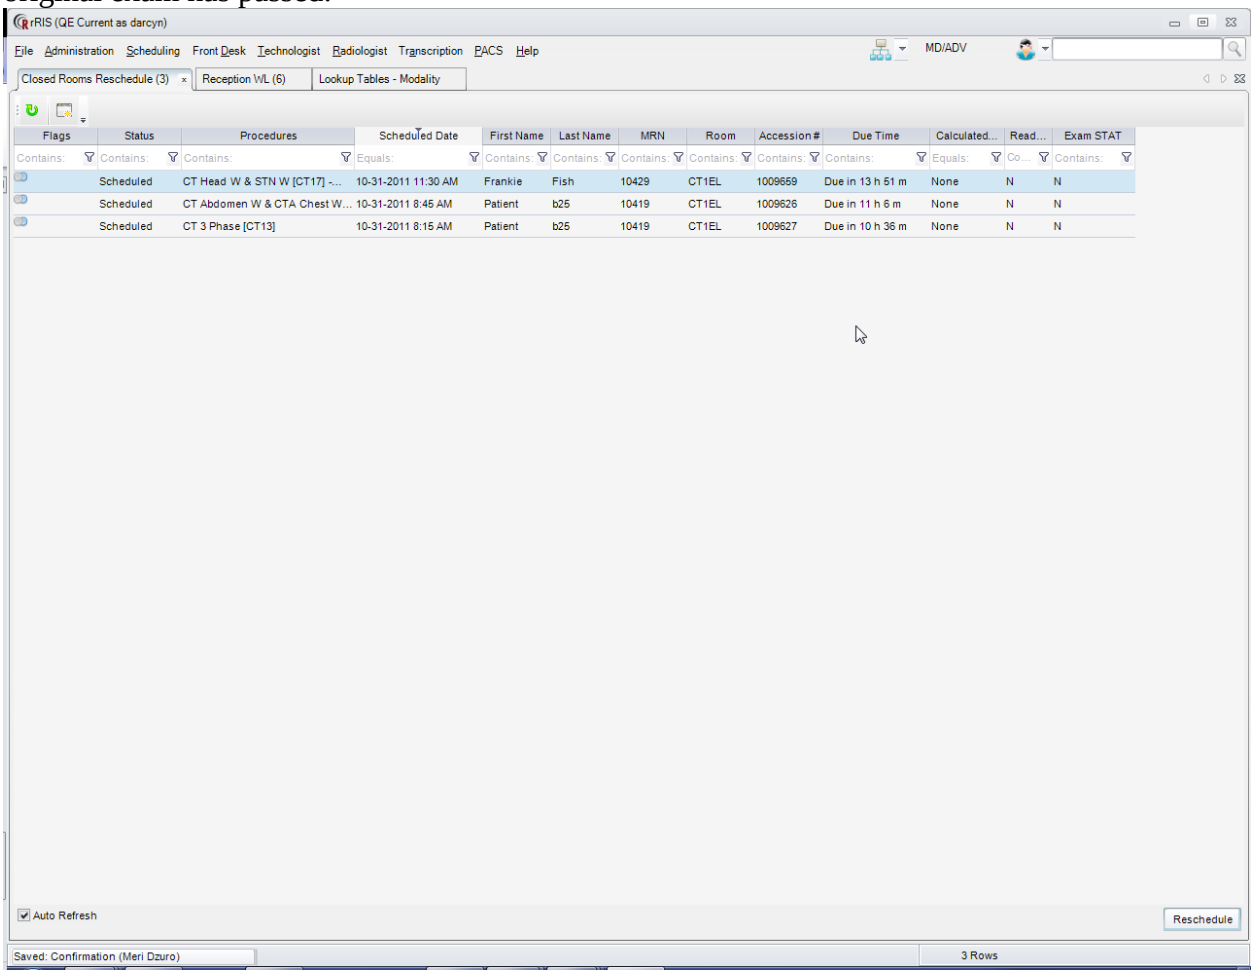

**Figure 5.7.1 – Closed Rooms work list**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 5.8 Cancelled Orders work list

The Cancelled orders work list contains all of the orders that have been cancelled. As of right now, this work list is only a visual confirmation of what has been cancelled. At this time you cannot re-order or create a new order from this work list. The user can check the Audit History to see who and when the order was cancelled.

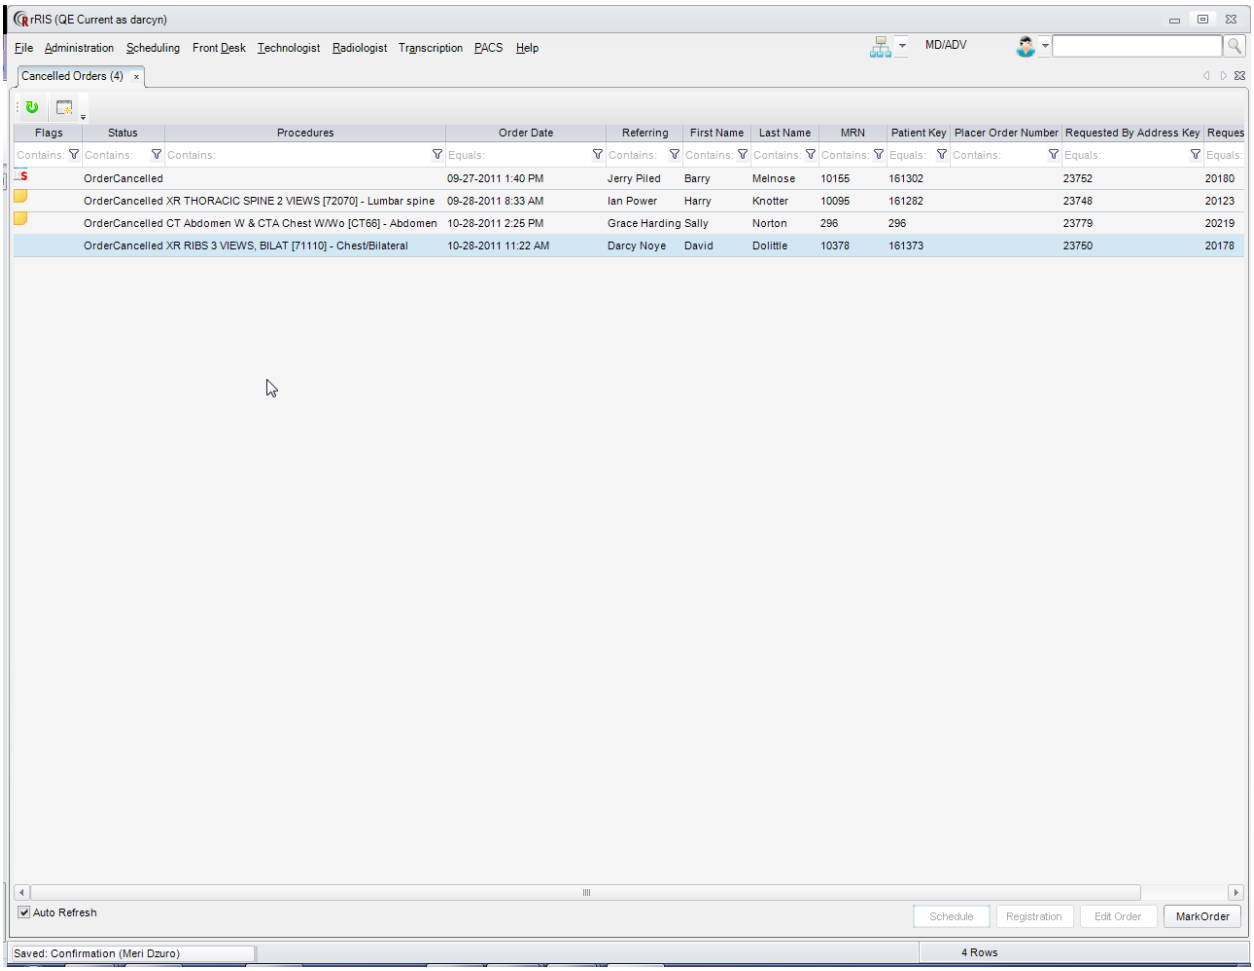

**Figure 5.8.1 – Closed Rooms work list**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 5.9 Reschedule

Reschedule can take place from the Reception work list, Confirmation work list, Appointment Book, and the No Show work list. Upon select to Reschedule, the user will be prompted with the window displayed in figure below.

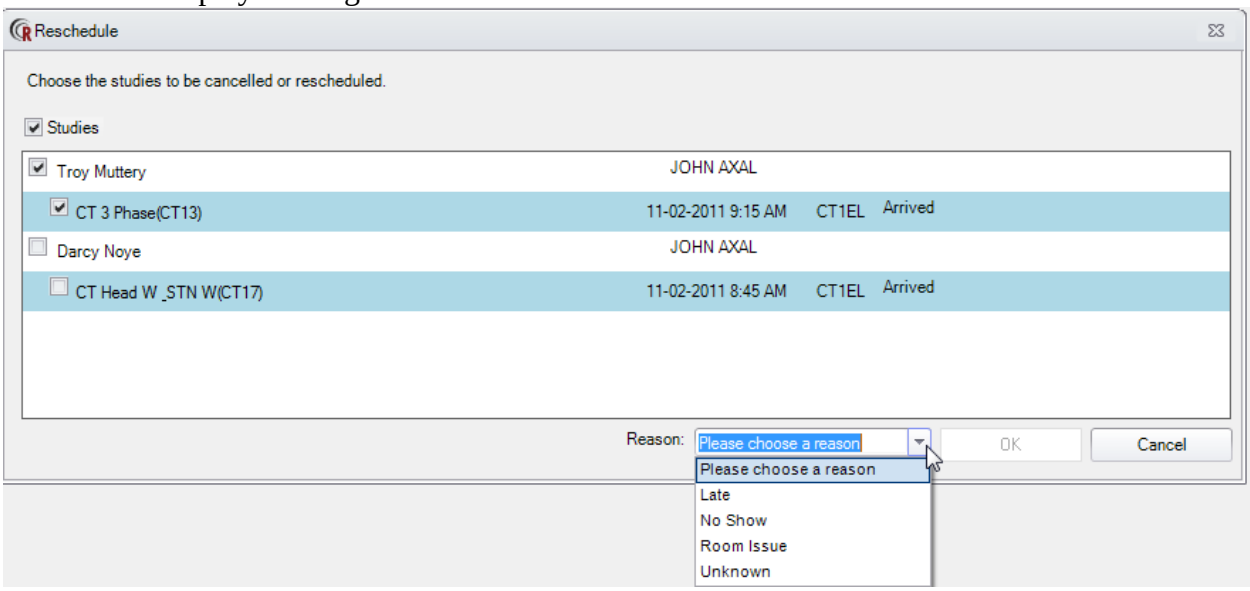

**Figure 5.9.1 – Reschedule**

If the patient has multiple scheduled exams for that day the user can choose to reschedule one or all. The exam selected from the work list is checked by default. The user must select a reason code for the reschedule to enable the OK button.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 6. 6. Front Desk

## 6.1 Reception work list

The Reception work list is a daily view of the exams scheduled. The calendar Icon allows the user chooses a different day, month, or year. The user can also navigate to other days using the left and right green arrows on either side of date and calendar control. Possible buttons actions are Registration, Reschedule, Edit Order and Mark Order. Context menu options are Registration, Reschedule, Edit Patient, Forms and Labels, Patient Folder, Audit History, Copy Cell, Change Status to…which contains is own sub-menu, and Request Copies of Images.

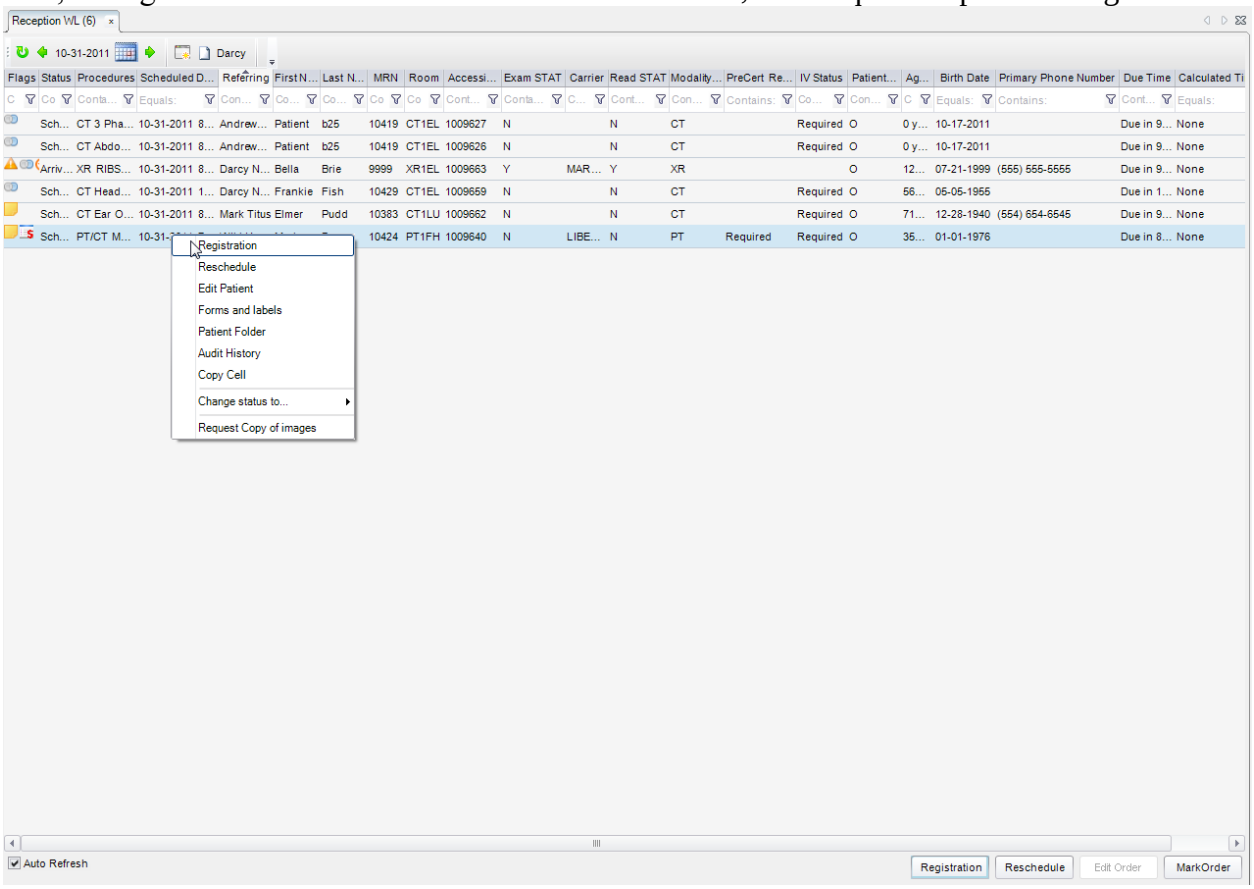

**Figure 6.1.1 – Reception work list with context menu displayed**

Registration is to be completed to get the patient status to checked in or arrived status.
Much of the registration data fields will already have been complete. Required fields at the time of Registration are the Verified ID flag, Responsible party, and the user will be prompted for policy information, which can be bypassed.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 6.2 Registration

Registration is accessed from different places in the application. A user can complete Registration from Orders to Schedule work list, bypassing the schedule order stage. The Reception work list also has the ability to complete Registration. The actions from Registration are to Check In the patient Arrive the patient, save changes to the data window and leaving it in a state of scheduled if accessed from Reception work list, or advancing the order to scheduled status if registration was accessed from Orders to Schedule work list. The use can also close the Registration data window. If changes were made in the data window the user will be prompted to save changes.

### 6.2.1 Patient Tab

The patient tab is the same as new order with the exception of a Labels and Forms button giving the user the ability to print any label or form that may be associated with the procedure. Also there are two additional check boxes for Arbitration Signed and Verified ID, which is mentioned above as being a required field.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

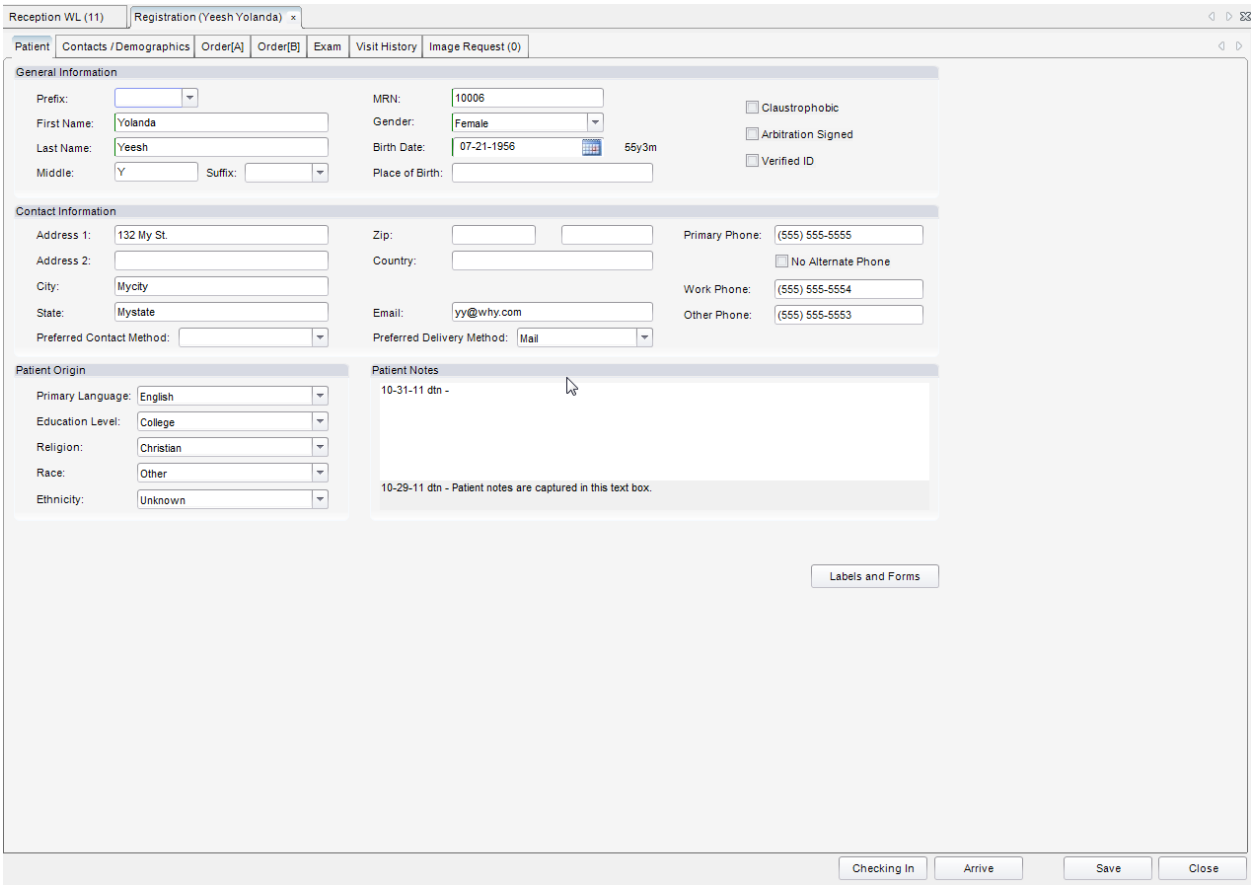

**Figure 6.2.1.1 – Patient tab at Registration**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

### 6.2.2 Contacts / Demographics

Again this tab is essentially the same as in new order with the exception of the Demographics at Encounter that is located on the Visit History tab for Registration. The Responsible Party is required.

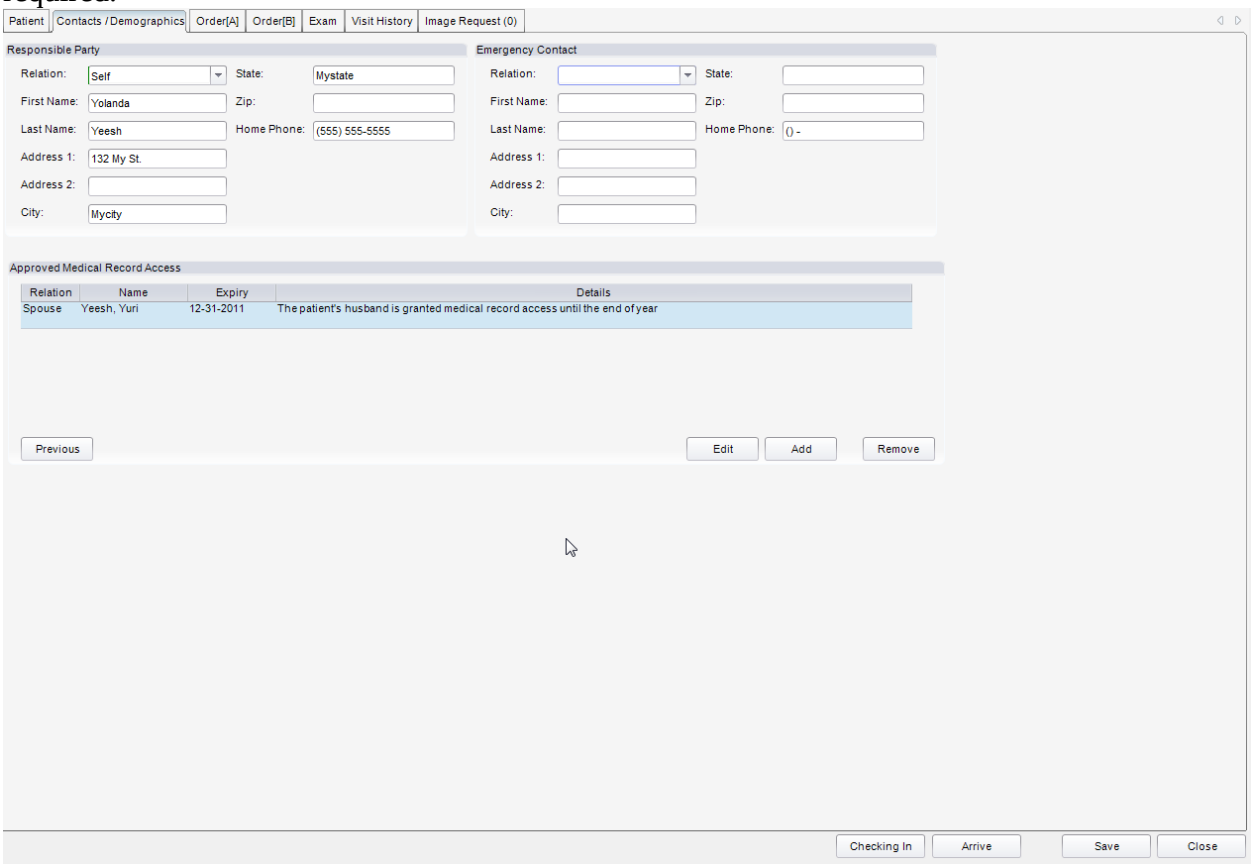

**Figure 6.2.2.1- Contacts/Demographis Tab**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

### 6.2.3 Order Tab

The order tab of the Registration data window has the same fields as Schedule Order with the addition of Payments.

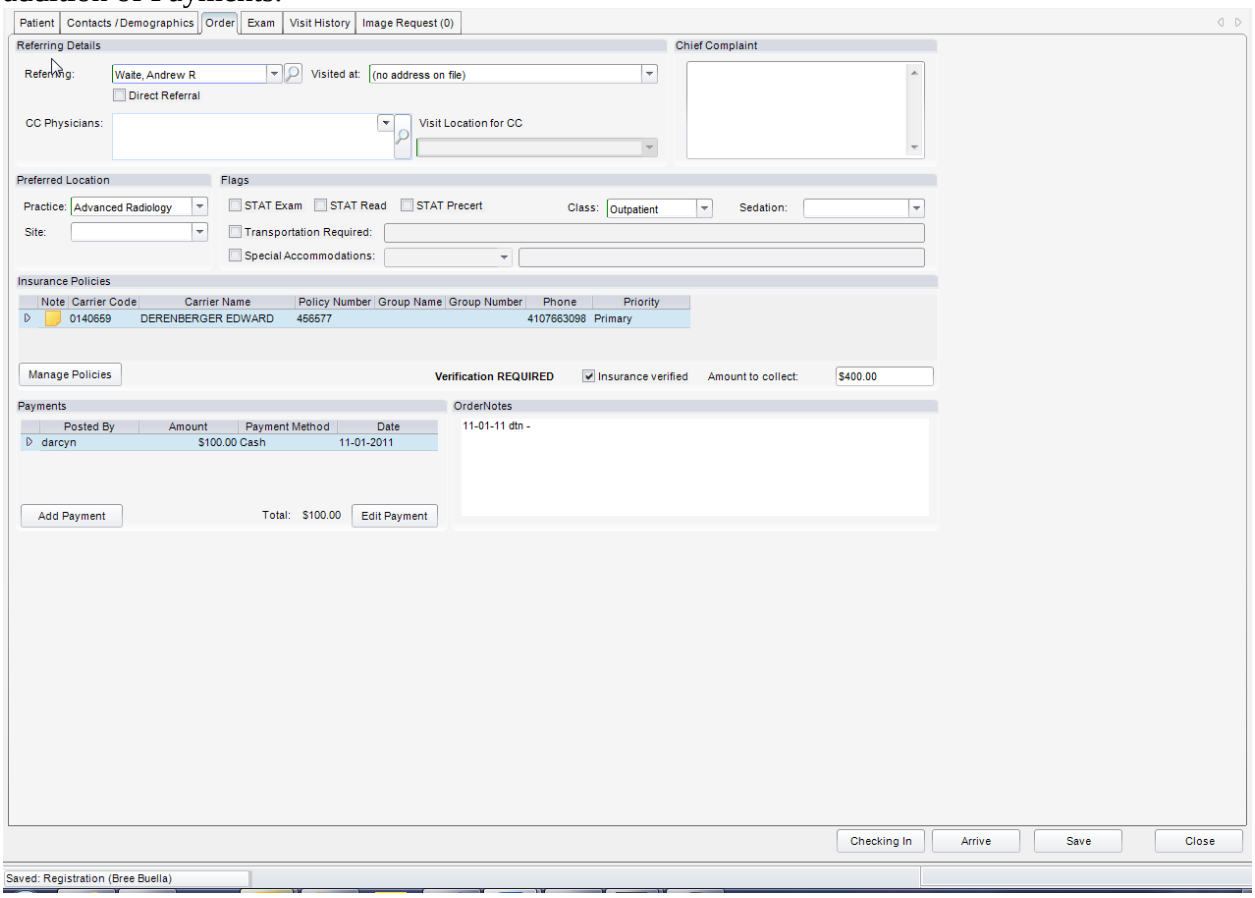

**Figure 6.2.3.1 – Registration Order tab**

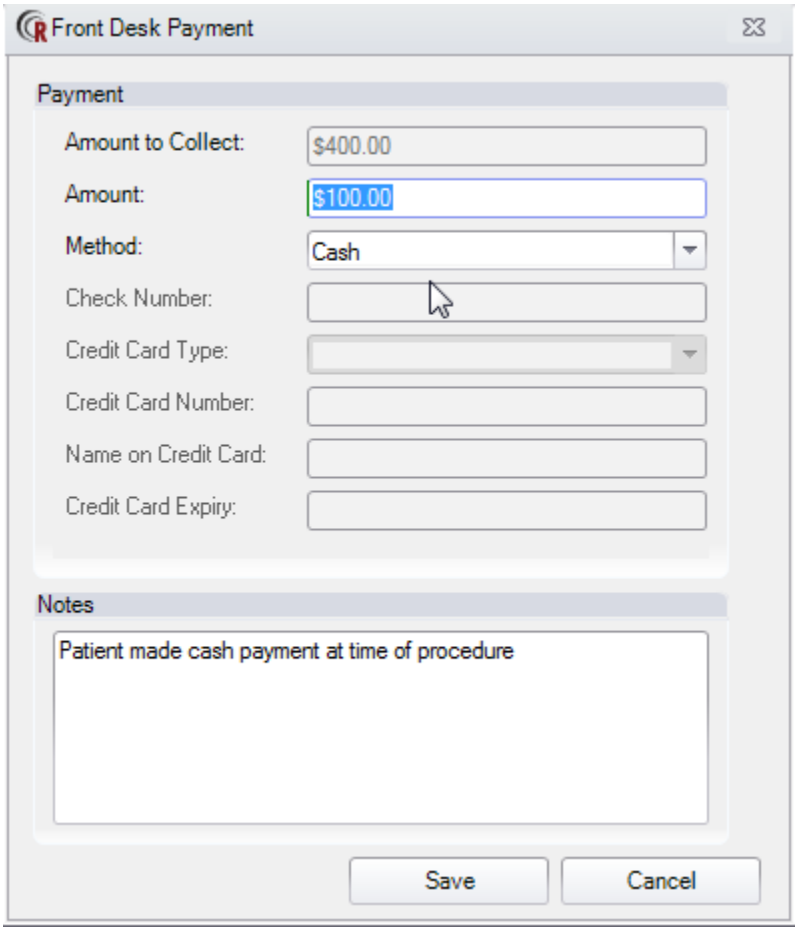
Payments can be made and a history of who accepted the payment, the amount, method of payment, and the date the payment was entered. Payment details may be edited after being posted.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.



**6.2.3.2 – Payment window**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

### 6.2.3 Exam Tab

The exam tab displays the study(s) orders, duration, room and date of the procedure. Attachments may be accessed or added. You will remember in the Schedule Order window, this area was used to display the advanced scheduling availability. The prep instructions occupy this space in Registration. Also on this tab are the PreCer t#, Expiry Date, and Billable Item.

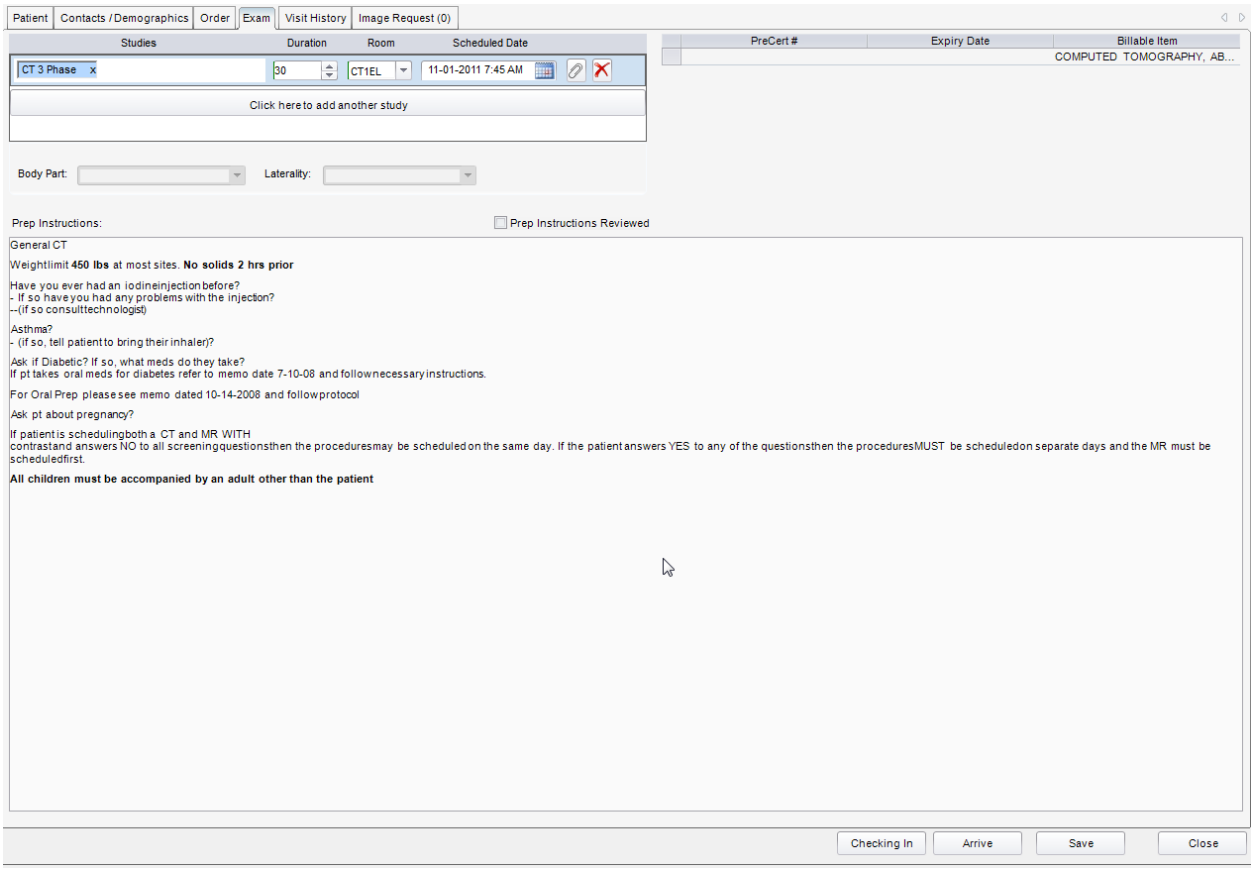


**Figure 6.2.3.1 – Registration Exam tab**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

### 6.2.4 Visit History

The Demographics at Encounter is located on the Visit History tab. Also included on this tab are the patient's drug allergies and Patient Immunizations with the ability to Export to HL7.

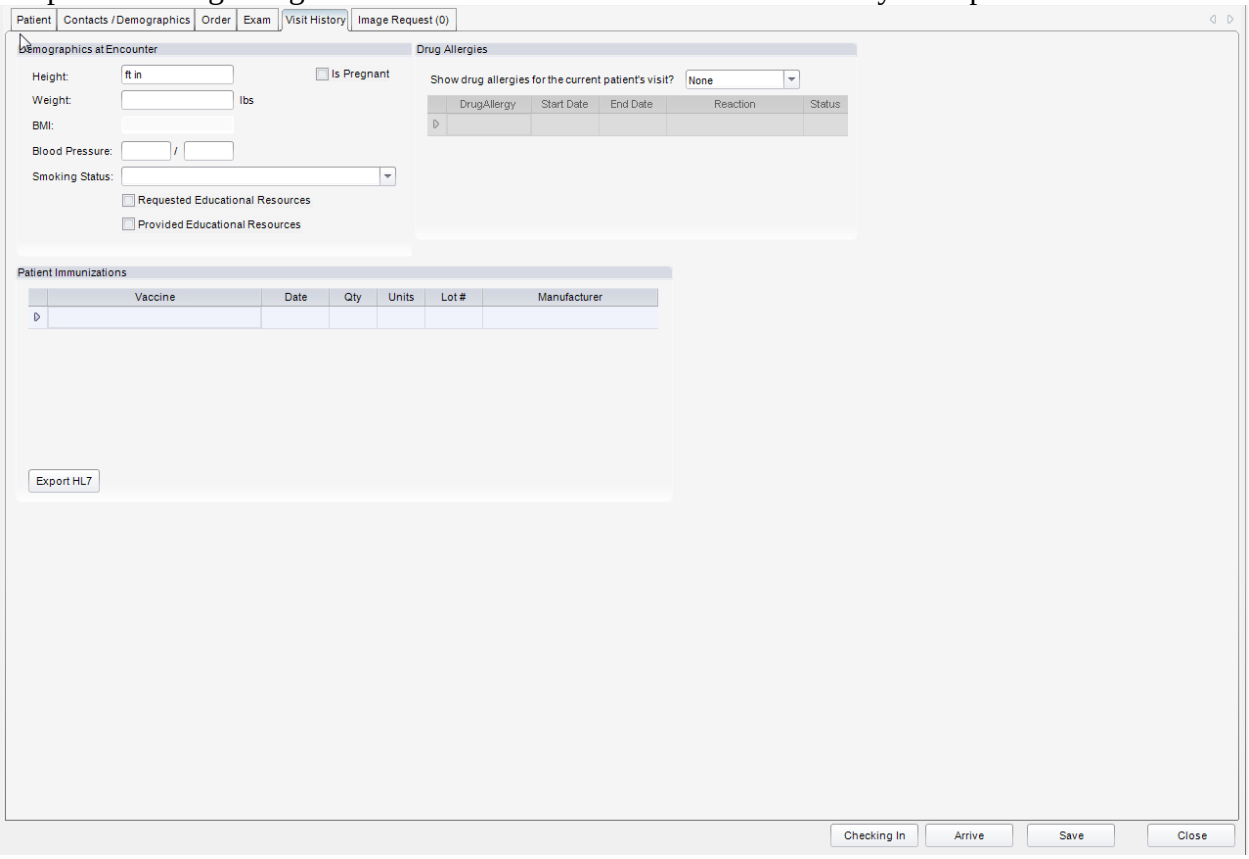

**Figure 6.2.4.1 – Visit History tab**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

### 6.2.5 Image Request

The Image Request tab is a work list view displaying the request for images for this scheduled procedure. From this tab the user may add, edit or remove edit requests. The user may also print the release form. Creating Image requests will be covered later in this document. The Image Request data window is present on the Schedule Order, Registration and Perform Exam data windows.

The Image request tab will contain the number of image requests for the study. A study with no requests for images with show "Image Request (0)" in the tab page title.

Only new requests can be removed (i.e. not save to the db). In order to "remove" other requests they have to be cancelled. This can be accomplished via the Image request tab or by editing the request from the Image Request work list.

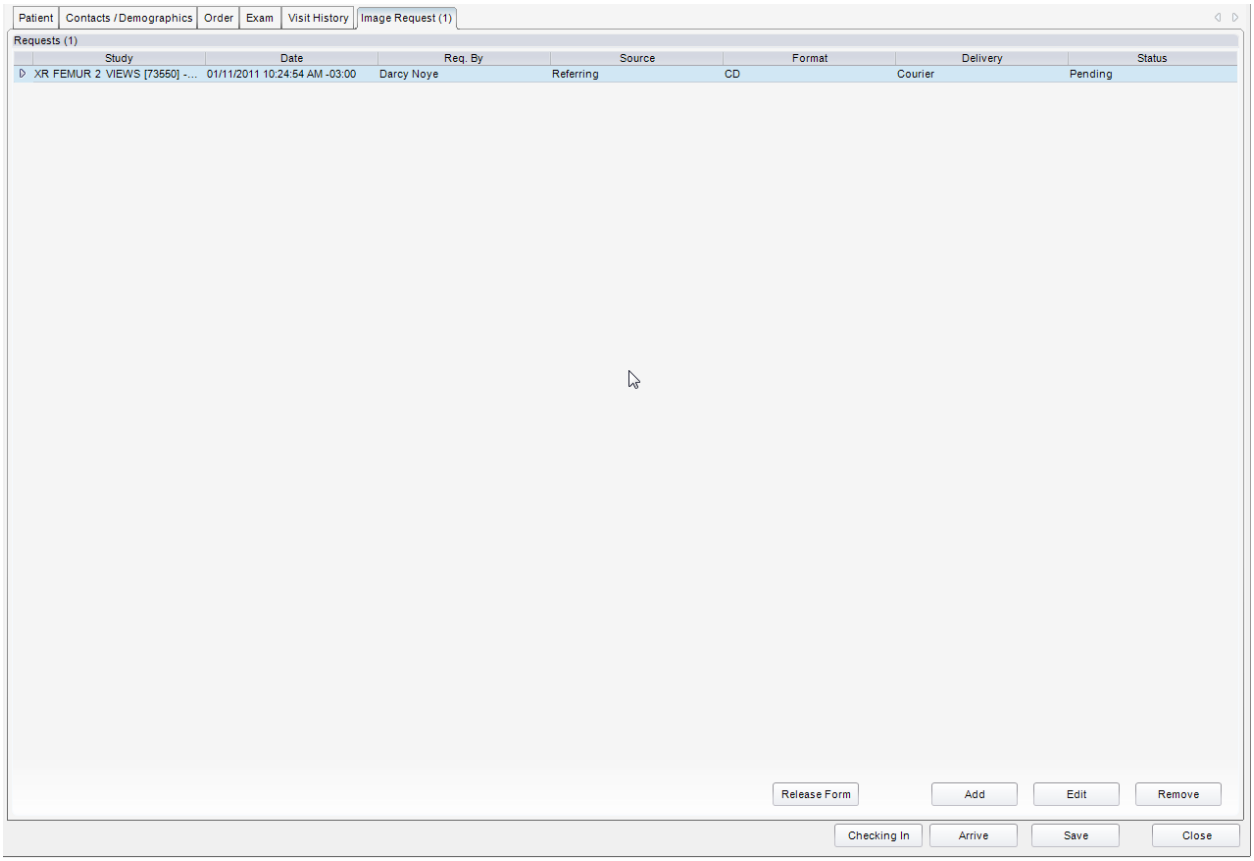

**Figure 6.2.5.1 – Image Request Tab**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

From the Image Request tab, a new request can be added, or a previous request edited. The remove button will only work for requests in a status of "New". In the example above the status is Pending. The request would have to be edited and cancelled.

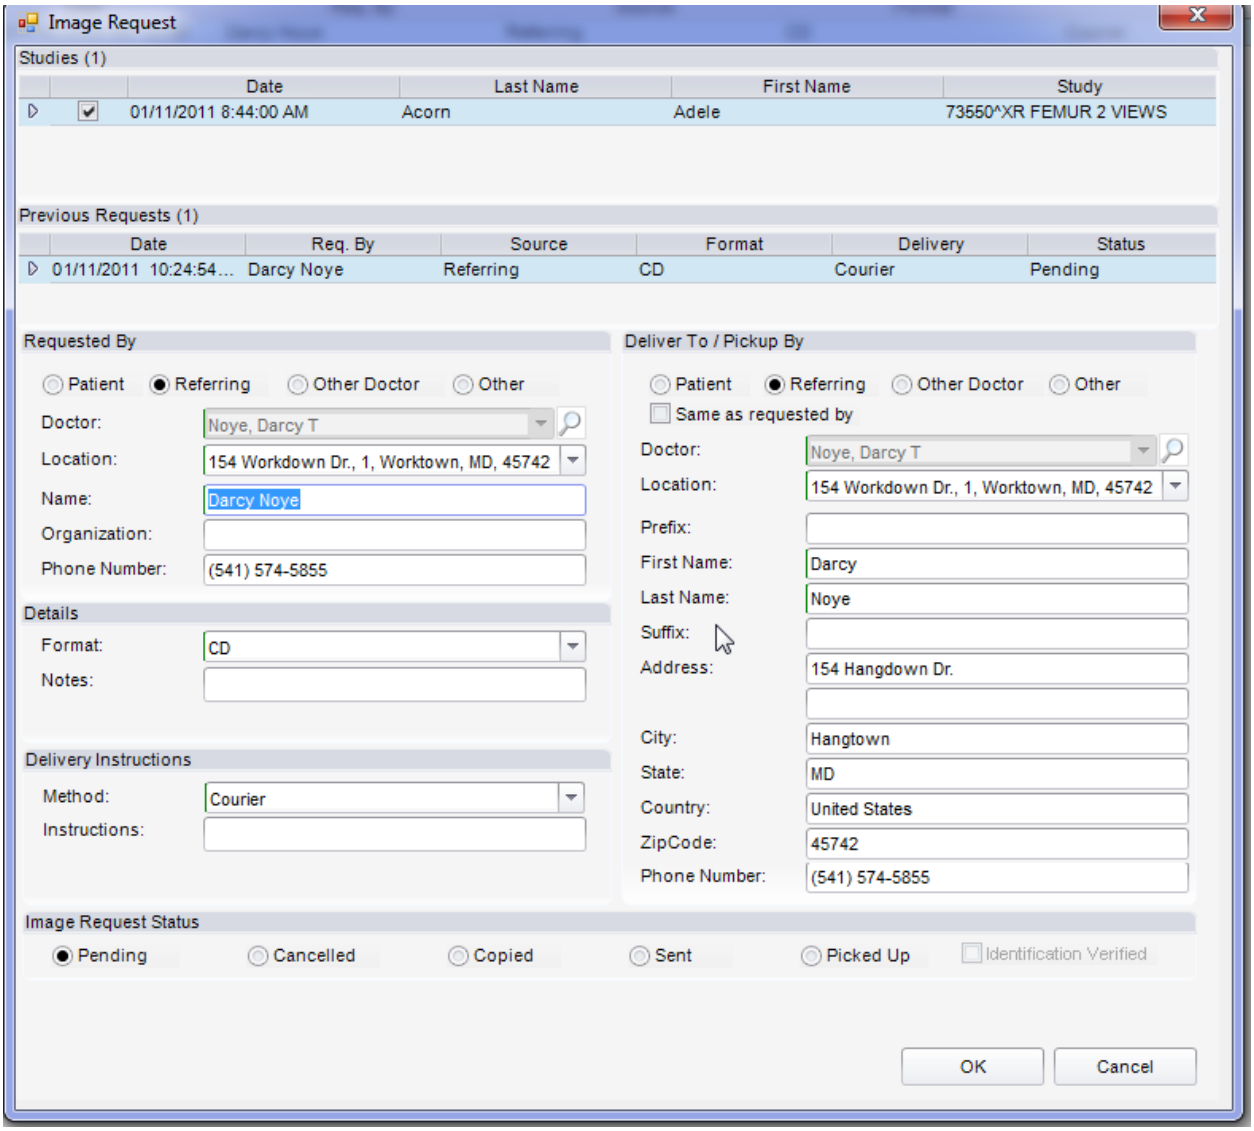

**Figure 6.2.5.2 – Image Request window**

Within the Image Request window the user will have the ability to change its status when creating a request. This will allow a user create and complete the request in one step. The "complete" status has been split. . Available statuses for the request are Pending, Cancelled, Copied, Sent and Picked Up. The statuses of Sent and Picked Up enable the system to

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

differentiate how a request was completed. Also, when a request is picked up, the "Identification Verified" check box is enabled and becomes required.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 6.3 Walk In Data Window

The Walk In data window is essentially a mirror copy of the Registration data window with no data. This gives the user the ability to skip the New Appointment and / or Schedule Order process. The idea is a patient shows up with order in hand requesting a procedure. Please refer to screenshots in section 6.2

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 7. Technologist

## 7.1 Technologist work list

The Technologist work list is a daily view for the Technologist role. As exams are completed, the record will be removed from the work list. If the exam is completed, it will advance the status to exam done. Alternatively the exam may be aborted, and thus the exam will sent back to the pending orders work list if the user so chooses or can simply be discontinued. Discontinued exams remain on the Technologist work list.
Button actions are Perform Exam and Edit Patient. Context menu options are Perform Exam, Edit Patient, Forms and Labels, Change status to…(which has a sub menu), Patient Folder, Audit History, Copy Cell and Request Copy of Images.

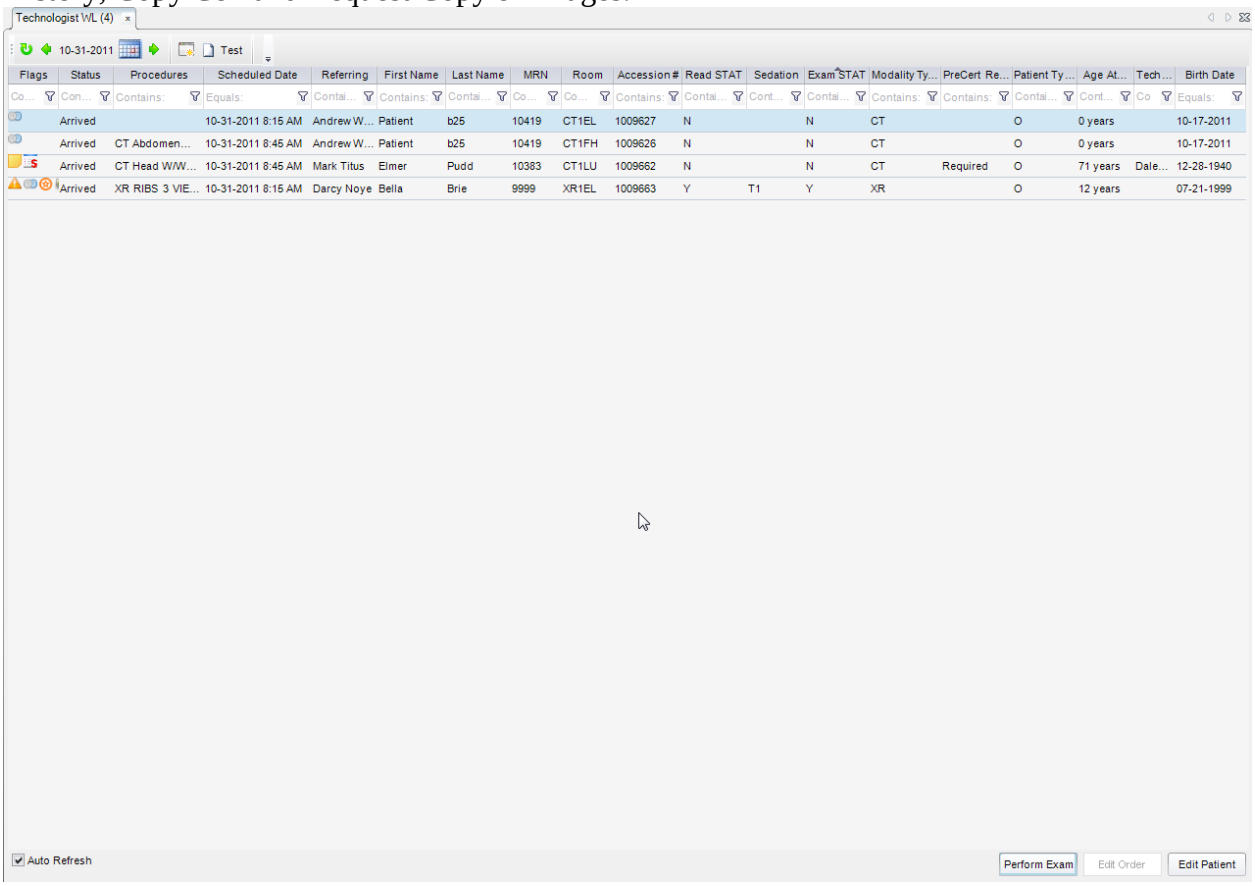

**Figure 7.1.1 – Technologist work list**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 7.2 Technologist Data Window

Accessing the Technologist data window the user selects a procedure from the work list and then selects the Perform Exam button. This covered in 7.2.8 of this document.

### 7.2.1 Patient Tab

The patient tab has the same look and feel as in Schedule Order and Registration.

### 7.2.2 Order Tab

The Order tab has the Referring details, Chief Complaint, Preferred Location, Flags, and Order Notes.

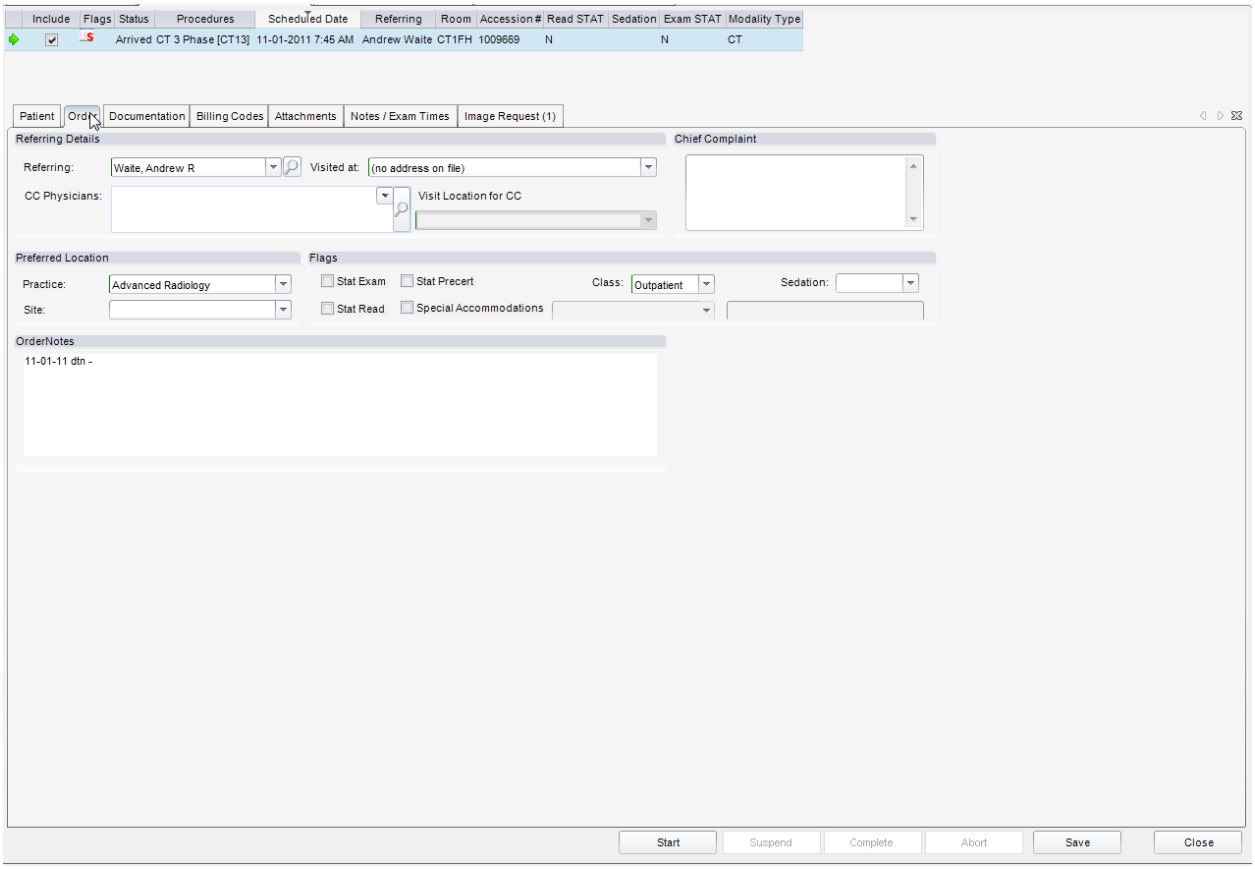

**Figure 7.2.2.1 – Perform Exam Order tab**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

### 7.2.3 Documentation Tab

The Documentation tab captures the Techs notes, the techs that performed and assisted on the exam, patient details, the equipment used and procedure to be performed and any reasons for change and associated radiologists.
To start the exam, the Primary Tech field needs to be populated. If the patient the exam is being performed on is a female between the ages of 12 and 55, the LMP and Pregnant / Not Pregnant fields become required fields.
To complete the exam the Technologist Notes field must be completed.

The referring physician may have a Preferred assigned to the Personnel profile. If they do, the Assigned Radiologist field will be pre-populated this Radiologist. In a case where there is more than one preferred reader, the Assigned Radiologist field will not have a default value. Upon starting the exam a dialog box will inform the user that preferred radiologists are assigned to this referrer. Ok to the message will mark the field with **!** indicating that a preferred radiologist is configured and may be selected. The preferred radiologists will be prefixed with Preferred:

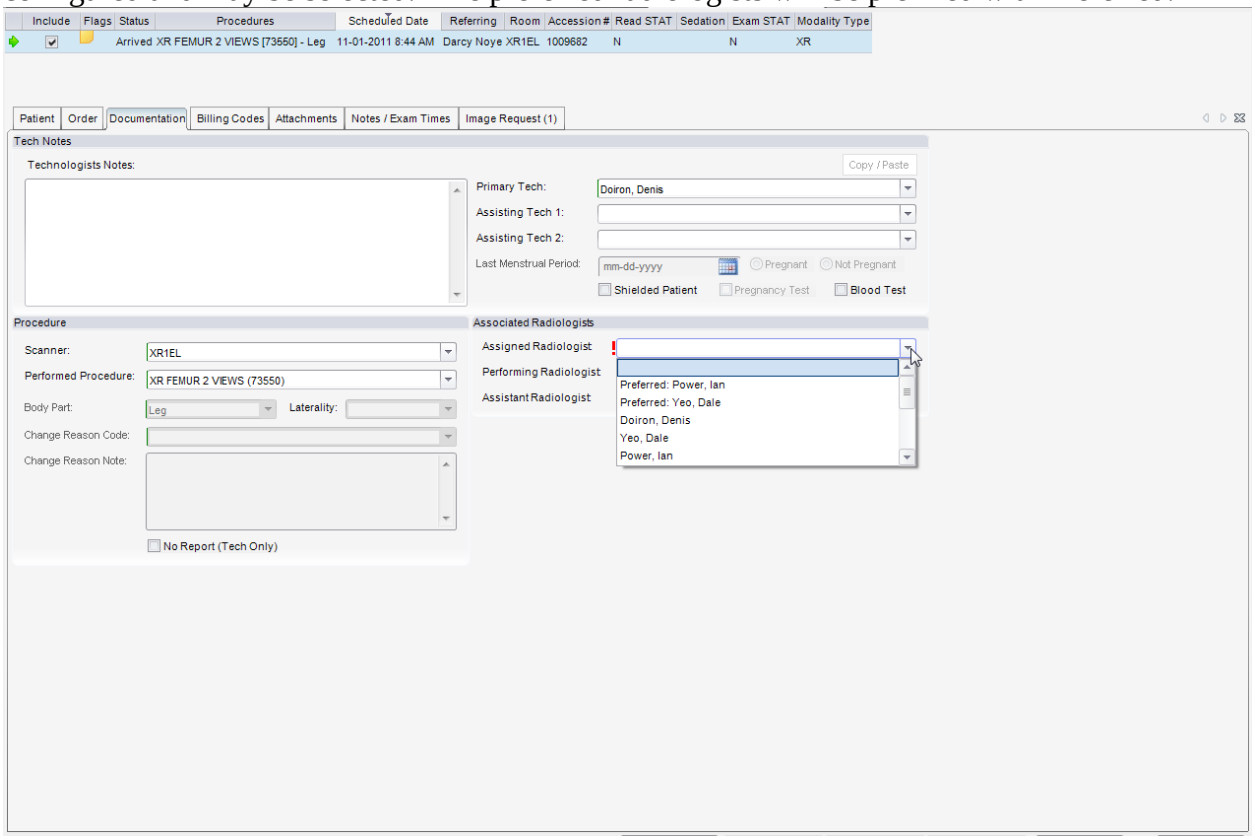

**Figure 7.2.3.1 – Perform Exam Documentation tab**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

If the exam being performed is flagged with No Report (Tech Only) and / or Report External to rRIS, additional check boxes will appear on the Documentation tab. If both of these check boxes are present when Performing Exam, only one will be permitted to be checked as they contradict one another. A warning message will be presented to the user when one of the checkboxes is selected.

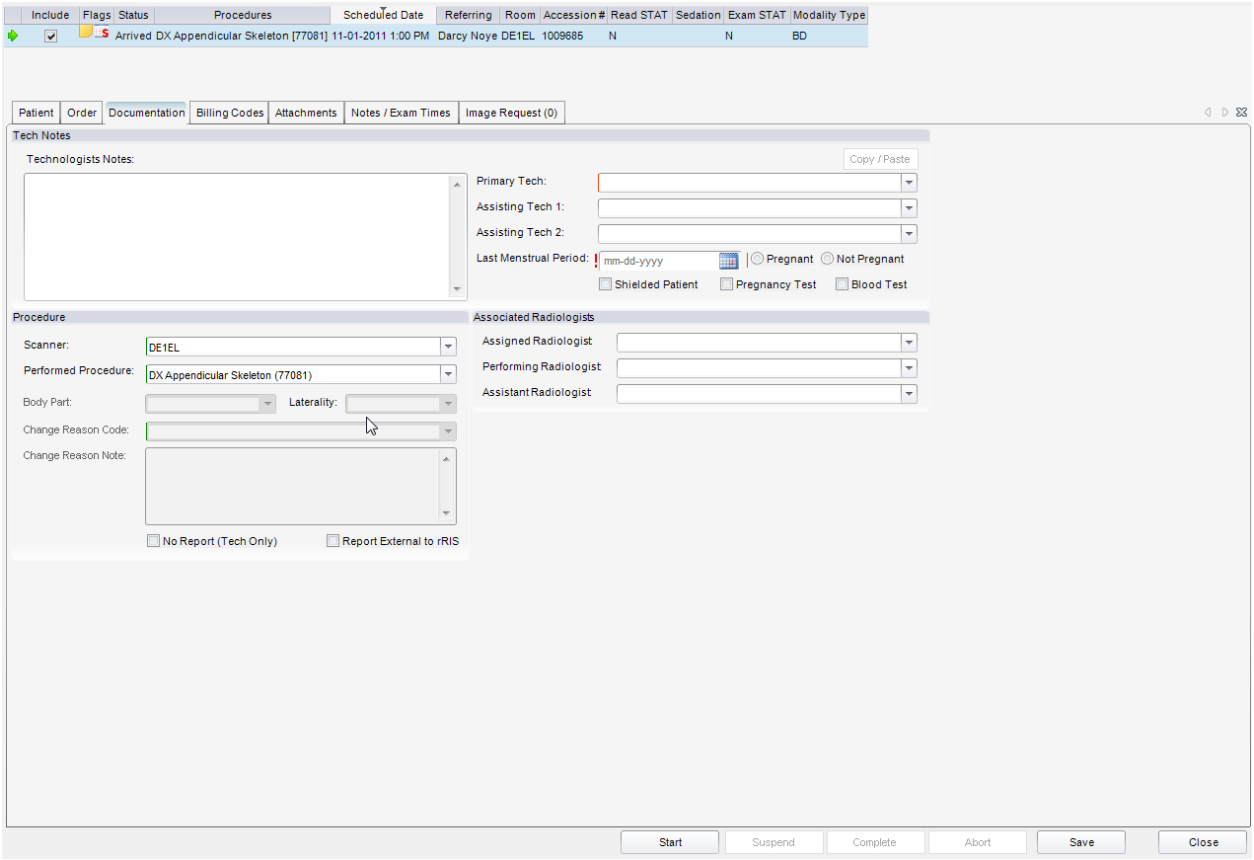

**Figure 7.2.3.2 – Perform Exam showing No Report and Report External check boxes**

Completing an exam with either "No report (Tech Only)" or "Report External to rRIS" will send the exam to a status of "ExamDoneTechOnly" and will not be added to the Radiologists work list of Exam Done.

After the exam is started, the rest of the buttons will become enabled. If the exam is aborted, the Abort Exam window opens. The user must select a reason why the exam has been aborted. The list of reasons can be sorted and / or filtered. A right click on the column header gives the user more sorting options.
When a reason code is selected and you hit the OK button a dialog box will open asking if you would like to send this order back to the Orders to Scheduled work list. Select Yes will do so. Select No will cancel the exam and set the status to Discontinued.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

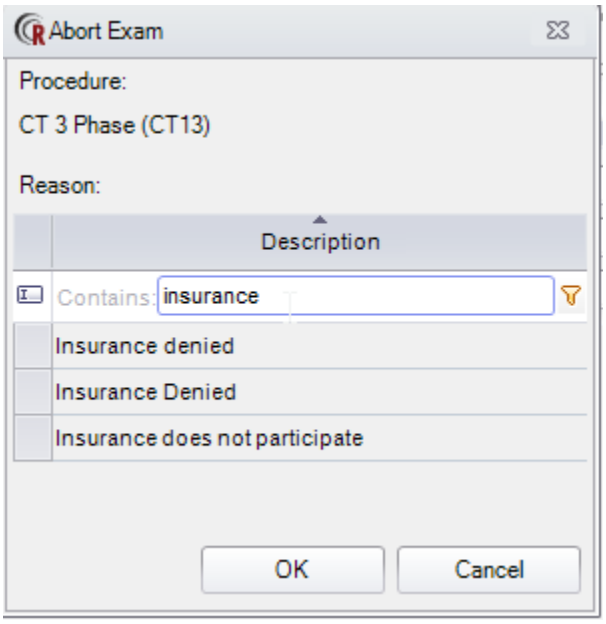

**Figure 7.2.3.3 – Abort Exams reason codes**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

### 7.2.4 Billing Codes

The Billing codes tab allows the tech to edit the details of the billing codes, add cpt modifiers, units used, change reason, and precert status.

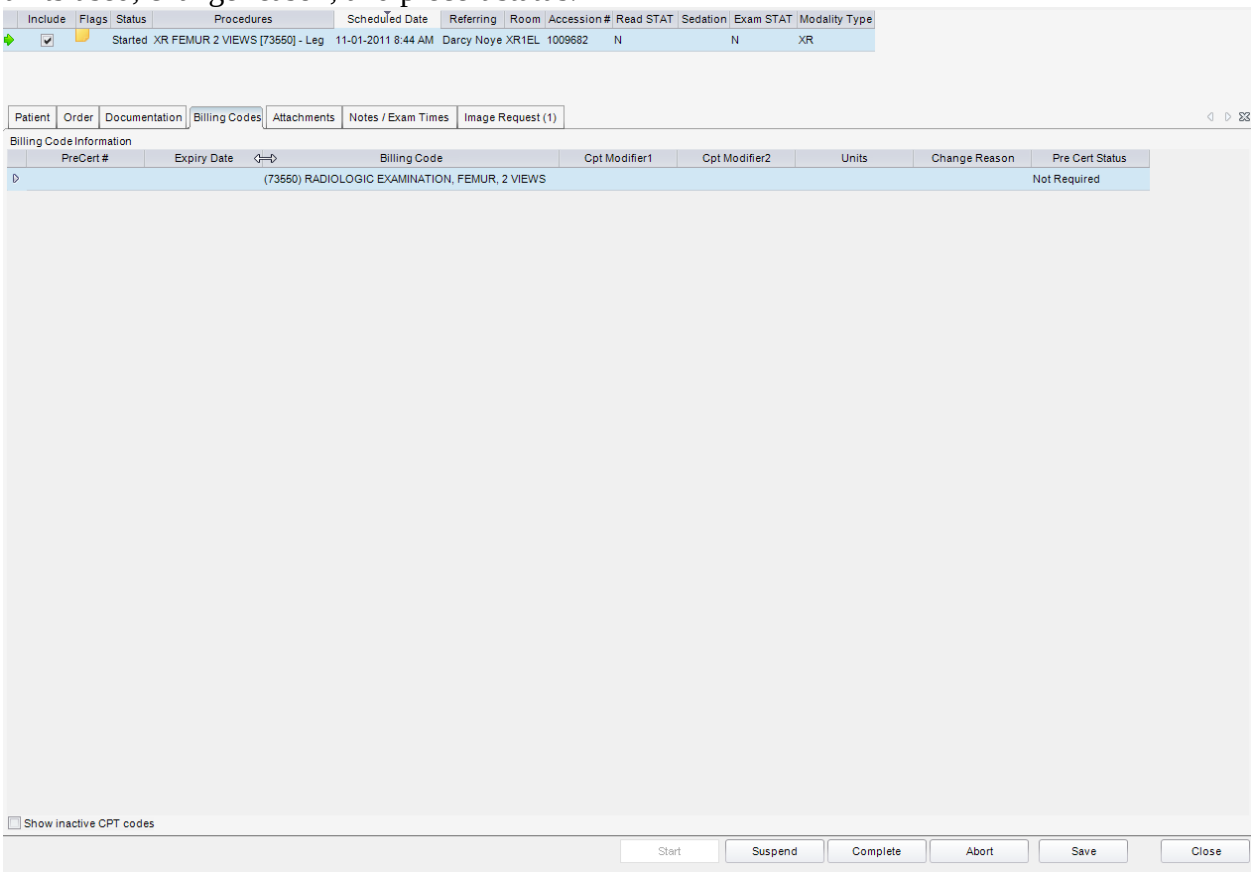

**Figure 7.2.4.1 – Perform Exam Billing Codes**

### 7.2.5 Attachments Tab

The Attachments Tab is the same as in previous data window.

### 7.2.6 Notes / Exams Times

The Notes / Exam times tab captures the Scheduled / Arrival time and who scheduled and arrived the patient.

The time that exam was started and completed and by whom is also captured.

Appointment notes and a duplicate view of the patient notes is present. Both of these text boxes can be edited. The patient notes entered here will also display in the patient notes field on the Patient tab.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

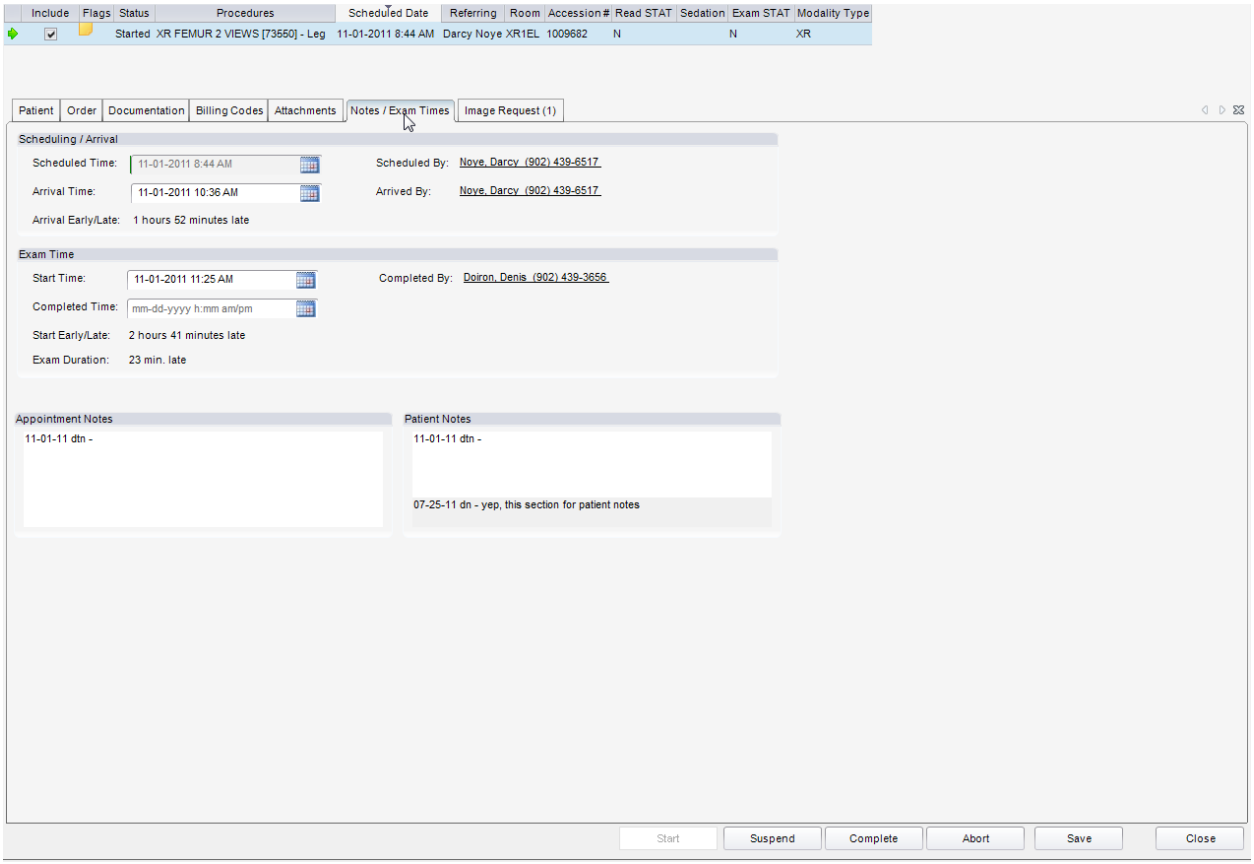

**Figure 7.2.6.1 – Perform Exam Notes / Exam Times tab**

### 7.2.7 Image Request

There are no changes to the Image Request tab. Please see section 6.2.5 of this document.

### 7.2.8 Credential Switch

To assist in auditing in shared workstation environments where a common login may be used, Credential Switch has been developed. This flag is added at the user's personnel level. If the users account has this flag checked, they will receive prompt. If valid credentials are entered the user will be permitted to continue workflow.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

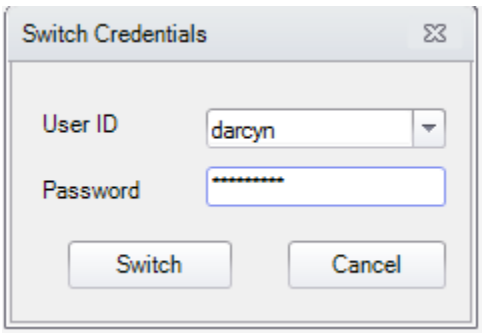

**Figure 7.2.8.1 Switch Credential dialog box**

The user will be prompted every time either of these Data Windows is accessed, even when the user may currently have a data window open where credentials have been passed. If a second user clicks on the first user's tab, rRIS will allow them to see the tab, without being prompted for credentials again. In this manner, it is possible for the second user to save the data of the first user, and it will be saved under the credentials of the first user. This was preferred to having the system prompt yet again for credentials. When the user leaves the Perform Exam or the Edit Patient, the credentials will be set back to the user logged into the application. The dialogue box will keep a history of User ID's enter as long as the current rRIS session is active.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 8. Radiologist

## 8.1 Pending Dictation

The Pending Dictation work list has two different default views. For most users who access this work list they will see the Pending Dictation option from the Radiologist menu. There is also a menu option of Pending Dictation (all) that displays all pending dictations for all users. The work list that opens for the user will not display exams that are assigned to another Radiologist, or exams that have been dictated on or suspended by another Radiologist. Beside tab contains the name of the work list as well as the count of records in the work list. The number is updated jobs are completed. When a filter is applied it will display the number of records currently on work list followed by the overall count. (Example 9 of 25)
Button actions from this work list are only to Dictate. Context menu options are Dictate, Patient Folder Audit History, Copy Cell, Forms and Labels, Stat Case (which has a sub menu), Assign to Radiologist and Request Copy of Images
The Pending Dictation work list has a large selection of columns available to be viewed. I have included 2 screenshots to capture all columns.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 8.2 Dictating Data Window

When the Dictating data window is opened a new menu option "View" becomes present. This menu has options for the dictating data window. This menu is present in the dictate and reporting windows. Expanding the menu allows the user to select which data panes they wish to view. If one of the data panes is accidently closed, it can be re-opened from this menu. You will also notice that you can "Save Layout" changes and "Reset Layout" changes. Adjusting the layout during the session doesn't automatically save the layout on exit of the window. If the user adjusts the layout to their liking, select Save Layout will retain the layout for all future sessions. Reset layout will remove any changes made and revert back to the default layout.

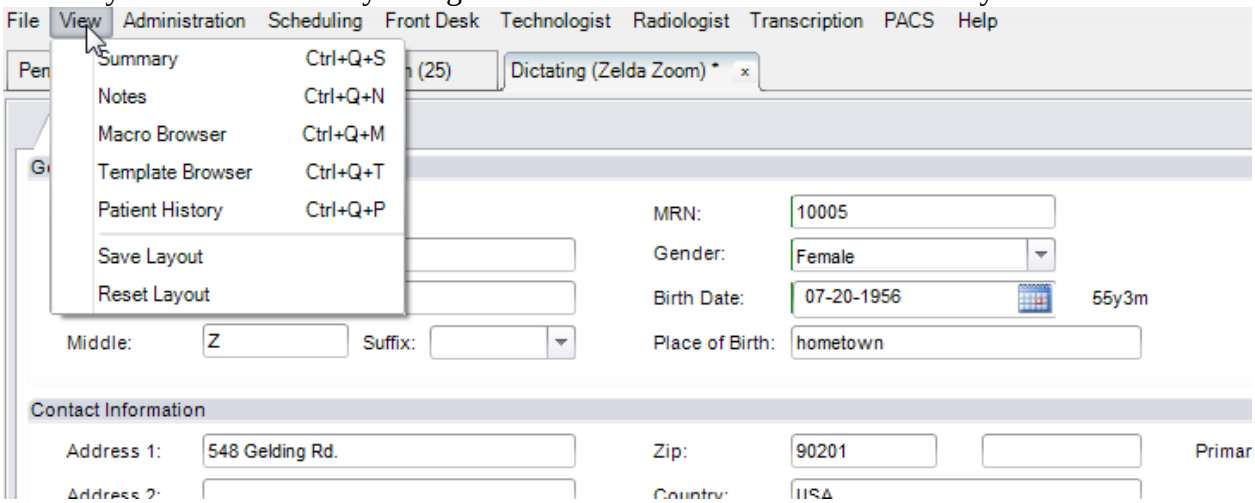

**Figure 8.2.1 – View Menu**

The dictating data window has 3 tabs, the Patient Tab with the patient's name, address origin, and notes. The Exam tab that shows the technologists work flow. Lastly, the report tab which has the dictation control, and report editor. The data tabs can be moved and docked within the main document frame area. A user can list the tabs in the order they like or dock them individually. On the outer frames of the data windows are data panes. These data panes include the patient summary, a section to enter notes, Macro Browser, Template Browser, and a Patient History list box.

These controls are much more flexible, they can be docked anywhere in the bounds of the reporting screen, they can be displayed as a tabbed document window next to the document window as if it was one. It can be floating above the rRIS, or on another screen. They can be pinned so that they stay visible or they can be unpinned so that they auto hide to a small tab.

I have provided examples in an attempt to show the versatility of the data pane.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

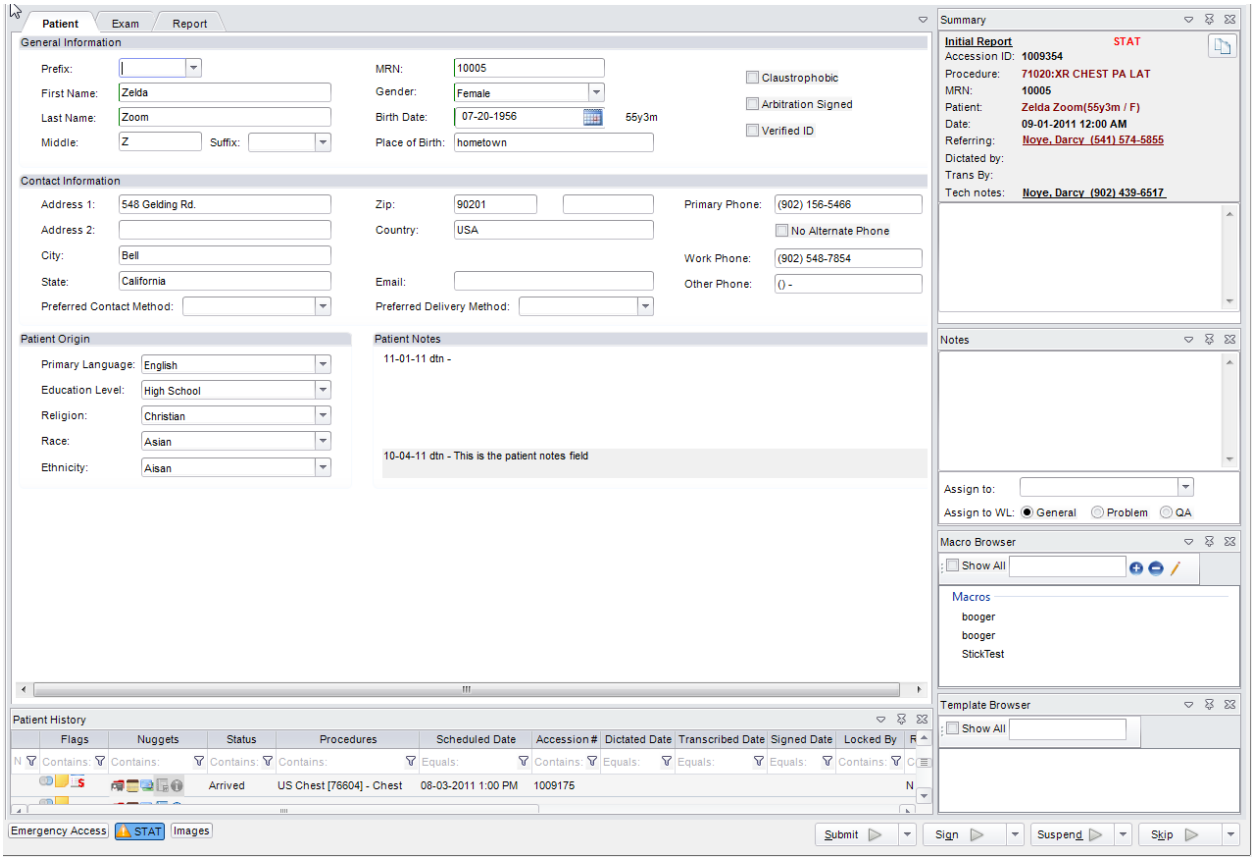

**Figure 8.2.2 – Dictating data window sample view 1 tabbed**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

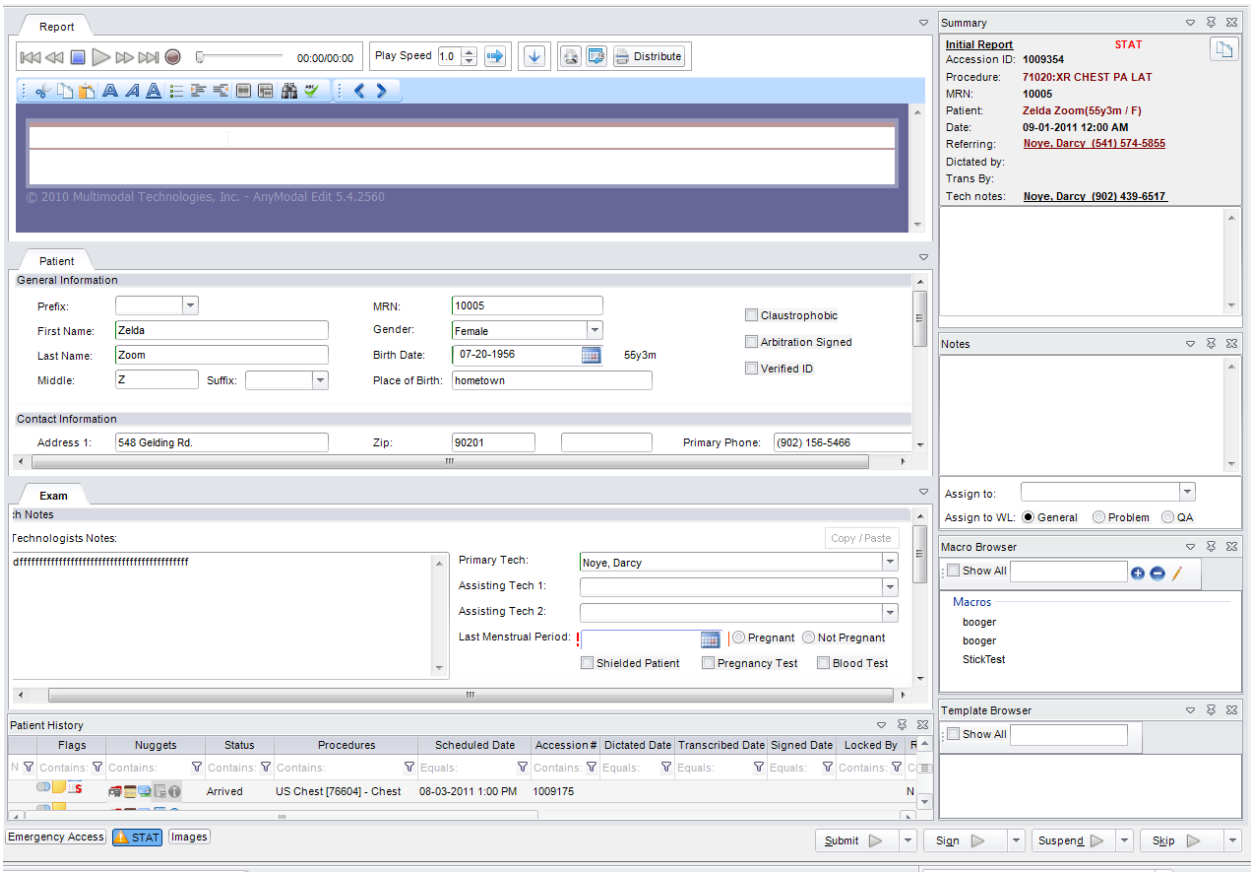

**Figure 8.2.3 – Dictating data window sample view 2 horizontal**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

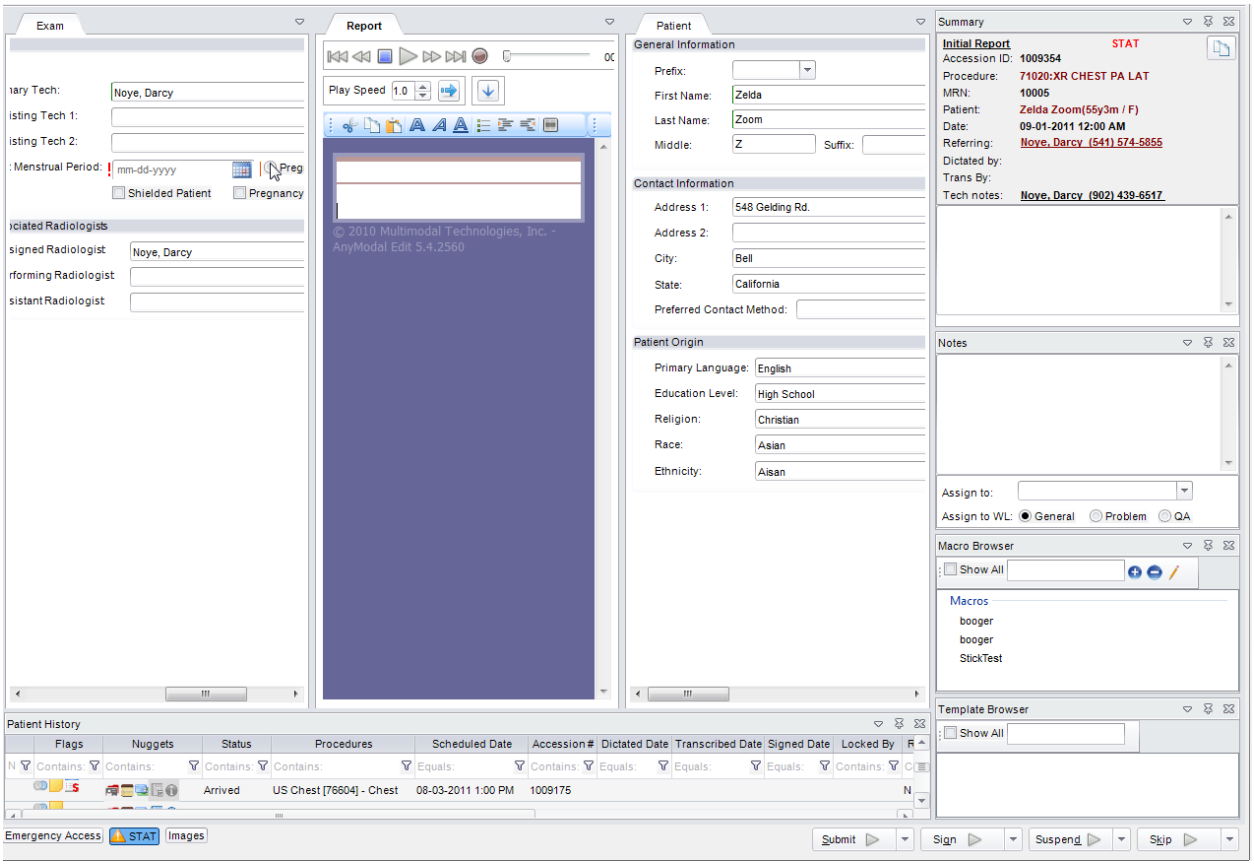

**Figure 8.2.4 – Dictating data window sample view 3 vertical**

The user can have one or two tabs horizontal / vertiacal and the other(s) tabbed. The layout can be saved in the users desired configuration. If the layout is changed, but not desired, the user can select reset layout to revert back to the original.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

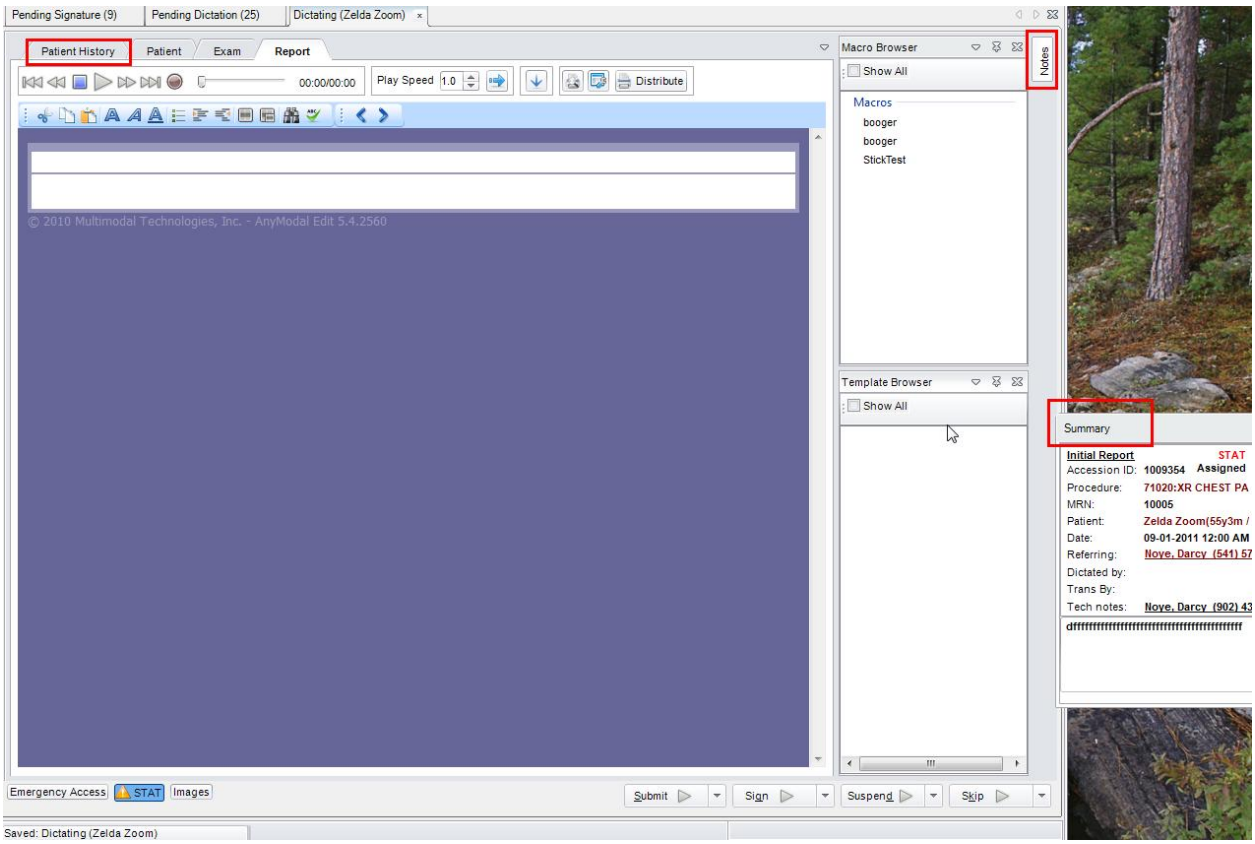

**Figure 8.2.5 - Dictating data window sample view 4 permitter panes layout changed**

In Figure 8.25 we have the summary screen that is floating on the desktop on the right of the rRIS. Patient history is a tab next to the patient tab (sequence of tabs can be re-arranged), and the notes are unpinned to make them auto hide on the left side of the window. Hover the mouse over the unpinned data panes will expand that data pane into view.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

### 8.2.1 Patient Tab

Figure 8.2.2 shows the patient tab. The information available are the patients general Information such has name, gender date of birth, contact information, patient Origin, and patient notes.

### 8.2.2 Exam Tab

The exam tab is a view of the technologist's notes, the tech that performed the exam, procedure details, and assigned radiologists.

### 8.2.3 Report Tab

On the report tab the user will find the report template, the dictation control, the ability to adjust play back speed, distribute report, report history, and preview report.

**Dictation Control**

The dictation control buttons in use will be lit to easily identify the current state. The buttons will light up in a blue color, with the exception of the record button which will be red. When no buttons are selected from either the Speechmike, or the dictation control, the stop button will be lit blue.

**Figure 8.2.3.1 – Dictation control in a stopped state**

**Figure 8.2.3.2 – Dictation control in record state**

A right click within the report template will open context menu. From this menu the option of text expander is available. The text expander has a preconfigured list, but the user may also add to this list.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

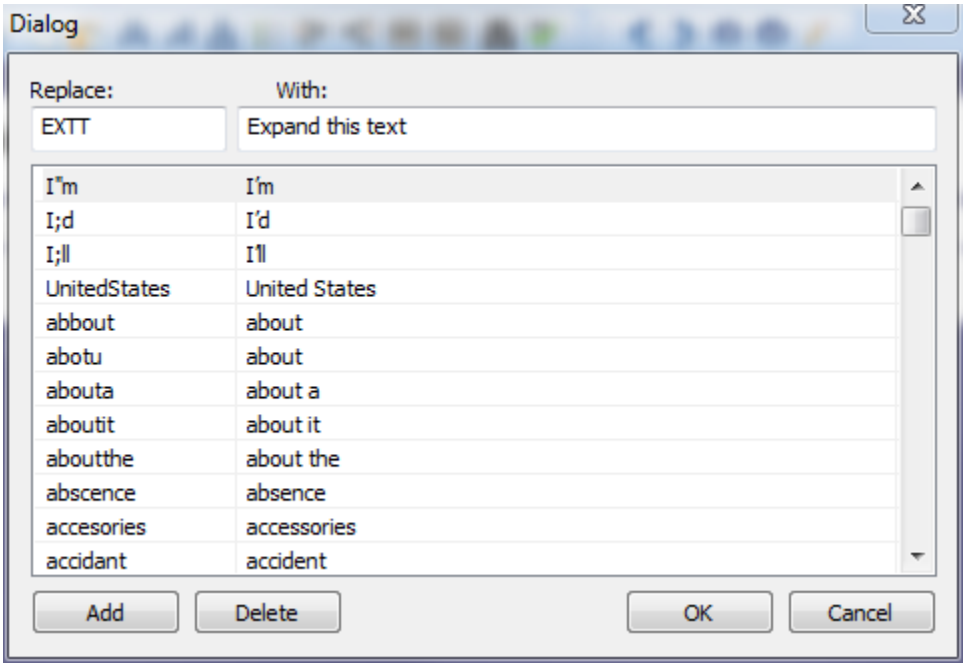

**Figure 8.2.3.3 – Text expander dialog window**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**Report History**

Report history is accessed from the Icon outlined in red below. Selecting this button will open the Report History window.

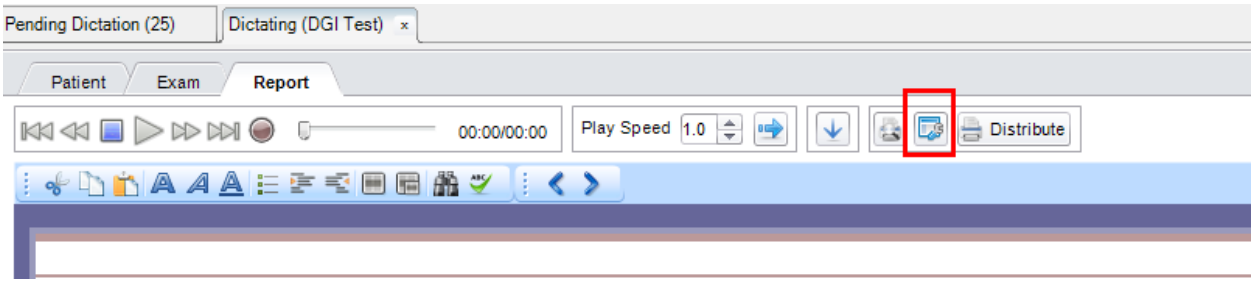

**Figure 8.2.3.4 – Report History Icon**

The user can select which version they would like to view as well as play back the dictation for that interpretation. The user may also enter another accession number to view the report and play back the dictation. The study info panel displays information about the patient and specific history of the study.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

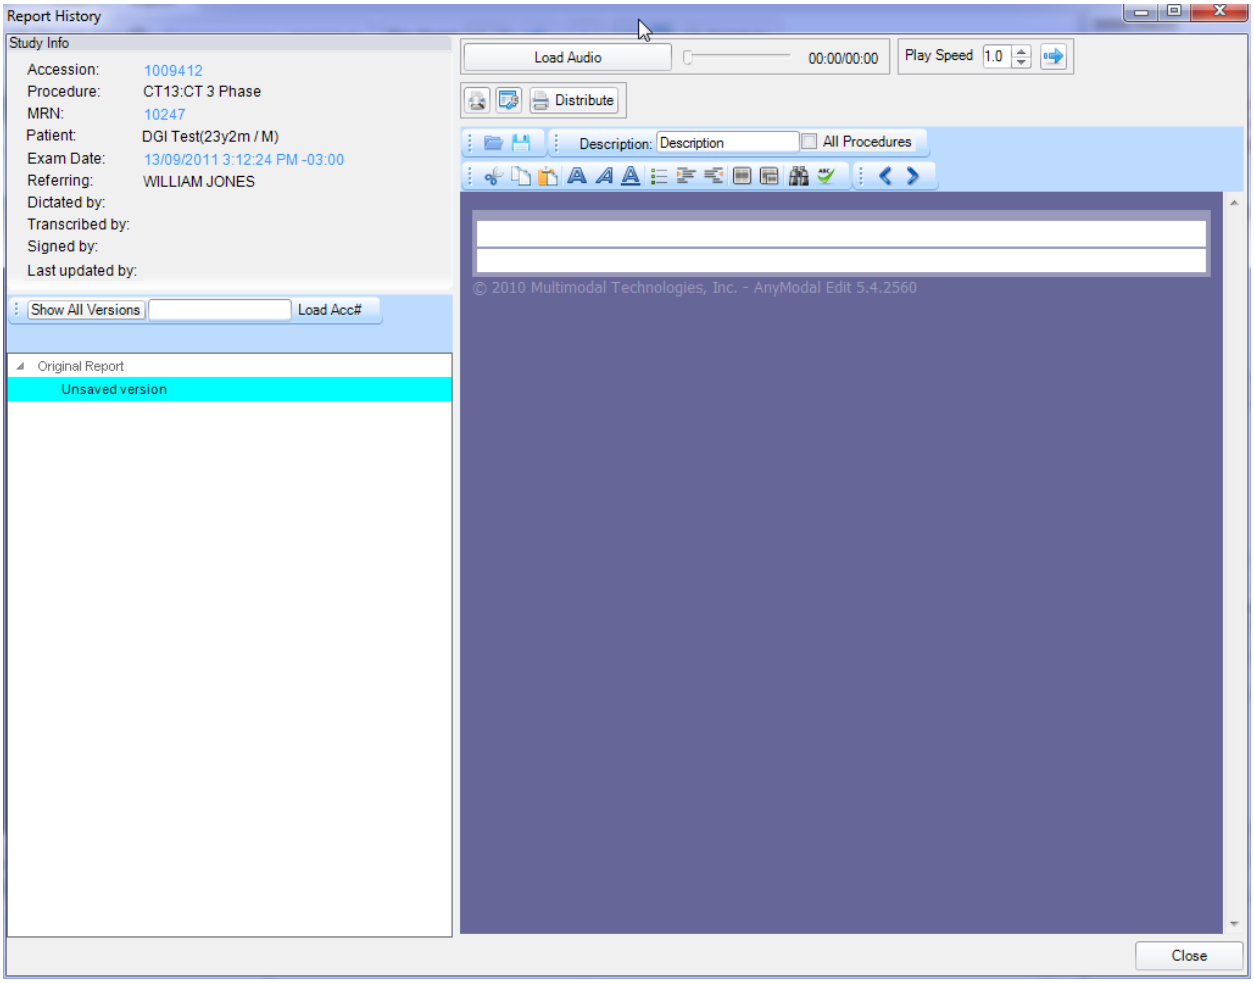

**Figure 8.2.3.5 – Report History Window**

The Report Preview button outlined in red below provides the radiologist and the technologist the ability to preview diagnostic reports.

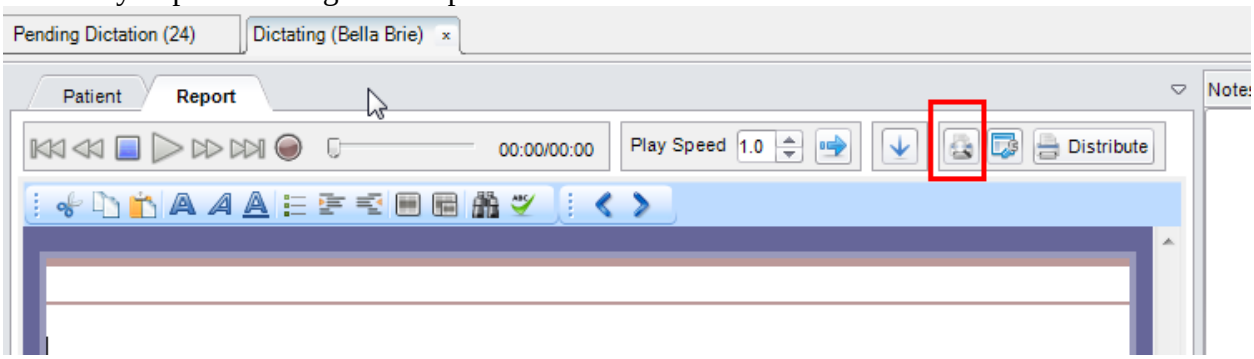

**Figure 8.2.3.6 – Report Preview**

From within the diagnose window or create reports windows will display a print layout view of the report even when the interpretation is not saved to the DB.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

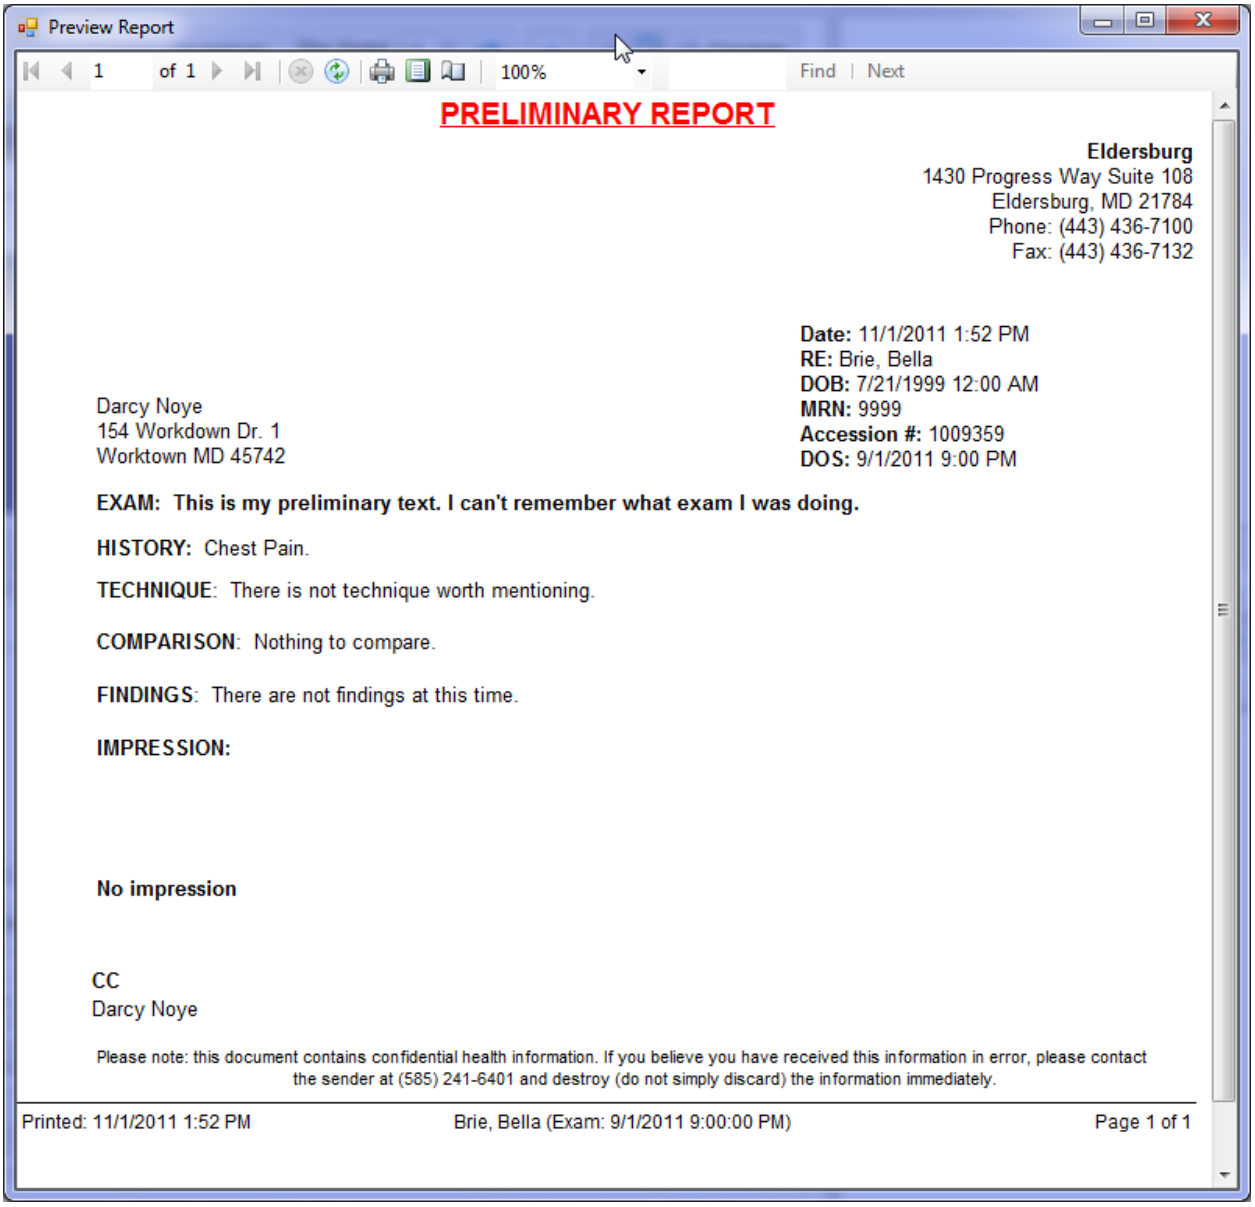

**Figure 8.2.3.7 – Report Preview**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**Dictating and Create Report Configurable Default Buttons**

The button controls on the Dictating, and Reporting windows for Radiologists and Transcriptionists have a downward arrow next to the button indicating that there is more than one potential action that can be completed on a particular button control. Figure 8.2.3.8 displays these buttons, with the Submit button menu expanded showing alternate actions. Hover the mouse pointer over the button will show its default value. Clicking directly on the button will perform the assigned default action.

You can see in Figure 8.2.3.8 that two option from this buttons drop down list have bypass VR. Selecting one of this menu options will submit the dictation skipping voice recognition.

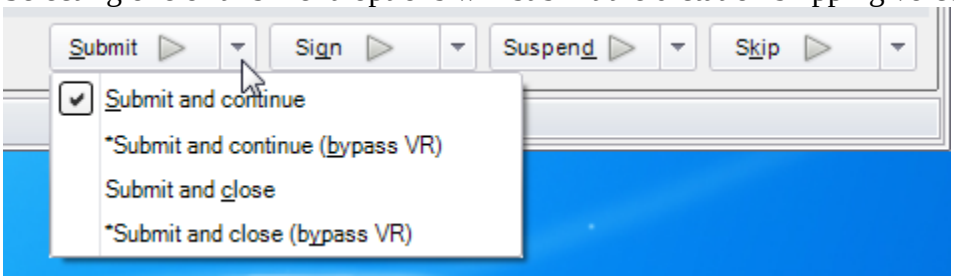

**Figure 8.2.3.8 – Radiologist drop down buttons**

To change the default action of the button, hold down the CTRL key on the keyboard and select the action from the drop down list. The option selected from the list will be performed as well as change the default setting for the button. When the default action is changed for a button, the text on the button will also change.

Some actions are preceded by an '*' (as displayed in figure 8.2.3.8), these are the actions that cannot be defaulted. If the user attempts to default that action a message box would be displayed.

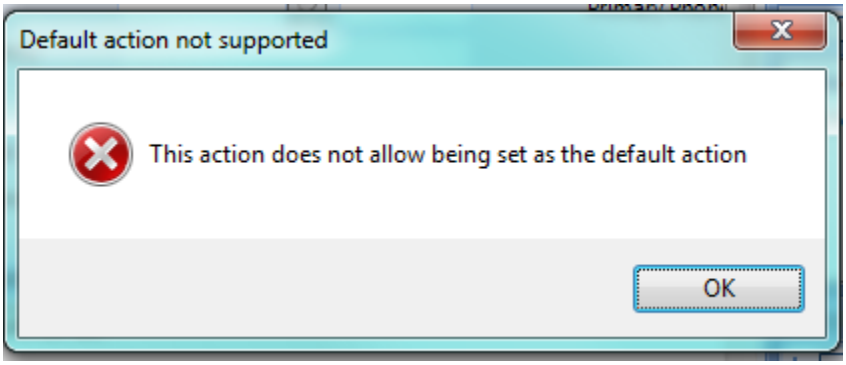

**Figure 8.2.3.8 – Message informing user the action cannot be defaulted to the button**

Actions are defined as "button action" and continue or "button action" and close. Referring to Figure 8.2.3.9, you will notice ICONS on the buttons as play or stop. Assigning actions that are to continue to the next record on the work list display the play ICON, and actions that are to complete action and close data window to return to the work list will have the stop ICON.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

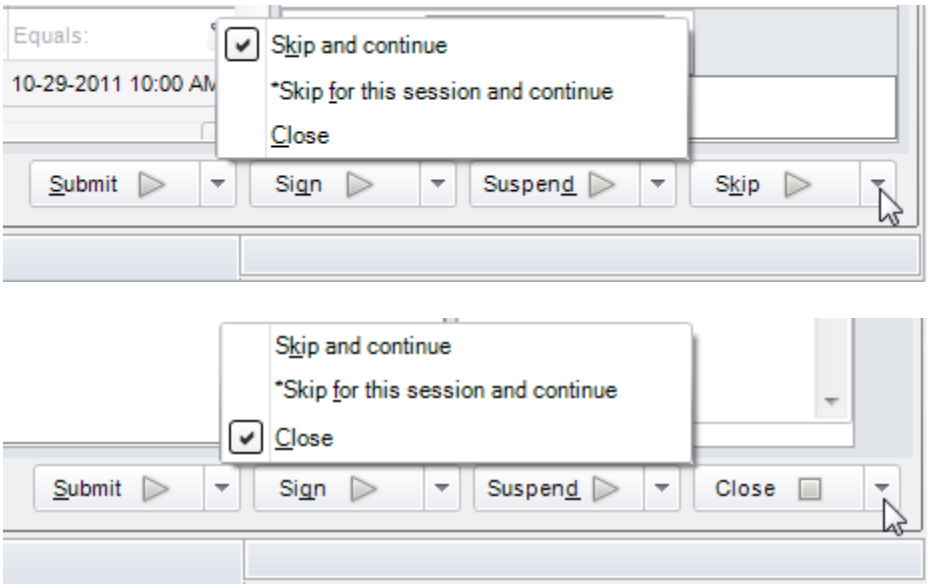

**Figure 8.2.3.9 – Default button changed. Default action checked in drop menu with text on button also changed.**

In figure 8.2.3.9 the menu options are to skip the current exam and a specified following action. In this example Skip and Close if defaulted with the action being to simply close the Dictate window.
Skip and continue will skip the item for the current workflow instance. To access this exam in the Dictate window again, it can be opened directly from the work list as normal, or if the user completes the entire work list, then the skipped rows are accessed next.
The final menu option of "*Skip for this session and continue" will mark this exam as such. Unlike "Skip and Continue" once the user completes the work list, exams flagged "*Skip for this session and continue" will not be accessed during the normal "next available exam" work flow. If the user so chooses, they can access the exam via the work list, or if the exam(s) are to be added back into the "next exam" work flow, the user does have the ability to manually add these skipped exams back into the workflow by resetting skipped rows via the Radiologist menu option displayed in Figure 8.2.3.10. Also in Figure 8.2.3.10 is the window that opens. The user can reset individual rows or all of the skipped rows in this list.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

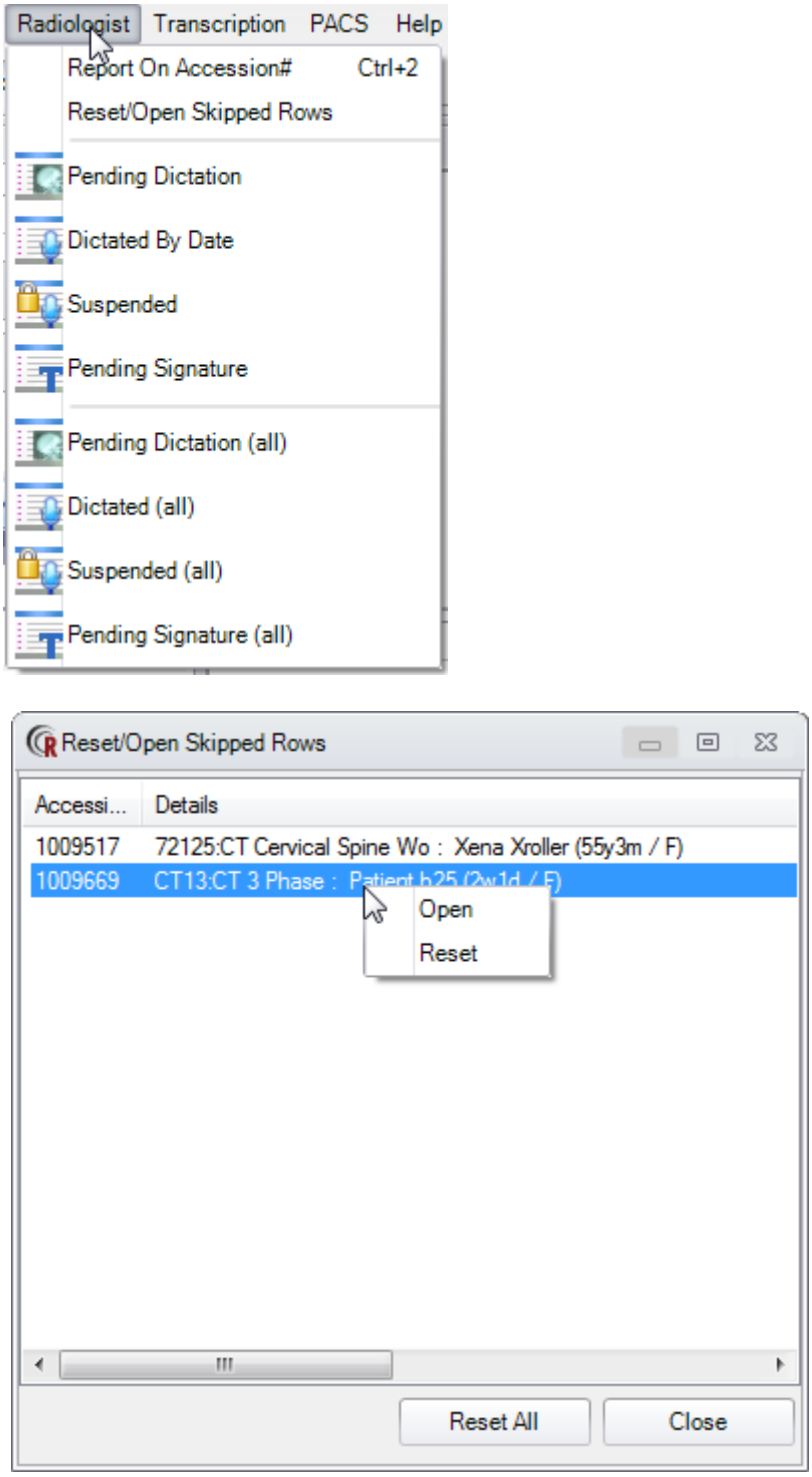

**Figure 8.2.3.10 – Reset/Open Skipped Rows menu option and Window**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**Emergeny Access**

If the user has the Emergency Access flag, they will be permitted to override a lock to an exam and continue workflow. Figure 8.2.3.11 shows the Dictate window open by a user that has the Emergency Access flag. This exam is not owned by this particular user. Selecting the Emergency Access button will enable the "Submit, Sign, and Suspend" buttons, permitting the user to continue workflow for this exam. The emergency access flag is set for the user in the personnel editor.

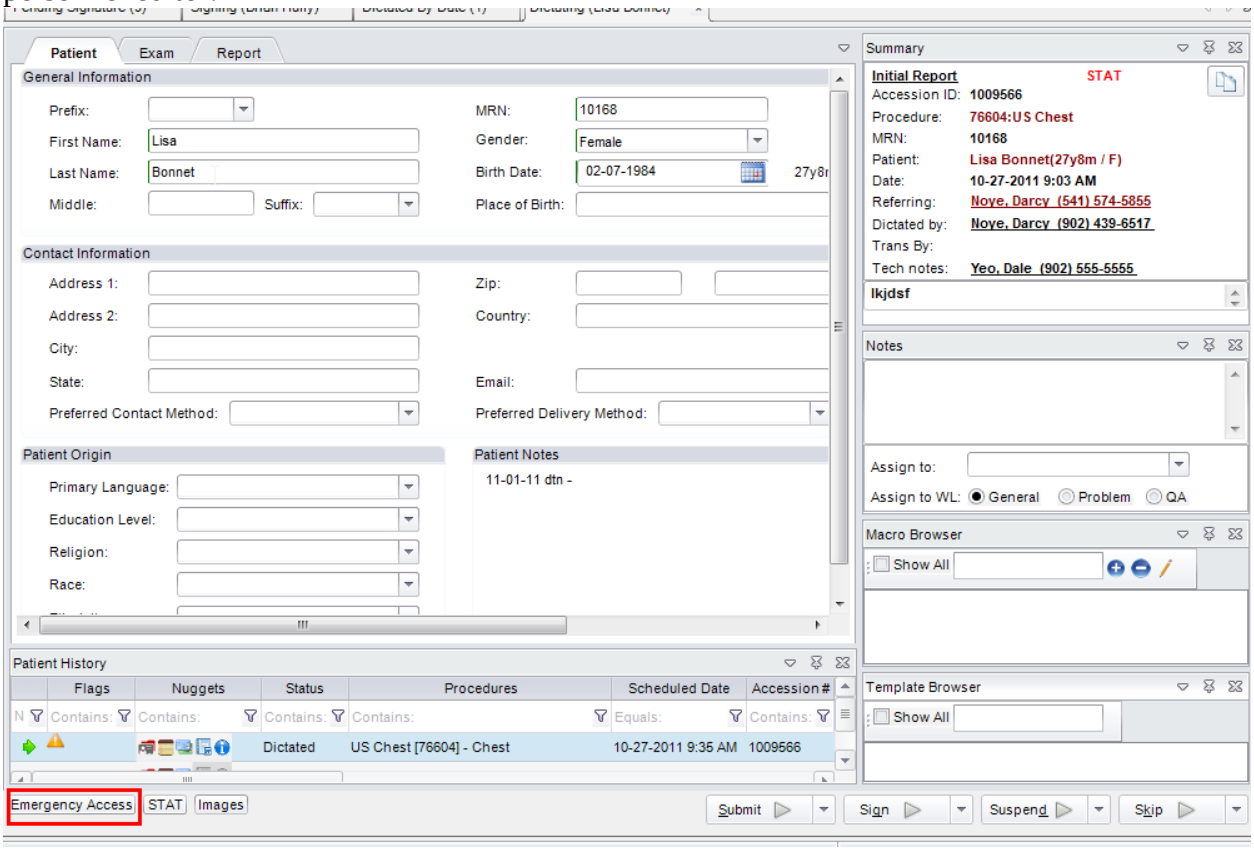

**Figure 8.2.3.11 – Emergency access**

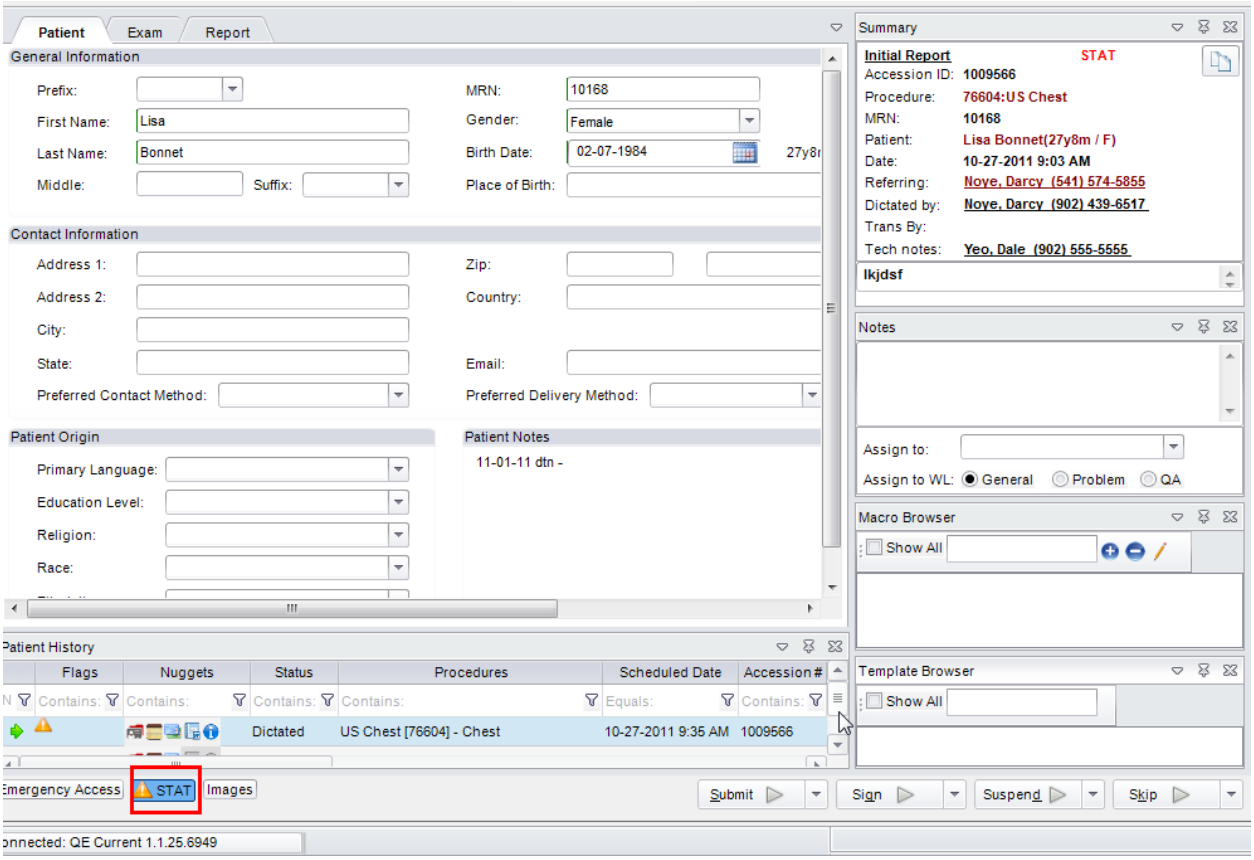
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 8.3 Dictated by Date

The Dictated by date work list is a daily view of jobs completed by the logged in user. It shows jobs in all status from Dictated to Signed.
Buttons actions from the Dictated by Date work list is only Dictate. Context menu options are Assign to Transcriptionist, Stat case (has sub menu to assign/unassign), Problem Queue (sub menu to assign/unassign) , QA Queue (sub menu to assign/unassign), Change Status To Report Drafted, Delete the dictation/report and reset the status, Patient Folder Audit History, Copy Cell and Request Copy of Images.
Again, the work list columns available are numerous so I have added two screenshots with an overlap of the columns displayed.

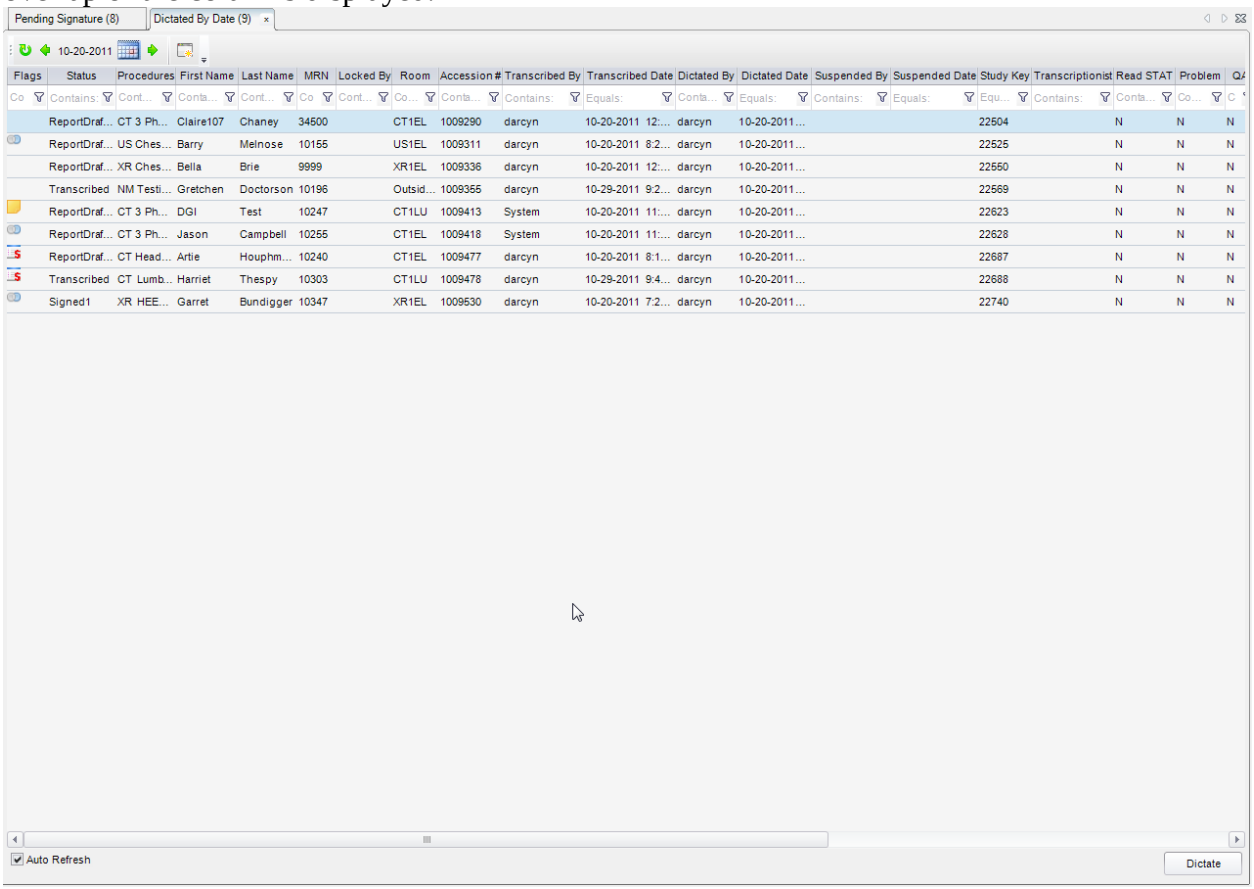


**Figure 8.3.1 – Dictated by Date**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

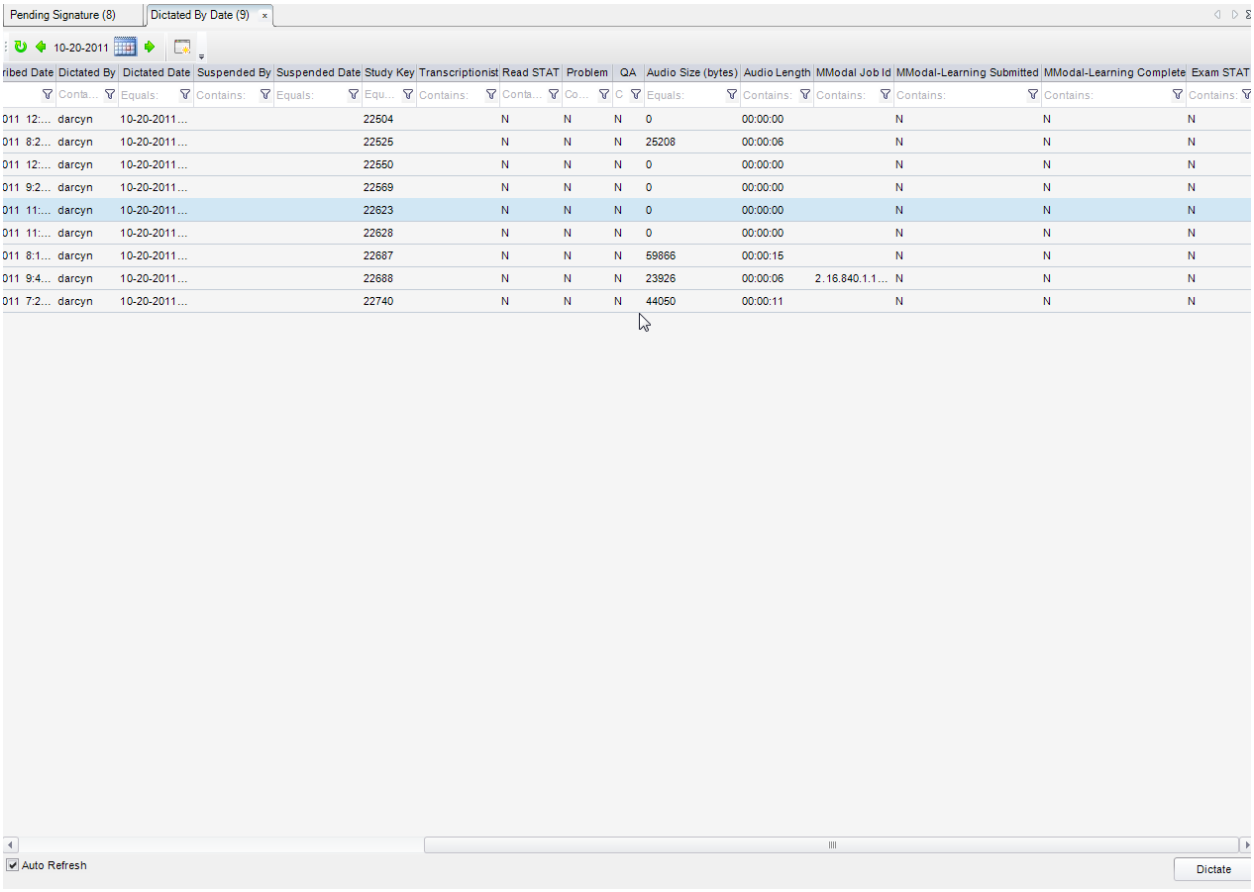

**Figure 8.3.2 - Dictated by Date**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 8.4 Suspended work list

There are two views of the Suspended work list. Most users will only see the one that displays the current exams in Suspended state by the current logged in user. Admin types can also view the Suspended (all) which shows all jobs in suspended state for all users.
There is only one button action of Dictate from this work list.
The context menu options are Assign to Radiologist, Stat Case (sub menu to assign/unassign), Patient Folder, Audit History, Copy Cell and Request Copy of Images.
Two screen shots are needed to display all of the columns for this work list.

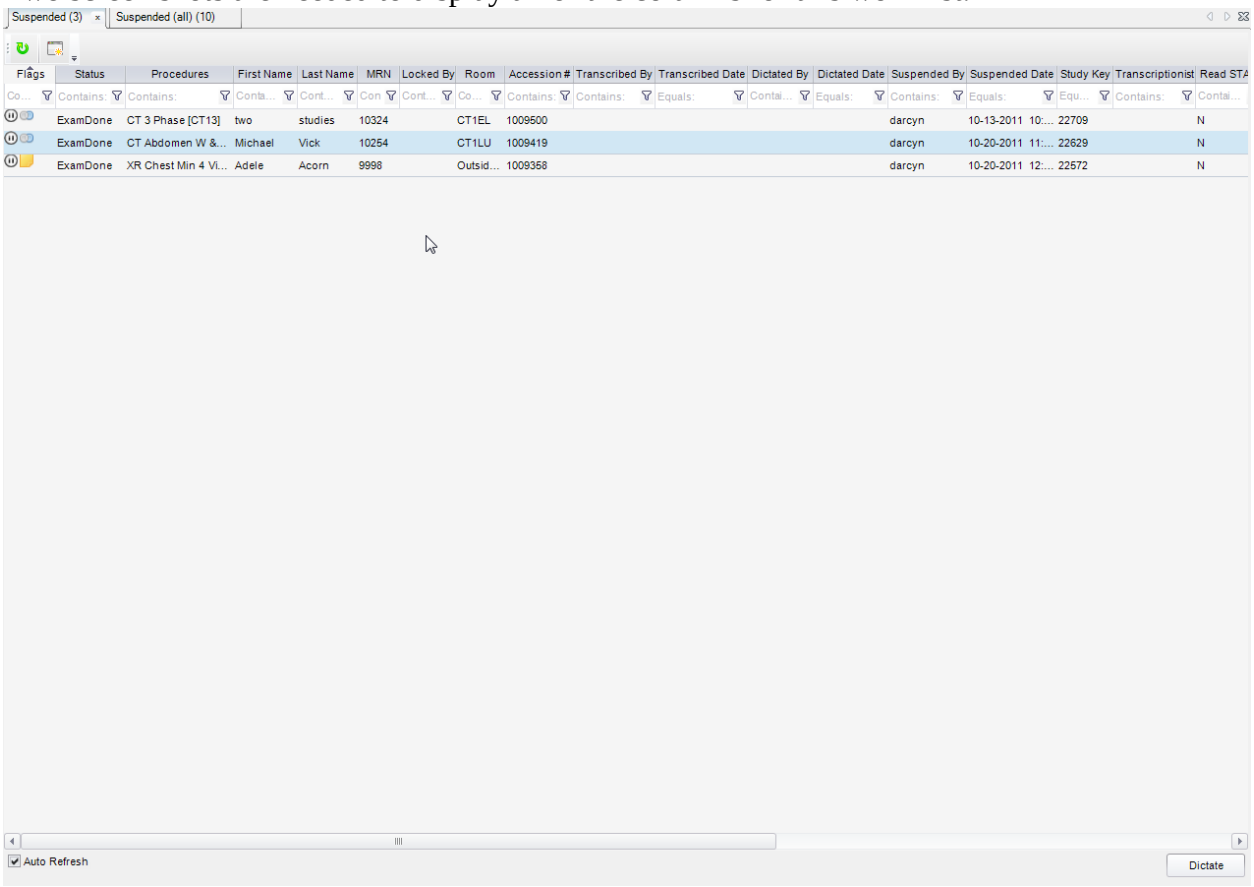

**Figure 8.4.1 – Suspended work list**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

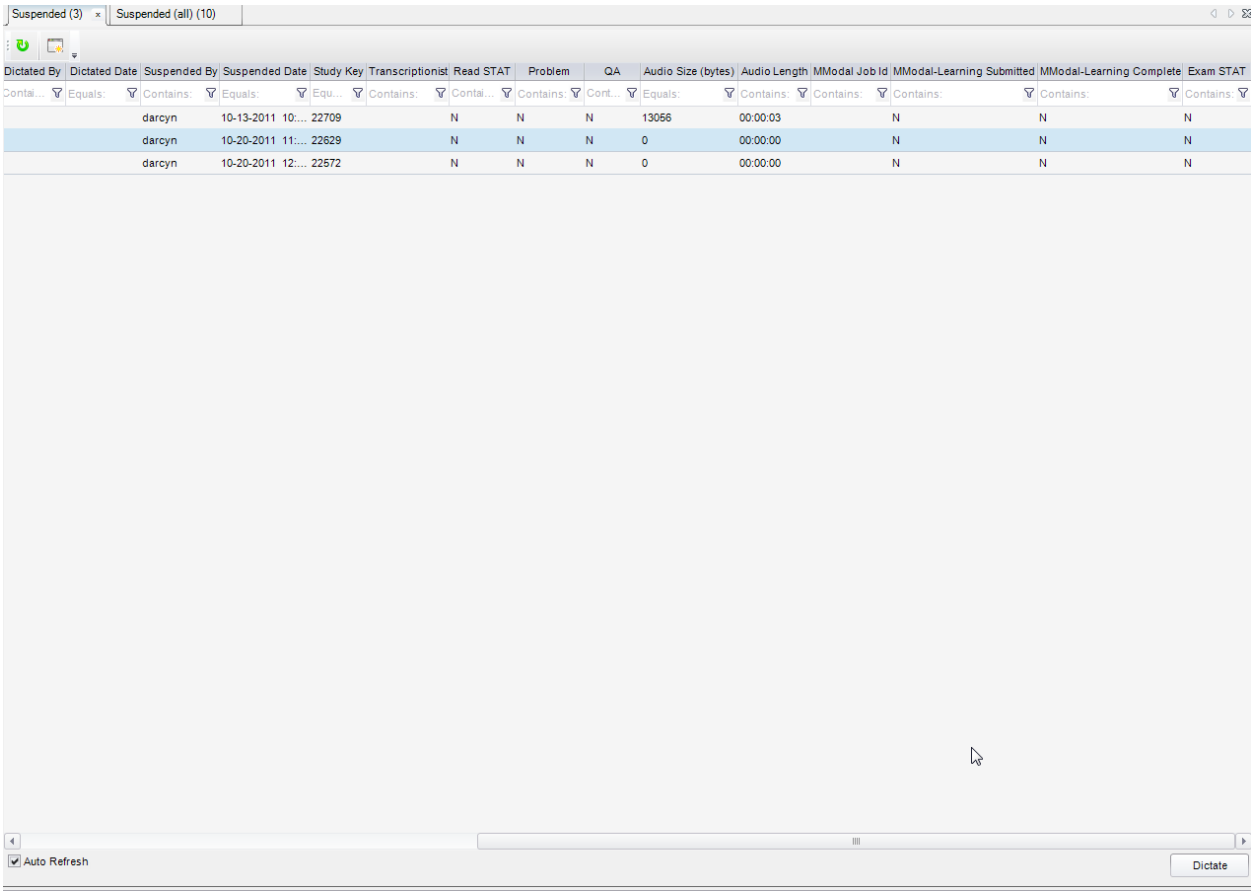

**Figure 8.4.2 – Suspended work list additional columns**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 8.5 Pending Signature work list

The Pending Signature work list contains the exams that require sign off by the logged in user. Users of resource type Radiologist will have their Pending Signature work list launch when they log into the application.
Again admin types will also have an additional Radiologist menu option of Pending Signature (all) display a view of reports from all users that needing final signature.
The only button action available is Sign Reports.
Context menu options are Dictate, Patient History, Audit History, Copy Cell, Change Status To Report Drafted, Delete the dictation/report and reset the status, Forms and Labels, Stat Case…(sub menu to assign/unassign) and Request Copy of Images.
The following two figures were required to display all columns available in the Pending Signature work list.

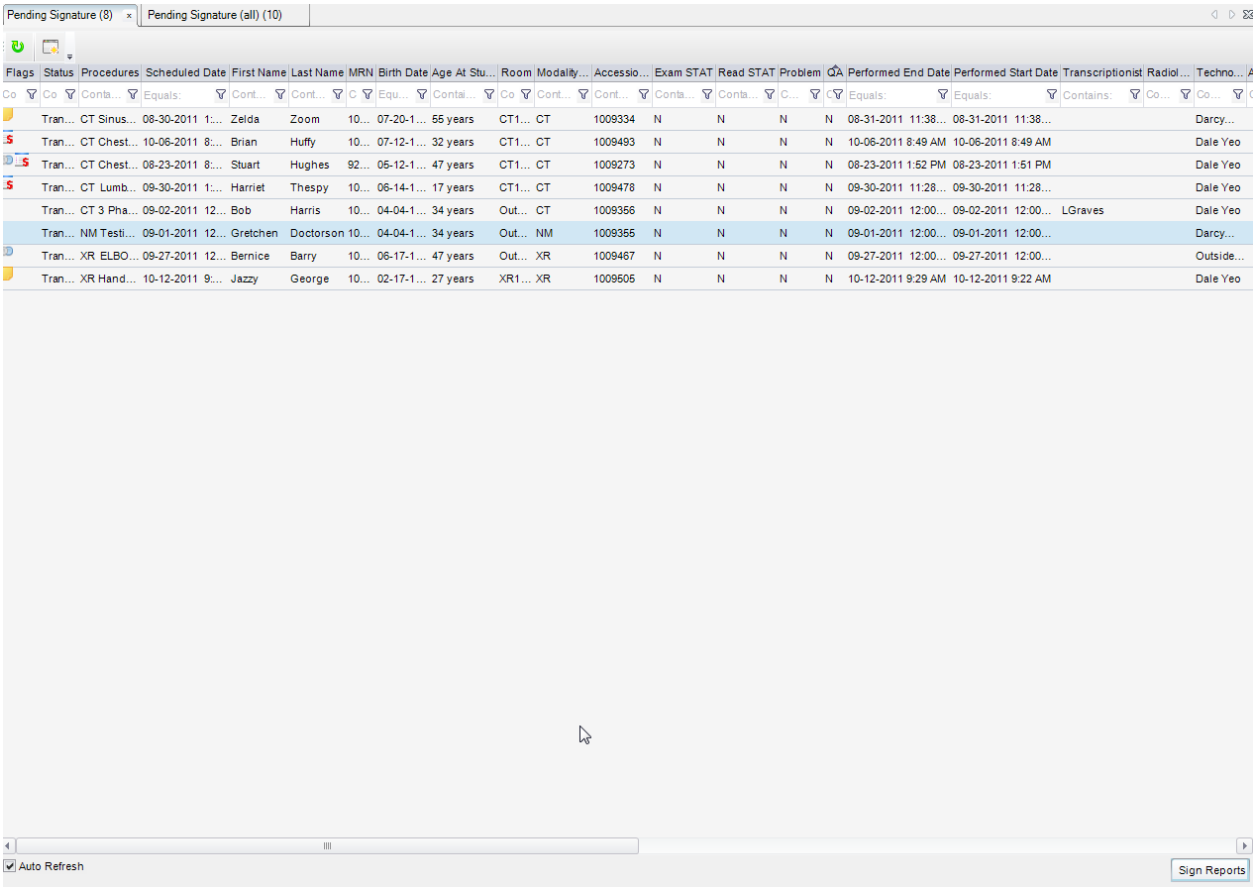

**Figure 8.5.1 – Pending Signature work list**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

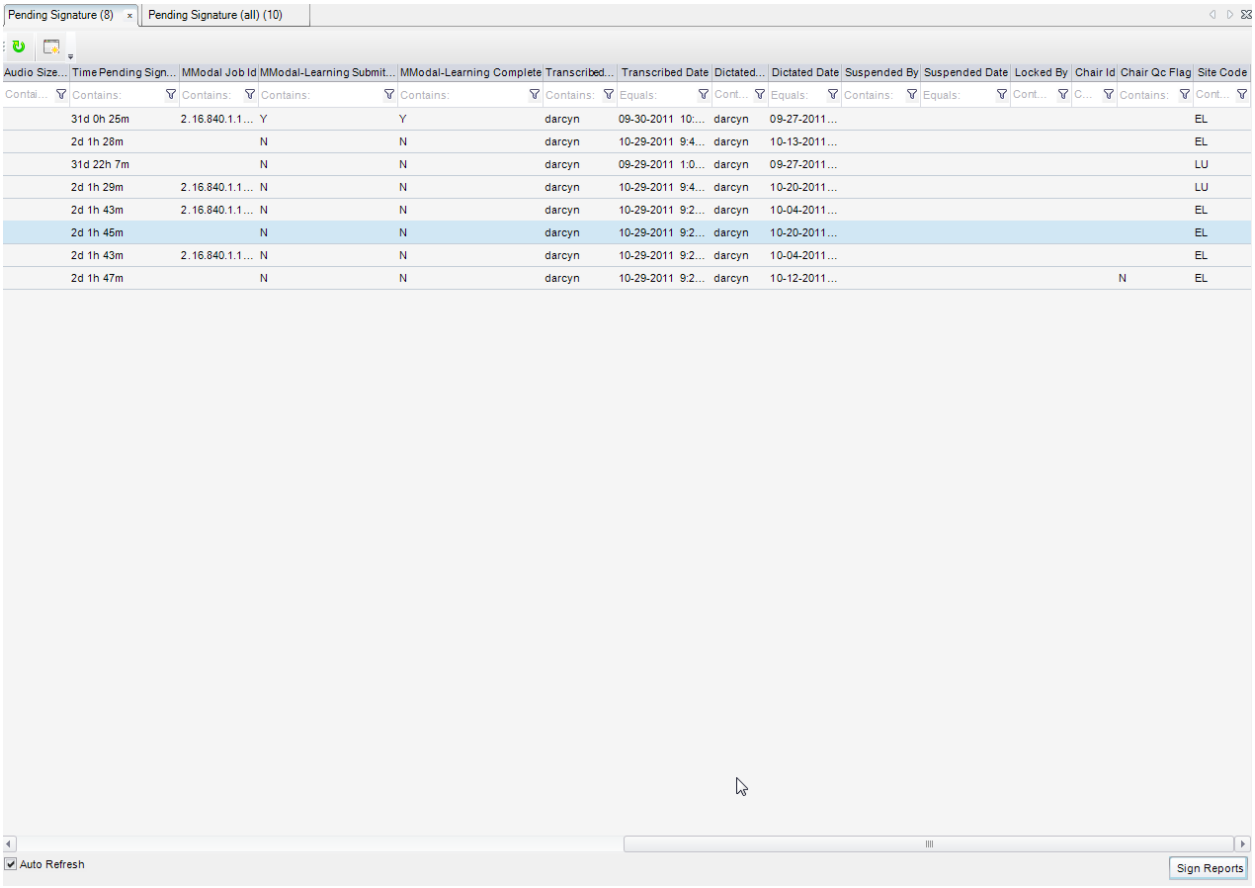

**Figure 8.5.2 – Pending Signature work list**

Selecting the context menu item Delete the dictation/ report and reset the status will prompt the user with a confirmatory message.

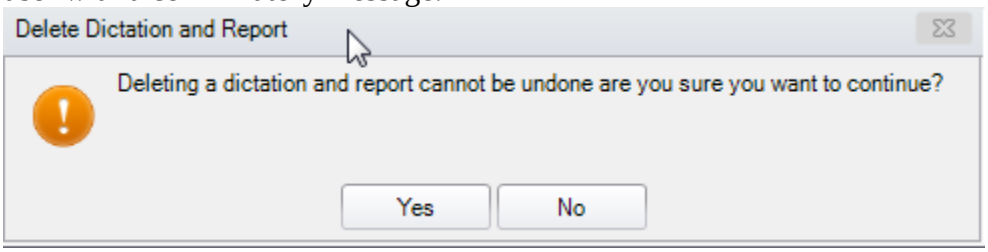

**Figure 8.5.3 Delete the dictation / report confirmation dialog**

When the delete dictation/report happens the system will remove the current dictation and set the status back to exam done with the exception of an addendum. If the dictation is for an addendum then the application will reset the status back to Signed where it can be dictated on once again if needed.

A dictation deletion can only be performed when the study is in Dictated, ReportDrafted or Transcribed status.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

### 8.5.1 Sign Reports Data window

The data window tabs, panes and features are the same as the dictating data window pictured in section 8.2 of this document. Once the report is signed the exam the accessed from the patient folder.

### 8.5.2 Amending Reports

From the patient folder select the Exam in the list. This will enable the Dictate button. Selecting the Dictate button will prompt the user with the following message.

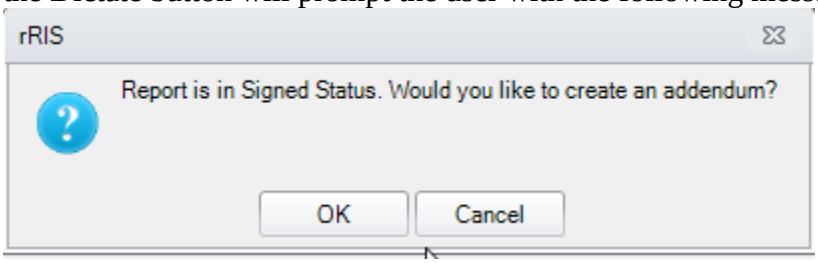

**Figure 8.5.2.1 – Create addendum message**

After selecting the OK button to the message above will open the Dictating (patient name) window, and the user can complete the dictation or add template normal text, or cancel out and the status of the exam stays in in signed status.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 8.6 Report on Accession Number

This feature will allow the user to open the Diagnose screen on a study based on a specified accession number. This provides the user with the ability to bypass the worklist type workflow and run rRis in a "slave" type mode. The input of this accession number can come in different forms as tcp listener, file watcher, etc. These are all used as methods to drive workflow from another system such as a PACS system.

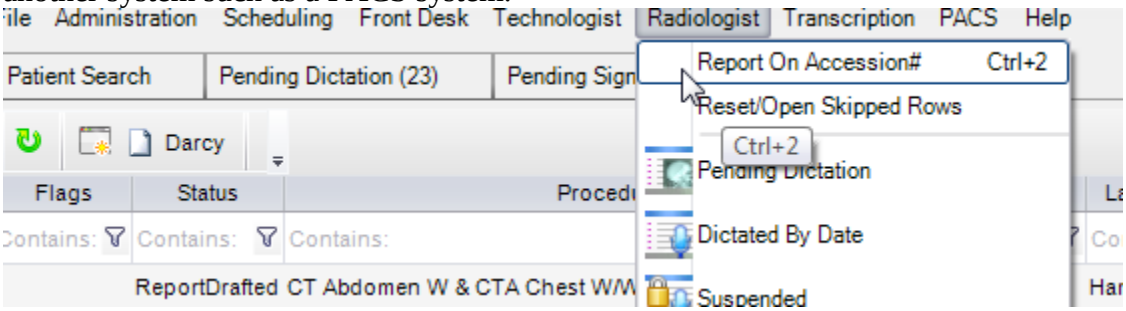

**Figure 8.6.1 – Report on Accession Number**

The user also has the ability to manually enter an Accession Number and let rRIS search for it. This can be done by using the menu option or the right-click context menu on the system tray icon. If the Accession Number is not found, the user is prompted accordingly.

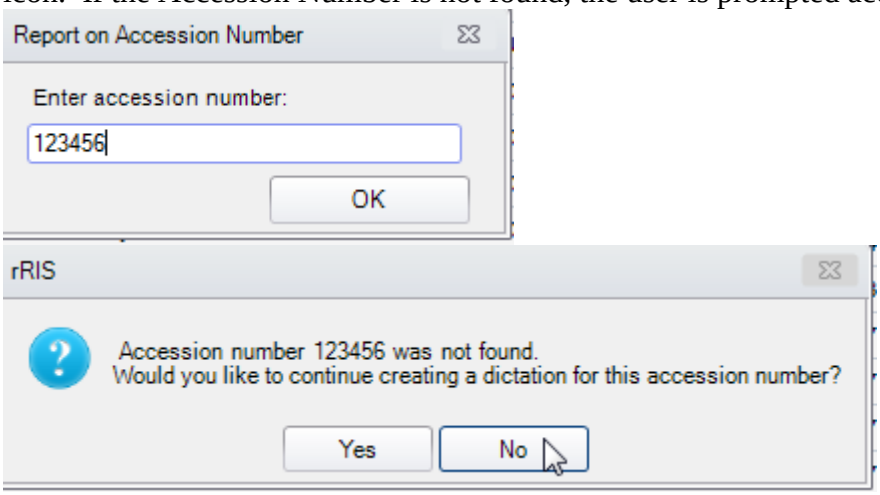

**Figure 8.6.2 – Enter Accession Number Dialog and Confirmation Message**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 9. Transcription

## 9.1 Report Drafted

The Reported Drafted is a work list for the Transcription role and is a complete list of all jobs that require action to move to Transcribed status (transcribed exams are displayed in the Pending signature work list).
The only button action is Create/Edit Reports.
Context menu options are Assign to Transcriptionist, Stat Case (sub menu to assign/unassign), Problem Queue (sub menu to assign/unassign), QA Queue (sub menu to assign/unassign), Change Status To Report Drafted, Delete the dictation/ report and rest the status, Patient Folder, Audit History, Copy Cell and Request Copy of Images.
The following 2 figures display the columns available from the Reports Drafted work list.

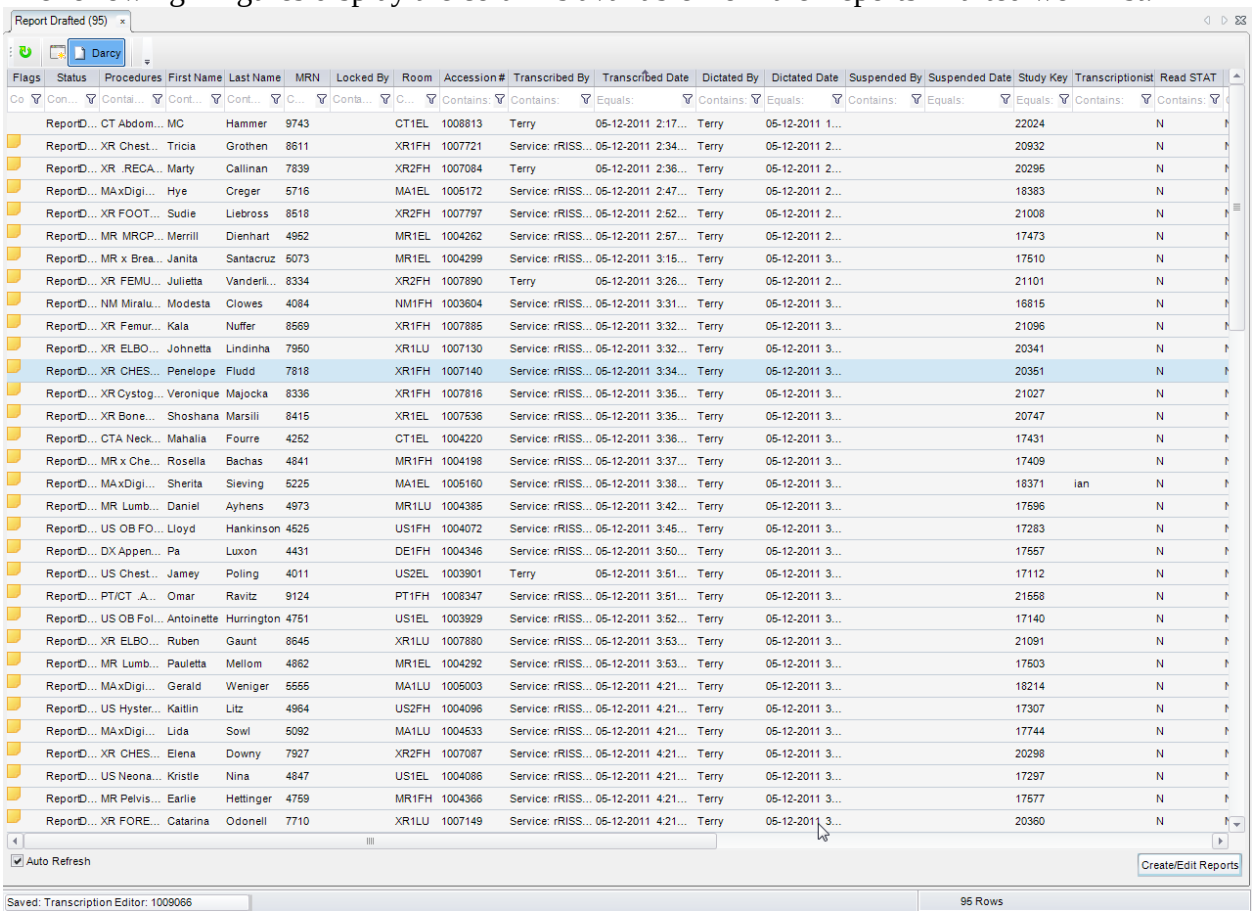

**Figure 9.1.1 Report Drafted work list**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

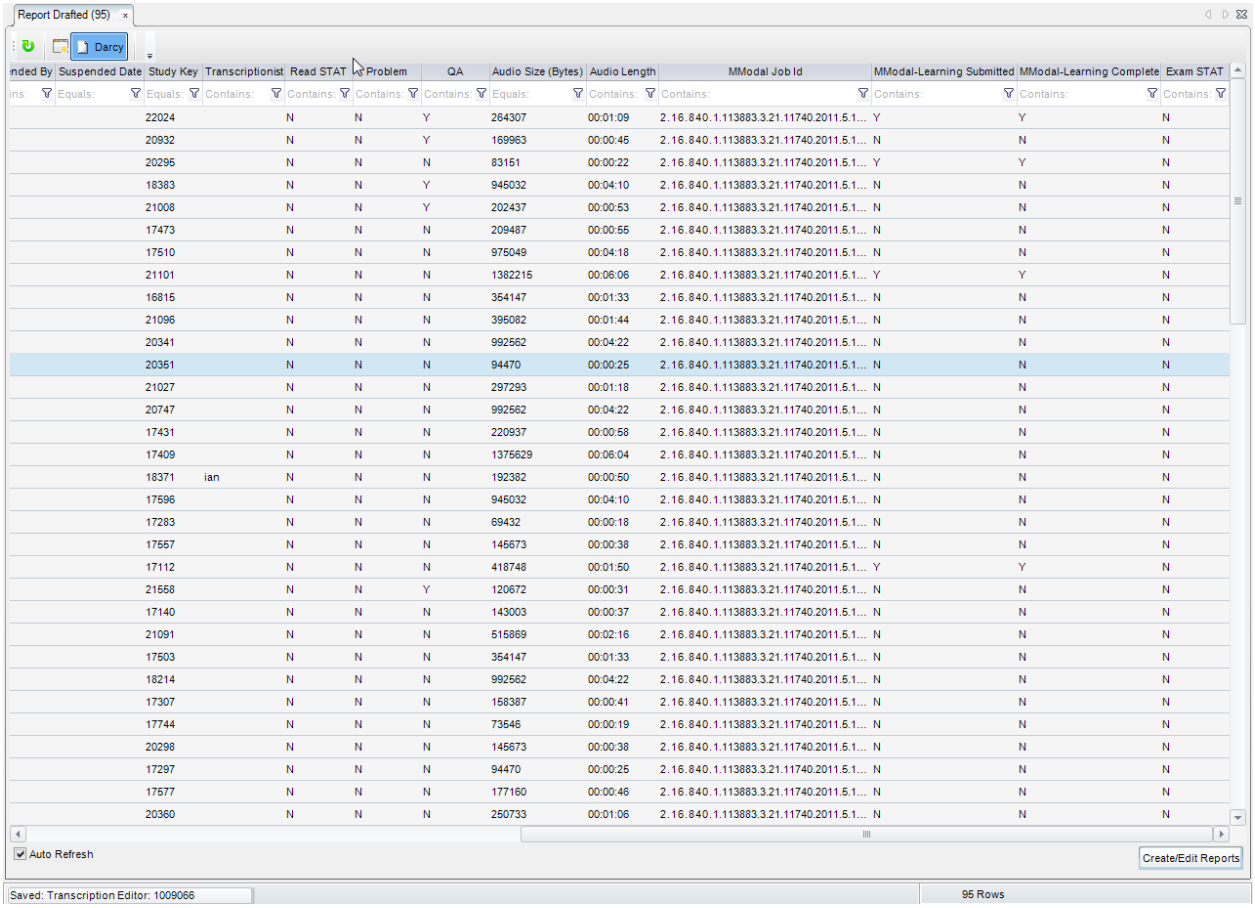

**Figure 9.1.2 Report Drafted work list**

Selecting the context menu item Delete the dictation/ report and reset the status will prompt the user with a confirmatory message.

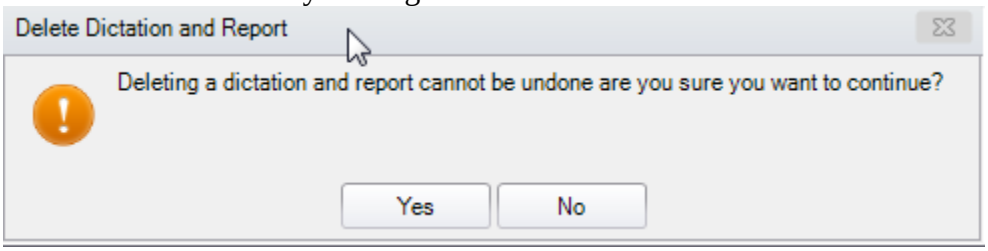

**Figure 9.1.3 Delete the dictation / report confirmation dialog**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

When the delete dictation/report happens the system will remove the current dictation and set the status back to exam done with the exception of an addendum. If the dictation is for an addendum then the application will reset the status back to Signed where it can be dictated on once again if needed.
A dictation deletion can only be performed when the study is in Dictated, ReportDrafted or Transcribed status.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

### 9.1.1 Reported Drafted Data Window

The Transcription Editor is a mirror image of the Dictating data windows with the exception of the button available to skip and close.

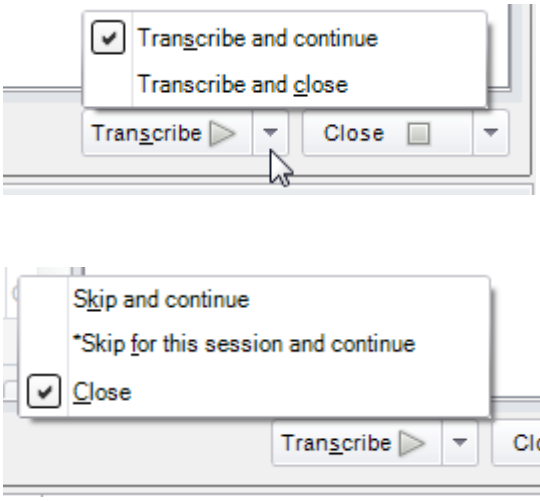

**Figure 9.1.1.1 Transcription Editor buttons for transcribing and closing**

### 9.1.2 Diagnostic – Note to Radiologist

Note to Radiologist has been added in this build. Utilizing the pre-existing "Transcription Notes" data pane in the reporting data window, a checkbox was added. When checked it marks the notes are meant for the radiologist to review. Also when this checkbox is selected the "Assign to:" and Assign to WL:" are disabled.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

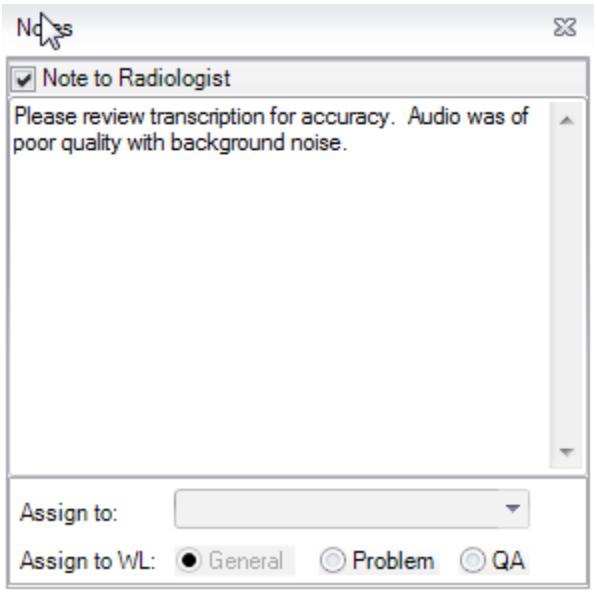

**Figure 9.1.2.1 – Note to Radiologist selecting, disabling Assign to and Assign to WL**

When the transcriptionist submits this study with "Note to Radiologist" checked, the Radiologist must acknowledge the note before the study can be signed off.

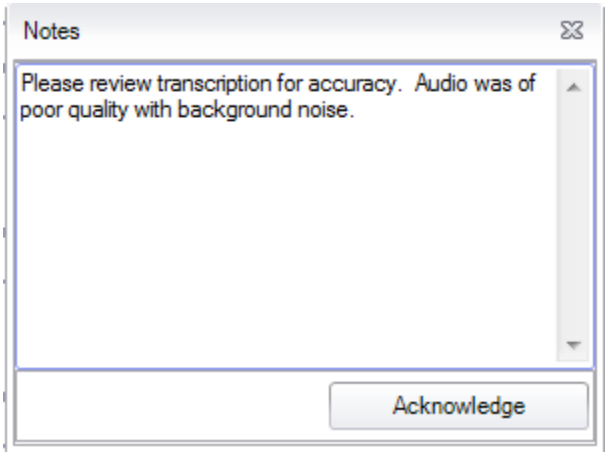

**Figure 9.1.2.2 – Note to Radiologist – Note to be acknowledged.**

The Radiologist can choose to re-dictate, edit report, or edit data window fields without having to acknowledge the "Note to Radiologist". If the exam is moved to a status of Dictated or Report Drafted, the flag for "Note to Radiologist" is retained. The radiologist still has to acknowledge the note before it can be signed. If the exam status was changed to Report Drafted by a radiologist, the transcriptionist can remove the "Note to Radiologist" flag and the exam will no longer have to be acknowledged by the Radiologist.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

If the Radiologist attempts to sign off a report that has not been acknowledged, they will be presented with a confirmatory message that provides the option to acknowledge and sign off, or select No and return to the data window.

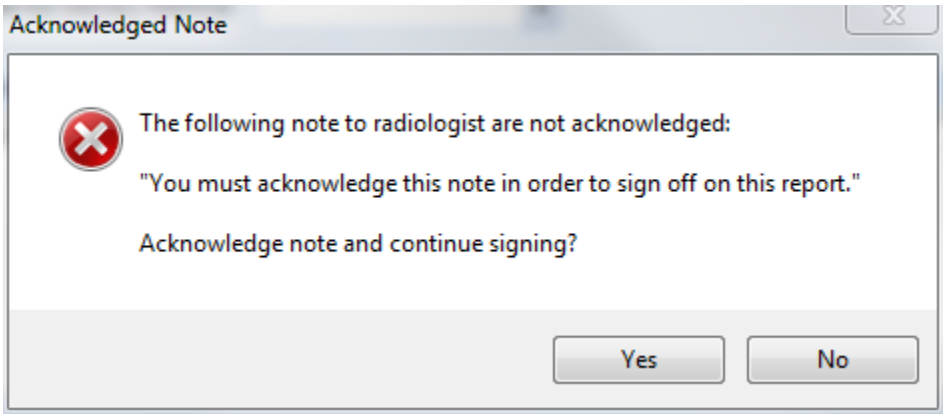

**Figure 9.1.2.3 – Confirmation of signing before acknowledging Note To Radiologist**

### 9.1.3 Optimizing Dictation Playback

On the reporting control there is an Optimize Playback toggle buttons . When this button is enabled, rRIS will skip any dead space in the report/dictation. The button state is stored at the user level so the application will remember the setting when the next report is loaded.

### 9.1.4 Playback Speed per Radiologist

Transcription can adjust the playback per radiologist. If Radiologist A has a slower talking rate when dictating, and Radiologist B has a faster, the transcriptionist can adjust the playback speed. The speed selected will be auto saved and the next dictation the transcriptionist completes on Radiologist A or B, etc… is maintained.

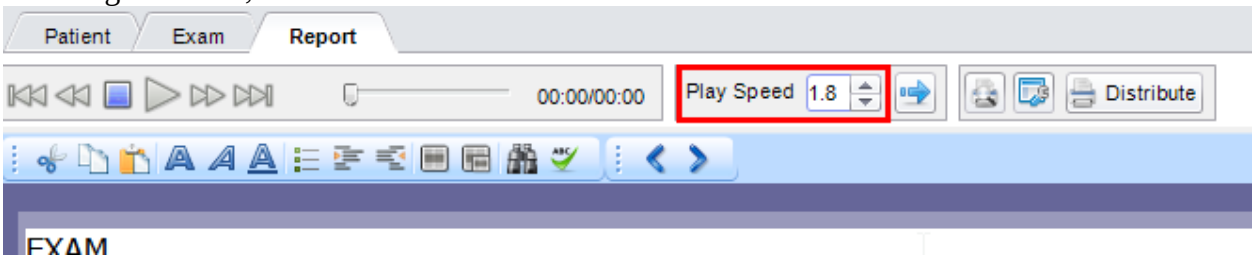

**Figure 9.1.2.4 – Playback speed**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 9.2 Pending Review

The Pending Review work list contains jobs that may have been dictated on but the accession number was not recognized by the system, the job will be added to this work list.
Only the Create/Edit Reports button action is available from this work list.
The context menu options are
Again 2 figures were needed to show the columns available.
Please Note that in rRIS first release, although the menu item and work list is accessible, the feature is not complete, therefore there will be no records assigned to the work list. This is listed as a known limitation.

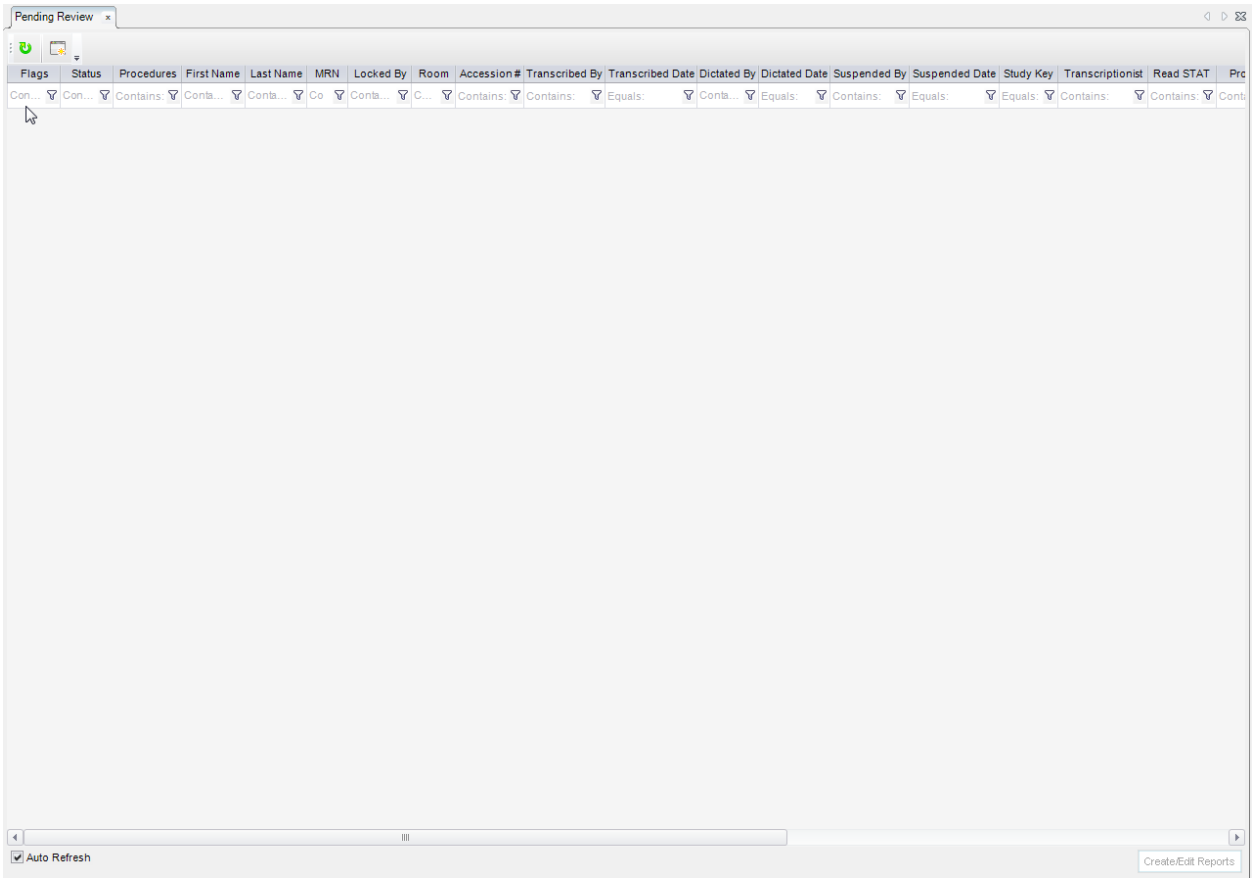

**Figure 9.2.1 – Pending Review work list**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

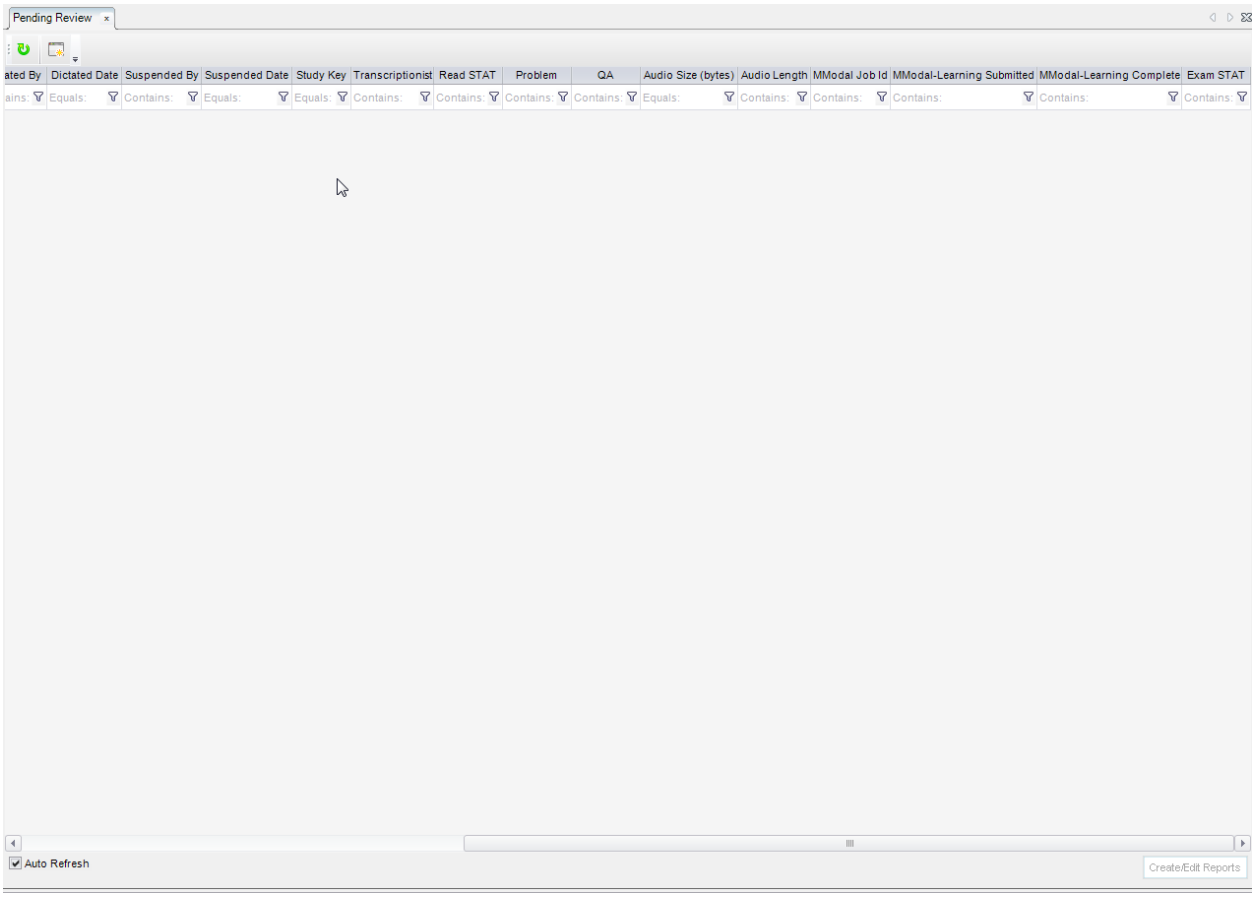

**Figure 9.2.2 – Pending Review work list**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 10. CDS Job Manager

The CDS Job Manager is an application that handles communication with our MModal partner for voice recognition. You can access the CDS Job Manager console from within the rRIS main GUI application. Under the menu option Administration>CDS Job Manager.

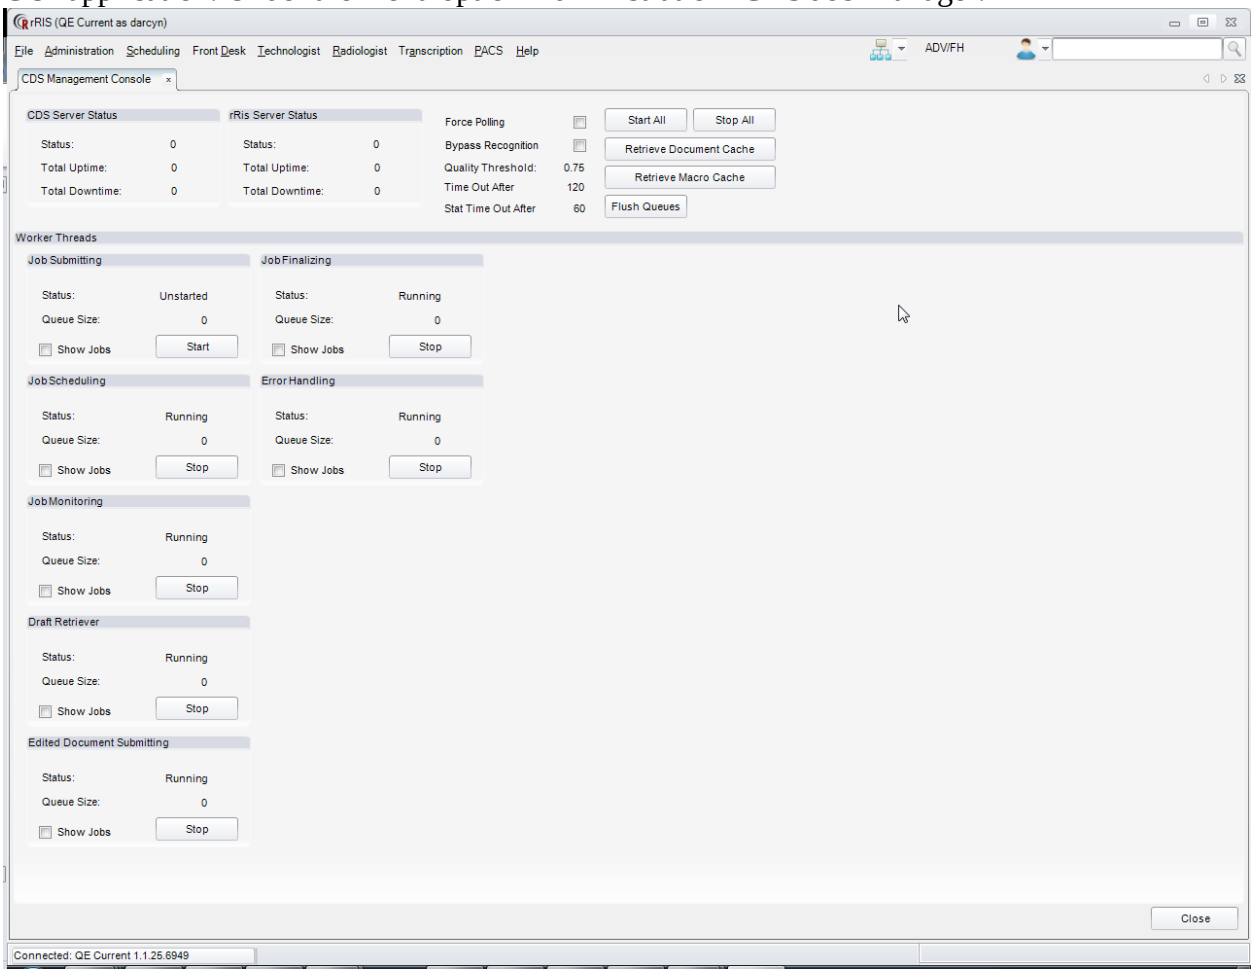

**Figure 10.1 CDS Job Manager Console**

**CDS Server Status:** shows the amount of uptime and downtime since the last service restart that the CDS service has been communicating with MModal servers.

**rRIS Server Status:** shows the amount of uptime and downtime since the last service restart that the CDS service has been communicating with rRIS servers

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**Force Polling:** normally we poll MModal for completed jobs every 10 minutes for normal cases and 5 minutes for stat cases. If this option is checked we will poll every minute. This shoulc only be turned on in cases where you are trying to catch jobs or when trouble shooting.

**Bypass Recognition:** if this option is checked we will always return typing documents to the MT's and bypass the recognition process completely. This is added in the event a site wants digital dictation only of if the MModal servers go down for an extended period of time.

**Quality Threshold (70):** reflects the system configuration value stored in the lookup table. When a dictation is submitted for recognition we get a qualtiy score. If the quality score is higher thatn this value we will wait for the recognized draft to be returned from MModal. If the quality score is below the value we will bypass recognition and return a typing document.

**Time out after:** reflects the CDSTimeOutInMinutes.

**Stat Time out after:** reflects the CDSStatTimeOutInMinutes.

**Start All** : this will start all of the worker threads (processes)

**Stop All**: this will stop all of the worker threads (processes)

**Retrieve Document Cache:** this will download all of the templates from MModal into the rRIS database

**Retrieve Macro Cache**: this will download all of the macros (normal) from MModal in the rRIS database

**Flush Queues:** this will clear all of the worker threads of any data (jobs) that may be in each process

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 11. Organization Picker

The ability to change between organizations has been built into the application. A new ICON was added to the menu bar. Selecting the arrow next to the ICON will expand to a drop down list enabling the user to change from current site. Expanding the list will display all the Orgs and Sites the current logged in user is configured for. When the selected Org or site changes, work lists will refresh as will the label next to the ICON. The org and site codes of your currently selected Organization and site are displayed to the right of the ICON.

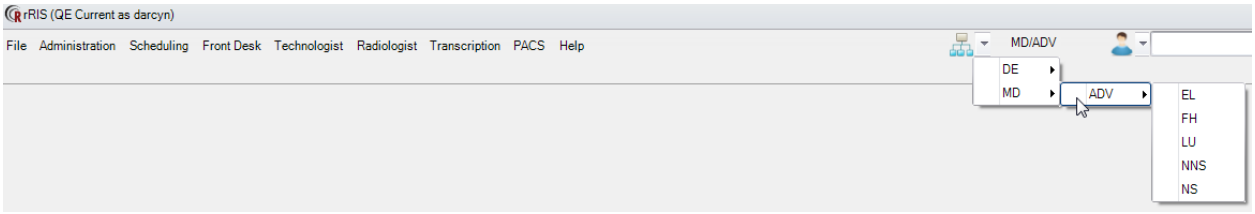

**Figure 11.1 – Expanded Organization Picker**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 12. Search Functionality

Within rRIS there are multiple search options. Users with the proper permissions have the ability to not only search for patients, but also for staff, sites, and insurance carriers. The search functionality also supports the ability to add multiple search providers such as Google and / or WebMD.

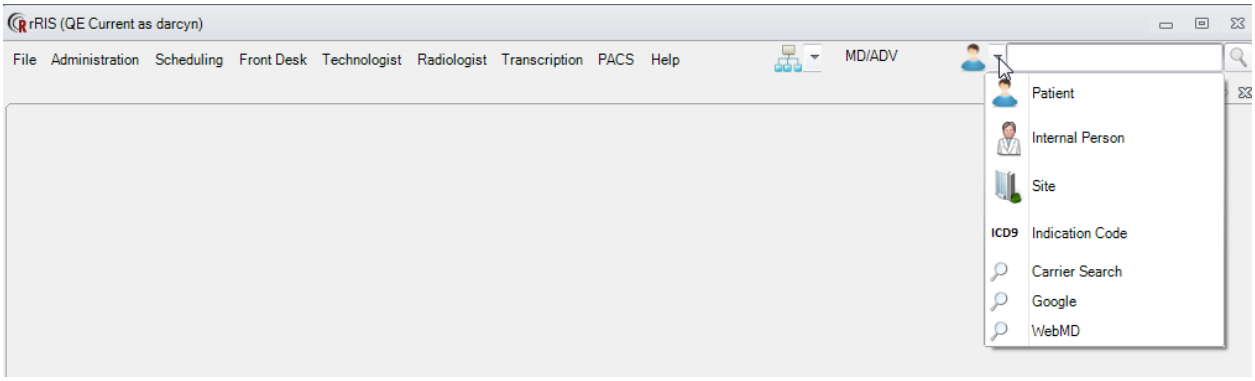

**Figure 12.1 – Accessing search options available**

The internal person search is a great utility to quickly find the resources such as referring doctors, techs, radiologists, etc. within the application.

The site search allows users to lookup contact information for other sites within the organization.

Multiple search providers can also be added to the search functionality selection.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 12.1 Enhanced Patient Search

Patients can be searched on by last name, first name, birthdate, or MRN. In the event that the patient's name changed, a search can be performed on the patient's previous name(s) or MRN.

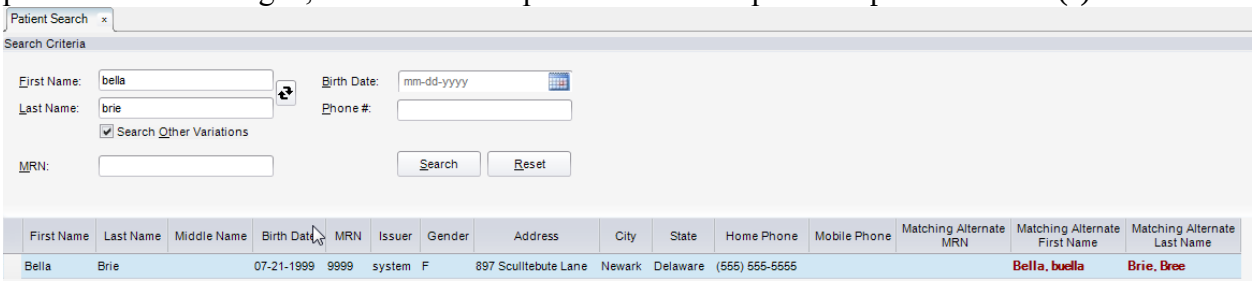

**Figure 12.1.1 – Previous name**

You will also notice in the above figure the check box "Search Other Variations" is selected. When this checkbox is selected rRIS will complete a more extensive search. Patients name "starts with" Search first, then a "sounds like" search as well as search for birthdate variations ('12/01/1970', '01/12/1970'). If the name field only has one character, the sounds like search will do a starts with instead.
Example - firstname sounds like s, lastname sounds like smith will be converted to firstname starts with s, lastname sounds like smith.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 13. User Preferences

## 13.1 Font Size

User can adjust the font size within the application. Three font sizes are offered, small, medium and large. Adjusting font size is accessed from the File > Font Size menu.

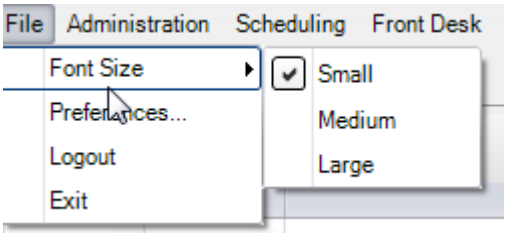

**Figure 13.1.1 – Adjusting Font Size**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 13.2 User Preferences

User preferences are also accessed from the file menu. Most the preferences are for Radiologist and Technologist workflow.

### 13.2.1 General Tab

**MT Polling –** Used for transcription. When user logs in they don't see a work list, the create / edit report window opens automatically.

**Screen Lock –** There is a system config setting "MaxUILockTimeoutMin" which is the maximum inactivity time the user can set their user preferences to. So for example if the system max is set to 10, everyone will be locked out after 10 minutes of inactivity and users can only set their local preference to 10 minutes or less.

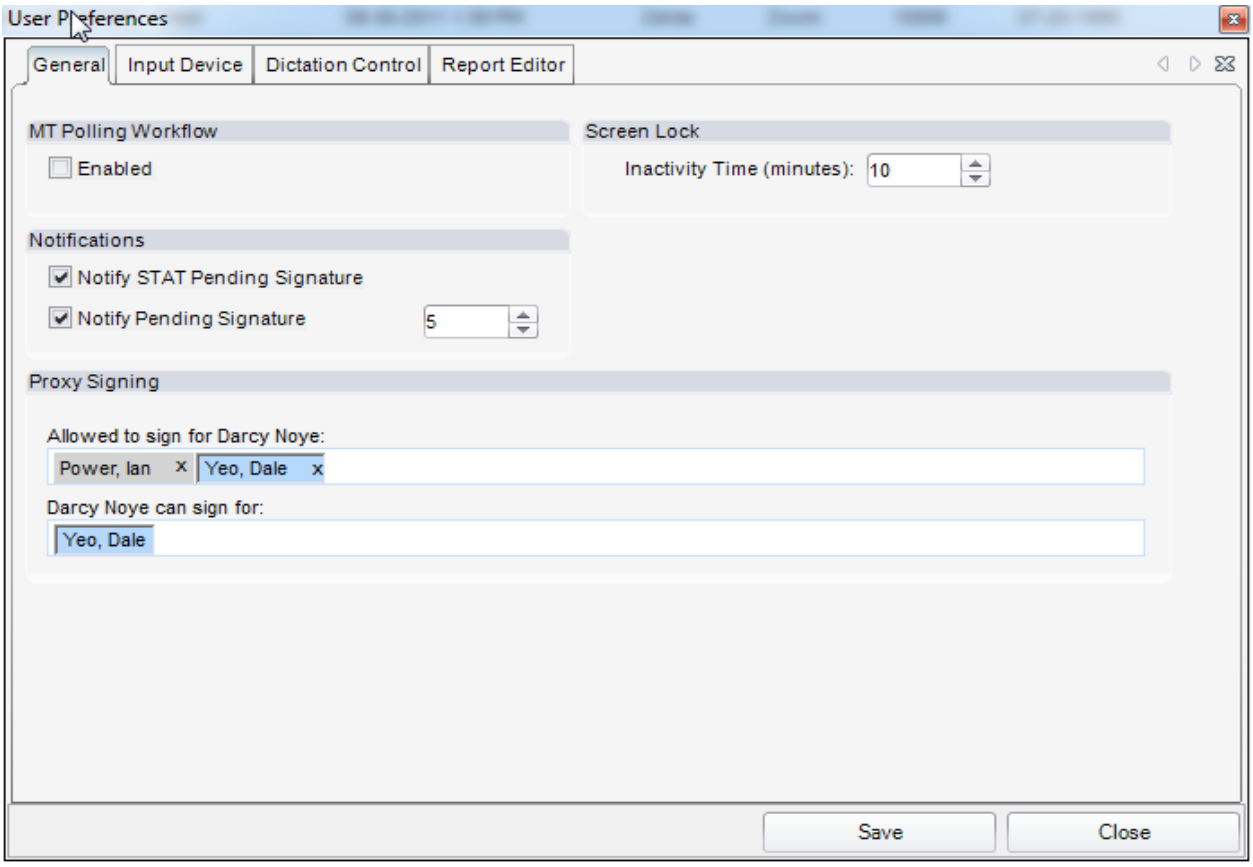

**Figure 13.2.1.1 – General tab of User Preferences**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**Notifications -**

**Proxy Signing -** Users can specify who will be able to proxy sign on their behalf. Also as a display only, it will inform who you (the user preferences of the user logged in) that you may sign for.

### 13.2.2 Input Device Tab

**SpeechMike Buttons –** Used to configure the user preferences of the Philips SpeechMike Function 1-4 keys, the EOL button and Instr (INS / OVR on speechmike) on the face of the SpeechMike and also the trigger button located on the underside of the SpeechMike.

**Foot Pedals –** Used to configure foot pedals the users desired preference

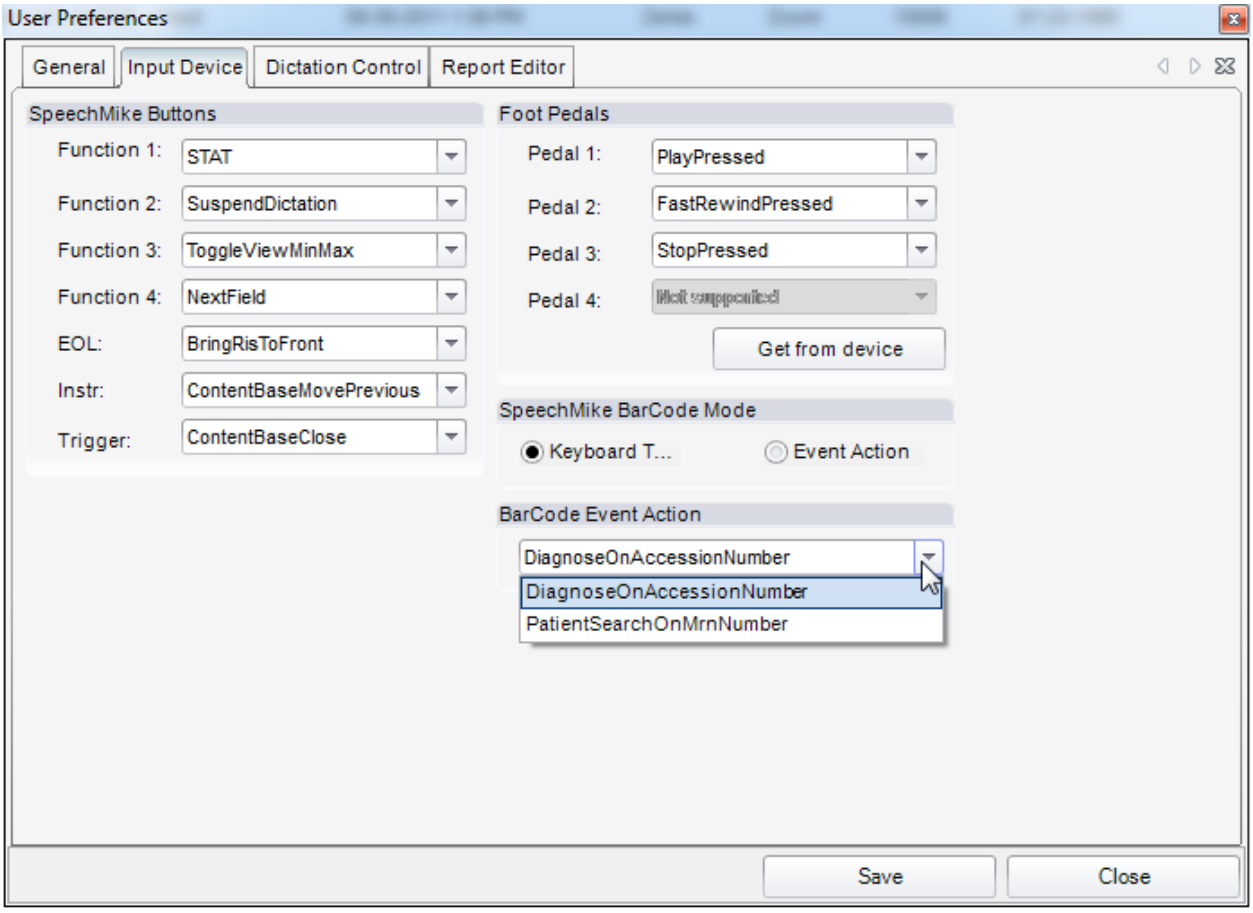

**Figure 13.2.2.1 – User Preferences Input Device tab**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**SpeechMike BarCode Mode –**

- Keyboard Text - Takes the scanned barcode and essentially keyboards it into whatever field is active. This is the standard barcode implementation
- Event Action - This will cause the Barcode to trigger a configurable event to be fired in rRis and a corresponding action will be taken.

**Barcode Event Action –** Scanning barcode event action. Scanning the patients folder barcode will either Diagnose on the Accession Number or Search for the patient using their MRN

### 13.2.3 Dictation Control tab

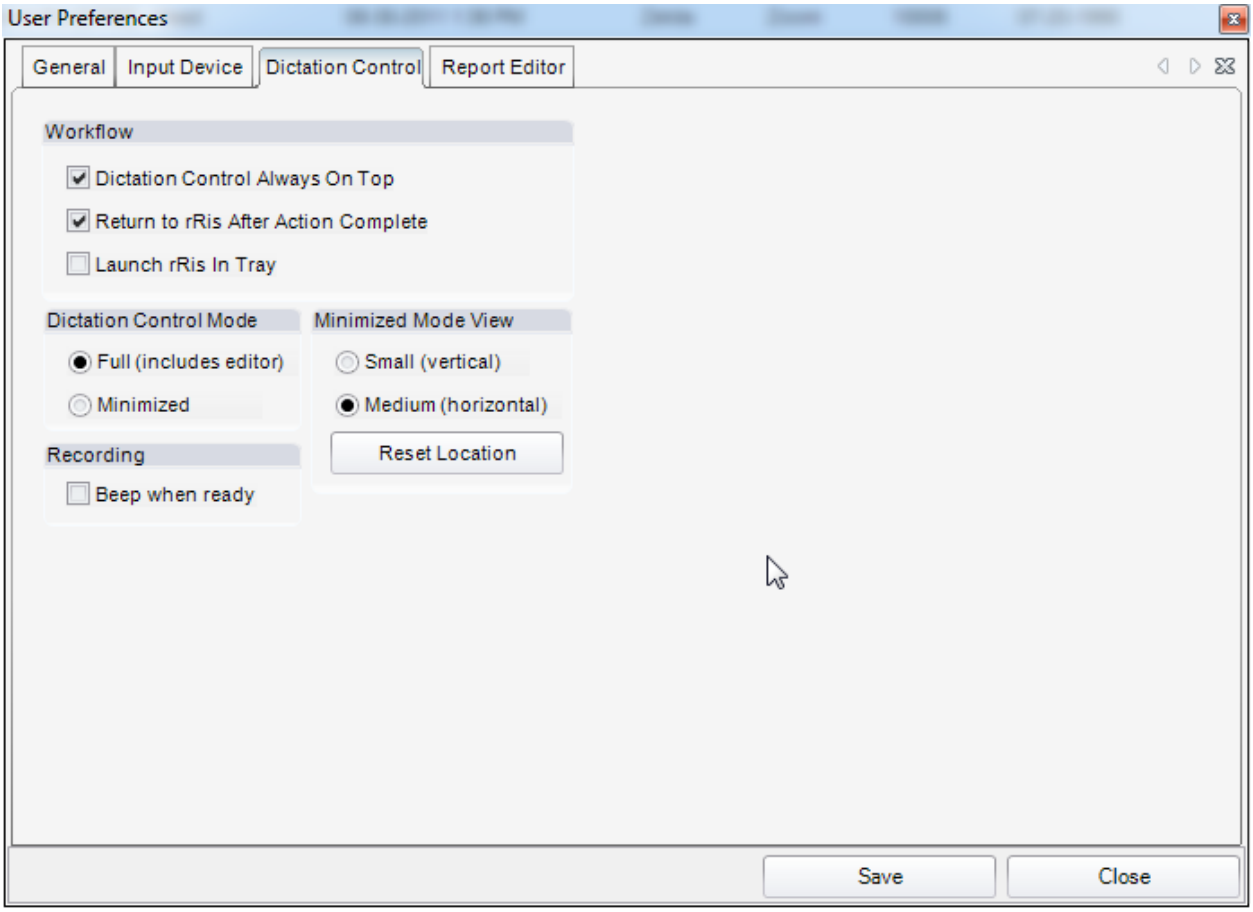

**Figure 13.2.3.1 – User Preference Dictation Control tab**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**WorkFlow-**

- **Dictation Control Always On Top -** when turned on will force the control to remain on top of other windows even if the other window has focus.

- **Return to rRIS After Action Complete –** If this is selected, and Dictation Control Mode is set to Minimized, once the Radiologist has completed dictation and exits the Dictation window they will be returned to rRIS in Full view

- **Launch rRIS tin Tray -** If rRIS is configured to launch in tray, immediately after logging in the application will not show on the screen as usual but appear in the system tray as a small "R" icon. When rRis is shown and this mode is configured, minimizing or closing rRis using the icons at the top right of the application window will simply return rRis to the tray icon. To actually exit rRis the user needs to select File -> Exit from the file menu when rRis is onscreen, or using the tray icons context menu -> Exit.
    - **User id** - identifies currently logged in user
    - **Show rRis** - Will bring rRis on the screen, same as double clicking
    - **Report on accession #** - Prompt user for the accession number
    - **Info** - Will display information about rRis such as version
    - **Exit** - Will exit rRis completely

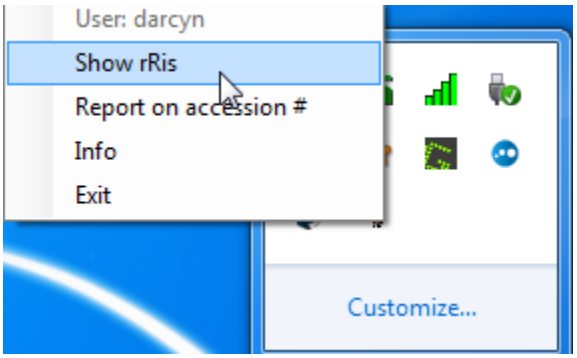

**Figure 13.2.3.2 – rRIS launched to system tray**

**Dictation Control Mode –** Full (includes editor) is the standard mode. Minimized will open as one of the two options in figure 13.2.3.3.

**Minimized Mode View –** Two different dictation control layouts have been implemented; a vertical (small) and a horizontal (medium). These controls exist outside of the rRis GUI. They have the ability to float on the screen and can be place where they will least interfere with the radiologist's existing RIS/PACS workstation.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**Figure 13.2.3.3 – Horizontal (medium) control and Vertical (small) control**

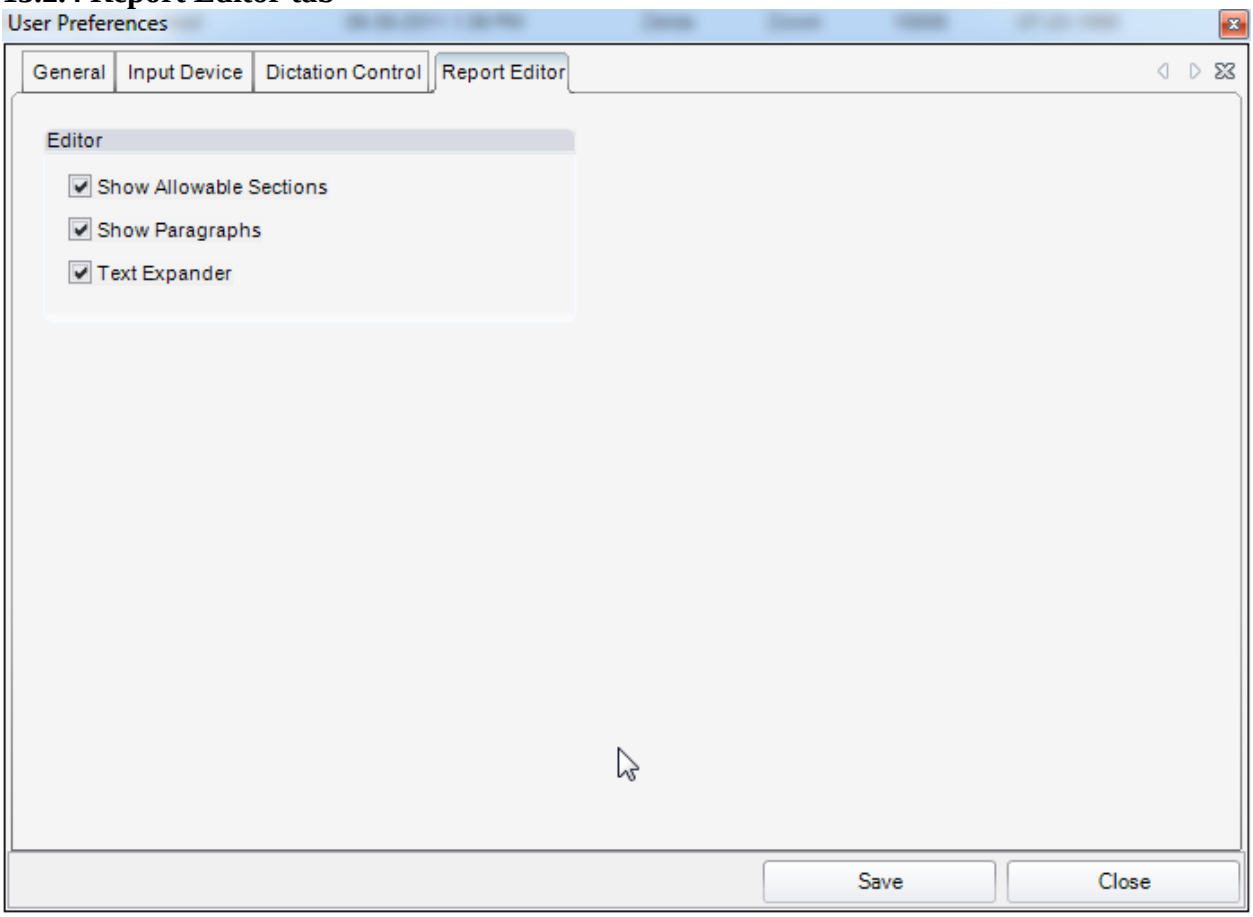
The minimized views can be placed anywhere on the screen and their location will be remembered forever. In the unlikely event that the location was saved to make them appear in an area which is not visible, in the user preferences the user can select "Reset Location" which will reset the control's location to position 0,0 (top left of screen 1).

**Recording -**

A user preference called Beep when ready was added to the Dictation Control tab. This feature will play and audible sound to alert the user as to when the control is ready for recording.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

### 13.2.4 Report Editor tab



**13.2.4.1 – User Preference Report Editor tab**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Editor

**Show allowable Sections –** In the report editor, selecting a section name within the editor will display the allowable sections available. With focus within the section header and typing will open a window displaying the allowable sections.

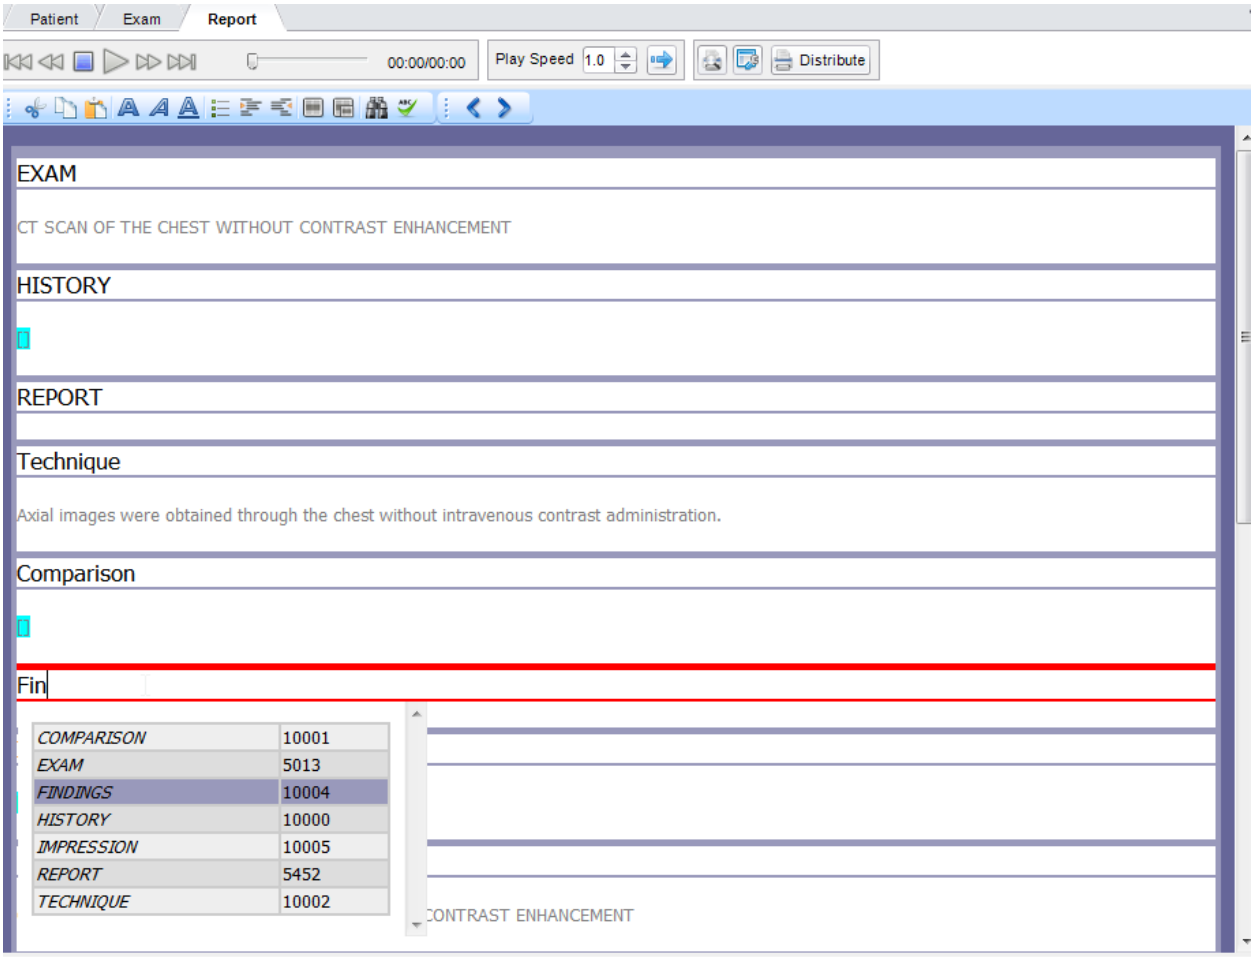


**Figure 13.2.4.2 – Show allowable sections**

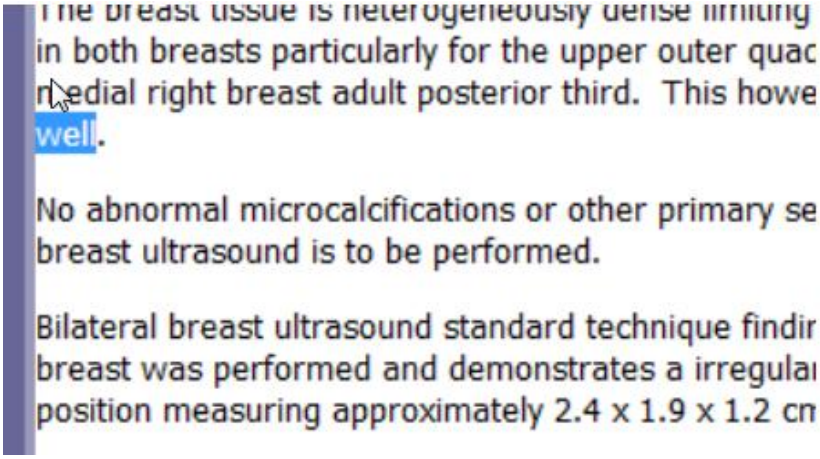
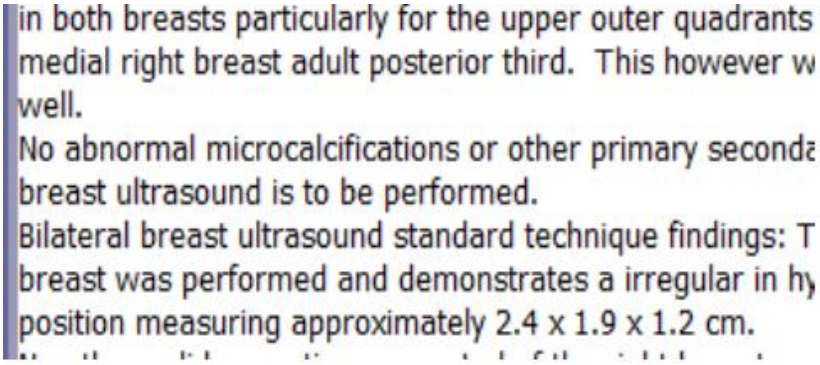
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**Show Paragraphs –** Separates the text into paragraphs in report editor.



**13.2.4.2 Show Paragraph Enabled**



**13.2.4.3 Show Paragraphs Disabled**

**Text Expander –** Enables the Text Expander utility. See section 8.2.3 of this document for more information on Text Expander.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 14. Forms and Labels

Forms and Labels can be configured to print when the order reaches a specific status or the user can manually print from the context menu accessed from Patient Folder, Reception work list, Confirmation work list, Technologist work list, and Radiology work lists. Also from the Registration data window, and Technologist work list.

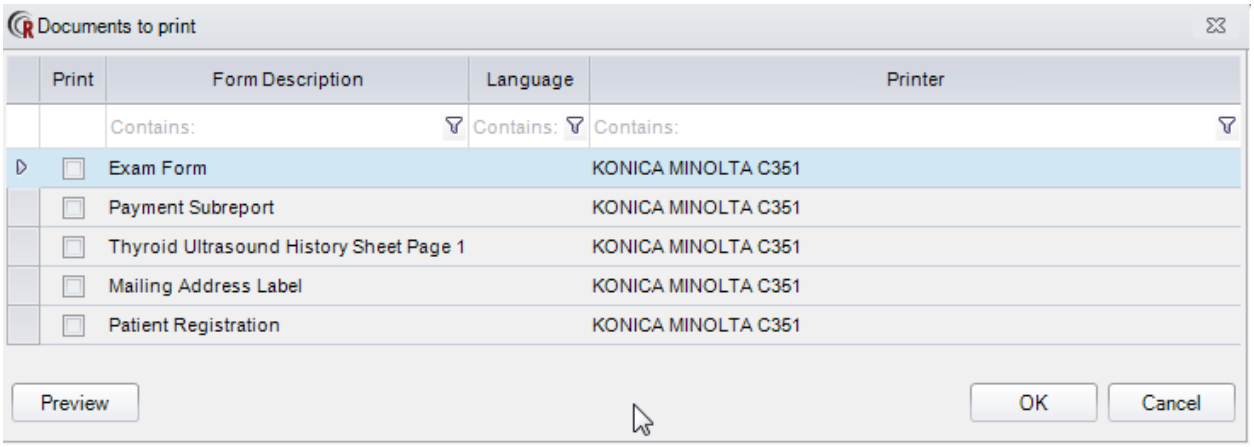


Figure 14.1 – Forms and Labels.

Forms and Labels can be configured to print for a specific modality type, procedure type, specific carrier, gender, and practice.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 15. Help menu

The help provides important information of the versions, where the application was installed from, current connection, logged on user, etc.

