

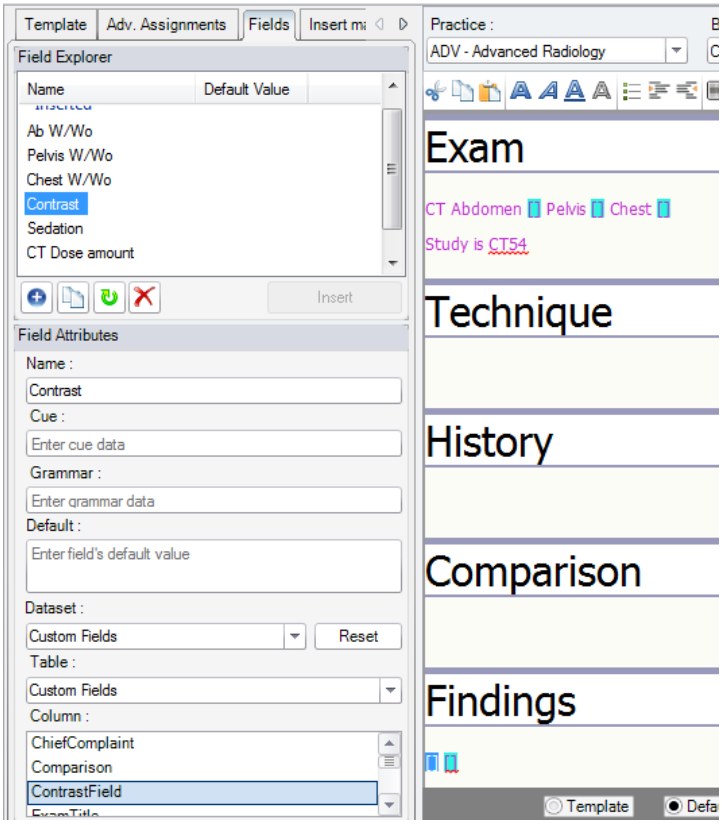

**Figure 5.32 – Adding Contrast field to template**

## Sedation

Similar to contrast tracking, there will be defaults identified to be loaded for each sedative, amount administered and unit of measure. Sedatives will be associated to a practice.

The sedative grid will have records added and removed via Add and Delete buttons.

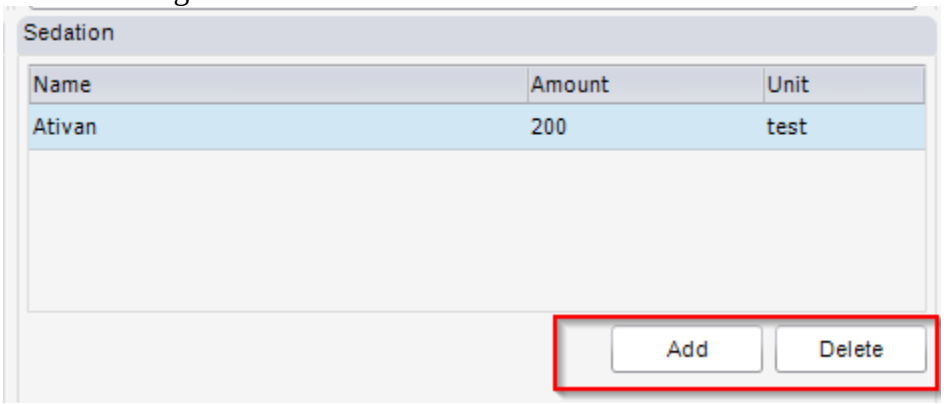

**Figure 5.33 – Sedation grid**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Selecting the Add button will open the Add Sedation window. The list of available option will come from the Sedative lookup and the options available will be those that are not already added to the grid.

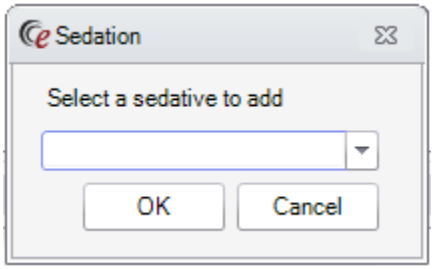

**Figure 5.34 – Add Sedation grid**

The new lookup table called Sedative is controlled by access string "**Config.LookupEditor.Sedative**" that has a default of None.

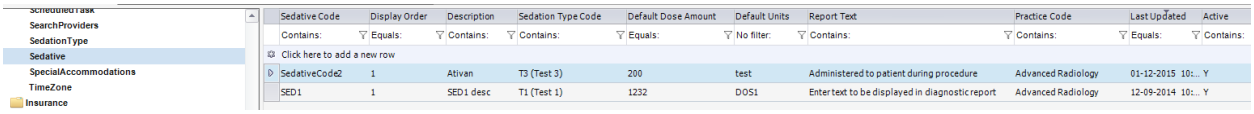

**Figure 5.35 – Sedative lookup table**

Sedative's will be associated to a practice. The Description is what the user will see in the grid of the Perform Exam, View\Edit and Billing Exception windows. The default dose amount will auto populate the Amount column and the Default Units value will auto populate the Unit field. The Report Text field can be mapped to Template\Macros. This column allows for a 2nd description of the sedative for the intent of being included in the radiologists report (in case it is different than the main description which the tech sees in their screen).

There is a master "SedativeField" field, which will concatenate the sedation record(s) for the study into a sentence. Also there are options to manually pull the sedative data items one at a time. However this manual option only pulls the first contrast record for each data item.

Example of SedativeField:: ***Patient was administered 4g of Sedative Type A, 47cc of Sedative Brand X, 250ml of Sedative Type 5 and 8g of Sedative Brand XYZ***.

In this example, we are looking at "Patient was administered" + dose + unit + "of" + "sedative name". This pattern repeats for each record.

Sedation data will be packaged and sent to third party integrated applications as needed through configuration.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

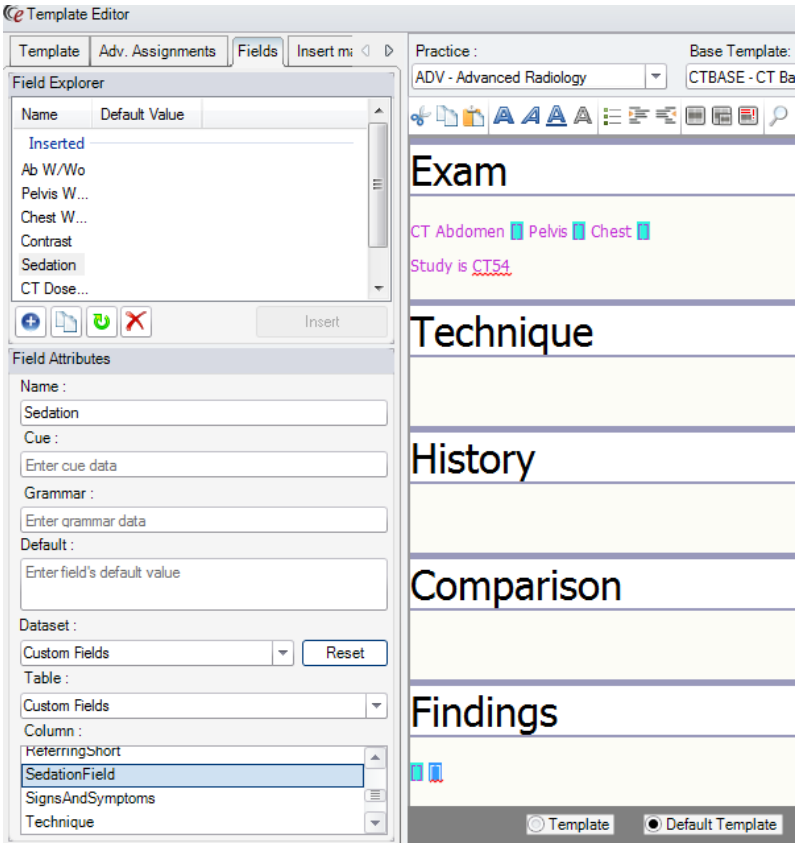

**Figure 5.36 – SedationField for Template\Macros**

In this example, we are looking at “Patient was administered” + dose + unit + “of” + “sedative name”. This pattern repeats for each record.
Sedation data will be packaged and sent to third party integrated applications as needed through configuration.