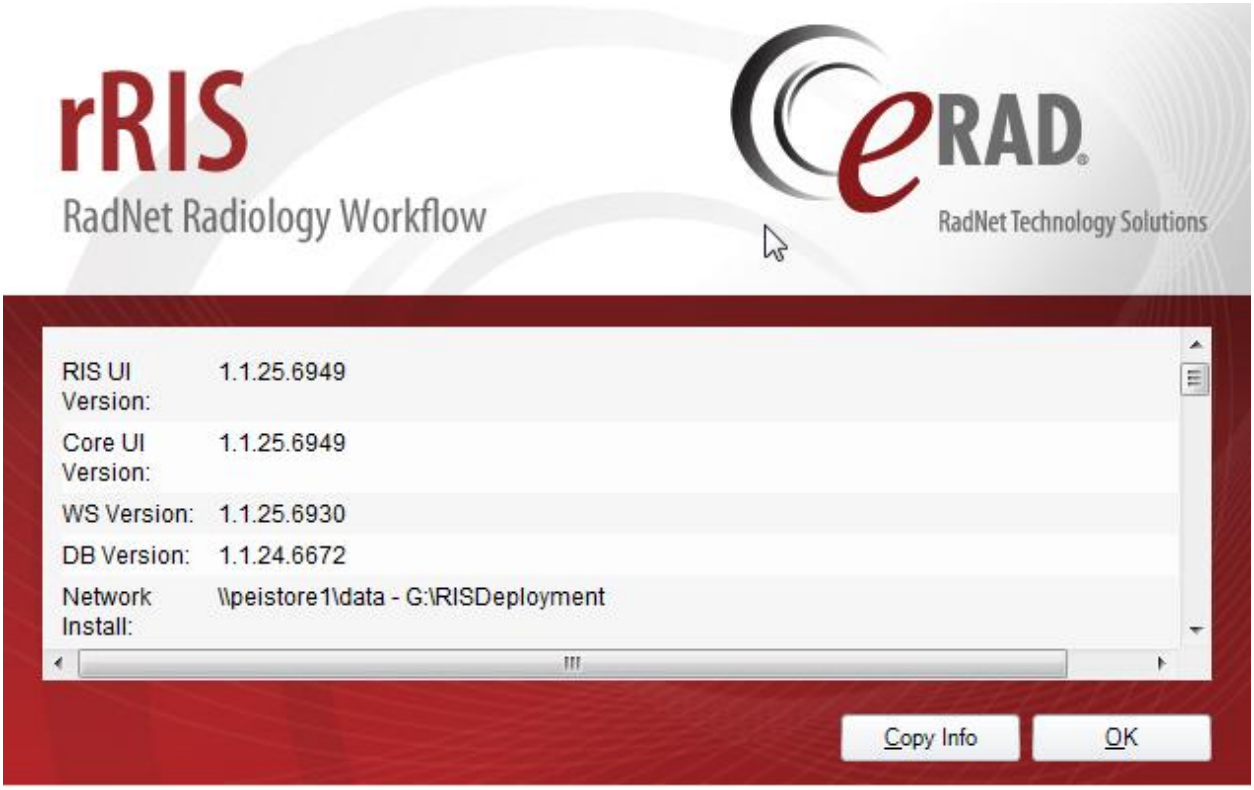

**Figure 15.1 – Help About Window**

Selecting the Copy Info button will capture the data window the Help About window, and then the user can easily paste the contents into an editor.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 16. Shortcuts

rRIS application shortcuts will be covered in a separate document.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 17. Known Limitations

| # | Status | Project | Subject | Category | Target version |
|---|---|---|---|---|---|
| 660 | New | Radnet RIS | Outside reads will eventually end in billing exceptions. | Thick Client GUI | 1.25 |
| 560 | New | Radnet RIS | Column filter range of same day - no results returned | Thick Client GUI | 1.21 |
| 644 | New | Radnet RIS | Cannot close application if there is a data window open. | Thick Client GUI | 1.25 |
| 659 | New | Radnet RIS | Manage policies > Injury Details keeps history of last selected | Thick Client GUI | 1.25 |
| 665 | New | Radnet RIS | fk error when adding new order | Thick Client GUI | 1.25 |
| 438 | New | Radnet RIS | User Preferences - Should enable or disable speech preferences based on resource type | Admin Tools | 1.16 |
| 447 | New | Radnet RIS | Dictation - User is able to start dictating with SpeechMike when it is not the recording device | Thick Client GUI | 1.17 |
| 667 | New | Radnet RIS | Dictating > Adding tech notes and submit throws error | Thick Client GUI | 1.25 |
| 671 | New | Radnet RIS | Launch rRIS to system tray Icon needs to be updated. | Thick Client GUI | 1.25 |
| 360 | New | M Modal Interim Reporting | Audio not played to the end message | | |
| 639 | New | Radnet RIS | Work list column not expanded when opening work list. | Thick Client GUI | 1.25 |
| 657 | New | Radnet RIS | Opening dictate window on signed exam or suspended message conflicts with pacs message | Thick Client GUI | 1.25 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | | | | |
|---|---|---|---|---|---|
| 668 | New | Radnet RIS | User Preference > Stat Notification not working | Thick Client GUI | 1.25 |
| 670 | New | Radnet RIS | Diagnose > Report preview can be opened multiple times | Thick Client GUI | 1.25 |
| 639 | New | Radnet RIS | Work list column not expanded when opening work list. | Thick Client GUI | 1.25 |
| 675 | New | Radnet RIS | Edit Order > Verbal Order returns error | Thick Client GUI | 1.25 |
| 677 | New | Radnet RIS | Edit order tab missing patient name | Thick Client GUI | 1.25 |
| 678 | New | Radnet RIS | Transcription > Save playback speed for dictating rads | Thick Client GUI | 1.25 |
| 674 | New | Radnet RIS | Cancelled Orders work list buttons not enabled | Thick Client GUI | 1.25 |
| 358 | New | M Modal Interim Reporting | Accession Number for Memo recordings | | |
| 74 | New | Radnet RIS | Patients with deleted_flag = 'Y' are still showing up on worklists | Thick Client GUI | 1.07 |
| 252 | New | Radnet RIS | ScheduleGroup - Slowness when saving lookup | Web Services/DB | 1.11 |
| 406 | New | Radnet RIS | New Appointment - Unhandled WCF exception | Web Services/DB | 1.15 |
| 463 | New | Radnet RIS | Concurrency error on scheduling | Web Services/DB | 1.17 |
| 469 | New | Radnet RIS | After deleting 1 User cannot save for other users | Web Services/DB | 1.17 |
| 633 | New | Radnet RIS | Walk in image request | Thick Client GUI | 1.24 |
| 640 | New | Radnet RIS | Installer error > Windows xp cannot register spellchecker - wspell.ocx | Thick Client GUI | 1.23 |
| 652 | New | Radnet RIS | The recently used patient list sometimes return an empty patient folder | | |
| 663 | New | Radnet RIS | Add outside read does not have new attachment Icon | Thick Client GUI | 1.25 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This document describes some of the new features and changes implemented in rRIS as of the end of Sprint 26. This version of rRIS is referred to as Build 1.26.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the rRIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation instructions for the rRIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu, click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.26 is considered a new core release of the application and will require a reinstallation of rRIS. This is accomplished by navigating to the rRIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application, please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Problem List – Requirement MU 170.302.c

A new data pane was added to the Visit History tab of the Registration data window. The Problem List data pane is a grid view that will display an historical list of "problems" recorded in previous visits.

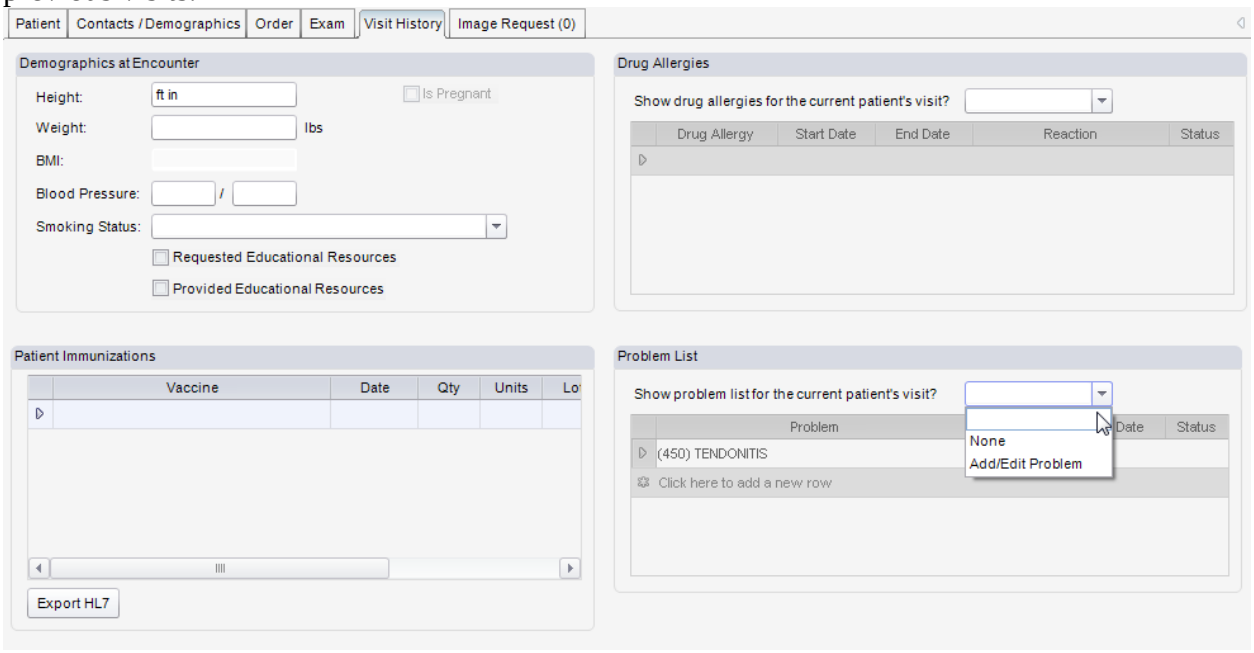

**Figure 4.1 – Problem List Grid**

The list box has 2 hard coded values of "None" and "Add/Edit Problem". Selecting the Visit History tab, the Problem list grid will be disabled. Selecting "None" will capture the current visit as not having a problem associated with it. Selecting "Add/Edit Problem" will enable the grid. If there is a problem from a previous visit, the user can edit the entry or can add a new problem.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

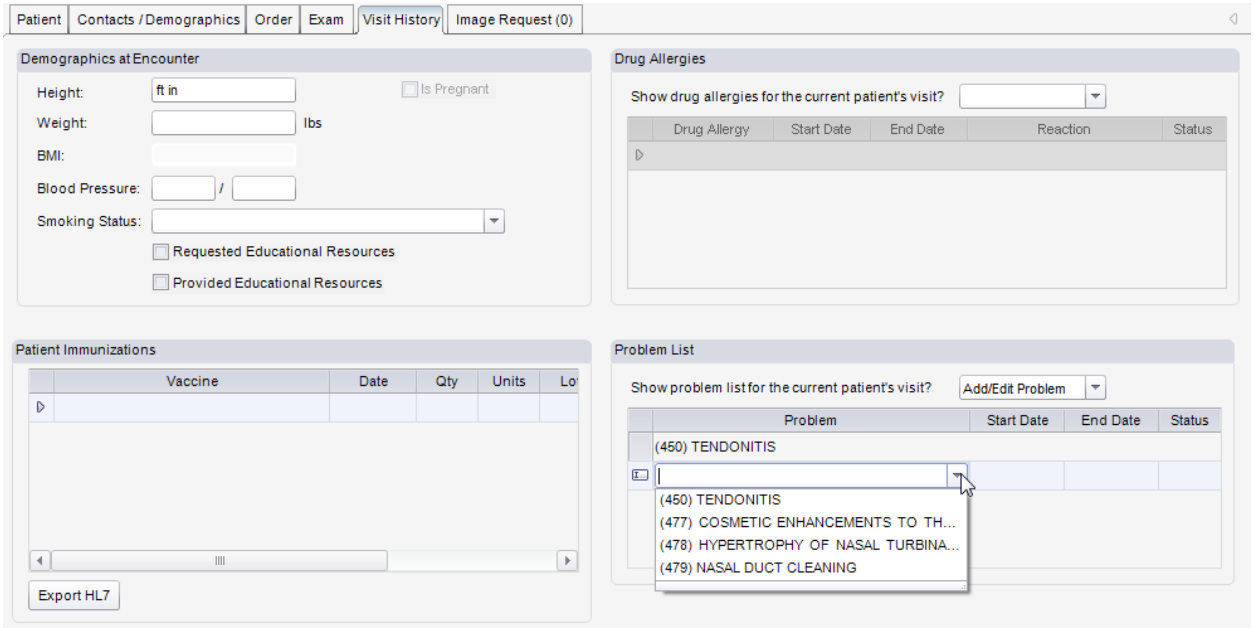

**Figure 4.2 – Problem List enabled showing available problems (ICD-9)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Electronic Prescribing (ePrescribing) – Requirement MU 170.304.b

A new button available on the Patient window titled eRx. This button does some data validation to compile an xml message into a format that New Crop requires to get access to their ePrescription application.

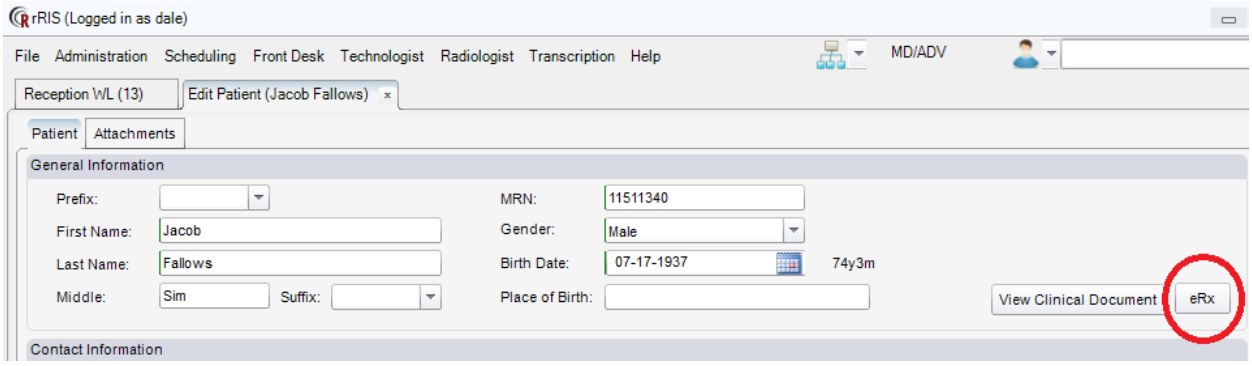

**Figure 4.3 – eRx button on patient tab**

If the user is not presented with any validation errors a web browser object will launch and they will be logged into the New Crop System and taken directly to their Compose Rx screen. This object will close with the application.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

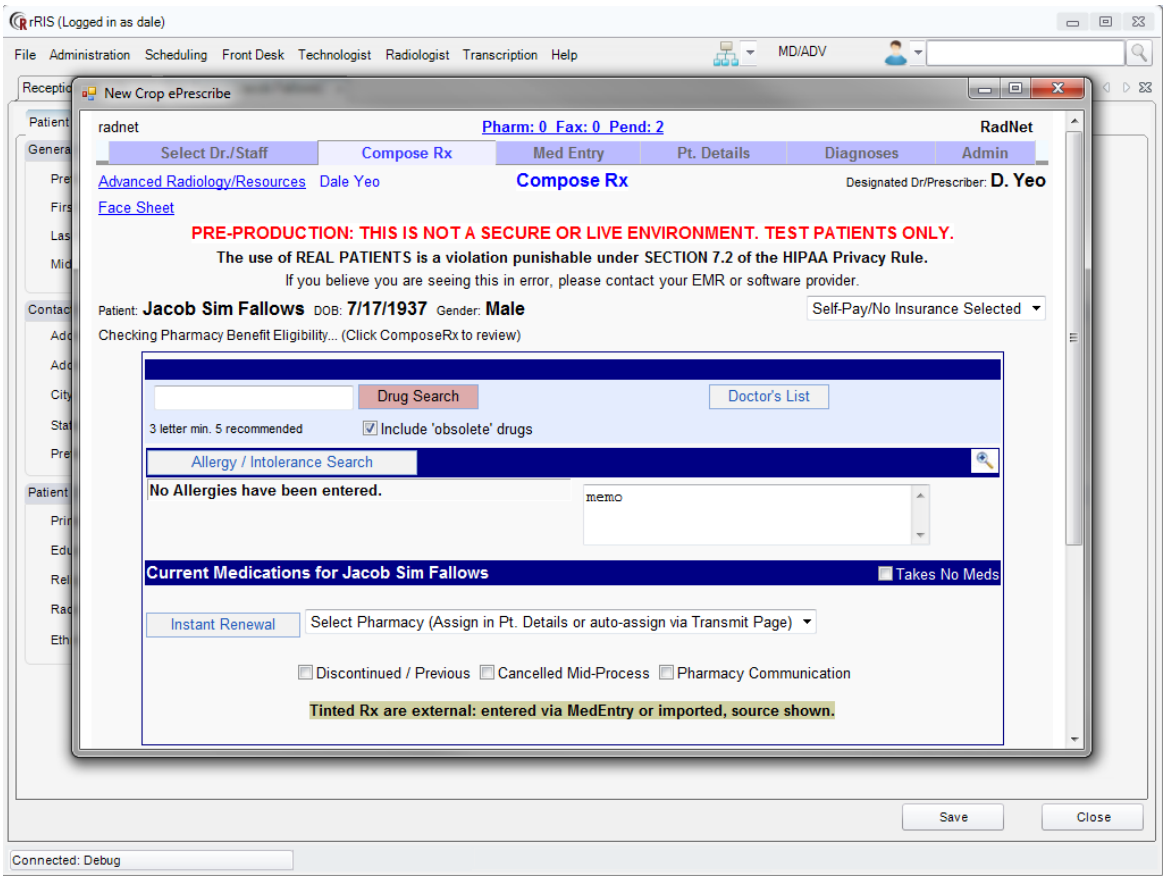

**Figure 4.4 – New Crop ePrescribe window**

A new field has been added to the personnel editor to capture the DEA# that will need to be completed for the Radiologist to access the New Crop ePrescribe website.

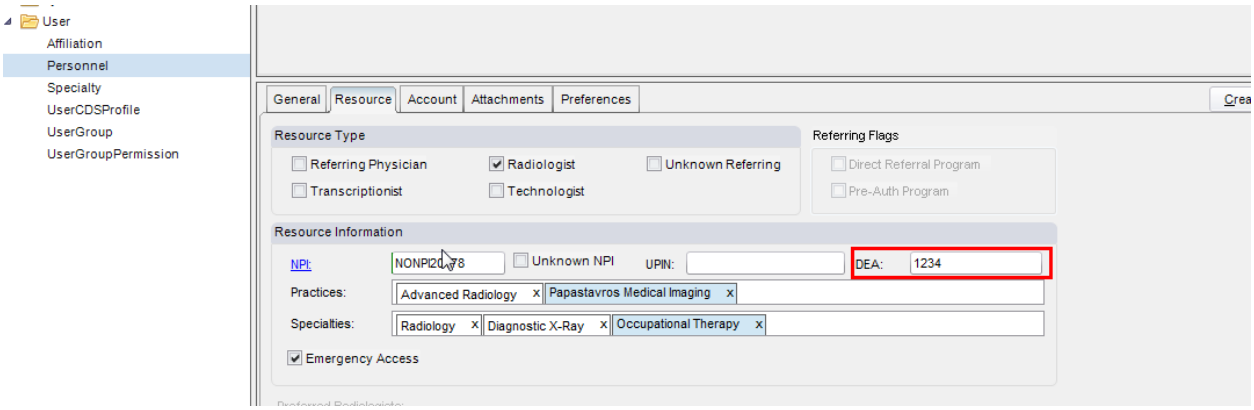

**Figure 4.5 – DEA number field in personnel editor**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

There are 3 types of validation checks
First is to verify ePrescribing the account fields are configured

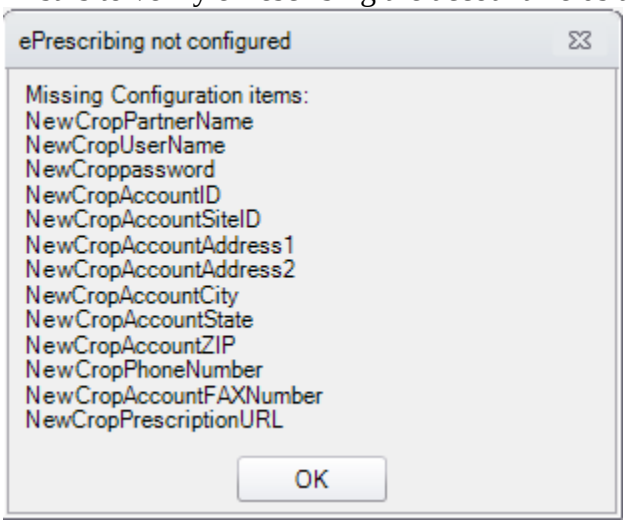

**Figure 4.6 – Validation on ePrescribe fields**

Second would be for missing information on both patient and practice

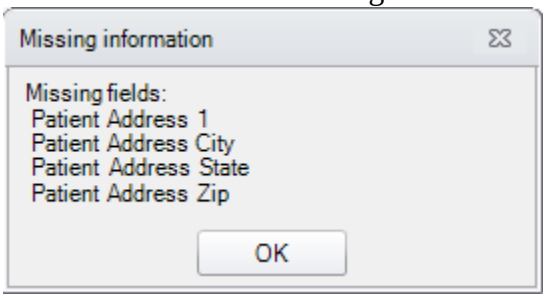

**Figure 4.7 – Checks on missing information on patient / practice data**

Third check validates information on both patient and practice

1. ?, & and " are not accepted by New Crop
2. State must be a valid 2 digit state
3. Zip must be 5 digits (and 4 if there is a zip extension)
4. Country must be US

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**Figure 4.8 – Validation on Invalid characters for patient / practice**

A new access string was created, and should be granted to the Radiolgist user group

| Access String Code | Description | Display Order | Default Access Level Code | Active |

## Clinical Decision Support – MU Requirement 170.304.e

Alert framework has been added so that an alert message will fire when we meet a certain criteria. We created two alert rules in the application:

1) No Phone number which fires a message if there is no cell, home or work phone entered for a patient.
2) Rule if the modality is a MR and the patient is over 65 to fire the alert.

If both are met for a patient, the alerts will be applied in one message.

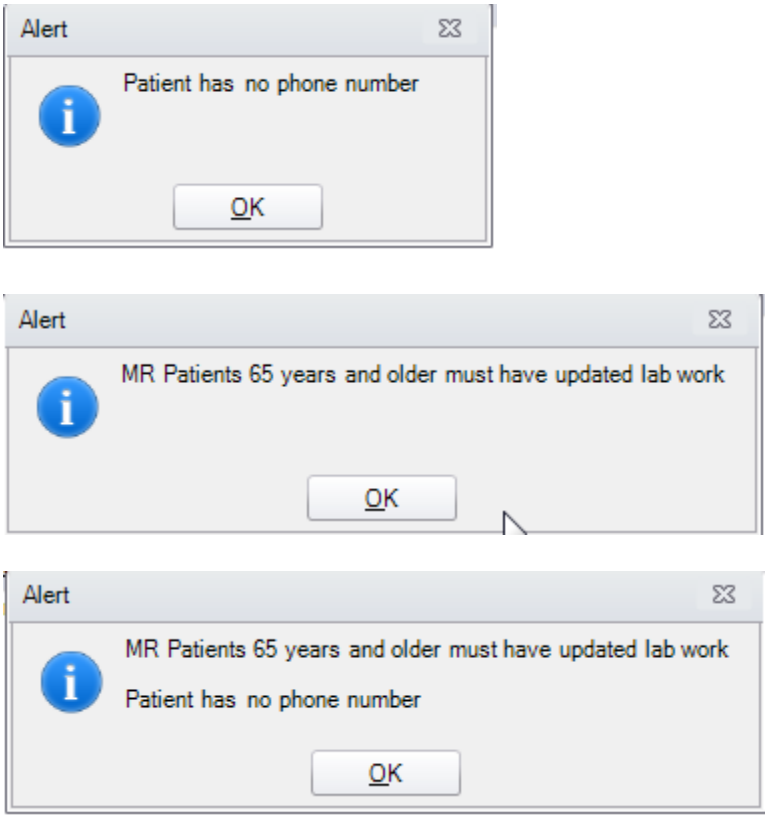

**Figure 4.11 – Possible Alert Messages**

A new lookup table has also been added to contain the alert codes and messages.

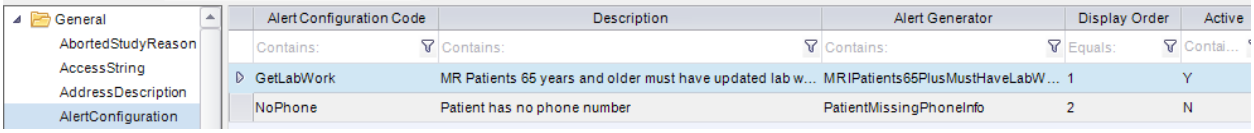

**Figure 4.11 – Alert Configuration lookup table**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Exchange Clinical Information and Patient Summary Record – MU Requirement 170.304.i

We added a button on the Patient General tab which will allow the user the ability to import a validate CCR or CCD document and display in human readable format.

To successfully show the imported xml file we loaded two xls stylesheets into the resources part of the application for each type CCR.xsl and CDA.xsl. The stylesheet transforms the xml to a html document which we store on the local users workstation where the user is running the application from. After closing the web browser we remove the results file from the users workstation. Finally we do some low level validation when importing the file,

1) We do a quick check to make sure the file location exists on both types and throws an exception error message if one or both don't exists in the location specified.
2) `TODO: remove the results.html file when closing the webbrowers`

We display the SHA-1 value of the imported document (used to verify that the document is not modified by an outside force).

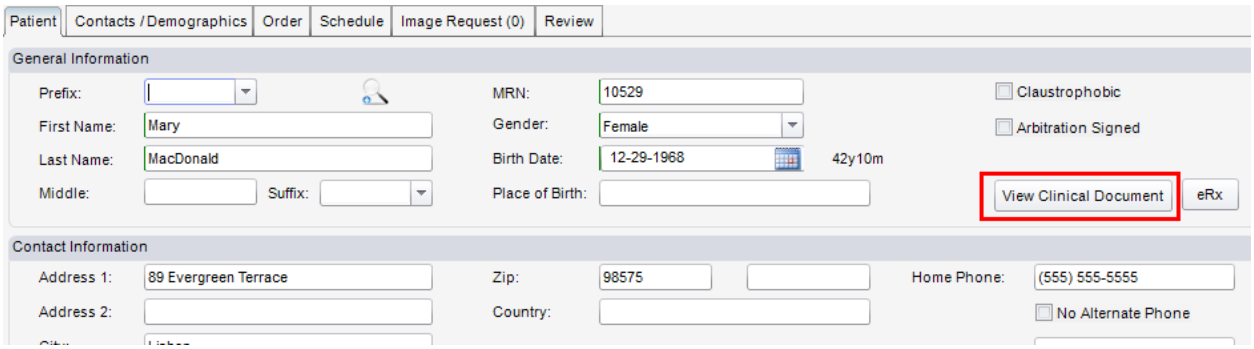

**Figure 4.12 – View Clinical Document button**

The example below is a sample displaying an imported CCR document opened in rRIS internal web browser.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

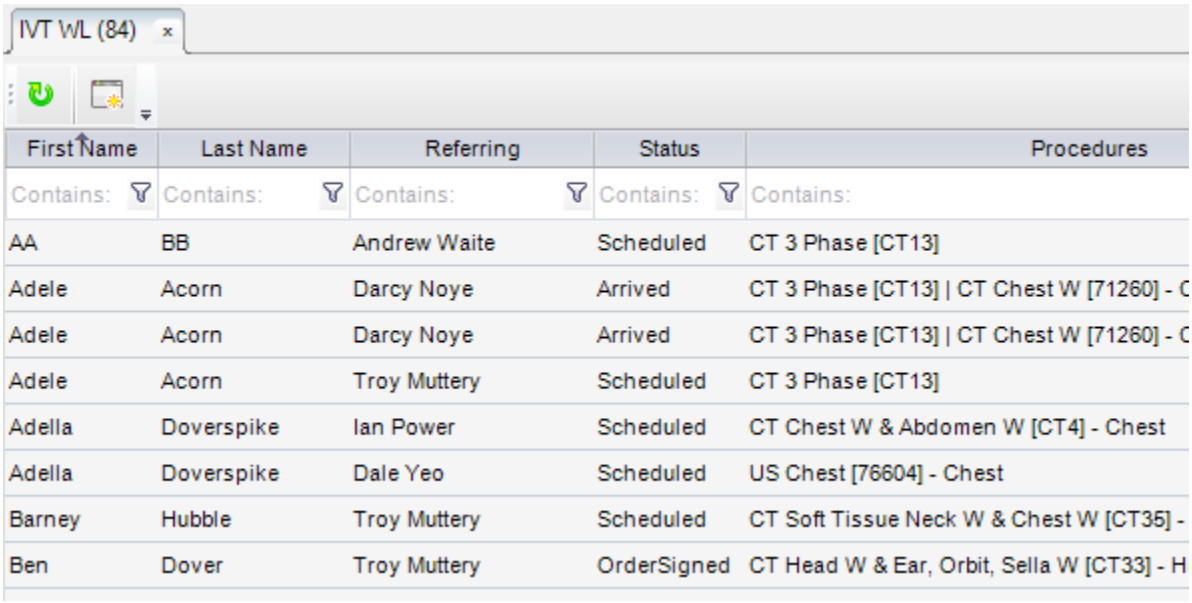
## Referring Column Added to IVT Work List

In build 1.26 the referring column has been added to the IVT work list. If the patient record is edited and the referrer is changes, the column will reflect this change on the IVT work list. As like other columns, the referring column can be pinned to the left or right or hidden from view.



| First Name | Last Name | Referring | Status | Procedures |
|---|---|---|---|---|
| Contains: | Contains: | Contains: | Contains: | Contains: |
| AA | BB | Andrew Waite | Scheduled | CT 3 Phase [CT13] |
| Adele | Acorn | Darcy Noye | Arrived | CT 3 Phase [CT13] \| CT Chest W [71260] - C |
| Adele | Acorn | Darcy Noye | Arrived | CT 3 Phase [CT13] \| CT Chest W [71260] - C |
| Adele | Acorn | Troy Muttery | Scheduled | CT 3 Phase [CT13] |
| Adella | Doverspike | Ian Power | Scheduled | CT Chest W & Abdomen W [CT4] - Chest |
| Adella | Doverspike | Dale Yeo | Scheduled | US Chest [76604] - Chest |
| Barney | Hubble | Troy Muttery | Scheduled | CT Soft Tissue Neck W & Chest W [CT35] - |
| Ben | Dover | Troy Muttery | OrderSigned | CT Head W & Ear, Orbit, Sella W [CT33] - H |

**Figure 4.14 – Displaying Referring Column on IVT Work List**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Removing Study from Procedure Picker Row Must Add Cancel Reason

At the time of Registration on scheduled studies, if the user removes the procedure picker row via the large red ✗ located on the right edge of the picker row, the user will now have to enter a reason for cancelling.

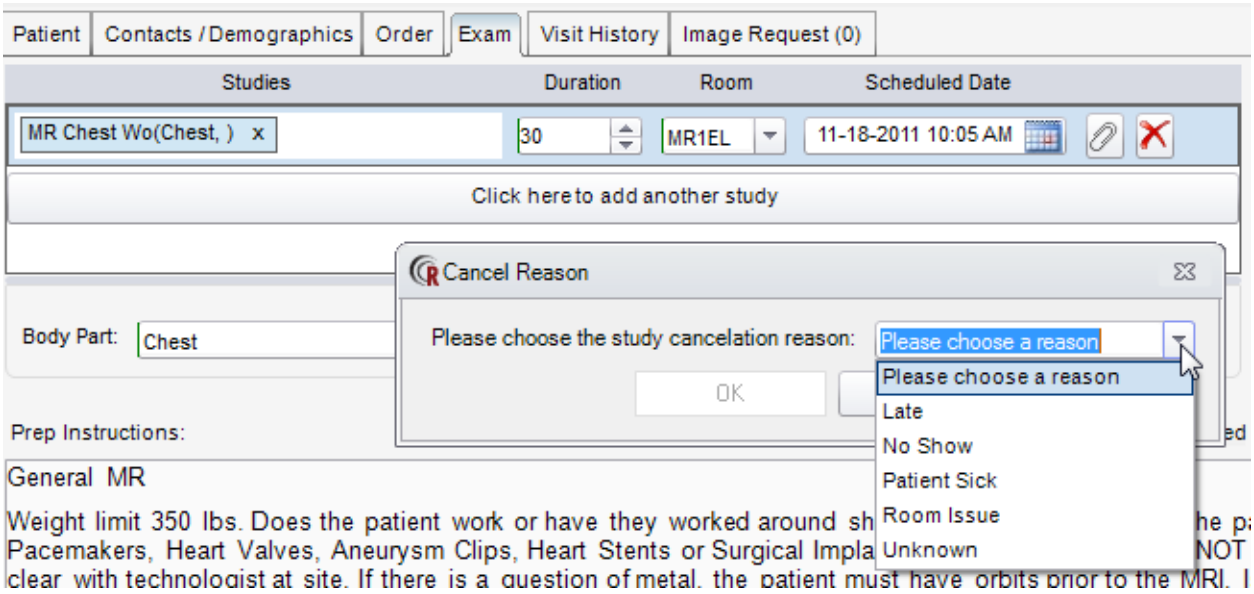


**Figure 4.15 – Cancel Reason window opens when removing procedure row.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Resolved Defects

Bugs, Suggested Features and Support Issues resolved in build 1.26. The extract is taken from Redmine bug tracking system and only displays defects resolved in 1.26.

| # | Status | Tracker | Priority | Subject | Category | Target version | Resolved Version |
|---|---|---|---|---|---|---|---|
| 666 | Resolved | Bug | Low | Abort exams window resize issue | Thick Client GUI | 1.25 | 1.26 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This document describes some of the new features and changes implemented in rRIS as of the end of Sprint 27. This version of rRIS is referred to as Build 1.27.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the rRIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the rRIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu, click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.27 is considered a new core release of the application and will require a reinstallation of rRIS. This is accomplished by navigating to the rRIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application, please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Advanced Beneficiary Notice (ABN) Flag

In build 27 the ability to mark patient studies with ABN flag has been added. A drop down list box was added to the billing code information data pane. During Registration, the ABN list box is adjacent to the procedure picker row.
Available options

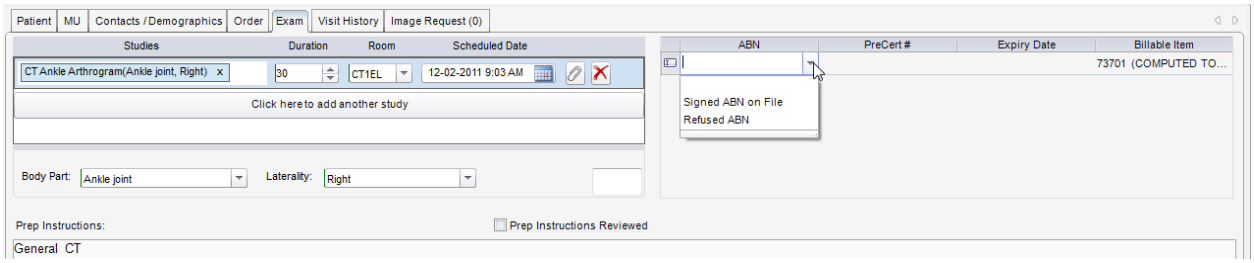

**Figure 4.1 – ABN list box displayed from the Registration window.**

The ABN flag is also available to Technologists from Perform Exam window.

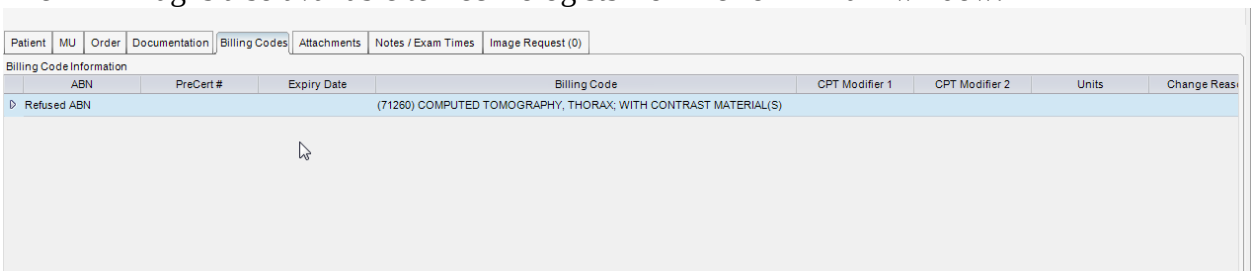

**Figure 4.2 – ABN list box from Perform Exam window.**

Lastly the ABN flag is available in the IVT data window.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

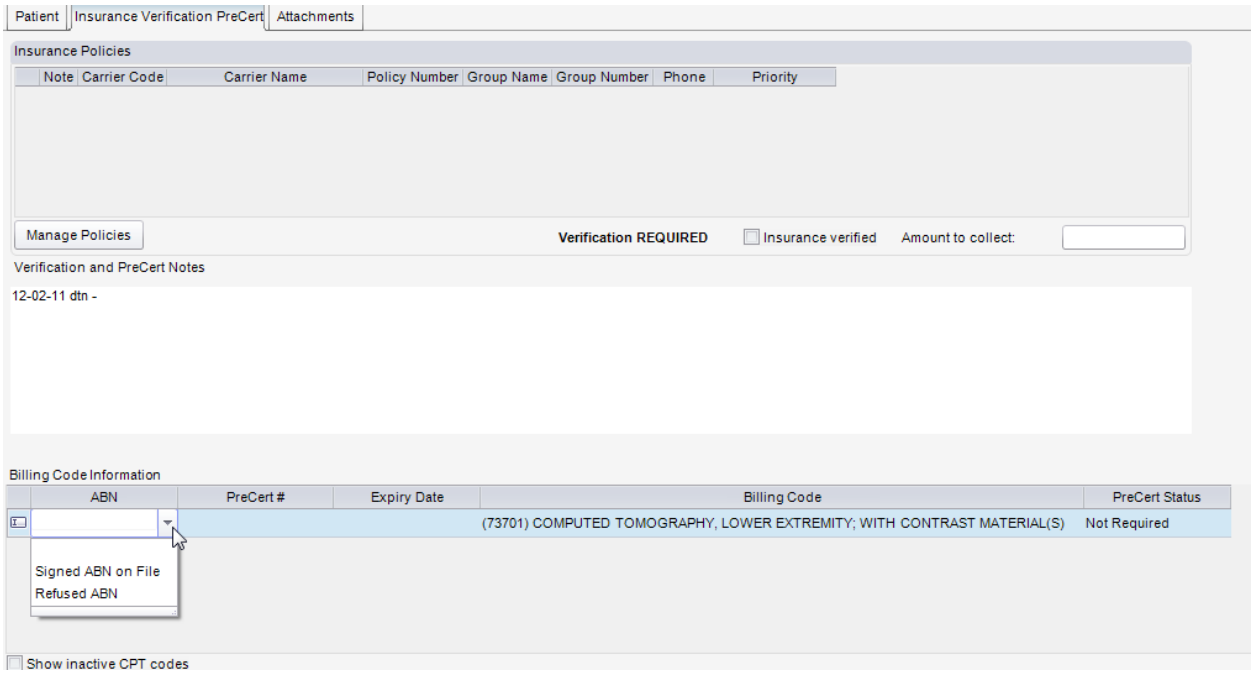

**Figure 4.3 – ABN list box from IVT data window**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Outside Read Sites Insurance Required

Insurance policies can now be specified for outside reads. At the site level, a flag was added to indicate if the particular site required insurance.

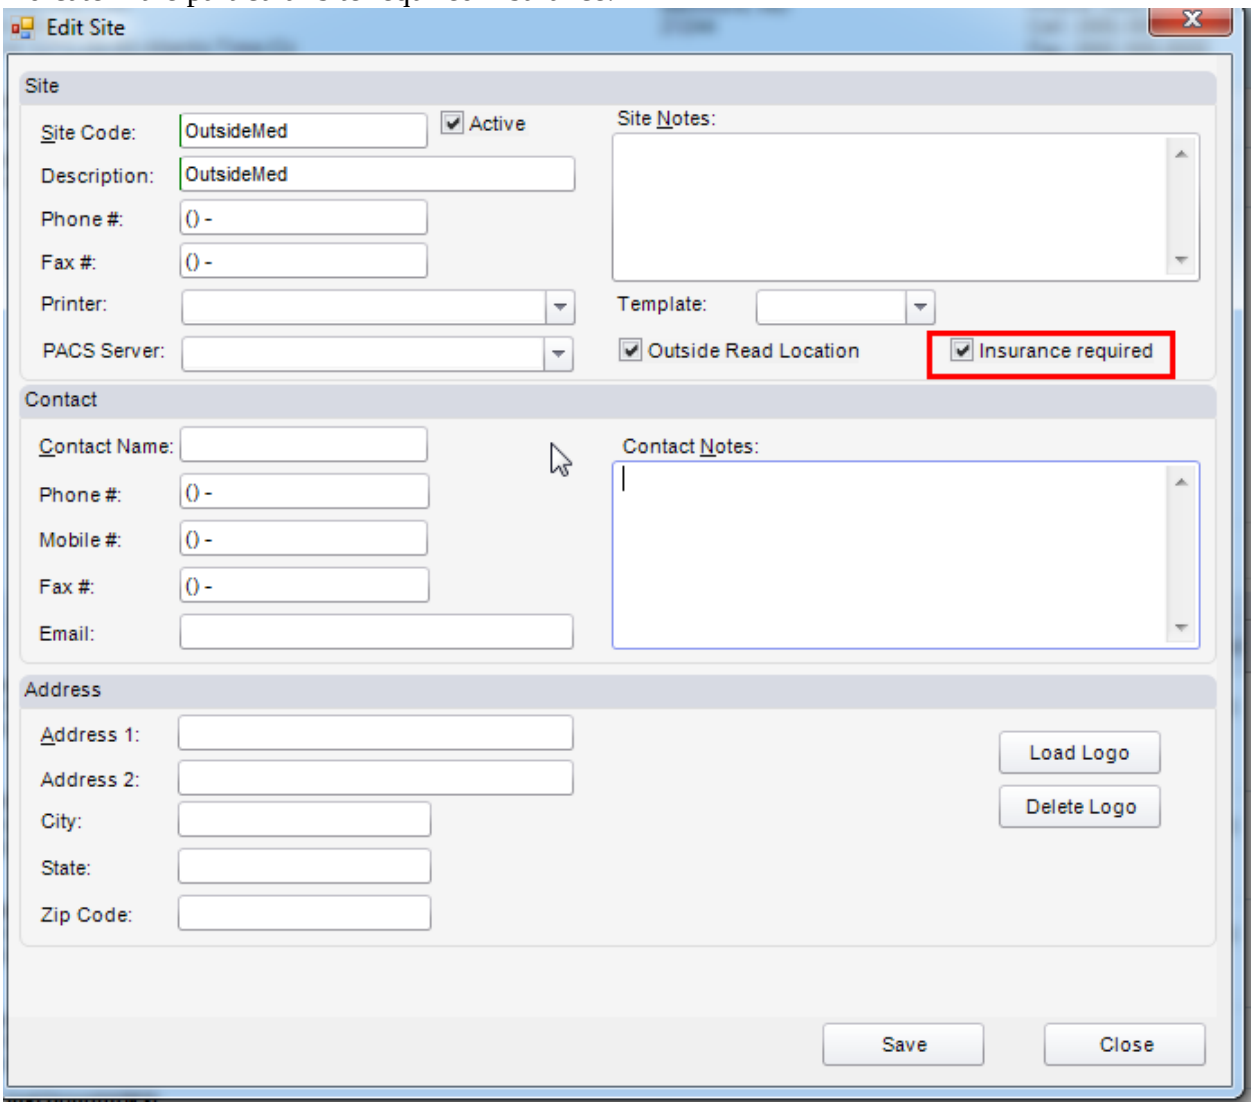

**Figure 4.3 – Insurance Required flag at site level**

When creating an Outside Read, once the site is selected for the order, the Insurance Policies data pane appears allowing the user to add a new or select a previous Insurance Policy.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

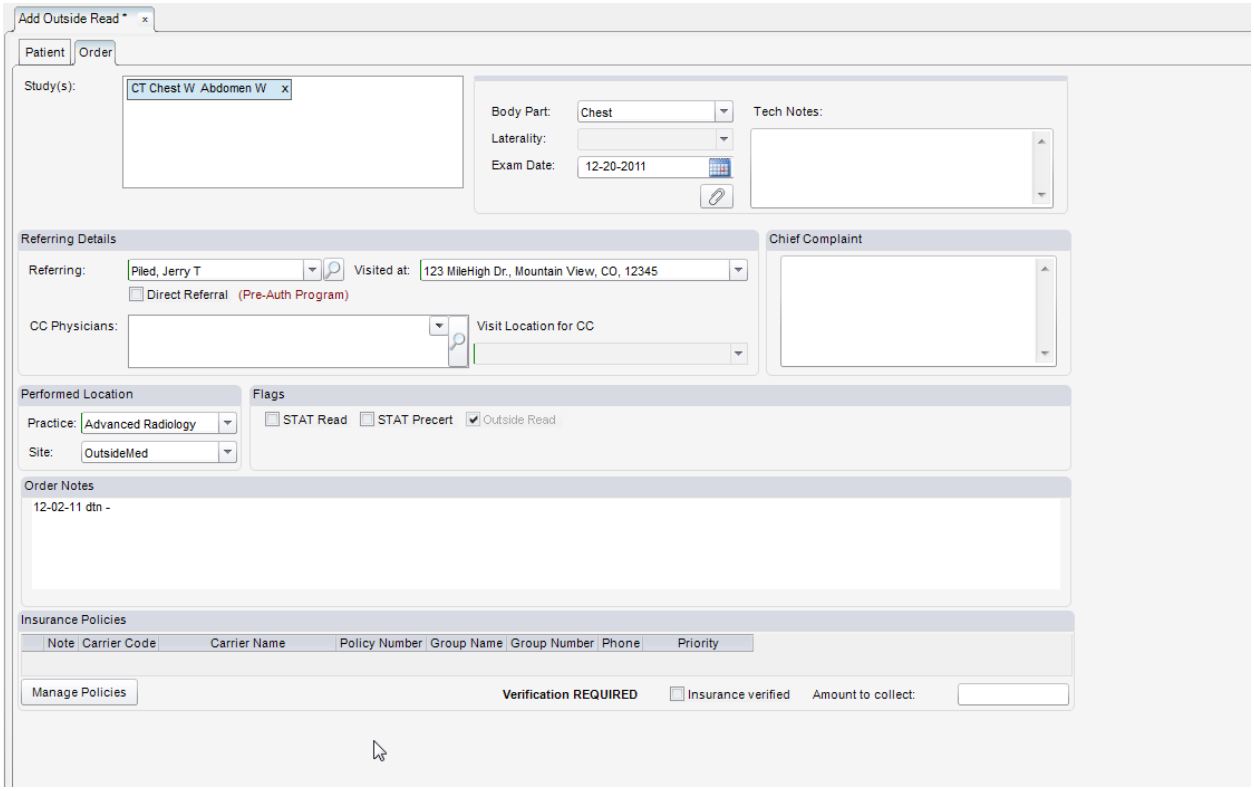

**Figure 4.4 – Add Outside Read displaying Insurance Policies data pane**

Outside reads that require insurance can also be added to the Billing Exception work list. If the outside read site does not have the "Insurance Required" flag, it will not be added to the Billing Exception work list.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Clinical Decision Support – MU Requirement 170.304.e

On the MU tab where medications are located a grid for lab results has been added under the grid there are buttons for adding and editing lab results. There is also a right click context menu for add/edit and delete. The delete warns the user asking them to confirm the delete.
The grid only shows the fields that are critical to the technician for example the lab's name and address information isn't critical to their decision making and is only available on the right click edit menu.
In the edit screen most fields are free text data entry. The main exception being the test name, which is combo box entry based on the LabTest lookup table. Only the active tests in the LabTest lookup are returned with the patient recorded for display in the UI. This is to limit bandwidth usage, to speed performance and make it easier for techs and rads to see the critical items they are concerned with. Note if we were to receive the values via an HL7 feed, the system would enter all test items but only the active tests would display and download to the clients. Later if a test is activated the history of all past retrievals for that test will be displayed.
For the entry of a lab result the only required fields are the observation date which is the date the test was collected on in all cases where there is a specimen (such as blood work – according to the HL7 spec). The other required fields include observation_value and the name of the test aka lab_test_code.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

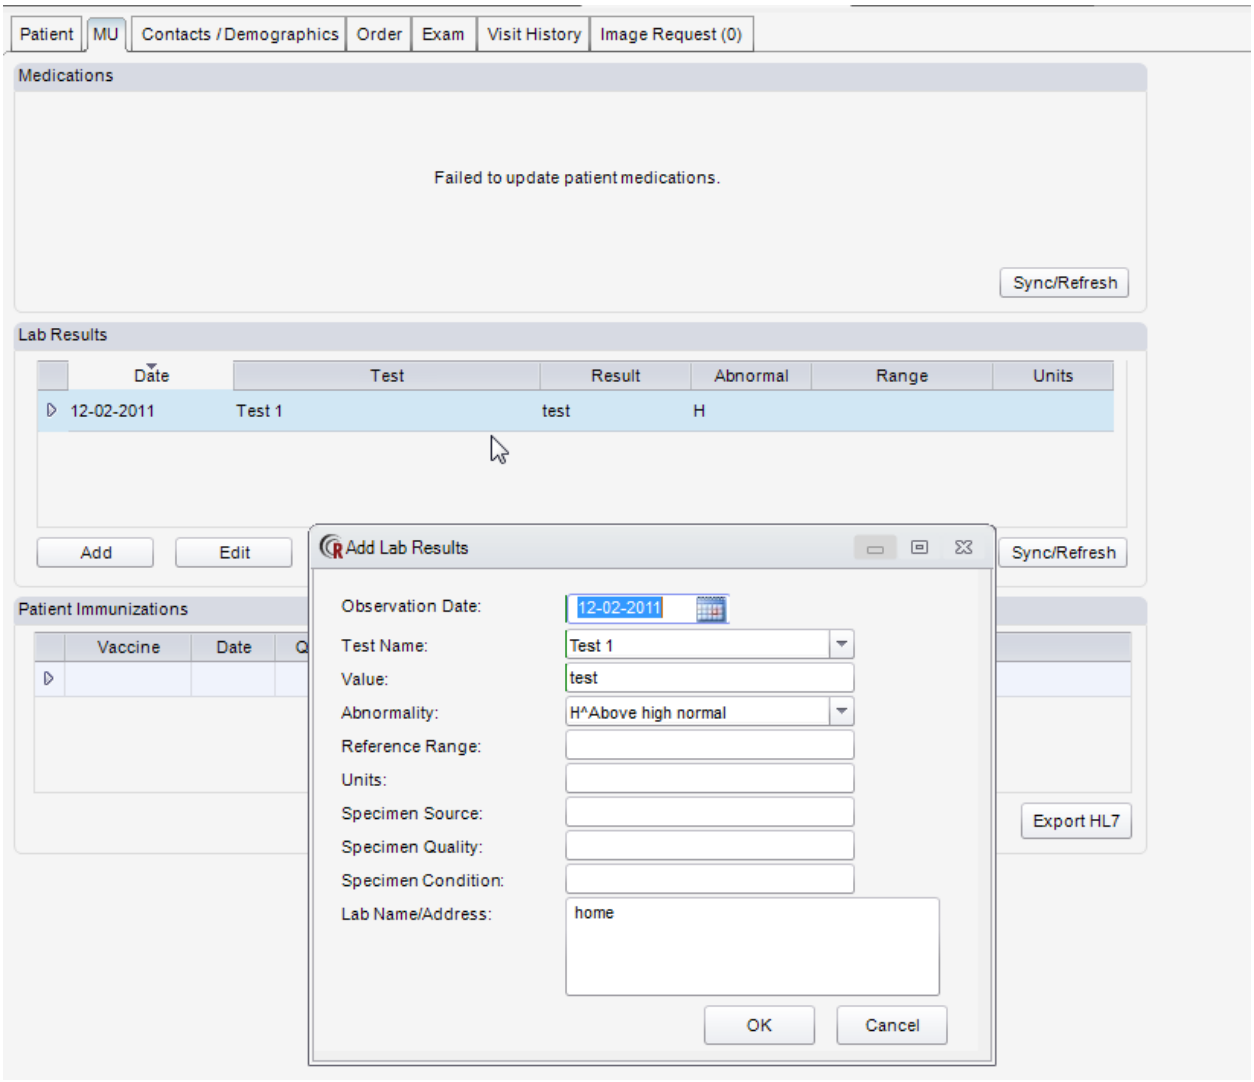

**Figure 4.5 – Possible Alert Messages**

Please note that this feature is incomplete. The sync refresh button does nothing at this time because NewCrop has not yet released WS methods for receiving lab results. HL7 portion of the solution still needs work if we are to receive lab results via HL7.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Lab Results – MU Requirement 170.306.g

The medications grid is located on the MU tab, next to the patient tab in most content screens. In addition to the auto sync feature the user can click on the "Refresh/Sync" button just below the grid. This refresh will query NewCrop on a separate thread as not to slow down or lockup the main workflow in the case where the intranet connection is unavailable, failing or slow.

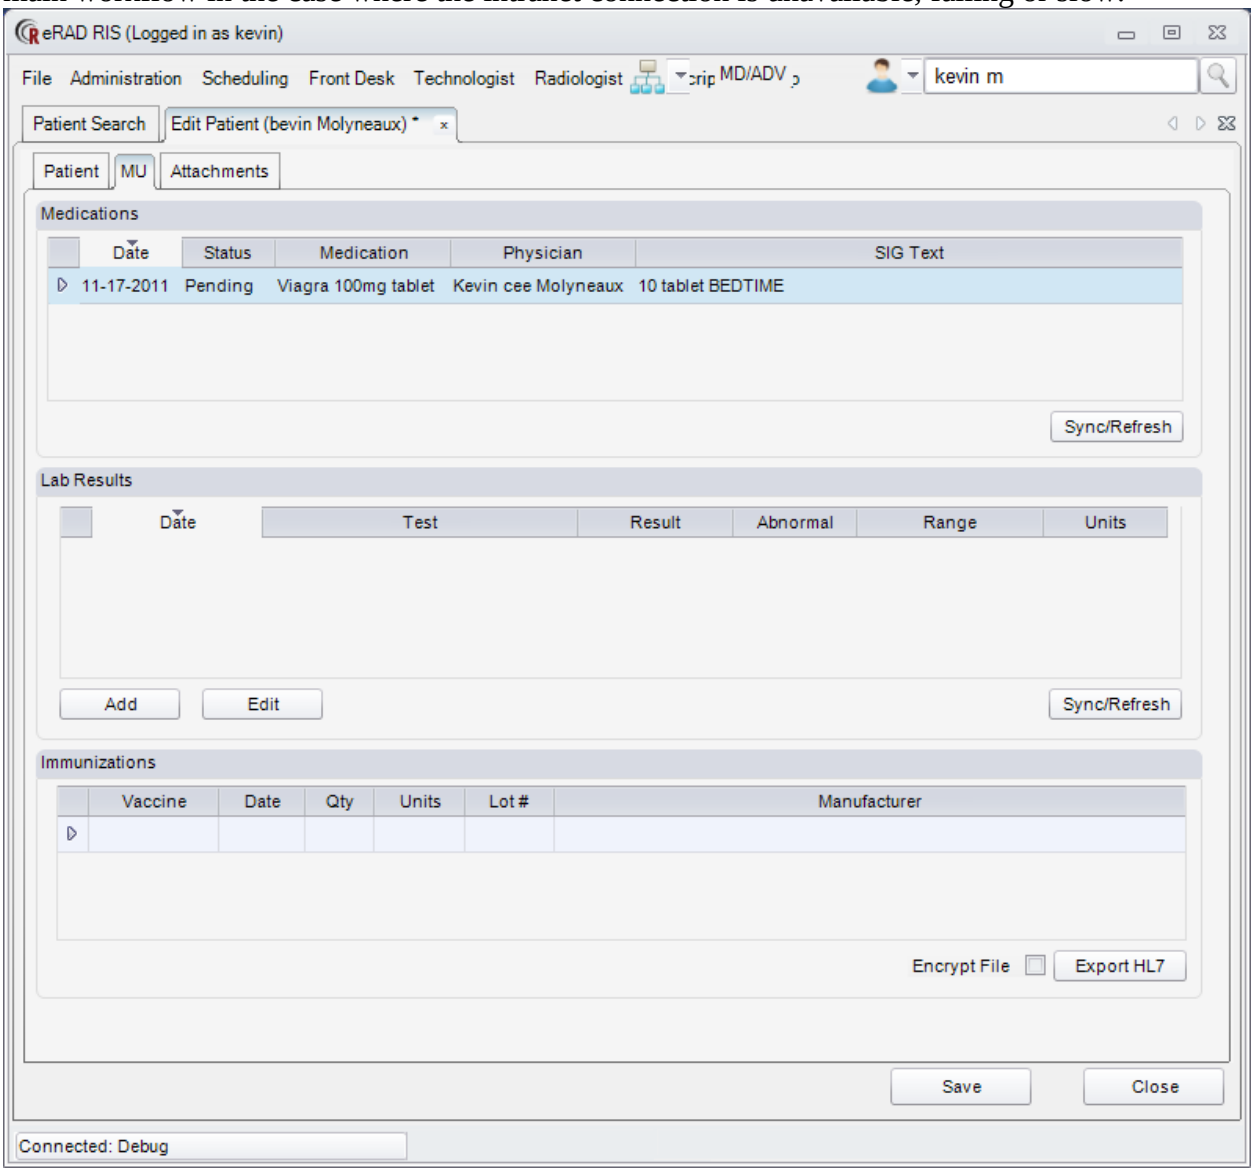

**Figure 4.6 – Medication data pane on MU tab**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

A new system configuration setting "MUMedicationSyncFrequency" has also been created. After the sync is performed the patient.last_medication_sync is updated to reflect the change. The new medications (if any) and patient.last_medication_sync are stored when the user saves the screen. Saving the screen is guaranteed at key points in the workflow such as IVT verification, arrival, starting and completing studies.

Auto sync's can be disabled by setting the "MUMedicationsSyncFrequency" to -1. A zero value would force an autosync every time they open a patient record. For example, a value such as 600 would force a check every 10 hours.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Drug to Drug Allergy and Drug Formulary – MU Requirements 170.302(a)(b)

A new button has been added on the Visit History tab in the Drug Allergies data pane.
This button passes along the allergies entered in our grid to the New Crop application where the user will be responsible to add them to the patient within New Crop.

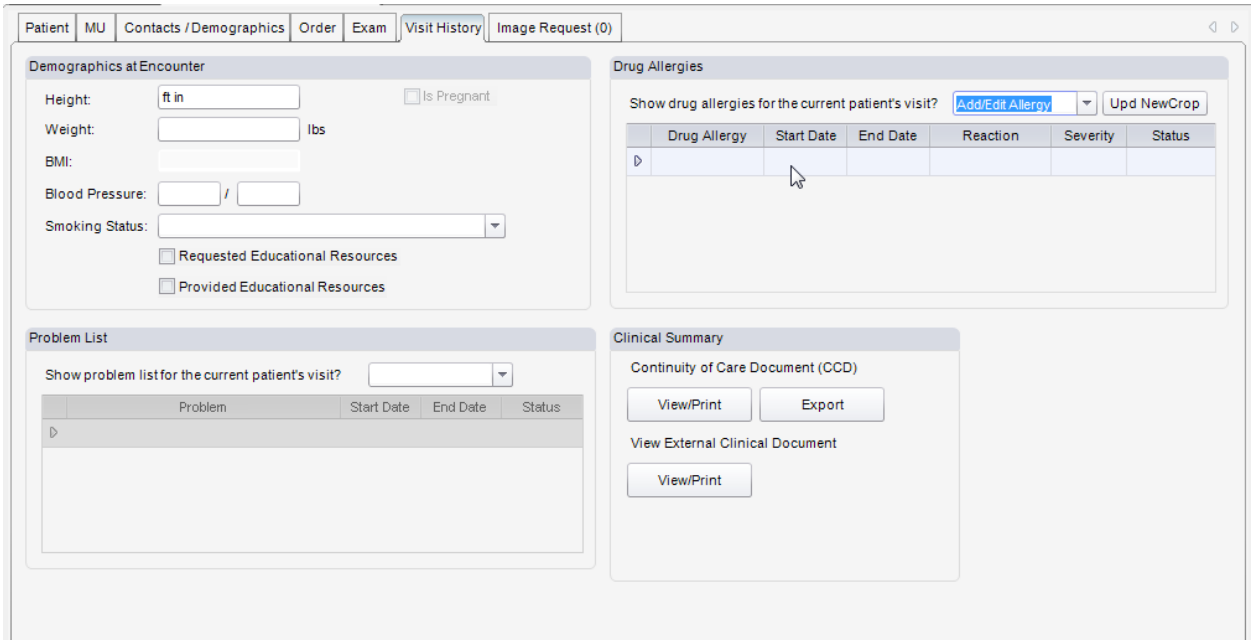

**Figure 4.7 – Drug Allergies and Update NewCrop**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Resolved Defects

Bugs, Suggested Features and Support Issues resolved in build 1.27. The extract is taken from Redmine bug tracking system and only displays defects resolved in 1.27.

| # | Status | Tracker | Priority | Subject | Category | Target version | Resolved Version |
|---|---|---|---|---|---|---|---|
| 701 | Resolved | Bug | High | No way to turn off ChairService | Web Services/DB | 1.27 | 1.27 |

# 1. Purpose

This document describes some of the new features and changes implemented in rRIS as of the end of Sprint 28. This version of rRIS is referred to as Build 1.28.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the rRIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the rRIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu, click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.28 is considered a new core release of the application and will require a reinstallation of rRIS. This is accomplished by navigating to the rRIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application, please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Adding RVU to Billing Codes

In build 28 the Billing Code table has 2 new columns added to specify RVU values. The columns Technical RVU and Professional RVU are displayed in Figure 4.1 below.

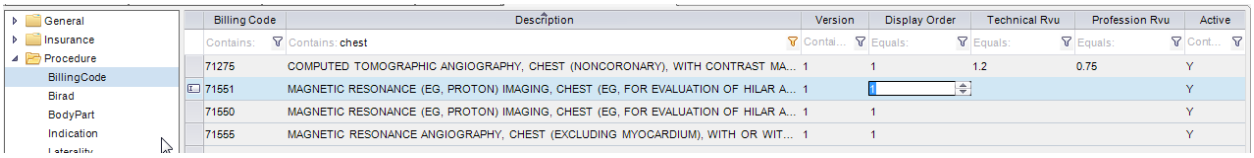

**Figure 4.1 – Billing Code table showing Technical and Professional RVU columns.**

## Real Time Alerts

The Alert configuration was introduced in Build 26. In Build 28 the alert will also be real time. Added to the Alert Configuration table patients first or last name has changed and birth date. This is for existing patients if a new patient is being added and one of these fields are changed no alert will display.
For existing patients, if the value for one of these fields are changed and do not match with the value stored in database, the user will automatically receive an alert when the field that was edited is exited. Example: User edits birth date by changing day of birth and tabs out of that field, or selects another area of the form, an alert will pop up.

Also in build 26 the alert for a Patient over the age of 65 and the modality is MR an alert was opened. This alert has been enhanced. The additional conditions must also be met for this alert to fire. In addition to the patient's age and modality type, the patient must have been prescribed Lipitor, lab result has LDL Cholesterol over 100 and have and have heart disease captured in the Problem List.

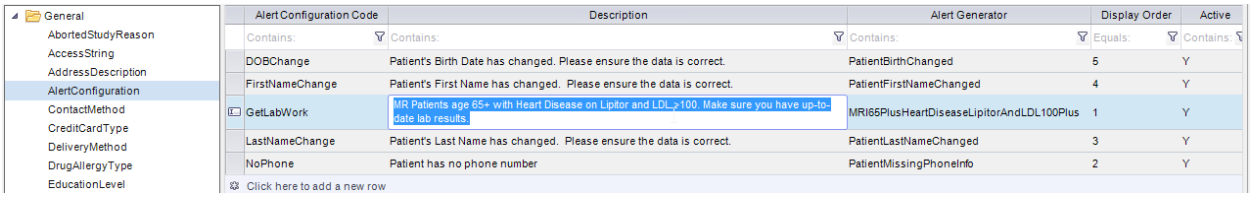

**Figure 4.2 – Alert Configuration lookup table**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

The Alert Configuration Code and Description can be entered as the user wishes. The Alert Configuration Code must be a unique value.
The alert generators are hard coded values in the application. The cell under the Alert Generator column is a list box and currently has the following values:

- PatientBirthChanged
- PatientFirstNameChanged
- PatientLastNameChanged
- PatientMissingPhoneInfo
- MRI65PlusHeartDiseaseLipitorAndLDL100Plus

## Clinical Summary – MU Requirement 170.304.i

The generation of the Clinical Summary structured xml file actually satisfies pieces of requirements.

- 170.304(f) Copy of Electronic Health Record
- 170.304(h) Clinical Summaries
- 170.304(i) Exchange Clinical Information / Patient Summary

On the Clinical Summaries section within the Patient Visit 2 buttons were added
View /Print and Export.

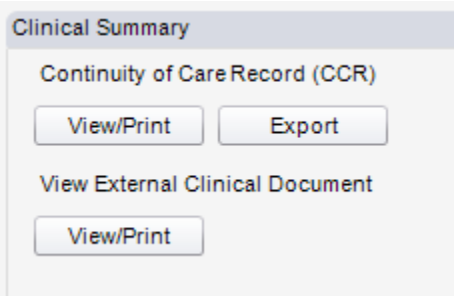

**Figure 4.3 – Clinical Summary – CCR buttons for View/Print and Export**

Basically you have the option to View the Patient CCR in a browser window. Printing is covered off by using the right click print on the open record.
Exporting the file allows the user to specify where they want the generated XML file saved. From there is can be handled like any file in the Windows environment for printing, copying, emailing and deleting.
The preview mode for the CCR looks something like this…

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Clinical Quality Measures – MU Requirement 170.304j

Under the Administration menu a new menu item Meaningful Use has been added. This opens the Meaningful Use window (we will change the name of this menu item and window to CQM or Clinical Quality Measures in a later build). The window has a series of list boxes. The first has a list of the CQM options. A radiologist list box, report interval, and the Period Ending for the report.

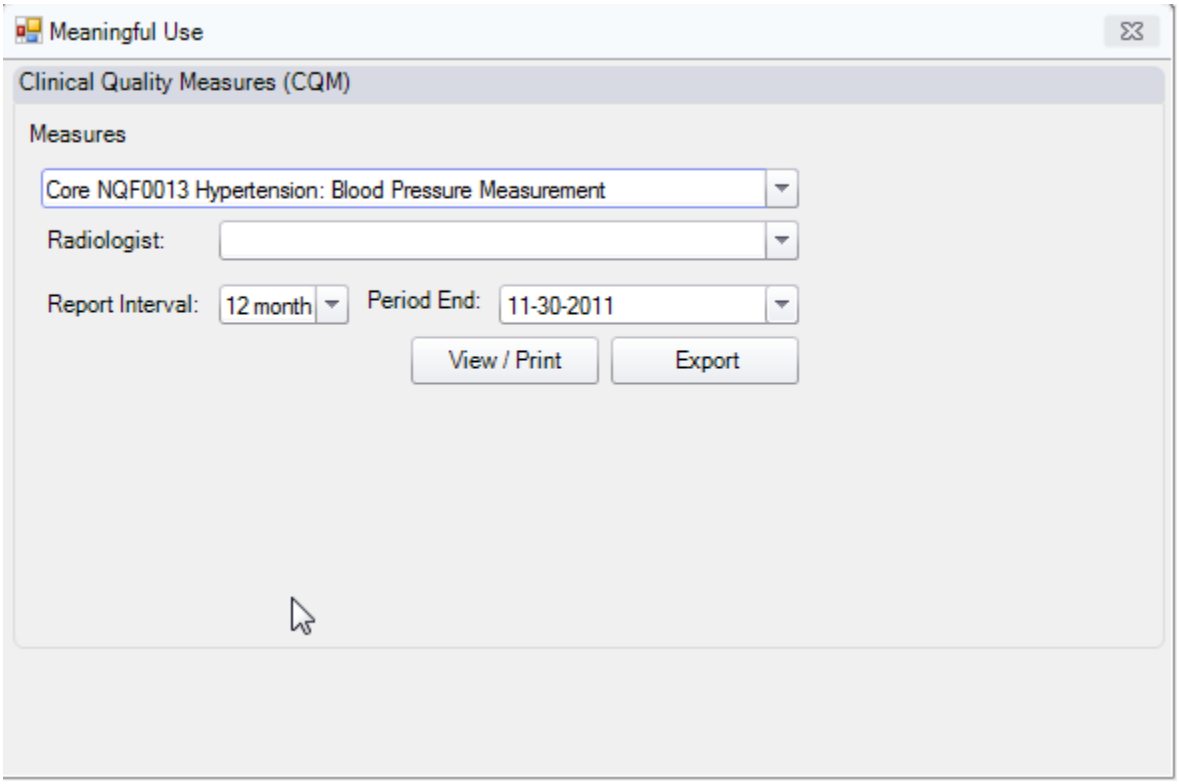

**Figure 4.5 – Medication data pane on MU tab**

The following describes each of the CQM requirements to generate the report.

Core
c_mu_cqm_0013_hypertension –

a) The patient must be at least **18 years of age or older** at the start of the reporting period and have at least **two encounters** with the Rad during the reporting period.
b) An active diagnosis of **Hypertension(used icd-9 codes).**
c) At least one **blood pressure reading (systolic and diastolic)** should be performed and documented during the reporting period in the Vital Signs chart section.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

c_mu_cqm_0028a_tobacco_use –

a) The patient must be at least **18 years of age or older** at the start of the reporting period and have at least **two encounters** with the Rad during the reporting period.
b) The patient was queried about tobacco use one or more times within 24 months.

c_mu_cqm_0028b_tobacco_intervention –

a) The patient must be at least **18 years of age or older** at the start of the reporting period and have at least **two encounters** with the Rad during the reporting period.
b) Documentation that the patient is a tobacco user within the last 24 months.
c) An active diagnosis of Nondependent tobacco use disorder **(used icd-9 codes).**

c_mu_cqm_0421a_weight_screening -

a) The patient must be at least **65 years of age or older** at the start of the reporting period and have at least **one encounter** with the Rad during the reporting period.
b) The number of patients in the denominator that have a normal BMI (BMI >= 22 or <30) OR an abnormal BMI (BMI >= 30 or <22) recorded in the Vital Signs chart section (BMI must be recorded in the six months prior to the encounter date or during the reporting period);

c_mu_cqm_0421b_weight_screening –

a) The patient must be aged 18 - 64 at the start of the reporting period and have had one encounter with the Rad during the reporting period.
b) The number of patients in the denominator that have a normal BMI (BMI >=18.5 or <25) OR an abnormal BMI (BMI >=25 or <18.5) recorded in the Vital Signs chart section (BMI must be recorded in the six months prior to the encounter date or during the reporting period);

Alternative Core

c_mu_cqm_0024_child_weight_assessment -

a) The patient must be aged 2 - 17 at the start of the reporting period and have had one encounter with the Rad during the reporting period.
b) And had BMI percentile documentation (**V85.5, V85.51, V85.52, V85.53, V85.54),** counseling for nutrition (V65.3) and counseling for physical activity (V65.41) during the reporting period. **(used icd-9 codes).**

c_mu_cqm_0038_childhood_immunization - missing

c_mu_cqm_0041_influenza_immunization -

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

a) The patient must be at least **50 years of age or older** at the start of the reporting period and have at least **two encounters** with the Rad during the reporting period.
b) And had an influenza shot during the flu season(Jan-Feb and Sept –Dec).
c) And have received influenza vaccine CVX code 111 or 140.

Optional
c_mu_cqm_0031_breast_screening -

a) The patient must be female aged 40 - 69 at the start of the reporting period and have had one encounter with the Rad during the reporting period.
b) At least one procedure should be a mammo type(Screening)**.**

c_mu_cqm_0043_pneumonia_vaccination -

a) The patient must be aged 65 at the start of the reporting period and have had one encounter with the Rad during the reporting period.
b) And have ever received a pneumococcal vaccine CVX code 100 or 133.

c_mu_cqm_0061_diabetes_blood_pressure –

a) The patient must be aged 18 - 74 at the start of the reporting period and have had one encounter with the Rad during the reporting period.
b) And had a diagnoisis of Diabetes recorded(used icd-9 codes): 250, 250.0, 250.00, 250.01, 250.02, 250.03, 250.10, 250.11, 250.12, 250.13, 250.20, 250.21, 250.22, 250.23, 250.30, 250.31, 250.32, 250.33, 250.4, 250.40, 250.41, 250.42, 250.43, 250.50, 250.51, 250.52, 250.53, 250.60, 250.61, 250.62, 250.63, 250.7, 250.70, 250.71, 250.72, 250.73, 250.8, 250.80, 250.81, 250.82, 250.83, 250.9, 250.90, 250.91, 250.92, 250.93, 357.2, 362.0, 362.01, 362.02, 362.03, 362.04, 362.05, 362.06, 362.07, 366.41, 648.0, 648.00, 648.01, 648.02, 648.03, 648.04

Patient in the reporting period last blood pressure reading must be <140/90 during the reporting period.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Resolved Defects

Bugs, Suggested Features and Support Issues resolved in build 1.28. The extract is taken from Redmine bug tracking system and only displays defects resolved in 1.28.

| # | Status | Tracker | Priority | Subject | Category | Target version | Resolved Version |
|---|---|---|---|---|---|---|---|
| 752 | Closed | Bug | High | Created a Business Hours Availability Template and error returned | Admin Tools | 1.27 | 1.28 |

# 6. Known Limitations

The following are Bugs, Suggested Features, and Support Issues found in build 1.28. This build is the current QE build and testing is ongoing. The list may increase in size. This document will not be updated or re-released.

| # | Status | Subject | Category | Target version |
|---|---|---|---|---|
| 760 | New | Edit Send To report is not defaulted correctly | Thick Client GUI | 1.28 |
| 761 | New | Closing the Report History will through series of messages | Thick Client GUI | 1.28 |
| 762 | New | Seen this error when closing Report Drafted | Thick Client GUI | 1.28 |
| 763 | New | Report History data nugget throws error on Send To button | Thick Client GUI | 1.28 |
| 764 | Resolved | Walk-In Error thrown after completing required fields. | Thick Client GUI | 1.28 |
| 765 | Resolved | Cannot open 2 instances of Edit Patient | Thick Client GUI | 1.28 |
| 766 | New | Exiting application with data window open keeps record locked | Thick Client GUI | 1.28 |
| 767 | New | Logging off application with data window open can cause error | Thick Client GUI | 1.28 |
| 768 | New | CQM window > Report Interval fields need to be longer | Thick Client GUI | 1.28 |
| 769 | New | Drug Allergies Row Error | Thick Client GUI | 1.28 |
| 771 | New | CQM 00043 Pneumonia Vaccination Status for Older Adults returns error | Thick Client GUI | 1.28 |
| 772 | Resolved | Clinical Summary > Continuity of Care Record needs "Scheduled Study Date" | Thick Client GUI | 1.28 |
| 773 | Resolved | Clinical Summary > Continuity of Care Record Throws error if patient folder is missing procedures | Thick Client GUI | 1.28 |
| 774 | New | Patient search column for "DataNug" gone after search | Thick Client GUI | 1.28 |
| 775 | New | Spelling error for RVU column | Admin Tools | 1.28 |

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 29. This version of eRAD RIS is referred to as Build 1.29.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu, click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.29 is considered a new core release of the application and will require a reinstallation of eRAD RIS. This is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application, please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## MT Polling Permission

MTPolling will now be disabled in the User Preference screen if the permission "Clinical.UserPreferences.TranscriptionPolling" is not granted to the user. It is suggested that the base permission be set to "None".

**Figure 4.1 – User who has permission to change preference**

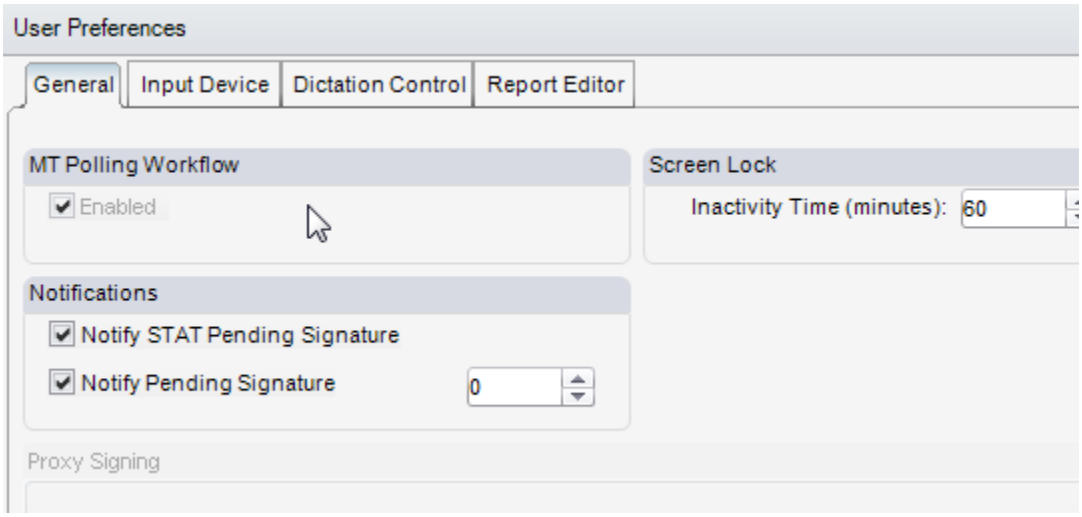

**Figure 4.2 – User who does not have permission to change preference**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Ability for Medical Transcription to Change Polling Queues

In previous builds, transcription had the ability to assign / un-assign to the Problem and QA work lists. The user would have access to the work list to view the contents and select which record they would like to open from the work list. With the introduction of work list polling, and the possibility of transcription not having access to these work lists, we needed to provide access to these queues.

Four new access strings have been added to control the access to the menu items.

| Access String | Description |
|---|---|
| WL.GetJob | Access to MT polling workflow for general queue/all queues |
| WL.GeneralQueue | Access to MT polling workflow for general queue |
| WL.ProblemQueue | Access to MT polling workflow for problem queue |
| WL.QaQueue | WL access to MT polling workflow for qa queue |

The transcription menu will display the Get Job menu item with a submenu listing the individual queues.

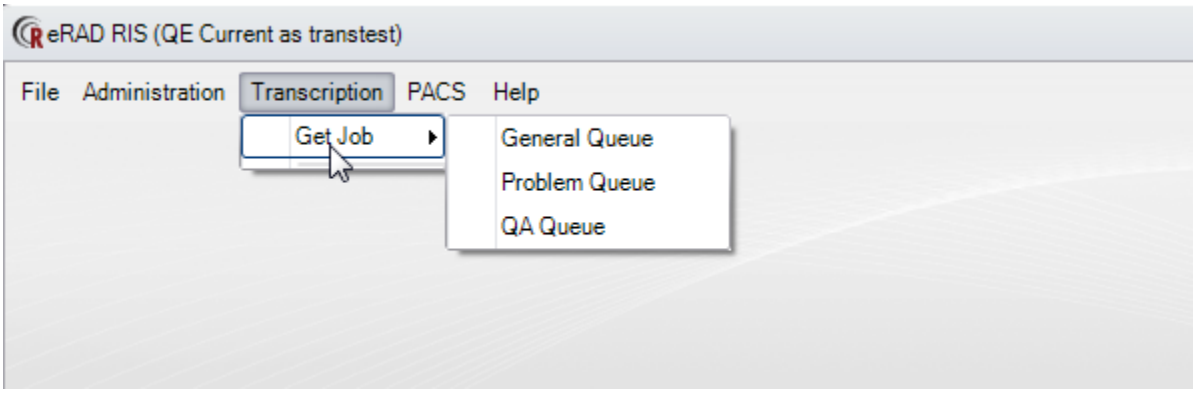

**Figure 4.3 – Transcription role with only access to polling queue's**

Selecting one of these menu items will start polling the respective queue and get a job as soon as one is available. If an Edit report screen is already open on, it will tell them to close it before they can start polling a new queue.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Reset Skipped Rows for Transcription

This feature was introduced for Radiologists in Build 23 and is now included in work flow for Transcription.
Figure 4.4 below shows the options available to be assigned the far right button on the Transcription Editing tab. The default button action can be changed. To change the default action of the button, hold down the CTRL key on the keyboard and select the action from the drop down list. The option selected from the list will be performed as well as change the default setting for the button. When the default action is changed for a button, the text on the button will also change.

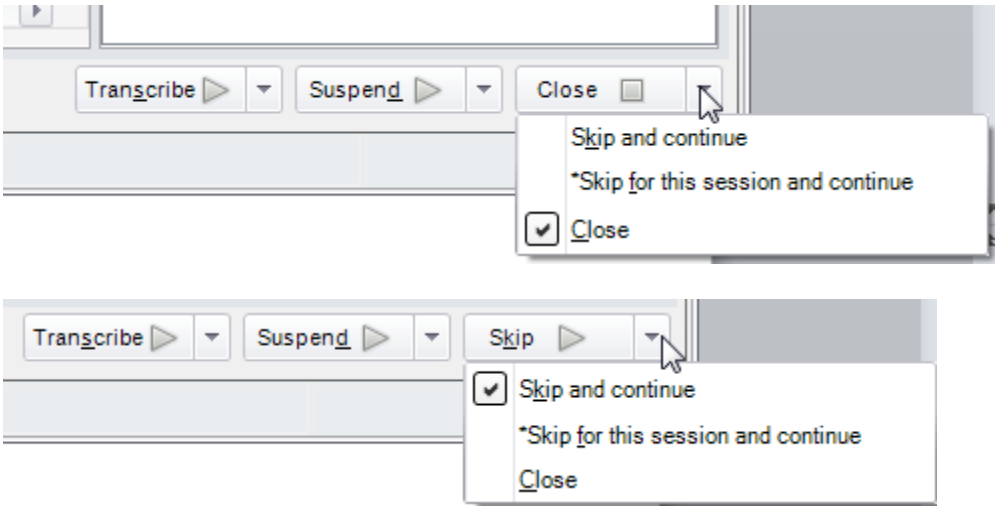

**Figure 4.4 – Displaying the ability to Skip work list rows and changing the default action of the "Close" Button**

Actions are defined as "button action" and continue or "button action" and close. Referring to Figure 4.4, you will notice ICONS on the buttons as play ▷ or stop □. Assigning actions that are to continue to the next record on the work list display the play ICON, and actions that are to complete action and close data window to return to the work list will have the stop ICON.

Also in figure 4.4 the menu options are to skip the current exam and a specified following action. In the first example, Close if defaulted with the action being to simply close the Transcription Editing window.
Skip and continue will skip the item for the current workflow instance. To access this exam in the Editing window again, it can be opened directly from the work list as normal, or if the user completes the entire work list, then the skipped rows are accessed next.
The final menu option of "*Skip for this session and continue" will mark this exam as such. Unlike "Skip and Continue" once the user completes the work list, exams flagged "*Skip for this session and continue" will not be accessed during the normal "next available exam" work flow.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

If the user has access to the work list they can access the exam via the work list, or if the exam(s) are to be added back into the "next exam" work flow, the user does have the ability to manually add these skipped exams back into the workflow by resetting skipped rows via the Transcription menu option displayed in Figure 4.5. Figure 4.6 is the window that opens. The user can reset individual rows or all of the skipped rows in this list.

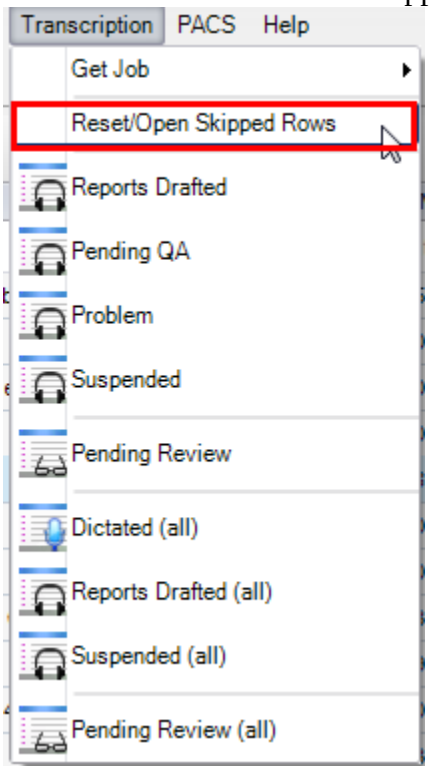

**Figure 4.5 – Reset/Open Skipped Rows menu option**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

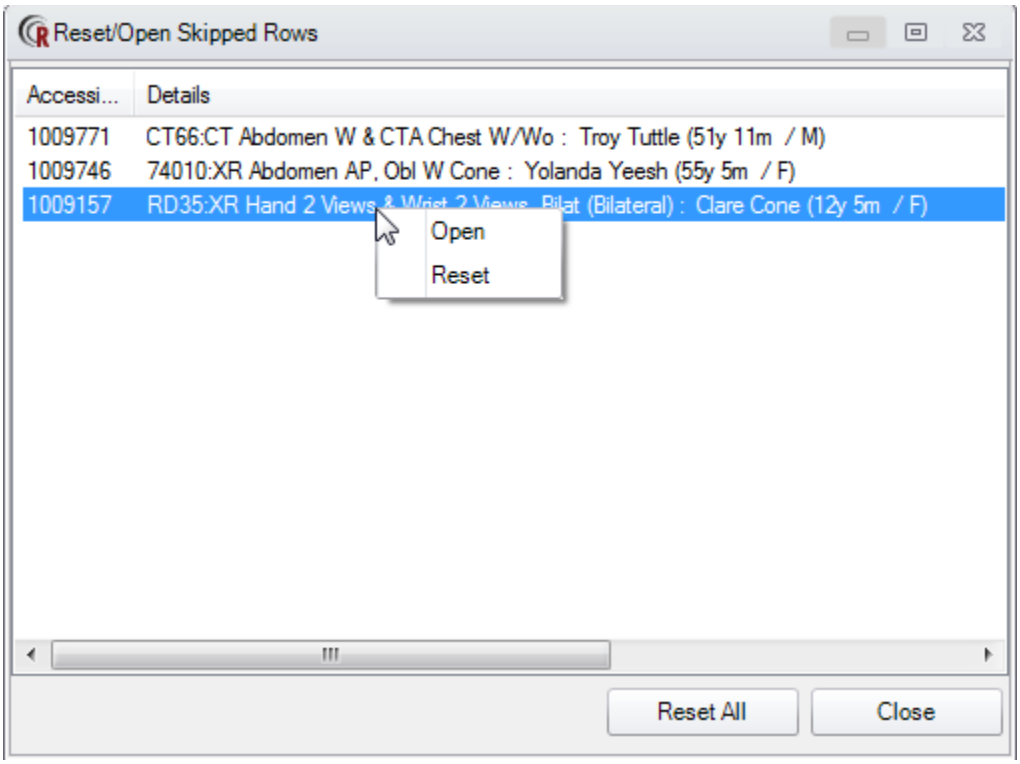

**Figure 4.6 – Reset/Open Skipped Rows window**

## Suspended Workflow Added for Transcription

The ability to suspend a job has been available to the Radiologists for some time now. In build 29 this work flow has been introduced to the Transcription work flow as well. In the Report Editing window a new drop list button has been added with the options to Suspend and continue or to Suspend and close.

Suspend and continue will suspend the current exam open in report editor window. Suspend and close will suspend the current exam and return the user to the work list they accessed the record from. If the user is configured polling work flow only (does not have access to work list views) they are returned to the main screen.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

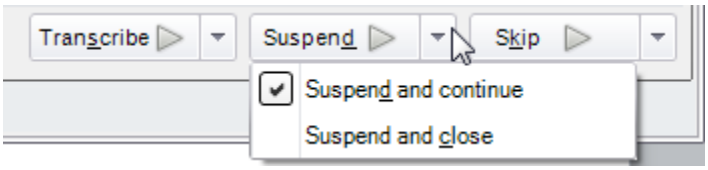

**Figure 4.7 – Suspended Button with drop list options**

For those that do have access to work lists, under the Transcription menu you will find two new menu options. Suspended and Suspend (all) have been added. The Suspended work list will have all suspended records belonging to the current logged in user. The Suspend (all) work list will display records from all users suspended from transcription. This menu option will most likely only be available to an admin.

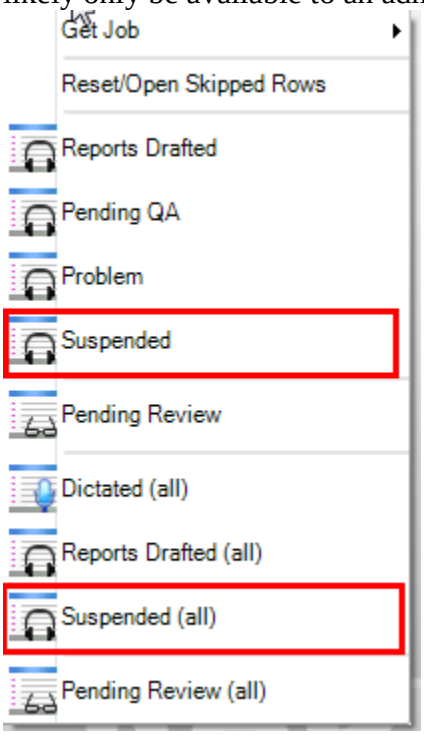

**Figure 4.8 – Suspended menu options to access work list**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Change Dictating Radiologist from Work List

In build 29, exams that are in a status of Dictated, Report Drafted, Transcribed, and Signed can have the dictating radiologist changed. From the Patient folder, Dictated by Date, and Pending Signature work lists select the row to be changed and from the context menu (right click) select the menu option Change Dictated by Radiologist.

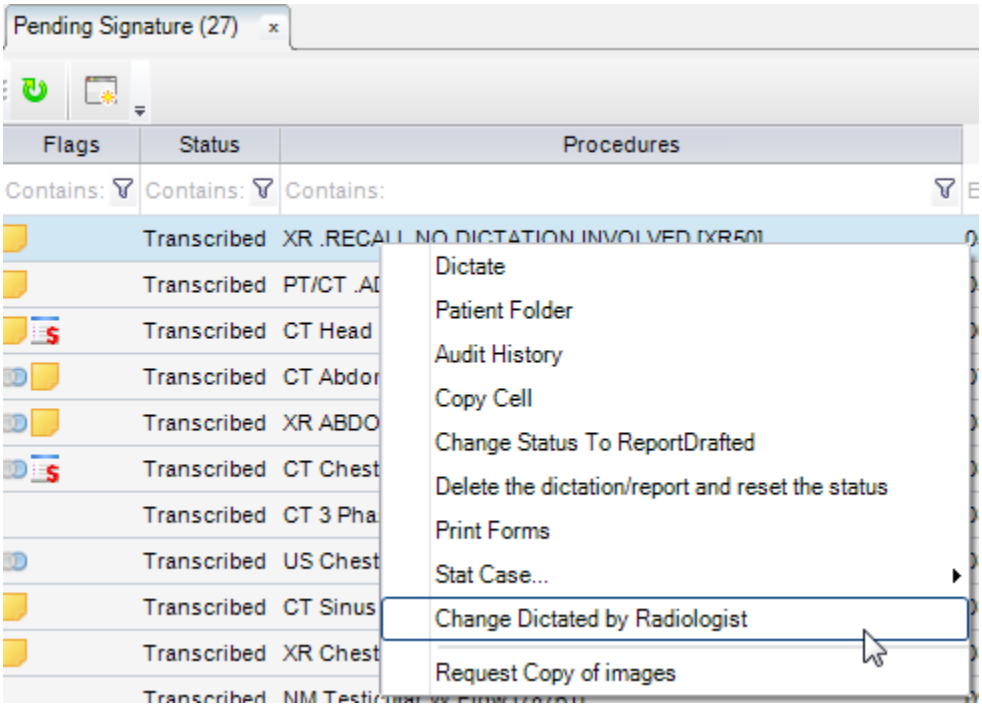

**Figure 4.9 – Change Dictated by Radiologist on context menu**

This will open a new window with the Radiologists that can be assigned to the study(s) selected based on what practice they are assigned to and where the modality resides for the studies affected. Only the latest interpretation will be affected.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

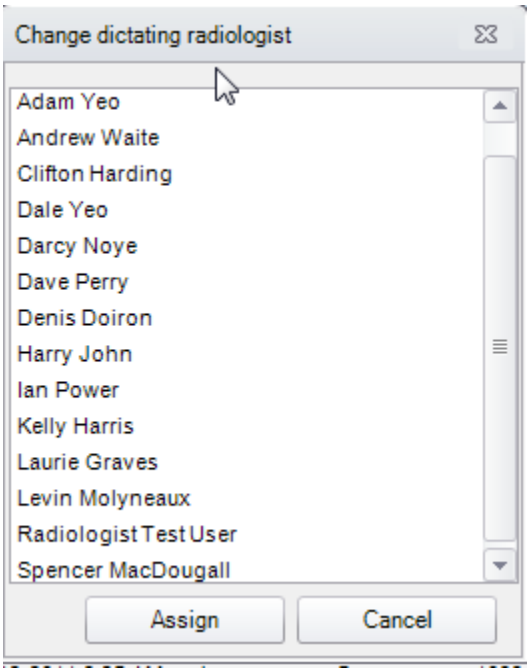

**Figure 4.10 – Change dictating Radiologist window**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Preview Report Enhancements

If the record selected has an interpretation row, Preview Report will show on the context menu. Before build 29, if the report was not ready, it would throw an error stating that it was not ready. Now the report will be prepared for display without saving the interpretation body.

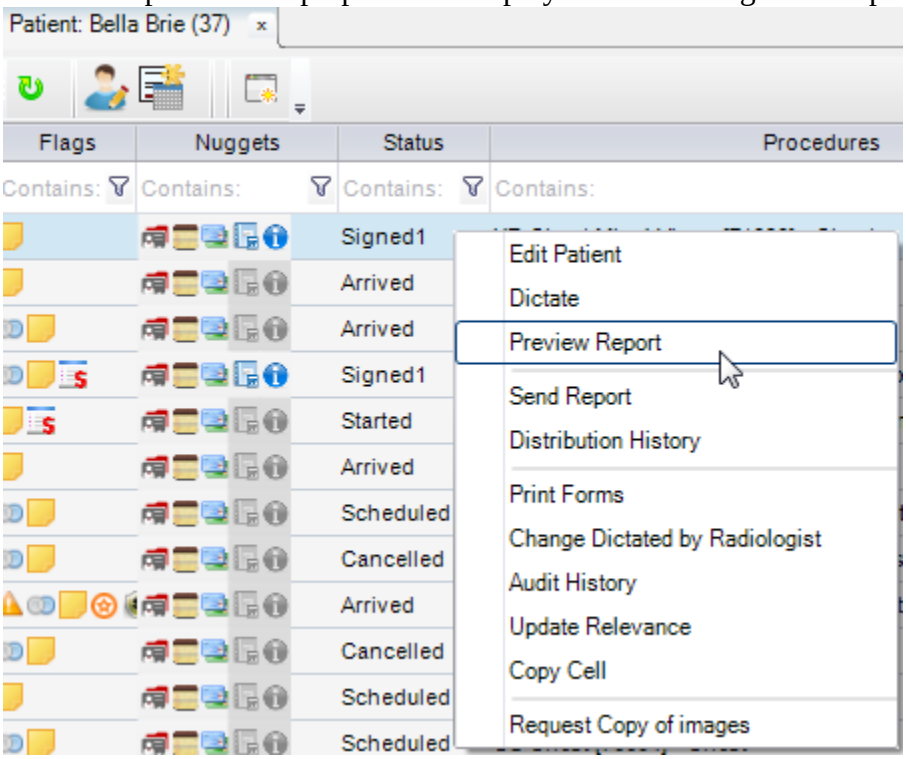

**Figure 4.11 – Preview Report from context menu**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Billing Exception

We created a method that will run when a study is being signed off.
The new functionality was designed to ensure that the following segments of data where populated;

- Referring Physician was selected, and was not still flagged as an unknown referring Physician
- Insurance was specified
    - Insurance Policy number was specified
    - Checks to see if the policy number doesn't override the policy mask
    - Insurance is active
- There was a responsible party selected.
- Pre Certification number is defined.

All these cases apply to outside read studies excluding responsible party, when the outside site required Insurance.

We also created a WL called "Billing Exception WL", under the administration menu, studies will appear on this worklist when the study is either on hold for billing, or when the study failed a billing exception on signing.

## User Preferences for Inbound Reporting (File Listener and TCP Listener)

Two new user preferences have been added in this build. Start TCP Listener and Start File Listener each are checkboxes. When logging in we determine if we should start the listeners based on the system setting first and the user preference second. If both are true then we turn the corresponding listener on.
The default setting is checked or true. This was determined to be the norm if the system setting is on.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

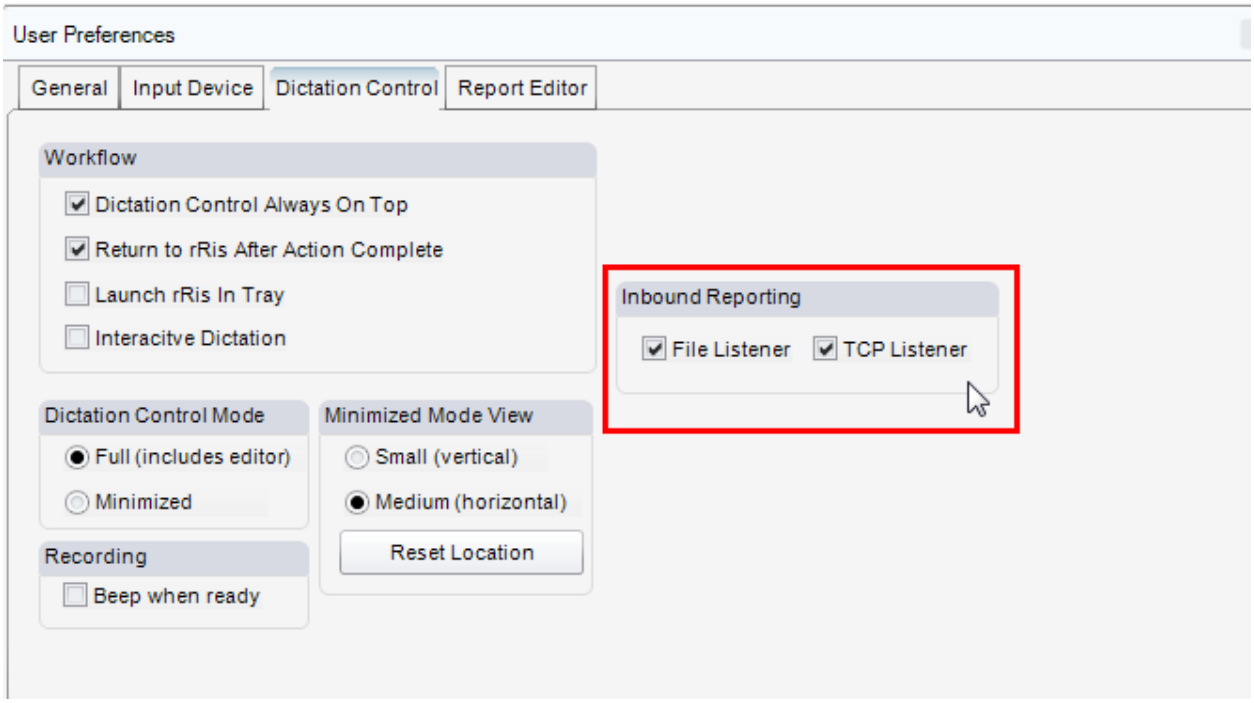

**Figure 4.11 – Inbound Reporting User Preferences**

## Modality Scheduling Interval

To allow for time blocks to be more configurable for each modality a new column called "Scheduling Interval" has been added to the Modality Lookup table. The time interval is defaulted to 5, but will allow each modality to have individual time blocks.

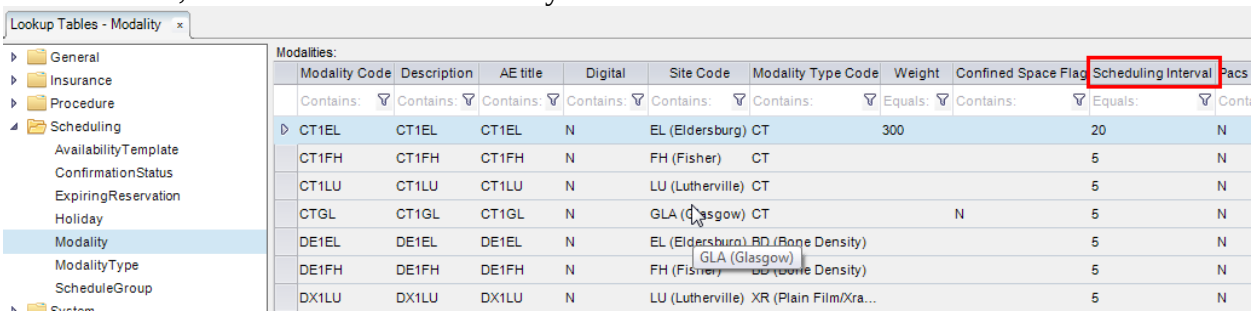

**Figure 4.12 – Modality lookup displaying new column Scheduling Interval**

If the procedure selected has a default time that is less than the Scheduling Interval for the modality, the time blocks will reflect the modality scheduling interval.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# Automated Measure Calculation – MU Requirement 170.302.n

Meaningful User requirement # 170.302 n_AutomatedMeasure_Gen_PS_RevE.doc

***"170.302 n Automate measure calculation***. For each meaningful use objective with a percentage-based measure, electronically record the numerator and denominator and generate a report including the numerator, denominator, and resulting percentage associated with each applicable meaningful use measure.

Created a management to call stored procedure to display automated measures.(report is called MU Scorecard added it to the report server(Home > Dev > Meaningful Use ).

Added a number of new fields to our hidden MU tab used to capture measures

1) **Hidden MU tab(ctlr + M + U)**

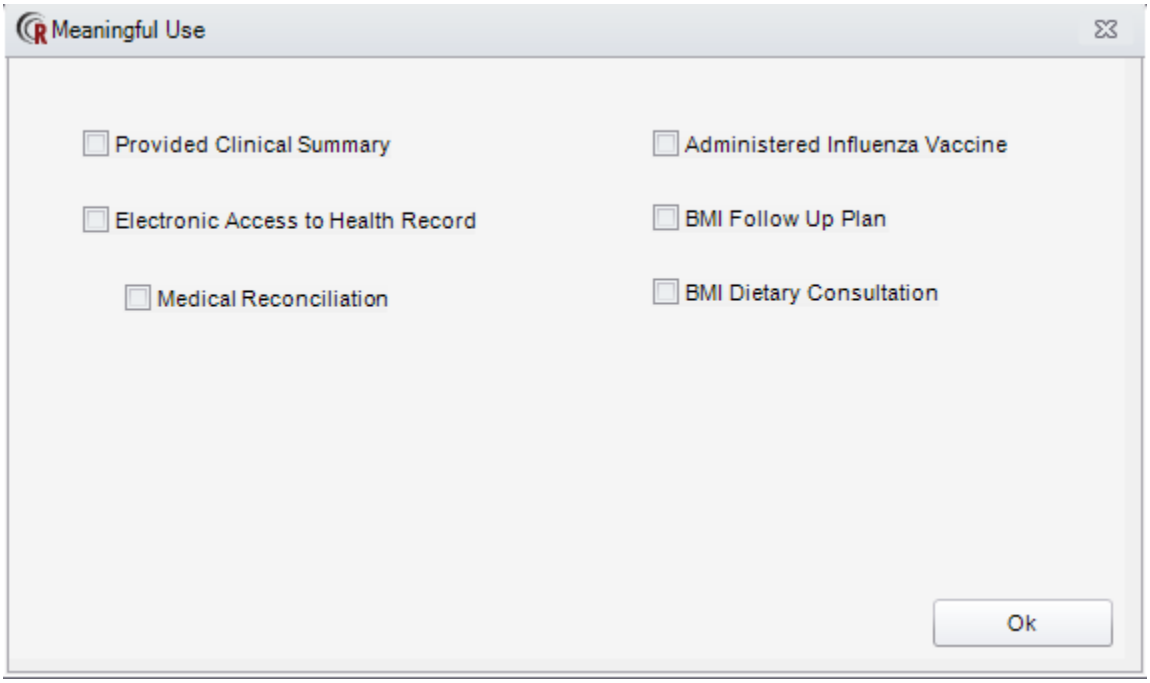

**Figure 4.13 – Meaning Use (hidden tab)**

a) **Provided Clinical Summary –** captures if a clinical summary was provided to the patient at any during the visit. Behind the scene the date is stamped when this checkbox was checked.
b) **Electronic Access to Health Record –** is used to capture timely access. Behind the scene the date is stamped when this checkbox was checked.
c) **Medical Reconciliation –** is used to capture if the Rad did any medical reconciliation on the patient during the visit.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

d) **Administered influenza vaccine –** Is used by CMQ to capture if influenza vaccine was administered during the visit.

e) **BMI Follow Up plan –** Is used by CMQ to capture if a follow up plan was suggested to the patient. Should never be used other than certification day.

f) **BMI Dietary Consultation -** Is used by CMQ to capture if a follow up plan was suggested to the patient. Should never be used other than certification day.

2) **Other Automated Measures –**

a) **Transition of care** - must be checked if the patient is referred to the rad by a referring physician. In our case all exams should have this checked. Talking to Susan only mammo screening should not check this off.

b) **Provided Educational Resources –** if the patient was provided educational resources during visit this should be checked.

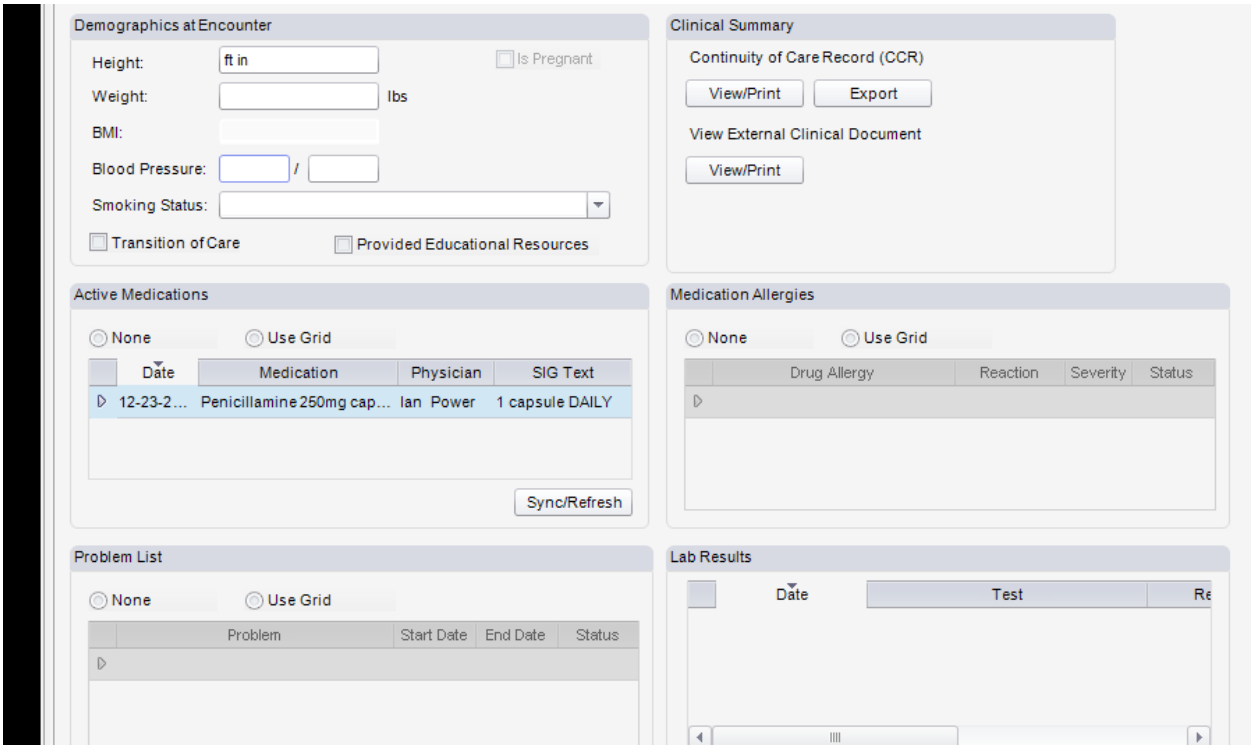

**Figure 4.14 – Meaning Use "Hidden Tab" is accessed from Visit History**

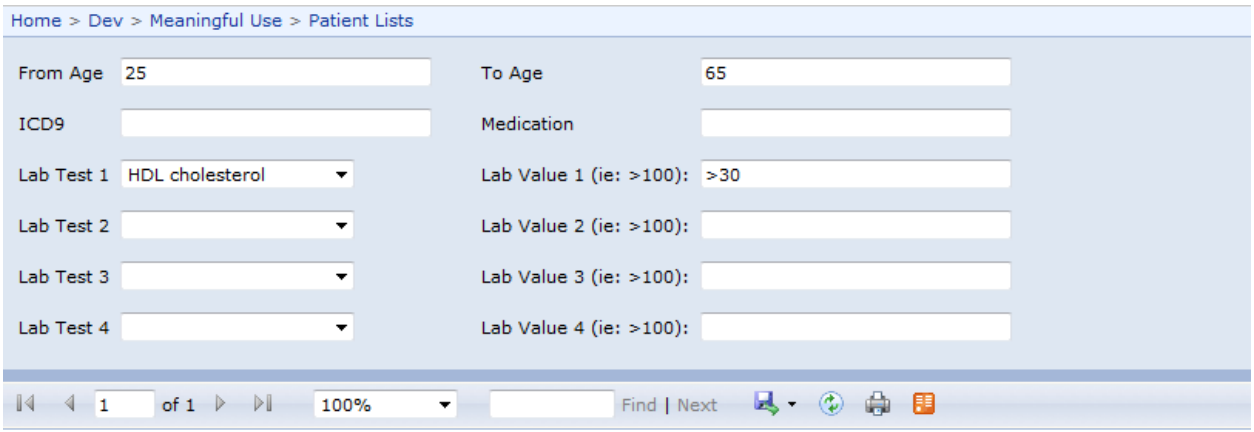
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Generate Patient Lists – MU Requirement 170.302.i

Requirement
*"Generate lists of patients by specific conditions to use for quality improvement, reduction of disparities, research, or outreach."*
The Test Procedure requires the following…
*Enable a user to electronically select, sort, retrieve, and generate lists of patients according to, at a minimum, the data elements included in:*
*(1) Problem list;*
*(2) Medication list;*
*(3) Demographics; and*
*(4) Laboratory test results.*

Following this we created a management report named "Patient Lists" which provides the user with parameters to filter a list based on patient age (range), ICD9 (Problem), Medication (string search) as well as 4 sets of labs and lab value. The age parameters include the values selected. So in the screen shot I've selected ages 25-65 this would include ages of 25, 65 and everything in between.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.



**Patient Lists**

**Age: 25 through 65**
**Lab 1: HDL cholesterol with lab value: >30**

| MRN | First Name | Last Name | Age | Gender |
|---|---|---|---|---|
| 405979410 | Frank | Lewis | 61 | M |
| | Lab Results | 2010-09-20 Test:Total cholesterol Result:162mg/dl<br>2010-09-20 Test:HDL cholesterol Result:43mg/dl<br>2010-09-20 Test:LDL cholesterol Result:84mg/dl<br>2010-09-20 Test:Triglycerides Result:127mg/dl | | |
| | | | | **Count: 1** |

*Report Description: Designed for Meaningful Use requirement 170.302(i) this returns list of patients based on the conditions(conditions) specified.*

**Figure 4.15 – Patient List report**

## Session Individual Production Counters

Introduced in build 29 are status counters for Radiologists and Transcription work flows. Located at the bottom of the application, they are visible from all windows.
The stats displayed are based the users production for that day. We are capturing the data based on a 24 hour calendar day (midnight to midnight). For example if a dictation was completed yesterday and signed today, the Signed count at the bottom would increase by one, but the dictation count would remain the same because it was captured the day before.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

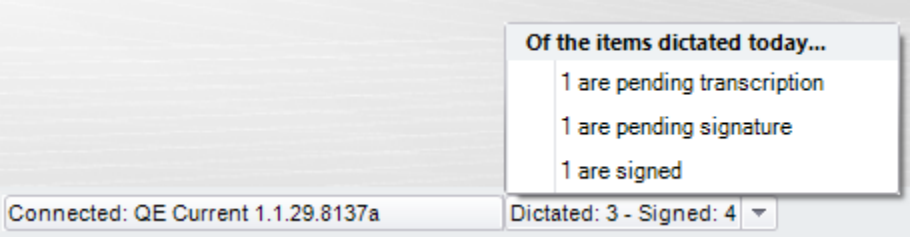

**Figure 4.16 – Production Counters for Radiologists**

The expanded menu shows the status of exams that were dictated today. In the example above the Radiologist dictated on 3 exams and has signed 4. Of the 3 that were dictated today, 1 is pending transcription 1 is pending signature and 1 has been signed.

Transcription will see a similar counter tracking their individual progress for that day.

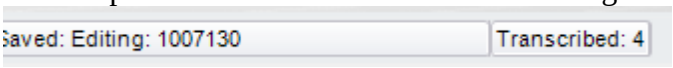

**Figure 4.17 – Production counter for transcription**

## Failed PACS Correction Work List

The modality lookup table contains a new column “Pacs Correction Required Flag”.

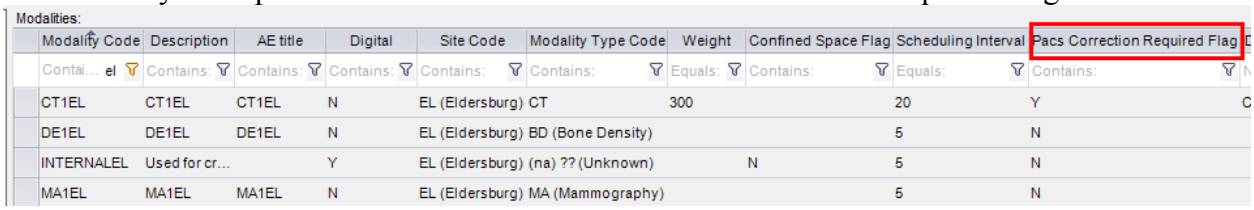

**Figure 4.18 – Modality lookup table displaying new column Pacs Correction Required Flag**

If the value is Y or on for a modality the exam will be sent to the Failed PACS Correction work list when the technologist completes the exam. If the value on the modality is N or off, when the technologist completes the exam it will go to the Pending Dictation work list.

A new work list has been added under the Administration menu titled “Failed PACS Correction” has been added. As mentioned previously the modalities marked for PACS correction will have the completed exams populate this work list.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

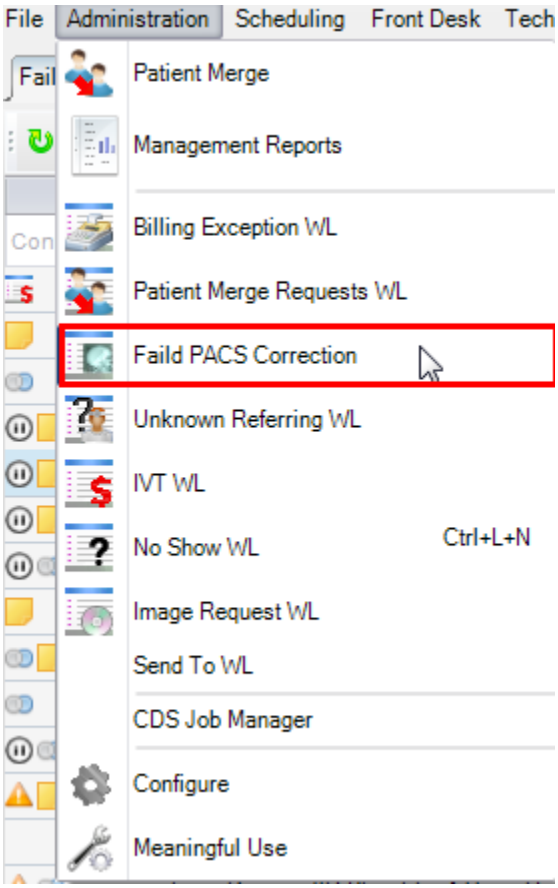

**Figure 4.19 – Administration menu showing Failed PACS Correction menu option**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

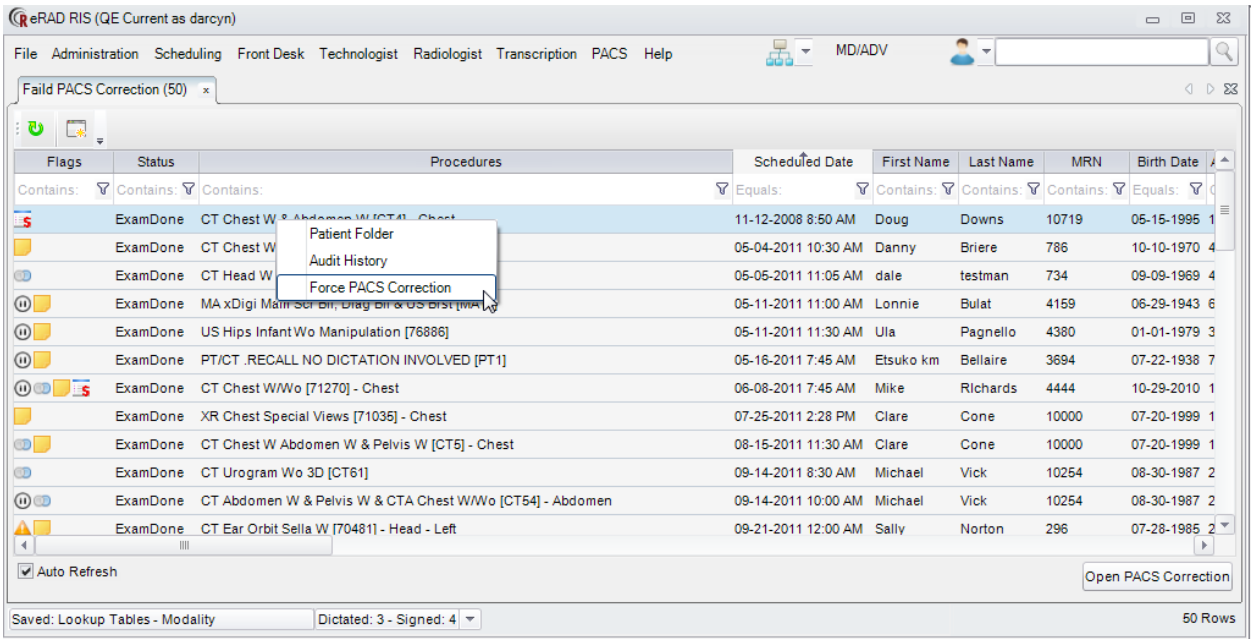

**Figure 4.20 – Failed PACS Correction Work List**

Selecting the Open PACS Correction button will open the corresponding PACS viewer window designed for this function. If a user so chooses, they can select Force PACS Correction from the context menu the exam(s) will be moved to the Pending Dictation work list.

The patient folder also has a new column PACS Corrected Flag.

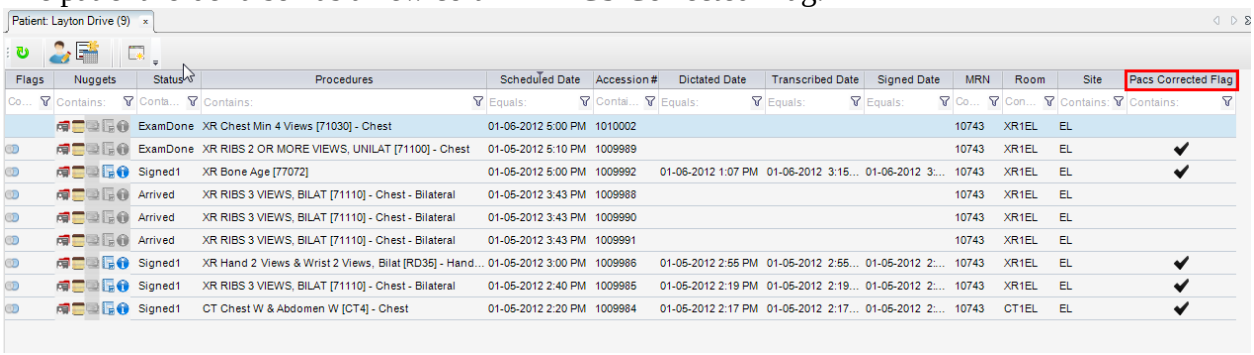

**Figure 4.20 – Patient folder displaying column for PACS Corrected Flag**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Interactive Dictation

Build 29 introduces Interactive Dictation. This is enabled by a user preference flag under the Dictation Control tab.

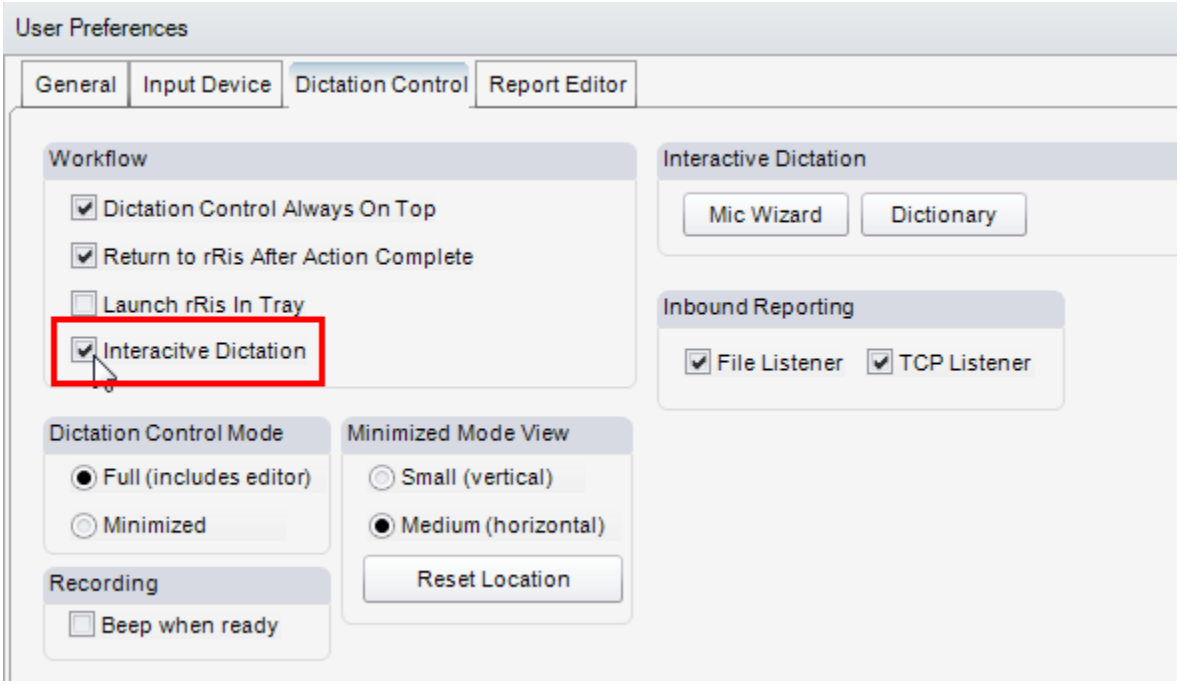

**Figure 4.21 – Interactive Dictation user preference flag**

The dictation window opens as it normally would without Interactive Dictation. As the Radiologist records the dictation, the text is captured real time. The user can release the dictation button control and start / stop as required.

More documentation will be available in Build 30 regarding Interactive Dictation.

## View / Edit Data Window

A new data window has been added in Build 29. This window is accessed from the patient folder and is enabled for all active statuses except for status of Cancelled.
Selecting a row from the patient folder and select the View / Edit button will open the View/Edit (patient name) data window. In this release the data tabs are the same for all statuses. This will be enhanced in the next build. Also OrderSigned will return error.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

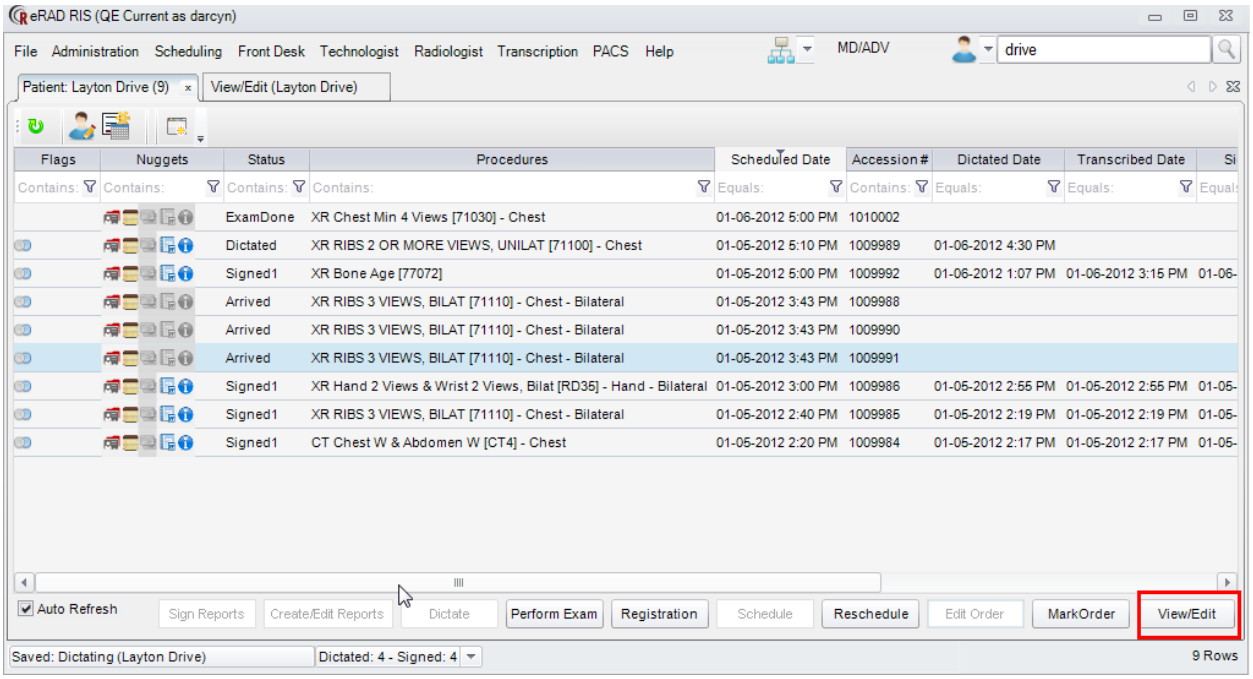

**Figure 4.22 – View / Edit button to access View/Edit data window**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

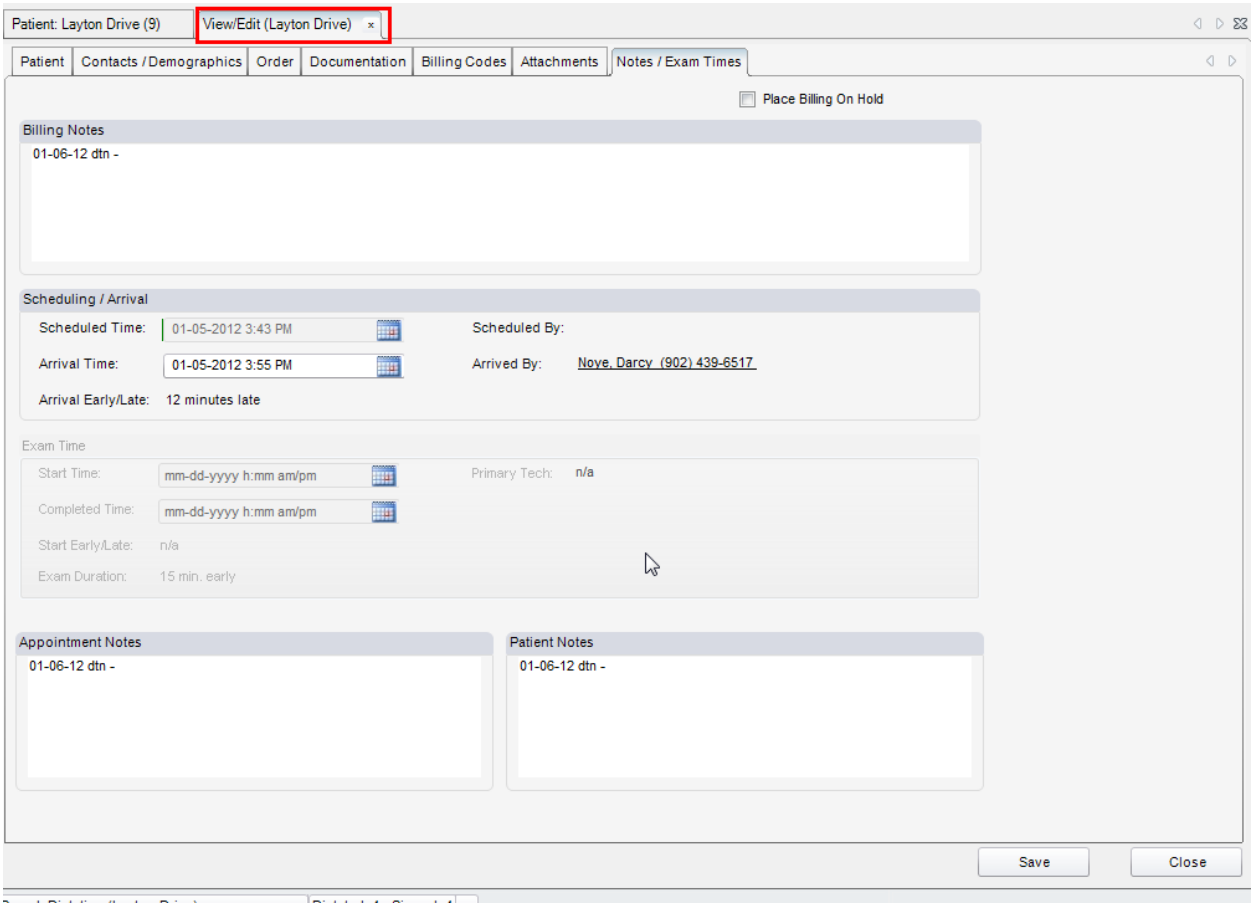

**Figure 4.23 – View/Edit data window.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Resolved Defects

Bugs, Suggested Features and Support Issues resolved in build 1.29. The extract is taken from Redmine bug tracking system and only displays defects resolved in 1.29.

| # | Status | Tracker | Priority | Subject | Category | Target version | Resolved Version |
|---|---|---|---|---|---|---|---|
| 785 | Closed | Bug | High | Add patient. Cannot create new order | Thick Client GUI | 1.28 | 1.29 |
| 782 | Closed | Bug | Normal | Unselecting Referring resource type, the NPI is still required to save. | Admin Tools | 1.28 | 1.29 |
| 780 | Closed | Bug | Normal | Schedule study for past date and select Room can throw error | Thick Client GUI | 1.28 | 1.29 |
| 773 | Closed | Bug | Normal | Clinical Summary > Continuity of Care Record Throws error if patient folder is missing procedures | Thick Client GUI | 1.28 | 1.29 |
| 772 | Closed | Bug | Normal | Clinical Summary > Continuity of Care Record needs "Scheduled Study Date" | Thick Client GUI | 1.28 | 1.29 |
| 765 | Closed | Bug | Normal | Cannot open 2 instances of Edit Patient | Thick Client GUI | 1.28 | 1.29 |
| 763 | Closed | Bug | Normal | Report History data nugget throws error on Send To button | Thick Client GUI | 1.28 | 1.29 |
| 754 | Closed | Bug | Normal | Labels and Forms - Issue with Action Picker | Admin Tools | 1.25 | 1.29 |
| 743 | Closed | Bug | Normal | Date selected from Date / Time Picker not accepted after removing compostite code. | Thick Client GUI | 1.27 | 1.29 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 741 | Closed | Bug | High | Add Outside Read - can save outside read without visit selected. | Thick Client GUI | 1.27 | 1.29 |
| 740 | Closed | Bug | Normal | Outside Read - Edit billing does not show all the billing exceptions | Thick Client GUI | 1.27 | 1.29 |
| 739 | Closed | Bug | Normal | Outside Read - Edit Billing from Billing Exception and Responsible Party is required | Thick Client GUI | 1.27 | 1.29 |
| 733 | Closed | Bug | High | Cannot Scan documents | Thick Client GUI | 1.26 | 1.29 |
| 709 | Resolved | Bug | Low | Dictation / Create Edit reports - Patient Alert pop up not centered | Thick Client GUI | 1.26 | 1.29 |
| 675 | Closed | Bug | Normal | Edit Order > Verbal Order returns error | Thick Client GUI | 1.25 | 1.29 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 6. Known Limitations

The following are Bugs, Suggested Features, and Support Issues found in build 1.29. This build is the current QE build and testing is ongoing. The list may increase in size. This document will not be updated or re-released.

| # | Status | Subject | Category | Target version |
|---|---|---|---|---|
| 807 | New | Timezone issue - Cannot update personnel | Admin Tools | 1.29 |
| 806 | Resolved | Walk-In error when checking in | Thick Client GUI | 1.29 |
| 805 | Resolved | Failed PACS Correction > Flag on modality does not work | Thick Client GUI | 1.29 |
| 804 | New | Perform Exam > Labels don't activate after changing Performed Procedure. | Thick Client GUI | 1.29 |
| 803 | New | User Preferences options access | Thick Client GUI | 1.29 |
| 802 | New | Column Age At Study not calculating age correctly. | Thick Client GUI | 1.29 |
| 801 | New | Possible issue with date / time formats and Perform Exam data window | Thick Client GUI | 1.29 |
| 800 | New | Forms and labels action on <-- arrow continues when filtered list is done | Admin Tools | 1.29 |
| 799 | Resolved | Configurable Modality Scheduling | Thick Client GUI | 1.29 |
| 797 | Resolved | Failed PACS Correction work list only moves one exam at time when forcing PACS Correction | Thick Client GUI | 1.29 |
| 796 | Resolved | Creating duplicate user throws error | Admin Tools | 1.29 |
| 795 | Resolved | MT polling work flow. Once list is complete cannot close the editor window | Thick Client GUI | 1.29 |
| 794 | Resolved | Patient Search window > Search by Phone number will throw error | Thick Client GUI | 1.29 |
| 791 | New | View / Edit data window error on View OrderSigned | Thick Client GUI | 1.29 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | | | |
|---|---|---|---|---|
| 790 | Resolved | View / Edit data window prompts for required fields | Thick Client GUI | 1.29 |
| 783 | New | the gui has hard coded values for Patient relation | Thick Client GUI | 1.29 |
| 777 | New | missing a billing message when tech only workflow | Web Services/DB | 1.29 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 30. This version of eRAD RIS is referred to as Build 1.30.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu, click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.30 is considered a new core release of the application and will require a reinstallation of eRAD RIS. This is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application, please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Reporting – Permission to Edit Macros

In build 30 a new permission has been added to remove the ability to edit Macros from the report editor. The new permission access string is "Clinical.MacroEditing". If the user group does not have this permission, a user belonging to this group will not be able to add / remove or edit macros. It should be noted that a user can only edit a Marco from the report editor when they are the owner of that Macro.

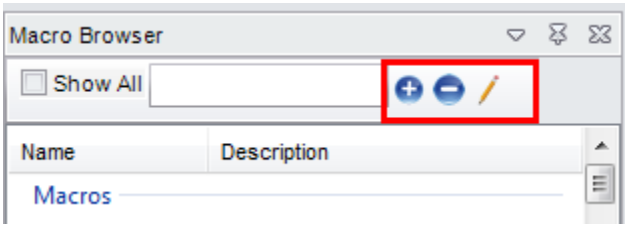

**Figure 4.1 – User who has permission Edit Macros (permission Clinical.MacroEditing = Full)**

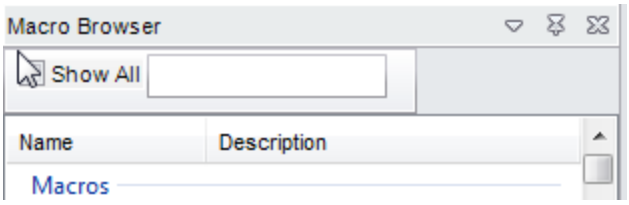

**Figure 4.2 – User who does not have permission Edit Macros (permission Clinical.MacroEditing = None)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Advanced Macro Editing Options

In build 30 a new tab has been added within the Macro Editor. The Advanced tab allows a user with access to the Macro Editor to assign a Macro to other Practice's and / or other User's.

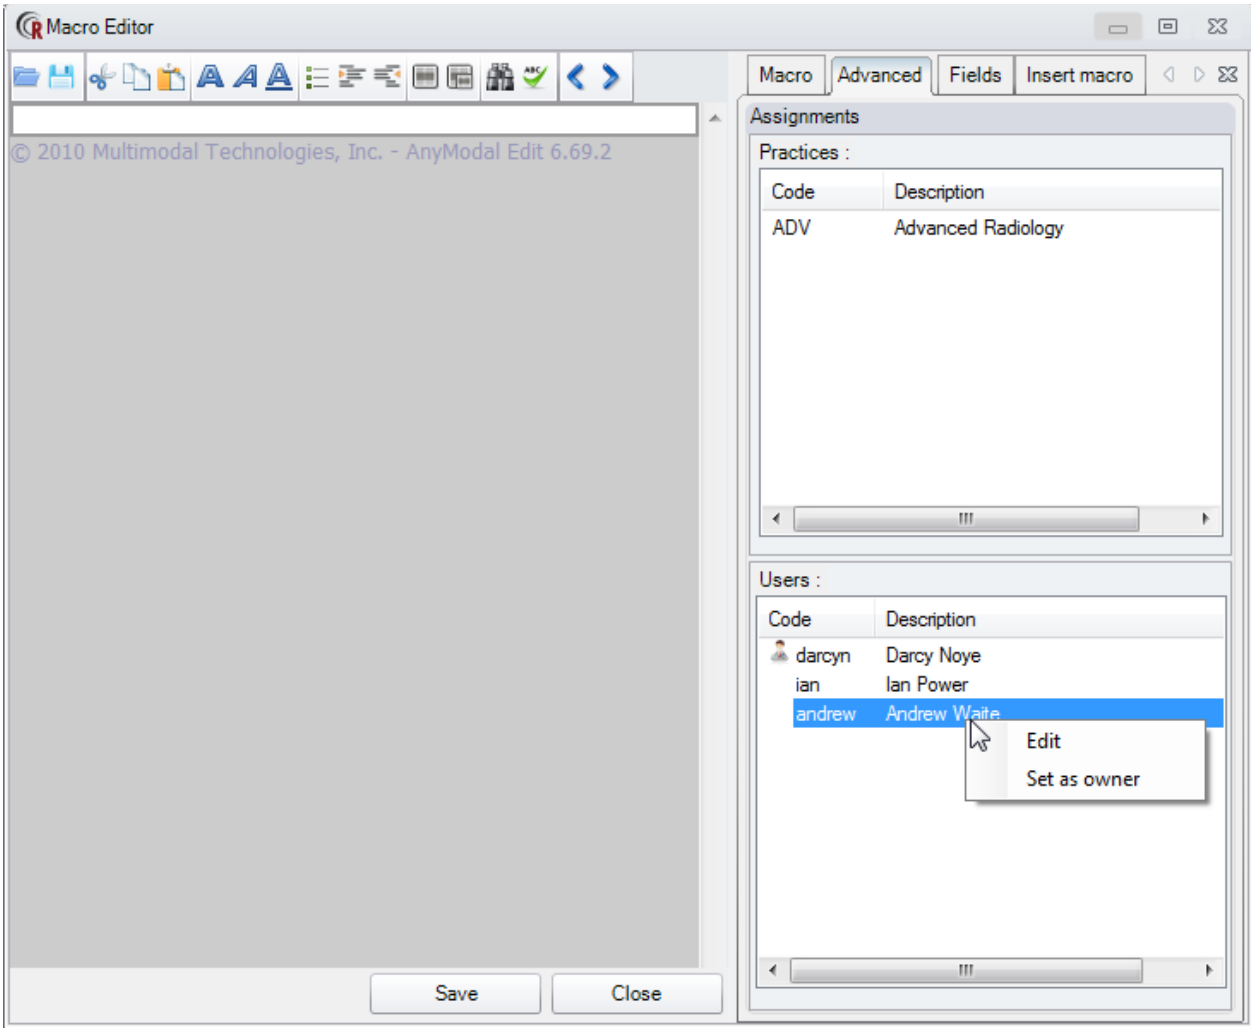

**Figure 4.3 – Macro Editor displaying Advanced tab**

In the figure above the Advance tab is selected. Under the Assignments pane you can see that this particular macro is assigned to Advanced Radiology. The practice the user belongs to will be the default value when creating a Macro.

Under the Users pane you can see that this Macro is assigned to 3 users. Currently the Macro is "owned" by user darcyn as indicated by the Icon next to the user name under the code column.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

From the context menu the current owner can change who the owner of the Macro is and also edit who has access to the Macro. Selecting the "Edit" option opens the window below.

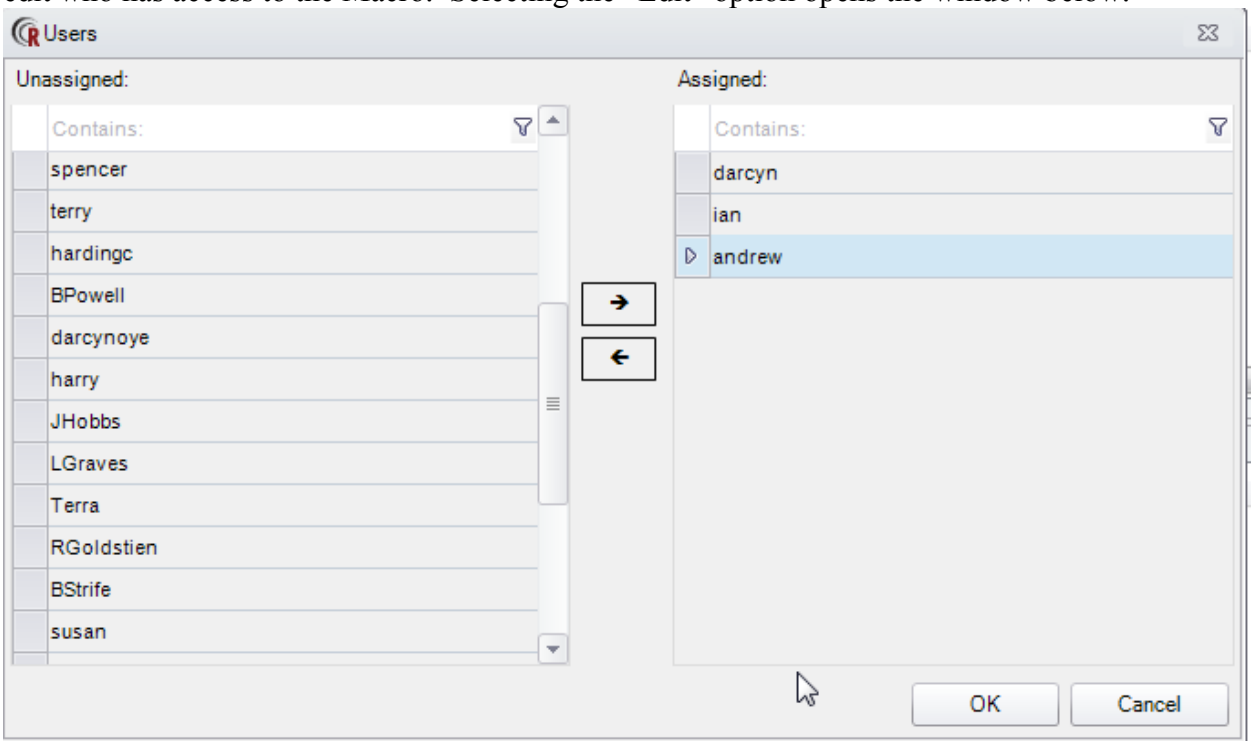

**Figure 4.4 – Users window allows for the addition or removal of users that will have access to the Macro**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Administration Macro Editing

With the new advanced tab added to the Macro Editor, practically all functions can be performed within the Macro Editor. Because of this added functionality to the Macro Editor, the lookup editor for the Macro table has been simplified. There is now only one grid and the rule sets are no longer configurable on this screen. From the macro lookup editor, users can set it to active / inactive, delete and create or edit macros.

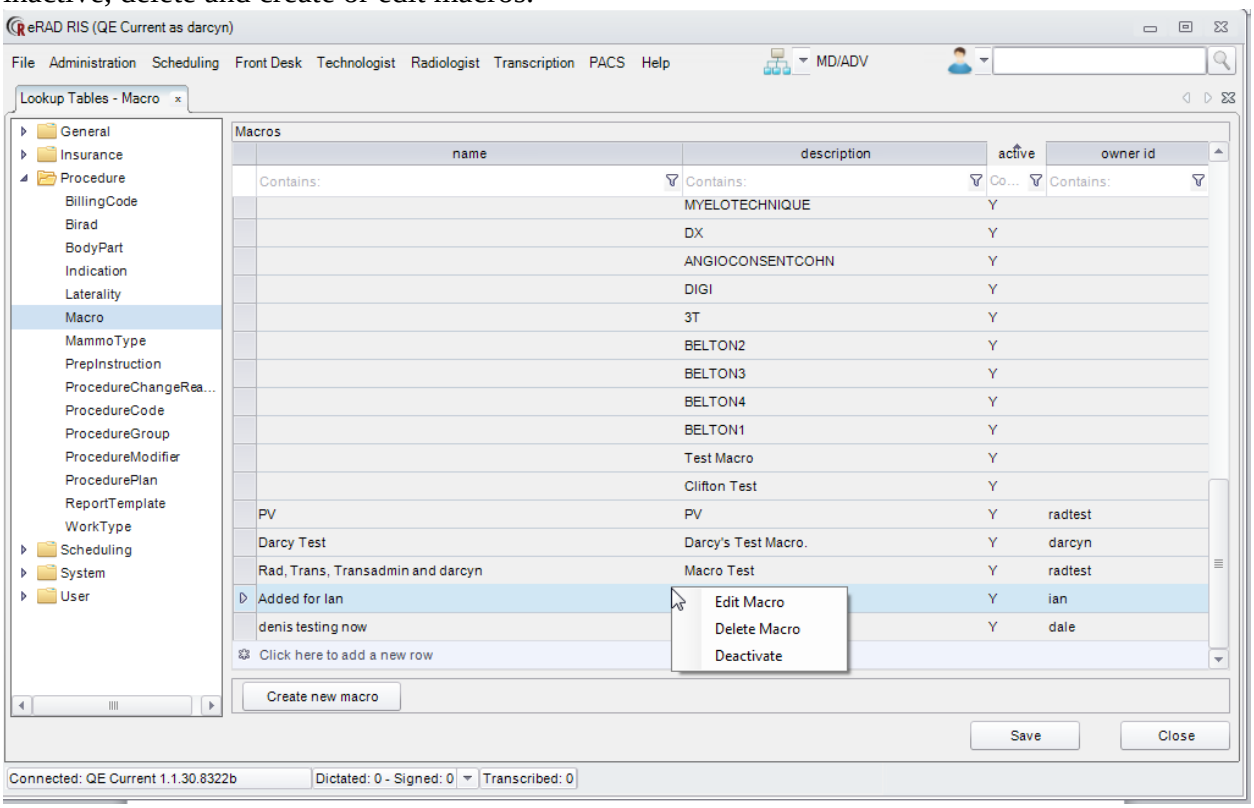

**Figure 4.5 – Macro lookup table**

When creating or editing macros the same macro editor will show, user must have access to the advanced tab in order to perform advanced assignments.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

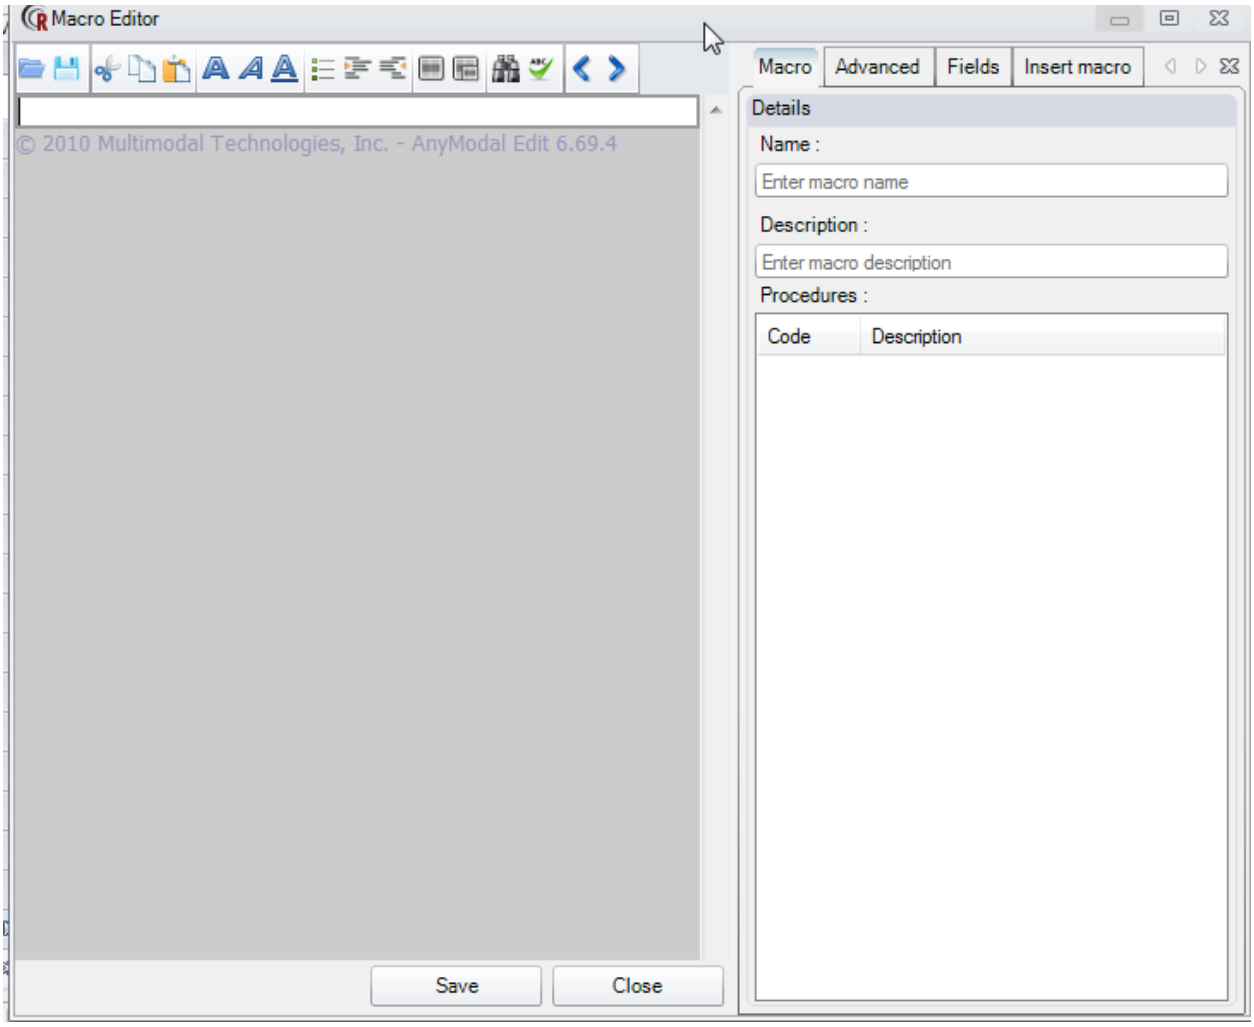

**Figure 4.6 – Macro Editor (same is accessed from report editor)**

## Transcription Polling – Ability to Close Tab on Empty Queue

In the previous build Transcription polling was added to eRAD RIS, but when the polling queue list was completed, or an empty queue was opened the user had no way to close the data window queue. In build 30 the user will now be able to close an empty queue and open a different one to continue transcription work flow.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

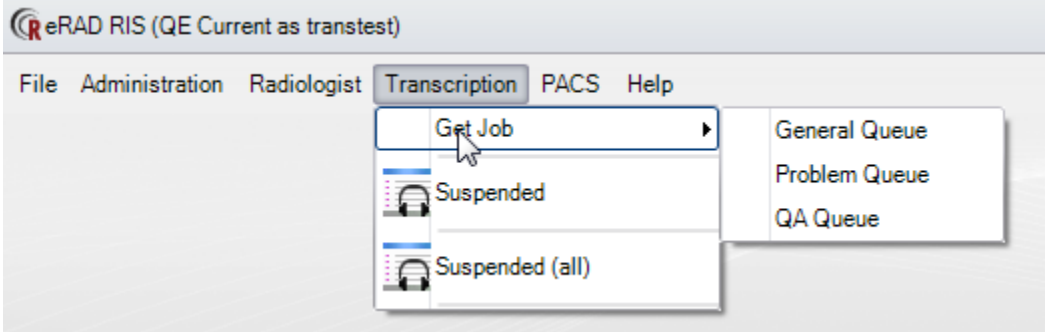

**Figure 4.7 – Displaying Transcription Polling Queues**

The polling window can be closed the same as other data windows in the application. Viewing the figure below the user can select one of the "X"s or choose an option from the tabs context menu.

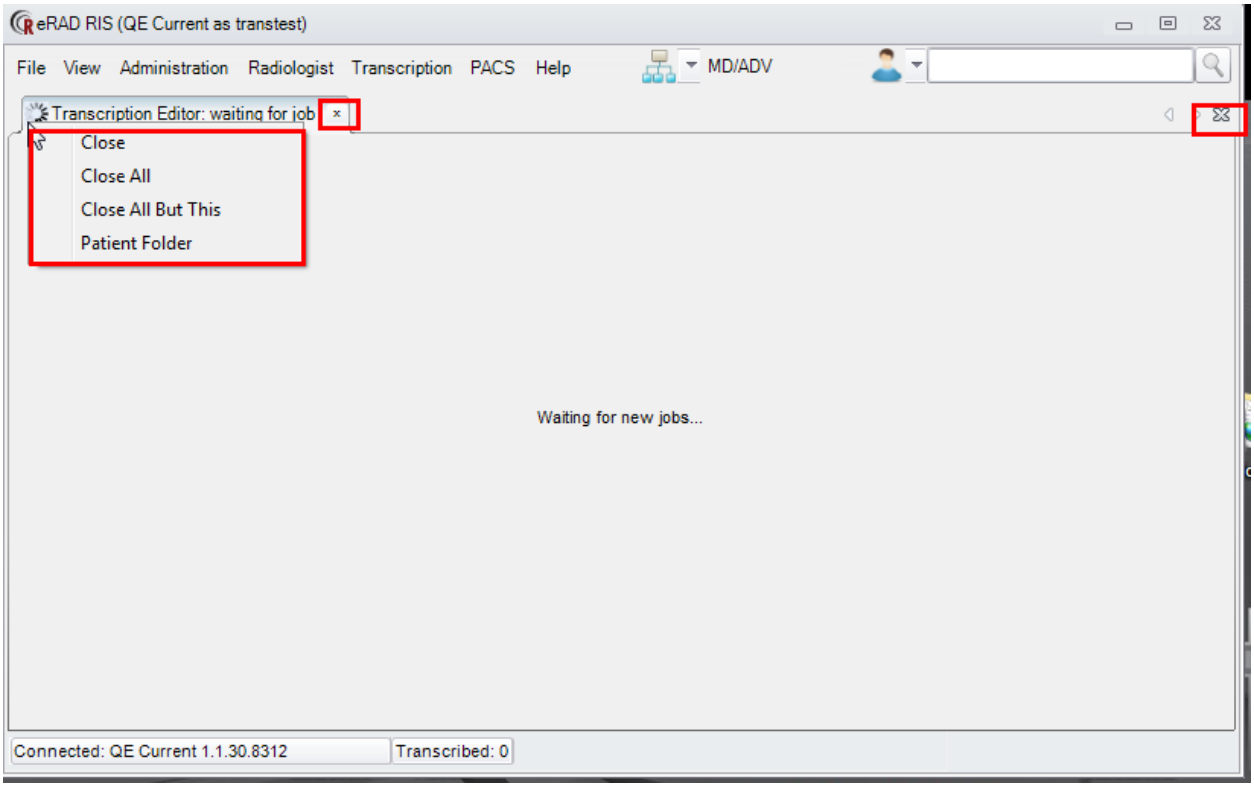

**Figure 4.8 – Closing Polling window**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Ability to Assign Reports without Clearing Fields '[ ]' from the Report

In the Report Editor window the report must have all of the pre-marked fields [ ] that are highlighted removed before the report can be transcribed (selecting the transcribed button).

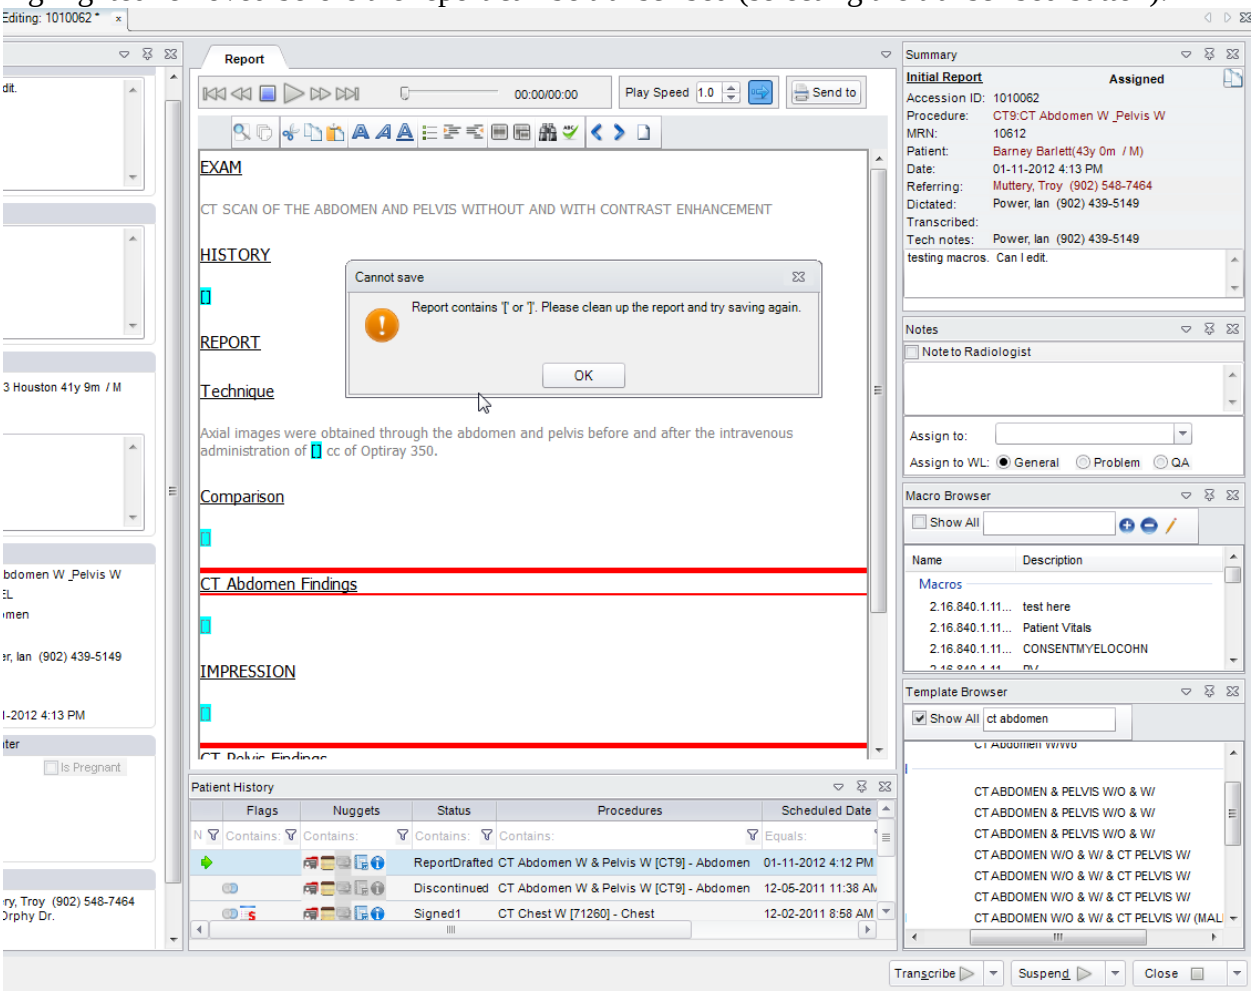

**Figure 4.9 – Display message that appears if the pre-marked fields are not removed from the report**

If the report is assigned to another Transcriptionist or to another WL the user will be permitted to select the Transcribe button with the pre-marked fields still in the report. The exam status does not change, but it moved to the selected work list, or remains in its current work list assigned to the designated user.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

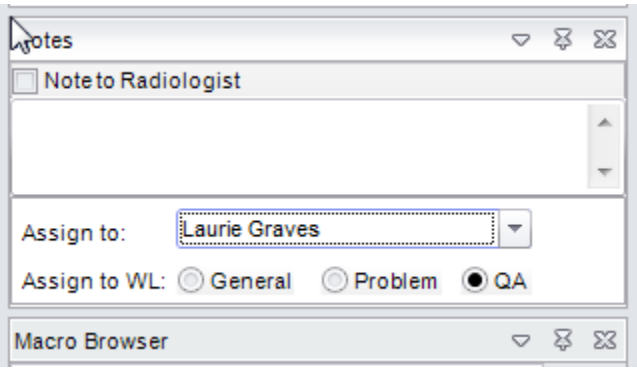

**Figure 4.10 – Notes data pane of report editor window showing the Assign to: list box and the Assign to WL.**

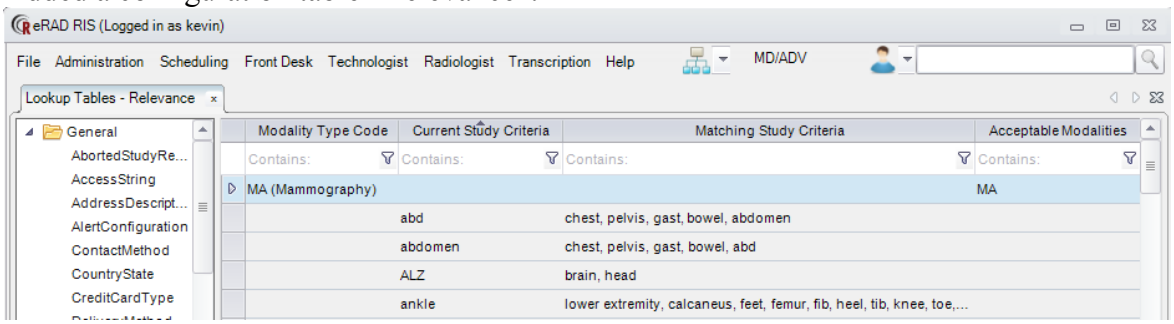
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Relevance Flag

Added a configuration table "Relevance":



For the first entry in the above, Mammo studies of any body part will only be relevant if the modality for the other study is also a Mammo. Note: adb and abdomen are considered as possible body part strings and if they appear studies with "chest, pelvis, gast…" will be considered as relevant on any modality.

Each row represents a Relevance Rule. If any one of applicable relevance rules applies evaluate to True, then the matching study is marked as "Relevance_flag = 'Y'".

**ModalityTypeCode**: When a rule exists with a modality type cod, such as MA, then source studies of type MA will only be applicable to relevance rules that have "Modality Type Code" MA. If this is left blank then it's considered a generic rule and will apply to any source studies where there isn't already a modality type code based relevance rule.

**CurrentStudyCriteria**: If the word in this column exists in the source study description, then this rule is used.

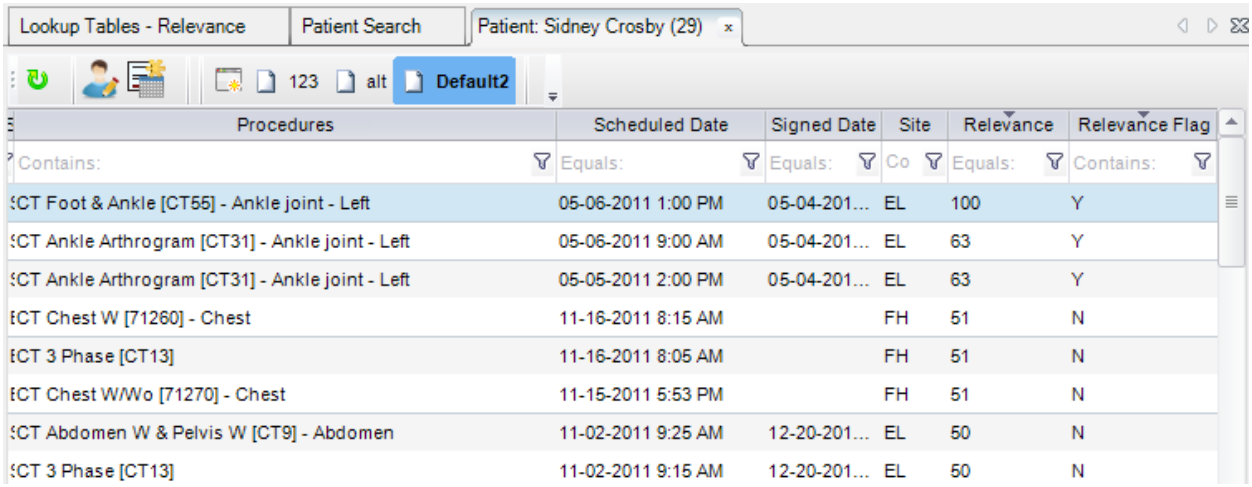
**MatchingStudyCriteria**: Comma separate list of words that must exist in the matching study. If other study matches one of the words in this field's comma separated list then it is considered Relevant. It is default behavior that we also include the word in the CurrentStudyCriteria. For example, where CurrentStudyCriteria contains **adb**, then it is a relevant if the other study contains **abd**, chest, pelvis, gast, bowel or abdomen.

**AcceptableModalities:** If specified, then matching studies must also be of one of the specified modality types. This acceptableModalities string can be a single modality type or a comma separated list of acceptable modality types.

For the first entry in the above screenshot, the source study of type Mammo will only be relevant if the modality for the other study is also a Mammo by leaving the "CurrentStudyCritiera" and "MatchingStudyCriteria" empty its equivalent to say any current study description and any MatchingStudyCriteria.

Also, added the work list Relevance Flag as shown in the following:

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.



In the above, the CT31 is most relevant to the other CT31 because they are the same study. Next is the CT Foot because it has the relevant flag and is of the Left ankle, the right angle even though it was performed on the same day as the previous study gets a lower relevance score of "79" instead of "81" because it has a different laterality.
We use much the same % relevance calculation (idea is for sorting) as before; however, the weight of date and procedure description match is given 50% to each. Also, the configuration from the l_relevance table also adds weight to the scores.
For the procedure description portion of the calculation, each matching word is given a score of .5; however, if the word is a modality type it's given a score of 1, if it's a body part a score of 2, a laterality gets a score of 3 and if it's a string in the Relevance rule it's given a score between 6 and 2. If it's a string in the relevance rule, 6 is given if it's the first word (in the comma separated list for the MatchingStudyCriteria column), while 2 would be given to the last item in the comma separated list. Finally the total score is divided the best possible score for that patient and scaled to 50%.

**Figure 4.11 – Preview Report from context menu**

## Access Strings Added

Added the following access strings to the lookup table AccessStrings
*** 'Config.LookupEditor.CountryState'
*** 'Config.LookupEditor.LabTest'
*** 'Config.LookupEditor.Relevance'

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

*** 'Clinical.UserPreferences.TranscriptionPolling'
*** 'Clinical.DeleteDictationReportResetStatus'
*** 'Clinical.AssignRadiologist'
*** 'Clinical.ChangeDictateByRadiologist'
*** 'Clinical.RequestImageCopy'
*** 'Clinical.EditSchedule'
*** 'Clinical.ChangeStatusExamDone'
*** 'Clinical.ChangeStatusCanceledStudy'
*** 'Clinical.EditDiagnosticReport'

## State Field Selection – List Box

In build 30 the State Field has been enhanced to change to a list box if the value for the Country field entered is US. The State field will change to a list box with each state listed as an available selection.

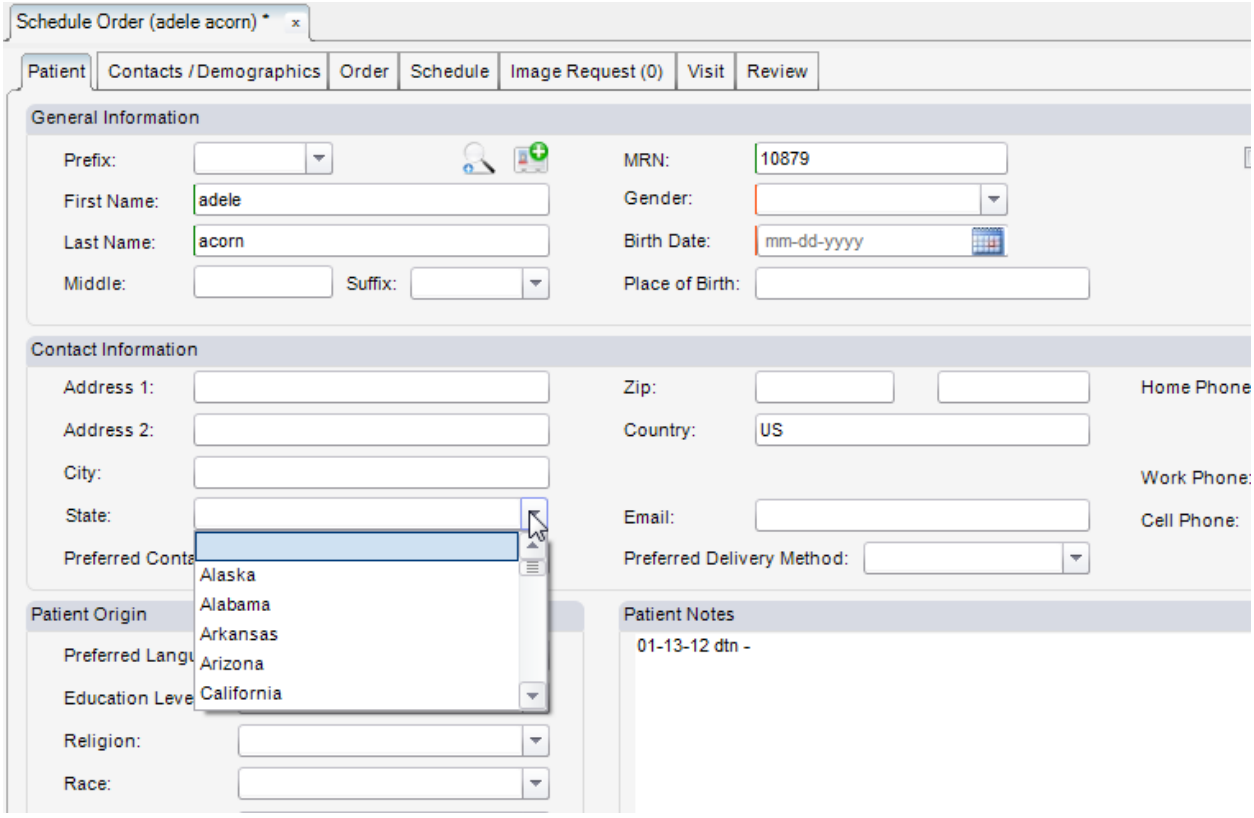


**Figure 4.12 – Displaying State field list box when country is US**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Manual Entry of Medication

On the Active Medications data pane the ability to Add / Edit / Delete medications has been added. Buttons to "Add or Edit" have been added to the data pane. Also a context menu on the medications data panel has the options to Add or Edit as well as Delete, as shown in the following:

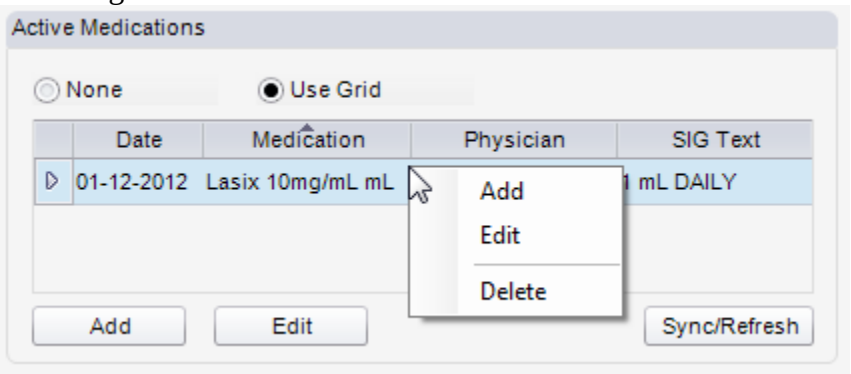

**Figure 4.13 – Active Medications data pane New context menu and Add / Edit buttons**

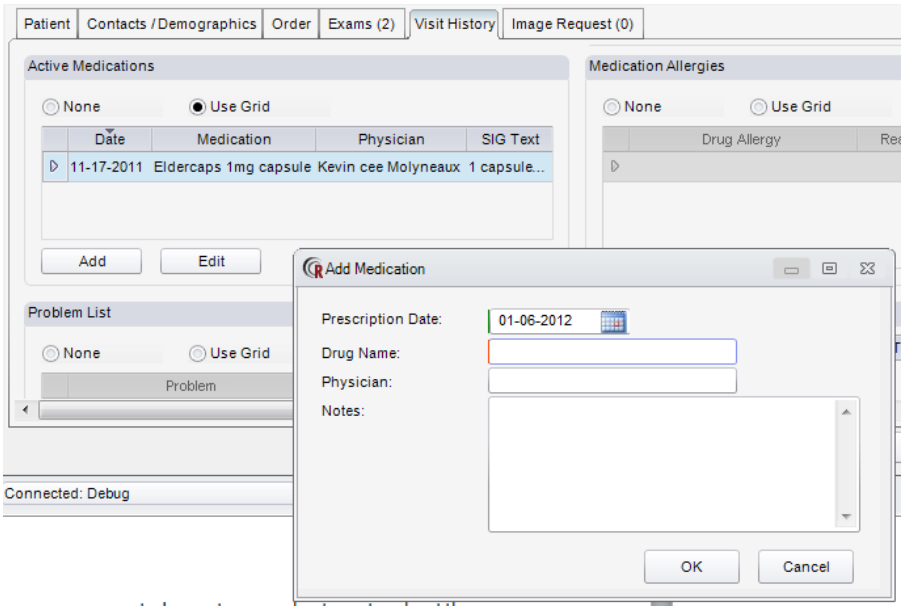

**Figure 4.14 – Add Medication window**

Also added a flag to the c_patient_medication table called "ris_entered_flag", which will keep ris entered medications when we sync with new crop and will allow us to edit only the ris_entered items.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Automated Measures – MU Requirement 170.302n

Meaningful User requirement # 170.302 n_AutomatedMeasure_Gen_PS_RevE.doc

***"170.302 n Automate measure calculation***. For each meaningful use objective with a percentage-based measure, electronically record the numerator and denominator and generate a report including the numerator, denominator, and resulting percentage associated with each applicable meaningful use measure.

Created a management to call stored procedure to display automated measures.(report is called MU Scorecard added it to the report server(Home > Dev > Meaningful Use ).

Added a number of new fields to our hidden MU tab used to capture measures

1) **Hidden MU tab(ctlr + M + U)**

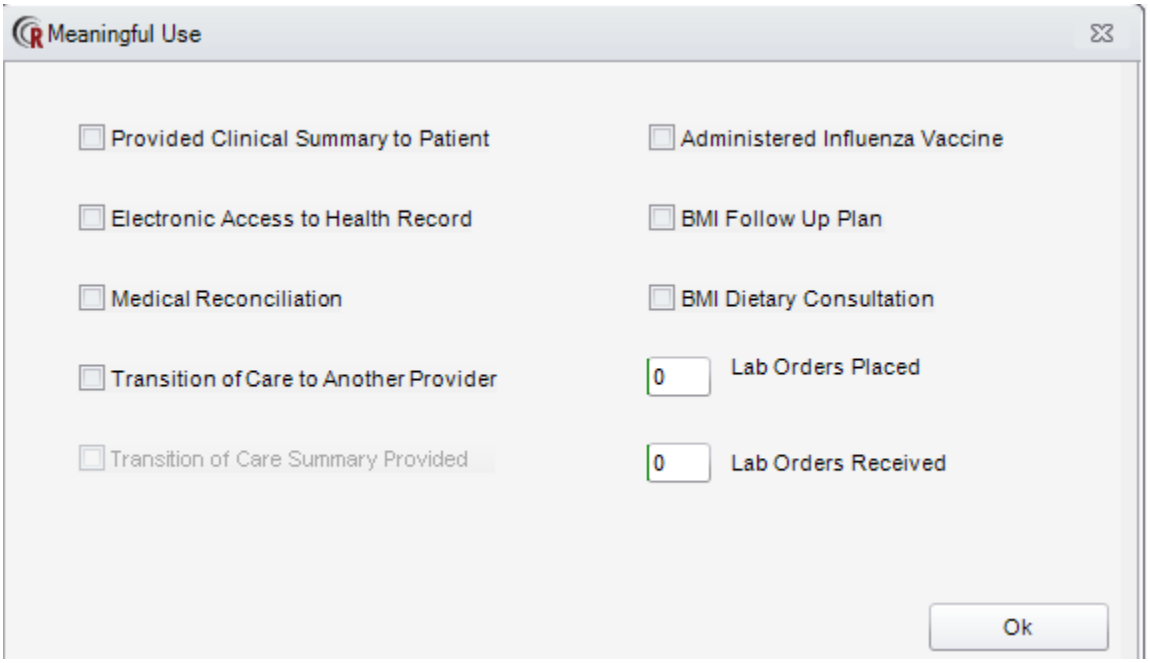

**Figure 4.15 – Hidden MU Tab**

a) **Provided Clinical Summary –** captures if a clinical summary was provided to the patient at any during the visit. Behind the scene the date is stamped when this checkbox was checked.
b) **Electronic Access to Health Record –** is used to capture timely access. Behind the scene the date is stamped when this checkbox was checked.
c) **Medical Reconciliation –** is used to capture if the Rad did any medical reconciliation on the patient during the visit.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

d) **Administered influenza vaccine –** Is used by CMQ to capture if influenza vaccine was administered during the visit.
e) **BMI Follow Up plan –** Is used by CMQ to capture if a follow up plan was suggested to the patient. Should never be used other than certification day.
f) **BMI Dietary Consultation -** Is used by CMQ to capture if a follow up plan was suggested to the patient. Should never be used other than certification day.
g) **Transition of Care to Another Provider –** if the patient is referred to another setting of care or provider.
h) **Transition of Care Summary Provided –** if the patient the is referred to another setting of care or provider and a patient summary record is provided.
i) **Lab Orders Placed –** used to capture if a lab order was requested.
j) **Lab Orders Received –** used to capture if a lab order results were retrieved.

2) **Other Automated Measures –**

a) **Transition of care** - must be checked if the patient is referred to the rad by a referring physician. In our case all exams should have this checked. Talking to Susan only mammo screening should not check this off.

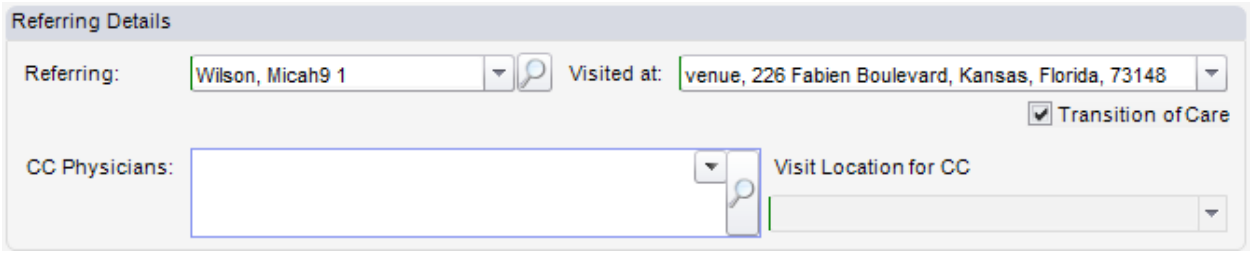

**Figure 4.17 – Referring Details**

b) **Provided Educational Resources –** if the patient was provided educational resources during visit this should be checked.

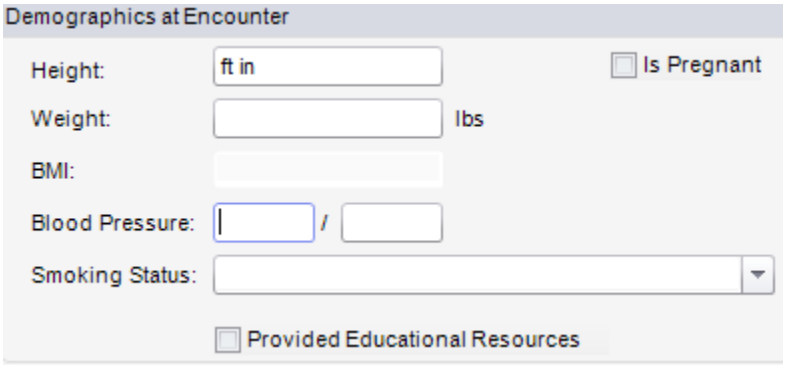

**Figure 4.17 – Demographics**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Clinical Quality Measures – MU Requirement 170.304j

Meaningful User requirement #
170.304j_CalculateClinicalQualityMeasures_Amb_PS_RevE.doc

"170.304 (j) Clinical Quality Measures This test procedure is organized into two sections:
Calculate clinical quality measures – evaluates the capability to electronically calculate
1. all six of the core clinical measures specified by CMS for eligible professionals and
2. at a minimum, three clinical quality measures specified by CMS for eligible professionals, excluding the

Submit calculated clinical quality measures – evaluates the capability to electronically submit calculated quality measures in accordance with the standard and implementation specifications.

Resolution
Core
c_mu_cqm_0013_hypertension –

a) The patient must be at least **18 years of age or older** at the start of the reporting period and have at least **two encounters** with the Rad during the reporting period.
b) An active diagnosis of **Hypertension(used icd-9 codes).** (401.0, 401.1, 401.9, 402.00, 402.01, 402.10, 402.11, 402.90, 402.91, 403.00, 403.01, 403.10, 403.11, 403.90, 403.91, 404.00, 404.01, 404.02, 404.03, 404.10, 404.11, 404.12, 404.13, 404.90, 404.91, 404.92, 404.93)
c) At least one **blood pressure reading (systolic and diastolic)** should be performed and documented during the reporting period in the Vital Signs chart section.

c_mu_cqm_0028a_tobacco_use –

a) The patient must be at least **18 years of age or older** at the start of the reporting period and have at least **two encounters** with the Rad during the reporting period.
b) The patient was queried about tobacco use one or more times within 24 months.

c_mu_cqm_0028b_tobacco_intervention –

a) The patient must be at least **18 years of age or older** at the start of the reporting period and have at least **two encounters** with the Rad during the reporting period.
b) Documentation that the patient is a tobacco user within the last 24 months.
c) An active diagnosis of Nondependent tobacco use disorder **(used icd-9 codes).**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

c_mu_cqm_0421a_weight_screening -

a) The patient must be at least **65 years of age or older** at the start of the reporting period and have at least **one encounter** with the Rad during the reporting period.
b) The number of patients in the denominator that have a normal BMI (BMI >= 22 or <30) OR an abnormal BMI (BMI >= 30 or <22) recorded in the Vital Signs chart section (BMI must be recorded in the six months prior to the encounter date or during the reporting period);

c_mu_cqm_0421b_weight_screening –

a) The patient must be aged 18 - 64 at the start of the reporting period and have had one encounter with the Rad during the reporting period.
b) The number of patients in the denominator that have a normal BMI (BMI >=18.5 or <25) OR an abnormal BMI (BMI >=25 or <18.5) recorded in the Vital Signs chart section (BMI must be recorded in the six months prior to the encounter date or during the reporting period);

Alternative Core

c_mu_cqm_0024_child_weight_assessment -

a) The patient must be aged 2 - 17 at the start of the reporting period and have had one encounter with the Rad during the reporting period.
b) And had BMI percentile documentation (V85.5, V85.51, V85.52, V85.53, V85.54**),** counseling for nutrition (V65.3) and counseling for physical activity (V65.41) during the reporting period. **(used icd-9 codes).**

c_mu_cqm_0038_childhood_immunization – missing

c_mu_cqm_0041_influenza_immunization -

a) The patient must be at least **50 years of age or older** at the start of the reporting period and have at least **two encounters** with the Rad during the reporting period.
b) And had an influenza shot during the flu season(Jan-Feb and Sept –Dec).
c) And have received influenza vaccine CVX code 111 or 140.

Optional

c_mu_cqm_0031_breast_screening -

a) The patient must be female aged 40 - 69 at the start of the reporting period and have had one encounter with the Rad during the reporting period.
b) At least one procedure should be a mammo type(Screening**).**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

c_mu_cqm_0043_pneumonia_vaccination -

a) The patient must be aged 65 at the start of the reporting period and have had one encounter with the Rad during the reporting period.
b) And have ever received a pneumococcal vaccine CVX code 100 or 133.

c_mu_cqm_0061_diabetes_blood_pressure –

a) The patient must be aged 18 - 74 at the start of the reporting period and have had one encounter with the Rad during the reporting period.
b) And had a diagnoisis of Diabetes recorded(used icd-9 codes): 250, 250.0, 250.00, 250.01, 250.02, 250.03, 250.10, 250.11, 250.12, 250.13, 250.20, 250.21, 250.22, 250.23, 250.30, 250.31, 250.32, 250.33, 250.4, 250.40, 250.41, 250.42, 250.43, 250.50, 250.51, 250.52, 250.53, 250.60, 250.61, 250.62, 250.63, 250.7, 250.70, 250.71, 250.72, 250.73, 250.8, 250.80, 250.81, 250.82, 250.83, 250.9, 250.90, 250.91, 250.92, 250.93, 357.2, 362.0, 362.01, 362.02, 362.03, 362.04, 362.05, 362.06, 362.07, 366.41, 648.0, 648.00, 648.01, 648.02, 648.03, 648.04
c) Patient in the reporting period last blood pressure reading must be <140/90 during the reporting period.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Resolved Defects

Bugs, Suggested Features and Support Issues resolved in build 1.30. The extract is taken from Redmine bug tracking system and only displays defects resolved in 1.30.

| # | Status | Tracker | Priority | Subject | Category | Target version | Resolved Version |
|---|---|---|---|---|---|---|---|
| 796 | Closed | Bug | High | Creating duplicate user throws error | Admin Tools | 1.29 | 1.30.8182 |

# 6. Known Limitations

The following are Bugs, Suggested Features, and Support Issues found in build 1.30. This build is the current QE build and testing is ongoing. The list may increase in size. This document will not be updated or re-released.

| # | Status | Subject | Category | Target version |
|---|---|---|---|---|
| 830 | New | View / Edit on a signed report will throw error on Report tab | Thick Client GUI | 1.30 |
| 824 | New | Removing Procedure can close RIS | Thick Client GUI | 1.30 |
| 819 | Resolved | “Inactive” lateral codes are showing up in scheduling screen. Any values “inactive” values in lookup should not be “selectable” in combo boxes. | Thick Client GUI | 1.30 |
| 816 | Resolved | State selection does not save | Thick Client GUI | 1.30 |
| 814 | New | Cannot preview reports | Thick Client GUI | 1.30 |
| 813 | New | Cannot access CDS Job Manager | Admin Tools | 1.30 |
| 832 | New | Demographics at encounter is duplicated | Thick Client GUI | 1.30 |
| 831 | New | Active medictations - Right click brings up 2 context menus on on column headers | Thick Client GUI | 1.30 |
| 829 | Resolved | Meaningful Use - Automated Measure report return duplicate user | Mgt Reports | 1.30 |
| 828 | New | Macro lookup - Cannot deactivate or delete a macro | Admin Tools | 1.30 |
| 827 | New | Assigning macros to other users includes all resource types | Thick Client GUI | 1.30 |
| 826 | New | Duplicate NPI throws exception | Thick Client GUI | 1.30 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | | | |
|---|---|---|---|---|
| 825 | Resolved | Inactive rooms appear in advanced scheduling | Thick Client GUI | 1.30 |
| 823 | New | Macros ignoring "assign to user" | Thick Client GUI | 1.30 |
| 822 | New | Remove access string Macro Editing Advanced tab and cannot edit macros | Thick Client GUI | 1.30 |
| 821 | New | Newly added access strings are not easily found in UserGroup Lookup editor | Thick Client GUI | 1.30 |
| 820 | New | View Images not available from login | Thick Client GUI | 1.30 |
| 818 | New | After bypass PACS correction no order to the next exam selected in work list when WL sorted by scheduled date | Thick Client GUI | 1.30 |
| 817 | New | Order of tabs for Order Signed | Thick Client GUI | 1.30 |
| 815 | New | External patient can be scheduled without creating an internal patient. | Thick Client GUI | 1.30 |
| 812 | New | Open dictate data window to add addendum will throw error | Thick Client GUI | 1.30 |
| 811 | New | GUI will not open to full size | Thick Client GUI | 1.30 |
| 810 | Resolved | advanced search times are not correct in relation to current system time | Thick Client GUI | 1.30 |
| 809 | Resolved | Error on New Appointment | Web Services/DB | 1.30 |
| 808 | QE Rejected | After logging in get error on Dictation control | Thick Client GUI | 1.30 |

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 31. This version of eRAD RIS is referred to as Build 1.31.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu, click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.31 is considered a new core release of the application and will require a reinstallation of eRAD RIS. This is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application, please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Mammo Callbacks, Recalls, Repeats

Birad and Recommendation both existed in previous builds. A new directory titled Mammography has been added to the Administration> Configure list of. Under this new directory are lookup tables for Breast Density, Pathology, MammoBiopsyTechnique, MammoBiopsyStage, MammoLetterConfig, and FollowUpType. The BIRAD and Recommendation lookups will be moved to this directory in the next build.

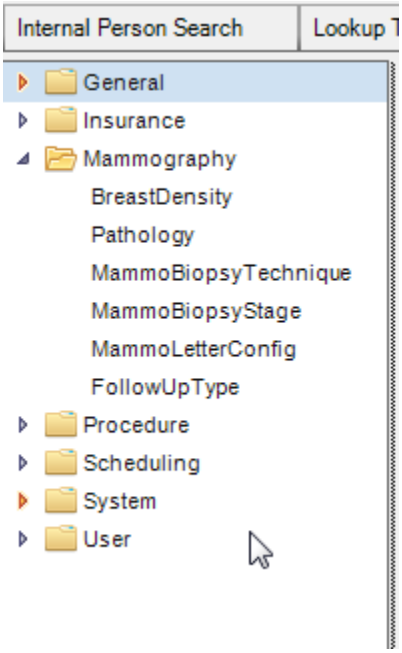

**Figure 4.1 – New Configure directory titled "Mammography"**

On a new install, an administrator can create BIRADS in the Birad editor and then create the Recommendations in the Recommendation editor.

By configuring the set of Recommendations for each BI-RADS level, the administrator can determine which short list of recommendations the Radiologist will see after indicating the BI-RADS code.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

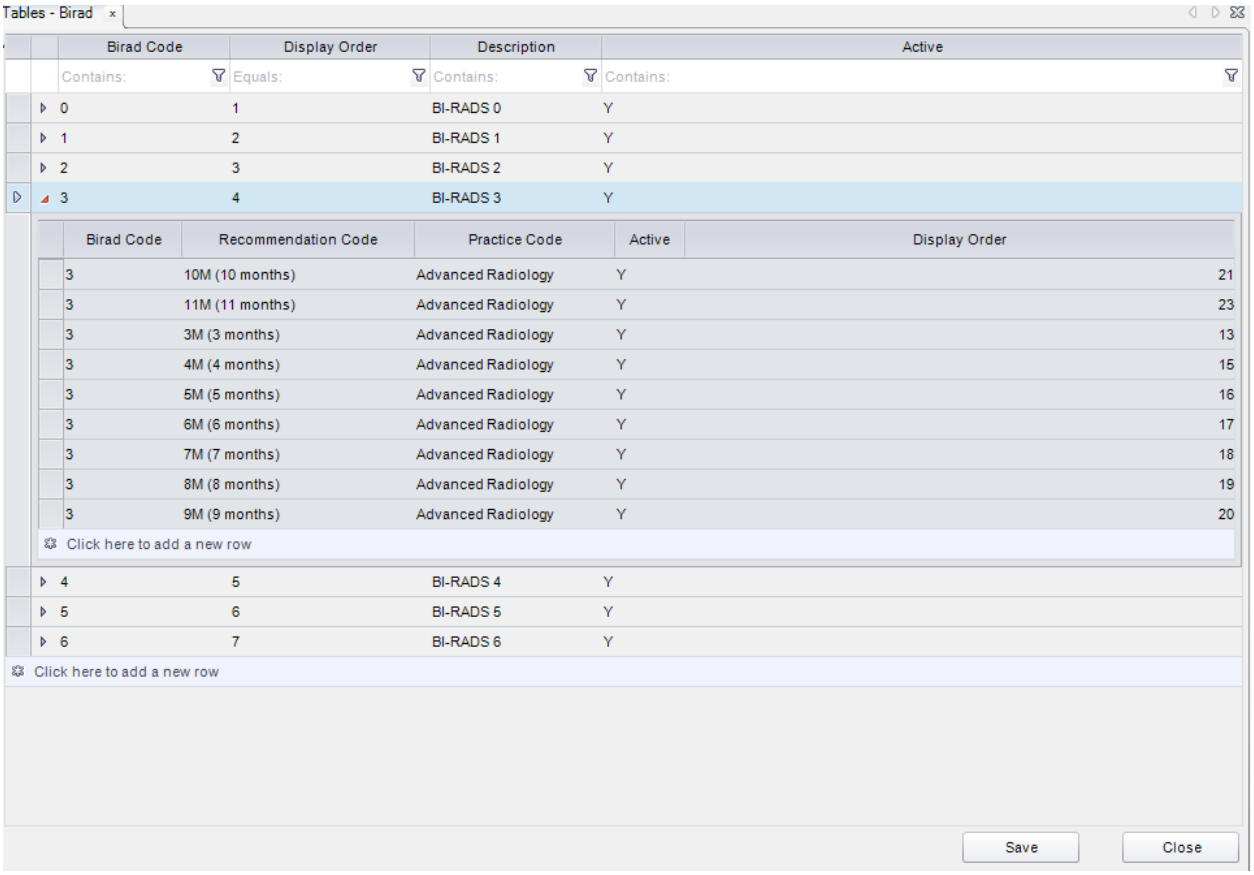

**Figure 4.2 – BIRAD editor. These are not expected to change after initial configuration**

Recommendations have been enhanced in the Mammography workflow in build 31. Looking at Figure 4.3 two new columns have been added to drive callbacks, recalls, invitations, and repeats. The Follow-up Days column was added to trigger the creation of a new order with a particular "target date" for scheduling. The procedure code column will determine which procedure code should be used for the new order. If procedure code is null, the new order will use the same procedure code as the original study.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

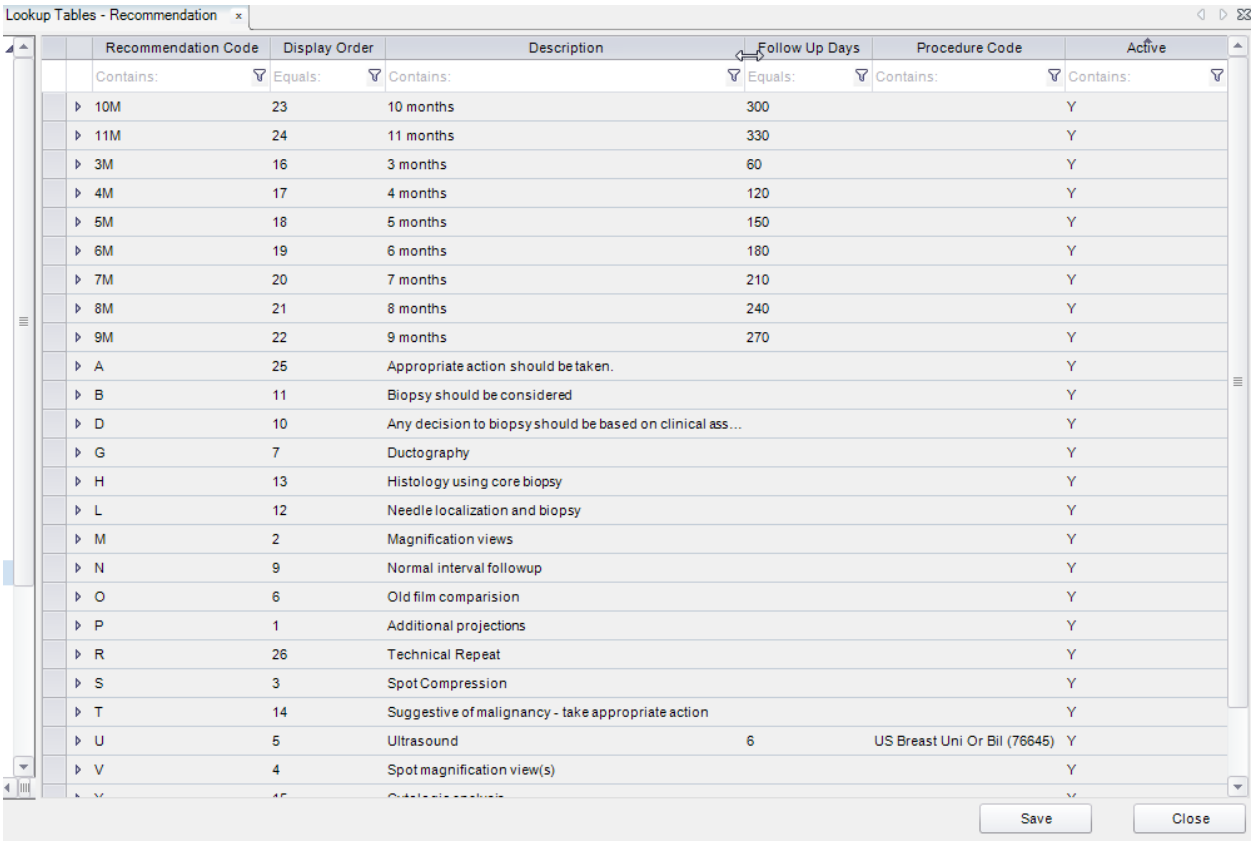

**Figure 4.3 – Recommendation lookup**

Follow-up Orders are created as required when the Radiologist signs a report. The backend services will determine if a follow-up order is required by looking at the Radiologist's recommendation.

A new order will not be created unless the Radiologist selects a recommendation that has an associated "Follow Up Days" or "Procedure Code".

The following table shows how the status of the new order is determined:

| Follow-Up Order Status | Condition |
|---|---|
| Callback | If the recommendation includes a procedure code, the callback status will be used. The order will have the procedure code that is indicated by the recommendation, instead of what was initially performed. |
| Short Term Follow Up | If the recommendation includes a follow-up days that is less than 365, the follow-up order will have a Short Term Follow Up status and a target schedule date of Date Of Service + |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | |
|---|---|
| | follow-up days. Procedure code will be the same as the original study. |
| Invitation | If the recommendation includes a follow-up days that is 365 or greater, the follow-up order will have a status of Invitation and a target schedule date of Date Of Service + follow-up days. Procedure code will be the same as the original study. |

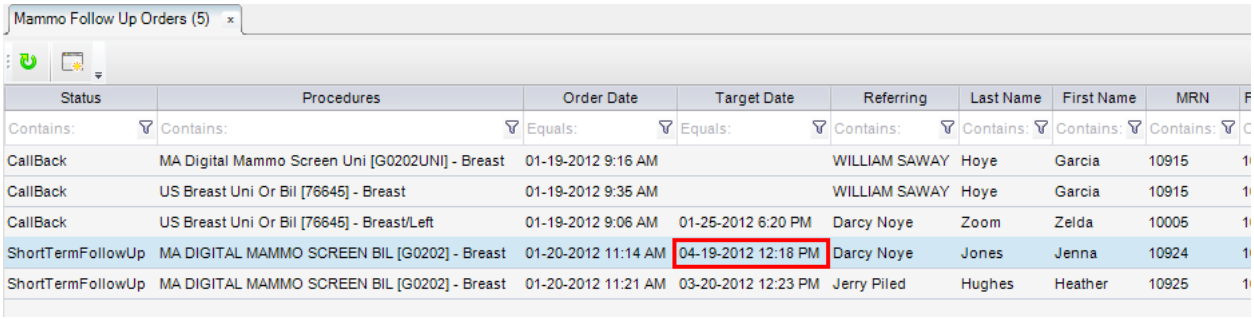
BI-RADS play an indirect role in determining the behavior of the follow-up order creation process. The BI-RADS code will determine which recommendations are presented to the Radiologist, and the selected recommendation will determine the workflow from that point. BI-RADS 0, 4, and 5 are given special treatment however, even though follow-up orders are not automatically generated.
There is a BI-RADS 0 Follow-up Work list and a BI-RADS 4/5 Follow-up Work list from which the user can manually schedule additional procedures, log contact and follow-up attempts, enter biopsy and pathology information, etc. The 0 and 4/5 follow-up worklist and the biopsy, pathology, and contact logging will be discussed in separate documents.
Note: Invitations will not be generated for male patients as males are excluded from reminder letter workflow. The behavior that skips male patients for invitations will be enhanced to look at other criteria such as a patient or study level flag that indicates that an invitation/reminder letter should not be sent.

**Follow-up Order attributes**

The follow-up order will have a status that is determined based on the logic in the section above. It will also have a key reference to the study that caused the creation of the order. The reference to the original study is required in case the Radiologist addends the report and changes the recommendation. In this case, the backend services will modify the existing follow-up order as appropriate (i.e. update the target schedule date and the status), in order to ensure we are not generating multiple follow-up orders for the same study.

In addition, a target date for scheduling will be set if applicable, based on the follow up days of the recommendation.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.



| Status | Procedures | Order Date | Target Date | Referring | Last Name | First Name | MRN |
|---|---|---|---|---|---|---|---|
| Contains: | Contains: | Equals: | Equals: | Contains: | Contains: | Contains: | Contains: |
| CallBack | MA Digital Mammo Screen Uni [G0202UNI] - Breast | 01-19-2012 9:16 AM | | WILLIAM SAWAY | Hoye | Garcia | 10915 |
| CallBack | US Breast Uni Or Bil [76645] - Breast | 01-19-2012 9:35 AM | | WILLIAM SAWAY | Hoye | Garcia | 10915 |
| CallBack | US Breast Uni Or Bil [76645] - Breast/Left | 01-19-2012 9:06 AM | 01-25-2012 6:20 PM | Darcy Noye | Zoom | Zelda | 10005 |
| ShortTermFollowUp | MA DIGITAL MAMMO SCREEN BIL [G0202] - Breast | 01-20-2012 11:14 AM | 04-19-2012 12:18 PM | Darcy Noye | Jones | Jenna | 10924 |
| ShortTermFollowUp | MA DIGITAL MAMMO SCREEN BIL [G0202] - Breast | 01-20-2012 11:21 AM | 03-20-2012 12:23 PM | Jerry Piled | Hughes | Heather | 10925 |

**Figure 4.4 – Target date from Mammo Follow Up Orders**

When a user attempts to schedule an order with a target schedule date, the scheduling screen should set the start date search criteria automatically. E.g. if a scheduler opens up a study 2 weeks before the target schedule date, the start date should be 2 weeks in the future, instead of set to the current date. The scheduler will have the ability to massage the start date range if required.

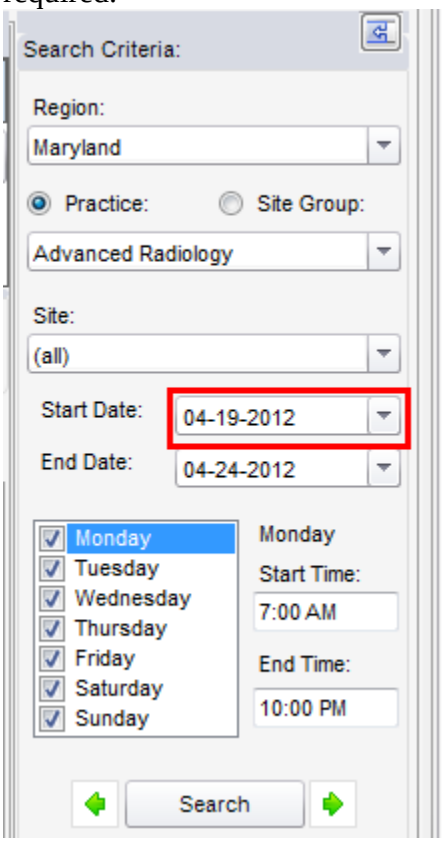


**Figure 4.5 – Search Criteria start date determined by the target date of the Mammo Follow Up.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

The target schedule date is currently calculated based on the date of service + the follow up days associated with the recommendation. We may need to add a "Back on schedule" checkbox for cases where the current study is a follow-up of a previous mammography exam and the patient was late. E.g. if a patient is supposed to come in every 6 months and they are two months late, "back on schedule" would massage the target date such that the patient is due back in 4 months.

Currently all follow-up orders will be visible in the Patient Folder. Call Backs and Invitations will be placed on a work list tentatively titled "Mammo Follow-Up Orders" which will be described in a separate document. Invitations will be used to help drive the reminder letter workflow, which will be described in a separate document.

**Follow-up Order procedure code**

The procedure code for the Follow-up order will be the same as the original procedure, unless there is an override attached to the recommendation (e.g. mammo diag ultrasound breast). The system cannot currently replace a single procedure with 2 follow-up procedures.
In the event that there is no procedure code override attached to the recommendation, the follow-up order will use the same body part and laterality as the original study.

**Technical Repeats** (currently a known limitation is preventing this feature to be used. This will be corrected in the next build)

The Radiologist can sign a report with BI-RADS 0 and a recommendation of Technical Repeat. This will send the exam to a BI-RADS 0 Follow-Up worklist (discussed later). A user can then choose "Create Technical Repeat" once they have the patient on the phone and they are ready to schedule a new time.
The Technical Repeat will be a study that starts off in Scheduled status and has the same accession number as the original study.
Repeats are walked through the workflow and performed by the technologist as if they were a regular exam.
When the Radiologist picks up the Exam from the Exam Done Worklist, they will be prompted to create an addendum, and they should see both the original and the new images in PACS. The addendum will be associated with the original exam, not with the Technical Repeat. The tech notes from the technical repeat will be merged into the technotes from the original study.
After the Rad dictates or signs off on the addendum, the technical repeat will move to a final status of RepeatDone. It will be visible from Patient History but not from any of the other status driven worklists.
A Technical Repeat should bypass billing, the original exam itself is the study that will be billed.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Technical Repeats will not function as designed (with respect to opening the new images on the pacs) unless/until our PACS integration framework passes over the accession number (+MRN?) instead of simply sending over study instance UID.
Note: the reporting screen does not look for the recommendation description of "Technical Repeat", it looks for the recommendation code that is specified by the system config setting: TechnicalRepeatRecommendationCode (in the futures branch this is set to "R" which maps to the recommendation code/description "R"/"Technical Repeat".

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Mammo Follow Up – Breast Density

A new lookup table has been added under the Mammography directory.

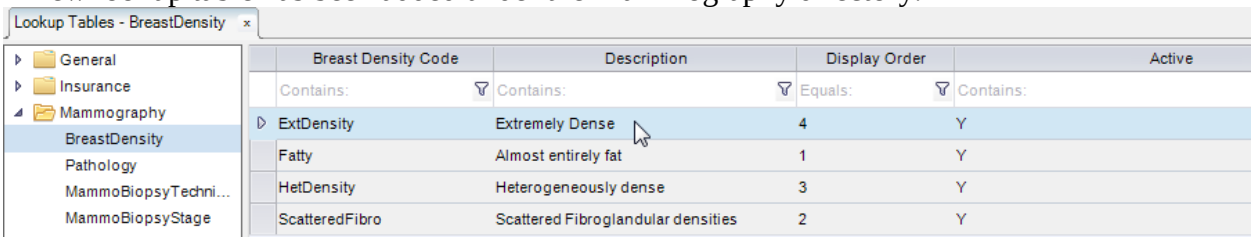

**Figure 4.6 – Breast Density lookup table**

Breast Density table contains the values the will be available to the Radiologist user. The Tissue Density dropdown list mimics the behavior of the BI-RADS and Recommendation dropdown lists. These controls only become visible when the radiologist opens an exam that has a procedure code that has "BIRAD ENABLED FLAG" set to "Y"

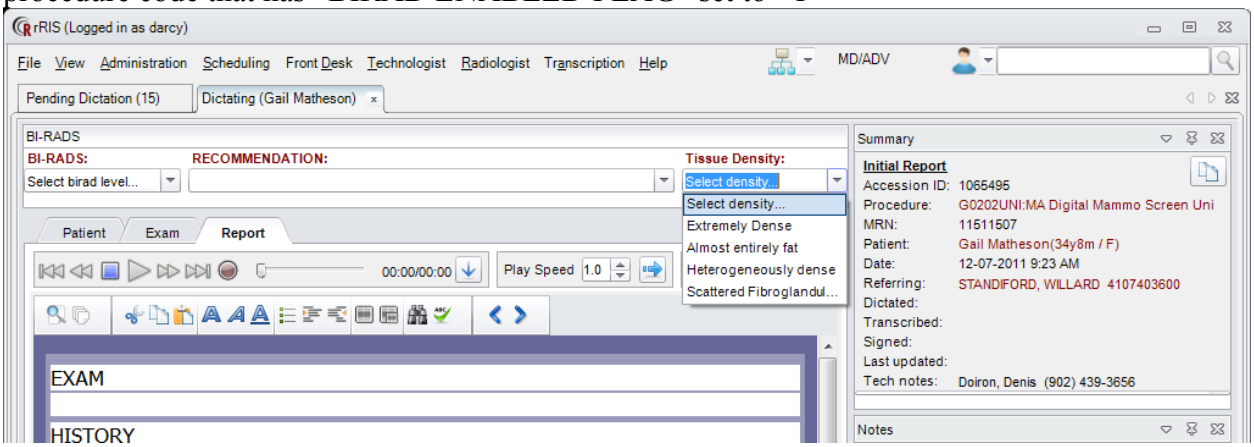

**Figure 4.7 – Tissue Density drop down list.**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Mammo Follow Up – Contact Logging

Contact logging was added to the Mammo Follow Up work lists of ACR Cat. 0 Follow-Up and ACR Cat. 4/5 Follow-Up. Columns on the work list track the "Last Follow Up date, Method of Last Follow-Up and Follow Up Attempts".

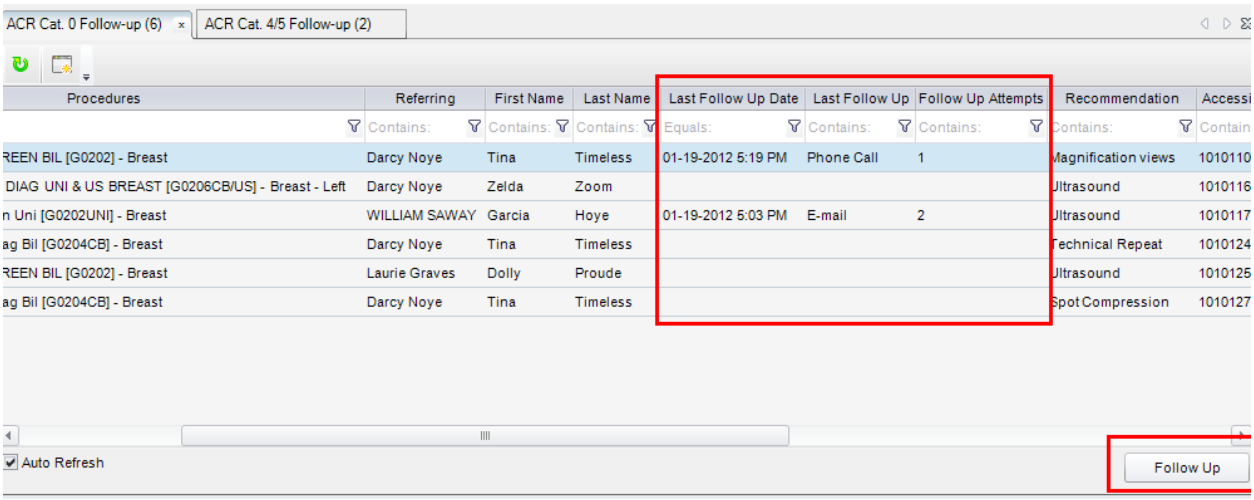

**Figure 4.8 – Follow Up work list displaying Follow Up columns**

The "Follow-Up's" are created from the Follow-Up data window.

The main grid sits on the Follow Up tab and shows a summary of the follow-up activity on the current exam. The yellow sticker icon means there are notes/comments attached to the follow-up entry.
The user can double-click or highlight a follow-up and click view to see the full details on a pop-up dialog.

The Figure below shows the Follow Up tab displaying the contact attempts. The Add button has been selected displaying the Follow Up Details window.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

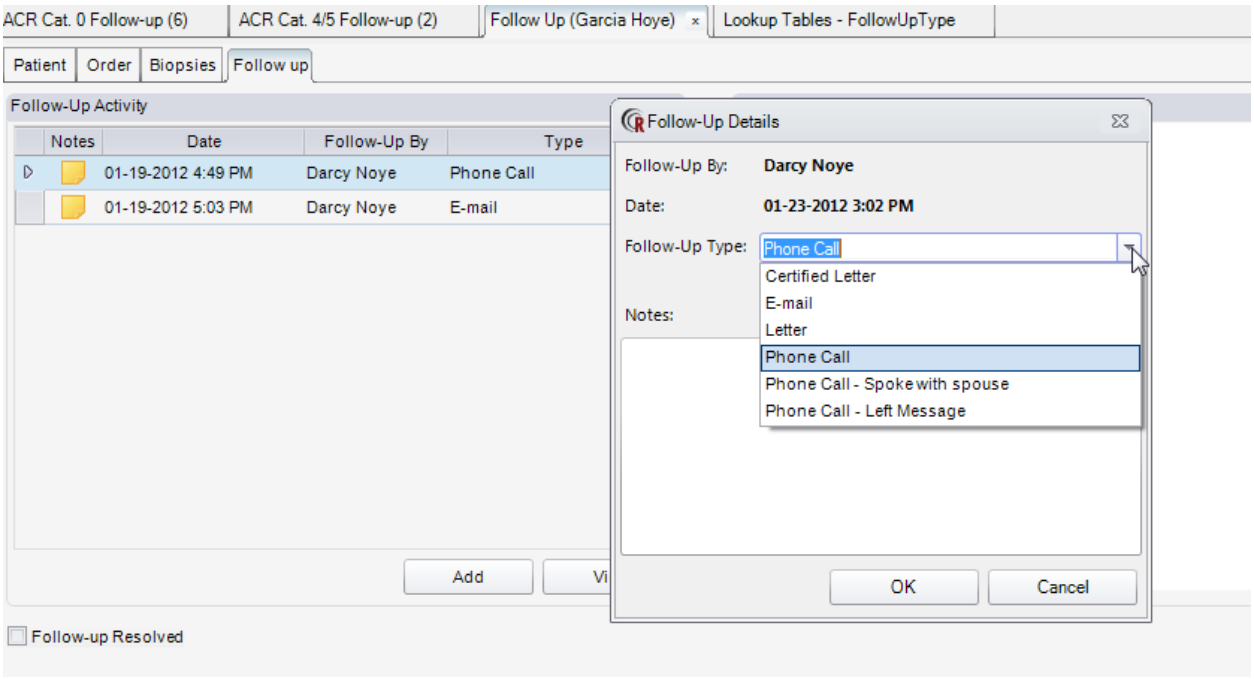

**Figure 4.9 – Entering Follow Up.**

A list box within the window has various Follow Up values from a lookup table was created in the Administration -> Configuration screen to allow the administrator to define a set of Follow-Up codes for the user to choose from on the Follow-Up Details pop-up dialog. An administrator can configure new follow-up types as required to increase the value of the information on the work list.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Mammo Layletter Printing

Lay Letter printing has been added to build 31. The SystemConfig table has new values to specify default letters for each BIRAD category.

| System Config Code | Value | Default | Description |
|---|---|---|---|
| Contains: | Contains: | Contains: | Contains: |
| LayletterBIRAD0Default | /QE Current/Forms/Generic Mammo Lay Let... | | (value = path and name) The path and name... |
| LayletterBIRAD1Default | /QE Current/Forms/Generic Mammo Lay Let... | | (value = path and name) The path and name... |
| LayletterBIRAD2Default | /QE Current/Forms/Generic Mammo Lay Let... | | (value = path and name) The path and name... |
| LayletterBIRAD3Default | /QE Current/Forms/Generic Mammo Lay Let... | | (value = path and name) The path and name... |
| LayletterBIRAD4Default | /QE Current/Forms/Generic Mammo Lay Let... | | (value = path and name) The path and name... |
| LayletterBIRAD5Default | /QE Current/Forms/Generic Mammo Lay Let... | | (value = path and name) The path and name... |
| LayletterBIRAD6Default | /QE Current/Forms/Generic Mammo Lay Let... | | (value = path and name) The path and name... |

**Figure 4.10 – SystemConfig table displaying new Config Codes for LayLetters**

The default values for system config layletter paths can be overridden by values in the Forms and Labels lookup editor.