In both the Contrast and Sedative lookup tables, the values available in the Default Units column will come from the lookup table Dosage Unit. Access to this lookup table is controlled by “**Config.LookupEditor.DosageUnit**” that has a default of None. The table will capture the Dosage Unit Code and Description, along with Display Order, Last Updated and Active columns.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

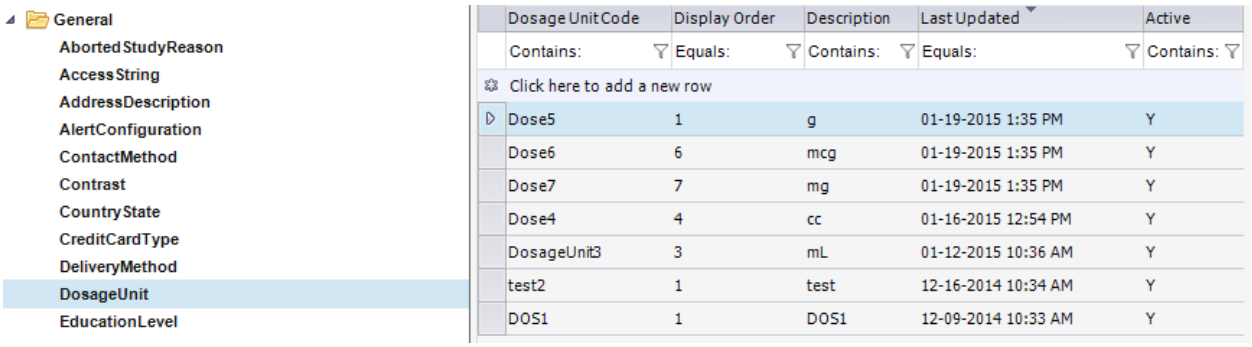

**Figure 5.37 – Dosage Unit lookup table**

## CT Dose

In the Perform Exam window, the View\Edit window and the Billing Exception window on the Documentation tab, anew field called CT dose (mGy) has been added.

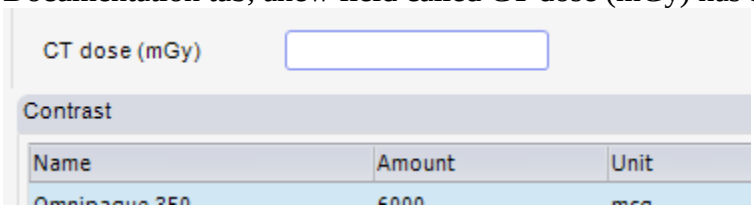

**Figure 5.38 – CT dose field on documentation tab**

Dosage tracking is enabled at the practice level and will be performed by entering the dosage amount into a text field on the tech screen. There would be no default values set for this. The tech will have to manually enter the amount.

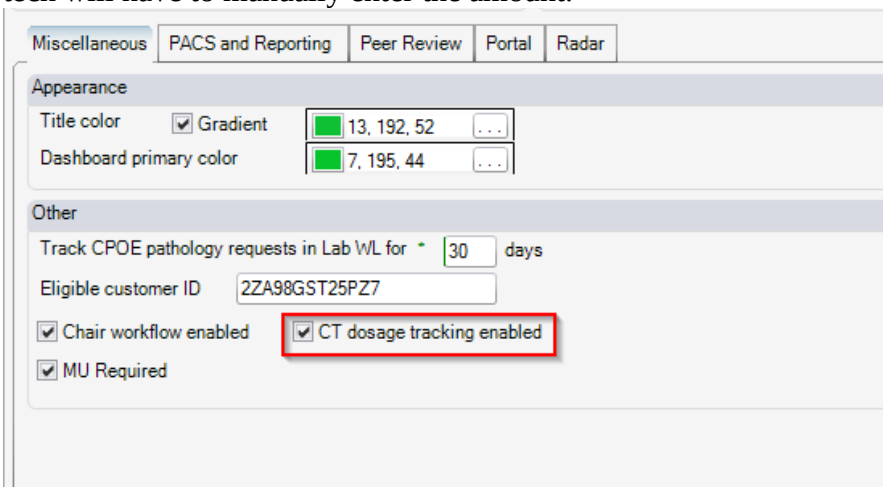

**Figure 5.39 – Enabling CT dosage tracking for Practice**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

To determine what is a CT, there was a new system table added, s_dicom_modality_type. This table contains a list of dicom supported modality types:
http://www.dicomlibrary.com/dicom/modality/

These codes can be mapped to the procedure code table. If CT dosage tracking is enabled we check if the procedure code has that procedures dicom_modality_type set to 'CT', if so, then we require the tracking to be entered.

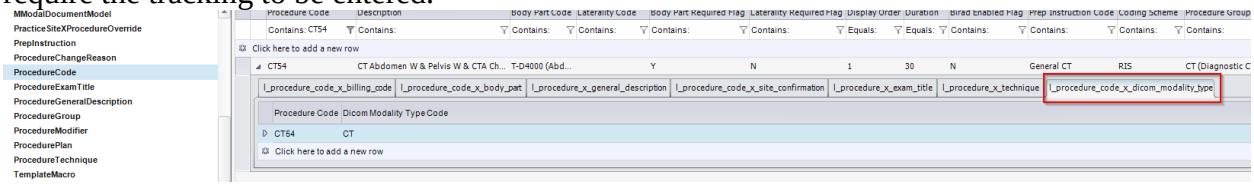

**Figure 5.40 – Dicom Modality Type set on a procedure code**

CT dosage data will be accessible in the radiologist report via fields. A system would be configured to have report template contain the ct_dose_amount field. Alternatively a radiologist could have macros created that use the field and they can then choose to include the data at will or leave it omitted.

CT dosage data will be packaged and sent to third party integrated applications as needed.

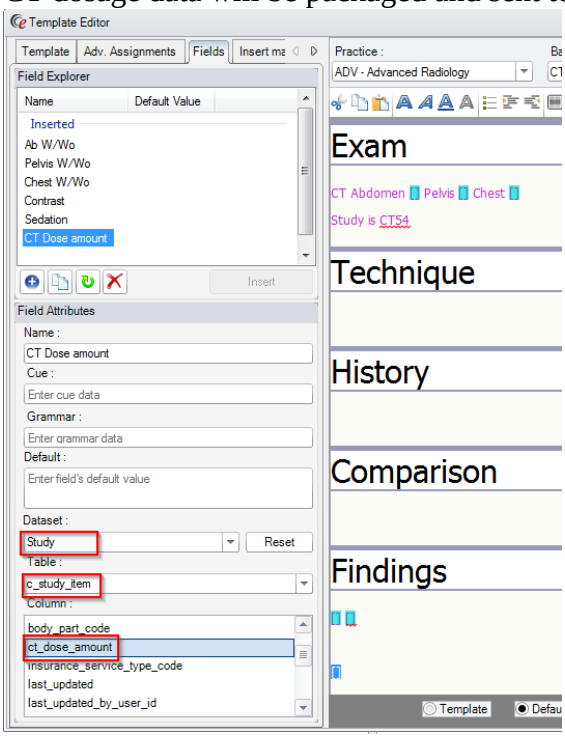

**Figure 5.41 – Adding CT Dosage amount to Template\Macros**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Send Copy of Diagnostic Report to Patient on Request

An option to send the diagnostic report to patient has been added in B44. First we have added a check box on the Order tab in the Referring Details section of the window. Selecting this check box will create a distribution print job on the Document Distribution WL when the report is signed. This checkbox will also be available for New Outside Reads.