FORMS AND LABELS – Custom LayLetter for each appropriate BIRAD can be configured for each PRACTICE in the Forms and Labels configuration screen. If not defined, no letter will be available of on demand printing via right click print forms. On demand printing can still be accomplished via right click, distribution→ distribution history and re-sending the layletter for back end printing.
If no custom template is defined for practice. Document distribution engine will use the system default Layletter template.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

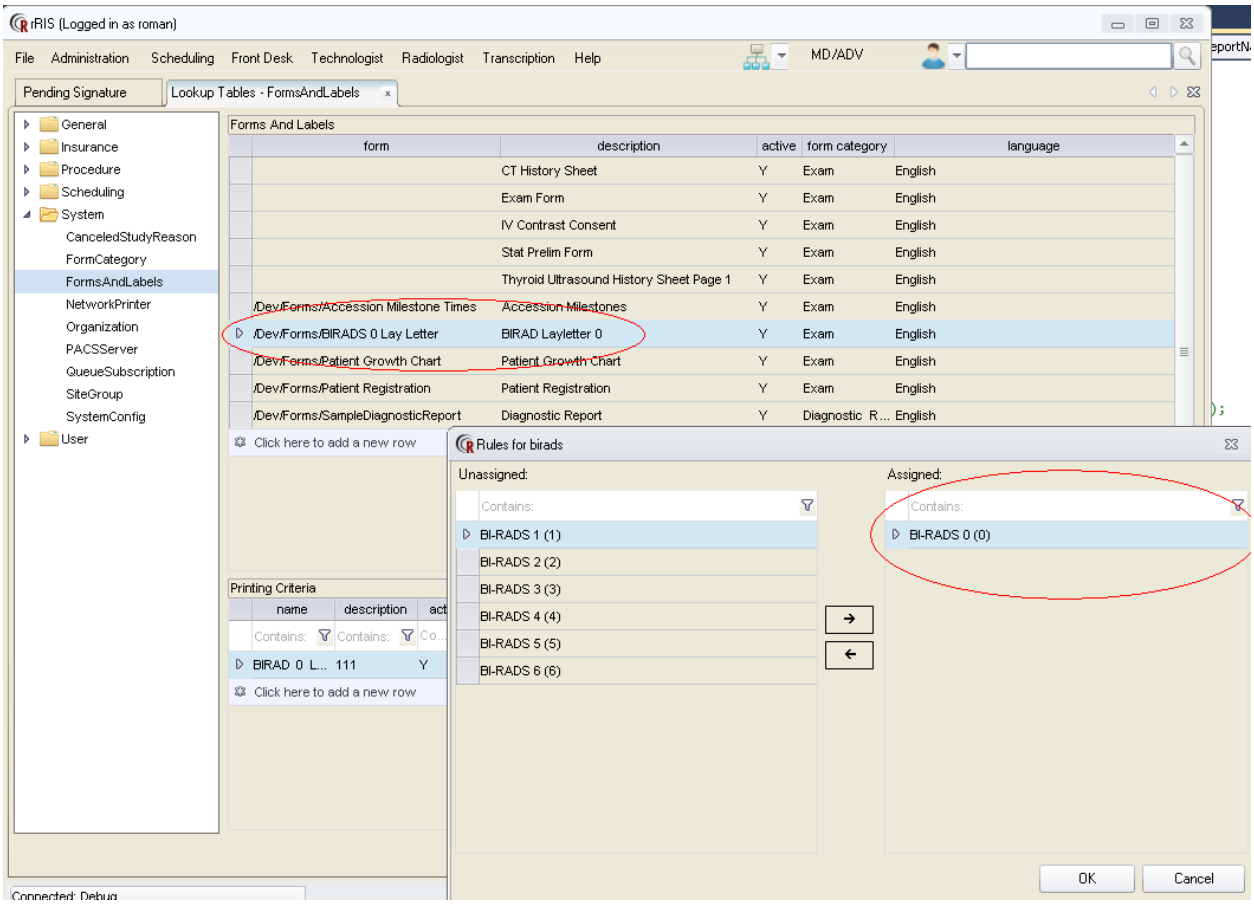

**Figure 4.11 – Forms and Labels displaying a configured BIRAD Layletter**

FORM CATEGORIES - Form categories for mammography letter forms have been made static ( system locked – for mammography and other purposes. Categories “Diagnostic Report”, “Layletter”, “Recall Letter”, “Call Back Letter” , “Short Term Followup” → system will not allow a user to delete or change the name of these 3 categories.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

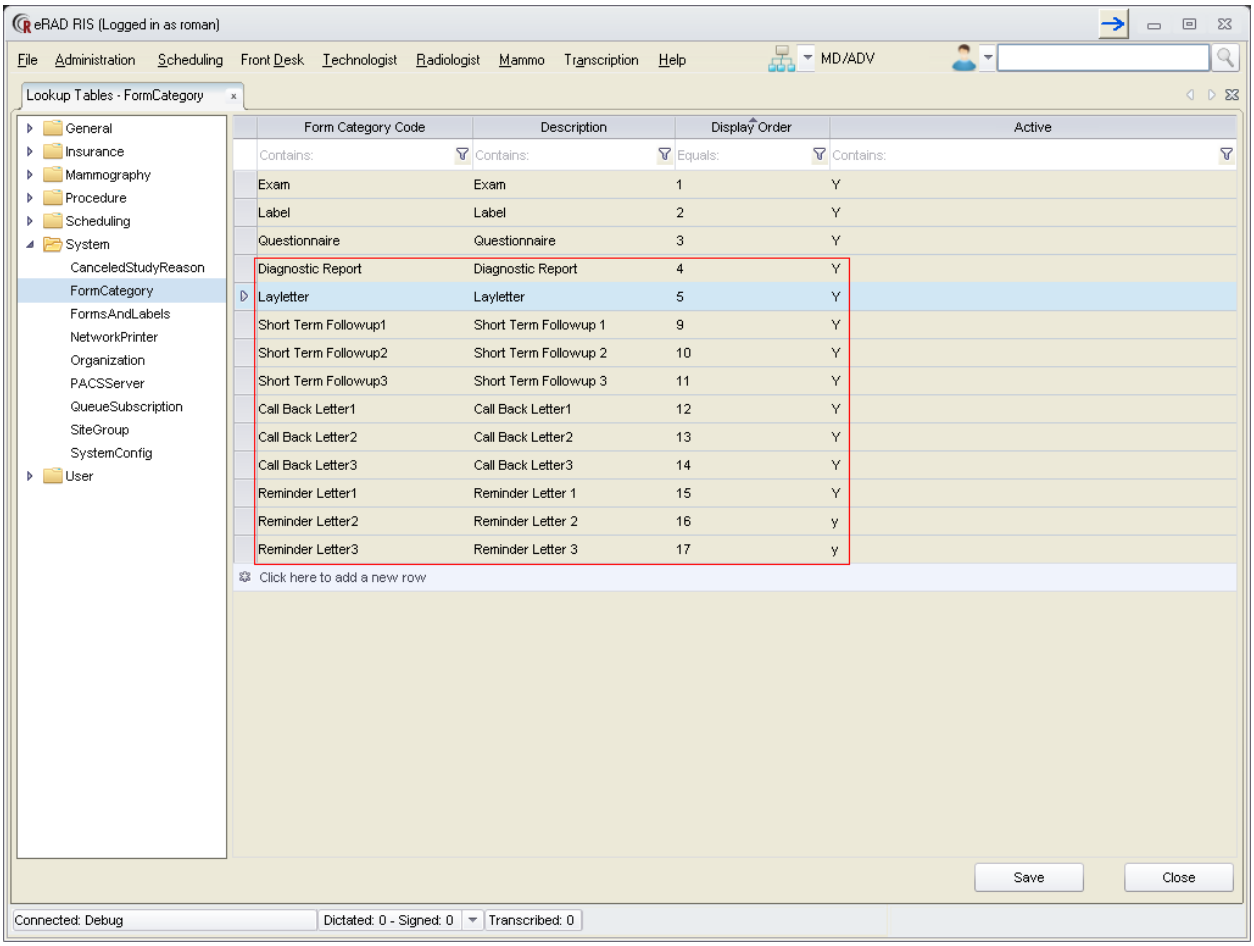

**Figure 4.12 – Form Category for Layletters, Callback, Short Term Follow Up and Reminder Letters**

If patients diagnosis BIRAD code / PRACTICE matches the layletter code assigned and the study is in “Signed1” status, the letter will be available for printing from the patient history work list, by right clicking the study and selecting “Print Forms”. (To print to the local printer)

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

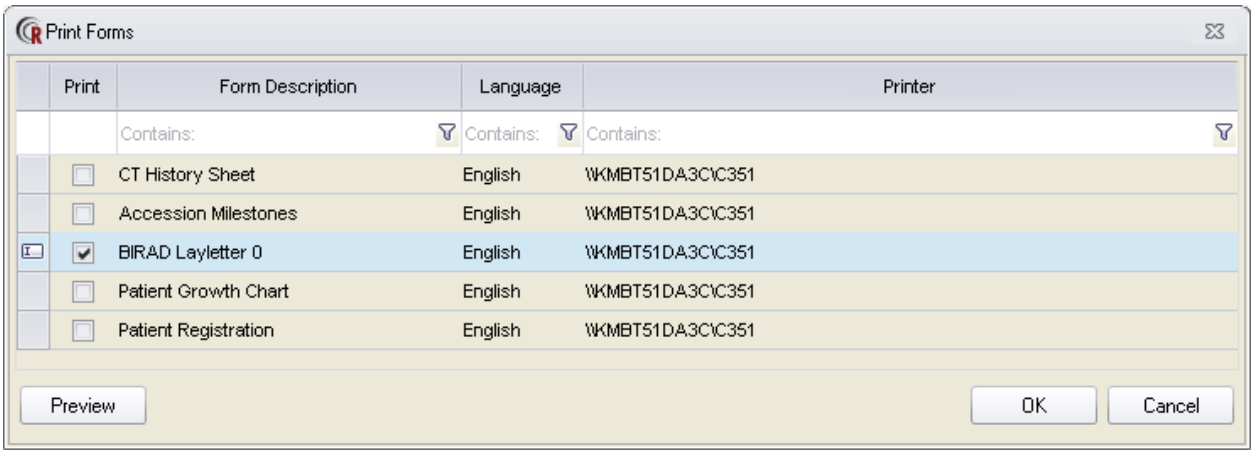

**Figure 4.13 – Print Forms displaying Layletter specified in Forms and Labels lookup editor**

Alternative method of on demand printing is by accessing the document distribution history via right click.

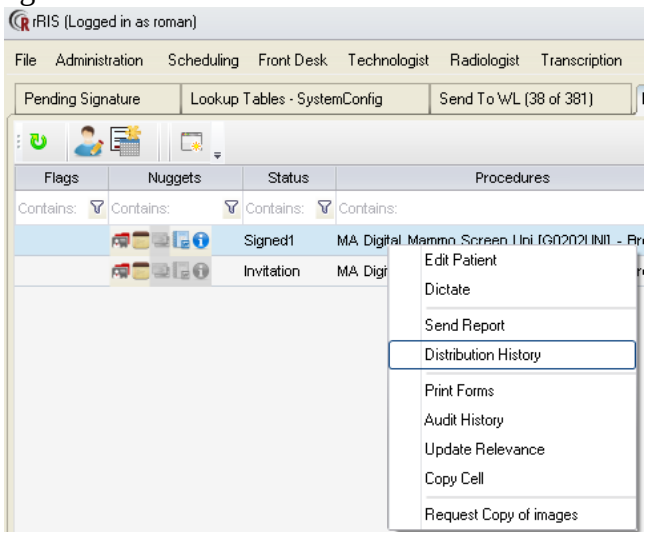

**Figure 4.14 – Accessing Distriubtion History from patient folder.**

Selecting the layletter for the exam and hitting the “Start / Restart Job” to print a copy of the letter to the back end printer.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

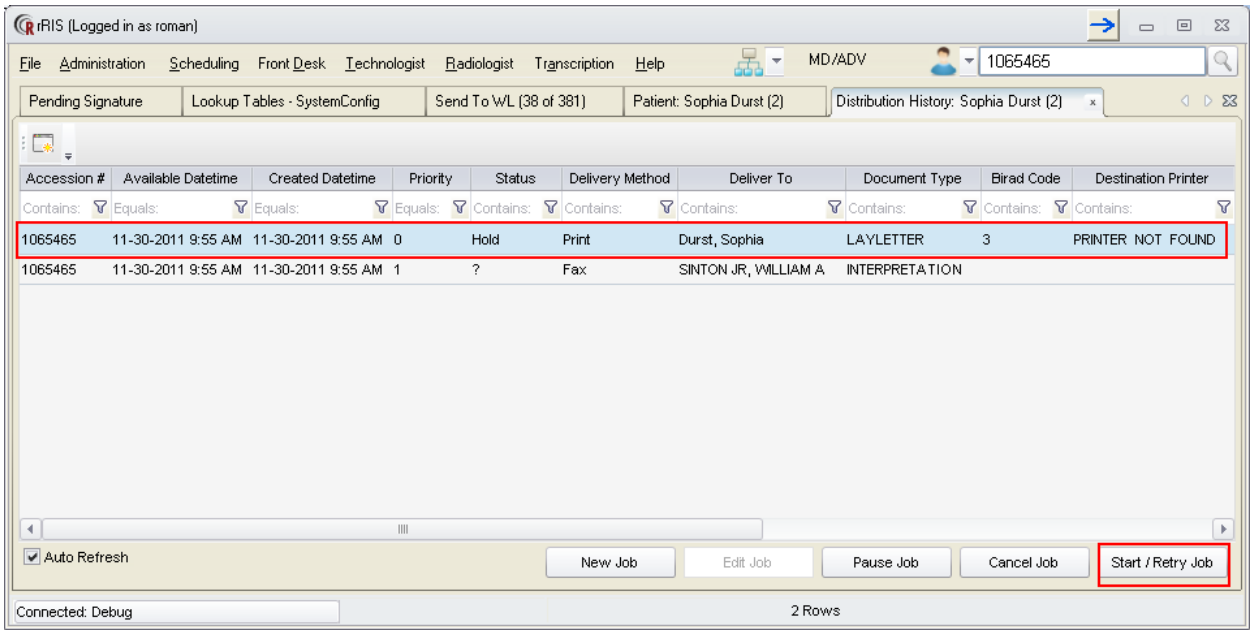

**Figure 4.15 – Distribution History Work List**

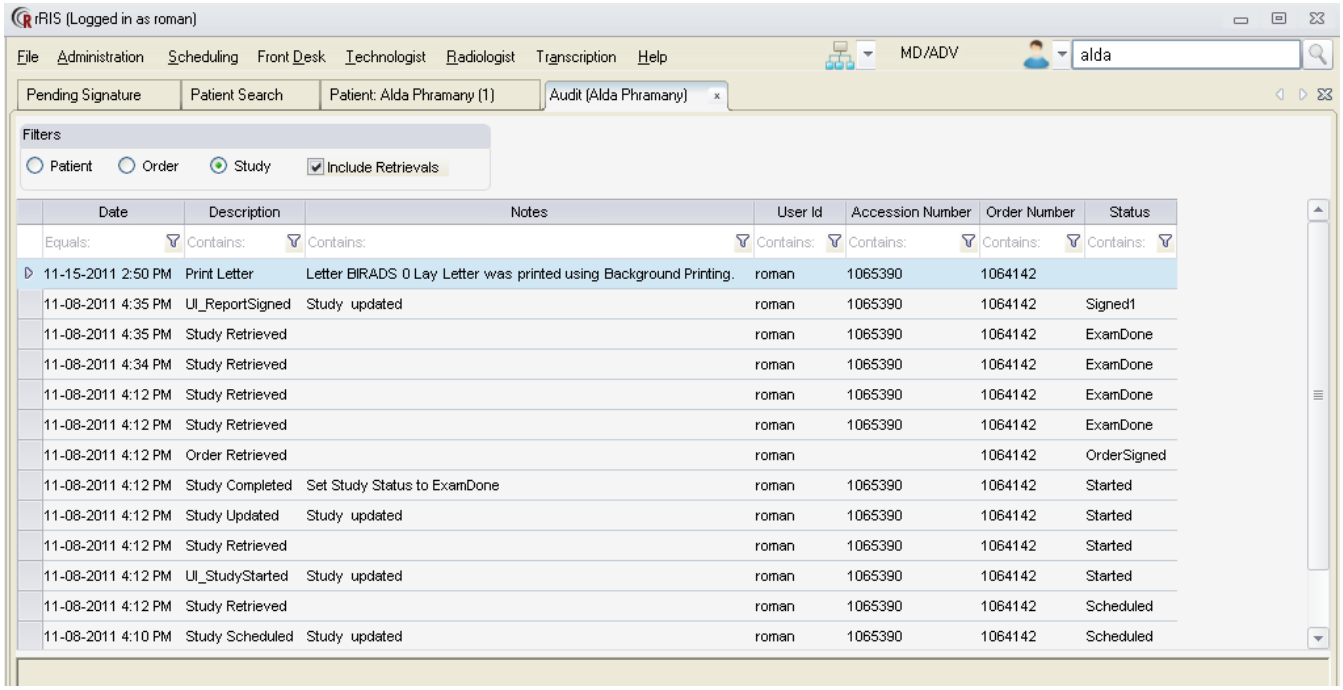
NOTE: Document Distribution History work list will not allow a user to resume a Layletter job that was cancelled by the DDE engine (as in this case a newer version / newer diagnosis layletter was created). Only user cancelled layletters can be retried.

When the letter is created, automatically printed or (replaced with a newer version by the system) an entry will be logged in the Audit History:

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.



| Date | Description | Notes | User Id | Accession Number | Order Number | Status |

| 11-08-2011 4:10 PM | Study Scheduled | Study updated | roman | 1065390 | 1064142 | Scheduled |

**Figure 4.16 – Audit History**

Also, all user actions for putting the job on Hold, Cancelling, Starting / Retrying the job will be audited to the system audit log.

**BULK Layletter Printing Workflow:**

Layletters will be automatically submitted to the Document Distribution Engine when an exam is Signed. The printer selection will be made in the same way the DDE engine currently selects the printer for diagnostic reports. (BASED on network printer configured to the Site). DDE back end printing Layletter jobs when queued will be automatically placed in HOLD status (not to tie up the printer). Administrative staff will need to open the DDE work list at the end of the day, multi select the layletters to be printed and select to START the jobs. (Recommend creating a LAYLETTER filtered view on the Document Distribution Work list for this purpose).

While the Job is in any status other than Completed, if diagnosis is changed on the exam ( ex. Addendum with different BIRAD reading), the lay letter in the DDE worklist will be cancelled and a new job with a newer letter will be generated.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

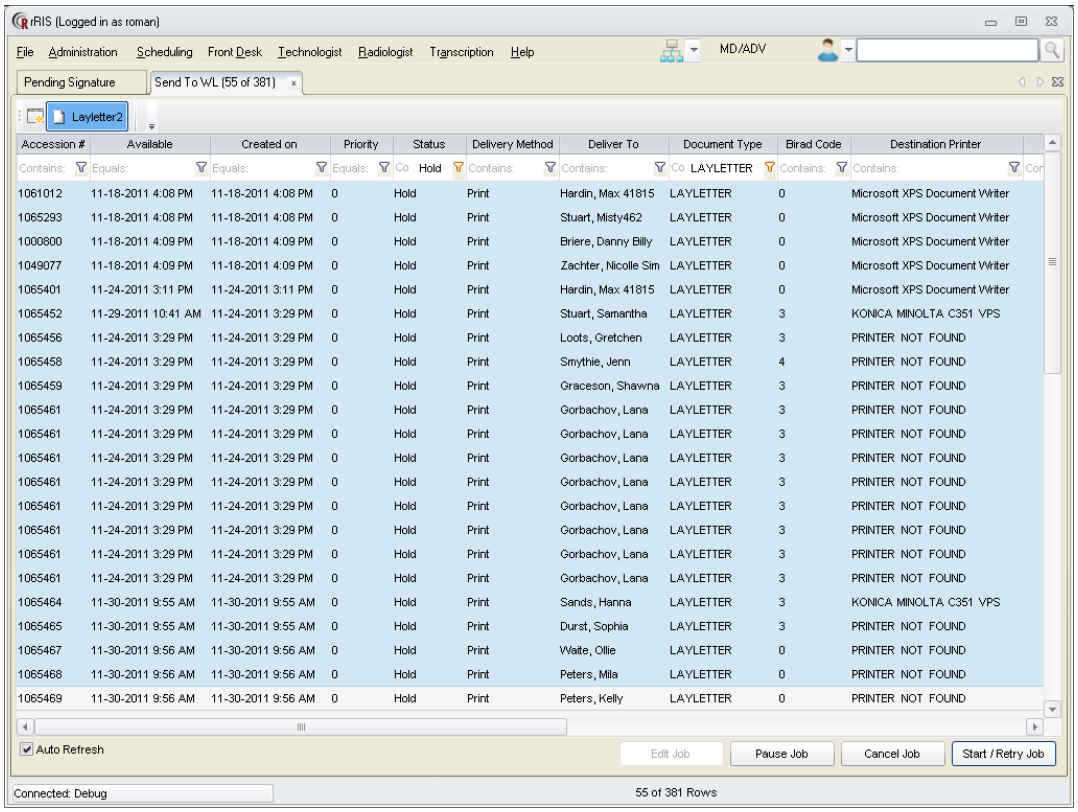

**Figure 4.17 – Send To work list, printing bulk layletters**

Document Distribution Engine will attempt to dynamically pick a template for each Layletter as per configuration in the FORMS and LABELS screen. (Considering only criteria of BIRAD + PRACTICE).

If there is no template specified for (BIRAD + PRACTICE), DDE engine will use a System template for BIRAD from the SystemConfiguration table. If for some reason multiple templates are configured for (BIRAD + PRACTICE) → mis-configuration. DDE engine will pick the first available template.

Edit Job → Edit Job button is disabled on the DDE work list when working with a lay letter. Edit Job button is specific to sending diagnostic reports (to change fax number or recipient) so not applicable to layletters.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Mammo Reminder, Short Term Followup, Call Back Printing

A method to print Reminder, Short Term Followup and Call Back letter printing was needed. These letters
Configuration:
**FORM CATEGORIES** - Form categories for mammography letter forms have been made static (system locked – for mammography and other purposes. Categories "Diagnostic Report", "Layletter", "Recall Letter", "Call Back Letter" , "Short Term Followup" → system will not allow a user to delete or change the name of these 3 categories.

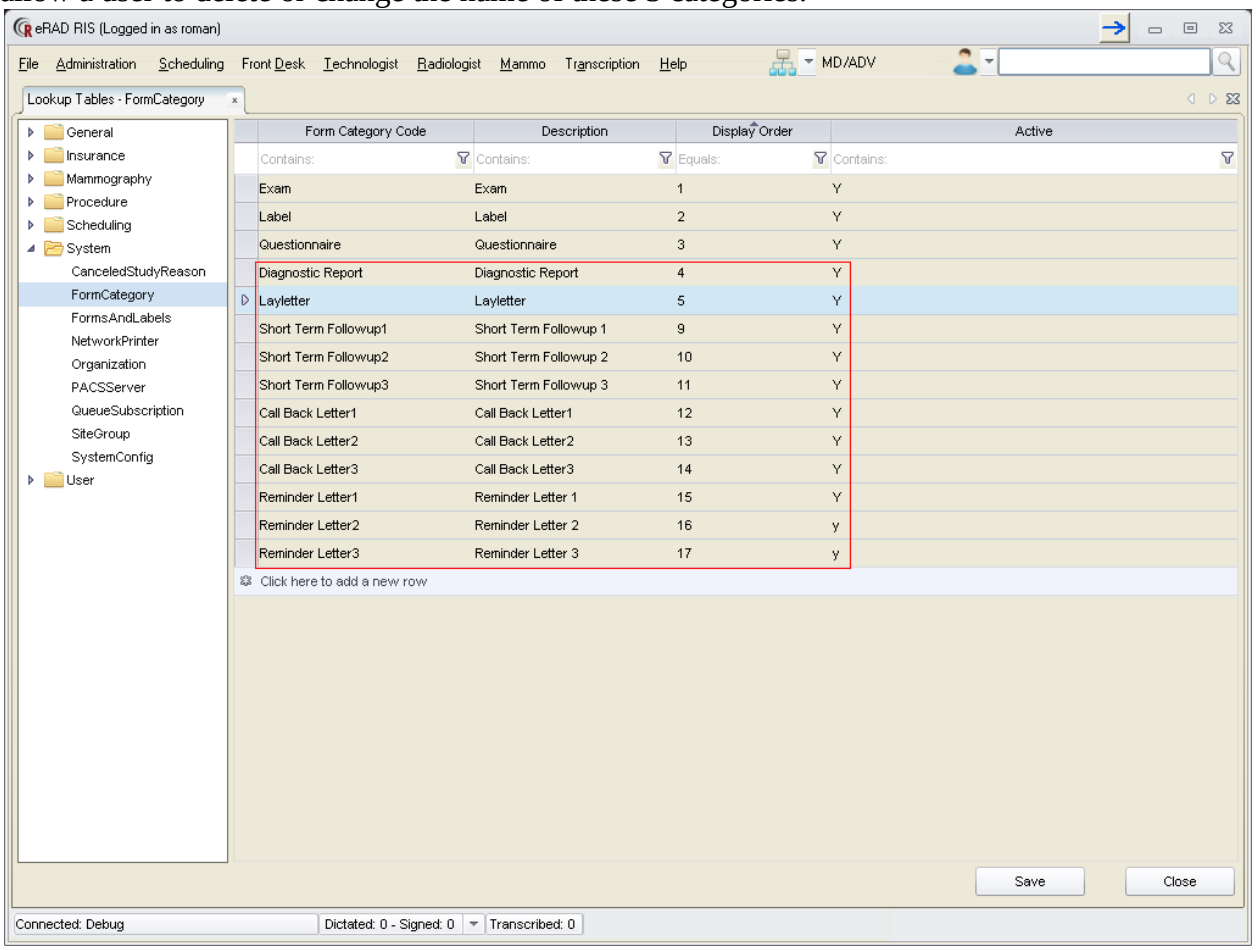

**Figure 4.18 – Form categories for Short Term, Callback and Reminder letters created**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

FORMS AND LABELS – 3 Custom letters can be created for each letter category for each PRACTICE in the Forms and Labels configuration screen. If not defined, a system default letter will be used.
Mapping a mammography letter to PRACTICE is the only mapping configuration Document Distribution Engine uses.

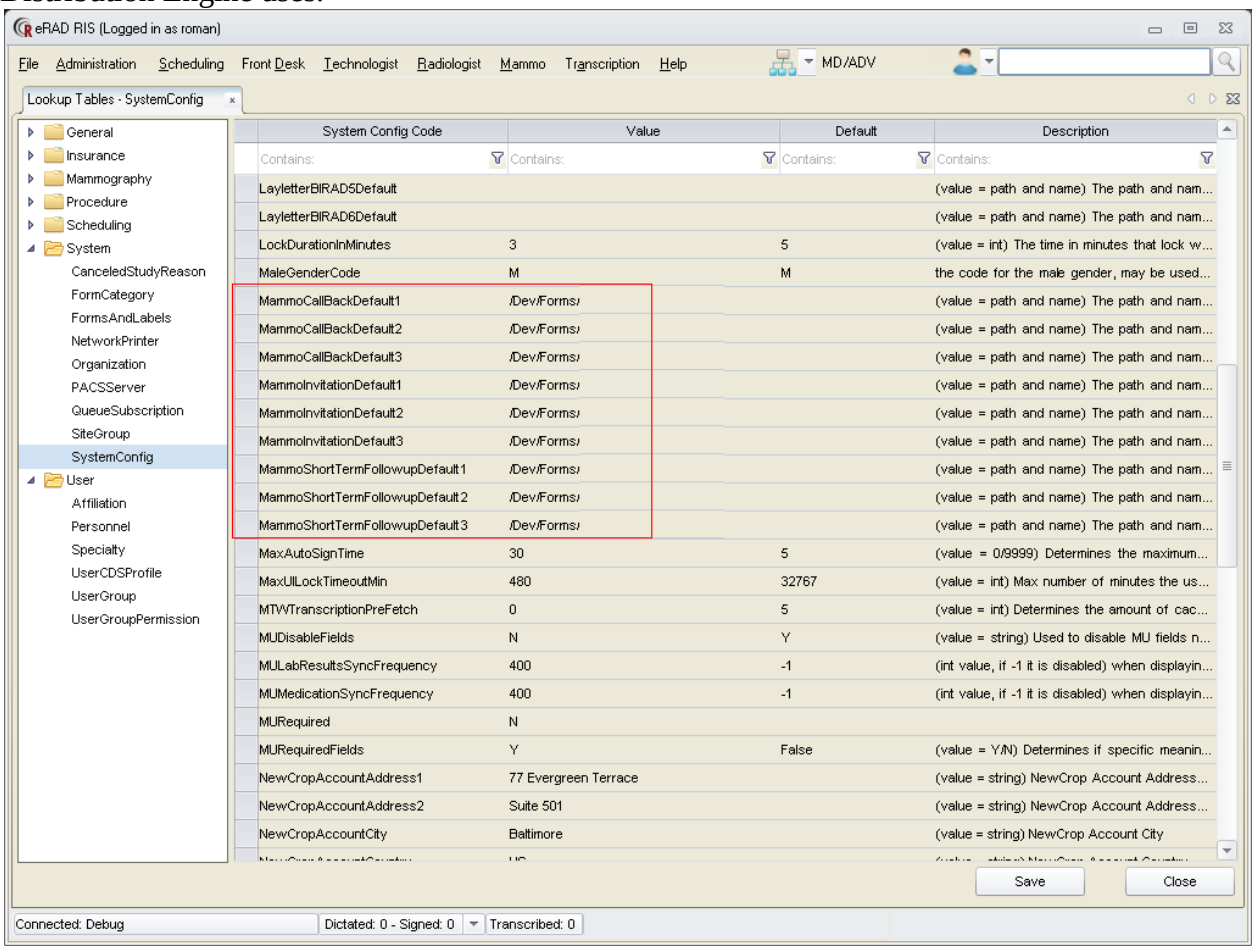

**Figure 4.19 – SystemConfig values for default letter templates**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

MAMMOGRAPHY LETTER CONFIGURATION ( # letters, and timeframes)
There are 3 SYSTEM DEFAULT form categories (categories that have NO association to any PRACTICE or SITE) defined to be used as system wide defaults. These should not be deleted!
Using the Mammography Letter Configuration screen each practice or site can populate 1,2 or 3 letters for each category. The number of letters a site or practice had defined will control how many letters they will be configured to print.
So if system defaults are used → all 3 letters are available.
If Site Mapped 2 Reminder letters → they will only have access to print 2 reminder letters.
If Site Mapped 3 Call Back letters → site will have access to 3 Call back letters.

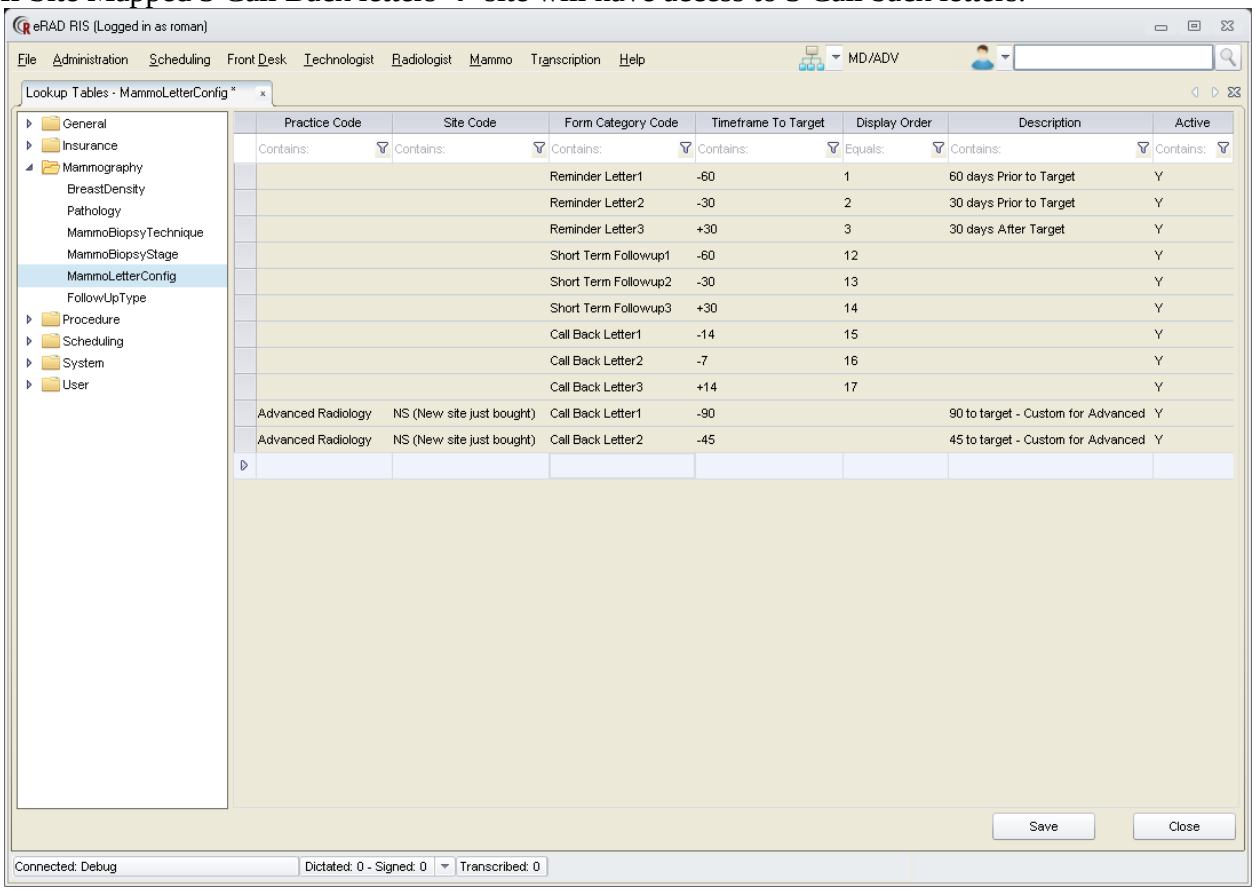

**Figure 4.20 – MammoLetterConfig lookup table**

Time Frames for letters**.** Time frames for letters can be customized on system wide or if Site defined their own category letters (time frame can be set just for practice or just for site category).
Reminder Letters → are used for orders of type "Invitation"
Short Term Followup Letters → are used for orders of type "ShortTermFolloup"
Call Back Letters → are used for orders of type "CallBack"

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Each order has a defined "Target Date" for the patient to be scheduled. For orders of type "Inviation" and "ShortTermFolloup" the Target date is determined based on the "Recommendation" that the radiologist specified.
For orders of type "CallBack" the intent is for the patient to come back as soon as possible, so the **Target Date is set to the current date** (when **the layletter is printed** for the corresponding exam).

TIME FRAME CALCULATION**:** The Mammography Letters work list has a calculated column field that will calculate (which letter should be sent to the patient) for every "Invitation", "ShortTermFolloup", "CallBack" order. The calculation is performed based on order "Target Date" and the configuration that is entered in the MammoLetterConfig screen.

For example: Letter 1 Configuration of **-60 days to Target Date**, on the work list will calculate to send the patient Letter 1 until letter 1 is printed or calculation fall into next criteria example Letter 2 **– 30 days to Target Date.**
So the system will recommend Letter 1 to be printed for the patient until the letter is printed or the calculation falls into the next timeframe (ex. Letter 2 timeframe).

Deceased Handling**:** If a patient has a deceased flag specified on the patient record. System will not calculate a Mammography Letter for the patient. (Preventing printing).

Ignored Reminder**:** Calculated letter category will fall into **Ignored Reminder** calculation 2 weeks (14 days) after last letter has been sent to the patient. (Last letter could be letter 2, or 3 depending on configuration)

BULK Mammography Letter Printing Workflow:
In order to bulk print letters, the designated staff member will need to load the Mammography Letter work list via Mammo menu → Letters.

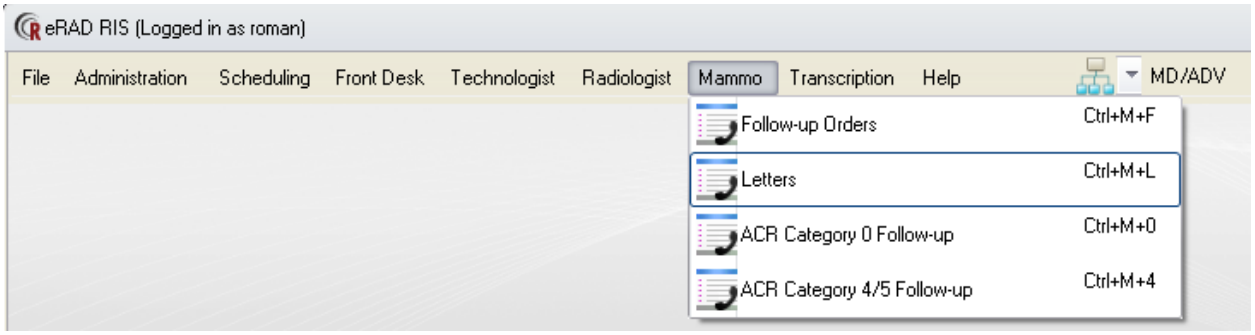

**Figure 4.21 – Mammo → Letters menu option**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

The user will then see all calculated letters due to be printed. Work list can be filtered down to see only specific letter categories. Once the work list is filtered to desired letters for printing, the user may use (CTRL –A) keyboard shortcut to select all items on the work list, and click the "Print Selected" button. This action will send all selected letters for printing to the Document Distribution Work list. The system does allow the user to submit letters of various types at the same time.

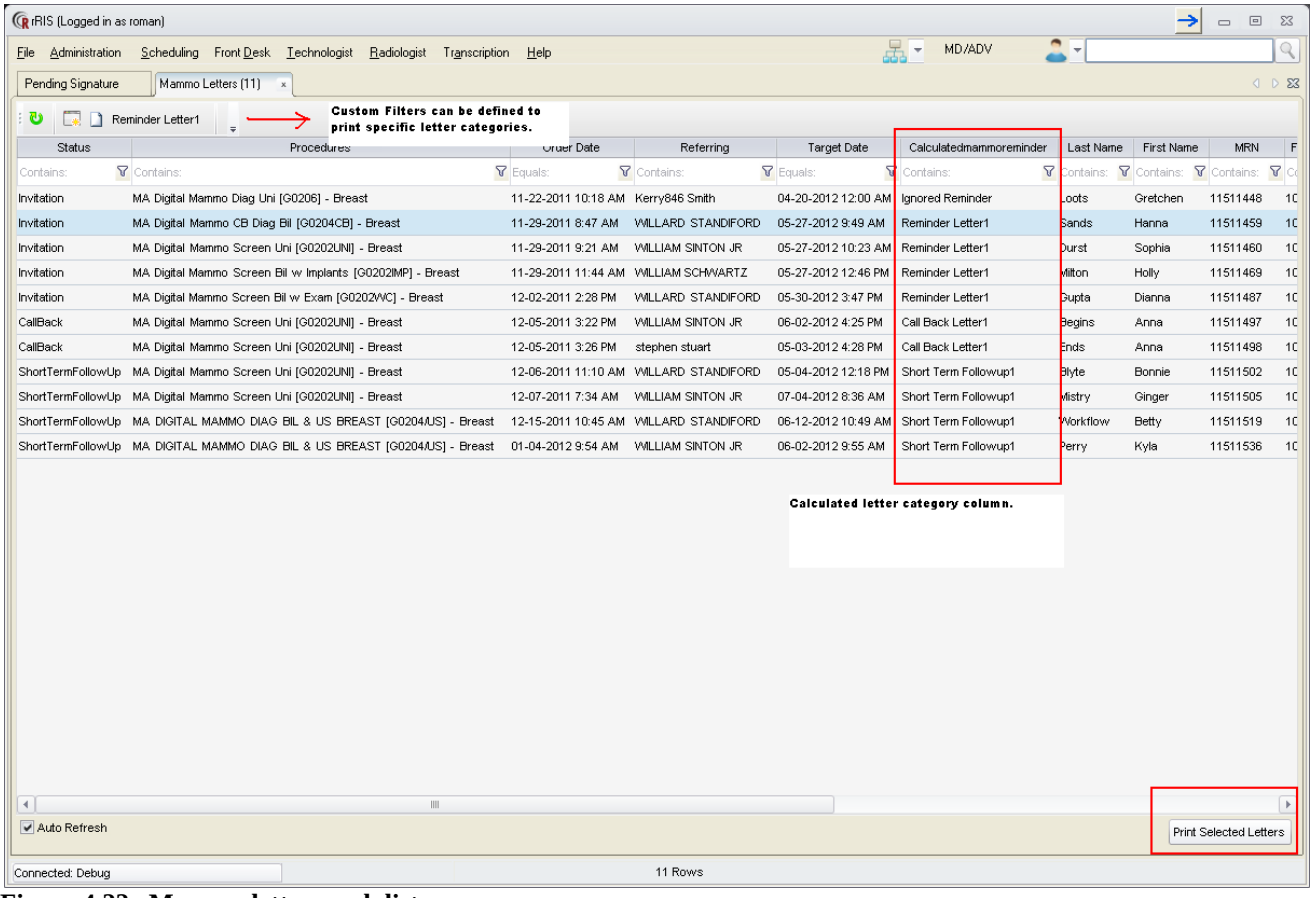

**Figure 4.22– Mammo letter work list**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Mammo Follow Up Worklists

For the Mammography work flow there was a need to capture Mammo exams of BIRAD 0 and BIRAD 4/5 follow up's was required. Two new work lists have been added in build 31. Each is described below.

BI-RADS 0 Worklist

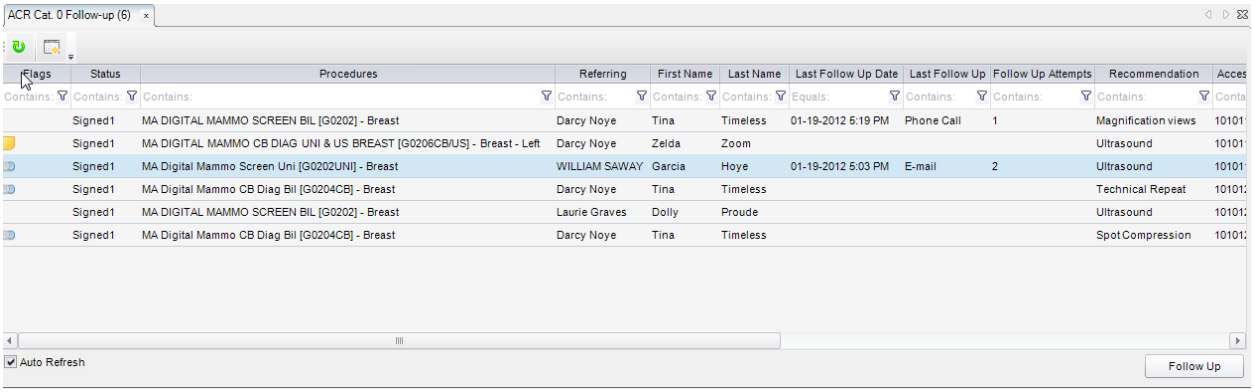

**Figure 4.23 – ACR Cat. 0 Follow-up work list**

Tentative Work list Tab Title: "ACR Cat. 0 Follow-up Work list"
Work list filter: show all signed studies with a BI-RADS code of 0, in the ReportSigned1 status, with mammo_fup_required_flag = 'Y'. When a BI-RADS 0 study is signed, it will automatically go to this work list. The study remains on the work list until a user opens the Post Exam screen and checks the "Follow-up Resolved" checkbox and saves the change to the database.

**Double click action**: Open Post Exam follow-up.

**Context menu items available from right click:**

- Patient folder,
- Audit History,
- Print Forms,
- Post Exam,
- Rescheduled Flag … Set Follow up Rescheduled
- Rescheduled Flag … Clear Follow up Rescheduled

**Columns:**

- Flags
- Status

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

- Procedures
- Referring
- First Name
- Last Name
- Accession #
- BI-RADS
- Technologist
- Signed By Radiologist
- MRN
- Performed End Date
- Recommendation
- Last Follow Up Date
- Last Follow Up (Type)
- Follow Up Attempts
- Signed Date
- Rescheduled (Flag) – set automatically when the user schedules an exam from Post Exam -> Schedule, or manually (as a fail-safe) if the study gets scheduled in some other way
- Locked By – indicates the user, if any, who is currently working on the study.

**Expected Workflow:**

Users will use this list to follow-up on BIRADS 0 studies. They can open Post Exam and schedule a follow-up study, and add follow-up activity (e.g. sent certified letter).

The study will not leave the work list at the point of scheduling. It will remain on the list until the exam is flagged as “Resolve Follow-Up”.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

BI-RADS 4/5 Work list

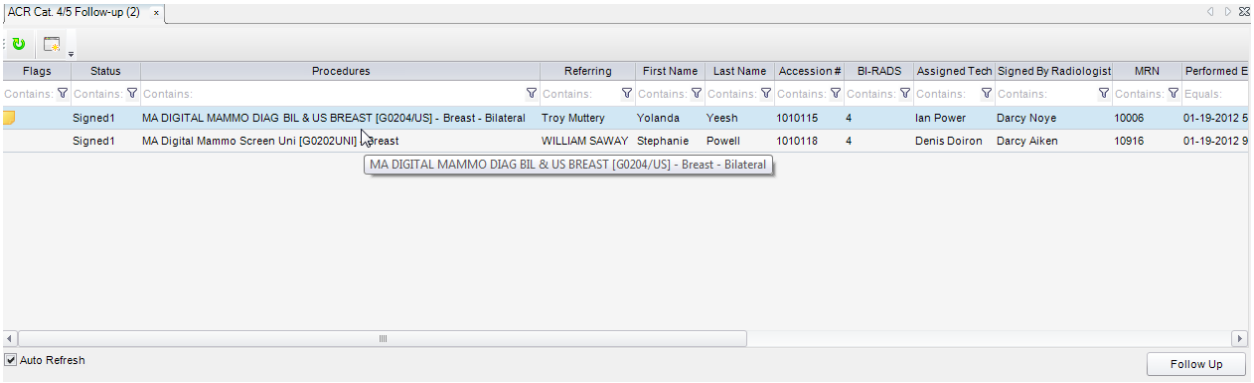

**Figure 4.24 – ACR Cat. 4/5 Follow-up**

**Tentative Worklist Tab Title:** "ACR Cat. 4/5 Follow-up" (suggestions?)
**Worklist filter:** same as BI-RADS 0, except we filter for BI-RADS 4/5
**Double click action:** same as BI-RADS 0
**Context menu items available from right click:** same as BI-RADS 0
**Columns:** same as BI-RADS 0
**Expected Workflow:** same as BI-RADS 0 except the user may also enter biopsy and pathology information on the Post Exam follow-up screen.
Again, to be clear, the studies on this list will not fall off until the user "resolves follow-up" on the Post Exam screen.

CallBack and Short Term Follow-up Worklist

**Tentative Worklist Tab Title:** "Mammo Follow Up Orders" (suggestions?)
**Worklist filter:** order status is "Callback" or "ShortTermFollowUp" and target date (for scheduling) is specified. (suggestions? Callbacks may not need to have a target date, perhaps we should only look at those 2 statuses).
**Double click action:** Schedule Order
**Context menu items:** to be determined

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**Columns:**

- Status
- Procedures
- Order Date
- Referring
- Last Name
- First Name
- MRN
- Filler Order Number
- City
- Insurance Carrier
- PreCert Required
- Patient Type
- Target Date (for scheduling)
- Primary Phone Number

These columns are preliminary and most were borrowed from the Orders To Schedule WL.

**Expected Workflow:**

Callbacks and Short Term Follow Up orders will be created automatically when the Rad signs off on a study with a special recommendation (documented elsewhere). Other users will work this list, and as the exam is scheduled it will automatically fall off the Follow Up Orders list.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Password Change

In build 31 the ability to change your password from within the RIS has been added.

A new check box called "Domain Authentication" on the Account tab of the Personnel editor has been added.

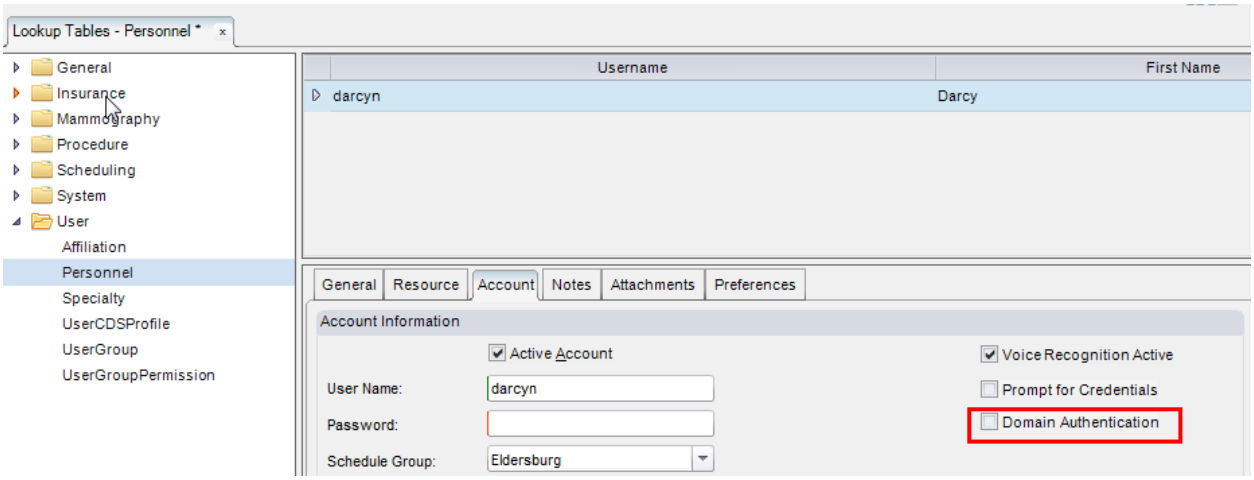

**Figure 4.25 – Domain Authentication flag**

When this flag is **not** set (unchecked) a new menu option under the File menu called "Change Password…" will appear.

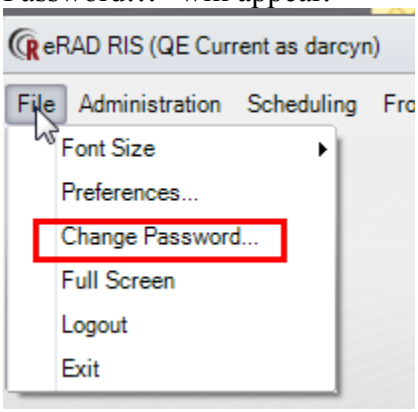

**Figure 4.26 – Change Password Menu item activated when the Flag for Domain Authentication is unchecked in the personnel editor.**

Selecting this menu option will open the Change Password dialogue window. You must enter in the correct current password. If you enter the current password incorrectly it will prompt on save that it has been entered incorrectly.
The New Password and the Repeat New Password must match.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

The New Password must have “At least 1 lowercase letter, 1 uppercase letter, 1 number and length between 6 and 15 characters”. This is currently the default setting.

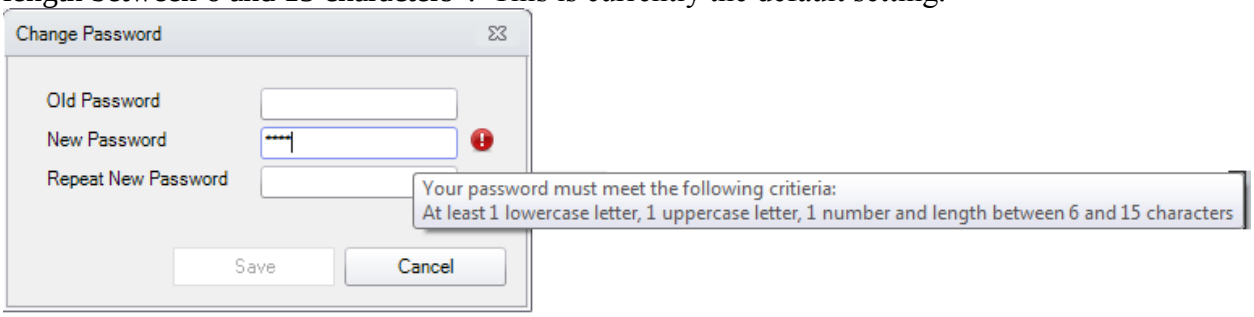

**Figure 4.27 – Change Password dialogue box**

To change the RIS password the user must enter their old password, and re-enter their new password twice.

Validations:
The new password must meet the Strong Password validation. This validation is configured by setting a regex value in the Config Table item: StrongPasswordRegex.

For example, (and the default value is)

(?=^.{6,15}$)(?=.*\d)(?=.*[a-z])(?=.*[A-])(?=.*[!@#$%^&*()_+}{":;'?/>.<,])(?!.*\s).*
This translates to at least 1 lowercase letter, 1 uppercase letter, 1 number and length between 6 and 15 characters.

If this regex is passed, a checkmark appears beside the new password field. Otherwise, an exclamation mark will appear. The tooltip on the exclamation mark will explain the regex validation in human readable terms. This human readable version comes from another Config Table Entry called StrongPasswordRegexHing, which is defaulted to “At least 1 lowercase letter, 1 uppercase letter, 1 number and length between 6 and 15 characters”

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Removal of Philips Device Control and Default Device

In previous builds it was noted that the playback of dictations was not being played back on the Philips SpeechMike, and were being played back on the systems default device. To avoid conflicting hardware it is being suggested that the Philips SpeechMike should not be the default recording /playback device.

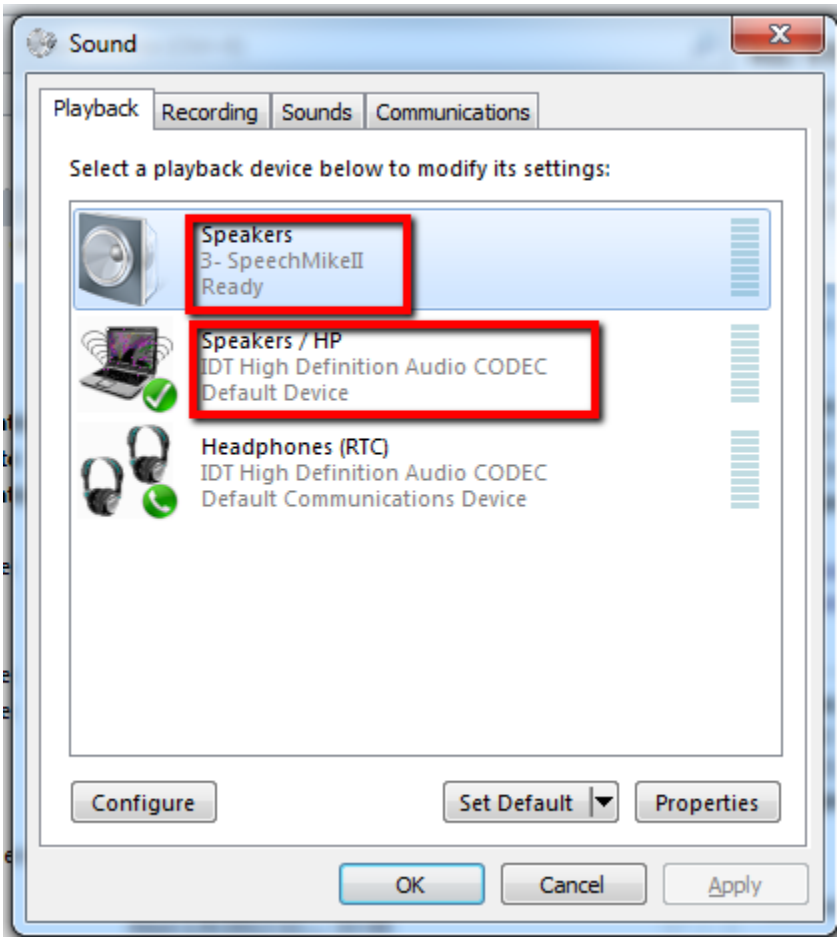

**Figure 4.28 – SpeechMike is not default playback device**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

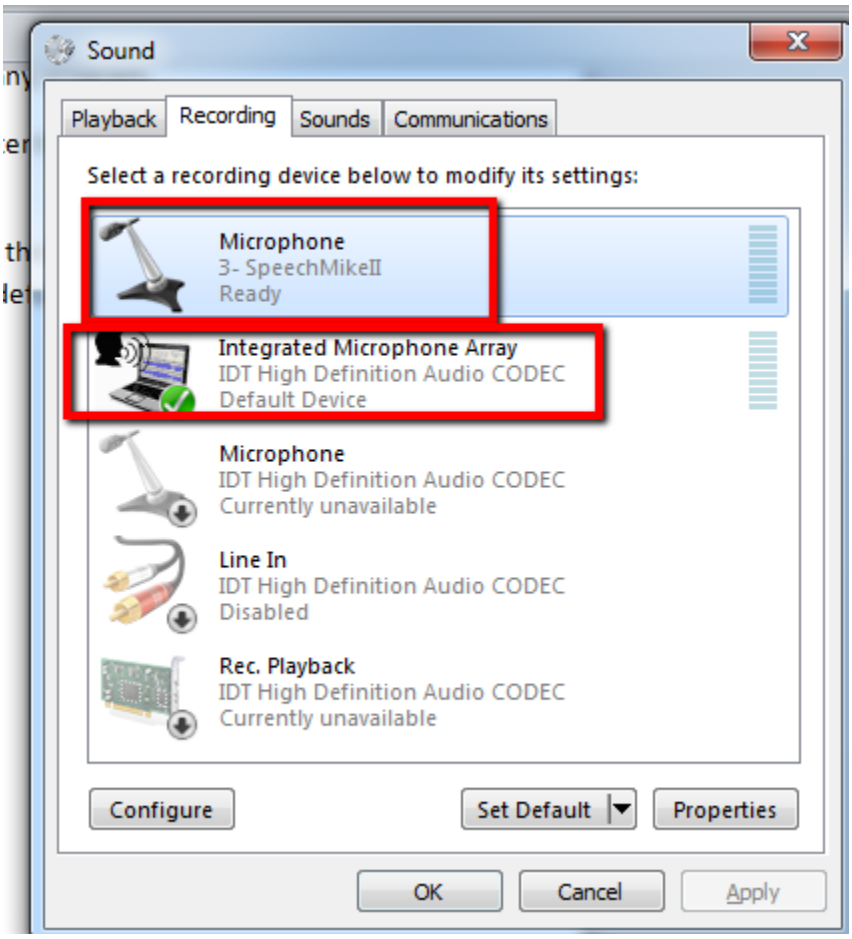

**Figure 4.29 – Philips SpeechMike is not the default recording device**

Selecting the User Preference Interactive Dictation flag will active the Interactive Dictation data pane. Selecting the Mic Wizard button will open the MicConfig window. On the second step of the MicConfig wizard the user can select the ERAD RIS recording and playback devices. If the Philips SpeechMike is the default recording / playback device, the user will also be informed on this page.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

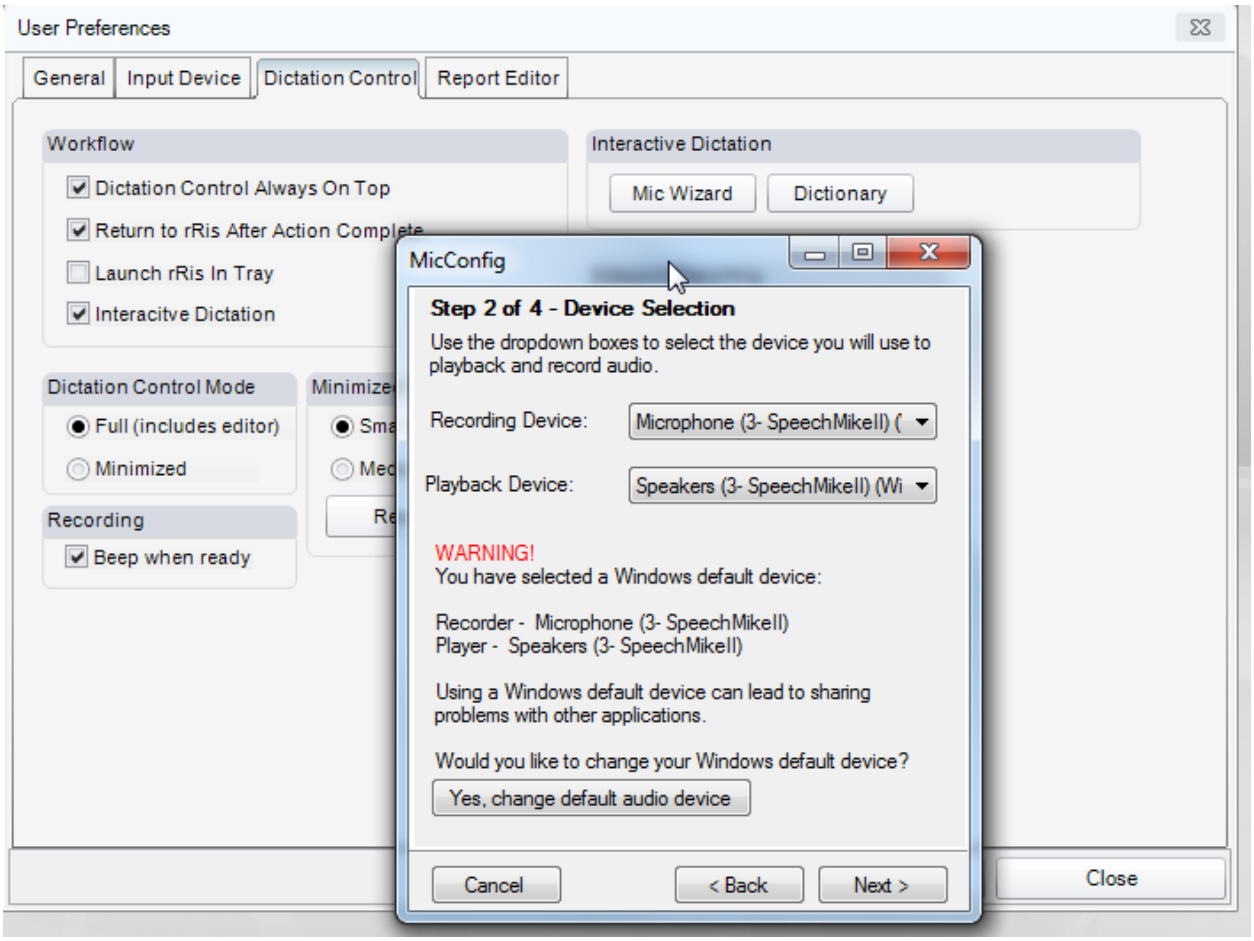

**Figure 4.30 – MicConfig wizard. Step 2 of 4 Device Selection**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Reporting – RegFreeCom

We have provided the manifest files along with our application files in the installation directory. Now with these new files they will register themselves on demand.
The two files we use with regfree com are AnyModalCaptureCtrl.dll and AnyModalEditCtrl2.dll. We added four files to the root of the MainApp project. They are:

AnyModalCaptureCtrl.dll,

AnyModalCaptureCtrl.sxs.manifest,

AnyModalEditCtrl2.dll and

AnyModalEditCtrl2.sxs.manifest

These files are set to copy into the build directory and will need to be updated as new releases are provided from MModal. Note that the manifest files typically don't change unless the interface to either dll changes.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Rewind Desktop Interactive Dictation

In previous builds that included Interactive Dictation we didn't have the ability to rewind the dictation when working in Interactive Mode. MModal will need to supply a "true" fix for this deficiency. Until then this temporary fix for rewind has been added into the application. There is no visual representation of the rewinding action (bouncing ball affect) in the document.

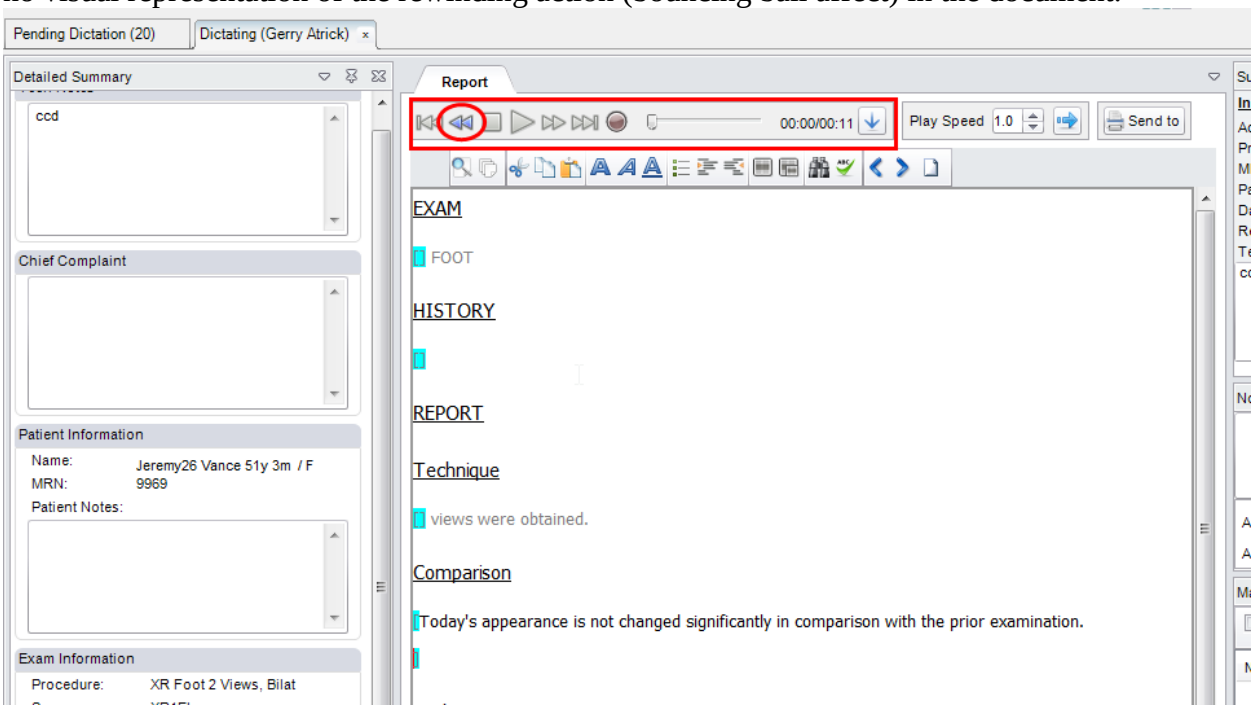

**Figure 4.31 – Interactive Dictation rewind feature. Rewinding from Philips Speechmike**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Tentatively Sign (AKA Sign Opps)

A new status of ***TentativelySigned1*** was created which will hold a signed report for a configurable amount of time.

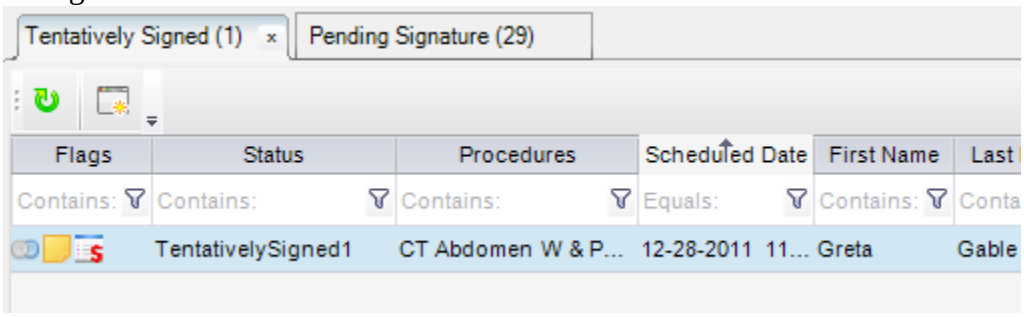

**Figure 4.32 - Tentatively Signed Work List displaying 1 record in TentativelySigned1 status**

Once the time has elapsed we have a service that will pick the job up and send it through for report distribution and billing.

A new System Config entry called **MaxAutoSignTime** has been created to (1.) assign a default value for time allotted to hold an exam in TentativelySigned1 status and (2.) allows the user to set a different system time greater or less than the default time.

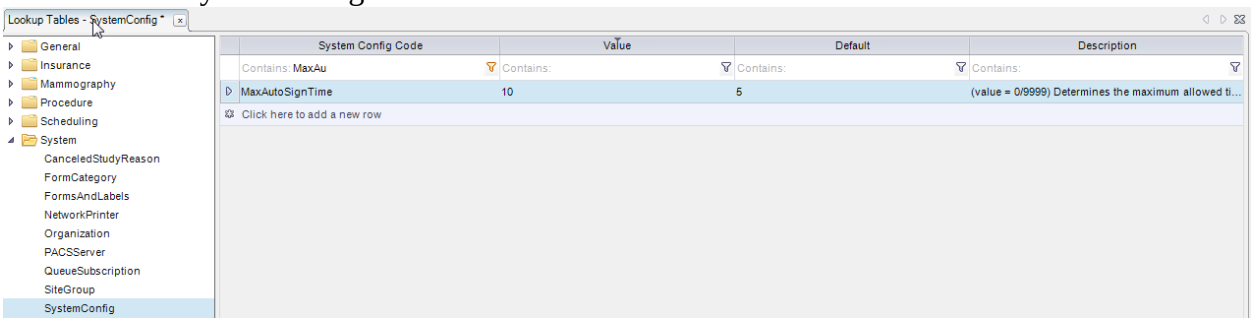

**Figure 4.33 – System Config table displaying MaxAutoSignTime**

Four new access strings have been added for this feature:

**Clinical.UserPreferences.TentativeSigning** that will control if the user has access to turn the feature on or off in the User Preference screen. This would typically be added to an admin group who generally configures user preferences for each user via the Configuration screens. This access string may also be given to radiologist groups if they require the ability to change and manage this at that level.

**WL.TentativelySigned** was added to control access to the work list for radiologist or individual users.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**WL.TentativelySignedAll –** A work list that will display all Tentatively Signed records for all users. Usually only accessed by an Admin type user.

**Clinical.ReleaseTentativelySignedReport** was added to control access to the right click context menu to push the exam through.

The user preference Tentative Signing is accessible if the **Clinical.UserPreferences.TentativeSigning** access string is enabled. Checking it will enable the **hold time** spinner box. This hold time value is the amount of time before the report will be automagically moved to Signed status. The default value will be the default for the system configuration value **MaxAutoSignTime** or the value assigned to it. The user preference cannot be more than the value (default or user entered) of the System Config Code.

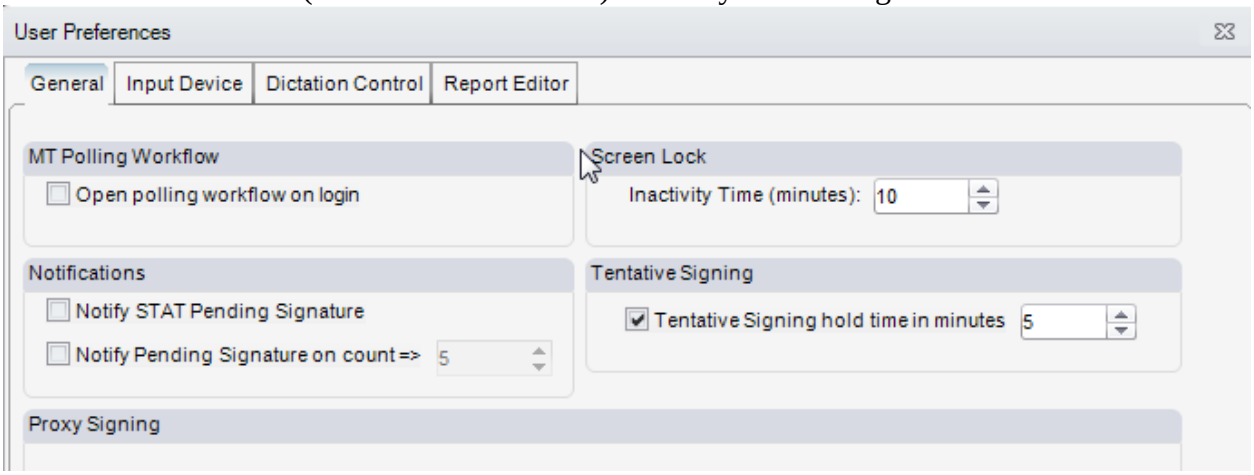

**Figure 4.34– Tentatively Signing User Preference**

If the User Preference was already set and the Value of system config entry for MaxAutoSignTime is changed to be less than the user preference, the next time the user opens User Preferences a message prompt will be displayed informing that your value has been adjusted.

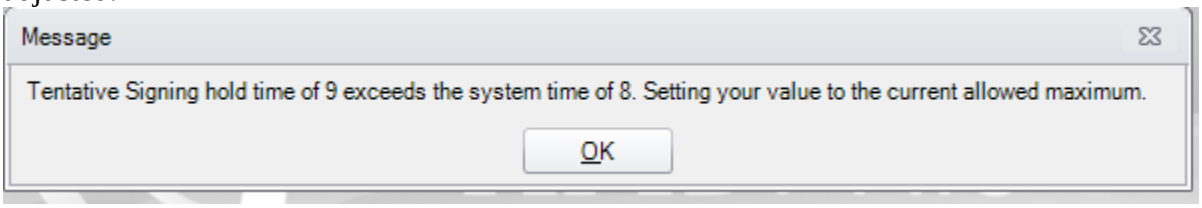

**Figure 4.35 – Message pop up displayed if the user preference is more than the current system config value**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Updated Meaningful Use Permissions

Changed permission codes for the following access strings.

1. Clinical.ConfigureMeaningfulUse
2. Clinical.eLabOrdering
3. Clinical.ePrescribeAdministrator
4. Clinical.ePrescribeRadiologist
5. Clinical.ePrescribeStaff

Updated permissions to be this.

1. MU.ConfigureMeaningfulUse
2. MU.eLabOrdering
3. MU.ePrescribeAdministrator
4. MU.ePrescribeRadiologist
5. MU.ePrescribeStaff
6. MU.TransitionOfCare **New permission for the transition of care checkbox on the order tab

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Miscellaneous High Priority Items

1. Race, Smoking, preferred language, ethnicity need a config setting that will make them required at registration.
2. Scheduling – Summary tab should be the default tab.
3. Personnel – Need a Notes section where notes can be added and displayed about a person
4. Image request – if you add more than one study, the patient is no longer an option for the deliver-to functionality
5. When patient folder is open, the New Appointment menu item assumes it should take patient context. This is no longer desired, so now it will not take patient context, unless the smaller New Appointment button is used within the patient folder itself.
6. Registration – Must be able to enter a PreCert number and expiry date in the registration grid.
7. Registration – Change checkbox on billing codes to say "Show previous PreCert and CPT codes"
8. Technologist – Patient tab should be read-only, except patient notes.
9. Scheduling – Default tab should be patient.
10. Verbal Order – Change the Free Text option to be the default for studies, not the multi-type ahead.
11. Technologist - LMP, pregnancy check, and Tech name should be required on Complete, not on start.
12. Tech Worklist – Want to also see Checking in status
13. Tech Worklist – Do not want to see discontinued exams in this WL.
14. Technologist - Billing code grid columns should be in the order of Abn, units, change reason code, billing code
15. Various billing codes grids: PreCert expiry date column showed a time portion, when it should only have been date.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Resolved Defects

Bugs, Suggested Features and Support Issues resolved in build 1.31. The extract is taken from Redmine bug tracking system and only displays defects resolved in 1.31.

| # | Status | Tracker | Priority | Subject | Category | Target version |
|---|---|---|---|---|---|---|
| 711 | Closed | Bug | High | Dictation - Send To throws error | Thick Client GUI | 1.26 |
| 725 | Resolved | Bug | Normal | Pending Dictation > Open Suspended exam can cancel will return error. | Thick Client GUI | 1.26 |
| 745 | Closed | Bug | Normal | Should not be allowing State as free text | Thick Client GUI | 1.25 |
| 761 | Closed | Bug | Normal | Closing the Report History will through series of messages | Thick Client GUI | 1.28 |
| 762 | Resolved | Bug | Normal | Seen this error when closing Report Drafted | Thick Client GUI | 1.28 |
| 784 | Closed | Bug | Normal | Delete drug allergy and try to access eRx (newcrop) will through error | Thick Client GUI | 1.28 |
| 789 | Closed | Bug | Normal | Clinical Summary CCR to view/print or export throws error | Thick Client GUI | 1.28 |
| 799 | Resolved | Bug | High | Configurable Modality Scheduling | Thick Client GUI | 1.29 |
| 805 | Closed | Bug | High | Failed PACS Correction > Flag on modality does not work | Thick Client GUI | 1.29 |
| 808 | Closed | Bug | Normal | After logging in get error on Dictation control | Thick Client GUI | 1.30 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | | | | | |
|---|---|---|---|---|---|---|
| 810 | Resolved | Bug | Normal | advanced search times are not correct in relation to current system time | Thick Client GUI | 1.30 |
| 812 | Resolved | Bug | High | Open dictate data window to add addendum will throw error | Thick Client GUI | 1.30 |
| 814 | New | Bug | High | Cannot preview reports | Thick Client GUI | 1.30 |
| 816 | Closed | Bug | High | State selection does not save | Thick Client GUI | 1.30 |
| 819 | Closed | Bug | High | â€œInactiveâ€ lateral codes are showing up in scheduling screen. Any values â€œinactiveâ€ values in lookup should not be â€œselectableâ€ in combo boxes. | Thick Client GUI | 1.30 |
| 825 | Closed | Bug | Normal | Inactive rooms appear in advanced scheduling | Thick Client GUI | 1.30 |
| 829 | Closed | Bug | Normal | Meaningful Use - Automated Measure report return duplicate user | Mgt Reports | 1.30 |
| 830 | Closed | Bug | High | View / Edit on a signed report will throw error on Report tab | Thick Client GUI | 1.30 |
| 835 | Closed | Bug | High | Perform exam - laterality codes are not retained once you start the exam. | Thick Client GUI | 1.31 |
| 836 | Closed | Bug | Normal | Country field defaults to USA if zip code is entered first. | Thick Client GUI | 1.31 |
| 837 | Closed | Bug | Normal | Removing country code changes state format | Thick Client GUI | 1.31 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 6. Known Limitations

The following are Bugs, Suggested Features, and Support Issues found in build 1.31. This build is the current QE build and testing is ongoing. The list may increase in size. This document will not be updated or re-released.

| # | Status | Subject | Category | Target version |
|---|---|---|---|---|
| 839 | Resolved | Interactive dictations will stay in Dictated status if use submit button | Thick Client GUI | 1.31 |
| 840 | New | Order tab name on reschedule | Thick Client GUI | 1.31 |
| 842 | Resolved | Interactive dictation can freeze after dictating on Suspended exam with no audio | Thick Client GUI | 1.31 |
| 843 | New | Playback device selected in Mic Wizard is not being used. | Thick Client GUI | 1.31 |
| 845 | New | Non Interactice User cannot playback interactive dictations | Mgt Reports | 1.31 |
| 846 | New | Tentitive signing hold time message | Admin Tools | 1.31 |
| 847 | Resolved | Pending Dictation / Dictated / Report Drafted / Pending Review / Dictated need to be appended with (All) | Thick Client GUI | 1.31 |
| 848 | Resolved | Mammography directory for lookups | Admin Tools | 1.31 |
| 853 | New | Follow up orders - Need to add the ability to cancel follow up orders | Thick Client GUI | 1.31 |
| 854 | New | Mammo Layletters are not being sent for distribution | Thick Client GUI | 1.31 |
| 855 | New | Follow up work lists still have Post Exam in context menu | Thick Client GUI | 1.31 |
| 856 | New | Mammo exams > Recommendation and Tissue Density are not saving | Thick Client GUI | 1.31 |
| 857 | New | Mammo Follow Up Orders - Target date not searched on schedule | Thick Client GUI | 1.31 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | | | |
|---|---|---|---|---|
| 858 | New | Interactive dictation suspended throws Anymodel error when opened by non interactive user. | Thick Client GUI | 1.31 |
| 859 | New | Procedures scheduled with default laterality are not saved when flag for Laterality required is N | Thick Client GUI | 1.31 |
| 860 | Resolved | Attempting to create Technical Repeat throws error | Thick Client GUI | 1.31 |
| 674 | Resolved | Cancelled Orders work list buttons not enabled | Thick Client GUI | 1.31 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# User Release Notes

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 32. This version of eRAD RIS is referred to as Build 1.32.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu, click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.32 is considered a new core release of the application and will require a reinstallation of eRAD RIS. This is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application, please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Interactive – Submit Button Changes

When opening a dictate screen as an interactive user the submit button will be modified to not show the bypass VR option as they really don't apply to this workflow. The normal submit option get rewired to send the interactive dictation directly to the transcriptionists for review.

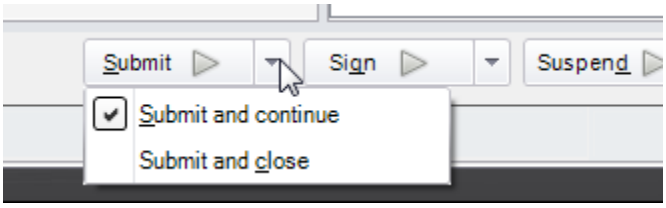

**Figure 4.1 – Submit Button Options for Interactive Dictation User**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Macro Editor Changes \ Updates

1. In the previous build the Advanced tab on the macro editor was added. If the permission for the Advanced tab was removed an error would be thrown. This has been corrected.

2. Also now when assigning a macro to users, the list that is presented is filtered to only be Radiologists. In build 1.31 the list presented displayed all resource types

3. Before build 1.32 a macro created would automatically be assigned to the user that was creating it, even when the user did not have the resource flag for Radiologist. In Build 1.32 if the user is a rad, we will automatically assign the macro to them, if the user is not a rad we check to see who dictated the study. In the case of an MT creating a macro, there would be a dictating rad, and therefore we would assign it to the dictating rad. If there was no dictating rad and the user isn't a rad then it would not get assigned to anyone. In this case the user creating the macro (which should in theory here be an admin) will have to create the assignements manually.

4. Macros are automatically assigned to the Radiologist who created it. The creator (owner) can assign additional users to have access to the macro. In previous builds, if the macro was only assigned to the owner, other users could still see the macro in the available list. This has been corrected in build 1.32.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Dictation Data Window Changes \ Updates

1. In previous builds data panes that were pinned but then closed so not in view and the layout was saved in the Dictate, Sign Reports, or Create \ Edit Reports data window, the next time the screen was loaded you could not open that data pane from the View menu. This has been corrected in build 32.
2. The ability to change the dictating Radiologist in the Summary pane of the Sign Reports window was not working. This has been fixed in build 32
3. In previous builds if the user had the user preference for Dictation Control Mode set to Minimized and the exam opened from the work list had a dictation, the dictation would not load in the minimized control. This has been fixed in build 32

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Dictation Commands

Below is the list of defined commands available for reporting dictation.

### DICTATION COMMANDS

#### SELECTING AND CORRECTING

**select <word sequence>** Select a word or group of words; 5 word limit, including punctuation
CDS Live will find exact matches, as well as any related match. It will select the first available instance after the cursor.
**correct <word sequence>** Correct a word or group of words
**select <word> through <word>**
Select the text beginning with the first word spoken through to the last word spoken.
**correct <word> through <word>**
Correct the text beginning with the first word spoken through to the last word spoken.
**select all** Select all text in the entire document.

#### FOLLOW-UP SELECTION

**select next**
**select next one**
**next one**
Select the next instance of the currently selected text.
Can be used with:
Sentence, Section, Subsection, List Item, Paragraph, or Line.
This command requires the use of "Select Current <x>" first.
**select previous**
**select previous one**
**select previous**
Select the previous instance of the currently selected text.
Can be used with:
Sentence, Section, Subsection, List Item, Paragraph, or Line
This command requires the use of "Select Current <x>" first.
**select next <n> words**
Select the number of words (between 2 and 10, including punctuation) to the right of the cursor.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Cannot use the Next One commands in conjunction with this command.
The cursor must be at the beginning or end of a word to use this command properly.
**select previous <n> words**
Select the number of words (between 2 and 10, including punctuation) to the left of the cursor.
Cannot use the Previous One commands in conjunction with this command.
The cursor must be at the beginning or end of a word to use this command properly.
2

## CLEAR SELECTION

**clear selection** Clear the selected text. Cursor will be positioned at the end of the selection, once cleared.
**unselect text** Deselect the selected text.
**unselect that** Deselect the selected text.

## SECTION AND SUBSECTION

**toggle section/subsection**
Toggle the current selection between regular text and a section/subsection.
**new section/subsection**
Turn regular selected text into a new section/subsection at the current cursor position.
**new section <section title>: [word sequence x]**
Create a new section/subsection beginning with the section/subsection title, colon, and section content.
**insert section/subsection** Insert a new section/subsection at the current cursor position.
**new section <section title>: [word sequence x]**
Insert a new section/subsection beginning with the section/subsection title, colon, and section content.
**select current section/subsection**
Select the entire section/subsection in which the cursor is currently positioned.
**delete current section/subsection**
Delete the entire section/subsection

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

in which the cursor is currently positioned.
**delete next section/subsection**
Delete the next section/subsection to the right of the cursor position, excluding the current section/subsection.
**delete previous section/subsection**
Delete the previous section/subsection to the left of the cursor position, excluding the current section/subsection.
3

## LIST

**item <n> <word sequence>** Begin a list at the current cursor position with the first list item. Continue with Item <n> until complete.
**item number <n> <word sequence>** Begin a list at the current cursor position with the first list item. Continue with Item Number <n> until complete.
**next item <word sequence>** Begin a list at the current cursor position with the first list item. Next Item command continues the list.
**delete next list** Delete the next list item, excluding the current list item.
**delete previous list** Delete the previous list item, excluding the current list item.

## LINE AND PARAGRAPH

**new line/paragraph**
Start selected text on a new line/paragraph or create a new line/paragraph at the current cursor position
**next line/paragraph** Move to the next line/paragraph following the current line/paragraph.
**insert line/paragraph** Insert a new line/paragraph from the cursor position.
**select current line/paragraph**
Select the current line/paragraph in which the cursor is currently positioned.

## UNDOING AND DELETING

**delete selection**
**delete current selection** Delete the currently selected text. All delete commands ensure proper spacing and case at the location of the deletion.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**delete current sentence** Deletes the entire sentence in which the cursor is currently positioned.
**delete next <n> words**
Delete a specified number (between 2 and 10 words, including punctuation) of words to the right of the cursor position.
If the cursor is positioned within a word, it will use that word as the first word.
**delete previous <n> words**
Delete a specified number (between 2 and 10 words, including punctuation) of words to the left of the cursor position.
If the cursor is positioned within a word, it will use that word as the first word.
**undo that**
**undo last**
**undo last command**
Undo last command spoken.
4

## CAPITALIZING

**lowercase/no caps selection** Turns current selection into lowercased text
**lowercase/no caps next <n> words**
Lowercases the sequence of <n> tokens to the left of the current cursor position
Can select between 2 and 10 words, including punctuation
**lowercase/no caps previous <n> words**
Lowercases the sequence of <n> tokens to the right of the current cursor position
Can select between 2 and 10 words, including punctuation
**uppercase/all caps selection** Turns current selection into uppercased text
**uppercase/all caps next <n> words**
Uppercases the sequence of <n> tokens to the left of the current cursor position
Can select between 2 and 10 words, including punctuation
**uppercase/all caps previous <n> words**
Uppercases the sequence of <n> tokens to the right of the current cursor position
Can select between 2 and 10

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

words, including punctuation

## EDITING AND FORMATTING TEXT

**boldface selection** Turns current selection into boldfaced text
**boldface next <n> words**
Boldfaces the sequence of <n> tokens to the left of the current cursor position
Can select between 2 and 10 words, including punctuation
**boldface previous <n> words**
Boldfaces the sequence of <n> tokens to the right of the current cursor position
Can select between 2 and 10 words, including punctuation
**italicize selection** Turns current selection into italicized text
**italicize next <n> words**
Italicizes the sequence of <n> tokens to the right of the current cursor position
Can select between 2 and 10 words, including punctuation
**italicize previous <n> words**
Italicizes the sequence of <n> tokens to the left of the current cursor position
Can select between 2 and 10 words, including punctuation
**underline selection** Turns current selection into underlined text
**underline next <n> words**
Underlines the sequence of <n> tokens to the left of the current cursor position
Can select between 2 and 10 words, including punctuation
**underline previous <n> words**
Underlines the sequence of <n> tokens to the right of the current cursor position
Can select between 2 and 10 words, including punctuation
5

## NAVIGATING THE DOCUMENT

**scroll up** Scrolls up
**scroll down** Scrolls down
**insert after <word>** Places cursor after the given word in insert mode
**insert after <word sequence>** Places cursor after the given word

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

sequence in insert mode
**insert before <word>** Places cursor before the given word in insert mode
**insert before <word sequence>** Places cursor before the given word in insert mode
**go to <start/begin/beginning> of <sentence/paragraph>**
Places cursor at the beginning of the current sentence, paragraph, or list
**move to <start/begin/beginning> of <sentence/line/paragraph>**
Places cursor at the beginning of the current sentence, line, paragraph, or list
**go to <end/ending> of <sentence/line/paragraph>**
Places cursor at the end of the current sentence, line, paragraph, or list
**move to <end/ending> of <sentence/line/paragraph>**
Places cursor at the end of the current sentence, line, paragraph, or list
6

## FIELD COMMANDS

**next field**
**go to next field**
Positions cursor in next field (relative to current cursor position)
A Field is identified by surrounding square brackets, e.g. [This is a field]. The selection will include the brackets.
**previous field**
**go to previous field**
Positions cursor in previous field (relative to current cursor position)
**first field**
**go to first field**
Positions cursor in first field in document
**last field**
**go to last field**
Positions cursor in last field in document

## RADIOLOGY SPECIFIC COMMANDS

**go to start/begin/beginning of <section name>** Places cursor at the beginning of the given section
**move to the <start/begin/beginning>**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**of the <section name>**
Places cursor at the beginning of the given section
**go to the <start/begin/beginning> of the <section name> section**
Places cursor at the beginning of the given section
**move to the <start/begin/beginning> of the <section name> section**
Places cursor at the beginning of the given section
**go to <end/ending> of <section name>**
Places cursor at the end of the given section
**move to <end/ending> of <section name>**
Places cursor at the end of the given section
**go to the <end/ending> of the <section name> section**
Places cursor at the end of the given section
**move to the <end/ending> of the <section name> section**
Places cursor at the end of the given section
**move that to beginning of <section name> section**
Moves currently selected content to the beginning of the indicated section
**move current selection to start of <section name>**
Moves currently selected content to the beginning of the indicated section
**move selection to begin of <section name>**
Moves currently selected content to the beginning of the indicated section
**move that to end of <section name>** Moves currently selected content to the end of the indicated section
**move current selection to ending of <section name> section**
Moves currently selected content to the end of the indicated section
**move current selection to <section name>**
Moves currently selected content to the end of the indicated section

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# New Management Reports

## 1. Daily FAX Log

The Daily Fax log can be filtered on a specified date criteria and also on the Distribution Statuses.

**Daily FAX Log**
**Date:** 01/19/12
**Status(s):** ?,Cancelled,Completed,Error,Hold,InProgress,Pending

| Date | Status | Acc # | Patient Name | MRN | Recipient | Fax # | Retries | Job Id | Del. Method |
|---|---|---|---|---|---|---|---|---|---|
| Total Count | | | | | | | | | 0 |

**Figure 4.2 – Daily Fax Log Report**

## 2. Unread Exams **displays all exams in status "exam done"*

The Unread Exams list cannot be filtered. It returns a list of all unread exams.

**Unread Exams**

| Performed | Patient | MRN | Acc # | Procedures | Performed By |
|---|---|---|---|---|---|
| 01/19/2012 02:22 PM | testman, dale | 734 | 1000853 | CT Head W & Sinus W [CT22] - Head | |
| 01/06/2012 02:26 PM | Worster, Elane | 2008109 | 1052996 | PT/CT Myo Imag Perf Study [78459] | Denis Doiron |
| 12/28/2011 12:17 PM | Bevacqua, Elva | 11499448 | 1052999 | PT/CT Myo Imag Perf Study [78459] | Ian Power |
| 01/06/2012 01:48 PM | Oaxaca, Misha | 17135 | 1053658 | PT/CT Myocardial Multi Study [78492] | Denis Doiron |
| 01/12/2012 07:12 PM | Zempel, Akilah | 7795 | 1054083 | PT/CT Myo Imag Perf Study [78459] | Denis Doiron |

**Figure 4.3 – Unread Exams Report**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## MQSA Reporting

Proposed DEFINITIONS:
The following definitions should be used in the creation of the Mammography MQSA Audit reports. Reference the ACR BI-RADS® Breast Imaging Atlas, BI-RADS®. Mammography pages 229-260 for more information.

Positive Exam: An exam is considered to be positive if the BI-RADS® assessment category is 0, 4, 5 for a screening exam; or 4, 5 for a diagnostic exam.

Negative Exam: An exam is considered to be negative with a benign or probably benign finding if the BI-RADS® assessment category is 1, 2, or 3 for either a screening or a diagnostic exam.

MQSA does not limit the use of category 3 to diagnostic exams. Therefore, a BI-RADS® category 3 is considered negative for both screening and diagnostic exams.

True-Positive (TP): Cancer was diagnosed within 1 year after biopsy recommendation based on an abnormal mammogram.
(BI-RADS® Category 0, 4 or 5 for screening; BI-RADS® Category 4 or 5 for diagnostic).

True-Negative (TN): No known tissue diagnosis of cancer within 1 year of a negative examination
(BI-RADS® Category 1 or 2 for screening, BI-RADS® Category 1, 2 or 3 for diagnostic).

False-Negative (FN): Tissue diagnosis of cancer within 1 year of a negative examination
(BI-RADS® Category 1 or 2 for screening, BI-RADS® Category 1, 2 or 3 for diagnostic).

False-Positive (FP): Three separate definitions:

a. (FP1): No known tissue diagnosis of cancer within 1 year of a positive screening examination
(BI-RADS® Category 0, 4, or 5).

b. (FP2): No known tissue diagnosis of cancer within 1 year after recommendation for which
further imaging evaluation, biopsy, or surgical consultation on the basis of a positive
examination (BI-RADS® Category or 5 ).

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

c. (FP3): Benign tissue diagnosis within 1 year after recommendation for biopsy on the basis of
a positive examination (BI-RADS® Category 4 or 5).

Note: TP + TN + FP + FN = Total number of examinations.
This note refers to definitions 9, 10, 11, and 12.

Positive Predictive Value (PPV): Three separate definitions:

a. (PPV1) (abnormal findings at screening): The percentage of all positive screening examinations
(BI-RADS® Categories 0, 4 and 5) that result in a tissue diagnosis of cancer within 1 year. An
initial screening assessment of Category 4 or 5 is unusual, but is possible.
PPV1 = TP/(number of positive screening examinations)
OR
PPV1 = TP/(TP + FP1) [FP1 = see 12a in glossary of statistical terms]

b. (PPV2) (biopsy recommended): The percentage of all screening or diagnostic examinations
recommended for biopsy or surgical consultation (BI-RADS® Categories 4 and 5) that resulted
in a tissue diagnosis of cancer within one year.
PPV2 = TP/(number of screening or diagnostic examinations recommended for biopsy)
OR
PPV2 = TP/(TP + FP2) [FP2 = see 12b in glossary of statistical terms]

c. (PPV3) (biopsy performed): The percentage of all known biopsies done as a result of positive
screening or diagnostic examinations or additional imaging evaluations of positive screening
examinations (BI-RADS® Categories 4 and 5) that resulted in a tissue diagnosis of cancer
within 1 year. PPV3 is also known as the Biopsy Yield of Malignancy or the Positive Biopsy
Rate (PBR).
PPV3 = TP/(number of biopsies)

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

OR
PPV3 = TP/(TP + FP3) [FP3= see 12c in glossary of statistical terms]

Negative Predictive Value: indicates the percentage of patients who truly do not have breast cancer when the mammogram was called normal.

Sensitivity: The probability of detecting a cancer when a cancer exists or the number of cancers diagnosed after being identified at mammography in a population within 1 year of the imaging examination, divided by all cancers present in that population in the same time period.
Sensitivity = TP/(TP + FN) [Remember that FN is actually a cancer case]

Specificity: The probability of interpreting an examination as negative when cancer does not exist; or the number of true-negative mammograms in a population divided by all actual negative cases (those for which there is no tissue diagnosis of cancer within 1 year of the mammogram) in the population.
Specificity = TN/(TN + FP)

Cancer Detection Rate: The number of cancers correctly detected at mammography per 1,000 patients examined at mammography.
a. This is of greatest value when calculated for screening examinations only or when calculated separately for screening and diagnostic examinations.
b. May also be calculated separately for PREVALENT cancers (those found at first-time mammographic examination) and for INCIDENT cancers (those found at subsequent screening examinations performed at or close to the recommended screening interval).
c. May also be calculated by AGE GROUP (40–49 years, 50–59 years, etc.).

Recall Rate (Abnormal Interpretation Rate: The percentage of examinations interpreted as positive. For screening mammography, positive examinations include BI-RADS® Categories 0, 4 and 5
assessments. For diagnostic mammography positive examinations include BI-RADS® Category 4
and 5 assessments.

Recall Rate (Abnormal Interpretation Rate) = (positive examinations) / (all examinations)
Note that in many scientific publications concerning screening mammography, a Recall Rate is reported as being equivalent to the Abnormal Interpretation Rate, even though some screening

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

examinations occasionally are given BI-RADS® Category 4 or 5 assessments. This is done because
prompt further imaging evaluation with mammography and/or ultrasound (to assess for extent of disease and to plan for imaging-guided biopsy) is also recommended in addition to tissue diagnosis
for almost all (if not all) screening examinations that are given BI-RADS® Category 4 or 5 assessments.

Note from Randy Rogers:
---

According to MQSA:

Recall Rate: # of positive examinations on screening (BI-RADS Categories 0,4 and 5) divided by the total number of examinations (screenings)

Would like this as one calculation and then a breakout of just the 0 and a breakout of 4/5. So:

Recall Rate Total

Recall Rate 0

Recall Rate 4/5

Unknown Exams: Positive exams that do not have a biopsy result (ex. BIRAD 0) and therefore cannot be classified as either true or false positives. For screening exams, BI-RADS® 0 is considered positive per ACR guidelines.

Proposed List of Reports for MQSA audit:

General Exam list: (drill down report would be ideal)

| PARAMETERS to query by: | Exam Data to Display: | Statistical Data to Display: |
|---|---|---|
| Date Range | Patient Name | Date time report was ran |
| Location ( Practice, Site, etc) | Patient ID | List of parameters used. |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | |
|---|---|---|
| BIRAD codes to include. (ex. Looking for positive, negative exams). Do we want to create automatic groupings of BIRAD codes to report by?? | Accession Number | |
| Radiologist(s) – All or specific | Exam Date | Totals per location |
| Filter exams by Biopsy results, Include / Exclude exams without biopsies. | Exam Status | Totals per Radiologist |
| Procedure Codes to query on: Ex. Looking for only Mammo Screening, or only Mammo Diagnostic exams, only Ultrasounds etc. | Dictating Radiologist | Totals per BIRADS category |
| | Signing Radiologist | |
| | Biopsy Result | |
| | Biopsy Date | |
| | BIRAD assigned | |

Report should not list any exams that have not been performed. All in Signed1 status.

Summary Reporting by Location and or By Radiologist: (could be 2 different reports but data queried should be identical)

| PARAMETERS to query by: | Statistical Data to Display: | Statistical Data to Display: |
|---|---|---|
| Date Range | Break down exams by Screening vs Diagnostic | Date time report was ran |
| Location ( Practice, Site, etc) | Break down Sreening and Diagnostic by procedure. | List of parameters used. |
| | Breakdown each procedure by BIRAD. ( so total for each birad per site/radiologist) | Total exams by Screening vs Diagnostic |
| | Summary per Screening , | Total Sreening and |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | |
|---|---|---|
| | per Diagnostic:<br>True Positive Total<br>True Negative Total<br>False Positive Total<br>False Negative Total<br>Sensitivity<br>Specificity<br>PPV<br>Unknown exams | Diagnostic by procedure. |
| | Combined total of Screening and Diagnostic exams. | Total each procedure by BIRAD. ( so total for each birad per site/radiologist) |
| | | |
| | | |

List of False Negative Exams - by Location and or By Radiologist:

| PARAMETERS to query by: | Exam Data to Display: | Statistical Data to Display: |
|---|---|---|
| Date Range | Patient Name | Date time report was ran |
| Location ( Practice, Site, etc) | Patient ID | List of parameters used. |
| Radiologist ( All or specific | Accession Number | Total exams by Location |
| | Exam Date | Total exams by Radiologist |
| | Exam Status | |
| | Dictating Radiologist | |
| | Signing Radiologist | |
| | Biopsy Result | |
| | BIRAD assigned | |

List of False Positive Exams - by Location and or By Radiologist:

| PARAMETERS to query by: | Exam Data to Display: | Statistical Data to Display: |
|---|---|---|
| Date Range | Patient Name | Date time report was ran |
| Location ( Practice, Site, etc) | Patient ID | List of parameters used. |
| Radiologist ( All or specific | Accession Number | Total exams by Location |
| | Exam Date | Total exams by Radiologist |
| | Exam Status | |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | |
|---|---|---|
| | Dictating Radiologist | |
| | Signing Radiologist | |
| | Biopsy Result | |
| | BIRAD assigned | |

List Mammography exams performed by Technologist:

| PARAMETERS to query by: | Exam Data to Display: | Statistical Data to Display: |
|---|---|---|
| Date Range | Patient Name | Date time report was ran |
| Location ( Practice, Site, etc) | Patient ID | List of parameters used. |
| Technologist | Accession Number | Total exams by Location |
| Select procedures to include ( ex Mammo Screening, Mammo Diagnositc, Mammo Ultrasounds) | Exam Date | Total exams by Technologist |
| | Exam Status | |
| | Dictating Radiologist | |
| | Signing Radiologist | |
| | Biopsy Result | |
| | BIRAD assigned | |

By technologist - list of exams where a technologist has performed a mammogram or interventional procedure within the date range and location specified in the report.

List of Positive exams with outstanding Pathology Follow-ups:

| PARAMETERS to query by: | Exam Data to Display: | Statistical Data to Display: |
|---|---|---|
| Date Range | Patient Name | Date time report was ran |
| Location ( Practice, Site, etc) | Patient ID | List of parameters used. |
| | Accession Number | Exam Total |
| | Exam Date | |
| | Exam Status | |
| | Dictating Radiologist | |
| | Signing Radiologist | |
| | Biopsy Result | |
| | BIRAD assigned | |

All positive mammography exams performed during the specified period that do not have pathology results recorded nor does a later exam exist with pathology results.

List of Positive exams Follow-ups by BIRAD:

| PARAMETERS to query by: | Exam Data to Display: | Statistical Data to Display: |
|---|---|---|

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | |
|---|---|---|
| Date Range | GROUP EXAMS by Recommendation ( ex. BIRAD 0, followup exam scheduled is Ultrasound, etc) | Date time report was ran |
| Location ( Practice, Site, etc) | Patient Name | |
| BIRAD code(s) to include | Patient ID | List of parameters used. |
| Procedure Codes to query on: Ex. Looking for only Mammo Screening, or only Mammo Diagnostic exams, only Ultrasounds etc. | Accession Number | Exam Total |
| | Exam Date | |
| | Exam Status | |
| | Dictating Radiologist | |
| | Signing Radiologist | |
| | Biopsy Result | |
| | BIRAD assigned | |
| | NEXT Exam Reffering MD# | |
| | NEXT Exam Accesion # | |
| | NEXT Exam Date | |
| | NEXT EXAM Status | |

New requirement provide a report (for Referring Physician) listing patients that have ignored all reminder letters sent (so have not returned). Also listing any patients that RadNet has not received biopsy results from.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Resolved Defects

Bugs, Suggested Features and Support Issues resolved in build 1.32. The extract is taken from Redmine bug tracking system and only displays defects resolved in 1.32.

| # | Status | Tracker | Priority | Subject | Category | Target version |
|---|---|---|---|---|---|---|
| 860 | Closed | Bug | High | Attempting to create Technical Repeat throws error | Thick Client GUI | 1.31 |
| 850 | Closed | Bug | High | Beaumont - Management Reports window should not be modal | Thick Client GUI | 1.27 |
| 839 | Closed | Bug | High | Interactive dictations will stay in Dictated status if use submit button | Thick Client GUI | 1.31 |
| 790 | Closed | Bug | High | View / Edit data window prompts for required fields | Thick Client GUI | 1.29 |
| 848 | Closed | Bug | Normal | Mammography directory for lookups | Admin Tools | 1.31 |
| 847 | Closed | Bug | Normal | Pending Dictation / Dictated / Report Drafted / Pending Review / Dictated need to be appended with (All) | Thick Client GUI | 1.31 |
| 828 | Closed | Bug | Normal | Macro lookup - Cannot deactivate or delete a macro | Admin Tools | 1.30 |
| 827 | Closed | Bug | Normal | Assigning macros to other users includes all resource types | Thick Client GUI | 1.30 |
| 823 | Closed | Bug | Normal | Macros ignoring "assign to user" | Thick Client GUI | 1.30 |
| 822 | Closed | Bug | Normal | Remove access string Macro Editing Advanced tab and cannot edit macros | Thick Client GUI | 1.30 |
| 817 | Closed | Bug | Normal | Order of tabs for Order Signed | Thick Client GUI | 1.30 |
| 674 | Closed | Feature | Normal | Cancelled Orders work list buttons not enabled | Thick Client GUI | 1.31 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 6. Known Limitations

The following are Bugs, Suggested Features, and Support Issues found in build 1.32. This build is the current QE build and testing is ongoing. The list may increase in size. This document will not be updated or re-released.

| # | Status | Subject | Assigned to | Category | Target version | Resolved Version |
|---|---|---|---|---|---|---|
| 879 | New | If RIS in minimized with Dictate window open the application will not open to desktop | Clifton Harding | Thick Client GUI | 1.32 | |
| 878 | New | All hyperlinks in dictate / reporting summary data pane open as "Referring Details" | Stephen Powell | Thick Client GUI | 1.32 | |
| 877 | New | Interactive user cannot dictate if Dictation Control Mode is minimized | Clifton Harding | Thick Client GUI | 1.32 | |
| 876 | New | Error accessing transcribed records | Clifton Harding | Thick Client GUI | 1.32 | |
| 875 | New | Error trying to preview report | Clifton Harding | Thick Client GUI | 1.32 | |
| 873 | Resolved | User can create another new macro from the create new macro editor | Denis Doiron | Admin Tools | 1.32 | 1.33 |
| 872 | Resolved | Concurrency error on saving macro lookup. | Denis Doiron | Admin Tools | 1.32 | 1.33 |
| 871 | Resolved | Create a new macro from Macro Editor returns a Unique key violation | Denis Doiron | Admin Tools | 1.32 | 1.33 |
| 866 | New | Error thrown when changing Performed Procedure Code durning perfom exam | Kevin Molyneaux | Thick Client GUI | 1.32 | |
| 865 | New | Forms and Labels set to auto print can have multiple instances open | Darcy Aiken | Thick Client GUI | 1.32 | |

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 33. This version of eRAD RIS is referred to as Build 1.33.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu, click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.33 is considered a new core release of the application and will require a reinstallation of eRAD RIS. This is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application, please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Interactive – Submit Button Changes

When opening a dictate screen as an interactive user the submit button will be modified to not show the bypass VR option as they really don't apply to this workflow. The normal submit option get rewired to send the interactive dictation directly to the transcriptionists for review.

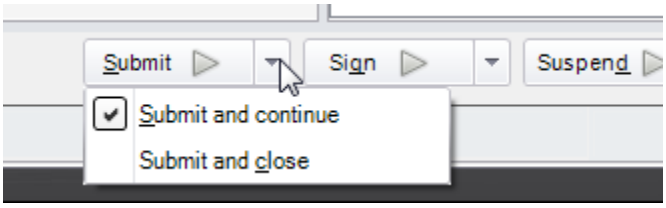

**Figure 4.1 – Submit Button Options for Interactive Dictation User**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Unknown Referring Fixes

When a referring is unknown, the normal search button now launches the reconciliation screen. This prevents them from orphaning an unknown referring by the user selecting a different referring from the search without using the reconciliation screen.

On the user manager resource tab, the unknown referring checkbox is data bound ( as it was before) but is now visually disabled. This prevents someone from manually creating an unknown referring directly in this screen, without associating them to an order (which would make them an orphan). It also has the benefit of preventing someone from resolving an exception by unchecking the unknown checkbox, and selecting either no other resource type, or selecting them as a rad, tech, or transcriptioninists. This would create an order that is not truly linked to a referring.

When initially creating the unknown referring, the button has been renamed to Add Unknown (from Create New) to make it more intuitive.

When an order is Book-X 'ed (multiple orders are created) it is possible to re-use the same "unknown referring" on more than one order. However, the process for resolving unknown referring expects a relationship of 1 to 1 between order and unknown referring. Therefore, a message was generated after resolving each order saying:

"The unknown referring is referenced elsewhere and cannot be removed."

To avoid confusion this message was changed to:
"Your changes were saved, however the original unknown referring is still linked to another order.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Enhancements for Suspending / Un-suspending Studies

Additional ways to suspend and un-suspend studies has been added in build 33. In figure 4.1 is displaying the dictate window open on a study that is in suspended status. Two new options have been added to the Suspend button:

- Unsuspend and continue
- Unsuspend and close

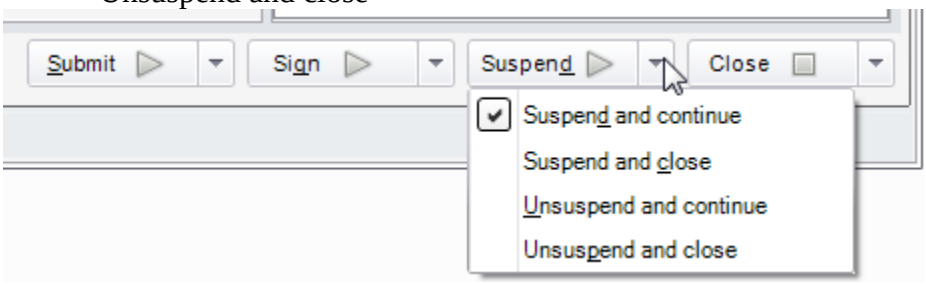

**Figure 4.1 – Un-spending options added to Suspend button drop list**

Also from the main work lists, context menu items have been added. When the study is in the Pending Dictation or Pending Signature work lists the context menu item option for Suspend Study has been added. For studies on the Suspended work list, the context menu item Unsuspend Study has been added.

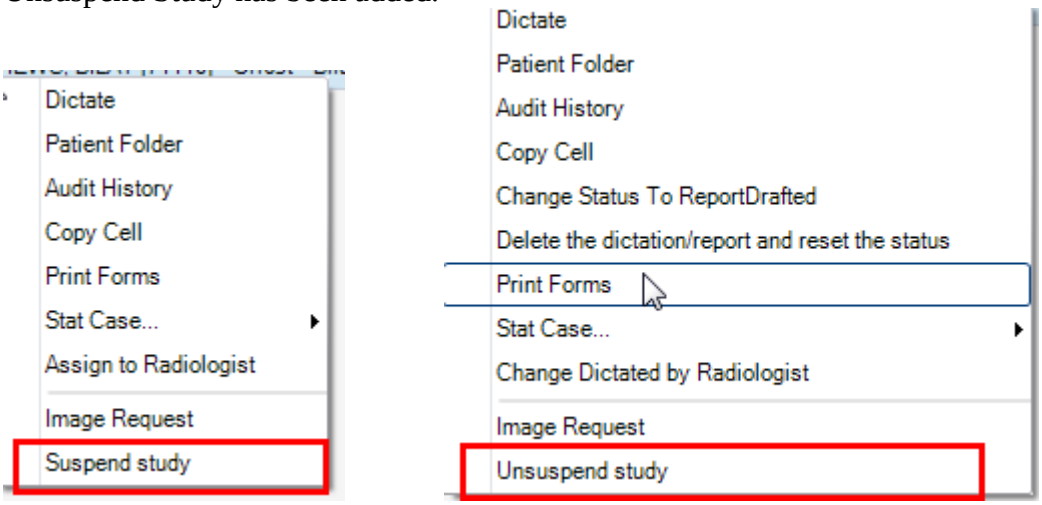

**Figure 4.2 – Context menus displaying options to Suspend / Un-suspend studies from the work list**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Interpretation Type Handling

In previous builds a non-Interactive (or desktop dictation) would encounter an error when opening a dictated study that was completed using Interactive dictation, and vice versa. In build 33 when a user opens a study that was dictated in a mode different than their current mode, they will be prompted with message box with 3 options.

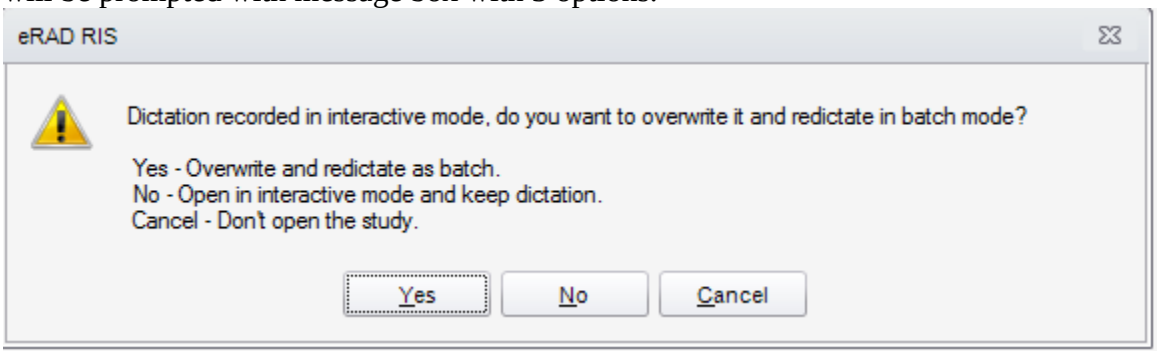

**Figure 4.3 – New message box for non-interactive user opening interactive dictation.**

The message describes the action of each option.

**Yes –** Will open the dictate window with no dictation, and no text in report. If the dictate window is closed you will be prompted if you would like to save your changes. Selecting no will retain the original

**No –** Will open the dictate window in Interactive mode (even if the user's current preference is non-interactive) and keep the current dictation

**Cancel –** Will return the user to the work list.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# New Management Reports

## 1. Audit Log

**Audit Log**
**Date:** 1/24/2012

**Figure 4.5 – Audit Log by Patient**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Mammography Biopsy and Pathology

A tab was added to the Post Exam screen that displays current biopsies, allows for adding new biopsies, and provides edit/remove functionality.

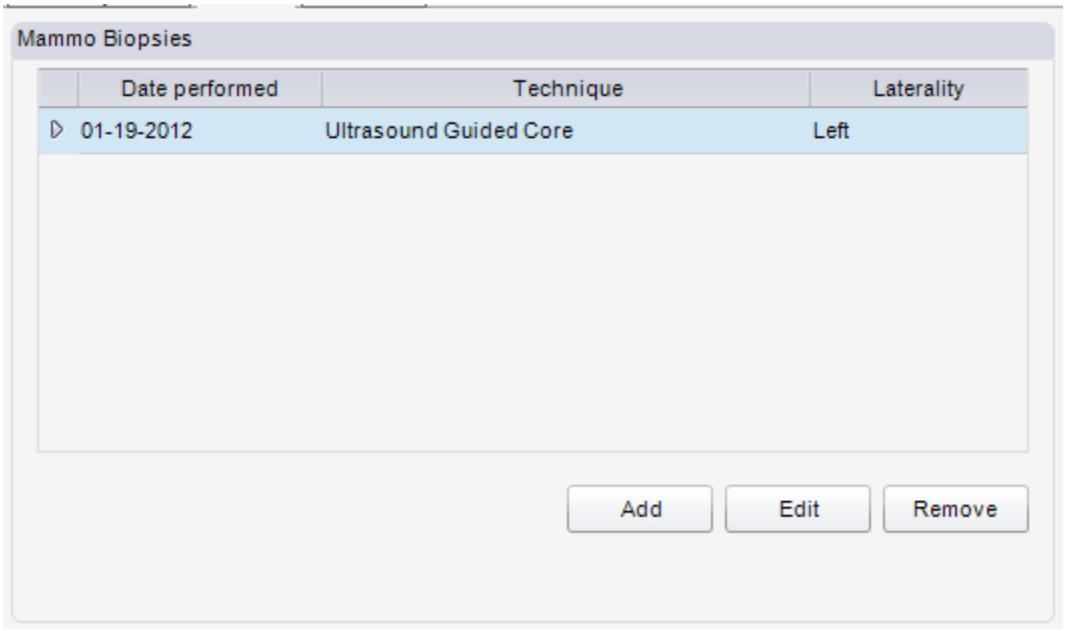

**Figure 4.6 – Mammo Biopsy data pane from the Follow-up data window**

- Clicking the Add or Edit button will present the Add/Edit Dialog, where biopsy information can be collected. On the next screen capture:
  - 1: Correlate biopsies with other studies
    - Clicking a checkbox will correlate the biopsy with the study corresponding to the checkbox row. After checking, the biopsy would appear if the checked row study was opened.
  - 2: Required fields
    - All fields on this side of the screen are required as of Sprint 29.
  - 3: Technical data
    - No fields on this side are required as of Sprint 29.
  - 4: Multi-type look ahead

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

- Pathology codes will automatically display if the first character of any word in the code is entered. For instance if the desired code is "The First Code", it will appear if the character (T, F, or C) is entered.

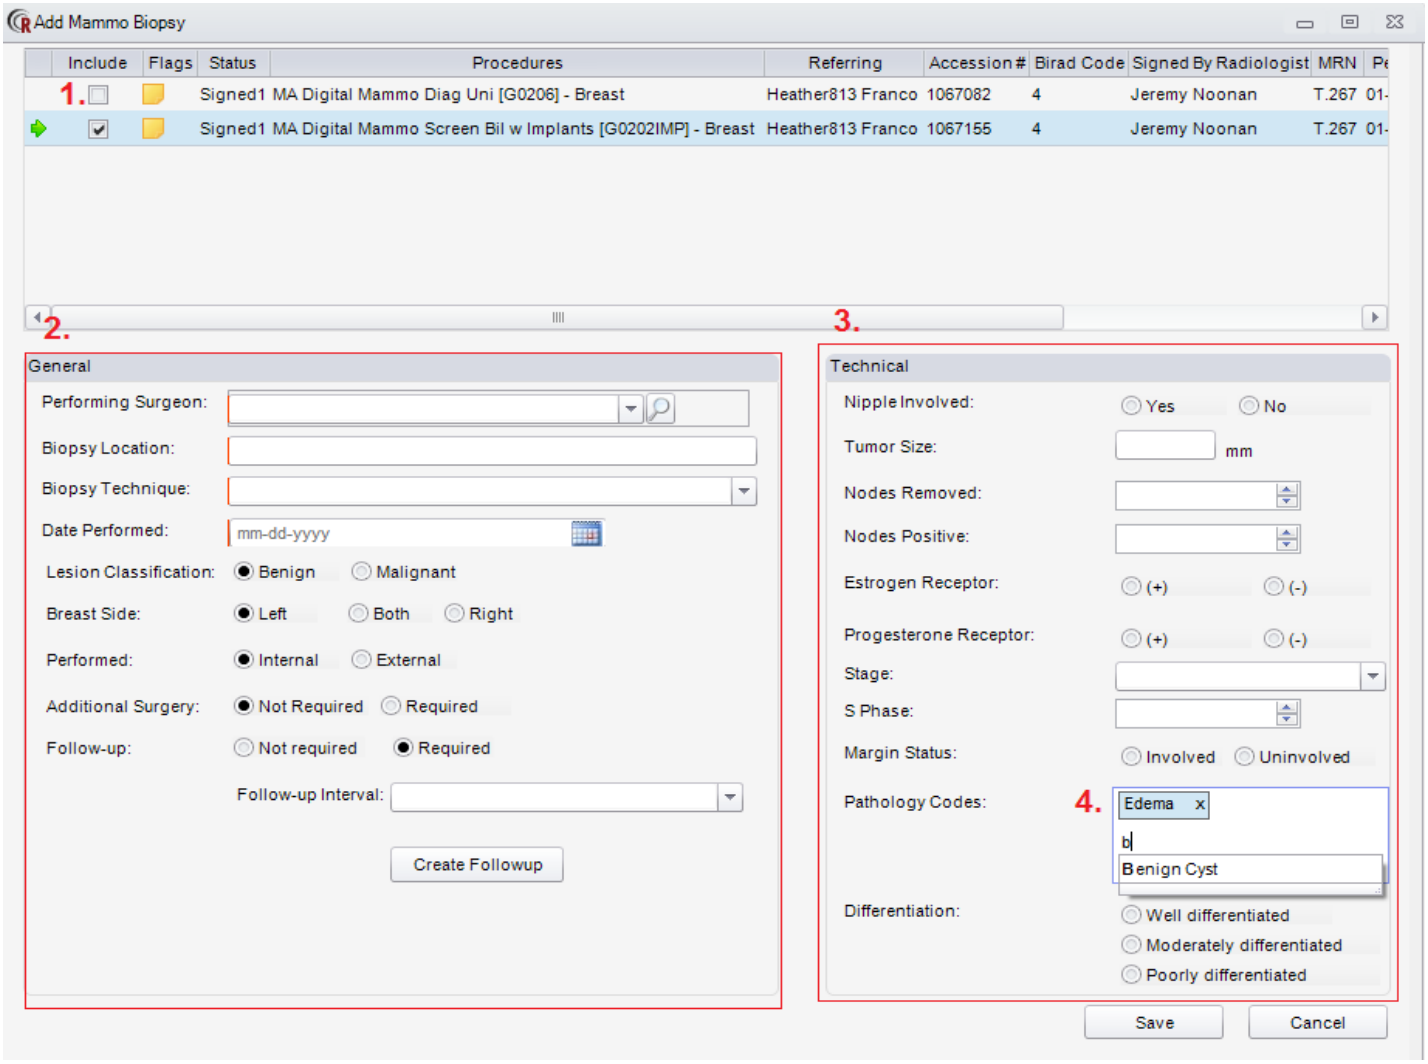

**Figure 4.7 – Add Mammo Biopsy**

- The performing surgeon can be selected /added from the referring physician popup.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

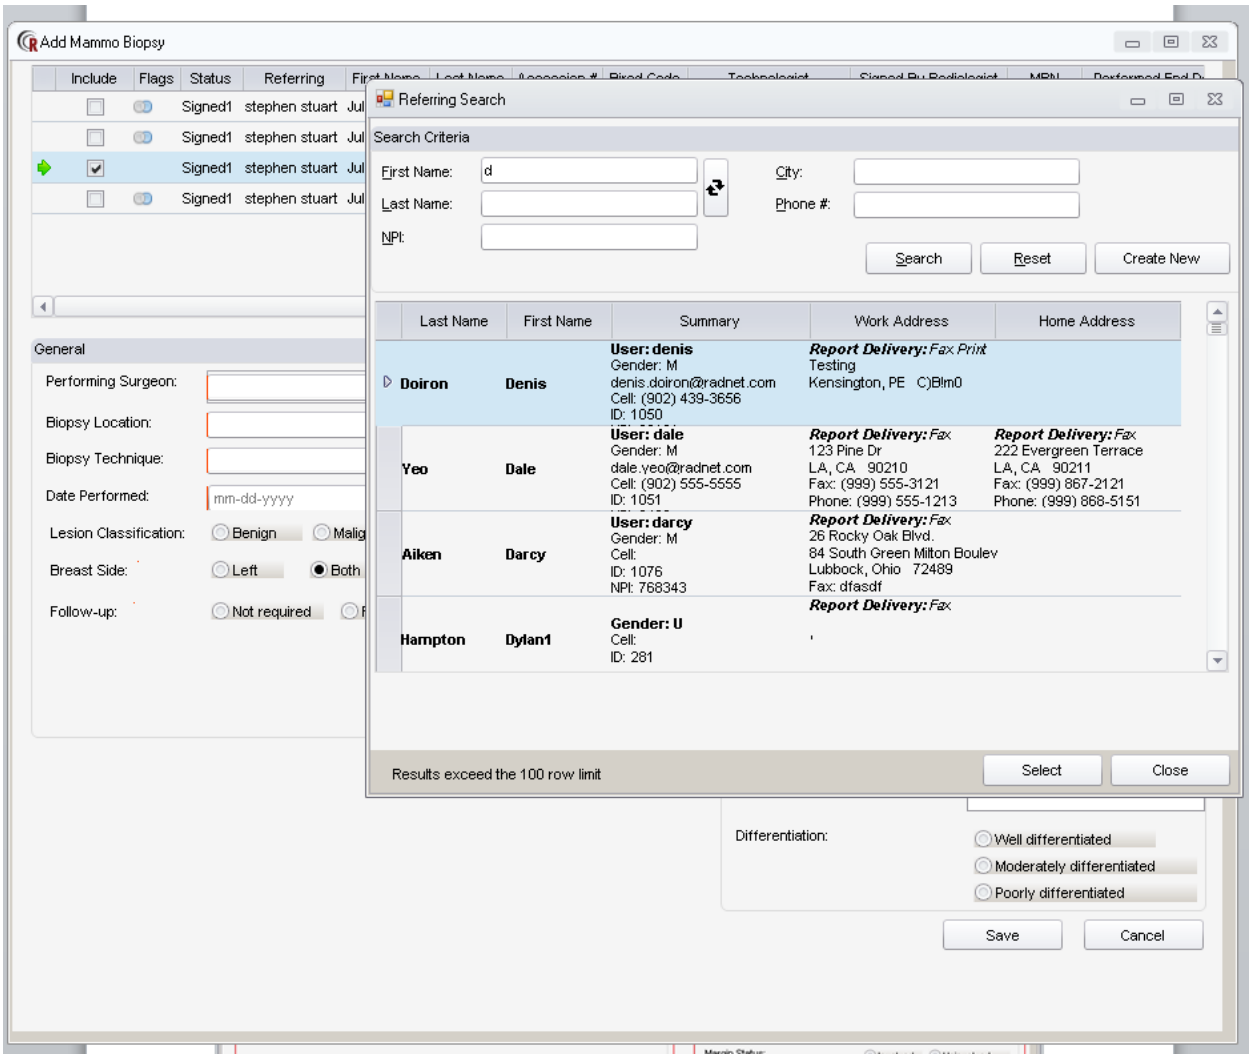

**Figure 4.8 – Performing Surgeon Search**

- Follow-up orders can be created after “Create Followup” is clicked

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

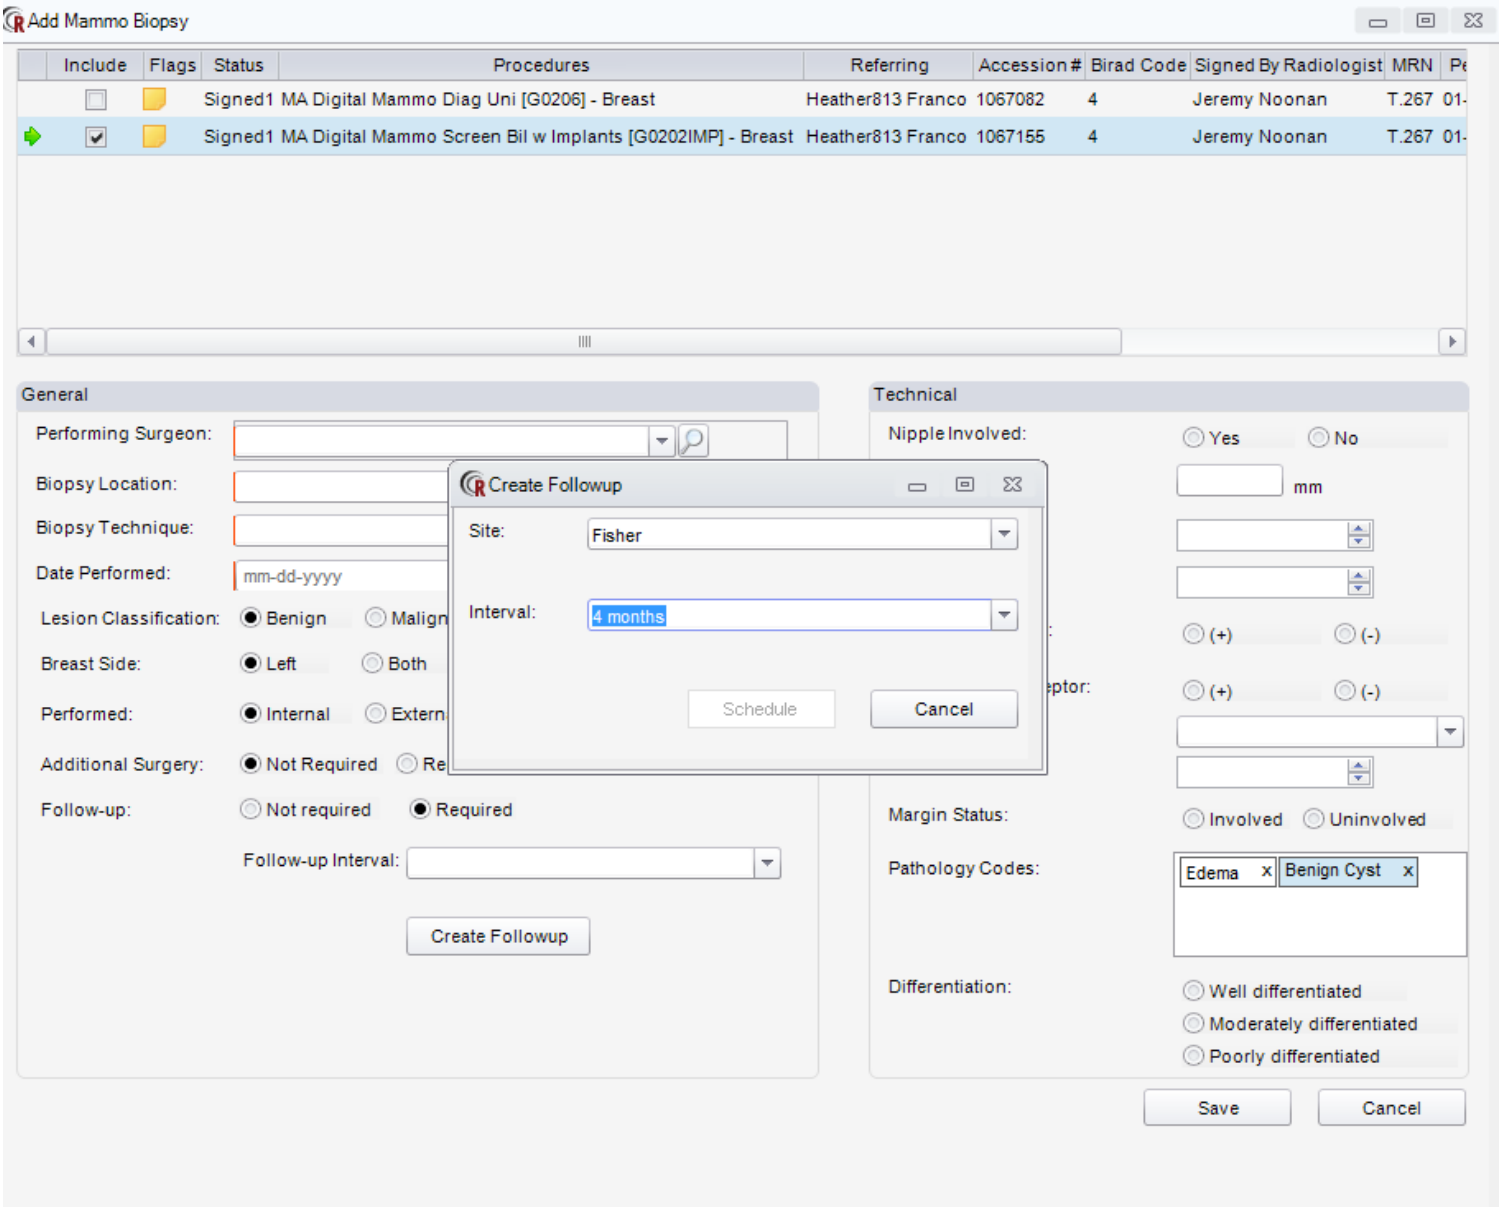

**Figure 4.9 – Dialogue from Create Followup**

- Pathology, Biopsy techniques, and Biopsy stages can be added/edited from the lookup table editor:

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

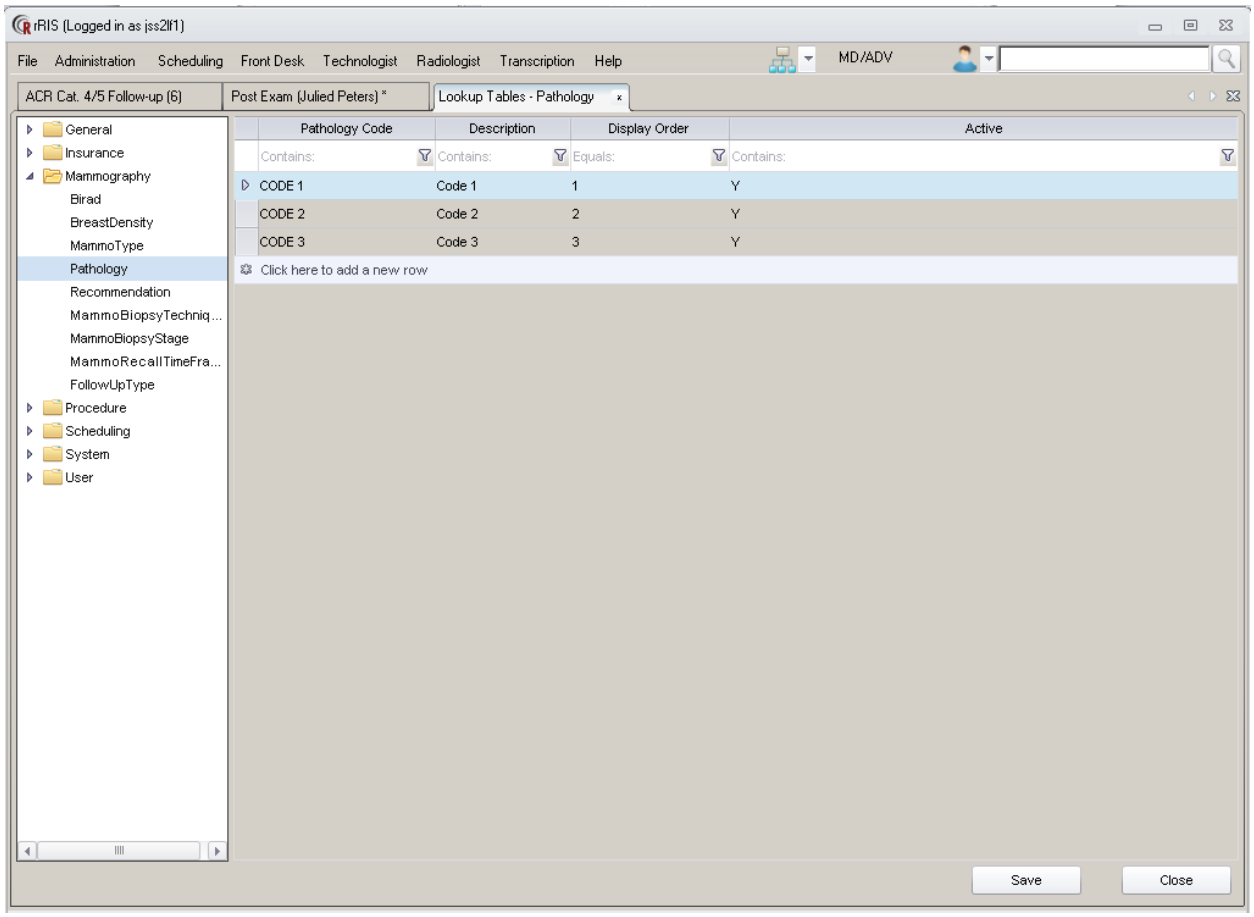

**Figure 4.10 – Pathology lookup table**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

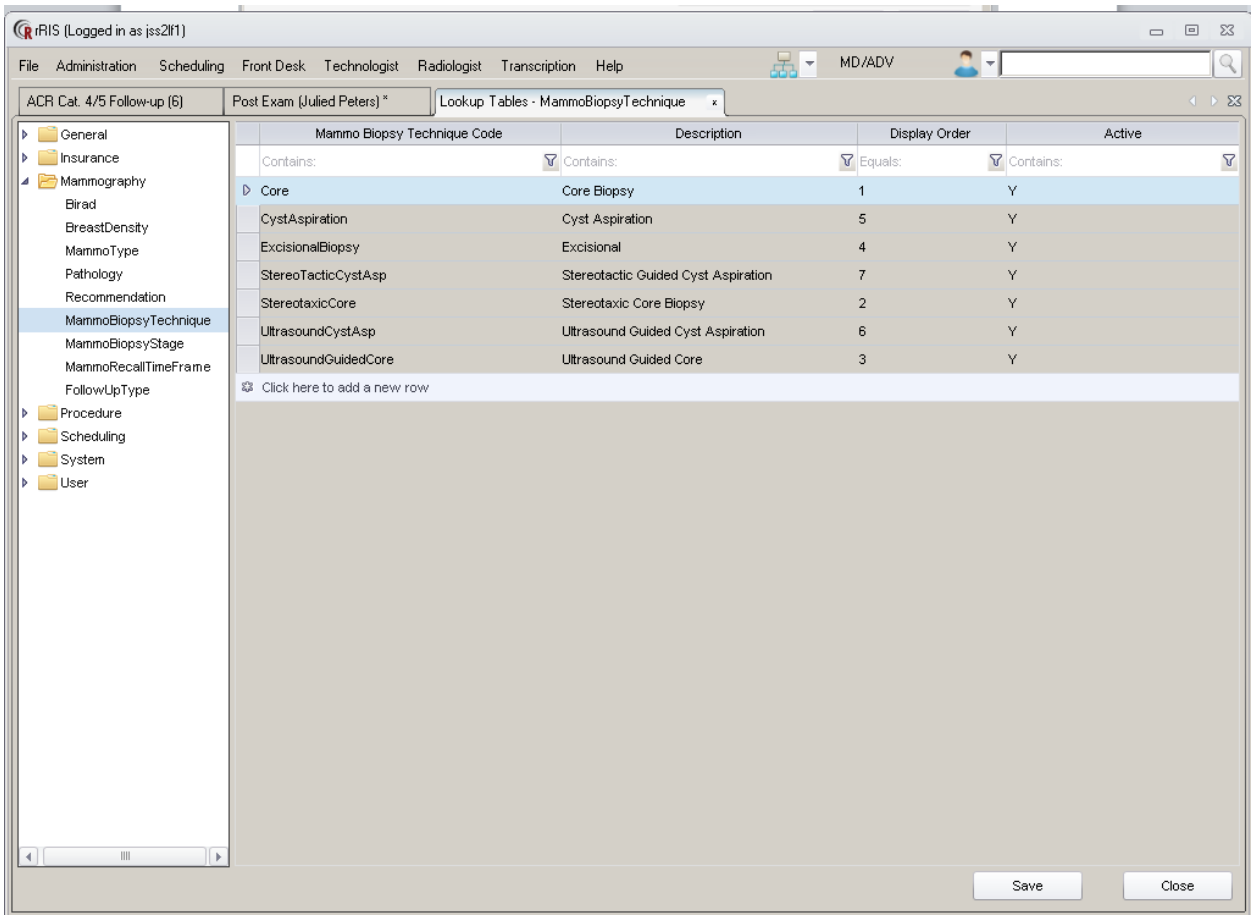

**Figure 4.11 – Mammo Biopsy Technique Lookup Table**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

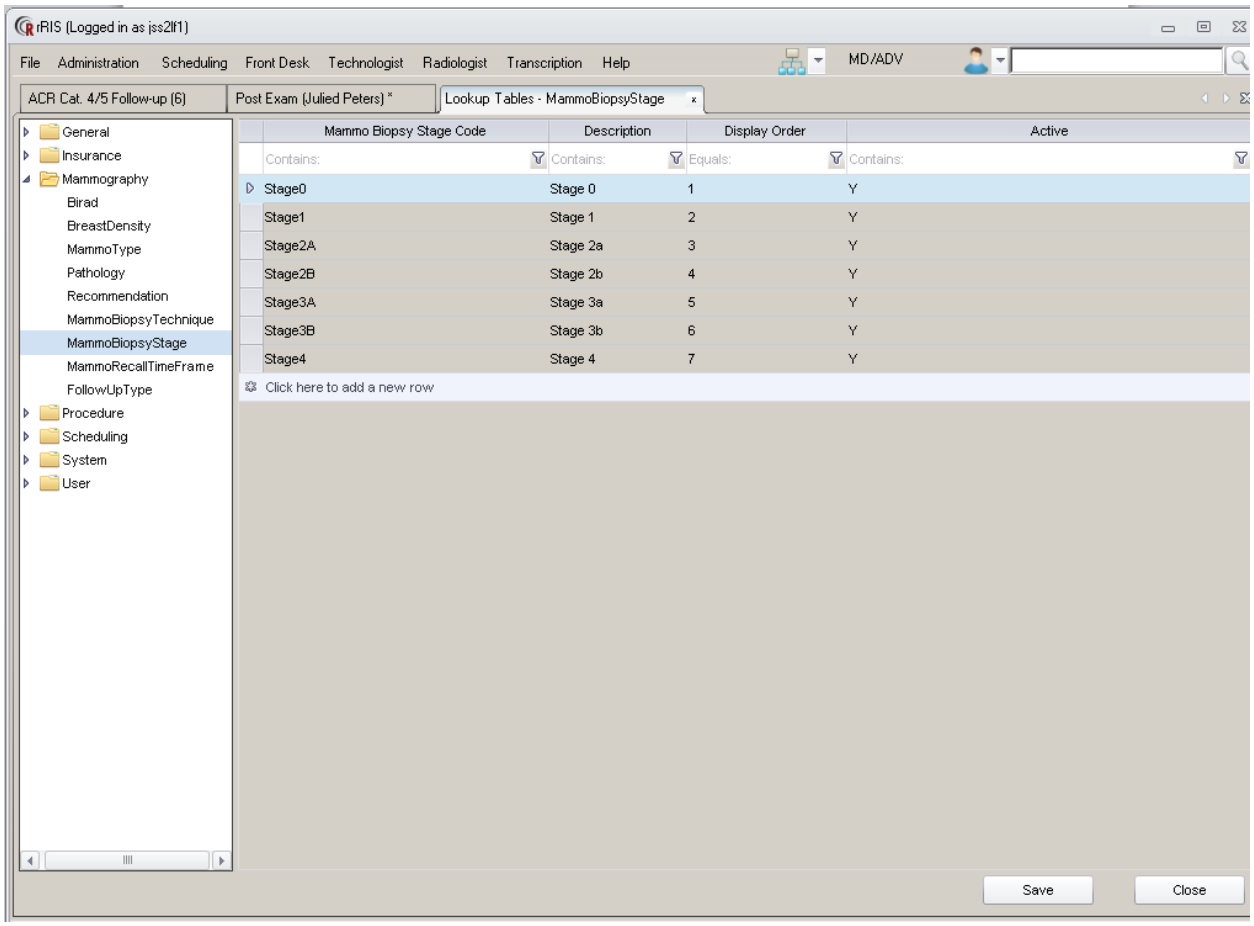

**Figure 4.12 – Mammo Biopsy Stage Lookup table**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Scan Doc Events

The transfer of scanned documents to the PACS was needed. The action queue mechanism already supported sending events to Mirth. New db_action types were added for StudyCorrected, ScanDocAssociated, ScanDocDisassociated, ScanDocCreated, ScanDocUpdated, ScanDocDeleted. Actions of these types are sent to Mirth which writes out an xml file describing the action and containing the relevant keys.
From the PACS side a script was written to pull data from the RIS database and push it to the PACS. As described above we now notify the script that images / documents should be transferred.

## Front end integration with PACS - MRN + Accession

Previously we used the study instance UIDS to match with the PACS image. In build 33 we will now match on MRN as well as the Accession number as well as the 2 most relevant Priors.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Resolved Defects

Bugs, Suggested Features and Support Issues resolved in build 1.33. The extract is taken from Redmine bug tracking system and only displays defects resolved in 1.33.

| # | Tracker | Priority | Subject | Category | Target version |
|---|---|---|---|---|---|
| 888 | Bug | Urgent | Perform Exam - If you select include check box on second exam change reason code is required | Thick Client GUI | 1.33 |
| 881 | Bug | High | Constraint exception on visit table when saving a multiple study containers | Web Services/DB | 1.32 |
| 872 | Bug | High | Concurrency error on saving macro lookup. | Admin Tools | 1.32 |
| 866 | Bug | High | Error thrown when changing Performed Procedure Code durning perfom exam | Thick Client GUI | 1.32 |
| 856 | Bug | High | Mammo exams > Recommendation and Tissue Density are not saving | Thick Client GUI | 1.31 |
| 742 | Bug | High | Beaumont - Issue with WSBinding | Web Services/DB | 1.25 |
| 898 | Bug | Normal | Suspending a transcribed study from work list context menu will not prompt with Suspended message | Thick Client GUI | 1.33 |
| 878 | Bug | Normal | All hyperlinks in dictate / reporting summary data pane open as "Referring Details" | Thick Client GUI | 1.32 |
| 873 | Bug | Normal | User can create another new macro from the create new macro editor | Admin Tools | 1.32 |
| 871 | Bug | Normal | Create a new macro from Macro Editor returns a Unique key violation | Admin Tools | 1.32 |
| 863 | Bug | Normal | Error on AssignedRad when attempting to edit image request from perform exam. | Thick Client GUI | 1.31 |
| 862 | Bug | Normal | Attempting to Add image request can throw an error | Thick Client GUI | 1.31 |
| 855 | Bug | Normal | Follow up work lists still have Post Exam in context menu | Thick Client GUI | 1.31 |
| 832 | Bug | Normal | Demographics at encounter is duplicated | Thick Client GUI | 1.32 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | | | | |
|---|---|---|---|---|---|
| 768 | Bug | Normal | CQM window > Report Interval fields need to be longer | Thick Client GUI | 1.33 |
| 724 | Bug | Normal | Patient Tab > View Clinical Document wrong tab stop | Thick Client GUI | 1.33 |
| 679 | Bug | Normal | Drug Allergy data panel | Thick Client GUI | 1.33 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 6. Known Limitations

The following are Bugs, Suggested Features, and Support Issues found in build 1.33. This build is the current QE build and testing is ongoing. The list may increase in size. This document will not be updated or re-released.

| # | Status | Subject | Category | Target version | Resolved Version |
|---|---|---|---|---|---|
| 895 | New | Signing Interactive job as non interactive user can delete report | Thick Client GUI | 1.33 | |
| 886 | Resolved | Removing Pathology codes throws error | Thick Client GUI | 1.33 | 1.34 |
| 883 | Resolved | Saving Biopsy result can throw error | Thick Client GUI | 1.33 | 1.34 |
| 900 | New | Add multiple to UserGroupPermission throws exception | Admin Tools | 1.33 | |
| 899 | Resolved | Study suspended without interpretation throws error after suspended message | Thick Client GUI | 1.33 | 1.34 |
| 896 | Resolved | Issues with Changing "Internal RIS" passwords. | Admin Tools | 1.33 | 1.34 |
| 894 | Resolved | Multi order scheduling search results not picking correct times | Thick Client GUI | 1.33 | 1.34 |
| 893 | New | Macro editing - same user can be added twice | Admin Tools | 1.33 | |
| 892 | New | Dictate > if duplicate MRN's exist but from different issuer of ID the Summary and Exam Information can display different patient names | Web Services/DB | 1.33 | |
| 891 | New | multiple study scheduling search results not correct for first site on list | Web Services/DB | 1.33 | 1.34 |
| 890 | Resolved | On a new order removing procedure with laterality code throws error | Thick Client GUI | 1.33 | 1.34 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | | | | |
|---|---|---|---|---|---|
| 887 | New | Cannot submit dictation db contraint | Web Services/DB | 1.33 | |
| 885 | New | Mammo Follow-up > Add \ Edit biopsy tabbing order | Thick Client GUI | 1.33 | |
| 884 | Resolved | When region and language format is not English (United States) then "Meaningful Use" on administration screen does not work | Thick Client GUI | 1.33 | 1.34 |
| 882 | New | Adding Performing Surgeon from search throws error | Thick Client GUI | 1.33 | |
| 897 | Resolved | Placement of tabs on Book X | Thick Client GUI | 1.33 | 1.34 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# User Release Notes

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 34. This version of eRAD RIS is referred to as Build 1.34.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu, click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.34 is considered a new core release of the application and will require a reinstallation of eRAD RIS. This is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application, please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## TWAIN Scanning

Originally the eRAD RIS was going to support WIA (Windows Image Acquisition: http://msdn.microsoft.com/en-us/library/windows/desktop/ms630368(v=vs.85).aspx) scanning only. Most modern scanners support WIA technology with updated drivers from the manufacturer. There are some that have not provided support and do not intend to provide support for pre-existing hardware.

Build 34 will now support TWAIN as well as the existing support we had for WIA.
In the figure below you will see a new menu option under the File Menu titled Scanning. The sub menu provides the user with the option to select the type of scanning they require.

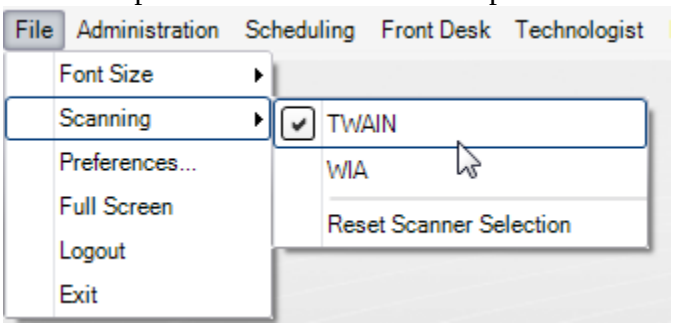

**Figure 4.1 – File > Scanning menu**

Also, in the above menu, it the option "Reset Scanner Selection", which is used to reset the default scanner for cases where the user has more than one scanner to choose from and wants to switch scanners or the previously used scanner has been disconnected. After choosing "Reset Scanner Selection", the next time the user performs a scan they will receive a prompt to select a scanner.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

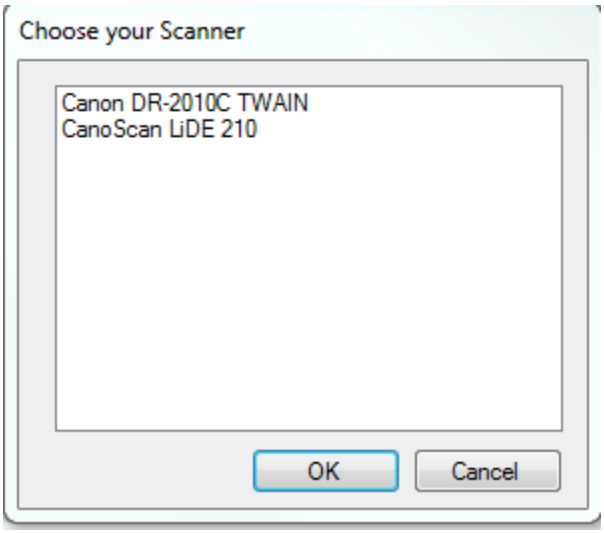

**Figure 4.2 – Choose your Scanner selection box**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Enhancements to Status Area

To make the status message area more usable, we've split the context based menu items and non-context based status messages as displayed below

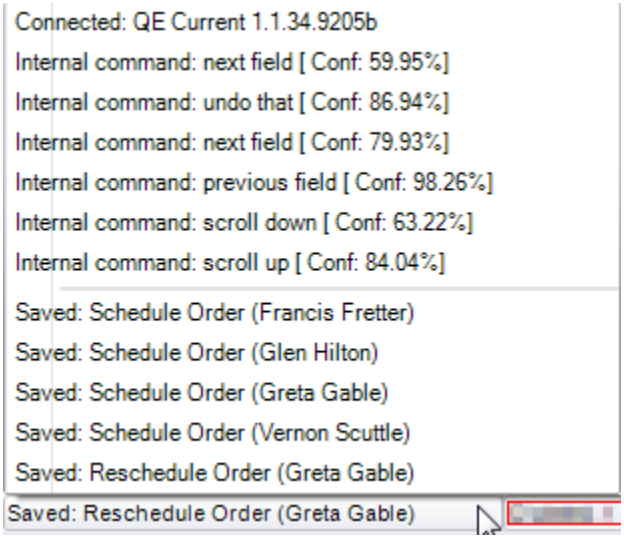

**Figure 4.3 – Enhanced Status Area**

The non-context items show at the top above the status area separator in order that they occurred (up to 12 items). As you can see in the figure above it is displaying messages for internal commands and are displaying the type of command (Internal or Custom) the command issued (next field, Scroll down, etc.) and the confidence that the recognizer determined the speech ( [Conf: 86.94%] ).

The context based status messages are displayed at the bottom of the list. The text showing on the actual status bar in this case "Saved: Reschedule Order (Greta Gable)" is the last thing that was written regardless of context.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## MU Screen Changes

Changes were identified as needed in order to improve usability of certain MU features.

1) The eLab button was removed completely.
2) The eRx button is security driven.
3) Moved the blood pressure, the patient education and the immunization grid to the hidden MU window.

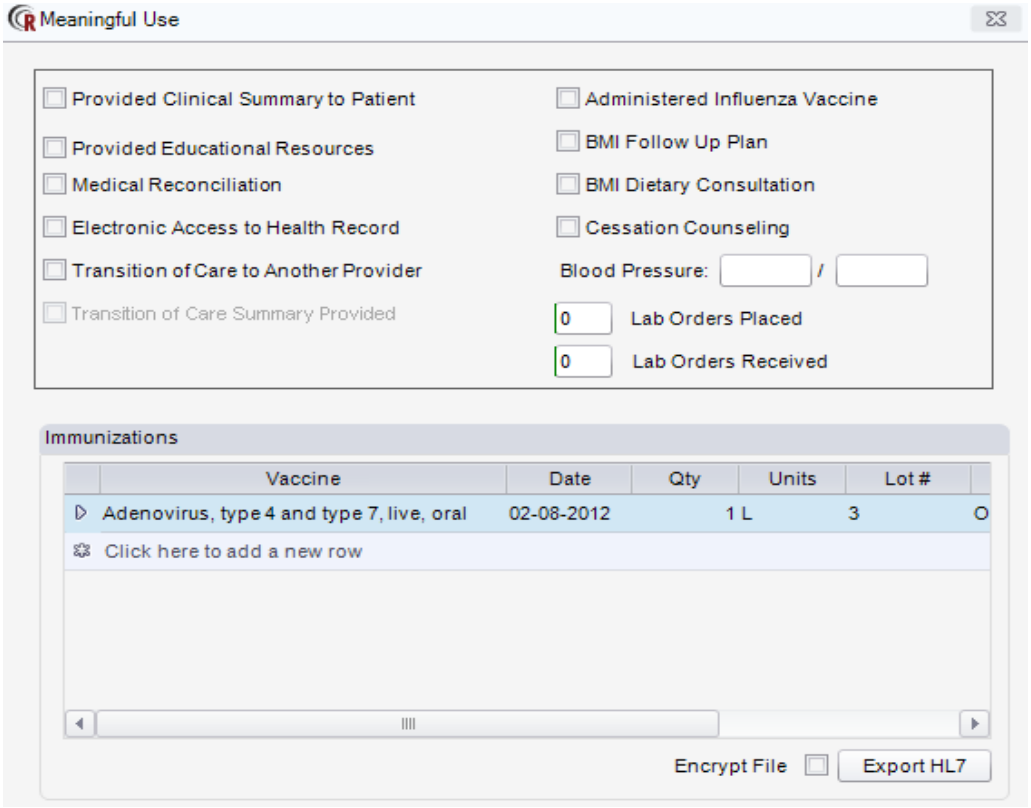

**Figure 4.4 – Hidden MU window changes**

4) Visit Tab has been added to the Perform Exam workflow.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

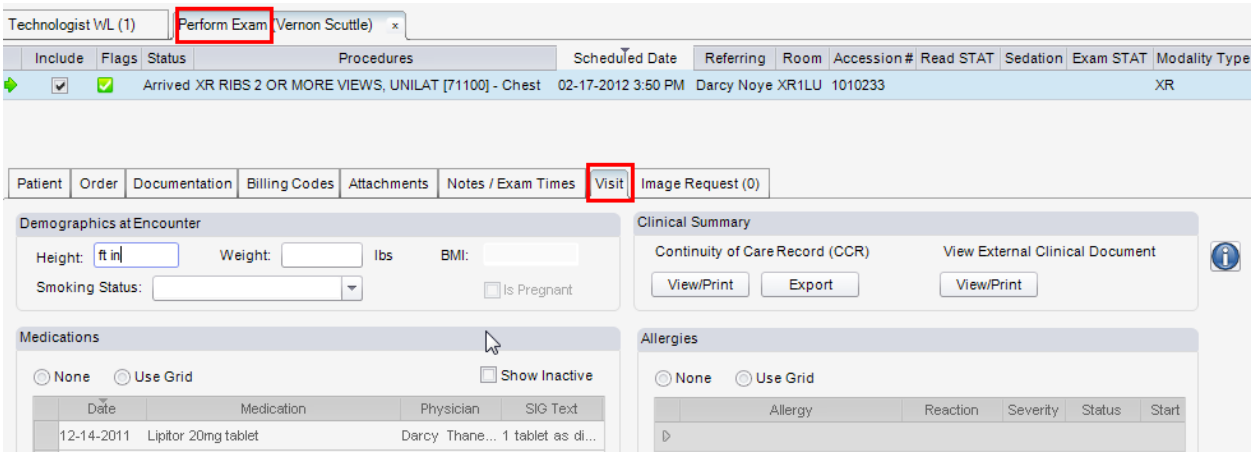

**Figure 4.5 – Visit tab for Technologists**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Organization Added to Exam Information of Summary / Exam Details

It was requested to have the Organization path added to the reporting window. In build 34, the Exam Details and the Summary pane now display this information. If the exam was from an outside read, the side will be indicated as "OUT" as displayed in figure below.

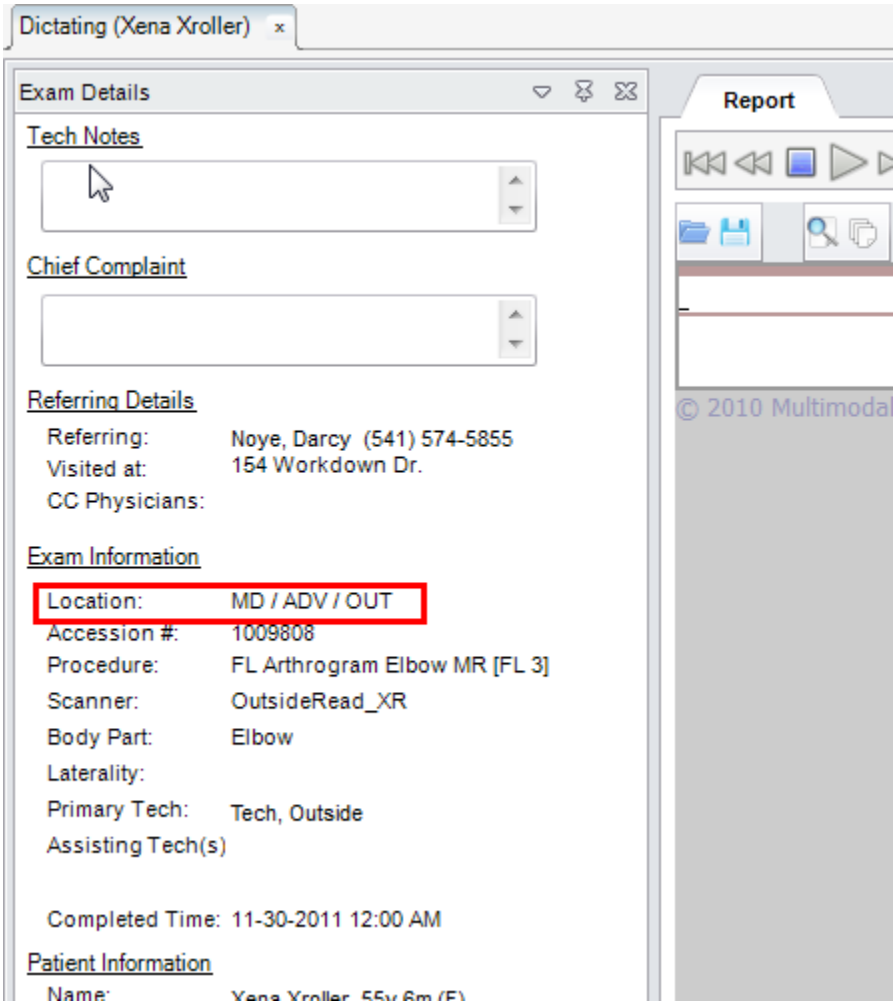

**Figure 4.6 – Exam Details of dictating / reporting window**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

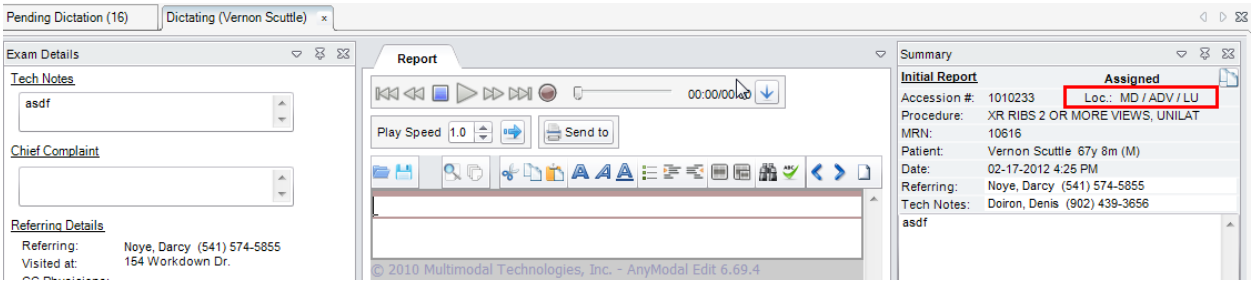

**Figure 4.7 – Summary pane of dictating / reporting window**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Medical Transcriptionist Reminder On Save

When transcribing reports the transcriptionist has the ability to assign the report to another user or to the problem or QA work lists.

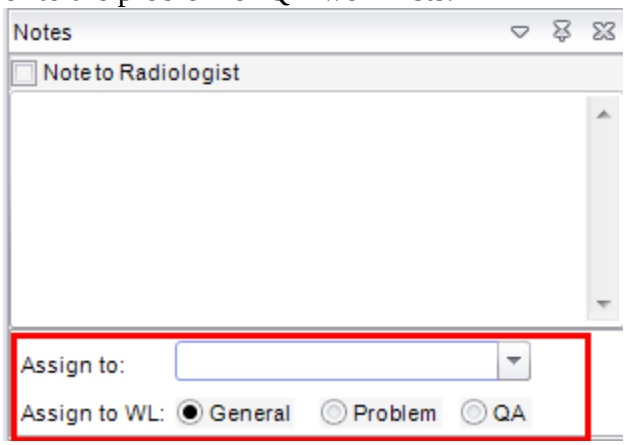

**Figure 4.8 – Reporting window, Notes data pane showing the ability to assign to a user or work list**

A reminder in the form of pop-up messages has been added when the Transcribe button is selected.

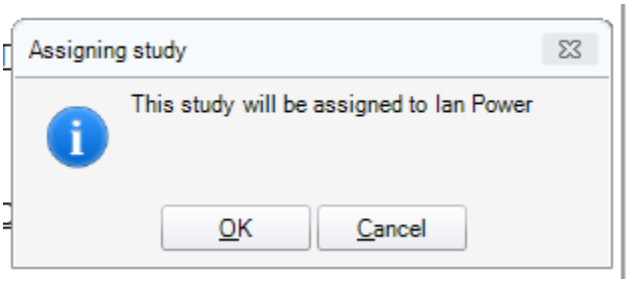

**Figure 4.9 – Assigning to a user**

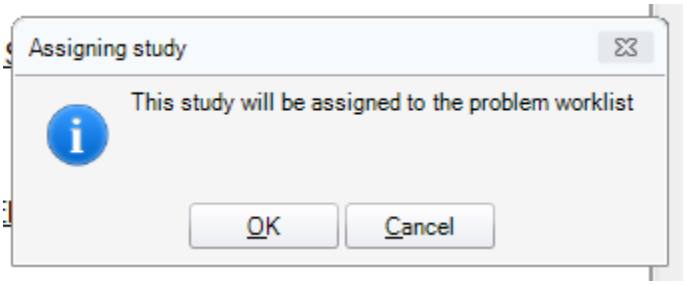

**Figure 4.10 – Assigning to a work list**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

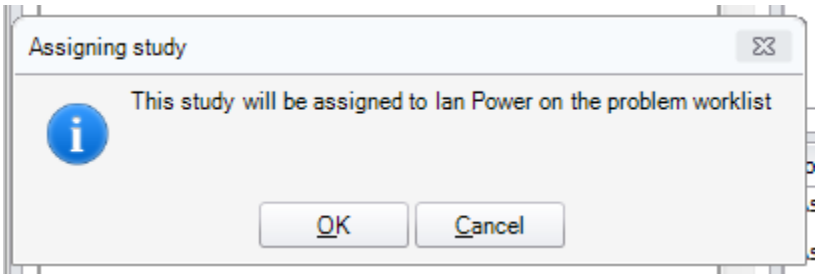

**Figure 4.11 – Assigning to a user and a work list**

## Suspending from Work List Permissions

Two new access strings have been added to control who and when the suspend from work list options are available.

1. Clinical.SuspendStudyFromOtherUser
2. Clinical.UnsuspendStudyFromOtherUser

These access strings gives the user the permission to Suspend and Unsuspend pretty much anything regardless who owns it at the time.
If a user doesn't have these permission(s) then he can only

- Unsuspend – when the job is suspended by the current user.
- Suspend
    - Exam done
        - If it's not dictated yet, the user can suspend it if he is the assigned radiologist, or if it's not assigned to any radiologists
        - If it's dictated, the user can suspend it if he is the dictating radiologist.
    - Dictated or Report Drafted
        - The user can suspend if he is the dictating radiologist or if he is the assigned MT
    - Transcribed
        - The user can suspend if he is the dictating radiologist or if he is the MT that transcribed.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Interactive Panel Event Logging

The Interactive Panel is accessed from the Radiologist menu. The menu option is controlled by the access string **Clinical.Rad.InteractivePanel.** By default this access string is set to none in the access string lookup table and must be added to the UserGroupPermission lookup table. As the access string would suggest, it would be available to Radiologist group.

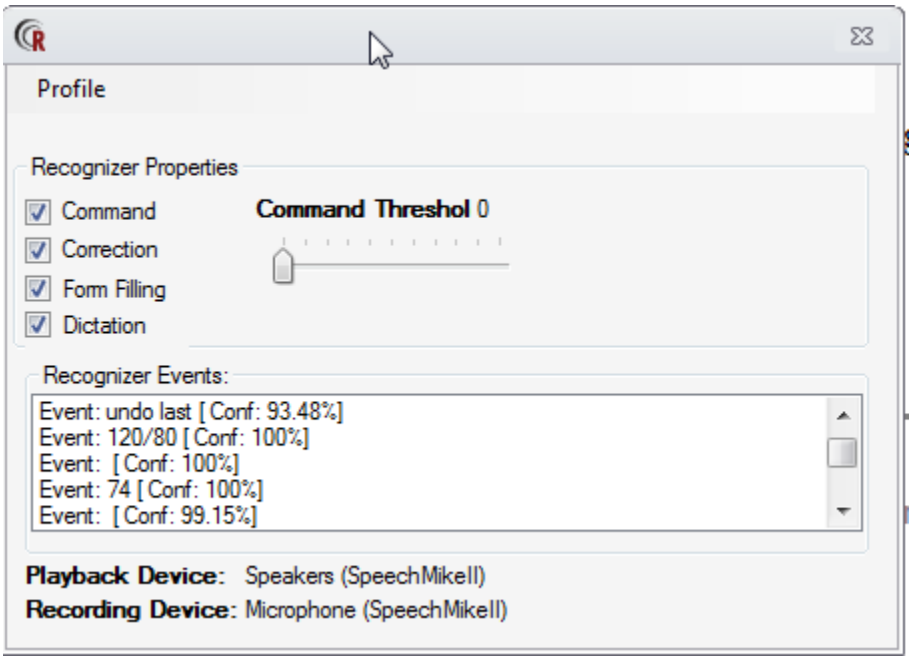

**Figure 4.12 – Interactive Panel**

The Interactive control panel listens to the recognizer events and writes the recognized utterance and the confidence level at which it recognized it.

This can be opened and remain visible, drag it out of the way, while the user is dictating.

**Note**: events will not be written to the log while the Interactive Panel is closed to save resources.

The Recognizer Properties control what interactive commands / dictation events that can be used in the document. For example if the flag for "Command" is removed, voice commands such as "**go to the end of the Findings section"** will no longer be accepted in the document.

There are no save, ok or cancel buttons in this window. If a flag is selected / unselected, it will be saved when the window is closed.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Spell Check Prompts

From the reporting window, if there is spelling errors detected in the report, once the user selects the Sign or Transcribed buttons the user will be prompted asking if they would like to correct the errors.

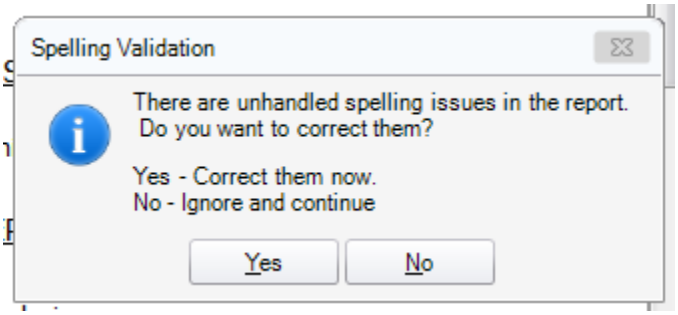

**Figure 4.13 – Spelling Error Message Prompt**

Selecting "Yes" will open the spell check window giving the user the options to Ignore, Change, Add, etc…

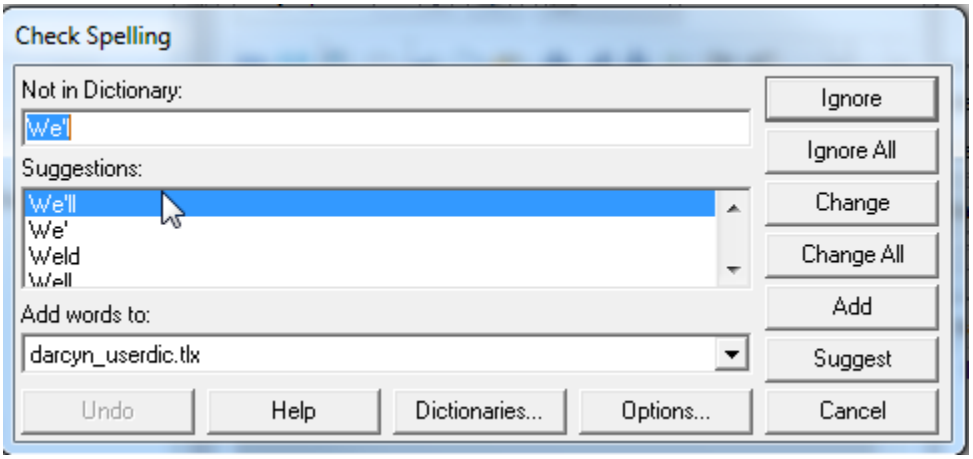

**Figure 4.13 – Check spelling dialogue window**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Extended Field Functionality

We added the "cue" attribute which can be defined when editing/creating a field in a document. This cue field will set the rules which define what needs to be dictated to move the cursor position to the field or to place dictation content in the field. There are several rules which are set forth by the JSGF standard.
Here is an example cue: " **[fetal] biophysical [profile] score | biophysical profile**". There are several important characteristics in this definition. Anything in "[]" indicates that it may or may not be spoken. The "|" character is an "or" conditions. So in the example the same result would happen if we said the following commands.

- Fetal biophysical profile score
- Biophysical score
- Fetal biophysical score
- Biophysical profile score

Or

- Biophysical profile

As you can see these combinations can go from simple to very complex.
**GRAMMAR:**
We created the grammar field which is also editable when editing/creating fields in the macro editor. The grammar field will allow users to specify what data should be recognized when dictating into the field. It will not limit literally but will try to recognize the values in the said grammar field first. For example if our grammar was set to be "yes|no|maybe" it would, at a degree recognize those three words before any others.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

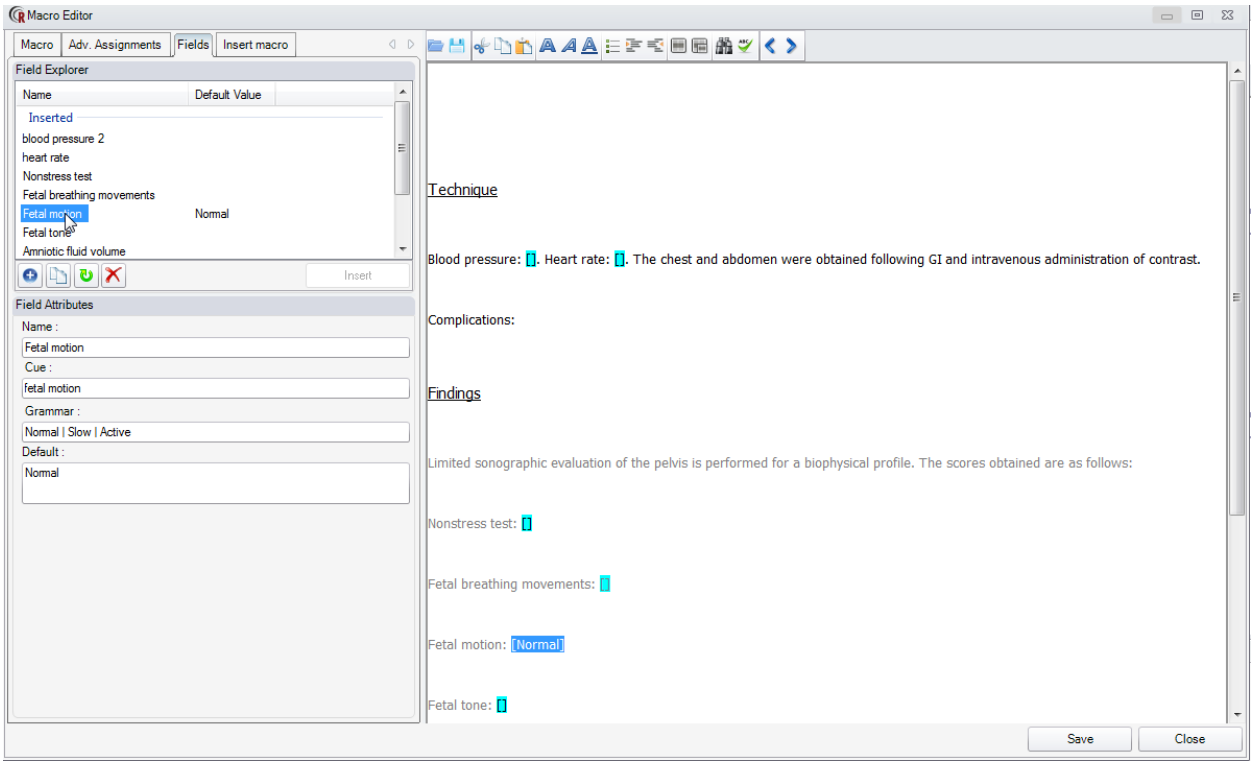

**Figure 4.14 – Macro Editor displaying the Extending Field Functionality**

Looking at the figure above, in the Field Explorer section the Field Motion is selected. You can see this opens the Field Motion Field Attributes:

- Name = The display name in the Field Explorer
- Cue = Dictation command to select this field in the report. As the example above states this can be a range of words. For example to select the Fetal motion field the cue could be configured as **Fetal motion | Fetal movement.** In this case the field will be selected with either of the voice commands.
- Grammar = The most likely voice dictation that will be given. It can be a range of values separated with the pipe "|". Does not have to be one of these commands, but improves the recognition rates.
- Default = The field will be defaulted with this value, but can be changed

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Canonical Fax Numbers

Windows has a built in utility to specify dialing rules that will provide a way to specify a pre-dial a number for either (or both) long-distance and local calling. You can also specify dialing of a 1 and/or area code prior to the main 7 digit phone number. These dialing rules only take effect if the fax number is specified in canonical form, ie. +1 (999) 999-9999. The Phone and Modem dialogue is accessed from the Control Panel.

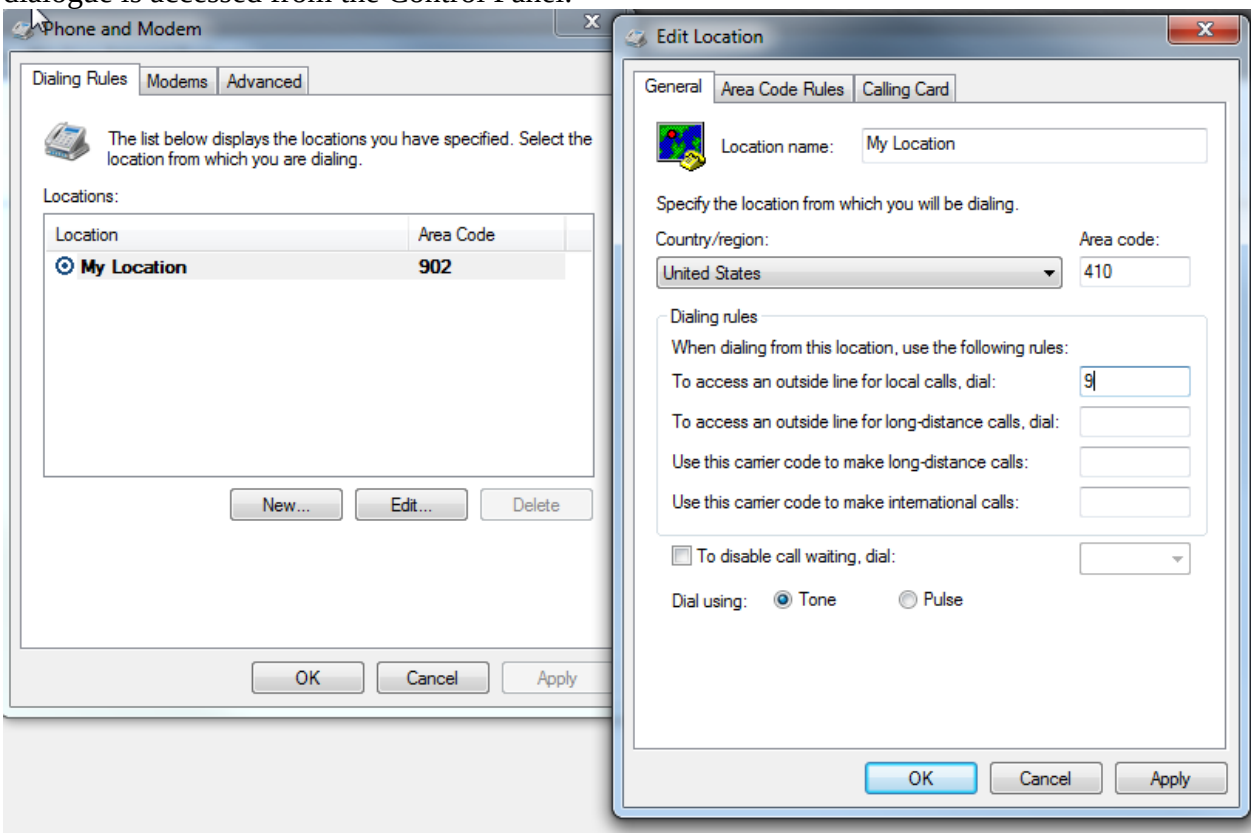

**Figure 4.15 – Displaying Microsoft Windows Phone and Modem dialing rules**

Another issue was formatting of numbers. In eRAD RIS we have all of the phone / fax number fields masked as (xxx)xxx-xxxx. If a number was obtained from an external system that didn't have this formatting, it would cause errors.
Now prior to submitting the fax job, the formatting and any non-numeric characters are removed. If the remaining characters are numbers with either 10 or 11 digits, it will be forced into canonical form and submitted.
NOTE: if the remaining numbers are 11 characters in length and the first digit is a one it is also removed so that we have a 10 character phone number remaining.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## MQSA Reporting

Proposed DEFINITIONS:
The following definitions should be used in the creation of the Mammography MQSA Audit reports. Reference the ACR BI-RADS® Breast Imaging Atlas, BI-RADS®. Mammography pages 229-260 for more information.

Positive Exam: An exam is considered to be positive if the BI-RADS® assessment category is 0, 4, 5 for a screening exam; or 4, 5 for a diagnostic exam.

Negative Exam: An exam is considered to be negative with a benign or probably benign finding if the BI-RADS® assessment category is 1, 2, or 3 for either a screening or a diagnostic exam.

MQSA does not limit the use of category 3 to diagnostic exams. Therefore, a BI-RADS® category 3 is considered negative for both screening and diagnostic exams.

True-Positive (TP): Cancer was diagnosed within 1 year after biopsy recommendation based on an abnormal mammogram.
(BI-RADS® Category 0, 4 or 5 for screening; BI-RADS® Category 4 or 5 for diagnostic).

True-Negative (TN): No known tissue diagnosis of cancer within 1 year of a negative examination
(BI-RADS® Category 1 or 2 for screening, BI-RADS® Category 1, 2 or 3 for diagnostic).

False-Negative (FN): Tissue diagnosis of cancer within 1 year of a negative examination
(BI-RADS® Category 1 or 2 for screening, BI-RADS® Category 1, 2 or 3 for diagnostic).

False-Positive (FP): Three separate definitions:

a. (FP1): No known tissue diagnosis of cancer within 1 year of a positive screening examination (BI-RADS® Category 0, 4, or 5).

b. (FP2): No known tissue diagnosis of cancer within 1 year after recommendation for which further imaging evaluation, biopsy, or surgical consultation on the basis of a positive examination (BI-RADS® Category or 5 ).

c. (FP3): Benign tissue diagnosis within 1 year after recommendation for biopsy on the basis of a positive examination (BI-RADS® Category 4 or 5).

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Note: TP + TN + FP + FN = Total number of examinations.
This note refers to definitions 9, 10, 11, and 12.

Positive Predictive Value (PPV): Three separate definitions:

a. (PPV1) (abnormal findings at screening): The percentage of all positive screening examinations
(BI-RADS® Categories 0, 4 and 5) that result in a tissue diagnosis of cancer within 1 year. An initial screening assessment of Category 4 or 5 is unusual, but is possible.
PPV1 = TP/(number of positive screening examinations)
OR
PPV1 = TP/(TP + FP1) [FP1 = see 12a in glossary of statistical terms]

b. (PPV2) (biopsy recommended): The percentage of all screening or diagnostic examinations recommended for biopsy or surgical consultation (BI-RADS® Categories 4 and 5) that resulted in a tissue diagnosis of cancer within one year.
PPV2 = TP/(number of screening or diagnostic examinations recommended for biopsy)
OR
PPV2 = TP/(TP + FP2) [FP2 = see 12b in glossary of statistical terms]

c. (PPV3) (biopsy performed): The percentage of all known biopsies done as a result of positive screening or diagnostic examinations or additional imaging evaluations of positive screening examinations (BI-RADS® Categories 4 and 5) that resulted in a tissue diagnosis of cancer within 1 year. PPV3 is also known as the Biopsy Yield of Malignancy or the Positive Biopsy Rate (PBR).
PPV3 = TP/(number of biopsies)
OR
PPV3 = TP/(TP + FP3) [FP3= see 12c in glossary of statistical terms]

Negative Predictive Value: indicates the percentage of patients who truly do not have breast cancer when the mammogram was called normal.

Sensitivity: The probability of detecting a cancer when a cancer exists or the number of cancers diagnosed after being identified at mammography in a population within 1 year of the imaging examination, divided by all cancers present in that population in the same time period.
Sensitivity = TP/(TP + FN) [Remember that FN is actually a cancer case]

Specificity: The probability of interpreting an examination as negative when cancer does not

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

exist; or the number of true-negative mammograms in a population divided by all actual negative cases (those for which there is no tissue diagnosis of cancer within 1 year of the mammogram) in the population.
Specificity = TN/(TN + FP)

Cancer Detection Rate: The number of cancers correctly detected at mammography per 1,000 patients examined at mammography.
a. This is of greatest value when calculated for screening examinations only or when calculated separately for screening and diagnostic examinations.
b. May also be calculated separately for PREVALENT cancers (those found at first-time mammographic examination) and for INCIDENT cancers (those found at subsequent screening examinations performed at or close to the recommended screening interval).
c. May also be calculated by AGE GROUP (40–49 years, 50–59 years, etc.).

Recall Rate (Abnormal Interpretation Rate: The percentage of examinations interpreted as positive. For screening mammography, positive examinations include BI-RADS® Categories 0, 4 and 5
assessments. For diagnostic mammography positive examinations include BI-RADS® Category 4
and 5 assessments.

Recall Rate (Abnormal Interpretation Rate) = (positive examinations) / (all examinations)
Note that in many scientific publications concerning screening mammography, a Recall Rate is reported as being equivalent to the Abnormal Interpretation Rate, even though some screening examinations occasionally are given BI-RADS® Category 4 or 5 assessments. This is done because
prompt further imaging evaluation with mammography and/or ultrasound (to assess for extent of disease and to plan for imaging-guided biopsy) is also recommended in addition to tissue diagnosis
for almost all (if not all) screening examinations that are given BI-RADS® Category 4 or 5 assessments.

Note from Randy Rogers:
---
According to MQSA:
Recall Rate: # of positive examinations on screening (BI-RADS Categories 0,4 and 5) divided by the total number of examinations (screenings)
Would like this as one calculation and then a breakout of just the 0 and a breakout of 4/5. So:

Recall Rate Total

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Recall Rate 0
Recall Rate 4/5

Unknown Exams: Positive exams that do not have a biopsy result (ex. BIRAD 0) and therefore cannot be classified as either true or false positives. For screening exams, BI-RADS® 0 is considered positive per ACR guidelines.

# Proposed List of Reports for MQSA audit:

General Exam list: (drill down report would be ideal)

| PARAMETERS to query by: | Exam Data to Display: | Statistical Data to Display: |
|---|---|---|
| Date Range | Patient Name | Date time report was ran |
| Location ( Practice, Site, etc) | Patient ID | List of parameters used. |
| BIRAD codes to include. (ex. Looking for positive, negative exams). Do we want to create automatic groupings of BIRAD codes to report by?? | Accession Number | |
| Radiologist(s) – All or specific | Exam Date | Totals per location |
| Filter exams by Biopsy results, Include / Exclude exams without biopsies. | Signing Radiologist | Totals per Radiologist |
| Procedure Codes to query on: Ex. Looking for only Mammo Screening, or only Mammo Diagnostic exams, only Ultrasounds etc. | Biopsy Result | Totals per BIRADS category |
| | Biopsy Date | |
| | BIRAD assigned | |
| | | |
| | | |

Report should not list any exams that have not been performed. All in Signed1 status.

Summary Reporting by Location and or By Radiologist: (could be 2 different reports but data queried should be identical)

| PARAMETERS to query by: | Statistical Data to Display: | Statistical Data to Display: |
|---|---|---|
| Date Range | Break down exams by Screening vs Diagnostic | Date time report was ran |
| Location ( Practice, Site, etc) | Break down Sreening and Diagnostic by procedure. | List of parameters used. |
| | Breakdown each procedure by BIRAD. ( so total for each birad per site/radiologist) | Total exams by Screening vs Diagnostic |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | |
|---|---|---|
| | Summary per Screening , per Diagnostic:<br>True Positive Total<br>True Negative Total<br>False Positive Total<br>False Negative Total<br>Sensitivity<br>Specificity<br>PPV<br>Unknown exams | Total Sreening and Diagnostic by procedure. |
| | Combined total of Screening and Diagnostic exams. | Total each procedure by BIRAD. ( so total for each birad per site/radiologist) |
| | | |
| | | |

List of False Negative Exams - by Location and or By Radiologist:

| PARAMETERS to query by: | Exam Data to Display: | Statistical Data to Display: |
|---|---|---|
| Date Range | Patient Name | Date time report was ran |
| Location ( Practice, Site, etc) | Patient ID | List of parameters used. |
| Radiologist ( All or specific | Accession Number | Total exams by Location |
| | Exam Date | Total exams by Radiologist |
| | Exam Status | |
| | Dictating Radiologist | |
| | Signing Radiologist | |
| | Biopsy Result | |
| | BIRAD assigned | |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

List of False Positive Exams - by Location and or By Radiologist:

| PARAMETERS to query by: | Exam Data to Display: | Statistical Data to Display: |
|---|---|---|
| Date Range | Patient Name | Date time report was ran |
| Location ( Practice, Site, etc) | Patient ID | List of parameters used. |
| Radiologist ( All or specific | Accession Number | Total exams by Location |
| | Exam Date | Total exams by Radiologist |
| | Exam Status | |
| | Dictating Radiologist | |
| | Signing Radiologist | |
| | Biopsy Result | |
| | BIRAD assigned | |

List Mammography exams performed by Technologist:

| PARAMETERS to query by: | Exam Data to Display: | Statistical Data to Display: |
|---|---|---|
| Date Range | Patient Name | Date time report was ran |
| Location ( Practice, Site, etc) | Patient ID | List of parameters used. |
| Technologist | Accession Number | Total exams by Location |
| Select procedures to include ( ex Mammo Screening, Mammo Diagnositc, Mammo Ultrasounds) | Performed Date | Total exams by Technologist |
| | Exam Status | |
| | | |
| | | |
| | | |
| | | |

By technologist - list of exams where a technologist has performed a mammogram or interventional procedure within the date range and location specified in the report.

List of Positive exams with outstanding Pathology Follow-ups:

| PARAMETERS to query by: | Exam Data to Display: | Statistical Data to Display: |
|---|---|---|
| Date Range | Patient Name | Date time report was ran |
| Location ( Practice, Site, etc) | Patient ID | List of parameters used. |
| | Accession Number | Exam Total |
| | Exam Date | |
| | Exam Status | |
| | Dictating Radiologist | |
| | Signing Radiologist | |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | |
|---|---|---|
| | Biopsy Result | |
| | BIRAD assigned | |

All positive mammography exams performed during the specified period that do not have pathology results recorded nor does a later exam exist with pathology results.

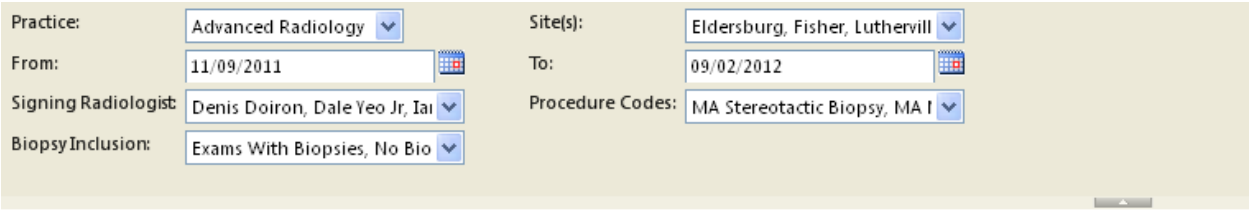
List of Positive exams Follow-ups by BIRAD:

| PARAMETERS to query by: | Exam Data to Display: | Statistical Data to Display: |
|---|---|---|
| Date Range | GROUP EXAMS by Recommendation ( ex. BIRAD 0, followup exam scheduled is Ultrasound, etc) | Date time report was ran |
| Location ( Practice, Site, etc) | Patient Name | |
| BIRAD code(s) to include | Patient ID | List of parameters used. |
| Procedure Codes to query on: Ex. Looking for only Mammo Screening, or only Mammo Diagnostic exams, only Ultrasounds etc. | Accession Number | Exam Total |
| | Exam Date | |
| | Exam Status | |
| | Dictating Radiologist | |
| | Signing Radiologist | |
| | Biopsy Result | |
| | BIRAD assigned | |
| | NEXT Exam Reffering MD# | |
| | NEXT Exam Accesion # | |
| | NEXT Exam Date | |
| | NEXT EXAM Status | |

- New requirement provide a report (for Referring Physician) listing patients that have ignored all reminder letters sent (so have not returned). Also listing any patients that RadNet has not received biopsy results from.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

SAMPLE REPORTS
MQSA General Exam List:
Standard Filtering Criteria: (Practice, Site, Date Range)
Additional Filtering Criteria: ( Radiologist, Include / Exclude Biopsies, Procedures to Include / Exclude)



## MQSA Geneal Exam List

**Practice:** Advanced Radiology
**Site(s):** Eldersburg, Fisher, Lutherville, New site just bought, OutsideMed

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 6. Known Limitations

The following are Bugs, Suggested Features, and Support Issues found in build 1.34. This build is the current QE build and testing is ongoing. The list may increase in size. This document will not be updated or re-released.

| # | Status | Subject | Category | Target version | Resolved Version |
|---|---|---|---|---|---|
| 936 | New | Usergroups require Config.LookupEditor.Personnel to add unknown referring | Thick Client GUI | 1.34 | |
| 913 | New | Patient folder will display target and previously viewed images | Thick Client GUI | 1.34 | |
| 912 | New | Cannot view priors in dictate window | Thick Client GUI | 1.34 | |
| 910 | New | Patient Folder will keep opening image viewer | Thick Client GUI | 1.34 | |
| 908 | New | Object reference from dictate window will close RIS | Thick Client GUI | 1.34 | |
| 933 | New | MQSA_Reporting - General Exam List - Procedure Codes | Mgt Reports | 1.34 | |
| 932 | New | MQSA_Mammo - General Exam List - Date range does not included selected "To:" date | Mgt Reports | 1.34 | |
| 931 | New | Mammo reporting - General Exam List - not displaying Patient ID | Mgt Reports | 1.34 | |
| 930 | Resolved | Alternate phone flag does not disable alternate phone number fields | Thick Client GUI | 1.34 | 1.35 |
| 929 | New | User Group permissions difficult to add | Admin Tools | 1.34 | |
| 928 | Resolved | View / Edit OrderCancelled gives GetData error | Thick Client GUI | 1.34 | 1.35 |
| 927 | Resolved | Issue with procedure picker type ahead when procedure is removed. | Thick Client GUI | 1.34 | 1.35 |
| 926 | Resolved | Memory leak causing error. | Thick Client GUI | 1.34 | 1.35 |
| 925 | Resolved | Error scanning specific document type from Perform Exam | Thick Client GUI | 1.34 | 1.35 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | | | | |
|---|---|---|---|---|---|
| 924 | Resolved | Add outside read on site that requires insurance, but insurance is not chosen, is not added to billing exception | Thick Client GUI | 1.34 | 1.35 |
| 923 | Resolved | Image Request on Multi procedure order belonging to different orders throws error | Thick Client GUI | 1.34 | 1.35 |
| 922 | Resolved | Error thrown attempting to create multi procedure schedule | Thick Client GUI | 1.34 | 1.35 |
| 921 | Resolved | Home phone is not copied to Responsible Party | Thick Client GUI | 1.34 | 1.35 |
| 917 | New | Minimizing application by moving another application over top of RIS throws error | Thick Client GUI | 1.34 | |
| 916 | New | Adding UserGroupPermission with empty access string throws exception | Admin Tools | 1.34 | |
| 915 | New | Error returned on suspended study when selecting Cancel on overwrite message | Thick Client GUI | 1.34 | |
| 914 | New | Documents can be distributed without specifying deliver to: causing error | Thick Client GUI | 1.34 | |
| 911 | New | Adding a third study through registration behaves differently. | Thick Client GUI | 1.34 | |
| 909 | New | First time launch of a study does not find the image | Thick Client GUI | 1.34 | |
| 907 | Resolved | Datetimeoffset columns not correctly updating to the correct time zone | Web Services/DB | 1.34 | 1.35 |
| 905 | New | Rescheduling an exam without selecting time returns un-informative error. | Thick Client GUI | 1.34 | |
| 904 | New | Rescheduling exam and choose Schedule later and the procedure is not retained | Thick Client GUI | 1.34 | |
| 903 | New | Tool tips on flags don't always worked | Thick Client GUI | 1.34 | |
| 902 | New | worklist filler connection leak on exception | Web Services/DB | 1.34 | |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | | | | |
|---|---|---|---|---|---|
| 918 | Resolved | Clean up tab order of Visit tab | Thick Client GUI | 1.34 | 1.35 |

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 35. This version of eRAD RIS is referred to as Build 1.35.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu, click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.35 is considered a new core release of the application and will require a reinstallation of eRAD RIS. This is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application, please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. New Features and Enhancements

## Scheduling Timeslot Lock Release

In the past if the user has searched for and selected available time slots for scheduling, this user would have those times locked. In the event the user was distracted from completing the schedule, the selected times would remain locked.

In build 35 we have introduced a lock release. We check every 10 seconds to see if there was any activity. As long as the scheduling tab is the active tab then any mouse or keyboard event will refresh the lock. If the user opens a new tab then any mouse or keyboard event will not refresh the lock. When the timer runs through the configurable amount of time, the focus will jump back to the scheduling tab with a pop-up prompting the user if the lock timer should refresh or release the lock, if the pop-up is left open for 1 minute then it will close and the lock will automatically be released.

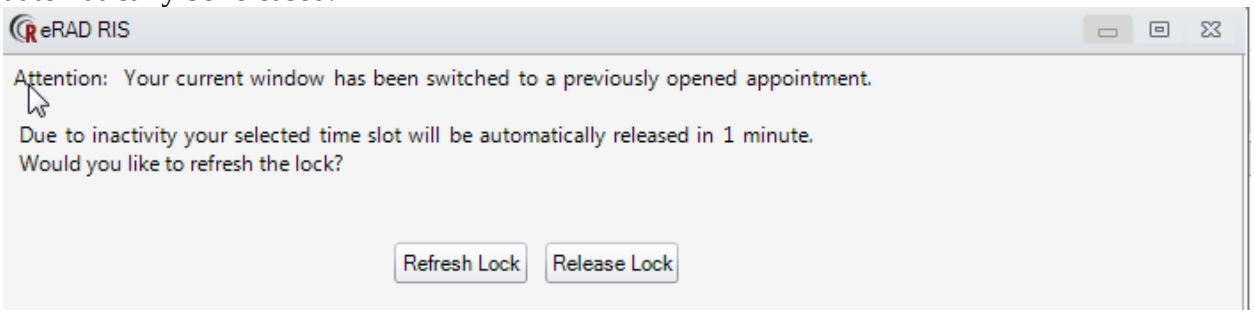

**Figure 4.1 – Lock release prompt if not in data window**

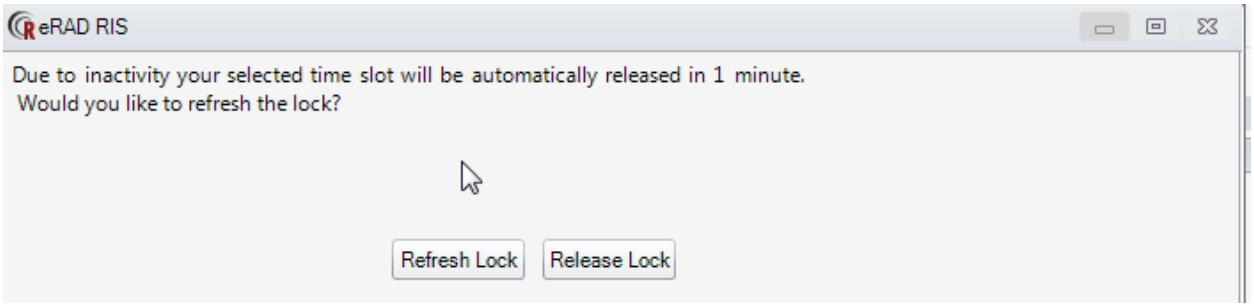

**Figure 4.2 – Lock release prompt if you are in data window but not on Schedule tab**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Schedule Review on Selecting Schedule Button

When a user had completed entering in data, searching for available schedule dates and time, etc they would select the schedule button to commit the data. It was desired that the user be presented with a review of the schedule.

In build 35 upon selecting the Schedule button the user will now be presented with the Review window. The review window will display a Schedule Summary of the patients name, procedures scheduled, date time and duration of the study. The address of the site in which the exams will occur and any prep instructions for the procedures selected.

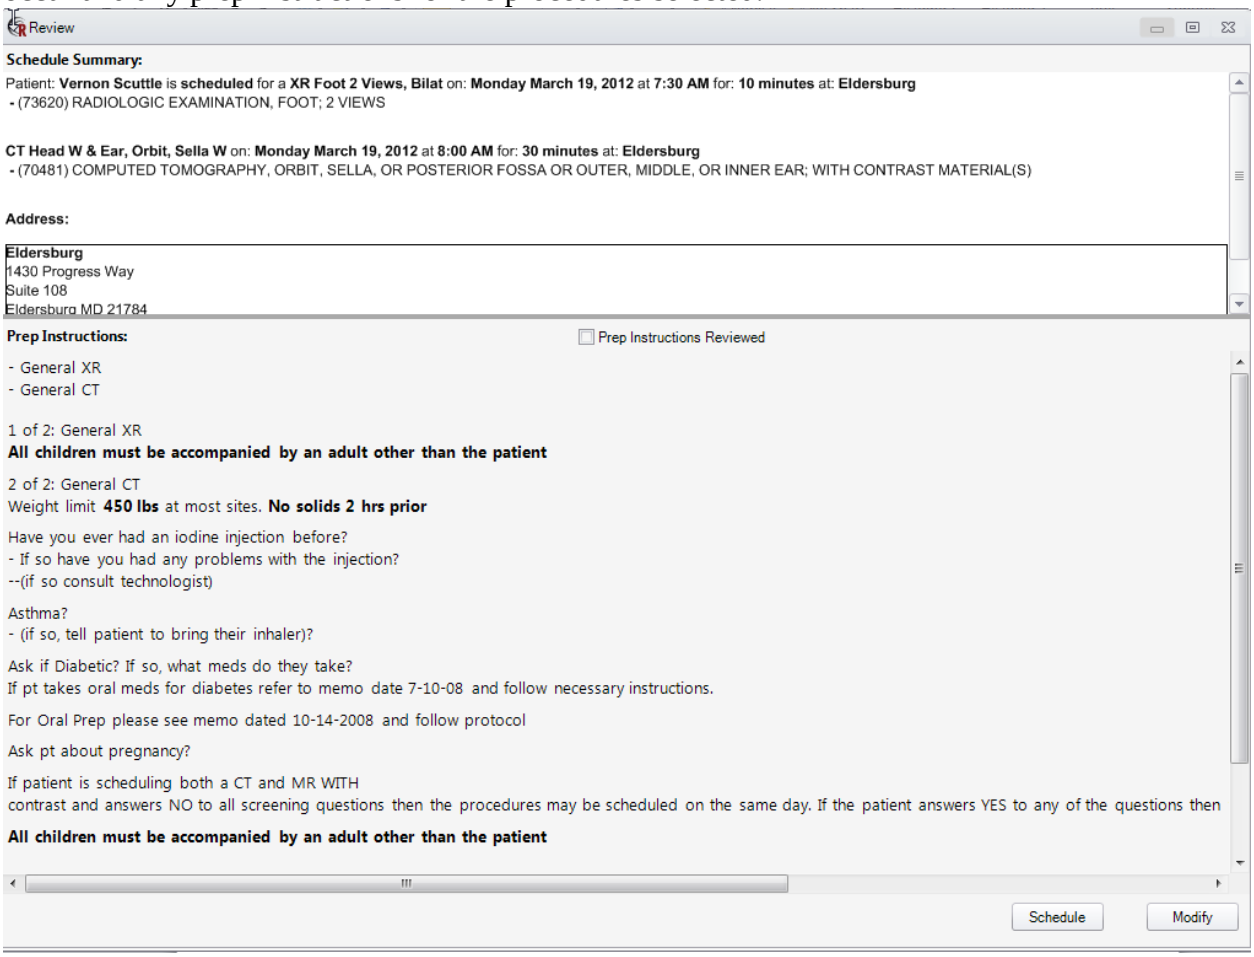

**Figure 4.3 – Schedule Review window**

The user can select the Schedule button to confirm, or select the Modify button to return to the Schedule Order data window to make any corrections required.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Scheduling Across Sites Warning

If the user is scheduling a multi procedure order and the rooms selected are (modality code) from different sites, the user will be prompted with an informative message with a Yes / No option to continue with the selection.

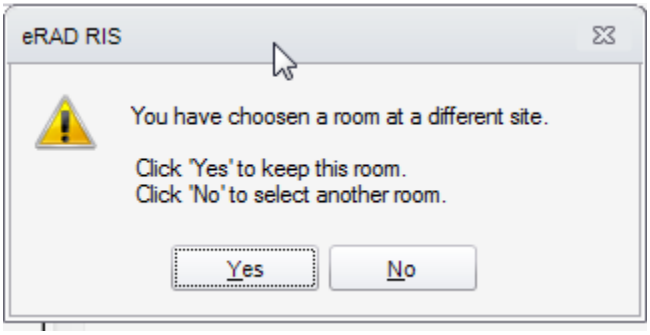

**Figure 4.4 – Scheduling across sites warning**

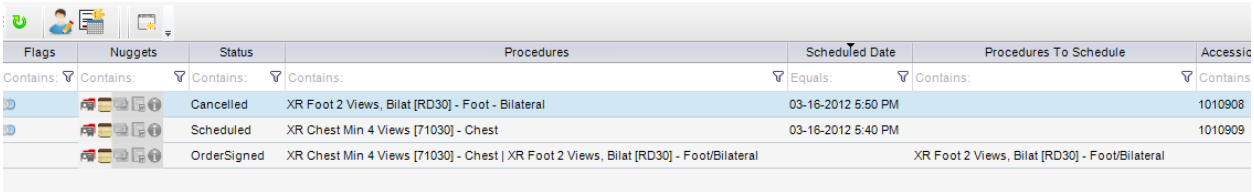
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Cancelling / Rescheduling Studies

The patient folder has a new column on the work list. The procedures to schedule column will now show the procedures that are to be scheduled from an order in the event that one of the procedures from an original order remains scheduled, arrived, completed, etc…

In the example displayed below, the patient had an order with 2 procedures scheduled. One of the procedures was cancelled and sent to the Orders to Schedule work list. The result in the patient folder is the Order Signed showing the original procedures for that order and the Procedures to Schedule from that order, the study that was cancelled, and the study that remained in schedule status.



| Flags | Nuggets | Status | Procedures | Scheduled Date | Procedures To Schedule | Accessio |
|---|---|---|---|---|---|---|
| Contains: | Contains: | Contains: | Contains: | Equals: | Contains: | Contains |
| | | Cancelled | XR Foot 2 Views, Bilat [RD30] - Foot - Bilateral | 03-16-2012 5:50 PM | | 1010908 |
| | | Scheduled | XR Chest Min 4 Views [71030] - Chest | 03-16-2012 5:40 PM | | 1010909 |
| | | OrderSigned | XR Chest Min 4 Views [71030] - Chest \| XR Foot 2 Views, Bilat [RD30] - Foot/Bilateral | | XR Foot 2 Views, Bilat [RD30] - Foot/Bilateral | |

**Figure 4.5 – Patient folder displaying results of scheduled order with one cancelled study**

The list below is some possible scenarios and the results from cancelled and aborted exams.

### Scenario #1-1:

A patient is scheduled for a US Bladder on Friday at 11:00 AM. The patient calls and cannot make the appointment but request a new time. The PSR cancels the Friday appointment and then searches for new appointment times. The PSR and patient together find an appointment for Monday.

The patient folder now contains:

- Friday's cancelled US Bladder.
- Monday's scheduled US Bladder

### Scenario #1-2:

The patient from Scenario #1 arrives for his Monday appointment. The PSR registers the patient and marks the study as "Patient Arrived". The technologist invites the patient to the imaging room and starts the procedure. The technologist discovers the patient bladder is not full enough and cannot complete the procedure at this time. The patient has other commitments and must reschedule this procedure for a future date. The Monday's procedure is "Aborted" and a new study is put on the pending orders worklist to be scheduled (re-scheduled flag can be used to show that this is a re-scheduling event).

The patient folder now contains:

- Friday's cancelled US Bladder.
- Monday's aborted US Bladder.
- Pending order for US Bladder

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

### Scenario #1-3:

A PSR calls the patient from scenario #1 to re-schedule the US Bladder. The patient decides not to follow up with the procedure and wishes to not have it completed. The PSR cancels the pending order (pending study).
The patient folder now contains:

- Friday's cancelled US Bladder.
- Monday's aborted US Bladder.
- Cancelled US Bladder pending order.

### Scenario #2:

A patient is scheduled for a CT Head on Tuesday at 11:00 AM and XR Foot on Tuesday at 11:45 AM. The patient arrives and is registered. The tech performs the CT Head on the patient. After the CT Head, the patient has to leave and cannot have the XR foot done at this time. The tech completes the CT Head and cancels the XR Foot and request that it be put back on the pending order work list.
The patient folder now contains:

- Tuesday's completed CT Head
- Tuesday's cancelled XR Foot
- Pending order by XR Foot

### Scenario #3-1

A patient is scheduled for a MR Knee on Friday at 9:00 AM, and XR Elbow on Friday at 10:00 AM. The patient calls a day before the exam and request that they be rescheduled. The PSR and the patient together reschedule then for Monday at the same times.
The patient folder now contains:

- Friday's cancelled MR Knee
- Friday's cancelled XR Elbow
- Mondays scheduled MR Knee
- Mondays scheduled XR Elbow

### Scenario #3-2

The patient from scenario #3 arrives on. The PSR notices that the script is for a MR Knee and XR Ankle. The PSR updates the XR Elbow to XR Ankle. The tech performs and completes the MR Knee. However, the patient unfortunately has to leave prior to starting the XR Ankle. The tech cancels the XR Ankle and returns it to the pending order worklist.
The patient folder now contains:

- Friday's cancelled MR Knee
- Friday's cancelled XR Elbow
- Monday's completed MR Knee

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

- Monday's cancelled XR Ankle
- Pending order for XR Ankle

### Scenario #4-1

Sorry for the bad example of procedures here.
A patient is scheduled for US Bladder and US Pelvis On Tuesday at 2:30 and 3:00 PM respectively. The patient arrives and is registered. The technologist starts both studies in the RIS. The tech cannot complete the studies as the patient bladder is not full. The technologist aborts both exams and sends them to the pending order worklist.
The patient folder now contains:

- Tuesday's aborted US Bladder
- Tuesday's aborted US Pelvis
- Pending order for US Bladder (under the skin, this technically belongs the same order as the US Pelvis).
- Pending order for US Pelvis (under the skin, this technically belongs the same order as the US Bladder).

### Scenario #4-2

A PSR calls the patient to reschedule procedures aborted in scenario #4. Together they schedule 2 studies for Thursday at 3:30 PM and 4:00 PM. The patient arrives and is registered. The tech starts both procedures. The tech completes the US Bladder. But a clinical decision is made that the US Pelvis is not needed so the procedure is aborted.
The patient folder now contains:

- Tuesday's aborted US Bladder
- Tuesday's aborted US Pelvis
- Thursday's completed US Bladder.
- Thursday's aborted US Pelvis.

### Scenario #5-1

A patient is scheduled for a mammo screening on Friday at 11:30 AM. The patient arrives, registered and the procedure is performed. The radiologist diagnoses a Birad-0, and recommends a follow-up US Breast.
The patient folder now contains:

- Friday's completed mammo screening exam.
- Pending order for US Breast. The study is also visible in the mammo follow-up worklist, but not visible in the generic pending ordered worklist.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

### Scenario #5-2

A PSR calls the patients to schedule US-Breast follow-up. Together they schedule an appointment for Wednesday at 10:45 AM. The patient does not show for Wednesday morning appointment. The appointment is cancelled and is marked to be rescheduled.
The patient folder now contains:

- Friday's completed mammo screening exam.
- Wednesday morning cancel US Breast
- Pending order for US Breast. The study is also visible in the mammo follow-up worklist, but not visible in the generic pending ordered worklist.

### Scenario #5-3

A PSR calls the patients to re-schedule US-Breast follow-up. Together they schedule an appointment for Thursday at 10:45 AM. The patient arrives and the procedure is performed.
The patient folder now contains:

- Friday's completed mammo screening exam.
- Wednesday morning cancel (no-show) US Breast
- Thursday morning completed US Breast.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Unknown Carrier Work Flow

Needed with the eRAD RIS was a method to add Insurance Carriers that did not already exist within the application at the time of scheduling.

In build 35 users will have the ability to add unknown carriers. Within the existing Manage Policies window, if a Carrier name entered does not match an existing carrier, the user can add the unknown carrier from the Carrier Search window.