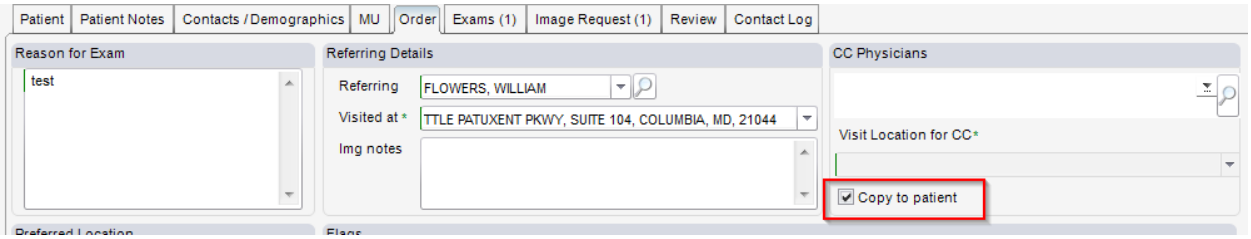

**Figure 5.42 – Copy to patient check box on the Order tab**

From the Document Distribution WL, the Distribution History By Date WL and Distribution History WL access from the Patient Folder WL will have the option to edit a job and select Patient

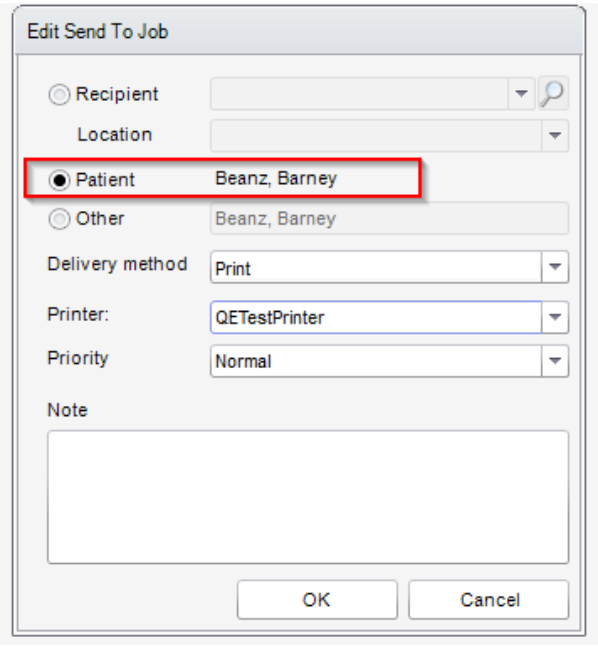

**Figure 5.43 – Edit existing distribution job**

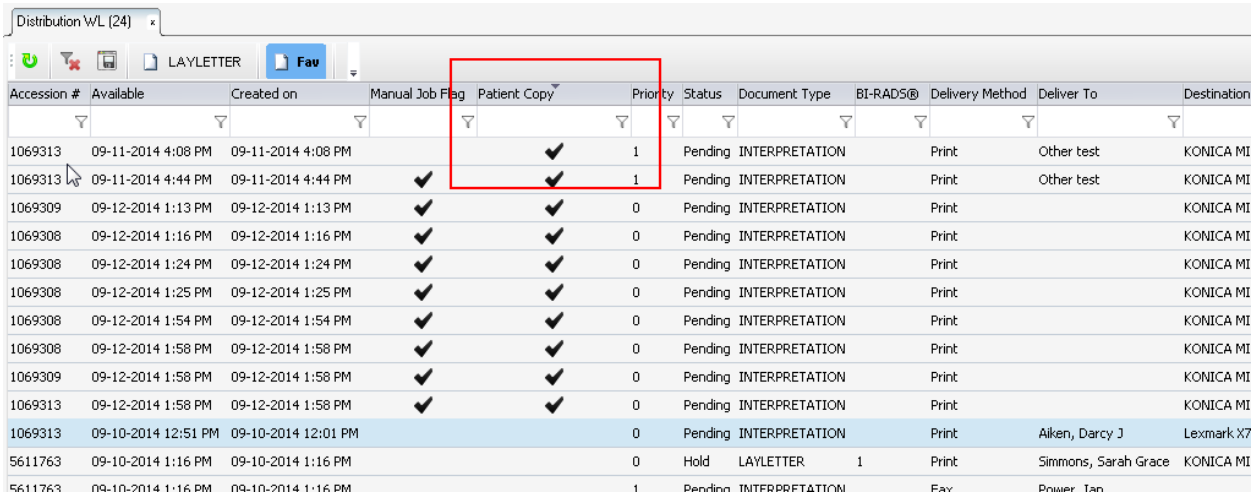
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Also from the Distribution History By Date WL and Distribution History WL access from the Patient Folder WL a user can create a new job and once again the Patient option can be selected to send report to patient.