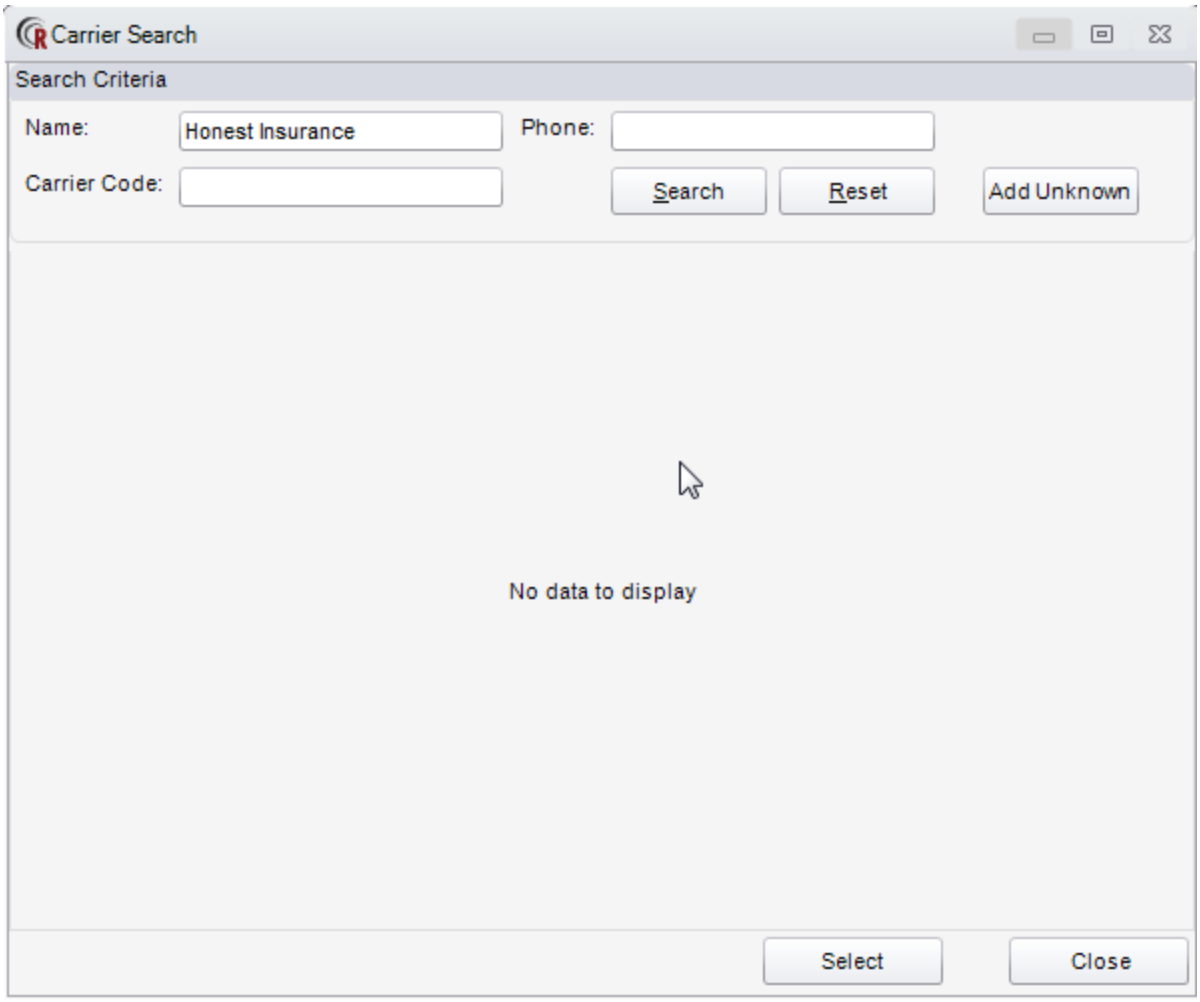


**Figure 4.6 – Carrier Search window didn't find a match**

Selecting the Unknown Carrier button in the above figure will open the Add Unknown Carrier window

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

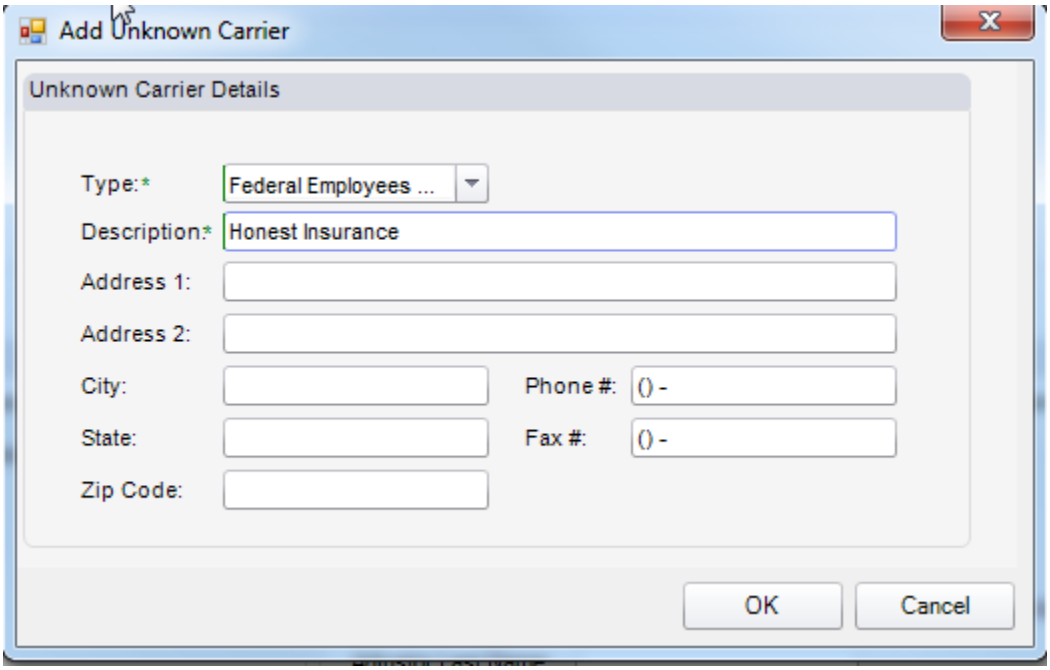

**Figure 4.7 – Add Unknown Carrier window**

After scheduling the above example, the entries with unknown carriers will be added to the "Unknown Reconciliation WL" (formally known as the "Unknown Referring WL") and will contain Unknown Carriers and Unknown Referrers as indicated under the columns for each in the work list

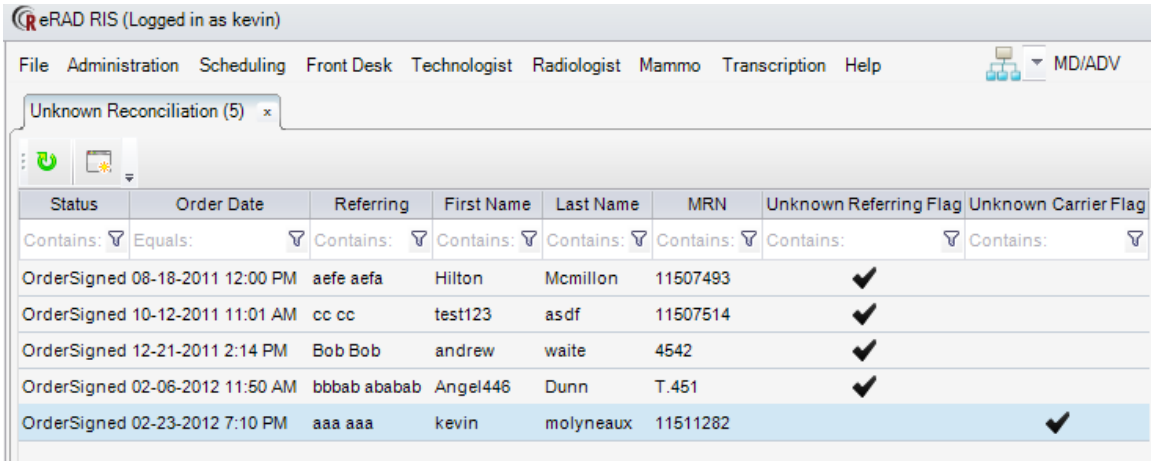

**Figure 4.8 – Unknown Reconciliation work list**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Double clicking on the row with the "Unknown Carry Flag" checked will open edit order and you can go to the insurance grid, right clicking on the row to reconcile the unknown entry. The Reconcile Unknown menu item is only available to users who have admin access to edit the carrier lookup table. Orders listed in the Unknown Reconciliation WL can only be accessed when the status of the order is OrderSigned. Once the study is scheduled and statuses past scheduled in the work flow, the Unknown Carrier can be reconciled from any data window that has the Manage Policies data pane, included View / Edit from the patient folder and Edit Billing from the Billing Exception work list.

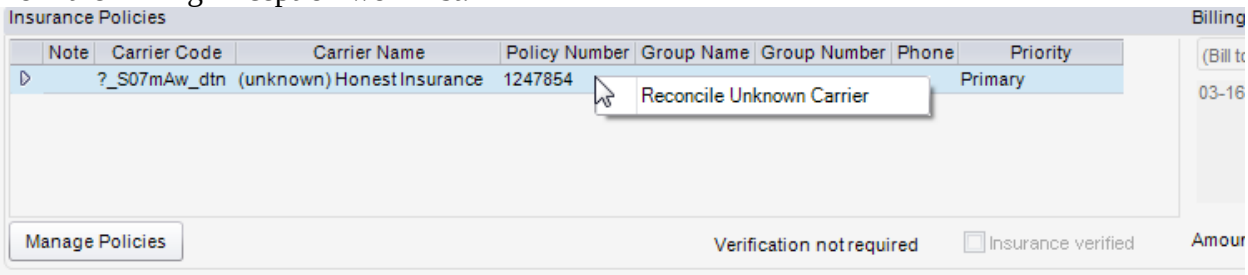

**Figure 4.9 – Reconcile Unknown Carrier**

In the "Reconcile Unknown Carrier" screen you can enter a code for the carrier and chose "Make Known" or you can search for an existing carrier, which may have been added but was not found earlier when scheduling the patient.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

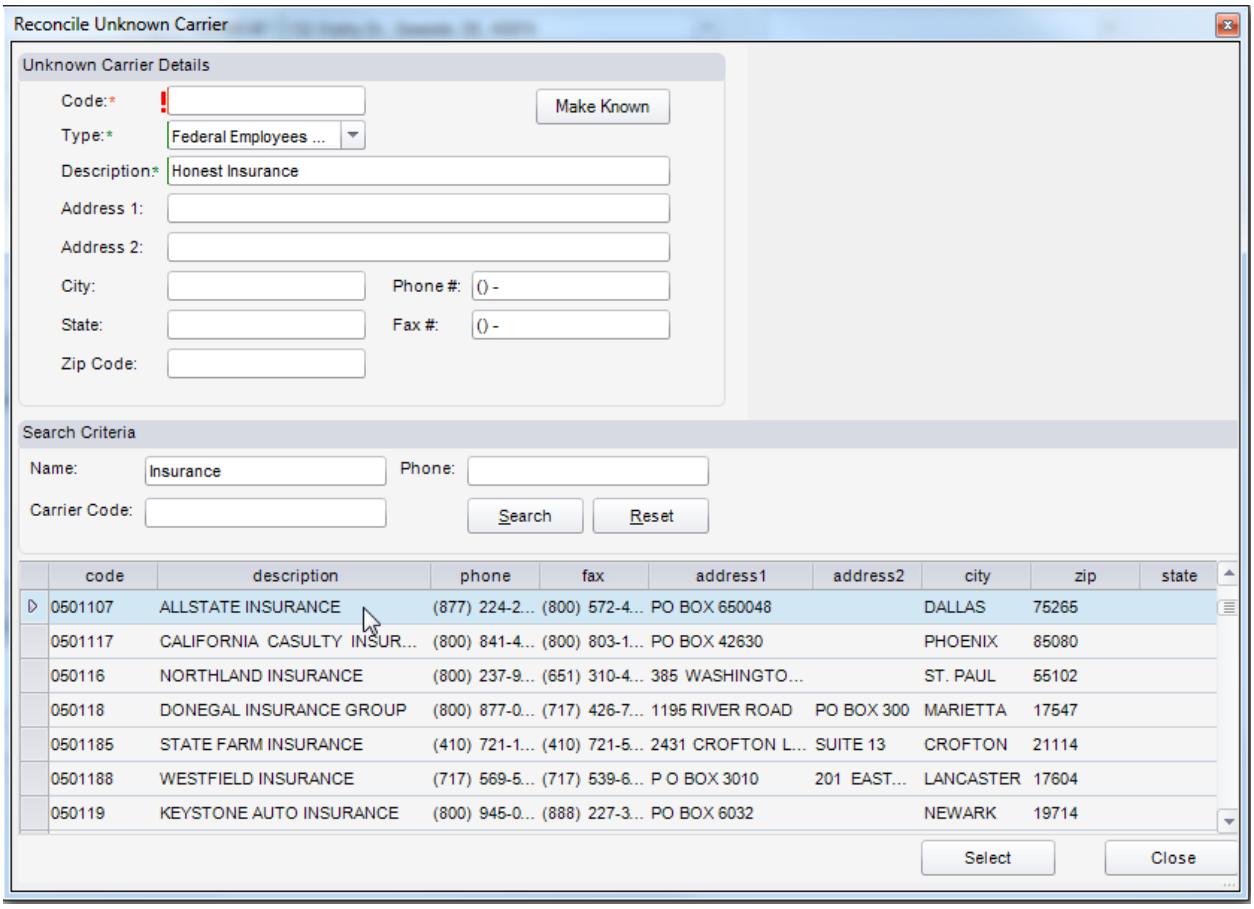

**Figure 4.10 – Reconcile Unknown Carrier window**

Validation was also added so that users can not add carrier codes that start with '?', which is reserved for the system generated unknown carrier codes.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Self-Pay Feature

The new Billing Method controls are located to the right of the Insurance Policies grid.

A new drop down box exists for Billing Method. It will be defaulted to "Bill to Insurance"
The PSR can select the dropdown, and populate 1 of 4 other values, which are driven from a new lookup table (l_bill_to_types), consisting initially of: 1. Self pay no discount 2. Self pay prompt pay discount 3. Self pay medical hardship 4. Self pay manager override)
There is a small notes section which becomes enabled when any self pay option is selected from the drop down list box. This is in fact the Billing Notes column.
The existing amount to collect textbox would be where we put in the quoted amount for the self-pay.
If the PSR later selects an insurance carrier, the billing method box is reset to "bill to insurance", and the box and notes are then disabled. To re-enable them, the PSR my un-select the insurance carrier.
The new controls are controlled by a permission "Clinical.BillingMethod"
Also the alert when no insurance is added has been removed if a self-pay option is selected.

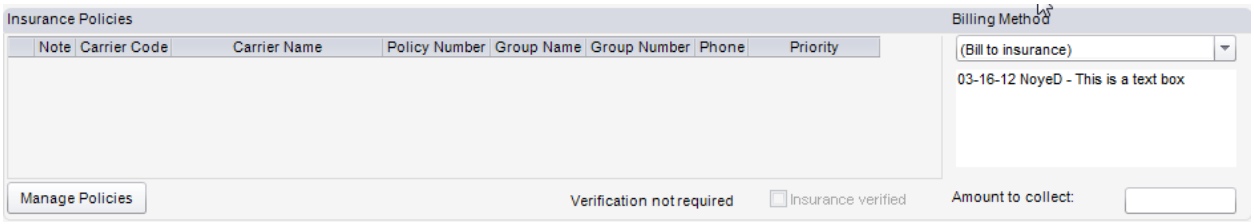

**Figure 4.11 – Billing Method data pane, list box and notes billing notes text box**

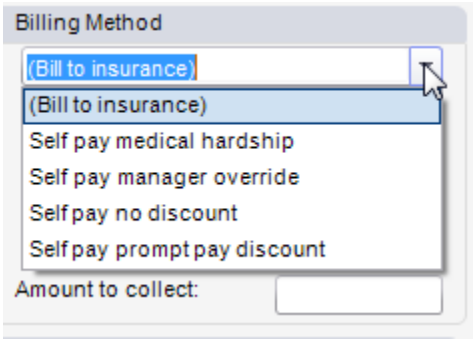

**Figure 4.12 –Billing Method list box values**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Meaningful Use Wizard

A new ICON has been added to the Patient Visit tab. This ICON will open a new Meaningful Use Wizard dialog where the users can check an item and that item will be added to the grid on the patient visit tab.

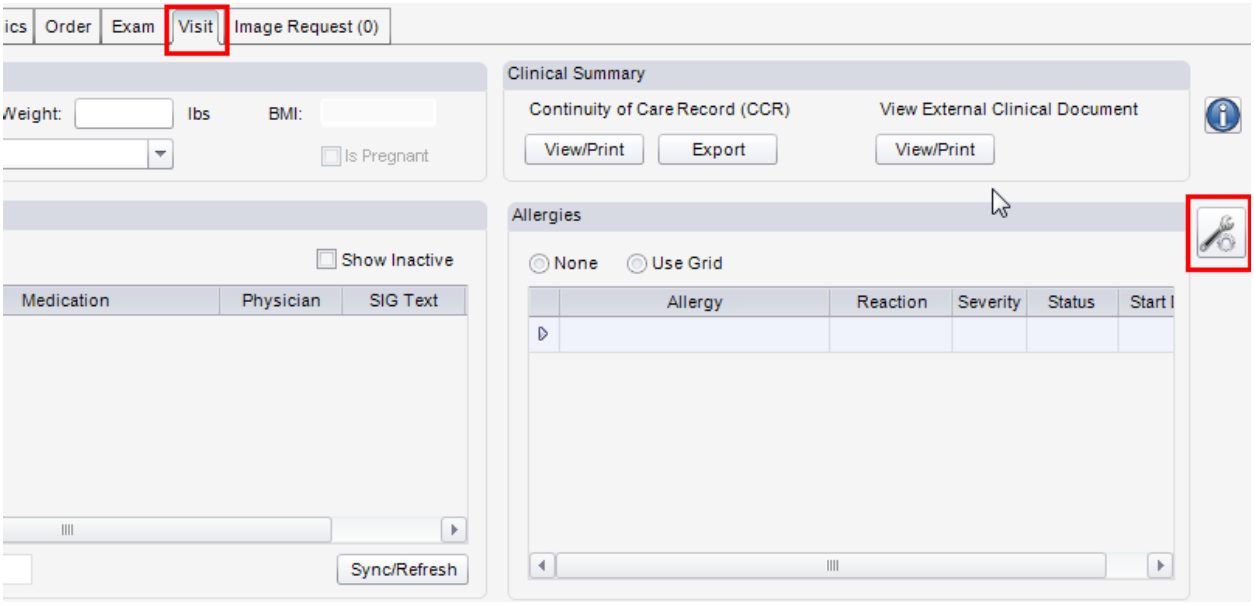

**Figure 4.13 – Meaningful Use Wizard button**

The Meaningful User Wizard button is controlled by the access string MU.WizardDialog. User groups must have this value set to full in order to see the button.

Medical History – The medical history grid allows the user the ability to have the same icd-9 code show multiple times however, we don't allow the dates of an icd-9 code to overlap. If the user selects the same icd-9 code only one can be active at a time (we throw an error saying overlapping dates not allowed). We added code that forces the user to select a start date for active icd-9 codes and we added code to force an end date for inactive or resolved icd-9 codes. This is needed so we can use the mu wizard to activate or inactive the correct code in the list.

Allergies – The allergy shows in the grid only once. Therefore you have an allergy or the user does not have the allergy.

Medications – Because we are using NewCrop medications can show in the list multiple times. We don't have the concept of start and end dates with medications so the way we use the meaningful use wizard is as follows. If the user clicks the wizard button we show all active drugs by checking the appropriate mediation (no matter if entered in ris or NewCrop). If the user

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

unchecks the checkbox we make all medications entered in rRIS (ris_entered_flag = Y) inactive. We don't inactive the medications entered in NewCrop because the sync button will control the status of the medication. If the user checks a medication in the wizard we add a new row to the grid.

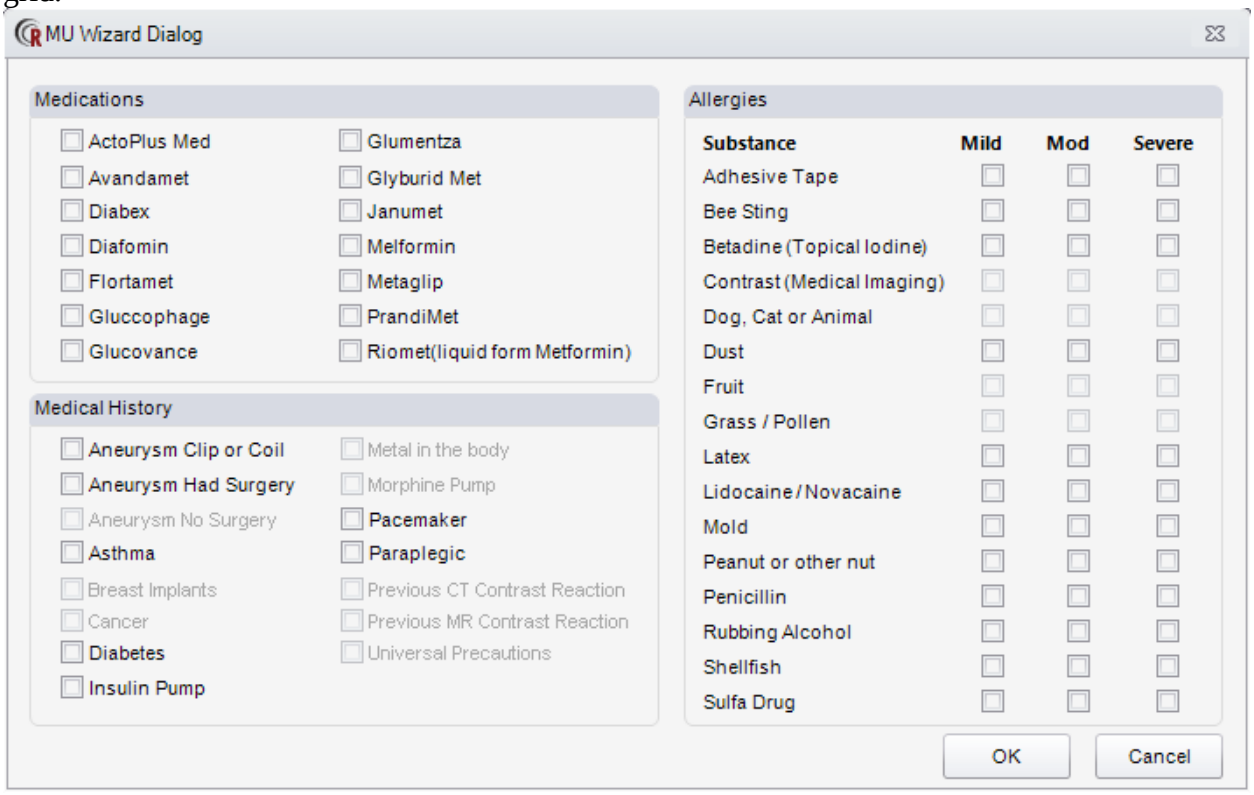

**Figure 4.14 – Meaningful Use Wizard window**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Hide New Crop Access

Added an access string “Clinical.NewCrop”, which if set to something other than Level.Full will prevent any of the newcrop features from being accessible, which means the button on the PatientInformation and the update button on PatientDrugs will be hidden.

The permission controls the visibility of the buttons and the syncing with New Crop.

## Control Access to Proxy Signing Feature

Add the access string: Clinical.UserPreferences.ProxySigning

When set to None, the proxy group box in the user prefer screen will be hidden. If its set to any other level other than full the proxy group box will be disabled.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Notes Fields - User Identifier

In previous builds the Notes field would capture the user's initials. In build 35 it will now display the last name and first initial of first name. The notes history will also display the same.

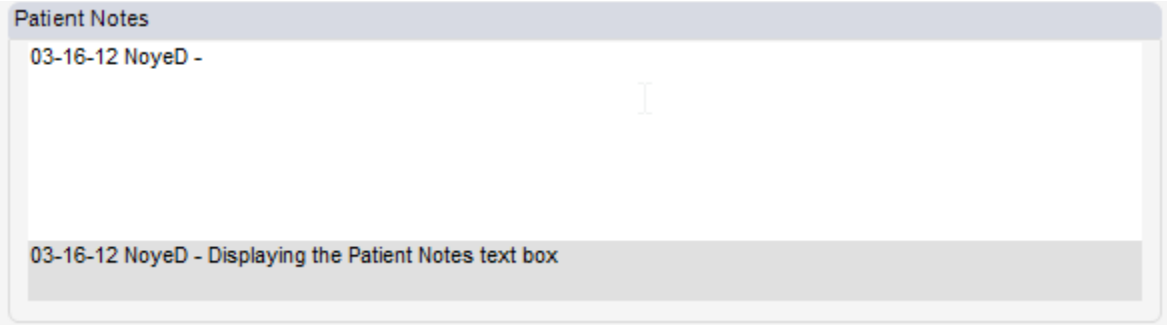

**Figure 4.15 – Notes field displaying new User Identifier**

## Billing Exception Additions

New exceptions added:
**Patient**
- Full name
- Address
- A contact phone number

**Insurance**
- Policy holder relationship
- Name
- Date of Birth
- Address

**Responsible party**
- Relationship
- Date of birth
- Gender
- Address

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## MWL Enhancements

DCM4CHEE supports coercion of inbound messages via xsl stylesheets, meaning that we can make modifications to the passed in messages before they are acted upon.
For MWL queries, there is a base stylesheet that is shared across all queries in addition to optional stylesheets that are specific to a particular calling AE Title.

The common stylesheet now coerces the dicom tag for study status (00400020) to be ARRIVED\STARTED\DISCONTINUED. This will filter the worklist to studies of only these statuses. In addition, we only send HL7 to dcm4chee when the status is arrived, started, discontinued, exam done, or cancelled. Note that scheduled studies are NOT sent to dcm4chee. The stylesheet also uses the current date if no date, accession number, or patient id is provided, otherwise it will use the date provided which could possibly be none.
In order to support the modality_x_modality requirement, a separate xml file has been created in order to contain the groupings. For each calling AE Title, it is required that all AE titles to be returned in the worklist are listed, including the calling AE Title itself.
The following example specifies that a Calling AE Title of CT1EL will return all studies scheduled under either CT1EL or MR1FH. Note that this example is somewhat nonsensical.

```
<modality_x_modality>
        <modality calling_ae_title="CT1EL">
                <x_modality ae_title="CT1EL" />
                <x_modality ae_title="MR1FH" />
        </modality>
</modality_x_modality>
```

If no modality node exists with the calling AE Title sent in the query then the query will be limited to only the calling AE Title.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Document Distribution Enhancements

For busy jobs, I put a delay in of 10 minutes, hardcoded.
A catch-all else block to handle all failures that were not previously being checking for was added. These errors included “Fax Transmission Error” and “Disconnected”. This will send these jobs to error status.

For busy jobs, a delay in of 10 minutes was added (hardcoded for this release, may look at configurable value in the future)

On a manual retry, we’ll now clear the fax no answer log.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Management Reports – Sales

The Sales Team had requested management report. Below is a list of 6 new management reports designed specifically for the Sales Team.

For a list of all current designed management reports, please see the rRIS Core Management Reports.pdf file that can be accessed on the RADNET Wiki

| | **Total** | | | **0** | **1** | **0.2** | **1** | **0.8** |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Limit Number of Relevant Priors

Added a system configuration setting called “MaxRelevantPriors”, which limits the number of relevant priors shown in the PACs “sorted by ranking”.

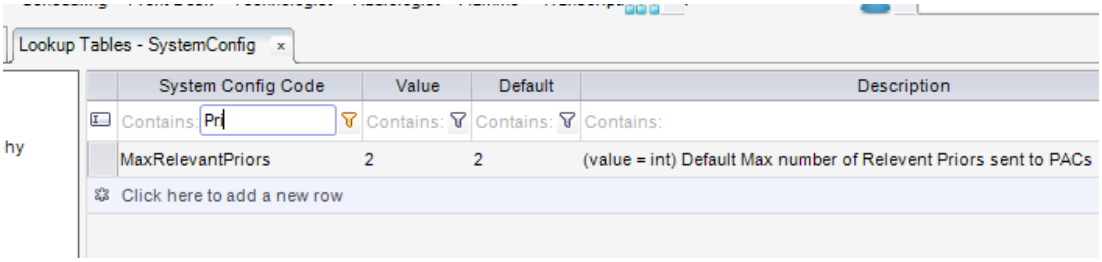

**Figure 4.16 – MaxRelevantPriors system config entry**

A user can modify their personal MaxRelevantPriors via user preferences.

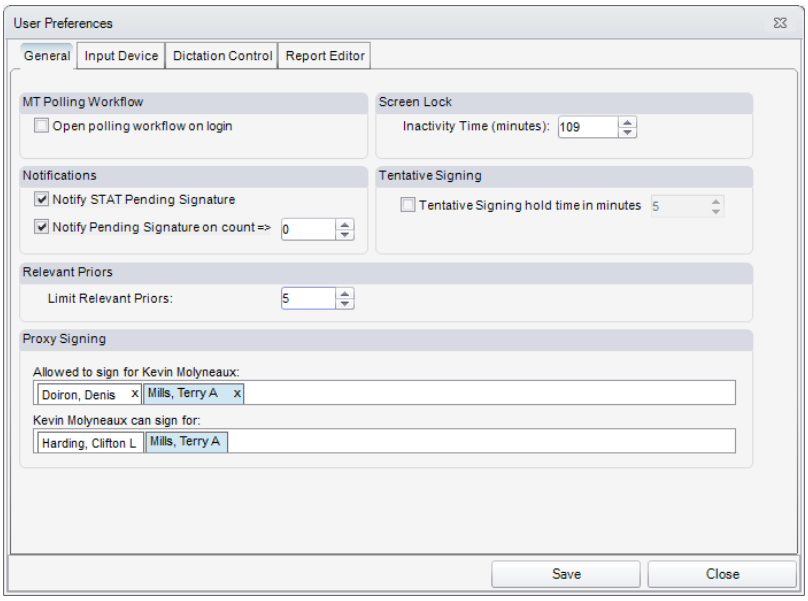

**Figure 4.17 – MaxRelevantPriors User Preference**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

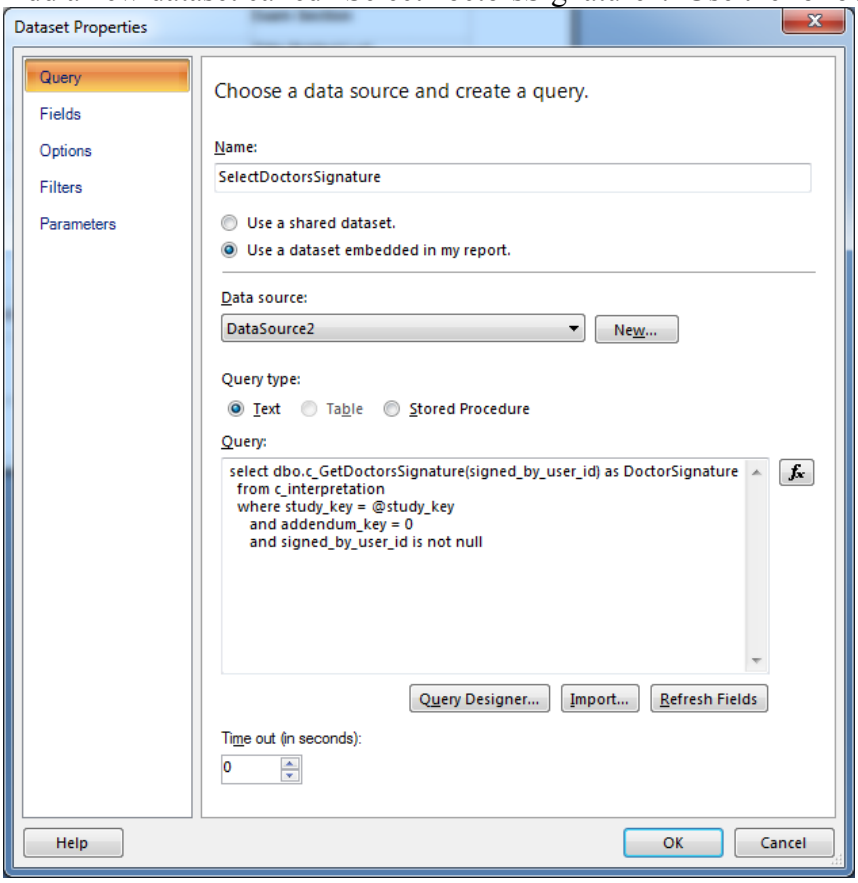
## Radiologist Written Signature on Reports

To implement, you will need to add a new scan document type that is associated to the person level. This scan document type must be referenced in the DoctorsSignatureScanType system configuration setting.
**The default DoctorsSignatureScanType value is "DoctorsSignature".**
Also, you will need to update your version of the Diagnostic Report Body and Diagnostic Report Addendum reports in SQL Server Report Server. If you are using the "SampleDiagnosticReportBody" and the "SampleDiagnosticReportAddendum", then the signature feature is automatically included. Please feel free to reference the sample diagnostic report template for more implementation details.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

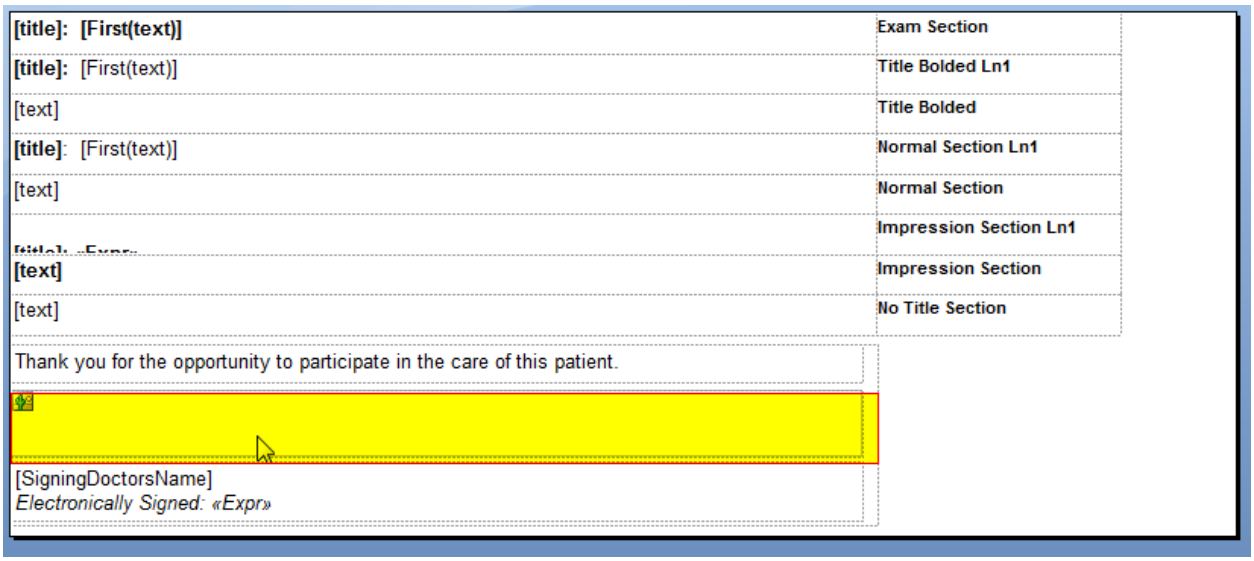
## Implementation instructions for the original report:

Open the diagnostic report template that the system uses for report body.
Add a new dataset called “SelectDoctorsSignature”. Use the following properties.

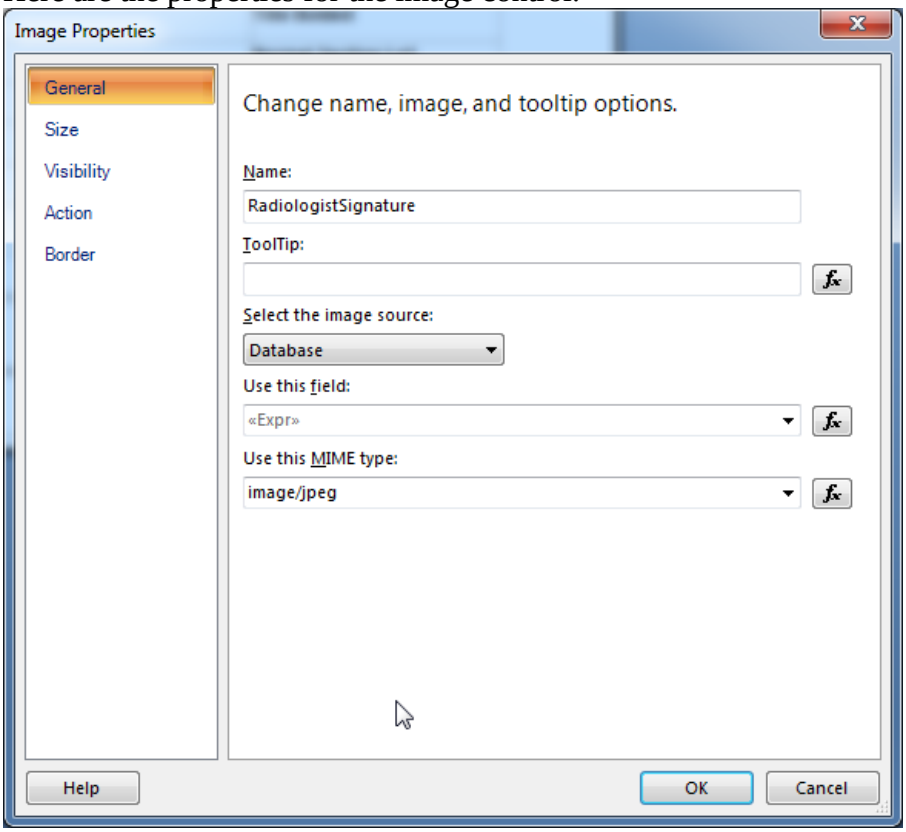


Add a new image control to the area you want the signature to appear. We added the image control just above the doctor’s name in the sample template.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

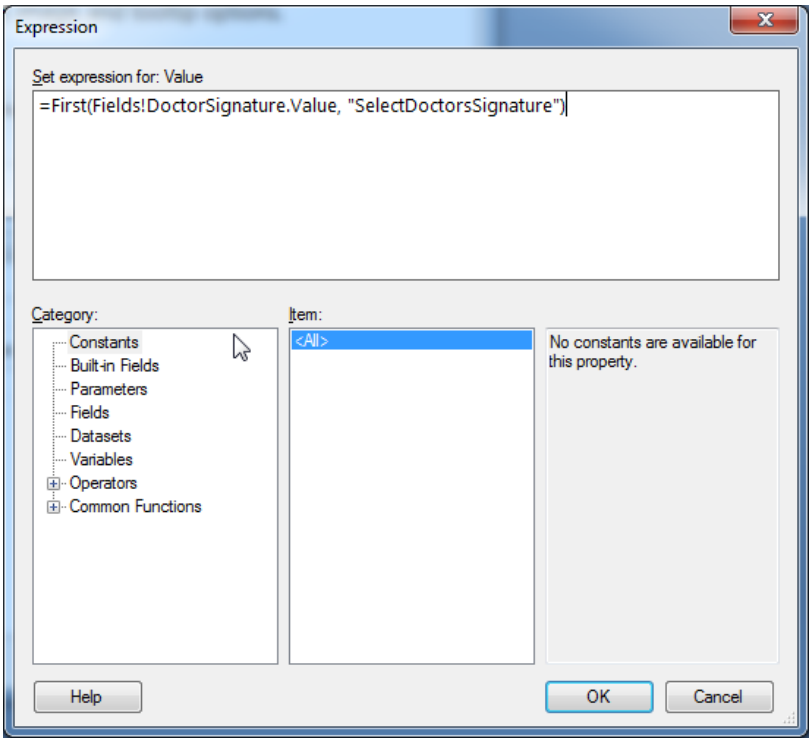


Here are the properties for the image control.

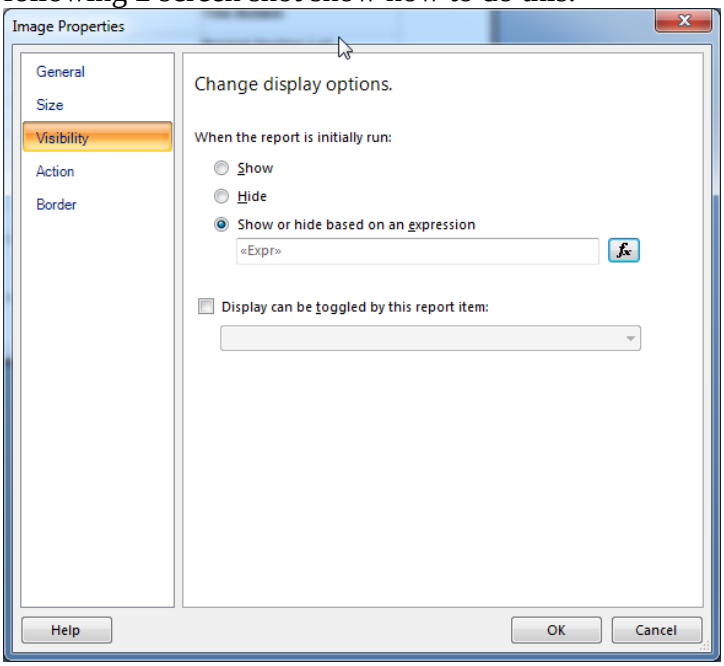


In the "Use this field" we used the following:

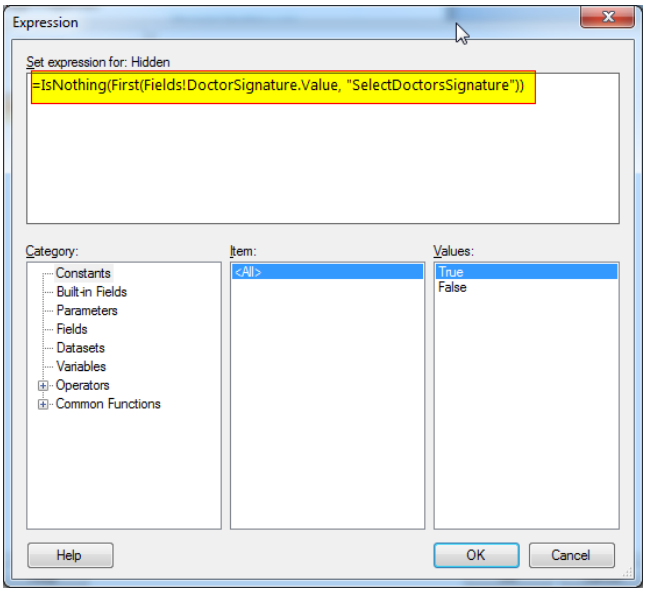
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.



For visibility, we will hide the image control if there is no signature on file for the doctor. The following 2 screen shot show how to do this.



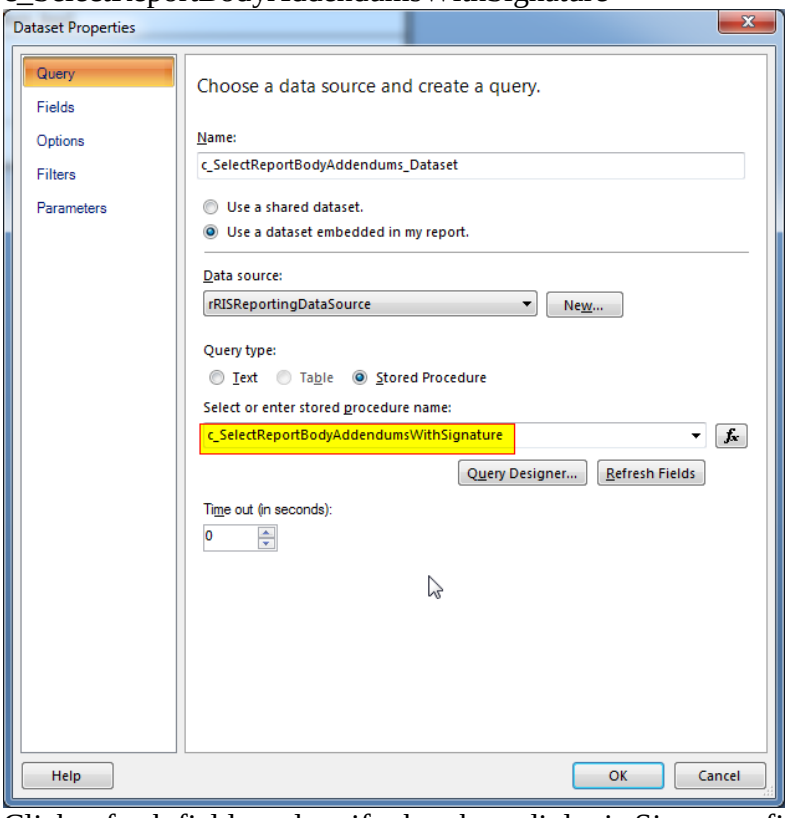
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

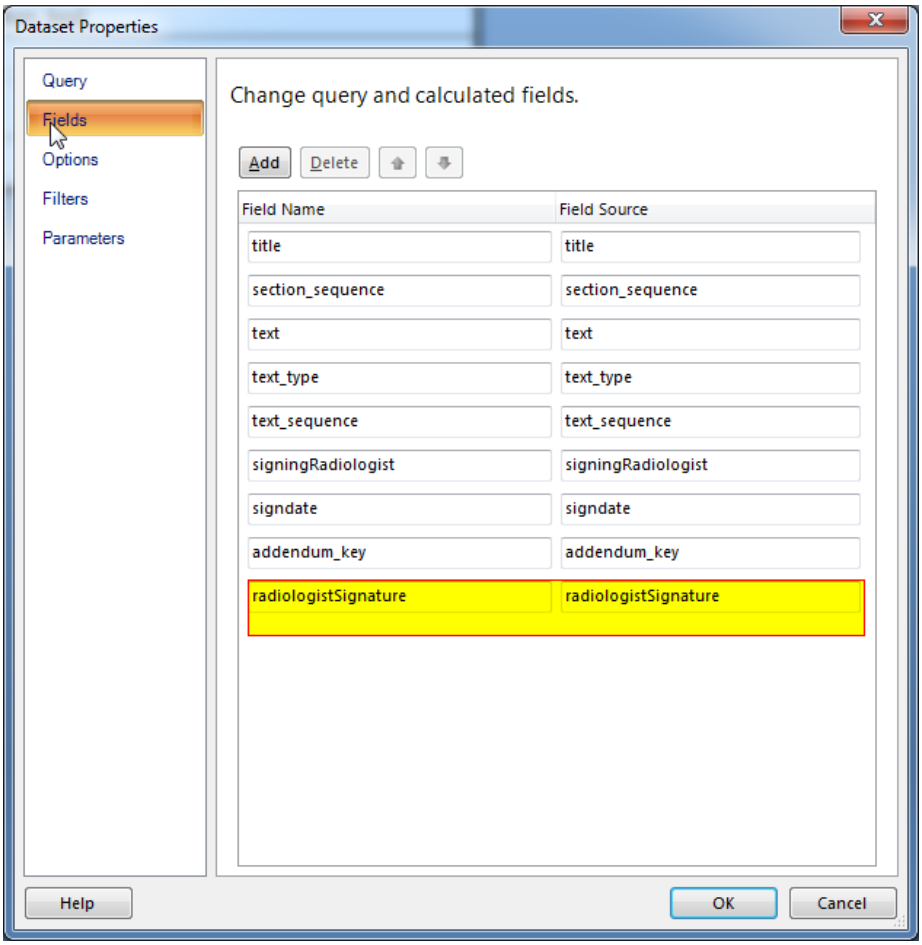
**Implementation instructions for Addendums:**

Open the diagnostic report template that the system uses for report addendums.
Change the c_SelectReportBodyAddendum dataset to point to a new stored procedure call c_SelectReportBodyAddendumsWithSignature

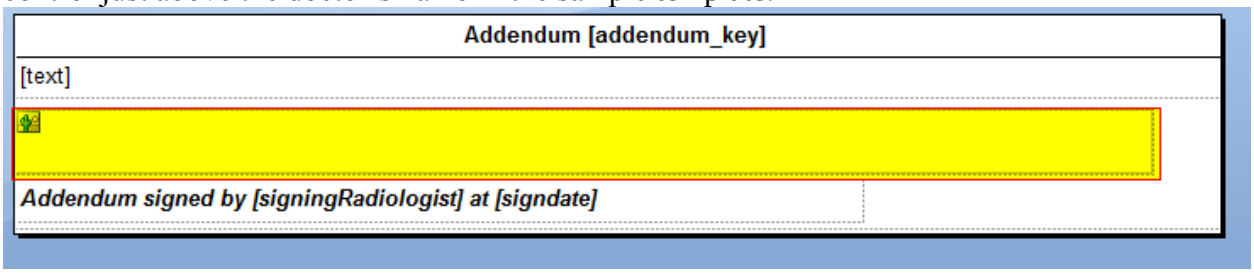


Click refresh fields and verify that the radiologistSignature field is not populated in the Fields list.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

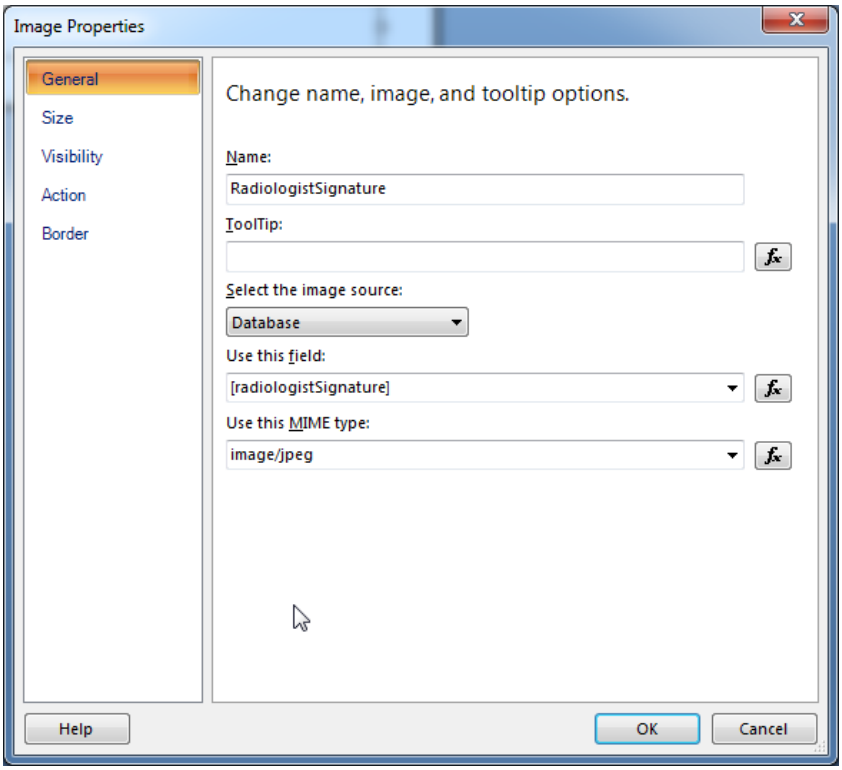


Add a new image control to the area you want the signature to appear. We added the image control just above the doctor's name in the sample template.

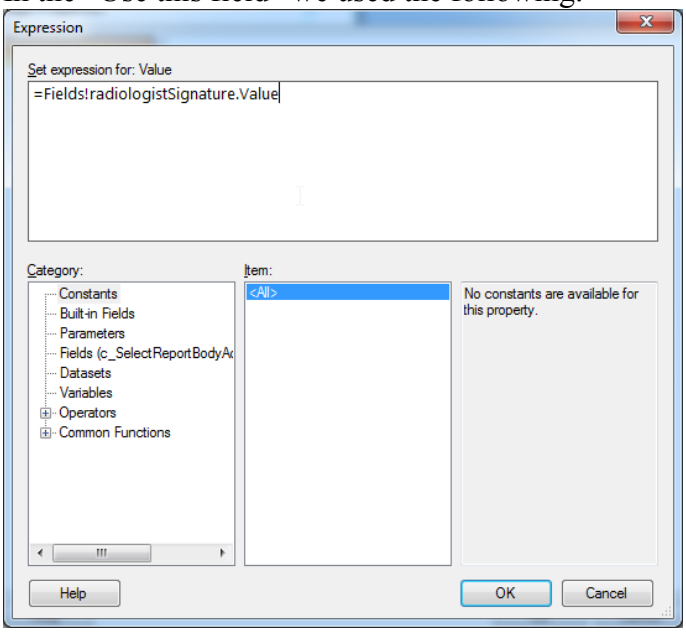


Here are the properties for the image control.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

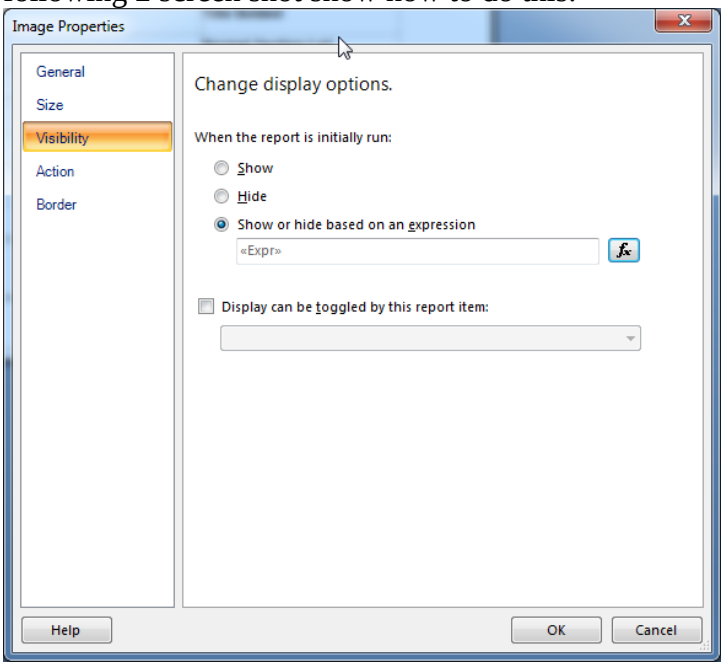


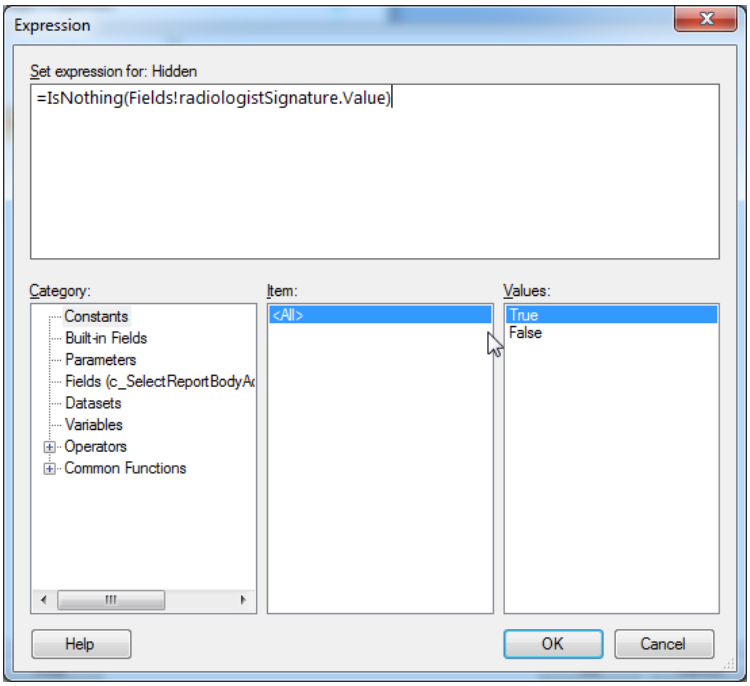
In the "Use this field" we used the following:



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

For visibility, we will hide the image control if there is no signature on file for the doctor. The following 2 screen shot show how to do this.





No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Pending Edit Work List

A new work list called Pending Edit has been added for the Radiologist role. This new work list will contain exams in Report Drafted items dictated by the current logged in Radiologist. The columns in the work list are the same as the Pending Signature work list.

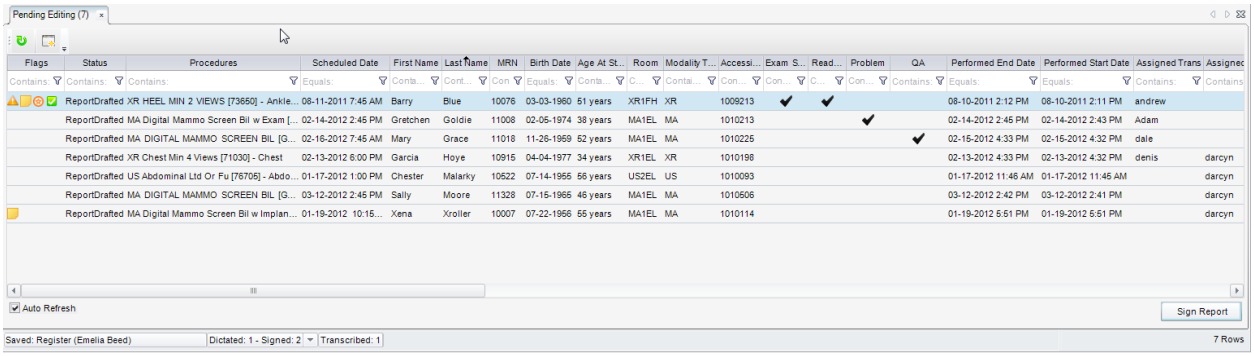


**Figure 4.18 – Pending Edit work list**

The Radiologist can open the sign reports data window from the button in the lower right, double clicking on the selected work list row, or choosing from the options from the context menu displayed in the figure below.

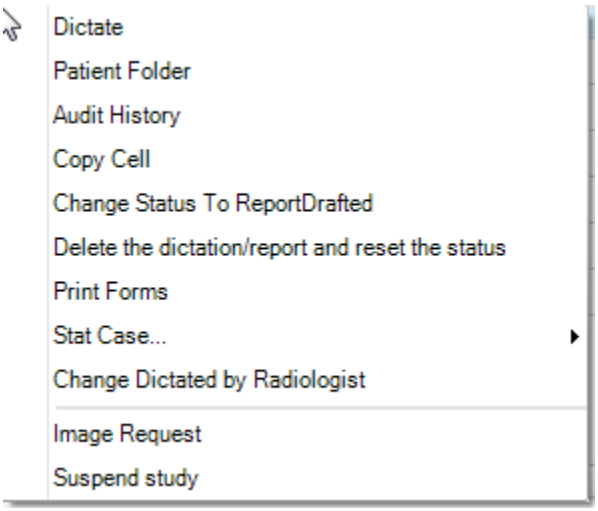

**Figure 4.19 – Pending Edit context menu options**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Reporting - Message Prompt for Missing or Empty Required Sections

When the "Sign" or "Transcribe" button is pressed we will run validation against the report and compare it to the Document Model to make sure all required sections are accounted for. If they are not, the user will be prompted with a message box. The user will have to correct the issues before they are able to sign/transcribe the report. If the user needs to save without correcting the issue(s), he will have to save using another button, like suspend for example would be the perfect example. Or perhaps a Radiologist might want to send it to a transcriptionist to make the corrections, which he could do by using the appropriate button under the submit button drop down.

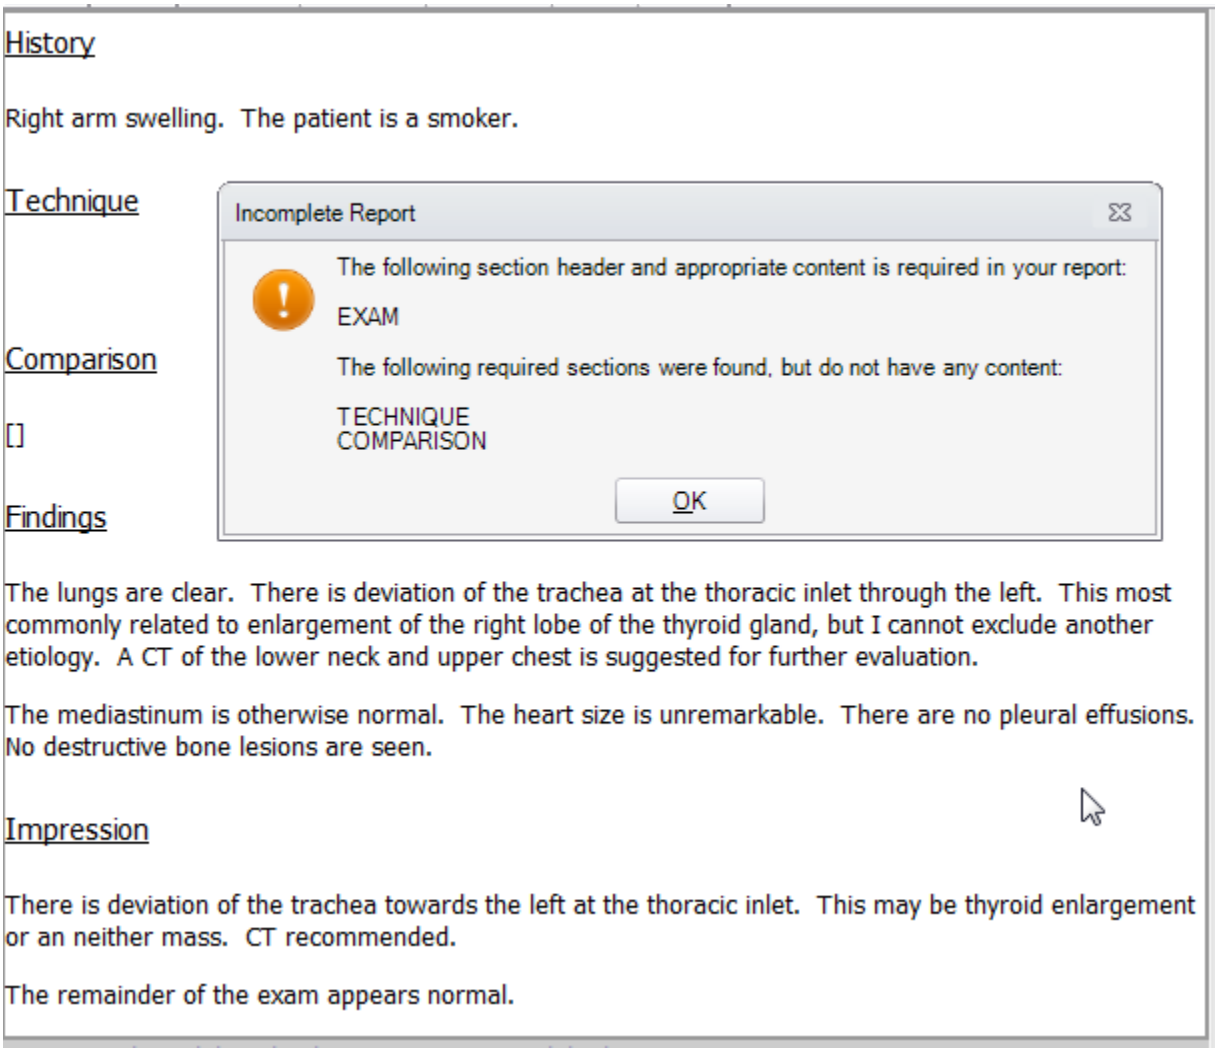

**Figure 4.20 – Incomplete Report Message Prompt**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

This new feature is controlled by two new config values that can turn on or off parts of this feature.

- ReportingEnforceEmptyRequiredSections
- ReportingEnforceMissingRequiredSections

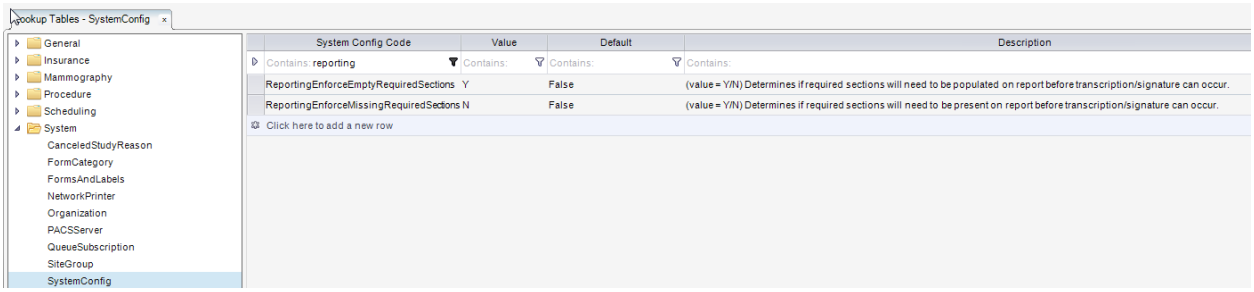

**Figure 4.21 – Incomplete Report new config settings**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Reporting – Sign Oops (Delayed Release of Report after Signing)

**NOTE: The screen shots and explanation of the feature below reference "*Tentatively Signed*". This terminology will be replaced in the next build and captured in the release notes of the next build.**

Another new feature in build 35 is the Sign Oops feature. This feature is a configurable value controlled first on the client side system config settings.

- The feature can be turned on/off from the system config – TentativeSigningEnabled with possible options of Y or N
- The "MaxAutoSign" config setting determines the max allowed time for a study to sit in "TentativelySigned1".
- The user preference pane allow the user to set if they want to use this feature or not, and also what they want their time period to be, which can be set up to the "MaxAutoSign" value. And as low as 1 minute.

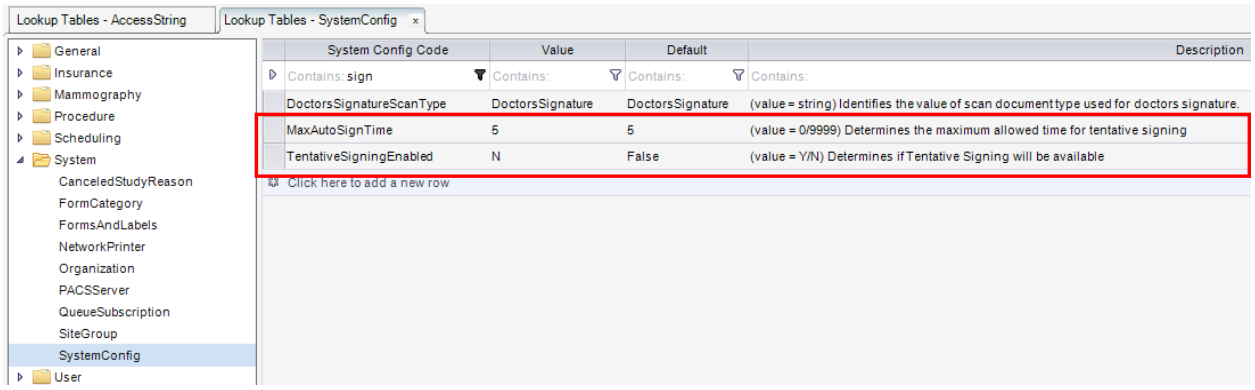

**Figure 4.21 – System config options for Sign Oops feature**

Access to the work lists, user preference and the option to release the report before the configured time has elapsed are controlled by the following access strings

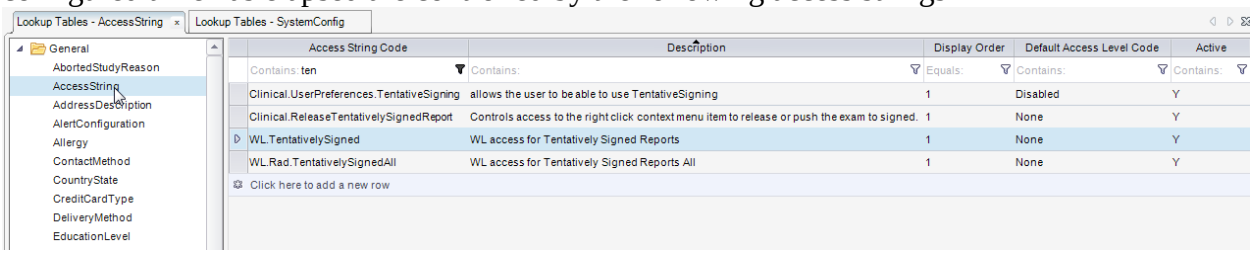

**Figure 4.22 – Access strings for Tentatively signed features**

- WL.TentativelySigned – Controls the access to the Tentatively Signed work list. This would be for the logged in user

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

- WL.Rad.TentativelySignedAll – Controls access to the All Tentatively Signed work list. This would be for an Admin to see all users exams in Tentatively Signed status
- Clinical.UserPrefernces.TentativelySigning – Enables the User Preference
- Clinical.ReleaseTentativelySignedReport – Controls if the user will have the option to release the exam early from Tentatively Signed work list/status before the designated time specified in the user preference

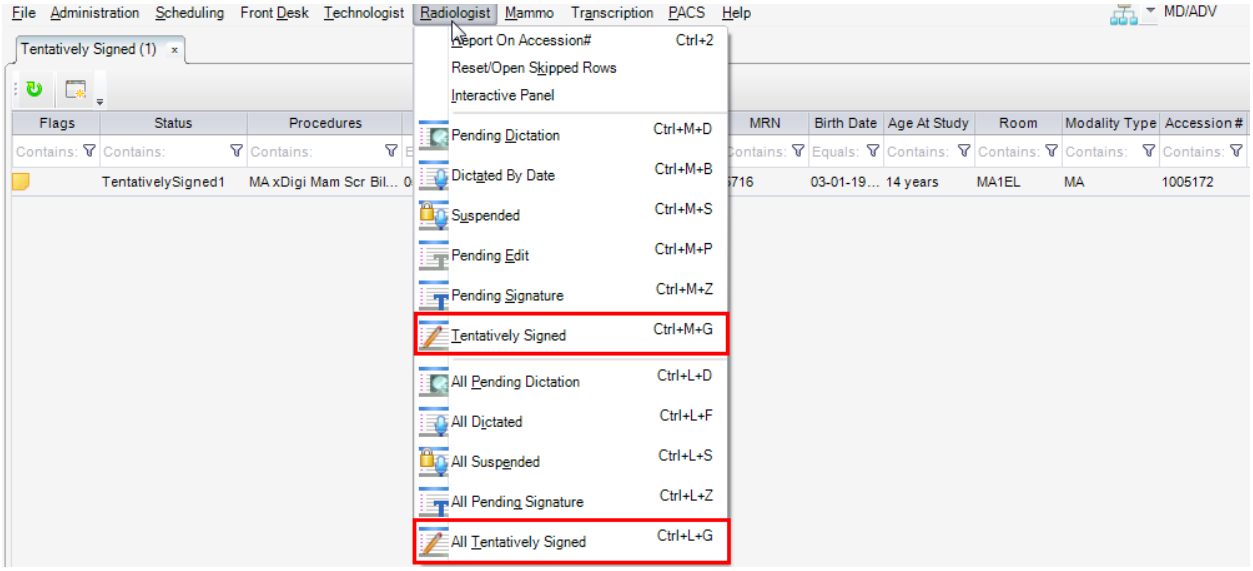

**Figure 4.23 – Tentatively Signed work list and Work list access from the Radiologist menu**

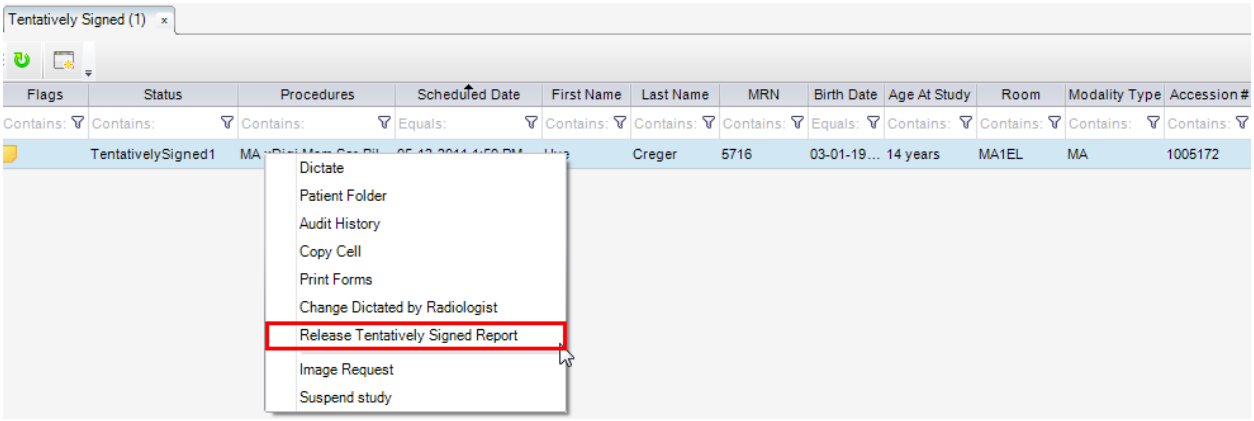

**Figure 4.24 – Context menu option to Release Tentatively Signed Report**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

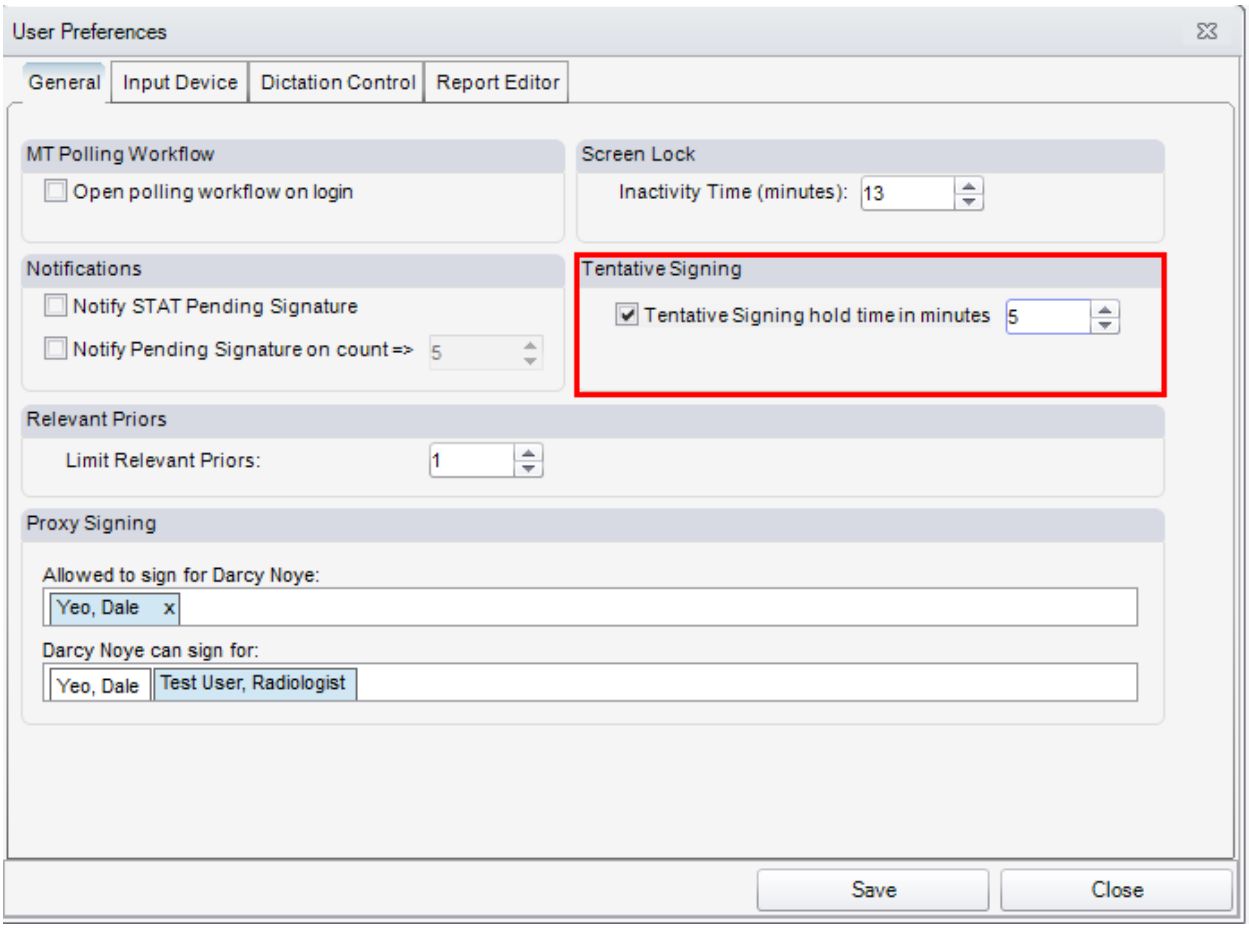

**Figure 4.25 – Tentatively Signing User Preference**

NOTE: The user preference value for "Tentatively Signing hold time in minutes" cannot exceed the system config setting value specified for "MaxAutoSignTime".

Exams that are in the Tentatively Signed work list can be opened in the dictate window. The user will have access to the same options / controls within the dictate window. The exam can be submitted to MT again, putting it in a status of Report Signed. The exam can be signed again, which would put the exam back in Tentatively Signed status, starting the time to be held in this status over again. The exam can be suspended, and the exam would then be in the Suspended work list. Closing the data window would return the exam to the Tentatively Signed work list.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Reporting – Remove Field Markers for Document Distribution

In previous builds the Radiologist or Transcriptionist could not submit or sign a report if the report had field markers "[" or "]" still in the report, requiring the user to remove all instances before the job could be submitted.

In build 35 the use can now submit jobs with the field markers still existing in the report. Going forward the "[" and "]" will be removed before the report is previewed or sent for distribution. When viewing the report via the Data Nugget, the field markers will still be present.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Reporting – Maintain Field Markers User Preference

A new user preference has been added for maintaining field markers within the report. If the User Preference is not selected, when the user is completing a report that has the predefined field markers, once that field is selected and it is dictated interactively or a value is manually entered in that field, the field marker will be removed.

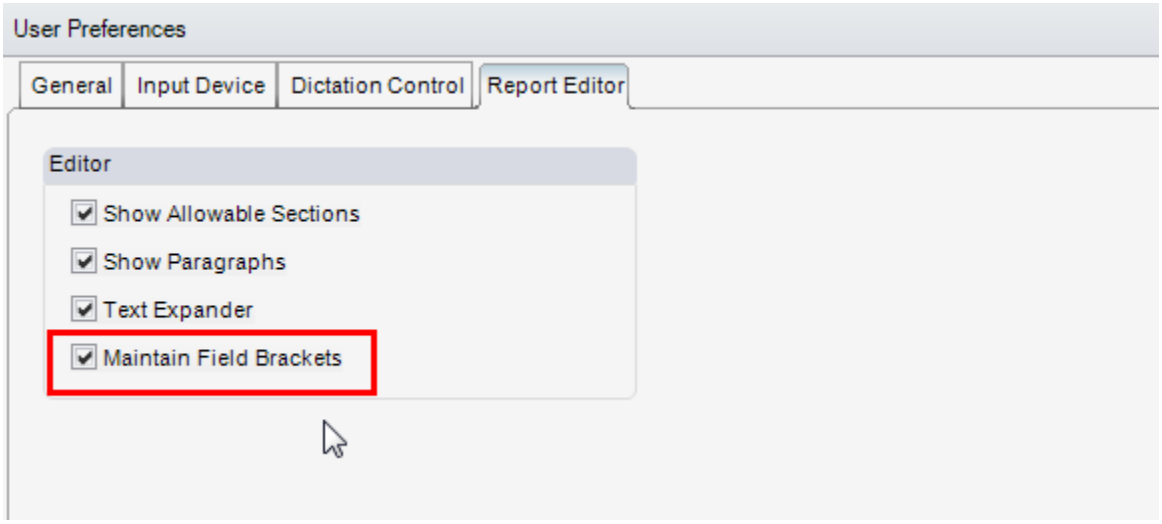

**Figure 4.26 – User preference "Maintain Field Brackets"**

The alternative is having the user preference Maintain Field Brackets enabled. In this case when the user enters a value in a predefined field, the field brackets are retained.

The access string Clinical.UserPreferences.MaintainFieldBrackets controls access to the user preference.

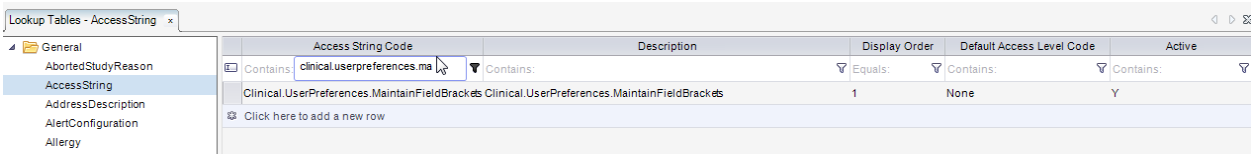

**Figure 4.27 – Access string Clinical.UserPreferences.MaintainFieldBrackets**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Reporting – Insert Normal and Default Templates

When opening an exam for dictation, the templates that are available to the user are based on the naming convention of Worktype Code = Procedure Code. We do an exact match on these fields to load the default, shortlisting the templates of any items that precede the work type code.
For example for procedure code: 34560

- Worktype code 34560 will load as a default and will be available in the template picker.
- Worktype code 34560-N will load in the template picker shortlist (this is mentioned purposely)
- Worktype code 34560-N@@@@ will load in the template picker shortlist. Where @@@@ can be anything but usually is the doctors name.

To assist the users in selecting templates and the ability to insert the default and the main normal, the use can use voice commands:

a) Insert Template Default - will insert the exact match template as it did when loading the study. Mainly for undoing or returning to original state.
b) Insert Template Normal – will insert the procedure code match plus the additional –N which specifies normal. For example this will insert template 34560-N
c) Insert Template My – will insert the procedure code match plus the N plus the user id if supplied. For example this will insert template 34560-NHARDINGC

New buttons have also been added to the Template Browser data pane D for the default, N for the normal and M for My template.

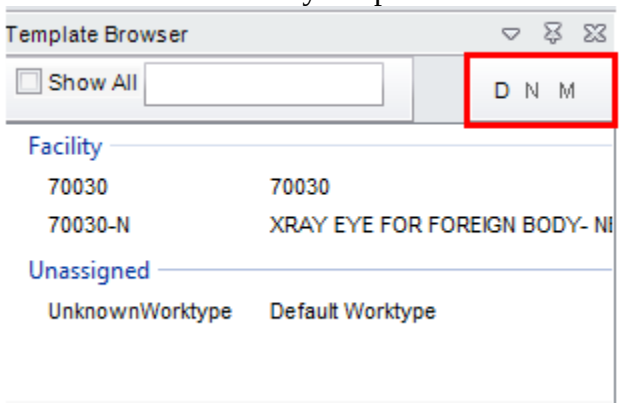

**Figure 4.28 – Template Browser buttons for selecting templates**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Reporting - Set User ID and Role for Reporting

When a report is opened in the editor we set the user id and role. We use the currently logged on user identifier and if opening ReportingRadiologist we set the role to RAD. Alternatively if they are opening the ReportingTranscription we set the role to MT.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Reporting / Dictation – Insert / Overwrite Recording Preference

Users requested to have the option to choose default recording preference when adding dictation. A new user preference called "Overwrite mode (non-interactive only) has been added in build 35. From the file menu > preferences > Dictation Control tab under the Recording section, the user can make the preference to be Overwrite if selected, or insert when unselected. Overwrite is not supported with Interactive Dictation, thus this user preference does not apply to Interactive (aka: self-edit) users.

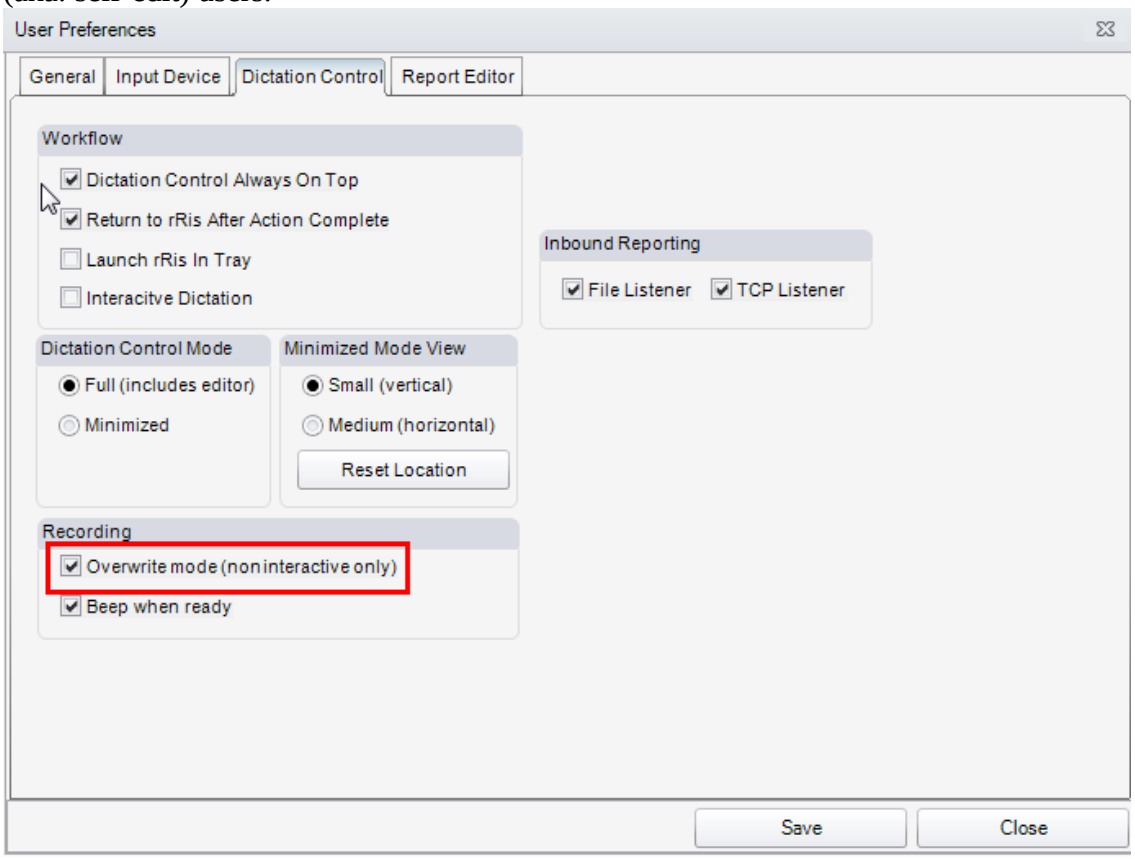

**Figure 4.29 – Overwrite dictation user preference.**

The insert/overwrite is used within the dictation window – dictation control. If the user places the dictation marker at a point within the recording the previous default would be to insert into the recording if the Radiologist decided to add to the dictation. This new user preference will change the default to overwrite the dictation from the point where the dictation pointer is positioned to the point where it is stopped. The recording before and after this point would remain untouched.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

To indicate what the current state is, the recording ICON on the dictation control has been enhanced. You will notice in the figures below the extra colored red or green dots on either side of the dictation button. The dots appear on opposite sides of the record button to help color blind users determine the current state of insert / overwrite.

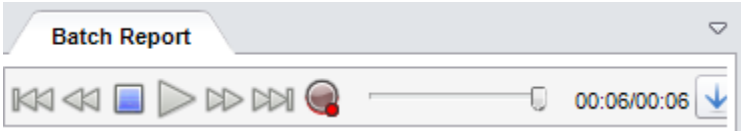

**Figure 4.30 – Dictation control indicating Overwrite**

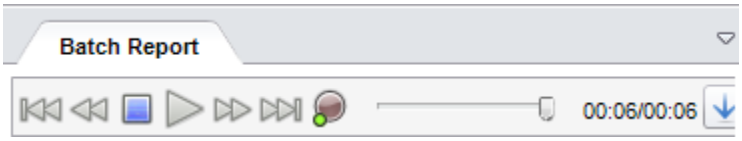

**Figure 4.31 – Dictation control indicating Insert**

The option can be toggles on the Speechmike as well. The Ins\Ovr button will toggle between Insert and Overwrite. A light on the Speechmike directly above the Ins\Ovr button will also change colors depending on which option is currently selected. Insert - the light will be green. Overwrite – the light will be red.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## SQL Server Reporting Services with Secure Socket Layer

Forms and labels, management reports, and diagnostic reports all leverage SQL Server Reporting Services (SSRS). SSRS exposes webservices that are called behind the scenes in the RIS client. The url for the webservices is currently set in the system config table in Administration->Configure.

Under no circumstances should RIS client use plain http for the URL in an internet scenario. If the client is being run in a protected, intranet or internal LAN, then http is acceptable. Either a VPN or https must be used for the internet to keep patient data from being transmitted over the internet in clear text.

For a resolution, we create a server certificate with a name that matches the server's computer name, Run Visual Studio Command Prompt 2010 as administrator:
Example: makecert –sr LocalMachine –ss My –a sha1 –n CN=ip-0A0223EF6 –sky exchange –pe where ip-0A0223EF6 is the computername.

This will create a certificate with a private key and put it in the Local Machine, Personal certificate store.

Open up certificates for the local machine personal store using Start->Run->mmc->File->Add/Remove Snapin->Certificates

Browse to the newly create certificate, right click the cert, All Tasks -> Export… Choose Yes, export the private key, choose next, choose Export all extended properties, choose next, enter a password, click next, specify a file name that includes servercert in the name (for clarity).

Repeat the steps above except the second time, do not export the private key, and then pick a file name that includes clientcert in the name (for clarity).

Remote into the server and launch mmc, import the server certificate into both "My Computer/Personal" and "My Computer/Trusted People".

On the server, run Reporting Services Configuration Manager, go to the Web Service URL tab and choose the newly created certificate from the list, verify that after the selection is made the results section does not report any failures.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

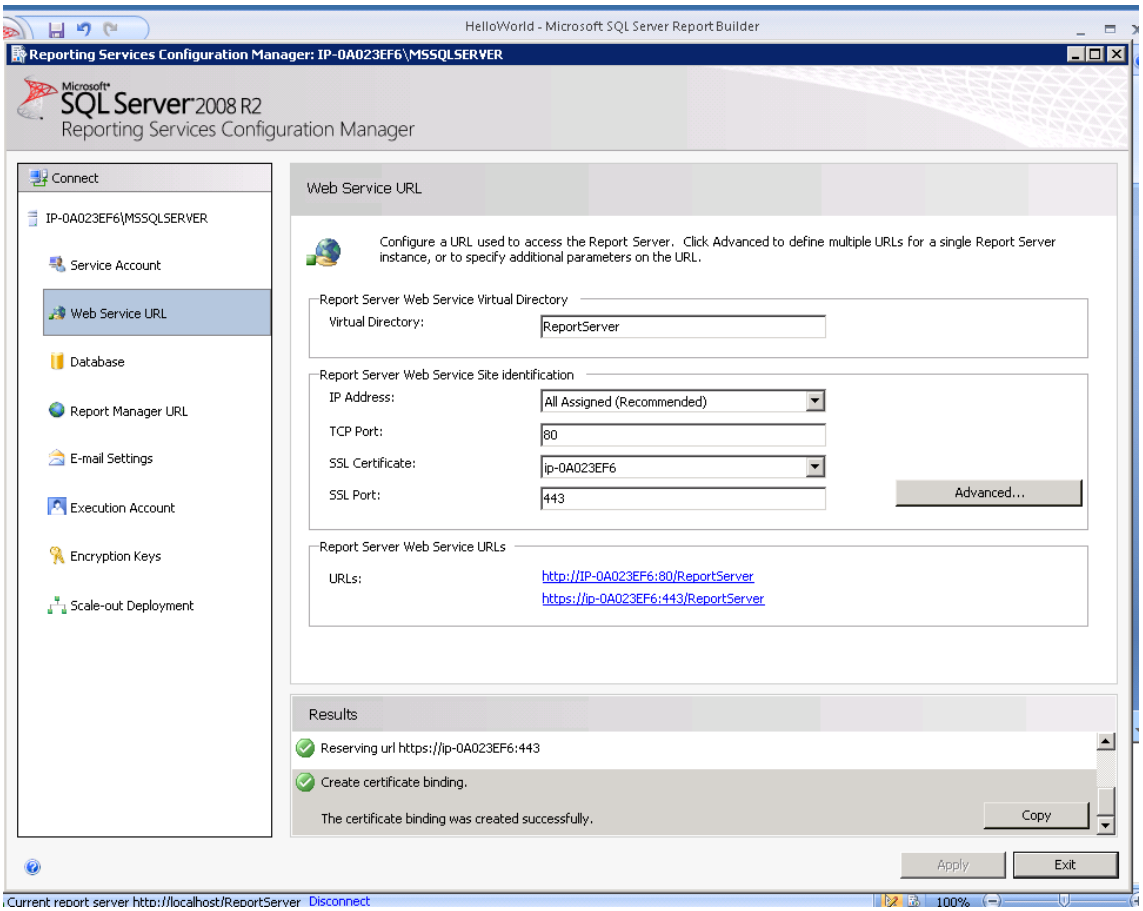

**Figure 4.32 – Reporting Services Configuration Manager**

On the client, import the client certificate created above into Local Machine/Trusted People using mmc.

Launch RIS. In the Administration->Configure menu option in RIS, browse to System\SystemConfig and find the ReportServerUrl config setting. Set the Value to: https://ip-0a023ef6/ReportServer where ip-0a023ef6 is the server's computer name.

Note: the above requires that port 443 incoming is open on the windows server's firewall. Edit the hosts file on the client and add an entry for the servers computer name with the appropriate IP address. Note that this step may not be required in cases where ping <servername> resolves the IP correctly.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## View Images of Studies Started but not Completed

The current implementation will allow a user to view image from the search field, by typing **v:** followed by the **accession number** (Example – v:1010245) will open the Patient Folder, automatically select the associated study from the patient folder work list, and open the PACS to view the images.
Similar to the accession number search, if the accession number could not be found then the same message prompt will appear.

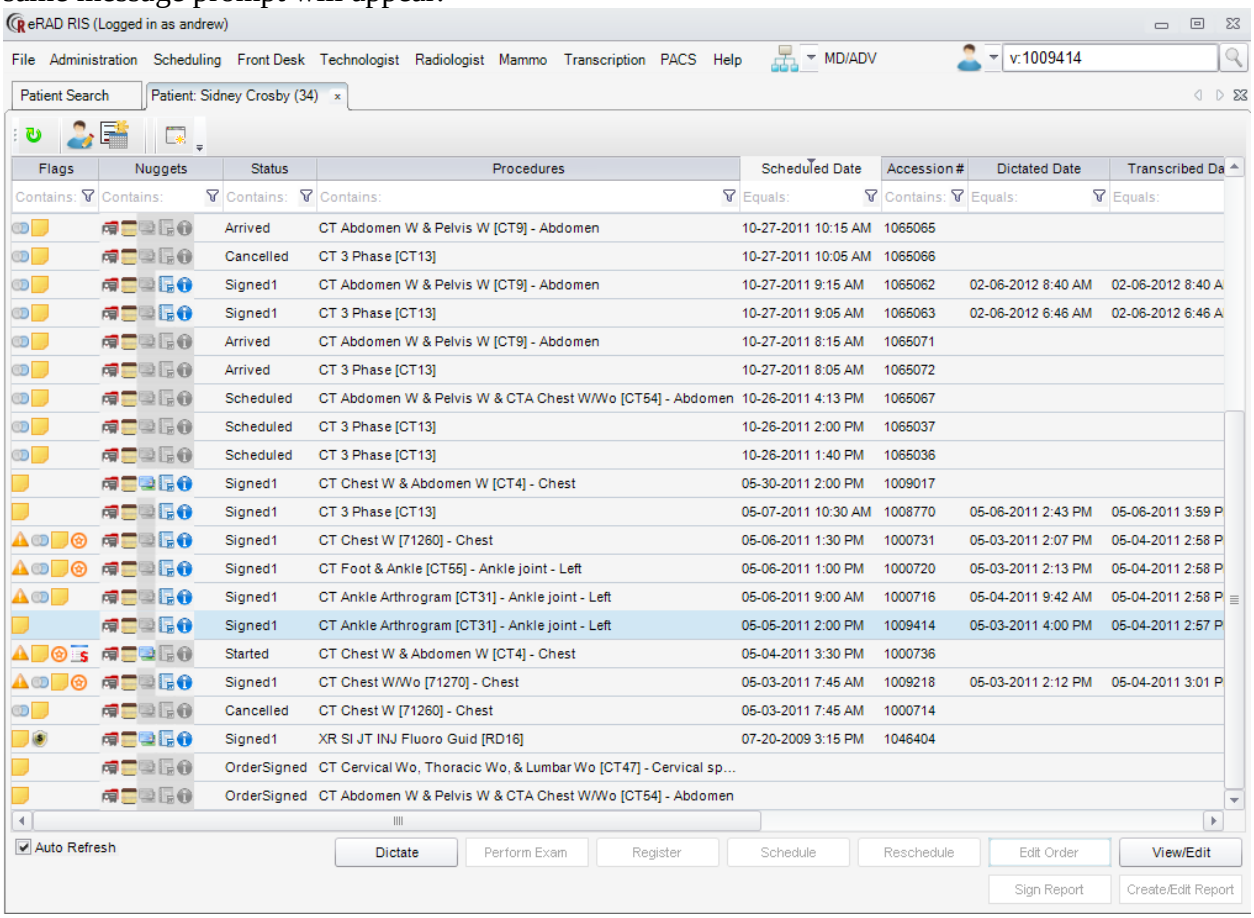

**Figure 4.33 – Image search**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## KBI Extract

KBI is an external system that is used for measuring productivity at each site. The RIS will provide a method so that KBI can extract the transactional count on a daily bases.

A stored procedure call c_KBIExtract for rRIS was created that does the following:

- Provide a count of billable items by transaction date (perfomed date), practice and modality.
- The performed date is based on an argument that is passed to the stored procedure. This way the stored procedure could be run for any day, versus a day based on the current day.

It only includes exam status when there are images associated to the study, basically after the technologist role.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## PACS Integration Message for Studies with no Images

A change was made on the PACS side to return a list of the opened accession numbers. The RIS then checks this opened list against the list that was requested. If there is a discrepancy then the user is notified.

If the primary study failed to load the message indicates explicitly that it was the primary that failed to load.

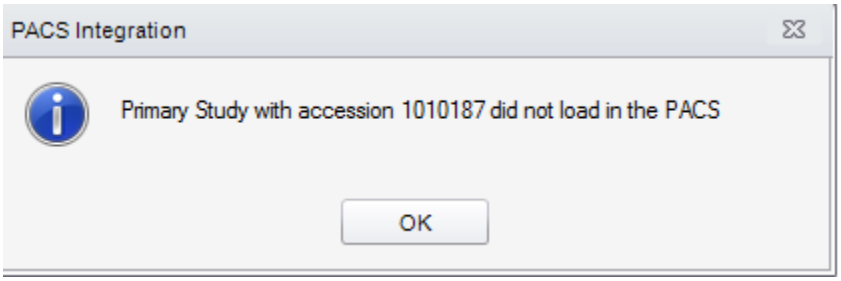

**Figure 4.34 – Primary study does not have images**

If it happens to be a prior study that did not have images, a message will also inform the user.

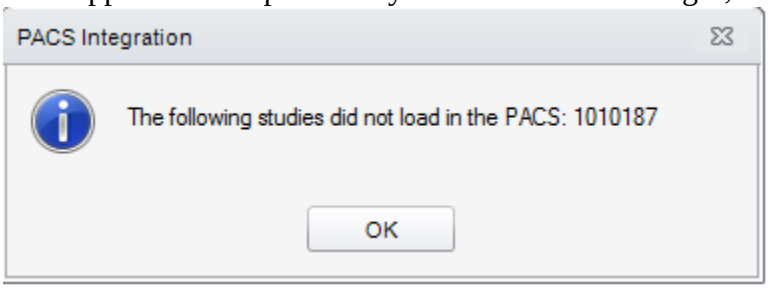

**Figure 4.34 – Relevant prior study does not have images**

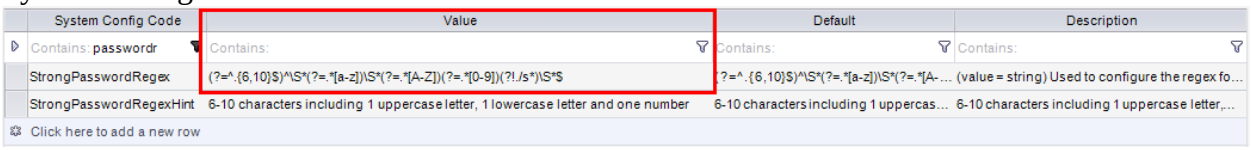
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Miscellaneous Additions and Enhancements

### Increase System Config Value

System Configuration field value was increased from 100 to 500



| System Config Code | Value | Default | Description |
|---|---|---|---|
| Contains: passwordr | Contains: | Contains: | Contains: |
| StrongPasswordRegex | (?=^.{6,10}$)^\S*(?=.*[a-z])\S*(?=.*[A-Z])(?=.*[0-9])(?!./s*)\S*$ | (?=^.{6,10}$)^\S*(?=.*[a-z])\S*(?=.*[A-... | (value = string) Used to configure the regex fo... |
| StrongPasswordRegexHint | 6-10 characters including 1 uppercase letter, 1 lowercase letter and one number | 6-10 characters including 1 uppercas... | 6-10 characters including 1 uppercase letter,... |
| Click here to add a new row | | | |

**Figure 4.35 – System Config table displaying the value column with increased field length**

### Reporting - Addendum Work Type

When the reporting screens are in Addendum mode, if a work type exists with work type code of "ADDENDUM" it will be used for the report, if not, "unknown work type" will be used.

### Reporting – Note to Radiologist

In previous builds the radio buttons where not disabling after selecting the check box for Note To Rad. Now the Qa and Problem radio button will be disabled when Note to Rad is checked, enabled on uncheck.

### Reporting – Inconsistency with Next Field Functionality

When using the keyboard manual "Next Field" it wold sometimes select part of the section header and get confused of its location. Result would be more text selected than was desired. This has been resolved by modifying the code for next field.

### Reporting – Create Macro from Command Bar

The user used to receive a COM error when attempting to create a macro from selected text, but the user had not selected any text.
We have added an appropriate message if nothing is selected when trying to create macro from selected text.
We still allow for empty text if a paragraph is selected or new lines.
A tooltip description has also been added to the command button.

### Other

1. Site column was added to the Orders To Schedule work list

2. PACS corrected column was added to the Tech work list

3. When submitting a New Appointment to the Orders to Schedule work list the site field must be completed on the Order tab.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. Resolved Defects

Bugs, Suggested Features and Support Issues resolved in build 1.35. The extract is taken from Redmine bug tracking system and only displays defects resolved in 1.35.

| # | Tracker | Priority | Subject | Category | Found Version |
|---|---|---|---|---|---|
| 1101 | Bug | Urgent | Scheduled exam is in Overbooked timeslot, cannot complete tech workflow | Thick Client GUI | 1.35 |
| 999 | Bug | Urgent | Cannot transcribe Mammo exams | Thick Client GUI | 1.35 |
| 854 | Bug | Urgent | Mammo Layletters are not being sent for distribution | Thick Client GUI | 1.31 |
| 1090 | Bug | High | Personnel address information not expanded for Mirth | Web Services/DB | 1.35 |
| 1089 | Bug | High | Order CC Person Key not expanded for Mirth | Web Services/DB | 1.35 |
| 1037 | Bug | High | LastContacts functionality not working properly | Thick Client GUI | 1.35 |
| 1034 | Bug | High | RAD - Mammo Scheduling from Followup 0 worklist | Thick Client GUI | 1.35 |

| 870 | Bug | Normal | When "zipcode" table not populated / not in DB, user cannot create patients, orders, etc. | Admin Tools | 1.31 |
| 857 | Bug | Normal | Mammo Follow Up Orders - Target date not searched on schedule | Thick Client GUI | 1.31 |
| 834 | Bug | Normal | Expand system config value to 255 characters from 100 | Web Services/DB | 1.31 |
| 770 | Bug | Normal | Organization - Modifying Practice or Site removes Logo | Admin Tools | 1.27 |
| 579 | Bug | Normal | IVT PreCert column does not update | Thick Client GUI | 1.35 |
| 1040 | Bug | Low | Unable to post billing exception with Claim # required when both a claim number are entered and the "Unknown Claim Number" are checked | Thick Client GUI | 1.35 |
| 800 | Bug | Low | Forms and labels action on <-- arrow continues when filtered list is done | Admin Tools | 1.29 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 6. Known Limitations

The following are Bugs, Suggested Features, and Support Issues found in build 1.35. This build is the current QE build and testing is ongoing. The list may increase in size. This document will not be updated or re-released.

| # | Status | Subject | Category | Found Version | Resolved Version |
|---|---|---|---|---|---|
| 1105 | Resolved | ConfirmValidMRNNumber failing | Web Services/ DB | 1.35 | |
| 1102 | New | CDS Threads pinning CPU in Balitmore Sandbox environment | Web Services/ DB | 1.35 | 1.36 |
| 1097 | New | Reporting > Problems continuing dictation when using interactive and field markers | Thick Client GUI | 1.35 SVN 10005 | |
| 1063 | Resolved | New patient button on patient demographics screen. | Thick Client GUI | 1.35 | 1.36.10196 |
| 1117 | New | Report editor text can span off of the editor | Thick Client GUI | 1.35 | |
| 1116 | New | Procedure can be scheduled when laterality is required but not selected | Thin Client GUI | 1.35 | |
| 1114 | New | Room is not updated on work lists if changed during Perform Exam | Thick Client GUI | 1.35 | |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | | | | |
|---|---|---|---|---|---|
| 1112 | New | New Appointment > Patient tab > Contact Information tab order | Thick Client GUI | 1.35 | |
| 1111 | New | Billing exception for unknown carrier. | Thick Client GUI | 1.35 | |
| 1110 | New | Tooltip to create macro from selected text is misspelled | Thick Client GUI | 1.35 | |
| 1109 | New | User preference > Interactive Dictation misspelling | Thick Client GUI | 1.35 | |
| 1108 | Resolved | When pasting an address into the Report Delivery address field only the first line is filled in | Thick Client GUI | 1.35 | 1.36.10179 |
| 1107 | Resolved | Address paste on personnel screen doesn't work | Thick Client GUI | 1.35 | 1.36.10179 |
| 1106 | New | Logging into locked workstation when GUI ZIP file has changed | Thick Client GUI | 1.35 | |
| 1098 | New | PACS Correction and PACS view image functionality conflict re: Session Id | Thick Client GUI | 1.35 | |
| 1096 | New | Reporting > viewing report history throws COM error | Thick Client GUI | 1.35 SVN 10005 | |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | | | | |
|---|---|---|---|---|---|
| 1095 | New | Session Id for PACS is not being handled appropriately | Thick Client GUI | 1.35 | |
| 1093 | New | When allergy is inactive in the lookup the value is not displayed for the patient that has that allergy | | 1.35 | |
| 1087 | Resolved | Unknown Reconciliation - Cannot edit order from this work list if the study is past ordersigned status | Thick Client GUI | 1.35 | 1.36.10210 |
| 1085 | New | Scheduling an aborted exam, removing a completed exam from the order and adding a new proceudre | Thick Client GUI | 1.35 | |
| 1084 | New | External patients can be scheduled without having "System" MRN | Thick Client GUI | 1.35 | |
| 1083 | New | Completed Time | Thick Client GUI | 1.35 | |
| 1082 | Resolved | Appointment Book "Interval" dropdown does not reflect displayed interval | Thick Client GUI | 1.35 | 1.36 |
| 1080 | New | Mammo -- Followup -- Schedule ( runtime issue) - Able to schedule without selecting a room | Thick Client GUI | 1.35 | |
| 1079 | New | Mammo -- Followup 0 --> Schedule ( Save as Order) Null sdudy dataset | Thick Client GUI | 1.35 | |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | | | | |
|---|---|---|---|---|---|
| 1075 | Resolved | patient notes and order notes not synchronizing in View/Edit | Thick Client GUI | 1.35 | 1.36.9940 |
| 1074 | Resolved | Location label not populated/recommendation codes not populating. | Thick Client GUI | 1.35 | 1.36.9941 |
| 1072 | Resolved | Graceful exception if new scheduled study deleted before saving | Thick Client GUI | 1.35 | 1.36 |
| 1071 | New | Mammo -- Followup 0 Worklist --> schedule ( runtime- object reference error) | Thick Client GUI | 1.35 | |
| 1070 | New | Rescheduling an order that has a study cancelled will still show the cancelled study | Thick Client GUI | 1.35 | |
| 1067 | Resolved | If you click Schedule button on the follow up screen after you have already scehduled the follow up you get an exception | Thick Client GUI | 1.35 | 1.36 |
| 1066 | Resolved | Scheduling - able to schedule procedure to wrong room | Thick Client GUI | 1.35 | 1.36 |
| 1062 | New | Edit order with multiple procedures change one procedure and save | Thick Client GUI | 1.35 | |
| 1061 | Resolved | Scheduling -- no study -- able to do room search ( runtime error) | Thick Client GUI | 1.35 | 1.36 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | | | | |
|---|---|---|---|---|---|
| 1059 | New | Broken Lock on Re-Schedule Should Disable "Schedule Later" and "Cancel Study" Buttons | Thick Client GUI | 1.35 | |
| 1057 | New | Scheduling - Confirmation WL --> runtime crash | Thick Client GUI | 1.35 | |
| 1055 | New | Tentatively signed feature cannot be turned off with System Config value | Thick Client GUI | 1.35 | |
| 1053 | Resolved | Mammo Callback can create order with duplicate procedure | Thick Client GUI | 1.35 | 1.36 |
| 1050 | New | An outgoing call cannot be made since the application is dispatching an input-synchronous call. (Exception from HRESULT: 0x8001010D (RPC_E_CANTCALLOUT_ININPUTSYNCCALL)) | Thick Client GUI | 1.35 | |
| 1045 | Resolved | Foreign Key Contraint error from New Appointment | Thick Client GUI | 1.35 | 1.36 |
| 1044 | New | New Patient with Canadian address throws 'Invalid Selection' validation | Thick Client GUI | 1.35 | |
| 1041 | Resolved | Index was outside the boudns of the array. | Thick Client GUI | 1.35 | 1.36 |

# HOTFIX

for eRAD RIS
Version 1.0
Build 35
Hotfix 35.001

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# Table of Contents

1. Purpose ..... 3
2. Intended Audience ..... 3
3. Who is affected ..... 3
4. Installing ..... 4

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

An issue was discovered where after a study is scheduled all outbound messaging from RIS is in a faulted state. This is no fault of the user and no workflow changes are required to prevent it.

There are drop-down controls on the RIS client that are pre-populated with Referring Physicians that have been previously associated with the current patient. When saving the study, the internal keys related to these physicians are being persisted in the RIS database with the details surrounding the action undertaken by the user. In the case of an Unknown Referring in this list, the key stored is -1.

The Wedge service takes these details and tries to resolve this -1 to an existing physician. It throws an error because that -1 does not refer to anything. Since the Wedge preserves the order of messages in a first-in-first-out manner, its message queue is now blocked, preventing any other messages from going out.

**The result of this error was the halting of all outbound messaging from the RIS.**

This hot fix applied to Build 35 for this issue causes the Wedge service to no longer resolve person keys of -1. This fix will automatically carry forward in future builds.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

# 3. Who is affected

Installations of eRAD RIS 1.1.35.10140 (RIS application Help About → labeled as 1.1.34.10140)

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. Installing

*To install this hot fix:*
*1) Shut down the Wedge service*
*2) Replace the existing Wedge.exe with the one distributed with this readme file.*
*3) If Wedge.pdb exists, replace it also*
*4) Start the Wedge service*
*5) The Wedge.exe (and pdb) files should also be replaced in the directories containing the other rRIS services (Core, DocumentDistribution, CDS, etc.) in a similar manner.*

If you have any questions regarding this Hotfix, contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# HOTFIX

for eRAD RIS
Version 1.0
Build 35
Hotfix 35.002

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# Table of Contents

1. Purpose ..... 3
2. Intended Audience ..... 3

# 1. Purpose

The text in Red indicates changes from Hotfix 35.001, which this fix also includes.

An issue was discovered where after a study is scheduled all outbound messaging from RIS could be potentially be in a faulted state. This is no fault of the user and no workflow changes are required to prevent it.

There are drop-down controls on the RIS client that are pre-populated with Referring Physicians that have been previously associated with the current patient. When saving the study, the internal keys related to these physicians are being persisted in the RIS database with the details surrounding the action undertaken by the user. In the case of an Unknown Referring in this list, the key stored is -1. 0 is also a possible value.

The Wedge service takes these details and tries to resolve this -1(or 0) to an existing physician. It throws an error because that -1(or 0) does not refer to anything. Since the Wedge preserves the order of messages in a first-in-first-out manner, its message queue is now blocked, preventing any other messages from going out.

**The result of this error was the halting of all outbound messaging from the RIS.**

This hot fix applied to Build 35 for this issue causes the Wedge service to no longer resolve person keys ~~of -1~~ less than 0 or any person keys from the c_previous_referring table. This fix will automatically carry forward in future builds.

A separate issue with the Mirth mapping files was causing the Proposed Study Instance UID sent to the PACS to be truncated. This has been fixed in the OBX.js file included in this directory.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 3. Who is affected

Installations of eRAD RIS 1.1.35.10140 (RIS application Help About → labeled as 1.1.34.10140)

## 4. Installing

*To install this hot fix:*
*1) Shut down the Wedge service*
*2) Replace the existing Wedge.exe with the one distributed with this readme file.*
*3) If Wedge.pdb exists, replace it also*
*4) Start the Wedge service*
*5) The Wedge.exe (and pdb) files should also be replaced in the directories containing the other rRIS services (Core, DocumentDistribution, CDS, etc.) in a similar manner.*

*Copy the OBX.js file to the MirthMappings\Outbound\eRadPACS directory.*

If you have any questions regarding this Hotfix, contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# HOTFIX

for eRAD RIS
Version 1.0
Build 35
Hotfix 35.003

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# Table of Contents

1. Purpose ..... 3
2. Intended Audience ..... 3
3. Who is affected ..... 4
4. Installing ..... 4

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

1. A Microsoft update was released on April 10, 2012 to fix several security vulnerabilities. This update inadvertently made a change to the way the Document Distribution Engine is submitting fax jobs to the MS Fax console. A code fix was required to make a small adjustment to this job submission.

   The hotfix 35.003 includes 3 files to correct this issue.

   i) Tourreau.Gilles.FaxDotNet.dll

   ii) Tourreau.Gilles.FaxDotNet.pdb

   iii) Tourreau.Gilles.FaxDotNet.XML

2. For Highway go live, accreditation logos on the diagnostic reports were required. This hotfix will add the logos to the reports by adding the SQL objects without updating the RIS binaries. This means that for build 35 system administrators will not be able to add logos or associate logos to a modality and/or procedure and the issue is temporarily corrected via Patch-b35-2.sql file in the 35.003.

3. The KBI extract stored procedure had changes made to it on the NY City production system. As a precaution and to keep in sync we have included these changes to the Patch-b35-2.sql file so the changes are not inadvertently overwritten in a potential future patch of build 35.

4. SQL update required to correct an issue with the Daily Schedule management report. The Insurance Carrier was not being populated. This SQL update is also included in the Patch-b35-2.sql

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 3. Who is affected

Installations of eRAD RIS 1.1.35.10140 (RIS application Help About → labeled as 1.1.34.10140)

# 4. Installing

*To install this hot fix:*
*1) Shut down the Document Distribution Engine service*
*2) Replace the existing Torreau.Gilles.FaxDotNet.* files with the ones distributed with this readme file.*
*3) Start the Document Distribution Engine service*
*4) These files should also be replaced in the directories containing the other rRIS services (Core, DocumentDistribution, CDS, etc.) in a similar manner.*
*5) From the SQL Server Management Studio execute the Patch-b35-2.sql on your database.*

If you have any questions regarding this Hotfix, contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# HOTFIX

for eRAD RIS
Version 1.0
Build 35
Hotfix 35.004

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# Table of Contents

1. Purpose ..... 3
2. Intended Audience ..... 3
3. Who is affected ..... 3
4. Installing ..... 4

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

1) Redmine Bug 1141: Backend printing jobs report an error even though they successfully print.

   The error message in the log indicates that the patient_key column in the c_document_distribution table is db_null. This is because after the job prints there is an attempt to create an audit message indicating success, but the patient key in the row is null.

   The c_document_distribution_patient_key_patch.sql file in this directory provides a trigger that looks up the patient_key based on the study key if the patient key is not already provided. With this change the jobs will continue to print successfully and will eliminate the error message.

2) Redmine Bug 1143: Fax jobs are failing with an error: "Could not load file or assembly 'Microsoft.ReportViewer.Winforms, ...". This is because there are two missing .dll files that are not packaged with the Distribution Service. These .dll's are Microsoft.ReportViewer.Winforms.dll and Microsoft.ReportViewer.Common.dll. The Microsoft.ReportViewer.WinForms.xml file has also been packaged with the .dll's.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

# 3. Who is affected

Installations of eRAD RIS 1.1.35.10140 (RIS application Help About → labeled as 1.1.34.10140)

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. Installing

*To install this hot fix:*
*1) Open a new query window in SQL Server Management studio.*
*2) Paste the contents of the c_document_distribution_patient_key_patch.sql file into it.*
*3) Ensuring that the correct DB instance is selected, execute the sql. (DB may have more than one DB instance installed. (Example – Test and Production environments)*

*4) Copy the Microsoft.ReportViwer.Winforms.dll, Microsoft.ReportViewer.Common.dll, and Microsoft.ReportViewer.Common.xml files into the directory containing the DocumentDistribution Service.*
*5) Restart the service.*

If you have any questions regarding this Hotfix, contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

1) Redmine Bug 1152: Mammo exam --> Recommendation codes not saving. Transcription opens the exam to transcribe but the recommendation field is empty

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

# 3. Who is affected

Installations of eRAD RIS 1.1.35.10140 (RIS application Help About → labeled as 1.1.34.10140)

This is a cumulative HOTFIX. It includes all previous HOTFIXES (35.001 – 35.004)

# 4. Installing

Please remember to take a backup of all files before replacing with current HOTFIX

*To install this hot fix:*

1) *Replace the contents of the RISDeployment folder with the contents in the ThickClient folder included with this patch. This includes:*
   a) *Build\YourSystemName\rRIS_1.1.35.10752.zip*
   b) *Build\rupdate.exe*
   c) *Core_setup\rRisSetup.msi and setup.exe*
2) *Replace the binaries in the rRISService folder with the binaries included with this HOTFIX in the rRISService folder. The will require you to stop the rRISSERVICE*
3) *Run the Patch-b35-2.sql file and the rRISCoreData.sql file against your database.*

   *NOTE other files that are included folders such as MirthConfig were updated in previous HOTFIXES and are also included here. Please refer to previous HOTFIX documentation.*

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This HOTFIX has been produced to fix bugs required for production setting, or to complete an enhancement requested for production.

This HOTFIX includes the following:

1) Redmine Bug 1157: Image Center Manager (ICM) Dashboard was not completed in Build 35. This has 2 new report files and a .sql file
   a) Accession Milestone Time.rdl
   b) Imaging Center Manager (ICM).rdl
   c) Patch-b35-3.sql. This script creates:
      i) 2 new views – c_mamt_wait_times and c_mgmt_PWT.
      ii) 1 new function – c_GetPatientNameFromPatientKey
      iii) 1 Updated view – c_mgmt_unread_exams
      iv) 1 updated stored procedure – c_GetDailyModalityUtilization

2) Append MRN with letter – This is a request for production so the MRN's generated from RIS do not collide with MRN's from legacy systems. The MRN will be appended with an r for all new generated MRN's.
   This has 4 new files for the rRISServices directory and a .sql file
   a) CommonLib.dll
   b) CommonLib.pdb
   c) WCFService.dll
   d) WCFService.pdb
   e) defaultMRNSuffix.sql – Creates new system config entry and adds value of r for the config value.

3) Redmine Bug 1262: When a user tries to manually send out a legacy report at Highway, it fails in the distribution queue with a "Could not generate report: The system cannot find the file specified" error.
   This issue was caused by the use of the PDFToImages.exe utility to manipulate the legacy report. This executable and a dll it depends on could not be found for two reasons. First, they were not being included with the service binaries and second, the path on which the service was looking for it was incorrect. The build process has been updated to include these files and the path issue has been corrected to ensure that it is looking for PDFToImages.exe in the same directory as the rest of the assemblies.
   This includes 4 new files to be added or replaced in the Document Distribution Service directory

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

a) PDFToImages.exe
b) O2S.Components.PDFRender4NET.dll
c) DDEngine.dll
d) DDEngine.pdb

4) Redmine Bug 1183 – Fix will exclude study items and bill codes that are not active. Removes trailing suffix from the MRN (problem with Radnet Nobel blender). Corrects mappings when multiple interpretation nodes are included in the message. The fix includes the Billing folder to be replaced on the Mirth server. The billing folder contains 17 files:
   a) 01_DecodeContainer.js, ACC.js, EVN.js, FT1.js, GT1.js, IN1.js, MSH_ADT.js, MSH_DFT.js msh_ORU.js, OBX.js, ORC_OBR.js, PID.js, PV1.js, VariableSetup.js, ZCS.js, ZFT.js, ZIN.js

5) Redmine Bugs 1264 and 1265 –
   Bug 1264 - Turnaround times not all being reported correctly. Incorrect user being looked for to get the drafted date from mModal in VR1 it was "Service: rRISServices" now in RIS is now called "System"

   Bug 1265 - Numbers for component Unread Exams being incorrectly counted. Needed to add a PACS corrected flag and a coalesce to performed_end_date, performed_start_date to correct handle null performed_end_dates.

   The 3rd part is an enhancement to the Result Template used at New City (Highway). The fix is to provide a function called by the view which returns a formatted name in LastName Suffix, FirstName of the patient. This issue came to light when a patient was also a Dr and he expected to see MD after his name.
   a) Files included are NewCityDiagnosticReport.rdl and Patch-b35-4.sql

6) Redmin Bugs 1275 and 1282 (partial fix) –
   Bug 1275 – This fixes an issue using the F8 key on keyboard. If dictating as non-interactive and the F8 key is used to initiate dictation, some interactive commands were firing.

   Bug 1282 – MT polling studies from same order is not skipped when locked. Studies belonging to the same order, such as a stat read, work list will apply a lock on both studies if either is opened. The issue is when using the MT polling workflow the "other study" can still be accessed.
   a) Files included are ris.exe and WCFService.dll.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

## 3. Who is affected

Previous versions of build 35. Current build is 1.1.35.10752.

## 4. Installing

Please remember to take a backup of all files before replacing with current HOTFIX

*To install this hot fix:*
Redmine Bug 1157:

1) *Manually add and/or replace the 2 report files on the report server.*
   a) *Accession Milestone Time.rdl*
   b) *Imaging Center Manager (ICM).rdl*
2) *Run the Patch-b35-3.sql file against your database.*

Append MRN with letter:

1) *Copy the 4 files to the rRISService directory.*
2) *Run the defaultMRNSuffix.sql file against your database*

Redmine Bug 1262:

1) *Manually add/replace the included files into the directory containing the Document Distribution Service.*

Redmine Bug 1183:

1) *To install, connect to your Mirth server, copy mapping files to the appropriate billing channels and re-deployment the channels.*

Redmine Bugs 12364 and 1265:

1) *Manually add or replace the report file on the report server*
   a) *NewCityDiagnosticReport.rdl*
2) *Run the Patch-b35-4.sql file against your database*

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

RedMine Bugs 1282 and 1275:

1) *From the RISDeployment directory, unzip the rRIS_1.1.35.10752. Replace the ris.exe file. Re-zip the contents and rename the zip folder to rRIS_1.1.35.10752a*
2) *In the rRISServices directory replace the WCFService.dll*

If you have any questions regarding this Hotfix, contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# Server Update

for eRAD RIS
Version 1.0
Build 35
Update 35.007

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# Table of Contents

1. Purpose ..... 3
2. Intended Audience ..... 3
3. Who is affected ..... 3
4. Installing ..... 4

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This update has been produced to fix bugs required for production setting, or to complete an enhancement requested for production.

This update includes the following:

1) HL7 Mammo Report Message with Recommendation Code– This fix will allow messages with Mammo reports with recommendation codes to come into RIS. There was a bug that caused a null reference error.
    a) WCFService.dll
    b) WCFService.pdb

2) Outbound HL7 message queue was blocked due to person key resolution problem. Two files to be replaced:
    a) Wedge.exe
    b) Wedge.pdb

3) IVT Order Row Specific – This fix will convert the IVT work list from showing all the studies related to an order to only show the single order and show the more appropriate information.
    a) Files included - Patch-b35-5-UpdateIVTtobeOrderRowSpecfic.sql

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

# 3. Who is affected

All previous versions of build 35. Current build is 1.1.35.10752.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. Installing

*1)* HL7 Mammo Report Message with Recommendation Code*:*
*Copy the 2 files to the directory for each rRISService. rRISService directories include:*
*a) rRISService*
*b) CDS rRISService*
*c) Wedge rRISService*
*d) DDE rRISService (DDE – Document Distribution Engine.*

*2)* Outbound HL7 message queue:
*Copy the 2 files to the directory for each rRISService. rRISService directories include:*
*a) rRISService*
*b) CDS rRISService*
*c) Wedge rRISService*
*d) DDE rRISService (DDE – Document Distribution Engine.*

3) IVT Order Row Specific:
*Run the Patch-b35-5-UpdateIVTtobeOrderRowSpecfic.sql file against your database*

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 36. This version of eRAD RIS is referred to as Build 1.36.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.36 is considered a new core release of the application and will require a reinstallation of eRAD RIS. This is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 4. New Features and Enhancements

## Sending Tech Only Studies to Billing at Exam Done Status

Studies that were flagged as No Report Required Tech Only will never be set to Signed status. Previously only studies in Signed status were sent to billing. Now if a study is flagged No Report (Tech Only) when the study reaches exam done status it will be sent to billing.

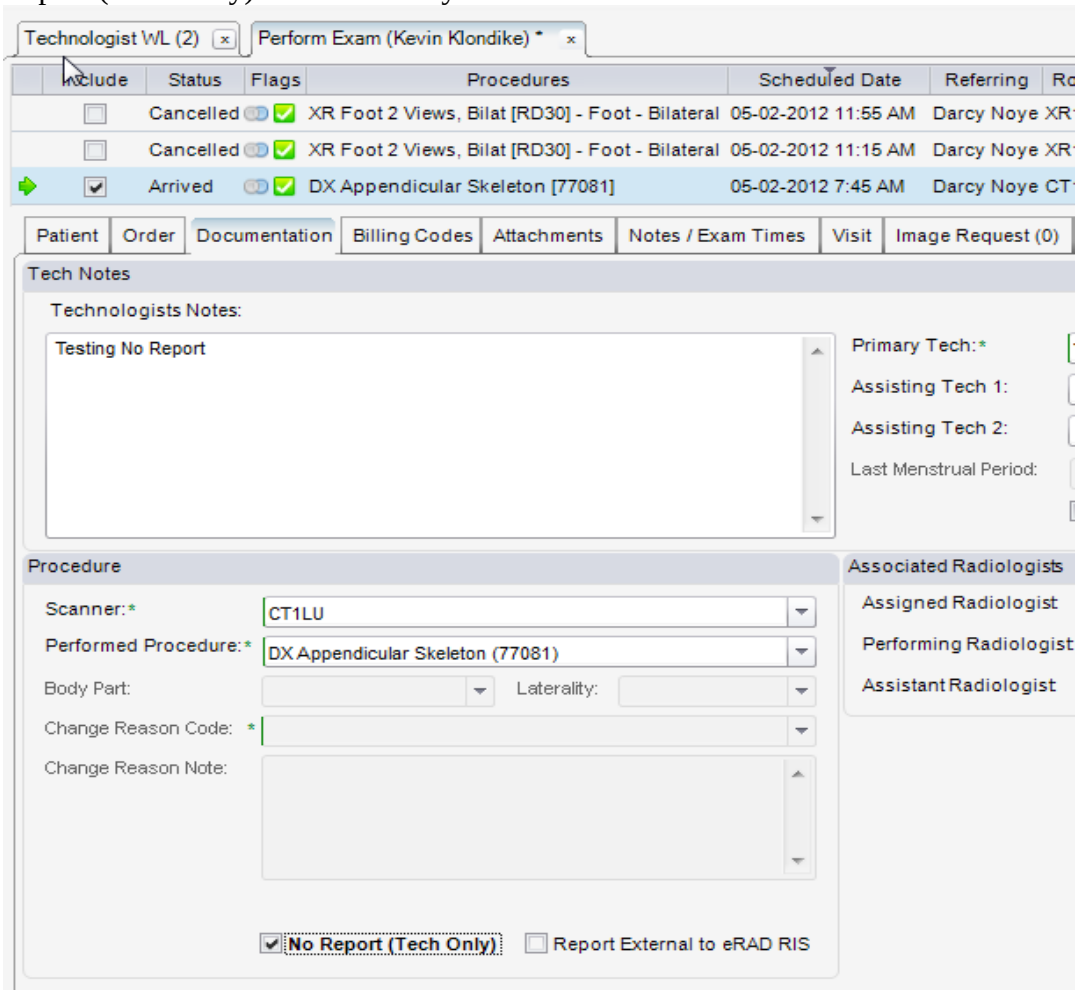

**Figure 4.1 – Perform Exam: No Report required flag**

As you can see from the figure above this study has been flagged that no report is required.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

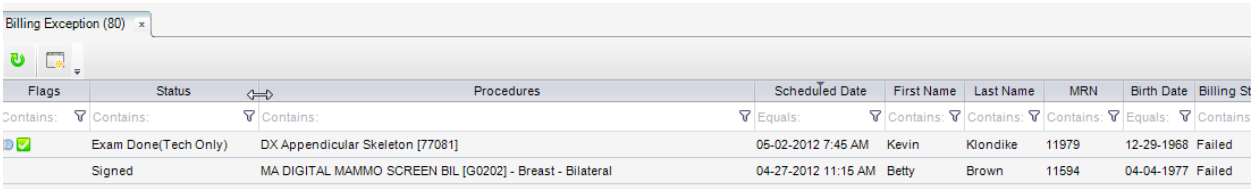

**Figure 4.2 – Status of Exam Done (Tech Only) added to billing.**

This particular study did not meet the billing requirements and has been added to the Billing Exception work list. Notice the status is Exam Done(Tech Only).

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Study Statuses Display Changes

In previous builds study statuses were displayed as one complete word regardless of how many actually words were in the status. In build 36 the DB study status will be converted to be more easily read. Below is a list of status and the converted text that will be displayed on the work list.

| DB Status | Work list Displayed Status |
|---|---|
| OrderDraftedOrder | Drafted |
| OrderSigned | Ordered |
| OrderCancelled | Order Cancelled |
| Invitation | Invitation |
| ShortTermFollowUp | Short Term Follow Up |
| CallBack | Call Back |
| Scheduled | Scheduled |
| Cancelled | Cancelled |
| CheckingIn | Checking In |
| Arrived | Arrived |
| Started | Started |
| Discontinued | Discontinued |
| ExamDone | Exam Done |
| ExamDoneTechOnly | Exam Done(Tech Only) |
| Dictated | Dictated |
| ReportDrafted | Report Drafted |
| Transcribed | Transcribed |
| RepeatDone | Repeat Done |
| TentativelySigned1 | Signed* |
| Signed1 | Signed |
| ActionPending | Action Pending |
| ActionComplete | Action Complete |

**Table 4.1 – Statuses converted to readable text.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Deploying RIS Reporting Services

Utilizing the Report Server utility (RS.EXE which is part of SSRS) a DOS batch file and some VB .NET scripts have been created.
The structure of the report server is deployed as follows:
Root Folder will contain these directories

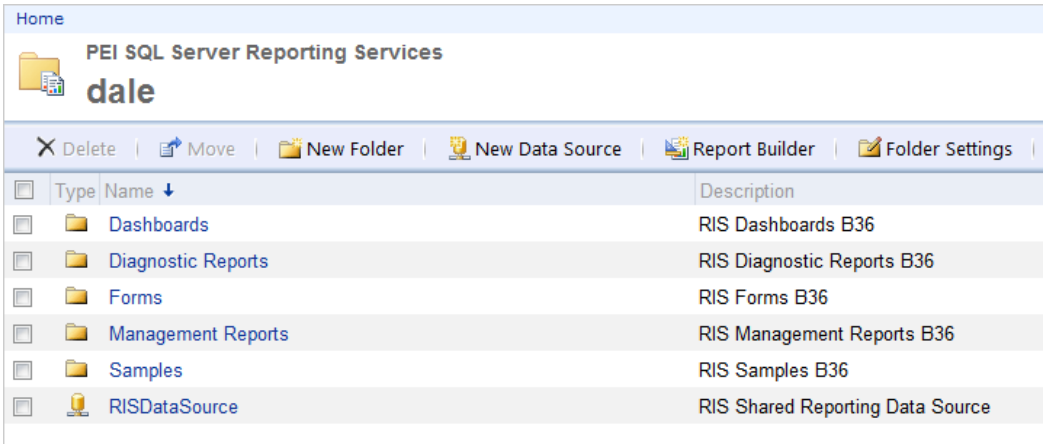

**Figure 4.3 – Root Folder for deploying reports to reporting server**

Dashboards, Diagnostic Reports and Forms folders are designated as site folders. This means they will get an initial deployment, but will not be overwritten during upgrades.
Management Reports folder
This folder will not be deleted, but the following subfolders will be:

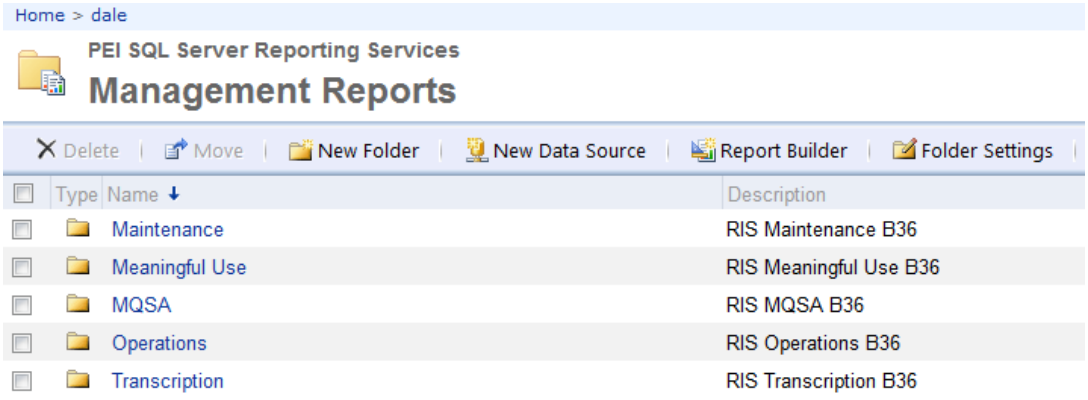

**Figure 4.4 – Management Reports Subfolders**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

***The intention below Management Reports is to add a folder (yet to be named) where site specific (custom) reports would live. That folder would not be deleted and rebuilt in the deployment process.***

Samples Folder
The samples folder will be deleted and rebuilt with the upgrades.
The root of Samples folder has a store for Diagnostic Templates and Forms

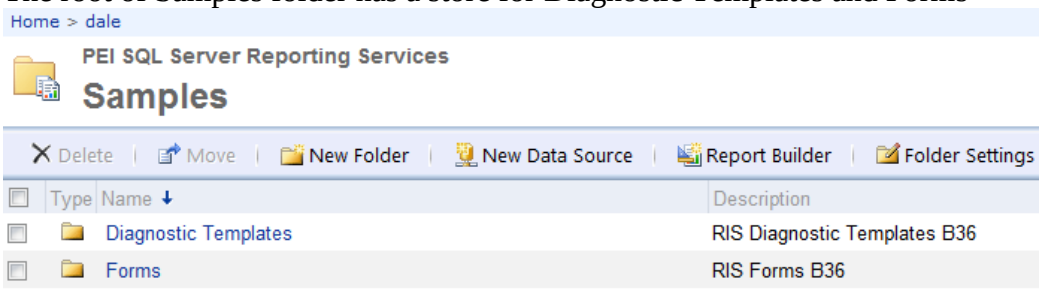

**Figure 4.5 – Sample folder deployed**

The forms folder underneath Samples contains a large set of examples which have currently been categorized like this, but may change moving forward.

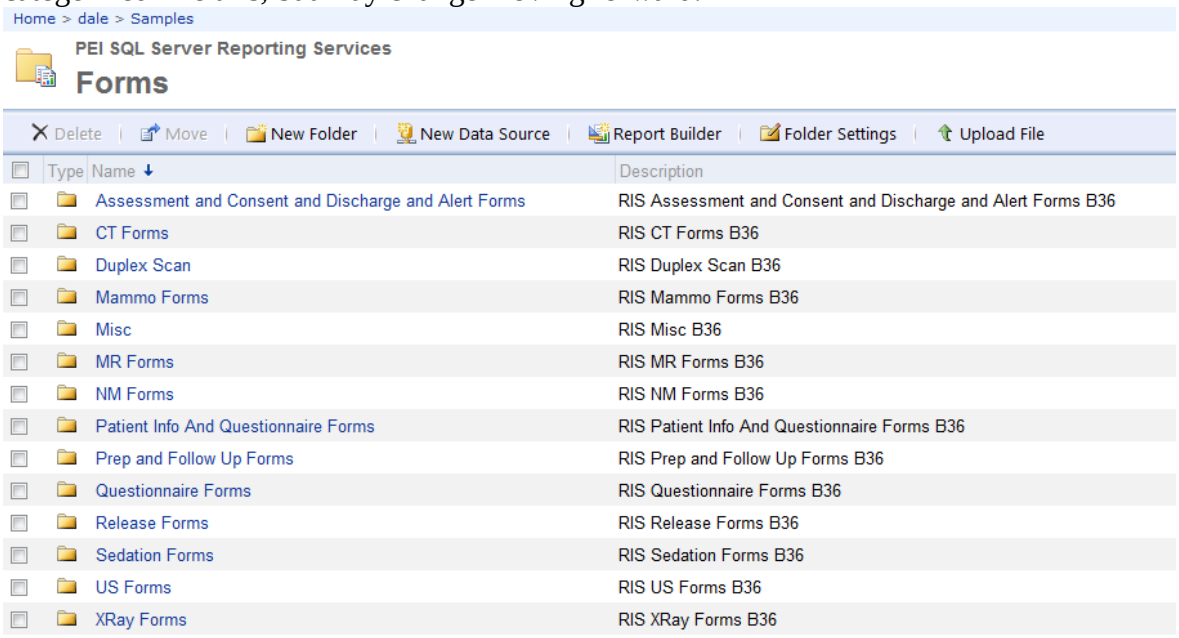

**Figure 4.6 – Forms folder**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Deploying using the deployment script is pretty basic.

1. Launch the DeployReports.bat file.
2. ***Enter report server name:***
    a. A script will run against the server and return a list of all the root folders on that report server
3. A subscript will execute to display a list of the root folders currently sitting on the report server entered above.
4. **Enter root folder to deploy reports**:
    a. This will create a new root if the name you give doesn't exist, or it will simply publish below the root of the folder if it does already exist.
5. **Enter the Build Number (ie: B35)**:
    a. This number will get tagged into the description of the folders as they get built (or rebuilt). It will not update folders if they exist and are not being replaced.
6. **Do you wish to deploy core management reports**?
    a. If you enter "y", it will redeploy the core management reports
7. **Do you wish to deploy sample files**?
    a. If you enter "y", it will delete, rebuild and deploy the core samples
8. **Do you wish to create a datasource**?
    a. If you select "y" you will get prompted for more information about the datasource you wish to create

If you selected to create a datasource, the following steps will be requested to complete the connection string.

1. **Enter database server name**:
    a. This is the name of the physical database server
2. **Enter database name**:
    a. This is the name of the database on the database server
3. **Enter report schema user name**:
4. **Enter report schema password**:

The results of deployment will be written to log.txt in the same folder as the DeployReports.bat file.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Check In / Arrive Before Scheduled Date

If a patient arrives for their scheduled appointment before the scheduled date, registration needs to accommodate the patient. A new window will open

Studies scheduled for a future date can be checked in / arrived early. A new window has been added to the process. If the patients study being checked in / arrived is for a future date the new window will open prompting the user to select the desired patient's studies in which they would like to check in / arrive.

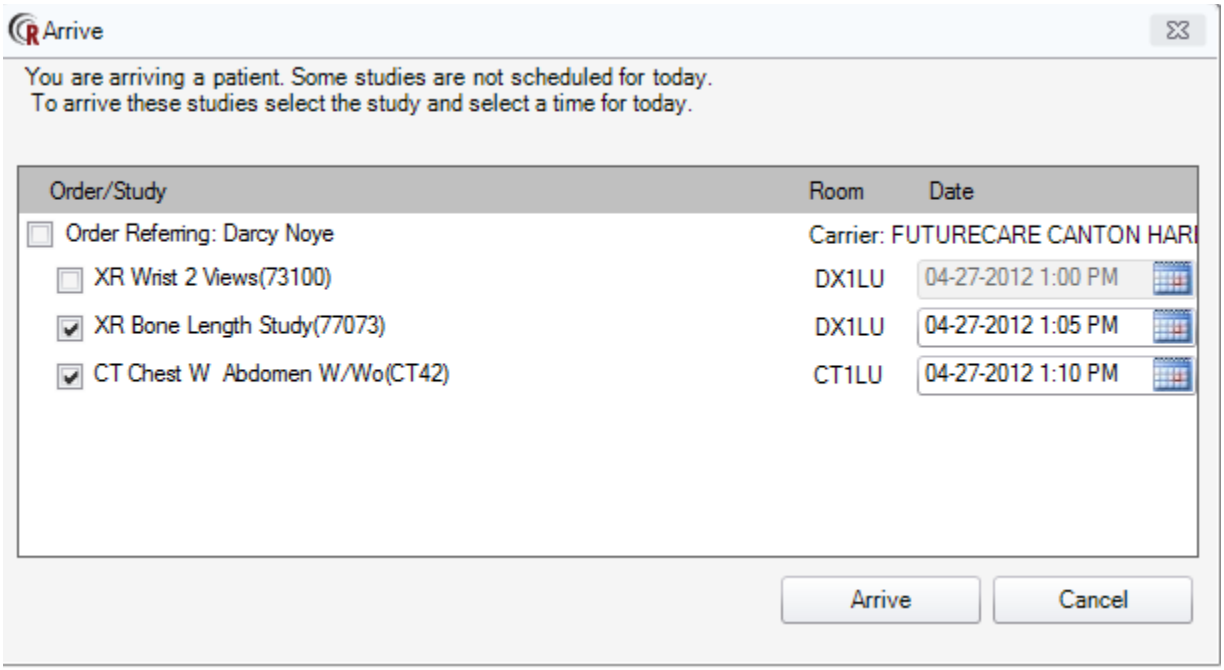

**Figure 4.7 – Arrive window displayed on early arrivals**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

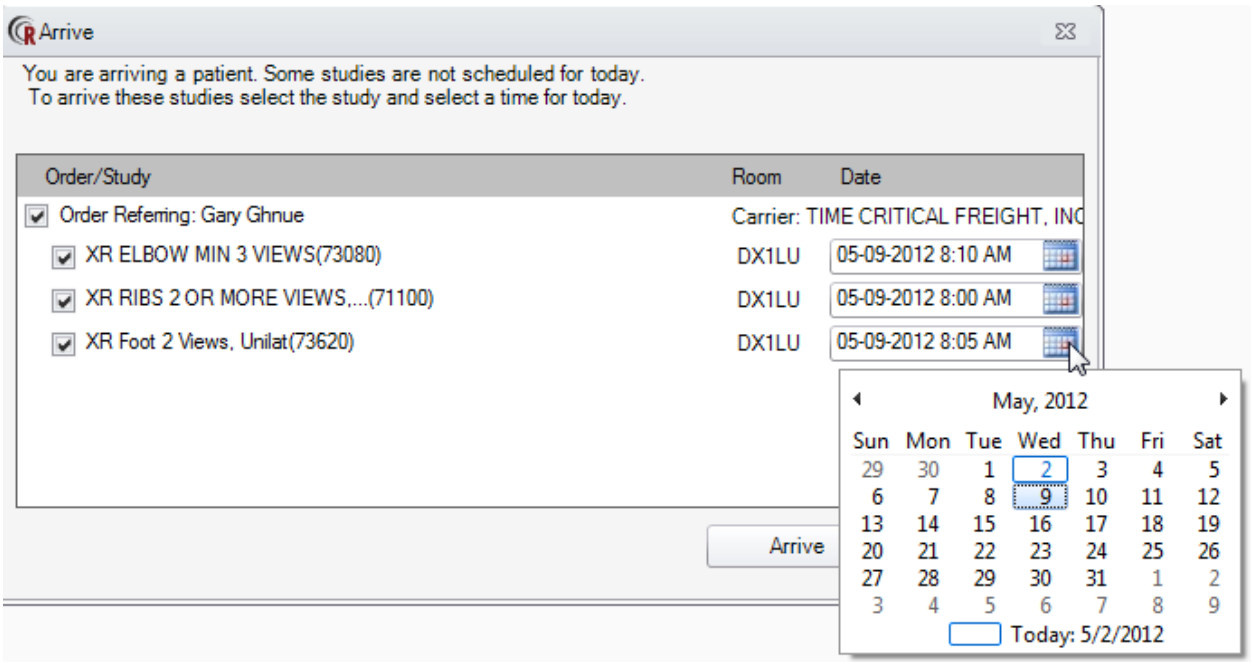

**Figure 4.8 – Order selected auto selects all. Must be current date to arrive**

Looking at the figure above, selecting the Order Referring check box will select all the studies. If you then try to unselect one of the studies it will deselect all including the Order Referring check box.
Selecting the check box for the study will activate the Date control. Selecting the calendar ICON opens the calendar control to select the current date. The date can also be input manually.

If the Check In / Arrive button is selected and a study(s) selected does not have the current date selected, it will inform the user with a message prompt.

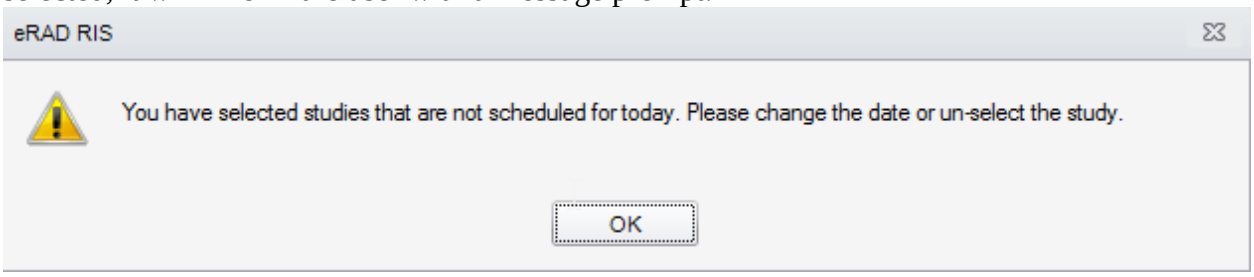

**Figure 4.9 – Message of study with a future date.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Site and Practice filtered according to schedule group

The user group the user belongs to will control what sites the user will now be able to have access to. Also based on those sites the practices will also be filtered to the practices that the user has sites for scheduling.

This will be seen in the dropdown lists in which the practice or site is selectable. For instance, when creating a new appointment on the order tab, the list boxes for Practice and Site will be filtered to what is configured for the user in the schedule group the user belongs to.

Also, included in the dropdown's list of values is any practice/site that is already saved in the dataset. For example if another user (with a different schedule group) opens a study in the New Order, Registration, or View/Edit windows and does not have access to the site that the order was saved with, the user may edit the order/study and save.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Logging client side errors to the server

To aid support in troubleshooting errors that may have occurred, the ability to log the error in a database table has been added in build 36.

The logging is configurable, controlled by a new system configuration value called EnableLoggingClientErrorsToServer, which defaults to true. . If this is false then the GUI will not try to upload errors as they occur. If this is true, the GUI will upload errors as soon as they occur, as long as a) the error is not related to authentication, and b) the error is not the exact same as the last error that was logged by that user.

If an error occurs while logging to the server, we silently suppress the error so it is not displayed to the client, and we disable future logging for the rest of the session (i.e. until RIS is restarted). This functionality was put in place to ensure that we didn't fall into an infinite loop of logging an error, logging the error that occurred while logging the error, etc.

Errors are stored in the c_client_error_log table. The log contains the date of the error, the user_id of the current user, the computer name, the details of the error itself, and a hash_code for that error.
The hash_code is calculated using the description of the error to help with grouping and filtering.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Management Report Authorization

eRAD RIS supports both Windows and custom authentication, but our Reporting Services integration has always relied upon the Report Manager web interface to configure permissions. Starting in build 36, we will support managing authorization for Management Reports from within our Configuration module. Authorization should allow members of specified user groups to access the contents of particular folders on the Management Report Server.

When the user opens eRAD RIS, we query the report server to obtain a list of reports and forms that the guest user is authorized to access. We have built new logic into the application to ensure that the Administration -> Management Report screen will only display the reports for which the current user is authorized to access. Note that if a user belongs to Groups A and B, they will have access to folder C if EITHER group A or group B is authorized.

### Initial Configuration

From Administration->Configure->System->SystemConfig, the administrator/installer can set the values for the following key configuration values:

| | |
|---|---|
| ReportServerUrl | Identifies the URL of the SSRS Report Server web services endpoint. |
| ReportServerUserName | Identifies the name of a windows account on the report server. If this value is blank, the RIS will try to use the active user's credentials instead. Before populating this value, the user will need to create a windows account on the report server. Consider using the password never expires option when creating the account. |
| ReportServerPassword | The password that will be used to authenticate to the report server when using the guest account specified above |
| ReportServerMgmtReportFolderFilter | The folder that will be used as the top level folder for management reports. No folders or reports should be accessible that are not children of this folder |

**Figure 4.2 – Report server System Config codes**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Configuring the guest account's report server permissions

Step 1: visit the report manager in Internet Explorer, by default this is http://peidev1/Reports in our environment, substitute the machine name for the report server in place of peidev1 if applicable. From the "Home" folder, click "Site Settings" in the top Right Corner and then click "Security" on the left side of the screen. Ensure that the guest account has the "System User" role.

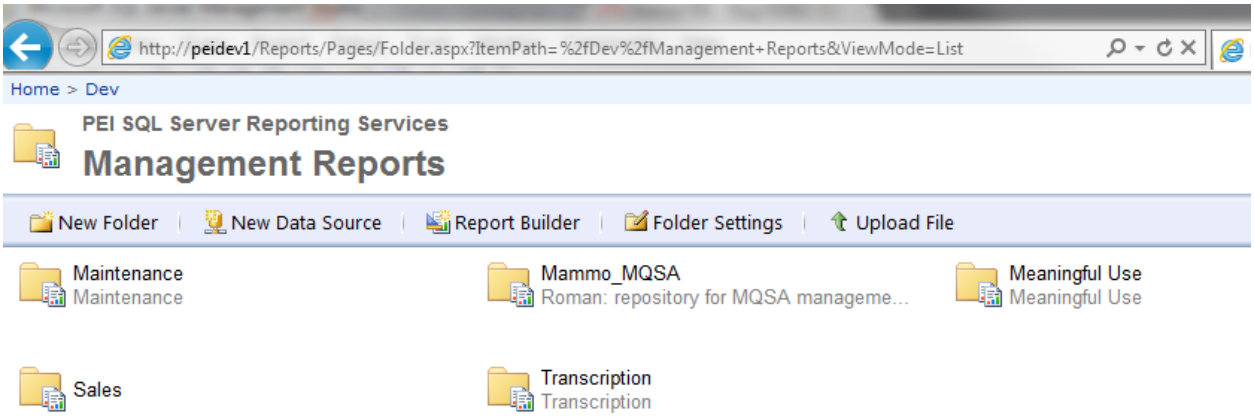

**Figure 4.10 – Report Manager page that is provided by SQL Server reporting Services**

Step 2: again using the report manager, browse to the top level folder that will be specified in the config setting "ReportServerMgmtReportFolderFilter", click "Folder Settings" and assign the Browser role assignment to this folder. Note that the guest user also needs browser permissions at the root folder for the report server.

## New Report Permissions Editor

1. A list of folder hyperlinks shows which folder is currently being edited. The user is editing the folder "DA Test Folder" in the screenshot above. The user can navigate back up the tree by pressing the backspace button, or by clicking on the link for another folder (e.g. "Research and Development". The Home folder is the top level folder for this RIS install, it is configured to point to a physical folder on the report server (see ReportServerUrl and ReportServerMgmtReportFolderFilter in the SystemConfig editor).
2. Folder View – displays the folders within the folder that is currently being edited. If the user double-clicks or presses the enter key on a folder, the editor will update all areas to reflect the selected folder. In the screenshot above, the folder "DA Test Folder" contains two other folders. If the user presses enter or double-clicks "DA Test Child1", the area

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

in section 1 would update to show "Home > Research and Development > DA Test Folder > DA Test Child1", the folder list would show "DA Test Child1"'s folder contents and the list of groups in section 3 would update to reflect the permissions for the "DA Test Child1" folder.

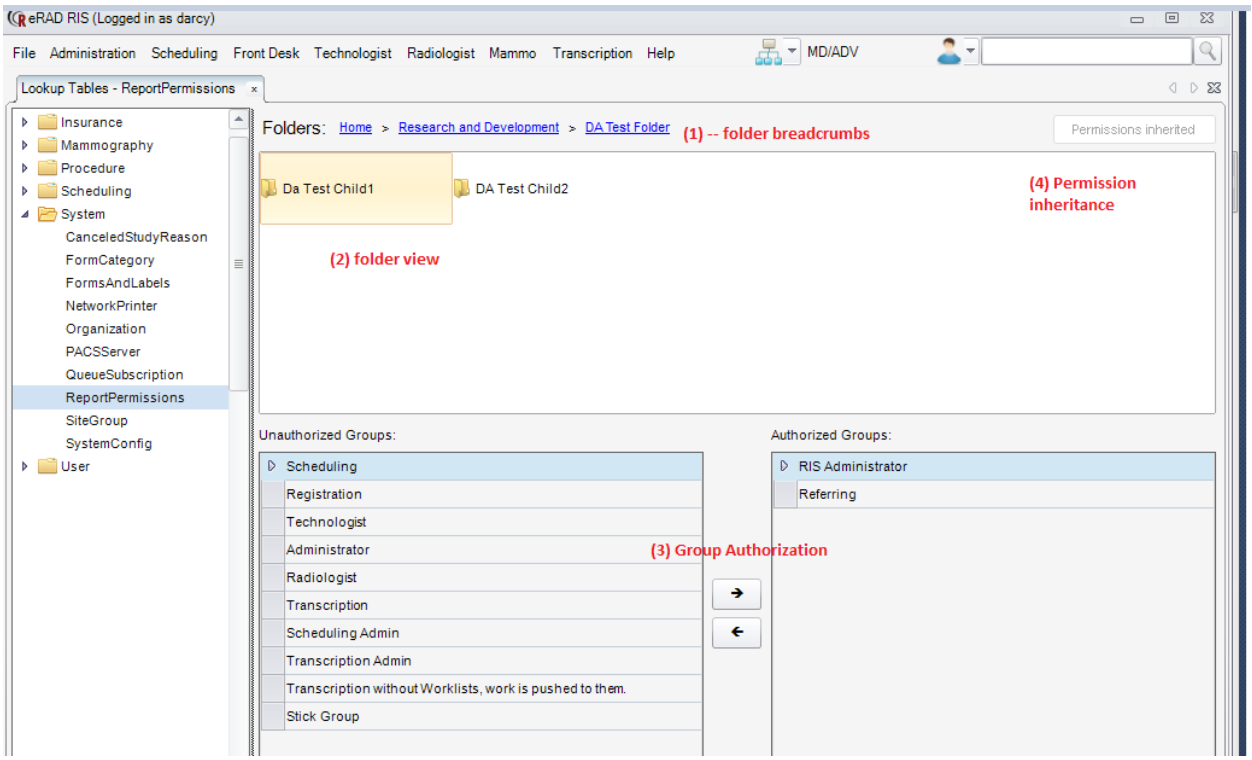

**Figure 4.11 – Report permission editor**

3. Group Authorizations – the bottom portion of the editor shows a list of groups. All existing groups should fall into the "Unauthorized Groups" or "Authorized Groups". The user can move a group from one category to the other by double-clicking, pressing enter, or using the arrow buttons between the two grids.
4. Permission Inheritance – our permission framework is built so that a folder will either have its own list of authorized groups, or it will inherit from its closest ancestor (e.g. parent, grand-parent, great-grand parent, etc). While editing the top level ("Home") folder, this button will be invisible. If the current folder inherits its permissions from an ancestor, the button will be disabled and show the text "Permissions inherited". If the current folder has its own defined permissions, it will be enabled and show the text "Revert to parent security". Reverting to parent security will result in the current set of authorizations being deleted, and the screen will refresh to show the inherited permissions.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Note: when the user changes the assigned groups from a folder so that it is different from its parent, the user will be prompted with:

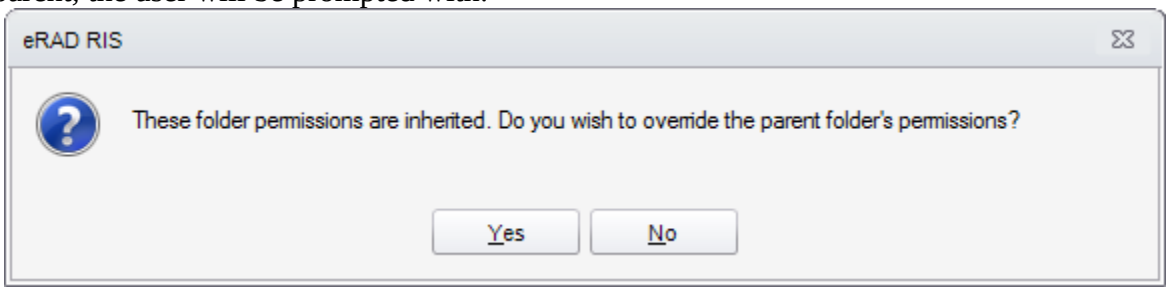

**Figure 4.12 – Prompt to override the permissions of a parent folder**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Modality closure "times"

In previous builds of eRAD RIS modalities could be closed in a date range, but the time could not be specified. In build 36 2 new columns have been added to the modality closure grid. This now allows the modality to be closed for an hour, 2, 3, etc… instead of a full day.

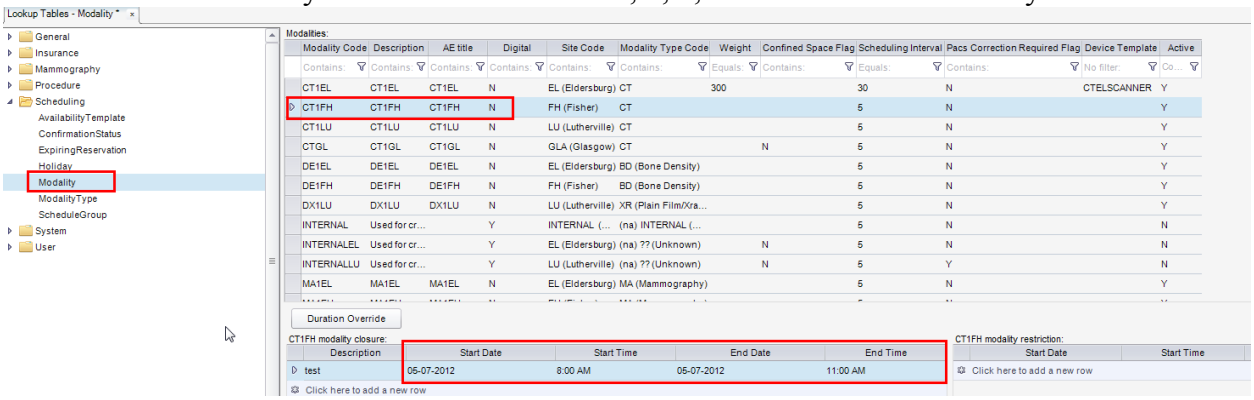

**Figure 4.13 – Modality closure times**

In the figure above the Modality lookup is opened. The Specific modality to be closed is selected in the top pane. This will show all modality closures. The user can specify the start date, start time, end date and time.

This has also been extended to the modality restrictions.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use (MU) wizard dialog

The patient visit tab has been enhanced with a MU wizard. The wizard will allow the user to quickly add or remove allergies, medical history and medications via a list of check boxes. When an item is checked, that item will be added to the grid on the patient visit tab. The wizard is accessed from the Meaningful Use Wizard button shown in figure 4.15.

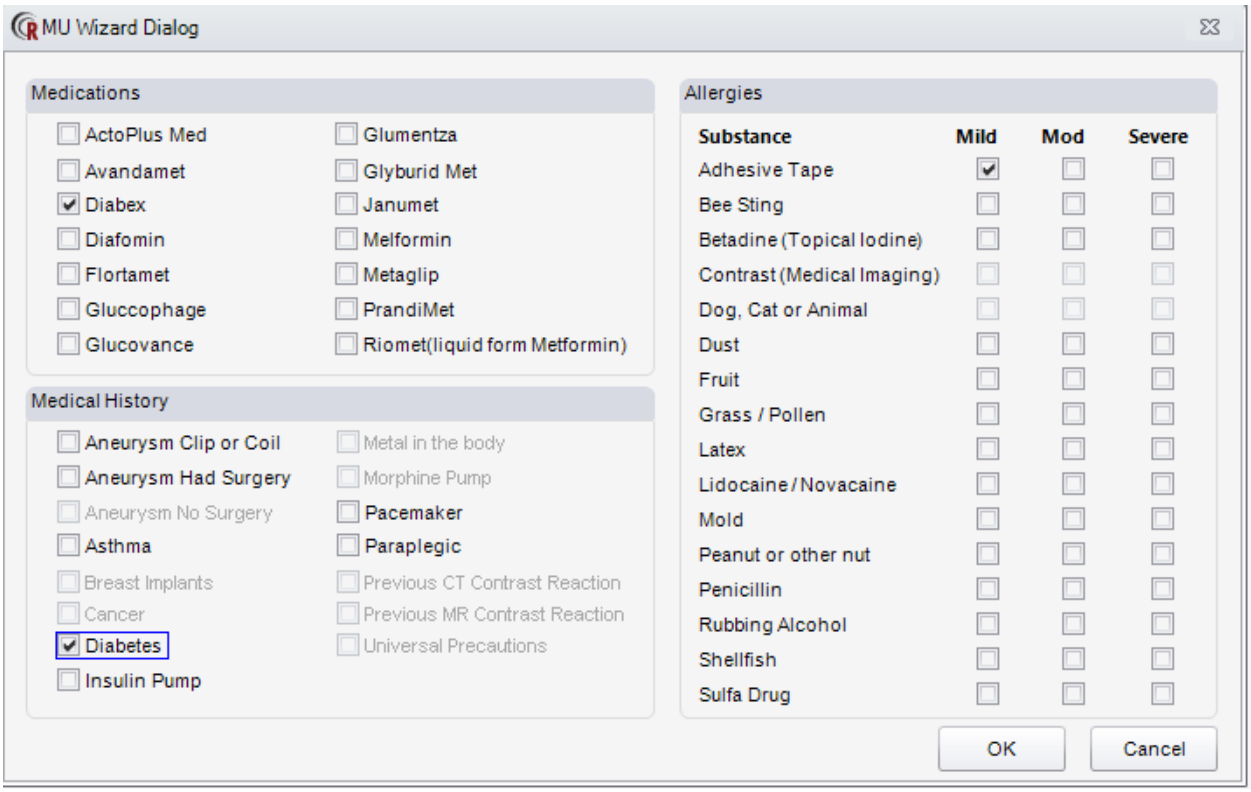

**Figure 4.14 – MU wizard**

Medical History – The medical history grid allows the user the ability to have the same icd-9 code show multiple times, however we don't allow the dates of an icd-9 code to overlap. If the user selects the same icd-9 code only one can be active at a time (we throw an error saying overlapping dates not allowed). We added code that forces the user to select a start date for active icd-9 codes and we added code to force an end date for inactive or resolved icd-9 codes. This is needed so we can use the mu wizard to activate or inactivate the correct code in the list.

Allergies – The allergy shows in the grid only once. If an inactive allergy is flagged again, it will simply activate it.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Medications – Because we are using NewCrop medications can show in the list multiple times. We don't have the concept of start and end dates with medications so the way we use the meaningful use wizard is as follows.
If the user clicks the wizard button we show all active drugs by checking the appropriate medication (no matter if entered in ris or newcrop). If the user unchecks the checkbox we make all medications entered in eRAD RIS (ris_entered_flag = Y) inactive. We don't inactive the medications entered in NewCrop because the sync button will control the status of the medication. If the user checks a medication in the wizard we add a new row to the grid.

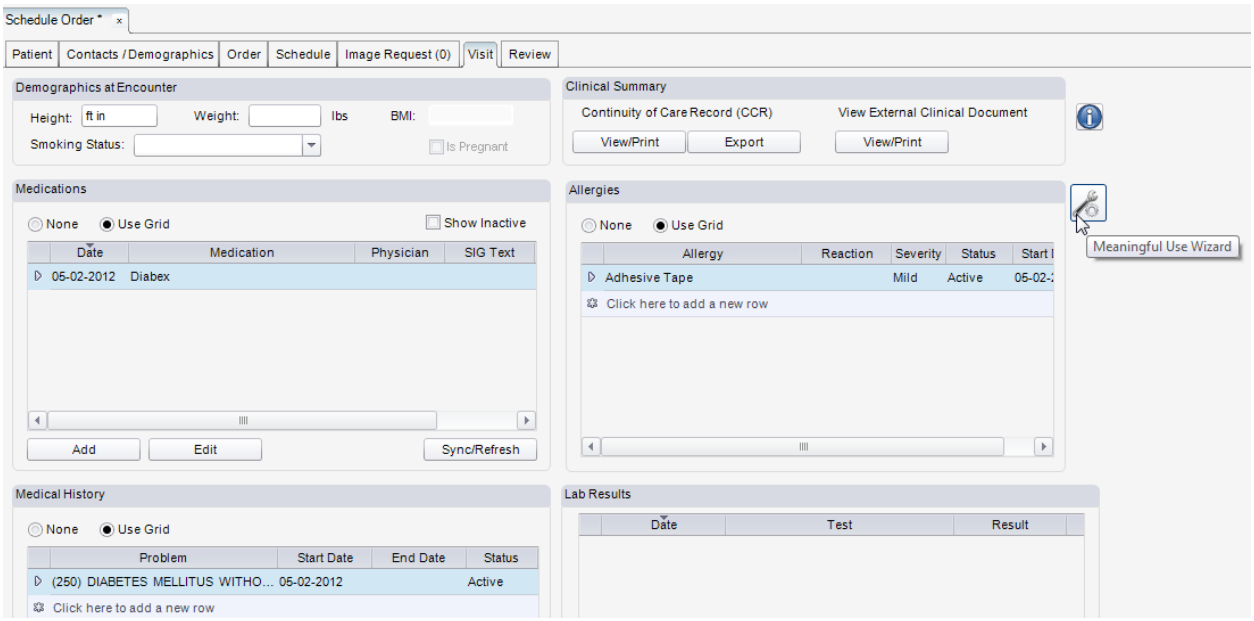

**Figure 4.15 – Displaying access to the MU wizard and the Medications, Allergies and Medical History grids**

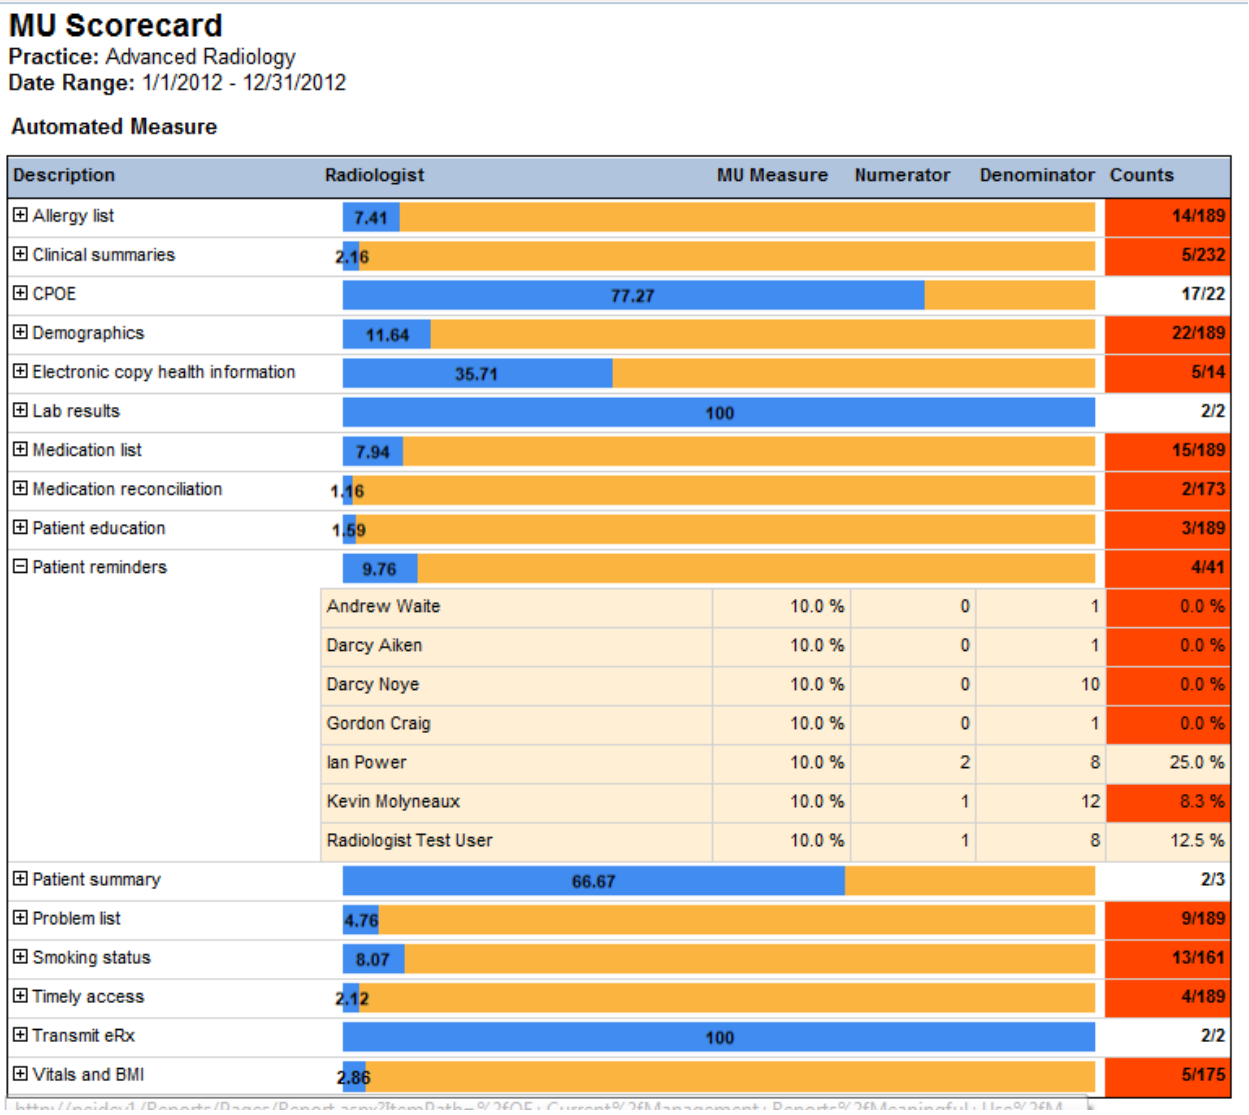
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MU Scorecard Management Report

The automated measure report has a details section which allows the user the ability to drill down into each MU status to check each user's numerator/denominator and percentages for each measure MU Status. To help the user easily track down users that are not meeting the MU standard we fill the last textbox red indicating below the MU standard for the MU Status. Ideally, if the users are using the system in a meaningful way we will never see red in the last textbox



**MU Scorecard**
**Practice:** Advanced Radiology
**Date Range:** 1/1/2012 - 12/31/2012

**Automated Measure**

| Description | Radiologist | MU Measure | Numerator | Denominator | Counts |
|---|---|---|---|---|---|
| ⊞ Allergy list | | 7.41 | | | 14/189 |
| ⊞ Clinical summaries | | 2.16 | | | 5/232 |

**Figure 4.16 – MU Scorecard management report**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Outside Read Changes

In build 36, the Add Outside Read data window has seen some change.

The following has been added to Add Outside Read:

1. **Digital Flag;**
   Added a 'digital' flag to the add outside read screen, if one or more of the images are expected to be in eRad PACS then this check box should be checked, which will put it into the PACS correction workflow and when the rad reads the study the images will get loaded; otherwise, the study is considered analog or that the images will be searched for manually on an external system.

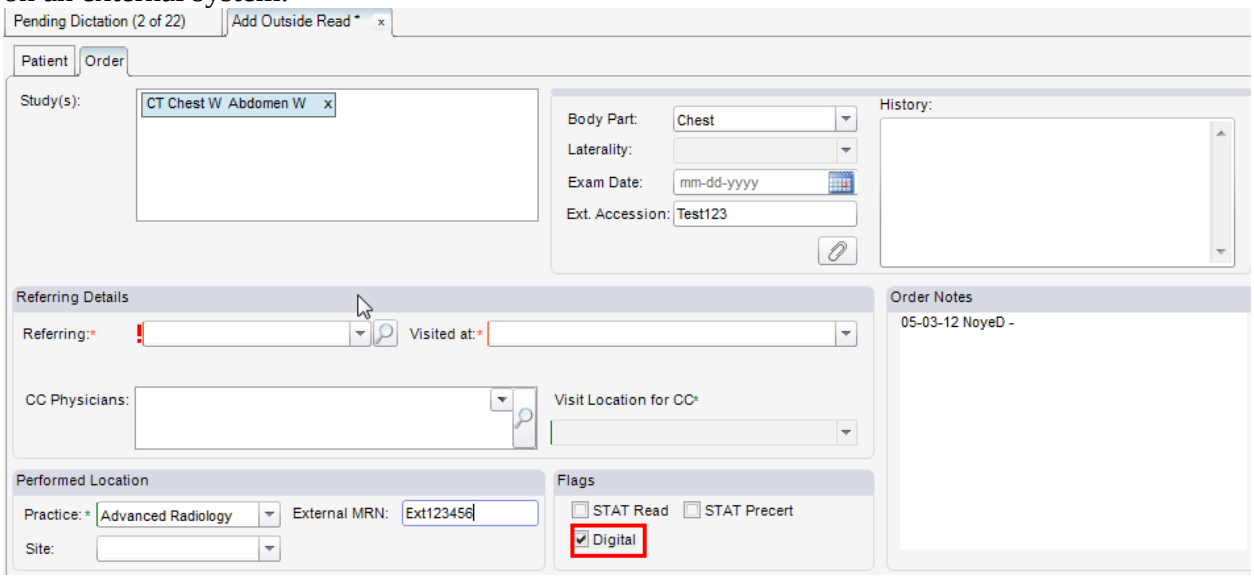

**Figure 4.17 – Digital flag on Add Outside Read window**

Under the hood there is a modality named "OutsideRead_<mod_type_code>" such as "OutsideRead_CT" for each modality type. This is still how things work; however, there is now an additional modality for each type named "OutsideRead_AN_<mod_type_code>" for each modality type. The <AN> standing for analog. An administrator setting up the system access the outside read screen they will be prompted to create outside modalities for each of the active modality types that is still missing from the l_modalities table. They will not get prompted to create the *_AN_* modalities since those can be auto generated from the digital modalities they need to manual create.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

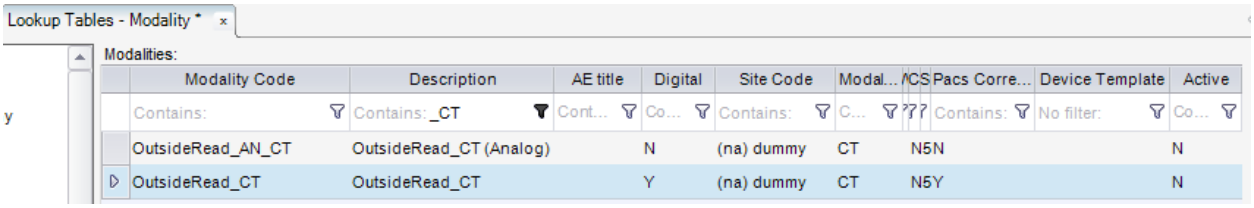

**Figure 4.18 – Modality lookup showing outside read rooms as digital and analog**

The figure below shows a digital outside read study (OutsideRead_XR) and an outside read study that is analog (OutsideRead_AN_XR)

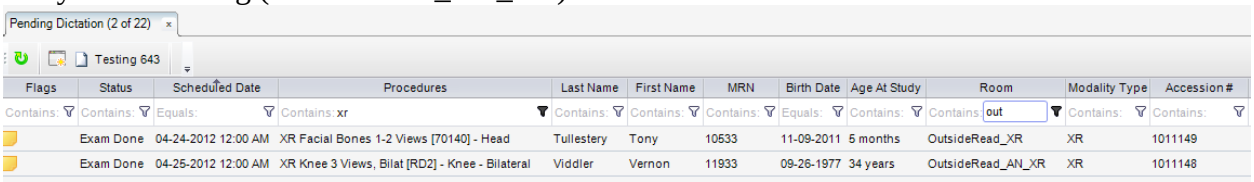

**Figure 4.19 – Work list view of digital and analog outside reads**

The Dictate, Sign Reports, and Create Reports windows also shows analog studies appended with analog in the exam details.

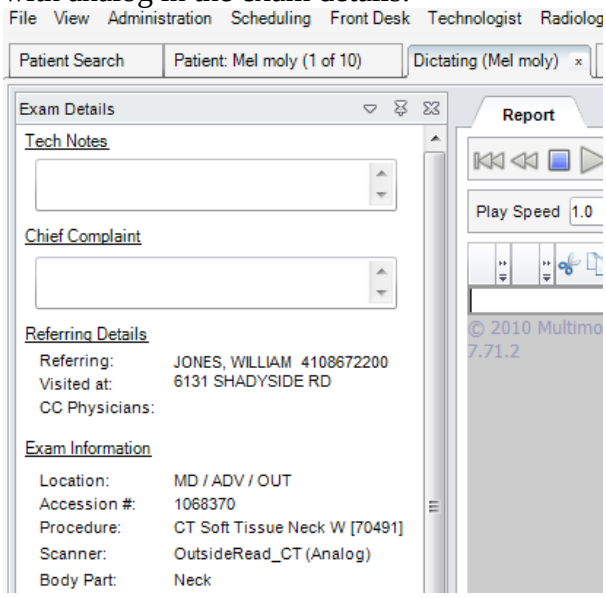

**Figure 4.20 – Dictate window displaying scanner information**

2. **External Accession Number for Outside Reads:**
   Users need to add the external accession number for cases where the images aren't imported into our PACS and the user needs to locate them on an external system where the images where acquired.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

For each study we the user can provide an external accession number, which is displayed on the Radiologist and 'View Edit' screens. Screens show the external accession number so RADs can search the external system (when applicable). The report will show both the RIS and External accession numbers. The RIS accession number must maintain their uniqueness since our search current must resolve studies uniquely and our interfaces require accession number to be unique. We can't use the external accession number as the RIS accession number because we must prevent duplicates.

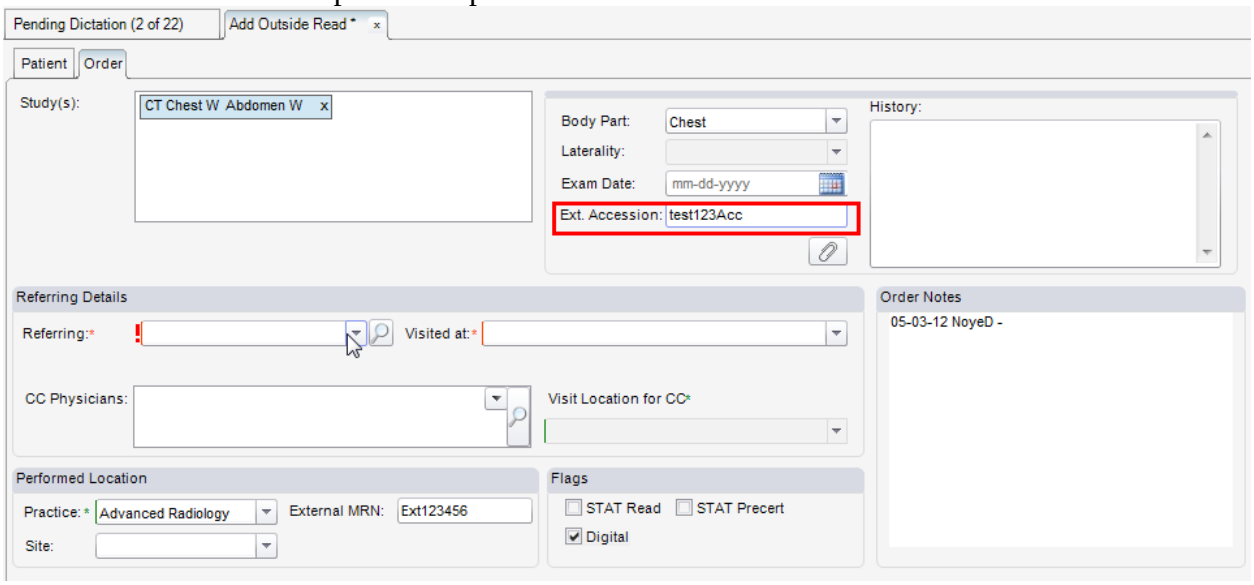

**Figure 4.21 – Add Outside Read window displaying external accession number field**

The external accession number is displayed in the Exam Details and Summary panes of the radiologists and transcription windows.

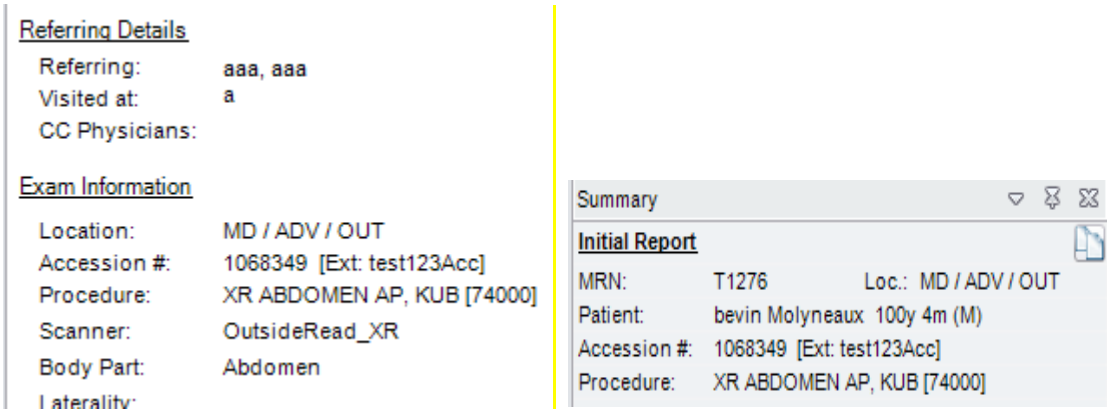

**Figure 4.22 Exam details and Summary Panes of Dictate window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The View/Edit data window also has the External Accession number in display on the Note/ Exam Times tab. It can also be edited on the Documentation tab.

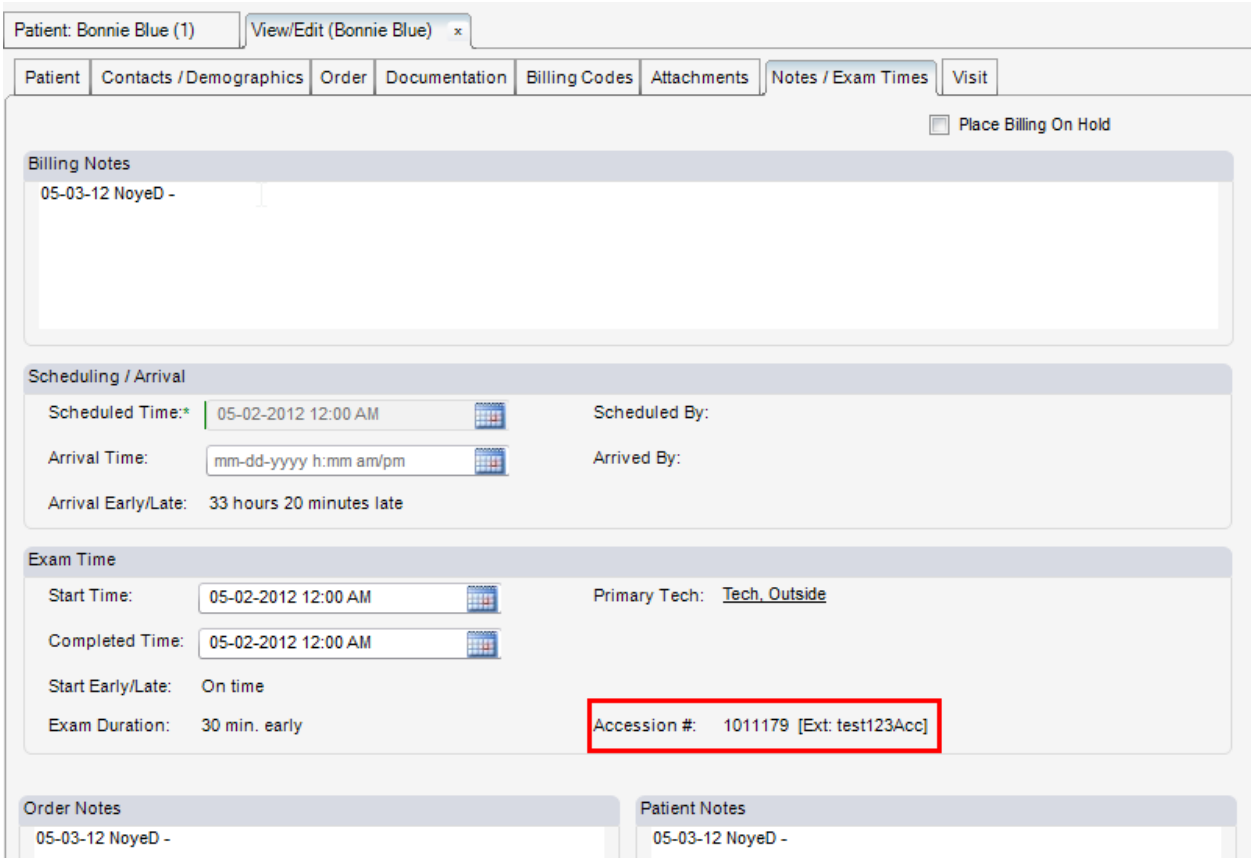

**Figure 4.23 – External Accession number on the View/Edit window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

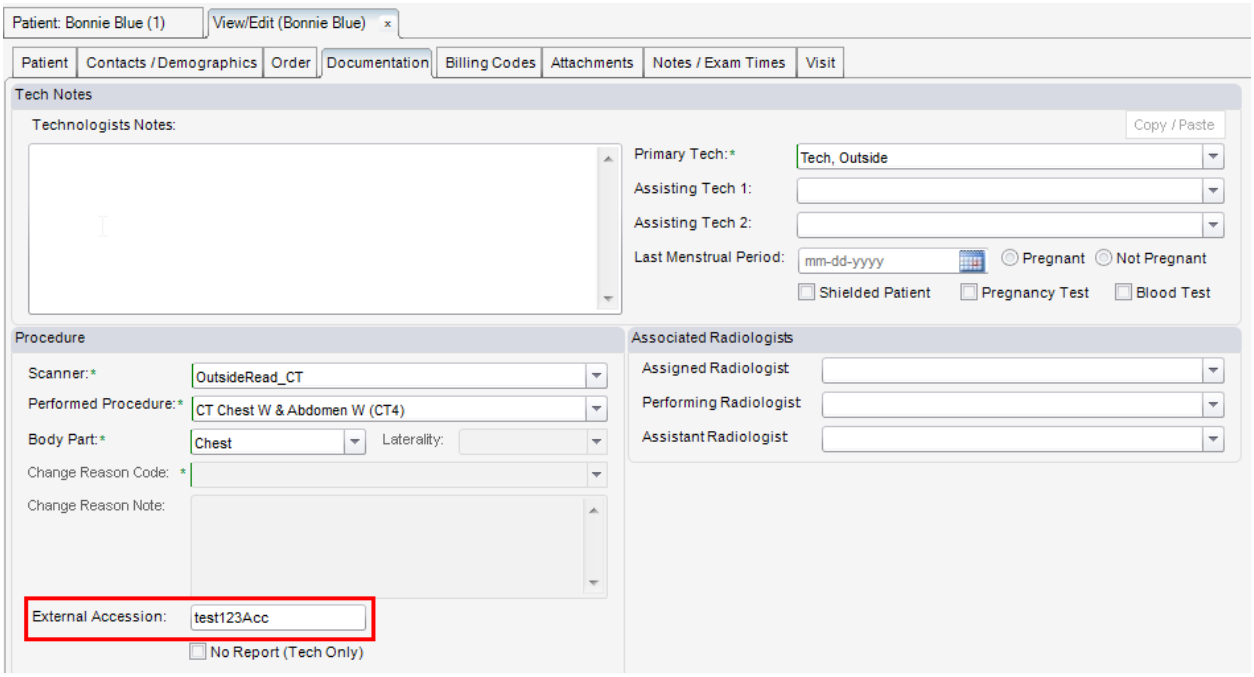

**Figure 4.24 – Ability to edit the External Accession number**

## 3. External MRN:

An External MRN can also be added in the Add Outside Read data window. Located on the Order tab, the External MRN field is a free form text field that will allow users to input and save an external MRN for this patient.

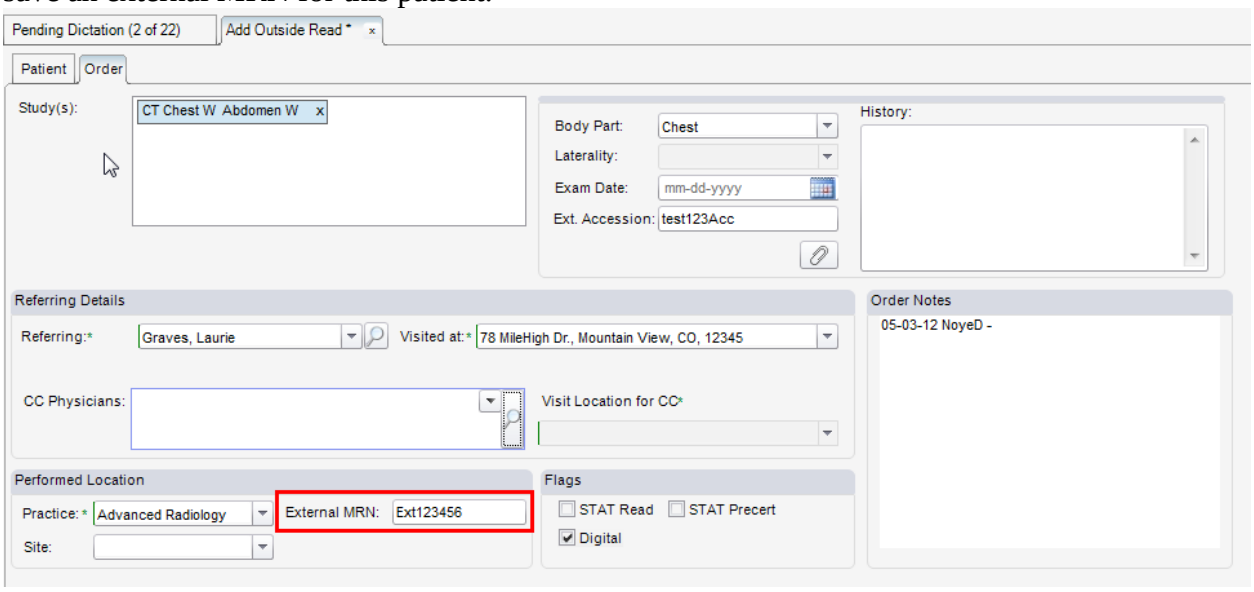

**Figure 4.25 – External MRN field on Add Outside Read window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Submiting an outside read with an external MRN also creates a second patient record with that patient_id/MRN with the issuer_of_patient_id of 'outside_<site_code>'. This is so we can locate the patient via the alternate MRN which will be displayed on the report.

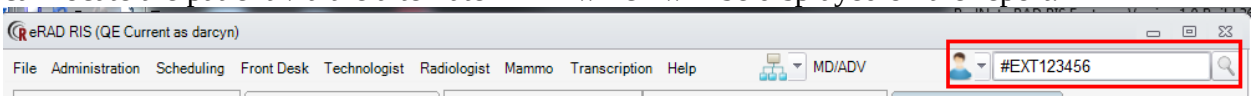

**Figure 4.26 – Searching for external MRN**

A new section has been added on the main patient tab to display the alternate MRN(s) for a patient. If the study that is open was an outside read with an alternate MRN for reporting than that MRN will show in bold if that is the MRN that for the report.

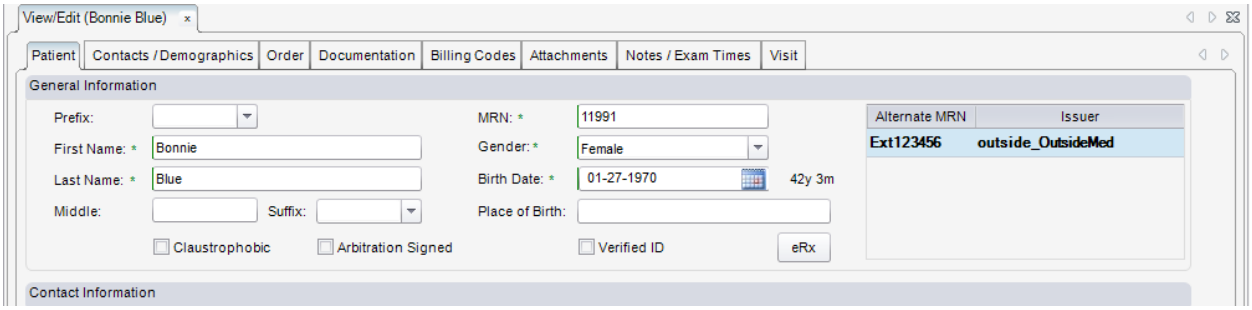

**Figure 4.27 – View/Edit showing Alternate MRN**

When scheduling a new appointment for this patient, the alternate MRN will display. Because this is a new order but you will notice that it is not bolded.

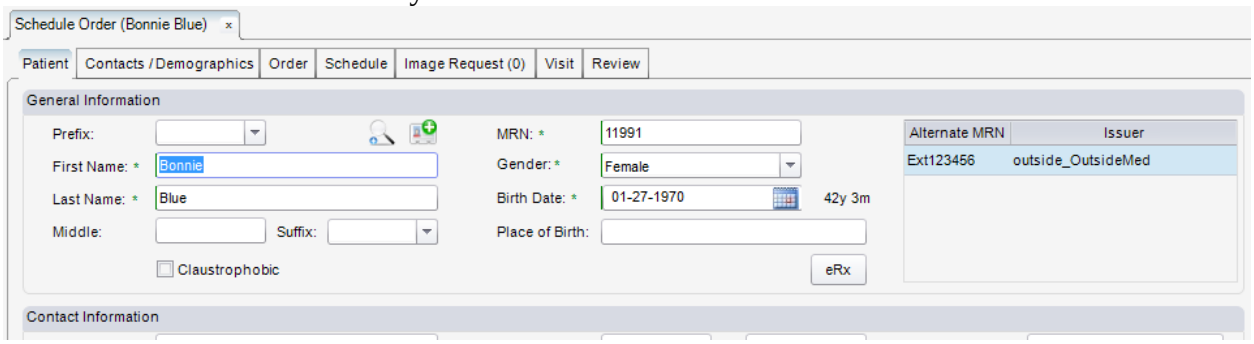

**Figure 4.28 – New appointment showing alternate MRN**

The alternate MRN may be edited in the View/Edit window on the order tab.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

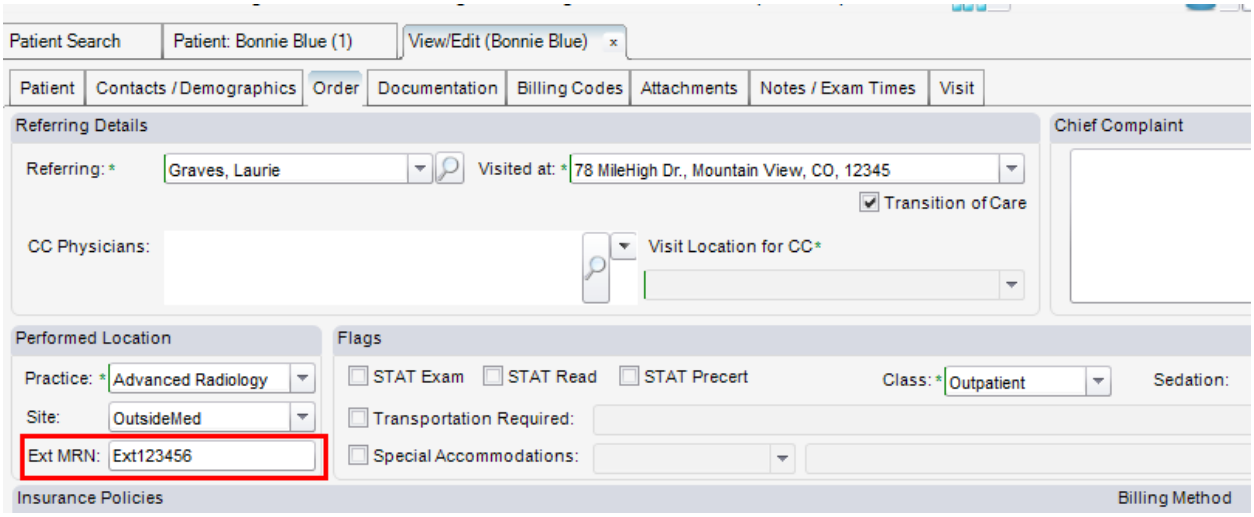

**Figure 4.30 – Ext MRN field in View/Edit window**

4. **History Box:**

On the Order tab, the History box replaces the Tech Notes box. In fact the text box itself is the same, but the label of the box has changed.

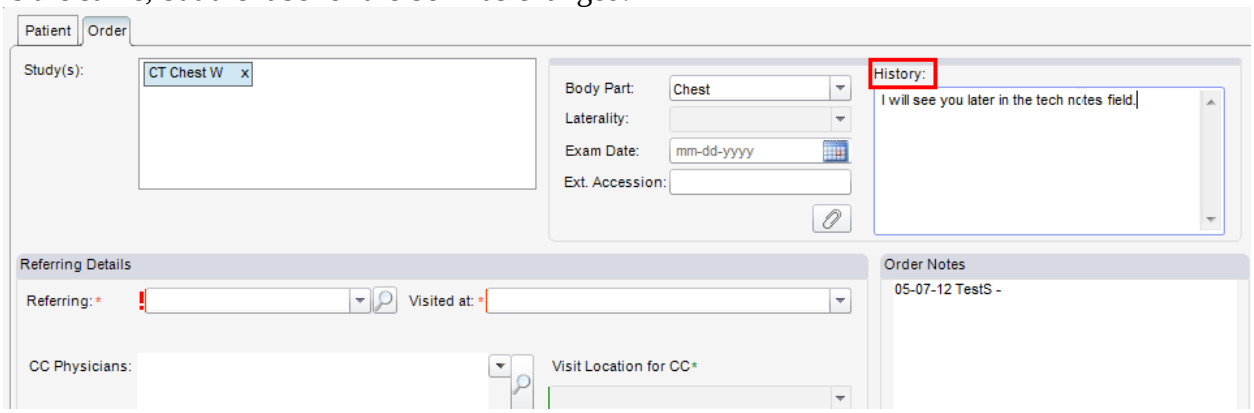

**Figure 4.31 – History text box in Add Outside Read window**

Text entered in the History box will be displayed in the Tech Notes box in View/Edit window and Billing Exception window.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

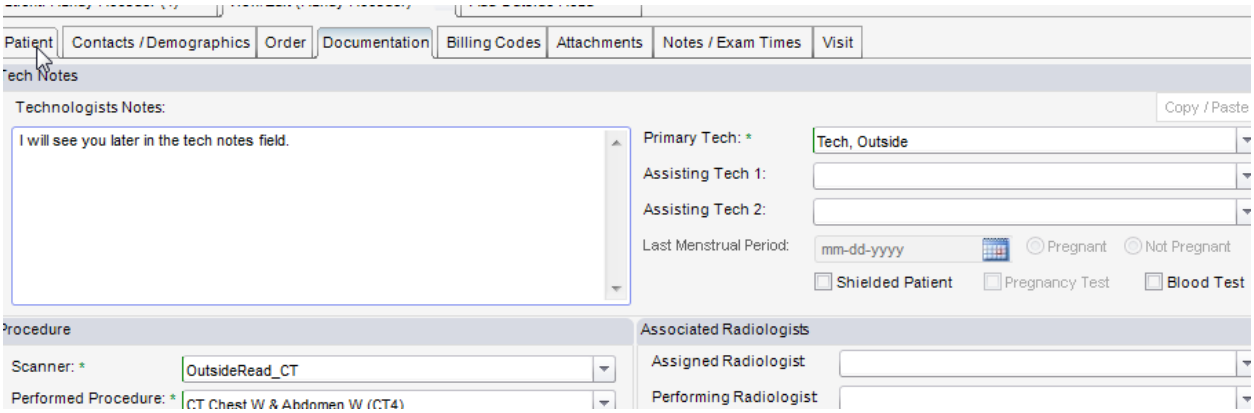

**Figure 4.32 – Text captured in History box appears in the Tech Notes field**

5. **Chief Complaint:**
   The chief complaint field has been removed from the Add Outside Read window. To fill in the space where the chief complaint was shown, the order notes was resized and moved into the empty space. This had a nice effect on the screen and freed up much needed space for outside reads that require insurance information.

6. **Patient Tab Changes:**
   The Field Place of Birth has been removed, as has the Claustrophobic and Verified ID check boxes. The eRx button for ePrescribe does not appear. All of these fields / buttons were located in the upper right of the Add Outside Read window. This space is now for the display of the Alternate MRN

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

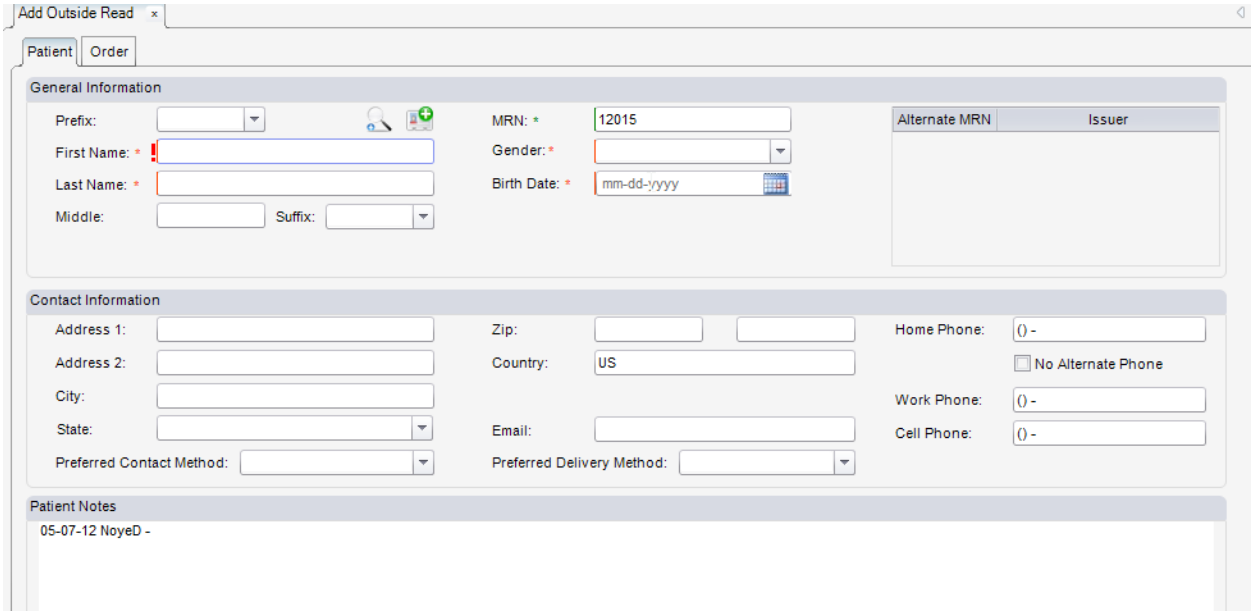

**Figure 4.33 – Add Outside Read data window**

The Patient Origin data pane has also been removed. The patient note pane was expanded to occupy the page real estate.

7. **Site Filtering:**

Finally, we are now filtering practices based on the practices assigned to a user. In addition, a practice will only be displayed in the practice selection if that practice has an outside read site.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Self-Pay Carrier

In previous builds a study could be flagged as self-pay if the patient did not have an insurance carrier. This created an issue with the billing work flow as insurance was a required step.

In build 36 we have added the ability to assign self-pay methods carrier codes which will be used as the insurance required.

The Carrier lookup table has a new column called "Self Pay Flag" added to specify if the carrier is for self-pay.

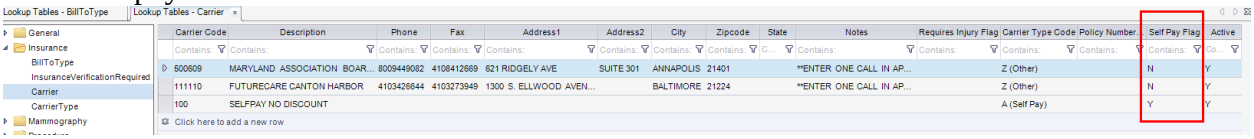

**Figure 4.34 – Carrier lookup displaying new column "Self Pay Flag"**

The Bill to Type lookup table also has a new column "Carrier Code" which allows for the self-pay carrier code to be specified for the Bill to Type Code.

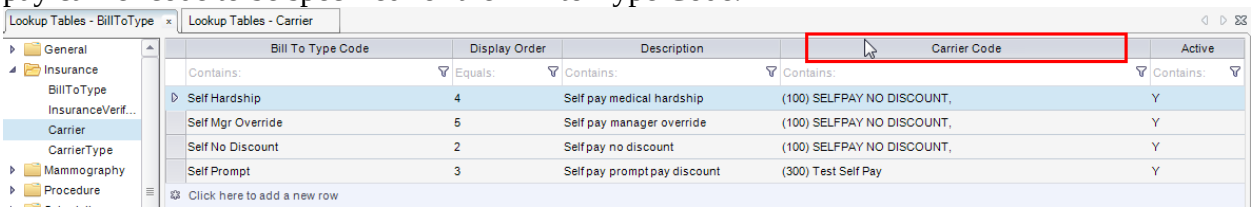

**Figure 4.35 – Bill to Type lookup displaying new column "Carrier Code"**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Mammo Diagnostic Reporting Window Features

It was desired to have data panels with new properties specifically for the Mammography reporting radiologist. We felt these panels were optimal for other users as well. Although we have them initially associated with Mammography reporting, some of these features will be available for all reporting users.

By default, the windows still load in their themed (grey) look. This was done to prevent shock to any existing radiologists before the mammo features are fully in place.

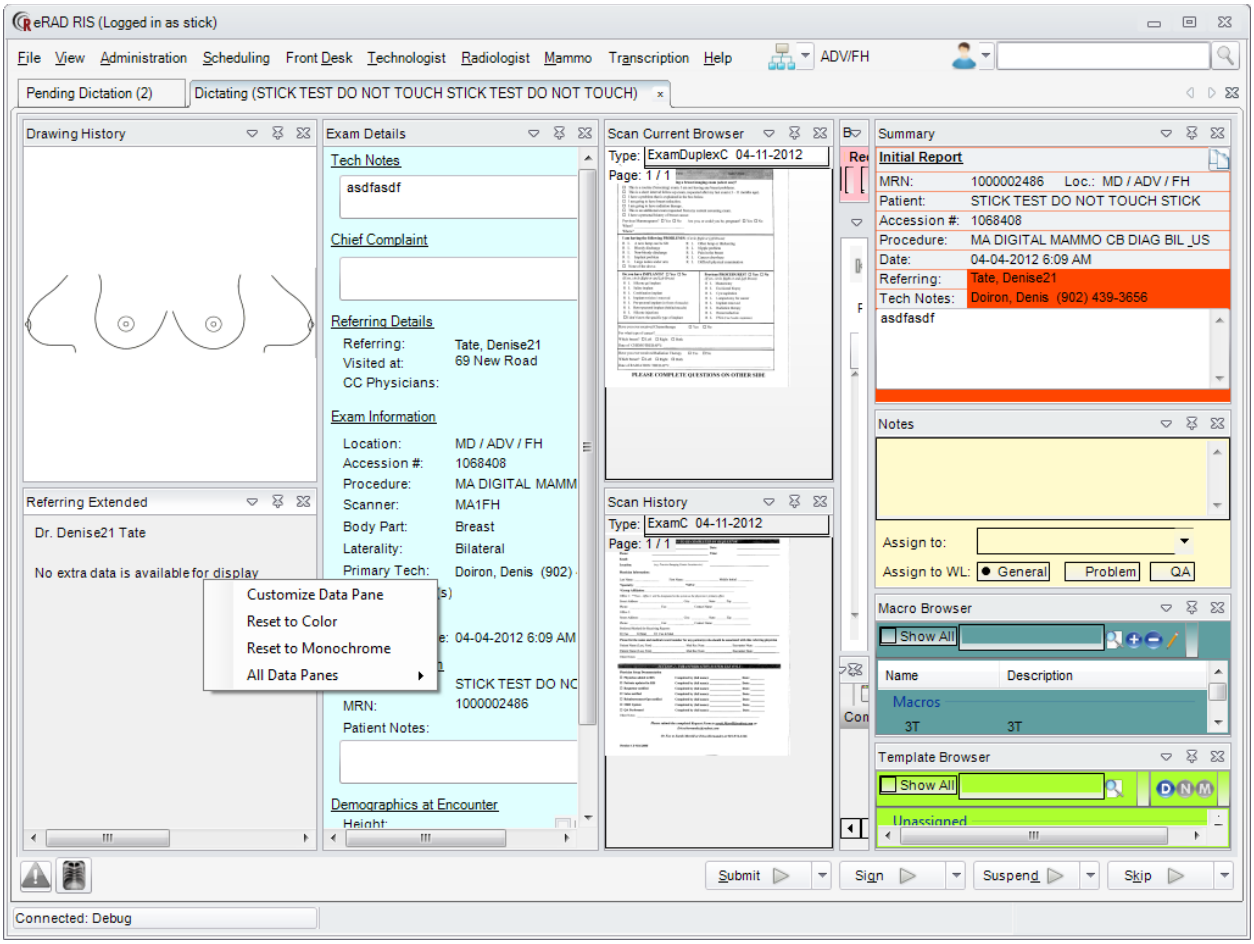

**Figure 4.36 – Reporting window showing background and text colors and context menu**

A new Class RToolWindow was created that maintains a set of defaults colours, for both the themed (ie, mostly grey), and pastel representation of mammo window. Each RToolWindow

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

now has a right-click context menu controlled with an access string (menu.CustomizeDataPanes) with options for:

- Customize window – allows the user to set foreground and background colors on each data pane.
- Reset to Color - initializes the window with the default pastel colour assigned to it.
- Reset to Monochrome - set the color to the default monochrome scheme
- All Data Panes – Contains a sub menu
    - Show/Hide Titlebars – will show or hide the title bars on each tool window
    - Reset to Color - initializes all the panes with the default pastel colour assigned to it
    - Reset to Monochrome - set the color of all panes to the default monochrome scheme

Also added was the extended data glyph. This new feature has another tool window that can be associated with an existing tool window. The example that has been coded is the referring physician window, where only a minimal amount of data is visible by default, but the extended data window features supplemental information

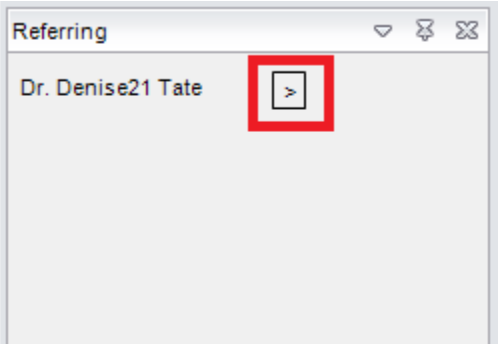

**Figure 4.37 – Extended data glyph button**

When the extended data glyph is hovered over, an additional window is opened as a floating window at the mouse location. This new window is just like any other tool window, so it can be docked into the layout as well.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Surgeon as Person Type

When adding/editing a person through the Personnel lookup editor there is now a Surgeon checkbox available.

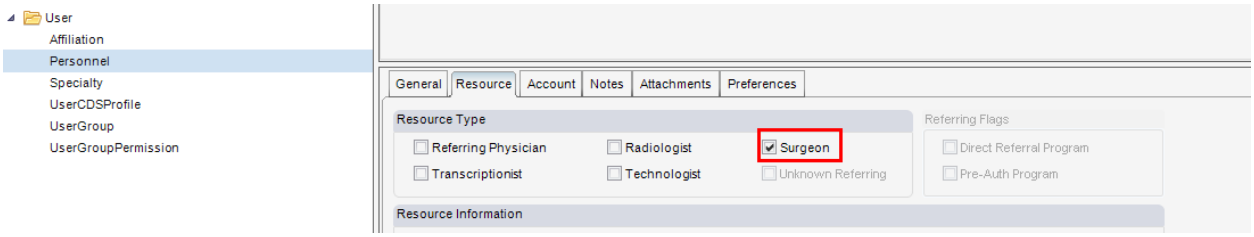

**Figure 4.38 – Surgeon flag in Personnel editor**

The Surgeon can only be searched for and used in the "Send To" Report feature. A user flagged as a surgeon will not return in the results for referring search. This includes the "Performing Surgeon" field on the Mammo Biopsy window (referring search only).

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Bring RIS to Front

Bring RIS to Front is a new available option that can be mapped to a function key, The EOL button, Instr button or the trigger on the underside of the of the Philips Speechmike.

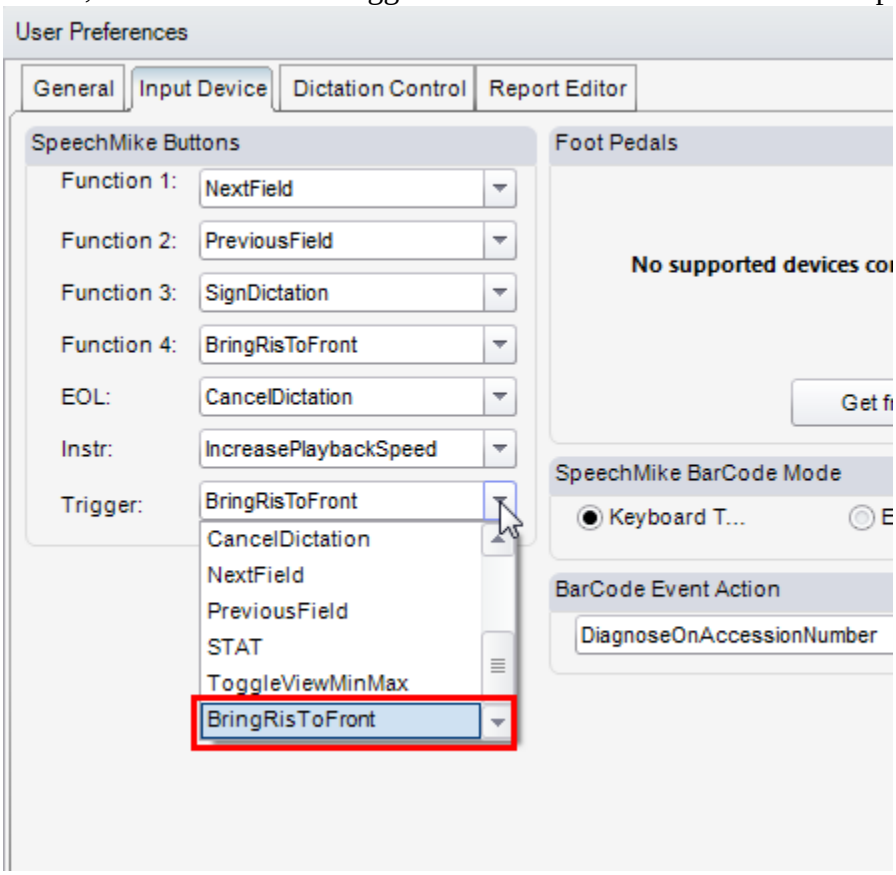

**Figure 4.39 – User Preference SpeechMike button action for BringRisToFront**

If the RIS is hidden behind another application, such as PACS, the user can select the button programed for BringRisToFront and the RIS will appear in the foreground.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting - Easy Access to Macro Editor

In previous builds the macro editor had to be accessed via Administration menu > Configure > Macro lookup table or from within the diagnose window. In build 36 the macro editor can now also be accessed from the Radiologist menu.