The Patient Folder WL also has a context menu option of Send Report. This again will open the window displayed in Figure 5.43 and once again Patient is an option. This is also the same for the Send to button that is available from the Reporting windows such as the Dictate window, the Sign Reports window, etc…

When a distribution job is created for a patient, a new column on the Distribution WL titled Patient Copy will be populated with a check mark. This column also exists on the Distribution History By Date WL and Distribution History WL



| Accession # | Available | Created on | Manual Job Flag | Patient Copy | Priority | Status | Document Type | BI-RADS® | Delivery Method | Deliver To | Destination |

**Figure 5.44 – Patient Copy column on the Distribution WL**

The diagnostic template(s) will require changes to accommodate this feature. To implement the logic for adding patient "send to" information to the template see document eRAD RIS Build 44 Upgrade Instructions.docx

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## STAT Read changes

The ‘stat read’ flag had many different labels and icons. We have made some changes to have one consistent format. ‘STAT Read’ and ‘STAT read’ (where sentence case is required) and the icon will be a red triangle with an exclamation mark.

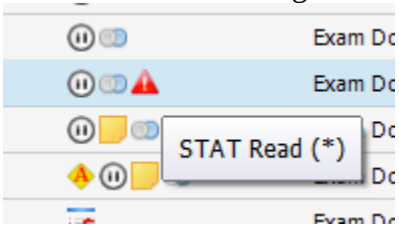

**Figure 5.44 – STAT Read flag icon**

The context menu to add flag has been changed to be “Set STAT Read” and “Remove STAT Read” when it has been already set.

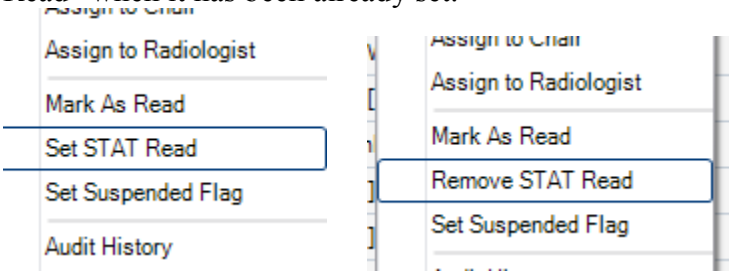

**Figure 5.45 – Context menu items to set and remove STAT read flag**

The Column title has also been updated

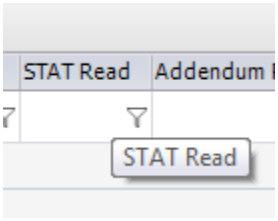

**Figure 5.46 – STAT Read work list column title**

Finally, when opening a study that has the STAT Read flag we have changed the verbal notification to say STAT Read as opposed to STAT Exam.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## PACS Server Override From PACS Menu

This was originally introduced in patch build 43.0.6. Adding as a refresher. The menu item of PACS Server Override located under the PACS menu is controlled by the access string "PACSIntegration.Override" with a default access level of Full. We have given it full access so users who have access to the Menu.PACS access string which has a default of None will be given automatic access to it.

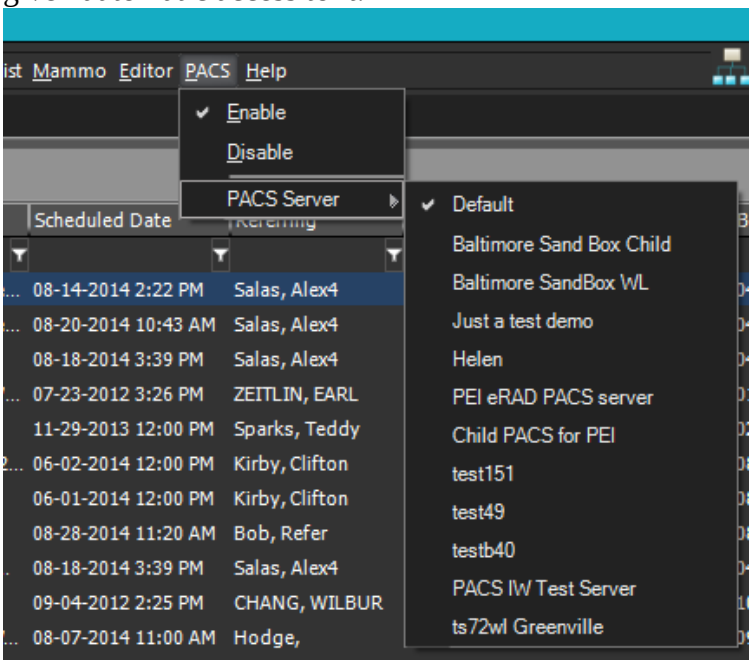

**Figure 5.47 – PACS Server menu option**

Before when a workstation didn't have the configuration for the selected Pacs server, the menu would disappear, now it does not, access string determines if the user sees the menu. If the Pacs server isn't configured on the workstation, the Enable/Disable items will be disabled.

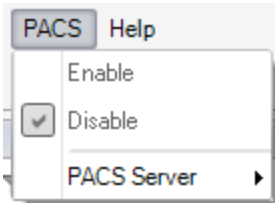

**Figure 5.48 – Enable\Disable menu options disabled**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Hologic Integration Changes

When integration with a Hologic Workstation was initially developed in Build 43.0.6, it required the user to select "Hologic" from the PACS Override menu every time they logged in. This was painful for the radiologists who work only with Hologic from a particular workstation.

Now if the Hologic integration is available on the workstation it is now selected by default in the PACS override menu. This means that the user needs to have the *PACSIntegration.Override* permission.

Also in the original release of this feature, the Hologic Integration was user specific. The HologicConfig.xml file was added to the %appdata% directory ( a user's roaming profile) Now this file is put in c:\ProgramData\Radnet\eRad RIS to make the configuration available to all users on the workstation.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Track Registered in PECOS

PECOS (Provider Enrollment, Chain, and Ownership System) is used with Medicare to support the Medicare Provider and Supplier enrollment process. A new checkbox has been added to the Personnel Editor that is enabled when the Resource Flags of Referrer or Radiologist are selected.