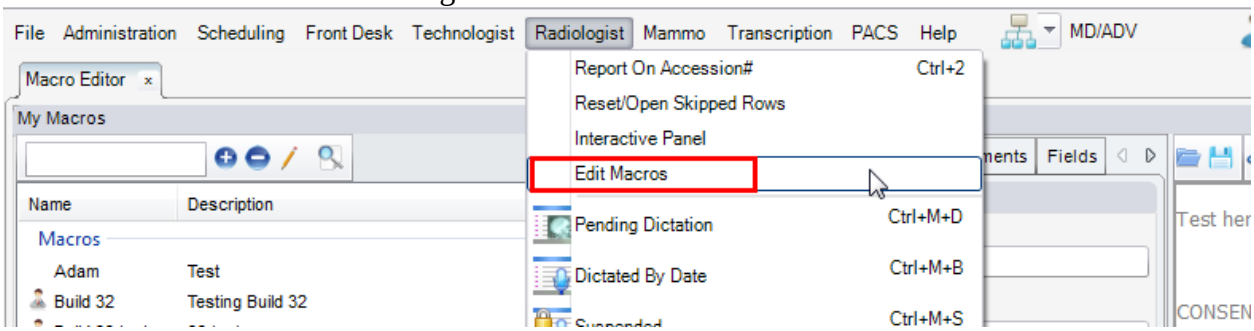

**Figure 4.40 – Macro Editor accessed from the Radiologist menu**

The same access string permissions are required as with previous macro editor access. The Editor will open as a new data window tab. The Macro's displayed on the left are those assigned to the logged in user. This is biggest difference as how the editor is loaded. When accessed from the Radiologist menu, the editor loads those macros assigned to the user. When the editor is accessed from within the dictate window is loads based on the procedure code.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

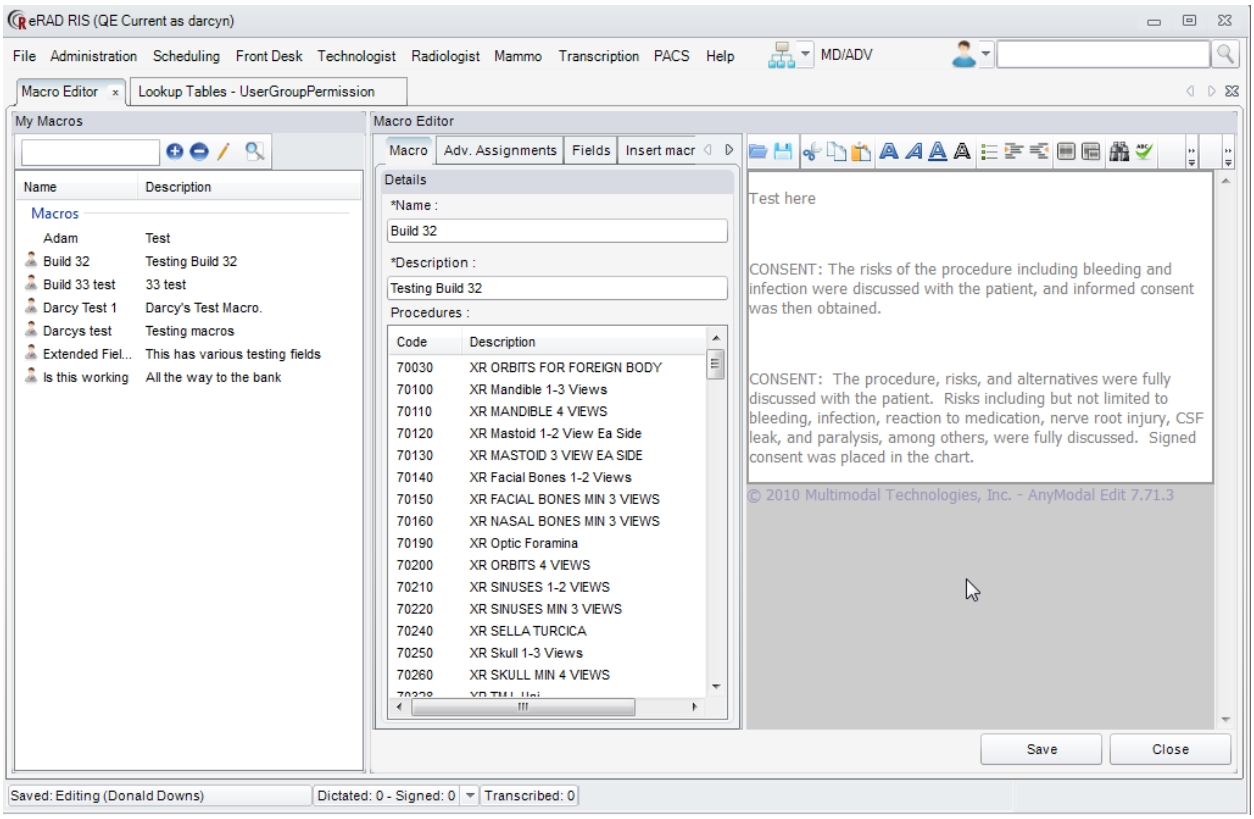

**Figure 4.41 – Macro Editor from Radiologist menu**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Indicate Reporting Mode

Users need to know what mode the report was created with (Interactive or Batch). This is very important to the medical transcriptionists as it changes their editing functions.

In build 36, the reporting tab within the report editor (dictate, create/edit report, sign report windows).

If the report was created using Batch Dictation the report tab will display Batch Report

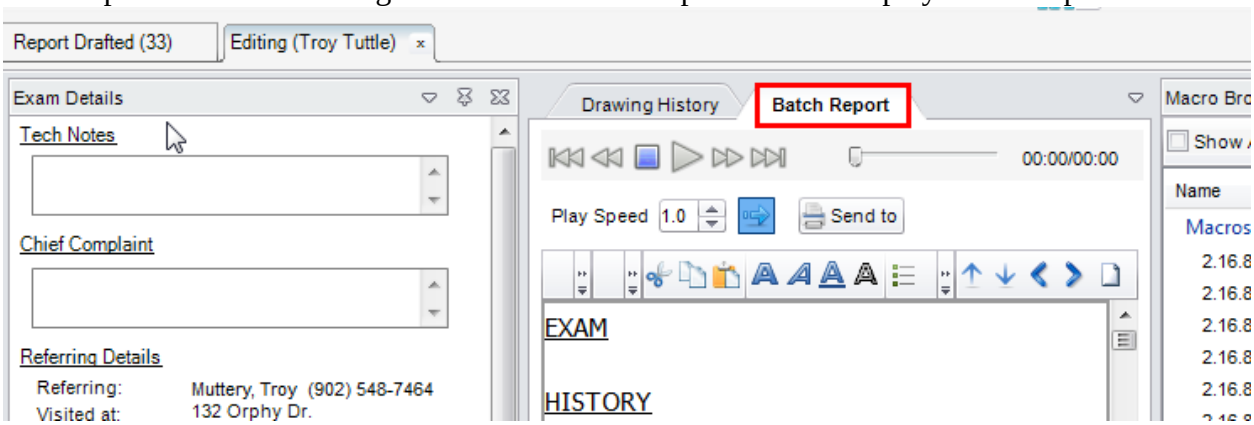

**Figure 4.42 – Editor showing report created with Batch dcitation**

If the report was created using Interactive Dictation the report tab will display Interactive Report

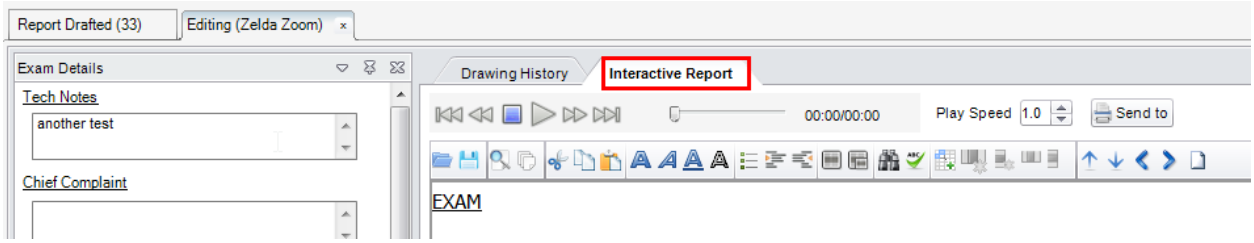

**Figure 4.43 – Editor showing report created with Interactive dictation**

If for some reason the report was not dictated using batch or interactive dictations, the tab will read “Report” as it did in the past.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Patient History Apply Filtered Views

Work lists such as Pending Dictation, Reception, Reports Drafted, etc… have the ability to create custom views to the work list. The list can be sorted, filtered, columns moved or hidden as saved as a view or default view for the user or for the group. The filtering of a list has been added to the Patient History data pane within the Reporting window.

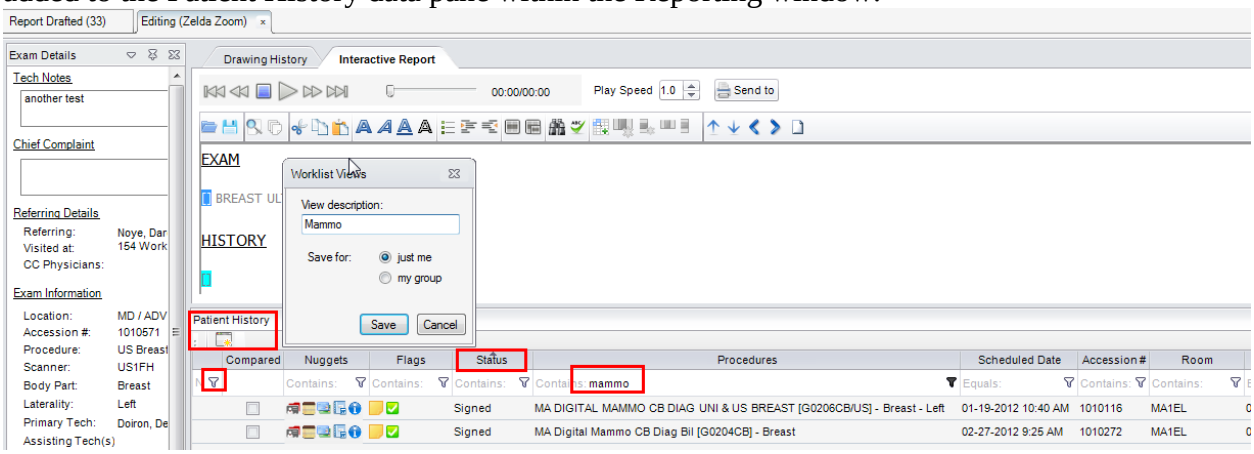

**Figure 4.44 – Creating custom view on patient history data pane in reporting window**

In the figure above, a custom view for mammo exams is being created. The procedure column is filtered on "Mammo" and the status column is sorted descending.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Patient History Mark Priors

The patient history control has also seen another enhancement in build 36. A new column titled "Compared" has been added on the left side of the control. The column contains a check box for each row in the list.

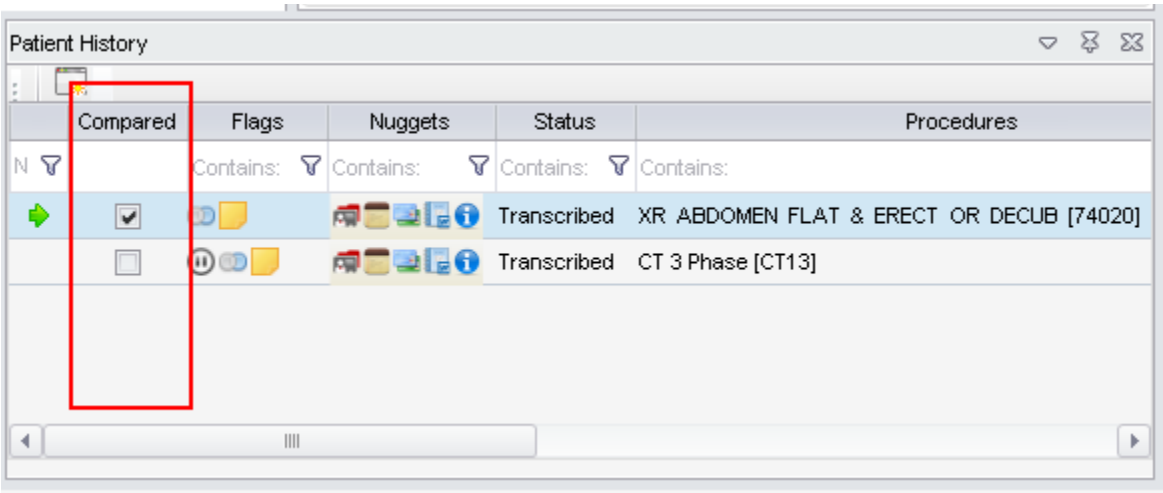

**Figure 4.45 – Patient History displaying new "compared" column**

When the diagnostic screen is opened the working radiologist is able to make any applicable changes to relevant priors, by clicking the checkbox on study history row to mark a study as a relevant prior. Marked relevant priors can be unchecked (removed) on the fly as well by un-checking a row. When the radiologist saves his/her work in the Diagnostic screen by clicking save, completing a dictation, signing, etc. The relevant prior's selection will be automatically saved.

**NOTE: It must be noted that because the row has a check in the compared column, this does not initiate a call to PACS to load the images, this is simply a visual marker to display the prior.**

Another part to this feature and enhancement to the Patient History control is the ability to display the current study in the in control or to omit it. This is controlled by a user preference. Looking at the figure above, the reporting window is opened and the current study is displayed and automatically has a check mark in the Compared column.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

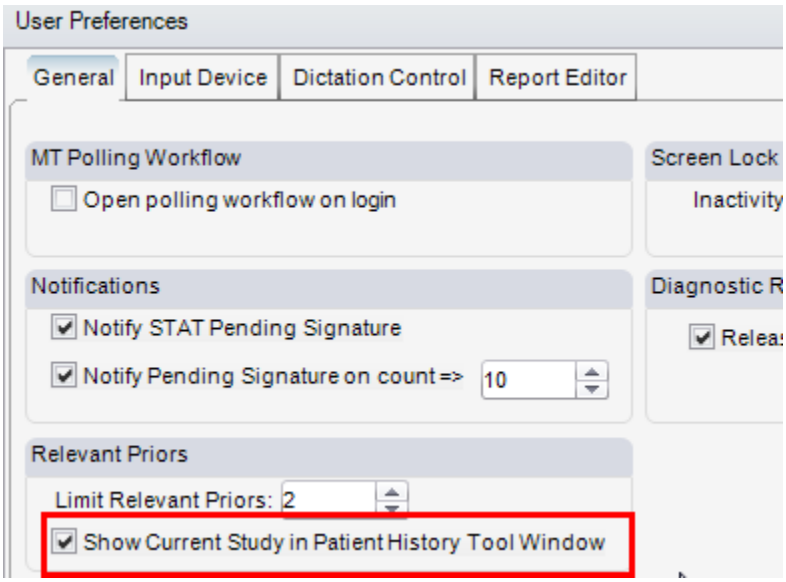

**Figure 4.46 – User preference "Show Current Study in Patient History Tool Window"**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting - Preview Report Templates

Added in build 36 is the ability to view a template or document model. Prior to this version the radiologist would have to load the template into the editor in order to see the layout/contents.

From the report editor window (Dictate window) on the Template Browser data pane a new ICON and context menu options have been added.

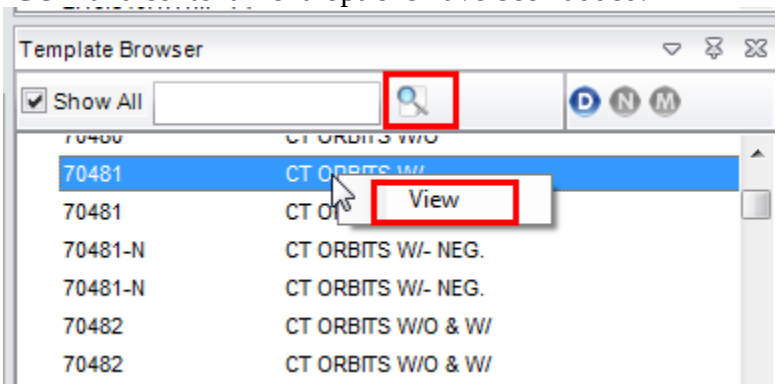

**Figure 4.47 – Access to view report templates and document models**

Highlighting the desired template and selecting the View Icon or the context menu option of View will open a new window displaying the template or document model.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting - Viewing Current Study and Prior Study Attachments

Two new tool windows were created that are accessible to Radiologists through the "View" menu → "Attachments" and "Attachment History".

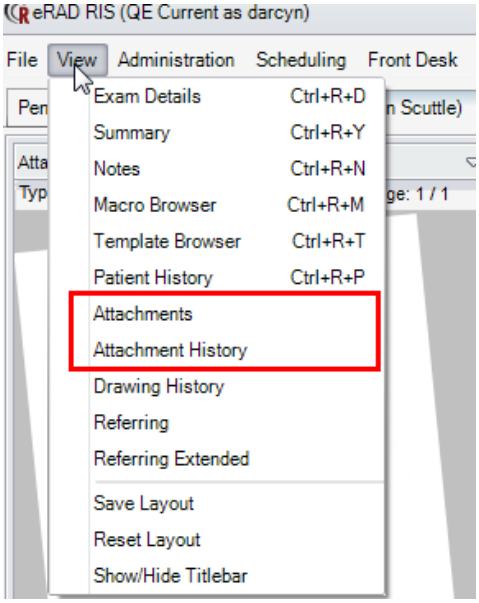

**Figure 4.48 – View menu displaying Attachments and Attachment History menu options**

"Attachments" Tool window → will dynamically display attachments (scanned or imported documents) for the current study radiologist is working on, in the diagnostic screen. "Attachment History" tool window → will dynamically display attachments (scanned or imported documents) for any study that is clicked on (highlighted) in the "Patient History" window.

Both windows, for historic or current study will display relevant attachments according to the user's preferences for displaying attachments. All usual attachment viewer tools and views are available in both tool windows by right clicking on the attachment.

**Attachment Navigation Enhancements:**

- Regardless of the view mode: (full page, page width, or original size) → user can click on the attachment, then use the mouse wheel to scroll to the end of the page, continued scrolling will advance user to next page. Individual pages can also be scrolled if needed via scroll bar. This functionality now applies to all attachment controls in other parts of the application ex. (Document Data Nugget)

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

- Only inside the "Attachments" and "Attachment History" the action of scrolling the mouse wheel through pages → once the last page of a document is reached the viewer will load the next document. This allows the user to scroll through all available documents and pages dynamically.
- Inside the "Attachment History" and "Attachment", in the top right hand corner of the screen document type is displayed, with a drop down menu. Where a user can select a different document type to jump to a different document in the viewer.
- As user uses the mouse wheel to scroll through different pages of the attachments loaded in the viewer in the top right hand corner page count will be displayed.

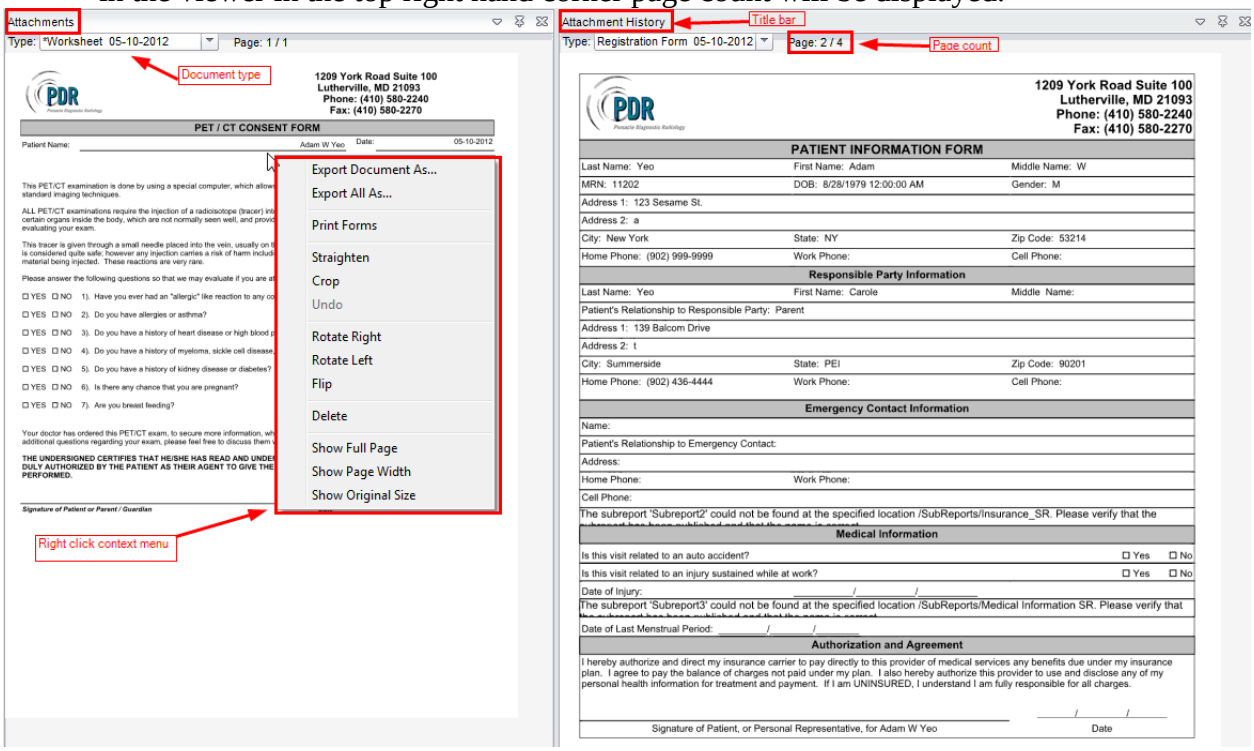

**Figure 4.49 – Example of attachments and attachment history tool window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Signed by date Work List for Administrator(s)

A new daily work list "All Signed by Date" has been added under the Radiologist menu. Added for the admin role, this work list contains all signed reports for the date selected.

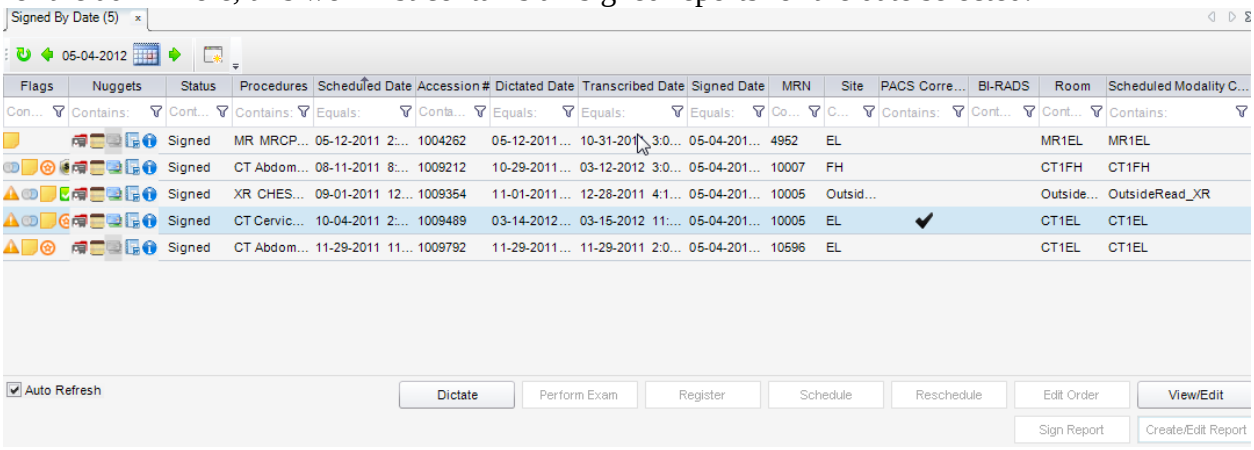

**Figure 4.50 – Signed by date work list.**

This work list takes context menus and buttons from patient mode, but in this case will display all studies signed by date. Just like other by date work lists the user will have the ability to navigate to previous day/next day, or pick a day from a calendar.

Access to the work list is controlled by Access string = `WL.Rad.SignedFilteredByDate`

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Tables in Reports

The ability to add table(s) to reports has been added in build 36. There is a limited set of functionality that is available from the new toolbar buttons and/or context menu options.

In the figure below starting from the left the toolbar buttons are:

- Insert/Delete table
- Insert Column
- Insert Row
- Delete Column
- Delete Row

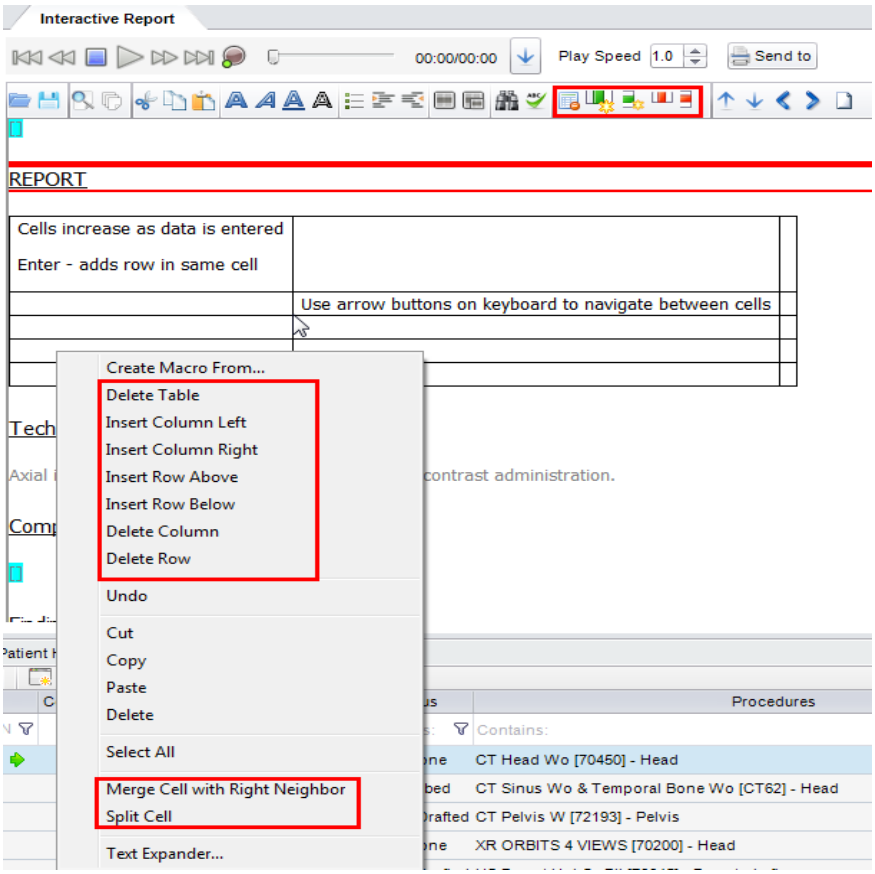

**Figure 4.51 – Adding table to report and available options**

The context menu in the above figure is displayed from a right click within the table. If focus is in another area of the report the context menu will have the option to Insert Table.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Template Browser Buttons for Default, Normal and My Normal

In the reporting window, buttons have been added to the Template Browser for loading report templates. Looking at the figure below the button (D) is for the Default Template, (N) is Normal Report and (M) is for My Normal.

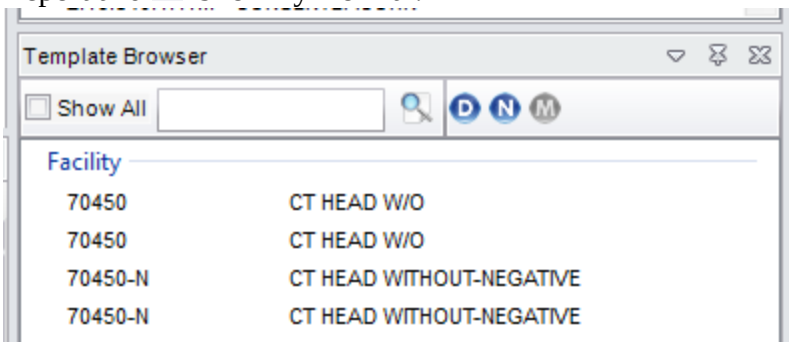

**Figure 4.52 – Reporting window Template Browser buttons.**

If the buttons is colored blue, this indicates there is a template available for the procedure. If the button is grey (such as the M), this indicates the type of template is not available for the procedure.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Yellow Sticker Support

There is an existing application that is used in the field called Yellow Sticker. This application need to know when a radiologist opens an exam to dictate or is dictating a particular case. Yellow Sticker also needs the ability to update a notes field in the system. This notes field can then be viewed by users.

This has been implemented in build 36 and is controlled via a new user preference "Write XML Study Data". This new option is in the form of a check box and when checked will enable the File Path text box. When not checked the text box will be disabled.

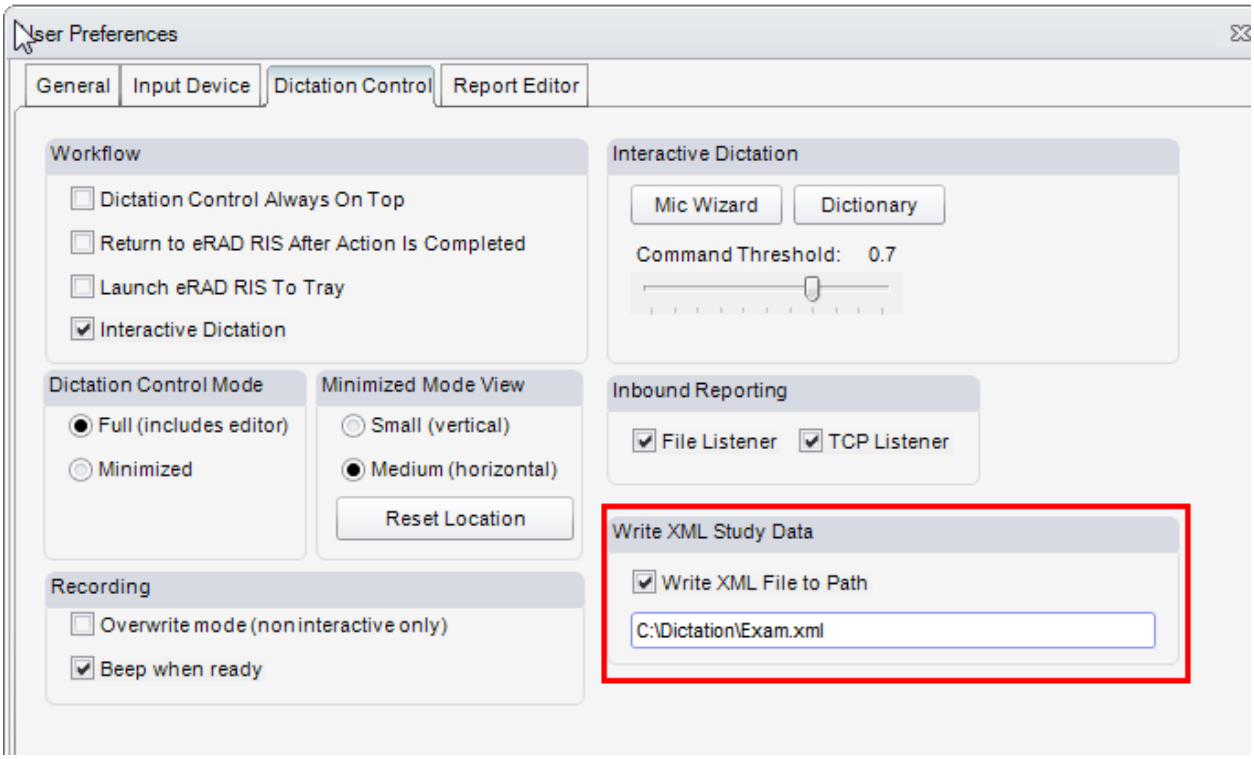

**Figure 4.53 – User preference window displaying new preference "Write XML Study Data"**

The default value for the path is "`C:\Dictation\Exam.xml`". This value can be set to any valid path and file combination. Note that if the path doesn't exist the system will attempt to create it upon the first open of a study for dictation.

Each time a dictation screen is opened or focused we write an xml file containing the required fields to the specified directory.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Here is the XML that will be created by the RIS when a study is opened or, in the case of multiple studies being open, focused. We do not delete the file but overwrite as a new one is opened or focused.

```
<YellowStickerData xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xmlns:xsd="http://www.w3.org/2001/XMLSchema">
<Accession>1067158</Accession>
 <PatientName>Cynthia7 Shields</PatientName>
 <DOB>2/28/1960</DOB>
 <StudyDate>1/19/2012 12:57:54 PM +00:00</StudyDate>
 <MRN>T.366</MRN>
</YellowStickerData>
```

Also the ability to update the notes field via the Yellow Sticker application has been added too. These notes are attached to the existing order notes. It prepends to the existing notes.

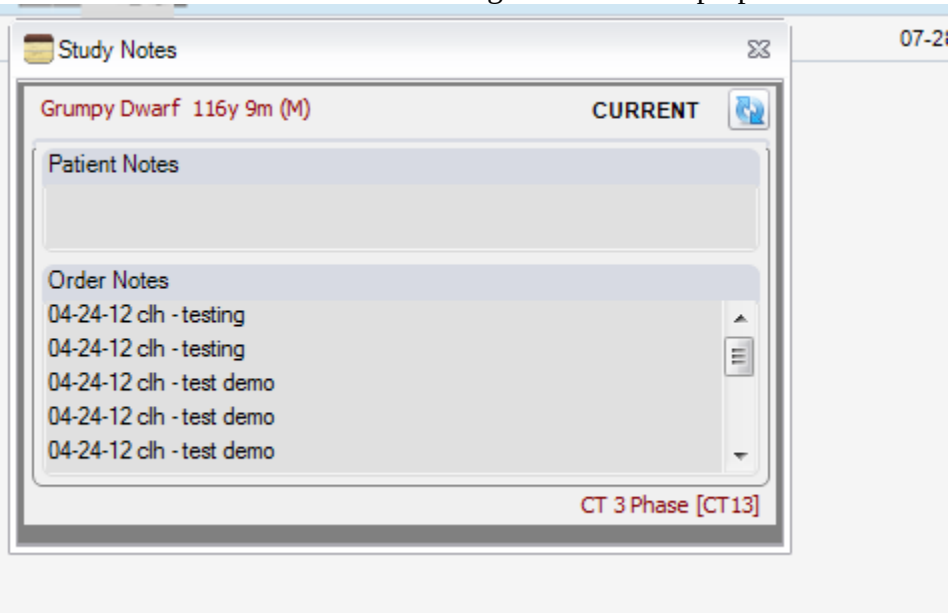

**Figure 4.54 – Study Notes**

To set the notes the calling application should POST to the http://[servername]:9002/api/notes/ with values for accession number, initials, and notes. The accession number will determine which order to attach the notes field.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 5. Resolved Defects

Bugs Suggested Features and Support Issues resolved in build 1.36. The extract is taken from Redmine bug tracking system and only displays defects resolved in 1.36.

| # | Tracker | Priority | Subject | Category | Found Version |
|---|---|---|---|---|---|
| 1141 | Bug | Urgent | Backend Printing jobs reporting Error | Web Services/DB | 1.35 |
| 1143 | Bug | High | Fax/Print jobs failing with missing dll error | Web Services/DB | 1.35 |
| 1102 | Bug | High | CDS Threads pinning CPU in Balitmore Sandbox environment | Web Services/DB | 1.35 |
| 1063 | Bug | High | New patient button on patient demographics screen. | Thick Client GUI | 1.35 |
| 1265 | Bug | Normal | Imaging Center Dashboard | Mgt Reports | 1.35 |
| 1264 | Bug | Normal | Transcription Dashboard | Mgt Reports | 1.35 |
| 1207 | Bug | Normal | Transcription Dashboard | Mgt Reports | 1.35 |
| 1173 | Bug | Normal | personKeyNotFound in summary panel | Thick Client GUI | 1.35 |
| 1167 | Bug | Normal | PushSignature service causes an unwanted addendum | Web Services/DB | 1.35 |
| 1156 | Bug | Normal | error on getdata/displaydata in tech | Thick Client GUI | 1.35 |
| 1148 | Bug | Normal | Check - in Arrive early and cancel one procedure still appears in Check In window | Thick Client GUI | 1.35 |
| 1144 | Bug | Normal | Document Distribution - Fax number not auto completed when referring selected that has Fax as delivery | Thick Client GUI | 1.35 |
| 1137 | Bug | Normal | Daily Schedule Report | Mgt Reports | 1.35 |
| 1136 | Bug | Normal | After getting message for not paper in scanner second attempt will though error | Thick Client GUI | 1.35 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | | |
|---|---|---|---|---|---|
| 1135 | Bug | Normal | Change document type from Attachment viewer includes personal scan type | Thick Client GUI | 1.35 |
| 1134 | Bug | Normal | Scheduling study can require site be selected | Thick Client GUI | 1.35 |
| 1133 | Bug | Normal | Scan cannot be saved because of out of memory error | Thick Client GUI | 1.35 |
| 1132 | Bug | Normal | Clone user clones affiliation at the person level | Admin Tools | 1.35 |
| 1131 | Bug | Normal | Error on Access string WL.MT.GetJob set to none | Thick Client GUI | 1.35 |
| 1130 | Bug | Normal | Unable to use RIS after a cache corruption caused by a hardware failure. | Web Services/DB | 1.35 |
| 1127 | Bug | Normal | Patient Folder not updated to correct patient | Thick Client GUI | 1.35 |
| 1120 | Bug | Normal | Billing Exception occuring when they shouldn't | Thick Client GUI | 1.35 |
| 1119 | Bug | Normal | Post billing exception can return error | Thick Client GUI | 1.35 |
| 1114 | Bug | Normal | Room is not updated on work lists if changed during Perform Exam | Thick Client GUI | 1.35 |
| 1110 | Bug | Normal | Tooltip to create macro from selected text is misspelled | Thick Client GUI | 1.35 |
| 1109 | Bug | Normal | User preference > Interactive Dictation misspelling | Thick Client GUI | 1.35 |
| 1108 | Bug | Normal | When pasting an address into the Report Delivery address field only the first line is filled in | Thick Client GUI | 1.35 |
| 1107 | Bug | Normal | Address paste on personnel screen doesn't work | Thick Client GUI | 1.35 |
| 1087 | Bug | Normal | Unknown Reconciliation - Cannot edit order from this work list if the study is past ordersigned status | Thick Client GUI | 1.35 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | | |
|---|---|---|---|---|---|
| 1082 | Bug | Normal | Appointment Book "Interval" dropdown does not reflect displayed interval | Thick Client GUI | 1.35 |
| 1075 | Bug | Normal | patient notes and order notes not synchronizing in View/Edit | Thick Client GUI | 1.35 |
| 1074 | Bug | Normal | Location label not populated/recommendation codes not populating. | Thick Client GUI | 1.35 |
| 1072 | Bug | Normal | Graceful exception if new scheduled study deleted before saving | Thick Client GUI | 1.35 |
| 1067 | Bug | Normal | If you click Schedule button on the follow up screen after you have already scehduled the follow up you get an exception | Thick Client GUI | 1.35 |
| 1066 | Bug | Normal | Scheduling - able to schedule procedure to wrong room | Thick Client GUI | 1.35 |
| 1061 | Bug | Normal | Scheduling -- no study -- able to do room search ( runtime error) | Thick Client GUI | 1.35 |
| 1059 | Bug | Normal | Broken Lock on Re-Schedule Should Disable "Schedule Later" and "Cancel Study" Buttons | Thick Client GUI | 1.35 |
| 1053 | Bug | Normal | Mammo Callback can create order with duplicate procedure | Thick Client GUI | 1.35 |
| 1050 | Bug | Normal | An outgoing call cannot be made since the application is dispatching an input-synchronous call. (Exception from HRESULT: 0x8001010D (RPC_E_CANTCALLOUT_ININPUTSYNCCALL)) | Thick Client GUI | 1.35 |
| 1045 | Bug | Normal | Foreign Key Contraint error from New Appointment | Thick Client GUI | 1.35 |
| 1041 | Bug | Normal | Index was outside the boudns of the array. | Thick Client GUI | 1.35 |
| 1039 | Bug | Normal | Unable to post billing exception. Claim number is required when carrier doesn't have injury flag set if any data at all is entered in injury details | Thick Client GUI | 1.35 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | | |
|---|---|---|---|---|---|
| 1035 | Bug | Normal | Cannot insert duplicate key row in object 'dbo.c_order_item' with unique index 'IX_c_order_item'. The duplicate key value is (23978, 1) | Thick Client GUI | 1.35 |
| 1019 | Bug | Normal | Rad - Macro Editor - Insert Macro ( Cast Error) | Thick Client GUI | 1.34 or 1.35 |
| 1017 | Bug | Normal | Invalid Scheduled Date Error when trying to complete a Tech where the room was closed after scheduling | Thick Client GUI | 1.35 |
| 1011 | Bug | Normal | Rad - Macro Editor -- Object Reference Runtime error | Thick Client GUI | 1.35 |
| 994 | Bug | Normal | When creating a patient, and user adds an attachment, there is no option to delete a row if entered incorrectly. | Thick Client GUI | 1.35 |
| 989 | Bug | Normal | Cannot update 'State' field in Patient | Thick Client GUI | 1.35 |
| 987 | Bug | Normal | Switch user from patient search | Thick Client GUI | 1.35 |
| 984 | Bug | Normal | When doing an "outside read" upon choosing performed location site, the insurance grid appears and some text is cut off. | Thick Client GUI | 1.35 |
| 981 | Bug | Normal | Data nugget and camel notation | Thick Client GUI | 1.35 |
| 970 | Bug | Normal | Schedule Order Patient search does not automatically highlight best available | Thick Client GUI | 1.35 |
| 969 | Bug | Normal | Add Outside Read Billing Method needs more real estate | Thick Client GUI | 1.35 |
| 962 | Bug | Normal | Unknown Referring: Clicking Add with no first name blows up | Admin Tools | 1.33 |
| 954 | Bug | Normal | Outside read - order_item_key not found | Thick Client GUI | 1.35 |
| 953 | Bug | Normal | Study field on procedure picker row (including outside read) is not marked as required | Thick Client GUI | 1.35 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | | |
|---|---|---|---|---|---|
| 952 | Bug | Normal | Schedulingt: Unable to find modality solution message only lists procedure code | Thick Client GUI | 1.34 |
| 951 | Bug | Normal | PAtient Folder Context Menu for a "Scheduled" study is missing "Reschedule" | Thick Client GUI | 1.34 |
| 950 | Bug | Normal | Weight Restriction Warning has spelling errors | Thick Client GUI | 1.34 |
| 943 | Bug | Normal | Schedule Order Patient tab requests | Thick Client GUI | 1.34 |
| 942 | Bug | Normal | Patient/Order Notes does not follow characters being entered. | Thick Client GUI | 1.34 |
| 941 | Bug | Normal | Schedule Order - Phone number fields lose mask when entering to many extra numbers for extention | Thick Client GUI | 1.34 |
| 935 | Bug | Normal | Erron on launch "Value SendBringRisToFrontEvent is no longer a valid entry" | Thick Client GUI | 1.35 |
| 929 | Bug | Normal | User Group permissions difficult to add | Admin Tools | 1.34 |
| 924 | Bug | Normal | Add outside read on site that requires insurance, but insurance is not chosen, is not added to billing exception | Thick Client GUI | 1.34 |
| 923 | Bug | Normal | Image Request on Multi procedure order belonging to different orders throws error | Thick Client GUI | 1.34 |
| 922 | Bug | Normal | Error thrown attempting to create multi procedure schedule | Thick Client GUI | 1.34 |
| 916 | Bug | Normal | Adding UserGroupPermission with empty access string throws exception | Admin Tools | 1.34 |
| 911 | Bug | Normal | Adding a third study through registration behaves differently. | Thick Client GUI | 1.34 |
| 905 | Bug | Normal | Rescheduling an exam without selecting time returns un-informative error. | Thick Client GUI | 1.34 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | | |
|---|---|---|---|---|---|
| 904 | Bug | Normal | Rescheduling exam and choose Schedule later and the procedure is not retained | Thick Client GUI | 1.34 |
| 900 | Bug | Normal | Add multiple to UserGroupPermission throws exception | Admin Tools | 1.33 |
| 879 | Bug | Normal | If RIS in minimized with Dictate window open the application will not open to desktop | Thick Client GUI | 1.32 |
| 877 | Bug | Normal | Interactive user cannot dictate if Dictation Control Mode is minimized | Thick Client GUI | 1.32 |
| 811 | Bug | Normal | GUI will not open to full size | Thick Client GUI | 1.30 |
| 801 | Bug | Normal | Possible issue with date / time formats and Perform Exam data window | Thick Client GUI | 1.29 |
| 781 | Bug | Normal | Read Only permission still allows some actions | Admin Tools | 1.20 |
| 758 | Bug | Normal | Drug Allergy Type requires Display order to save | Admin Tools | 1.27 |
| 691 | Bug | Normal | Configure > Lookup Tables scroll bar not always present. | Admin Tools | 1.20 |
| 644 | Bug | Normal | Cannot close application if there is a data window open. | Thick Client GUI | 1.25 |
| 643 | Bug | Normal | Dictate window > Blank error is displayed and rRIS stops responding. | Thick Client GUI | 1.25 |
| 529 | Bug | Normal | Reschedule study search returning incorrect times | Thick Client GUI | 1.21 |
| 522 | Bug | Normal | Search for available times incomplete based on criteria | Thick Client GUI | 1.20 |
| 447 | Bug | Normal | Dictation - User is able to start dictating with SpeechMike when it is not the recording device | Thick Client GUI | 1.17 |
| 313 | Bug | Normal | Appointment Book - Out of memory exception | Thick Client GUI | 1.12 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | | |
|---|---|---|---|---|---|
| 105 | Bug | Normal | Worklist - Issue with large worklist and title bar | Thick Client GUI | 1.07 |
| 1124 | Bug | Low | Cannot read contents of list box | Thick Client GUI | 1.35 |
| 1121 | Bug | Low | Book Summary Error | Thick Client GUI | 1.35 |
| 1077 | Bug | Low | Scheduling - Calendar is too small = windows XP | Thick Client GUI | 1.35 |
| 1069 | Bug | Low | Personnel editor inconsistency | Thick Client GUI | 1.35 |
| 1065 | Bug | Low | Error saving user in personnel editor. | Thick Client GUI | 1.35 |
| 1064 | Bug | Low | Clicking Schedule Later on a procedure loses the laterality for the procedure | Thick Client GUI | 1.35 |
| 1044 | Bug | Low | New Patient with Canadian address throws 'Invalid Selection' validation | Thick Client GUI | 1.35 |
| 1038 | Bug | Low | Confirmation Dialog popups do not pop up on the same monitor as RIS ( always primary monitor) | Thick Client GUI | 1.35 |
| 1015 | Bug | Low | Personnel | Thick Client GUI | 1.35 |
| 1008 | Bug | Low | Pasting Address on Patient Screen does not populate state if US is already entered in Country field | Thick Client GUI | 1.35 |
| 995 | Bug | Low | Invisible tab | Thick Client GUI | 1.35 |
| 973 | Bug | Low | Issues adding multiple CC physicians | Thin Client GUI | 1.35 |
| 959 | Bug | Low | Edit Medical Access window title is incorrect | Thick Client GUI | 1.35 |
| 821 | Bug | Low | Newly added access strings are not easily found in UserGroup Lookup editor | Thick Client GUI | 1.30 |
| 685 | Bug | Low | Error When Exporting Table Data | Thick Client GUI | 1.35 |
| 321 | Bug | Low | DataSet Visualizer - Does not show for Studys and CC Physician | Thick Client GUI | 1.12 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 6. Known Limitations

The following are Bugs Suggested Features and Support Issues found in build 1.36. This build is the current QE build and testing is ongoing. The list may increase in size. This document will not be updated or re-released.

| # | Status | Subject | Found Version | Resolved Version |
|---|---|---|---|---|
| 1272 | New | Error trying to import image | 1.36 | |
| 1270 | New | View/Edit data window does not show billing codes | 1.36 | |
| 1269 | Resolved | Relevant priors do not open correctly when user preference to show current study in patient history is off | 1.36 | 1.37.11062 |
| 1257 | New | Signed by date WL access string not included in build | 1.36 | |
| 1249 | Resolved | Creating custom view on status column can crash RIS | 1.36 | |
| 1180 | New | Mammo follow up work lists > Scheduling from follow up does not always flag study as resoolved | 1.36 | |
| 1290 | New | Data nugget - Notes or Study Notes? | 1.36 | |
| 1289 | Resolved | Transcription - Perform Exam ( worklist does not show current study) | 1.36 | 1.37 |
| 1288 | Resolved | Template viewer title bar has incorrect title. | 1.36 | |
| 1287 | New | Carriers flagged as inactive cannt be found in search. | 1.36 | |
| 1286 | New | Status filtering on worklist - you have to filter by old status value, not the displayed value | 1.36 | |
| 1283 | Resolved | Nuggets shouldn't respond to right click | 1.36 | 1.37.11175 |
| 1282 | New | MT Polling > Studies from same order are not skipped when locked | 1.36 | |
| 1281 | New | Surgeon can be searched for to send report, but cannot be used to send report | 1.36 | |
| 1278 | New | Error accessing data windows resuming locked RIS application | 1.36 | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 1273 | Resolved | Assign to Radiologist window closes if clicking to fast on srcoll bar action down | 1.36 | 1.37.11070 |
| 1268 | Resolved | Personnel > Cannot search for existing after deleting create new | 1.36 | fixed in 1.37.11062 |
| 1259 | New | Yellow Sticker - XML file is not updated when using skip function | 1.36 | |
| 1258 | New | Arriving multiple studies for one day, the Relation to Patient is not captured to the other studies | 1.36 | |
| 1253 | New | Questionnaire exception on "Context Menu" / "Close All" | 1.36 | |
| 1245 | New | Unable to cast System.DBNull to System.String | 1.36 | |
| 1242 | New | Null Reference on Payment control | 1.36 | |
| 1241 | New | Selecting BIRAD or Tissue density will show "..." in the associated box and the the value selected. | 1.36 | |
| 1240 | New | Buttons disappear from bottom of Patient folder on Maximize | 1.36 | |
| 1238 | New | Editiing patient and repeatedly getting "Status can not be empty" message on save | 1.36 | |
| 1235 | New | Select Search multiple times in Carrier search window will throw error. | 1.36 | |
| 1229 | QE Rejected | Modality closure issues | 1.36 | 1.36 |
| 1227 | New | Patient Folder Window --> Scheduled Date filter = object reference error | 1.36 | |
| 1221 | New | Drawing History color schemes cannot be reset | 1.36 | |
| 1220 | New | Insurance - Returns Object Reference Error | 1.36 | |
| 1219 | New | Unable to delete billing codes | 1.36 | |
| 1218 | New | Logging client side errors to the server logs the same consectutive error from the same work station | 1.36 | |
| 1217 | New | Drawing History will not open again after Reset Layout | 1.36 | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 1215 | New | Rad - Dictate - Template Browser - runtime | 1.36 | |
| 1214 | New | From diagnose screen choosing Referring Extended from View Menu does not show pane | 1.36 | |
| 1213 | New | Rad - All Pending Signature Worklist --> Dictate --> Click Print Icon "Send to" = runtime | 1.36 | |
| 1202 | New | Registering studies early should pick current time | 1.36 | |
| 1198 | New | Scheduling - Edit Image request --> runtime NULL handling | 1.36 | |
| 1195 | QE Rejected | Rad - Dictate or Transcripion window.. Attachments and Attachment History views are missing | 1.36 | |
| 1192 | New | birthday bug -- cannot change birthdate forward 1 day | 1.36 | |
| 1190 | New | Error message appears twice | 1.36 | |
| 1186 | New | Filtered patient folder on Signed and Ordered rows are in the list. | 1.36 | |
| 1179 | New | Walk-in | 1.36 | 1.36 |
| 1178 | New | Macro Editor --> Insert Macro --> Click Previous Field = COM Error | 1.36 | |
| 1177 | New | Completing fields in report editor and using Back button < will return COM error. | 1.36 | |
| 1175 | New | Transcirption editor does not support keyboard shortcut to select text up and down | 1.36 | |
| 1174 | New | Mammo - Followup worklist. Right Click --> Followup "New patient button is available on signed study" | 1.36 | |
| 1172 | New | Rad - Macro Editor - Exception inserting normal | 1.36 | |
| 1170 | New | Warning for scheduling across sites message displayed twice when selecting Yes | 1.36 | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 1168 | New | User is able to add multiple procedures in one row. | 1.36 | |
| 1162 | New | Error from entering alpha numeric number in allergy field | 1.36 | |
| 1161 | New | error on second save within macro editor | 1.36 | |
| 1160 | QE Rejected | Procedure Group function returns Inactive study items | 1.36 | 1.36 |
| 1154 | New | Removing procedure from study cell can throw exception if Scheduled Date field is selected. | 1.36 | |
| 1153 | New | Save layout not saving selected tabs | 1.36 | |
| 1145 | New | Edit macro twice throws object reference error | 1.36 | |
| 1088 | New | Log RIS Logon Failures to c_Audit log | 1.36 | |
| 964 | New | Payments - Making a credit card payment | 1.36 | |
| 1291 | New | Interactive dictation > non responsive recording using shortcut key | 1.36 | |
| 1277 | New | Self-pay insurance carriers show up in Patient Insurance Policies carrier search | 1.36 | |
| 1261 | Resolved | Double context menu in personnel editor > Contact information | 1.36 | 1.37.11062 |
| 1243 | New | Able to choose same physician multiple times on CC physicians control | 1.36 | |
| 1236 | New | Patient Folder Preview window issue on patient search | 1.36 | |
| 1225 | New | Scheduling - Image Request WL --> Edit Image request ( new patient icon) | 1.36 | |
| 1224 | New | Image Request list sometimes shows "No Data to Display" in DataGrid when there are items in the list | 1.36 | |
| 1223 | New | Image Request tab shows (0) when there are image requests in the list | 1.36 | |
| 1211 | Resolved | Administration - User - Personnel ( Add, Edit Address validation) | 1.36 | 1.37.11062 |
| 1208 | New | Study box size on Walk-In Exam tab is too small to see all of the study description | 1.36 | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 1200 | New | Patient Merge - Search - Invalid Search Criteria - click Details = error | 1.36 | |
| 1185 | New | Alert may cause button to grey out, even if action did not take place | 1.36 | |
| 1184 | New | Batch to Interactive Mode changes can result in tab being mislabeled | 1.36 | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# Server Update

for eRAD RIS
Version 1.0
Build 36
Update 36.001

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# Table of Contents

1. Purpose ..... 3

# 1. Purpose

This server update has been produced to fix bugs required for production setting, or to complete an enhancement requested for production.

This server update includes the following:

1. HL7 Mammo Report Message with Recommendation Code– This fix will allow messages with Mammo reports with recommendation codes to come into RIS. There was a bug that caused a null reference error.
   Two files to be replaced:
   a. WCFService.dll
   b. WCFService.pdb

2. Outbound HL7 message queue was blocked due to person key resolution problem.
   Two files to be replaced:
   a. Wedge.exe
   b. Wedge.pdb

3. SQL scripts. Three separate scripts to be run. Please run scripts in of Patch 1-2-3.
   a. Patch-36b-1- Correct stored procedure c_selectreporttable.sql (Redmine bug #1342 - sql to correct stored procedure c_SelectReportTable)
   b. Patch-b36-2-UpdateIVTtobeOrderRowSpecific.sql (This fix will convert the IVT worklist from showing all studies related to an order to only show the single order, and show the more appropriate infomration. This sql script was already released as hotfix 35.007 for build 35)
   c. Patch-b36-3-from B35 patches.sql (these are sql patches that have been applied to build 35 but were not added to build 36)

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

# 3. Who is affected

All previous version of build 36. Current build is 1.1.36.11197.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. Installing

*1)* HL7 Mammo Report Message with Recommendation Code*:*
*Copy the 2 files to the directory for each rRISService. rRISService directories include:*
*a) rRISService*
*b) CDS rRISService*
*c) Wedge rRISService*
*d) DDE rRISService (DDE – Document Distribution Engine.*

*2)* Outbound HL7 message queue:
*Copy the 2 files to the directory for each rRISService. rRISService directories include:*
*a) rRISService*
*b) CDS rRISService*
*c) Wedge rRISService*
*d) DDE rRISService (DDE – Document Distribution Engine.*

*3)* SQL scripts*:*
*ON the database RIS instance run the 3 sql files in order of patch number. In this order*

*Patch-36b-1- Correct stored procedure c_selectreporttable.sql*
*Patch-b36-2-UpdateIVTtobeOrderRowSpecific.sql*
*Patch-b36-3-from B35 patches.sql*

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# Server Update

for eRAD RIS
Version 1.0
Build 36
Update 36.002

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# Table of Contents

1. Purpose ..... 3
2. Intended Audience ..... 4
3. Who is affected ..... 4
4. Installing ..... 5

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This server update has been produced to fix bugs required for production setting, or to complete an enhancement requested for production.

This server update includes the following:

1. Logged as Redmine bug 1328 - Management Report Access fix.
   If during RIS session, the personnel editor was accessed and changes made and saved to a subset of users because of resource type, the logged in user would no longer have access to Management reports. Whenever the cache was updated, the new copy from web services did not include "l_user_x_user_group".
   Files included are:
   a) rRISServices.exe
   b) rRISServices.pdb
   c) SignatureApprovalService.exe
   d) Wedge.exe
   e) Wedge.pdb
   f) CDSJobManager.dll
   g) CDSJobManager.pdb
   h) ScheduledTaskManager.dll
   i) ScheduledTaskManager.pdb
   j) SignatureApprovalService.pdb
   k) DDEngine.dll
   l) DDEngine.pdb
   m) ChairApi.dll
   n) ChairApi.pdb
   o) WCFService.dll
   p) WCFService.pdb
   q) CommonLib.dll
   r) CommonLib.pdb
   s) rRISServices.vshost.exe
   t) Interop.FAXCOMEXLib.dll
   u) Tourreau.Gilles.FaxDotNet.dll
   v) Tourreau.Gilles.FaxDotNet.pdb
   w) Tourreau.Gilles.FaxDotNet.xml

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

2. Logged as Redmine bug 1427 - Appointment book not displaying device availability. The appointment book was not utilizing the device template configuration.
   Files are contained in the rRIS_1.1.36.12558

3. Logged as Redmine bug 1426 – Associating Scanned documents (attachments) to additional accession numbers would create an error.
   Files are contained in the rRIS_1.1.36.12558

4. SQL scripts. Three separate scripts to be run. Please run scripts in of Patch 4-5-6.
   a. Patch-36b-4- BUG1289 Show Current Study.sql – this script will add the user preference "Show Current Study in Patient History Tool Window" for all users.
   b. Patch-b36-5-BUG1442 MQSA Reporting Fix.sql – Changes how the biopsy result is captured. Now the "Lesion Classification" selection is used, not the "Nodes Positive" selection .
   c. Patch-b36-6 Blank Sections in Reports.sql – Corrects report rendering to exclude blank sections

## 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

## 3. Who is affected

All previous versions of build 36. Current build is 1.1.36.11197.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. Installing

*1)* HL7 Mammo Report Message with Recommendation Code*:*
*Copy the files from the BUG1328- Management report access to the directory for each rRISService.*
*rRISService directories include:*
*a) rRISService*
*b) CDS rRISService*
*c) Wedge rRISService*
*d) DDE rRISService (DDE – Document Distribution Engine.*

*2)* Bugs 1426- Associating Scanned documents and 1427 - Appointment book not displaying device availability.
*Replace the current RIS UI file (Example rRIS_1.1.36.1197) in the RISDeployment directory with the.zip file included in the folder "Bug 1426 and 1427- Appointment book and scan doc association fixes".*
*File included:*
*a) rRIS_1.1.36.12558.zip*

*3)* SQL scripts*:*
*ON the database RIS instance run the 3 sql files.*
*Execute in this order:*

1. *Patch-36b-4- BUG1289 Show Current Study.sql*
2. *Patch-b36-5-BUG1442 MQSA Reporting Fix.sql*
3. *Patch-b36-6 Blank Sections in Reports.sql*

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# Server Update

# 1. Purpose

This server update has been produced to fix bugs required for production setting, or to complete an enhancement requested for production.

This server update fixes 2 issues.

1.) Redmine Bug 1458 – On Windows XP workstations, the DOB may change for dates that fall between the second Sunday of March to the first Sunday of April and the last Sunday of October to the first Sunday of November. This was due to the change to the start and end of Daylight Savings Time (DST) in 2007. Although there was an XP service pack that allowed XP to properly start and end DST, XP inherently could only support a single algorithm for determining the start and end of DST.

2.) Redmine Bug 1505 – Interactive commands not working when using next study workflow.

Files for each reported fix listing about are contained in the 2 folders supplied with this update.

1.) Folder GUI ZIP Updates contains the following
   a. AudioLib.dll
   b. ris.exe
   c. WCFClient.exe

2.) Folder RIS Service Updates contains the following
   a. rRISServices.exe
   b. rRISServices.pdb
   c. WCFService.dll
   d. WCFService.pdb

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

## 3. Who is affected

All previous versions of build 36.
**NOTE:** Build 36 Server Update 36.002 must be applied before this update.

## 4. Installing

1.) Copy and replace the files **from** the GUI ZIP Updates folder **to** the rRIS_1.1.36.12558.zip file. Rename the .zip to rRIS_1.1.36.12653.zip

2.) Copy and replace the files from the RIS Service Updates folder to rRISService directory. Stop each service, replace the files and restart each service. These directories may include:
   a. rRISService
   b. CDS rRISService
   c. Wedge rRISService
   d. DDE rRISService

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# Server Update

for eRAD RIS
Version 1.0
Build 36
Update 36.005

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# Table of Contents

1. Purpose ..... 3

# 1. Purpose

This server update has been produced to fix bugs required for production setting, or to complete an enhancement requested for production.

This server update fixes 2 issues.

1.) Redmine Bug 1673 – setBuillingStatus NA action causing billing post to fail.
When completing a TechOnly exam that goes to billing, an error was occurring because it was being set at not applicable. It has been changed back to be set as UI_StudyCompleted

Files for this fix are included in the following folders.

1.) Folder GUI ZIP Updates contains the following
   a. ris.exe

2.) Folder RIS Service Updates contains the following
   a. WCFService.dll
   b. WCFService.pdb

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

## 3. Who is affected

All previous versions of build 36.
**NOTE:** Previous server updates and hotfixes must be applied before this update.

## 4. Installing

1.) Copy and replace the files **from** the GUI ZIP Updates folder **to** the rRIS_1.1.36.12653.zip file. Rename the .zip to rRIS_1.1.36.12953.zip
(NOTE: the .zip file name must be different for the changes to take effect on the client. Changing it to .12953 will keep it in sync with the RIS UI Version)

2.) Stop the following services as needed: copy the files from the RIS Service Updates folder to rRISService folder and restart the service(s).
These directories may include:
   a. rRISService (core service)
   b. CDS rRISService
   c. Wedge rRISService
   d. DDE rRISService

(NOTE: your installation may not have all services listed)

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 37. This version of eRAD RIS is referred to as Build 1.37.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.37 is considered a new core release of the application and will require a reinstallation of eRAD RIS. This is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

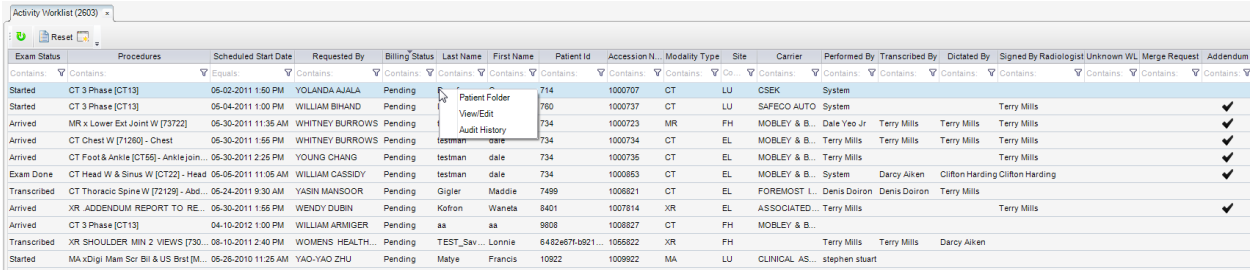
If you experience difficulties accessing the application please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 4. New Features and Enhancements

## Activity Work List

The Activity work list is new in Build 37. The Activity work list is accessed under the Administration menu and access is controlled by a new access string called WL.ActivityWL.contains all outstanding active studies.
The Activity work list contains all outstanding active studies. An outstanding study is on that has progressed beyond scheduled status but is not finished. This will include statuses of Checking In, Arrived, Started, Exam Done, Dictated, Report Drafted, Transcribed, Signed* (indicating report is being held). It may also include studies with a status of Signed or Exam Done (tech only) if billing has failed on these studies. It will not include studies in statuses of Scheduled, Cancelled, Discontinued, Void or studies with status of Signed and Exam Done(tech only) that were successfully sent to the billing system.



| Exam Status | Procedures | Scheduled Start Date | Requested By | Billing Status | Last Name | First Name | Patient Id | Accession N... | Modality Type | Site | Carrier | Performed By | Transcribed By | Dictated By | Signed By Radiologist | Unknown WL | Merge Request | Addendum |

**Figure 4.1 – Activity work list.**

From this work list, users will be able to access the Patient Folder, View/Edit window, and also Audit History.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Labwork work list

A work list titled "Labwork Required WL" has been added in build 37. This work list will contain patient studies have been flagged as blood work required. An example is if a patient is diabetic and/or on certain medication we may want that patient to show on the Labwork WL.

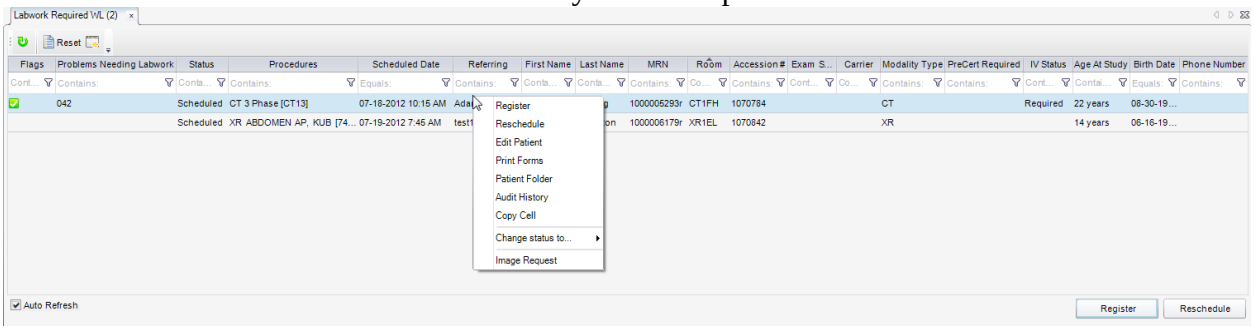

**Figure 4.2 – Labwork Required WL**

A new system config value (LabWLWindowInDays) controls the timeframe in which the studies would appear on the work list. If the study(s) were to appear 2 prior of the scheduled date the system config value would be set as *LabWLWindowInDays=14.*
A study that is scheduled one month in advance wouldn't show in the work list until two weeks before the appointment and will be removed if a recent labwork request or result exists (recent being => the time of the order). Also, the study will be removed from the work list when the patient is arrived.

Changes to lookup tables were also required to accommodate capturing if the patient was to be added to the Labwork WL.

The Indication lookup table (indication codes used in Medical History list on MU Tab) entries have a new column "Bloodwork Required Flag"

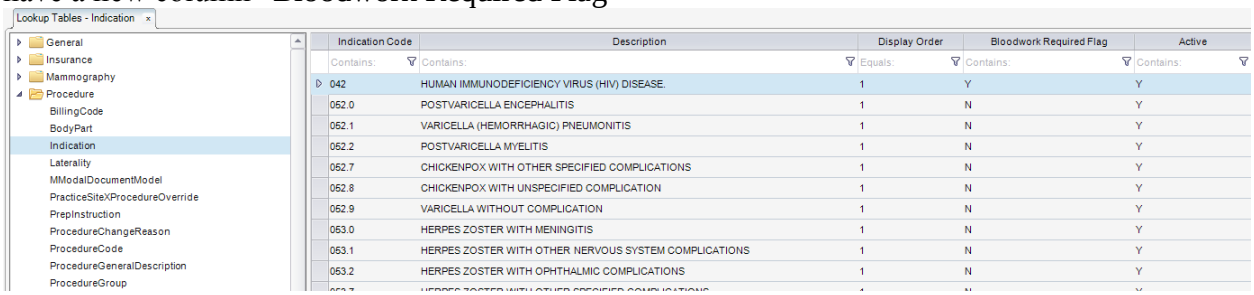

**Figure 4.3 – Indication lookup table**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The Medication lookup table (medication used in the Medication list on MU tab) entries have a new column “Bloodwork Required Flag”

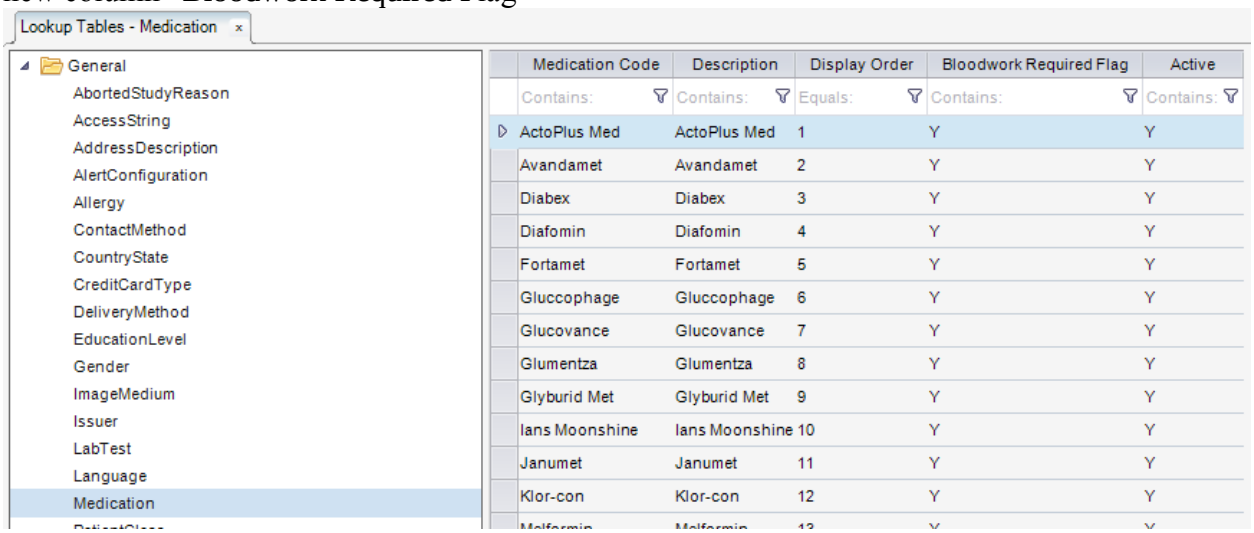

**Figure 4.4 – Medication lookup table**

The Modality Type lookup has a new column “Bloodwork Aplicable Flag”.

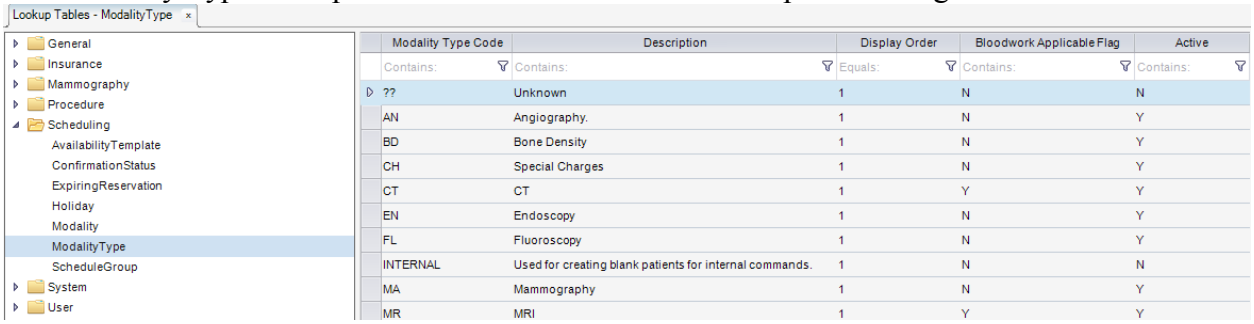

**Figure 4.5 – ModalityType lookup table**

The PracticeSiteXProcedureOverride lookup has a new column “Bloodwork Required Age”.

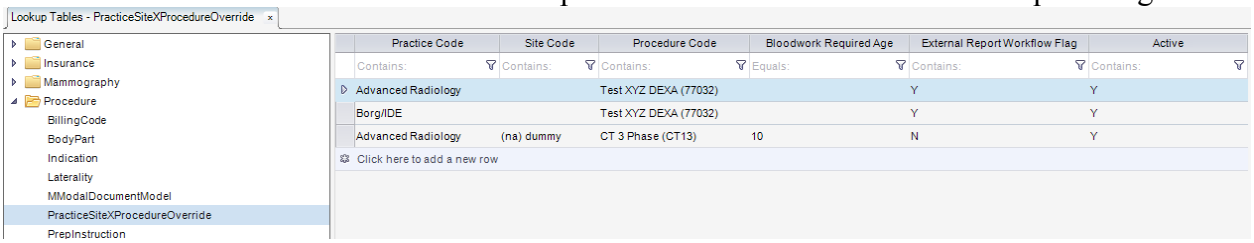

**Figure 4.6 – PracticeSiteXProcedureOverride lookup table**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Looking at the above lookups new columns, if the patient is diabetic (and diabetic is configured to bloodwork_required_flag 'Y') or the medication they are on is configured to bloodwork_required_flag 'Y' and the modality type has a bloodwork_applicable_flag of 'Y', then the study would fall to the LabWL once the exam is within LabWLWindowInDays.
Note: a "bloodwork required age" set to 0 says that every exam for that procedure will require bloodwork, while a value of 60 would say any exam with a patient 60 or older will require blood work. Bloodwork required age is configurable at the procedure level and can be overridden at the practice or site.

To remove it from the Lab WL, the user needs to do one of the following:

- Enter lab result(s) in the MU Lab Results Grid
- Open the screen and see if lab results get updated from NewCrop
- Make and record a lab work request
- Check the "Skip Lab WL" checkbox.

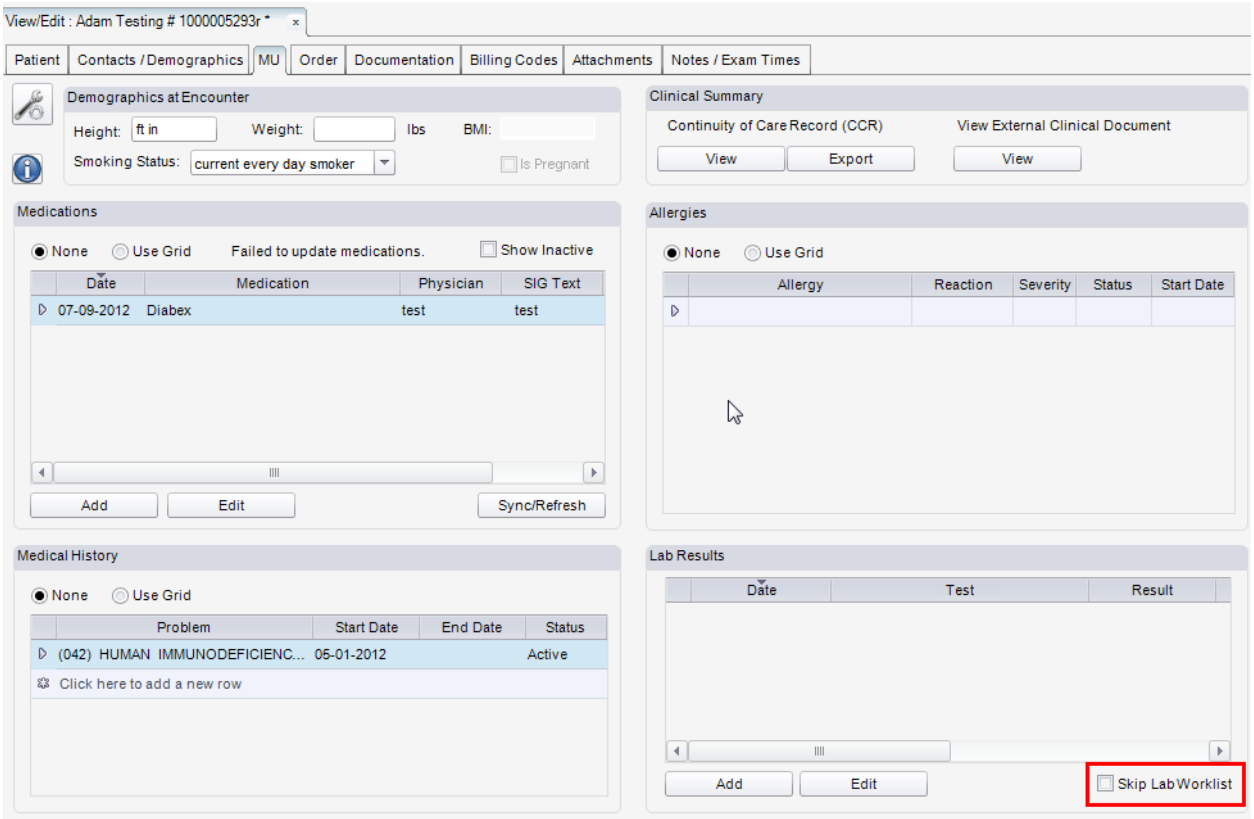

**Figure 4.7 MU tab**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Orders to Schedule WL Flags Column

It was requested to have the Flags column added to the Order to Schedule WL. In build 37, this column has been added.

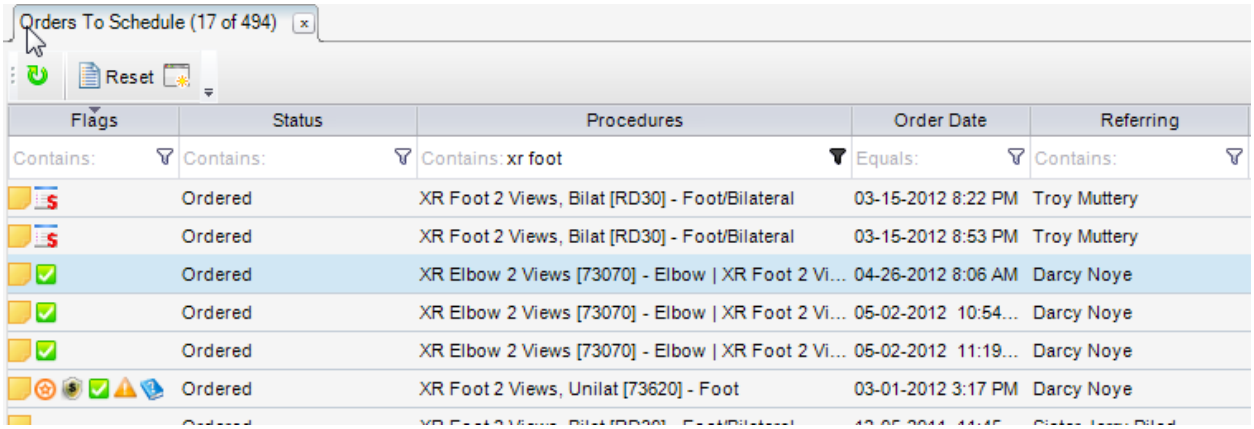

**Figure 4.8 – Orders to Schedule WL**

## Export WL to CSV file type

In previous versions of eRAD RIS, work lists could be exported to Excel in .xml format. This did not work for older versions of Excel. Added to the context menu from work lists columns is the option to export to .csv file type.

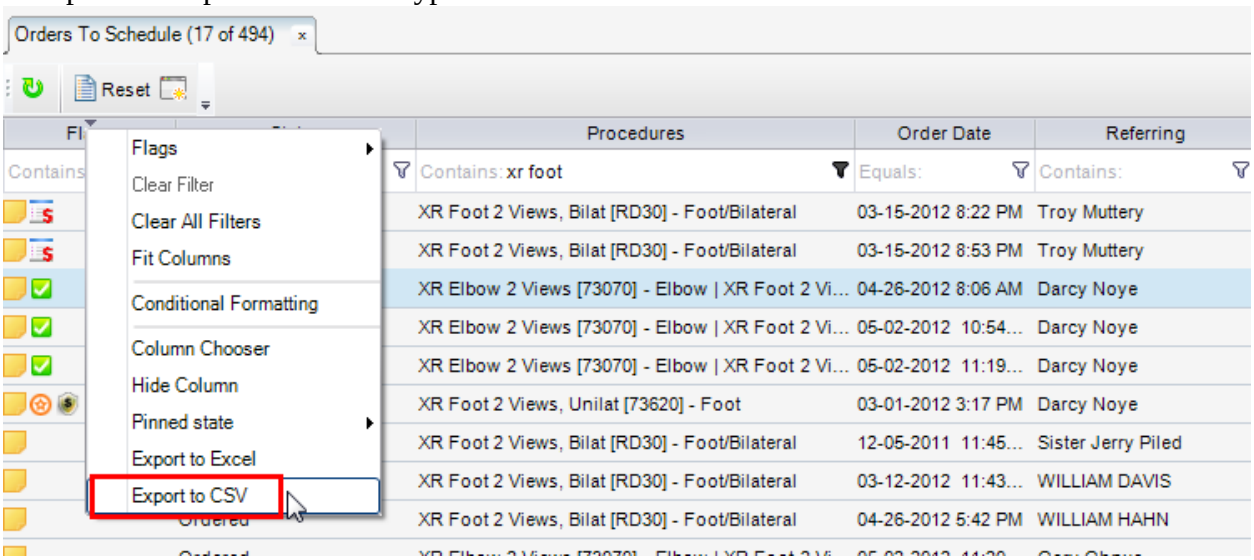

**Figure 4.9 – Export work lists to .csv**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Referring Column Added to Radiologist WL's

The column "Referring" has been added to the Pending Dictation, Suspended, Pending Edit, Pending Signature, Signed Pending Release, All Pending Dictation, All Suspended, All Pending Signature, All Signed Pending Release, All Signed by Date, All Pending QA and All Problem work lists. The above work lists are under the Radiologist menu.

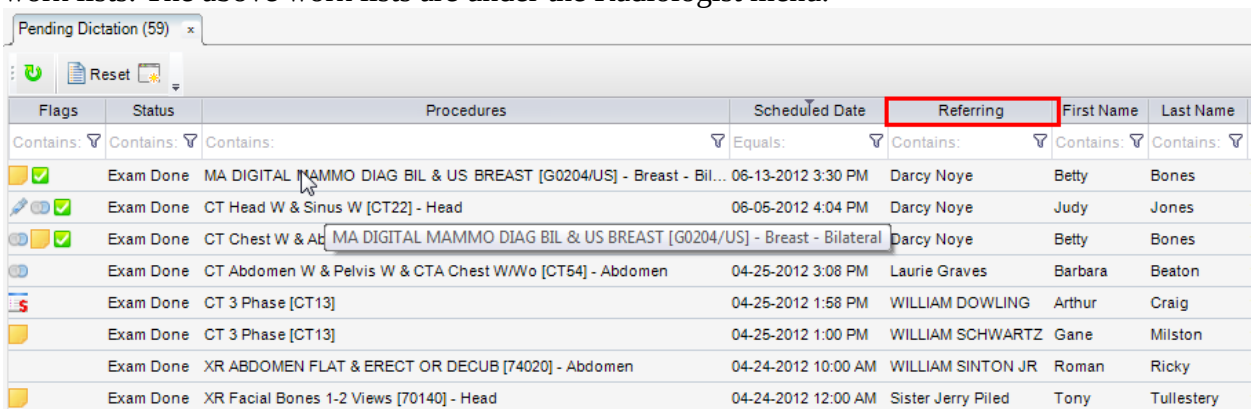

**Figure 4.10 – Displaying the Referring column added to Pending Dictation**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Patient First and Last Name Columns Added to Document Distribution WL

As the title states, the 2 columns were added to the Document Distribution WL for the patients first and last name. The Distribution History By Date WL has also had these columns added.

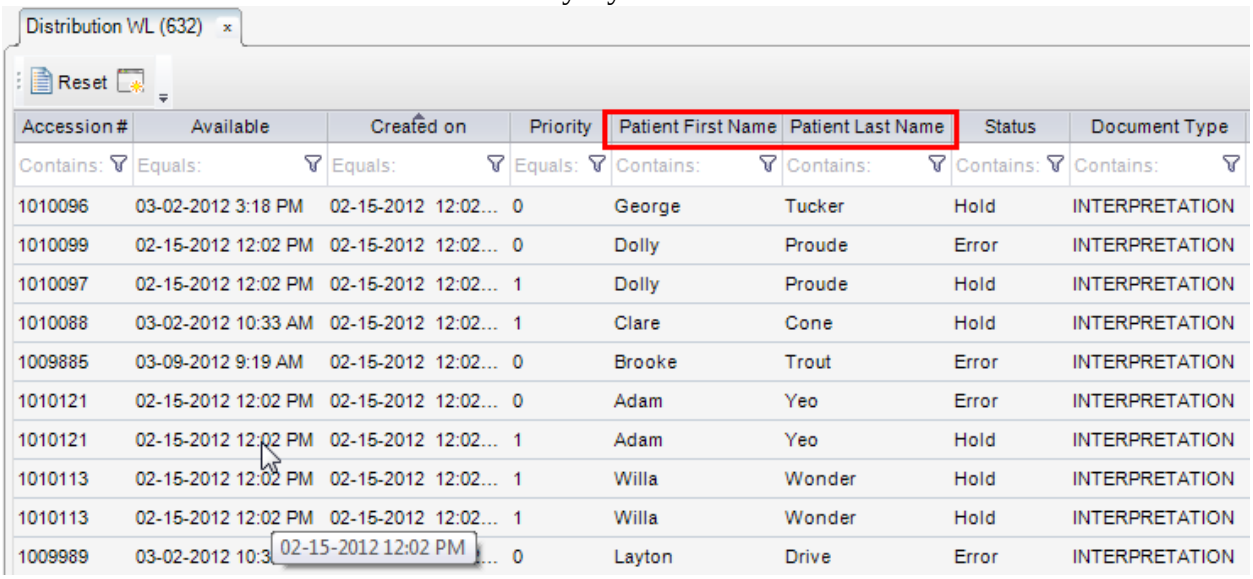

**Figure 4.11 – Document Distribution WL with patient first and last name columns**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Remove Change to…Arrived Status from Reception WL

The Reception WL has had the option to change to "arrived" status removed from the context menu option "Change status to…"

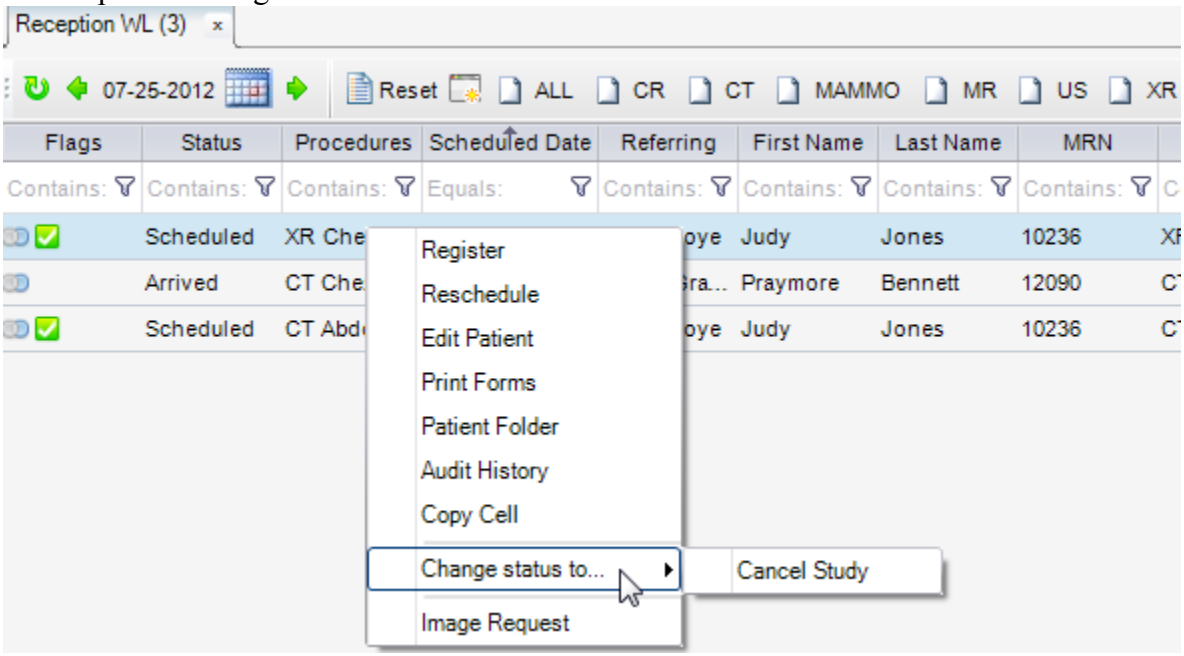

**Figure 4.12 – Arrived status removed from context menu**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Default WL view

In previous versions the user didn't have the ability to remove a "My View", once the view was selected, they could not revert back to the default work list view. In build 37 a "Reset" has been added to all work lists. If a "My View" is selected, the sorting, filtering, columns displayed, etc… have changed, selecting the "Reset" button will revert the work list back to the default of the work list.

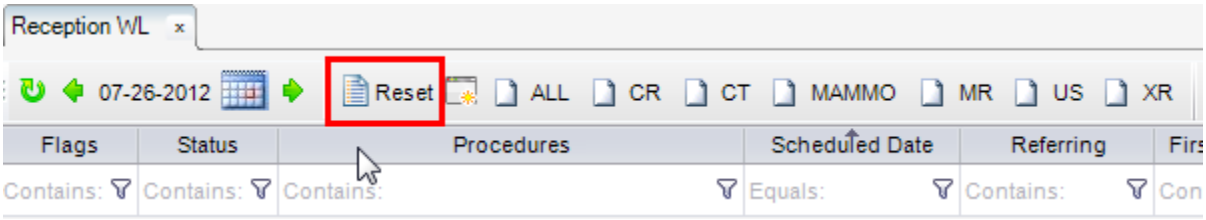

**Figure 4.13 – Reset button to remove my views**

Once the "Reset" button is selected the work list will be sorted by the scheduled start date. The Document Distribution work lists will be sorted by available date.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Statuses and Outside Reads Removed from IVT Work List

In previous versions of eRAD RIS, the IVT work list was displaying rows with statuses in Invitation and Short Term Follow up, these statuses have been removed. It was also displaying Outside Read studies, which will no longer be present on the IVT work list.

## Work List Filtering Changes

We needed the ability to filter work lists using "and" "or" conditions and to exclude other strings that don't contain a particular expression.

To accomplish this we have changed work list filtered to support this. The following is an explanation:

We support 'and' using the '&' character, 'or' using '|', 'not' using '!' and groupings using '(' and ')'. Some example filters are:

(CT & XR) | MR – will display procedures with CT and XR procedures as wells as MR procedures
(CT & XR) | !MR – will display procedures with CT and XR procedures but not MR procedures

The ! operation also works on Parentheses groups such as the following, which displays all CT procedures that are not also XRays:

!(ct & xr) & CT

If the parentheses do not match such as (CT & MR, then the groupings are not evaluated. Also if an operator is missing such as (CT & XR)!MR then the & is used where the missing operator should be.

Note: as before you can match to '', which matches to a blank column so the following expression

(CT & XR) || ''

The above example, matches any procedure that has both CT and an XR in the description or has a blank description.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Context Menus Added to Patient Search Results

The Patient Search window has had some additions in build 37. A context menu has been added allowing the user to select "New Appointment" and "New Walk-in". New buttons have also been added. The top of the search screen has "New Patient", for the case where you can't find the patient you want and only want to add a note to their patient file and first need to create the patient.

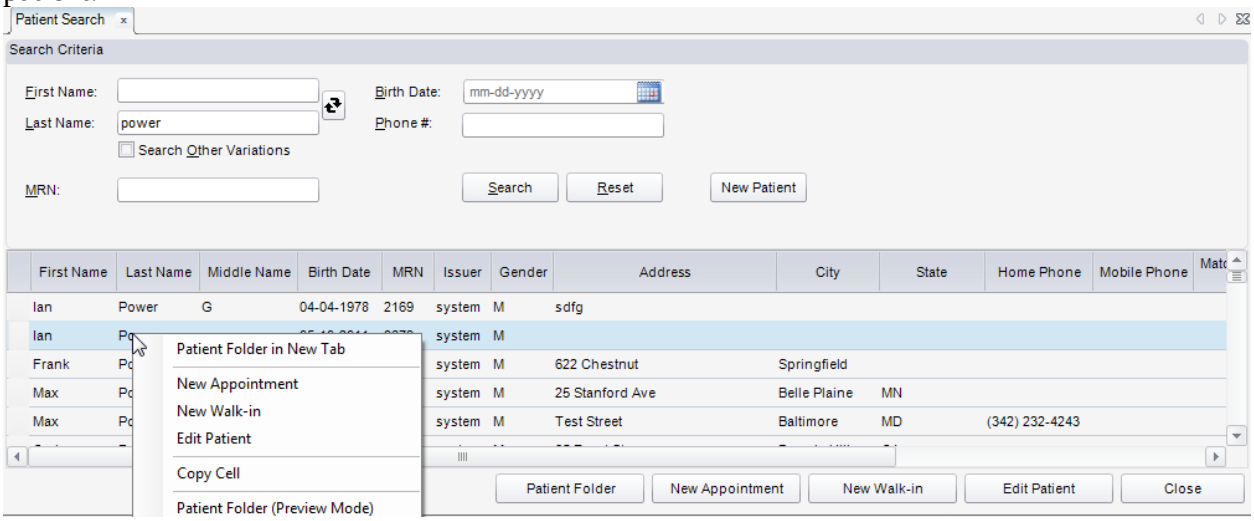

**Figure 4.14 - Patient Search**

When in the patient search popup the bottom buttons and context menu items are hidden and if the patient search is on a popup which is launched from a content base that Search/New Patient icon buttons then the "new Patient" button on the search popup will close the popup and click the "New Patient" icon on the content screen and will populate the default values for the new patient based on what was typed in the search screen.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Void Signed and Abort Exam Done Studies

The ability to void a signed study and Abort a study in statuses of Exam Done, Exam Done (tech only), Dictated, Report Drafted and Transcribed has been added in build 37. Buttons of Void

and Abort 
can be accessed from the View Edit window. The View Edit window is accessible from the patient folder.

When the user selects the Void button in the View Edit window, they will be prompted with a message, displayed in the figure below

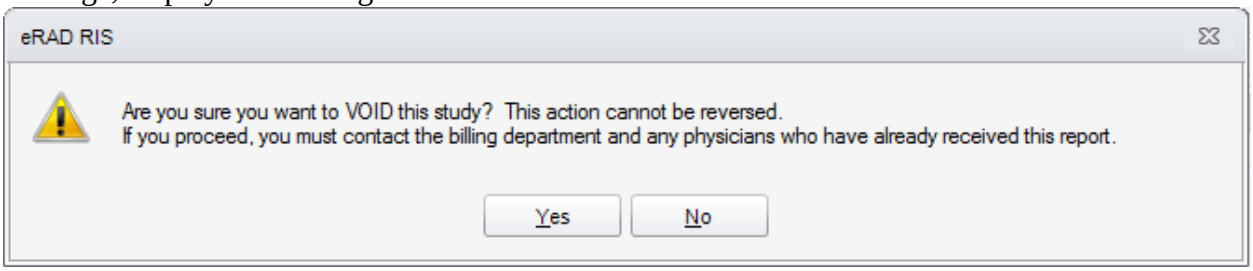

**Figure 4.15 – Confirm Void message**

Clicking 'No' will just return to the view edit screen, 'Yes' will save the study with the status of Void.

When a study is aborted in the View Edit window a confirmatory message prompt will also display

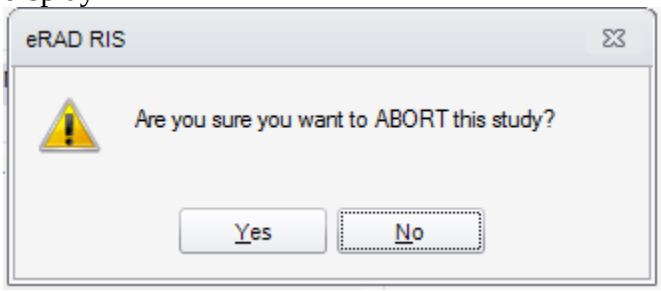

**Figure 4.16 – Confirm Abort**

Studies that are voided will appear in the Patient Folder work list as "Voided", while studies that are aborted will appear on the Patient Folder work list as "Discontinued".

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

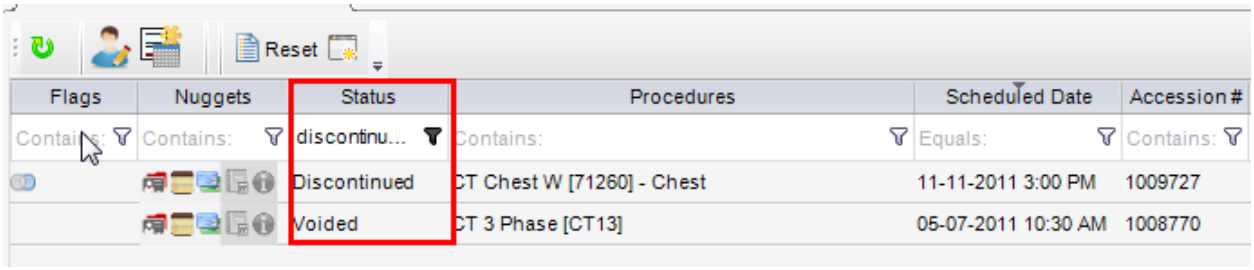

**Figure 4.17 – Patient Folder displaying voided and aborted statuses**

Permissions for these buttons are controlled by the access strings of:
Access to Void – Clinical.VoidStudy
Access to Abort – Clinical.AbortStudy

## Add and Remove Patient Alternate MRN's

On the patient tab, a new data pane has been added that allows users with permissions to add and remove alternate MRN's. If the alternate MRN data pane is empty open the context menu from the column header and the option to "Add MRN" will be available. If there are already alternate MRN's in the data pane, simply open the context menu from the list and the user will have to option to "Add MRN" or Remove MRN"

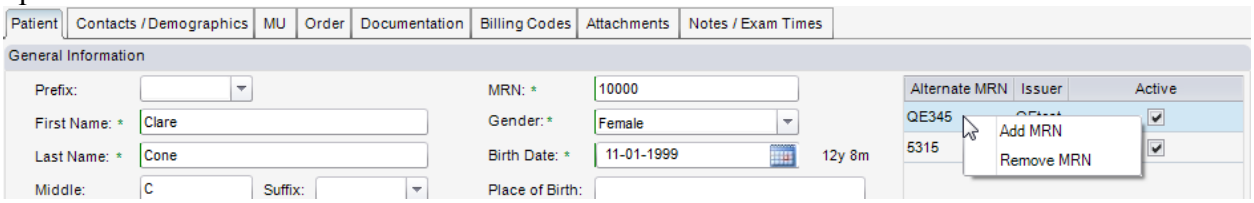

**Figure 4.18 – Add and Remove MRN**

Selecting "Add MRN" will open the Add MRN window.

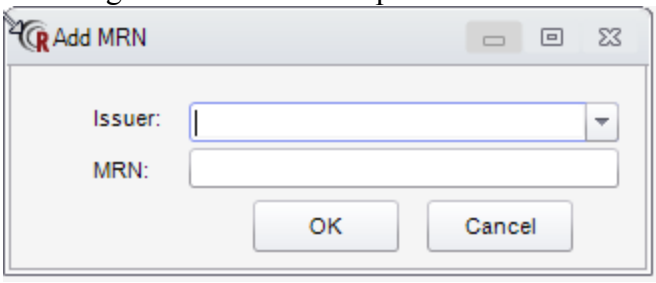

**Figure 4.19 – Add MRN window**

The Issuer: list box is populated with the values from the Issuer Lookup table.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

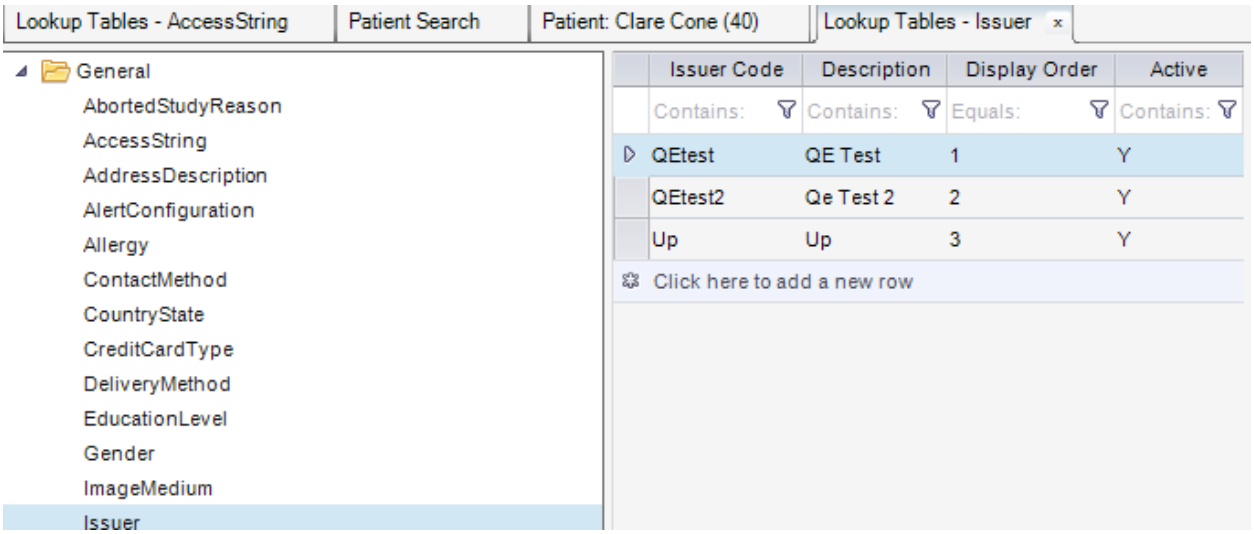

**Figure 4.20 Issuer Lookup**

If an alternate MRN is attempted to be added to another patient, the user will get a prompt informing that the MRN is already assigned to another patient.

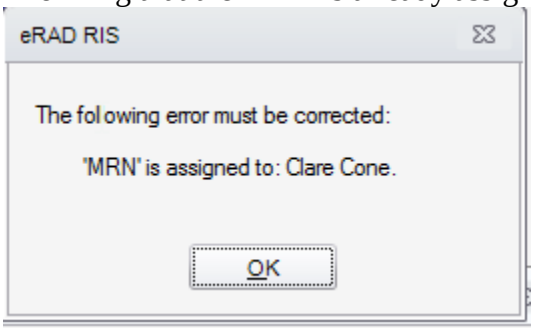

**Figure 4.21 – MRN already assigned**

The alternate MRN can be used for patient search.

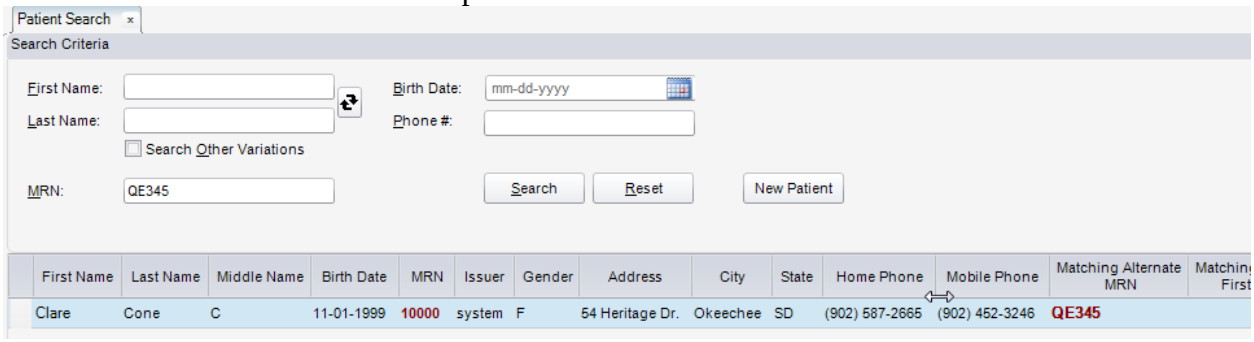

**Figure 4.22 – Patient search on alternate MRN**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Permissions to access the Add and Remove options as well as the lookup table are as follows
Add MRN – Clinical.AddMRN
Remove MRN – Clinical.RemoveMRN
Access to Issuer lookup table – Config.LookupEditor.Issuer

Note: users can never remove the system MRN or MRN added in the "AddOutsideRead / Alternate MRN ForReport". To remove an "Alternate MRN for Report", use the View Edit screen and edit/remove the "Alternate MRN for Report" from the applicable field.

## Last Menstrual Period Approximate Date

In the Perform Exam window there is a date field for Last Menstrual Period. Requested was the ability to show this date as an approximate date. Within the date field a check box will appear when a date is entered or selected from the calendar control.

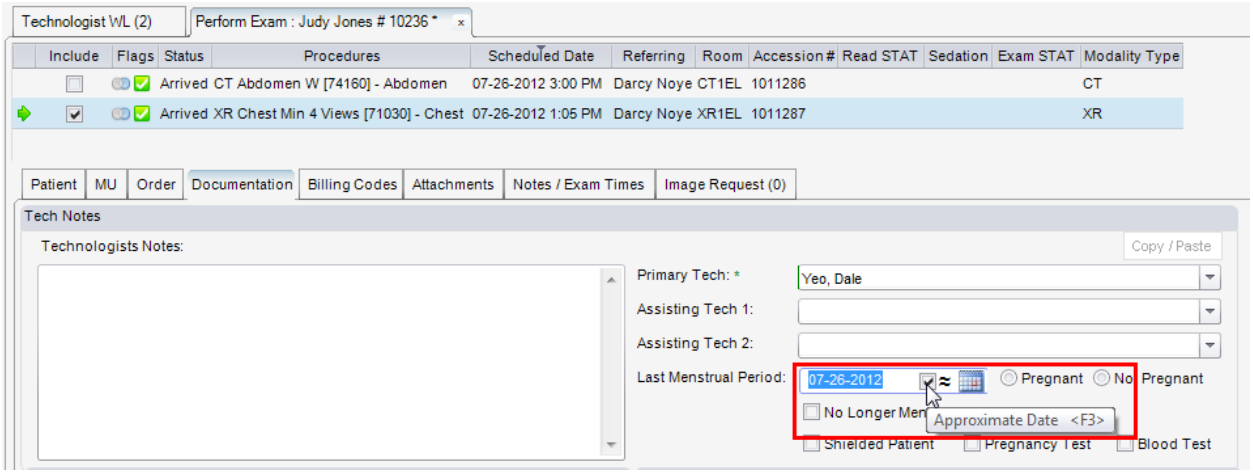

**Figure 4.23 – Approximate date**

The check box can be toggled and the date can be changed backwards and forwards, todays date selected and the day / month swapped when the day does not exceed 12.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

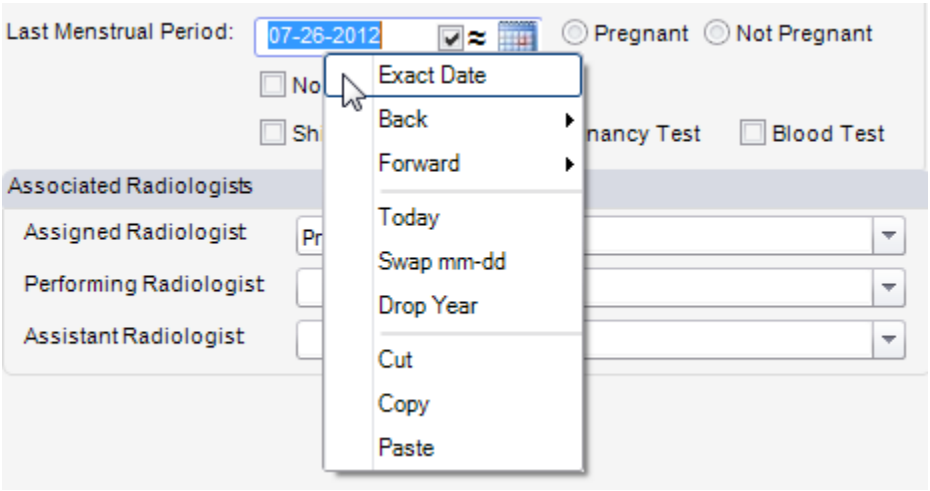

**Figure 4.24 – LMP date field context menu**

## Save As Order from Schedule Order Window

In previous versions the scheduled window allowed the user to either Schedule or Close the Schedule Order window. A new button "Save as Order" has been added. Orders opened in the Schedule window from the Orders to Schedule work list will have this option.

This option was always available from the New Appointment window. This gives the user an extra option in case the patient can't agree on a time with the scheduler at the time; any added information can then be saved to the order.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Default CPT

Procedure codes can now have default CPT1 and CPT2 modifiers assigned. From the procedure code lookup table expand the procedure code row. Looking at the figure below you can see the optional fields for Cpt Modifier1 and Cpt Modifier2 Codes.

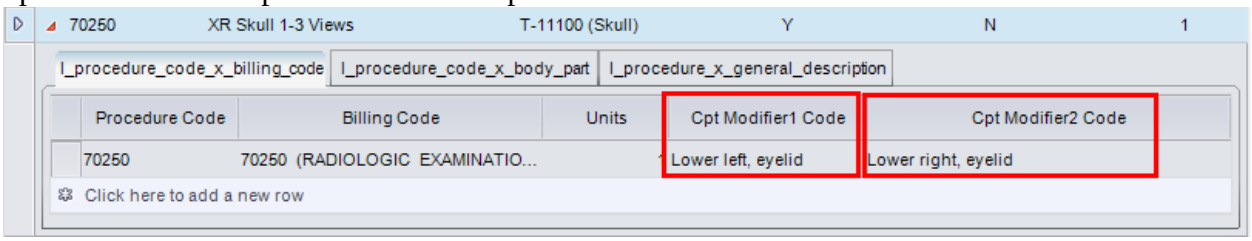

**Figure 4.25 – Default CPT1 and CPT2 modifier**

## Changes to Patient Merge window

We have retained the same Source and Destination concepts, but we now categorize the patient information into separate categories of items that can be merged over from the Source. Name, DOB, Address, Home Phone, Cell Phone, and Work Phone are the categories of information that can be used to merge over. By default each of these options is set to use the Destination patient's attributes, but by toggling a radiobutton for each category, the admin can selectively use the attributes from the Source patient.

Patient Merge suggest was also updated to use this ability, so a front desk user without sufficient authorization for a Patient Merge can still suggest a merge and indicate which version of the data is most appropriate to retain.

In addition, we now show the patient history including access to the nuggets so the admin has easy access to the scan documents if they feel the need to compare the patient's photo ID or signature, and they can view the list of exams on both the source and the destination.

As before,there is a "< -- >" button to switch the source and the destination patient.

A "Show ID" button (a camera icon) that will only be visible if the patient has at least one scan document classified as a license (a config setting is used to specify which "scan document type" represent the driver's license/photo ID.

On the back-end, the logic for patient merge is very similar as it was before, we are now doing a patient merge and then updating the patient attributes where applicable afterwards.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

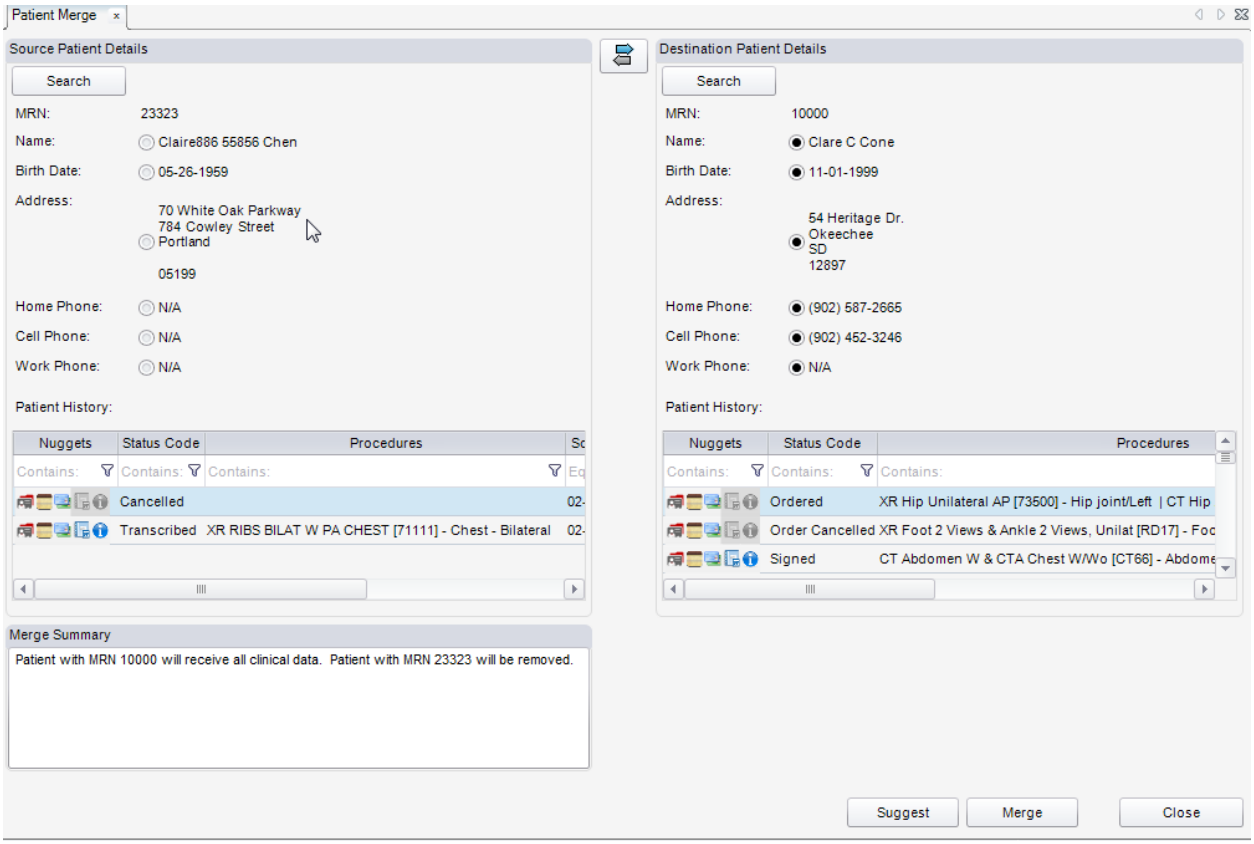

**Figure 4.26 – Patient Merge window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Show Report for Prior Exam for Mammo Follow-ups

The schedule order window for Mammo follow-ups will allow the user to view reports for the prior exam. The button will be located in the lower left of the window.

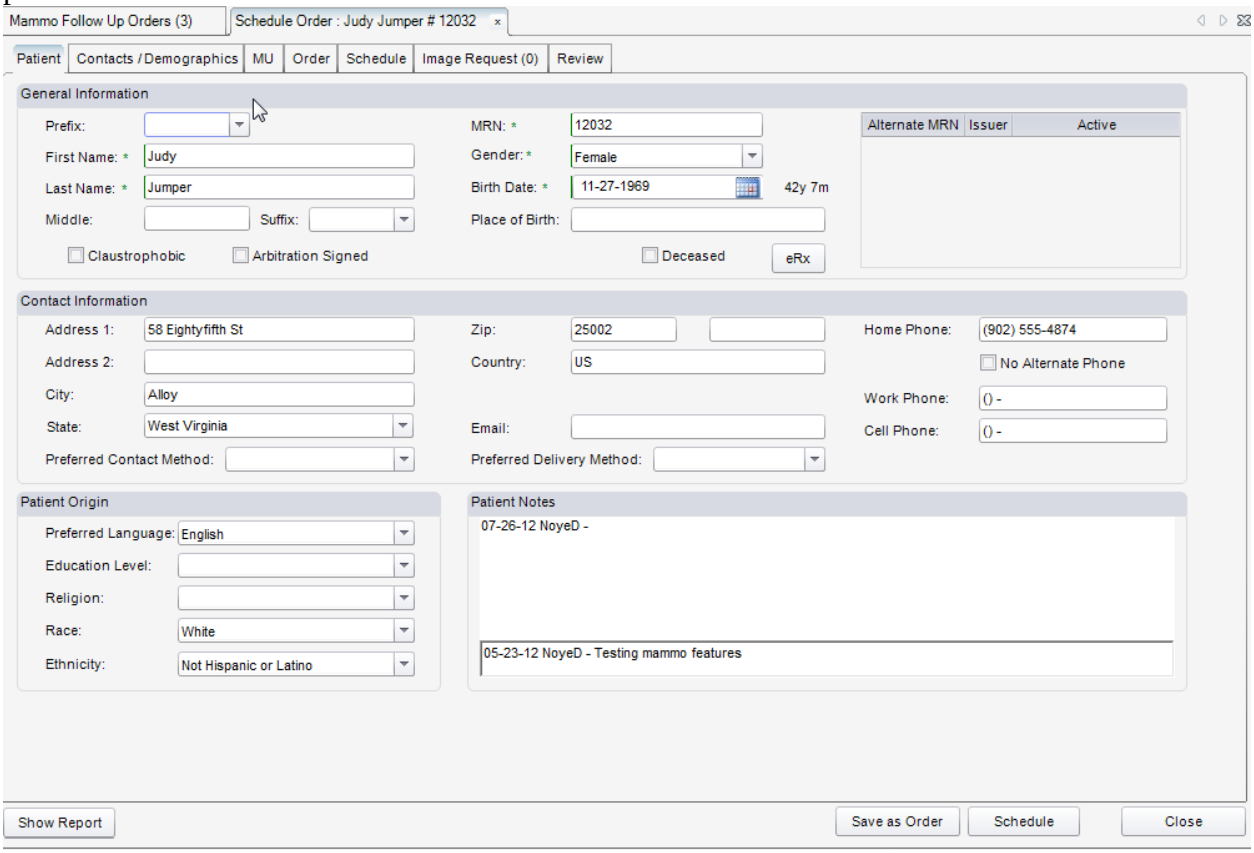

**Figure 4.27 – Mammo follow-up schedule order window**

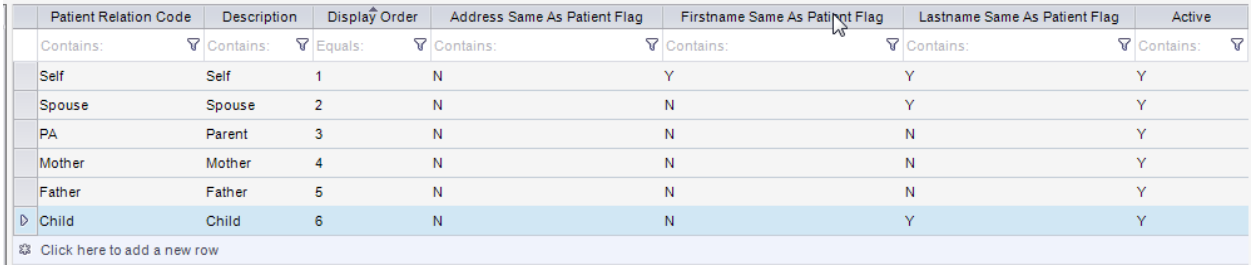
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Patient Address Updates – Relation to Patient

Changes have been made to the PatientRelation lookup so we can configure what is copied over to other patient fields from the Patient Tab information. This applies to the Responsible Party and Emergency Contact sections on the Contacts/Demographics, Medical Record Access window and the Manage Policies window relation to patient.



| Patient Relation Code | Description | Display Order | Address Same As Patient Flag | Firstname Same As Patient Flag | Lastname Same As Patient Flag | Active |
|---|---|---|---|---|---|---|
| Contains: | Contains: | Equals: | Contains: | Contains: | Contains: | Contains: |
| Self | Self | 1 | N | Y | Y | Y |
| Spouse | Spouse | 2 | N | N | Y | Y |
| PA | Parent | 3 | N | N | N | Y |
| Mother | Mother | 4 | N | N | N | Y |
| Father | Father | 5 | N | N | N | Y |
| Child | Child | 6 | N | N | Y | Y |
| Click here to add a new row | | | | | | |

**Figure 4.28 – Additional columns added to PatientRelation lookup table**

Similar to before when we hard coded these conditions to things like "Self" the last name and first name will be copied over if the flag for that piece of data is set and if the field is blank. The Address Same As Patient Flag will copy over all contact information if the destination field hasn't yet been set after doing that if all the fields match the Patient, the "Same as patient field will be checked".

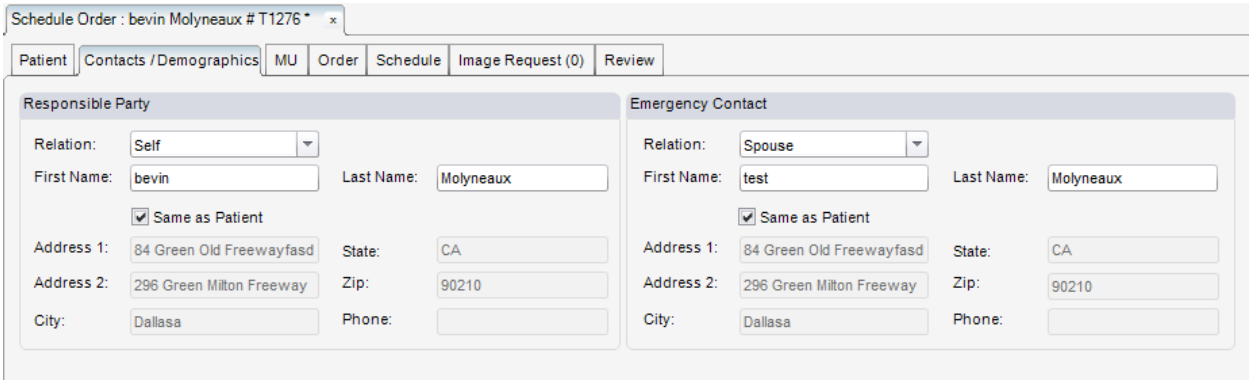


**Figure 4.29 – Relation to patient fields**

If "Same as Patient" is checked then any changes to the patient's address information will be updated in the contacts tab.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Order Follow Up Tracking

In build 37 tracking follow ups on orders will be available. Edit the order and a follow up tab has been added. On this tab the follow ups can be added or previously added follow ups can be viewed.

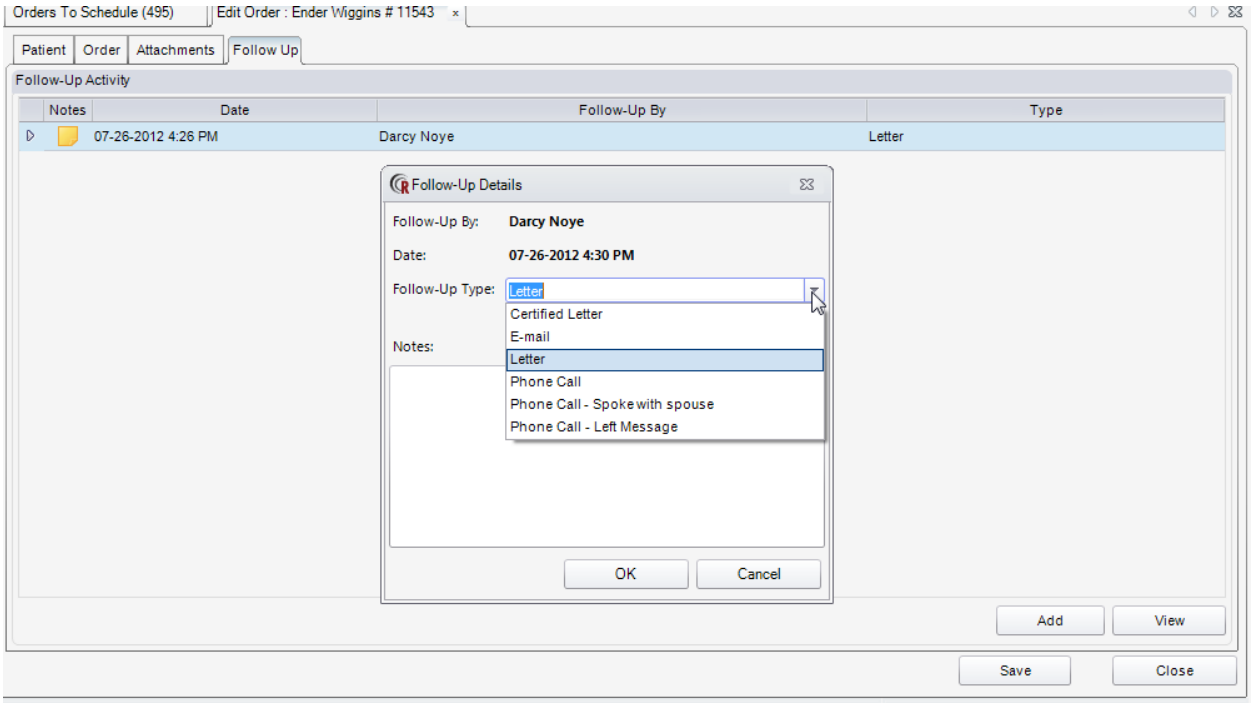

**Figure 4.30 – Order follow up tracking**

This works similar to the pre-existing follow up tracking from Mammo, with the exception of the columns on the work list. ACR Cat. 0 and ACR Cat. 4/5 Follow-up work lists will display the Last Follow Up Date, the follow up attempts, and the method of the Last Follow Up. These columns were not added to the Orders To Schedule or Patient Folder work lists. If the user wishes to see the follow-up, they must open the Edit Order window and select the follow up tab.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Zip Code Field Enhancements

If the zip code field is populated with 5 numeric characters, the search option will be enabled. If the character count does not match five, the search will not be conducted.
To initiate the search and auto populate the City and State fields, the user can tab from or select enter from the zip code field.

## Copy Contents from Grids

To assist in capturing / copying information from a grid the context menu item option of "Copy Cell has been added. Examples are the Insurance Policies grid and Billing Code Information Grid.

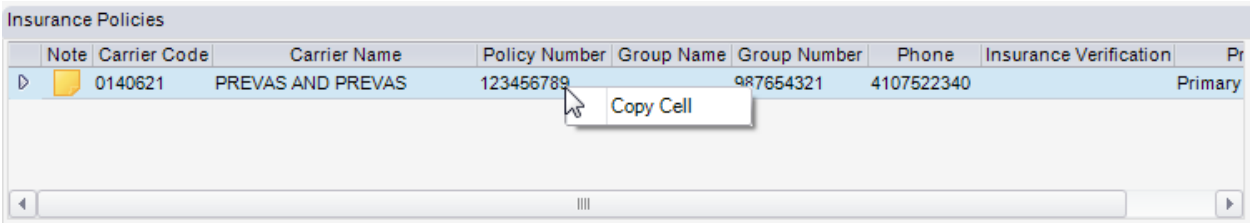

**Figure 4.32 – Copy cell context item added to grids**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## New Required Fields

In build 37 the Chief Complaint field and Special Accommodations field are now required. The standard pop up message information of incomplete required fields will display if these fields are not populated.

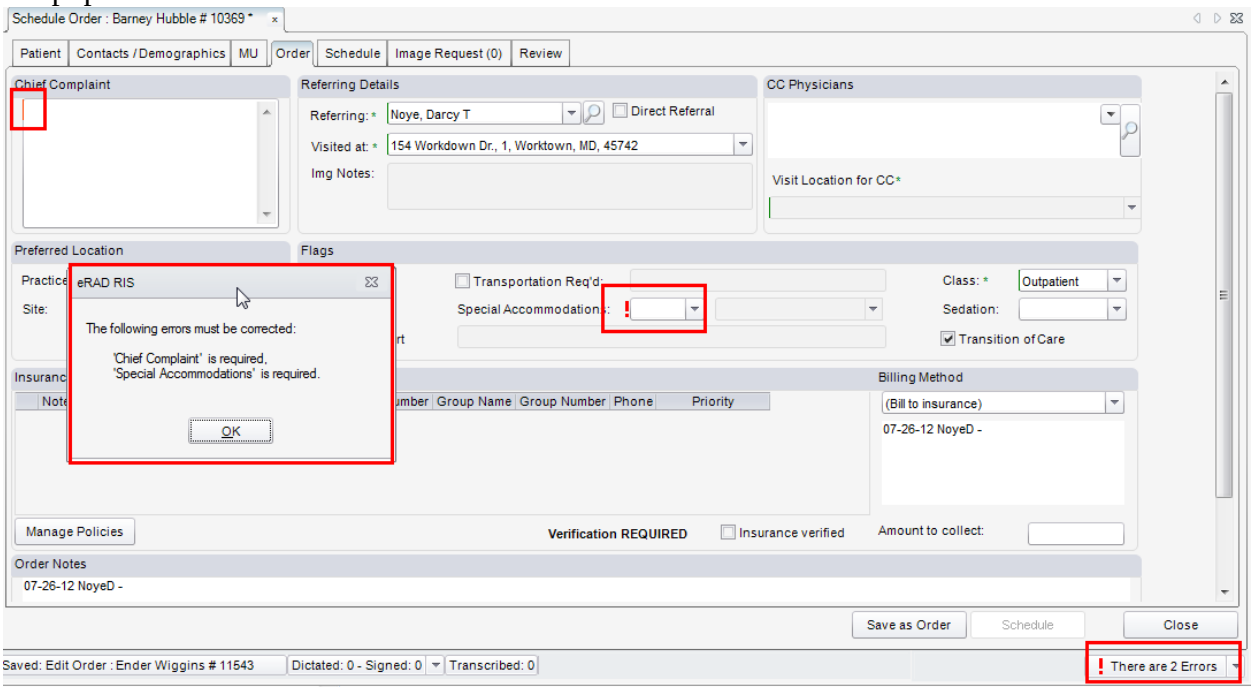

**Figure 4.31 – New required fields**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Editing Data of Exam for Outside Reads

From the view edit window users can change the Arrival time and the Exam start and end times. Neither of these data panes applied to Outside Reads. Now when opening an Outside Read in the view edit window, the Notes/Exam Times tab will have a new data pane of "Outside Read" in place of the Arrival and Exam times data panes.

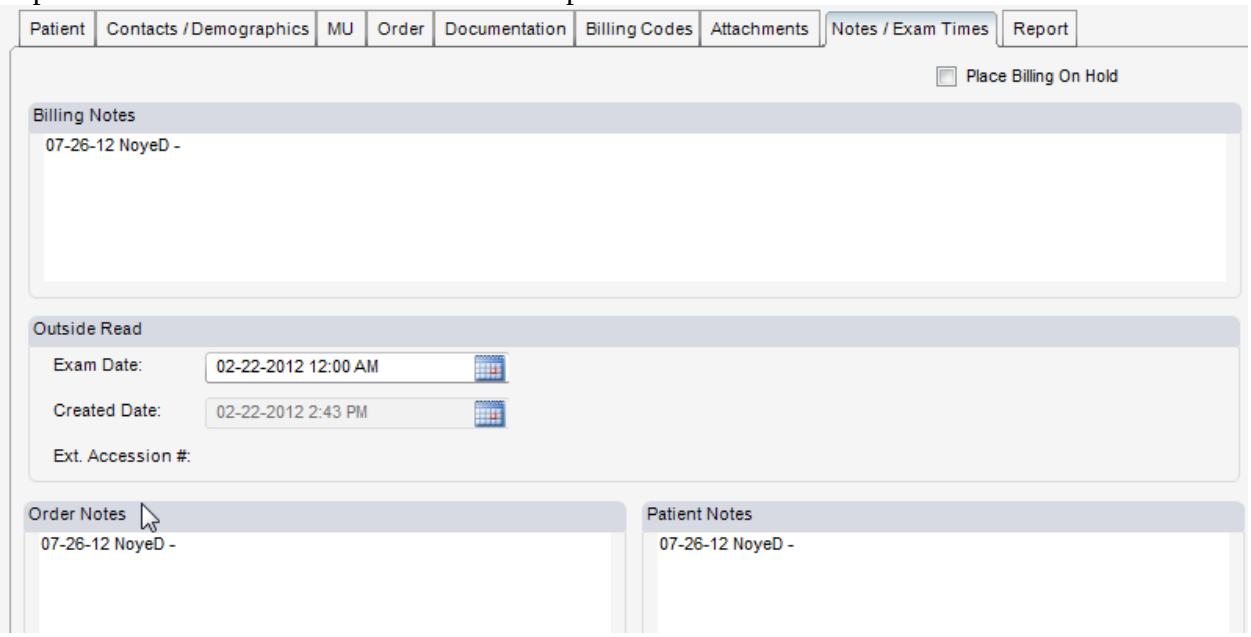

**Figure 4.33 – Outside Read time**

Editing of this field is permission based and the user must have the **Clinical.ModifyTimestamp** permission to edit these fields.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

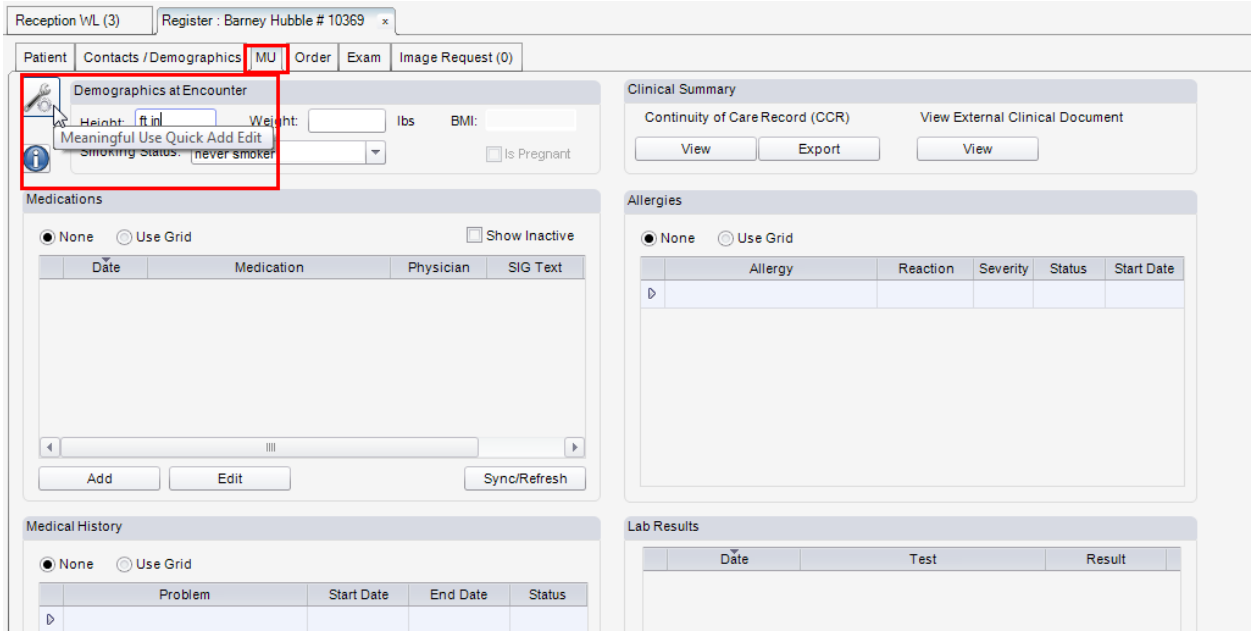
## Meaningful Use (MU) Enable Controls

Added a new Access string **MUEnabledConrols** that when the user has full access to this new permission has the ability to add Problems, Allergies or Medications either by the quick add edit button or the MU grids. If they do not have full access to **MUEnabledConrols** the user will be only able to enter Problems, Allergies and Medications by clicking on the Meaningful Use Quick Add Edit button.

**Figure 4.34 – New access string for Clinical.MUEnableControls**

## Meaningful Use Changes

In build 37 there has been many minor changes to Meaningful Use. First off the data tab that contains the MU grids has been renamed from "Visit" to "MU". The location of the tab has been moved so that it is in front of the "Order" tab in all data windows that MU is present. The MU Wizard Dialog has been renamed to Meaningful Use Quick Add Edit and the location of this button has been moved from the right side of the MU tab to the right side. The Meaningful Use Information button has also been move from the right side to the left.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**Figure 4.35 – MU tabs new location and displaying Meaningful Use Quick Add Edit and Meaningful Use Information buttons new locations.**

The access string for the Meaningful Use Quick Add Edit button was also as MU.QuickAddEditDialog, while the old access string MU.WizardDialog has been removed.

To turn on Meaningful Use as required is now set at the practice level. From the Organization lookup table > Edit Practice and there is a new check box "MU Required". Checking this box will require the Preferred Language, Race, and the Ethnicity fields on the patient tab and the Smoking Status, and radio button for Medications, Allergies and Medical History on the MU tab to have values when Checking in of Arriving the patient.

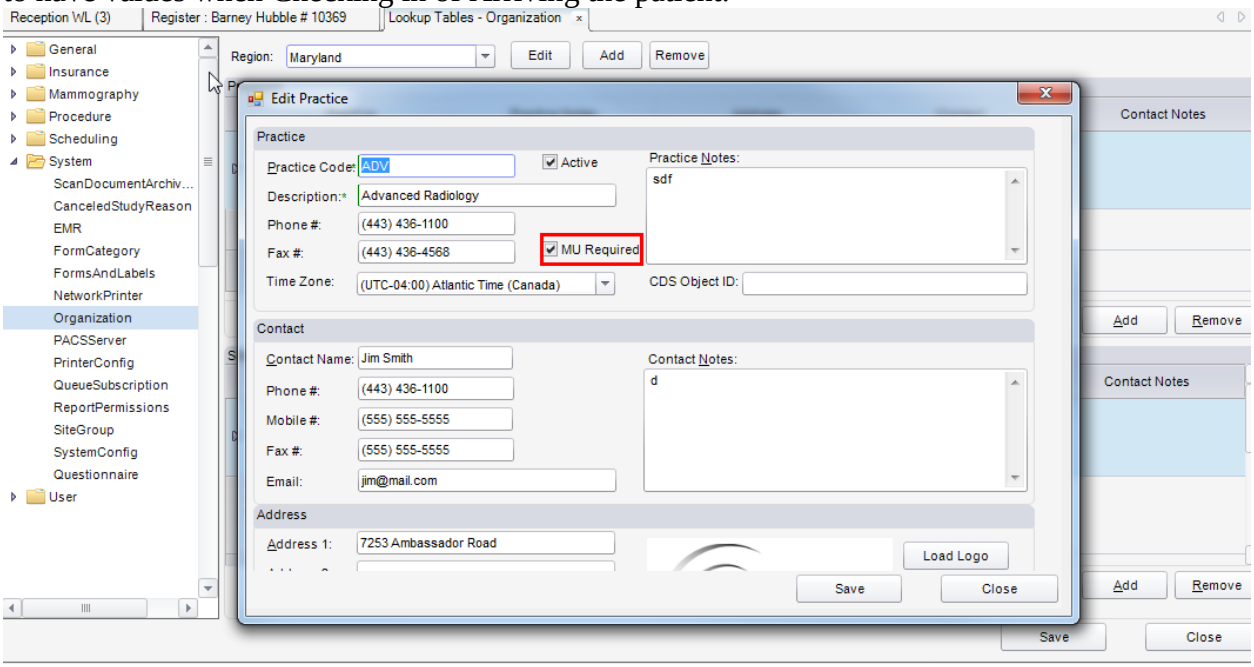


**Figure 4.36 – MU Required at the practice level**

Users are prevented from change the Clinical Summary Rule by not allowing them to de-activate the Alert Configuration code for GetLabWork.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

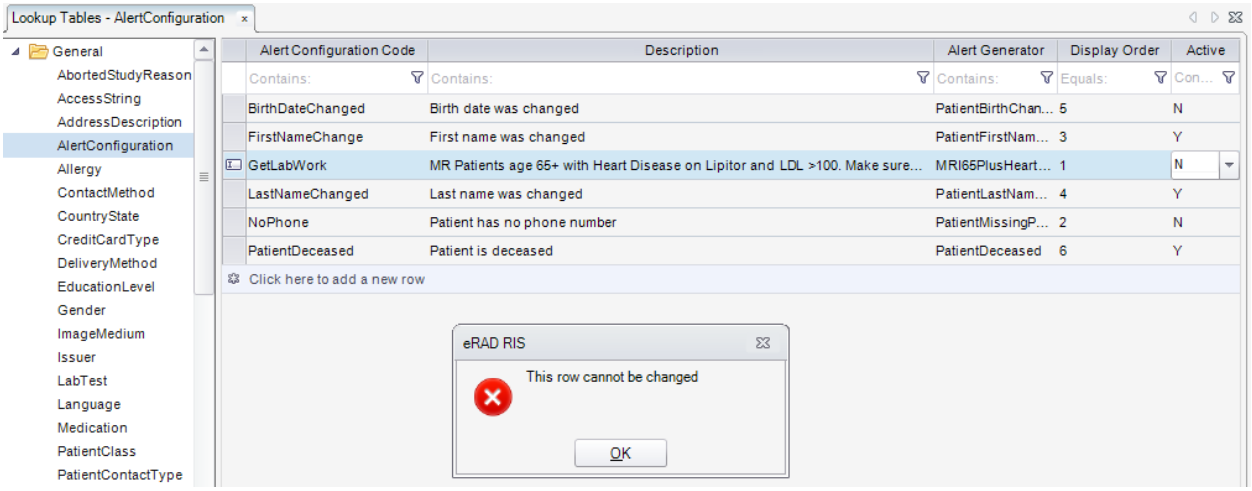

**Figure 4.37 – Alert Configuration cannot be disabled**

A new Clinical Summary management report has been added which is setup in the Forms and Labels lookup table. In order to capture is the report was printed we added a new system config code of MUClinicalSummary item. The value is changeable based on the name of the management report file. If the name of the report is change, the value of MUClinicalSummary code will have to change to match it.
When the user prints this new report the application will look for the Config item to determine if we need to capture if the report was printed. We record the date the report was printed and set the provided_clinical_summary_flag = Y in the db when this report is printed.

Lastly a change was made to the MU Scorecard so it does not calculate multiple patient population and multiple numerator counts. There are two entries ”0024” and “0038” that contain multiple entries. The report will display empty for those two mu entries. The user will to drill down to see the values as displayed in the figure below

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | | | | |

**Figure 4.38 – MU Scorecard changes**

## Appointment Book Change Schedule Time by Dragging

A limited piece of functionality was added to the Appointment book window. Users with the permission "Clinical.AppointmentsBooked.AppointmentDragging" will be permitted to move studies in the status of "Scheduled" only to different time slots. This will only work for studies that have 1 procedure in the order. The dragging of appointments that have multiple studies with one order will still have to be completed via rescheduled window.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

After the user has moved to the appointment to the desired time, the user will be prompted with a confirmatory message.

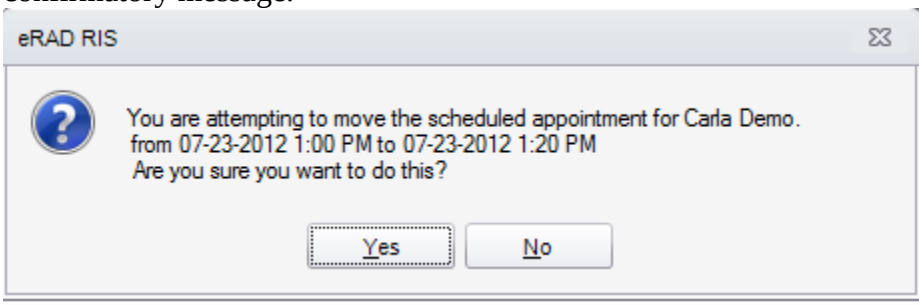

**Figure 4.39 – Dragging appointment confirmatory message**

If the user tries to move the study to a modality that is not valid based the users schedule group configuration, then they will get the warning.

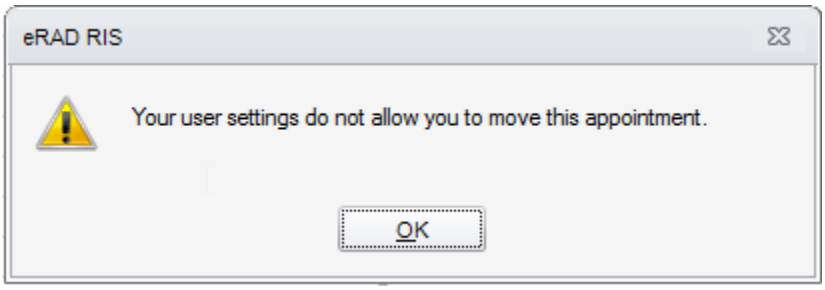

**Figure 4.40 – Message prompt if study is dragged to incorrect modality**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## External Reporting Workflow / No Report Workflow

Previous to build 37 no report workflow was configured at the procedure. If the procedure column No Report Flag was flagged as Y a check box would appear in the Perform Exam window. This column has been renamed to External Report Workflow Flag and if the procedure has this flag, the check box External Report Workflow is automatically checked in the Perform Exam window.

If the study is then opened with the "View Edit" or "Verify External" screens there will be a button "Verify External Report", which will move the study to the final state of "ExtReportVerified".

To find all exam done with external reports, which require verification, use the Exam Search as shown in the following:

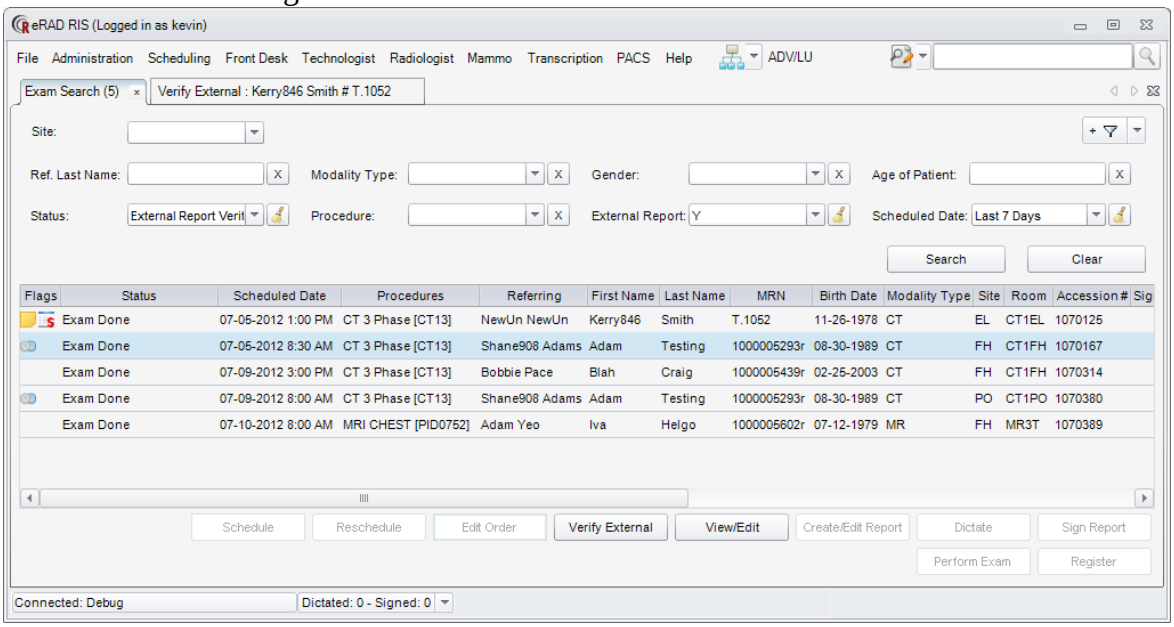

**Figure 4.41 – Exam search window (explained later in this document)**

In the Verify External screen, users can "View Images" and "Verify the report". The Verify External window is accessed from patient folder.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

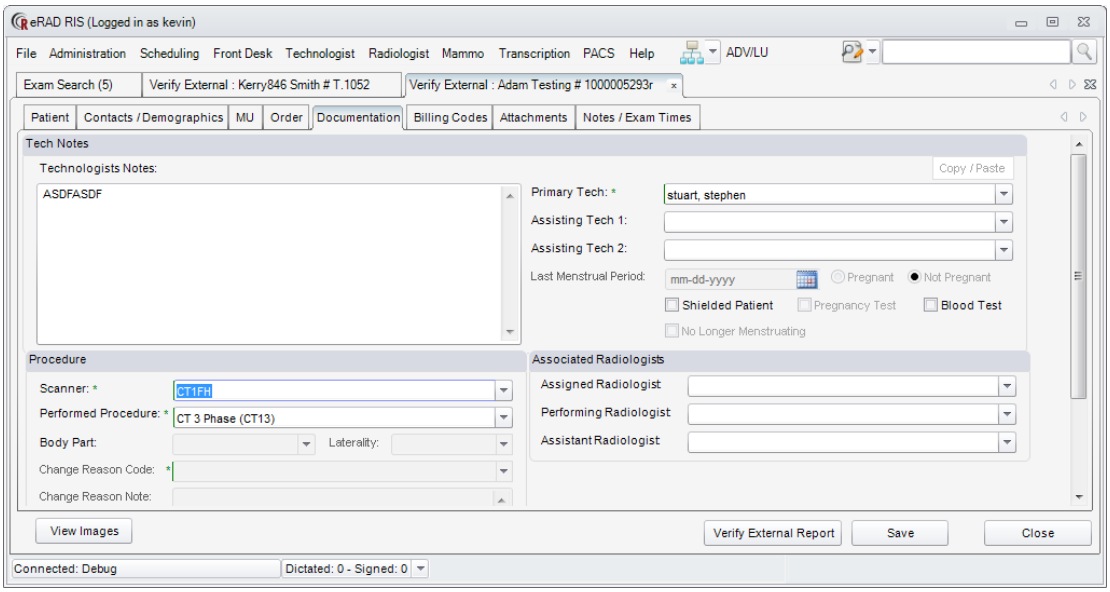

**Figure 4.42 – Verify External window accessed from patient folder**

ExamDoneReportVerified, will get added to the billing rules and will go to billing.

## IVT Additions and Data Window changes

In build 37 some additions have been made accessing the IVT data window as well as changes within the IVT data window.

The Patient Folder now has IVT in the context menu that will open the IVT data window

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

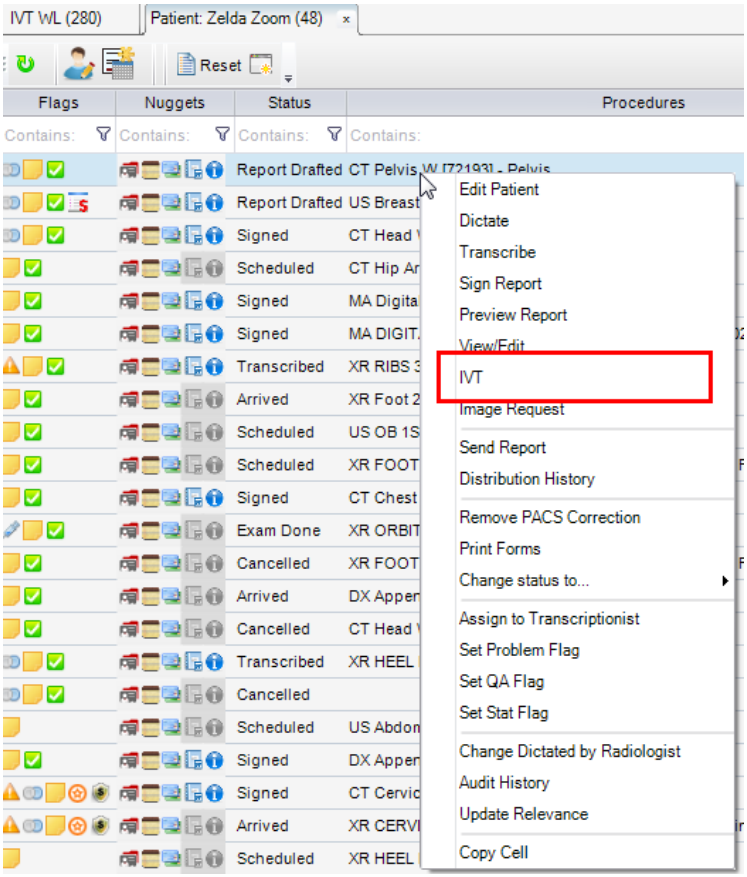

**Figure 4.43 – IVT added to context menu of patient folder**

Changes within the data window are a new tab called Order / Exam located between the Insurance Verification PreCert tab and the Attachments tab. The tab is initializes as read only as there is no need for editing in this window. The exam information data pane contains the Exam date and time, accession number(s) exam status and procedure.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

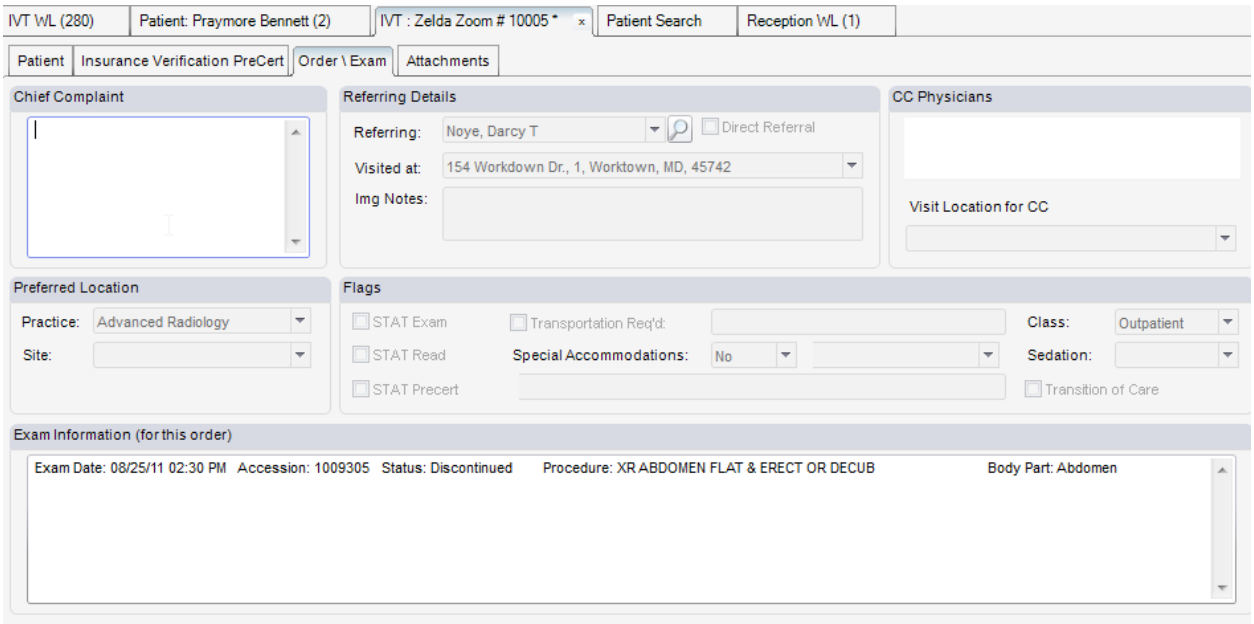

**Figure 4.44 – IVT Order/Exam tab**

Also added to the Insurance Verification PreCert tab was access to the Order Notes text box to simplify work flow.

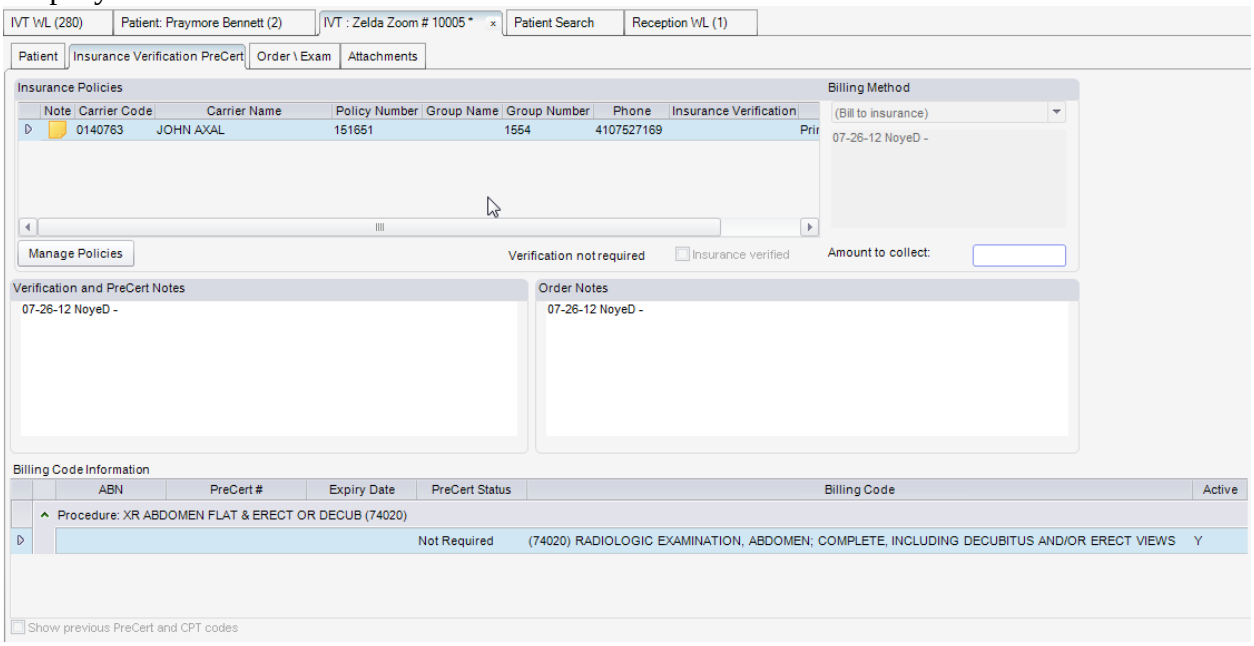

**Figure 4.45 – Order notes field added to IVT window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Mammo Diagnostic Reporting BI-RADS picker changes

In build 37 there have been some minor changes in the Mammography workflow, specifically the BI-RADS picker, which now has a configurable default recommendation for each BI-RADS level. If BIRAD is expanded, you will see all configured recommendation codes that are mapped (per SITE) to the BIRAD. There is now an optional field " Is Default Recommendation Flag". If set to "Y" this recommendation for the BIRAD, for the Site will be pre-populated automatically once the Radiologist selects a BIRAD.
Majority of the time the Radiologist will keep the default recommendation, however they can always choose to manually change it.

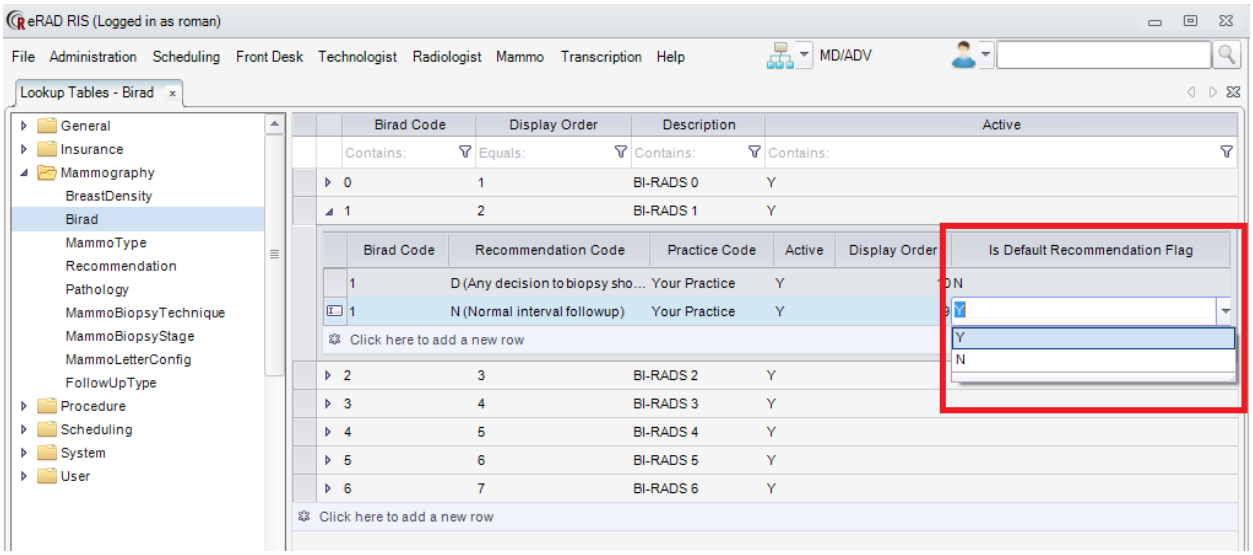

**Figure 4.46 – Configuration example for BI-RADS picker**

In RIS, once configured, if user selects a BI-RADS level, the corresponding 'default' recommendation will automatically populate the 'Recommendation' dropdown.

**Figure 4.47 – BI-RADS selector in RIS**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Follow-up Screen Enhancements

Follow-up workflow needs to allow the user to generate a follow-up order after new information becomes available (Eg. Biopsy results).

After the user chooses "Not Required" for additional surgery, they are able to enter a "Follow-up Required" or "Follow-up not required". If the user chooses "Required" for additional surgery, a "Create Follow-up" button appears, and when clicked, a dialog box appears:

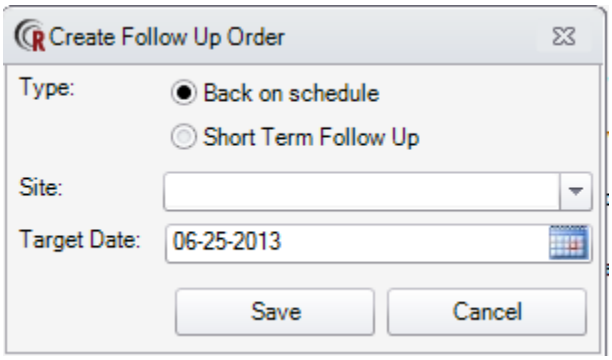

**Figure 4.48 – Create follow-up Order dialog**

This follow-up order dialog allows the user to specify "Back on Schedule" (i.e. invitation status) or Short Term Follow Up.
A site drop down list provides a Site drop down, that is populated with a short list of all sites for the practice that performed the mammography exam.
The target date controls the Target Schedule Date, which will be used to help determine when the order should be scheduled, and when the patient should receive reminder letters.

Auto-Resolving Follow-Ups
If the user specifies that no additional surgery is required and no additional follow-up is required, the signed exam should drop off the Follow-up worklist.

Lost to Follow-up
The follow-up tab of the Follow up screen has a checkbox that says Lost to follow-up. If this is checked, the exam should drop off the follow-up worklist. This functionality existed previously, but the text has been changed.

Follow-up Outstanding Issue
Input on the biopsy window is currently a required field for all practices using mammo tracking. In the future, those practices that don't do additional surgery shouldn't have to click "Not

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

required" (i.e. we should have a configuration setting that controls which practices require this field), for the time being all practices will be required to answer this question.

**Figure 4.49 – Additional Surgery Inputs**

## Xkeys Integration framework

Xkeys device mapping is normally done via "MacroWorks Software" that is installed on each user workstation. After exploring various integration options, we decided to leverage the MacroWorks mapping software to allow users to map their own Xkeys device actions.
We will be adding RIS action templates to the existing MacroWorks software, to make RIS actions available for key mappings.

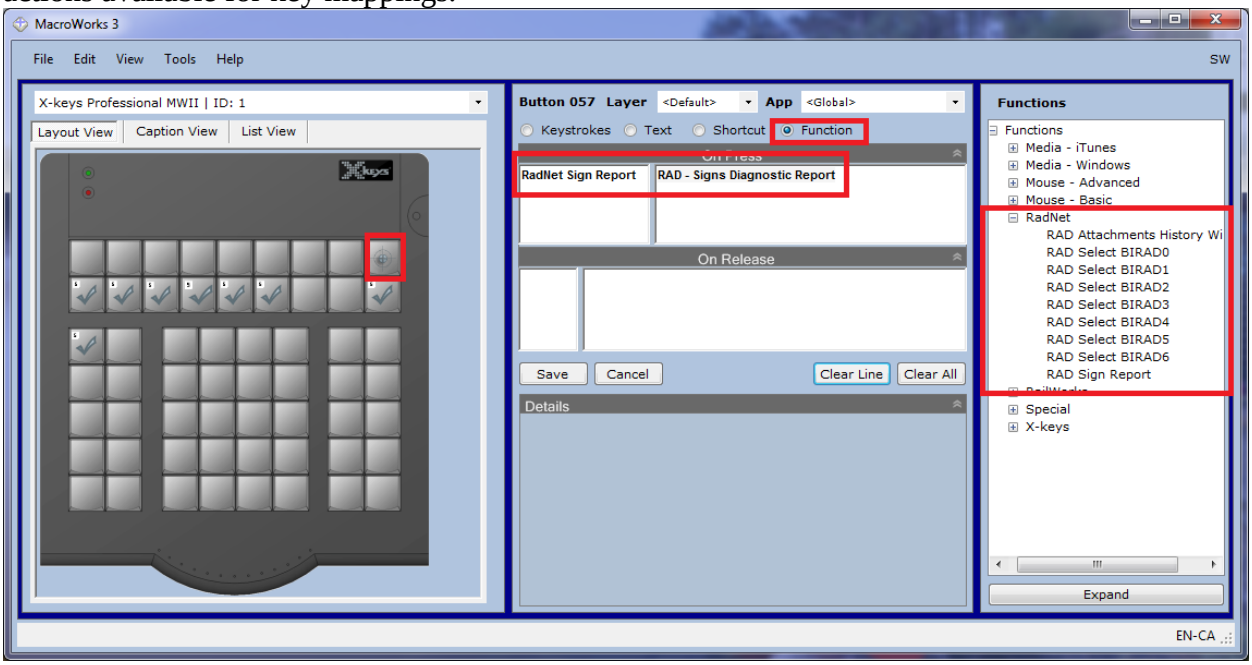

**Figure 4.50 – XKey Configuration Utility**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**For every "Function" listed** on the right hand of the screen under RadNet, **an XML file will be provided** to the following location on the users workstation:

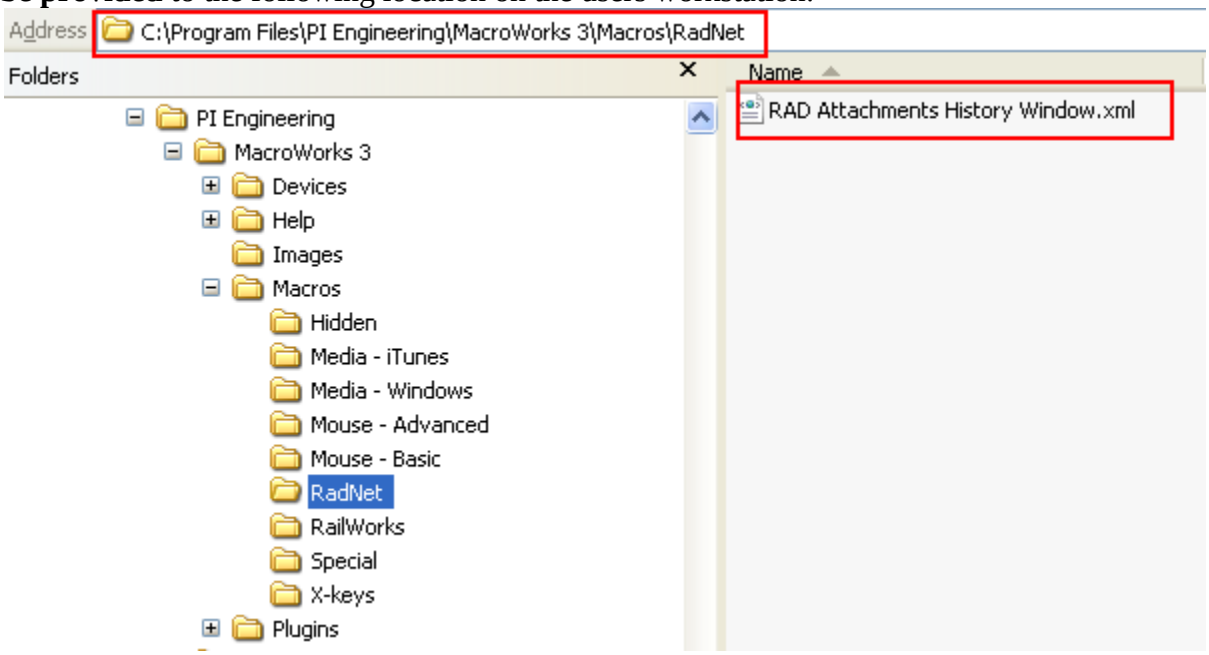

**Figure 4.51 – XKey XML file location**

The XML file it self will contain a command to execute a new DLL that is compiled with RIS. The DLL will execute a call passing an "**Action String**" to RIS. The XML structure file for different actions will always be the same. Only the action description, and the actual action string that is being passed to RIS will need to be changed when creating new actions

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

See sample below:

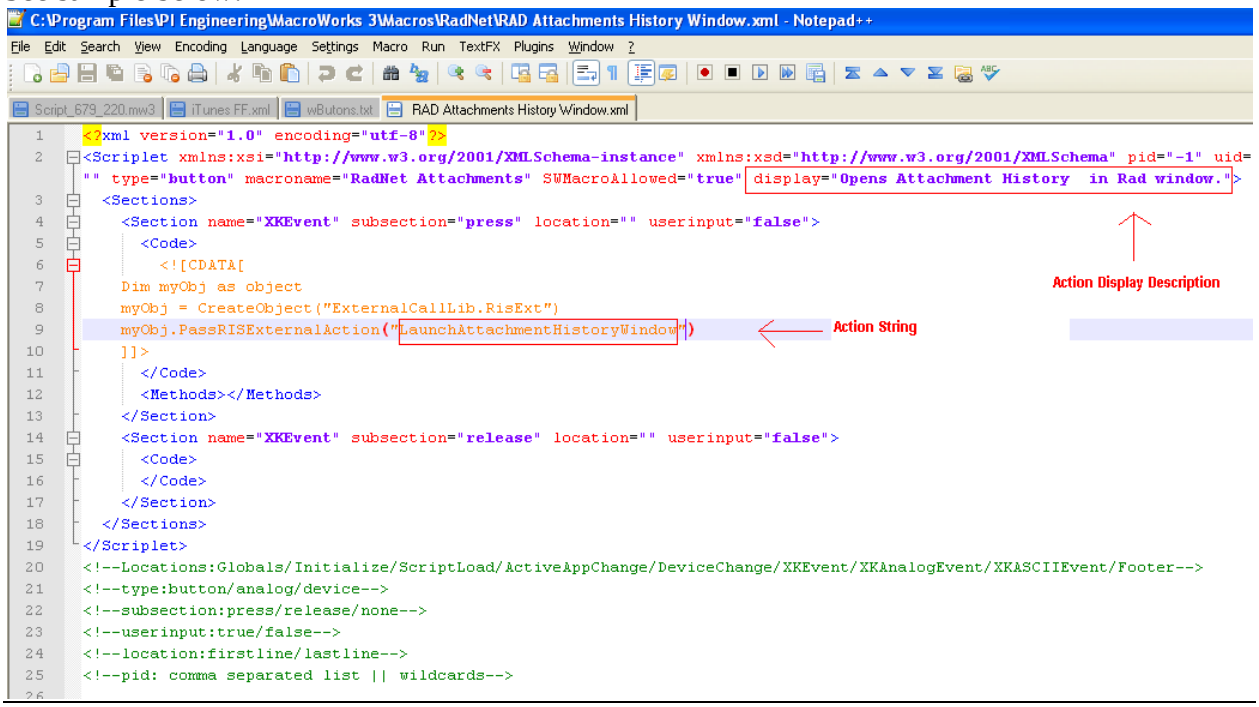

**Figure 4.52 – Sample XML file for XKeys**

Once this action is mapped to a key on the Xkeys device. When a user presses the key, the new DLL will pass an "Action String" to the main RIS window. RIS window will constantly be listening for actions being passed from the external DLL.

The following function will be listening.

MainApp.MainShell → WinProc (function)

If a call is determined to be coming in from the new External Call DLL the "Action String" being passed will be passed to a new XkeysLibrary class →

MainApp.XkeysIntegration.xKeysCallLibrary → AcceptExternalCall (function)

Based on the Action string that is passed in → new actions can be coded into the library. All existing RIS actions can be referenced and re-used. ( ex. Speech Mike actions)

Supported Events for XKey Configuration:

- Ability to select any BIRAD via Xkeys mapping
- Ability to select any breast density code via Xkeys mapping
- Ability to Sign Diagnostic Report via Xkeys mapping
- Ability to Suspend Dictation via Xkeys mapping
- Ability to load any Text Macro into the body of a Diagnostic report ( limitation – in RIS currently can not define default location for the macro to be inserted.) Insert will occur to the location where the user is currently focused in the report.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

NOTE: X keys can be programmed to fire multiple events on press of a key. For example one key stroke could set the BIRAD, insert a Macro into the report and fire an event to another application such as PACS.

## Maximum Open Tabs by User Group

It was determined that a need for a maximum number of open tabs, defined by user group. Code was added to all places that create tabs within RIS. If the maximum number has been exceeded, a message will appear asking the user to close some open tabs.
This does not apply to pop-up style windows, only tabs. Therefore (as an example) Reset Skipped rows dialog will still launch even if the maximum number of open tabs has been met.
A new column was added to the l_user_group table for maximum_open_tabs. The default value is 20. The value for each group can be edited in the lookup editor for user group

## Min Max Wait Time

There was a desire at the sites to allow for a configurable amount of time to occur between studies, part of this desire for this was that existence of the hardcoded limit of 4 hours that could occur between studies.
To resolve this possible issue that could occur of too much time between studies, we created a new config variable called "ScheduleDefaultMaxTimeBetweenStudies" this will work in conjunction with the addition of new controls added to the search panel that will allow for the manual selection of the allowed time between studies. This selection will only affect individual studies, it will not get used for procedure plans, where there is already a configured wait time.

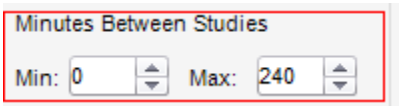

**Figure 4.53 – Min Max Controls**

As described above this selection process applies to all non-procedure plan studies, but there is no visible distinction to the user which one will be affected by the selection, there is a desired addition to have an advanced selection that will allow for the selection of min/max for each procedure and no selection of procedure plan studies.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## PreCert Notes in View Edit and Billing

It was discovered that we need the ability to view pre-cert notes after the pre-cert is done. Viewing ability to view/edit and billing exception screens was added to remedy this issue.

## Billing Code Grid Changes

It was discovered that users were having difficulty distinguishing which billing codes were matched up to each procedure. To remedy this, the procedure code has been added to the grid for billing codes, see below:

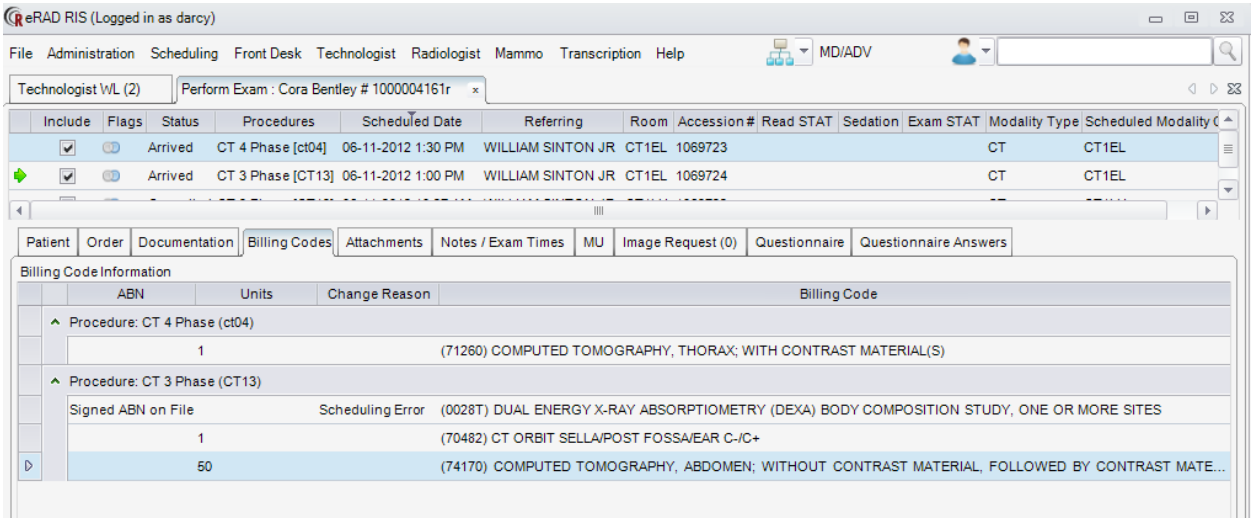

**Figure 4.54 – Billing code grid including associated procedures**

The bill codes above are now shown as rows which are grouped under the procedure.

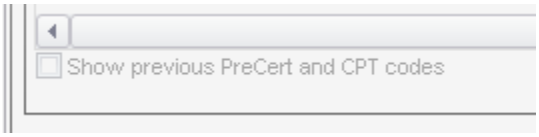

**Figure 4.55 – Disabled dynamically when rows are not being filtered**

The filter for showing prior PreCert and Bill codes has been updated so that it will be disabled unless there are actually rows that are being filtered out. The author was advised that there were complaints that the users had to toggle the checkbox just to see if there were any old rows that

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

were not being shown. This checkbox now behaves like it's cousin on the insurance dialog box (the enabled/disabled state provides information as to whether there is anything extra to show).
I modified the change reason so that it is bound to the procedure change reason lookup instead of a hard coded list.
Finally, the logic for the add button on the bottom of the grid was updated so that it assigns the bill code to the currently selected procedure on the bill code grid. Previously it was using the first active study item for study row [0].

Outstanding issues
When the tech changes the procedure, RIS creates a new study_item_certification row and filters out the old. If the user checks the checkbox to show the old precert rows, it shows them nested under the new procedure code (e.g. modify a CT3 phase to a CT4 phase. The CT3 phase precert rows will be nested under CT4 for the procedure code, because the study item was modified instead of creating and new study item and marking the old row as deleted).

## Technologist Notes Locking After Completion

A new permission was added, "`Clinical.Tech.ModifyTechNotesAfterCompletion`" to allow the locking of Technologist Notes to be permission based.

This permission is checked when the Tech or View/Edit screen opens and the user will prevent an unauthorized user from changing the technotes after the exam has been completed. A RIS Administrator will be able to update technotes at any time. Note that the Tech that completes the exam will be able to change the tech notes after they complete the exam while the screen is still open, but after they close out of the screen, they will need authorization to make a change.

## Tech Only – Patient Class Workflow

There is a TECH ONLY patient class. If it is set, then it should override any other settings and make this a tech only study.
Because customer sites can dynamically add Patient Class codes, I introduced a new configuration setting that will indicate the patient class code to be used for Tech Only workflow.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

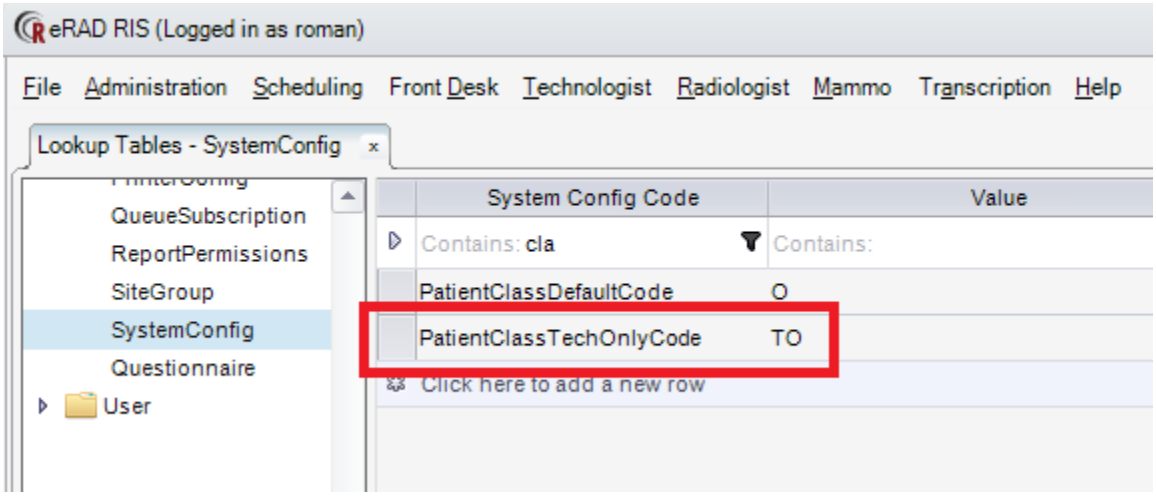

**Figure 4.56 – Configuration to define Patient Class Tech Only**

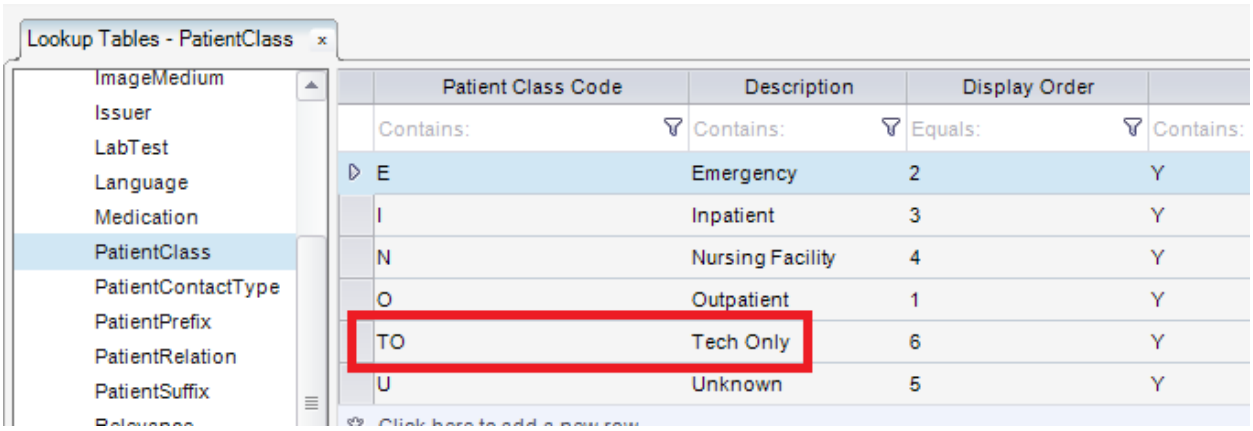

**Figure 4.57 – Patient Class code for Tech Only**

At the time the order is created or a study is booked, if the user selects the "Tech Only" patient class they will receive a confirmation dialog box, similar to the confirmation the Technologist receives if they select the workflow manually. This is to confirm that the user wants to proceed with the workflow.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

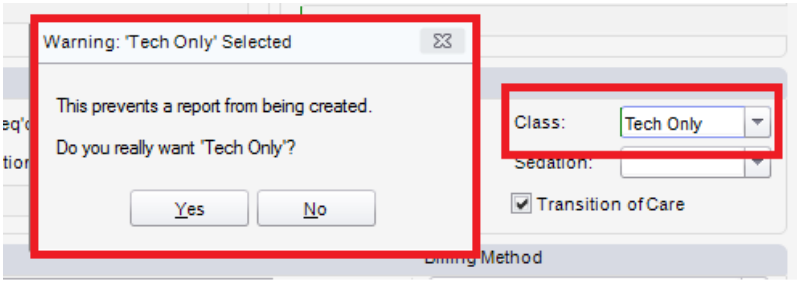

**Figure 4.58 – Patient Class Tech Only Warning**

If the user decides to proceed with "Tech Only" patient class the study will automatically be flagged for Tech Only workflow. The Technologist will NOT need to set the flag manually. ( it will be pre-selected)

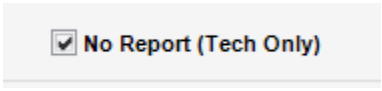

**Figure 4.59 – Pre-selected No Report (Tech Only) checkbox when Tech Only patient class is chosen**

On the technologist work list a new column is available for display, to visually indicate to the Technologist if the study has been selected for Tech Only workflow.

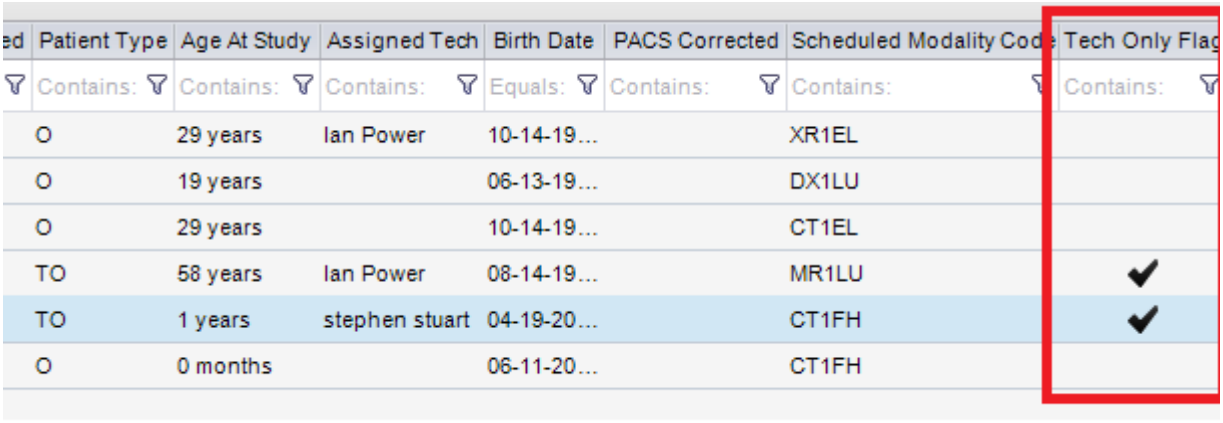

**Figure 4.60 – Worklist flag "Tech Only Flag" is checked for all tech only studies**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Technologist No longer Menstruating

LMP – Add a "no longer menstruating" checkbox beside LMP that skips the required field check. This should be stored at the patient level so that once it is set, it will never prompt again. A checkbox was added for the option for "No Longer Menstruating" to the technologist screen. See screenshot below:

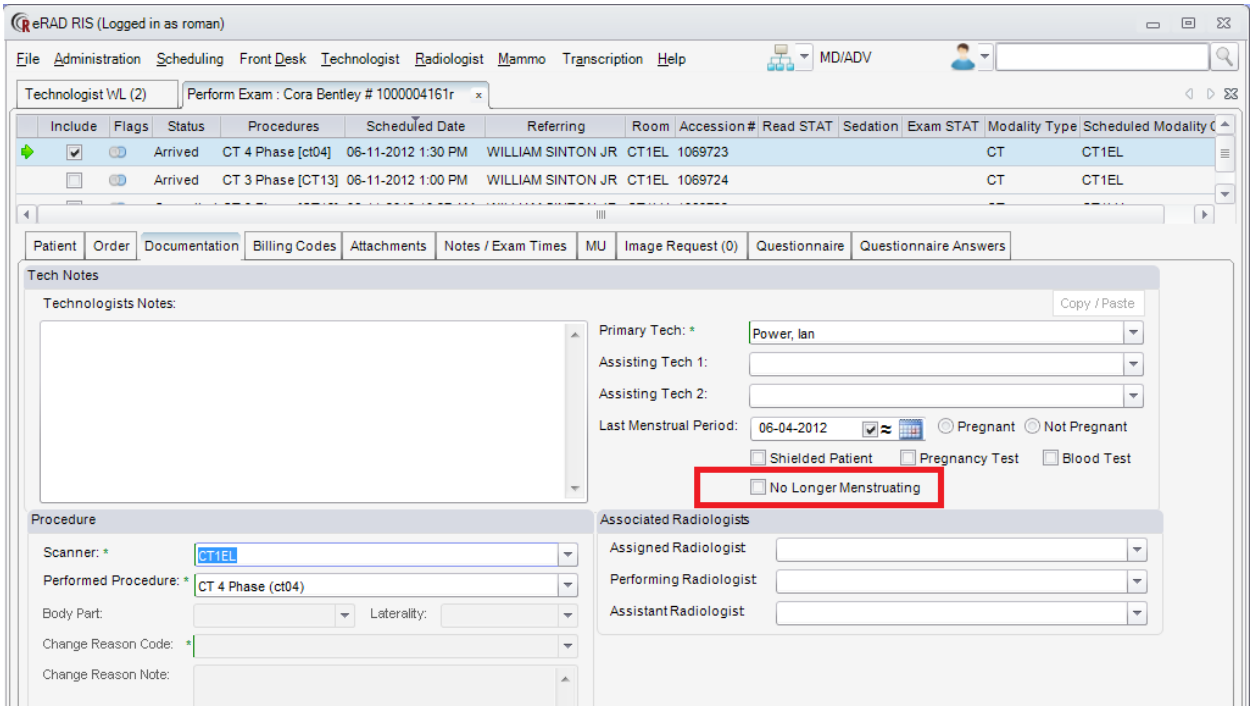

**Figure 4.61 – No longer Menstruating Flag**

## View Images from Technologist Screen

A new button titled "View Images" was added to the technologist Perform Exam Screen, on the bottom left. This button is only visible when you have both PACS and RIS installed.

**Figure 4.62 – View Images Button on RIS / PACS machine**

## Backend Interface with RADAR

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

A need was discovered to have all mammo exams confirmed via automation. RADAR will be used to confirm mammo appointments. Therefore we needed to build an interface with RADAR. Development is underway to interface the Merge RIS with RADAR. The high level solution is as follows:

1. Merge RIS dumps to a flat file a list of mammo appointments that are to be confirmed 4 or 5 days out.
2. RADAR picks up this file and begins confirming the appointments.
3. RADAR will send a flat file to the RIS with a confirmation status of the appointments.
4. This flat file is "processed" and the statuses are updated in the Merge RIS.

rRIS needs to simulate at least this integration with the following additions:

1. The procedures that are to be included in the flat file should be configurable, therefore allowing us to expand this feature functionality beyond mammo exams.
2. If the patient has multiple exams scheduled for that day, regardless of the procedure, we must provide the earliest appointment time to the flat file for RADAR.
3. We need a management report that lists all studies that have a confirmation status of "rescheduled" or "cancel". This report would be used by a PSR to reschedule or cancel the study via the gui.

   Note: In the future, we want to automatically move the study to the "orders to schedule WL" or automatically cancel an appointment based on these confirmation statuses from RADAR. **This is not needed for B37.**

**Outbound file for RADAR**

In S19 and S21, Stuart built a very similar for MedVoice. I used this interface as the base and made the following enhancements.

1. Added a configuration setting called "**RADARProceduresToConfirm**" that contains a comma separated list of procedure codes that are to be confirmed by RADAR.
2. Only return 1 study per day for a patient that meets the "procedures to confirm" criteria
3. Return the scheduled start date and time for the patient's first appointment for that day, regardless of what study it is (includes studies that do not match the "procedure to confirm" criteria.
4. Added a configuration setting called "**RADARConfirmDaysOut**" that contains the number of days out from today (or the date the query is ran) to search for studies that are to be confirmed by RADAR.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

There is a view in the RIS DB called **c_vw_RADAR_confirmation**. This view is used to produce a list of studies that are to be confirmed by RADAR. The **RADARProceduresToConfirm** and **RADARConfirmDaysOut** are built into this view.

The view is limited to only retrieve one days' worth of exams to be confirmed. So if the current day is Friday, and the **RADARConfirmDaysOut** is set to 3, the list retrieved from this view will include all studies scheduled on Monday. Running the view on Saturday with the same parameters will produce a list for Tuesday, and so on. Therefore this view needs to be run daily, regardless if it is a weekend or a holiday, in order to produce a list of exams to be confirmed on for a future date.

A-1 Mirth channel called "RADARConfirmation" has been created to trigger the compiling of the list of studies to be confirmed. This channel connects to the RIS db, queries the c_vw_RADAR_confirmation and creates a file that contains the list of studies to be confirmed.

The output file is a comma separated file with the following columns:

```
LastName
FirstName
HomePhone
MRN
EncounterID
Accession
Modality
ProcedureCode
Location
ArrivalTime
```

The channel configuration is found in \MirthConfig\RADARConfirmation.xml
There are no channel mappings for this channel.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Response File from RADAR

For the inbound implementation from RADAR I largely copied Stuart's implementation for MedVoice. See sprint documents "s19\Medvoice Confirmation Integration Continued_(Stu).docx" for details.
The RADAR side of this portion is not yet completed. We are speculating it will be the same at the MedVoice implementation. If there are differences then we will need to adjust accordingly.
The flat file from RADAR is a comma separated file (with no spaces between the fields) that contains:

Status
Mrn
Encountered
Accession_number

The channel configuration is found in \MirthConfig\RADARInbound.xml
The channel mappings are found in \MirthMapping\Inbound\RADAR.
Mirth mappings were created to accept the inbound file and appropriately update the studies. If the patient id provided does not exist, an error will be thrown indicating that column 'last_name' does not allow nulls. This is because the confirmation file does not have all the patient demographics necessary to create the new patient.

DB Schema Changes
New db view called c_vw_RADAR_confirmation
New stored function call c_GetFirstAppointment

## Change Default User for New Install

The default user for a new RIS install is "administrator". The authentication method is "Domain" (aka Active Directory). We should not default a user RIS to the Windows administrator user on the server where the RIS services are running.

The default RIS user for a new DB install is now set to be "RISAdmin". This account now uses RIS authentication (not active directory). The default password is "RISAdmin" (case sensitive). The RIS installation documentation has also been updated to reflect these changes.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Core Version Check

A check is needed when we apply a patch build, that verifies that the core version of DLLs installed on the workstation matches the core version required for the patch build.
When coping the patch build dependencies a core version check is now performed. If the builds version does not match the installed core's version #, then a prompt is displayed and the application exits:
The RIS software is incompatible with the installed core version. \nContact an administrator to obtain the correct version.\n\nPatch Version is {0}\nCore Version is {1}

Note: when versioning the application such as 1.1.37.svn# where 37 in this example is the sprint number, the second digit will now be the core version so as of build 37 release we are incrementing that to 1.2.37.svn#. Each time we change a core DLL dependency we need to increment the core version in the release.

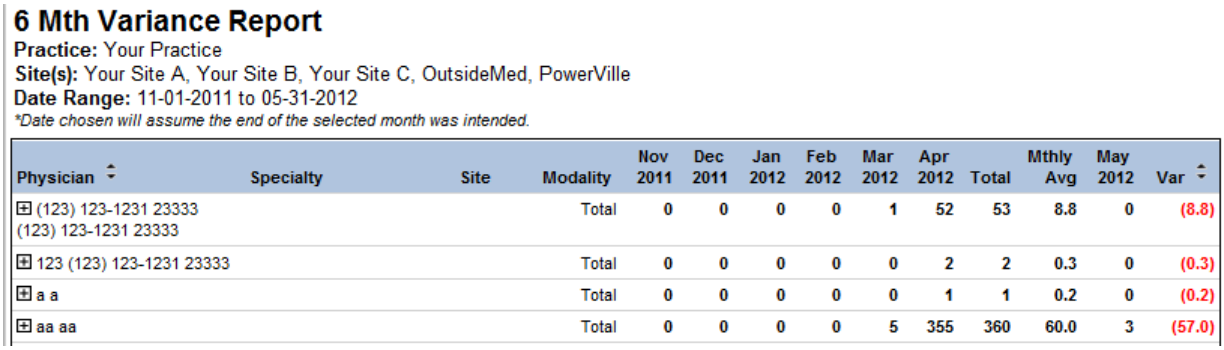
## New Management Reports Added

Front Desk Dashboard Management report - The Report shows a snap shot for the practice based off the selected dated and we break the dashboard into Daily Schedule, Frontdesk Activity, Modality availability and No Shows. The Daily schedule section shows the user all exams scheduled for the selected date for all sites within the selected practice. Within this report we show the user the all exams confirmed, if IVT or Pre-cert is required and the total of Complete vs Schedule exams. The Front Desk Activity section shows the number of exams the user scheduled, checked, walkins and the number of exams verified. The Modality section shows room availability. The report pulls the room availability from the modality template to show the minutes the room is open.
Sales Management reports – The sales team requested 9 new sales management reports:

- 6 Month Variance Report
- 13 Month Variance Report
- 13 Month Variance by Group Report
- 13 Month Variance by Physician location Report
- 13 Month Variance by Spec Group Report
- Month-over-Month Variance Report
- Quarterly Variance Report
- Year-over-Year Variance Report
- Year-to-Date Report

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**6 Month Variance Report** – This report selects all exams for the entire selected month and all exams from the previous 6 months to display a variance between the selected month and the average of the previous 6 months. Note we exclude exams in status (Cancelled or Discontinued).



**6 Mth Variance Report**

**Figure 4.80 – RTAT Report**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Rewind and Fast Forward Speed Setting

A user preference was added that will allow users to set the rewind and fast forward speed in a range of 2 – 50, with 1 being the normal playback speed.

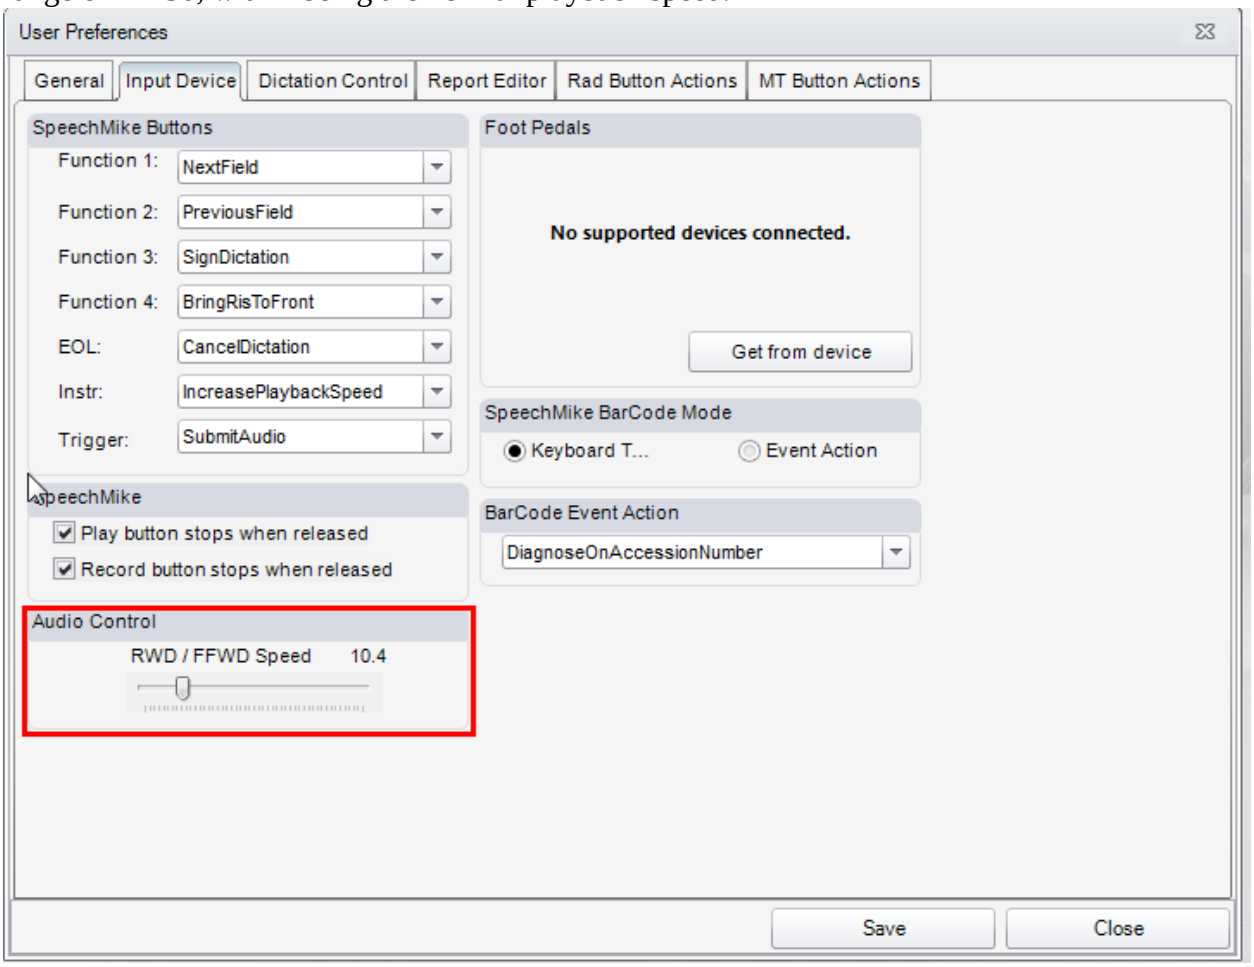

**Figure 4.81 – User preference Audio Control rewind/fast forward speed**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## User Preferences for Radiologist and Technologist window buttons

User preferences have been added so default action of the buttons located in the lower left of the Radiologists windows and the Technologist windows can be defined in one location.

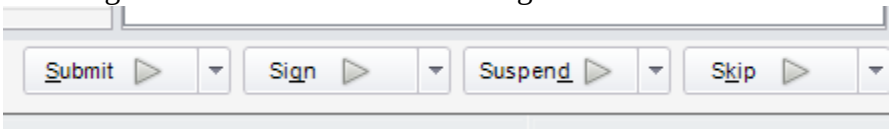

**Figure 4.82 – Buttons available for Radiologists**

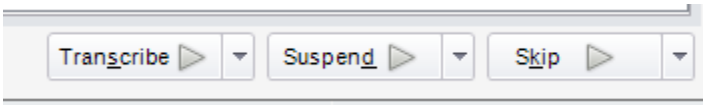

**Figure 4.83 – Buttons available for Technologists**

Two new tabs were added to user preferences to accommodate assigning the action of each of the above displayed buttons in each of the windows associated with the Radiologist and Technologist roles.

In the figures below you can see that each work list is listed and the default action of the button that can be assigned.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

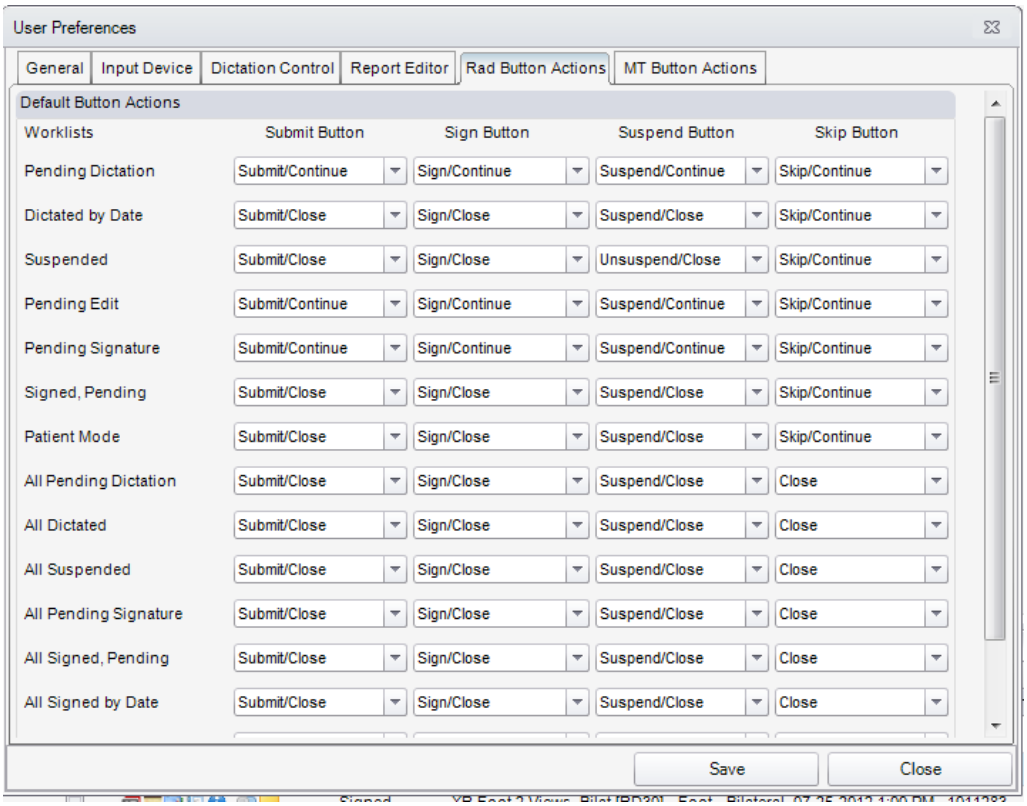

**Figure 4.84 – Radiologist work list button actions**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

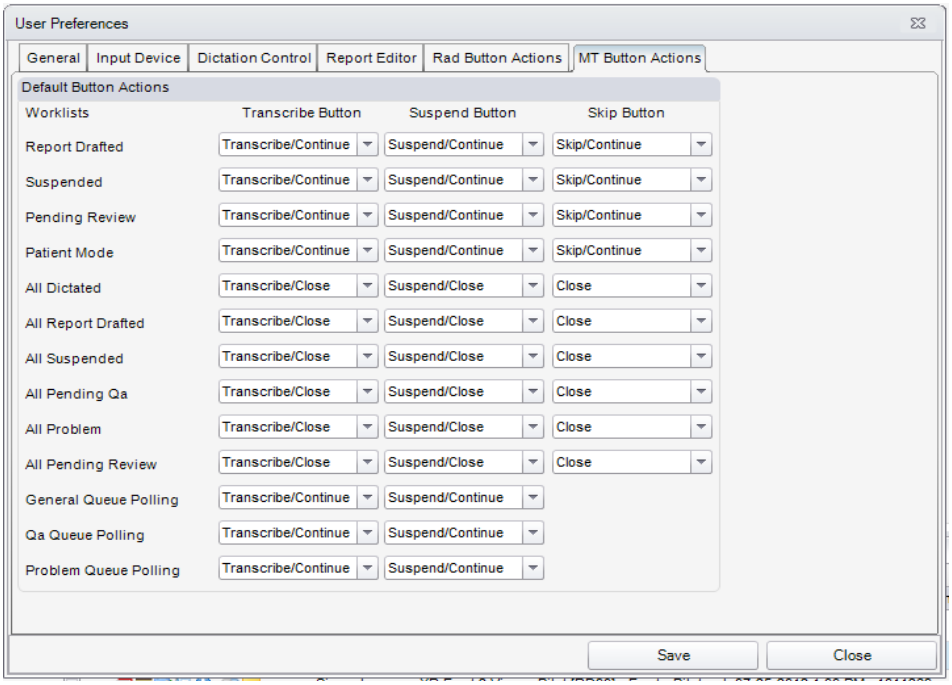

**Figure 4.85 – Transcription work list button actions**

The values available in the dropdowns should relate to the workflow. In some cases when workflow starts in certain work lists the available actions will vary. For instance, since work lists intended for user exclude suspended items from their view, these work lists wouldn't need an unsuspend option, but the same work list intended for an admin (All keyword) included suspended items and will have an unsuspend option.

MT workflow where they poll jobs from the webserver is intended to force work to MTs, skipping the jobs is not allowed. So for these three worklists there are no options at all on the skip button as it is forced to close.

Holding the CTRL button when clicking on a sub-item in the action buttons will set that item up as the default for that workflow, it will not fire the action as it used to.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Sign Button Removed for Batch Dictation

If the user is dictating in Batch mode (non-interactive) the sign button will no longer be an option in the Pending Dictation window.

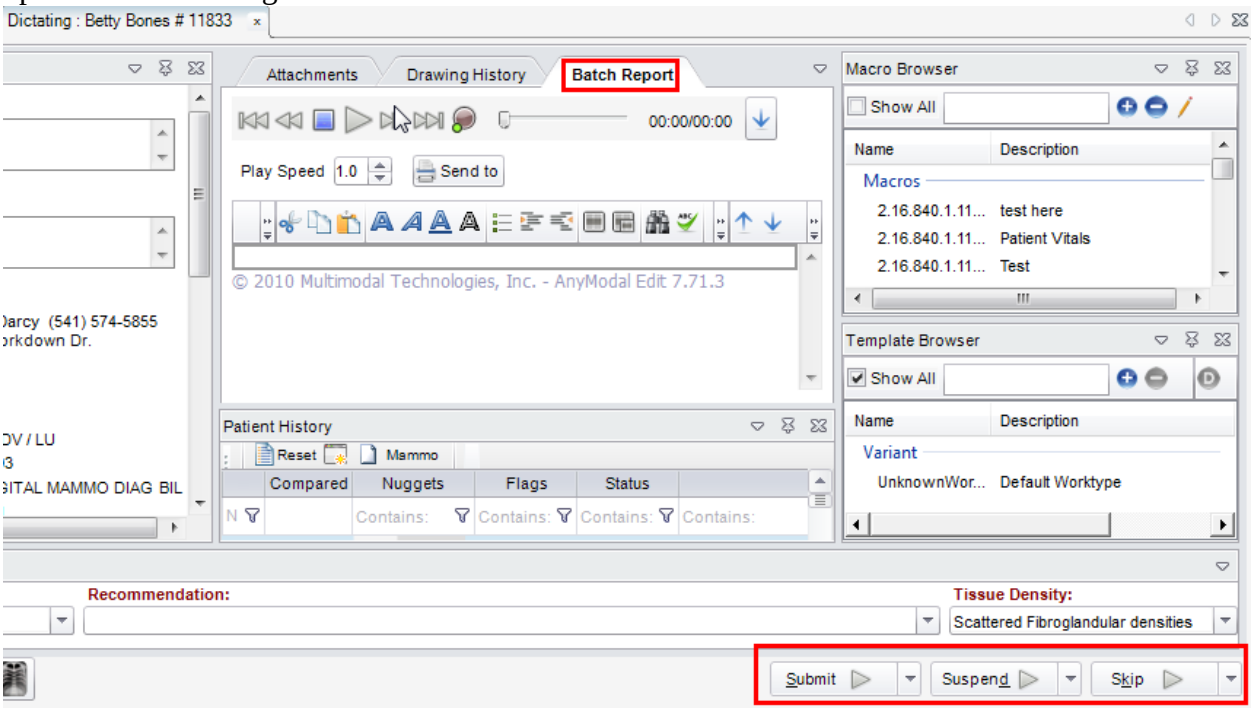

**Figure 4.86 – Sign button removed from Pending Dictation when recording in Batch**

## Reporting – Problem and QA Work Lists for Radiologists

Similar to the pre-existing Problem and QA work lists for transcription, we have added Problem and QA work lists for radiologists. When in one of the radiologist's data windows the assign to data pane will allow for the study to be assigned to one of these work lists.

Access to these work lists are controlled by two new user permission access strings
WL.Rad.QA – grants access to the Radiologist All Pending QA work list
WL.Rad.Problem – grants access to the Radiologist All Problem work list

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

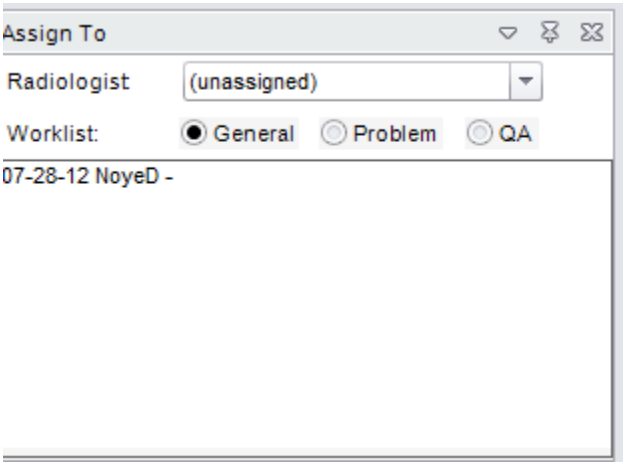

**Figure 4.87 – Assign To in radiologist window**

Once assigned to either the Problem or QA work lists these studies can be accessed from the associated "new" work lists under the Radiologist menu.

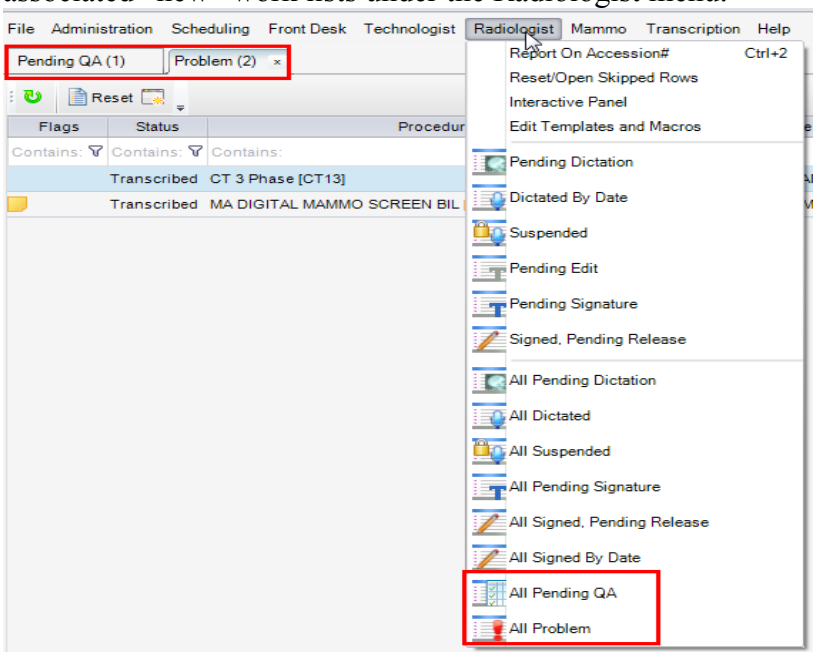

**Figure 4.88 – New Problem and QA work lists.**

From the All Problem work list a new pop up menu that is accessed from the context menu of has been added to resolve problems. The Resolve Problem window that opens will allow user to attach notes to the study assign to a particular Radiologist, mark it unassigned, or leave set to the user who set the problem (this is the default action).

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

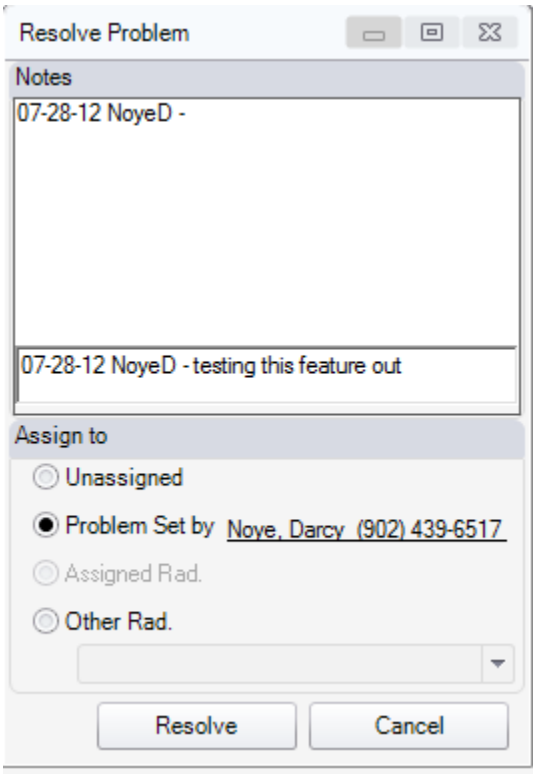

**Figure 4.89 – Resolve Problem window**

## Reporting – Dictation Control Stop When Play or Record Released

In build 37 two more user preferences of "Play button stops when released" and "Record button stops when released" have been added. These user preferences only work with Speechmikes that buttons for play and record and will not work with "slider" style Speechmikes.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

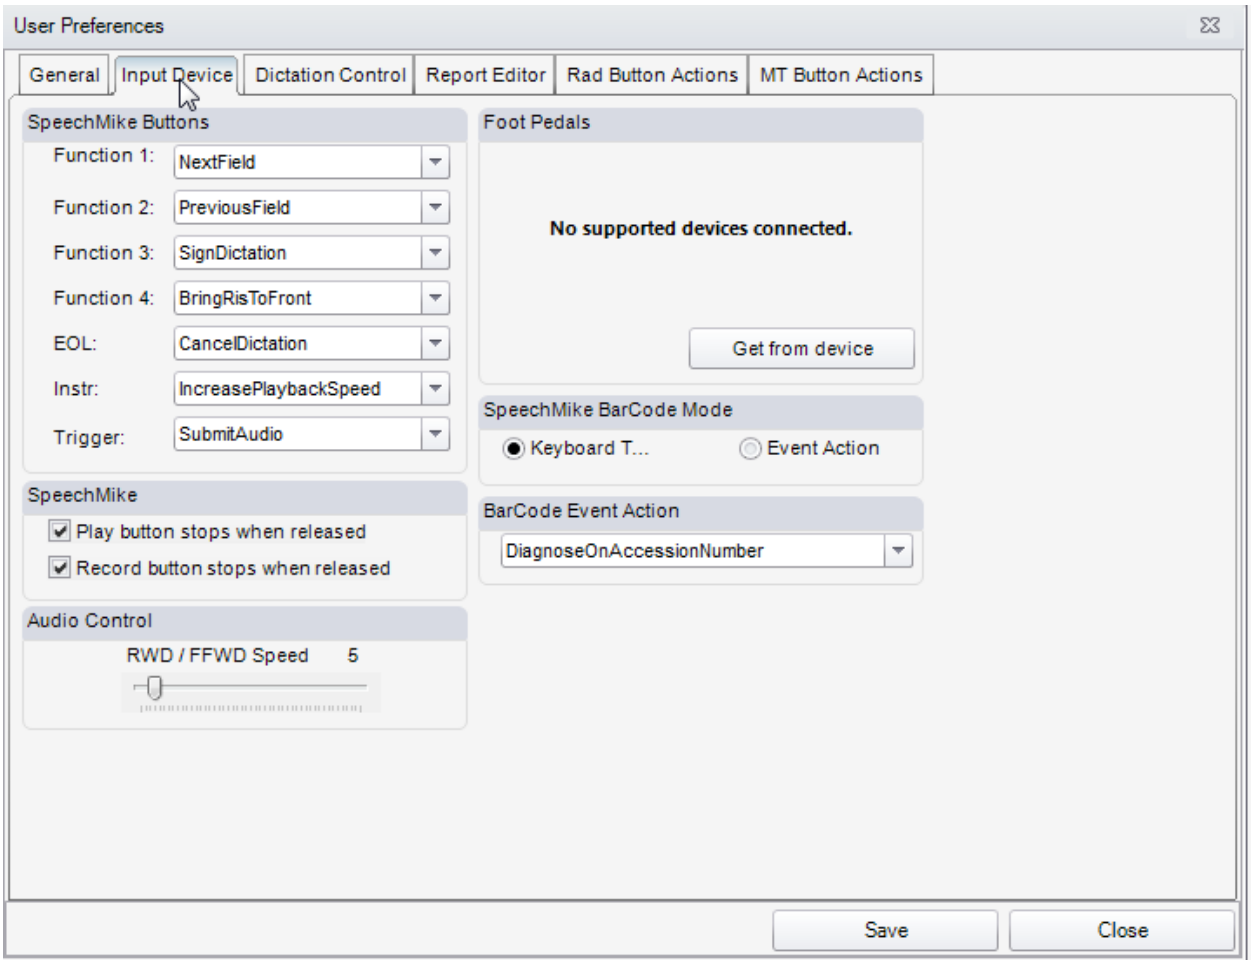

**Figure 4.90 – SpeechMike user preferences**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Bolding Current Value in "Assign To" Lists

From work lists we can assign the study to a particular radiologist or transcriptionist. When the list is opened, the currently assigned user will be bolded. If the study is not assigned, the (unassigned) option in the list will be bolded.

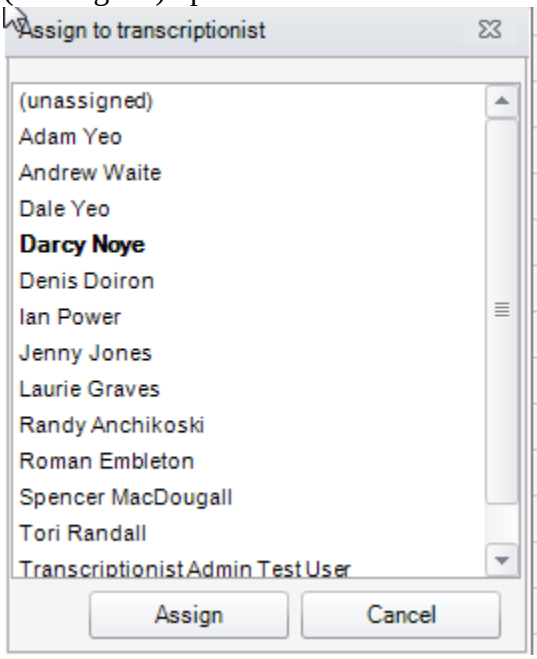

**Figure 4.91 – Assign to Transcriptionist with current assigned user bolded**

## Reporting – Audit History Change for CDSManager

Audit log used to show "Study drafted" message for all studies was processed by the job manager, whether it retrieved a draft or only a typing document. Now when a Typing document is the result it will show in the audit log with a "Study not drafted, typing document retrieved" message instead.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Column "Dictated By" Added to Patient Folder Work List

As the title indicates the column of "Dictated By" has been added to the Patient Folder work list.

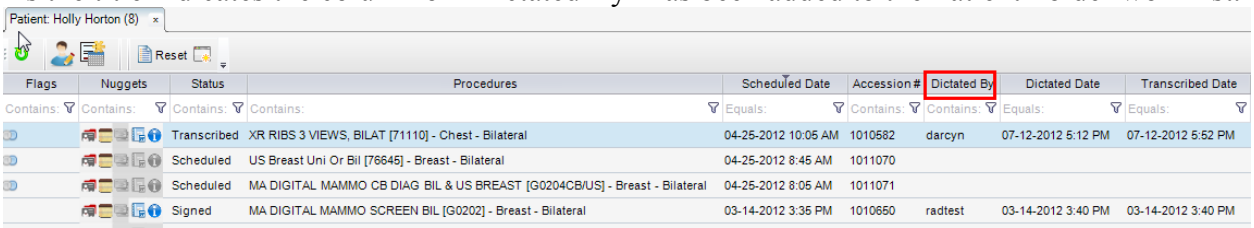

**Figure 4.92 – Patient Folder with new column of Dictated By added**

## Reporting – Hybrid Navigation for Fields/Sections

Added to the available options that the SpeechMike keys can be assigned are the hybrid option to move to the next section or field. In previous versions there were option for either or. Now when working in a document and the option for NextSectionOrField is assigned to the F1 key, the next available section or field will be selected.

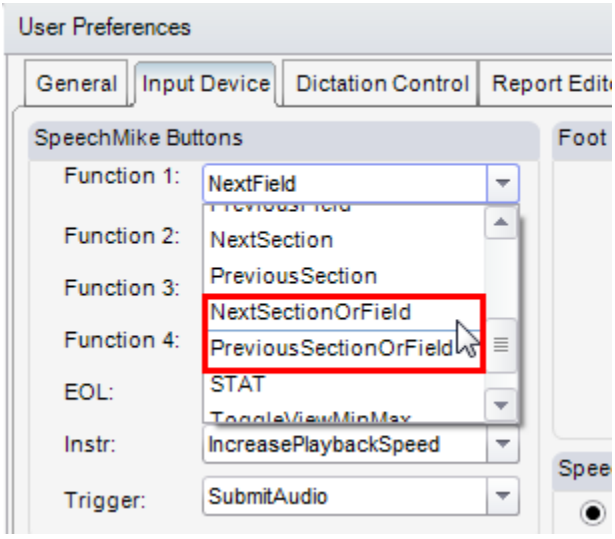

**Figure 4.93 – New available options to assign SpeechMike buttons**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting - Request Addendum

When right clicking on a signed study, user will now see a context menu item called “Request Addendum”. Clicking on that item will bring up the following popup dialog.

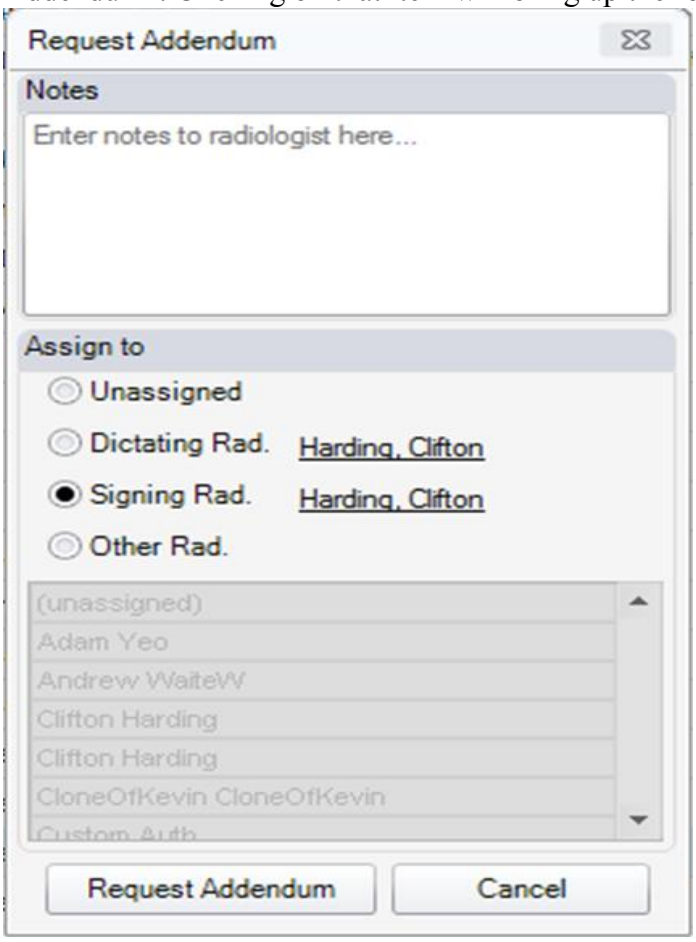

**Figure 4.94 – Request Addendum window**

From this screen user is able to write notes for the radiologist and choose who should be assigned to addend the report. This will default to the signing radiologist. Here is the data it changes:

```
assigned_radiologist = assigned rad selection
transcription_notes = notes in textbox
note_to_radiologist_flag = "Y";
addendum_requested_flag = "Y";
```

When right clicking on a study that is already marked for addendum. The context menu will show “Cancel Addendum Request” which will cancel the request. Here is the data it changes

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

```
Setassigned_radiologistNull();
Settranscription_notesNull();
note_to_radiologist_flag = "N";
addendum_requested_flag = "N";
```

When a study is marked for addendum it will show up the pending dictation work lists. The rad will dictate it as he does his other studies. He will get a prompt indicating that an addendum was requested for this study. When he dictates the study he will see the notes and need to acknowledge them before moving it forward

## Reporting - Resend Interpretation for VR

Added a context menu item to the standard transcriptionist context menu for worklists called "Resend for recognition". When this is used, it will be logged in the audit log, the study will return to dictated status, and the CDSManager will pick it up from there for recognition. We also added the interpretation type code to most worklists for rads/trans.

## Reporting – Report Editor Preferences for Color, Fonts and Font Size

In build 37 the report editor can be customized to the users liking. From within the report editor from a right click will open the context menu. Selecting Editor Appearance will open the Editor Preferences window with options for the report text and for the Sections.

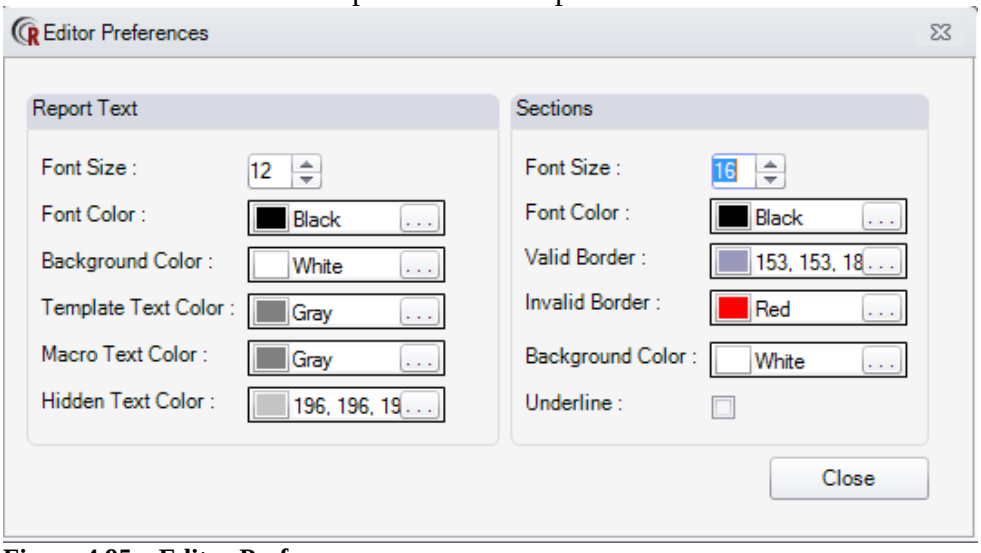

**Figure 4.95 – Editor Preferences**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Description of settings:

## Report Text

1) Font Size will control the font size of report text excluding section titles. Min 8 – Max 40
2) Font color controls the font color of the text in the report. This will be the color of the text that is typed or recognized as speech to text. This will not include normal text or canned text in the report
3) Background Color will control the color of the report excluding the background and outline of sections
4) Template Text Color controls the canned text that exists in a template when its used
5) Macro Text Color controls the color of the text inserted into the editor
6) Hidden Text Color will control the color of hidden text returned in batch mode if there any. Typically this text is placed at the top of the report.

## Sections

1) Font Size will control the font size of the section title text only
2) Font Color will control the color of the section title text only
3) Valid Border Color will control the border color around sections if they are valid. To hide the border make this color the same as the report background color or section background color.
4) Invalid Border Color will control the border color around sections that are invalid as defined by the document model rules and setup.
5) Background Color will control the only the color of the background of the section title area.

Underline will place an underline under section titles

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Site Level Report Templates

Templates can be assigned at the Site Level. From the Organization lookup table and editing the particular site in question, the report template path can be specified in a new field added to this window.

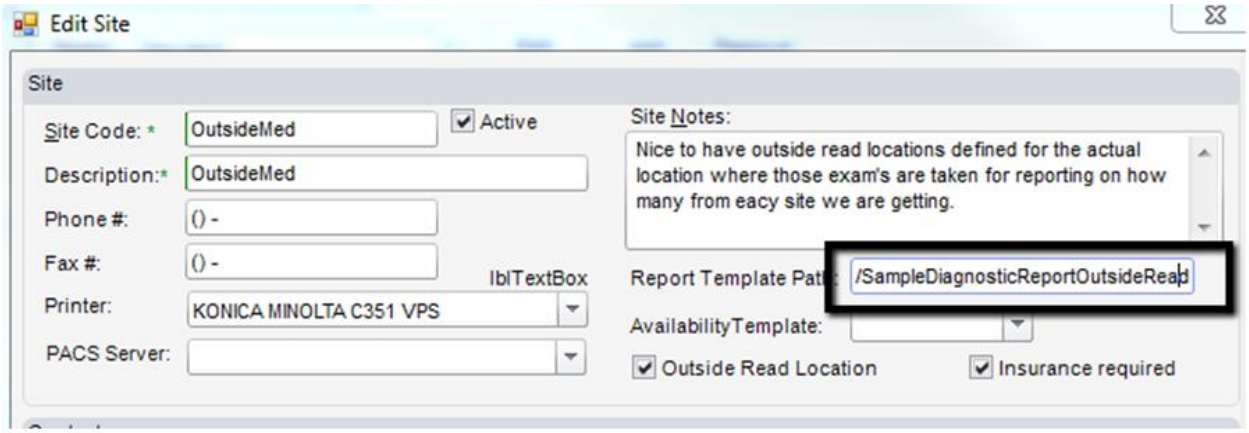

**Figure 4.96 – Site template path**

This new field called Report Template Path will be a pointer to a template created on the SSRS server. It expects a path that will be appended to the Report Server URL configuration value. It will use these two parameters to create the full uri to the report.
For example the system configuration values used are:

ReportServerUrl: http://10.120.19.10/ReportServer

DiagnosticReportDefatultBody: /Forms/ADVDiagnosticReport

The above values will be concatenated to create the complete path of

http://10.120.19.10/ReportServer/ Forms/ADVDiagnosticReport

If the setting in the Site>Report Template Path field is blank or null then it will always default to the System Configuration value as a default.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Calculating Default and Normal Templates

When creating template we have the option to mark them as default or normal. In a perfect world perhaps we would only ever have one default and one normal per study. But in reality, based on the assignments made to the template as far as practices/procedures/users that it applies to, there can be overlap.

What happens if for a particular study there is overlap? Perhaps it has five qualifying default templates. In that case we score the rule set of the templates, and use the highest scoring one. The same would apply to normal, but they are scored and processed separately. The idea of rule set scoring is to mathematically represent how specific the rule set is. The more specific it is the higher the score.

The most specific rule set score would be a rule set assigned 1 practice, one procedure, and 1 user. It cannot get more specific than this, therefore it will score 100%. The more items are assigned to a rule set, the lower the score will be.
I've inserted a table that may be used as reference, or even altered to identify the scores on your specific scenario.

So far we've been talking only about template marked as default/normal in the template editor.

The user also has the ability to mark items in the template browser as default/normal by way of a context menu. These assignments will always take precedence over template level default/macros talked about above. But conflict may still occur and if multiple templates are marked as default/normal by the user in the browser, the rule set score will come to the rescue again and break the ties.

| #Practice | #Procedure | #User | Corrected #Practice | Corrected #Procedure | Corrected #User | Score |
|---|---|---|---|---|---|---|
| 1 | 1 | 1 | 1 | 1 | 1 | 100.000% |
| 0 | 1 | 1 | 9 | 1 | 1 | 11.111% |
| 0 | 2 | 1 | 9 | 2 | 1 | 5.556% |
| 1 | 20 | 1 | 1 | 20 | 1 | 5.000% |
| 2 | 10 | 1 | 2 | 10 | 1 | 5.000% |
| 1 | 10 | 2 | 1 | 10 | 2 | 5.000% |
| 0 | 1 | 0 | 9 | 1 | 74 | 0.150% |
| 1 | 0 | 1 | 1 | 690 | 1 | 0.145% |
| 0 | 0 | 1 | 9 | 690 | 1 | 0.016% |

**Table 4.1 - The above table is interactive. Edit numbers in any of the columns to see the overall score change.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Macro and Template Browser Navigation Enhancements

Fixed were several bugs and focus problems with the browsers but more notably we added the CTRL+UP and CTRL+DOWN shortcuts. The CTRL+UP places the cursor into the search box within the currently selected browser. CTRL + DOWN move the cursor out of the search box and selects the first item in the browser for further navigation or insertion.
We also now select an item in the list when the browser is selected which will allow the users to quickly navigate using the UP and DOWN keys.

## Reporting – Assign To Panel

The control was changed around a bit to make it more intuitive and more useful. We…

Moved the notes control bellow the "Assign to" controls.

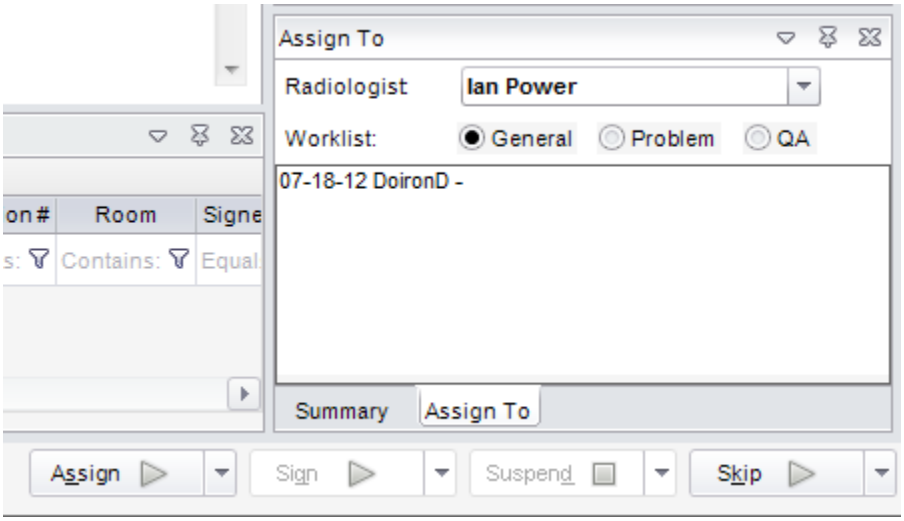

**Figure 4.97 – Assign To data pane**

The assigned transcriptionist control will be pre populated with whoever it is assigned to at the time. This field however does not have to be blanked out in order to transcribe, because only when the value is different will is assign it to that value. If the value didn't change then it will remain assigned to that particular person and will move on to transcribed status

Whenever a value is changed in the assign to panel the main action button on the screen, either Submit, or Transcribe, will change to Assign to. All other button other than skip will be disabled. This should make it clear to the user that values were changed and what action will take place.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

To remove the Assign to button and return to the normal workflow, the assign to panel values will have to be reset to their initial values. Made easier by them being bolded.

When the assigned to user value is changed it will show as bolded text. This lets the user know that this was modified and also the "Assign" button will become enabled.

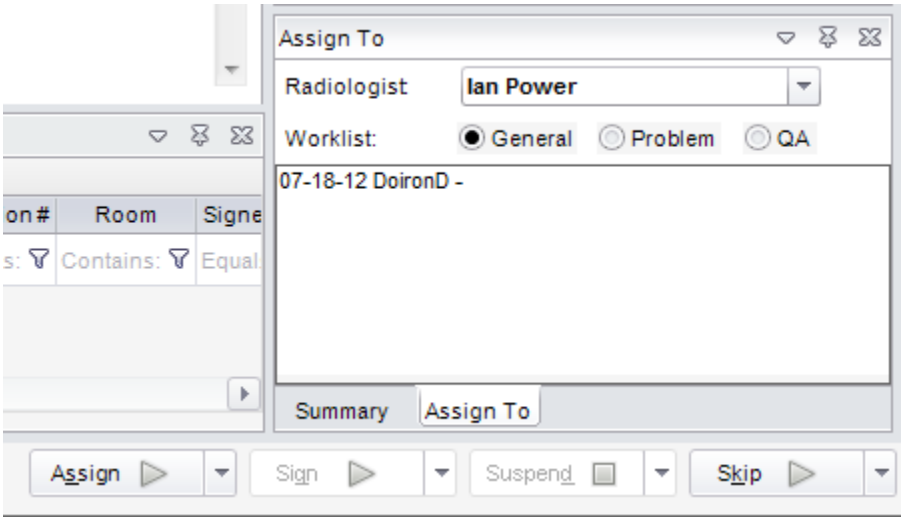

**Figure 4.98 – Assign To data pane user in bolded text**

When looking at a drop down list, the previously assigned to value will show as bolded text. This provided the user the ability to return to the previous value, or simply see what the value was before they changed it.

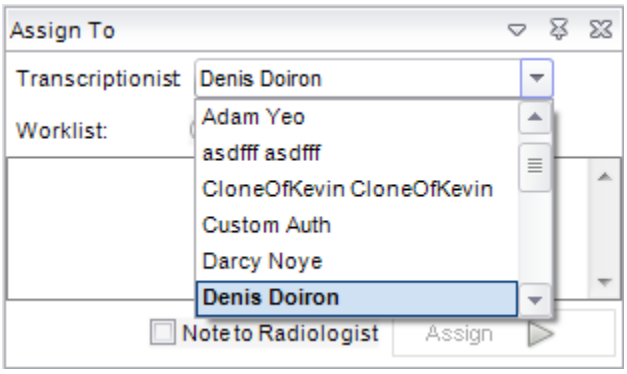

**Figure 4.99 – Assign To list box showing user in bold**

When writing radiologist notes, both the notes must be entered and the checkmark must be checked in order for the "Assign" button to enable. All other controls will disable when the

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

"Notes to Radiologist" check box is checked. Also any changed to these controls will be reverted to their original values.

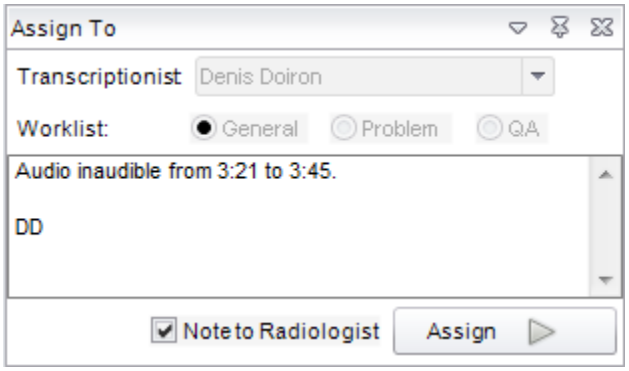

**Figure 4.100 – Assign To "Note to Radiologist checked**

We added an assigned radiologist drop down, which will only be visible in Radiologist screens

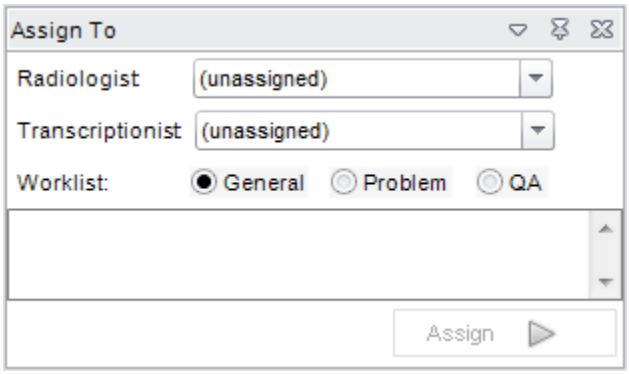

**Figure 4.101 – Assign To Radiologist field**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Miscellaneous Enhancements and Fixes

**Send To button access string**
Added Reporting.SendTo as an access string, when set to none it will remove the button.

**Transcription Summary Fixes**
Location wasn't copying to the clipboard, and Laterality was missing.
Added Location to the copy to clipboard code, added larerality at the end of the procedure code line.
Also cleaned up the copy to clipboard functionality so that's it's ordered better, spaced better and only copying what is on the screen and not hidden unpopulated values.
Example:

Priority: Normal

Location: MD / ADV / LU

MRN: 11504776

Patient: Gemma Wojtowich 80y 2m (M)

Accession: 1059842

Procedure: CTA Abd Aorta Runoff W/Wo [75635]

Performed Date: 03-27-2012 7:28 AM

Referring: MolyneauxClone, KevinClone (902) 439-4503

Dictated: Doiron, Denis (902) 439-3656

Performed By: Test User, Technologist (999) 999-9999

Tech Notes: sgferwte

**Prompt to Run SpeechMike Wizard**
When a user unplugs their speechmike, or starts using a different one. The Mic Wizard setting will point to a non existant device. This causes an error. In this error we now inform the user to run the mic wizard.

**Editor Ctrl +Shift + Up or Down Arrows**
CTRL + Shift + Up or Down should select paragraphs up or down as it does in most editors. But in our case that shortcut was being used to navigate grids on the screen, in this case patient history. It has been changed so that this will now work in the editor.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**Transcribing Assigned Studies**
Currently when an MT is assigned a job, and she opens it it will show her in the assign to control.
Now when she transcribe it will try to assign it to her again, so she needs to go clear out the value then transcribe again.

We will no longer pre populate that field, it will always load up empty.

**Transcription Polling Lock Issue**
MT polling is broken for multiple studies on the same order, a timing issue exists where the MT will lose work because her lock will be lost.

A GuiLockManager refactor will be required but for now all we did is change the GetAvailableCDSJob to not return any locked items, not even the ones owned by the current user.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## New Fields for Physician Details

Added three new fields to the personnel notes section (Image Preference, Specialty Read and Referring Protocol)

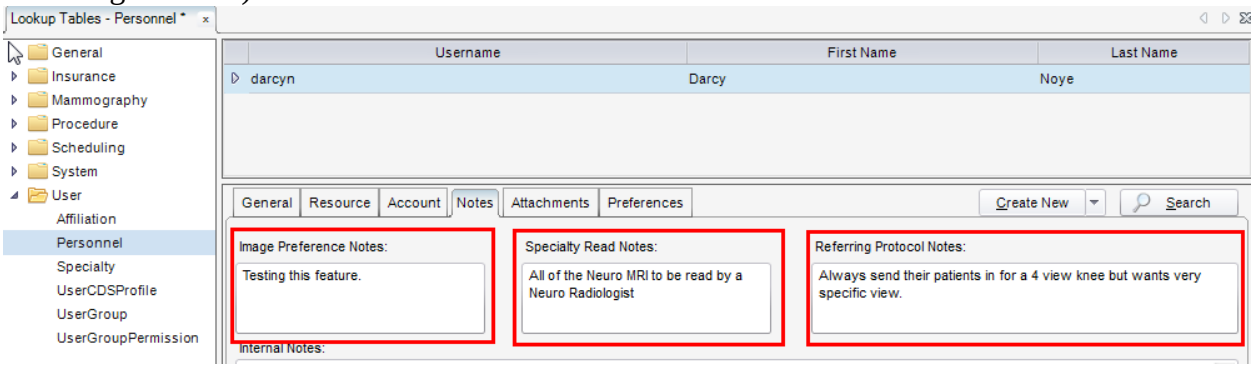

**Figure 4.102 – Notes fields in personnel editor**

When a search is performed for this referring physician, the three new notes sections will also appear in the search.

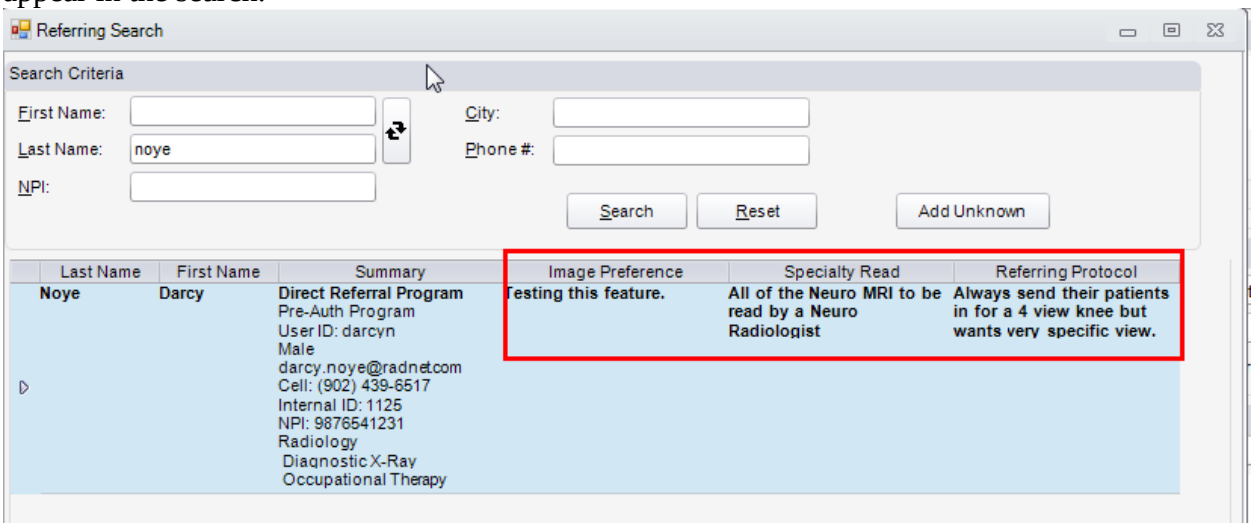

**Figure 4.103 – Referring search shows notes fields**

If the referrer selected has specific notes in these three fields, they can also be viewed on the data window in the Referring Details section on the Order tab.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The image notes appears in its own section.

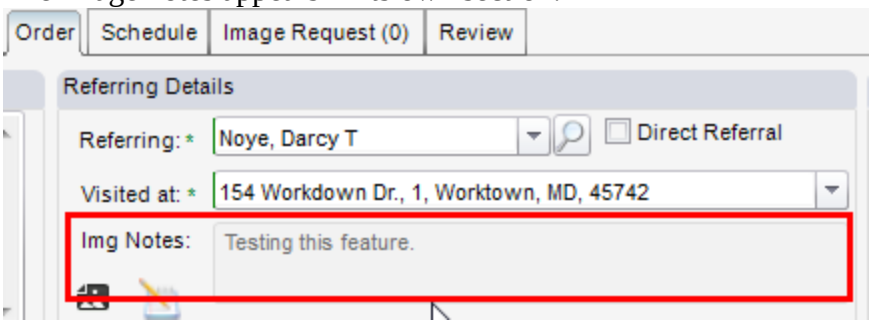

**Figure 4.104 – Image notes on Order tab**

Specialty Read notes appear in a tooltip window when the ICON is hovered over.

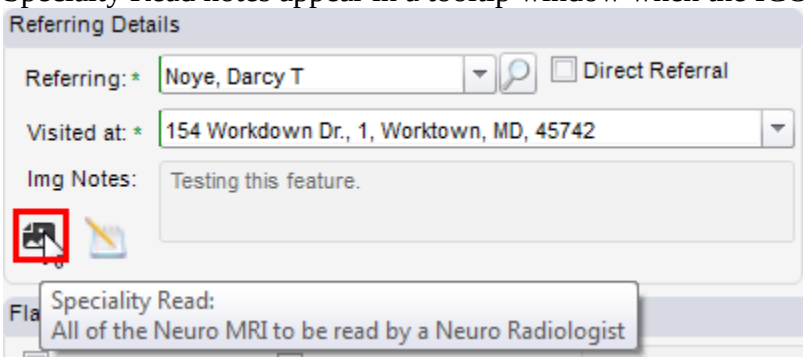

**Figure 4.105 – Specialty Read notes**

The Referring Protocol notes also appear in a tooltip window when the ICON is hovered over.

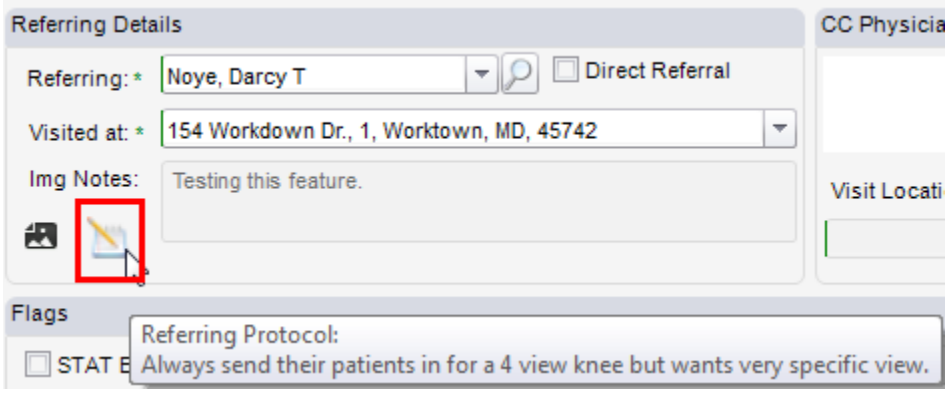

**Figure 4.106 – Referring protocol notes**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Button and Context Menu Options Added to Patient Search

Added the button “New Patient” to the top of the search screen for the case where you can’t find the patient you want and only want to add a note to their patient file and first need to create the patient.
Also, added the following context menu’s and bottom buttons.

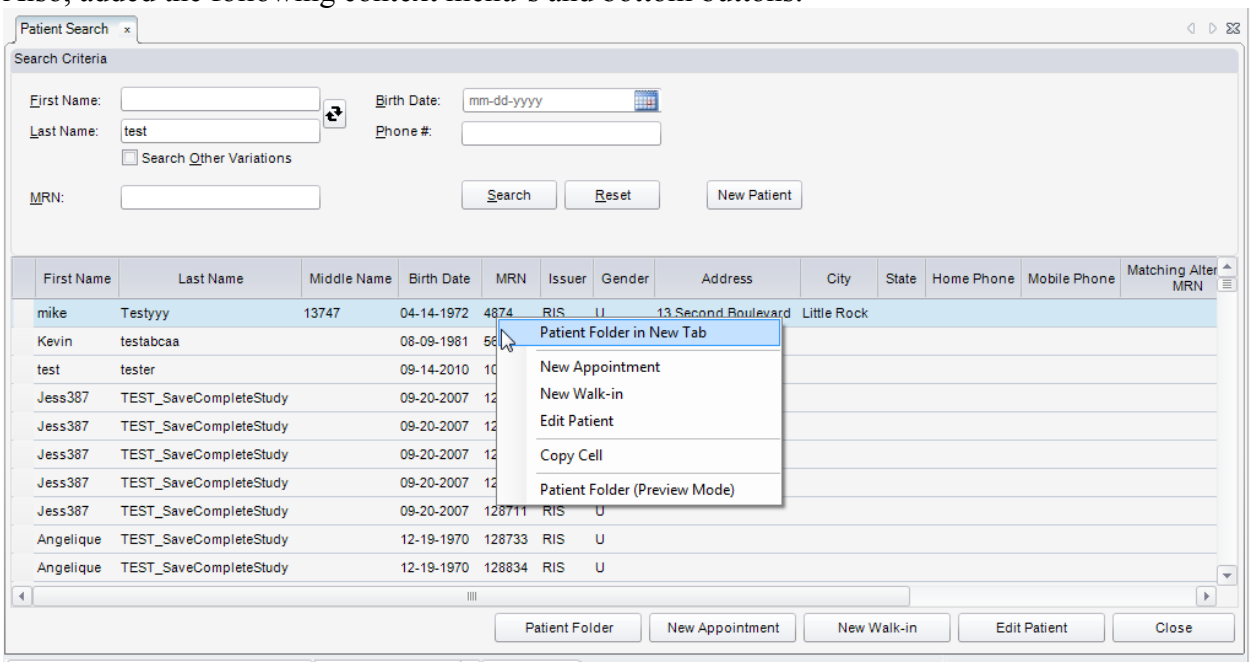

**Figure 4.107 – New buttons and context menu options for patient search**

When in the patient search popup the bottom buttons and context menu items are hidden and if the patient search is on a popup which is launched from a content base that Search/New Patient icon buttons then the “new Patient” button on the search popup will close the popup and click the “New Patient” icon on the content screen and will populate the default values for the new patient based on what was typed in the search screen.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Modality Type Selection for Outside Reads

A new combo box has been added to the Outside Read order tab. The combo box is populated with key/values from **l_modality_type**. In the background we will still try to determine the modality type, but if the site does not have a suitable configuration, the user will have the ability to enter the modality type in this new combo box. The Modality type field will be required.

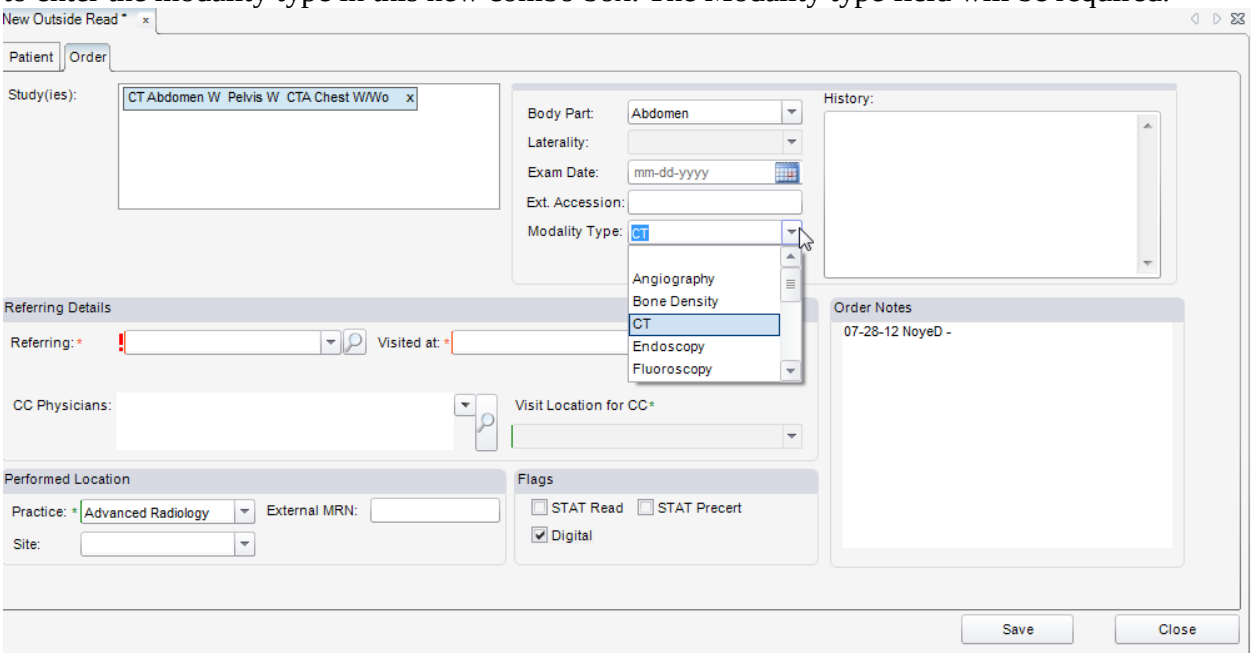

**Figure 4.108 – Modality Type Field**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Dynamic Printer to Document Type Configuration

Added in build 37 is the ability to map printers based on document type, per site / practice. This will give facilities ability to direct print traffic to various destinations.

A new lookup table titled PrinterConfig has been added which allows administrators to configure the practice / site printer where a particular form category should be directed to be printed.

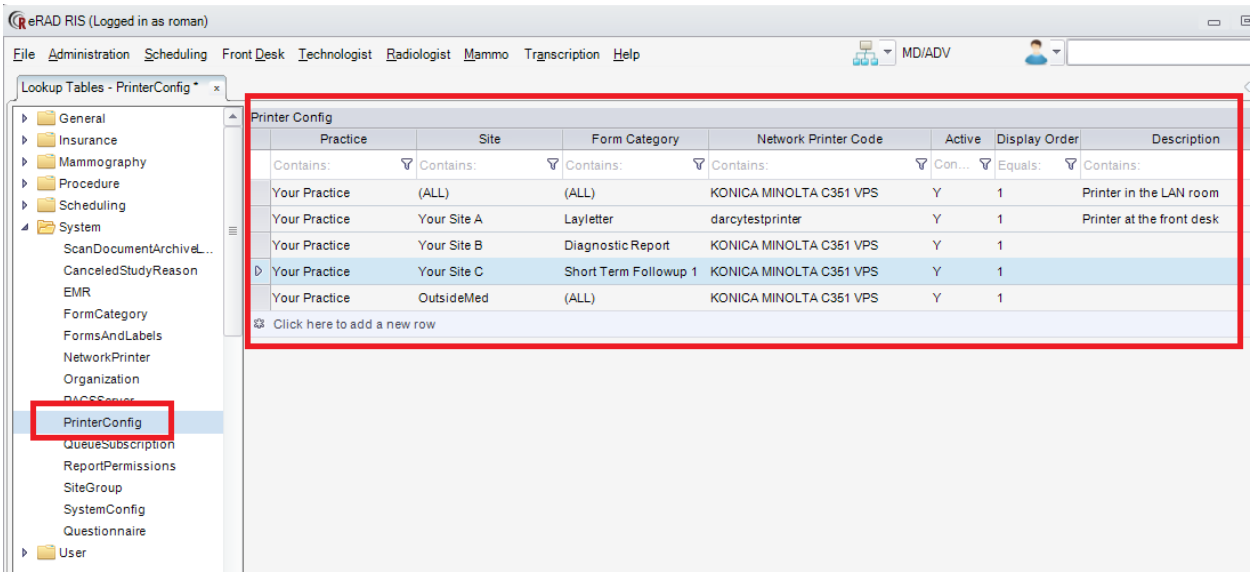

**Figure 4.109 – PrinterConfig lookup table**

For the build 37 upgrade an upgrade script was written. to copy network printers from current site configuration to the new lookup table. By default in the new lookup table the existing printer(s) for site will be mapped to (ALL) document types → to maintain previous configuration. Going forward users can use a new lookup table in the Administration under → System → Printer Config to define a more granular mapping or printers to document types.

This configuration primarily affects ALL back end document print distribution, and ALL mammography letters.

**NOTE:** Printer selection dropdown has been removed from the Add/Edit Site window. All future printer configurations to Practice / Site / Document Types will now be done via this new lookup table.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Exam Search

We've added a new search provider called "Exam Search", which has a dynamic set of search criteria. The only search parameter that is always present is Site, picking a site automatically gets remembered, any other changes to search filters can only be saved if they explicitly choose the +Filter, Save option.
To prevent extremely poor system performance we recommend users choose a site and require the user to choose a date range, which is less than equal to 14 days.
The following screen shot shows the "System Default" layout for Exam Search:

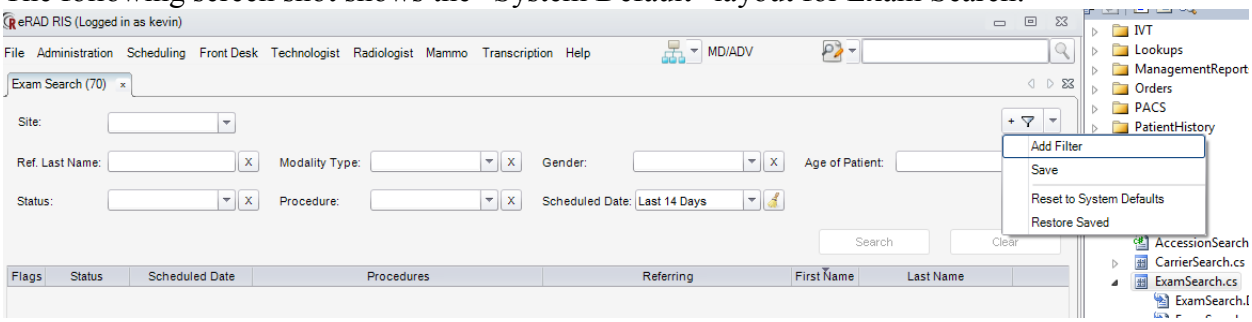

**Figure 4.110 – Exam Search window**

Users can remove filters by clicking the "X" buttons or use drag and drop on the labels to reorder the filters. The first three user defined filters are used in the toolbar's "Quick Search" text box.

All text box inputs such as "Ref. Last Name" matching on values starting with that text. Contains type of matching has not been provided at this time so we can better evaluate performance of this feature before opening it up to a contains type of searching.

Age of patient allows for exact ages such as 20 or age ranges such as 20-25.

Saving your filter set also saves the order and which columns are displayed in the results grid. Sorting by a column, will request that the results be sorted on the server, for cases where the number of search results exceeds what can be displayed.

In addition to dragging and dropping search filters, you can also right click on a search filter entry and use the Move Previous, Move Next buttons to change the order of your custom search criteria.

There are validation checks to insure, invalid dates and invalid combo box selections are not allows.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Each filter you populate much match for a result to be displayed; however, if you add two filters for the same field such as Modality Type, an ‘or’ operations will be performed on the two values for that field.
For example:

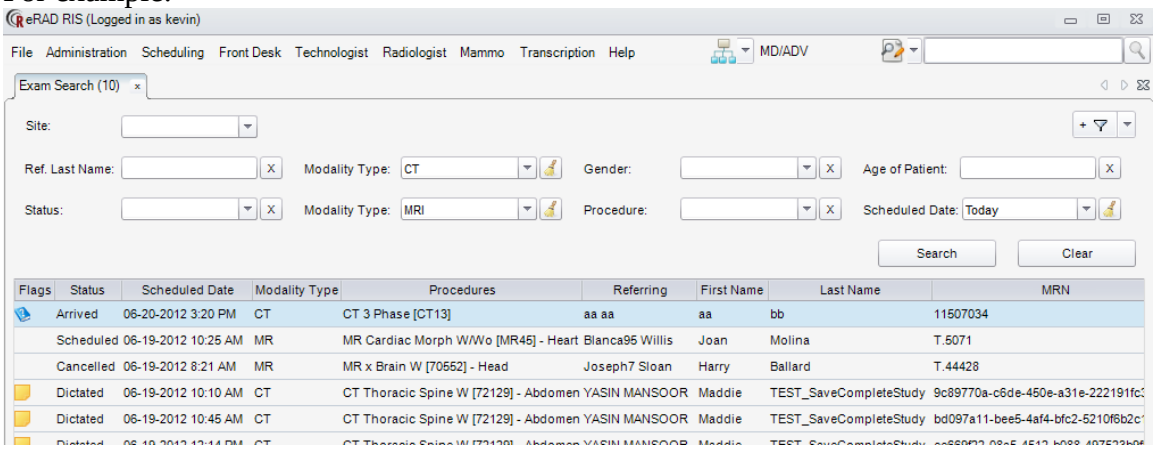

**Figure 4.111 – Exam Search**

The Broom Icon can be used to reset/clear its filters value.
Pressing the enter key on any of the search filters will execute the search. If there are any results in the grid keyboard focus will go to the first row in the grid. If there are no results, your keyboard focus will return to the last search field you were editing so you can quickly make a change and press enter again.

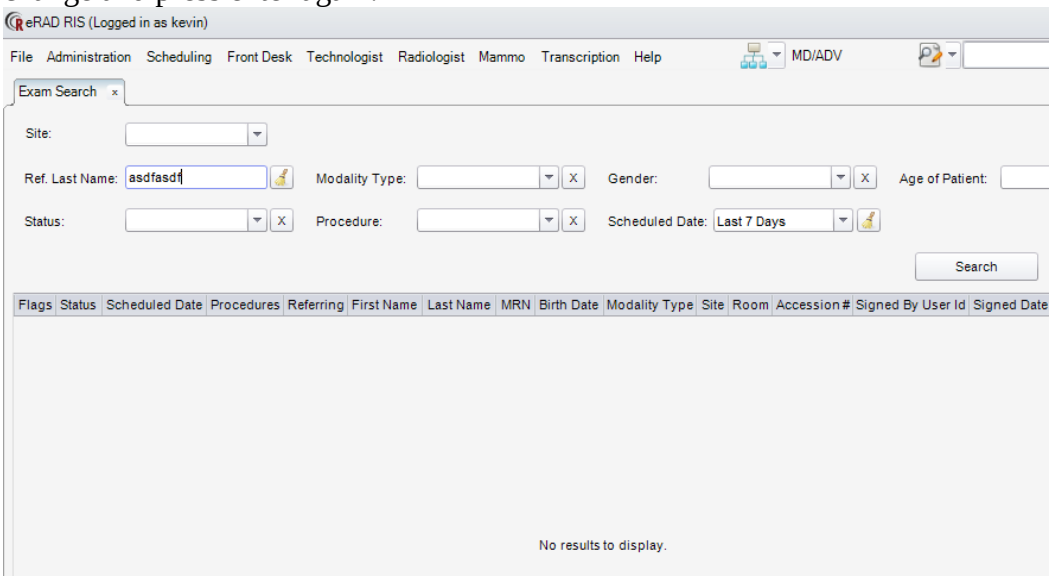

**Figure 4.112 – Exam Search**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Also if there are too many results the tab will say “Exam Search (100+)”, and the text “Too many matches. Results are limited..” will be displayed just above the results grid

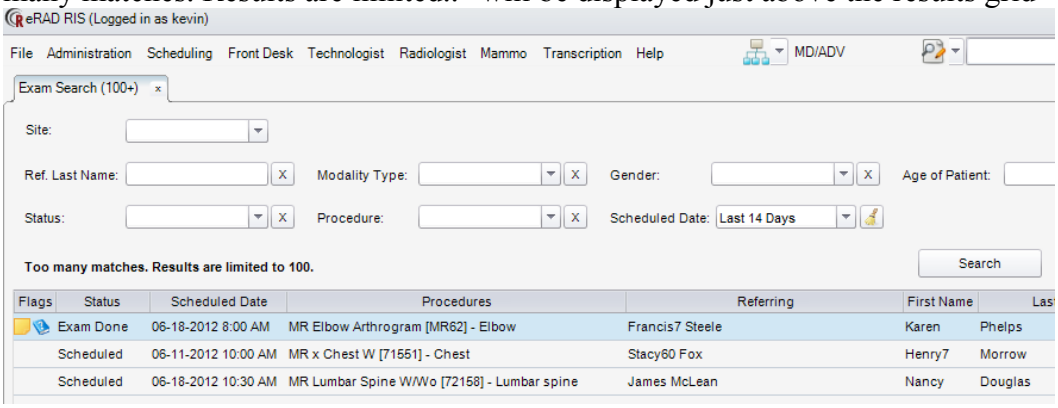

**Figure 4.113 – Exam Search**

The exam search max results is configurable via the System Config setting: ExamSearchMaxResults:

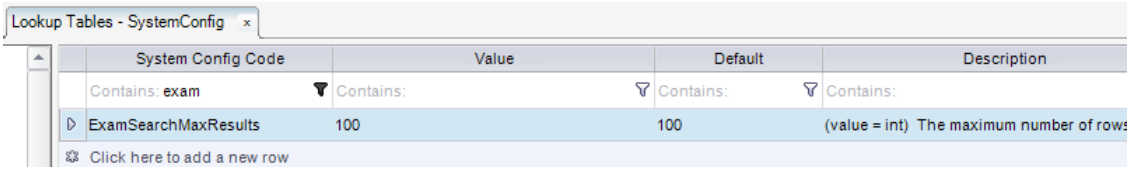

**Figure 4.114 – Exam Search**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Generalized Procedure Name

A new lookup table was added (ProcedureGeneralDescription). This lookup allows you to configure a friendly description.

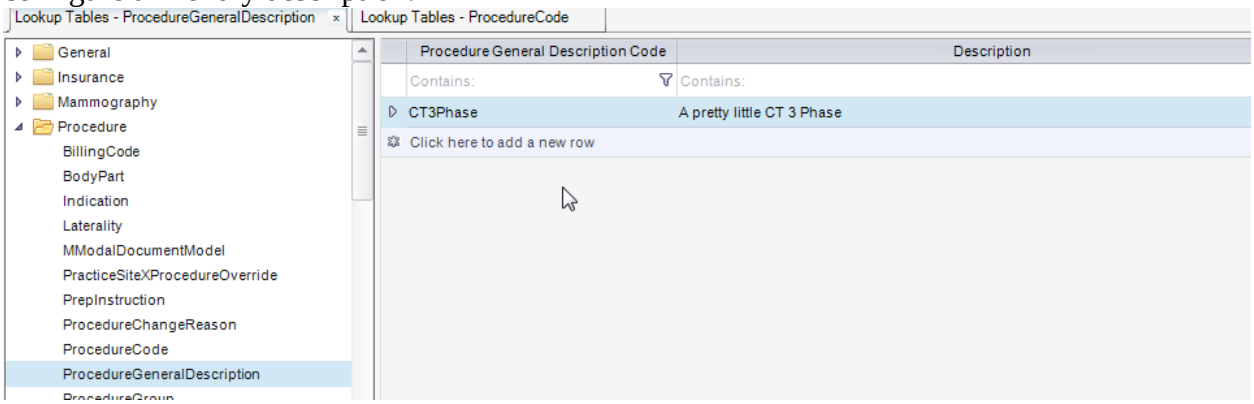

**Figure 4.115 – Procedure General Description lookup**

A new cross table (ProcedureXGeneralDescription) was created and included in the study data set. This cross table also includes a relation to practice.

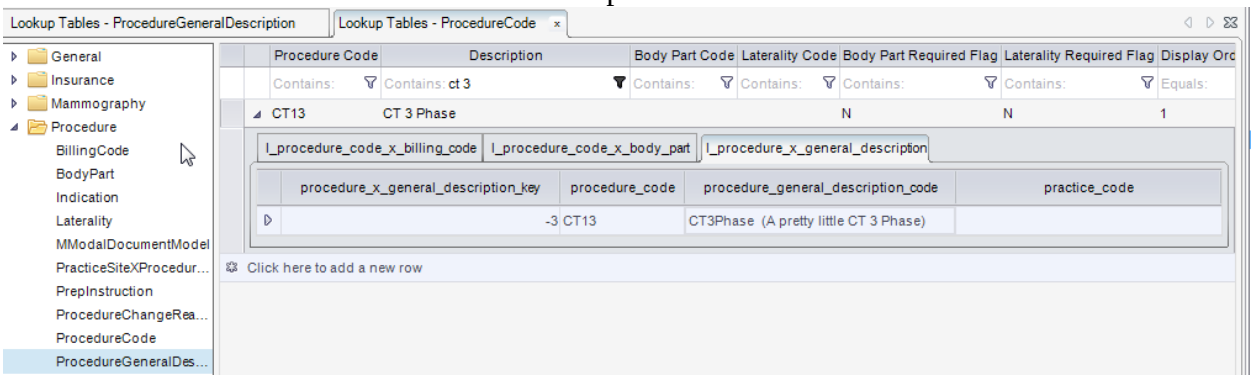

**Figure 4.116 – Procedure code lookup display cross table ProcedureXGeneralDescription**

A null value in practice means for all practices, unless there is another reference to that specific practice. If no entry is found in the procedure_x_general_description table, then the original procedure description is used instead.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Scheduling Date Time Control Enhancement

The previous control that was being used has the limitation of only being able to select the date and not the time.

The new control will allow for the time to be selected by typing in the box, setting focus to the individual time portions and using the up/down controls, or by using the mouse wheel.

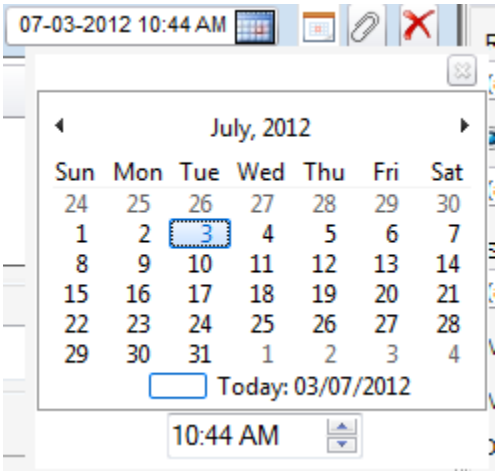

**Figure 4.117 – New date/time control**

The changes to the date picker control will use the provided format to determine which format the pop-up should be displayed in. If the format is a custom format and contains the time then it will be displayed as the figure above. This layout will allow for the closing of the screen by loss of focus outside of the pop-up or by clicking the "X" in the top corner. We have also corrected the issue that when a custom format is specified that the user will be able to change the time using the keyboard up/down keys.

If the format only has the date and not the time, the user will see the calendar only without the time option and will not have the "X" option to close the window.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Referring Physician Addresses

It has been requested that referring physician addresses can be flagged as active or inactive. This has been added in build 37.

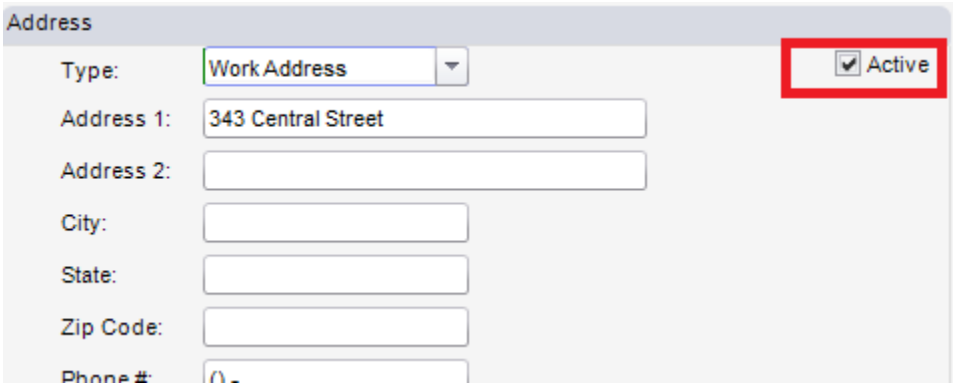

**Figure 4.118 – Referring physician addresses can active or inactive**

## Notes Text Boxes Copy / Paste Option

Added Copy/Paste options to the input box and the Copy context menu to the logged area as shown in the following. Note: paste in the logging area is disabled if the user doesn't have permission to edit the logging area.

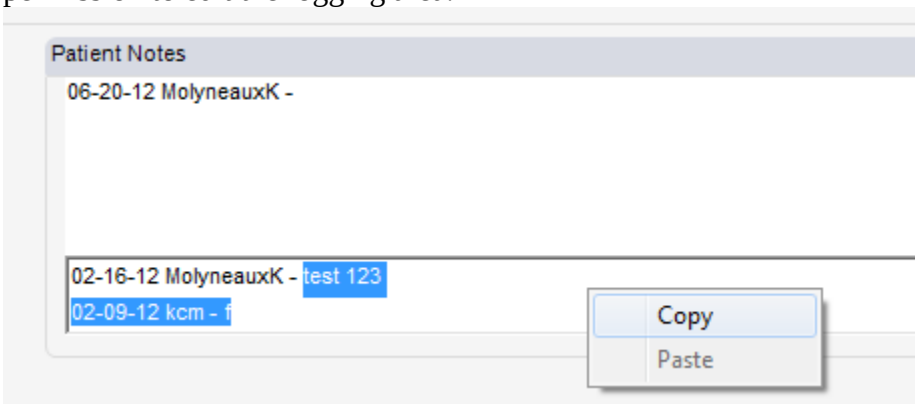

**Figure 4.119 – Copy/Paste notes fields**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Multiple Schedule Groups Per User

In previous versions users could only be assigned to one schedule group. It was desired to allow users to have multiple schedule groups. This was to prevent the need from having to create a new schedule group for each possible configuration, and remove the requirement to build a master schedule group that can be used across all sites/practices.

The previous method of selecting a scheduling group was by a list box in the personnel editor. The list box has been replaced with a multi type ahead box that allows for multiple enteries.

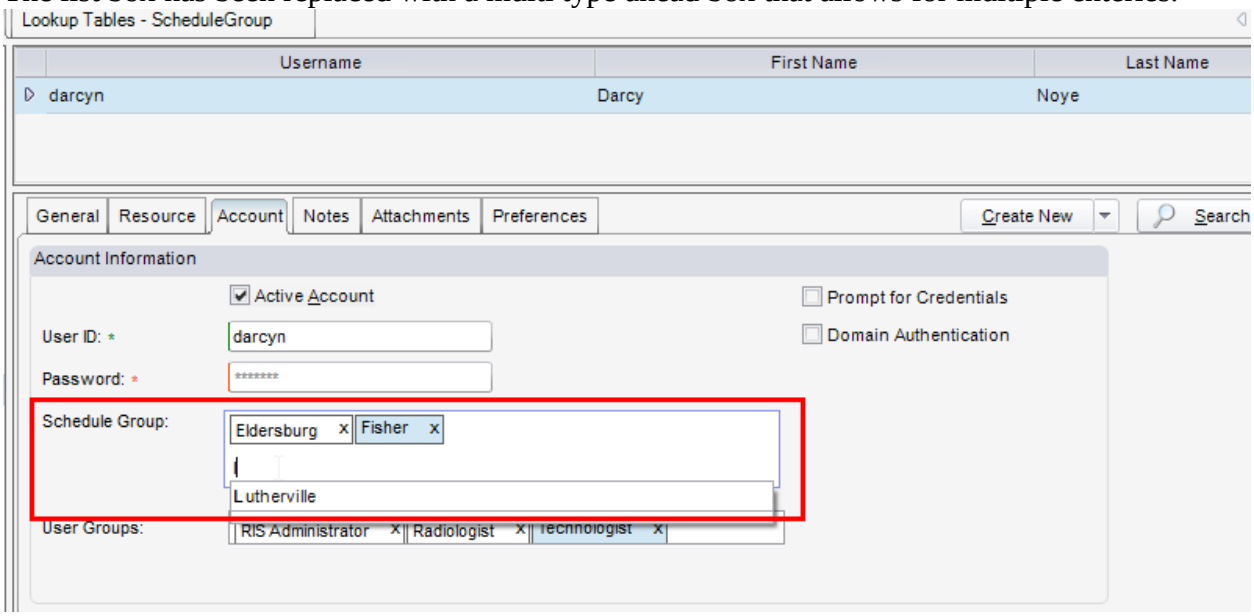

**Figure 4.120 – Multiple schedule groups per user**

With the ability of having multiple schedule groups assigned to the same user there is potential that there could be conflicting configurations. To deal with this issue if the time is available in one configuration then the time slot is available, this also applies to the reservation configuration. But in the case where there is a conflicting duration provided then the template duration will be ignored and the duration will be used from the previous level, which would from the modality duration override, if one exists, otherwise the duration from the procedure will be used.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Organization Picker Enhancements

The Org Picker allows the user to choose their current location in order to help filter worklists. In prior builds we were only showing the region/practice/site code. In Build 37 we will now show the code and the description.

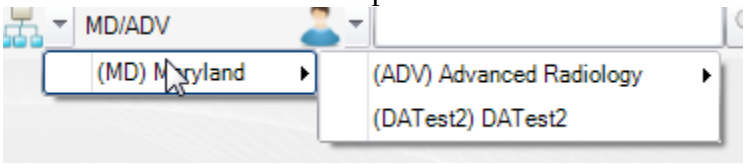

**Figure 4.121 – Org picker enhancements**

The region/practice/site code are displayed first, and their respective descriptions are displayed afterwards. The text of the description is trunctated if it exceeds 50 characters.

## Unknown Referring Required Address Removed

The unknown referring required an address, as all referring's needed a visited at address in the past.
In build 37 the address is no longer a requirement for the Unknown referring physician.

## Verify Credentials Enhancements

The swap credentials feature (now renamed Verify Credentials) would prompt each and every time a Perform Exam window was opened. For techs that might open 2 or 3 patients in a row, this was very time consuming and frustrating.

The swap credentials class was enhanced to be able to store the last UID and PW and Auth type of the last successfully swapped user.

A new timer - activity based – was introduced.

If the timer has not expired, a new button appears on the next opening of the verify credentials screen, with the previous logon id. The text of the button is "I am (userid)"

If the user clicks on this button, it opens the new screen under the credentials of that user, without them needing to key in a password.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

A system config value controls the duration of the inactivity timer. A timer setting of 0 disables the feature.
(SwapCredentialsKeepPreviousUserTimeout)

When the inactivity timer expires, the button will disappear.

An old bug was found if the user closed the tech worklist, reopening the worklist would now adopt the credentials of the switched user. I had not accounted for this, so now the credentials used to open the original worklist are preserved, so they can always be reverted to.

Edit patient was removed as an option from the tech screen, and Edit Patient (if activated by other means) no longer attempts to verify credentials.

## No Report Required Work Flow Enhancements

Previous to build 37, users in the Perform Exam window could flag an exam to not have a report. A flag on the documentation tab of the Perform Exam window, when checked, the exam would not be routed to the radiologist work list(s) and would go directly to billing, provided all the billing criteria has been met. This work flow still exists, but now we also provide the practice / site the option to mark procedures to have "No Report Required"

For configuring this feature see the "PractaceSiteXProcedureOverride" lookup as shown in the following:

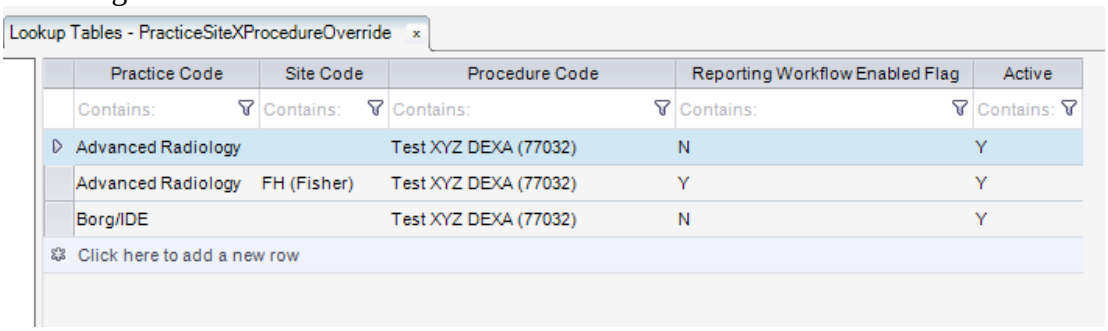

**Figure 4.122 – PracticeSiteXProcedureOverride lookup table**

In the above, the "Test XYZ Dexa" procedure will skip reporting for all of "Borg/IDE" and all of "Advanced Radiology" except for the "Fisher" site. Note: Site code is optional, if it is empty the override is for the entire practice and if a Site code is provided, that overrides the practice setting.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The tech screen for "ReportingWorkflowEnabled = 'N'" the check box for No Report (Tech Only) is checked and disabled so the user in the tech screen cannot accidently remove it.

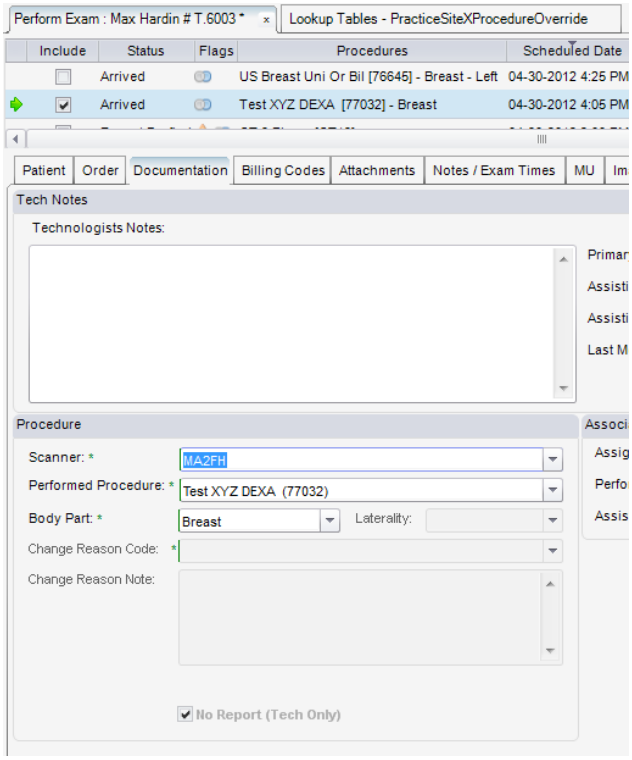

**Figure 4.123 – No Report auto checked and disabled**

# 5. Resolved Defects

Bugs Suggested Features and Support Issues resolved in build 1.37. The extract is taken from Redmine bug tracking system and only displays defects resolved in 1.37.

| Bug # | Tracker | Priority | Subject | Category | Found Version |
|---|---|---|---|---|---|
| 1300 | Bug | Urgent | DD when using an undefined recipient fails genreating SSRS report | Thick Client GUI | 1.36 |
| 1563 | Bug | High | Reporting - Update to the latest Radiology Recognizer | Thick Client GUI | 1.36 |
| 1545 | Bug | High | Scanning issue (Not Responding) | | 1.35 |
| 1499 | Bug | High | getting over booked error on outside reads when schedule outside reads exceed 15 | | 1.36 |
| 1496 | Bug | High | Remove Orphans | Thick Client GUI | 1.36 |
| 1494 | Bug | High | Beverly and Highway Users getting communication exception | Web Services/DB | 1.36 |
| 1466 | Bug | High | Reporting Interactive - minimize mode doesn't load macros | Thick Client GUI | 1.36 |
| 1451 | Bug | High | HIA report preview - blank sections should not appear in rendered report | Mgt Reports | 1.36 |
| 1440 | Bug | High | Move To <section> not being recognized consistantly. | Thick Client GUI | 1.36 |
| 1372 | Bug | High | Minimize Dictation - Sign Report as EOL throws exception | Thick Client GUI | 1.36 |
| 1359 | Bug | High | Report on Accession number | Thick Client GUI | 1.36 |
| 1355 | Bug | High | Scheduled by userID is not populating in the study table | Mgt Reports | 1.1.36.11197 |
| 1342 | Bug | High | Report tables not consistently returning in same sequence | Mgt Reports | 1.36 |
| 1330 | Bug | High | Perform exam | Thick Client GUI | 1.36 |
| 1294 | Bug | High | Pacs correction not Y on statuses beyond examdone | Thick Client GUI | 1.36 |
| 1292 | Bug | High | Suspending in WPR workflow doesn't work | Thick Client GUI | 1.36 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | | |
|---|---|---|---|---|---|
| 1284 | Bug | High | Dated Worklists not reflecting proper dates | Thick Client GUI | 1.35 |
| 1272 | Bug | High | Error trying to import image | Thick Client GUI | 1.36 |
| 1270 | Bug | High | View/Edit data window does not show billing codes | Thick Client GUI | 1.36 |
| 1269 | Bug | High | Relevant priors do not open correctly when user preference to show current study in patient history is off | Thick Client GUI | 1.36 |
| 1257 | Bug | High | Signed by date WL access string not included in build | Thick Client GUI | 1.36 |
| 1097 | Bug | High | Reporting > Problems continuing dictation when using interactive and field markers | Thick Client GUI | 1.35 SVN 10005 |
| 851 | Bug | High | Beaumont - PSPLOG.dll error on app launch | Thick Client GUI | 1.27 |
| 777 | Bug | High | missing a billing message when tech only workflow | Web Services/DB | 1.29 |
| 1510 | Bug | Normal | eRAD RIS Error - Scanned Documents (saving after viewing an attached scanned document) | Thick Client GUI | 1.36 |
| 1480 | Bug | Normal | Sort issue on Appointments Schedule | Mgt Reports | 1.36 |
| 1445 | Bug | Normal | Fax jobs: Busy retry count goes forever | Web Services/DB | 1.35 |
| 1429 | Bug | Normal | Cannot update patient prefix table via the GUI lookup table editor | | 1.36 |
| 1425 | Bug | Normal | The image request worklist has a button called "Edit" but when you open the form it says "Request Copies" | | 1.35 |
| 1397 | Bug | Normal | patient search - phone number | Web Services/DB | 1.36 |
| 1395 | Bug | Normal | Image request form shows offset. | Thick Client GUI | 1.35 |
| 1365 | Bug | Normal | Summary tab on scheduling tab is blank when value is not entered on system config, does not recognize defaults | Admin Tools | 1.36 |
| 1364 | Bug | Normal | Some study updated messages are post to the message queues with an empty study container | Web Services/DB | 1.36 |
| 1363 | Bug | Normal | inactive holidays still being applyed to the calendars | Thick Client GUI | 1.35 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | | |
|---|---|---|---|---|---|
| 1360 | Bug | Normal | Mgmt Reports - Scheduled vs Completed - report is showing exams in 'Cancelled' status. | Mgt Reports | 1.1.36.11197 |
| 1358 | Bug | Normal | Mgmt Reports - Scheduled Count by Site - exams are all appearing regardless of status. | Mgt Reports | 1.1.36.11197 |
| 1357 | Bug | Normal | Management Report - Room Utilization - documentation for this report is not correct, appears to be for a different report altogether. | Mgt Reports | 1.1.36.11197 |
| 1353 | Bug | Normal | Billing file can include addendums | Web Services/DB | 1.35 |
| 1351 | Bug | Normal | Mgmt Report 'Referrals by Physician' - when scheduled_start_date is greater than today's date, report and view are still showing it as a valid exam. | Mgt Reports | 1.1.36.11197 |
| 1350 | Bug | Normal | MGMT Report - Radiologist Signing Activity - 'Radiologist(s)' dropdown menu needs to be ordered alphabetically | Mgt Reports | 1.1.36.11197 |
| 1346 | Bug | Normal | Mgmt Report - Pre-Auth Referring Physician - description is not accurate | Mgt Reports | 1.1.36.11197 |
| 1345 | Bug | Normal | Mgmt Report - Pre-Auth Daily Count - description is not accurate of what the report is showing. | Mgt Reports | 1.1.36.11197 |
| 1344 | Bug | Normal | In visit tab, in 'Medications' window, message stating 'Failed to Update Medications' is cut off from view. | Thick Client GUI | 1.1.36.11197 |
| 1343 | Bug | Normal | Dictated by date worklist and counts are using 24 hours instead of date | Thick Client GUI | 1.36 |
| 1341 | Bug | Normal | Mgmt Report - Patient Wait Times - problem with view using two different time zones | Mgt Reports | 1.1.36.11197 |
| 1340 | Bug | Normal | Daily Fax log management report is not filtering out other distribution methods | Mgt Reports | 1.1.36.11197 |
| 1338 | Bug | Normal | core services install.. missing libraries | Web Services/DB | 1.36 |
| 1337 | Bug | Normal | MU required fields prompted for on Outside Reads | Thick Client GUI | 1.36 |
| 1333 | Bug | Normal | Revoming rows from MU Grids so it is empty does not change from "Use Grid" to "None" | Thick Client GUI | 1.36 |
| 1332 | Bug | Normal | Meaningful Use - New Appointment on existing patient with MU history, Medical history does not keep "Use Grid" | Thick Client GUI | 1.36 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | | |
|---|---|---|---|---|---|
| 1328 | Bug | Normal | When in RIS, after creating a new user / person, user attempts to launch Mgt. Reports but when the report selection window opens there is no reports | Mgt Reports | 1.1.36.11197 |
| 1326 | Bug | Normal | Management Report - Referring Physician Notification - when physicians name has suffix, it is appearing twice with their name in the report | Mgt Reports | 1.1.36.11197 |
| 1325 | Bug | Normal | Management Reports - Procedures without Procedure Group has no information at all in document. | Documentation | 1.1.36.11197 |
| 1324 | Bug | Normal | ODC - Login failed attempt will keep password on login screen | Thick Client GUI | 1.35 |
| 1323 | Bug | Normal | ODC - saved my view continously shows hour glass | Thick Client GUI | 1.35 |
| 1320 | Bug | Normal | ODC - Edit patient from patient search hangs app | Thick Client GUI | 1.35 |
| 1318 | Bug | Normal | Management Reports - Audit Log - drop down for 'user' is not in a easy to find order. It displays user name first, but appears to be sorted by user's last name. | Mgt Reports | 1.1.36.11197 |
| 1317 | Bug | Normal | Fax Sender in DDE requires a default printer | Web Services/DB | 1.35 |
| 1316 | Bug | Normal | 'No Shows' management report does not recognize cancelled exams for 'No show' reason | | 1.1.36.11197 |
| 1315 | Bug | Normal | Cell borders are inconsistent on Mgmt Report titled 'No Shows' | | 1.1.36.11197 |
| 1314 | Bug | Normal | Need Plan Management report returns no data whatsoever | | 1.1.36.11197 |
| 1313 | Bug | Normal | Management Report - Modality Utilization - not working, showing no data at all | | 1.1.36.11197 |
| 1312 | Bug | Normal | IVT 7 day trend displays more data than it should. | | 1.1.36.11197 |
| 1311 | Bug | Normal | Management Report - Front Desk Activity - will not populate 'Verified' | Mgt Reports | 1.1.36.11197 |
| 1310 | Bug | Normal | Confirmed Appts. Mgmt Report is showing all confirmed appointments, regardless of status. | Mgt Reports | 1.1.36.11197 |
| 1309 | Bug | Normal | Core reports document does not contian requirements for report titled 'Appointment Schedule' | Documentation | 1.1.36.11197 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | | |
|---|---|---|---|---|---|
| 1308 | Bug | Normal | Mgt Reports - Aborted Exams report - expanding reason shows numbers but does not indicate what they are for | Mgt Reports | 1.36.11197 |
| 1306 | Bug | Normal | Medical History > remove and add new problem will give error | Thick Client GUI | 1.36 |
| 1305 | Bug | Normal | Delete Allergy row, then add through Quick Add/Edit results in status column error | Thick Client GUI | 1.36 |
| 1304 | Bug | Normal | Report Preview unsigned addendum from worklist | Thick Client GUI | 1.35 |
| 1303 | Bug | Normal | Each Failed Login Results in Multiple Login Attempts | Thick Client GUI | 1.35 |
| 1302 | Bug | Normal | Recommendation lookup > Remove drill down control | Thick Client GUI | 1.36 |
| 1301 | Bug | Normal | Error from patient search. | Thick Client GUI | 1.36 |
| 1299 | Bug | Normal | DD Editing an exising job in the worklist doesn't load with all values | Thick Client GUI | 1.36 |
| 1296 | Bug | Normal | Unknown Referring/Carrier... should we be using Edit Order?? Seems bad idea | | 1.36 |
| 1295 | Bug | Normal | Unknown Reconciliation WL - can edit order on studies that are scheduled or further in workflow | Thick Client GUI | 1.36 |
| 1293 | Bug | Normal | Error closing New Appointment / Patient Search | Thick Client GUI | 1.36 |
| 1290 | Bug | Normal | Data nugget - Notes or Study Notes? | Thick Client GUI | 1.36 |
| 1289 | Bug | Normal | Transcription - Perform Exam ( worklist does not show current study) | Thick Client GUI | 1.36 |
| 1288 | Bug | Normal | Template viewer title bar has incorrect title. | Thick Client GUI | 1.36 |
| 1283 | Bug | Normal | Nuggets shouldn't respond to right click | Thick Client GUI | 1.36 |
| 1282 | Bug | Normal | MT Polling > Studies from same order are not skipped when locked | Thick Client GUI | 1.36 |
| 1281 | Bug | Normal | Surgeon can be searched for to send report, but cannot be used to send report | Thick Client GUI | 1.36 |
| 1279 | Bug | Normal | When using CTRL + Shift + '+=' or '_-' buttons or up and down arrow keys, RIS throws an error and | Thick Client GUI | 36.11042 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | | |
|---|---|---|---|---|---|
| | | | crashes. | | |
| 1278 | Bug | Normal | Error accessing data windows resuming locked RIS application | Thick Client GUI | 1.36 |
| 1274 | Bug | Normal | Open Capacity | Mgt Reports | 1.35 |
| 1273 | Bug | Normal | Assign to Radiologist window closes if clicking to fast on srcoll bar action down | Thick Client GUI | 1.36 |
| 1271 | Bug | Normal | Patient Folder > Ordered status studies data nuggets do not load | Thick Client GUI | 1.35 |
| 1268 | Bug | Normal | Personnel > Cannot search for existing after deleting create new | Admin Tools | 1.36 |
| 1256 | Bug | Normal | Macro editor - the delete function will not delete the macro | Thick Client GUI | 1.36.10931 |
| 1245 | Bug | Normal | Unable to cast System.DBNull to System.String | Thick Client GUI | 1.36 |
| 1238 | Bug | Normal | Editiing patient and repeatedly getting "Status can not be empty" message on save | Thick Client GUI | 1.36 |
| 1235 | Bug | Normal | Select Search multiple times in Carrier search window will throw error. | Thick Client GUI | 1.36 |
| 1227 | Bug | Normal | Patient Folder Window --> Scheduled Date filter = object reference error | Thick Client GUI | 1.36 |
| 1220 | Bug | Normal | Insurance - Returns Object Reference Error | | 1.36 |
| 1215 | Bug | Normal | Rad - Dictate - Template Browser - runtime | Thick Client GUI | 1.36 |
| 1213 | Bug | Normal | Rad - All Pending Signature Worklist --> Dictate --> Click Print Icon "Send to" = runtime | Thick Client GUI | 1.36 |
| 1198 | Bug | Normal | Scheduling - Edit Image request --> runtime NULL handling | Thick Client GUI | 1.36 |
| 1195 | Bug | Normal | Rad - Dictate or Transcripion window.. Attachments and Attachment History views are missing | Thick Client GUI | 1.36 |
| 1186 | Bug | Normal | Filtered patient folder on Signed and Ordered rows are in the list. | Thick Client GUI | 1.36 |
| 1178 | Bug | Normal | Macro Editor --> Insert Macro --> Click Previous Field = COM Error | Thick Client GUI | 1.36 |
| 1175 | Bug | Normal | Transcirption editor does not support keyboard shortcut to select text up and down | Thick Client GUI | 1.36 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | | |
|---|---|---|---|---|---|
| 1174 | Bug | Normal | Mammo - Followup worklist. Right Click --> Followup "New patient button is available on signed study" | Thick Client GUI | 1.36 |
| 1172 | Bug | Normal | Rad - Macro Editor - Exception inserting normal | Thick Client GUI | 1.36 |
| 1170 | Bug | Normal | Warning for scheduling across sites message displayed twice when selecting Yes | Thick Client GUI | 1.36 |
| 1161 | Bug | Normal | error on second save within macro editor | Thick Client GUI | 1.36 |
| 1153 | Bug | Normal | Save layout not saving selected tabs | Thick Client GUI | 1.36 |
| 1106 | Bug | Normal | Logging into locked workstation when GUI ZIP file has changed | Thick Client GUI | 1.35 |
| 1093 | Bug | Normal | When allergy is inactive in the lookup the value is not displayed for the patient that has that allergy | | 1.35 |
| 1057 | Bug | Normal | Scheduling - Confirmation WL --> runtime crash | Thick Client GUI | 1.35 |
| 991 | Bug | Normal | Patient Merge -- Selecting source and destination give weird birthdates | | 1.35 |
| 980 | Bug | Normal | Streaming execption when playing dictation | Thick Client GUI | 1.35 |
| 976 | Bug | Normal | Object reference saving multiple procedure order | Thick Client GUI | 1.35 |
| 945 | Bug | Normal | Responsible party is not updated when patient information has changed. | Thick Client GUI | 1.34 |
| 807 | Bug | Normal | Timezone issue - Cannot update personnel | Admin Tools | 1.29 |
| 783 | Bug | Normal | the gui has hard coded values for Patient relation | Thick Client GUI | 1.29 |
| 781 | Bug | Normal | Read Only permission still allows some actions | | 1.2 |
| 758 | Bug | Normal | Drug Allergy Type requires Display order to save | Admin Tools | 1.27 |
| 756 | Bug | Normal | Beaumont - Issue with time zones | Web Services/DB | 1.25 |
| 750 | Bug | Normal | Patient Search > Reset search criteria throws error. | Thick Client GUI | 1.27 |
| 691 | Bug | Normal | Configure > Lookup Tables scroll bar not always present. | | 1.2 |
| 463 | Bug | Normal | Concurrency error on scheduling | Web Services/DB | 1.17 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | | |
|---|---|---|---|---|---|
| 224 | Bug | Normal | Order - Exception when scheduling a modified order | Thick Client GUI | 1.11 |
| 1261 | Bug | Low | Double context menu in personnel editor > Contact information | Admin Tools | 1.36 |
| 1211 | Bug | Low | Administration - User - Personnel ( Add, Edit Address validation) | Thick Client GUI | 1.36 |
| 1208 | Bug | Low | Study box size on Walk-In Exam tab is too small to see all of the study description | Thick Client GUI | 1.36 |
| 1200 | Bug | Low | Patient Merge - Search - Invalid Search Criteria - click Details = error | Thick Client GUI | 1.36 |
| 1184 | Bug | Low | Batch to Interactive Mode changes can result in tab being mislabeled | | 1.36 |
| 1060 | Bug | Low | Tab order in Patient Demographics Content Pane | Thick Client GUI | 1.35 |
| 1058 | Bug | Low | Scheduling a child patient | Thick Client GUI | 1.35 |
| 1051 | Bug | Low | Recorder::resume couldn't open recording device (AnyModalCaptureCtrl.AsyncRecognizer.1) | Thick Client GUI | 1.35 |
| 1010 | Bug | Low | Continuity of Care Record (CCR) - user is able to click view / print, but when the preview appears there is no "print" button. | Thick Client GUI | 1.35 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 6. Known Limitations

The following are Bugs Suggested Features and Support Issues found in build 1.37. This build is the current QE build and testing is ongoing. The list may increase in size. This document will not be updated or re-released.

| # | Status | Priority | Subject | Resolved Version |
|---|---|---|---|---|
| 1613 | New | High | Reporting - Assign to Data pane will not open from view menu | |
| 1611 | New | Normal | View Template - Base Dropdowns visible and enabled | 1.38 |
| 1610 | New | Normal | If Patient Class for Tech Only is missing, scheduling from Orders to Schedule gives strange error. | |
| 1609 | New | Normal | Voided studies cannot accessed in View Edit window | |
| 1608 | New | Normal | Referring column not added to the Dictated by Date and All Dictated work lists | |
| 1607 | New | Normal | Perform Exam - Check \ Uncheck include box issue | |
| 1606 | In Progress | Normal | Dictate window getting Error on GetData/DisplayData | |
| 1598 | New | Normal | WPR workflow, multiple same accession numbers. | |
| 1595 | New | Normal | Message boxes not focusing default button. | |
| 1594 | New | Normal | View/Edit screen does not show EMR order information | |
| 1593 | New | Normal | Dictation / Create Edit Report screens do not show EMR ordered procedure | |
| 1592 | New | Normal | Opening exam done study prompting for an addendum... | |
| 1590 | New | Normal | View Edit report tab does not include section headers or formatted text | |
| 1579 | New | Normal | Exception on patient folder, right-click, Send Report | |
| 1577 | New | Normal | RIS throws an innappropriate error when you try to complete 2 studies at once that are in different modalities. | |
| 1576 | New | Normal | Saving a new order can cause an empty "Patient Mode" list... | |
| 1575 | New | Normal | Assigning one user trice in macro / template throws an error on save | |
| 1572 | New | Normal | Practice Filler code vs Modality - site - practice. | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 1571 | New | Normal | CDS Retrieve Document Cache -- if service is not running = infinite loop and hang of UI | |
| 1570 | New | Normal | Data consistency error with composite study | |
| 1569 | New | Normal | schedule later does not save procedures that haven't been committed yet | |
| 1568 | New | Normal | Installation Directory Name | |
| 1564 | New | Normal | Tech WL --> Deleting a billing code does not actually delete | |
| 1552 | New | Normal | PACS: Show images button on Dictation window non-functional if first Open call fails | |
| 1536 | New | Normal | Tech WL --> right click cancel a Checked In study = Object reference error | |
| 1534 | New | Normal | Add\deleting of billing codes | |
| 1530 | New | Normal | Macro editor | |
| 1529 | New | Normal | Macro editor | |
| 1526 | New | Normal | Suspend button and Close does not update recent activity list in status bar | |
| 1524 | New | Normal | MU - Grids.. When saving auto select -Use Grid option if validation fails | |
| 1518 | New | Normal | Error on close of Perform Exam window. | |
| 1517 | New | Normal | Exam search - index out of range when returning no results. | 1.2.37.12715 |
| 1503 | New | Normal | Unknown referring match allows you to match an unknown referring to another unknown referring | |
| 1487 | New | Normal | Worklist column does not refresh when exception thrown in Bulk Field Assignment | |
| 1450 | New | Normal | Scheduled from IVT can return error | |
| 1446 | New | Normal | View Macro with description of Test Here - Error inserting selected normal with exception: The value for column 'name' in table 'l_macro' is DBNull | |
| 1442 | New | Normal | Save IVT with large Precert note generates String or binary data would be truncated error | |
| 1430 | New | Normal | Error from view/edit window on close | |
| 1394 | New | Normal | Confirmation workflow should bypass overbook timeslot check | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 1385 | New | Normal | Scheduling Walk In - Overbook reason required should have the red required icon | |
| 1383 | New | Normal | Tab order\behaviour: Patient Insurance Policies screen | |
| 1375 | New | Normal | hit eRx button on Patient tab get exception | |
| 1370 | New | Normal | Can modify/schedule order with patient that has been flagged as deleted by patient merge in another tab | |
| 1366 | New | Normal | Play back volume is different (louder) for transcription then for rads | |
| 1348 | New | Normal | Special Accommodations required fields | |
| 1336 | New | Normal | on dated WL, adding or deleting a rView will change the display text for the "date" | |
| 1331 | New | Normal | Flags pane of perform exam window | |

# 1. Purpose

This server update has been produced to fix bugs required for production setting, or to complete an enhancement requested for production.

This server update fixes the following issues.

| Redmine Bug # | Issue | Description | Priority | Status |
|---|---|---|---|---|
| 1643 | External Report | Ideally we need this to be part of the Radiologist Pending Dictation workflow. Add a column that views can be created on. When the radiologist opens the study the view the images and have the Verify External Report button. Goes to billing with the radiologist the clicked the Verify External Report button as the dictating physician. Ultimately we would like a way to scan in the document and save it as the report for approval and deliver that way. | HIGH | COMPLETE |
| 1632 | Voided | Not Able to View/Edit the exam. | HIGH | COMPLETE |
| 1633 | Temporary Template | Still have to enter end time 11:50 to keep the 12 from showing, these are not showing on the Manual Appt (seems to only look at the default template) When using the Appt book through scheduling these slots are still available and are able to be picked without issue. | HIGH | COMPLETE |
| 1641 | Addendum | Need to add addendum_requested_flag to Activity WL - Need to add addendum flag and addendum_requested_flag to patient folder WL - Need to show signed studies in Activity WL where addendum_requested_flag is Y | HIGH | COMPLETE |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | | | |
|---|---|---|---|---|
| 1630 | Addendum | Unsigned Addendum states "Addendum" in the report. Need to fix so if a report is printed/faxed prior to the Addendum then it shouldn't show "Addendum" | HIGH | COMPLETE |
| 1634 | Follow up Tab | Needs to be accessible from any point, example need to see it in Schedule Order or View/Edit | MED/HIGH | COMPLETE |
| | Template documentation | Supply documentation on the Template mgt, for transcription mgt team. | HIGH | COMPLETE |
| 1635 | Pending Dictation - Assigned to Rad details | When assigning a dictation to a specific radiologist, put the rads 'lastname, firstname' in the "Assigned Rad" column on the worklist | HIGH | COMPLETE |
| 1645 | Tech Only | The tech only checkbox is not really necessary any longer. Just need an indication that the tech cannot change. They will use the Patient Class if it needs to be changed. Needs PACS Correction workflow but then just goes directly to billing. | HIGH | COMPLETE |
| 1644 / 1618 | Hold Code | Need flag at procedure level called "Hold Code". At tech completion this goes directly to status of Hold Code Complete. | HIGH | COMPLETE |
| 1638 | Insurance | Insurance: Once you add insurance to an order and try to remove or expire, it still shows in the order as active. No way to remove it once added. | HIGH | COMPLETE |
| 1652 | Verbal Order | You must be NT authenticated to create a Verbal Amended Order, we thought there was a fix for non NT authenticated users to access the reports. | HIGH | COMPLETE |
| BAD CONFIG | Outside Reads | Outside Reads: Unable to save an outside read. | HIGH | COMPLETE |
| 1636 | Billing | Units not being reset to the default value when switching procedures | HIGH | COMPLETE |
| 1614 | Reporting | Set account specs not working if system config values not set to true | HIGH | COMPLETE |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | | | |
|---|---|---|---|---|
| 1653 | Tech | Maintaining correction selection on perform exam screen patient history grid | HIGH | COMPLETE |
| 1616 | External Report workflow | Assigning the "assign by" radiologist | HIGH | COMPLETE |
| 1625 | Alisa - Reporting | Addendums should be blocked on historical (imported) studies | HIGH | COMPLETE |
| 1646 | Reporting | DLL Issues in B37. Cannot successfully run interactive features | CRITICAL | COMPLETE |
| 1637 | Mammo | Mammo follow up target date needs to be editable - We will display and allow the target date to be edited. | HIGH | COMPLETE |
| 1631 | Mammo | MU fields are required, but in mammo workflow, we do not know what the values should be - We will add code to the patch to bypass the MU fields, when the user is using the FollowUp mammo feature. | HIGH | COMPLETE |
| 1627 | Mammo | When entering a new follow-up date for a biopsy, if an order already exists it will not update the target date and simply gives a message "order already exists". - Add new feature to allow the update of the existing follow up order using the manual follow up from the biopsy screen. | HIGH | COMPLETE |
| 1640 | Image Request BUG | Can't open image request editing form from Image request WL. | HIGH | COMPLETE |
| 1639 | Scheduling - Joe | Duration issue with template duration overrides | HIGH | COMPLETE |
| 1545 | Scheduling | Scanning issue (Not Responding) | High | COMPLETE |
| 1642 | Outside Reads | Time of the outside read dates needs to be noon instead of the beginning of the day | Med | COMPLETE |
| 1605 | Reporting | Template Editor > need an easier way to find base templates | Med | COMPLETE |
| 1604 | Reporting | Base templates not saving for new templates created | Med | COMPLETE |
| 1596 | Installer | Error on Installtion ieframe.dll | MED/HIGH | COMPLETE |
| 1375 | Scheduling / MU | hit eRx button on Patient tab get exception | MED/HIGH | COMPLETE |
| 1145 | Reporting | Edit macro twice throws object | Med | COMPLETE |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | | | |
|---|---|---|---|---|
| | | reference error | | |
| 1096 | Reporting | Reporting > viewing report history throws COM error | Med | COMPLETE |
| 1651 | HL7 | error when processing HL7_StudyScheduled Message | Med | COMPLETE |
| 1622 | Payments | Payment made on rescheduled exam was displaying incorrect location and receipt prefix | Med / High | COMPLETE |

## 2. Known Limitations

| # | Priority | Subject | Comments |
|---|---|---|---|
| 1647 | High | Error adding follow up on voided exam | BUG - Most fields are disabled in the view/edit window on voided studies. The few remaining are attachments, payments and follow-up. These will be disabled in future build |
| 1646 | High | Interactive Dictation Problems in Build 37 | BUG - This is currently resolved by reverted back to the previous recognizer file. |
| 1667 | Normal | Historic Tech Only exams do not have "Post" button enabled in billing exception | Known Limitation - Changes have been made in this build to remove the Tech Only check box in the Perform Exam window and have this work flow driven by a new patient class of Tech Only.<br><br>We have seen that with historical exams on the Billing Exception work list that were flagged as Tech Only, the Post button will not enable. The **work around** for this issue is to change the patient class to Tech Only, save the record and reopen the Billing Exception work list. The post button will now be enabled. |
| 1665 | Normal | Blank help about message | BUG - This has only occurred once. A restart of the application fixed the issue. |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | | |
|---|---|---|---|
| 1662 | Normal | Availability Templates / appt book colors shown on legend do not contain legend for 2 colours that appear in the grid. | Known Limitation - The colors referenced in this bug are for the background on the calendar, not the statuses of the studies |
| 1661 | Normal | Cloning availability templates ( problem) | BUG - When cloning, it always adds the template as a "Procedure Availability" |
| 1660 | Normal | Reschedule on same day will enable flag for multiple studies | BUG - Occurs when study is rescheduled for same day |
| 1659 | Normal | Reporting - No space added when dictating measurements. | BUG - reporting MMODAL bug. |
| 1658 | Normal | Pre Auth Program does not appear for referring physician | BUG - If the Referring Physician selected on the order tab has flags in personnel editor for Direct Referral and Pre-Auth Program, only the Direct Referral will display due to space availability |
| 1657 | Normal | Setting playbackspeed on control is slow. | |
| 1654 | Normal | Perform exam patient history grid issues | BUG - Occurs when the Include option on the patient history grid is unselected. |
| 1650 | Normal | Exam Done(tech only) status has Register available in patient folder | BUG - Register button will need to be disabled in future builds. |
| 1649 | Normal | Calendar view on multi procedure order | BUG - This may end up a known limitation on the Telrik controls we use in this window. If there are mutiple procedures and multiple rooms to select from, the room on the right side can off by 5 minutes |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

## 3. Who is affected

All previous versions of build 37.

## 4. Package Contents

The following files are included for this upgrade:

1.) Core Installer updates_setup\rRISSetup.msi and setup.exe
2.) GUI ZIP Updates\rRIS_1.2.37.13040.zip
3.) RIS Service Updates\rRISServices.exe, rRISServices.pdb, WCFService.dll, WCFService.pdb, Wedge.exe, Wedge.pdb
4.) SQL\B37.001_updates.sql

## 5. Installing

1.) Copy the file rRIS_1.2.37.13040.zip file **from** the "GUI ZIP Updates" folder and replace the .zip file in the RISDeployment\Build\<RIS_*your environment*> folder. Make sure to create a backup of the previous .zip file. The ris.exe.config made be needed.

2.) Copy and replace the files from the "core Installer updates" folder and replace the _setup folder in the RISDeployment\Core folder.

3.) Stop the following services as needed: (NOTE: your installation may not have all services listed) replace the files and restart each service.

These directories may include:

a. rRISService (core service)
b. CDS rRISService
c. Wedge rRISService
d. DDE rRISService

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

Copy the files from the "RIS Service Updates" folder to rRISService directory and replace the files in each folder associated with the services listed above.
Restart each service.

4.) Run the B37.001_updates.sql file against the RIS DB instance.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# Server Update

for eRAD RIS
Version 1.0
Build 37
Update 37.002

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# Table of Contents

1. Purpose ..... 3
2. Intended Audience ..... 3
3. Who is affected ..... 3
4. Installing ..... 4

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This server update has been produced to fix bugs required for production setting, or to complete an enhancement requested for production.

This server update includes the following:

1. Logged as Redmine bug 1669 - Reporting - Custom Field Exam Title not populating laterality.

   Files included are:

   a) WCFService.dll
   b) WCFService.pdb

2. Logged as Redmine bug 1640 - Can't open image request editing form from Image request WL.
   Files included are:
   1) UILib.dll

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

# 3. Who is affected

All previous versions of build 37. Current build is 1.2.37.13040.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. Installing

1) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   Restart each service

2) Copy the UILib.dll file from the GUI ZIP Updates folder and replace the file of the same name in the rRIS_1.2.37.13040.zip file.
   This may require you to unzip the file, copy and replace the UILib.exe file. Zip the contents again by select all of the files in the rRIS_1.2.37.13040 folder, right click, select Send to > Compressed (zipped) folder.

   Rename the .zip file that was created to rRIS_1.2.37.13040a.zip. Move this .zip file up one directory. Remove the old rRIS_1.2.37.13040.zip file and the uncompressed rRIS_1.2.37.13040 folder.

   The next time the users log in, updates will automatically be detected because the .zip file has been renamed.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This server update has been produced to fix bugs required for production setting, or to complete an enhancement requested for production.

This server update includes the following:

1. Logged as Redmine bug 1681 – Patient Merge is not creating a data clob in the action data table. This causes all messaging to stop when the action is processed by the wedge due to error.

2. Logged as Redmine bug 1691 – Perform Exam – Error on click of complete button: "error determining study keys for status update". This error was occurring when the scanner was changed in the perform exam window and tried to complete exam.

3. Logged as Redmine bug 1688 - View Edit on Scheduled study prompts for MU required fields

4. Logged as Redmine bug 1687 – Forms not available from print forms option after upgrade. This is an option in the work lists. From context menu > Print Forms > forms that have a practice specified are not available.

5. Logged as Redmine bug 1686 – Min Max wait time system config code value not used in new appointment

6. Logged as Redmine bug 1685 – Merge Request WL error when attempted to view the WL

7. Logged as Redmine bug 1682 – Bypass MU required on "Checking In". Currently when registering a patient, the MU fields will be required when "checking in" the patient. Desired to have it only when arriving.

8. Logged as Redmine bug 1690 – CDS Job Manager not running

9. Logged as Redmine bug 1692 - Export CCR button on MU tab should have the patients name in file name

10. Logged as Redmine bug 1693 - Searching for appointment time excludes the last day in the search range

11. Logged as Redmine bug 1694 - device template assigned to device and procedure with date override has issues using full range

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

12. Logged as Redmine bug 1674 - Access String Reporting.ReleaseOthersTentativeSignedReports missing

13. Logged as Redmine bug 1695 - Concurrency exception when editing templates

Files included for this server update:

1. GUI ZIP Updates folder contains
    a. Ris.exe
    b. WCFClient.exe

2. RIS Service Update folder contains:

# 1. Purpose

This server update has been produced to fix bugs required for production setting, or to complete an enhancement requested for production.

This server update includes the following:

1. Logged as Redmine bug 1689 – Work list views (my views) are no longer available after upgrade

2. Logged as Redmine bug 1702 – Clinical Summary did display the modality type description and now it will display all modality type descriptions for that day

3. Logged as Redmine bug 1679 – Receipt issue resulting in incorrect total payments for patient.

4. Logged as Redmine bug 1696 – Suspended transcriptions are not viewable by the rad in the suspended work list.

5. Logged as Redmine bug 1699 – Unable to sync with NewCrop

6. Logged as Redmine bug 1703 – Memory leak when questionnaire tab is not shown in perform exam window.

7. Logged as Redmine bug 1704 – Error in IVT window "Failed to enable constraints" when closing Manage Policies window

8. Logged as Redmine bug 1705 – Application hang when using minimized dictation control

9. Logged as Redmine bug 1701 – Unable to create an outside read

10. Logged as Redmine bug 1700 – Error on reschedule from "Closed Rooms Reschedule" work list.

11. Logged as Redmine bug 1707 – CDSJobManager is not processing jobs missing "performed by user id"

12. Logged as Redmine bug 1680 – Document Distribution engine queue poller error when referring address unknown

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

13. Logged as Redmine bug 1698 – Application hang after transcription queue is completed in batch editing mode.

14. Logged as Redmine bug 1710 – rRIS Version Number needs to display an extra .1 to display as 1.1.xxxxx

15. Logged as Redmine bug 1731 – Right click Change status to exam done creates bad data

16. Logged as Redmine bug 1722 – Reporting – Wrong default template displaying

17. Logged as Redmine bug 1723 – Studies transcribed from QA WL do not appear in Pending Dictation WL.

18. Logged as Redmine bug 1711 - Unique constraint in Tech window when Check box in patient history grid is selected and scan doc attached then try to start the exam

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This server update has been produced to fix bugs required for production setting, or to complete an enhancement requested for production.

This server update includes the following:

## Billing exception for missing billing codes

If the exam being performed has an inactive billing code or the code is set to inactive during the technologist workflow, the exam will now go to the billing exception work list and a note will be posted in the Billing Notes section.

**Figure 1.1 – Billing exception posted for studies with inactive billing codes**

## Rooms displayed next to time on details tab of schedule window

When scheduling a multi procedure order in the past the advanced search > details tab did not indicate room with the available time. The user would need to select the time and see the rooms populate in the room list box on the procedure picker row. A new column was added to the details view to show the room

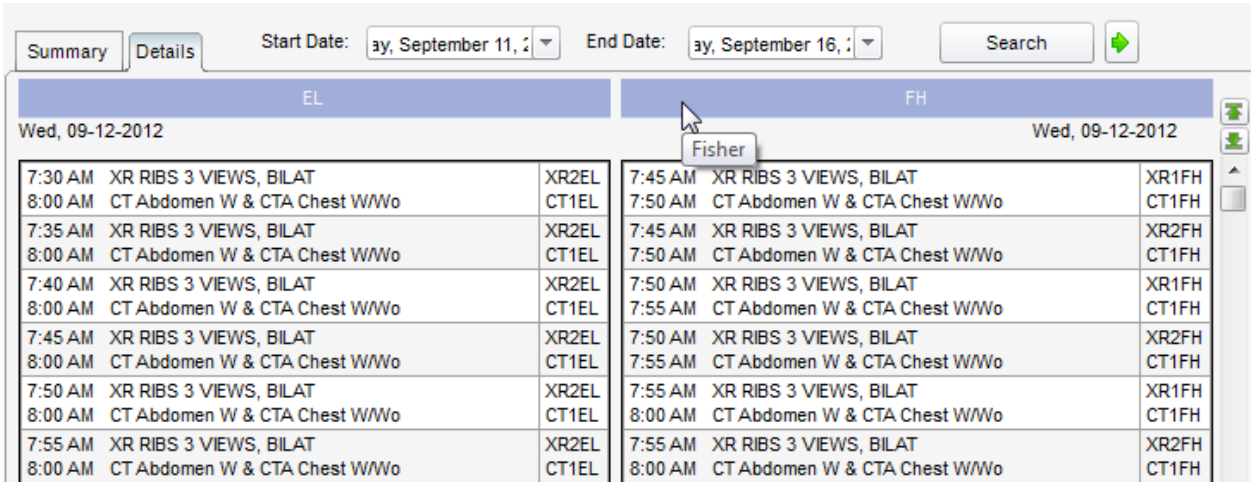

**Figure 1.2 – Details view on schedule tab**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Defects resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 1735 | Studies were being signed off on that no active billing codes were assigned | Med |
| 1736 | Outside reads were not being assigned billing codes | Med |
| 1710 | MU version number | Med |
| 1699 | NewCrop GetCredential Passing NewCropAccountSiteId instead of NewCropUsername | High |
| 1751 | COM component throwing access denied error | Med |
| 1749 | MT polling general queue is getting QA / Problem Jobs | High |
| 1748 | Assigned transcriptionist with non lowercase userid | High |
| 1762 | Remove a CC doctor from the registration screen, and save - it comes back | High |
| 1760 | CC docs get added multiple time on the perform exam screen | High |
| 1761 | Scheduled procedure can be blank after an abort | High |
| 1763 | Provided Clinical Summary | High |
| 1728 | Base template dropdown not filtering out inactive items | High |
| 1708 | Suspended jobs on polling queue will hang the application | High |
| 1515 | error loading worklist views in highway (logged 13 times in 1.5 days) | Med |
| 1755 | Duplicate section templates - When a template included duplicate sections ie multiple EXAM sections. We run into some issues. NOTE: this is a temporary solution. With problematic templates we won't insert the template, we will use the batch draft as is, and let them make the required corrections manually is anything is missing in the report. | High |

# 2. Package Contents

Files included for this server update:

1. GUI ZIP Updates folder contains
    a. ris.exe
    b. WCFClient.exe
    c. CommonLib.dll
    d. UILib.dll
    e. WSNewCropClient.exe

2. RIS Service Update folder contains:
    a. Wedge.exe
    b. Wedge.pdb
    c. CommonLib.dll
    d. CommonLib.pdb
    e. WCFService.dll
    f. WCFService.pdb
    g. WebApi.dll
    h. WebApi.pdb
    i. CDSJobManager.dll
    j. CDSJobManager.pdb
    k. SignatureApprovalService.exe
    l. SignatureApprovalService.pdb
    m. rRISServices.exe
    n. rRISServices.pdb

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 3. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

# 4. Who is affected

Previous versions of build 37.

# 5. Installing

1) Copy the files in the GUI ZIP Updates folder and replace those in the rRIS_1.2.37.13347 folder. Rename the zip file to be **rRIS_1.2.37.13665**

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

Restart each service

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# Server Update

for eRAD RIS
Version 1.0
Build 37
Update 37.007

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This server update has been produced to fix bugs required for production setting, or to complete an enhancement requested for production.

This server update includes the following:

### Defects resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 1822 | Reporting - Speech Mike 3 barcoding will not work | High |
| 1807 | Historical (imported) reports - Preview tool, and historical report distribution word-wrapping at a random spot. | High |
| 1826 | Mirth Mapping - After a patient merge, we are sending the original MRN in future messages | High |
| 1724 | Template editing - concurrency violations still intermittently are happening. Edit default template may return Concurrency violation. | High |
| 1823 | Work list - multi sort using dictated date and read stat flag. Worklist performance unacceptable | High |
| 1832 | Work list performance unacceptable at ARS | High |
| 1834 | MU - NewCrop updated EXE needs to be deployed | Med |
| 1774 | Perform Exam - When referrer has perferred Rad the Rad selected will not save on included study | Med |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 2. Package Contents

Files included for this server update:

1. GUI ZIP Updates folder contains
    a. AudioLIb.dll
    b. CommonLib.dll
    c. ris.exe
    d. WCFClient.exe

2. RIS Service Update folder contains:
    a. CDSJobManager.dll
    b. CDSJobManager.pdb
    c. CommonLib.dll
    d. CommonLib.pdb
    e. DDEngine.dll
    f. DDEngine.pdb
    g. rRISServices.exe
    h. rRISServices.pdb
    i. WCFService.dll
    j. WCFService.pdb
    k. WebApi.dll
    l. WebApi.pdb
    m. Wedge.exe
    n. Wedge.pdb

3. Mirth Mappings\Outbound\eRadPACS folder contains:
    a. 04_PID.js

4. SQL Folder contains:
    a. B37.007_updates.sql

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 3. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

# 4. Who is affected

Previous versions of build 37.

# 5. Installing

1) Copy the files in the GUI ZIP Updates folder and replace those in the rRIS_1.2.37.13665 folder. Rename the zip file to be **rRIS_1.2.37.13807**

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   Restart each service

3) Copy the PID.js file into the MirthMappings/Outbound/eRadPACS directory. If any custom changes at the site have been made (which shouldn't be), they will need to be merged manually.

4) Run the B37.007_updates.sql file against the eRAD RIS database instance.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This server update has been produced to fix bugs required for production setting, or to complete an enhancement requested for production.

This server update includes the following:

## Defects resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 1920 / 1986 | The MU Quick Add Edit has a data error. It should be Metformin and not MelFormin. | Med |
| 1918 | Managememt Reports - Daily Schedule requires chief complaint to be added to the report. | Med |
| 1926 | Error when you right-click to add an MRN to the alternate MRN grid | Med |
| 1939 / 1940 | Webservices including all studies from the same appointment in the action data | High |
| 1931 | Cannot open Labwork WL | High |
| 1912 | Management Report - Unread Exams, request to filter report | Med |
| 1922 | Management Report - Imaging Center Manager (ICM) Dashboard inconsistency | Med |
| 1941 / 1932 | Reporting - Users can dictate on cancelled exams with Report on Accession number | High |
| 1942 | Add Unknown referring - removing access does not hide the button | Med |
| 1925 | Appointment Book - Edit schedule does not remove the old one until the window is re-opened | Med |
| 1788 | Billing Exception - Editing billing codes will clear billing notes field | Med |
| 1938 | Error on reschedule of a single study to scheduling a series | Med |
| 1929 | PACS Integration - Relevance not working when adding Modailty Type criteria | High |
| 1886 | Relevance Lookup Editor - cant delete row | High |
| 1934 | Relevance Calculation - is evaluating inactive rows | High |
| 1947 | Register x was not updating the additional visit contact information | Med |
| 1948 | RTAT Summary report slow | Med |
| 1989 | Problem resolved studies that are unassigned not appearing on Pending Dictation WL | High |
| 1999 | Requesting Addendum on study to unassigned rad will not appear on Pending Dictation WL | High |
| 1998 | Duration not correctly being assigned correctly on search results | Med |
| 1993 | Studies appeared to move from on order to another when HL7 confirmation messages were processed | High |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | |
|---|---|---|
| 1990 | Perform Exam - Study can be completed without tech notes | Med |
| 1598 | WPR workflow, multiple same accession numbers | Med |
| 1933 | Daily Clean scripts for a large database take very long to run and will inflate transaction log | Immediate |
| 2006 | Appointment booking check lock | Med |
| 2005 | Scheduling a procedure plan was casuing issues with duration of 0 not finding results | Med |
| 2007 | Radiologist middle name needed on report signature | High |
| 1985 | Confirmation Screen - Save button bumps the items off | Med |
| 2011 | WPR 000 not creating a new accession number | High |
| 2014 | Durations for search results not always returning as expected | Med |
| 2010 | Resolve problem to assigned rad saves as user who resolved | High |
| 2012 | Appointment Book refresh issue | Med |
| 1983 | PDF Import causes major problem with FAX PDF Files | Med |
| 1949 | Management Reports - Radiologist Dashboard | Med |
| 1859 | Removing procedures picker rows and adding again will return error on Save As Order | Med |
| 2023 | Study comes back to IVT is someone opens the study in View Edit, and Billing | High |
| 2004 | Error scheduling book x on new patient | High |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Package Contents

Files included for this server update:

1. GUI ZIP Updates folder contains
    a. AudioLib.dll
    b. AudioLib.pdb
    c. CDSJobManagerConsoleClient.exe
    d. CDSJobManagerConsoleClient.pdb
    e. CommonLib.dll
    f. CommonLib.pdb

t. Wedge.exe
u. Wedge.pdb

3. SQL folder contains:
   a. 37.011_updates.sql

4. Reporting.zip folder contains all of the current management reports:
   a. ParentFolder that contains
      i. dashboards (9 files)
      ii. management reports (95 files contained in various sub folders)
      iii. marketing (9 files)
      iv. samples (numerous files in various sub folders)
      v. sub-reports (8 files)

   b. scripts folder that contains the files required to run DeployReports.bat
      i. CreateParent.fldr.rss
      ii. DeleteAndCreateCoreFolders.rss
      iii. DeleteAndCreateSampleFolders.rss
      iv. DeleteCoreFolders.rss
      v. DeleteSamples.rss
      vi. ListFolders.rss
      vii. RISDataSource.rds.rss

   c. DeployReports.bat

   **NOTE:** This folder has been compressed and added to a .zip file to reduce size for file transfer. The folder must be "unzipped" before the reports can be deployed.

## 5. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

## 6. Who is affected

Previous versions of build 37.
Server updates may not be cumulative; therefore this server updated must be applied directly to the previous server update.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 7. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|
| 37 | - | 1.2.37.12843 | 1.2.37.12782 | 1.2.37.12843 | 1.2.37.12843 | |
| 37 | 1 | 1.2.37.13040 | 1.2.37.13040 | 1.2.37.13039 | 1.2.37.13003 | |
| 37 | 2 | 1.2.37.13069 | 1.2.37.13040 | 1.2.37.13069 | 1.2.37.13003 | |
| 37 | 3 | 1.2.37.13069 | 1.2.37.13040 | 1.2.37.13069 | 1.2.37.13003 | Just WebAPI updated, no version changes |
| 37 | 4 | 1.2.37.13171 | 1.2.37.13040 | 1.2.37.13165 | 1.2.37.13171 | |
| 37 | 5 | 1.2.37.13347 | 1.2.37.13040 | 1.2.37.12979 | 1.2.37.12979 | Bug was discovered with version numbers, this is why it appears we went backwards in the version number but we really did not. |
| 37 | 6 | 1.2.37.13665 | 1.2.37.13040 | 1.2.37.13580 | 1.2.37.12979 | |
| 37 | 7 | 1.2.37.13807 | 1.2.37.13040 | 1.2.37.13799 | 1.2.37.13807 | |
| 37 | 8 | 1.2.37.13807 | 1.2.37.13040 | 1.2.37.13827 | 1.2.37.13807 | |
| 37 | 9 | 1.2.37.13807 | 1.2.37.13040 | 1.2.37.13839 | 1.2.37.13807 | |
| 37 | 10 | 1.2.37.13895 | 1.2.37.13040 | 1.2.37.13895 | 1.2.37.13895 | |
| 37 | 11 | 1.2.37.14161 | 1.2.37.13040 | 1.2.37.14161 | 1.2.37.14161 | |

## 8. Installing

1) Copy the files in the GUI ZIP Updates folder and replace those in the rRIS_1.2.37.13895.zip folder. Rename the zip file to be **rRIS_1.2.37.14161.zip**

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

Restart each service

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

3) Run the B37.011_updates.sql file against the eRAD RIS database instance.

4) Copy the Reporting.zip file to the local server. Unzip the contents before running the DeployReports.bat file. Completing the DeployReports.bat file will replace all core management reports and all samples if you choose yes to the associated prompt. It will not affect any custom folders that have been created on the report server.

   To get the latest Management Reports:
   a) Run the DeployReports.bat file by double clicking on the file
   b) Enter the report server name: Example – MDBAL01RIS001. The report folders on the server will be displayed
   c) Enter the root folder to deploy the reports : Example - Baltimore Sandbox
   d) Enter the build number – Example b37
   e) Next question will ask if you want to deploy core management reports – input y
   f) Next question will ask if you want to deploy sample files – input n
   g) Next question will ask if you wish to create a datasource – input n. (Note: creating a datasource would be used for a new installation and creating SQL Server Reporting Services for the first time)

   The window will look like this:

# Server Update

For eRAD RIS
Version 1.0
Build 37
Update 37.012

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# Table of Contents

1. Purpose ..... 3
Defects resolved ..... 3
2. Package Contents ..... 4
4. Intended Audience ..... 5
5. Who is affected ..... 5
6. eRAD RIS Release Version Numbers ..... 5
7. Installing ..... 6

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This server update has been produced to fix bugs required for production setting, or to complete an enhancement requested for production.

This server update includes the following:

## Defects resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 1831 | View images button and retrieving images from archive not working | High |
| 2049 | Object Reference not set to an instance of an object error when editing an order | Med |
| 2059 | Scheduling from appointment book = Teleric error | High |
| 2076 | Issue with logos displaying in reports | Med |
| 2081 | VR2 - Messages from Merge with alternate patient ids no longer Merging | Urgent |
| 2090 | ris appointment search not returning expected results | High |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Package Contents

Files included for this server update:

1. GUI ZIP Updates folder contains
    a. CommonLib.dll
    b. CommonLib.pdb
    c. Ris.exe
    d. Ris.pdb
    e. UILib.dll
    f. UILib.pdb
    g. WCFClient.exe
    h. WCFClient.pdb

2. RIS Service Updates folder contains
    a. CDSJobManager.dll
    b. CDSJobManager.pdb
    c. rRISServices.exe
    d. rRISServices.pdb
    e. SignatureApprovalService.exe
    f. SignatureApprovalService.pdb
    g. WCFService.dll
    h. WCFService.pdb
    i. Wedge.exe
    j. Wedge.pdb

3. SQL folder contains:
    a. 37.012_updates.sql

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 4. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

## 5. Who is affected

Previous versions of build 37.
Server updates may not be cumulative; therefore this server updated must be applied directly to the previous server update.

## 6. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|
| 37 | - | 1.2.37.12843 | 1.2.37.12782 | 1.2.37.12843 | 1.2.37.12843 | |
| 37 | 1 | 1.2.37.13040 | 1.2.37.13040 | 1.2.37.13039 | 1.2.37.13003 | |
| 37 | 2 | 1.2.37.13069 | 1.2.37.13040 | 1.2.37.13069 | 1.2.37.13003 | |
| 37 | 3 | 1.2.37.13069 | 1.2.37.13040 | 1.2.37.13069 | 1.2.37.13003 | Just WebAPI updated, no version changes |
| 37 | 4 | 1.2.37.13171 | 1.2.37.13040 | 1.2.37.13165 | 1.2.37.13171 | |
| 37 | 5 | 1.2.37.13347 | 1.2.37.13040 | 1.2.37.12979 | 1.2.37.12979 | Bug was discovered with version numbers, this is why it appears we went backwards in the version number but we really did not. |
| 37 | 6 | 1.2.37.13665 | 1.2.37.13040 | 1.2.37.13580 | 1.2.37.12979 | |
| 37 | 7 | 1.2.37.13807 | 1.2.37.13040 | 1.2.37.13799 | 1.2.37.13807 | |
| 37 | 8 | 1.2.37.13807 | 1.2.37.13040 | 1.2.37.13827 | 1.2.37.13807 | |
| 37 | 9 | 1.2.37.13807 | 1.2.37.13040 | 1.2.37.13839 | 1.2.37.13807 | |
| 37 | 10 | 1.2.37.13895 | 1.2.37.13040 | 1.2.37.13895 | 1.2.37.13895 | |
| 37 | 11 | 1.2.37.14161 | 1.2.37.13040 | 1.2.37.14161 | 1.2.37.14161 | |
| 37 | 12 | 1.2.37.14285 | 1.2.37.13040 | 1.2.37.14300 | 1.2.37.14285 | |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 7. Installing

1) Copy the files in the GUI ZIP Updates folder and replace those in the rRIS_1.2.37.14161.zip folder. Rename the zip file to be **rRIS_1.2.37.14285.zip**

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   Restart each service.

3) Run the B37.012_updates.sql file against the eRAD RIS database instance.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# Server Update

For eRAD RIS
Version 1.0
Build 37
Update 37.013

# 1. Purpose

This server update has been produced to fix bugs required for production setting, or to complete an enhancement requested for production.

This server update includes the following:

## Defects resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 1442 | Save IVT with large Precert note generates String or binary data would be truncated error | Normal |
| 2107 | error on opening registration when patient has multiple orders for today | Normal |
| 2122 | selecting search result times/typing date/times in manually could cause the wrong duration override to ber used | Normal |
| 2098 | Registration - When registering an exam for a patient with multiple exams for the same day | High |
| 2081 | VR2 - Messages from Merge with alternate patient ids no longer Merging | Urgent |
| | | |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Package Contents

Files included for this server update:

1. GUI ZIP Updates folder contains
    a. CommonLib.dll
    b. CommonLib.pdb
    c. Ris.exe
    d. Ris.pdb
    e. UILib.dll
    f. UILib.pdb
    g. WCFClient.exe
    h. WCFClient.pdb

2. RIS Service Updates folder contains
    a. CDSJobManager.dll
    b. CDSJobManager.pdb
    c. CommonLib.dll
    d. bommonLib.pdb
    e. rRISServices.exe
    f. rRISServices.pdb
    g. ScheduledTaskManager.dll
    h. ScheduledTaskManager.pdb
    i. SignatureApprovalService.exe
    j. SignatureApprovalService.pdb
    k. WCFService.dll
    l. WCFService.pdb
    m. Wedge.exe
    n. Wedge.pdb

3. SQL folder contains:
    a. B37.013_updates.sql

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 4. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

## 5. Who is affected

Previous versions of build 37.
Server updates may not be cumulative; therefore this server updated must be applied directly to the previous server update.

## 6. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|
| 37 | - | 1.2.37.12843 | 1.2.37.12782 | 1.2.37.12843 | 1.2.37.12843 | |

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 38. This version of eRAD RIS is referred to as Build 1.2.38.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation instruction for the eRAD RIS client are included with this software release and can be found in the _Documentation > Installation folder. They have also been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.38 is considered a new core release of the application and will require a reinstallation of eRAD RIS. This is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 4. New Features and Enhancements

## Document Distribution – Manual Job Column

A new column titled Manual Job has been added to the Distribution WL and Distribution History by Date WL. A check mark in this column indicates that the job was created manually, otherwise the job was system created.

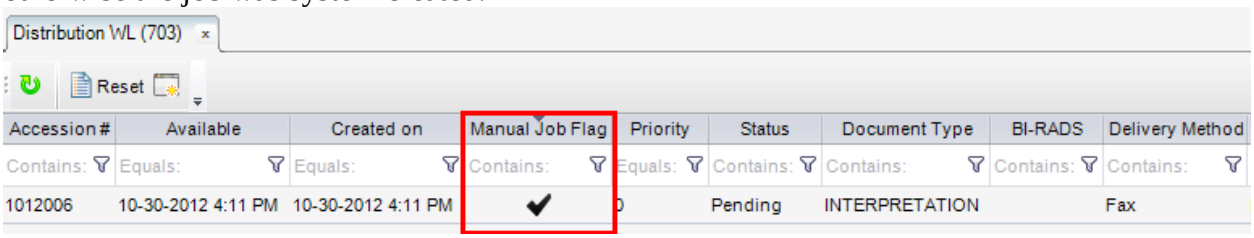

**Figure 4.1 – Document Distribution WL displaying new Manual Job column**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Firmware Version Check

Users have experienced issues in the past when the firmware version was old and out of date. To circumvent these issues a firmware version check of the SpeechMike can now be performed at the time of logging into the application.

A new lookup table called Firmware that allows the eRAD RIS administrator to add different models numbers of SpeechMikes, the firmware at which it should be at, a description for the admins as to why this firmware upgrade is being requested, and if the models and version prompt should be active.

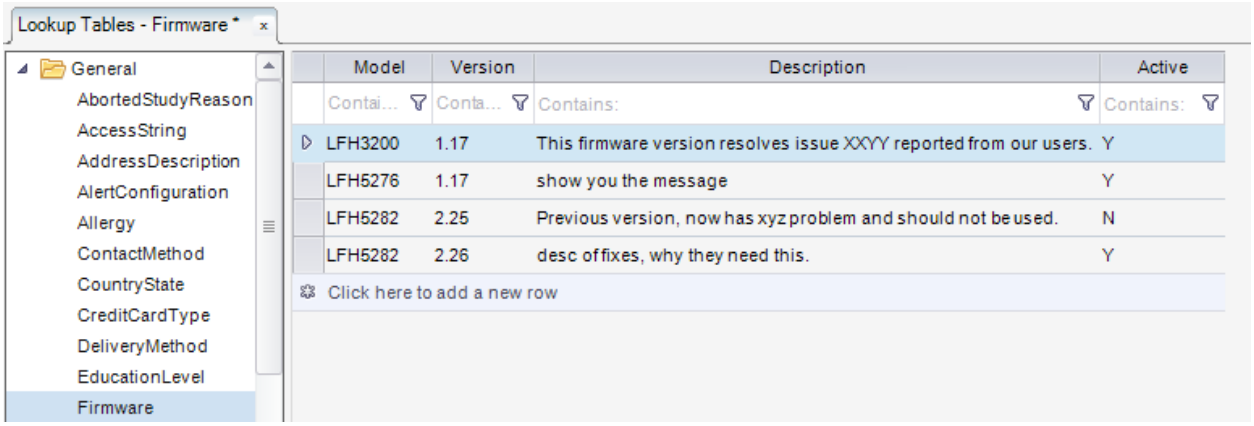

**Figure 4.2 – Firmware lookup table**

If the firmware version of the SpeechMike is not met, the user will be prompted with the following message upon login of eRAD RIS.

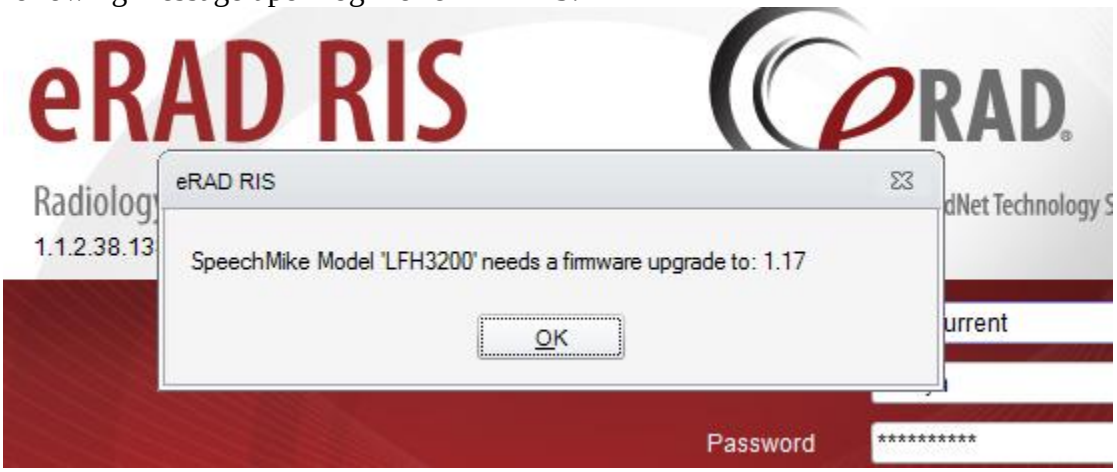

**Figure 4.3 – Message prompt displayed when Model XX firmware does not match with lookup**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use Clinical Summary Reports

The Clinical Summary Report is a summary of the patients visit. Details in the report include patient name, date of exam, modality description (shows all studies for the day based off of procedure group description), reason for the exam (chief complaint), allergies and severity, patient medications, relevant history (medical history) and any pending appointments the patient may have.

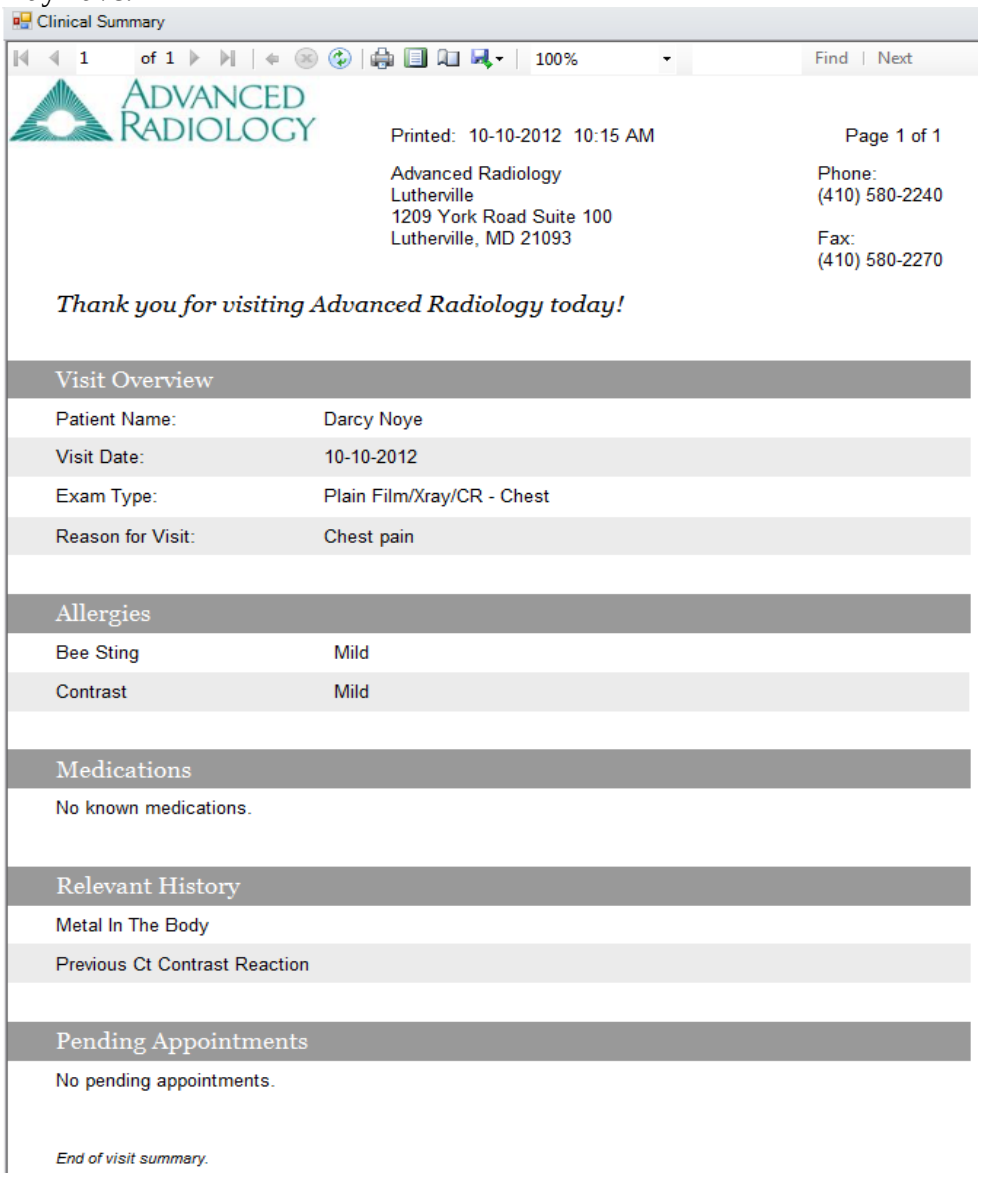

**Figure 4.4 – Print preview of Clinical Summary Report**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The report is configured in the Forms and Labels lookup editor with form category of Exam. Printing criteria can be configured to print upon a specific action (such as checking in). The form can also be accessed from work lists context menu > print forms option. This opens the Print Forms window. From this window the report can be previewed as displayed in the figure above and also printed from the preview window. It can also be sent directly to the printer without preview by selecting the Print check box for Clinical Summary and selecting the OK button.

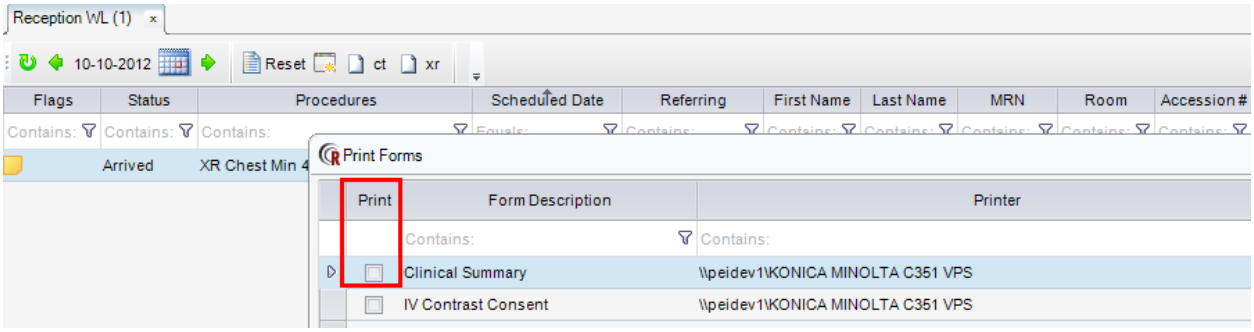

**Figure 4.5 – Print Forms window from Reception WL**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use Quick Add Edit Dialog Changes

Within the Quick Add Edit Dialog window, two new options have been added under Medical History. Hypertension is linked to Indication (ICD-9) code 401.9 and Renal Disease is linked to 593.9.

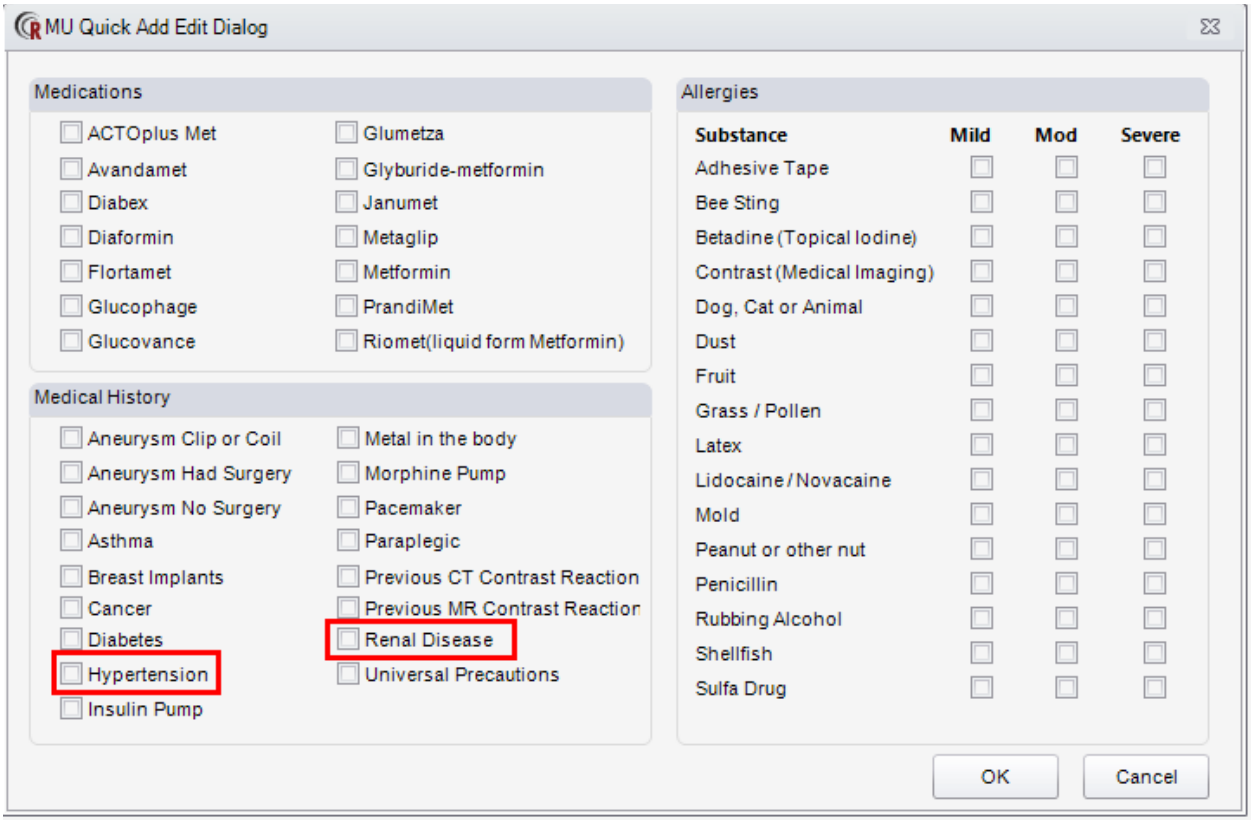

**Figure 4.6 – MU Quick Add Edit Dialog additions**

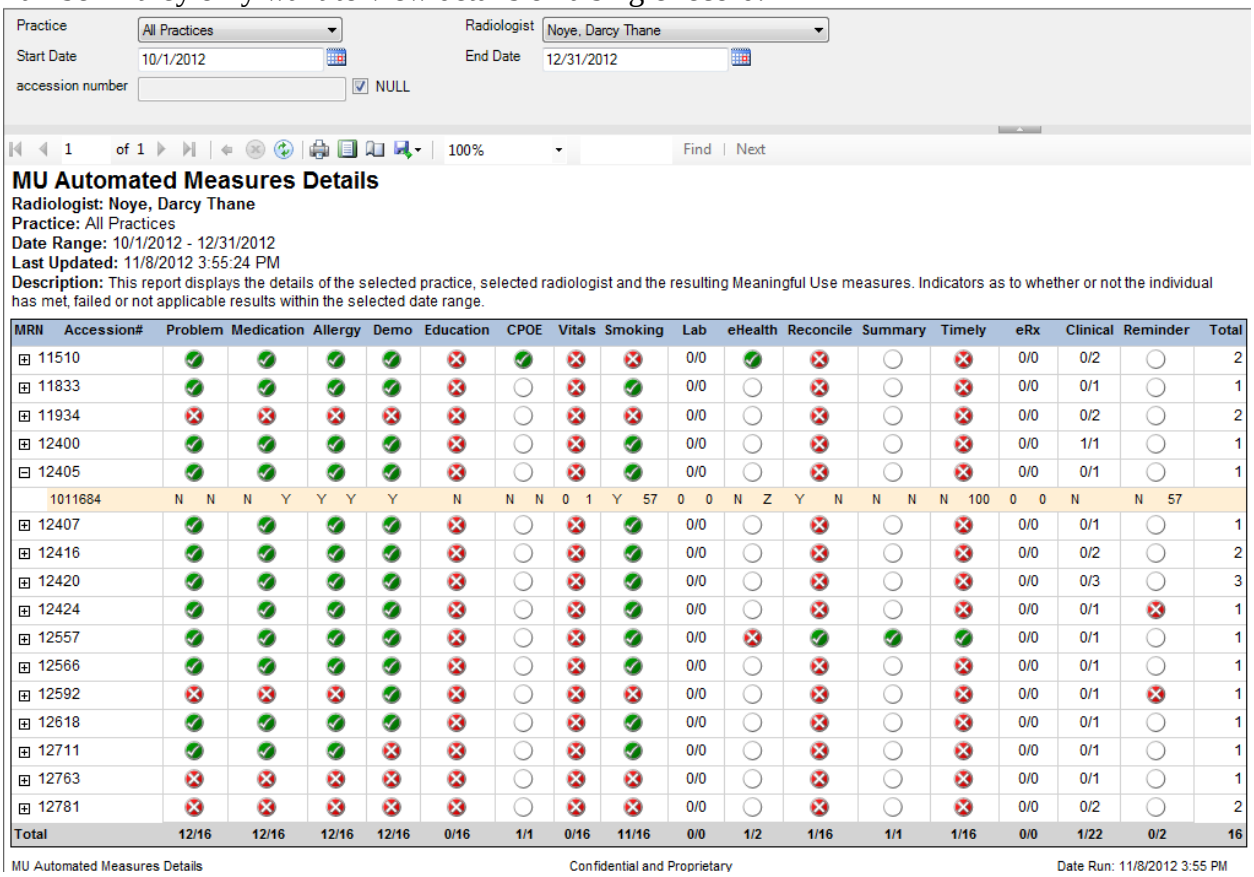
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Management Report - Meaningful Use Automated Measures Details

The MU Automated Measures Details report was created to assist in determining which patient is missing meaningful use criteria. The report is sorted by patient id (MRN). The user has the ability to search by all practices or individual practice. A Radiologist must be selected along with a specific reporting period. The user also has the ability to search for a patient accession number if they only want to view details on a single record.



Practice: All Practices | Radiologist: Noye, Darcy Thane
Start Date: 10/1/2012 | End Date: 12/31/2012
accession number: NULL

1 of 1 | 100% | Find | Next

**MU Automated Measures Details**

**Radiologist:** Noye, Darcy Thane
**Practice:** All Practices
**Date Range:** 10/1/2012 - 12/31/2012
**Last Updated:** 11/8/2012 3:55:24 PM
**Description:** This report displays the details of the selected practice, selected radiologist and the resulting Meaningful Use measures. Indicators as to whether or not the individual has met, failed or not applicable results within the selected date range.

| MRN | Accession# | Problem | Medication | Allergy | Demo | Education | CPOE | Vitals | Smoking | Lab | eHealth | Reconcile | Summary | Timely | eRx | Clinical | Reminder | Total |

MU Automated Measures Details | Confidential and Proprietary | Date Run: 11/8/2012 3:55 PM

**Figure 4.7 – MU Automated Measures Details**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Order Level Attachments (Scan Docs)

We use the SSRS to create a graphical representation of the order much the same as the diagnostic reports are produced for faxing. The image produced by SSRS is then attached as a scan doc to the newly created order.

These shows up as Order Level scan docs in the UI. The following screenshot shows the editing of an order for a patient that has several orders each with its own scan doc. The Show All checkbox is checked.

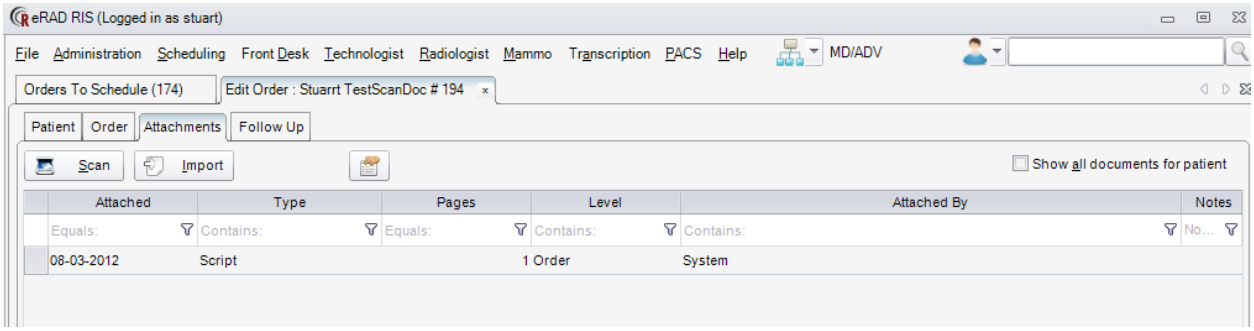

**Figure 4.8 – Patient order displaying attachment at order level**

In this build the documents can be scanned in or imported at the patient level, then from the Attachments tab changed to order level.

A new order via HL7 will result in a scan doc being automatically created and attached to the order.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Limit Practices in Template Macro Editor

The Template Macro Editor Practice selection will be auto filtered to the practices the logged in user is associated with in the Personnel Editor.

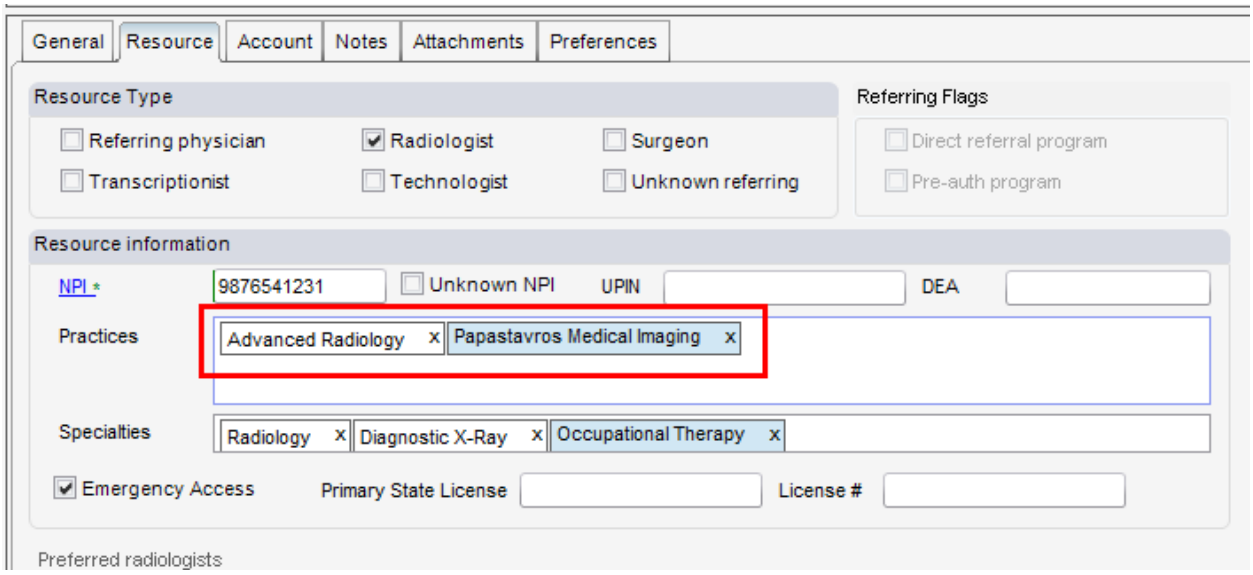

**Figure 4.9 – Displaying Practices for logged in user**

Looking at the figure above you can see that this user is associated with 2 practices. If this user opens the Template Editor, they can only create a template for these 2 practices.

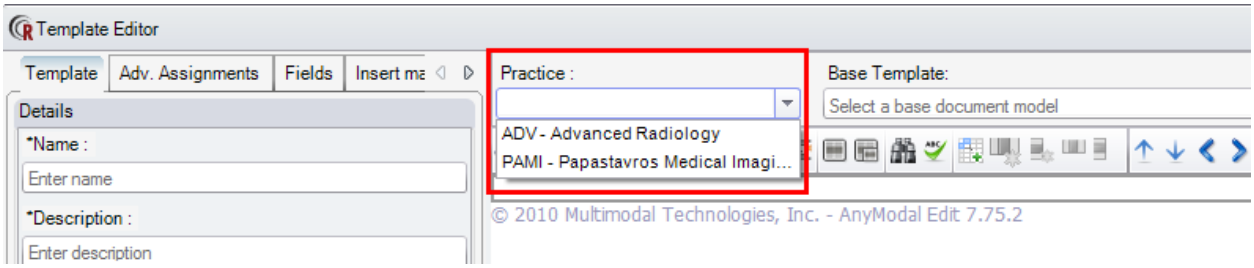

**Figure 4.10 – Template Editor filtered by practice for user**

If for some reason a practice is removed from the users personnel account, the template will still be available for edit to the user, but if creating a new one, the practice that is no longer associated will not be available.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – QA Workflow

QA Workflow has been introduced in build 38 to allow transcribed reports and signed reports to be reviewed by QA personnel.
To start explaining what is involved in implementing this process we will start with a new lookup table that has been added. The User Id column is list of all users with the resource types of either Radiologist or Transcriptionist. The Quality Review Rate is the frequency in which the users transcribed or signed report is reviewed. Only the users added in this lookup table with be sent to QA.

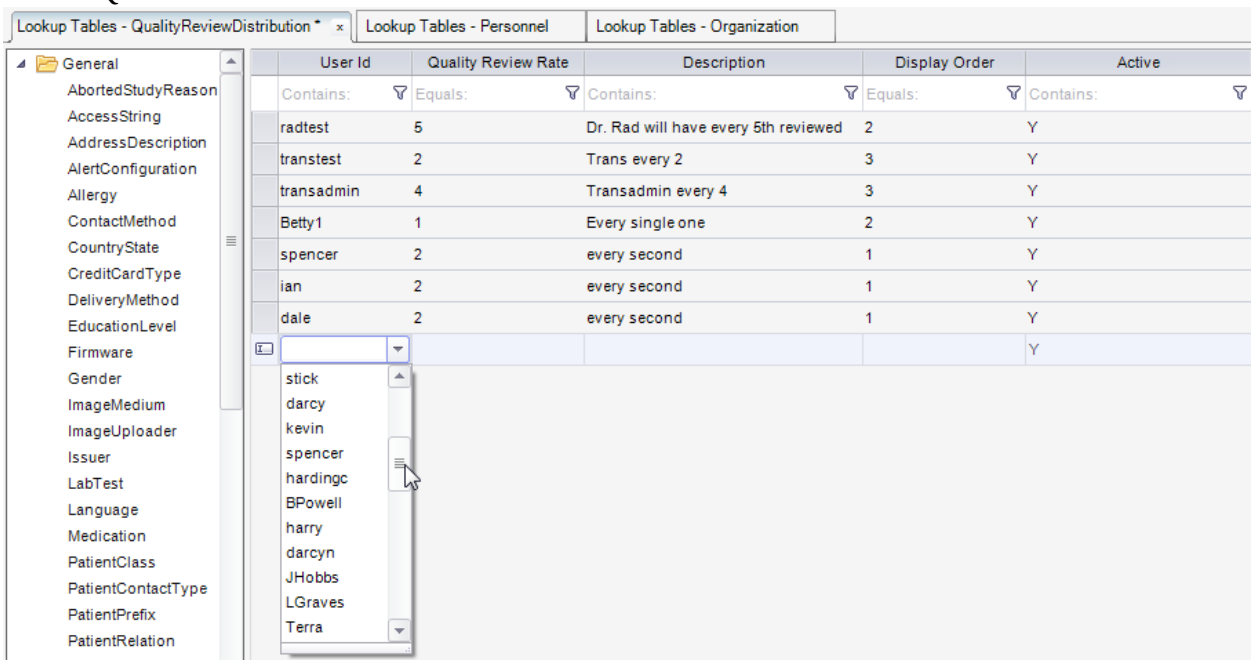

**Figure 4.11 – Quality Review Distribution lookup table**

Looking at the figure above, the user id radtest will have every 5th signed report sent to QA.

The Push Signature Service must be running on the database. The Push Signature Service, up until now has been used for the "Signed, Pending Release" feature (AKA as "Oops" or "Tentatively Signed"). The QA work flow now also utilizes this service. Even if the users don't use the "Oops" feature, this service must be running.

**Transcription Pending QA work flow**
Transcription edits will be sent to the work list Edits Pending QA WL. The work list is accessed from the Transcription menu and granted access from the access string

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

***WL.MT.ReportDraftedQA***. The work list provides many details such as who transcribed the report, who the report is currently assigned to and transcribed and dictated dates.

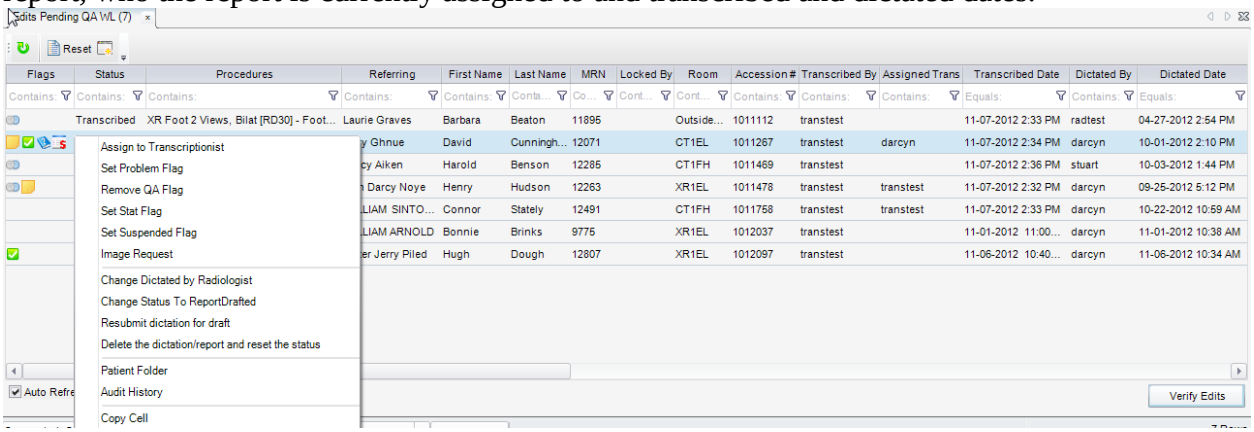

**Figure 4.12 – Edits Pending QA WL**

From this work list, QA personnel can open the Verify Edits window to begin the process of QA. Various other options can be available from the context menu based on permission for the user.

Within the Verify Edits window the QA user can verify the report or reject. If the report is verified the report is released from the QA process and the Radiologist is then able to sign the report. If the report is rejected, the QA personnel can complete the edits required and transcribe the report. The report will then be available for the Radiologist to complete the work flow.

The report can also be rejected and assigned to a particular user via the Assign To data pane within the Verify Edits window. On the initial load of the window the buttons in the lower right are Verify Edits and Close. If the Reject/Edit button is selected the Verify Edits button will change to Transcribe. If the edit is assigned to a Transcriptionist, Problem or QA, the button will then change to Assign. See figure below

If the report is assigned to a specific transcription user, the report is returned to the Reports Drafted WL for further correction

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

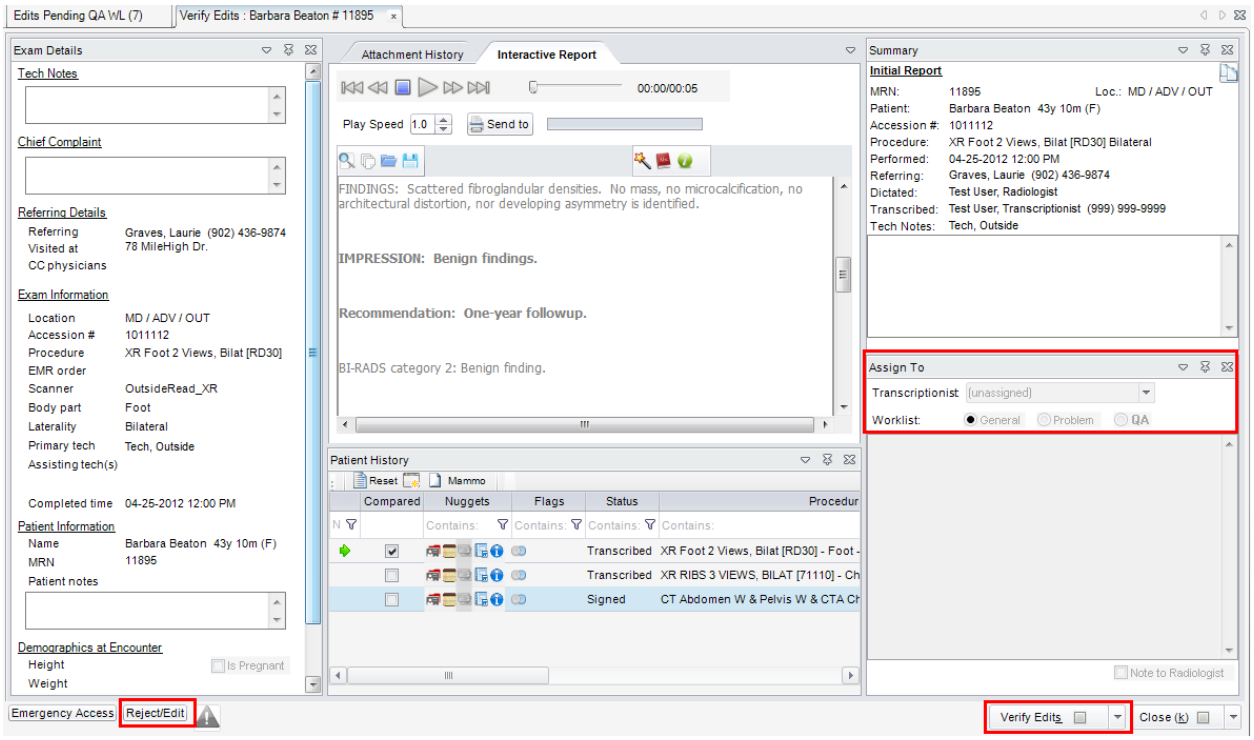

**Figure 4.13 - Verify Edits window**

## Radiologist Pending QA work flow

Radiologists can also have signed reports sent for QA. Signed reports marked for QA are sent to the All Signed Pending QA WL. Similar to the Signed Pending Release WL, the status of the study will be Signed*, until the QA personnel action the study from the Verify Report window. The WL is accessed from the Radiologist menu. The access string

The work list itself has numerous columns for display (49 in total) that offer patient information, study information, dictating and signing Radiologists, dates for signing, dictation, etc…

Access to the Signed Pending QA WL is granted from the access string ***WL.RAD.QA***

The context menu offers many option based on the user permissions and the action buttons in the lower right are Dictate and Verify Report.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

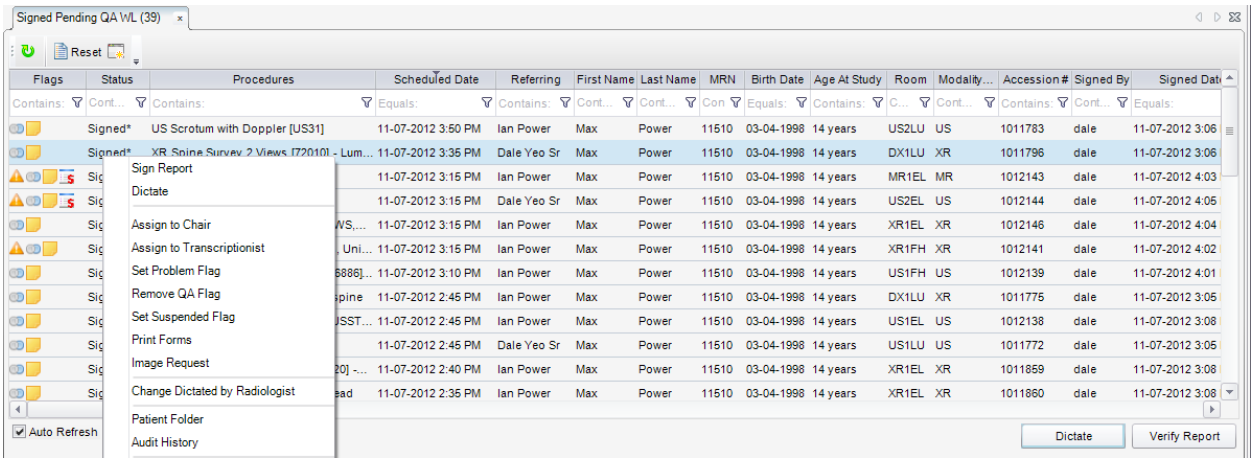

**Figure 4.14 – Signed Pending QA WL**

The Verify Report window allows the QA personnel to Verify Report, which will remove the QA flag and the study will be moved to Signed status.
If radiologists are using the "Oops" feature they will still have the same amount of hold time before the report is released. What may happen is that a radiologist's hold time is 5 minutes but it gets set to QA. If it stays in QA for 20 minutes and then gets "Verified" it will go out immediately because the "Hold Pending Release" time has expired. Alternatively if the report was verified at minute 2 it would stay in the "Pending Release" status until the 5 minutes expired.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

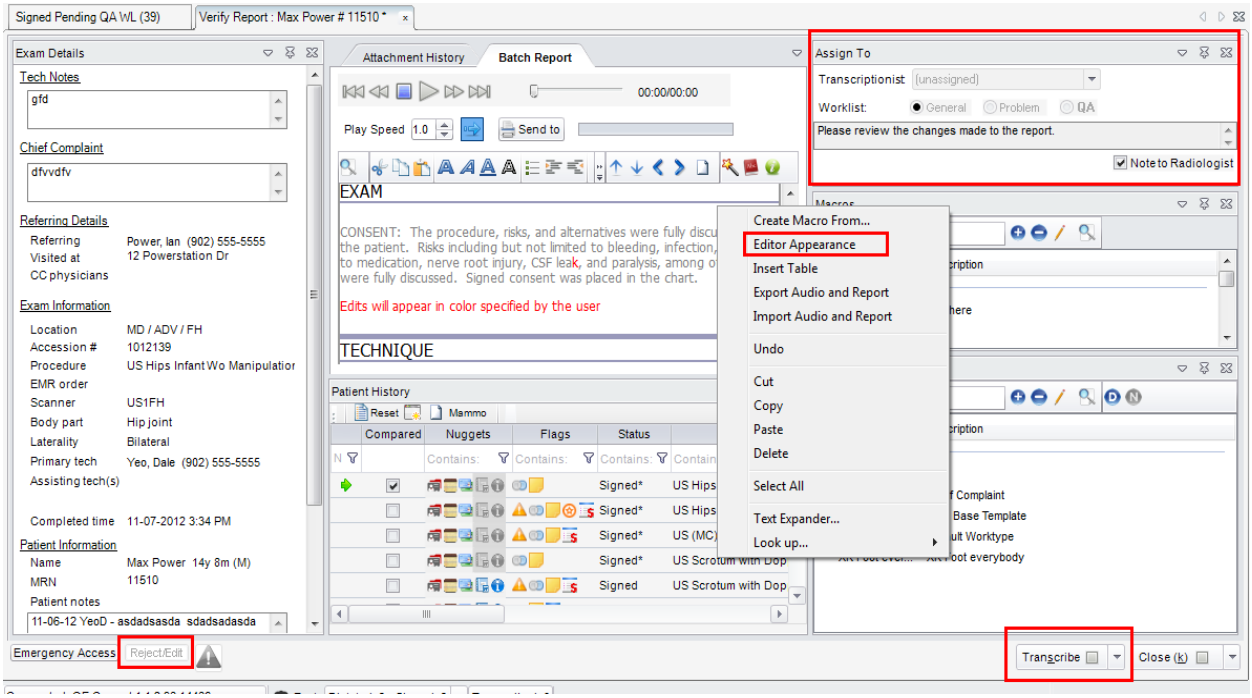

**Figure 4.15 – Verify report window displaying rejected example**

If the user determines edits or changes are required then they should click the Reject/Edit button on the bottom left which will enable all of the controls for further editing. At this point the user can edit the existing report in the same way a transcriptionist would. The notable difference in this window is the "Note to Rad" check box will be auto selected with a note entered. If the QA personnel so chooses, the can add additional notes.

When rejecting the user can then edit and transcribe the report, which will give them credit, or re-assign it to the original MT and let them make the changes required.

## QA Edit Text Color

When QA personnel edit the report after rejecting we track the edits typed and these change can be displayed in a different color. The new editor color is called QA Edit Text and is accessible from the right click Editor Appearance in report editor. This is a user setting so if user "A" changes his/her color it doesn't mean it will appear that way to the radiologist or user "B".

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Enhancements to Navigation

To assist Radiologists when reporting we have implemented three simple but very helpful features.

### Volume Meter

Similar to the volume meter we already in the MicWizard, the Radiologist reporting window will also have a volume meter for a visual confirmation that what is being dictated is recording.

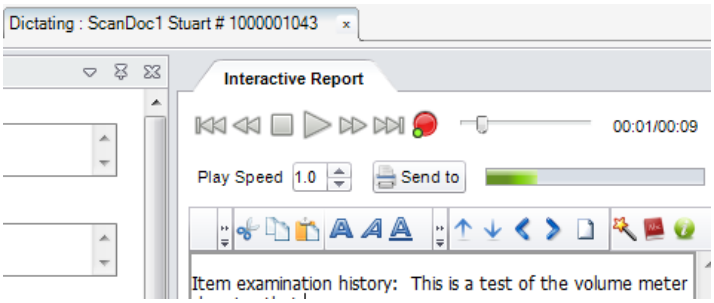

**Figure 4.16 – Volume meter in reporting window**

### Interactive Cursor

In the reporting window the Interactive Cursor is a larger cursor indication to show the current location. If the user current focus is in another application, the Radiologist may still be recording. The enlarged marked gives a visual representation of where in the report the cursor is.

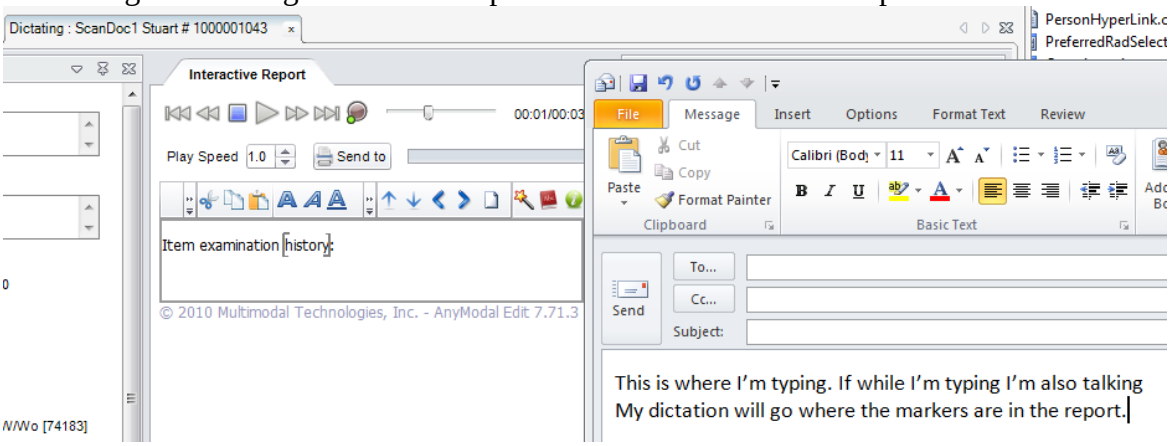

**Figure 4.17 – Markers in the report.**

### Interactive Info Promp of last voice command used

The Interactive Info Prompt is a popup message can be displayed near the users current mouse pointer position, or can be set to display in a fixed location.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

So if the Radiologist has the mouse in the PACS and they issue a command, the popup message displays the command near the mouse to let the user know the command was captured and executed.
If the popup is configured to be in a fixed location, the user can position the popup by clicking and dragging to the desired location with the mouse.

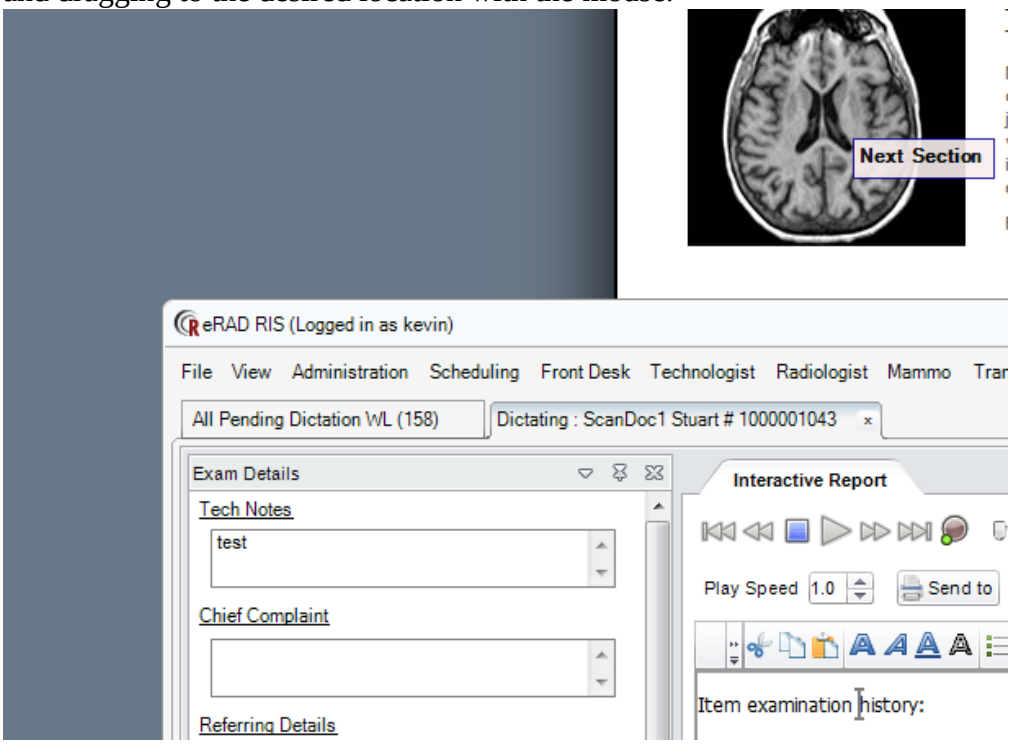

**Figure 4.18 – Interactive Info Prompt message displaying Next Section command**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The Interactive Info Prompt and Interactive Cursor options are configurable from the User Preferences window > Report Editor tab.

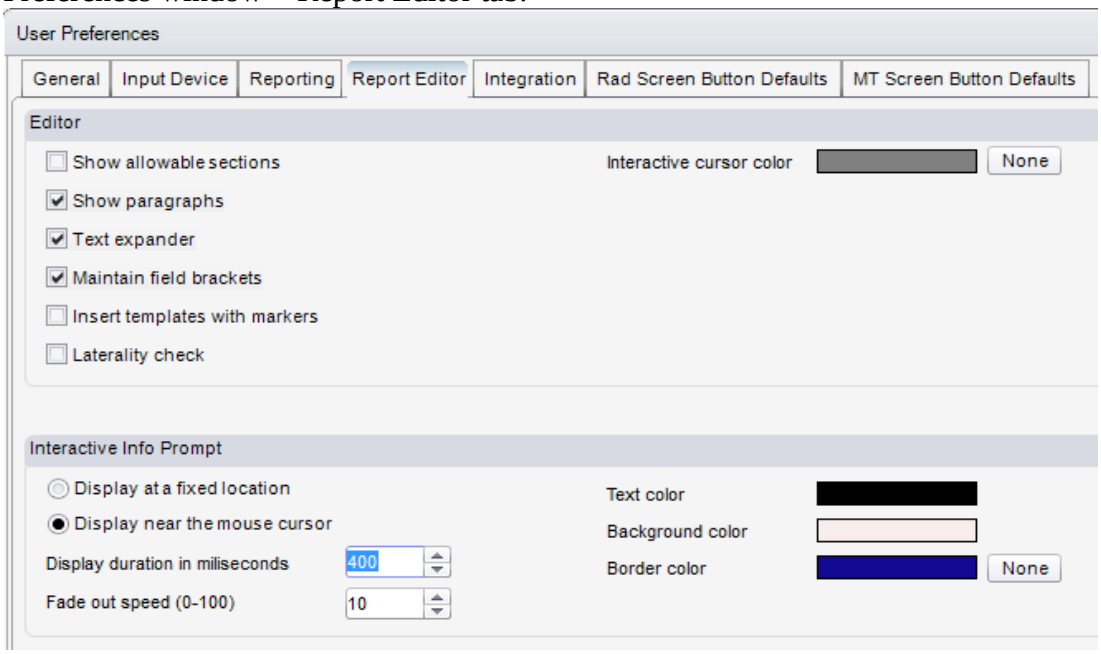

**Figure 4.19 – User Preferences window**

Interactive Cursor Color - color to use for the interactive voice cursor location when we are in another application (RIS Application is inactive).

Fixed/Mouse based Popup Location - popup opens at the mouse location; otherwise, it opens to the last position it was displayed at. Note user can click on a popup message and move it around the screen or right click on the popup message to change this behavior.

Durration/Fade out - duration in ms to display the popup before fading/ Face out is a value between 0 and 100. 1 fades slower while a larger number fades faster up to 100, which fades instantly.

Popup Color Text/Background/Border – Click on the color to change it. The border can also be set to “none”.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Auto Populating Macro Fields

When opening the reporting window, users will now have the option to automatically have values pre-populate in the Exam and Technique sections of the report editor specific to the study being read.

To accomplish this, an "Auto Macro" must be created using the Template Macro lookup editor. The following are the steps to create an "auto populating macro field"

- Administration -> Configure
- Expand procedure section and double click TemplateMacro.
- Select Auto Macro in the radio buttons just above the list.
- Click Create new…

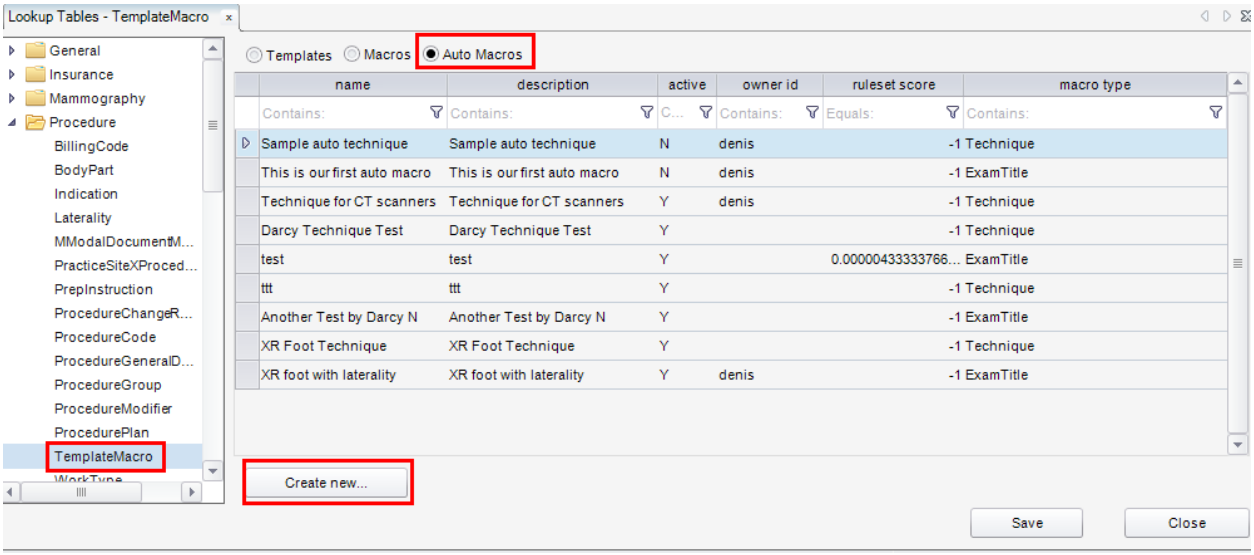

**Figure 4.20 – Template Macro lookup**

- Select an AutoMacro Type in the top drop down. (Currently there is only Exam Title and Technique)
- Enter Name and Description for the Auto Macro
- Adv. Assignments allows the user to add practices and procedures the Auto Macro is available for. If the practices and procedures are left blank, the Auto Macro will be available to all.
- Enter text in the Macro (ex: XR Knee)

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

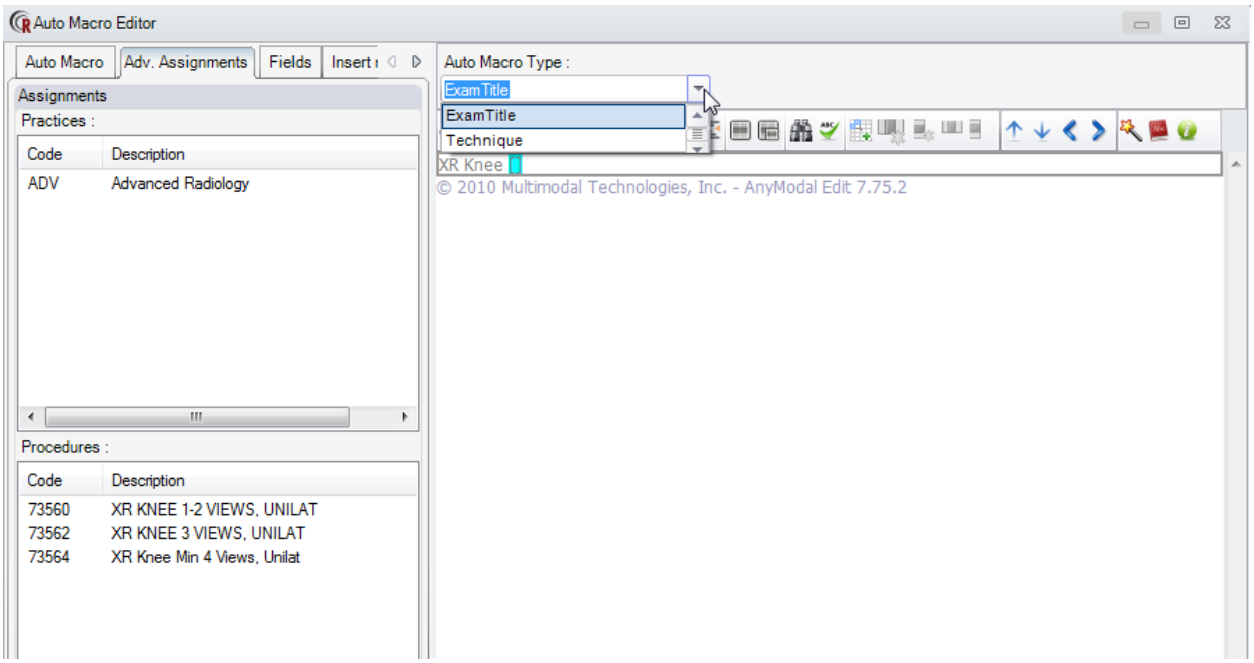

**Figure 4.21 – Auto Macro Editor window**

In the example above I have created an Auto Macro for XR Knee procedures that will populate the Exam Title with "XR Knee [laterality]". The field for laterality is a custom macro that was created earlier and inserted.

## Next Create or Edit a Template

Now that we have the Auto Macro created, we must create or edit a template(s) that will utilize it.

- Administration -> Configure
- Expand procedure section and double click TemplateMacro.
- Select Template in the radio buttons just above the list.
- Click Create new…

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

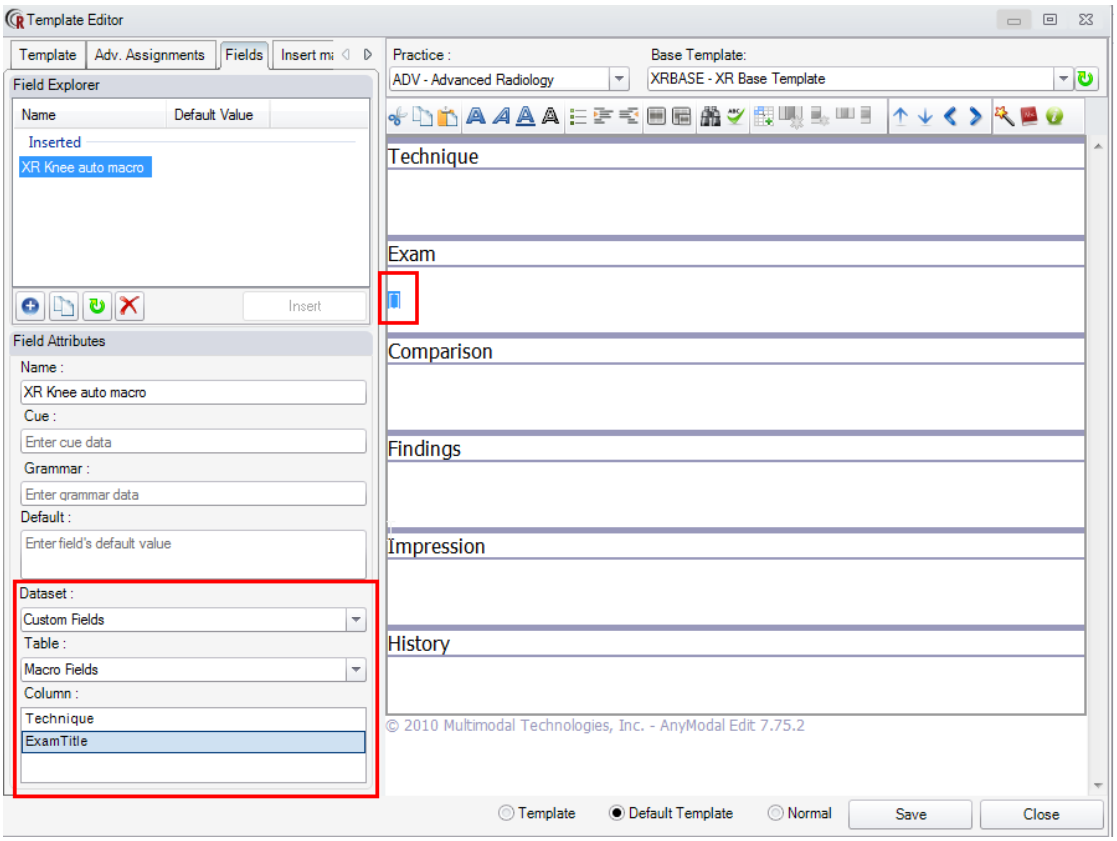

**Figure 4.22 – Creating template that auto populate exam title**

- On the fields tab select the Add field button , enter a field name.
- Dataset select **Custom Field**
- Table select **Macro Fields**
- Column selects either **Technique or Exam Title**. This should match the Auto Macro Type that was chosen earlier.
- Insert the field in the template
- The template must be assigned to a specific practice, and a base template selected
- Procedure(s) and users can be assigned. A default owner can also be set. In this example the template is available to the same procedures selected in the Auto Macro.
- Save the template.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Now when opening a procedure the template is assigned to the Exam section within the editor will be auto populated with the exam title and laterality.

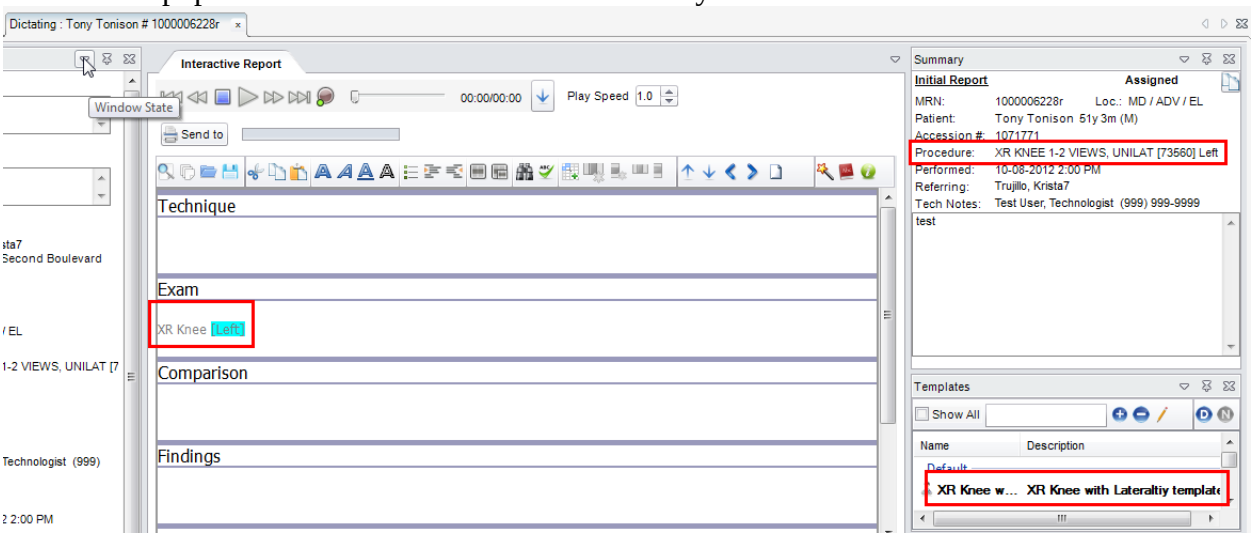

**Figure 4.23 – Dictate window displaying auto populated exam title**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Release Report Workflow Enhancements

A couple of minor additions have been added for the Release Report Workflow.

First addition is the Signed, Pending Release WL has had the context menu option to "Set Suspended Flag" added. Once the Suspended Flag is set, the study is removed from the Signed, Pending Release WL and will appear on the Suspended WL. Also, when the Suspended flag is removed, the study will reappear on the Signed Pending Release WL

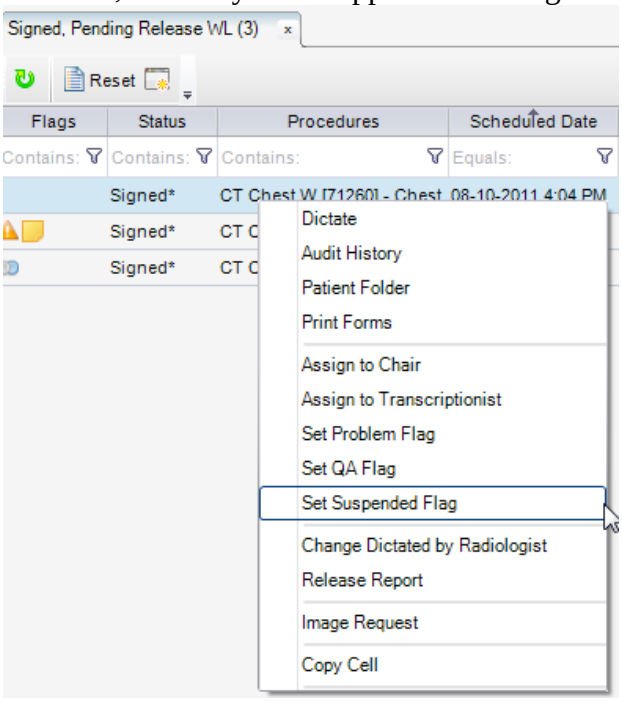

**Figure 4.24 – Signed, Pending Release WL context menu options**

Second addition is a new access string called "Reporting.ReleaseOthersTentativeSignedReports". This access string will allow other users who did not sign the report, have the option to manually release the report from the context menu.

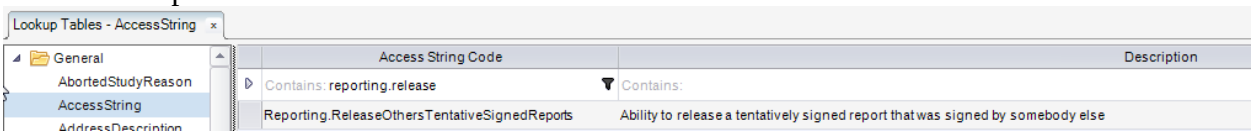

**Figure 4.25 – Access string lookup displaying new string "Reporting.ReleaseOthersTentativeSignedReports"**

As always, it is suggested that the access string permission be set at the User Group level and not from the Access String lookup.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – New User Preference for SpeechMike and Speech Commands

Two new Speechmike button actions have been added in Build 38. The DeleteField and DeleteFieldAndMoveNext options can be assigned to buttons on your Speechmike.

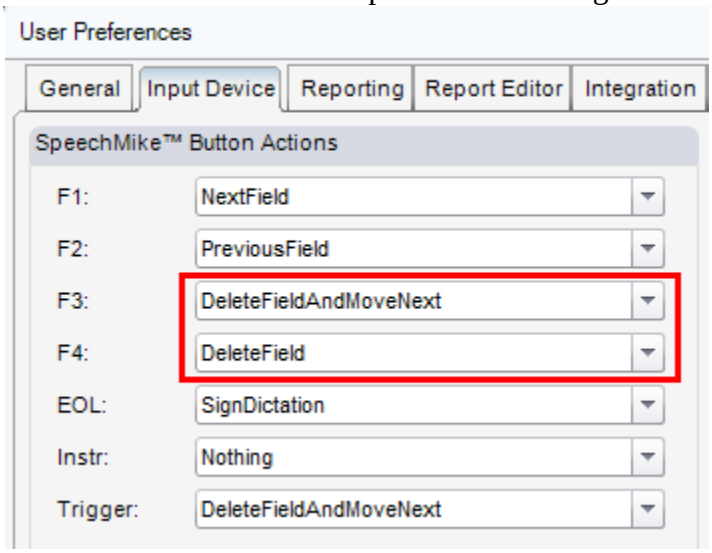

**Figure 4.26 – New Speechmike button action possible assignments**

1. Delete Field(Selection)
   This will delete the selected field or selected word(s) only. Cursor will stay at the current location for further dictation.

2. Delete Field and Next Field
   This will delete the current field and proceed to the next available field in the report. This allows for quick deletion of fields in the report. As some doctors like to have all options in fields and delete the selections they want to keep.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Reporting Window Toolbar Additions

The Dictate window toolbar has 3 new icons added in build 38. The Mic Wizard, Dictionary and Document Model are now accessible from these 3 icons.

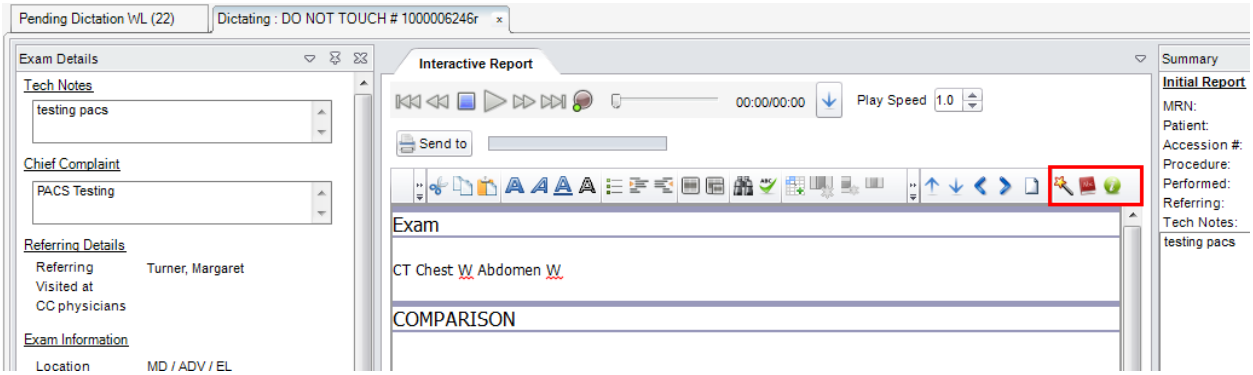

**Figure 4.27- Reporting window new icons**

### Mic Wizard

The Mic Wizard in previous version could only be accessed from user preferences window. In build 38 the Mic Wizard can be accessed in the "Dictate" window (aka reporting window).

Selecting the Mic Wizard icon from the toolbar will open the MicConfig window. By following the series of windows in the wizard, the user can configure their microphone for current eRAD RIS session.

**Figure 4.28 – MicConfig window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Dictionary

The Dictionary can now also be accessed from the Dictate window. Similar to the Mic Wizard, the Dictionary was only access via the User Preferences window.

Selecting the Dictionary icon will open the Interaction Dictation Dictionary window.

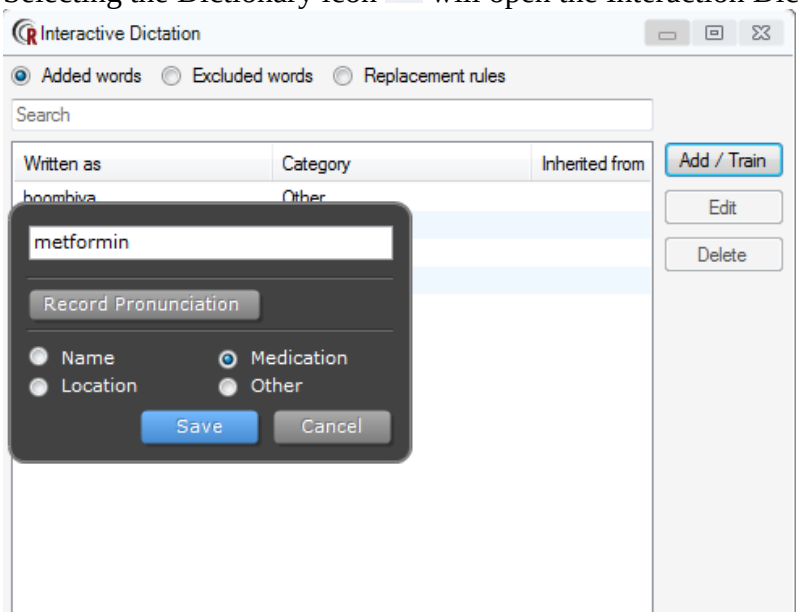

**Figure 4.29 – Dictionary window**

The Dictionary allows the user to enter uncommon words or words that are not as easily recognizable when spoken. The user enters the spelling, records the pronunciation, select the appropriate radio button to associate the latest word and save. The next time the word is used it will be recognized and inserted into the report.

## Document Model

The 3rd new icon added to the toolbar is too access the Document Model information .
The window that is presented to the user provides information about the setting and rules for the base template being used for the currently selected template in the editor. This is a read only window and is used for information purposes only.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

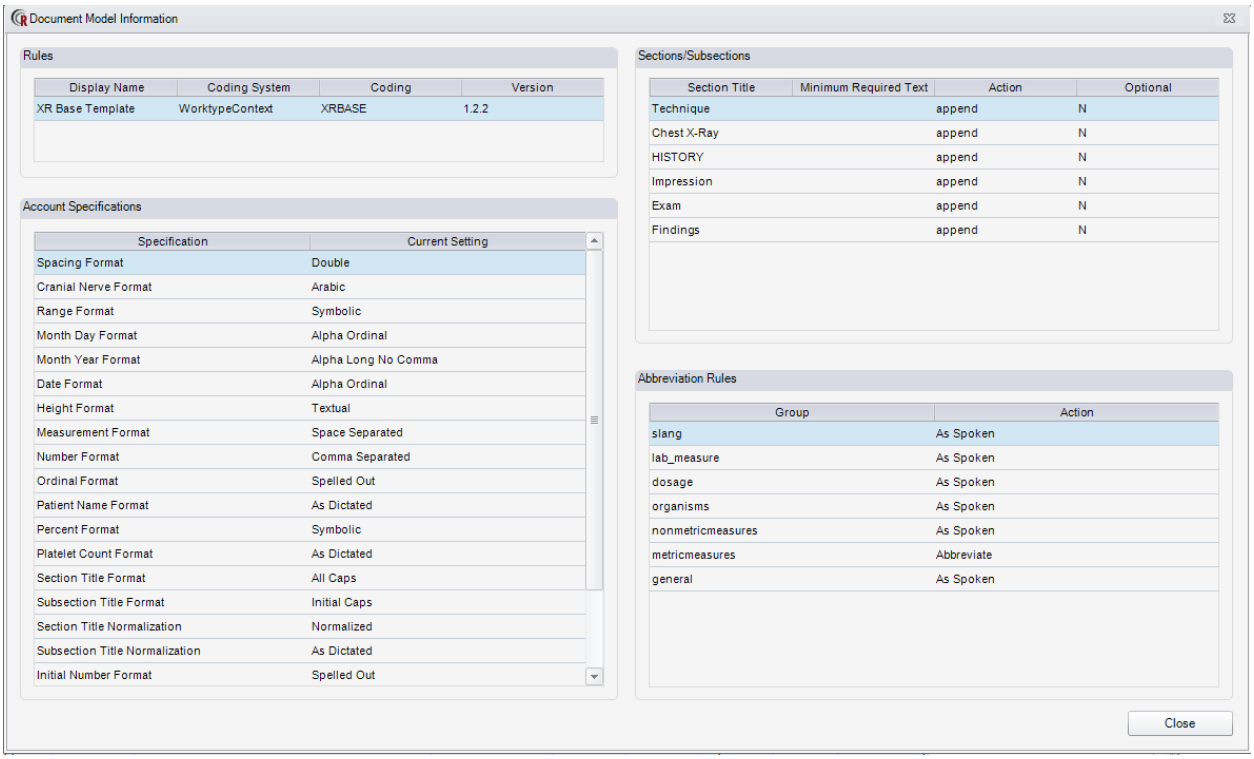

**Figure 4.30 – Document Model information window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Correction Dialog Box

When dictating in Interactive mode a means to correct words and add them to the dictionary in a more fluid and user friendly matter was needed.
In build 38 a popup correction dialog has been implemented that can be instantiated by using the "correct ***<utterance>***" command. Utterance is a specific word or group of words. Try to limit this utterance to 3 or 4 words. Anything beyond that will be unproductive to use this dialog.

You can also instantiate the correction dialog by issuing "***correct <word> through <word>***".

Additionally you can instantiate the correction dialog by issuing "***correct selection***" which will open the correction dialog with the selected text in the editor.

When this dialog is opened the users can easily dictate a new word or correct the existing one by typing. In this case I would choose to type the word "cylinders" because it is not in the dictionary.

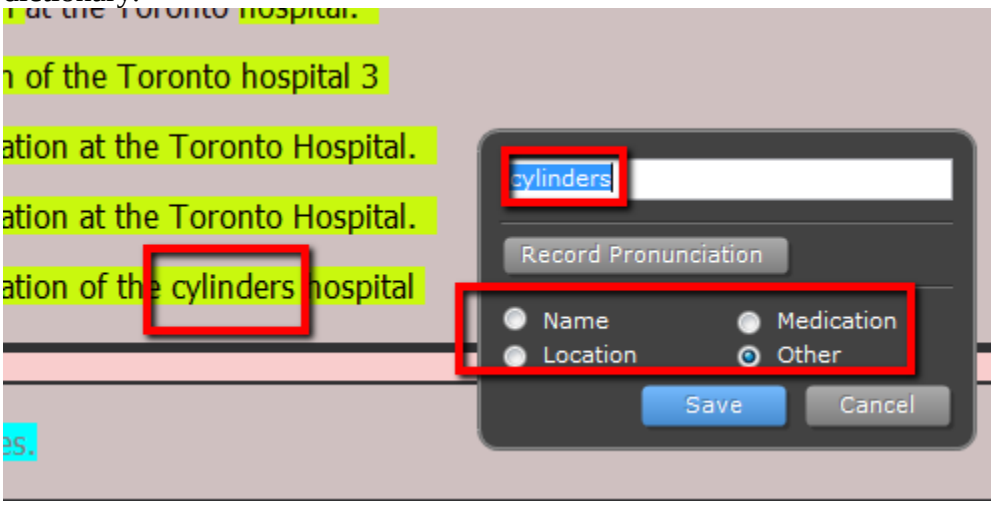

**Figure 4.31 – Correct dialog**

As you can see after I typed "cylinders" in the correction dialog it added it automatically to the list of added words in my dictionary.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

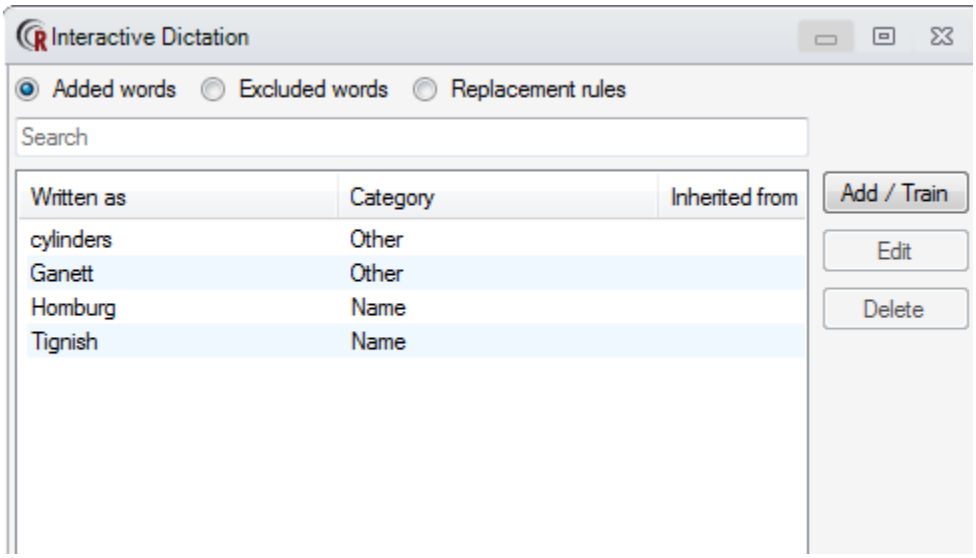

**Figure 4.32 - Corrected word added to dictionary**

After users correct the word by typing or dictating it can be saved or cancelled.
Users can train the word by clicking the Record Pronunciation button. It will change color to RED and then automatically turn off. Click “save” to keep changes.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting - Upgrade MModal to Latest Version

We received new set of .dll files from MModal which were integrated into the current code stream.
The files are housed in the rRISSetup.msi file and are installed locally when a full install is completed (running coreinstall.bat file).
The files included are:
AnyModalCaptureControl Version **v7.75.7751.215**
AnyModalEdit control version **7.75.2.97**
AnyModalCaptureUILib version 7.75.25.342

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Laterality Discrepancy Check

This new feature can be enabled / disabled with a new user preference added to the Report Editor tab of the User Preference window.

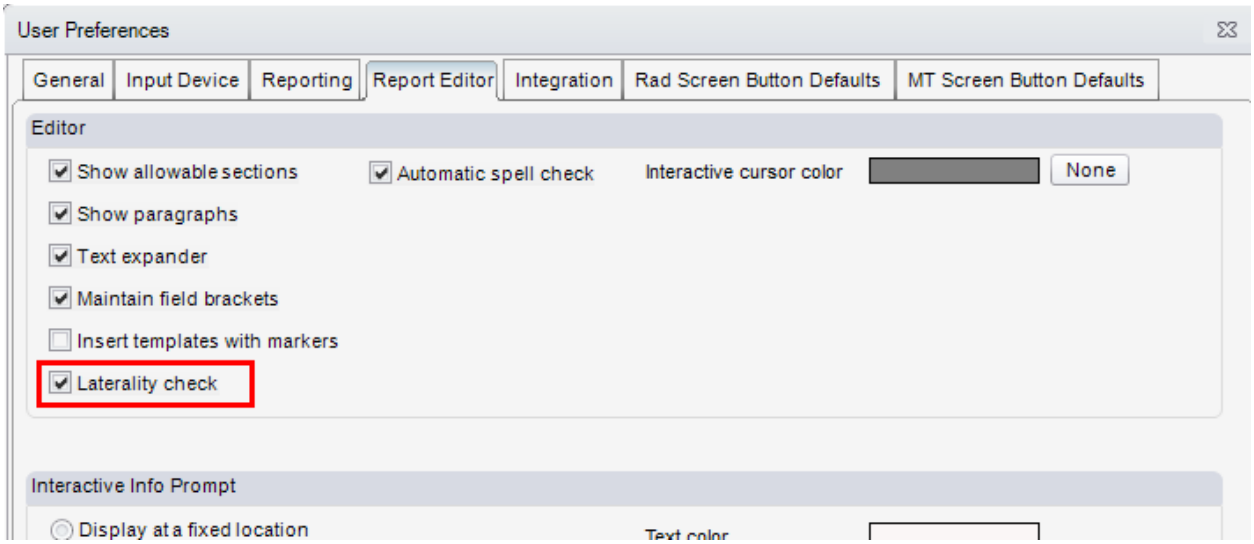

**Figure 4.33 – Laterality check user preference**

With the laterality check user preference enabled, if the user attempts to sign a report in which the laterality of the procedure conflicts with the laterality within the report the user will be presented with a message box.

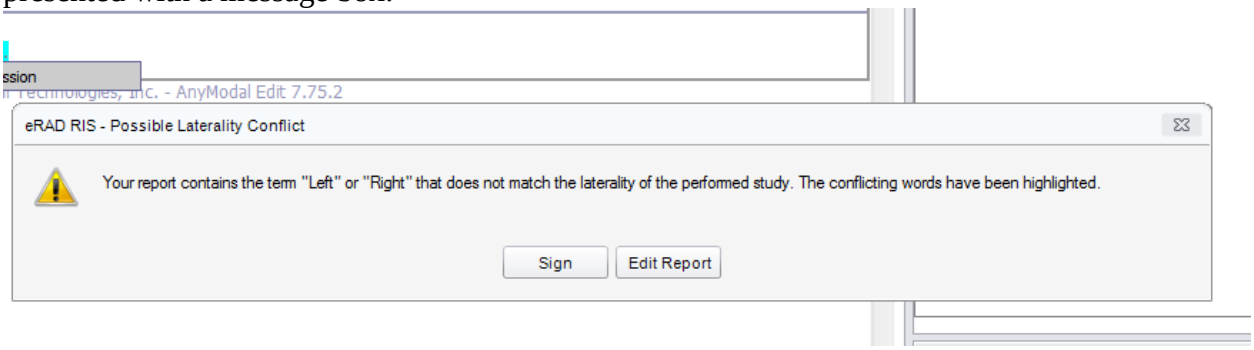

**Figure 4.34 – Possible Laterality Conflict message**

The conflicting laterality's will be highlighted within the report. The procedure laterality will be highlighted in green, and the conflicting "left or right" text will be highlighted in orange. The screenshot below is displaying the procedure with laterality in the Summary pane. In the report we can see the laterality that matches within the report is green and the one that doesn't is orange.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

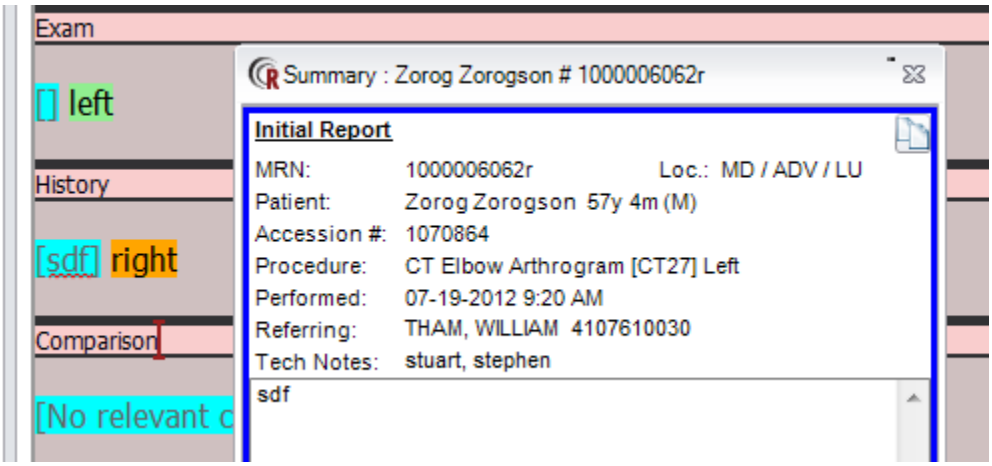

**Figure 4.35 – Conflicting laterality's highlighted in report**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Correction Dialog User Preference

The "Correction Dialog" box is displayed in the reporting window. It allows the user to correct and train with speech word(s) that have not been recognized as originally dictated, and going forward when the user dictates this word(s), it will continually be recognized.

The "Correction Dialog" box is now controlled with a new user preference added to the Reporting tab of the User Preference window. When unselected the "Correction Dialog" window will not appear with the "Correct <utterance>" command is used.

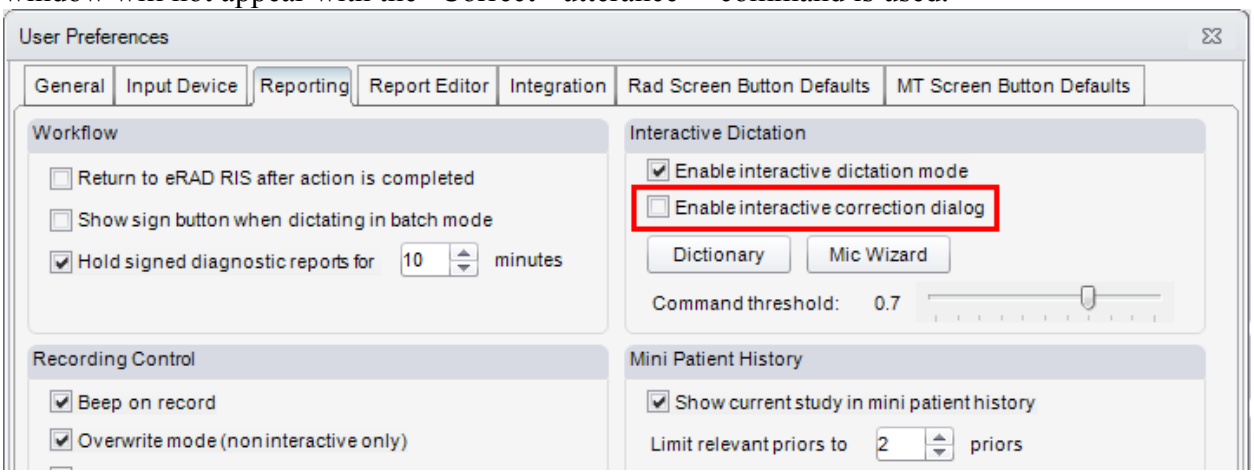

**Figure 4.36 – Enable interactive correction dialog user preference**

Also of note, in previous builds the "Correction Enabled" in the Interactive Panel controlled this feature, but it only applied to the current RIS session. The new user preference will also control the "Correction Enabled" check box in the Interactive Panel.

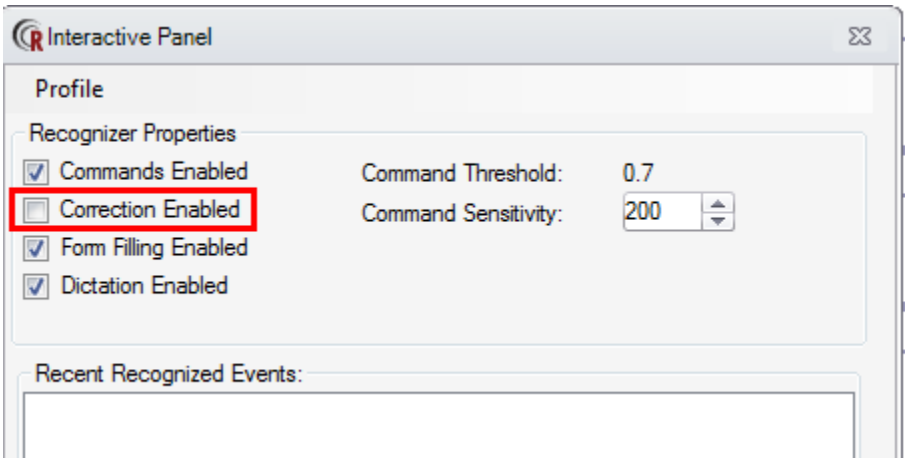

**Figure 4.37 – Correction Enabled in Interactive Panel**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Signed, Pending Release enhancement

The Signed, Pending Release WL now includes the Sign Reports button.
This new button is located in the lower right of the work list. Selecting this button will open the Signing window. This is the same window that is opened from the Pending Signature window.

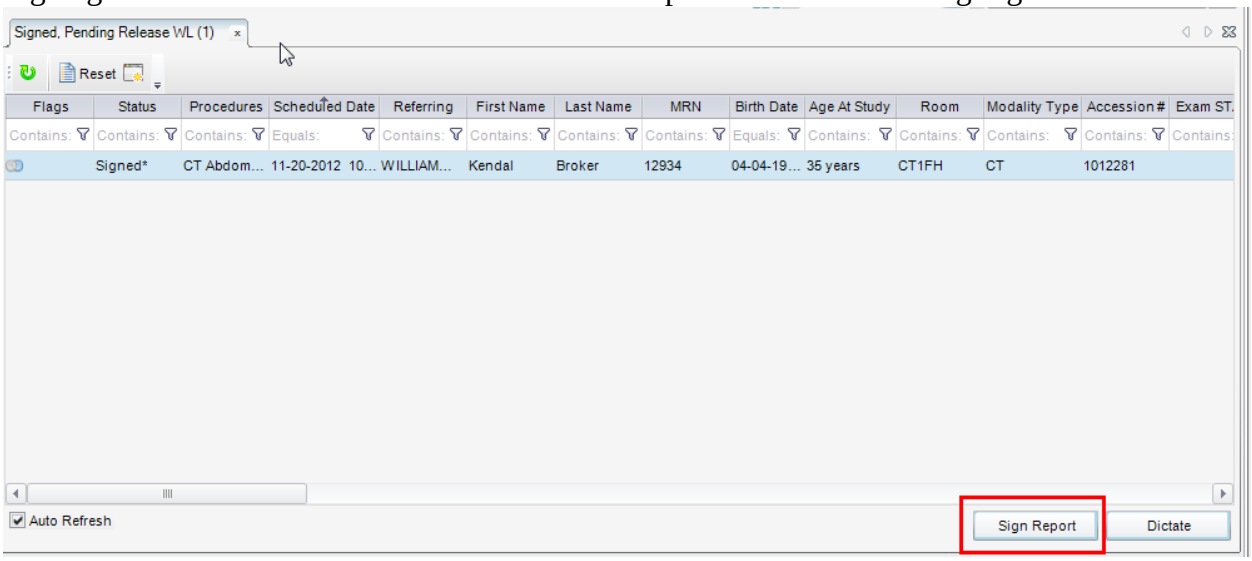

**Figure 4.38 – Signed, Pending Release WL with Sign Report button**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## SpeechMike Mappings to Functional Buttons

In previous builds there were options for “Sign Report”, “Sign Dictation”, “Submit Audio” and “Cancel Dictation”, but they didn’t work when mapped to any of the functional keys on the SpeechMike. This has been resolved in server patch 38.002.

## CTRN (Radar) Reminder Request

This is for Build 38 – 38.002. On the Schedule Review tab in build 38 there is a Reminder Request button that will allow the user to enter in a phone number, email, or mobile phone number to send a reminder request. For build 38 this button is controlled but the access string “Clinical.Schedule.ReminderRequest”.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Billing Exception for Missing Billing Codes

If the exam being performed has an inactive billing code or the code is set to inactive during the technologist workflow, the exam will now go to the billing exception work list and a note will be posted in the Billing Notes section.

**Figure 4.39 – Billing exception posed for study without an active billing code**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Chair Service

Chair workflow is used to help divide studies between radiologists. In prior sprints we had developed functionality to show a chair ID and qc flag on the worklist, but we were leaving it up to external systems to maintain these fields.
In Build 38 we have enhanced the RIS client to support setting these fields. In addition, we have also added a Hard copy prior's flag.

When a radiologist logs in with a practice that supports Chair workflow, they will be prompted to select their "Primary" chair. The list of chairs is determined by the radiologist's current practice. The number in parenthesis represents the number of exams pending dictation that have been assigned to each chair.
This setting will be persisted for their entire log in session and will be used to assign credit to a chair when a Rad dictates or signs an exam.

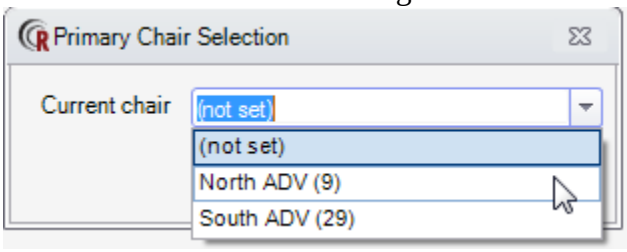

**Figure 4.40 – Primary Chair Selection after login**

Once a selection is made, the primary chair selection will be displayed in the title bar of the application.

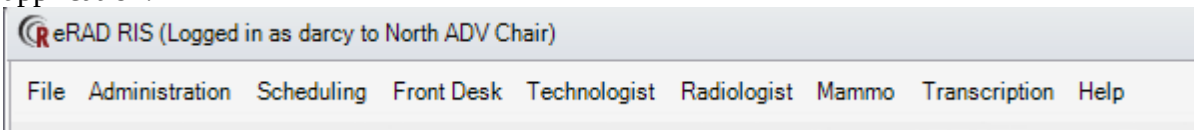

**Figure 4.41 – eRAD RIS title bar displaying primary chair**

If the user dismisses the primary chair selection dialog box or chooses (not set), they will be prompted to make a selection later when/if they open the My Pending Dictation WL or when they try to dictate/sign an exam.

The status bar of the RIS client now includes a Chair control which displays a chair icon (subject to change) and the current chair (if set). This control launches a Chair Selection dialog box which allows the radiologist to set an additional Chair filter for any open work lists that are chair enabled (currently only the Pending Dictation Worklist is chair enabled).
This control will only be visible for a user who is configured as a radiologist, and it will only apply to a practice that is chair enabled.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

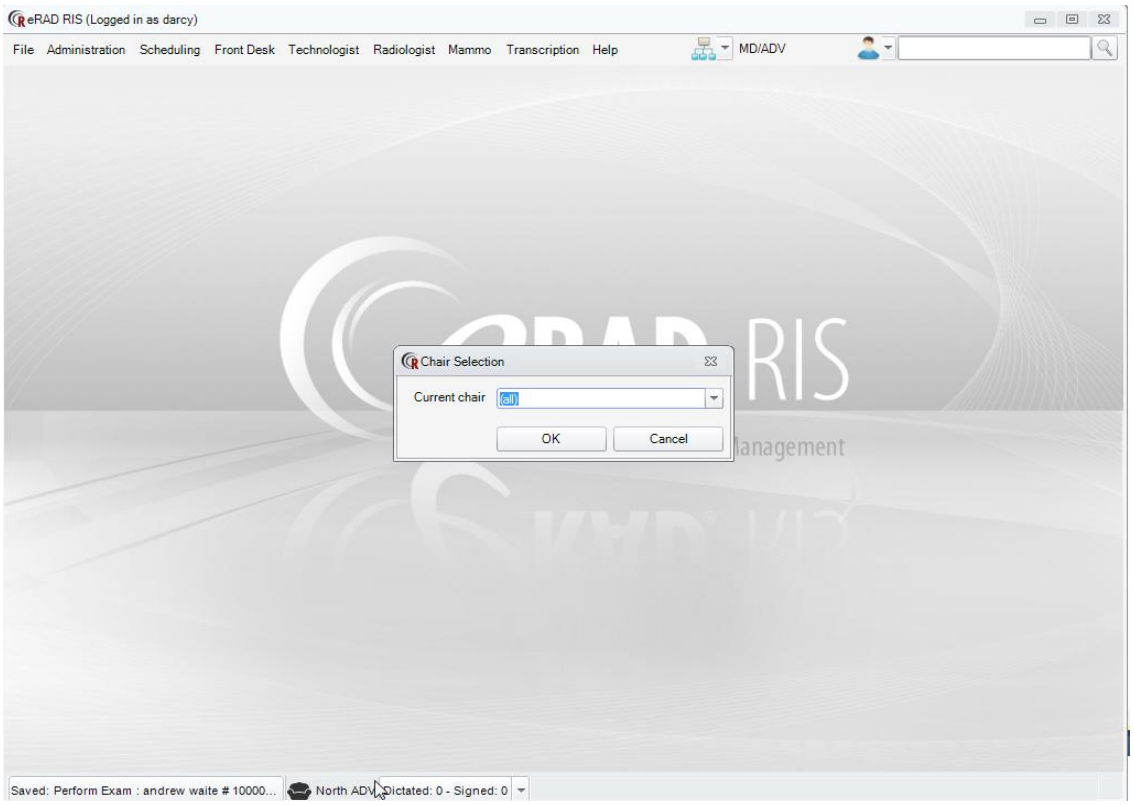

**Figure 4.42 - Access to chair selection and current selection in status bar**

The Chair Selection dialog box can be triggered in 1 of 3 ways:

1) The radiologist clicks on the chair icon on the status bar
2) The radiologist opens a chair enabled worklist when the active chair is not set (or is set to "all")
3) The radiologist has previously specified a chair, but switches the current practice to another chair enabled practice using the "Org Picker".

Like the "Org Picker", the chair control automatically applies a filter and adds it to the user's current filters. Example: if a radiologist has a "My View" configured for CT Exams, they do not need to create one for each practice or chair.

If the primary chair has not been set, the chair icon will set both the primary chair and the chair filter for the dictated work list. After the primary chair has been set, the chair selection will only be used as a work list filter, and will not update the title bar in the RIS client. To be clear, it is the primary chair shown in the title bar that is used to assign credit to a chair, not the work list filter shown on the bottom of the RIS in the status bar area.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Changes to work lists

A new item was created for the context menus on the Pending Dictation work list. The user can now select one or more rows and choose Assign to Chair to open a dialog box that allows them to specify the Chair settings.

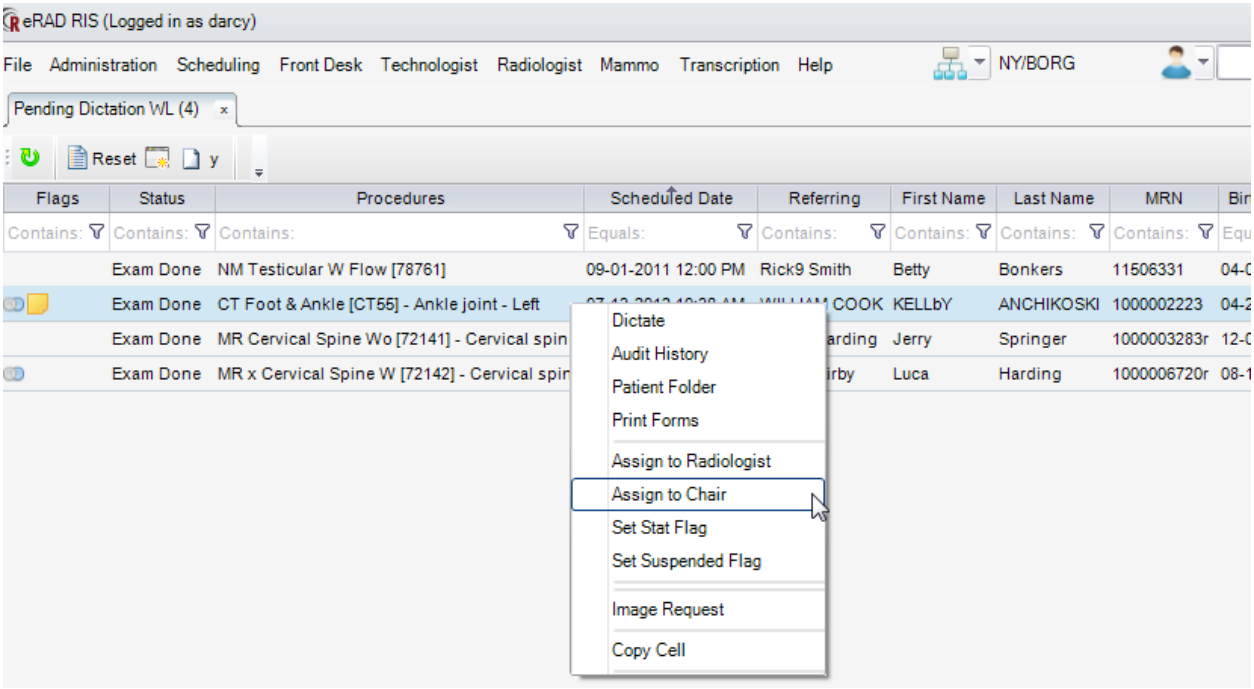

**Figure 4.43 – Context menu for Pending Dictation**

Selecting this menu option will open the Assign to Chair window.

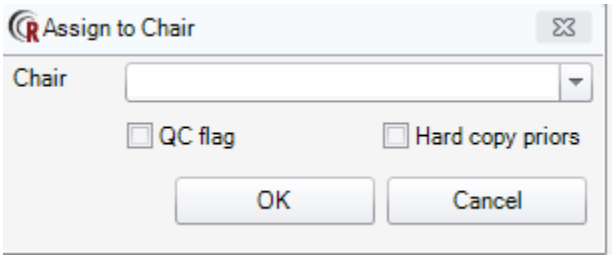

**Figure 4.44 – Assign to Chair window**

Chair assignments from the work list are audited and logged in an action table so they updates are able to be sent out to third party systems using Mirth.

"Hard copy priors" was added to both the radiologist's work lists and the activity work list.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

When a radiologist opens the Dictation or Signing Screen, if they have not yet selected a chair, they will be presented with the following message:

**Figure 4.45 – Message displayed when opening Dictate or Sign Reports window if chair has not been selected**

Selecting OK to the above message will present the user with the chair selection window.

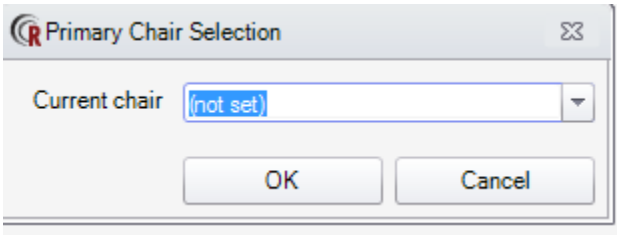

**Figure 4.46 - Primary Chair Selection window**

If Cancel is selected, the user is returned to the work list. To access the dictation or sign reports window, the user must select a chair then OK.
If the Radiologist signs or dictates an exam for which no chair has previously been assigned, the Radiologist's Primary Chair will be assigned to that exam.

## Technologist window changes

We have added a hyperlink to the tech screen to describe the current chair settings:

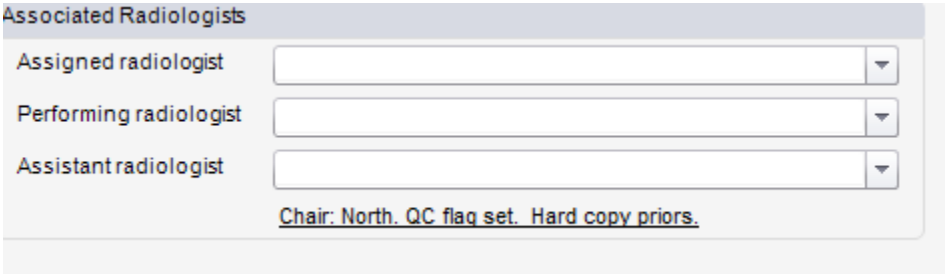

**Figure 4.47 - chair hyperlink on tech screen describes the current chair settings**

When the link is clicked, the following dialog box appears:

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

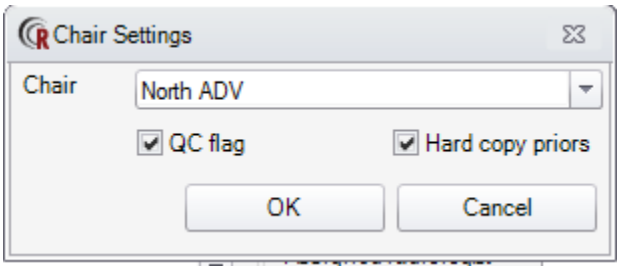

**Figure 4.48 - Chair Settings dialog box as displayed from tech screen**

The Chair Settings dialog box will provide a list of chairs for the current practice, a QC Flag checkbox and a Hard copy priors checkbox. If the user presses "OK" the changes will be saved immediately (i.e. it is not dependent upon the user saving and closing the tech screen). Changes triggered from this dialog box are logged to the audit table and they are also stored as an action that can be delivered to external systems via Mirth.

## Chair Configuration / Setup

A new lookup table titled "Chair" has been added and is accessed from the Administration > Configure > System > Chair.

Chairs can be defined with a unique chair code, user friendly description, and an associated practice.

A practice can have 0 or more chairs. A single chair can belong to only one practice.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

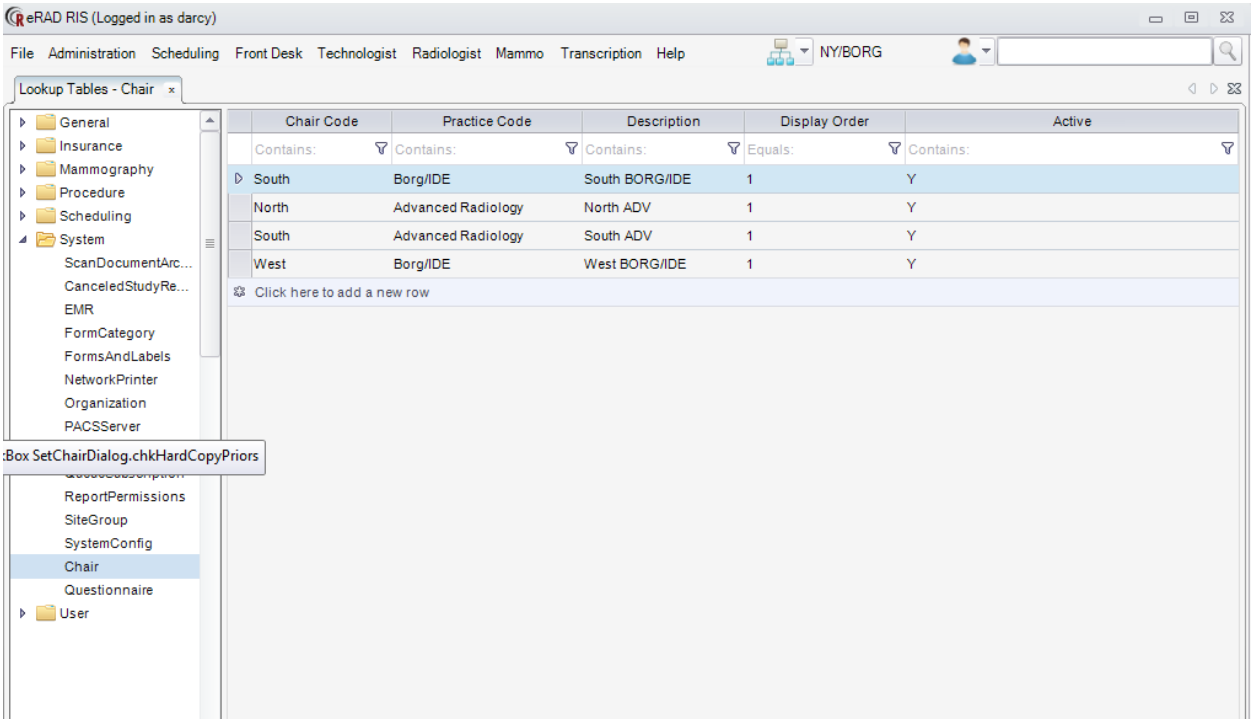

**Figure 4.49 – Chair lookup table**

The Organization lookup has also seen a change. To enable Chair work flow for a practice, edit the desired Practice and check to the Chair enabled work flow check box.

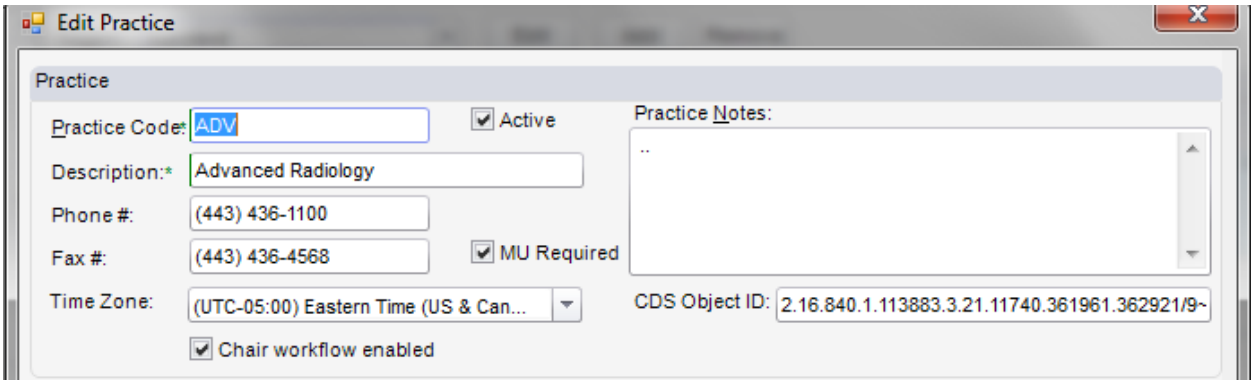

**Figure 4.50– Practice enabled for chair work flow**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Scheduling Across Rooms

A new dynamic column in the scheduled order window has been introduced to give the user a visual representation of the rooms to be selected without reserving the times. In the advanced search > details view the room is displayed in the search results when procedure with different modalities are choosen.

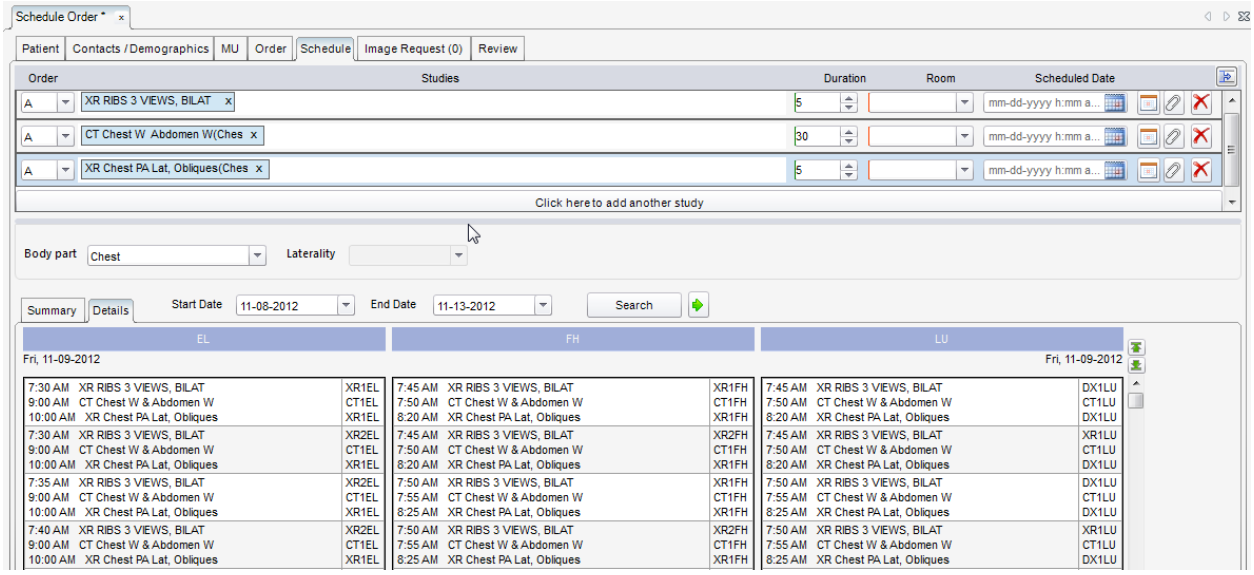

**Figure 4.51 – Schedule order window displaying new column for rooms when multiple studies of different modalities**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Modality Editor Lookup Restriction by Site

This new feature will prevent users from adding or modifying modalities for other practices. This is controlled by a new access string "Config.LookupEditor.Modality.ViewAll"

Full access to the above access string will allow the logged in user access to all modalities in the Modality lookup editor. Access as none, will grant access to only those modalities the user is associated with.

## Organization Picker Title Bar Color

To assist users who may select different practices from the Organization Picker, each practice can be assigned a designated color that will change the color of the title bar. This is accomplished by editing the practice from the Administration menu > Configure > Organization > then select the practice and open for edit.

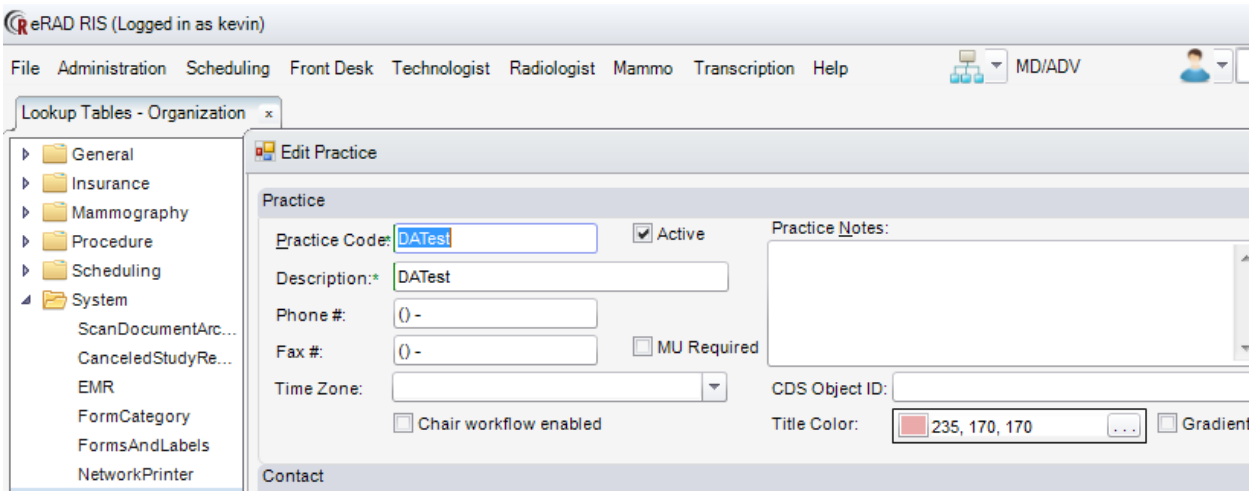

**Figure 4.52 – Edit Practice displaying how to set title bar color**

With the above practice configured for the color shown above, when the user selects this practice from the Organization Picker, the title bar will be of this color. This color will also be displayed upon logging into the application to this practice

**Figure 4.53 – Colored title bar**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Schedule Order not displaying locked times

Desired by the users the removal of locked appointment times in the schedule order window. Previously we relied on the red boarder around the Scheduled Date in the procedure picker row to inform the user that a specific time wasn't available.

We have added a system configuration setting:
ReservedTimeSlotsReturnedinSearchResultsEnabled

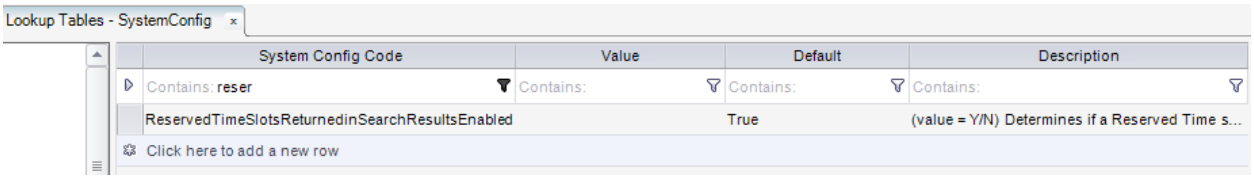

**Figure 4.54 – SystemConfig table display new system config code**

When set to true, which is the default setting, search results will return as they always have.

When set to false, if user A has a time selected in the search results, user B completes a search, the time selected by User A does not return in the search results for user B.

If user A has a schedule order window open and selects a time slot to reserve or lock it, then user A opens a second instance of the schedule order window, the locked time in first schedule order window will appear in the search results, but as before, when selected a red boarder will appear around the Scheduled Date column on the procedure picker row indicating it is not available.

## Management Report – Addended Mammography Exams

The Addended Mammography Exams report displays a list of mammography exams that have been addended and dictated within the selected date range. Identification of a mammography exam is based on the procedures mammo type code value being configured.

Parameters:

- From & To Dates (based on dictation date)

Date references:

- Study, interpretation and patient tables

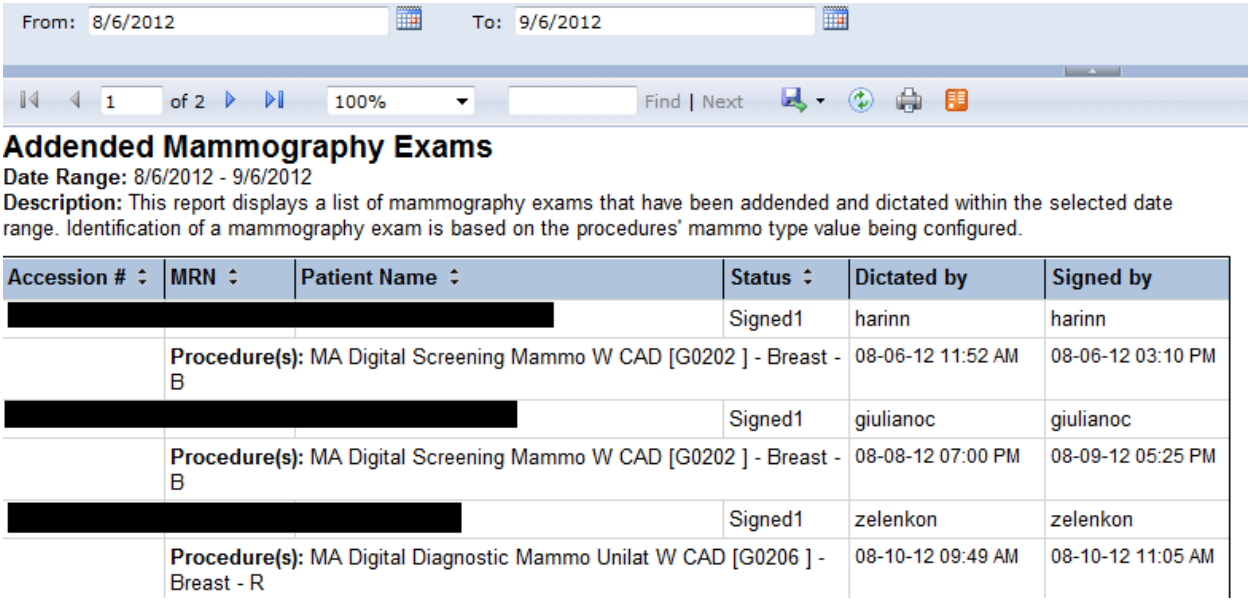

**Figure 4.55 – Addended Mammography Exams report**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Management Report – Last Login by User ID

The Last Login by User ID report displays the audit information capturing the last login for each user for eRAD RIS. This report will be used for security audits. The report is accessed under the Management Reports \ Maintenance menu.

Parameters:

- None

Data references:

- C_audit table
- L_user table

### Last Login by User Id

**Description:** This report displays the audit information capturing the last login for each user with the RIS.

| User Id | User Name | Active | Last Logon |
|---|---|---|---|
| stick | Stick Powell | Y | 10/4/2012 11:22:30 AM -04:00 |
| denis | Denis Doiron | Y | 10/4/2012 10:38:52 AM -04:00 |
| regtest | Registration Test User | Y | 10/4/2012 10:28:53 AM -04:00 |
| darcyn | Darcy Noye | Y | 10/4/2012 9:34:00 AM -04:00 |
| Ian | Ian Power MD | Y | 10/4/2012 7:33:27 AM -04:00 |
| gordon | Gordon Craig | Y | 10/4/2012 7:09:37 AM -04:00 |
| hardingc | Clifton Harding | Y | 10/3/2012 3:10:17 PM -04:00 |
| darcy | Darcy Aiken | Y | 10/3/2012 12:12:24 PM -04:00 |

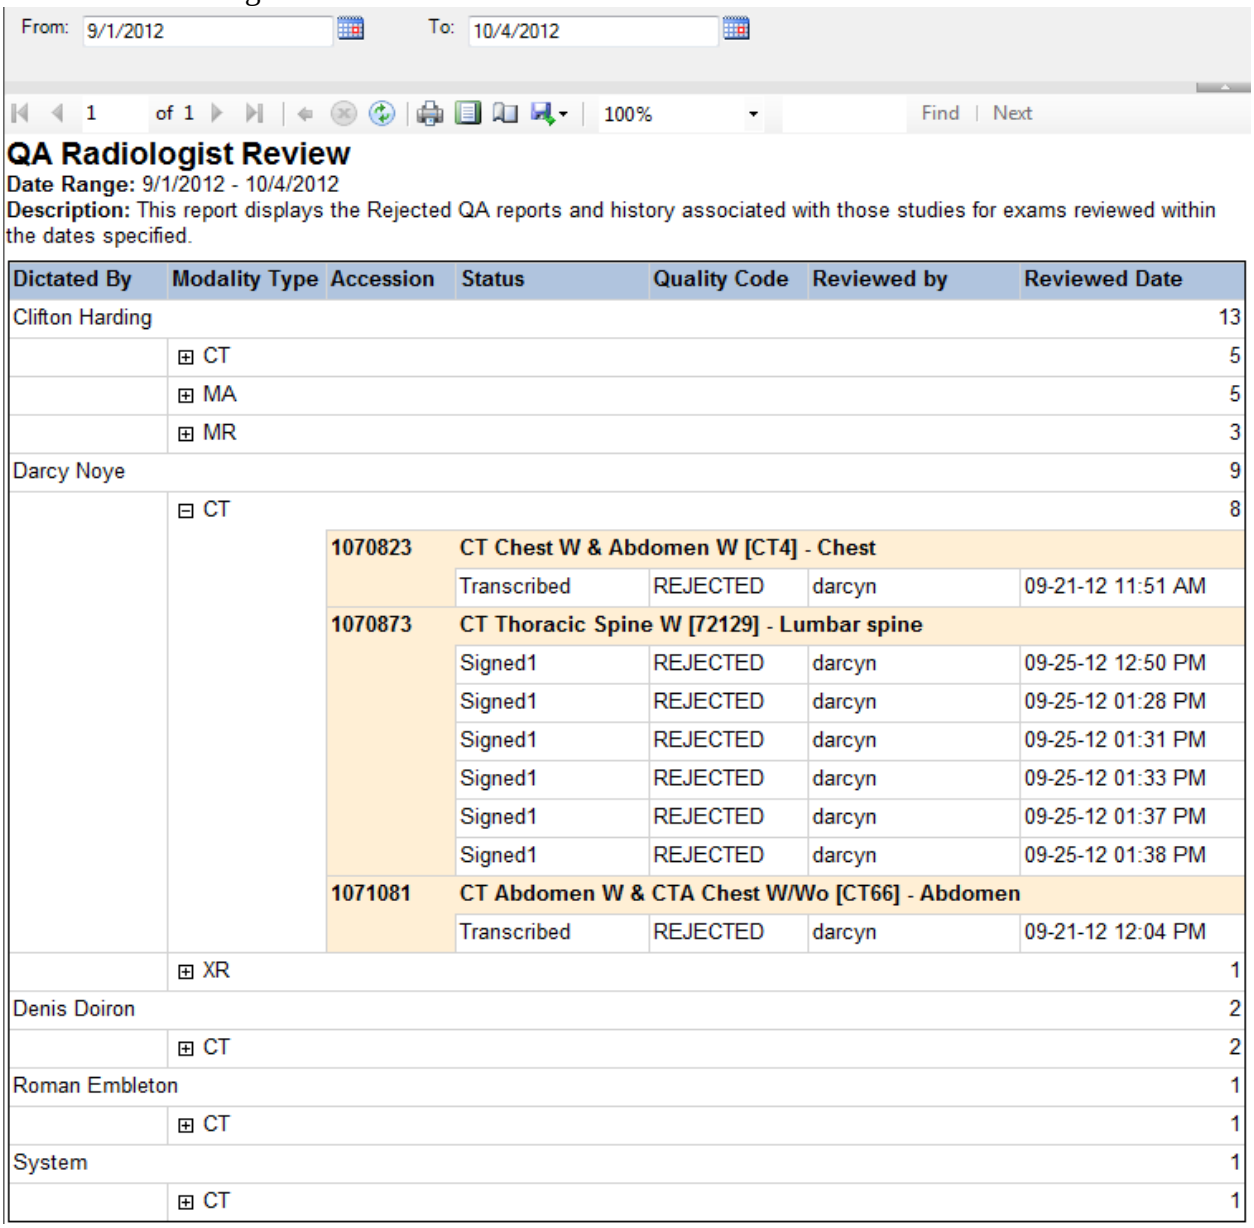
## Management Report – QA Radiologist Review

The QA Radiologist Review report displays the current status of studies that have been flagged for review. The report can be viewed in the eRAD RIS from the Management Report window \ Statistics \ Radiologists.



From: 9/1/2012 To: 10/4/2012

1 of 1 100% Find | Next

**QA Radiologist Review**

**Date Range:** 9/1/2012 - 10/4/2012

**Description:** This report displays the Rejected QA reports and history associated with those studies for exams reviewed within the dates specified.

## Management Report – Referring Physician List

The Referring Physician List report displays the complete list of referring and unknown referring physicians that are active in the eRAD RIS. Also displayed are the NPE, UPIN, License #, DEA#, address, phone, and fax numbers. The report is accessed under Management Reports\Maintenance.

Parameters:

- None

Data reference:

- Person and person address

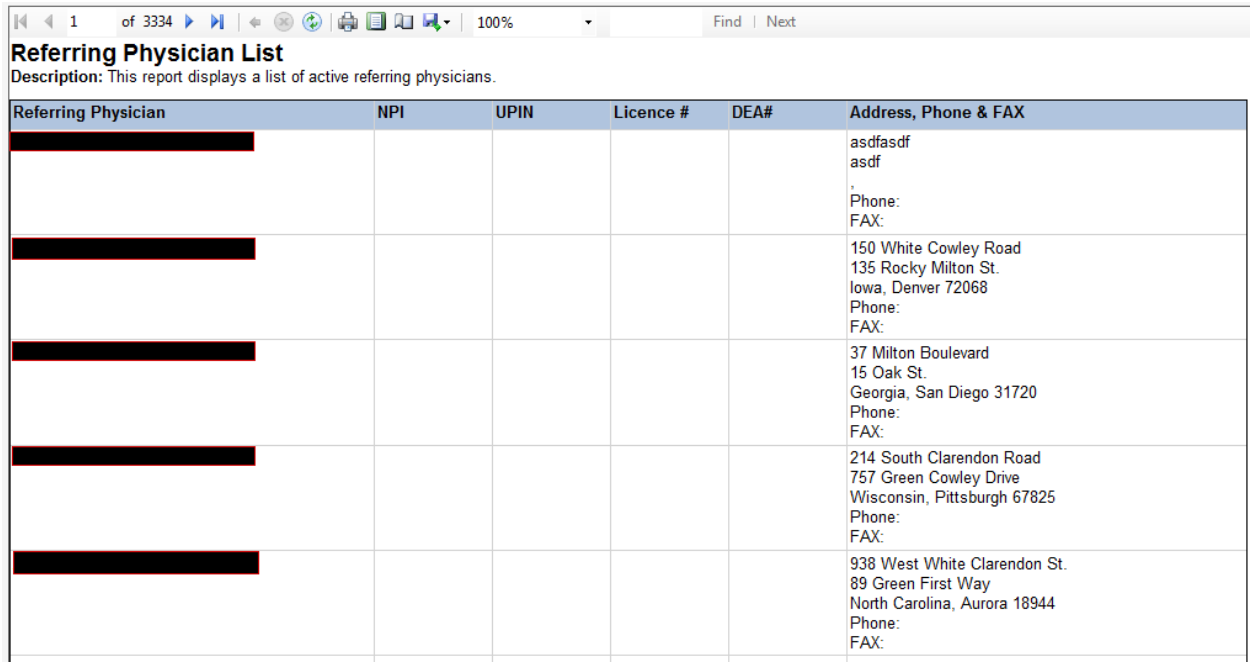

**Figure 4.58 – Referring Physician List report**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Management Report – Referring Physician Volumes

The Referring Physician Volumes report displays the volumes of orders placed by referring physicians within the practice(s), site(s) date range selected. The report is accessed under Management Reports \ Operations.

Parameters:

- Practice
- Site(s)
- From, To Dates

Data references:

- Order table, person table for active referring physicians

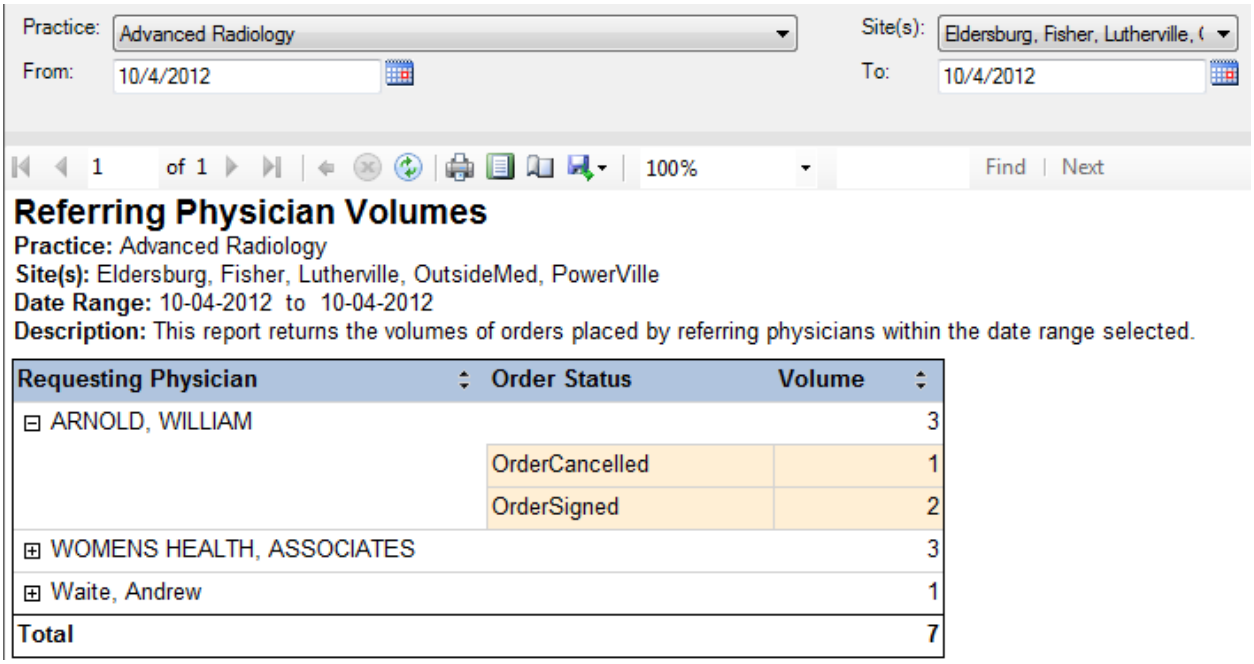

**Figure 4.59 – Referring Physician Volumes report**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Management Report - Chief Complaint Audit

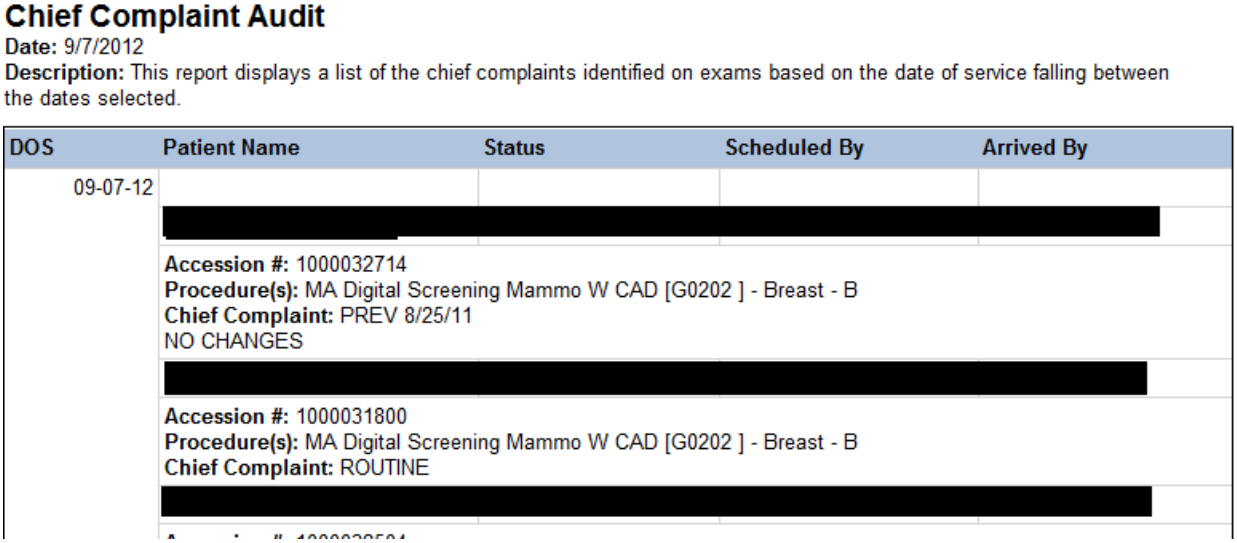
The Chief Complaint Audit report displays a list of chief complaints captured on exams. The report is based on the date range selected for date of service.

Parameters:

- Date Range

Data references:

- Order and study tables (excluding cancelled and aborted status)



**Chief Complaint Audit**

**Date:** 9/7/2012

**Description:** This report displays a list of the chief complaints identified on exams based on the date of service falling between the dates selected.

## Management Report Deployment Changes

Separation of samples from the management reports deployment.
Reason for doing this are:

- Smaller deployment of management reports (reduction of 270+MB)
- The sample forms were specific to Radnet, and may not be appropriate to share with external operations\competitors.

Also modified report deployment to enable the implementation team the ability to drop files into the following folders:

- Upload Forms (and a subfolder called SubReports)
- Upload Diagnostic Templates (and a subfolder called SubReports)

These folders should never have files in them from R&D. They are designed solely for the implementation team to upload files they wish to include. The files will be uploaded into the site-specific folder called Forms or Diagnostic Templates depending on the type of file being uploded.
Ie: if the implementer is setting up a new site and have 40 new forms to copy up to a site, this will enable them drop those files in the folder and it will upload them in bulk vs manually uploading and changing the datasource for each file.
The files will override files that exist in the folder with the same name. At the same time the script does not delete anything out of the destination folders.
Running the deployment now will give the user options to Upload Forms and Upload Diagnostic reports.
As it already does with management reports the datasource for the uploaded forms and templates will be updated to use the destination datasource.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 5. Access Strings

| Access string | Controls Access to |
|---|---|
| WL.MT.ReportDraftedQA | Transcription Edits Pending QA WL menu option |
| WL.RAD.QA | Radiologist Signed Pending QA WL menu Option |
| Reporting.ReleaseOthersTentativeSignedReports | Enables users to release reports signed but other users |
| Clinical.Schedule.ReminderRequest | Enables Reminder Request button on the Scheduling Review window. This window is presented from New Appointment window after the Schedule button is selected and mandatory fields have been completed |
| Config.LookupEditor.Modality.ViewAll | This can restrict or enable a user to configure changes for all modalities in the Modality Lookup Editor |
| Config.LookupEditor.ImageUploader | This feature was not completed for Build 38, but the lookup table exists. If users don't have this access string they will not see the lookup editor option in the Configure window. |

# 6. Resolved Defects Build 38

Bugs Suggested Features and Support Issues resolved in build 1.38. The extract is taken from Redmine bug tracking system and only displays defects resolved in 1.38.

| # | Status | Tracker | Priority | Subject | Category | Found Version |
|---|---|---|---|---|---|---|
| 1911 | Closed | Bug | Urgent | EMR distribution jobs not updating to completed status | Web Services/DB | 1.37 |
| 1770 | Closed | Bug | Urgent | Reporting - Editing templates getting "Out of Memory Exception" | Thick Client GUI | 1.37 |
| 2211 | Closed | Bug | High | Modality closure - same day | | 37.13 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | | | |
|---|---|---|---|---|---|---|
| 2179 | Closed | Bug | High | 0min duration studies where obtain a lock of negative duration length | | 1.37 |
| 2135 | Closed | Bug | High | Reporting - No way to turn spell checker off | Thick Client GUI | 1.37 |
| 2134 | Closed | Bug | High | Reporting - Global dictionary being over-written | Thick Client GUI | 1.37 |
| 2116 | Closed | Bug | High | River Ranch - experiencing issues when adding / editing insurance information. | Thick Client GUI | 37.12 |
| 2111 | Closed | Bug | High | Reporting - Sign, Skip etc and continue will kick you back to the worklist prematurely | Thick Client GUI | 1.37 |
| 2109 | Closed | Bug | High | RRanch - User(s) is sporadically receiving error messages with the subject of the error being insurance. | Thin Client GUI | 37.11 |
| 2092 | Closed | Bug | High | Reporting - Float a panel, close it, and save layout makes other panes disappear | Thick Client GUI | 1.37 |

# 7. Resolved Defects Build 38.001

| Redmine # | Subject | Priority |
|---|---|---|
| 2421 | image_request completed date Error | Normal |
| 2416 | Reporting - Add user preference for Correction dialogue box | Normal |
| 2415 | scheduled_start_date column does not belong to c_client_worklist error when starting/completing an exam | Normal |
| 2335 | audit history does not display scrollbar when required | High |
| 2332 | When user schedules multiple studies, and cancels any of those studies, the billing codes are still appearing in IVT, and are marked as active | High |
| 2326 | Laterality check | High |
| 2323 | Resolve 7 vs 8 day retrieval for scheduling query | High |
| 2321 | Update priority of insurance | High |
| 2320 | Add IVT flag in Pending IVT status | High |
| 2313 | Set up Request reminder on Review Tab to be security driven | High |
| 2300 | Reporting - Commands button in user preferences remove | Normal |
| 2291 | ExamDoneTechOnly studies are not dropping off MWL after completion | Urgent |
| 2290 | Reporting - No sign button on Signed Pending Release | High |
| 2289 | Can save as order without procedure | Urgent |
| 2246 | Reporting - Interactive Dictation SpeechMike buttons not working when set to SubmitAduio | High |
| 2231 | MT Polling error in GetNextData | High |
| 2183 | Management Reports - Accession Milestone Times | Normal |
| 2094 | NPI Clearing out when clicking the grid for first person searched | Urgent |
| 2024 | Reporting - Macro Lookup Table taking a long time | High |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 8. Defects Resolved Build 38.002

| Redmine # | Subject | Priority |
|---|---|---|
| 2498 | Close application while minimized, after logging in again the application does not appear | Normal |
| 2246 | Reporting - Interactive Dictation SpeechMike buttons not working when set to SubmitAduio | High |

# 9. Known Limitations – Please see this section for important information

The following are Bugs Suggested Features and Support Issues found in build 1.38. This build is the current QE build and testing is ongoing. The list may increase in size. This document will not be updated or re-released.

I would like to elaborate on a few of the bugs listed known limitations in this list below:

**Bug # 2209** – New work flow introduced that can be found in New Features section of this document. The previous work lists that contained studies marked for QA are no longer in the application. As a work around users may access the All Pending Dictation or the All Reports Drafted work lists and apply a filter on the QA column for results.

**Bug # 2178** – Grids within the application can present a large Red X that will cover the area in which the grid was. This is usually the result of rapid mouse clicks in a grid or a cell within the grid. To avoid this issue do not rapidly click from one cell to the next within grids. Grids are found in most lookup tables, the Mange Policies window, the Insurance Policies data pane on the order tab, etc…

**Bug # 2149** – Image Uploader was to be a new feature in Build 38. Late changes in the application had an adverse effect on this lookup table in which the images would not attach to the row properly. The will not affect the application and Image Uploader lookup table can be hidden from the Administration > Configure menu by not granting any UserGroups the permission for access string Config.LookupEditor.ImageUploader. The access string should be set to "none" by default in the AccessString lookup table.

| # | Status | Priority | Subject |
|---|---|---|---|
| 2209 | New | High | All QA studies WL missing |
| 2178 | QE Rejected | High | RED X appearing on Insurance Policies grid |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 2149 | New | High | Lookup Editor - Image Uploader |
| 2074 | New | High | Patient distribution history - New button throws exception |
| 1829 | QE Rejected | High | Memory leak introduced in B38, needs to be fixed. |
| 2215 | New | Normal | Schedule details grid refresh issue |
| 2214 | New | Normal | Image request with scheduled study tab show (0) in registration window |
| 2199 | New | Normal | INTERNAL PATIENT - Suspend and continue throws exception |
| 2197 | New | Normal | User occasionally has to click previous / next multiple times to move to the prev / next date when on a date worklist |
| 2195 | New | Normal | When user has 4 or more procedures to schedule, the 'Details' window cuts off the top procedure in the top time slot |
| 2194 | New | Normal | Tech Only - External Report Workflow |
| 2193 | New | Normal | Image request not saving "Same as requested by" |
| 2192 | New | Normal | Image request on discontinued exams |
| 2190 | New | Normal | Error On Edit Image Request on Tech screen after status change |
| 2185 | New | Normal | eRx - Practice Zip Code Invalid characters |
| 2182 | New | Normal | Procedure picker row does not display procedure code |
| 2176 | New | Normal | Error on fast clicking schedule button |
| 2171 | New | Normal | Large historical patient notes will display double scroll bars |
| 2170 | New | Normal | Cache Problem when changing user Permissions |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 2166 | New | Normal | Inactive referring addresses cause issues later in work flow |
| 2163 | New | Normal | Studies in Edits Pending QA can be signed off |
| 2162 | New | Normal | Cannot create a scantype with a document level or order level |
| 2159 | New | Normal | QA Work flow - Reports verified are sent to Signed, Pending Release WL again |
| 2155 | New | Normal | Schedule Group drop down clears out when you hit save |
| 2151 | New | Normal | Audit log should show user friendly terminology |
| 2150 | New | Normal | Audit log displaying user who released report as UI_ReportSIgned |
| 2137 | New | Normal | Reporting - Skip and continue external reports loop |
| 2117 | New | Normal | 'Assigned radiologist is required due to referring's preference. |
| 2099 | New | Normal | can't clear selection of dataset when creating an auto macro |
| 2097 | New | Normal | duplicate field insertion when editing field in auto macro editor |
| 2096 | New | Normal | Reschedule on locked exam does not prompt that the booking is locked. |
| 2094 | New | Normal | NPI Clearing out when clicking the grid for first person searched |
| 2091 | New | Normal | Confirmation Review tab |
| 2089 | New | Normal | Referring Search |
| 2087 | New | Normal | Macro Editor - Modifying Macro's Default keeps inserting it |
| 2086 | New | Normal | Edit Address on user |
| 2070 | New | Normal | Internal Person Search - Can search with blank criteria causing exception |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 2068 | New | Normal | Perform exam throws error on complete |
| 2067 | New | Normal | Walk-in - New Patient - Issue with Patient Folder displaying patient name |
| 2063 | New | Normal | Cancelled appointment requires default fields |
| 2054 | New | Normal | New user cannot access WL |
| 2039 | New | Normal | Print preview of Dx Report within transcription window when multiple addendums |
| 2018 | New | Normal | Reporting - Resolve Problem Assign to other rad will leave previously assigned if not selected |
| 1894 | New | Normal | validation of dtpScheduleDate failed |
| 1873 | New | Normal | Object error in system config lookup |
| 1842 | New | Normal | Reporting - CdsInterctive Text Color not consitent |
| 1830 | New | Normal | Interactive dictation - Correct selected text removes space when inserted into the report |
| 1819 | New | Normal | Studies can be scheduled on any modality (despite config) |
| 1804 | In Progress | Normal | View / Edit a cancelled exam prompts for required fields on Documentation tab |
| 1795 | New | Normal | Saving Manage Policies window add new column to Insurance policy grid |
| 1794 | New | Normal | Reporting - New setting to run report verification when in QA workflow |
| 2213 | New | Low | Image request location list box |
| 2210 | New | Low | Payments range message |
| 2201 | New | Low | Interactive Panel label for Playback / Recording cut off |
| 2196 | New | Low | Check in date - cast error |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 2187 | New | Low | Scheduling - Testing Procedure Plan(Darcy duration 0 test) |
| 2180 | New | Low | When we wrap buttons in patient folder due to screen resolution, the wrong button wraps |
| 2173 | New | Low | Configure Save button |
| 2169 | New | Low | UserGroupPermission - Able to enter non validate access strings |
| 2168 | New | Low | Chair Workflow - Able to remove a chair from the lookup that have the chair assigned to a study |
| 2142 | New | Low | Reschedule permission does not make 'reschedule' appear in context menu |
| 2106 | New | Low | Lookup Editor - TemplateMacro Should have Double click functionality |
| 2105 | New | Low | Lookup Editor -TemplateMacro |
| 2088 | New | Low | Macro Editor - Tab Order needs to be reveiwed |
| 2079 | New | Low | Overbook Reason - No max length, causes exception |
| 2071 | New | Low | Window handle error from Dictate window |
| 2069 | New | Low | Add image request to Discontinued study |
| 1991 | New | Low | Locked RIS may not show in taskbar |
| 1855 | New | Low | Reporting - Exam details - Proceudre name my not display completely |
| 1853 | New | Low | QualityReviewDistribution is not listed alphabetically in General menu |
| 1797 | In Progress | Low | Perferred Language field is not marked as required when on the patient tab |
| 1783 | New | Low | Chair Workflow - Select a chair dialog I can type in the dropdown. |
| 1744 | New | Low | Preferred Rad Assignment window bottom border missing |

## 2. Package Contents

Files included for this server update:

1. GUI ZIP Updates folder contains
    a. AudioLib.dll
    b. AudioLib.pdb
    c. CDSJobManagerConsoleClient.exe
    d. CDSJobManagerConsoleClient.pdb
    e. CommonLib.dll
    f. CommonLib.pdb
    g. Diagram Paint.pdb
    h. DynamicFormEditor.dll
    i. DynamicFormEditor.pdb
    j. MessageHelper.pdb
    k. ris.exe
    l. ris.pdb
    m. rupdate.pdb
    n. UILib.dll
    o. UILib.pdb
    p. WCFClient.exe
    q. WCFClient.pdb
    r. WSNewCropClient.exe
    s. WSNewCropClient.pdb

2. RIS Service Updates folder contains
    a. CDSJobManager.dll
    b. CDSJobManager.pdb
    c. CommonLib.dll
    d. CommonLib.pdb
    e. DDEngine.dll
    f. DDEngine.pdb
    g. rRISServices.exe
    h. rRISServices.exe.config
    i. rRISServices.pdb
    j. rRISServices.vshost.exe
    k. ScheduledTaskManager.dll
    l. ScheduledTaskManager.pdb
    m. SignatureApprovalService.exe
    n. SignatureApprovalService.pdb
    o. WCFService.dll
    p. WCFService.pdb
    q. WebApi.dll
    r. WebApi.pdb

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

   s. Wedge.exe
   t. Wedge.pdb

3. SQL folder contains:
   a. B38_001.sql
4. CoreInstall folder contains:
   a. rRisSetup.msi
   b. setup.exe

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 3. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

## 4. Who is affected

Previous versions of build 38.
Server updates may not be cumulative; therefore this server updated must be applied directly to the previous server update.

## 5. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|
| 37 | - | 1.2.37.12843 | 1.2.37.12782 | 1.2.37.12843 | 1.2.37.12843 | |
| 37 | 1 | 1.2.37.13040 | 1.2.37.13040 | 1.2.37.13039 | 1.2.37.13003 | |
| 37 | 2 | 1.2.37.13069 | 1.2.37.13040 | 1.2.37.13069 | 1.2.37.13003 | |
| 37 | 3 | 1.2.37.13069 | 1.2.37.13040 | 1.2.37.13069 | 1.2.37.13003 | Just WebAPI updated, no version changes |
| 37 | 4 | 1.2.37.13171 | 1.2.37.13040 | 1.2.37.13165 | 1.2.37.13171 | |
| 37 | 5 | 1.2.37.13347 | 1.2.37.13040 | 1.2.37.12979 | 1.2.37.12979 | Bug was discovered with version numbers, this is why it appears we went backwards in the version number but we really did not. |
| 37 | 6 | 1.2.37.13665 | 1.2.37.13040 | 1.2.37.13580 | 1.2.37.12979 | |
| 37 | 7 | 1.2.37.13807 | 1.2.37.13040 | 1.2.37.13799 | 1.2.37.13807 | |
| 37 | 8 | 1.2.37.13807 | 1.2.37.13040 | 1.2.37.13827 | 1.2.37.13807 | |
| 37 | 9 | 1.2.37.13807 | 1.2.37.13040 | 1.2.37.13839 | 1.2.37.13807 | |
| 37 | 10 | 1.2.37.13895 | 1.2.37.13040 | 1.2.37.13895 | 1.2.37.13895 | |
| 37 | 11 | 1.2.37.14161 | 1.2.37.13040 | 1.2.37.14161 | 1.2.37.14161 | |
| 37 | 12 | 1.2.37.14285 | 1.2.37.13040 | 1.2.37.14300 | 1.2.37.14285 | |
| 37 | 13 | 1.2.37.14326 | 1.2.37.13040 | 1.2.37.14326 | 1.2.37.14326 | |

| 38 | 1 | 1.2.38.14748 | 1.2.38.14486 | 1.2.38.14748 | 1.2.38.14748 | |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 6. Installing

1) Copy the files in the GUI ZIP Updates folder and replace those in the rRIS_1.2.38.14486.zip folder. Rename the zip file to be **rRIS_1.2.38. 14748.zip**

2) Copy and replace the files from the "CoreInstall" folder and replace the _setup folder in the RISDeployment\Core folder.

3) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   Restart each service.

3) Run the B38_001.sql file against the eRAD RIS database instance.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

This server update includes the following:

## Defects resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 2498 | Close application while minimized, after logging in again the application does not appear | Normal |
| 2246 | Reporting - Interactive Dictation SpeechMike buttons not working when set to SubmitAduio | High |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Package Contents

Files included for this server update:

1. GUI ZIP Updates folder contains
    a. ris.exe
    b. ris.pdb

## 3. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

## 4. Who is affected

Previous versions of build 38.
Server updates may not be cumulative; therefore this server updated must be applied directly to the previous server update.

## 5. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 6. Installing

1) Copy the files in the GUI ZIP Updates folder and replace those in the rRIS_1.2.38.15251.zip folder. Rename the zip file to be **rRIS_1.2.38.15327.zip**

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

Restart each service.

**NOTE**: A core install is not required for this update. Simply exit the application and reopen to get the latest changes.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 6. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.2.38.15513.zip file provided with this release. The previous GUI.zip should have been renamed to rRIS_1.2.38.15327. Be sure to make a backup of the ris.exe.config file contained within the .zip folder.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   Restart each service.

3) Run the B38_005.sql file against the eRAD RIS database instance.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# Server Update

For eRAD RIS
Version 1.0
Build 38
Update 38.006

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# Table of Contents

1. Purpose ..... 3
   Defects resolved ..... 3
2. Package Contents ..... 3
3. Intended Audience ..... 4
4. Who is affected ..... 4
5. eRAD RIS Release Version Numbers ..... 5
6. Installing ..... 6

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This server update has been produced to fix bugs required for production setting, or to complete an enhancement requested for production.

This server update includes the following:

### Defects resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 2869 | Reporting - Interactive dictation getting lost and set to 0 bytes | Urgent |
| 2876 | Transcription Dashboard not reporting self-editing radiologists properly | Normal |

# 2. Package Contents

Files included for this server update:

1. GUI ZIP Updates folder contains
    a. AudioLib.dll
    b. AudioLib.pdb
    c. Ris.exe
    d. Ris.pdb

2. SQL folder contains
    a. B38-006.sql

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 3. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

## 4. Who is affected

Previous versions of build 38.
Server updates may not be cumulative; therefore this server updated must be applied directly to the previous server update.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 5. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|
| 37 | - | 1.2.37.12843 | 1.2.37.12782 | 1.2.37.12843 | 1.2.37.12843 | |

# 1. Purpose

This server update has been produced to fix bugs required for production setting, or to complete an enhancement requested for production.

This server update includes the following:

## Defects resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 2884 | Hold Code Completed Status | Normal |
| 2898 | Verify and continue does not work | High |
| 2904 | HL7 messages are changing study status back in the workflow post-ExamDone | Urgent |
| 2905 | Reporting - Interactive dictation getting lost in data when refocusing after tab switch | High |
| 2908 | Reporting - inbound reporting may not open accession numbers tried once with an error | High |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Package Contents

Files included for this server update:

1. GUI ZIP Updates folder contains
    a. rRIS_1.2.38.15768.zip

2. RIS Service Updates folder contains
    a. CDSJobManager.pdb
    b. CDSJobManager.dll
    c. CommonLib.pdb
    d. CommonLib.dll
    e. DDEngine.pdb
    f. DDEngine.dll
    g. rRISServices.pdb
    h. rRISServices.exe
    i. rRISServices.vshost.exe
    j. ScheduledTaskManager.pdb
    k. ScheduledTaskManager.dll
    l. SignatureApprovalService.pdb
    m. SignatureApprovalService.exe
    n. WCFService.pdb
    o. WCFService.dll
    p. WebApi.pdb
    q. WebApi.dll
    r. Wedge.pdb
    s. Wedge.exe

## 3. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

## 4. Who is affected

Previous versions of build 38.
Server updates may not be cumulative; therefore this server updated must be applied directly to the previous server update.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 6. Installing

1) Copy the zip file to be **rRIS_1.2.38.15768.zip** file from the GUI ZIP Updates folder to the RISDeployment\Build folder. Move the rRIS_1.2.38.15618.zip folder to its backup location. No changes to the ris.exe.config settings file that is contained within the .zip folder.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   Restart each service.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 39. This version of eRAD RIS is referred to as Build 1.3.39.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.39 is considered a new core release of the application and will require a reinstallation of eRAD RIS. This is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 4. New Access Strings and Configuration Settings

| Setting Placeholder | Setting | Default | Controls Access to |
|---|---|---|---|
| Access string / User Group Permission tables | Clinical.Schedule.SplittingOrders | none | Controls access to split an order in the registration window |
| rRISServices.exe.config | <serviceThrottling<br>maxConcurrentCalls="2000"<br>maxConcurrentSessions="4000'<br>maxConcurrentInstances="4000" | Was 100, 50, and 50.<br>Will now be 2000, 4000 and 4000 | This is a pre-existing setting that controls the amount of concurrent users. The previous values were 50, 100, and 100 consectutively. |
| Access string / User Group Permission tables | Clinical.ImportCD | None | Controls access to Import CD option from patient folder. |
| SystemConfig table | *PACSCacheDelimiter* | ^ | Determines the delimeter to be used to separate user ids in the PACS cache field |
| SystemConfig table | *PACSCacheServer* | | Determines the PACS work list server used for setting and retrieving the cache field |
| SystemConfig table | PACSCacheField | UDF7 | Determines the field used in the PACS to indicate that the study should be cached |
| SystemConfig table | PACSCachingEnabled | False | Number of studies allowable to cache per user |
| SystemConfig table | PACSMaxNumCachedStudies | 5 | Determines if the PACS image caching functionality is enabled |
| SystemConfig table | PACSCacheFieldLength | 32 | Indicates the expected length of the PACS Cache field in the PACS database |
| Access string / User Group Permission tables | *Clinical.CacheStudy* | None | Allows the user to manually add a study to |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| | | | the cache |
| Access string / User Group Permission tables | Clinical.RISAdminChangeStatus | None | allows a RIS administrator to make changes to the status of an exam that might not be possible otherwise |
| Access string / User Group Permission tables | Config.LookupEditor.ScanDocumentArchiveLocation | None | Controls access to the lookup table under the Configure menu item |
| SystemConfig table | ScanDocumentMaxSizeInDB | 2147483647 | The maximum size in GB that the system will persist scans documents directly in the db. When this value is exceeded the archive process will begin (at its next run time interval) to move scan documents to the archive. |
| SystemConfig table | ScanDocumentMinSizeInDB | 2147483647 | When scan document archiving is initiated, this is the minimum size in GB that the system will reduce the amount of scans documents that are persist directly in the db. |
| SystemConfig table | ScanDocumentArchiveCurrentLocation | | The archive location where the archive process will move scan documents to. The value must match a value in the l_scan_document_archive lookup table. |
| SystemConfig table | ScanDocumentArchiveStartTime | 00:00:00 | The time of day in hh:mi format (24 hour) that the scan document archive process can wake up. |
| SystemConfig table | ScanDocumentArchiveStopTime | 00:00:00 | The time of day in hh:mi format (24 hour) that the scan document archive |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| | | | process must stop. ~~Does not have to be greater~~~~greater~~If less than ScanDocumentArchiveStartTime then the process will continue to the next day until the time is reached. |
| SystemConfig table | ScanDocumentArchiveDaysOfTheWeek | 0,1,2,3,4,5,6 | A comma separated list of days that the archive process will wake up to see if there is work. The list is contains numbers representing the day number within the week, where:<br><br>0 is Sunday<br>1 is Monday<br>2 is Tuesday<br>3 is Wednesday<br>4 is Thursday,<br>5 is Friday<br>6 is Saturday<br><br>For example, a value of 0,1,2,3,4,5,6 means that the archive process will run every day of the week. |
| | ScanDocumentArchiveServerNames | | A comma separated list of server names that are allowed to run the archive service. |
| | ScanDocumentArchiveMaxThreads | 6 | The maximum number of thread the scan document archive process can use within one process. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 5. New Features and Enhancements

## Mammo – Ignored Reminder Removal from Mammo Letters Work List

The Mammo Letters WL contains the letters to be sent to patients that have upcoming or missed exam dates for follow up mammo exams. We can generate up to 3 reminder letters that will appear on the Mammo Letters WL from a pre-configured time. When the last letter is generated and a follow up order is not scheduled, we then create an Ignored Reminder on the WL when 60 days has passed since the last letter was generated.

The issue we had with the ignored reminder is that if the follow up was scheduled as a new appointment and not from the follow up order itself, we had no way of removing the ignored reminder from the Mammo Letters WL.

We have added a new System Configuration variable:
**IgnoredRemindersMaxDays** with a default value of 7 days. This value can be changed to the practices desired time in day's length. The **IgnoredRemindersMaxDays** allows the practice to set the amount of days the ignored reminder will remain on the Mammo Letters WL after the reminder was generated.

We have added a second System Configuration variable:
**IgnoredRemindersStartDays** with a default of 60 days. This will allow the practice to configure the time in days that an ignored reminder is generated after the last letter was created.

Example – A the third and final reminder letter was generated 30 days past the target exam date. Using the default value for I**gnoredRemindersStartDays,** the ignored reminder will be created 60 days past the last letter generation date. The ignored reminder will remain on the WL until the **IgnoredRemindersMaxDays** configured value is met, with 7 days being the default. Then the ignored reminder is removed from the WL.

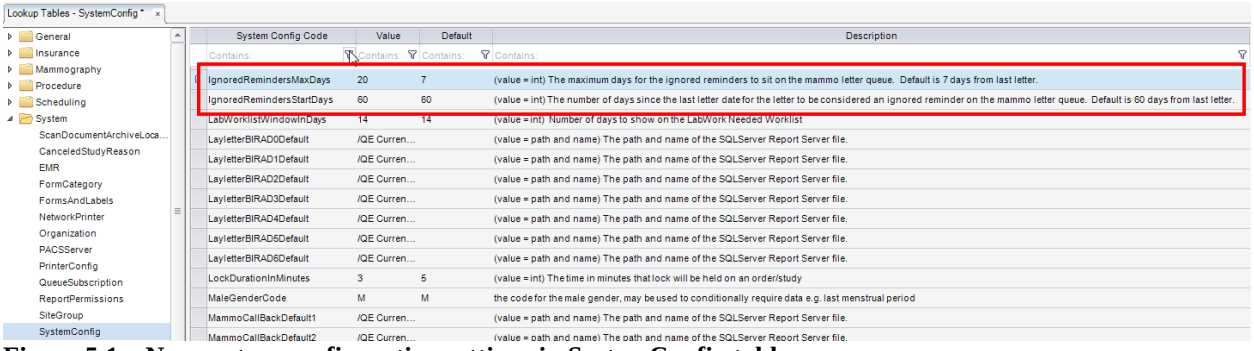

**Figure 5.1 – New system configuration settings in SystemConfig table**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Retrieve Locked by User Name

Today in eRAD RIS we don't let locked or taken time slots to appear in the scheduled search grid in the new appointment window. Users do still have the option to select the time from the Appointment Book, from the Scheduled Date control from the procedure picker row on the Schedule tab and also from the Calendar window also access from the procedure picker row.

If the time selected is currently locked by another user, we will try to obtain the user and person information.

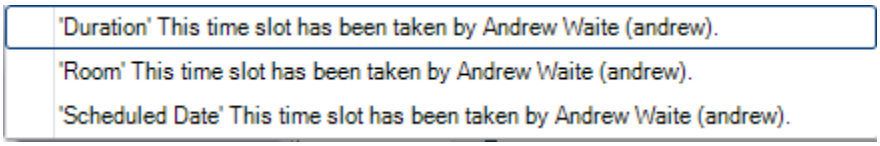

**Figure 5.2 – Locked time block user name and person information information**

If the person information is not obtainable, we will display at the very least the user name.

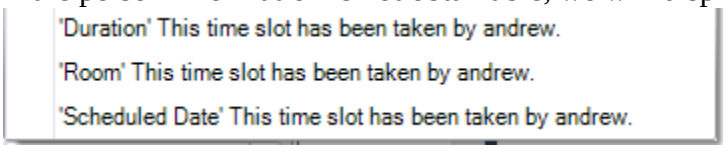

**Figure 5.3 – Locked time block user name only**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Carrier Information from Insurance Policy Grid

To assist users in easily obtaining the insurance carrier contact information we have added a context menu to the Insurance Policies grid located on the order tab of most data windows.

When the carrier name is present in the Insurance Policies grid, a right click on the carrier row displays a new menu option of Carrier Details.

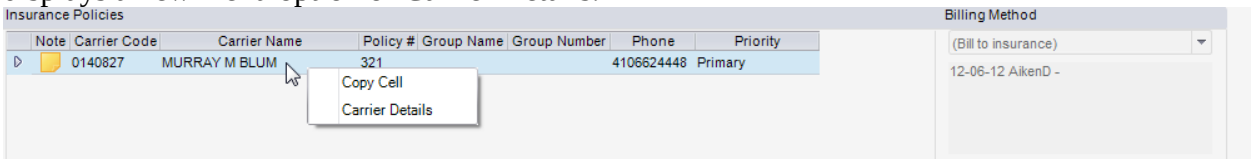

**Figure 5.4 – Access to Carrier Details from Insurance Policies grid**

Selecting the Carrier Details option from the menu provided will open the Carrier Details window with available contact information.

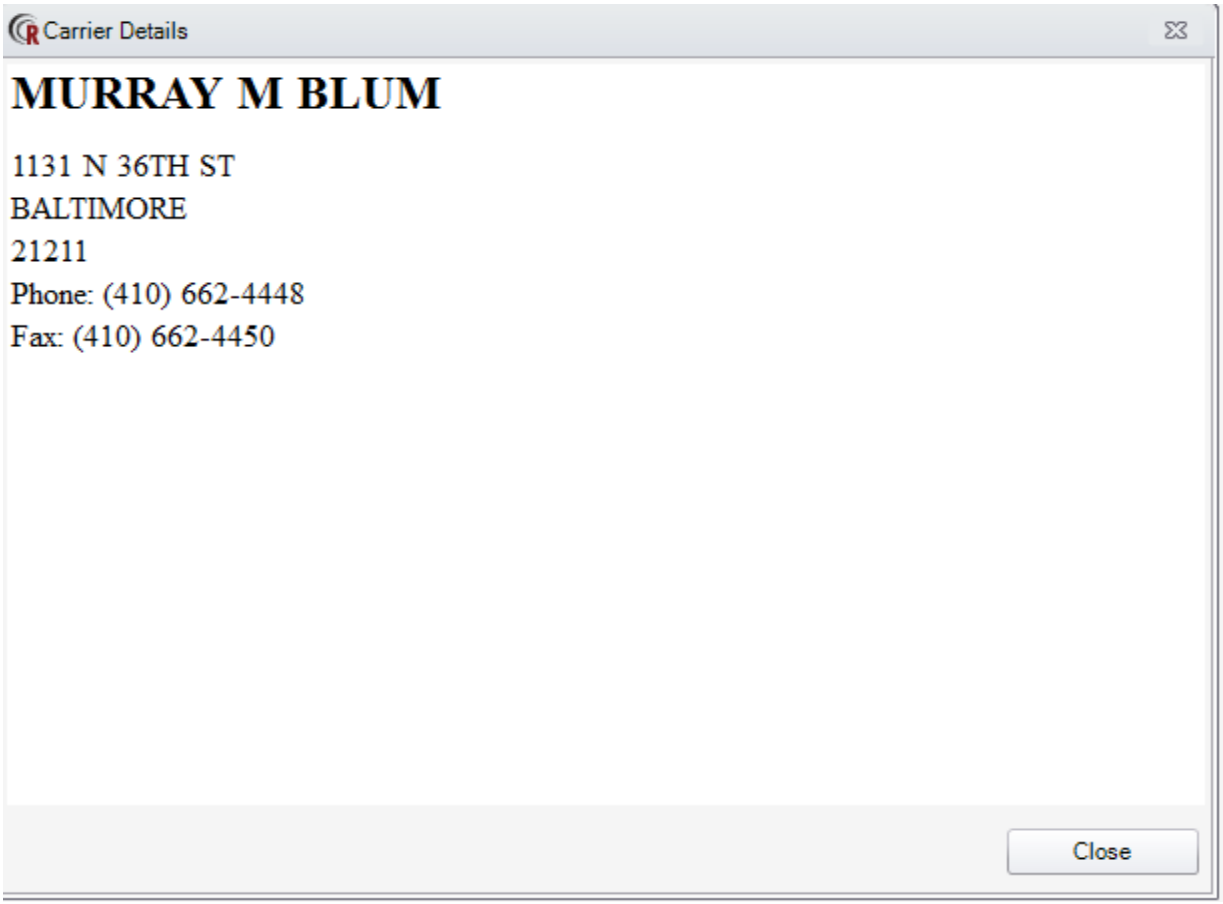

**Figure 5.5– Carrier Details information.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Ability to Split Studies on Existing Order

Previous to this build, the ability to create separate orders within a single booking was possible, but once the studies were scheduled, they could not be divided into separate orders. In build 39, it is now possible to complete this task in the registration window.

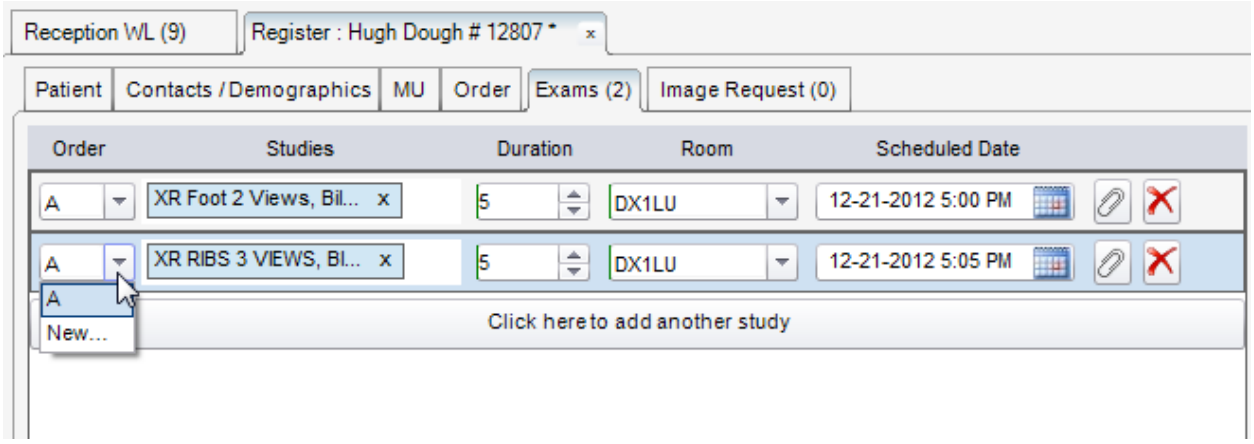

**Figure 5.6 – Splitting studies to separate orders.**

When New… is chosen the behaviour is the same as when scheduling a new appointment. Another order tab appears in which the required details must be completed and the Order tabs become Order[A] and Order[B], etc…

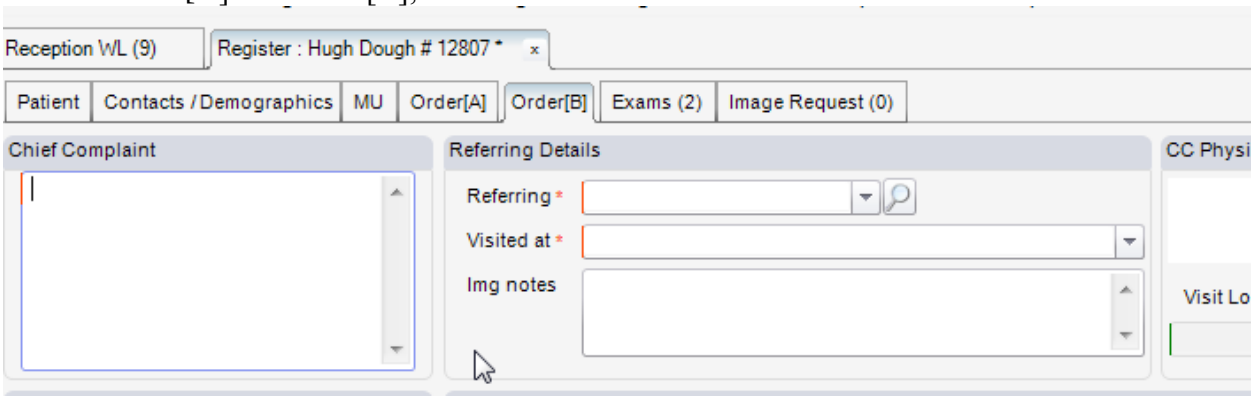

**Figure 5.7 – New order tab**

Access to this feature is available as long as the user has permissions with a new access string `Clinical.Schedule.SplittingOrders`

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

There is a restriction in place to prevent a study from being removed when there is only one remaining pre-existing study in an order. This is to prevent an order from being orphaned back to the Order to Schedule WL.

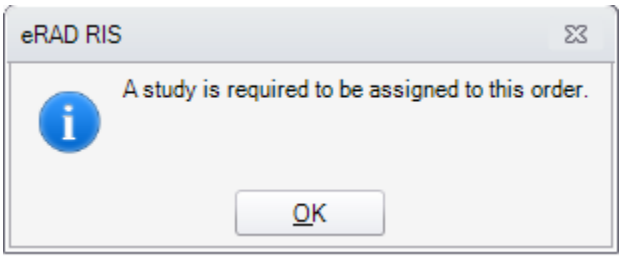

**Figure 5.8 – Message prompt from trying to remove all studies**

When a study is switched between orders, all the original order item and study item will remain the same and only the required order key will be updated.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# CD Import

We needed a way to import studies into RIS so that the accession number matches what is in PACS. The real need is so we have the information in RIS for the Patient Folder and that the RADs can see those studies in the relevance logic so that the correct prior exams get loaded.

CD Import has been added in the patient search window. Once you have the correct patient in the search results window, select the new context menu (right click) option "Import from CD"

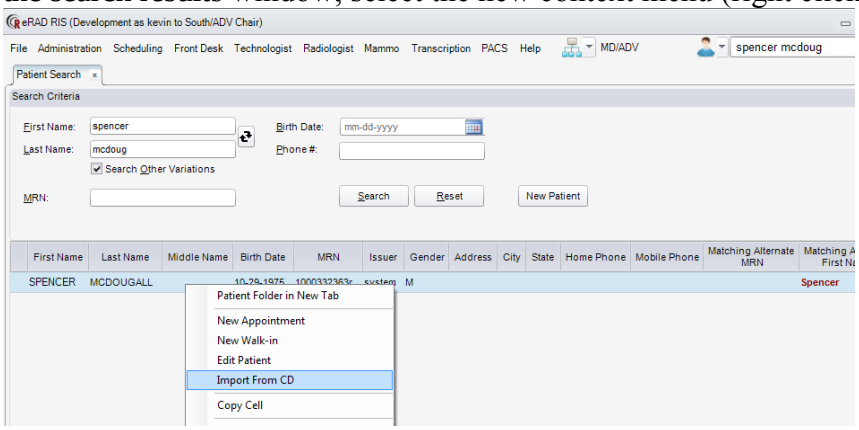

**Figure 5.9 – Patient Search context menu option Import from CD**

This will open the Import from CD window. If there is only one patient on the CD, this patient will be defaulted and the Patient to import list box will be disabled. Alternatively, if there is more than one, the list box will be enabled. Once the procedure is matched with the details in the description field, the modality will be auto populated, but can be changed if needed. Body part and laterality are optional. The Site field is required, and tech notes can be added.

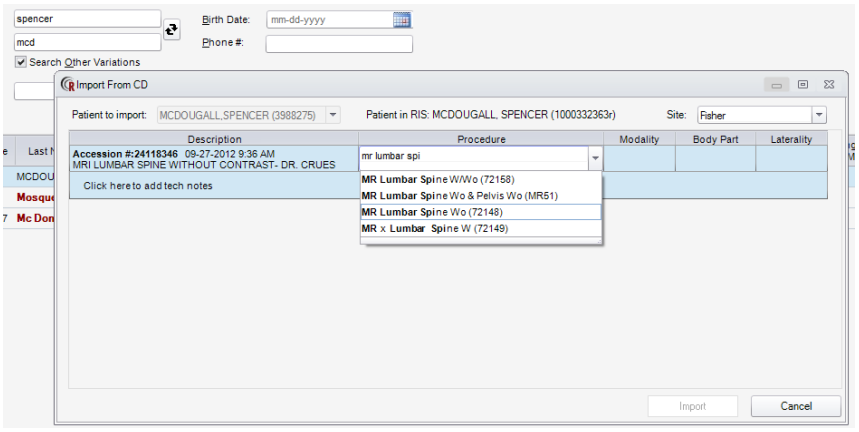

**Figure 5.10 – Import from CD window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

When the procedure, modality, body part, etc… has been selected, the user can proceed to select the import button.

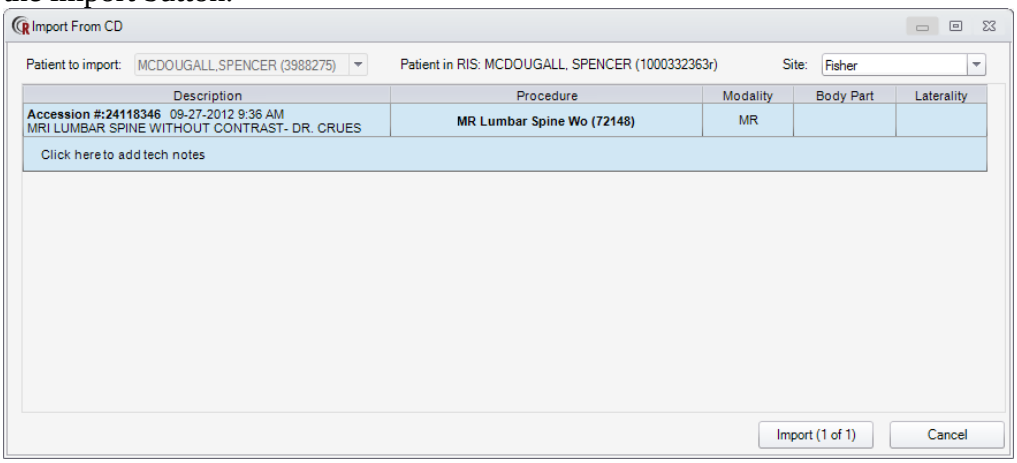

**Figure 5.11 – Import from CD window, ready to import!**

After clicking import, the status area in the bottom left will display "Started Importing into PACS", and the progress bar will appear giving the user a visual indicator of how much of the import has been completed.

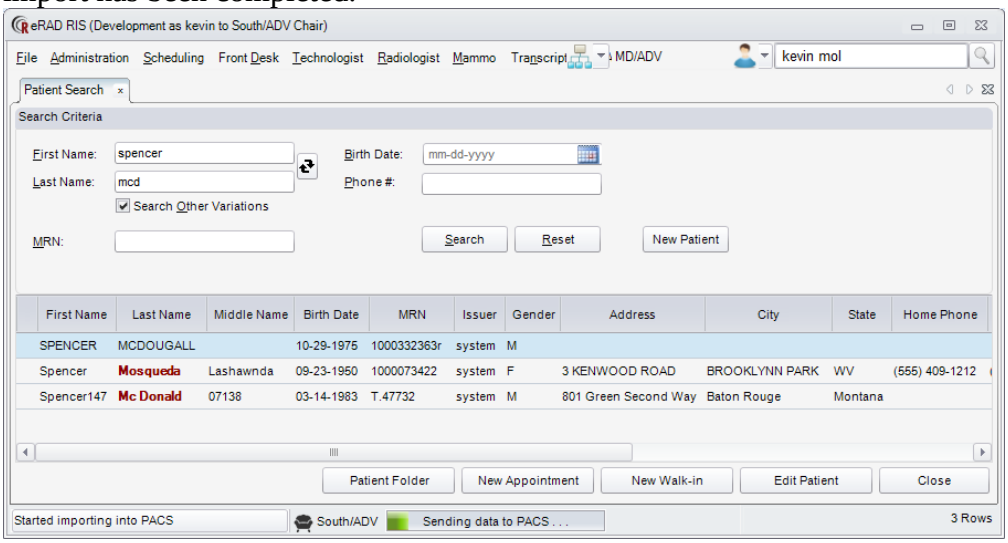

**Figure 5.12 – Import started, showing progress bar and message in status area**

If you try to logoff, exit or if you try to import again you get a message similar to the following.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

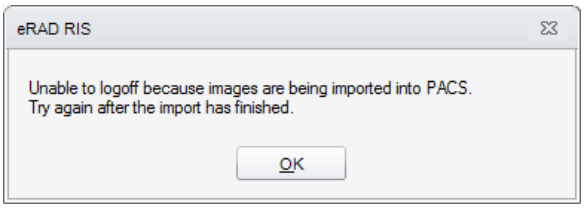

**Figure 5.13 – Message prompt displayed when import hasn't finished**

When the PACS import is complete the user will get a popup and status message as shown in the following. If there was an error the popup would be an exception message box with the e.Message and e.Exception accessible via the show details button along with a failed to import message in the status area. In the example below the status area is displaying Finished importing into PACS.

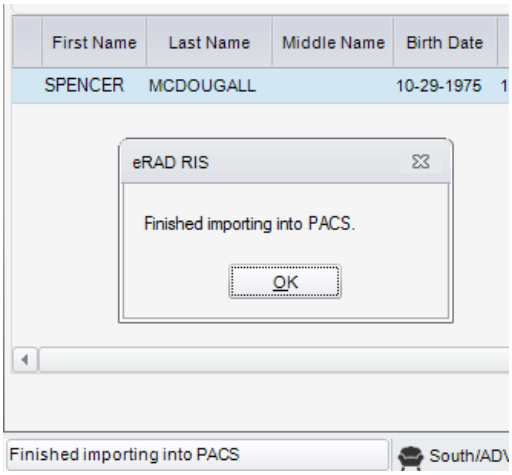

**Figure 5.14 – Import finished**

When the study is imported into RIS you can edit the study via the "View Edit Screen" from the Patient History work list. The exam will have the status of "ExamDoneTechOnly". ExamDoneTechOnly is a final status, for when we don't have the professional services data such as Dictation, CDA, Signed By, etc.

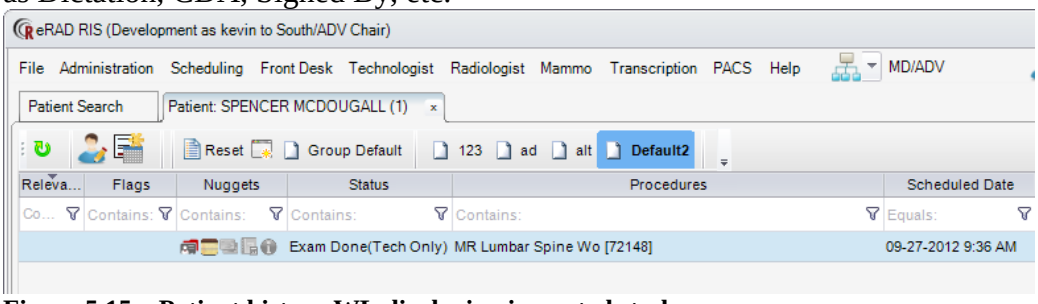

**Figure 5.15 – Patient history WL displaying imported study**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

If for some reason the study was loaded in RIS, but the upload of images to PACS was not completed, when they open up the "Import From CD" dialog they would get the following prompt with the procedure already matched. Clicking Import would only import the study on the PACS as there would be nothing to do on the RIS.

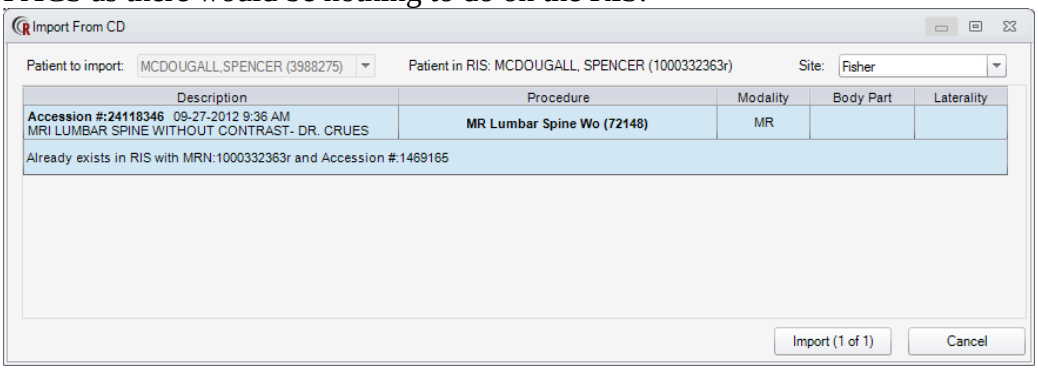

**Figure 5.16 – Study has already been imported to RIS but not PACS**

As mentioned earlier, the site to upload the images to must be selected. Each site can be configured to have a child PACS server. Displayed below the Site is accessed from the Organization lookup editor. Edit the site and enter the Child server for this particular site.

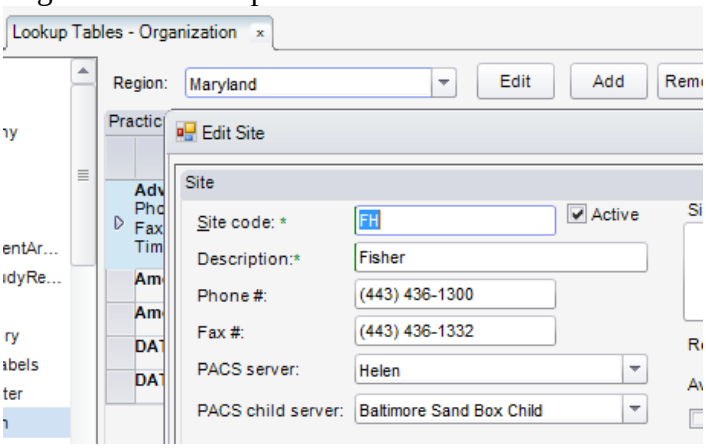

**Figure 5.17 – Organization lookup, Site with PACS child server configured**

The PACS child server is configured in the PACSServer lookup table.

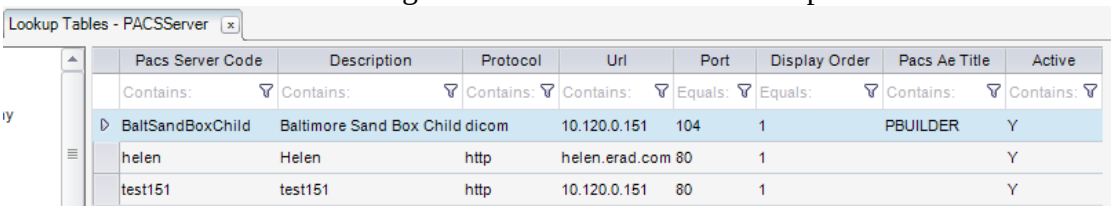

**Figure 5.18 – PACSServer lookup table with child server configured**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Configuration required importing images to a child PACS server include:

1) IP
2) Port
3) PACS_AE_TITLE
4) Protocol (dicom)

The Import CD feature uses the dummy outside modality codes, which are required for creating an OutsideRead. If the outside modalities have not been configured the user will get prompted with a message explaining the missing entries. These messages are similar to the messages they would see if the system wasn't configured and they attempted to open the Outside Read screen.

To control access to the Import CD feature the access string "Clinical.ImportCD" has been added with default permission set to "None". In order for users to have access to this feature one of their user groups will need full access rights. If their rights are set to "ReadOnly" they will be able to open the "Import from CD" popup but will not have permission to actually perform the import.

The "Import from CD" action first searches for any CD with a "DICOMDIR" in its root folder. If it finds one that CD is used in the import. If it can't find one it then searches for a removable media such as a USB drive that has a "DICOMDIR" in its root folder and if it finds one of those uses that for the import. If it can't find any DICOM image source then it prompts the user with the option of manually select a DICOMDIR.

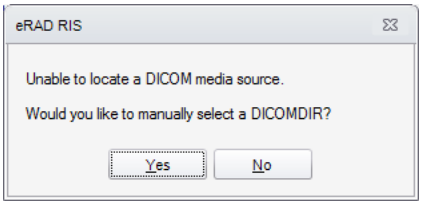

**Figure 5.19 – Message prompt for DICOM media source not located**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## PACS Image Caching

In order to speed up the loading of images on the PACS we need to cache the images on the Rad's workstation prior to their opening the study. The PACS currently has a 'prefetch' worklist that is configurable per user or workstation. This works by the PACS viewer running a task every 5 minutes (configurable) to query for the logged in user's prefetch worklist from the prefetch server(configurable). The studies that show up on this worklist are cached to the workstation.

PACS has 10 user defined fields of various lengths in its database. The approach is to use one of these fields to set up the users' prefetch work lists and to have the RIS populate this value appropriately for the user(s) that want to cache a particular study. This is configurable via the *PACSCacheField* system configuration setting.

It was determined that UDF2 is available and meets the necessary length. It is 32 characters long which will allow us to prefetch a study for on average 3 users. The average length of a user id is 7 characters but we also need to put in starting and ending delimiter characters to prevent problems when one user id is encompassed within another. This delimiter character is configurable via the new ***PACSCacheDelimiter*** system configuration setting.

***Example:*** Users s*tu* and *stuart* would be inserted into the UDF2 field as ^stu^ and ^stuart^. The RIS will retrieve the value of the UDF for each study it wants to cache prior to setting the value so it can determine if other users have already requested the study to be cached.

***Example:*** if we are using UDF2 and its value for accession number 123 is empty the user *stuart* we would set the value of UDF2 to ^stuart^. If user c*lifton* then requested that study be cached, the RIS would retrieve the UDF2 value and after seeing that *stuart* already requested it would set the value to ^stuart^^clifton^.

The PACS viewer can only specify one server for querying its prefetch worklist. The RIS now also has one system configuration setting for which server it will use to query/set its cache requests. This is defined in the ***PACSCacheServer*** system configuration setting.

The RIS client determines what primary studies are to be cached and passes a list of these study keys to the core WCF service. The WCF Service calculates the relevant priors using the same logic the client will use during the open call to the viewer. All primary and relevant studies are then set to be cached in the PACS database.

A c_study_prefetch_log table has been added to the RIS database to capture events surrounding this cache framework. Any time a study cache is attempted, an entry is created in this table

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

indicating the RIS and PACS user ids for the request, the primary study, the study being cached, and a note describing the value of the UDF field in the PACS database or some other information about the event.

Usage:
Studies can be cached either by a manual selection by the user from a right-click option or automatically based on the next available study on their worklist. Both of these approaches apply ONLY to the Pending Dictation worklist.

The automatic caching will take place on every refresh of the worklist after the initial open. This is in order to give the Rad time to sort and filter their worklist appropriately before we start caching studies they have no interest in.

The manual selection involves right-clicking on a study or set of studies using multiple section and selecting *Cache Study*. This is controlled by the access string ***Clinical.CacheStudy.***

Setup Steps:

1) Configure RIS as "trusted" on the PACS worklist server:

   All communication to the PACS server runs through the RIS server. In order for that communication to be possible, the RIS server must be registered with the PACS as a trusted server. This is done by ssh'ing into the PACS worklist server and editing */home/medsrv/var/iface/access.cfg* to enter in a line like:

   10.120.0.152 = "LASBQDEFORTH"

   Where the first value is the IP of the RIS server and the second is the permissions assigned to it. The above string gives full access.

2) Configure RIS to use the PACS worklist server for caching:
   a. If the worklist server does not exist in the l_pacs_server table, add it.
   b. Set the ***PACSCacheServer*** system config setting to the pacs_server_code value of the worklist server in the l_pacs_server table.

3) Set ***PACSCacheField*** to appropriate UDF field for the installation. Example is to use UDF2.

4) Set ***PACSCacheDelimiter*** to appropriate value. The default is ^, but that may have to change if it is found to cause problems with HL7.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

5) Set PACSCachingEnabled to true. This is false by default.

6) For users that need to cache, set the User preference for "number of studies to cache" on the Integration tab of the User Preferences dialog to a number between zero and the value of ***PACSMaxNumCachedStudies***. I'd suggest 3, maybe.

**Reminder:**

**Changes to a system configuration setting do not take place until the service is restarted.**
**Changes to a user preference do not take place until the user logs out and back in.**

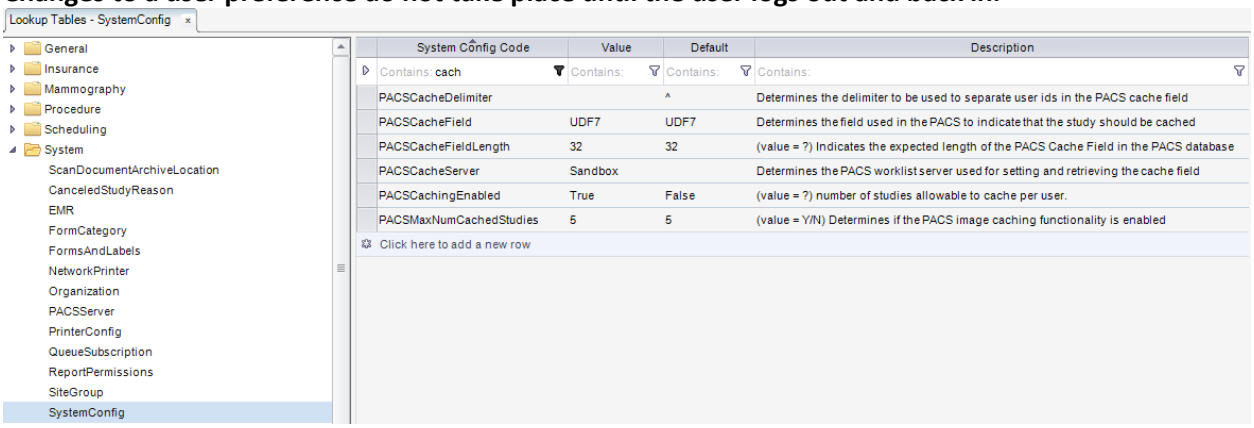

**Figure 5.20 – New system configuration settings for PACS Image Caching**

There is also a new User Preference called "Studies to cache". The value for Studies to cache cannot be greater than the value for the system configuration setting PACSMaxNumberCachedStudies

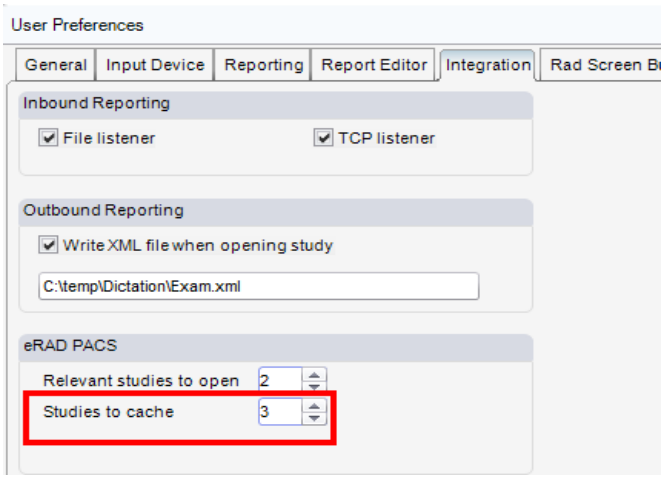

**Figure 5.21 – User Preference Studies to cache**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Enhancements to Navigation

Earlier versions of RIS had a hard coded set of expected status transitions – e.g. an exam could move from Scheduled to Cancelled, but not from Cancelled back to Scheduled. In some cases operations found that they needed to change the status of an exam, but RIS would not allow the exam to move to the desired status. Whenever RIS would not allow a particular transition from one status to another, a RIS Administrator or tech support provider would e-mail R&D and request that the data be updated in the database using SQL.

We added a new database table, s_status_transition, which will be maintained by R&D.

We added a new web method that provides a summary of the current exam (to reduce the likelihood of errors) and returns a list of statuses believed to be appropriate for an exam in a given status.

We added a web method to change the status for a specified study to a new status.
Added a new menu item to the context menu on patient folder, Manual Status Update…

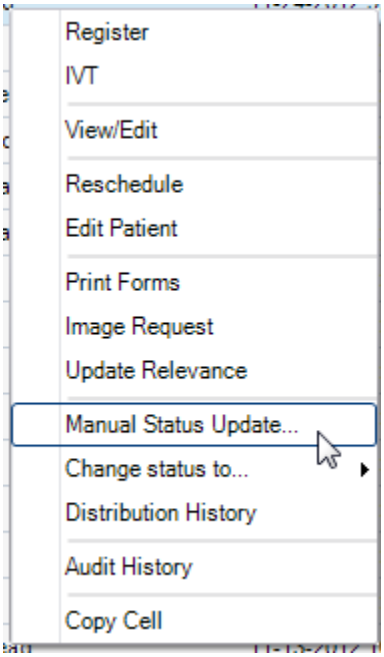

**Figure 5.22 – Manual Status Update context menu option available in Patient History**

The above context menu option is controlled by a new access string "Clinical.RISAdminChangeStatus" permission and is defaulted to None.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The Manual Status Update dialog shows the patient name, MRN, birth date, Address (if known), the current accession #, procedure description and the scheduled start date.

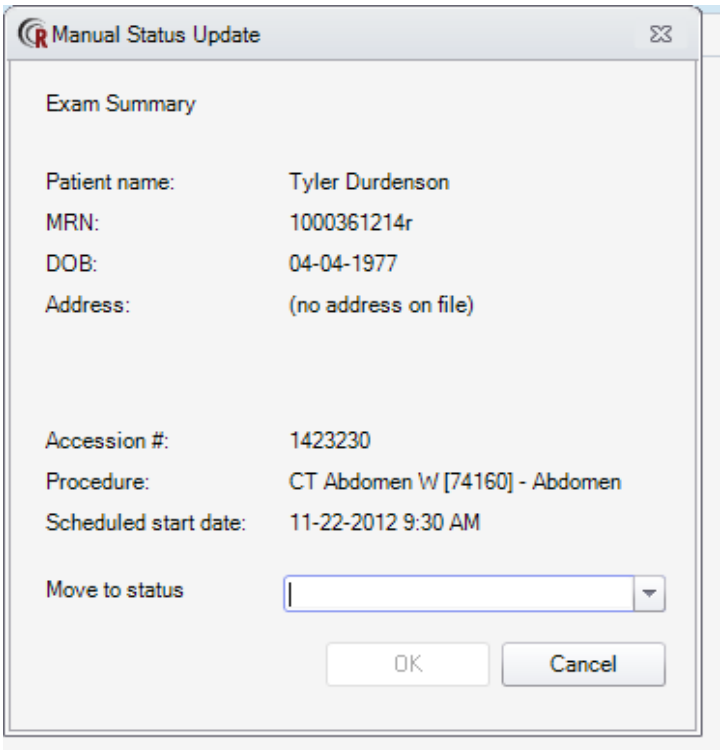

**Figure 5.23 – Manual Status Update window**

The "Move to status" drop down list is populated based on the list of "destination_status_code"s that are present in the s_status_transition table for the "source_status_code" (i.e. current status) of a given exam.

The OK button will remain disabled until the user makes a choice from the list.

After the user makes a selection and presses OK, the prompt below appears. If the user clicks "Yes", RIS will attempt to acquire a lock on the current order, and if successful, it will request the status update

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

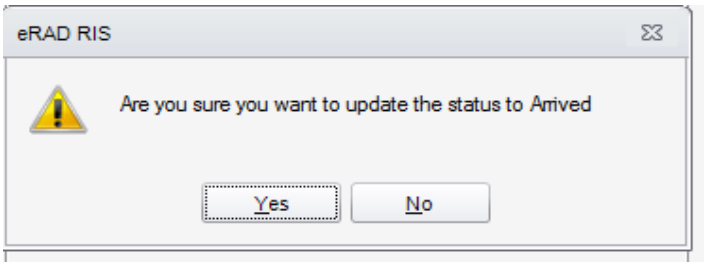

**Figure 5.24 – Confirmation prompt**

The audit logs show the date, an appropriate action, the user who took the action and the changes that took place during the manual status update:

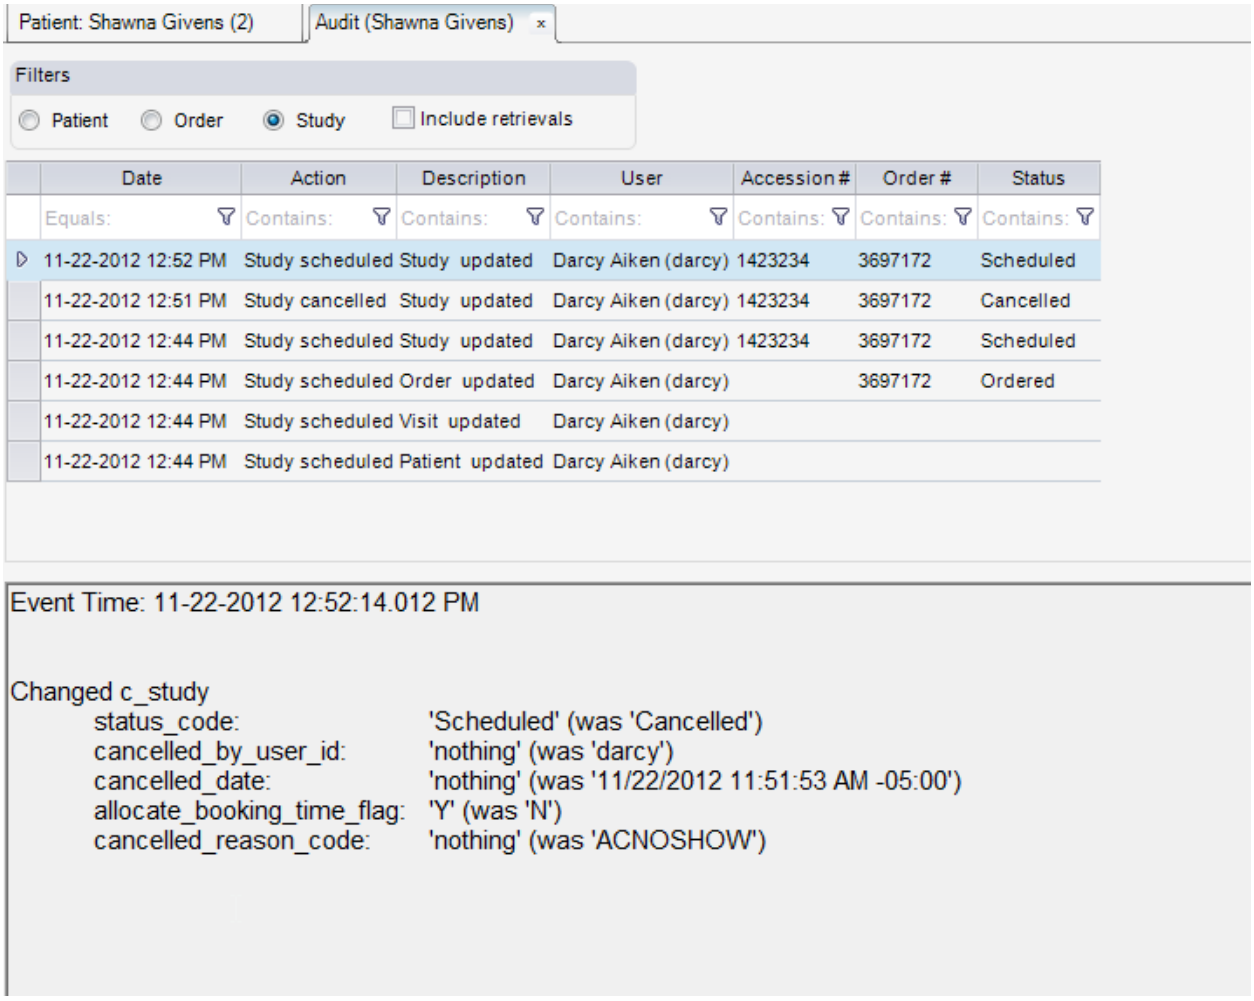

**Figure 5.25 – Audit log**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The "Action" in the audit logs is determined by the s_status_transition table's "main_action" column. If there is no main_action specified, the main_action will default to "UI_StudyUpdated".

**Special Handling of Statuses on the Server**

In addition to the special case exceptions below, we explicitly set the status to the status requested by the RIS Admin, and then we fire all the business rules associated with the UI_MainAction that is configured for a given status transition. (e.g. if the action is UI_StudyScheduled, the business logic may dictate that scheduled_by_user_id reflect the current user's user ID)

| Moving From | Moving To | Additional Steps Taken |
|---|---|---|
| Cancelled | | Clear out cancelled by user id<br>Clear out cancellation date<br>Set Allocate booking flag to Y<br>Set reschedule_flag to N |
| ExamDoneTechOnly | | Set Tech Only Flag to N |
| Discontinued | | Set discontinued by user id null<br>Set discontinued date null<br>Set aborted reason code null |
| | Cancelled | Set allocate booking flag to N |
| | ExamDoneTechOnly | Set Tech Only Flag to Y |

**Table 5.1 – Status changes "From" and "To" showing additional steps taken**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

This has been addressed at individual installs through configuration changes after-the-fact. The issue was identified and checked-in in May, but the config changes were not documented and thus not pushed out in the normal way. Individual installs have been spot checked for the appropriate settings.

```
<serviceThrottling
            maxConcurrentCalls="2000"
            maxConcurrentSessions="4000"
            maxConcurrentInstances="4000"
                 />
```

**Figure 5.26 – rRISService.exe.config file update (changes in value**

We believe 2000, 4000, 4000 is appropriate for up to 650 concurrent users. These numbers could be set higher if needed.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Report History availability

The radiologists have always been able to review a dictation and previous reports via the Report History window that was available from with the reporting window. Access to this window has been added to the context menu of the Patient History work list window, transcription work lists and also to radiologist work lists. Access for this menu option is the from the access string **Clinical.ReportHistory.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Default Layout Views for Reporting Window

In prior versions of eRAD RIS, the user could have 2 different views saved. There was one for the dictation reporting window and one for the signing reporting window. In build 39 we have added some default "canned" layout views that are always accessible.

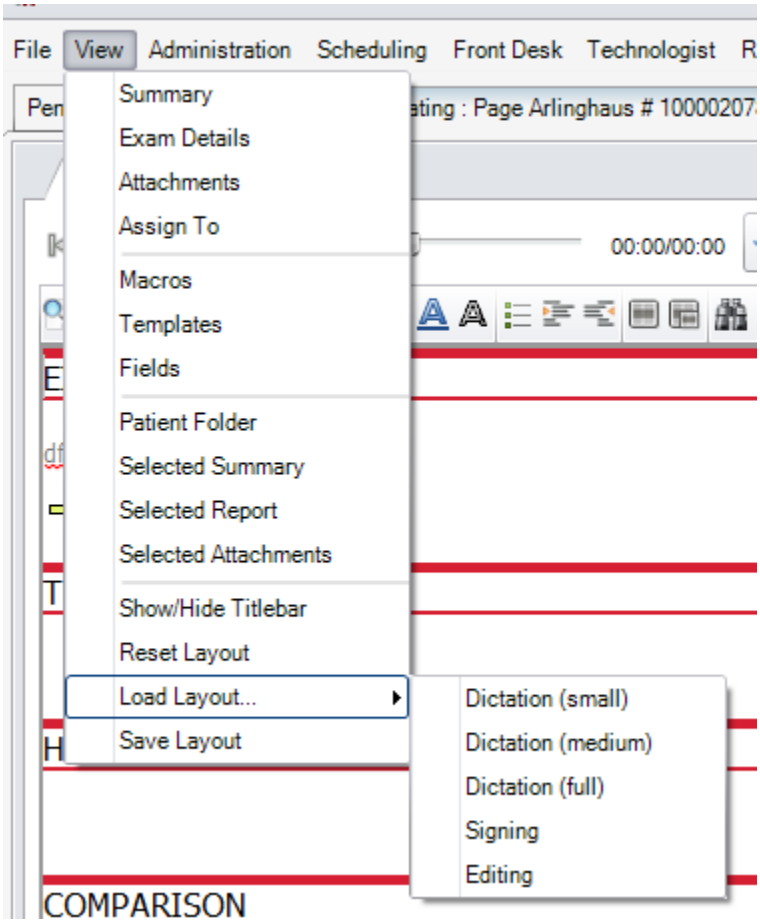

**Figure 5.26 – Default canned layout views**

The default "canned" layouts are static; meaning the configuration of the layout cannot be changed and saved as the default. The user may still have their own custom saved layout, can save one of the default views as their layout, but they cannot make changes to default layouts, save and expect it load the next time a default is selected from the Load Layout… submenu.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Playback Highlighter Color

Transcription wanted to be able to change the playback color in the reporting window. When playing back a dictation, the color is the standard blue color. If the playback and the cursor position are disconnected, meaning they are editing a different position of the report, but still listening to the dictation, the color can now be different. A new color option has been added to the Editor Appearance window.

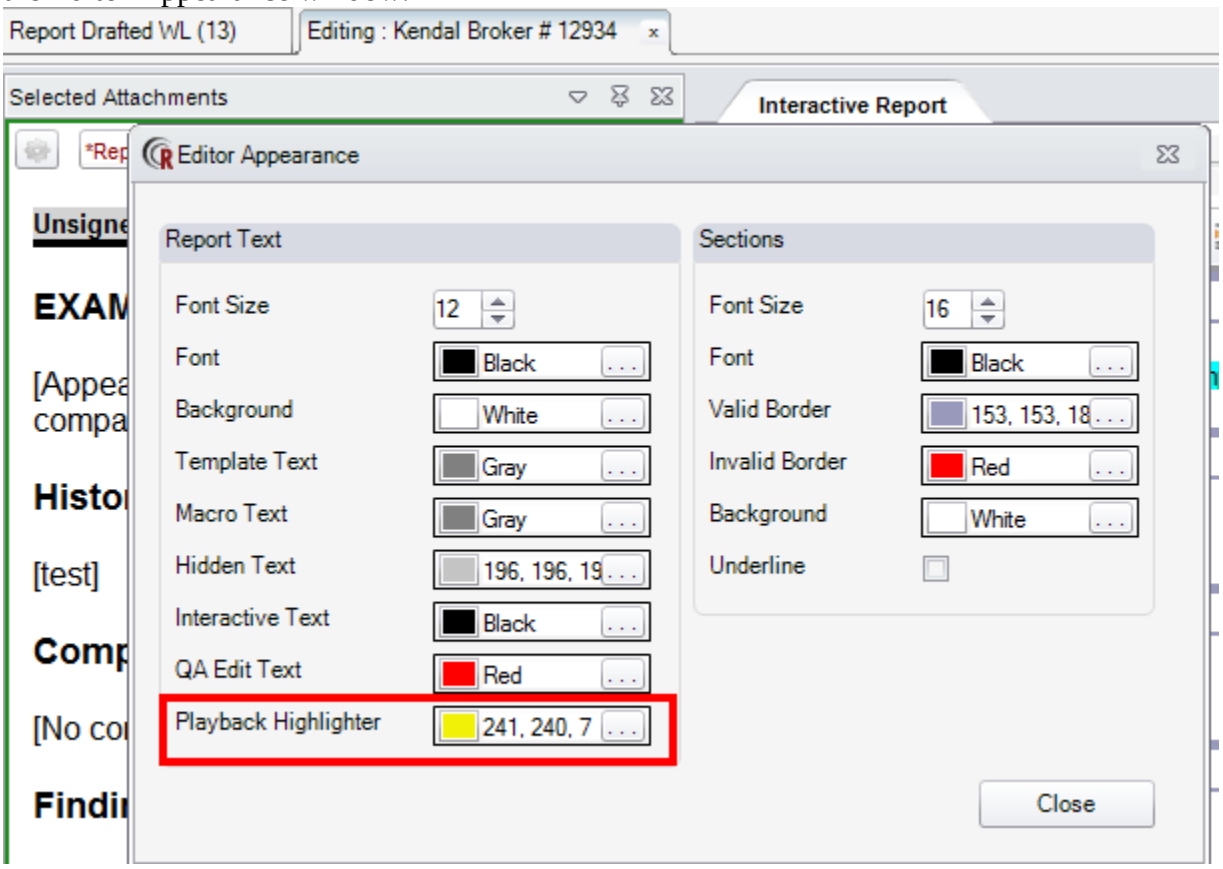

**Figure 5.27 – Playback Highlighter color preference option**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Field Tool Window

A new tool window (or data pane) has been introduced in Build 39. The Fields tool window will allow the user to see the sections and fields plus and field cues in the current report template loaded in the reporting editor.

The Fields tool window helps the radiologist to easily determine what the next field and field cue may be. The cue is the word or term used to navigate to a particular field. For example: There may be a single field in the History section and the cue for that field may be "History colon". This will move the cursor position to this field and allow the radiologist to dictate the history for this report.

In the example below you can see the cursor position is in the comparison field, and in the Fields tool window, comparison is highlighted indicating this is the current position in the report. In the second column you see the cues for the individual fields within the report. Lastly, the Fields window can also be used to navigate to a particular field in the report. For example, selecting the impression field in the Fields tool window will put focus on the impression field in the report. If the section title is selected in the Fields tool window it will put the cursor position at the start of that section.

As with the other tool windows, the Fields tool window can be docked, floating, or tabbed. We anticipate that this window will be floated away from the reporting window and used a navigation tool so the report editor is not the main focus.

There is a limitation if a section or field is deleted from the report, the Fields tool window will not dynamically update. If this section or field is selected from the Fields tool window, the user will receive a message that it could not be found, and then it will be removed from the view.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

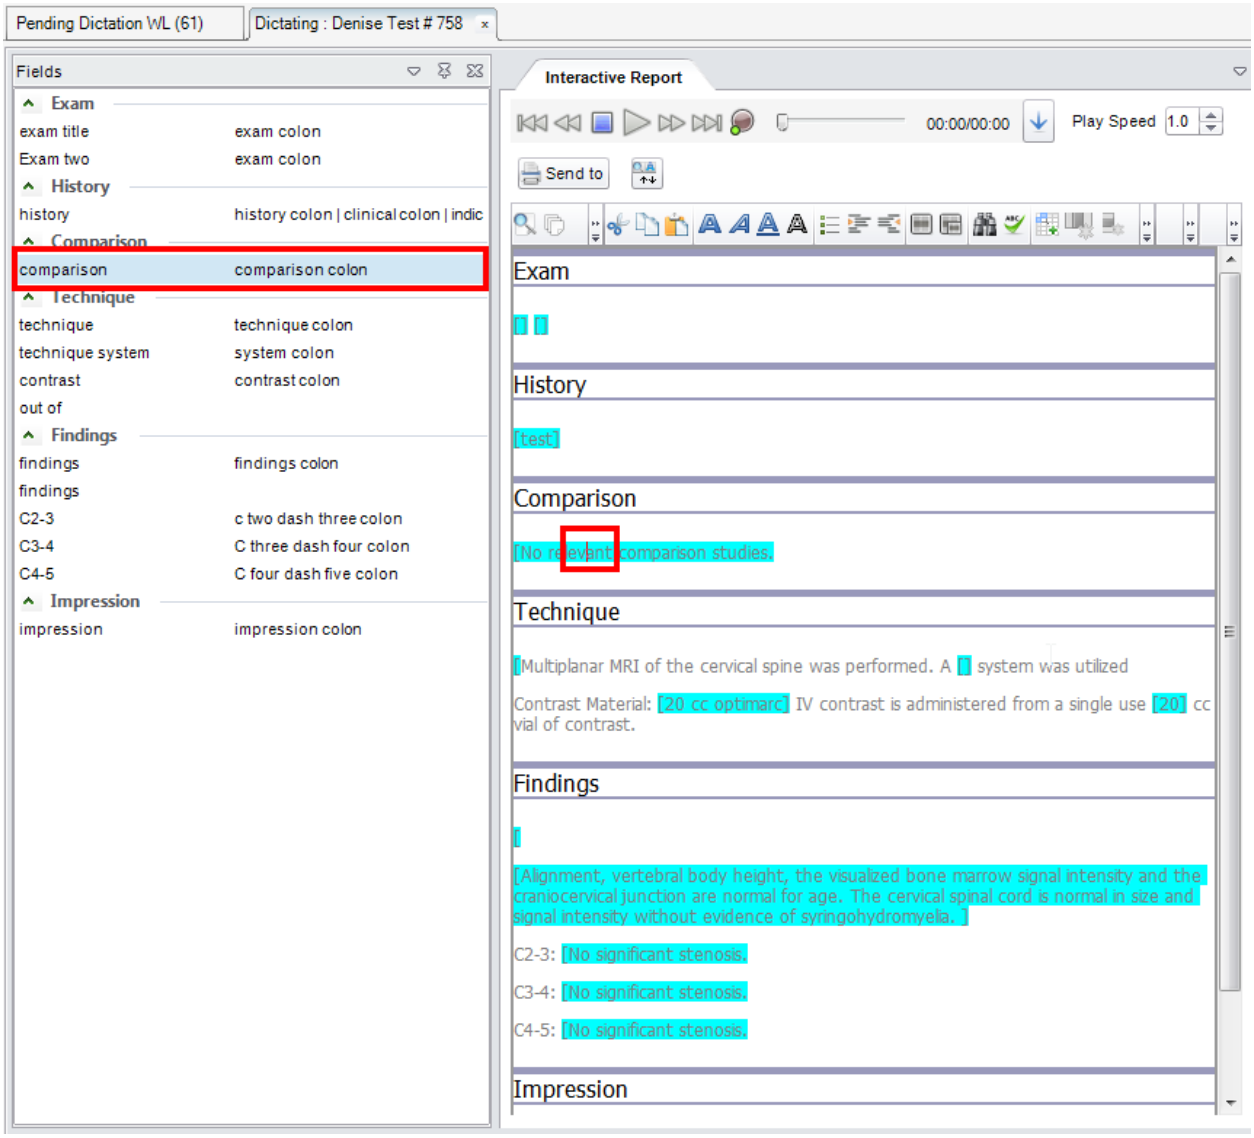

**Figure 5.28 – Field tool window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Mute Playback on Rewind and Fast Forward

Transcription has requested the ability to mute the playback sound when rewinding or fast forwarding a dictation. We have taken 2 steps for this request.

1. We have made the default to be no sound on playback when rewinding and fast forwarding a dictation
2. We have added a new user preference titled "Enable rewind / fast forward play-back". Selecting this option will allow for the sound to enabled when rewinding and fast forwarding.

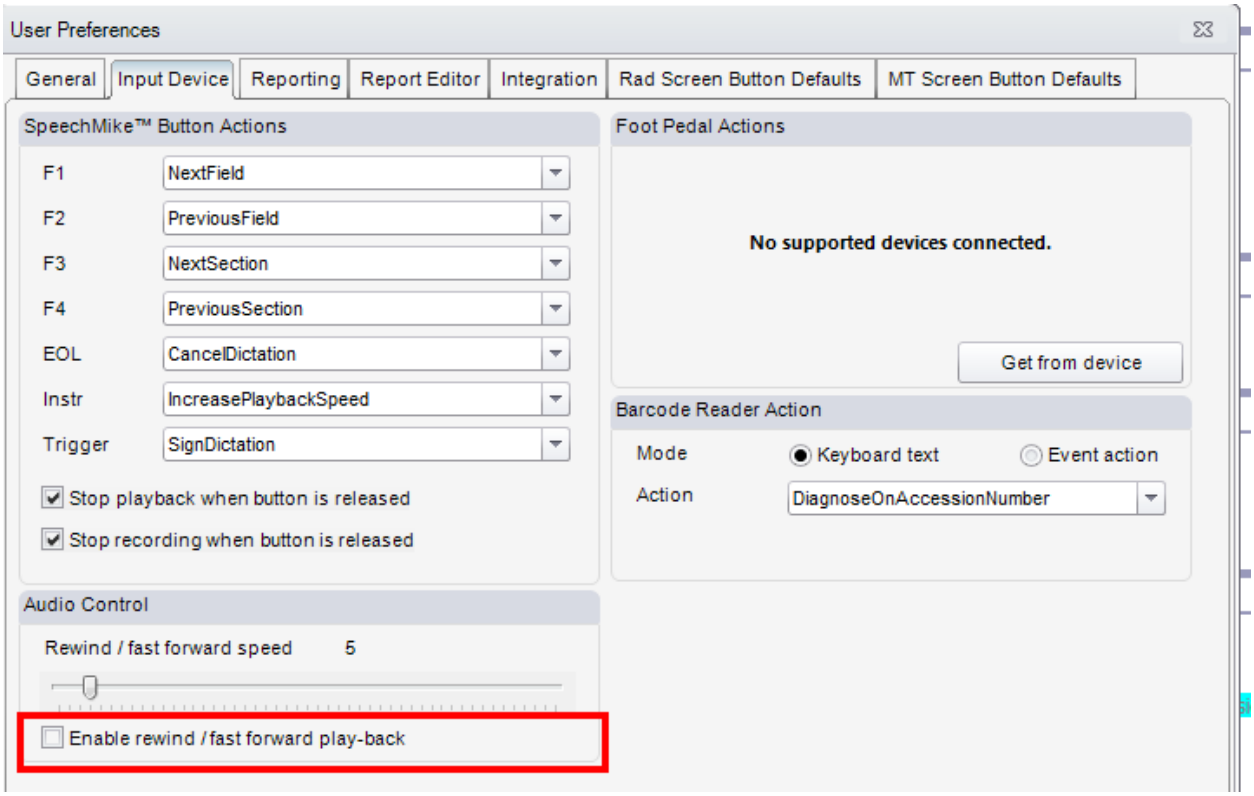

**Figure 5.29 – User preference "Enable rewind / fast forward play-back**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Auto reposition of minimized dictation window

When using the minimized dictation window and the monitor configuration changes (going from 4-3 monitors in use) the dictation control would not automatically realign with active monitors. Although the control was still active, it could not be found. We has a manual reset of the dictation control, but in this build the dictation control will now auto align with the active monitor configuration.

We are now checking to see if the dictation control is completely visible within a screen, if it is not we reset it's position to 0,0 on monitor 1.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Patient History Enhancements

We were tasked with creating a robust full featured patient folder that is launched and managed from within the RIS.

There were several areas that needed to be completed to enhance and complete the patient folder. There are several user preferences, new panes, new controls and views in the patient folder. Below we will describe each and provide some examples on how to set the patient folder up in a real environment.

### Selected Report Panel

We added a selected report pane that can be opened and docked as the user requires. This selected report pane will show a read only HTML rendered version of the selected row in the patient folder. The pane can be shown by opening from the View>Selected Report option from the main menu. When the user preference "Select current study initially" is checked we will open the current study in the selected report pane. If this preference is not checked it will show the next relevant study in the patient folder and display that report.

Note that the report viewer will now show the entire report with the latest addendum at the top. Also who signed the report or if it is "unsigned".

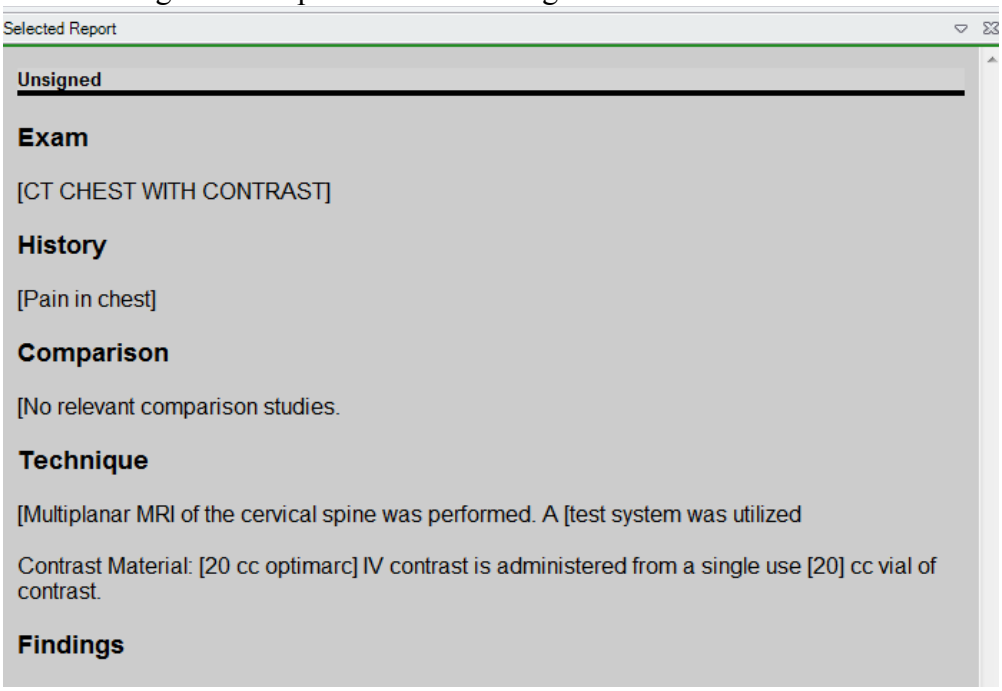

**Figure 5.30 – Selected Report tool window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

If the report was imported or is deemed a legacy report we provide a button in the report viewer that the user can click to open a PDF.

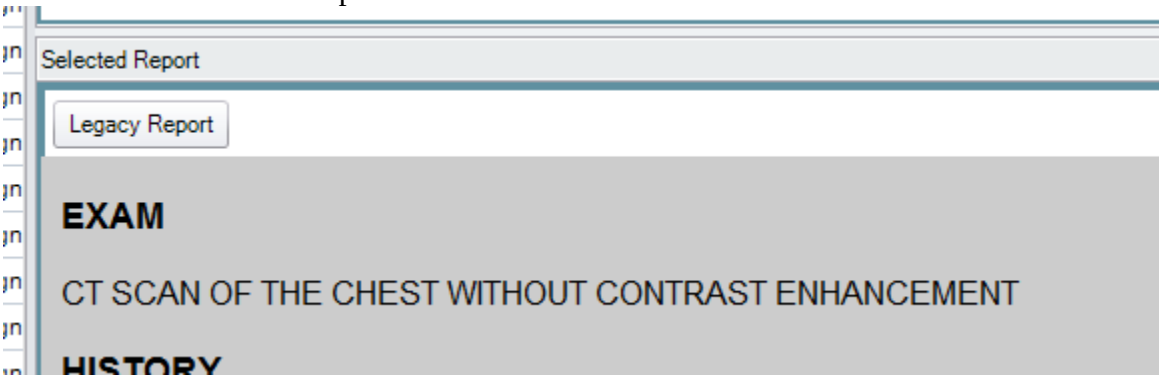

**Figure 5.31 – Selected Report tool window for a legacy report**

## Selected Summary

We added a "Selected Summary" pane that will provide details about the selected study. This pane is opened and access from the View>Selected Summary option. Just like all panes it can be docked and the layout saved as desired. Note that this summary will change based on the selected study. It is essentially the same control as the summary pane that existed previously but it changes with the selected row.

Referring, tech, dictated by, signed by and transcribed by users will show if the values are populated in the DB. They are hyperlinks and upon clicking will open the details for each person. The details screen could use some work.

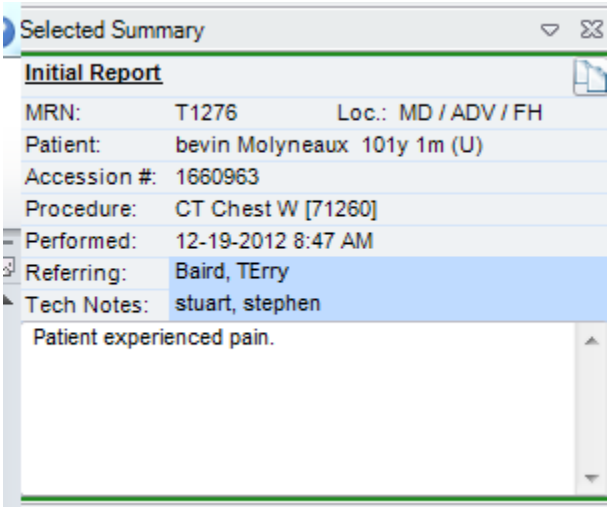

**Figure 5.32 – Selected Summary tool window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

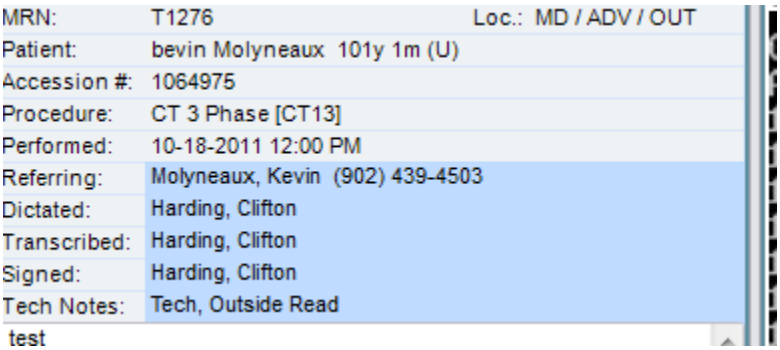

**Figure 5.33 – Selected Summary displaying all hyperlinked fields**

## Document Viewers (Selected Attachments and Attachments)

There is a separate sprint document created to outline the robust features and changes made to the document viewer I won't bother getting too deep on the feature set here. See section Attachment Viewer Enhancement for Patient Folder later in this document.

A document viewer was added as a pane called "Selected Attachments". This can be accessed from the View>Selected Attachments menu option. This particular pane will show scanned documents as per the selected study in the patient folder.

A document viewer was added as a pane called "Attachments". This can be accessed from the View> Attachments menu option. Unlike the "Selected Attachments" this pane will only show the current study.

Both panes support all pane functionality. (saving layout, color, size, state).

Based on the user preference it is possible both viewers can show the same attachments. If you have your "Select current study initially" checked we populate "Selected Attachments" with the current studies attachments. We also populate "Attachments" with the current study attachments. If this is your workflow, and you are lucky enough to have the real estate to show both panes, it will be better to uncheck the user preference which will select the next most relevant study in the patient folder. This would allow viewing of the current attachments and the most relevant at attachments simultaneously.

## User preferences

There were several user preferences added to enable the Patient Folder workflow.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

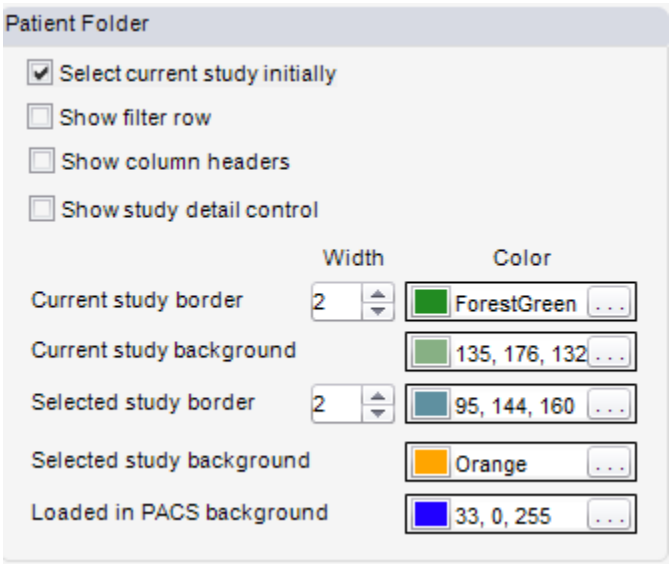

**Figure 5.34 – Patient Folder user preferences**

## Select current study initially

This setting will select the current study when opening the patient folder. This will make all of the "selected" type panes populate with the current study data.

Unchecking this will automatically figure which study is the next relevant in the folder and select that one. Thus populating the "selected" panes with the most relevant study data.

## Show filter row and Show column headers

These settings will be the defaults when opening the patient folder. They can be toggled in the patient folder by clicking the icons outlined below. Neither the filter row or column headers are showing below.

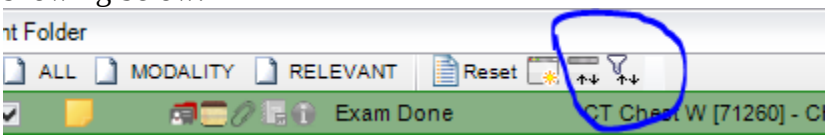

**Figure 5.35 – "Show" options for patient folder**

Toggle the filter and column headers to turn them both on below. This feature will come in handy when setting up specific radiologist views.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

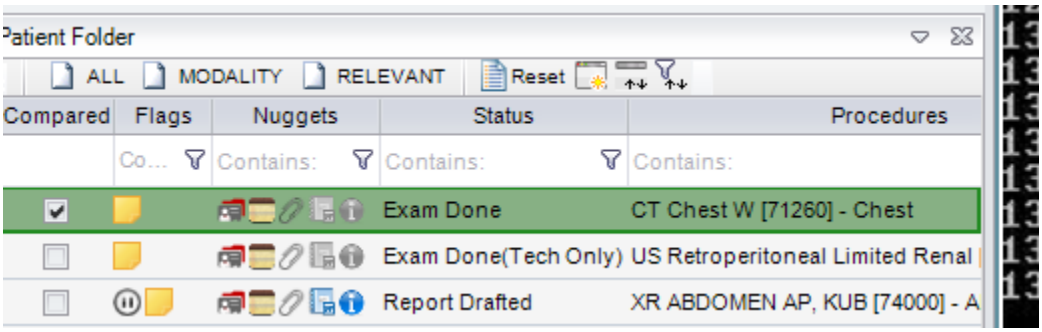

**Figure 5.36 – Patient folder with filter and bar and column headers displayed**

## Show study detail control

When checked the new study detail control will appear in the patient folder list. Notice in the above screen shot that we don't have the control. If you select this option and reopen the same study it will present in the work list. Note that this is just a starting point and now that you have added the control you can remove whatever (likely) all that you desire. Once the modifications to the columns have been made you can save a new view or overwrite it.

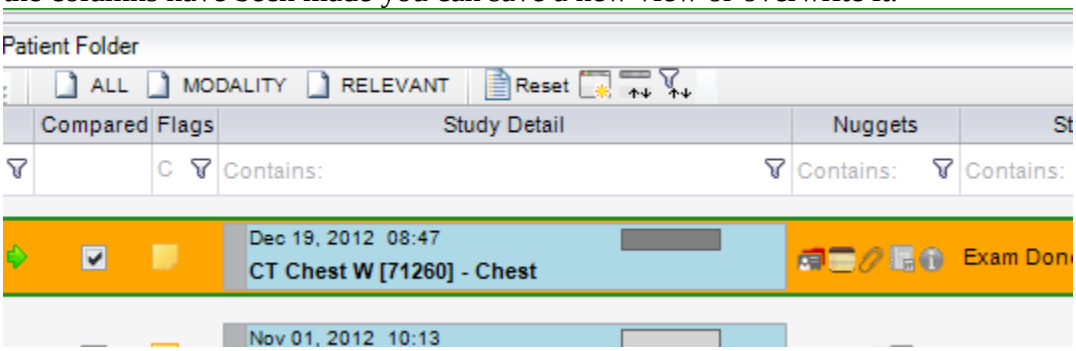

**Figure 5.37 – Show study detail**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

In the figure below, the columns have been modified to include the "current study indicator" (green arrow on the left) and the study detail control only. Saved the view…

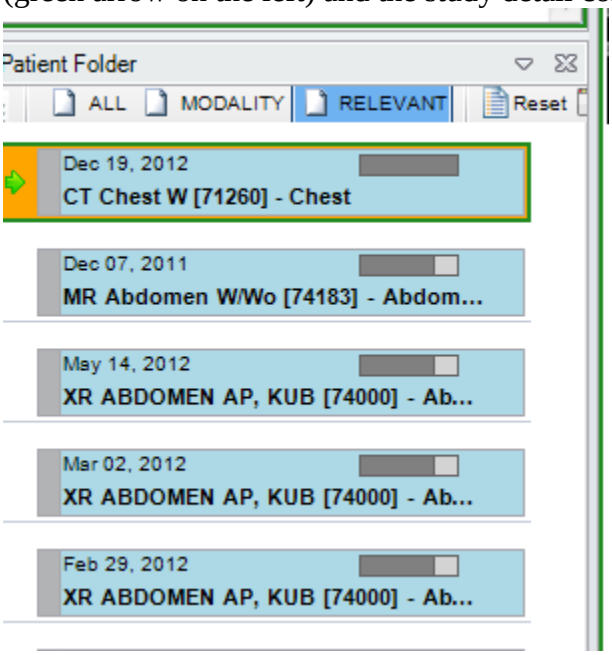

**Figure 5.38 – View created to show only current study indicator and study detail control**

The study detail has several elements worth discussing. Follow along with the figure below with the number list following.

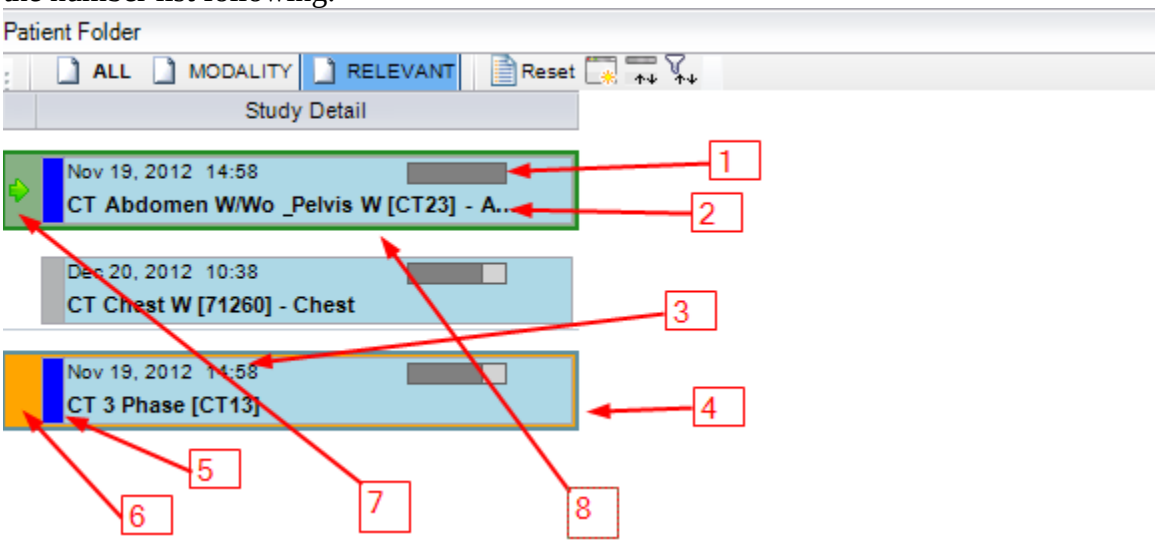

**Figure 5.39 – Patient folder explanations to follow**

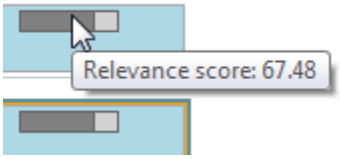
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

1. Relevance bar. Incrementing in 25% chunks. Hover over the bar will display a tooltip indicating the true relevance score.



2. Procedure description as per worklist display.
3. Date and time of when the exam was performed. If the exam hasn't been performed yet we will put the scheduled date and time instead.
4. Selected border color as per user preference
5. Loaded in PACS color in the detail control. We only change the color for loaded studies.
6. Selected background color as per user preferences
7. Current background color as per user preferences
8. Current border color as per user preferences

The figure below is showing the current study indicator column. When this column is removed we indicate the current study with an earmark in the study detail control.

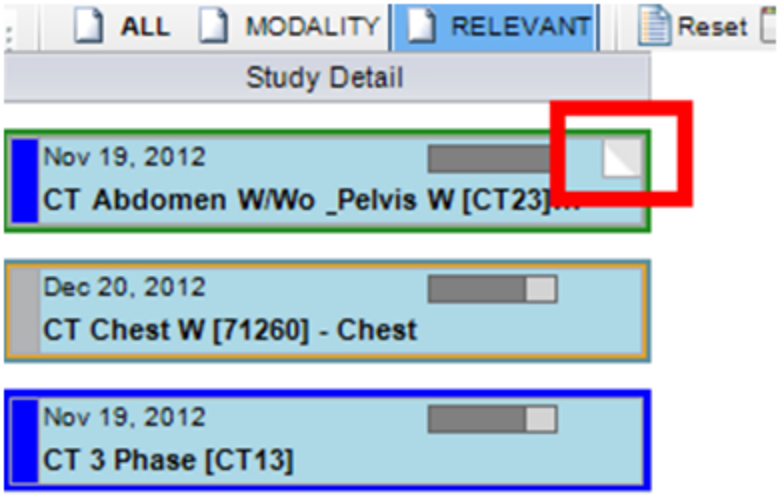


**Figure 5.40 – Displaying earmark**

## Current study border and Current study background

This will set the colors respectively for the current study. Separate document is created for this functionality.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Selected study border and background colors

This will set the colors respectively for the selected study. Separate document is created for this functionality.

## Loaded in PACS background

This setting controls the background color when the study is successfully loaded in PACS. We will load the current study always and all of the relevant priors set in the user preferences. If "0" was set in user preferences then only the current study should load in PACS. If "2" priors were set in user preferences we will load the current and two additional relevant priors. Image below shows we only loaded one study in PACS. Double clicking on a study not loaded in PACS will load it and update the patient folder appropriately to indicate the loading has occurred.

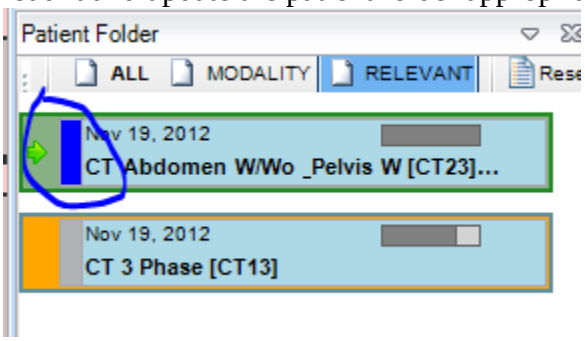

**Figure 5.41 – Top study loaded in PACS**

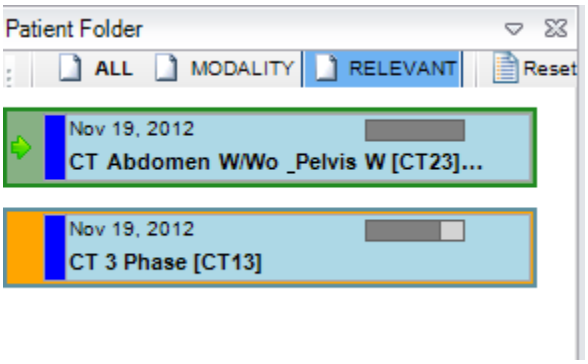

**Figure 5.42 – Second study selected**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

There is a new column added to the patient history control called PACS Loaded Status. This new column can have the following values:

OPEN – simply loaded and open in PACS for viewing

FAILED – could not open or find the study in PACS

ARCHIVE – found the study but it is in archive somewhere

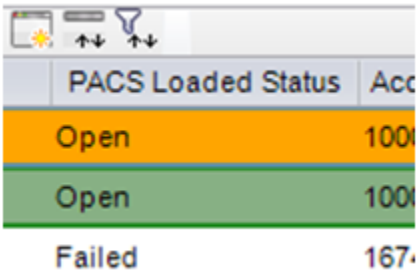

**Figure 5.43 – PACS Loaded Status column added to Patient History control**

## ALL, MODALITY and RELEVANT views

Although views are completely configurable we anticipate users will setup three group views. ALL – will show all of the patients studies. Nothing special about this view and it can be setup however the users prefer to see the list. Users may prefer this list to be more gird-like similar to our worklists instead of showing the study detail control.

MODALITY – this is a new special view created and will show only studies performed on the same modality type as the current study. This is special as we have to calculate what modality type the current study is and then apply a filter descriptor that limits only this modality type. It is done in code and is trigged by the name of the view. The name must be “MODALITY” case insensitive.

RELEVANT – this view will show all relevant studies. So anything with a “Y” in the relevant flag. Keep in mind that we may have a relevant score but not the relevant flag depending on the rulesets.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Attachment Viewer Enhancements for Patient Folder

We need to make the doc viewer simpler to navigate and when shown in a data nugget we need more advanced features such as:

- Panning (click and drag)
- Zooming with scroll wheel
- Click Next/Previous with arrow (hot spots) on the images
- User configurable exclude document types
- In tool bar at the top additional information including total page count
- Buttons at the top for flipping directly to preferred document types (showing count)
- All documents in the same book, such that clicking next, next , next goes through all document pages.
- Rendering of diagnostic report type in attachment viewer
- Enable rotate/flip buttons in attachment viewer (diagnose)
- Add Invert Colors button

Zoom is now possible via the mouse scroll wheel, magnifying buttons, or via the '+'/'-' keyboard keys. When zoomed clicking the mouse on the image and dragging will pan the image.

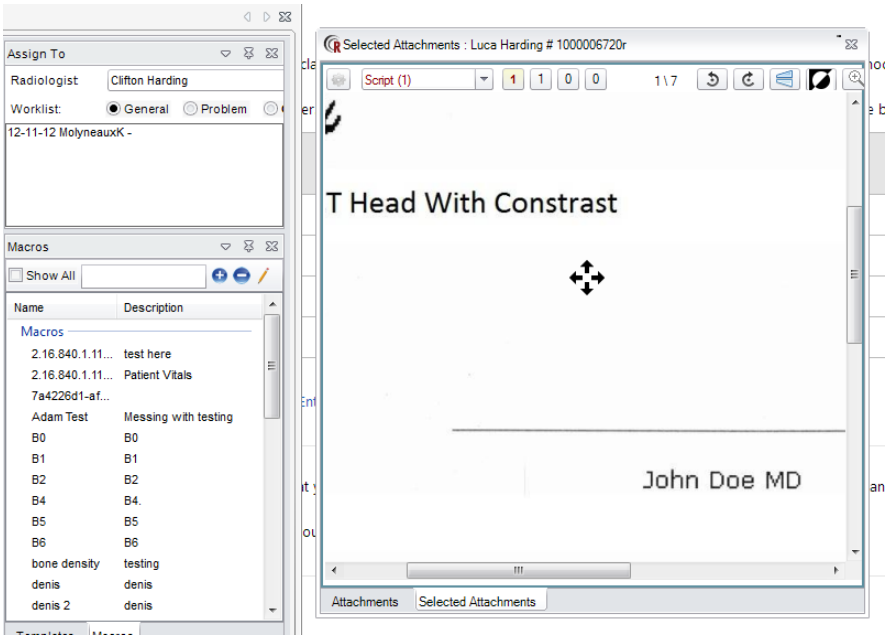

**Figure 5.44 – Zoomed in image and panning feature**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The user can move to the next image or the previous image by hovering the mouse over the left or right area of the image. A single click anywhere in the left or right area will navigate to the next or pervious image (user doesn't have to click directly on the arrow icon). When the user is in the area which is active for next/previous clicking, the arrow image will paint in darker and the mouse cursor changes to a next or previous arrow.

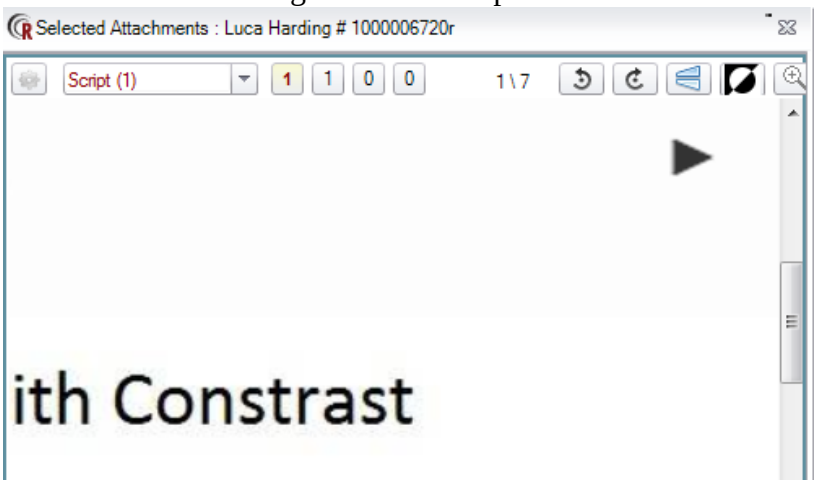

**Figure 5.45 – Next image control**

The top left icon in the attachments viewer (in the attachment data nugget or diagnose) is used to configure the users preferences as shown in the following screen shot. The user can uncheck a document type so that it will never show. This is useful if a Rad never wants to see a patients drivers licence. Also they can change the order in which the documents appear.

The first four document types are mapped to the numbered buttons at the top of the screen. Hovering over one of those numbered buttons will provide a tooltip explaining the document type it represents. The number refers to the total number of pages for that document type. In the following screen shot there is 1 page for the Script, 1 page for the *Report and zero pages for Unclassified and Demo document types. A fifth button will appear if there are other document types.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

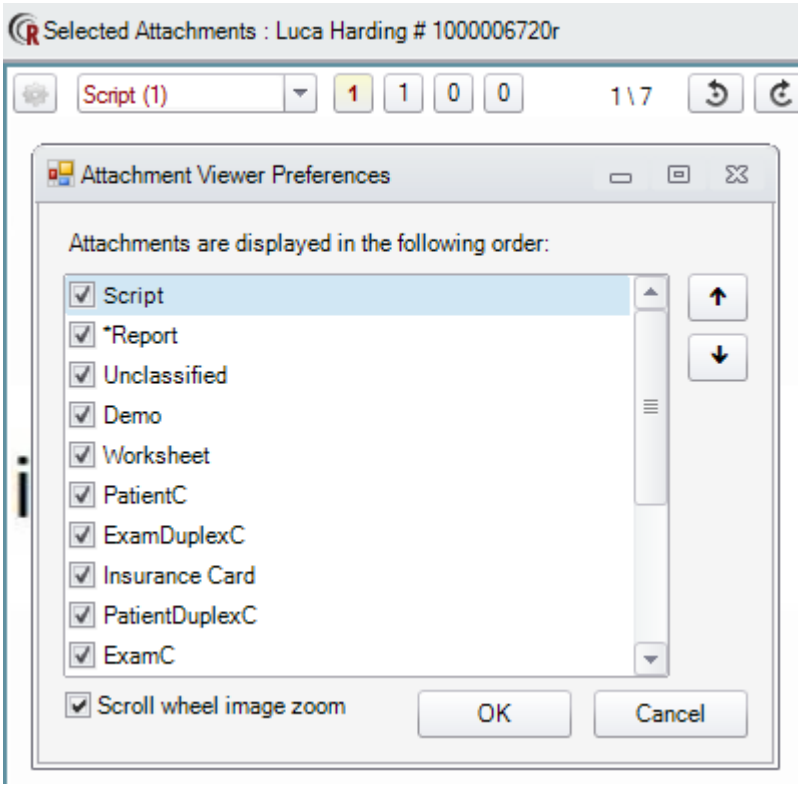

**Figure 5.46 – Attachment Viewer Preferences**

*Report, refers to the actual report, although we don't scan in the report and it technically isn't a scanned attachment. If available a '1' will show in the second button (based on the above configuration) and clicking on that will display the report in the attachments screen. The report, because it isn't a scanned image, displays as a Web Page with selectable text but in the same attachment viewer so that the rad doesn't have to float separate windows for viewing both attachments and reports. *Report is a special attachment type code that can't be re-used via administration for another scan document type code.

The data nugget version of the attachments viewer didn't display the rotate and flip icons, previously these where only visible during the process of acquiring scans/attachments. The "Invert Colors" icon is new in this build. The "Invert Colors" button inverts the white to black and black to white and is automatically invoked in the Rad screens if the user has configured the background of that data pane to dark and the foreground to light.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

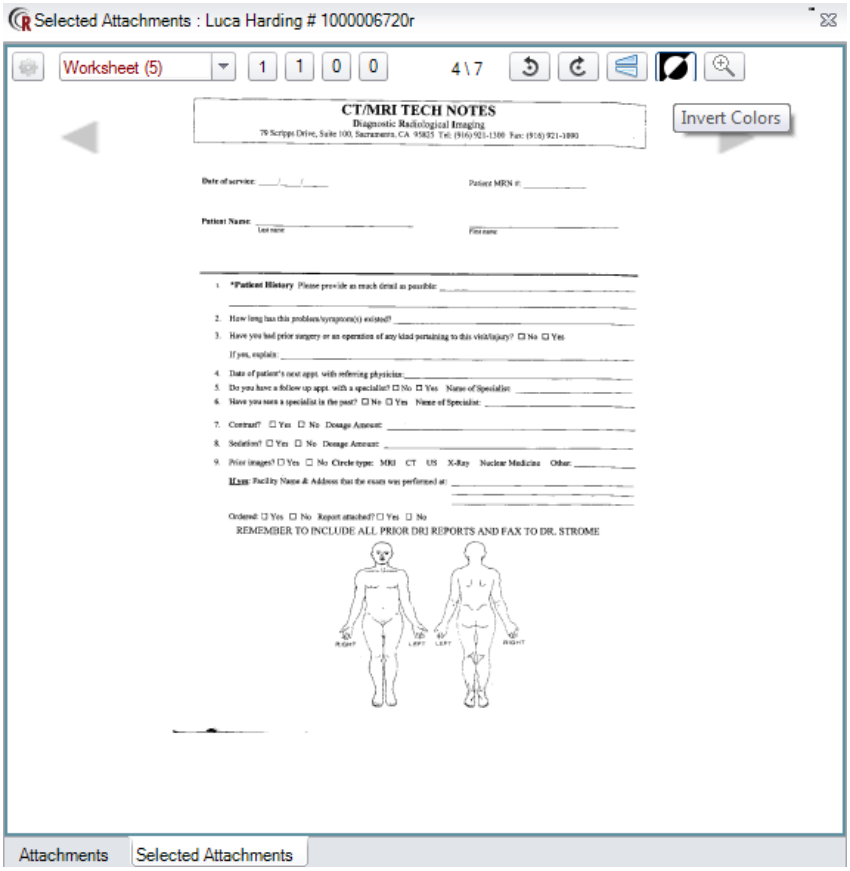

**Figure 5.47 – Data nugget attachment viewer**

There are three places where these changes will be visable:

1. Data Nuggets from patient history

2. Data Panes in the Rad Screens for both ‘Attachments’ and ‘Selected Attachments’

3. In the Attachment Viewer when scanning or reviewing scanned documents from screens such as View Edit. For example, screen: “View Edit”, tab: “Attachments”, double clicking on an attachments row will display the “Attachments Viewer”, which has the next, previous page, zoom and panning enhancements.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Tool Window Boarders

With the recent changes to the Patient History control we needed a method to show if the details being displayed in tool windows such as selected summary and selected attachments were for the current study or for another selected study.

We decided we would go with drawing a border around the tool windows in different colors, one color for tool windows showing current data, and another color for the ones showing prior data. These colors are also used to draw a border around the applicable row in the patient history tool window.

Currently these are the toolwindows that are configure to show borders:

- Summary
- Selected Summary
- Attachments
- Selected Attachments
- Selected Report
- Exam Details

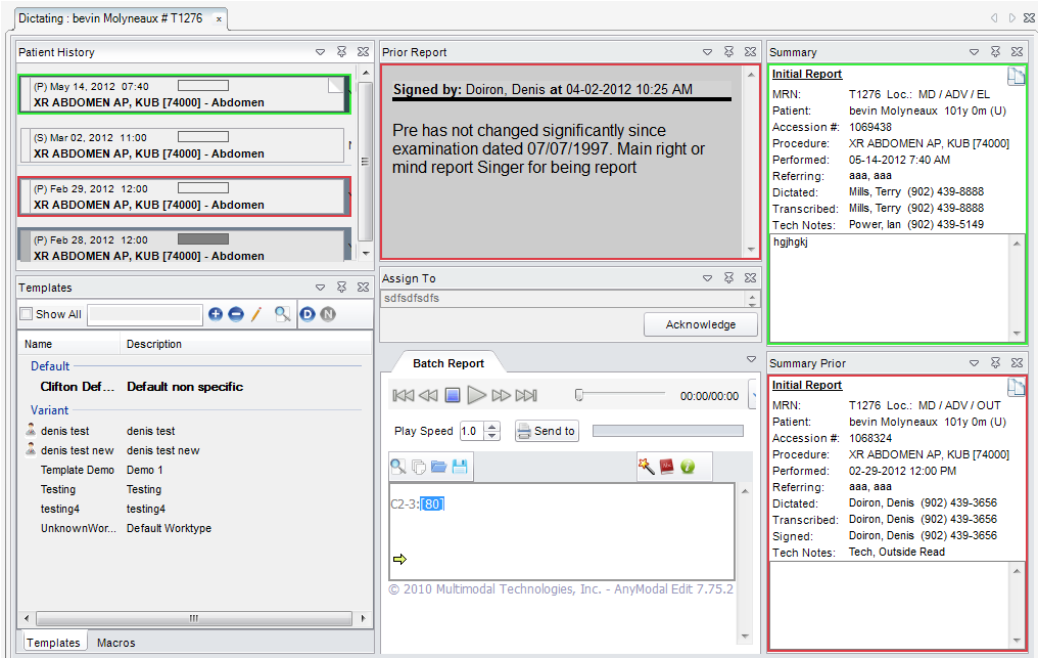

**Figure 5.48 – Reporting window displaying colored boarders**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

These colors are user selectable along with the width of the borders in question. This is accessed through user preferences and is on the "Reporting" tab. The changes will take effect the next time the tool window is drawn.

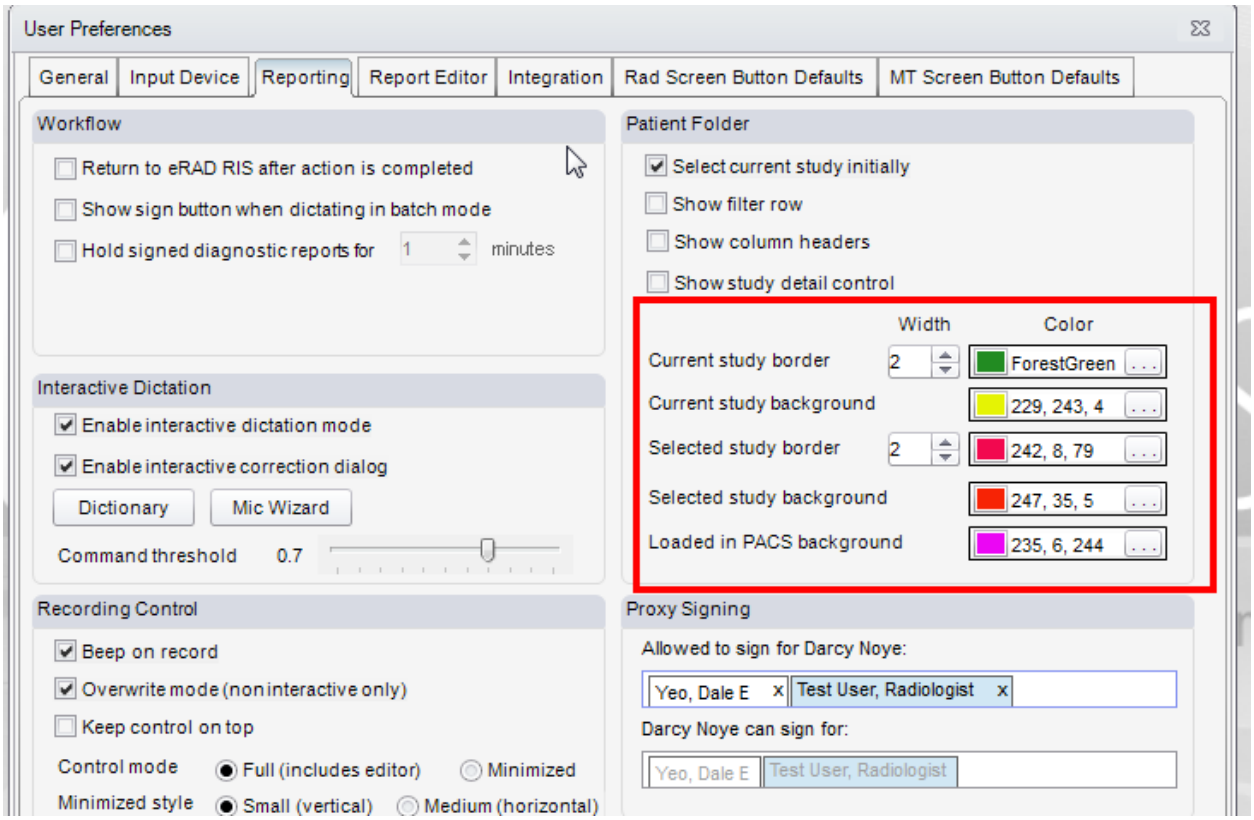

**Figure 5.49 – User preferences for boarder width and color**

The border on the patient history row will follow the width when it's between 0 and 4. When it's higher than 4 it will use 4, as anything higher doesn't work well in the patient history rows. The tool windows will use the exact width specified by the user preference.

If the user doesn't want to see these borders they can be turned off by setting the width to 0.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Patient Folder Back color Preferences

As mentioned earlier in this document the background color can be set in the Patient History control to display which study is currently selected

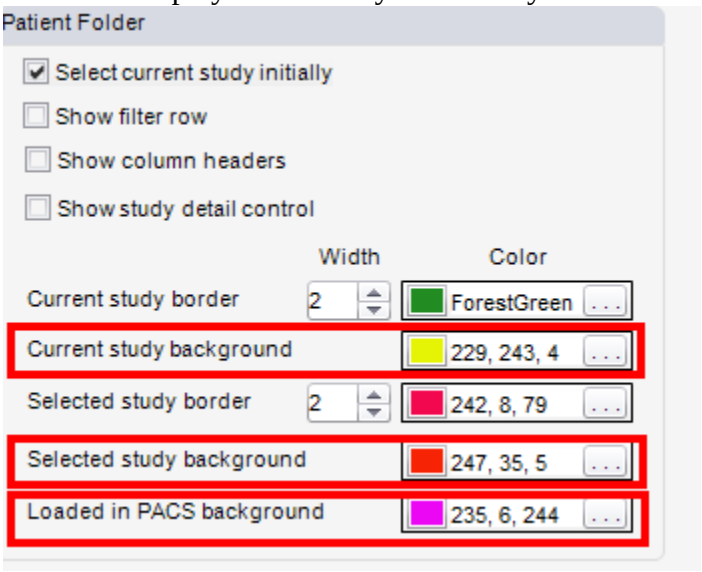

**Figure 5.50 – User preferences to set background study colors**

Looking at the background colors above, you can see in the figure below how this would look to the user. I used colors to be sure to stand out.

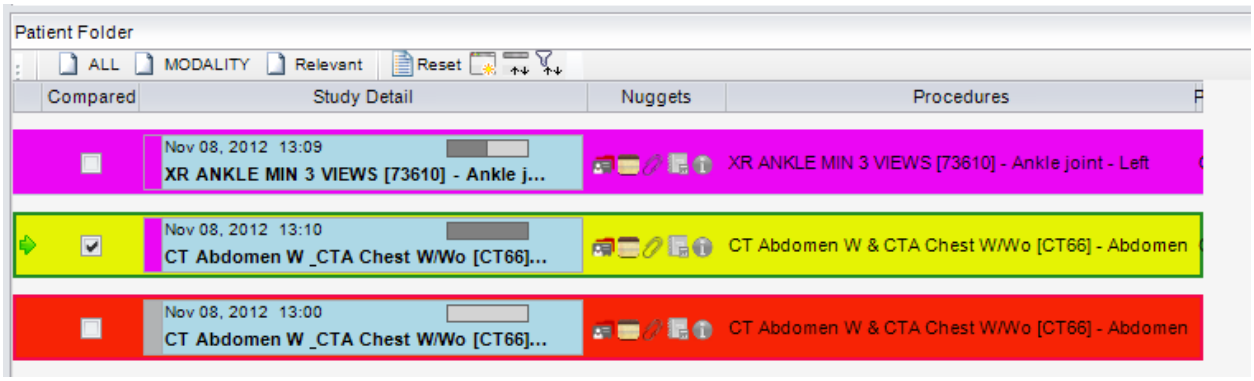

**Figure 5.51 – Patient history control in reporting window**

Notice that only two of the studies are loaded in the PACS. The red row is not, we know this because of the grey color next to the study detail control where the other 2 are purple.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

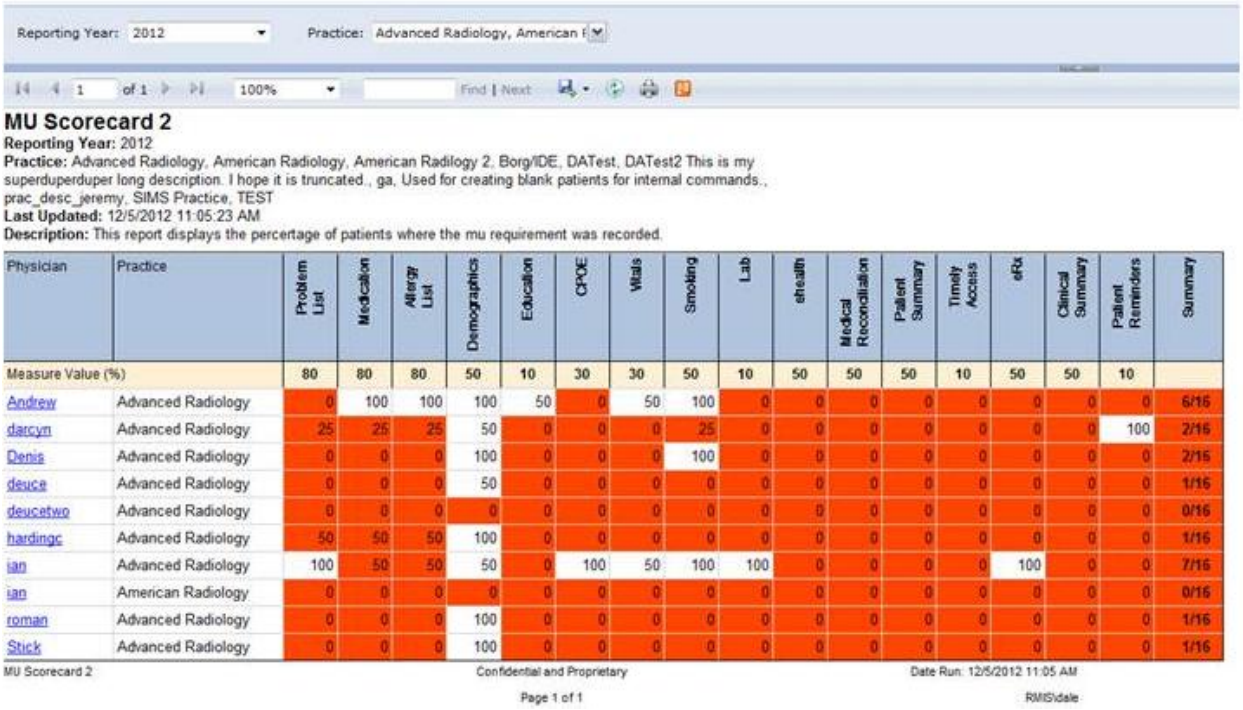
## Meaningful Use - Scorecard Rollup Tables

This feature will be completed over two builds 39 and 40. Phase 1 is completed in Build 39(Automated Measures). To resolve we added a new table c_mu_automated_measure_history which will be used to store automated measures for each patient, a Radiologist signs off on a report, at the specific practice for a specific reporting period(in Years). This table will be used by the mu scorecard report to show users a snap shot of the site with regards to mu. This table will get populated by the new stored procedure c_mu_SetAutomatedMeasures which will receives updates from a nightly job which will called c_ProcessPostEvents. This job checks the c_study_post_processing (this is a new table that gets populated by a new trigger on the c_action table storing action from within rRIS). Note studies will receive updates via the trigger even before the study is signed off but mu statistics will not get accounted for until the study is signed off. There is a new column added on the c_study table that will stamp the last time the mu measure was calculated(mu_automated_measures_last_updated). The reporting period in this table will be for scheduled exams between Oct. 1 2012 to Dec. 31 2012 signed off by a Rad for Year 1 and then Jan. 1 to Dec. 31 for each year after 2012.

Data Migration will have to take place on the c_mu_automated_measure_history to backfill all scheduled exams between Oct 1 and Dec 31 that have been signed off by a Rad.

We modified the existing management Report (MU Scorecard this will be completed in B40) which will eventually replace the existing MU Scorecard Report calling data from the new rollup tables. To better retrieve Automated Measure % on this report we created a new table "s_mu_measures" which will be used to store the MU Automated Measures and their appropriate Measure %'s for each Meaningful Use Stage. (stage 1 is accurate will modify stage 2 when requirements released).

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



**MU Scorecard 2**

# Meaningful Use – Smoking Status Phase 2

A new column (snomed_ct_id) has been added to the existing smoking dataset. The l_smoking_status table we added the two new rows for “Heavy tobacco smoker” and “Light tobacco smoker”.

Only administrators should see the Smoking Status lookup. To prevent non admins from changing these values we have an access string that prevents these users from seeing the lookups…”Config.LookupEditor.SmokingStatus”

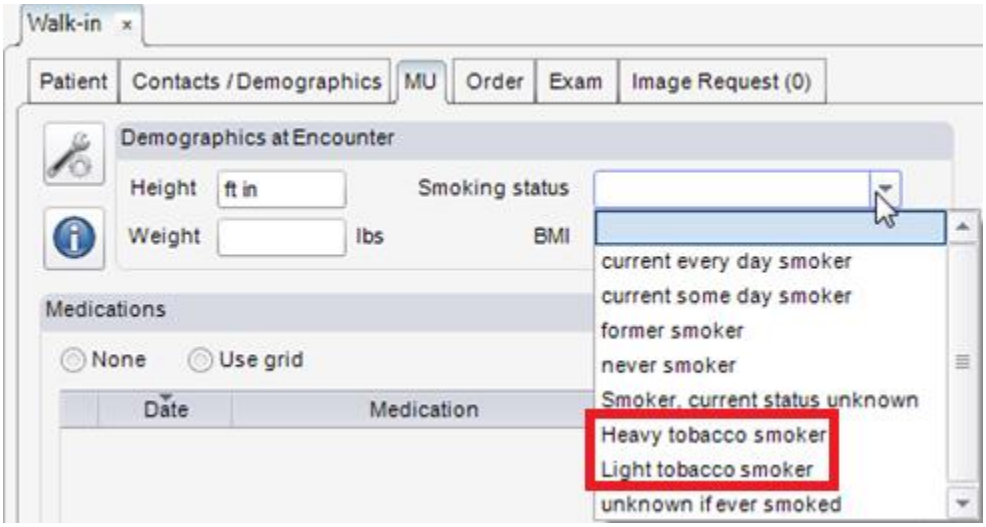

**Figure 5.53 – New smoking statuses**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Scan Document Archive

Scan documents are used extensively by the RIS to capture requisitions, worksheet, waivers, etc. These scan document occupy a significant amount of space in the db. There are some real benefits to storing the scan document in the db, at least initially, but there are some real concerns with db size. It is estimated that for every million exams we would need 1 TB for scan documents. The db backup time becomes longer as the db gets larger. In the event of equipment failure, disaster, etc. we may need to restore the db. A db recovery time ideally should be relatively short. With large db a short recovery time becomes difficult and expensive to implement.

We have added a new lookup table "ScanDocumentArchiveLocation" with access controlled by a new access string "Config.LookupEditor.ScanDocumentArchiveLocation"

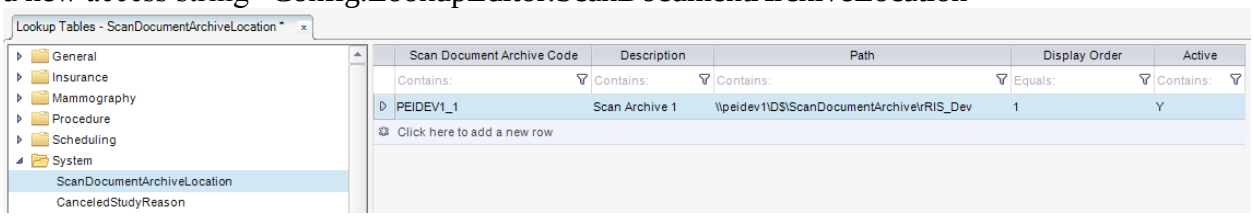

**Figure 5.54 – ScanDocumentArchiveLocation lookup**

l_scan_document_archive

Lookup Table of possible scan document archive locations.

| Name | Data type | Max Length | Default | Allow Nulls | Identity |
|---|---|---|---|---|---|
| scan_document_archive_code (PK)<br>The abbreviated, or short name for this archive code. Used as a natural key in referenced tables. | varchar | 20 | | | |
| description<br>The description for this archive path. | varchar | 500 | | x | |
| path<br>The path to where this archive location referes to. This path must be accessible to all rRISServices. | varchar | 1000 | | | |
| active_flag<br>(Y/N) Used to indicate if this row can be referenced in the future. | char | 1 | 'Y' | | |
| display_order<br>Used to indicate where the sort order position for this row when it appears in a dw combo box, or a list box. | int | 4 | | | |
| last_updated<br>The date and time that this row was lastupdated. | datetimeoffset | 10 | | | |
| last_updated_by_user_id<br>The user id of the person who last updated this row. | varchar | 100 | | | |

**Figure 5.55 – Scan document archive db values**

### Reading scan document from archive:

A scan document will exist in the db if its archive_dirty_flag = "Y". All new scan documents add to the db have this flag set to "Y". If this flag is set to "N" it means that the scan document has been moved from the db to a scan document archive. If this is the case, then the system will read the scan document from the archive. This is all transparent to the user. If the scan document is not accessible, a message will be presented to the user indicating that this "page is not available".

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## New columns for scan document page table

c_scan_document_page

Contains the images of the documents for the scan type

| Name | Data type | Max Length | Default | Allow Nulls | Identity |
|---|---|---|---|---|---|
| rowguid<br>A unique indentifier for this used by SQL Server FileStream feature. | uniqueidentifier | 16 | newid() | | |
| scan_document_page_key (PK)<br>Primary Key, autogenerated, internal use only. | int | 4 | | | x |
| scan_document_key (FK)<br>Identifies the scan document that this images belong to. (see c_scan_document.scan_document_key) | int | 4 | | | |
| page_number<br>The page number of the scanned document | int | 4 | | | |
| front_face<br>An image of the front side of the scan document | varbinary | -1 | | x | |
| last_updated<br>The date and time that this row was lastupdated. | datetimeoffset | 10 | | | |
| last_updated_by_user_id<br>The user id of the person who last updated this row. | varchar | 100 | | | |
| size<br>The size in kilobytes of the image. | int | 4 | | | |
| archive_code (FK)<br>identifies the path information for the scan document. (see l_scan_document_archive.scan_document_archive_code) | varchar | 20 | | x | |
| archive_datetime<br>identifies when this image was archived. | datetimeoffset | 10 | | x | |
| archive_path<br>The path within the archive to where this scan document is archived. | varchar | 300 | | x | |
| archive_dirty_flag<br>if yes we need to archive or re-archive the page | char | 1 | 'Y' | | |

**Figure 5.56 – Scan document page possible data values**

There also new system configuration settings to go with the new access string. The table shows the new settings and descriptions of each.

| | |
|---|---|
| ScanDocumentMaxSizeInDB | The maximum size in GB that the system will persist scans documents directly in the db. When this value is exceeded the archive process will begin (at its next run time interval) to move scan documents to the archive. |
| ScanDocumentMinSizeInDB | When scan document archiving is initiated, this is the minimum size in GB that the system will reduce the amount of scans documents that are persist directly in the db. |
| ScanDocumentArchiveCurrentLocation | The archive location where the archive process will move scan documents to. The value must match a value in the l_scan_document_archive lookup table. |
| ScanDocumentArchiveStartTime | The time of day in hh:mi format (24 hour) that the scan document archive process can wake up. |
| ScanDocumentArchiveStopTime | The time of day in hh:mi format (24 hour) that the scan document archive process must stop. ~~Does not have to be greater~~~~greater~~If less than ScanDocumentArchiveStartTime then the process will continue to the next day until the time is reached. |
| ScanDocumentArchiveDaysOfTheWeek | A comma separated list of days that the archive process will wake up to see if there is work. The list is contains numbers representing the day number within the week, where: |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | |
|---|---|
| | 0 is Sunday<br>1 is Monday<br>2 is Tuesday<br>3 is Wednesday<br>4 is Thursday,<br>5 is Friday<br>6 is Saturday<br><br>For example, a value of 0,1,2,3,4,5,6 means that the archive process will run every day of the week. |
| ScanDocumentArchiveServerNames | A comma separated list of server names that are allowed to run the archive service. |
| ScanDocumentArchiveMaxThreads | The maximum number of thread the scan document archive process can use within one process. |

**Table 5.2 – Scan document archive system configuration settings**

**When writing to the archive:**

The archive process must be scalable. It should be able to run on multiple archive process, possibly running on many services.

Moving scan documents to the archive should be done by oldest first.
The archive process will calculate the value of the c_scan_document_page.archive_path based on the last_updated date of the scan_document_page row using "\yyyy\mm\dd\hh\{scan_document_page_key}.jpg, where yyyy is the year, mm is the month ~~and~~, dd is the day and hh is the hour from the last_updated date.

If a scan document is retrieved from the archive and if and only if it is updated by the user (cropped, rotated, etc), the scan document will be persisted to the db again. When this scan document gets moved to the archive again, the archive process will delete the original file in the archive, then update archive_path based on the new value of the last_updated, then write the file to the new archive location.

Once the document is successfully written to and verified from the archive document we would clear it from the db.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## IMPLEMENTATION ADDITIONS TO THE DESIGN

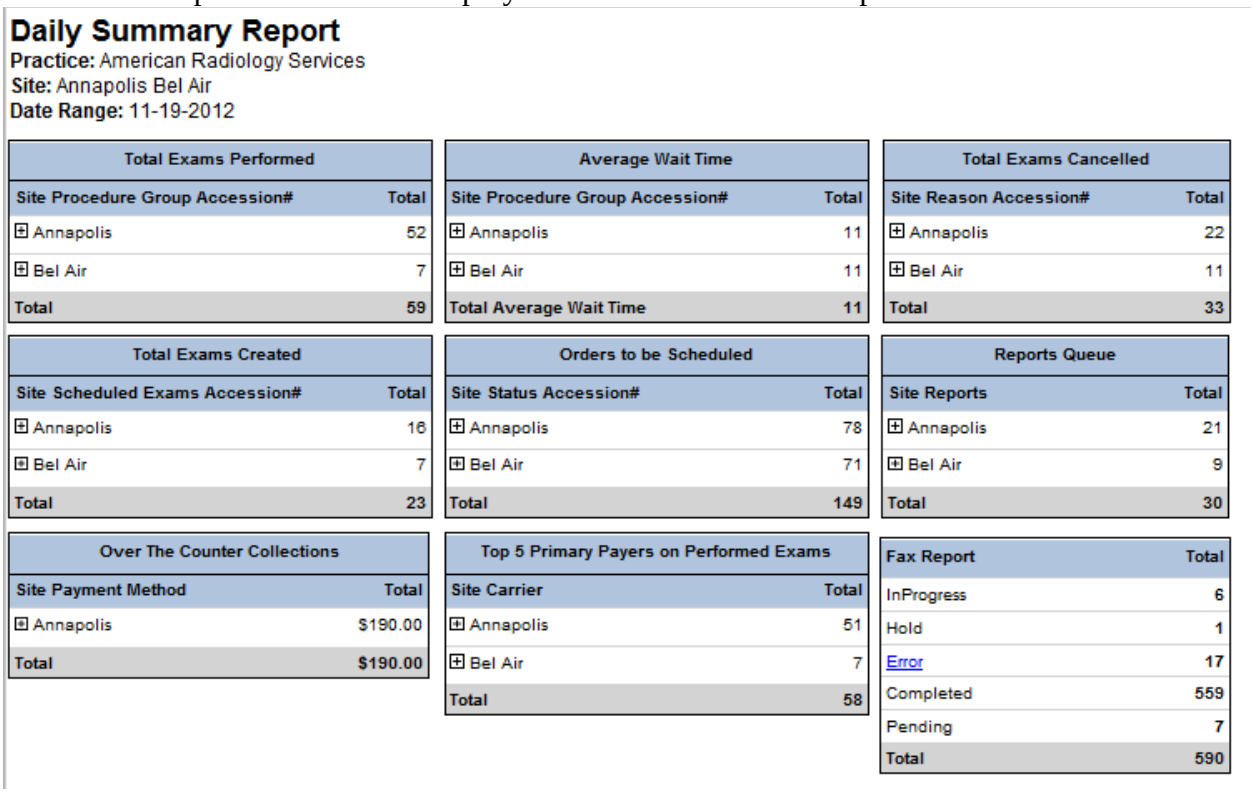
All configuration values changes take effect within 30 seconds after saving the change.

Processing starts once the MaxSizeInDB, Start/Stop Time and day of week conditions are meet. After the MinSizeInDB is reached processing will stop. If the scan document allocation does go above the MaxSizeInDB in the same archive start/stop window, the archive process will resume archiving. If the RIS service is restarted or if a configuration value for archiving is changed the conditions will be tested and if archiving is necessary processing will also start again.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Management Report – Daily Summary Report

We modified all queries on this report to allow the user the ability to filter the report by one or more site(s). Also, on each report within the report we added another group level for "site_code" so now each report will be broken up by totals based on what took place at the individual site.



**Daily Summary Report**

## Management Report – Biopsy Results Pending

Created new report under the operations deployment Biopsy Results Pending Letter as well as a sample form with the same name. To identify there is a column on the c_study for mammo_fup_required_flag and the report\letter will be looking for a value of 'Y'.
Screenshot: The form and report both have the same look. Difference is the parameters passed to the letter are more refined to the patient and exam where the report pulls all exams in the specified range that meet the criteria.

Parameters for report:

Practice(s), Site(s), and Date range based on scheduled date

Data references

- mammo_dataset
- l_practice
- l_site

Parameters for letter

- Study_key

Data references

- mammo_dataset (for the study selected)

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

John A Demo

RE: Marcy25 04918 Scott
Medical Record Number: T.3475

Date of Birth: July 19, 1997
Date of Study: February 06, 2012

Dear: John A Demo

Our records indicate that the above patient had an abnormal or indeterminate breast imaging study at Advanced Radiology. Per the Mammography Quality Standards Act, we must attempt to correlate breast imaging findings with surgical results.

Please take a few moments to fill out the information below and return it along with any biopsy reports.

FOLLOW-UP MAMMOGRAPHY DATA

_____ Patient underwent cyst aspiration

_____ Patient underwent biopsy (Please send results)

_____ Positive (Pease send results)

_____ Negative (Pease send results)

_____ Referred to surgeon

_____ Surgeon's Name

_____ Follow-up mammogram (date) _____

_____ We are unable to provide additional information.

Please fax to (443) 436-1332 or mail to:
Advanced Radiology
193 Stoner Avenue
Suite 200
Westminster, MD 21157
Attn: mammo tracking

Sincerely

Fisher

## Management Report – Image Request History

This report displays the history of Image Requests where requests fall between the specified dates for the selected practices and locations.

Parameters**:**
Practice, Site, and Date range based on requested date
Data references:

- c_vw_image_request_worklist
- l_practice
- l_site
- request_status

**Image Request History**
**Practice:** Advanced Radiology
**Site(s):** Eldersburg, Fisher, Lutherville, PowerVille
**Date Range:** 9/23/2012 - 11/23/2012
**Description:** This report displays the history of Image Requests where requests fall between the specified dates for the selected practices and locations.

| Requested Date | Completed by | Completed Date | Request Type | Requested By | Image Medium | Delivery Method | Status | MRN | Accession # |

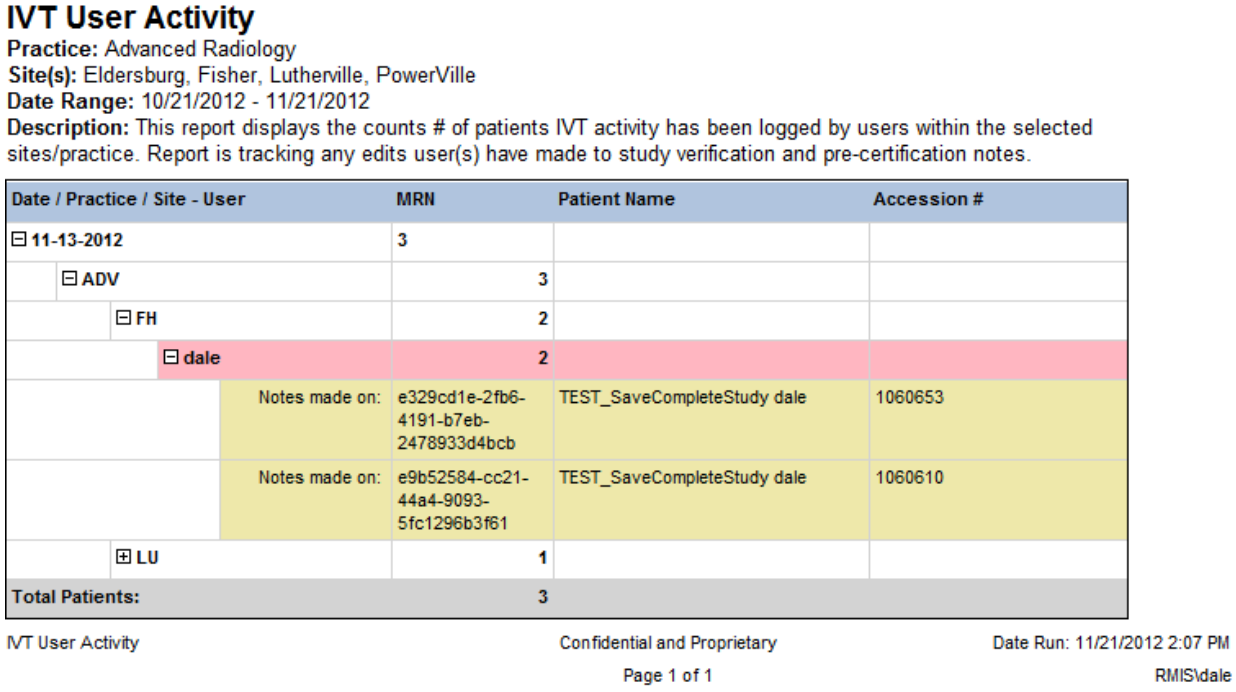
## Management Report – IVT User Activity

This report displays the counts # of patients IVT activity has been logged by users within the selected sites/practice. Report is tracking any edits user(s) have made to study verification and pre-certification notes.
Parameters:
Practice, Site, and Date range based on audit log last_updated date
Data references:

- c_mgmt_IVT_activity
- l_practice
- l_site
- users in practice



**IVT User Activity**

**Practice:** Advanced Radiology
**Site(s):** Eldersburg, Fisher, Lutherville, PowerVille
**Date Range:** 10/21/2012 - 11/21/2012
**Description:** This report displays the counts # of patients IVT activity has been logged by users within the selected sites/practice. Report is tracking any edits user(s) have made to study verification and pre-certification notes.

## Management Report – MQSA Outcome Report

This report displays outcome results for BIRAD 4 and BIRAD 5 exams. All Exams are Signed exams.

Report parameters are:

- Practice
- Site(s)
- Date Range
- Signing Radiologist
- Procedure Codes

**Description:** This report displays outcome results for BIRAD 4 and BIRAD 5 exams. All Exams are Signed exams.

| Signing Radiologist | # Studies | # Benign ( + ) | # Malignant ( - ) | No Biopsy on file | % ( + ) | % ( - ) | % NA |

## Management Report – NM Therapy Patient Listing

New report under the operations deployment

Parameters:
Practice, Site, and Date range based on scheduled date

Data references:
- NM_I131_dataset
- l_practice
- l_site

### NM Therapy Patient Listing

**Practice:** Highway Imaging Associates, Pinnacle Diagnostic Radiology
**Site(s):** Flatbush Ave, 49th Street, New Kirk Ave
**Date Range:** 10/1/2012 - 12/31/2012
**Description:**This report shows all exams within the specified parameters where the procedure description contains I-131.

| Scheduled | Patient Name | MRN # | DOB | Encounter ID |
|---|---|---|---|---|
| 10-17-2012 | [redacted] | [redacted] | 03-07-1957 | [redacted] |
| **Exam:** NM I-131 Whole Body Scan [78018] - Body<br>**Status:** Signed1 | | | **Location:** Flatbush Ave | |

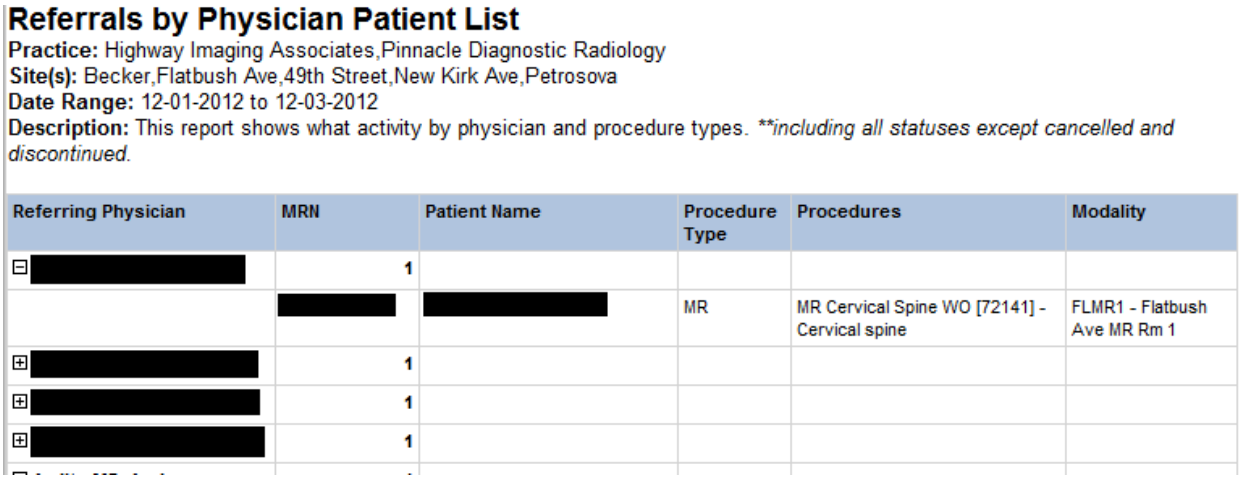
## Management Report – Referrals by Physician List

This report shows what activity by physician and procedure types. **including all statuses except cancelled and discontinued.

Report parameters are:

- Practice
- Site(s)
- Date Range
- Modality Types



**Referrals by Physician Patient List**

**Practice:** Highway Imaging Associates,Pinnacle Diagnostic Radiology
**Site(s):** Becker,Flatbush Ave,49th Street,New Kirk Ave,Petrosova
**Date Range:** 12-01-2012 to 12-03-2012
**Description:** This report shows what activity by physician and procedure types. ***including all statuses except cancelled and discontinued.*

| Referring Physician | MRN | Patient Name | Procedure Type | Procedures | Modality |
|---|---|---|---|---|---|
| [redacted] | 1 | | | | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

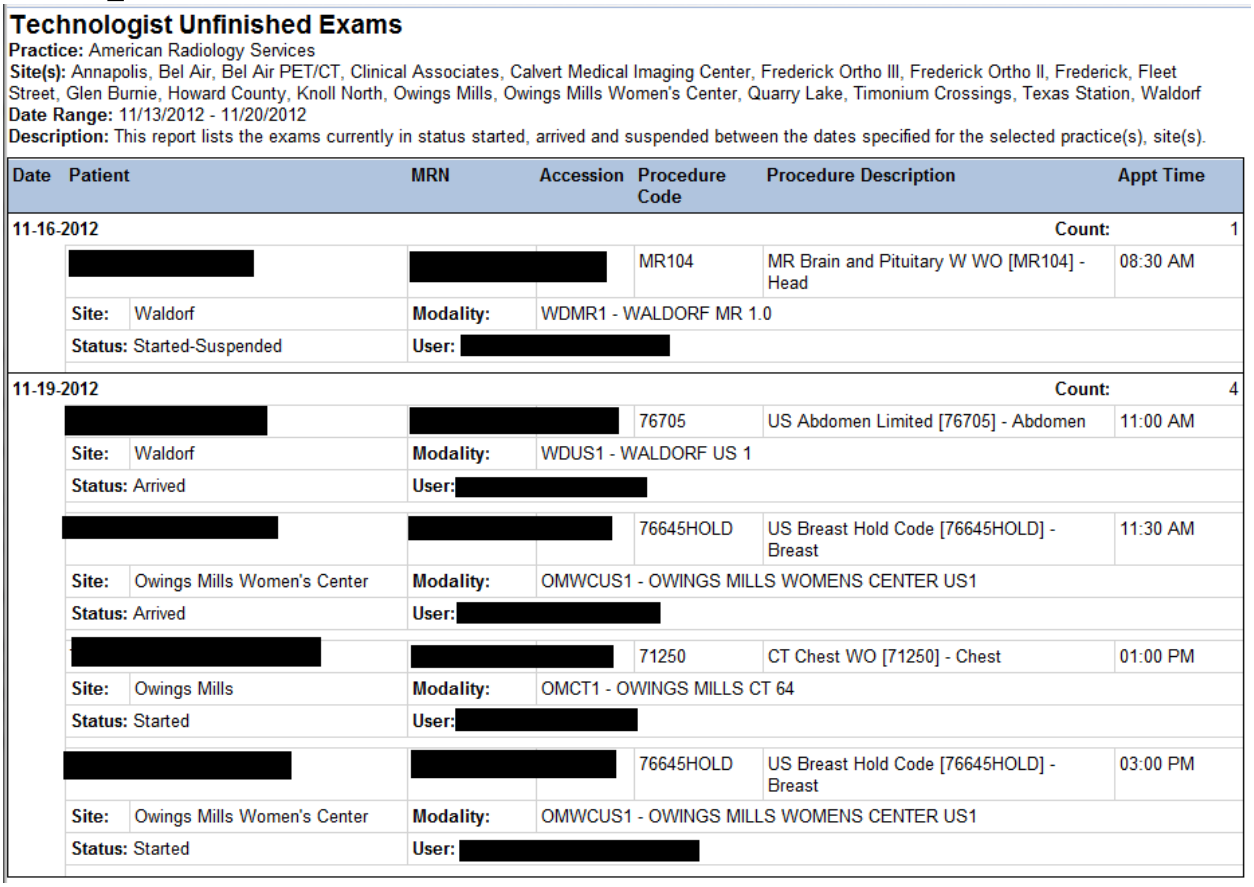
## Management Report – Technologist Unfinished Exams

Report to identify exams that have been left uncompleted on the technologist work list for a given date range based on appointment date and status of arrived, started or suspended.

Parameters:
Practice, Site, and Date range based on scheduled date

Data references:

- techUnfinishedExams_dataset
- l_practice
- l_site



**Technologist Unfinished Exams**

**Practice:** American Radiology Services
**Site(s):** Annapolis, Bel Air, Bel Air PET/CT, Clinical Associates, Calvert Medical Imaging Center, Frederick Ortho III, Frederick Ortho II, Frederick, Fleet Street, Glen Burnie, Howard County, Knoll North, Owings Mills, Owings Mills Women's Center, Quarry Lake, Timonium Crossings, Texas Station, Waldorf
**Date Range:** 11/13/2012 - 11/20/2012
**Description:** This report lists the exams currently in status started, arrived and suspended between the dates specified for the selected practice(s), site(s).

| Date | Patient | MRN | Accession | Procedure Code | Procedure Description | Appt Time |
|---|---|---|---|---|---|---|
| 11-16-2012 | | | | | Count: | 1 |
| | [redacted] | [redacted] | | MR104 | MR Brain and Pituitary W WO [MR104] - Head | 08:30 AM |

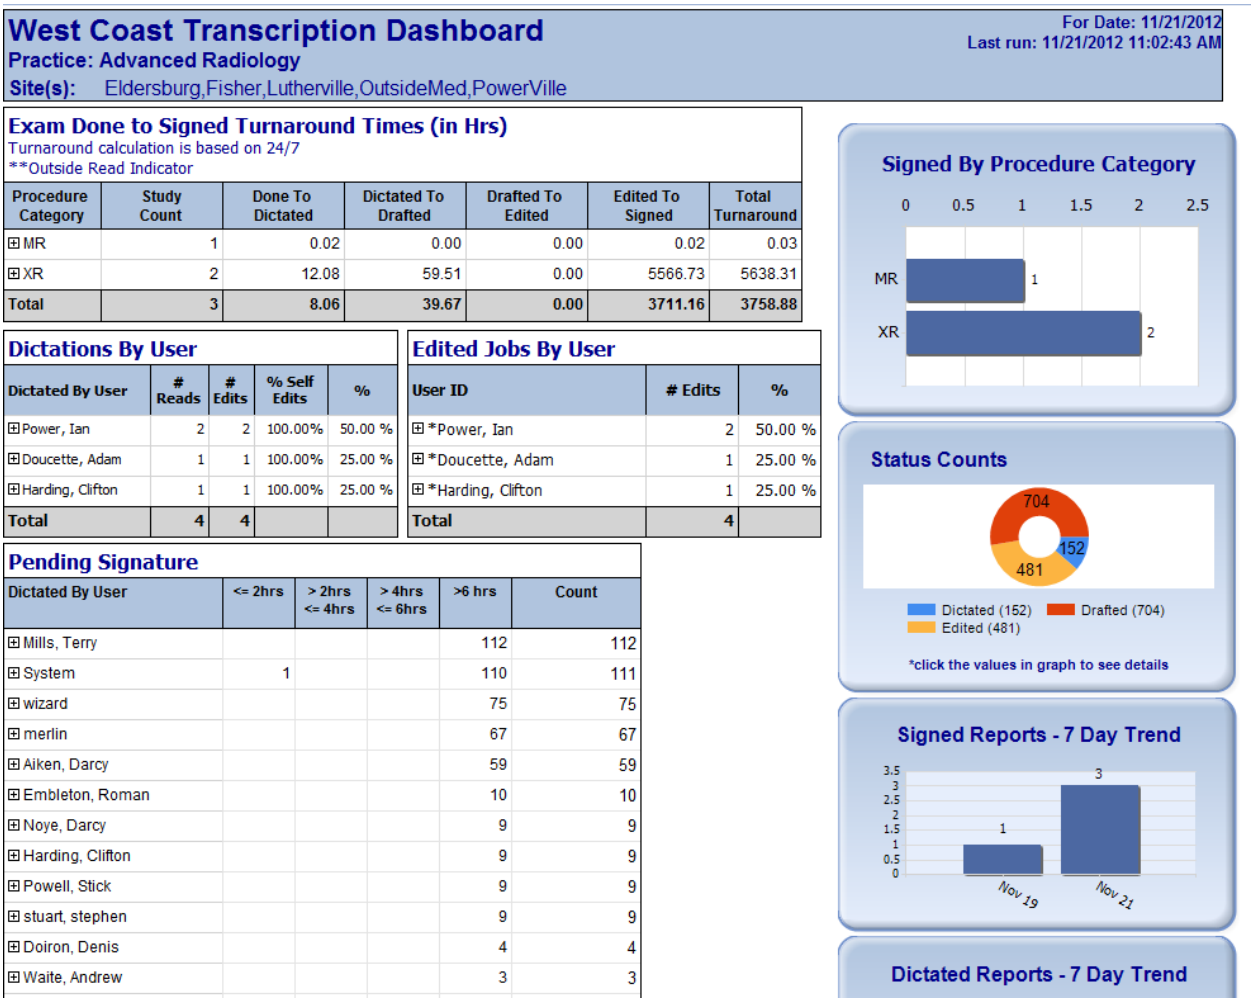
## Management Report – West Coast Transcription Dashboard

Created new dashboard report called West Coast Transcription Dashboard. Only difference is represented in the first table of the dashboard called Exam Done to Signed Turnaround Times (in Hrs).
These calculations calculate hrs difference regardless of hrs of operations.



**West Coast Transcription Dashboard**
**Practice: Advanced Radiology**
**Site(s):** Eldersburg,Fisher,Lutherville,OutsideMed,PowerVille
For Date: 11/21/2012
Last run: 11/21/2012 11:02:43 AM

**Exam Done to Signed Turnaround Times (in Hrs)**
Turnaround calculation is based on 24/7
**Outside Read Indicator

| Procedure Category | Study Count | Done To Dictated | Dictated To Drafted | Drafted To Edited | Edited To Signed | Total Turnaround |
|---|---|---|---|---|---|---|
| ⊞MR | 1 | 0.02 | 0.00 | 0.00 | 0.02 | 0.03 |
| ⊞XR | 2 | 12.08 | 59.51 | 0.00 | 5566.73 | 5638.31 |
| Total | 3 | 8.06 | 39.67 | 0.00 | 3711.16 | 3758.88 |

**Dictations By User**

| Dictated By User | # Reads | # Edits | % Self Edits | % |
|---|---|---|---|---|
| ⊞Power, Ian | 2 | 2 | 100.00% | 50.00 % |
| ⊞Doucette, Adam | 1 | 1 | 100.00% | 25.00 % |

# 7. Resolved Defects

Bugs Suggested Features and Support Issues resolved in build 1.39. The extract is taken from Redmine bug tracking system and only displays defects resolved in 1.39.

| Bug # | Tracker | Priority | Subject | Category | Found Version |
|---|---|---|---|---|---|
| 2758 | Bug | Immediate | Scanning - Errors with colour and duplex settings | Thick Client GUI | 1.38 |
| 2662 | Bug | Urgent | billing file missing GT1 segments for outside read study | | 1.37 |
| 2457 | Bug | Urgent | upgrade scripts take too long to run with large databases. | Web Services/DB | 1.38 |
| 2156 | Bug | Urgent | Webservices - UI_StudyStarted_StudyUpdated ( wrong study key in clob vs StudyContainer) | Thick Client GUI | 37.13 |
| 2145 | Bug | Urgent | Over Book Reason - Not logged to the Audit history | Thick Client GUI | 37.13 |
| 2082 | Bug | Urgent | From River Ranch: When you have 2 orders for the same patient and you 'view / edit' one of the orders and change the referring, the change is applied to both orders on that day. | Thick Client GUI | 37.11 |
| 2724 | Bug | High | attachment viewer shows out of date / stale results | Thin Client GUI | 1.38 |
| 2354 | Bug | High | Data nugget alignment and backcolor issue | Thick Client GUI | 1.38 |
| 2348 | Bug | High | Billing exception can be cleared before all notes cleared | Thick Client GUI | 1.2.38.14486 |
| 2335 | Bug | High | audit history does not display scrollbar when required | Thick Client GUI | 1.38.0 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | | |
|---|---|---|---|---|---|
| 2287 | Bug | High | Order notes are not preserved when rescheduiling | | 1.38 |
| 2234 | Bug | High | ReSchedule - ( schedule later) required laterality,, not checked | | 37.13 |
| 2233 | Bug | High | Re-Schedule ( Schedule Later) does not save added procedures. | | 37.13 |
| 2225 | Bug | High | View / Edit -> Billing codes tab -- showing billing codes for NOT active study items | Thick Client GUI | 37.13 |
| 2223 | Bug | High | Reconsile Unknown Insurance Carrier --> Foreign Key error | Thick Client GUI | 37.13 |
| 2209 | Bug | High | All QA studies WL missing | Thick Client GUI | 1.2.38 |
| 2208 | Bug | High | Registration --> Save prompts a check to validate Scheduled Date | Thick Client GUI | 37.13 |
| 2172 | Bug | High | changeing the insurance does not cause the precert rules to run | | 1.2.37 |
| 2144 | Bug | High | Precert Status - "Not Required" does not get logged to the database | Thick Client GUI | 37.13 |
| 2128 | Bug | High | River Ranch - modality availability check is not running upon pressing 'schedule' | Thick Client GUI | 37.12 |
| 2118 | Bug | High | River Ranch - Tech worklist is showing multiple studies flag even if one of those studies is in 'cancelled' status. | Thick Client GUI | 37.12 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | | |
|---|---|---|---|---|---|
| 2114 | Bug | High | Status changes initiated from an open screen in RIS can overwrite a status update from HL/7 | Web Services/DB | 1.37.12 |
| 2048 | Bug | High | Tech - Error Completing exam | Thick Client GUI | 37.11 |
| 2035 | Bug | High | Appointment book.. some appointments do not show tome of exam | | 37.1 |
| 2030 | Bug | High | Delete -Personnel | | 37.1 |
| 2000 | Bug | High | Transportation required flag - when populated in order, then re-opened for View / Edit, user no longer sees check in box | Thick Client GUI | 1.1.2.37 |
| 1960 | Bug | High | Column size for Referring ImagingNotes, SpecialtyNotes | Thick Client GUI | 1.37 |
| 1924 | Bug | High | rRISServices deployed with throttling turned on leading to poor performance | Thick Client GUI | 1.37.13858 |
| 1862 | Bug | High | If modality code has trailing space in code name, scheduled appointments will not show on appointment book | Web Services/DB | 1.1.2.37.13807 |
| 1829 | Bug | High | Memory leak introduced in B38, needs to be fixed. | Thick Client GUI | 1.38 |
| 1537 | Bug | High | When entering outside read info, if you put 'asf' into the study data panel, and you click outside the panel RIS throws a loop of the same error, and you cannot get out of it. | Thick Client GUI | 1.2.37.12724 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | | |
|---|---|---|---|---|---|
| 1116 | Bug | High | Procedure can be scheduled when laterality is required but not selected | Thin Client GUI | 1.35 |
| 2705 | Bug | Normal | Automated Measures eHealth calculation | Thick Client GUI | 1.38 |
| 2696 | Bug | Normal | forms not generated when arriving patient after changing procedure | Thick Client GUI | 1.37 |
| 2653 | Bug | Normal | PACS integration is passing showstudyinfo=Y even if config setting is turned off | Thick Client GUI | 1.37 |
| 2525 | Bug | Normal | Appointment book drag and drop time not working | Thick Client GUI | 1.38.002 |
| 2497 | Bug | Normal | Management Report - Referrals by Physician | Mgt Reports | 1.38 |
| 2495 | Bug | Normal | ris hangs on registration save | Thick Client GUI | 38.15138 |
| 2472 | Bug | Normal | Management Reports - Transcription Dashboard issue with external reports | Mgt Reports | 1.38 |
| 2468 | Bug | Normal | User Preference - opens on wrong tab | | 1.38 |
| 2466 | Bug | Normal | Management Report - Payments Received | Mgt Reports | 1.37 |
| 2464 | Bug | Normal | Reporting - Radiologist resource is required to dictate | Thick Client GUI | 1.37 |
| 2463 | Bug | Normal | Mammo - Annual reports freeze | Mgt Reports | 38 |
| 2462 | Bug | Normal | c_Calculate_BMI error when weight has a decimal | Mgt Reports | 1.37 |
| 2458 | Bug | Normal | Mgmt Report - Room Utilization | Mgt Reports | 1.37 |
| 2456 | Bug | Normal | User Preference - clean up task to remove ":" from labels with controls beside them | Thick Client GUI | 1.37 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | | |
|---|---|---|---|---|---|
| 2452 | Bug | Normal | audit history for tech workflow reflects the status of the exam prior to the status change | Thick Client GUI | 1.38 |
| 2447 | Bug | Normal | right click - Cancel Study does not release lock after cancelling study | Thick Client GUI | 1.38 |
| 2446 | Bug | Normal | FT1.4 date not as expected in billing file. | Web Services/DB | 1.35 |
| 2442 | Bug | Normal | Reporting - next previous field naviagtion with command bar buttons | Thick Client GUI | 1.38 |
| 2440 | Bug | Normal | Reporting - document model information dialog | Thick Client GUI | 1.38 |
| 2439 | Bug | Normal | Reporting - interactive tool options available in the editor | Thick Client GUI | 1.38 |
| 2438 | Bug | Normal | Color pickers in user preferences | Thick Client GUI | 1.38 |
| 2437 | Bug | Normal | MU Error timely_access_date | Thick Client GUI | 1.38 |
| 2435 | Bug | Normal | Reporting - Addendum message box cleanup | Thick Client GUI | 1.37 |
| 2433 | Bug | Normal | Scan Documents, documents should be renamed to "Attachements". | Thick Client GUI | 38 |
| 2417 | Bug | Normal | Resolve Problem : Problem set by not setting properly | Thick Client GUI | 1.37 |
| 2413 | Bug | Normal | Management Report - Transcription Dashboard | Mgt Reports | 1.38 |
| 2411 | Bug | Normal | Mgmt Report - Room Utilization | Mgt Reports | 1.37 |
| 2410 | Bug | Normal | This row has been removed when using the up/down arrows on keyboard from the personnell editor person grid | | 1.38 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | | |
|---|---|---|---|---|---|
| 2381 | Bug | Normal | Reporting Layout gets config file every time from DB | Thick Client GUI | 1.38 |
| 2380 | Bug | Normal | Patient Folder - Issues with floating toolwindows | Thick Client GUI | 1.38 |
| 2373 | Bug | Normal | Tool Window Focussing Issue | Thick Client GUI | 1.38 |
| 2352 | Bug | Normal | Patient Folder - rename view menu and corresponding tool windows. | Thick Client GUI | 1.38 |
| 2338 | Bug | Normal | Reset Open Skipped Rows Window/Menu Clean up | | 1.38 |
| 2325 | Bug | Normal | (intermittent) Null Reference error in scheduling after picking a timeslot that has a hold | Thick Client GUI | 1.37 |
| 2322 | Bug | Normal | Change existing insurance to a new insurance, follows rules applied to original insurance. | Thick Client GUI | 1.38 |
| 2318 | Bug | Normal | confirmation for multiple orders shows verbiage for registration, not confirmation | Thick Client GUI | 1.38 |
| 2312 | Bug | Normal | Managememt Reports - RTAT Detail | Mgt Reports | 1.37 |
| 2309 | Bug | Normal | error on getdata/display data -- invalid cast exception on open of confirmation exception | Thick Client GUI | 1.38 |
| 2293 | Bug | Normal | Reporting - Two release report context menu items | Thick Client GUI | 1.38 |
| 2282 | Bug | Normal | Mgmt Report Sales Marketing Dashboard | Mgt Reports | 1.38 |
| 2281 | Bug | Normal | Bill To Types - dropdown displays inactive items | Thick Client GUI | v37.13 |
| 2275 | Bug | Normal | Reporting - interactive popup mixed case | Thick Client GUI | 1.38 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | | |
|---|---|---|---|---|---|
| 2245 | Bug | Normal | Stored function c_getcontrastrequiredflag is using a cusor and does need to. | Web Services/DB | 1.38 |
| 2244 | Bug | Normal | userids case sensitive for domain logins | Web Services/DB | 1.38 |
| 2238 | Bug | Normal | Management Report Deployment - timeout | Mgt Reports | 1.38 |
| 2235 | Bug | Normal | Inactivity message showing at inappropriate time | Thick Client GUI | 1.2.38.14486 |
| 2232 | Bug | Normal | IVT worklist not loading / refreshing ... constraint violation not presented to user (or not reported by user) | Thick Client GUI | 1.37.13 |
| 2227 | Bug | Normal | Sales Dashboard | Mgt Reports | 1.37 |
| 2224 | Bug | Normal | Dx Templates - Delver to address | Mgt Reports | 1.37.13 |
| 2218 | Bug | Normal | Sales Reports ARS - performance Problems | Mgt Reports | 1.37 |
| 2214 | Bug | Normal | Image request with scheduled study tab show (0) in registration window | Thick Client GUI | 1.2.38.14443 |
| 2200 | Bug | Normal | Reporting - Reset/Open Skipped Rows | Thick Client GUI | 1.38 |
| 2189 | Bug | Normal | Management Reports - Special Accomodations | Mgt Reports | 1.37 |
| 2185 | Bug | Normal | eRx - Practice Zip Code Invalid characters | Thick Client GUI | 1.38.14426 |
| 2177 | Bug | Normal | Management Reports - update parameter to initialize to single day of yesterday | Mgt Reports | 1.38.14391 |
| 2176 | Bug | Normal | Error on fast clicking schedule button | Thick Client GUI | 1.2.38.14391 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | | |
|---|---|---|---|---|---|
| 2159 | Bug | Normal | QA Work flow - Reports verified are sent to Signed, Pending Release WL again | Thick Client GUI | 1.2.38.14350 |
| 2150 | Bug | Normal | Audit log displaying user who released report as UI_ReportSIgned | Admin Tools | 1.2.38.14350 |
| 2149 | Bug | Normal | Lookup Editor - Image Uploader | Thick Client GUI | 1.38 |
| 2137 | Bug | Normal | Reporting - Skip and continue external reports loop | Thick Client GUI | 1.2.38.14327 |
| 2130 | Bug | Normal | Typo - Attachement Viewer | Thick Client GUI | 1.37. |
| 2112 | Bug | Normal | Management Report - Referrals by Physician | Mgt Reports | 1.37.12 |
| 2108 | Bug | Normal | Referring Physician Volume Report | Mgt Reports | 1.37.12 |
| 2099 | Bug | Normal | can't clear selection of dataset when creating an auto macro | Thick Client GUI | 1.1.2.38.14294 |
| 2056 | Bug | Normal | Reporting - Dictatoin control (minimzed) not visible if saved on multiple monitor configurations | Thick Client GUI | 1.37 |
| 2039 | Bug | Normal | Print preview of Dx Report within transcription window when multiple addendums | Mgt Reports | 1.38 |
| 2037 | Bug | Normal | CDS Manager Service attempting to update signed studies. | Web Services/DB | 1.37 |
| 2022 | Bug | Normal | Reporting - Assign To problem when radiologist doesn't exist. | Thick Client GUI | 1.37 |
| 1996 | Bug | Normal | Reporting - VR2 environment signle spacing between sentences on report rendering. | Mgt Reports | 1.37 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | | |
|---|---|---|---|---|---|
| 1796 | Bug | Normal | Reporting - CdsInterctive Text Color | Thick Client GUI | 1.38 |
| 1569 | Bug | Normal | schedule later does not save procedures that haven't been committed yet | Thick Client GUI | 1.2.37.12782 |
| 1373 | Bug | Normal | Minimize Dictation - When doing WPR "000" Submit buttun text not legible | Thick Client GUI | 1.36 |
| 1254 | Bug | Normal | Shortcut keys are not working from floating panes | Thick Client GUI | 1.36.10931 |
| 1139 | Bug | Normal | When running MT polling workflow, lock is not being released | Thick Client GUI | 35.10273 |
| 1129 | Bug | Normal | Access to Diagnose / dictate window | Thick Client GUI | 1.35 |
| 965 | Bug | Normal | Dictate Screen does not lock after period of inactivity | Thick Client GUI | 1.35 |
| 917 | Bug | Normal | Minimizing application by moving another application over top of RIS throws error | Thick Client GUI | 1.34 |
| 909 | Bug | Normal | First time launch of a study does not find the image | Thick Client GUI | 1.34 |
| 876 | Bug | Normal | Error accessing transcribed records | Thick Client GUI | 1.32 |
| 2723 | Bug | Low | tooltip "fit to width" appears over zoom in and zoom out buttons on scan doc attachment viewer | Thick Client GUI | 1.38 |
| 2106 | Bug | Low | Lookup Editor - TemplateMacro Should have Double click functionality | Thick Client GUI | 1.38.14294 |
| 2105 | Bug | Low | Lookup Editor -TemplateMacro | Thick Client GUI | 1.38.14294 |
| 2088 | Bug | Low | Macro Editor - Tab Order needs to be reveiwed | Admin Tools | 1.1.2.38.14194 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | | |
|---|---|---|---|---|---|
| 1853 | Bug | Low | QualityReviewDistribution is not listed alphabetically in General menu | Admin Tools | 1.1.2.38.13809 |
| 1769 | Bug | Low | Repporting - Selecting "Show All" templates can change the default selected | Thick Client GUI | 1.1.2.37.13580 |
| 1678 | Bug | Low | GUI - Macro + Template editor.. base templates field does not display in min resolution | Thick Client GUI | 1.2.37.13040 |
| 1612 | Bug | Low | Locking - message box modifictaions perhaps | Thick Client GUI | 1.37 |
| 1485 | Bug | Low | On the Input tab of the Preferences screen there is a Label that can't be read | Thick Client GUI | 1.37 |
| 1113 | Bug | Low | Lang item for rRIS to system try need to be updated. | Thick Client GUI | 1.35 |
| 670 | Bug | Low | Diagnose > Report preview can be opened multiple times | Thick Client GUI | 1.25 |

# 8. Known Limitations

The following are Bugs Suggested Features and Support Issues found in build 1.39. This build is the current QE build and testing is ongoing. The list may increase in size. This document will not be updated or re-released.

| # | Status | Priority | Subject | Resolved Build |
|---|---|---|---|---|
| 2775 | New | High | Mammo letter config lookup active column values incorrect | |
| 2727 | New | High | PACS errors flipping between open dictate windows | |
| 2699 | Resolved | High | Inserting template is navigating all fields twice | 40 |
| 2532 | New | High | access to changing the access strings needs to read only. | |
| 2478 | Resolved | High | Title bar color does not change if Practice is set to transparent | 40 |
| 2782 | Resolved | Normal | ICM Dashboard - Need plan and Unknown Referring returning no results | 40 |
| 2777 | New | Normal | Appointment book - double click on open time | |
| 2761 | Resolved | Normal | Sales Mgmt Reports - 6 and 13 Mth Variance Data | |
| 2759 | New | Normal | Distribution WL - Message box should display in the center of the screen | |
| 2757 | New | Normal | Problem with doing multiple Verify Externals in a row. | |
| 2754 | New | Normal | Patient Folder context menu for Report History | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 2752 | Resolved | Normal | Patient Merge: ShowID Button does not auto select thumbnail | 40 |
| 2750 | New | Normal | Reporting - Select command does not work for words that are at the start or end of a field | |
| 2747 | Resolved | Normal | Reporting - Fields Navigator - Prevoius section does not highlight position in Fields tool window | 40 |
| 2746 | Resolved | Normal | Organization Picker Problem | 40 |
| 2744 | New | Normal | null exception when attempting to show/hide titlebars on report document | |
| 2743 | New | Normal | Personnel Editor - Tab/NewLine issues in notes fields | |
| 2741 | Resolved | Normal | Lookup Editor - Column Header Alignment is Messed up. | 40 |
| 2737 | New | Normal | Patient Folder - multiselect is true and it should be false | |
| 2734 | New | Normal | Reporting - Floating data panes do not stay on top | |
| 2728 | New | Normal | Study locked in PACS message on initial load | |
| 2713 | Resolved | Normal | Report History tab name | 40 |
| 2695 | New | Normal | parameter not specified error in preview report for tables | |
| 2690 | New | Normal | Show/Hide Titlebar issue | |
| 2683 | New | Normal | Patient folder > Study detail column color bleeds outside of row | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 2677 | New | Normal | Create Report from Reset Open skipped rows | |
| 2676 | New | Normal | Reset open skipped rows - If you dictate and save, it does not remove skipped row from list | |
| 2672 | New | Normal | Appointment book cannot obtain lock error | |
| 2661 | New | Normal | Template Macro Editor - Double click template or macro | |
| 2660 | New | Normal | Template Macro Editor - Adv Assignment - user not defaulting | |
| 2648 | New | Normal | Reporting - Attachments are not realigned when the data pane is resized | |
| 2647 | New | Normal | Reproting window - can't save layout to default Attachments tab | |
| 2646 | New | Normal | Reporting - field navigator using section headers are not navigating if report contains 0 fields | |
| 2645 | New | Normal | Overbook Reason title change | |
| 2643 | New | Normal | Multiple loads of Selection Aware controls | |
| 2641 | New | Normal | Duplicating report fields | |
| 2637 | New | Normal | Next field command selecting multiple fields | |
| 2635 | New | Normal | Unchecking No Longer Menstruating doesnt enable pregnancy fields | |
| 2632 | New | Normal | Perform Exam window doesnt update with changes made in another window | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 2630 | In Progress | Normal | PACS - Close call could fail if user has been logged off | |
| 2628 | New | Normal | Reporting screen not drawing in, if user make worklists active | |
| 2568 | In Progress | Normal | View menu disappears | |
| 2561 | New | Normal | reception WL retrieval time is slow | |
| 2540 | New | Normal | scan document association | |
| 2536 | New | Normal | Report Permissions, | |
| 2534 | New | Normal | Mammo followup - Newly entered data does not carry forward | |
| 2533 | New | Normal | Scheduling order from follow up mammo work list doesnt return to work list | |
| 2515 | Resolved | Normal | Create/Edit Report not in context menu in Problem WL | 40 |
| 2513 | Resolved | Normal | Create Edit Report missing from context on Pending Review WL | 40 |
| 2512 | Resolved | Normal | Verify Edits context missing on Edits Pending QA WL | 40 |
| 2511 | New | Normal | size and location information is not saved when client is close while minimized | |
| 2509 | Resolved | Normal | Create/Edit Report not in context menu in Report Drafted WL | 40 |
| 2493 | New | Normal | Management Report - RTAT Summary Poor Performance | |
| 2751 | New | Low | Object overlap on Order tab | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 2749 | Resolved | Low | Reporting - Fields Navigator - Selecting section before field changes cursor selection | 40 |
| 2729 | New | Low | Able to bring up two menus at once | |
| 2679 | New | Low | CDS Management Console | |
| 2664 | New | Low | Billing Exception - Post button | |
| 2658 | New | Low | Stored function c_getcontrastrequiredflag could return wrong value if multiple study items exist | |
| 2652 | New | Low | administration -> management report screen doesn't show any folders if permissions aren't configured | |
| 2535 | New | Low | Region, unable to deactivate | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# Server Update

For eRAD RIS
Version 1.0
Build 39
Update 39.001

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# Table of Contents

1. New Features ..... 3
   Multiple Signature Workflow ..... 3
   Reporting - Keyboard Shortcuts for Reporting Window ..... 13
   Reporting – Additional buttons for mapping on SpeechMike ..... 14
   Side by Side registration – Eliminate Core Install Requirement ..... 15
2. New Access Stings and Configuration Settings ..... 17
3. Defects resolved ..... 18
4. Package Contents ..... 20
5. Intended Audience ..... 21
6. Who is affected ..... 21
7. eRAD RIS Release Version Numbers ..... 22
8. Installing ..... 23

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 1. New Features

This server update has 4 new features added. This section will describe each feature in detail

## Multiple Signature Workflow

Multiple signature workflow has 3 signing levels. They are Contribute B, Contribute A and Final. Contribute B and Contribute A signatures will change or leave the status (depending on current status) of the study to / at transcribed. Only users with Final signature rights can move the study to Signed status.

Multi Signature Workflow allows for multiple radiologists to work a study by having a radiologist dictate/contribute B a study, then having another radiologist review/contribute A and finally a radiologist review/Final sign the study. Only the Final Sign is a required step in this workflow, assuming proper configuration/permissions.

If a study is modified by an MT or Radiologist and is sent back to dictated, report drafted or transcribed status, contributing signatures will be removed from the latest interpretation. Suspending at any level will not reset contributing signatures, unless it is resumed with one of the above actions. Only the final signature is permanent.

Contributed A and B studies can be directed to a "Supervising Radiologist". The Supervising Dictation WL is used to monitor the studies he/she is marked as the supervising radiologist.

A user will get their highest level signature defaulted when opening a study, unless they override it using the button default functionality. If they do override them, and the overridden signature level isn't available for some reason (it's already contributed at that level or it's been disabled at a system level) then his highest level will be defaulted.

The pending signature work list will show the studies that the radiologist can sign based on his default signature level, and his overrides per modality types. If he can't sign it, it won't show. There are no separate work lists for contribution signatures.

QA workflow does not change with this feature; QA workflow applies only to Final Signatures, Verifying the study will not reset the contributing signatures neither will rejecting.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Setup and Configuration

In order to support multi-signature workflow the following items must be set up…

### System config settings:

ContributeAEnabled - Determines in contribute A is available to use on the system. If this system config setting is disabled (=false), the sign level field in personnel editor will display the value for Contriubute A in a gray color (black when enabled).

ContributeBEnabled - Determines in contribute B is available to use on the system. If this system config setting is disabled (=false), the sign level field in personnel editor will display the value for Contriubute B in a gray color (black when enabled).

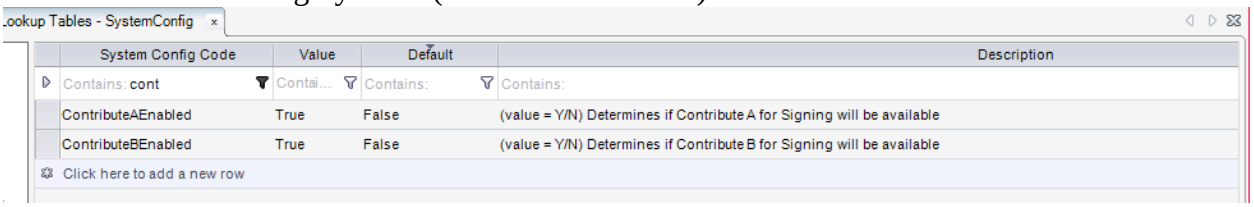

**Figure 1.1 – SystemConfig tables displaying new system config setting for multiple signature**

### Personnel Editor -Radiologist Level Sign:

In the personnel editor on the "Resource" tab there is a drop down to identify the radiologist's sign level. This is only enabled when the "Resource Type" of "Radiologist" is checked. Items shown in light gray in the drop down identify that it is disabled at the system level, based on system config settings above. When one of these items is selected, the label for "Sign Level" will turn red, indicating a conflicting value is selected.

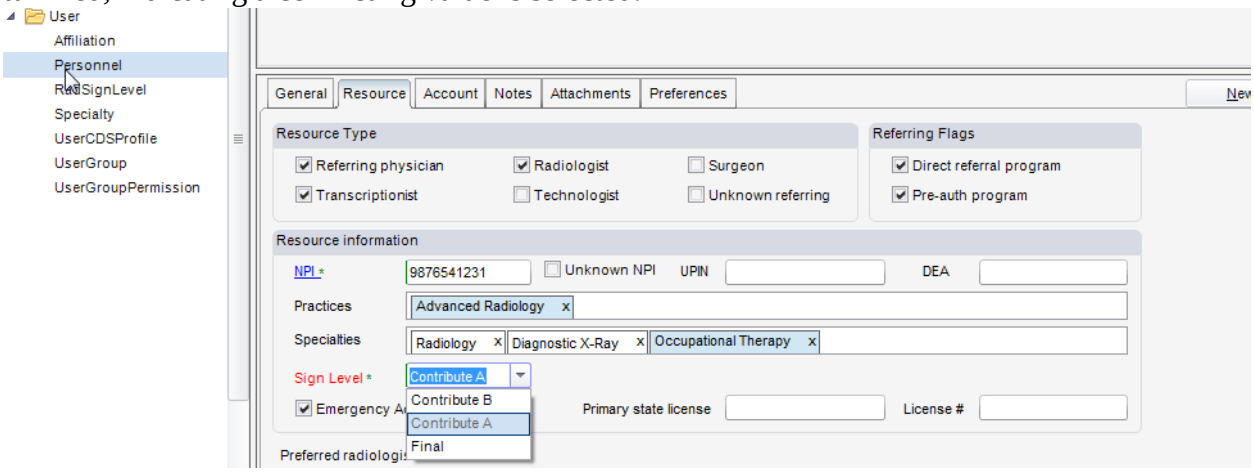

**Figure 1.2 – Personnel editor displaying new list box to assign signature level at user level**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Radiologist Sign Level Overrides:

In the Lookup table editor, under "User" you will see a new lookup table titled "RadSignLevel". This table contains the modality level overrides for radiologist's sign level. If a radiologist has "Final Sign" privileges set in the personnel editor, that users sign level can be overridden at the modality level in this table. For instance, perhaps this radiologist should not be signing off on MRs studies. In this table you would see an entry for that radiologist, MR modality type, and a lesser sign level, either contribute A or B. There can be an unlimited number of overrides, but limited to 1 per modality type/user.

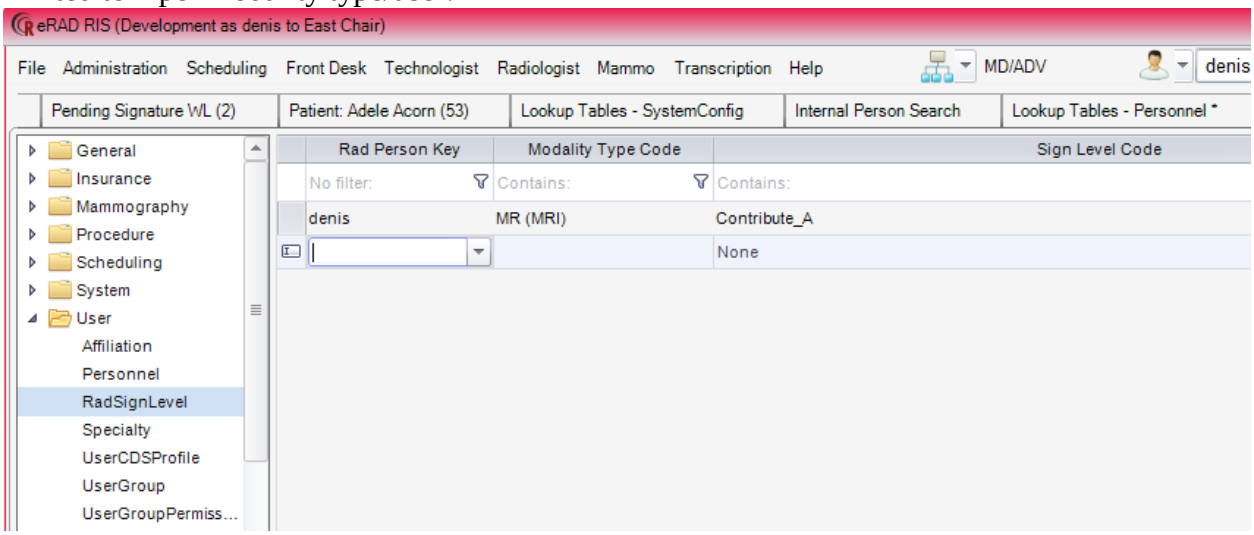

**Figure 1.3 – RadSignLevel lookup table showing user override sign level for MR modality**

## Radiologist user preferences:

In user preferences under the "Reporting" tab you will see in the "Signing" section 5 new user preferences.

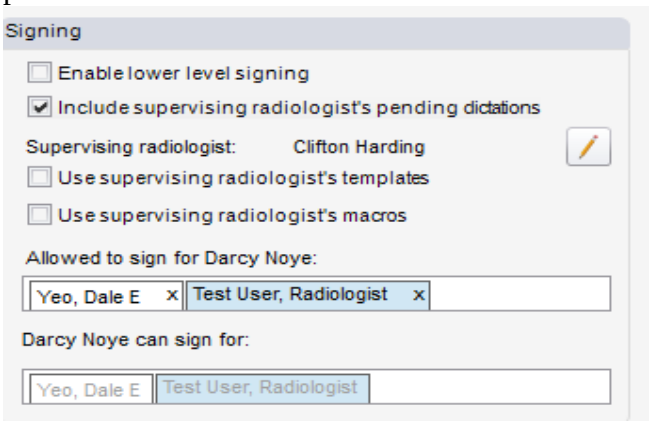

**Figure 1.4 – New user preferences**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

1.) **Enable signing at lesser values** (Default OFF)**:** This allows the user to be able to sign at less than his specified maximum level for the current study. What this mean is if this user is allowed final signature on a study, he would still have the options to contribute A or B. Disabling this option will clean up the gui by removing these items from his drop down "Sign" button.

2.) **Show supervising radiologist's pending dictation** (Default OFF)**:** This allows the user to decide if items assigned to the supervising radiologist will appear in his Pending Dictation WL. If this is false, items assigned to the supervising radiologist would then have to be assigned to his RPA/fellow radiologist to be worked. If this is on then the RPA/fellow radiologist would see them in his work list automatically.

3.) **Supervising Radiologist:** This identifies who the user will normally be working for when logging into eRad Ris. This value will not be affected by the picker in the main screen.

4.) **Default to Supervising Radiologist's Templates** (Default OFF)**:** This determines what user will be used to filter the "Template" browser when a study is opened. If this is off the the current user will be used, as normal. If this is on the supervising radiologist assigned will be used.

5.) **Default to Supervising Radiologist's Macros** (Default OFF): This determines what user will be used to filter the "Macro" browser when a study is opened. If this is off the current user will be used, as normal. If this is on the supervising radiologist assigned will be used.

## Supervising Radiologist Control:

This refers to the control in the status area of eRad Ris which shows the currently assigned Supervising Radiologist. It also allows changing this value for the session. Clicking on this item will show the "Supervising Radiologist Picker".

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

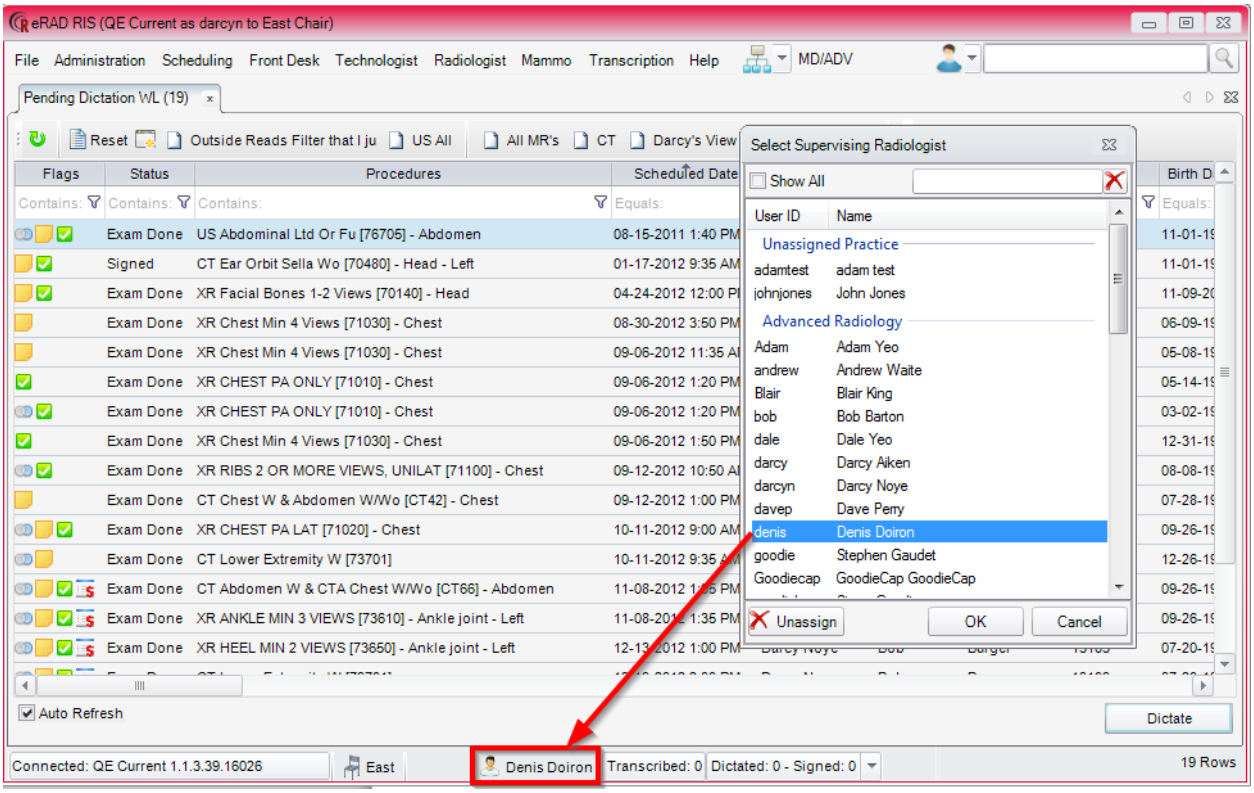

**Figure 1.5 – Select Supervising Radiologist window opened from the control on status bar**

The value here identifies which Radiologist the user is working for, and will insert this value into every report the user dictates, assuming the study didn't already contain a different value. This will only be used on NEW dictations. Previously dictated studies will keep the value they were created with unless it is manually changed using the work list's context menu If the user has "Show supervising radiologist's pending dictation" turned on, when he changes the value in this Supervising Radiologist control, it will refresh the work list with this new value.

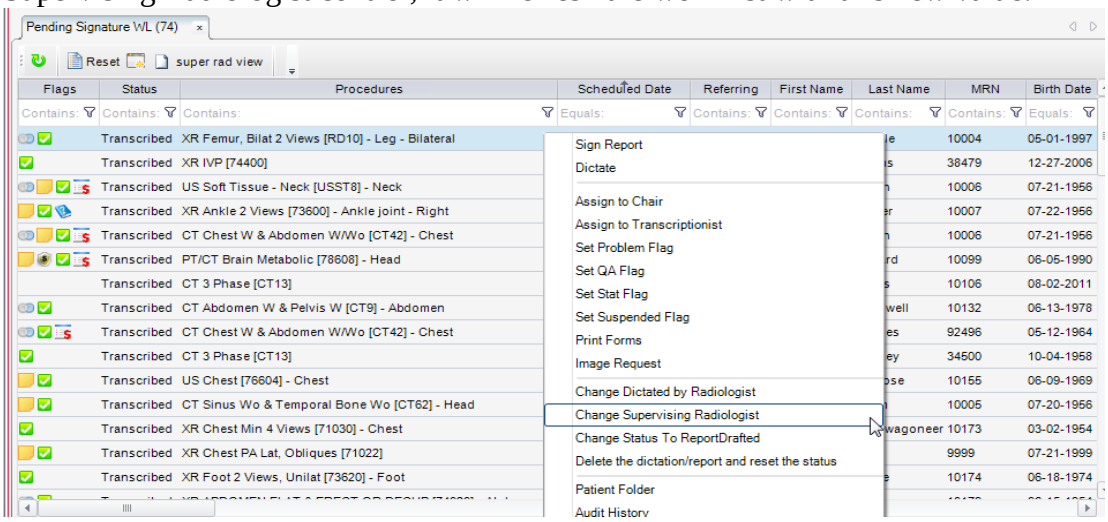

**Figure 1.6 – Context menu option to change supervising radiologist**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

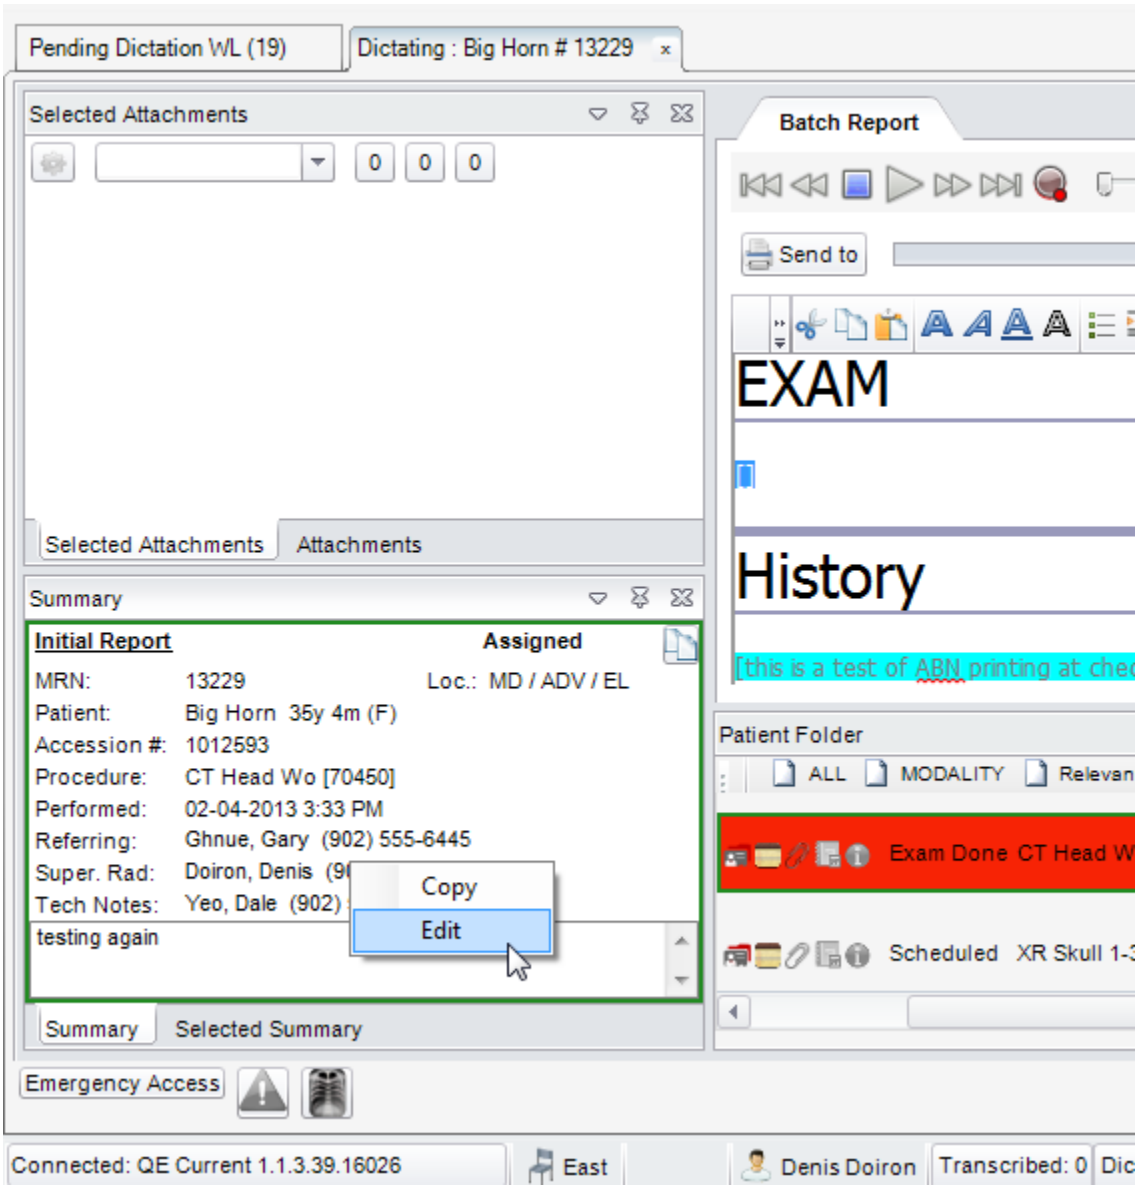

**Figure 1.7 – Context menu from Summary allows changing supervising radiologist**

The radiologist can also change the supervising radiologist from with the reporting window. From within the summary pane, hover the mouse pointer over Super. Rad: and from a right click select Edit. This will also open the Select Supervising Radiologist window.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

I am currently set up to see my supervising radiologists assigned pending dictation items. Here is a screen capture of my pending dictation worklist. If I had "Show supervising radiologist's pending dictation" turned off, then Clifton Harding's items wouldn't show on my worklist.

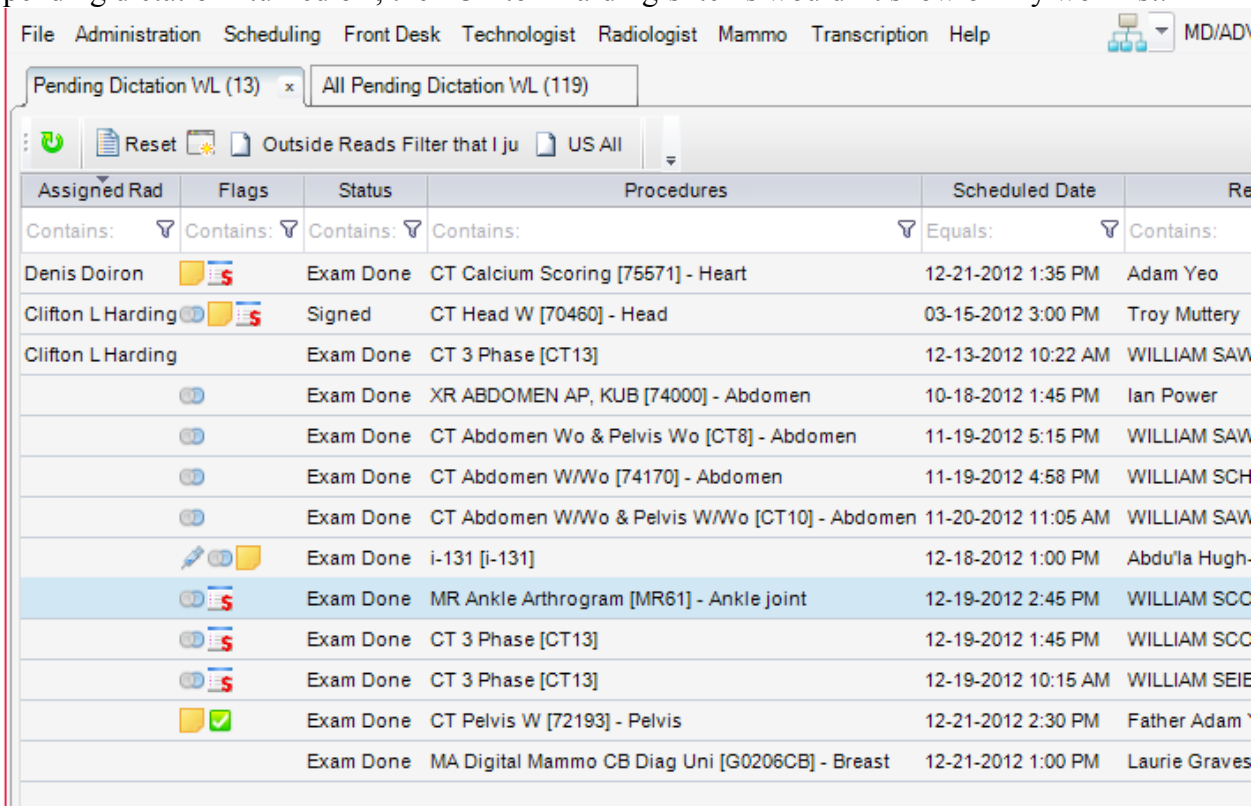

**Figure 1.8 – Assigned Rad's studies appear in my pending dictation work list when that Rad is my supervising radiologist**

Since I am not working for Clifton today, I will click on the "Assigned Radiologist" control and change my supervising radiologist to "Darcy Noye". This automatically refreshes my worklist and will show items assigned to "Darcy Noye".

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

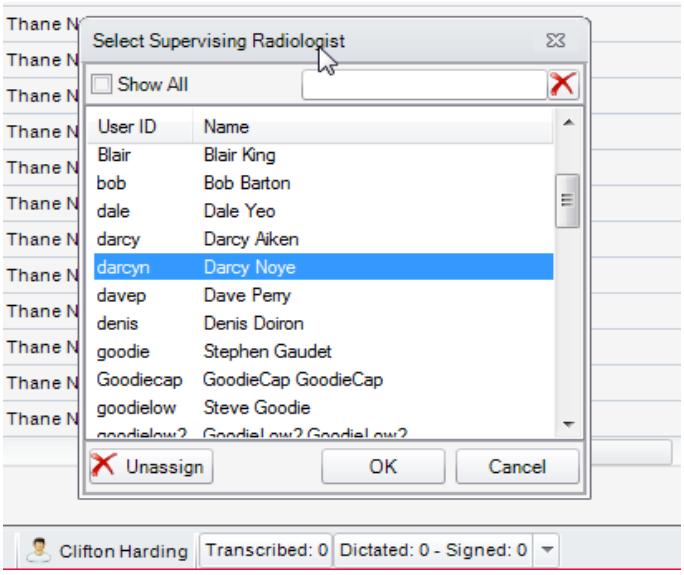

**Figure 1.9 – Assign a different Supervising Radiologist**

I now select to "Dictate" a study. Things to notice on this new screen are the Supervising Radiologist listed in the Summary panel, and the Sign button, which shows what level signature I am on. This is indicated like so: Contribute B Level will show a "Sign – B", Contribute A will show "Sign – A" and Final will show "Sign" as it always has before.

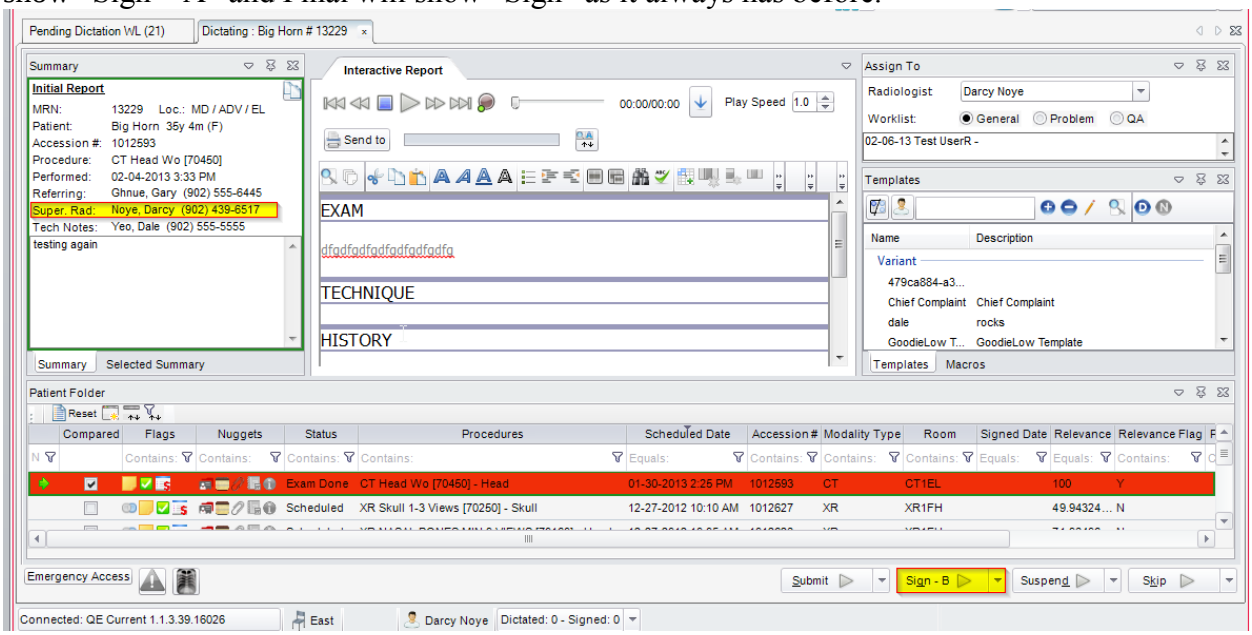

**Figure 1.10 – Dictate window displaying my Supervising Radiologist and my signing level**

I dictate the study. I select Sign B. The study is transcribed. It will now appear in the Pending Signature work list and the Supervising Dictation work list of the user who I have assigned as my Supervising Radiologist. It will also appear on the All Pending Signature worklist.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

It is possible to have it go through 2 different Supervising Radiologists. If I read for Rad A, who read for Rad X then when I signed it (level B) it would go to Rad A for signature, then when Rad A signs it, it will then go to Rad X for final signature.

When I open a screen to dictate, my templates / macros will load based on my "Default to Supervising Radiologist's Templates" and "Default to Supervising Radiologist's Macros" settings. If it is on it will show my supervising rads, and if it's off it will show mine.

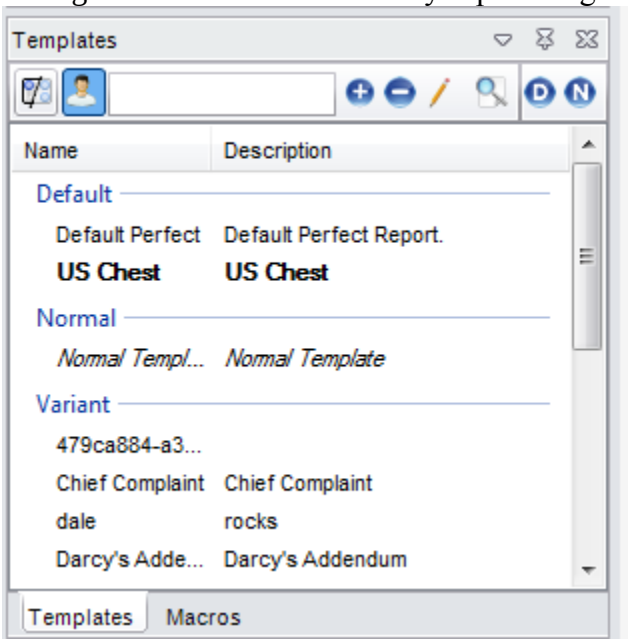

**Figure 1.11 – Templates loaded as my Supervising Radiologist**

This initial load will determine which default template gets inserted automatically in the report. Once the screen is loaded I can toggle between mine and his using the toggle button shown in the image on the right.

The button to the left of the supervising radiologist will toggle the "Show All" functionality. This was a check box control, now for real estate issues it is a toggle button as well. This show all option simply removed the procedure code from the equation, and will show templates for a procedure code that are accessible to me.

Based on what template I used to populate the report, the related user id will be saved to the interpretation row so that the system can then reopen the study using this user id as a filter for the templates. This allows future edits to display a template list that actually contains the template used to dictate. This is important for MT workflow.

Although macros work the same way, we don't save anything to the database for these, only the templates we track. We will still open the Macro filtered based on the template though.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

**If a study is Signed A or Signed B and the signing radiologist did not have a supervising radiologist assigned or if the supervising radiologist does not have the appropriate signing level for that study, the study moves to transcribed status, it won't appear on a Pending Signature Worklist nor the Supervising Dictation work list. The study then must be accessed from the All Pending Signature wl by an admin and from here a supervising radiologist can be assigned. The who signed A or B will also be able to access the study from their Dictated by Date work list. This could happen if a supervising rad didn't have the required signature level for the study type. Or if a rad dictates studies without having a supervising radiologist selected.

## Reporting - Keyboard Shortcuts for Reporting Window

The right and left arrow keys on the keyboard can now be mapped as functional keys within the reporting window. These are configured as user preferences under the Input Device tab.

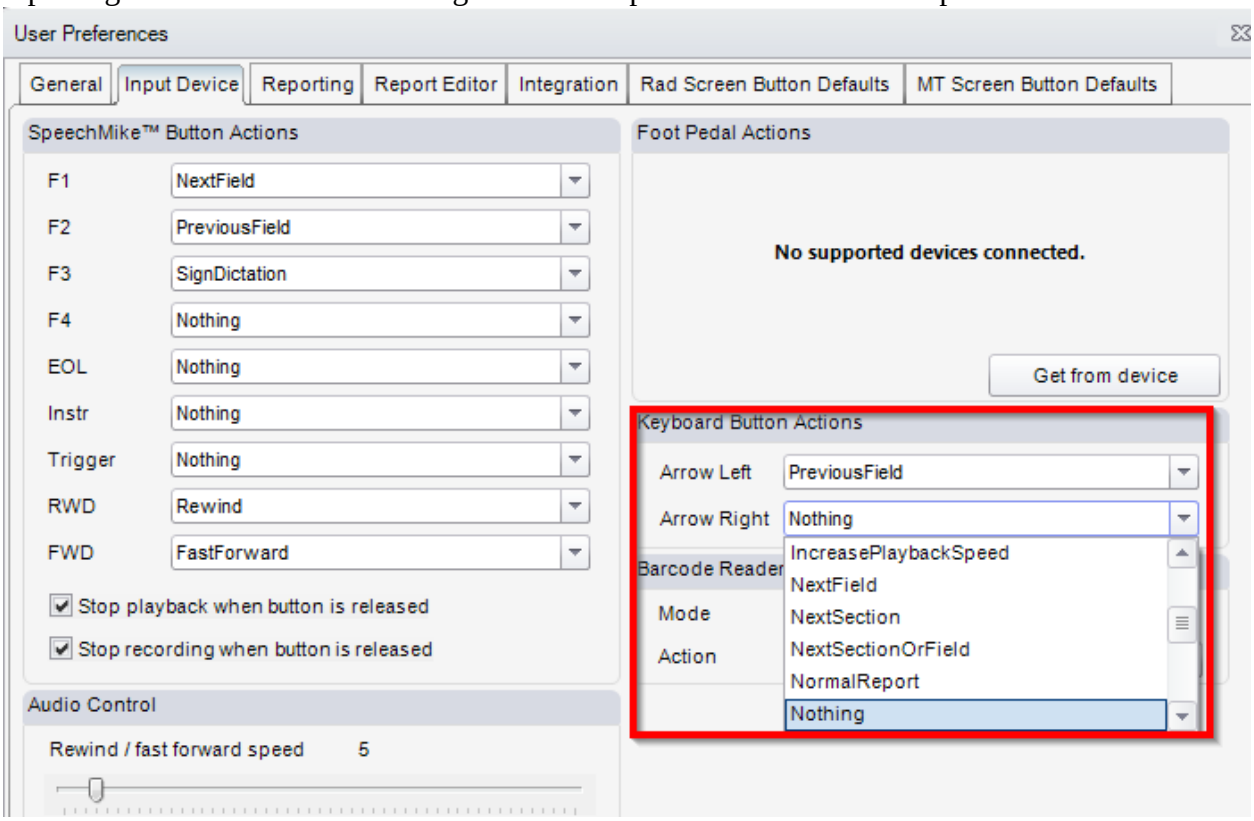

**Figure 1.12 – Keyboard arrow button actions as user preferences**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Reporting – Additional buttons for mapping on SpeechMike

The rewind and fast forward buttons can now be mapped to serve a different purpose in the reporting window. Also the options for "Rewind" and "FastForward" can be mapped to the other SpeechMike buttons.

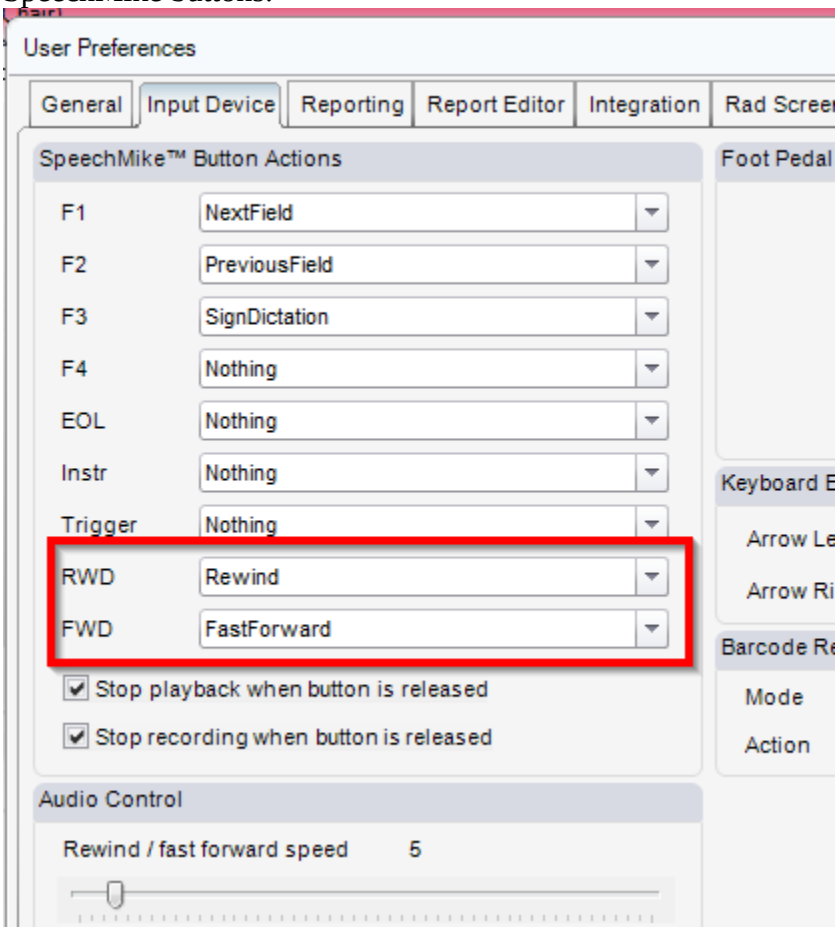

**Figure 1.13 – New SpeechMike buttons to allow mappings**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## Side by Side registration – Eliminate Core Install Requirement

The elimination of the core install is desirable because of the time consuming task of completing an upgrade when every work station needs personnel action. Also, administrators who are managing different practices with different versions would not need to constantly run the core install for the different versions.

Going forward from Build 39, users will be able to switch between versions simply by selecting the environment from the eRAD RIS login window.

**Figure 1.14 – eRAD RIS login displaying the ability to switch between versions without core install**

**NOTE: because of the core version number associated with Build 38 and 39 are different this feature will not allow going back to earlier versions before 39. The users will still need to run the core install to change between Build 39 and earlier versions.**

Below is the explanation of how this was achieved.

To resolve we introduced side-by-side registration of the libraries requiring registration in the application. This document isn't going to explain what side-by-side registration is fully. In short most application that require a registered dll will look to windows for the registered version

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

which could be located anywhere on the file system and re-registering would/could change the version everyone points to. Side-by-side will simply use the library located next to executable. So in our application we will use the libraries in the same folder as the ris.exe program.

To make this happen we first have to tell the ris.exe application that it should look in the same directory and use this type of reference instead of the previous method. To do this need to include a manifest file and tell the application to use this manifest file when running.

To create a side-by-side manifest file you need to include a reference to the library file. You then must set the isolated property to true so the manifest gets created properly. In our case that would be the SpMikeCtrl.dll, AnyModalEditCtrl2.dll, and AnyModalCaptureCtrl.dll file. This posed a couple problems as our application references the interop versions of these files and doing so would create some crazy reference compilation issues.

So we cleverly created a sample windows application, added the library references (3), set the isolated property to true and built the appellation. The build created a manifest file called "WindowsFormsApplication1.exe.manifest". If we inspect this file we can see the three libraries and a bunch of stuff. We rename this file to "ris.exe.manifest" and included it in our MainApp project as a file reference.

So at this point we have created our manifest file and placed it in root directory of our MainApp project. Ensure the application uses the manifest file by altering the properties of the project application manifest drop down to point appropriately.

Now we have setup our application to use the manifest created in the other application.
We previously had file references in the MainApp project to include AnyModalEditCtrl2.dll and AnyModalCaptureCtrl.dll so we had to add SpMikeCtrl.dll as a file reference also that copies to the build directory.

To complete the task we need to change how we deploy the application. Currently we only put a limited number of files in the zip folder for deployment. These files in the zip can be updated and will automatically be copied to the client PC when changing builds or upgrading. So as we previously relied on the core setup to include the libraries and the supporting files for the libraries we now need to include these in the zip file also.

This will create a much larger zip file and include many more files. Not great but it will allow us to switch from one version to another without installing which is worth it. We also had to consider that this larger zip file is only downloaded once per version or hotfix not everytime we switch. As long as the local copy is up-to-date we will not download it again.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 2. New Access Stings and Configuration Settings

| Setting Placeholder | Setting | Default | Controls Access to |
|---|---|---|---|
| SystemConfig lookup | ContributeAEnabled | False | Determines in contribute A is available to use on the system. |
| SystemConfig lookup | ContributeBEnabled | False | Determines in contribute B is available to use on the system. |
| SystemConfig lookup | BypassSignedQAWorkflow AfterCorrection | False | Determines if a Signed QA study is rejected, it is excluded from the QA workflow when corrected and signed again |
| AccessString lookup and UserGroupPermission Lookup | Config.LookupEditor.RadSignLevel | None | Controls access to the Lookup table RadSignLevel |
| AccessString lookup and UserGroupPermission Lookup | WL.Rad.SupervisingDictation | None | Controls access to the Supervising Dictation menu option under Radiologist menu |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 3. Defects resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 2963 | Resend for recognition not resetting template applied to draft variable | Immediate |
| 2959 | River Ranch - when multiple MR Arthrogram and FL Arthrogram procedures exist for a patient, the 'Exam Information' show all FL Arthrogram Shoulder studies | Urgent |
| 2929 | River Ranch - New & Cloned radiologists are not appearing in the 'Assigned Radiologist' dropdown | Urgent |
| 2904 | HL7 messages are changing study status back in the workflow post-ExamDone | Urgent |
| 2958 | Templates loading for wrong user when dictating in batch mode. | High |
| 2957 | Apply template to draft firing when it shouldn't | High |
| 2950 | Multiple signature - can't sign a report that was dictated by another rad | High |
| 2923 | Error attempting to view locked study in read-only mode | High |
| 2910 | Template/Macro editor, NewField inserts. | High |
| 2898 | Verify and continue does not work. | High |
| 2846 | Reporting - radiologist pending release worklist not showing reports in QA status | High |
| 2824 | Reporting - rejected reports should never go back to QA after signing again | High |
| 2978 | Date worklists where criteria looks at USERID | Normal |
| 2955 | Reporting - Status counts including action pending and action complete for radiologists | Normal |
| 2928 | River Ranch - HL7 Translation into RIS | Normal |
| 2925 | Dictated by user id and date not getting updated | Normal |
| 2924 | Transcribed by user id populated with Rad user | Normal |
| 2911 | BI-RADS control not defaulting recommendations properly and has some display issues | Normal |
| 2895 | QA Workflow - All Signed Pending QA wotklist tab not consistent with menu | Normal |
| 2888 | Mammo Reporting - BI-RAD picker text does not display properly | Normal |
| 2887 | Mammo Reporting - Default recommendation not selected if study had previous birad / recommendation selected | Normal |
| 2886 | Reporting - Volume meter missing | Normal |
| 2881 | Reporting - User preference Bring RIS To Front not working | Normal |
| 2879 | Reporting - Delete dictation and report exception if quality review table has an entry | Normal |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

| | | |
|---|---|---|
| 2870 | MU - electronic access to health information measure | Normal |
| 2866 | Minimized dictation mode hiding Sign message box | Normal |
| 2849 | xKeys integration broken | Normal |
| 2744 | null exception when attempting to show/hide titlebars on report document | Normal |
| 2730 | Change dictating raiologist loading assigned rad as initial value. | Normal |
| 2686 | no prompt for no screen actions when multiple rows were selected and the action is only a single row action | Normal |
| 1714 | CDSInteractive hanging when multiple hyphens are inserted. | Normal |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 4. Package Contents

Files included for this server update:

1. GUI ZIP Updates folder contains
    a. rRIS_1.3.39.15943.zip

2. rRISCore folder contains:
    a. rRisSetup.msi
    b. setup.exe

3. RIS Service Updates folder contains
    a. CDSJobManager.pdb
    b. CDSJobManager.dll
    c. CommonLib.pdb
    d. CommonLib.dll
    e. DDEngine.pdb
    f. DDEngine.dll
    g. rRISServices.pdb
    h. rRISServices.exe
    i. rRISServices.vshost.exe
    j. ScheduledTaskManager.pdb
    k. ScheduledTaskManager.dll
    l. SignatureApprovalService.pdb
    m. SignatureApprovalService.exe
    n. WCFService.pdb
    o. WCFService.dll
    p. WebApi.pdb
    q. WebApi.dll
    r. Wedge.pdb
    s. Wedge.exe

4. SQL folder contains:
    a) B39_001.sql

5. MirthMappings folder contains:
    a. Inbound\eRAD\08_c_interpretation_html.js
    b. Inbound\ORDPLC\06_c_order.js

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

## 5. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

## 6. Who is affected

Build 39 installs. This server update must be applied directly to the build 39 core install.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 7. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|
| 37 | - | 1.2.37.12843 | 1.2.37.12782 | 1.2.37.12843 | 1.2.37.12843 | Full version release |
| 37 | 1 | 1.2.37.13040 | 1.2.37.13040 | 1.2.37.13039 | 1.2.37.13003 | Core install, GUI.zip, web service and database updates |
| 37 | 2 | 1.2.37.13069 | 1.2.37.13040 | 1.2.37.13069 | 1.2.37.13003 | GUI.zip and Web service updates |
| 37 | 3 | 1.2.37.13069 | 1.2.37.13040 | 1.2.37.13069 | 1.2.37.13003 | WebAPI updated, no version changes |
| 37 | 4 | 1.2.37.13171 | 1.2.37.13040 | 1.2.37.13165 | 1.2.37.13171 | GUI.zip, web service, and database updates |
| 37 | 5 | 1.2.37.13347 | 1.2.37.13040 | 1.2.37.12979 | 1.2.37.12979 | Bug was discovered with version numbers, this is why it appears we went backwards in the version number but we did not. |
| 37 | 6 | 1.2.37.13665 | 1.2.37.13040 | 1.2.37.13580 | 1.2.37.12979 | GUI.zip and Web service updates |
| 37 | 7 | 1.2.37.13807 | 1.2.37.13040 | 1.2.37.13799 | 1.2.37.13807 | GUI.zip and Web service updates. Also MIRTH mapping changes |
| 37 | 8 | 1.2.37.13807 | 1.2.37.13040 | 1.2.37.13827 | 1.2.37.13807 | Web service update |
| 37 | 9 | 1.2.37.13807 | 1.2.37.13040 | 1.2.37.13839 | 1.2.37.13807 | Web service update |
| 37 | 10 | 1.2.37.13895 | 1.2.37.13040 | 1.2.37.13895 | 1.2.37.13895 | GUI.zip, Web service and database updates |
| 37 | 11 | 1.2.37.14161 | 1.2.37.13040 | 1.2.37.14161 | 1.2.37.14161 | GUI.zip, Web service, database updates and SQL Management reporting |
| 37 | 12 | 1.2.37.14267 | 1.2.37.13040 | 1.2.37.14161 | 1.2.37.14267 | GUI.zip, Web service and database updates |
| 37 | 13 | 1.2.37.14326 | 1.2.37.13040 | 1.2.37.14326 | 1.2.37.14326 | GUI.zip, Web service and database updates |
| 38 | - | 1.2.38.14486 | 1.2.38.14486 | 1.2.38.14486 | 1.2.38.14486 | Full version release |
| 38 | 1 | 1.2.38.14748 | 1.2.38.14748 | 1.2.38.14748 | 1.2.38.14748 | Core install required |
| 38 | 2 | 1.2.38.15182 | 1.2.38.14748 | 1.2.38.14748 | 1.2.38.14748 | GUI.zip update only |
| 38 | 3 | 1.2.38.15251 | 1.2.38.14748 | 1.2.38.14748 | 1.2.38.14748 | GUI.zip update only |
| 38 | 4 | 1.2.38.15327 | 1.2.38.14748 | 1.2.38.15290 | 1.2.38.14748 | GUI.zip and Web service updates |
| 38 | 5 | 1.2.38.15513 | 1.2.38.14748 | 1.2.38.15513 | 1.2.38.15451 | GUI.zip, Web service and database updates |
| 38 | 6 | 1.2.38.15618 | 1.2.38.14748 | 1.2.38.15513 | 1.2.38.15618 | GUI.zip and database updates |
| 38 | 7 | 1.2.38.15768 | 1.2.38.14748 | 1.2.38.15768 | 1.2.38.15618 | GUI.zip and Web Service updates |
| 39 | - | 1.3.39.15389 | 1.3.39.15389 | 1.3.39.15377 | 1.3.39.15355 | Full version release |
| 39 | 1 | 1.3.39.16026 | 1.3.39.15943 | 1.3.39.15943 | 1.3.39.15957 | Requires Core Install. GUI.zip, Web Service, and Database updates |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# 8. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.2.39.16026.zip file provided with this release. The previous GUI.zip should have been renamed to rRIS_1.2.39.15389. Be sure to make a backup of the ris.exe.config file contained within the .zip folder.

2) Copy and replace the setup.exe file and the rRisSetup.msi files from the _setup folder to the Build\core_setup folder.

3) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   Restart each service.

3) Run the B39_001.sql file against the eRAD RIS database instance.

4) MirthMappings:

   The sites current MirthMapping files may already have custom configurations applied. Replacing with the files supplied with this server update may overwrite any custom configurations.

   Please contact eRAD RIS Development before copying or making changes to the MirthMapping files.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted, in any form or by any means without the prior written permission from RADNET, Inc.

# User Release Notes

for eRAD RIS

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 39. This version of eRAD RIS is referred to as Build 1.3.40.

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 1.40 is considered a new core release of the application and will require a reinstallation of eRAD RIS. This is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 4. New Access Strings and Configuration Settings

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Access string / User Group Permission tables | Clinical.Rad.AssignToRadiologistDropDown | Full | Controls access to the Assign To – Radiologist list box in reporting window |
| Access string / User Group Permission tables | Config.LookupEditor.ReferringPractice | None | Controls access to the Referring Practice lookup table |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 5. New Features and Enhancements

## Reporting – Auto rewind functionality on play back

The auto rewind functionality has been added for transcription users. This is controlled by a new user preference "Rewind <value> seconds on play-back. The default is 0 with a maximum of 10.

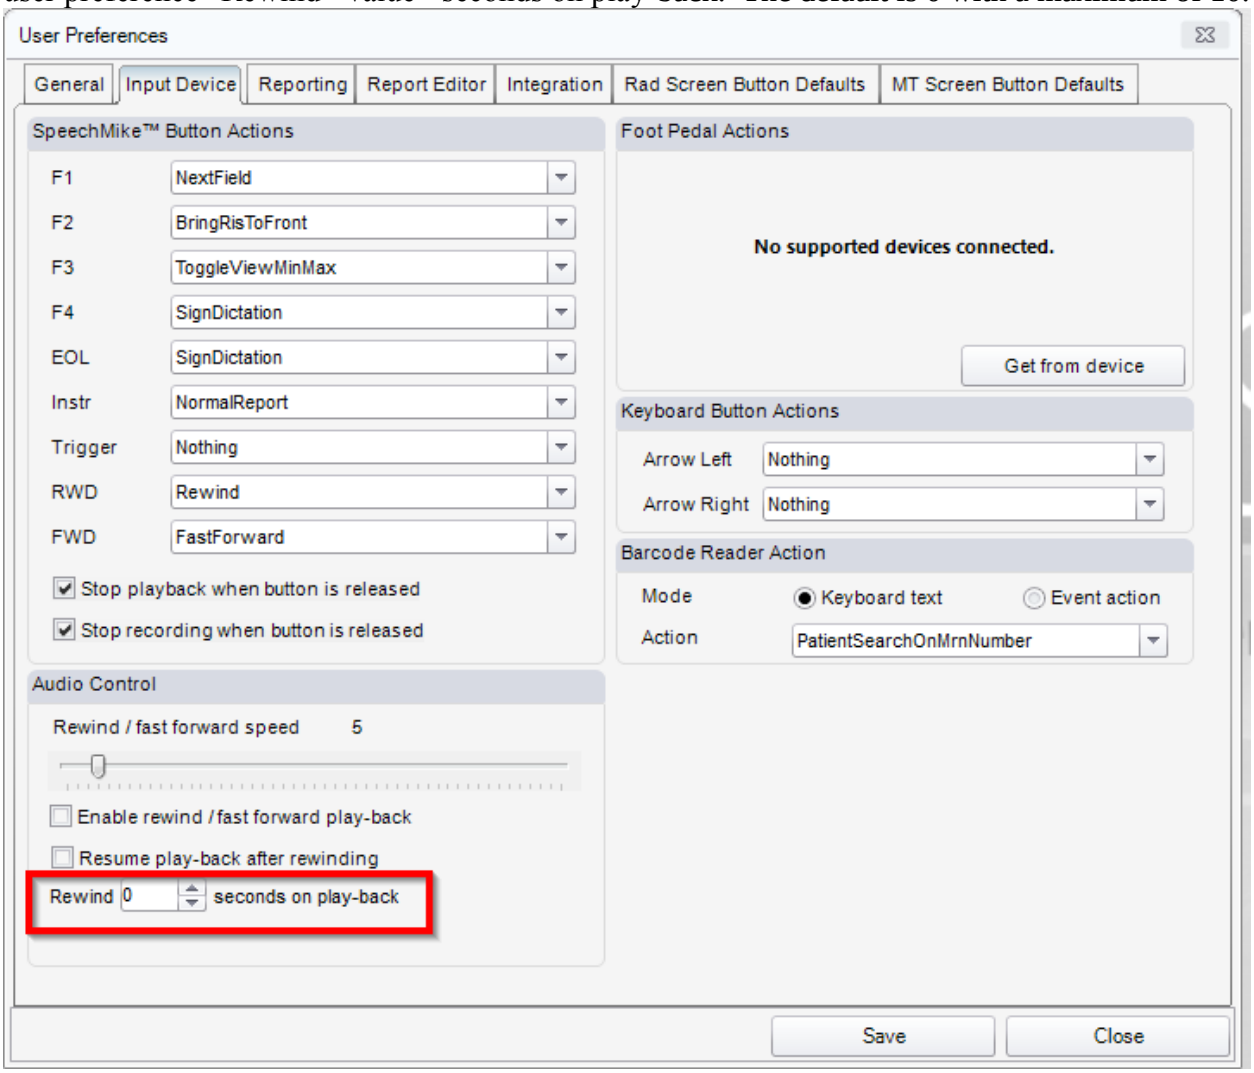

**Figure 5.1 – New user preference to set rewind play-back in seconds**

The new preference is located on the input device tab under Audio Control section.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Resume play-back after rewinding

A new user preference "Resume play-back after rewinding has been added on the input device tab under Audio Control section.

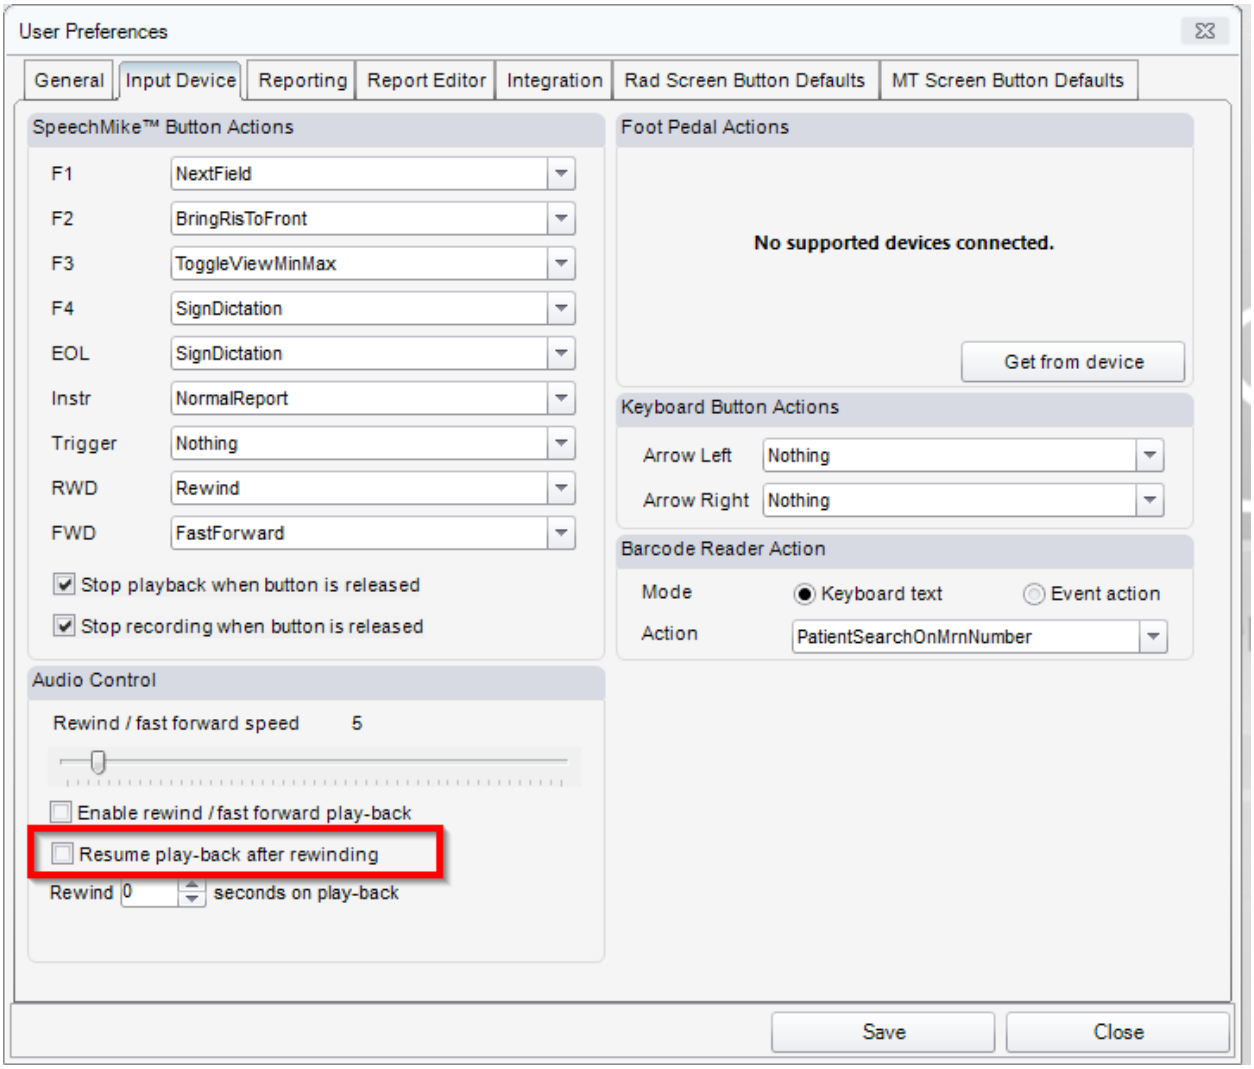

**Figure 5.2 – New user preference "Resume play-back after rewinding**

When enabled (checkbox selected), if the transcription user rewinds a part or all of the dictation, it will automatically begin play back. When disabled it will behave as before and the user will need to initiate the play back.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Save notes in problem work flow

Studies that are on the problem work list could not have notes added without resolving the problem, which would remove the study from the Problem work list. To fix this issue, the resolve button has a drop list addition with a new option to "Save notes only". The notes field displays in a similar fashion to other notes fields within the applications (Ex: patient notes). The date stamp and users last name first initial are displayed for the notes being added. Additionally historical notes will display with the date stamp and user who entered the comment.

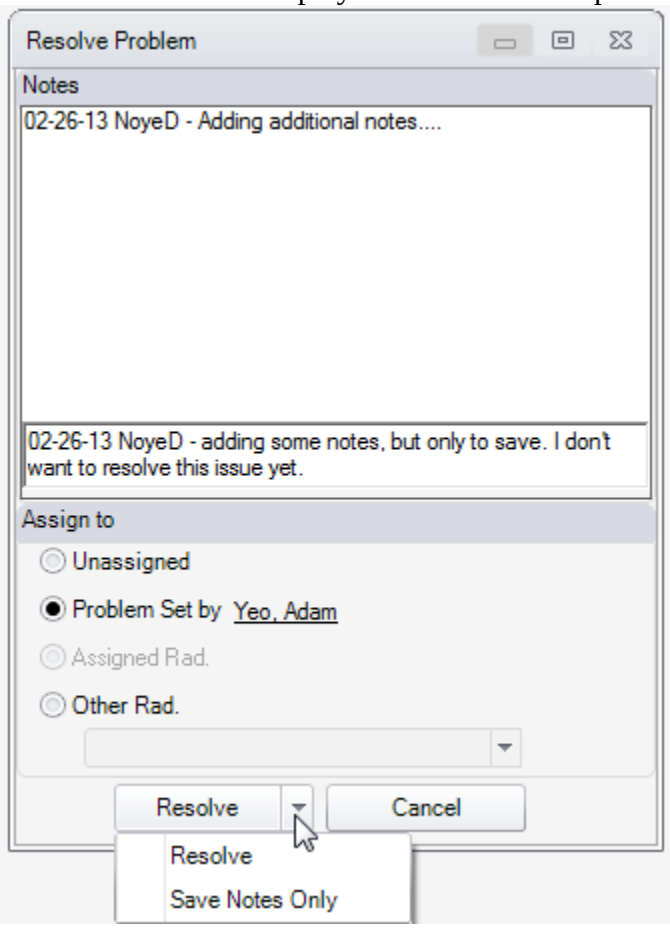

**Figure 5.3 – Displaying new option to "Save notes only" for studies on problem work list.**

Select the Save Notes Only option will close the Resolve Problem window and return the user to the work list and the study will remain on the Problem work list

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Open at end of dictation

In previous builds of eRAD RIS, if a batch dictation user re-opened a study to add additional dictation, the window would open at the start of the dictation. The user would need to go the end of the dictation manually.

For batch dictation users a user preference "Open at the end of dictation (none interactive only) has been added to allow them set if the dictate window opens at the start or end for studies that already have a dictation.

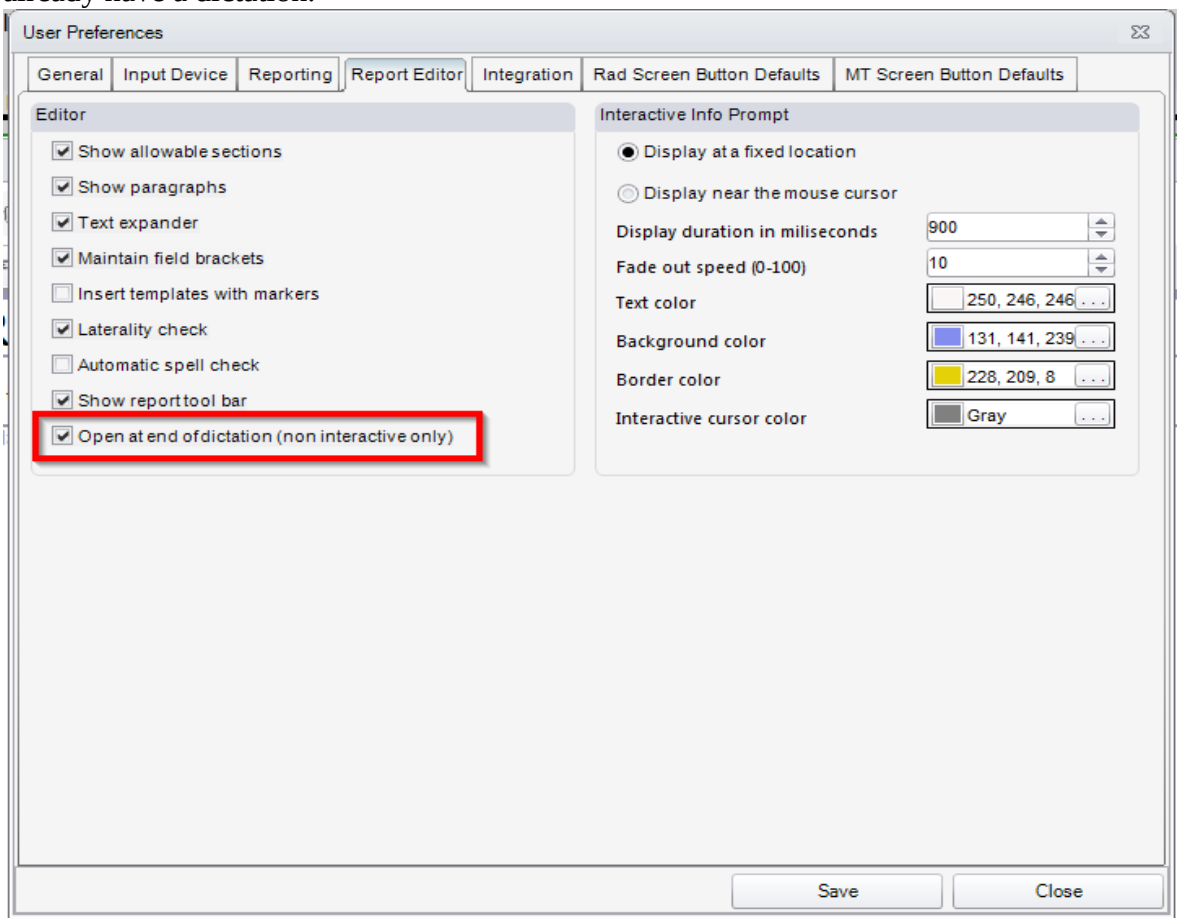

**Figure 5.4 – New user preference "Open at end of dictation (non interactive only)**

When this preference is enabled (checkbox selected) when a study that already has a dictation recorded via batch mode is opened in the dictate window, it will be defaulted to the end of the dictation. If disabled it works as before and will open at the start of the dictation.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Assign to Radiologist permission

Within the reporting window, we have a data pane "Assign To". In the "Assign To" data pane there is a list box to assign to a particular radiologist. This field was available to all user groups. To control access, the access string "**Clinical.Rad.AssignToRadiologistDropDown**" has been added in this build to restrict who can use this field.

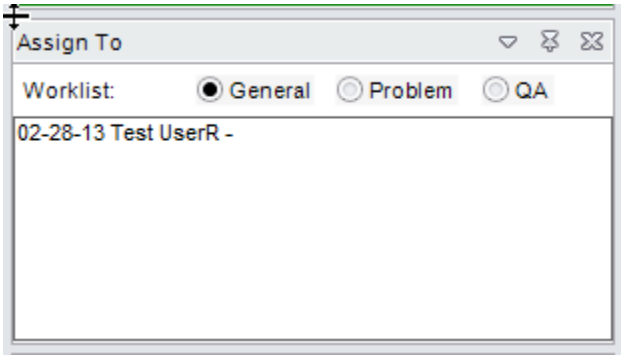

**Figure 5.5 – Clinical.Rad.AssignToRadiologistDropDown = none**

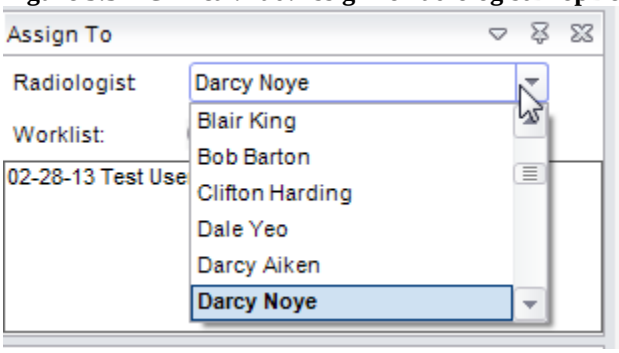

**Figure 5.6 – Clinical.Rad.AssignToRadiologistDropDown = full**

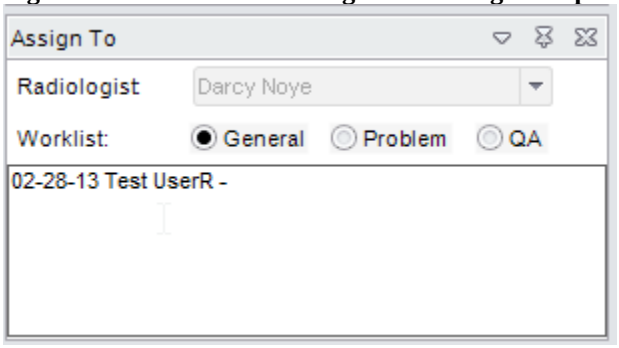

**Figure 5.7 – Clinical.Rad.AssignToRadiologistDropDown = read only / disabled**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Scheduling – Existing orders prompt

When creating a new appointment or walk in schedule, the patient name is entered into the first / last name fields and a search is performed. If the patient entered is an existing patient with orders or short term follow orders, the user will be prompted with the "Existing Orders" window. The "Existing Orders" window allows the user to select a pre-existing order to schedule instead of continuing with the current new appointment.

The user also has the option to select multiple existing orders to schedule instead of the current new appointment, or the user can choose to continue creating the new appointment with the current and add additional existing orders to be scheduled.

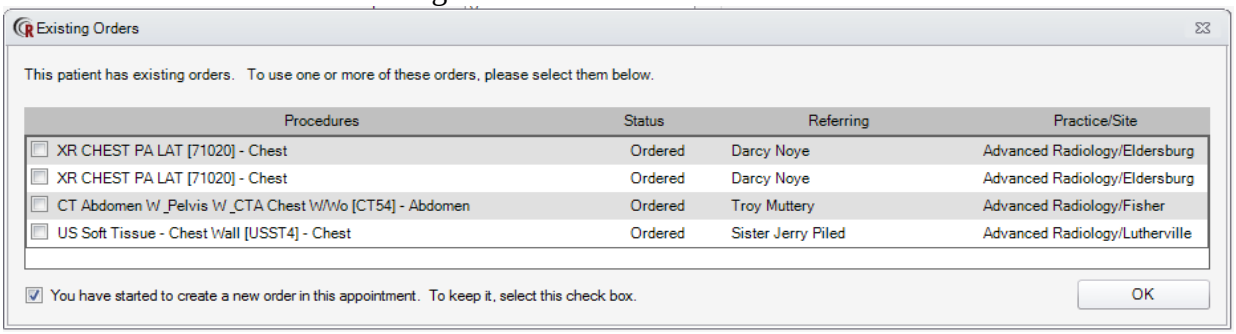

**Figure 5.8 – Existing orders window**

The "You have started to create a new order…" check box is selected by default when the window opens. If this is unchecked, the initial order will be destroyed, but to close (select OK button) the Existing Order window a one of an existing order or the current order must be selected.
If the new appointment window is opened from the patient folder, we assume that you want to create a new order / schedule. The Existing Orders window is still presented but the option to exclude the current new appointment is not available.

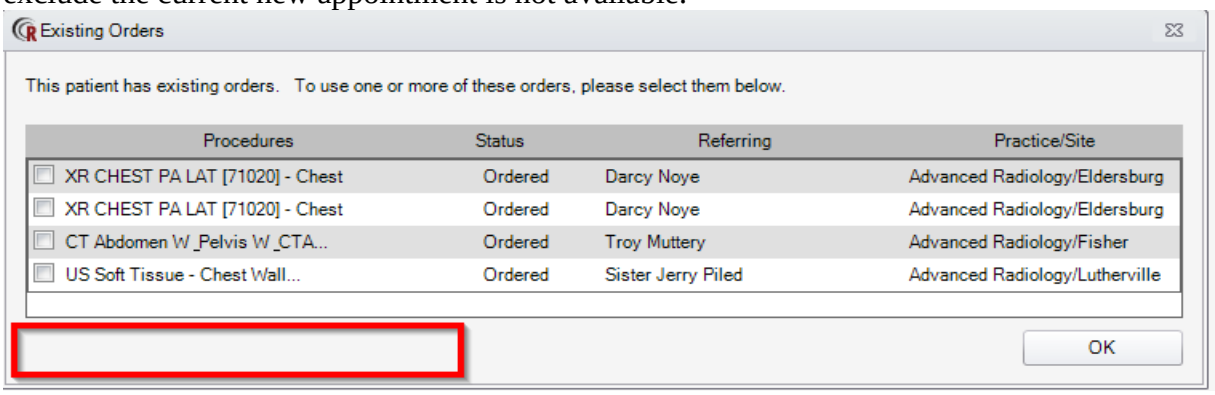

**Figure 5.9 – Existing Orders window presented from patient folder.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Registration – IVT Info Provided

The registration window now displays a read only PreCert status. The column was added to the existing billing code grid on the Exam tab.

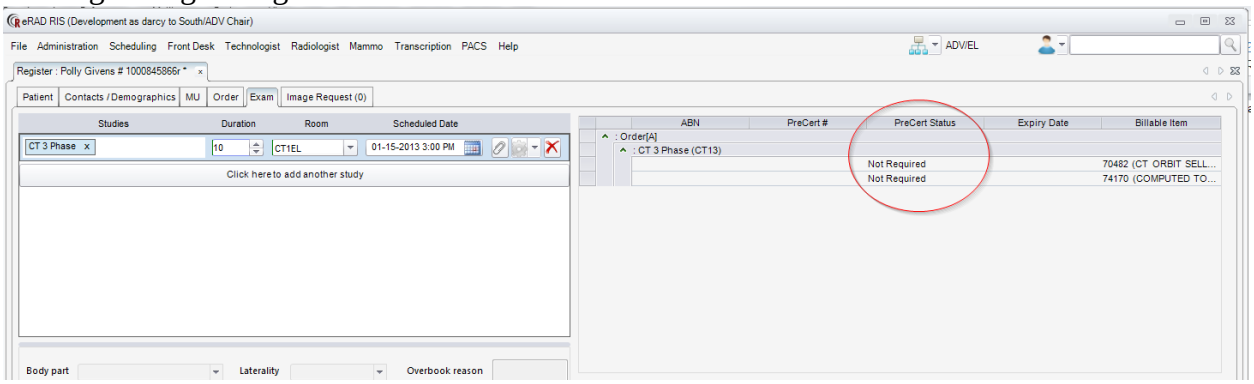

**Figure 5.10 – PreCert status in registration**

An IVT Notes button was added to the Insurance Policies Grid. The expected behavior of the button is as follows:

1. If the parent screen is IVT, the button should be invisible
2. If the current exam(s) do not have notes, the IVT Notes button is disabled
3. If the user does not have permissions (**Clinical.ReadPreCertNotes**) to see IVT Notes, the button is disabled
4. If there is only one open order, display the notes on a pop-up window
5. If there are two open orders (e.g. Order[A], Order[B]), show "Order[A]" and "Order[B]" with the notes for each grouped under a header.
6. The IVT Notes button should be disabled when scheduling a new order.

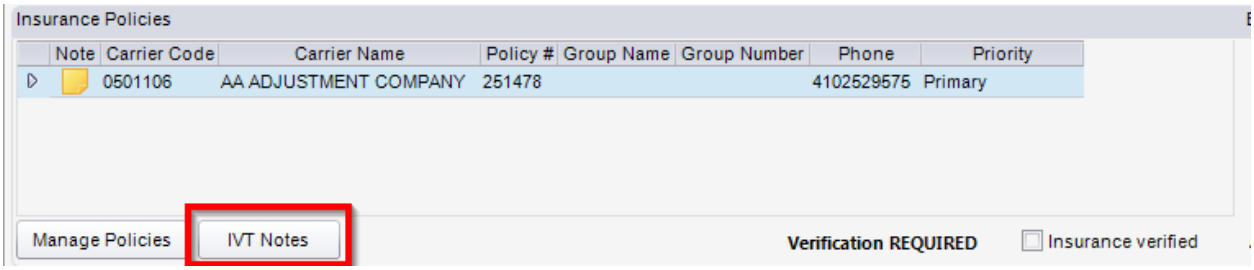

**Figure 5.11 – IVT button to display notes added. This button is available from registration and view/edit**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

If the patient only has one study for the day, or if the patient has multiple studies for the day and the user chose to arrive only one of the studies in the registration window, the notes window opens with the notes associated with that study.

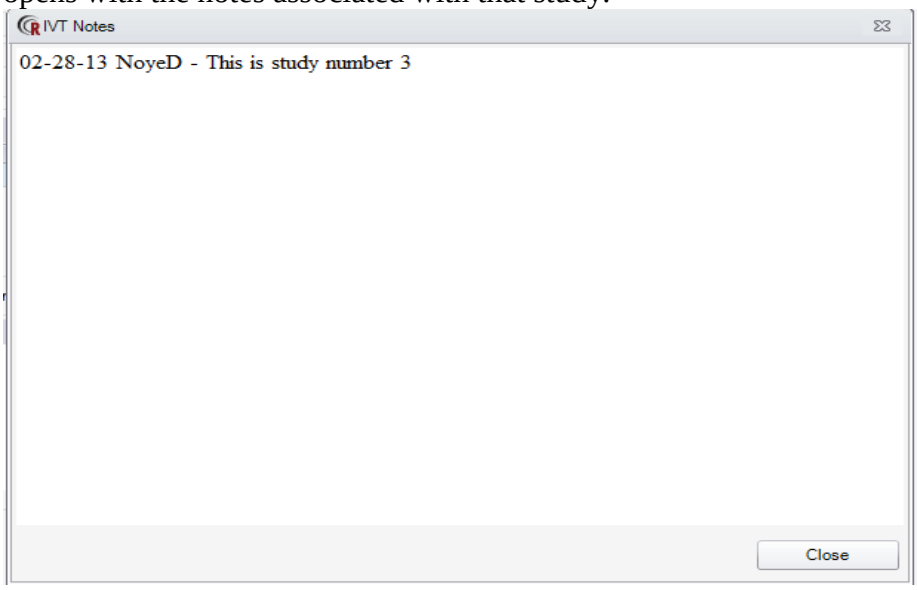

**Figure 5.12 – IVT note accessed from registration on one study**

If the patient has multiple studies and the user chooses to arrive multiple, the IVT notes will display for each study in the same notes window.

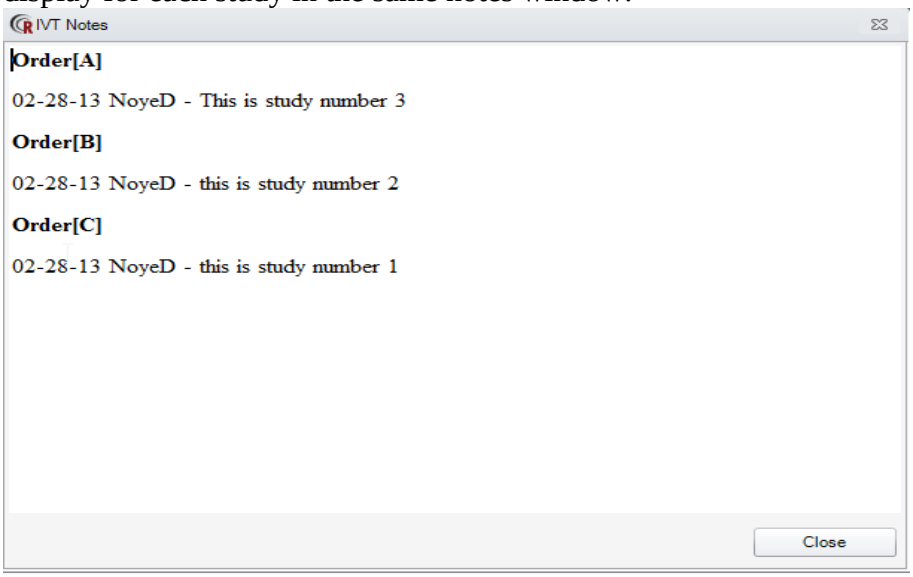

**Figure 5.13 – Notes displayed for multiple studies opened in registration window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The perform exam window (tech window) also displays a read only version of the Verification and PreCert Notes field. This display only notes field is located on the Billing Codes tab.

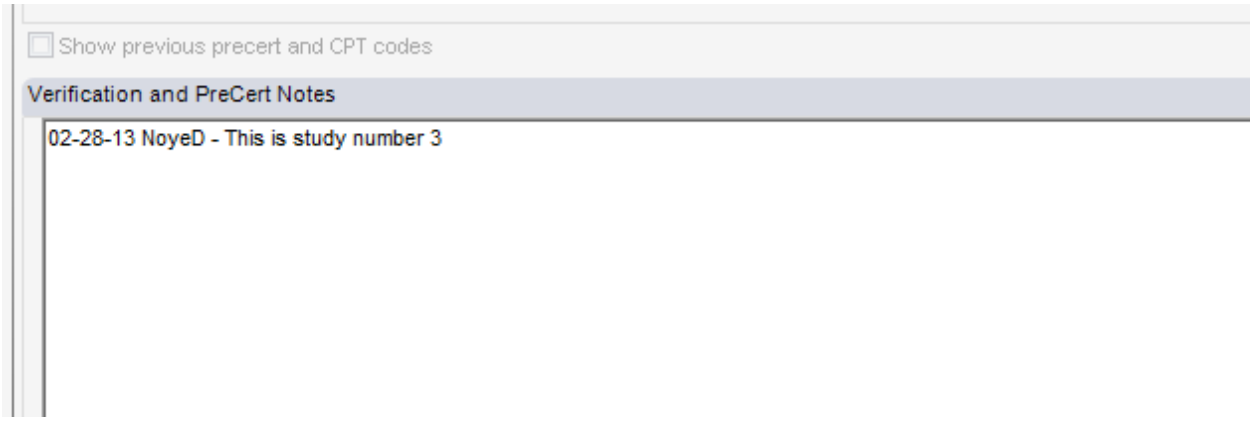

**Figure 5.14 – IVT notes on the Billing Codes tab of the Perform Exam window.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Unknown CC Physician

Users of eRAD RIS have always had the ability to add the referring physician as an "Unknown Referring Physician" when the referrer was not already known, and /or the details for referrer are not completely known at the time of entering the order.

In build 40, this has been extended to the CC Physician field. Unknown CC Physicians are added in the same manner as the unknown referrer. If the physician entered in the CC Physician field is not found in a search the user can select the "Add Unknown" button in the search window.

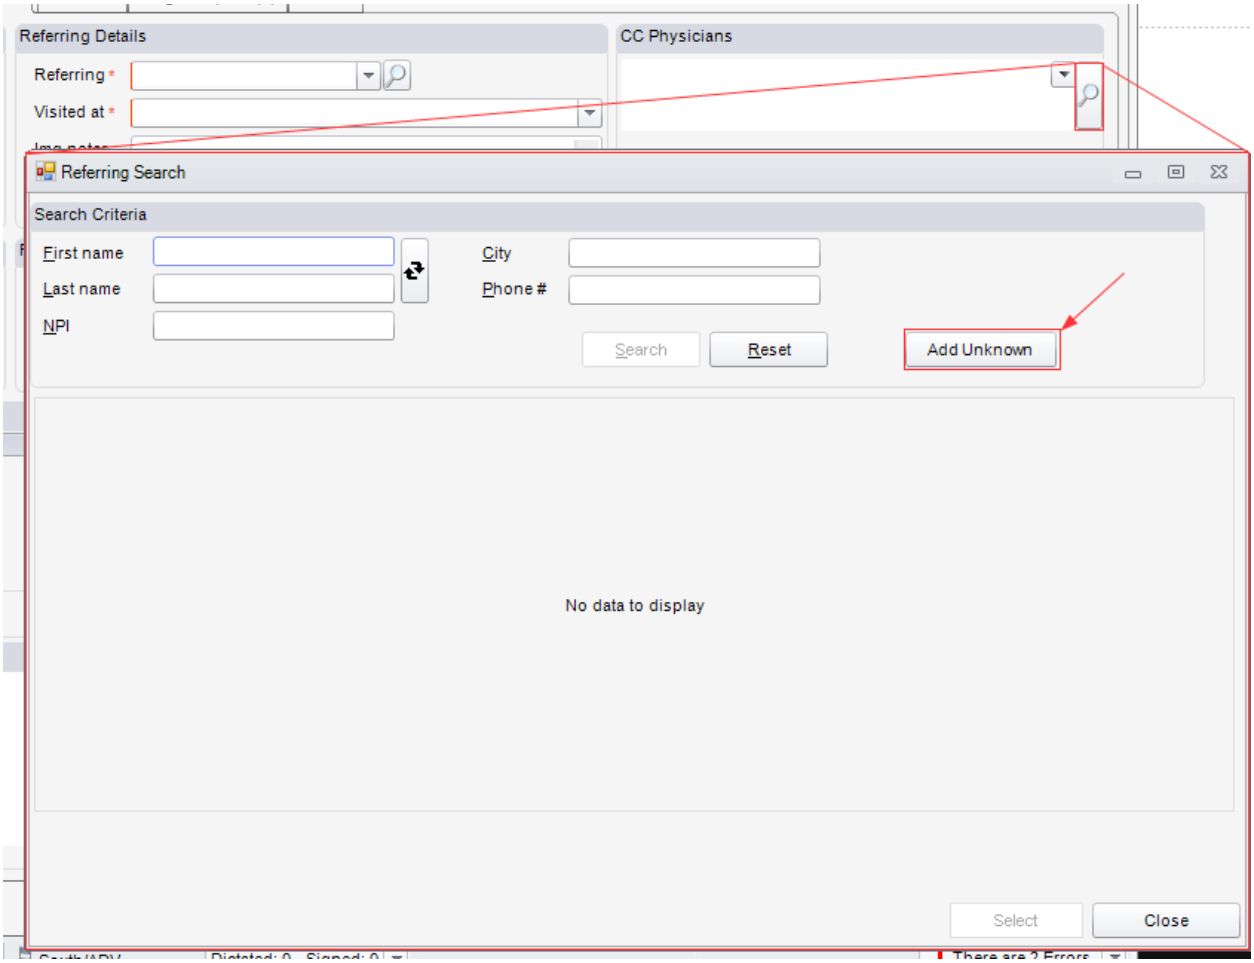

**Figure 5.15 – Add unknown CC Physician.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Selecting the Add Unknown button in the Referring Search window that is opened will open the personnel editor (with limited functionality). The Physicians first and last name, gender and D.O.B are required. The Unknown Referring flag is auto selected.

Once the study in which the Unknown CC Physician is being added to is saved, a row is added to the Unknown Reconciliation work list. The Unknown CC Physician can be reconciled from this work list and also from other data windows such as the Schedule/Reschedule window, Registration window, View/Edit window, etc… by a right click on the CC Physician name and selecting Reconcile Unknown Referring

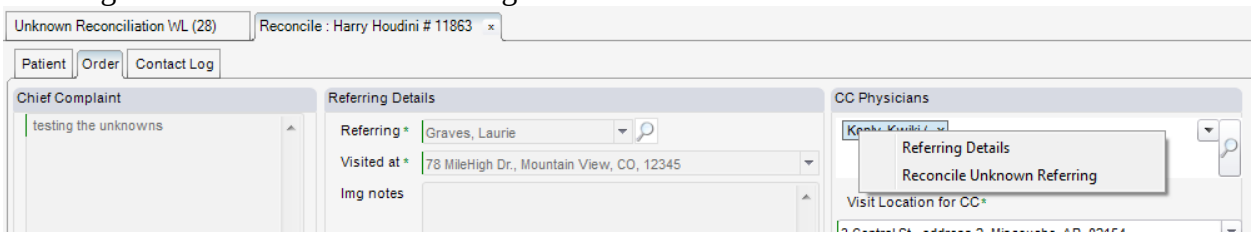

**Figure 5.16 – Reconcile unknown CC Physician**

**NOTE**: A limitation of this release. When a Unknown CC Physician is added, the row added to the Unknown Reconciliation work list will have the Referring Physician displayed in the under the referring column instead of the Unknown CC. The flag on the Unknown Reconciliation work list is added to the Unknown Referring column to indicate the purpose for the row being added to the work list

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Expired Insurance and Inactive Carrier Warnings

Two new alerts have been added in build 40. eRAD RIS can be configured to inform the user if the patient insurance has expired or the insurance carrier is inactive in the RIS.

An expired insurance carrier may arise if the patient has an active order or scheduled appointment with insurance A assigned to the study. Another order or study is created and the patient informs that insurance carrier A has expired, and they now use insurance carrier B. Now when the first study is worked on (scheduled, registered, etc…) it will inform the user by a message prompt.

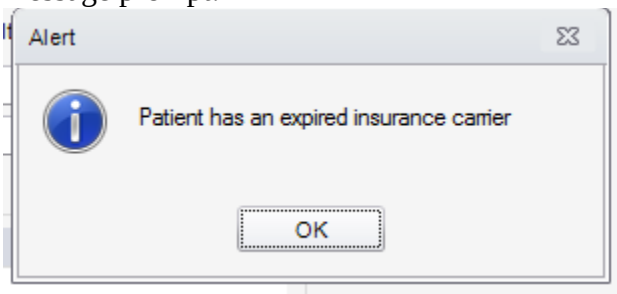

**Figure 5.17 – Expired insurance alert**

Also an Insurance Carrier may be set to inactive in the Carrier lookup table with patients active studies assigned to this carrier. Accessing this study in schedule, reschedule, registration, view / edit, etc… they will be prompted that an inactive carrier is selected

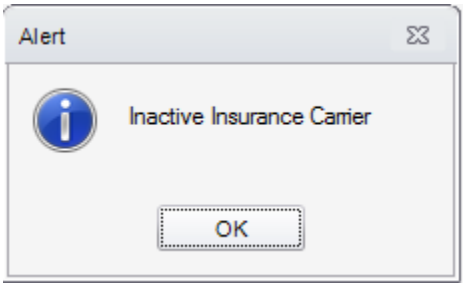

**Figure 5.18 – Inactive carrier alert**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The alerts are added / activated in the AlertConfiguration lookup editor. The messages that prompt the user are configurable, as what is entered in the Description field of the alert.
To add the alert, open the AlertConfiguration lookup table. Add an Alert Configuration Code. The message you want the user to see is entered in the Description field. The Alert Generators column is a list box that will contain all of the possible systems alerts. To add expired insurance, select ExpiredInsurance, and the inactive carrier alert you must select InactiveCarrierAppliedToVisit.

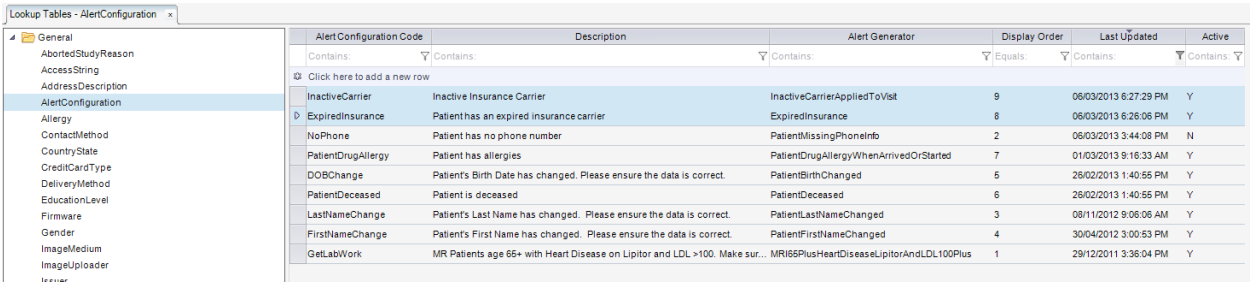

**Figure 5.19 – AlertConfiguration lookup displaying new alert codes**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Assign Radiologist at Scheduling / Registration

Before build 40 the radiologist could only be assigned in the Perform Exam window before the study was in a status before exam done. Once in exam done status a radiologist could be assigned in various reporting windows, and also from radiologists work lists context menu as well as the Patient Folder work list as long as the study was in at least a status of exam done.

Now in the New Appointment and Registration windows the Radiologist can be assigned to the study. On the procedure picker row a next to the Attachment button is an expandable list.

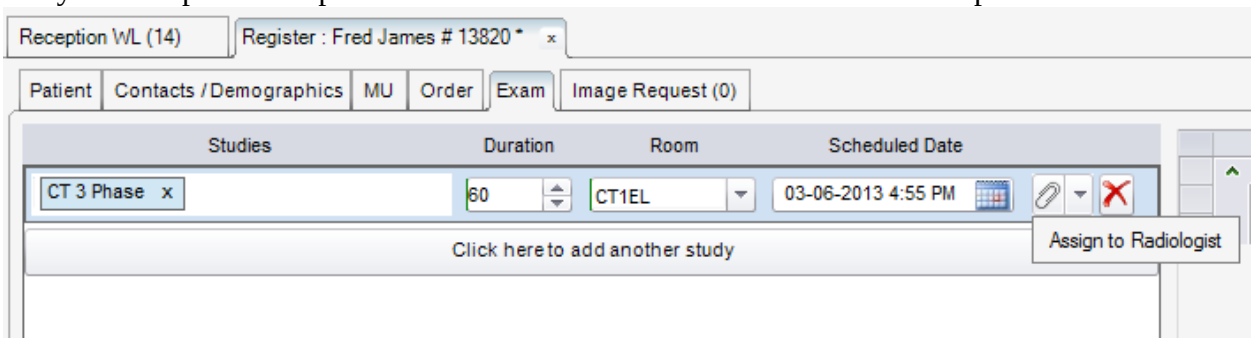

**Figure 5.20 – Assign Rad from new appointment / registration windows**

Selecting the Assign to Radiologist will open a window of the same name. The list of available Radiologists is populated when the "Studies" and "Room" fields are populated.

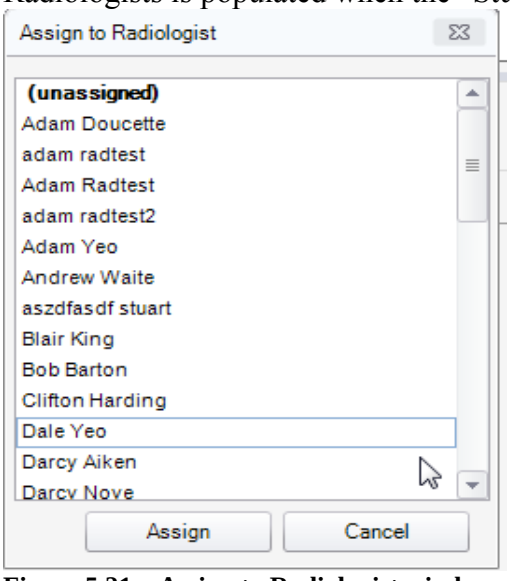

**Figure 5.21 – Assign to Radiologist window**

Access is controlled by the new access string "**Clinical.Schedule.AssignRadiologist** "

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Assign Radiologist in New Outside Read

When creating an Outside Read users can now assign a Radiologist within the New Outside Read window.

The field becomes enabled when the procedure is added to the Studies list. The list of available Radiologists is based on the procedure and modality type selected.

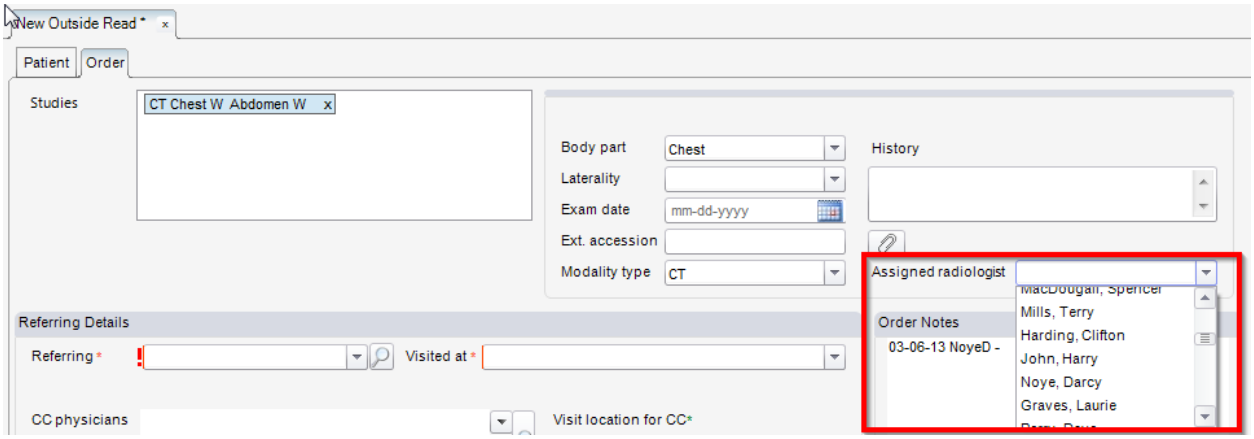

**Figure 5.22 – Assigned radiologist field in New Outside Read window**

Similar to the Assigned Radiologist field in the Perform Exam window, if the Referring selected has preferred radiologist(s) defined, that radiologist(s) name will be prefixed with "Preferred:" If the referring is selected before a value is chosen in the Assigned Radiologist field, and that referring has a preferred radiologist, the Assigned Radiologist field will be auto populated with the preferred radiologist. If the referring has multiple preferred radiologists, the preferred radiologist will not be selected.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Scheduling – Retain Attachments on Reschedule

In previous versions of eRAD RIS, when an scheduled study that has exam level attachments was rescheduled, the RIS was not carrying those scans over to the rescheduled study.

Going forward, when a study is being rescheduled all documents that are associated at the exam level to that study and are of the appropriate scan type, we will create a new association for the newly created study that will be scheduled.

If the study has documents attached at the exam level and at the time of rescheduling the option to schedule later is selected, the RIS will prompt the user to store the attachments at the patient level.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Patient Allergy Notifications

If a patient has allergies, the users of the RIS should be aware. In build 40 we have added two notifications for patient allergies.

The first is a new flag. If the patient has an allergy added to the Allergies grid under the MU tab, when the study is saved, the flags column on the work lists will be updated to include the new icon . This ICON is added regardless of the allergy selected, it is not limited to only drug allergies.

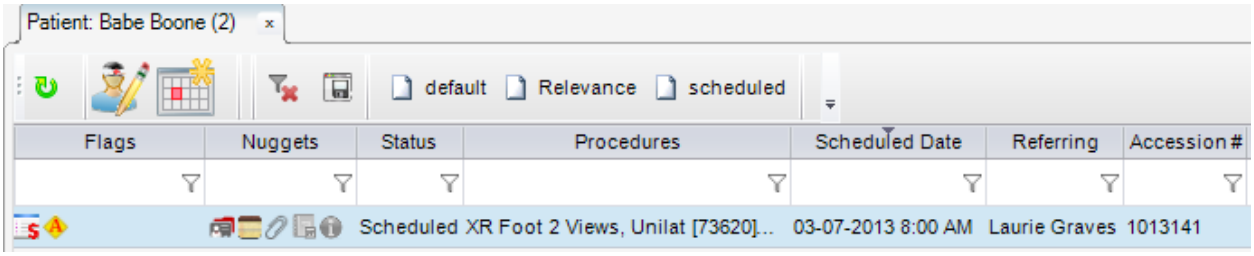

**Figure 5.23 – Patient Folder work list display allergy flag**

The second is a new alert that will prompt the user when the Technologist opens the study is Perform Exam data window. Again regardless if the allergy is drug related, the user will see the alert in the form of a pop up window.

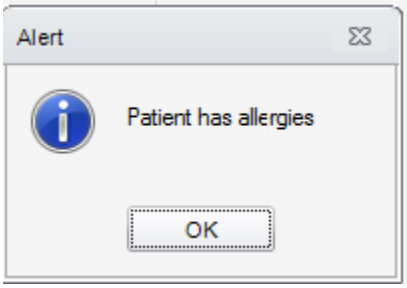

**Figure 5.24 – Allergy alert**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

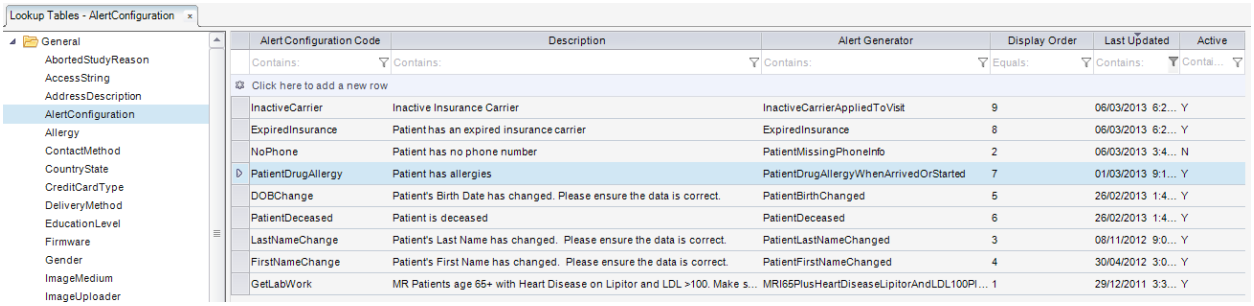

**Figure 5.25 – Alert configuration**

As with the other alerts that can be configured in eRAD RIS, an entry can be added and set to active or inactive in the AlertConfiguration lookup table. The Description is a free form field that the administrator may enter. The Alert Generator to select is PatientDrugAllergyWhenArrivedOrStarted

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Specialty Read and Referring Protocol Note Changes

When a referrer is added on the Order tab, the specialty read and referring protocol notes have been changed in build 40. Previously when the user would hover the mouse over the icon a tooltip would pop up with the associated notes.

We have changed this to be a pop up window when the associated icon is selected.

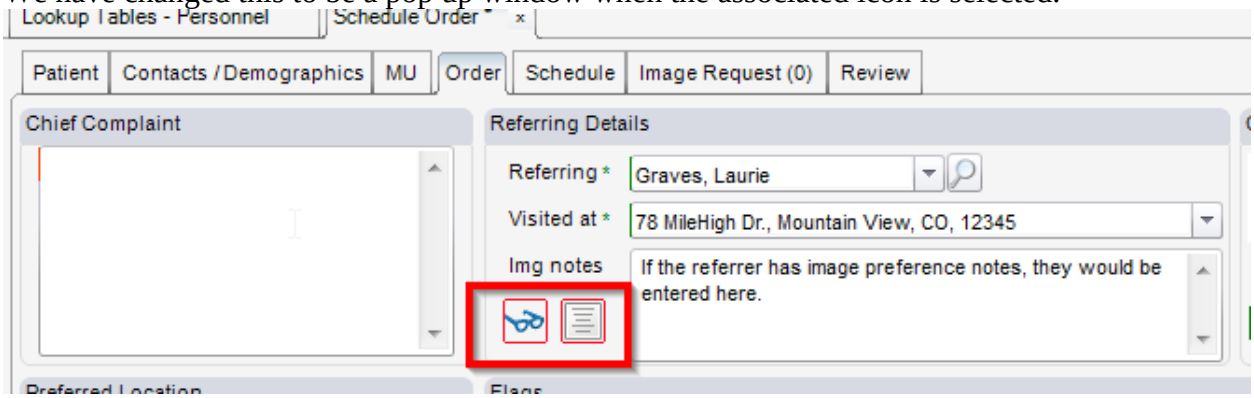

**Figure 5.26 – Specialty Read and Referring Protocol Note icons.**

Selecting the Specialty Read icon will open the associated notes for the referrer.

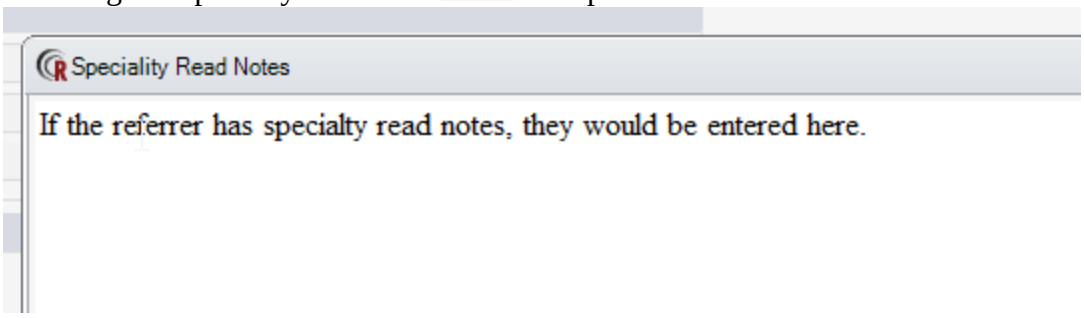

**Figure 5.27 – Specialty Read Notes window.**

Selecting the Referring Protocol Notes icon will open the associated notes for the referrer.

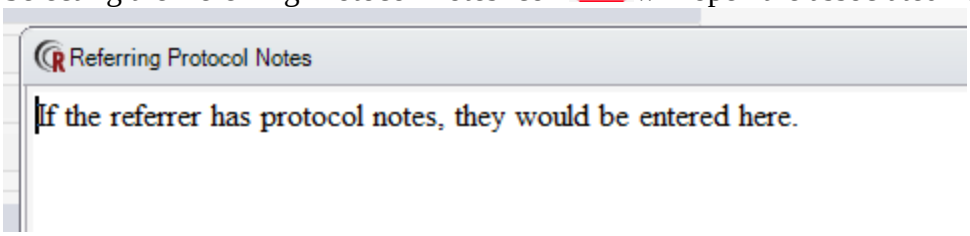

**Figure 5.28 – Referring Protocol Notes window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Site Specific Confirmation Flag

Previous to build 40, the confirmation flag could be set at the procedure level. Added in this build is the ability to override the procedure and have the confirmation flag set for that procedure for a specific site.

Opening the ProcedureCode lookup table you can see the pre-existing Confirmation Requeired Flag column. Expanding the procedure assignment capabilities to see a new tab titled l_procedure_code_x_site_confirmation tab.

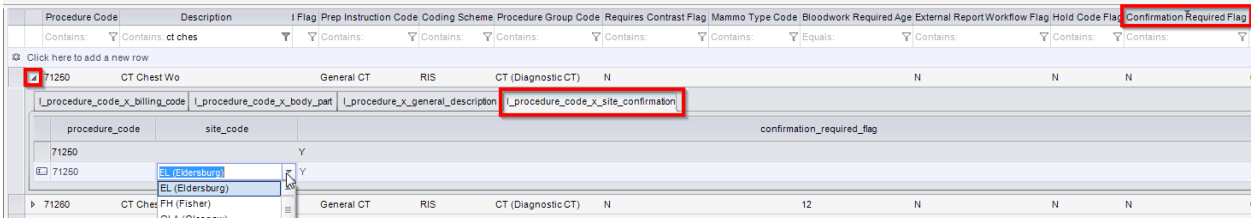

**Figure 5.29 – Assigning confirmation required for procedure to site level.**

If the flag for the procedure is set to N, but for site EL is set to Y, when procedure code # 71250 is scheduled for an EL room, confirmation will be required.
Alternatively, if the confirmation required flag is set to Y for the procedure, we can override confirmation to have it not required for a specific site.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Administration – Adding Rows to Lookup Enhancements

Previously we added new rows at the bottom of the lookup editor and after saving the rows the rows appear in the grid according to the DB or UI sort order. This can make it seem like the rows are jumping into a random gird location. The solution to these issues has two parts.

1. Rows will be added to the top of the gird preventing the user from having to continually scroll down to the bottom of the file.

2. Data will be sorted by last updated date so that the more recently updated rows will always be at the top of the list.

Having the last updated date (as read-only) in the lookup tables will allow them to see entries they recently modified. Often we change an entry, and then in testing realize we want to change it back or adjust it again.

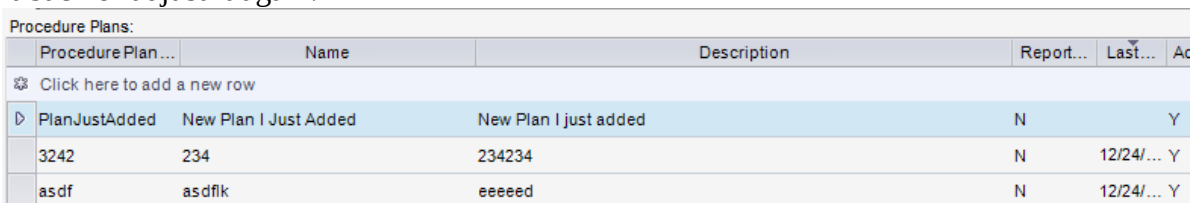

**Figure 5.30 – Adding rows to lookup from top of work list**

As you can see in the above, new rows are added at the top so that the user doesn't have to continually scroll down the grid and even after a save the last updated or newly added row will be at the top.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Administration – Referring Address Enhancements

Referring addresses in previous versions of eRAD RIS had to be added one at a time, unless the user was cloned from another user and the addresses were carried to the next user.

A new lookup table has been added under the User folder. From this lookup the administrator can add in Referring Practices and with each Referring Practice, multiple addresses can be associated. Access to the ReferringPractice lookup table is controlled by access string Config.LookupEditor.ReferringPractice

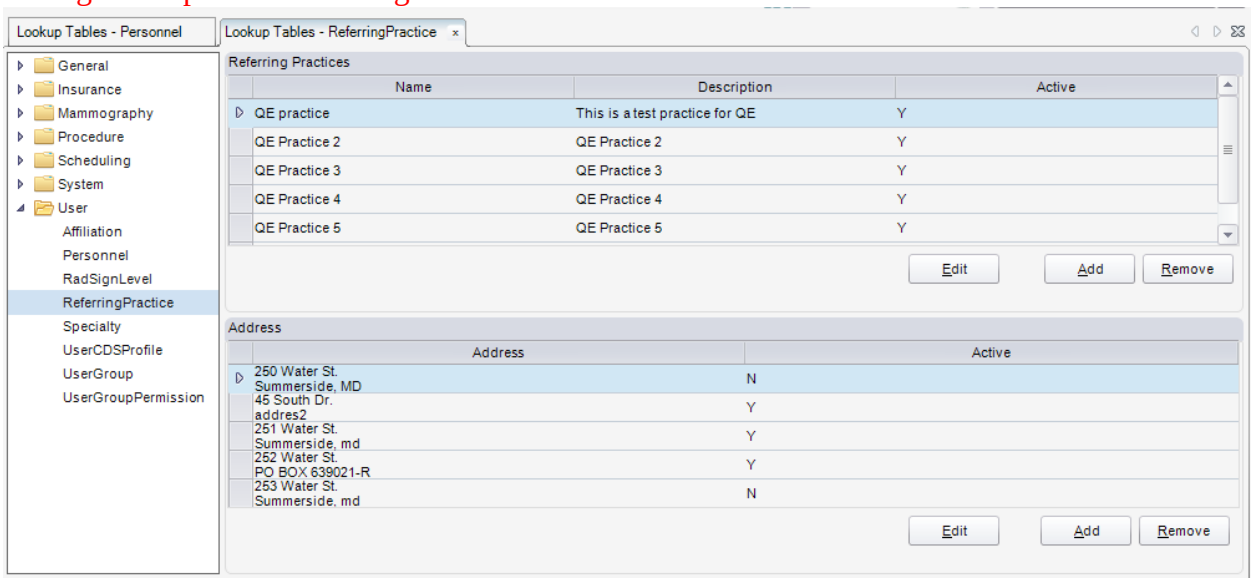

**Figure 5.31 – Referring Practice lookup table**

The Referring Practice and addresses can be set to inactive / active.

The Personnel editor has a new type ahead field on the General tab that looks at the Referring Practice table. When the Referring Practice is added, it will also add all of the addresses that are associated with the practice including inactive ones.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

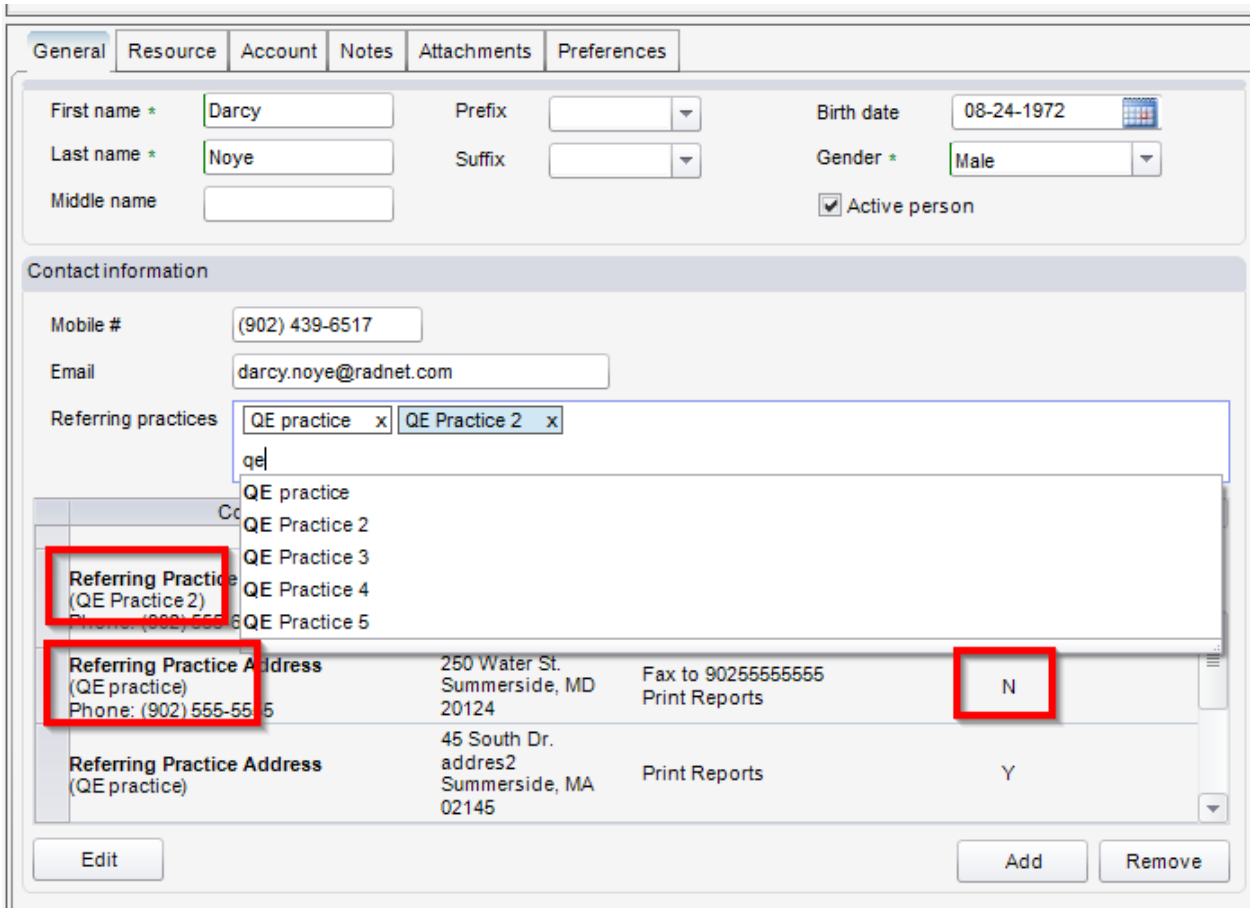

**Figure 5.32 – Personnel editor adding referring practices**

The referring added will have the practice name to differentiate what address belongs to what practice. As before, addresses can be removed if they are not required for this user.

Editing a referring practice address has limited capabilities from the personnel editor. The address can be changed to Active/Inactive, and the deliver to options can flagged if it for referring, CC physician or both.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## GUI Worklist Refactor

The worklists function very similar to how they did before with a few minor changes. We only show the filter compare text such as 'starts with:' or 'equals:' when a filter is applied or the filter is focused. Filters now default to 'StartsWith' instead of 'Contains' because the 'contains' search prevents the DB indexes from being used. In addition columns such as Last Name and MRN don't support the 'contains' filter.

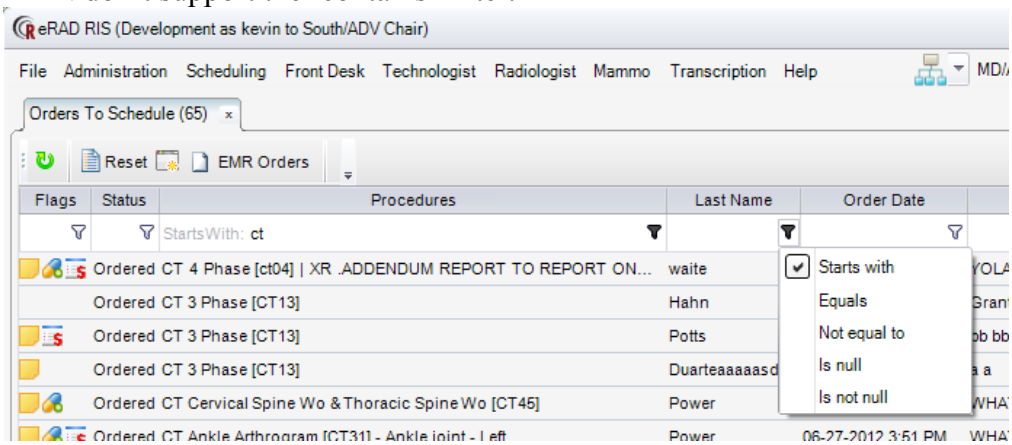

**Figure 5.33 – Filtering options have changed**

The amount of worklist items that can be displayed or retrieved is configurable in the SystemConfig lookup as shown in the following. The default value is 100. It cannot be set to more than 500. Any number greater than 500 entered as a value will be interrupted as 500.

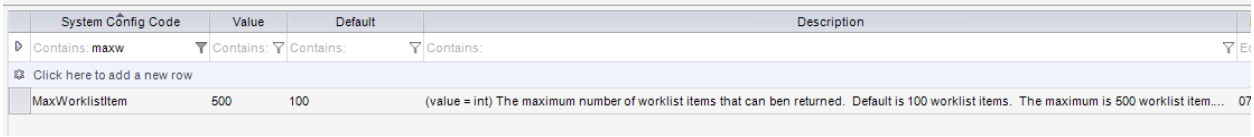

**Figure 5.34 – New system config code entry**

Using a value of 100, if the worklist has more than 100 rows then we only display the first 100 based on the view's sort column/primary key and a status area is introduced at the top of the worklist to explain that we are only displaying the first 100 of the results:

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

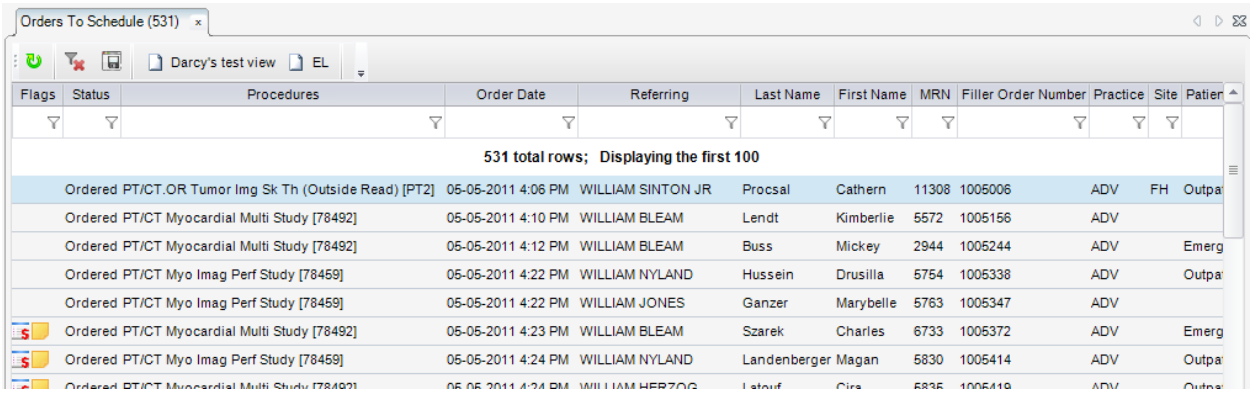

**Figure 5.35 – Work list displaying subset based on system config value.**

To view specific items the user needs to reduce the result set by specifying additional search criteria. For example, in the following we are filtering the Procedure column for studies that start with 'PT'

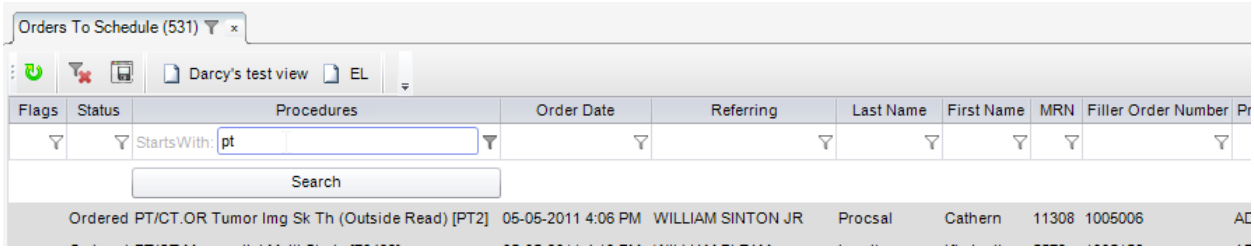

**Figure 5.36 – Work list filtering**

Then after clicking "Search" or pressing <enter> the worklist will look as follows:

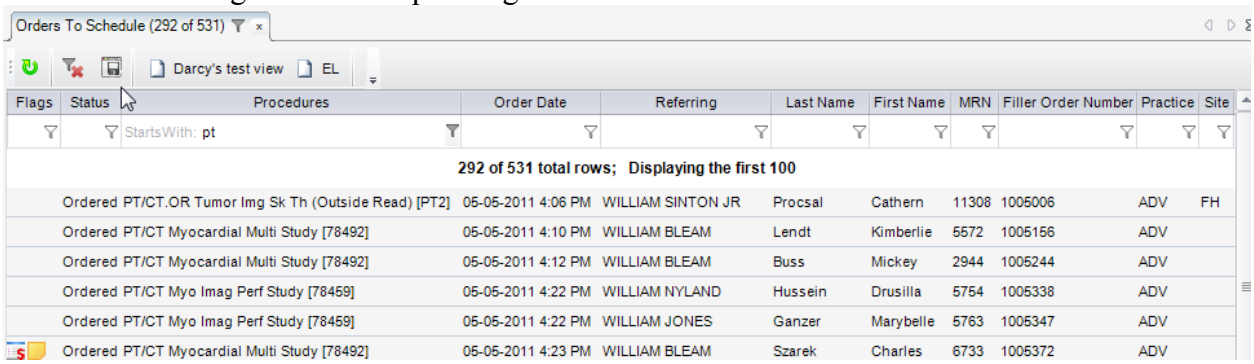

**Figure 5.37 – Work list display after search performed**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The Reception and Technologist WLs now require a site selection. The site selection is displayed at the top of the worklist next to the day selection as shown in the following:

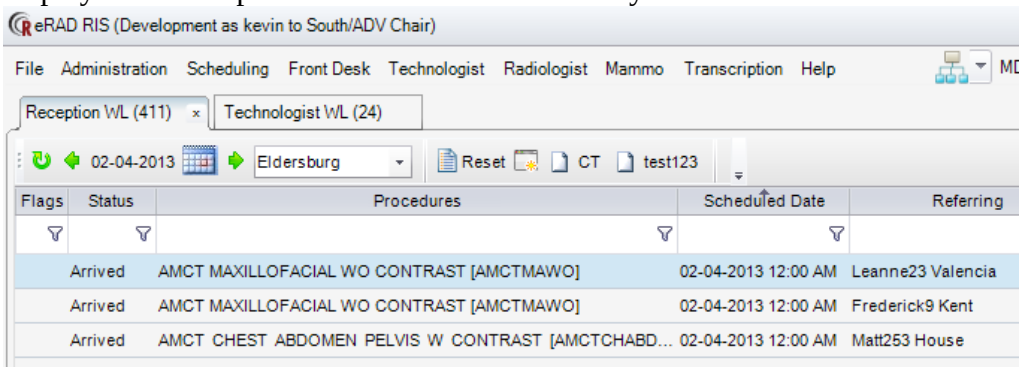

**Figure 5.38 – List box filter for sites on Reception and Technologist work list**

Several columns such as 'Flags', 'Status' and 'Modality Type' now have a "Select Values…" option under the filter button as shown in the following:

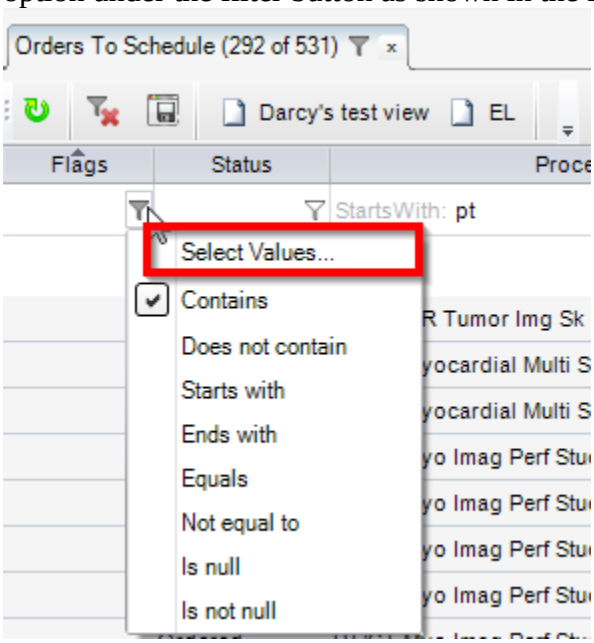

**Figure 5.39 – New filter option**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The ‘Select Values...’ option displays a popup which allows you to select specific values you would like to match. The following is an example of the ‘Select Values…’ popup for the Flags column:

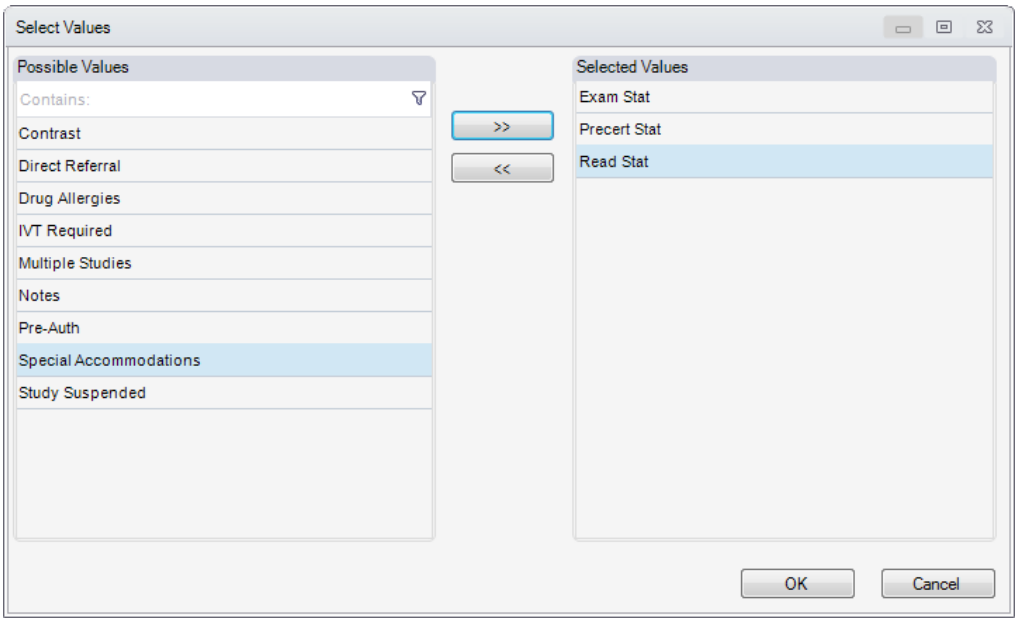

**Figure 5.40 – Select values work list filter options**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Scheduling – Restrictions Enhancement for Appointment Book

In previous versions of eRAD RIS, scheduling restrictions such as holiday's, room closures and restrictions would display similar to an appointment with a different background color.

In build 40 we are not displaying the items that could restrict an appointment from being scheduled as an alternative color to the appointment calendar.

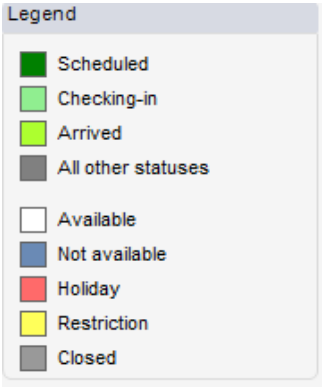

**Figure 5.41 – Appointment Book legend**

The description is displayed as the type of restriction (Holiday, Closed or Restriction), if there is a description configured it will appear on the next line, and will word wrap to fit inside the available space, at the point of painting the background, until finished or the interval will repeat again. The date span will appear on its own line, based on the restriction the date could be formatted in different ways.

The advantage of this will allow for the repeating of the description at set intervals to be user friendly. With the color change, we still display what the color change would relate to when it is not the normal template available/unavailable, but we have also include a legend for the different background colors.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

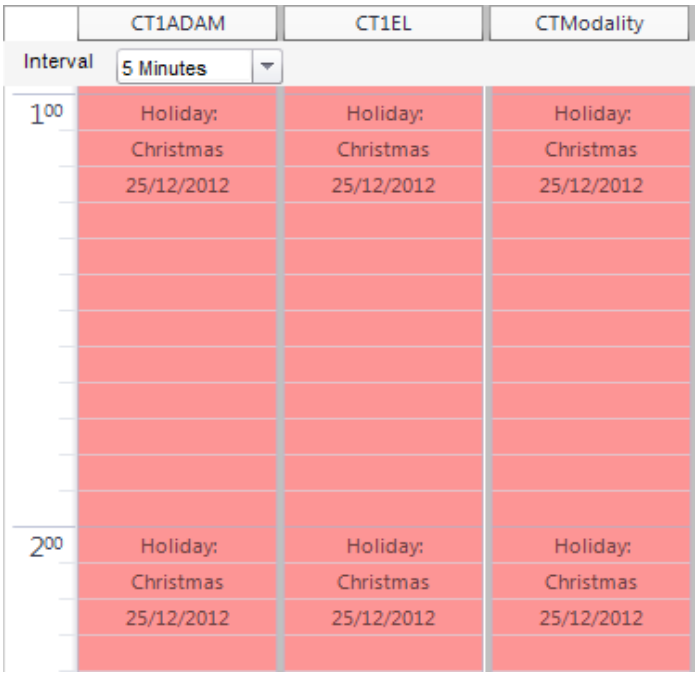

**Figure 5.42 – Room restriction for Holiday in appointment book**

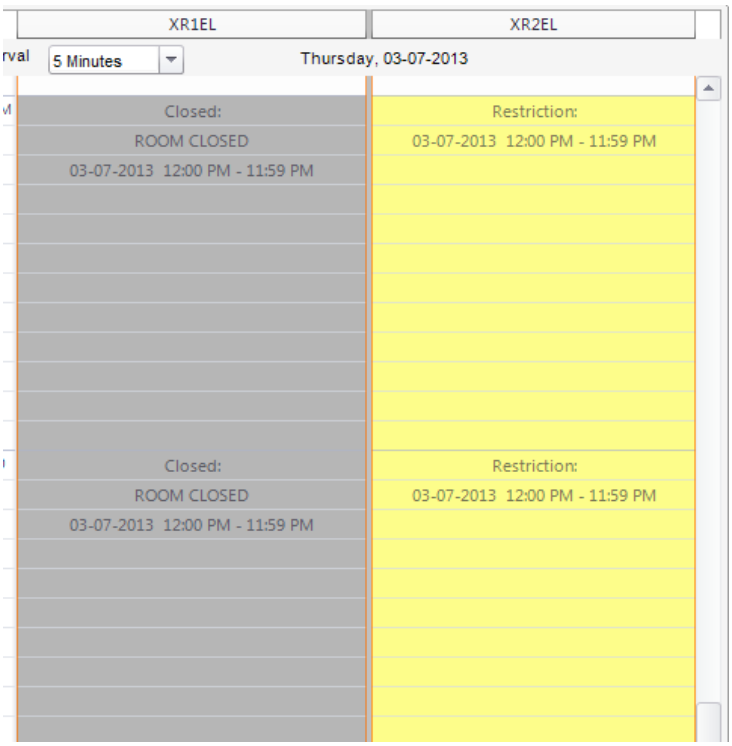

**Figure 5.43 – Room restriction for Closed and Restricted room in appointment book**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## PACS IW Integration

A particular customer required eRAD RIS integration with PACS IW. We also needed to preserve the current integration with eRAD PACS.

We used to associate the PACS server at the site level. This has been moved to the Practice level.

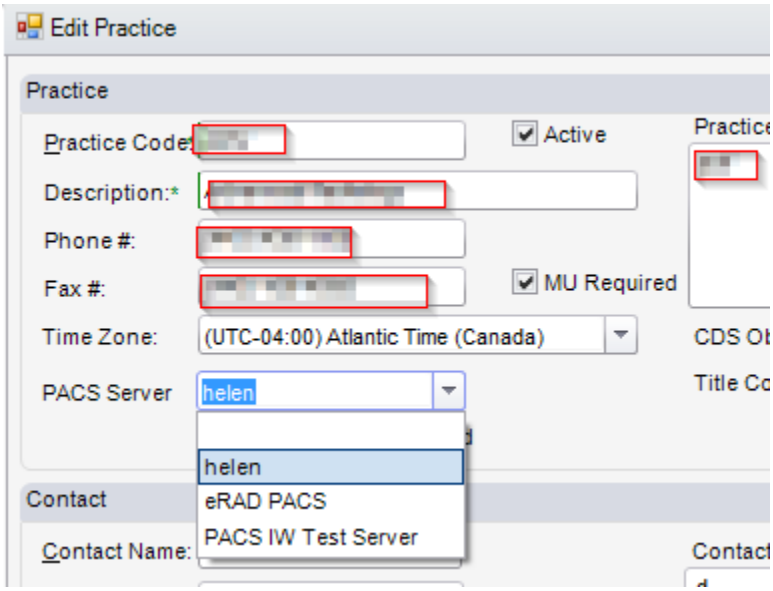

**Figure 5.43 – Practice lookup displaying new PACS Server list box**

This allows the decision of which PACS server should be launched to be based on the selected practice of the org picker. In order to temporarily change from one PACS server to another the user simply changes the selected practice in the org picker.

Also the PACSServer lookup table has a new column "PACS Server Type Code".

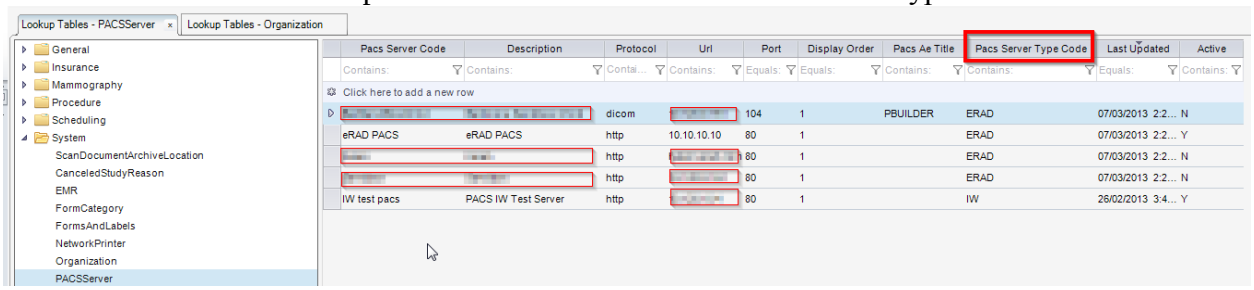

**Figure 5.44 – PACSServer lookup table**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The c_study table now has an external_identifier_column that will hold the NCDStudyId from PACS IW when it is received. Integration with eRAD will continue to be by MRN and accession number.

The PACS menu on the main menu bar is controlled by whichever PACS integration manager is in use at the time. Selecting the Enable or Disable menu items affects all integration managers. Selecting a practice that is not associated to a PACS server will disable all integration and remove the integration menu entirely.

On the initial opening of a study where the org picker's practice is associated to PACS IW, login is attempted using the username and password that logged into RIS. If these credentials fail, the user is prompted for additional credentials. On successful login, the study continues to open in the PACS.

Calls to IW to display images are triggered by either the View Images action accessed from the context menu on the Patient Folder work list. Also when opening the Dictate window the images for the study will be opened. From the patient history list in the Dictate window, the user can double click on a row to open the images for that study if they were not already loaded a relevant prior.

Attaching priors after the initial opening is very problematic. If study 1 is opened with 4 and 7 as priors on the initial open IW opens a session with 1, 4, and 7. If the RIS then uses the DisplayStudyContext to try to append 10 as a prior, the view session loses 4 and 7 and ends up with only 1 and 10 loaded.

Closing the RIS window from which studies were opened (either dictation or patient folder) will cause the images to close in PACS.

Opening a second active dictation window will result in a second instance of IW. Changing between tabs in RIS will focus the related IW viewer window. Switching between the PACS viewer windows will cause the tab focus in RIS to change, however the event coming from the viewer doesn't seem to be as reliable as it should be. Particularly in cases of minimizing and restoring the RIS does not always receive the event indicating that the viewer session is now active.

| User Action | eRAD PACS Behaviour | PACS IW Effect Behaviour |
|---|---|---|
| **User opens first study via:**<br>- **Right-click -> View Images on the main patient folder.** | Login attempt with RIS credentials. Upon failure, RIS prompts for additional credentials. On successful | Same |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | |
|---|---|---|
| - **View Images button on Tech window**<br>- **Opening Dictation window** | login, the attempt to open images continues. | |
| **Opening study via**<br>- **Right-click -> View Images on the main patient folder.**<br>- **View Images button on Tech window**<br>- **Opening Dictation window** | eRAD PACS is instructed to open images using the MRN+Accession number of the given study. Additional priors can be sent using their accession numbers as well.<br><br>eRAD PACS returns a list of opened accession numbers as well as data indicating which studies could be found but weren't opened(ie. In Archive). | PACS IW is instructed to open a study's images using NCDStudyID, which is an internal IW identifier. Addional NCDStudyIDs can be sent to load priors.<br><br>IW gives no indication on whether or not a study opened successfully. |
| **Adding priors after initial opening of a study via:**<br>- **Double click in the Reporting Patient Folder**<br>- **A second Right-click-> View images from main patient folder** | PACS provides a call to add priors to the open session based on MRN+Accession(s). It reports back on which studies were opened or at least found. | Instructing IW to add a prior to a given session results in all other priors being removed from the session. No result is returned and no query method is provided to see what is available. |
| **Opening a second PACS integrated window, ie. Tech, Patient Folder, or Dictation** | PACS bookmarks its currently opened study and then replaces it with the one associated to the new tab. | IW opens a new window with the new study and gives it focus. It is visible in the task bar and the previous window remains available. |
| **Switch between two PACS integrated tabs, ie. Some combination of patient folder, tech, and dictation windows.** | eRAD PACS bookmarks its currently opened study and replaces it with the one associated to the new tab. | IW will focus on the window associated to this form. |
| **Close the PACS associated window** | The open session in PACS is closed. If the RIS focuses on another PACS related form, PACS will load the related bookmarked images. | The PACS IW session will close. If the RIS focuses on another PACS related form, IW will focus on the related session window. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | |
|---|---|---|
| **Switch between active sessions in the PACS.** | Action not possible in the PACS | IW raises an event to tell the RIS which window now has focus. This event is not entirely reliable, particularly in cases of Minimizing and Restoring the IW windows. Upon receiving the event RIS will switch its focus to the appropriate tab. |
| **Close the session in the PACS** | | |

**Table 5.1 – Actions in eRAD PACS compared to PACS IW.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use - Image Medium Request Enhancements

There have been minor changes to the Image Request window. The “Copied” radio button had been relabelled “Ready”. When the “Ready” button is selected and the window is saved, it is also saved to the database.

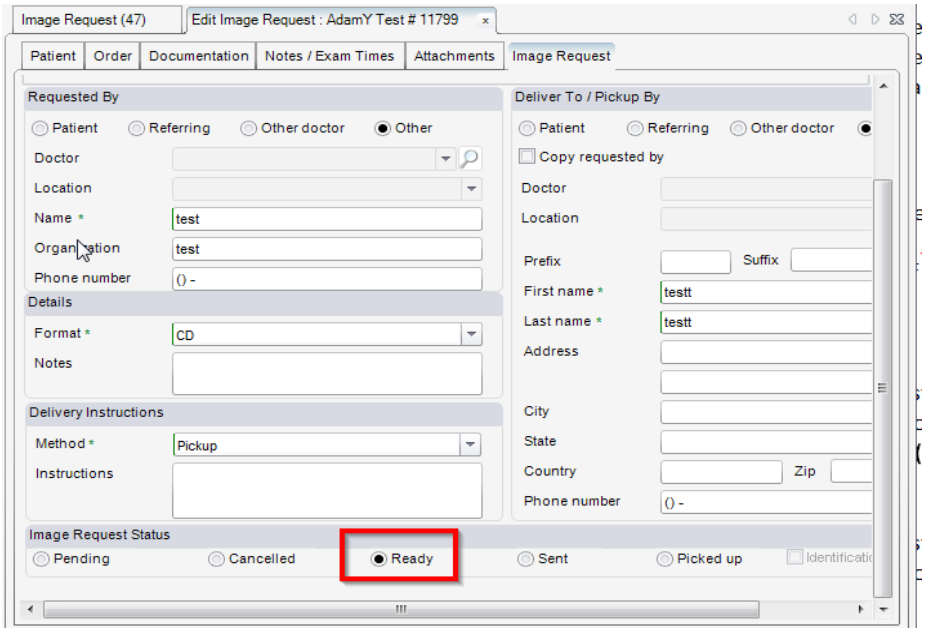

**Figure 5.45 – Image Request window**

We will report off this new date and if the patient does not return within 3 business days to pick up the request the statistic will not count.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Auto Resolving BI-RADS® 0 and 4/5 Exams

In previous versions of eRAD RIS we would auto-resolve whenever the follow up order was scheduled. This has been changed. Auto resolve for exams on the ACR Cat. 0 Follow-up WL will now occur when the scheduled study is Report Signed.

Exams on the ACR Cat. 4/5 follow-up work list will auto resolve when the user enters a biopsy and indicates "No Surgery Required".

## Manually Resolve BI-RADS® 0 and 4/5 Exams

The label for "Lost to Follow Up" has been renamed to "Follow Up Resolved". This checkbox appears on the mammography tab in View/Edit and on the Contact screen on the Follow Up screen.

When the user checks the checkbox, we check the permission Clinical.ManuallyResolveMammoFollowUp and if the user is authorized, we then show a dialog box prompting for a manual resolution reason:

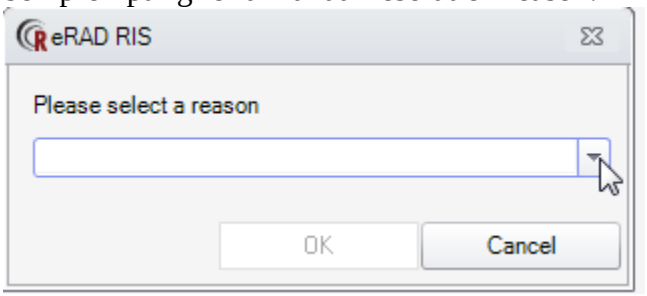

**Figure 5.46 – Follow up reason**

The list of reasons is specified in a new lookup table accessible from Administration > Configure > Mammography > FollowUpReason

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Management Report – Cancelled Reasons

The report has parameters to select the Date Range, Cancelled Reasons (default is Weather), and also if you'd like to see the ones that have been rescheduled or not (Default is to see both).

| Scheduled date | Procedure(s) | First Name | Last Name | Acc # | Rescheduled? |
|---|---|---|---|---|---|
| Reason: Employee Error | | | | | 1/6 |

## Management Report – Unknown Referring Report Enhancements

Enhancements to the Unknown Referring report are

- Adding a date range based on scheduled date
- Add Void in the Ignored Status parameter

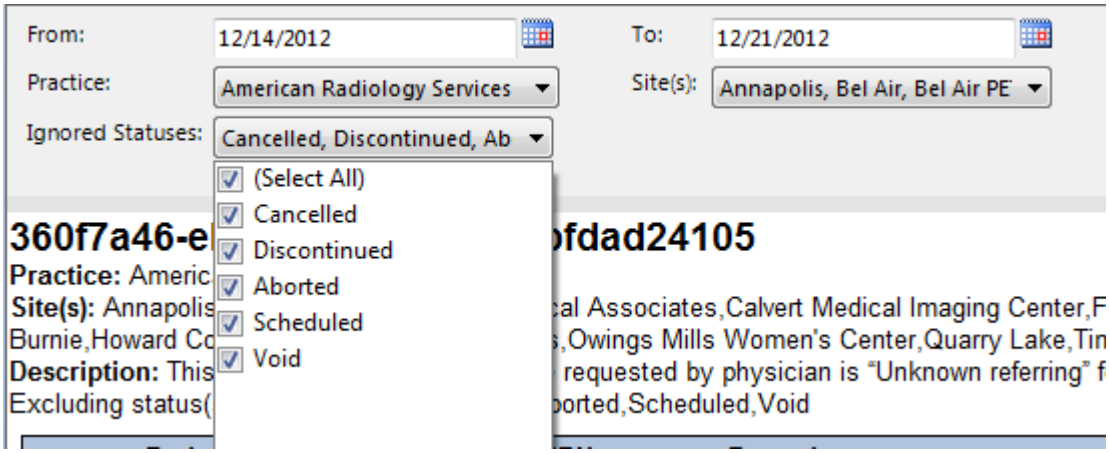

**Figure 5.48 – Unknown Referring report enhancements**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Management Report – Modality Duration Override Report

The parameters for the report are

- Practice(s)
- Site(s)

This report lists modality duration overrides for the selected location

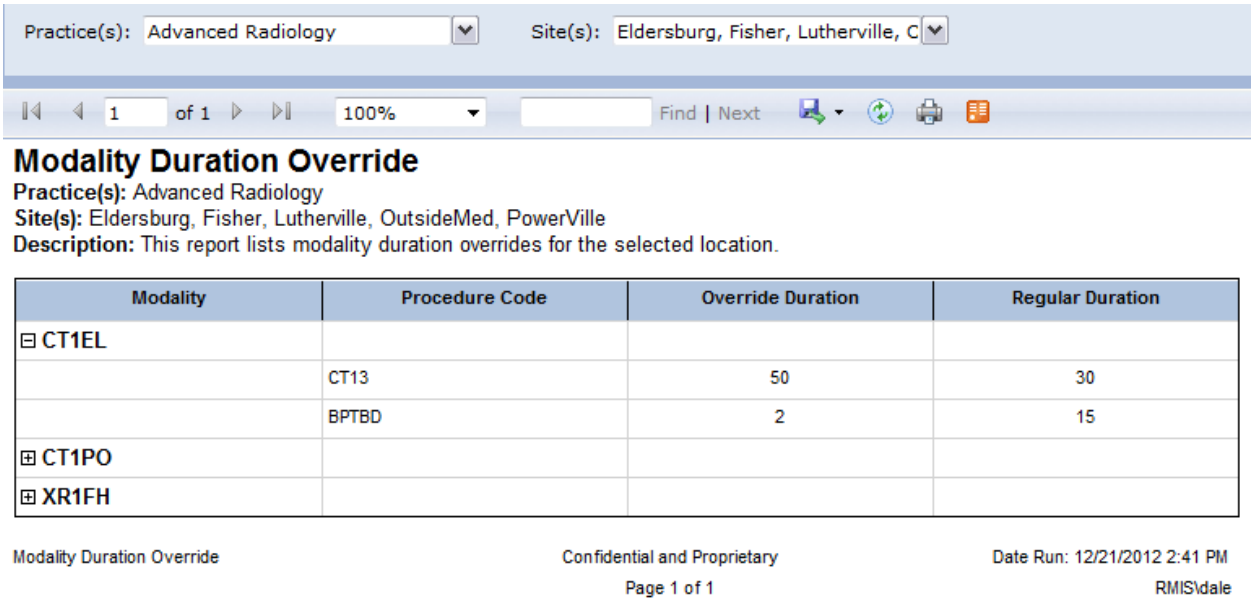

**Figure 5.49 – Modality Duration Override report**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Management Report – RTAT by Radiologist

This report displays report turnaround times for all practices within the RIS install for the procedure groups (*excluding mammo), and date range selected. There are three tables within this report that break down statistics of:

1. Radiologist: Pending Dictation - Pending Transcription (% of reports completed in < 3 hours)
2. 2. Radiologist: Pending Transcription - Pending Signature (% of reports completed in < 8 hours)
3. 3. Radiologist: Pending Dictation- Signed (% of reports completed in < 8 hours)

The report has groupings for each practice in the install and expands using the + symbol to show the accession numbers that are hitting the targets for each table within the report.

The report has parameters to select the practice(s), and site(s).

- RTAT dataset
- L_procedure_group_dataset
- Radiologist dataset

**RTAT by Radiologist**

**Date:** 2/28/2013
**Procedure Groups:** Diagnostic CT,DEXA,Evaluation Mgmt,Fluoroscopy,MRI and MRA,Nuclear Med,OTHER,EPET Procedures,PET,Diagnostic Imagt,Radiation Oncol,Intervntnl Rad,Intervntnl Surg,Ultrasound Vasc,Plain Film/Xray/CR
**Excluding exams signed on weekends**

| Pending Dictation - Pending Transcription (% of reports completed in < 3 hours) | | |

# 7. Resolved Defects

Bugs Suggested Features and Support Issues resolved in build 1.40. The extract is taken from Redmine bug tracking system and only displays defects resolved in 1.40.

| Bug # | Priority | Subject | Category | Found Version |
|---|---|---|---|---|
| 3370 | Normal | Appointment Book not filter practices that the user is assigned to | Thick Client GUI | 1.39 |
| 2899 | Urgent | Fax Service is not using all of the available fax ports | Web Services/DB | 1.37 |
| 3007 | Urgent | Inbound Reporting bypasses Core business rules in GetData | Thick Client GUI | 1.38 |
| 1375 | High | hit eRx button on Patient tab get exception | Thick Client GUI | 1.38.14391 |
| 1620 | High | Error when scheduling an exam with an image request | Thin Client GUI | 1.37 |
| 1956 | High | IVT Verified/Approved. | Thick Client GUI | 1.37 |
| 1980 | High | Too many modality restrictions kills the appointment book. | | 1.37 |
| 2074 | High | Patient distribution history - New button throws exception | Thick Client GUI | 1.38 |
| 2101 | High | Index out of bound scheduling.. | Thick Client GUI | 37.11 |
| 2136 | High | Administration - lookup making changes ( refreshes you to the top of the grid) | | 37.12 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 2193 | High | Image request not saving "Same as requested by" | Thick Client GUI | 1.38.14426 |
| 2351 | High | When user reschedules an order that contains scans at the 'Exam' level, RIS is not carrying those scans over to the newly scheduled exam as it should be. | Thick Client GUI | 38.14486 |
| 2467 | High | When lab work for BUN or Creatine (maybe others too, but those were all I could find) tests are on the lab work worklist, orders placed after are bypassing the worklist regardless of the state of the 'skip lab worklist' check box. | | 38.14748 |
| 2478 | High | Title bar color does not change if Practice is set to transparent | Admin Tools | 1.39 |
| 2504 | High | Book X attachments for Order B are not associated with correct procedure at time of scheduling | Thick Client GUI | 1.38.002 |
| 2671 | High | Failure to "save as order" on a cancelled appointment. | Thick Client GUI | 1.39.15268 |
| 2699 | High | Inserting template is navigating all fields twice | Thick Client GUI | 1.39 |
| 2775 | High | Mammo letter config lookup active column values incorrect | Admin Tools | 1.39 |
| 2865 | High | PersonSearch does not properly use database indexes and triggers excessive load | Web Services/DB | 1.39 |
| 2883 | High | My Views - If view has hidden columns, a reset to does not restore hidden columns | Thick Client GUI | 1.39 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 2916 | High | Exception on logout | Thick Client GUI | 1.38.007 |
| 2948 | High | IVT - Remove insurance can throw error | Thick Client GUI | 1.39.001 |
| 2953 | High | ORDER PLACER or EMR order not showing up on Orders to Schedule worklist | Modality Worklist | 1.39.001 |
| 3006 | High | Not able to cancel an EMR / order | Thick Client GUI | 39.1 |
| 3092 | High | Unable to add new value to static lookup tables in an upgrade and get those values pushed to the client | Thick Client GUI | 1.38 |
| 3321 | High | referring portal returns order cc PERSON_KEYs instead of order cc person "IDs" | Web Services/DB | 1.39 |
| 956 | Normal | When in "pending signature" WL, there is no context menu option for "Sign Report" | Thin Client GUI | 1.35 |
| 1085 | Normal | Scheduling an aborted exam, removing a completed exam from the order and adding a new proceudre | Thick Client GUI | 1.35 |
| 1140 | Normal | Unknown referring billing exception not in billing notes | Thick Client GUI | 1.35 |
| 1154 | Normal | Removing procedure from study cell can throw exception if Scheduled Date field is selected. | Thick Client GUI | 1.36 |
| 1168 | Normal | User is able to add multiple procedures in one row. | Thick Client GUI | 1.36 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 1258 | Normal | Arriving multiple studies for one day, the Relation to Patient is not captured to the other studies | Thick Client GUI | 1.36 |
| 1329 | Normal | Procedures with mutliple billing codes can be orphaned if procedure row is removed | Thick Client GUI | 1.36 |
| 1754 | Normal | Entering / Editing Availability templates - object reference error | Admin Tools | 1.1.2.37.13347 |
| 1775 | Normal | Filter work list using Customer filter does not allow "is null" or "is not null" | Thick Client GUI | 1.1.2.37.13580 |
| 1804 | Normal | View / Edit a cancelled exam prompts for required fields on Documentation tab | Thick Client GUI | 1.2.38.13666 |
| 1844 | Normal | After patient merge, data nugget does not update correctly | | 1.37 |
| 1873 | Normal | Object error in system config lookup | Admin Tools | 1.1.2.38.13809 |
| 1882 | Normal | Image request > Referring Location is not saved from Image request WL > edit | Thick Client GUI | 1.1.2.37.13842 |
| 1887 | Normal | Patient History Control leaking memory | | 1.37 |
| 1958 | Normal | Carrier type and address information on IVT WL | | 1.37 |
| 2034 | Normal | Null exception when delivery address key is missing. | | 37.1 |
| 2073 | Normal | Error changing scan associations in perform exam window | Thick Client GUI | 1.2.37.14267 |
| 2080 | Normal | Modality Type lookup object reference error | Admin Tools | 1.2.37.14267 |
| 2125 | Normal | No Scheduling credit for entering Outside Reads | Thick Client GUI | 37.12 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 2178 | Normal | RED X appearing on Insurance Policies grid | Thick Client GUI | 1.2.38.14412 |
| 2194 | Normal | Tech Only - External Report Workflow | Thick Client GUI | 1.38.14426 |
| 2270 | Normal | Template configuration issue | Mgt Reports | 1.37 |
| 2280 | Normal | Scanning - errror import a scanned document on to multiple exams. (River Ranch) | | v38 |
| 2306 | Normal | Sales Marketing Dashboard | Mgt Reports | 1.37 |
| 2444 | Normal | Dataset Visualizer - copy function is available in the context menu, but the function does not work. | Thick Client GUI | 38.001 |
| 2470 | Normal | Reporting - CDS Management console mystery button removal | Thick Client GUI | 1.37 |
| 2484 | Normal | Resolve - inactive insurances are still showing on patients record although the user is not aware that it is no longer active | Thin Client GUI | 1.3 |
| 2491 | Normal | The way we extract report text from XML is expensive on the CPU | Web Services/DB | 1.38 |
| 2493 | Normal | Management Report - RTAT Summary Poor Performance | Mgt Reports | 1.39 |
| 2502 | Normal | Management Report - copay vs collected issue | Mgt Reports | 1.38 |
| 2505 | Normal | Outside Read procedure label partially hidden | Thick Client GUI | 1.38.002 |
| 2509 | Normal | Create/Edit Report not in context menu in Report Drafted WL | Thick Client GUI | 1.39 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 2512 | Normal | Verify Edits context missing on Edits Pending QA WL | Thick Client GUI | 1.39 |
| 2513 | Normal | Create Edit Report missing from context on Pending Review WL | Thick Client GUI | 1.39 |
| 2515 | Normal | Create/Edit Report not in context menu in Problem WL | Thick Client GUI | 1.39 |
| 2521 | Normal | Reporting - next/previous field or section | Thick Client GUI | 1.37 |
| 2540 | Normal | scan document association | Thick Client GUI | 1.39 |
| 2543 | Normal | When "Sedation" was added to the reception worklist, users were not able to see 'sedation' on the worklist or in the column chooser. | Thick Client GUI | 38.15182 |
| 2548 | Normal | When you double-click an outside read that is in cancelled status, RIS throws an error because the double click action is opening the reschedule window | Thick Client GUI | 38.001 |
| 2568 | Normal | View menu disappears | Thick Client GUI | 1.39 |
| 2646 | Normal | Reporting - field navigator using section headers are not navigating if report contains 0 fields | Thick Client GUI | 1.39 |
| 2648 | Normal | Reporting - Attachments are not realigned when the data pane is resized | Thick Client GUI | 1.39 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 2654 | Normal | Mammo Annual Radiologist Summary - data returned by querying the view is inconsistent with the data returned in the report. | Mgt Reports | 39.15226 |
| 2668 | Normal | Management report - Radiologist Dictation Activity is displaying an error message upon execution | Mgt Reports | 39.15226 |
| 2702 | Normal | SNOMED CT Concept IDs did not make the QE drop for B39 l_smoking_status table | Thick Client GUI | 39.1533 |
| 2709 | Normal | Configuration - Create Duplicate User - You are warned twice. | Admin Tools | 1.1.3.39.15330 |
| 2710 | Normal | Configuration - Create Duplicate User - Causes Error | Admin Tools | 1.1.3.39.15330 |
| 2713 | Normal | Report History tab name | Thick Client GUI | 1.39 |
| 2725 | Normal | Radiologist Dashboard - Completed Exams 7 Day trend is showing Dec. 8, even though it is not in the last 7 days. | Mgt Reports | 39.15355 |

# 8. Known Limitations

The following are Bugs Suggested Features and Support Issues found in build 1.40. Bugs reported in previous versions are not captured as Known Limitation in this document.

| # | Status | Priority | Subject | Resolved Build |
|---|---|---|---|---|
| 2775 | New | High | Mammo letter config lookup active column values incorrect | |
| 2727 | New | High | PACS errors flipping between open dictate windows | |
| 2699 | Resolved | High | Inserting template is navigating all fields twice | 40 |
| 2532 | New | High | access to changing the access strings needs to read only. | |
| 2478 | Resolved | High | Title bar color does not change if Practice is set to transparent | 40 |
| 2782 | Resolved | Normal | ICM Dashboard - Need plan and Unknown Referring returning no results | 40 |
| 2777 | New | Normal | Appointment book - double click on open time | |
| 2761 | Resolved | Normal | Sales Mgmt Reports - 6 and 13 Mth Variance Data | |
| 2759 | New | Normal | Distribution WL - Message box should display in the center of the screen | |
| 2757 | New | Normal | Problem with doing multiple Verify Externals in a row. | |
| 2754 | New | Normal | Patient Folder context menu for Report History | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 2752 | Resolved | Normal | Patient Merge: ShowID Button does not auto select thumbnail | 40 |
| 2750 | New | Normal | Reporting - Select command does not work for words that are at the start or end of a field | |
| 2747 | Resolved | Normal | Reporting - Fields Navigator - Prevoius section does not highlight position in Fields tool window | 40 |
| 2746 | Resolved | Normal | Organization Picker Problem | 40 |
| 2744 | New | Normal | null exception when attempting to show/hide titlebars on report document | |
| 2743 | New | Normal | Personnel Editor - Tab/NewLine issues in notes fields | |
| 2741 | Resolved | Normal | Lookup Editor - Column Header Alignment is Messed up. | 40 |
| 2737 | New | Normal | Patient Folder - multiselect is true and it should be false | |
| 2734 | New | Normal | Reporting - Floating data panes do not stay on top | |
| 2728 | New | Normal | Study locked in PACS message on initial load | |
| 2713 | Resolved | Normal | Report History tab name | 40 |
| 2695 | New | Normal | parameter not specified error in preview report for tables | |
| 2690 | New | Normal | Show/Hide Titlebar issue | |
| 2683 | New | Normal | Patient folder > Study detail column color bleeds outside of row | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 2677 | New | Normal | Create Report from Reset Open skipped rows | |
| 2676 | New | Normal | Reset open skipped rows - If you dictate and save, it does not remove skipped row from list | |
| 2672 | New | Normal | Appointment book cannot obtain lock error | |
| 2661 | New | Normal | Template Macro Editor - Double click template or macro | |
| 2660 | New | Normal | Template Macro Editor - Adv Assignment - user not defaulting | |
| 2648 | New | Normal | Reporting - Attachments are not realigned when the data pane is resized | |
| 2647 | New | Normal | Reproting window - can't save layout to default Attachments tab | |
| 2646 | New | Normal | Reporting - field navigator using section headers are not navigating if report contains 0 fields | |
| 2645 | New | Normal | Overbook Reason title change | |
| 2643 | New | Normal | Multiple loads of Selection Aware controls | |
| 2641 | New | Normal | Duplicating report fields | |
| 2637 | New | Normal | Next field command selecting multiple fields | |
| 2635 | New | Normal | Unchecking No Longer Menstruating doesnt enable pregnancy fields | |
| 2632 | New | Normal | Perform Exam window doesnt update with changes made in another window | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 2630 | In Progress | Normal | PACS - Close call could fail if user has been logged off | |
| 2628 | New | Normal | Reporting screen not drawing in, if user make worklists active | |
| 2568 | In Progress | Normal | View menu disappears | |
| 2561 | New | Normal | reception WL retrieval time is slow | |
| 2540 | New | Normal | scan document association | |
| 2536 | New | Normal | Report Permissions, | |
| 2534 | New | Normal | Mammo followup - Newly entered data does not carry forward | |
| 2533 | New | Normal | Scheduling order from follow up mammo work list doesnt return to work list | |
| 2515 | Resolved | Normal | Create/Edit Report not in context menu in Problem WL | 40 |
| 2513 | Resolved | Normal | Create Edit Report missing from context on Pending Review WL | 40 |
| 2512 | Resolved | Normal | Verify Edits context missing on Edits Pending QA WL | 40 |
| 2511 | New | Normal | size and location information is not saved when client is close while minimized | |
| 2509 | Resolved | Normal | Create/Edit Report not in context menu in Report Drafted WL | 40 |
| 2493 | New | Normal | Management Report - RTAT Summary Poor Performance | |
| 2751 | New | Low | Object overlap on Order tab | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 2749 | Resolved | Low | Reporting - Fields Navigator - Selecting section before field changes cursor selection | 40 |
| 2729 | New | Low | Able to bring up two menus at once | |
| 2679 | New | Low | CDS Management Console | |
| 2664 | New | Low | Billing Exception - Post button | |
| 2658 | New | Low | Stored function c_getcontrastrequiredflag could return wrong value if multiple study items exist | |
| 2652 | New | Low | administration -> management report screen doesn't show any folders if permissions aren't configured | |
| 2535 | New | Low | Region, unable to deactivate | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 1. Defects resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 3407 | DDEngine reports a failed fax when the faxed was actually successful | Urgent |
| 3381 | The EMR order list is not appearing on a study that was imported from one order to another order | Normal |
| 3378 | EMR: Order Cancel message cancels studies in scheduled status | High |
| 3390 | Action queues hang whenever a queue entry has a null container | Normal |
| 2507 | Enhance Security for Practice level Mgt Report access | Normal |
| 3377 | Is Null filter causes error on refresh | High |
| 3417 | deleting the procedure from procedure picker row will delete study item cert row | Normal |
| 3418 | the "Show previous PreCert and CPT Codes" filter was showing the inactive PreCerts for inactive study items | Normal |
| 3423 | Specifying a CPT level PreCert rule was not being checked correctly at the point of selection | Normal |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Package Contents

Files included for this server update:

1) GUI ZIP Updates folder contains
   a) rRIS_1.3.40.16849.zip

2) RIS Service Updates folder contains
   a) CDSJobManager.pdb
   b) CDSJobManager.dll
   c) CommonLib.pdb
   d) CommonLib.dll
   e) DDEngine.pdb
   f) DDEngine.dll
   g) rRISServices.pdb
   h) rRISServices.exe
   i) rRISServices.vshost.exe
   j) ScheduledTaskManager.pdb
   k) ScheduledTaskManager.dll
   l) SignatureApprovalService.pdb
   m) SignatureApprovalService.exe
   n) WCFService.pdb
   o) WCFService.dll
   p) WebApi.pdb
   q) WebApi.dll
   r) Wedge.pdb
   s) Wedge.exe

3) SQL folder contains:
   a) B40_001.sql

4) SQLReporting folder contains 4 subfolders and 1 batch file:
   a) ParentFolder contains 6 subfolders

      i) Dashboards folder contains 10 .rdl files

      ii) Management Reports folder contains 6 subfolders each of the subfolder contains .rdl files. These are the main management reports accessed from the GUI

      iii) Marketing folder contains 6 .rdl files

      iv) Order Templates folder contains 1 .rdl file (default.rdl)

      v) Referring Portal folder contains 8 .rdl files

      vi) SubReports folder contains 11 .rdl files

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

b) Scripts folder contains 7 .rss files. These files are used by the DeployReports.bat file to install and deploy the management reports, dashboards, marketing, etc… reports

c) Upload Diagnostic Templates folder contains 1 subfolder titled SubReports. The SubReports folder is empty.

d) Upload Forms folder contains 1 subfolder titled SubReports. The SubReports folder is empty.

e) DeployReports.bat file is the batch file used to deploy the management reports.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 3. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

## 4. Who is affected

Build 40 installs. This server update must be applied directly to the build 40 core install.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# 5. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|
| 37 | - | 1.2.37.12843 | 1.2.37.12782 | 1.2.37.12843 | 1.2.37.12843 | Full version release |
| 37 | 1 | 1.2.37.13040 | 1.2.37.13040 | 1.2.37.13039 | 1.2.37.13003 | Core install, GUI.zip, web service and database updates |

| 39 | - | 1.3.39.15389 | 1.3.39.15389 | 1.3.39.15377 | 1.3.39.15355 | Full version release |
| 39 | 1 | 1.3.39.16026 | 1.3.39.15943 | 1.3.39.15943 | 1.3.39.15957 | Requires Core Install. GUI.zip, Web Service, and Database updates |
| 40 | - | 1.3.40.16628 | 1.3.40.16628 | 1.3.40.16628 | 1.3.40.16628 | Full version release |
| 40 | 1 | 1.3.40.16849 | 1.3.40.16659 | 1.3.40.16744 | 1.3.40.16727 | GUI.zip, Web service, database updates and SQL Management reporting |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# 6. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.40.16849.zip file provided with this release. The previous GUI.zip should have been renamed to rRIS_1.3.40.16659. Be sure to make a backup of the ris.exe.config file contained within the .zip folder.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   Restart each service.

3) Run the B40_001.sql file against the eRAD RIS database instance.

4) SQL Reporting. Please refer to the eRAD RIS Reporting Services Installation.docx supplied with the Build 40 release in the _Documentation\Installation folder.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# Server Update

## 6. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.40.16878.zip file provided with this release. The previous GUI.zip should have been renamed to rRIS_1.3.40.16849. Be sure to make a backup of the ris.exe.config file contained within the .zip folder.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   Restart each service.

**PLEASE READ** – This server release was created to support west coast operations with the addition of Order Level IVT (see new features). As development began on this server release additional issues were identified with east coast operations. The next server release of 1.40.005 (GUI file version 1.3.40.17087) has also been released with the additions made in this server release with additional features and bug fixes.

If you install this server release, proceed to install the 1.40.005. Keep in mind that .sql scripts are unique for each release and will have to be run on you eRAD RIS database.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# 1. New Features

## Order Level IVT

This patch release contains a new feature to have orders requiring Insurance Verification and/or PreCert approval. Essentially the IVT list will be the same, except now it will have the addition of procedures in Ordered status.

This is a configurable option that is controlled by a new systemconfig setting **OrderLevelIVT.** The default value is **False** (off).

| System Config Code | Value | Default | Description |
|---|---|---|---|
| Contains: | Contains: | Contains: | Contains: |
| Click here to add a new row | | | |
| OrderLevelIVT | | False | (value = true/false) Determines if IVT will first be calculated at order level |

**Figure 1.1 – SystemConfig lookup table displaying OrderLevelIVT code**

Once this setting is turned on, opening the IVT WL you will see the Ordered Status procedures on the work list. The procedures PreCert can be approved and insurance verified before the procedure is scheduled.

| Flags | Status | Procedures | Order Date | Scheduled Date |
|---|---|---|---|---|
| | Starts... order | | | |
| | Ordered | CT Abdomen W & Pelvis W & CTA Chest W/Wo [CT54] - Abdomen | 04-01-2013 2:08 PM | |
| | Ordered | CT Abdomen W & Pelvis W [CT9] - Abdomen | 03-28-2013 10:53 AM | |
| | Ordered | FL Arthrogram Elbow CT [FL9] - Elbow | 03-25-2013 3:29 PM | |
| | Ordered | XR ABDOMEN AP, KUB [74000] - Abdomen | 03-22-2013 1:55 PM | |
| | Ordered | CT Chest W & Abdomen W/Wo [CT42] - Chest | 03-18-2013 2:33 PM | 03-18-2013 1:55 PM |

**Figure 1.2 – IVT WL displaying Ordered status procedures**

Users may notice the Scheduled Date column is populated for procedures in Ordered status on the IVT work list. The reason for this is because EMR orders may have been scheduled and after the order is scheduled, the EMR order is cancelled because a new EMR order was required (missing information, procedure change, etc…). The cancelled EMR order remains in Ordered status until the new EMR order is matched with the scheduled study, thus the cancelled EMR order on the IVT WL shows a Scheduled Date.

The Status will update for the study on the IVT work list accordingly as the study proceeds through the work flow.

# 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.40.16967.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the .zip folder.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   Restart each service.

3) Run the B40_004.sql file against the eRAD RIS database instance.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# 1. New Features

## Order Level IVT

This patch release contains a new feature to have orders requiring Insurance Verification and/or PreCert approval. Essentially the IVT list will be the same, except now it will have the addition of procedures in Ordered status.

This is a configurable option that is controlled by a new systemconfig setting **OrderLevelIVT.** The default value is **False** (off).

| System Config Code | Value | Default | Description |
|---|---|---|---|
| Contains: | Contains: | Contains: | Contains: |
| Click here to add a new row | | | |
| OrderLevelIVT | | False | (value = true/false) Determines if IVT will first be calculated at order level |

**Figure 1.1 – SystemConfig lookup table displaying OrderLevelIVT code**

Once this setting is turned on, opening the IVT WL you will see the Ordered Status procedures on the work list. The procedures PreCert can be approved and insurance verified before the procedure is scheduled.

| Flags | Status | Procedures | Order Date | Scheduled Date |
|---|---|---|---|---|
| | Starts... order | | | |
| | Ordered | CT Abdomen W & Pelvis W & CTA Chest W/Wo [CT54] - Abdomen | 04-01-2013 2:08 PM | |
| | Ordered | CT Abdomen W & Pelvis W [CT9] - Abdomen | 03-28-2013 10:53 AM | |
| | Ordered | FL Arthrogram Elbow CT [FL9] - Elbow | 03-25-2013 3:29 PM | |
| | Ordered | XR ABDOMEN AP, KUB [74000] - Abdomen | 03-22-2013 1:55 PM | |
| | Ordered | CT Chest W & Abdomen W/Wo [CT42] - Chest | 03-18-2013 2:33 PM | 03-18-2013 1:55 PM |

**Figure 1.2 – IVT WL displaying Ordered status procedures**

Users may notice the Scheduled Date column is populated for procedures in Ordered status on the IVT work list. The reason for this is because EMR orders may have been scheduled and after the order is scheduled, the EMR order is cancelled because a new EMR order was required (missing information, procedure change, etc…). The cancelled EMR order remains in Ordered status until the new EMR order is matched with the scheduled study, thus the cancelled EMR order on the IVT WL shows a Scheduled Date.

The Status will update for the study on the IVT work list accordingly as the study proceeds through the work flow.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Reporting – Lock Section Titles

In the past section titles could be inadvertently removed, edited, etc… as the section titles were not locked down from the user.

In Server Release 1.40.005 a user preference was added under the Report Editor tab called "Protect section headers".

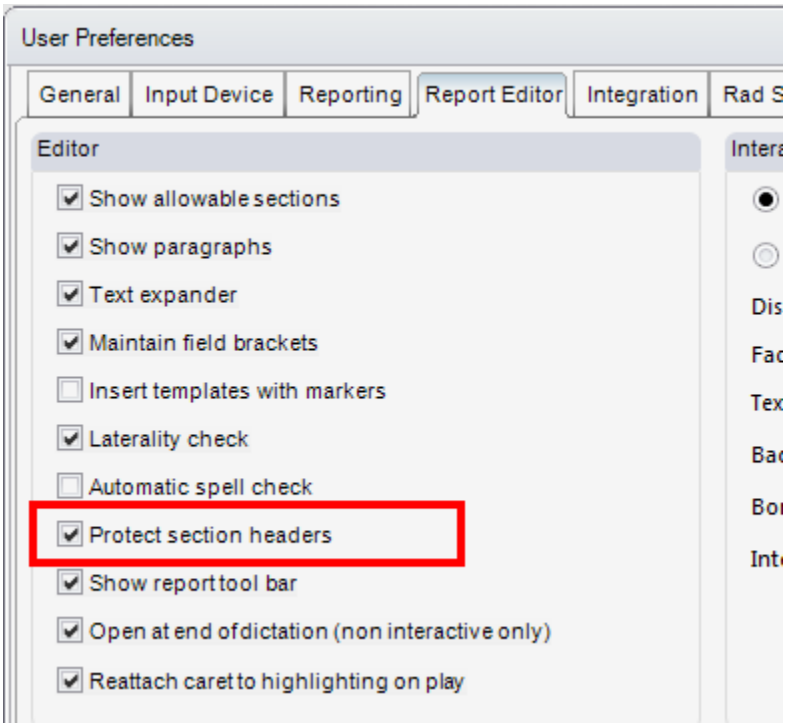

**Figure 1.3 – User preference "Protect section headers"**

When this User Preference is selected, the section titles in the reporting window will be "locked down". The user will not be able to add, edit, or remove section titles.

In addition to the new user preference, a new icon/toggle button called "Protect sections" has been added to the formatting toolbar in the reporting window. When the user preference is selected as shown in figure 1.3, the Protect section button will be toggled on.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

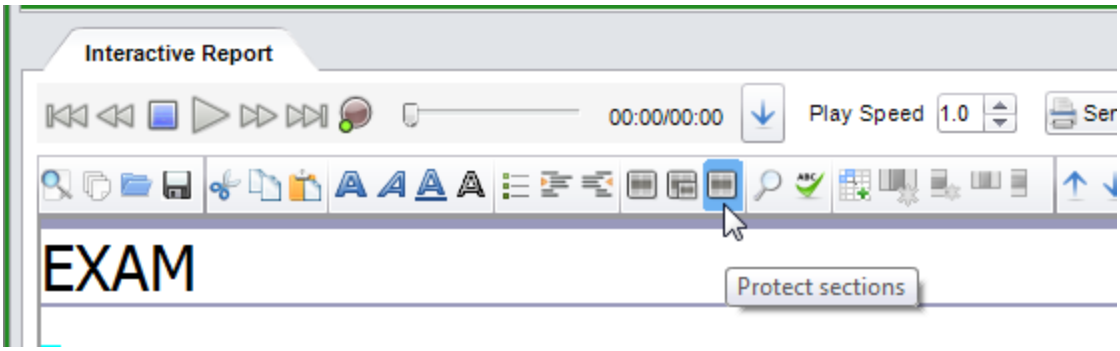

**Figure 1.4 – Protect sections button added to formatting toolbar in reporting window**

If the user does want to add, edit or remove a section title while in the reporting window, they can simply click on the Protect sections button to toggle off the lock of the section titles. Once they changes are made, they can toggle it back on if they so choose.

When the window is committed, closed or skipped, the next study that is opened in the reporting window will take the default action of the user preference.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Defects Resolved

| Redmine # | Subject | Priority |
|---|---|---|
| 3506 | Precert rule on CPT code not working when more than one procedure scheduled | High |
| 3488 | PreCert - Add study that requires precert at time of reschedule, precert is not required | High |
| 3503 | Add procedure row at new appointment or at the time registration throws error. | High |
| 3515 | User preference for Locking Section Titles is not visible in User Preferences window | Normal |
| 3516 | IVT - Orders from cancelled studies don't have Precert and are not added to the IVT work list | High |
| 3511 | DTC exception when attempting to manually change status | High |
| 2397 | Reporting - ability to lock down section titles and not allow editing | Normal |
| 3517 | appointment book background not coloring | Normal |
| 3421 | Spelling dictionaries not practice specific - cross contamination possible | High |
| 3529 | Unread exams slow | Normal |
| 3512 | WL Filter not working when like "!breast!dexa!mammo" or like "!breast & !dexa & !mammo" | High |
| 3530 | Billing ORU files no longer formatted correctly | Immediate |
| 3536 | RADAR integration at SE resulted in a patient being called more than once | Immediate |
| 3557 | CC Physicians not getting reports | Immediate |
| 3523 | some columns not populated in worklist | High |
| 3528 | Magview reports come in via HL7 containing  | High |
| 3535 | object reference error in forms and labels editor and row selection issues | High |
| 3539 | My pending signature WL no show rows if transcribed studies are updated after they have been transcribed | High |
| 3552 | original_study_key not being set when scheduling a followUp order BIRADS 0 wl | High |
| 3520 | CC doctors were not getting faxes | Urgent |
| 3555 | SystemSkin Error in CDImport Grid | Normal |
| 3549 | Order from cancelled study does not have Billing code in IVT window | High |
| 3556 | ARS - SpeechMike issue with play/record - can lose dictation (Batch) | High |

# 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.40.17087.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the .zip folder.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   Restart each service.

3) Run the B40_005.sql file against the eRAD RIS database instance.

# 6. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.40.17146.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the .zip folder.

   A change has been made the ris.exe.config file. Edit the existing ris.exe.config file and change the following.
   BEFORE:

```
<startup>
    <supportedRuntime version="v4.0" sku=".NETFramework,Version=v4.0" />
</startup>
```

   AFTER:

```
<startup  useLegacyV2RuntimeActivationPolicy="true">
    <supportedRuntime version="v4.0" sku=".NETFramework,Version=v4.0" />
   </starup>
```

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   Restart each service.

3) Run the B40_006.sql file against the eRAD RIS database instance.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# 6. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.40.17268.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   Restart each service.

3) Run the B40_007.sql file against the eRAD RIS database instance.

# 1. New Features

## Reporting - Order Notes Added To Exam Details Pane

Order Notes were missing from reporting window. Previously the users would have to access the Order Notes from the data nugget or the View / Edit window on the Patient Folder WL.

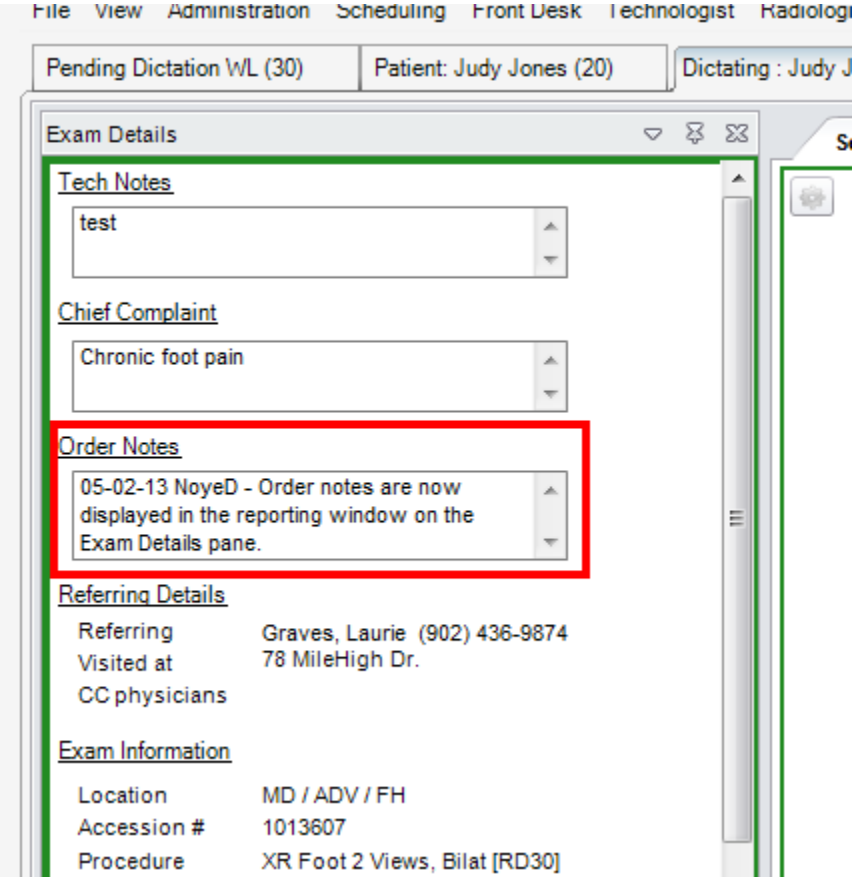

**Figure 1.1 – Order Notes in Exam Details pane**

In Server release 1.40.008, the Order notes have been added to the Exam Details data pane in the reporting window. Users must be aware that in order to view the Order notes they must dock the Exam Details data pane and save layout for it to display in future reporting window sessions.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# Reporting – Alter and Save Default Layouts

In the reporting windows view menu users had the option to choose from of a list of default layouts. These layouts came "canned" with eRAD RIS and if changes were desired to the layout, they could not be saved.

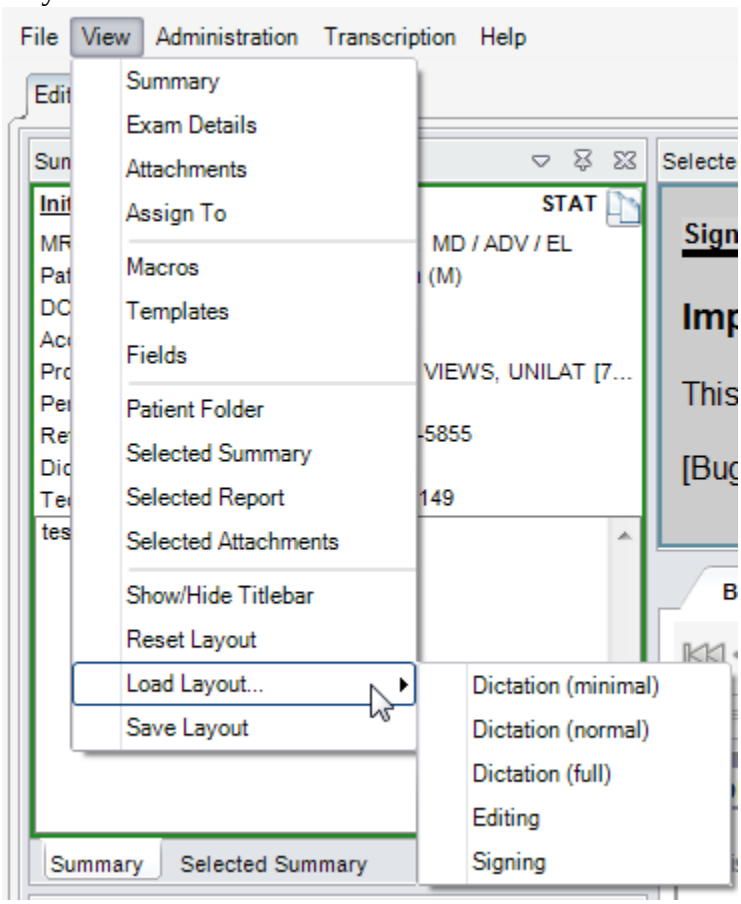

**Figure 1.2 – View Menu - Load Layout**

It was requested that these layouts could be altered and changes saved. We have added a new menu and sub-menu to the View menu. Under the report editor screens View menu, administrators will find a new menu item. **Administer Layouts…** this will lead to a **Save As** option for each of the standard layouts. The administrator simply designs an open screen as they desire then use this menu item to save to the database as one of the default layouts for all users. Aavailability of this set of menu items is based on a **new access string "View.Administration"**. Users must have full access to the mentioned access string in order to use this feature.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# 6. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.40.17364.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   Restart each service.

3) Run the B40_008.sql file against the eRAD RIS database instance.

# 1. New Features

## Scheduling – Limit Search Results for Appointment Schedules

This is feature 3844

Before this feature, users didn't have a restriction on the number of days that they could search for available times when scheduling a new appointment. If the search was repeatedly performed over an entire year, it is a waste of system resources.

A new system config variable was introduced to limit how many days users can search for time. The name of the variable is titled **"ScheduleMaxSearchDayRange"** and has a default of 30 days. The value column can override the default, so an administrator can reduce or extend the allowed days to search.

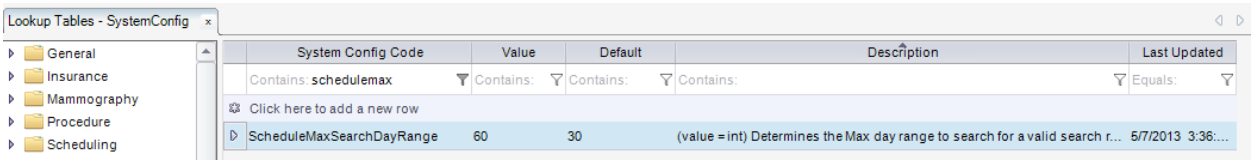

**Figure 1.1 – SystemConfig table displaying new config setting "ScheduleMaxSearchDayRange"**

In the example above the Value has been increased to 60 days.

When the user is creating a New Appointment, the Schedule Order window opens. On the Schedule tab we have the Search Options on the right of this tab.
The Search Range will default to the value set from an existing system config variable "ScheduleDefaultSearchDayRange". In my example below it is set for 7 days.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

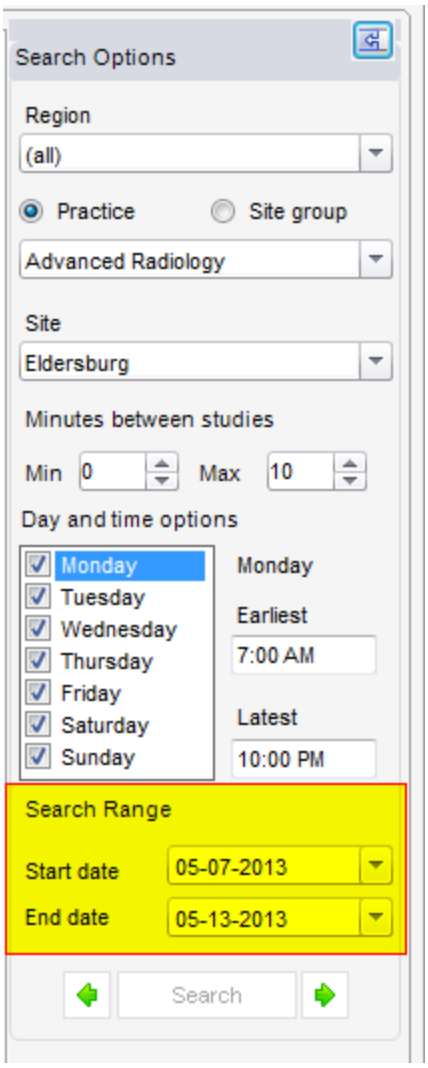

**Figure 1.2 – Search Range is defaulted to "ScheduleDefaultSearchDayRange"**

Since I have the system config setting for **"ScheduleMaxSearchDayRange"** = 60, if I change the end date of my search range to August 31, the start date will automatically change to July 2nd (end date minus 60)

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

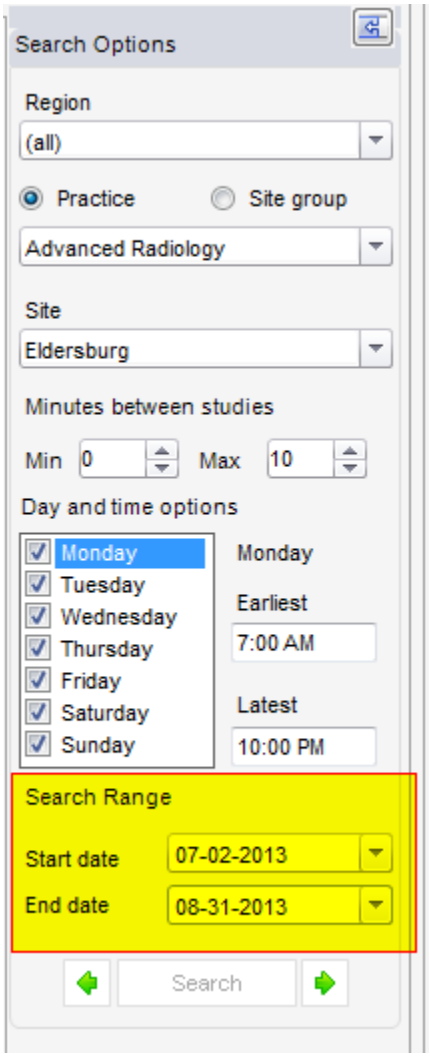

**Figure 1.3 – Search range end date set months ahead, the start date will change to equal that of new variable**

If the above start date Search Range is changed to June 1st, the End Date will automatically change to be that of the start date + 60 days.

However, if in the example above, the start date Search Range is changed to be after the end date (example September 1st), it will not move the end date to be Start Date + 60. It will instead use the value for the system config variable "ScheduleDefaultSearchDayRange" which in my case would be 7 days. So the end date would be September 7th.

# 6. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.40.17370.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   Restart each service.

3) Run the B40_009.sql file against the eRAD RIS database instance.

# 1. New Features

## 64 Bit Web Service

This server update includes new web service files for the Core RIS service, allowing it to utilize more of the server memory that 32 bit will not allow.

Included are 2 new files.

- rRISServicesx64.exe
- rRISServicesx64.exe.config

The 64 bit version is only to be used for the Core RIS Service. The CDS / SAPS, DD Engine, and Wedge services will continue to use the 32 bit version (rRISServices.exe).

For information on installing the 64 bit service for the Core RIS Service see section 6 of this document.

# 6. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.40.17435.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

   **NOTE:** If any port changes are made to the rRISServices.exe.config or the rRISServicesx64.exe.config files because of the changes for X64 webservice, make sure these port number changes are also updated in the ris.exe.config file.

2) Build 40, patch 10 includes a 64 bit version for RIS Services. Only the Core Services should be configured to run the 64 bit version. The other services such as DD Engine, CDS Manager, SAPS, etc. are not validated to run the 64 bit version at this time. Specifically, the DD Engine needs to run in 32 bit and the 64 bit version will fail.

   In this package there are now 2 executable programs for the RISServices, namely rRISService.exe and rRISServicex64.exe. The rRISService.exe continues to be the 32 bit application. If you were to leave the services configured as is and you deploy the new RIS Services you will be running the 32 bit version.

   Similar to the 32 bit version, the 64 bit version, rRISServicex64.exe has a configuration file called rRISServicesx64.exe.config. The contents of this file is identical to the 32 bit version.Stop each service listed below.

   To run the 64 bit version for RIS Services you need to do the following (only the RIS Core Services are validated to use the 64 bit version):

   a. Configure the rRISServicex64.exe.config by copying the current rRISServices.exe.config to rRISServicesx64.exe.config
   b. Uninstall the RIS Service as "Windows Service".
   c. Install the RIS Services as "Windows Service" using the rRISServicesx64.exe application
   d. Start the service.
   e. Verify the service is running.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
*rRISService directories include:*

i. rRISService
ii. CDS rRISService
iii. Wedge rRISService
iv. DDE rRISService

Restart each service.

**REMINDER:** After the new 64 bit service is installed for rRISServicesx64.exe, remember to use a domain account for log on of the new service.

## 6. Installing

1) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config, rRISServicesx64.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   Reminder: in the previous Server Update 40.010, the Core RIS service may have been converted to 64 bit. If this is the case with your installation, there will be a new service using created for the Core RIS service

   Restart each service.

# 1. New Features

## Configurable dataset retrieval interval

When lookup tables are updated, the client was hard coded to look for dataset updates every 5 minutes. Also when logging in, the datasets would be retrieved.

In Build 40.012 the hard coded value has been removed. A new ris.exe.config entry has been created and the value, set in minutes will be set for all users.
<add key="LookupTableTimeToLiveInMinutes" value="5"/>

In the ris.exe.config file, this new key is to be added to the <appSettings> section.

Before:

```
<appSettings>
   <add key="defaultEndPointName" value="NetTcpBinding_IStudyService" />
   <add key="ClientSettingsProvider.ServiceUri" value="" />
   <!--<add key="RowLevelCacheDataSetNamesCSV" value="*"/> -->
 </appSettings>
```

After:

```
<appSettings>
   <add key="defaultEndPointName" value="NetTcpBinding_IStudyService" />
   <add key="ClientSettingsProvider.ServiceUri" value="" />
   <add key="LookupTableTimeToLiveInMinutes" value="5"/>
   <!--<add key="RowLevelCacheDataSetNamesCSV" value="*"/> -->
 </appSettings>
```

If a user wants to get the latest lookup table updates they can log out and back in. This will always download the lookup table changes. An alternative method has also been added. Under the Help Menu a new menu option titled "Refresh Configuration" has been added. When selected, the next time the user opens a data window, the latest lookup changes will be obtained.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

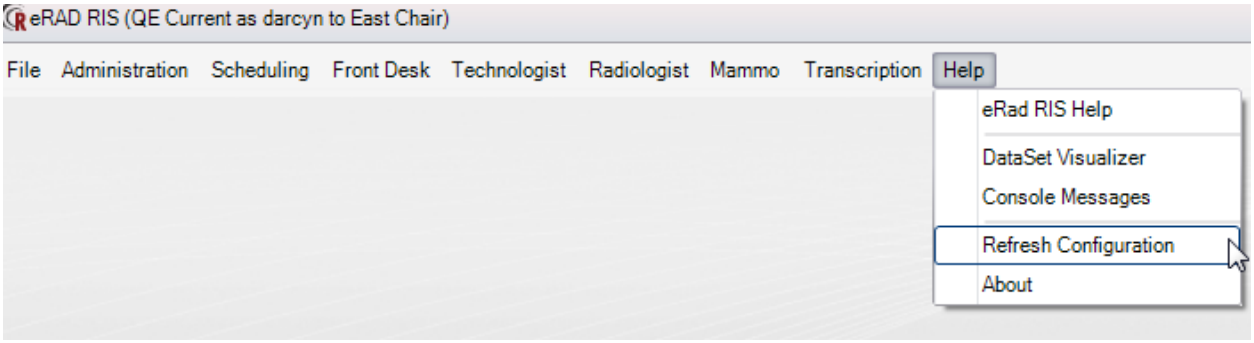

**Figure 1.1 – Refresh Configuration menu option.**

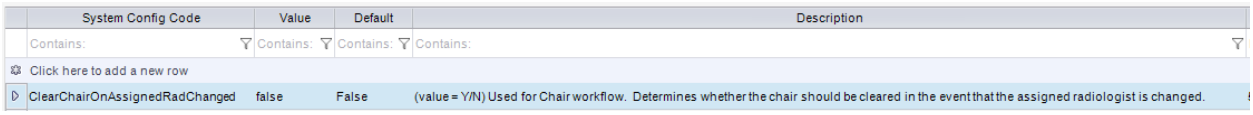
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Technologist – Remove chair assignment when Assigned Radiologist changed

In previous versions if the chair was assigned to the study in the Perform Exam window and saved, the next time the window was opened and a Radiologist was assigned, or the Assigned Radiologist was changed, this would remove the chair assignment.

In Build 40.012 a system configuration setting was added to have this behavior configurable. The SystemConfig setting of ClearChairOnAssignedRadChanged has been added with a default value of False, meaning that if the Assigned Radiologist is changed, the chair assignment will be retained. When a value of true is entered for the ClearChairOnAssignedRadChanged, it work as before.



| System Config Code | Value | Default | Description |
|---|---|---|---|
| Contains: | Contains: | Contains: | Contains: |
| Click here to add a new row | | | |
| ClearChairOnAssignedRadChanged | false | False | (value = Y/N) Used for Chair workflow. Determines whether the chair should be cleared in the event that the assigned radiologist is changed. |

**Figure 1.2 – New SystemConfig code of ClearChairOnAssignedRadChanged**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Reporting - Display selected attachments for current study

Using the existing User Preference of "Select current study initially" under the Patient folder section on the Reporting tab of the User Preferences window, will now also control whether the attachments associated with the current study will be displayed in the Selected Attachments data pane.

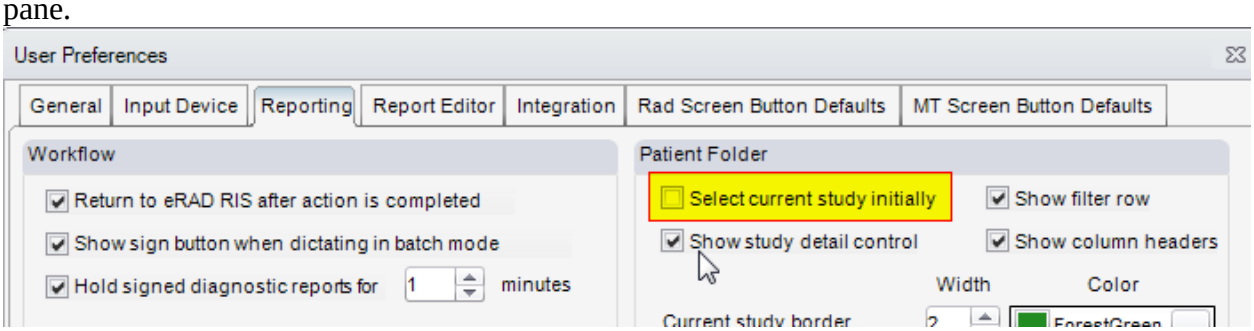


**Figure 1.2 – Existing User Preference "Select current study initially"**

A breakdown of how it will work:

- If the user preference "Select current study initially" is not selected and the study doesn't' have relevant priors, the selected attachment pane will be empty.

- If the user preference "Select current study initially" is not selected and the study does have relevant priors, the select attachment pane will display the attachment (most likely the report) for the most relevant study.

- If the user preference "Select current study initially" is selected and the study doesn't have relevant priors, the selected attachment pane will be of the current study.

- If the user preference "Select current study initially" is selected and the study does have relevant priors, the selected attachment pane will be of the current study.

## 4. Package Contents

Files included for this server update:

1) GUI ZIP Updates folder contains
   a) rRIS_1.3.40.17685.zip

2) RIS Service Updates folder contains
   a) CDSJobManager.dll
   b) CDSJobManager.pdb
   c) CommonLib.dll
   d) CommonLib.pdb
   e) DDEngine.dll
   f) DDEngine.pdb
   g) rRISServices.exe
   h) rRISServices.pdb
   i) rRISServicesx64.exe
   j) ScheduledTaskManager.dll
   k) ScheduledTaskManager.pdb
   l) SignatureApprovalService.exe
   m) SignatureApprovalService.pdb
   n) WCFService.dll
   o) WCFService.pdb
   p) WebApi.dll
   q) WebApi.pdb
   r) Wedge.exe
   s) Wedge.pdb

3) SQL folder contains:
   a) B40_012.sql

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 5. Intended Audience

This document is created by the RIS Development team for the RadNet RIS Implementation team.

## 6. Who is affected

Build 40 installs. This server update must be applied directly to the build 40 core install. Server updates are not cumulative. Any previous server updates must be applied before this one.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# 7. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|
| 37 | - | 1.2.37.12843 | 1.2.37.12782 | 1.2.37.12843 | 1.2.37.12843 | Full version release |

# 8. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.40.17685.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

   **NOTE:** there is a change to the ris.exe.config file.

   See Sections
   1 New Features - Configurable dataset retrieval interval and
   2 New Configuration settings and Changes

2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.
   *rRISService directories include:*
   a) *rRISService*
   b) *CDS rRISService*
   c) *Wedge rRISService*
   d) *DDE rRISService*

   Restart each service.

3) Run the B40_012.sql file against the eRAD RIS database instance.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.