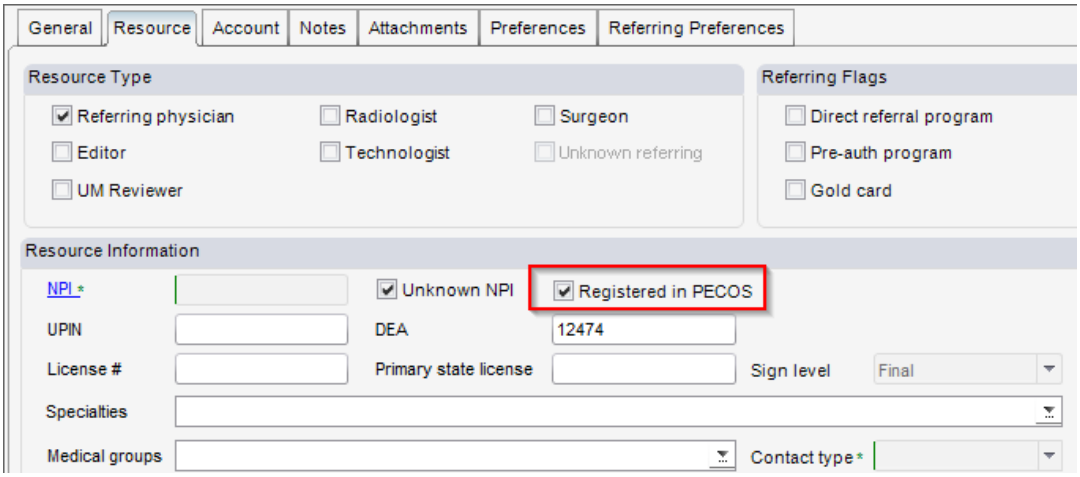

**Figure 5.49 – Registered in PECOS checkbox in Personnel Editor**

The Carrier Type lookup table has an additional column added with a title of Medicare Type Flag. This column is to be set to Y for all Carrier Types that are Medicare.

**Figure 5.50 – Medicare Type Flag column added to Carrier Type lookup table**

When a study is scheduled with an Insurance Carrier that is a Medicare provider, the referring physician that does not have the check box selected on their user profile will receive a message informing that they are not registered in PECOS. The message prompt will be determined by the system configuration setting of "**EnableNotRegisteredInPECOSWarning**" that has a default value of False.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

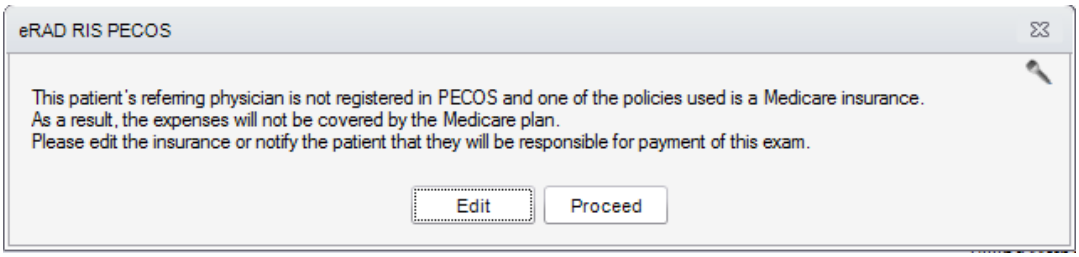

**Figure 5.51 – Not registered in PECOS message**

## Preferred Location Site Field on Order Tab Configurable

The Preferred Location Site field on the Order tab has always been required when saving a New Appointment as an Order. Build 44 will see this field as an optional field dependant on the system configuration setting of "**ScheduleUsePreferredSite**" that has a default of True to keep the current configuration as the default.

Customer wishing to have the Preferred Location field as not required when saving as an order will need to add a value of False

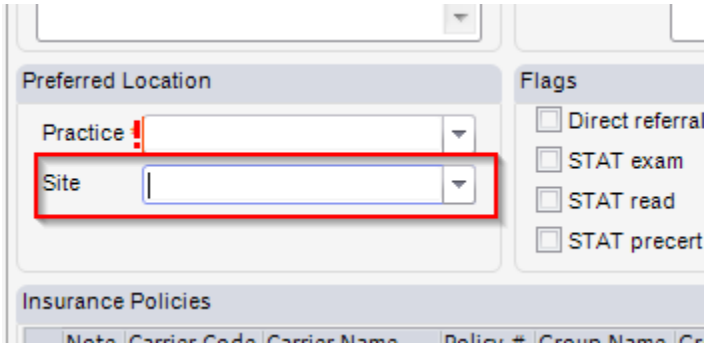

**Figure 5.52 – Optional Preferred Location Site field**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## MRN for Responsible Party

Two new fields have been added to the Responsible Party section on the Contacts Demographics tab. The Relation's ID field is a text field that will accept alphanumeric characters. The ID Issuer field is a list box in which the values come from the Issuer lookup table. Neither field is required to be completed.

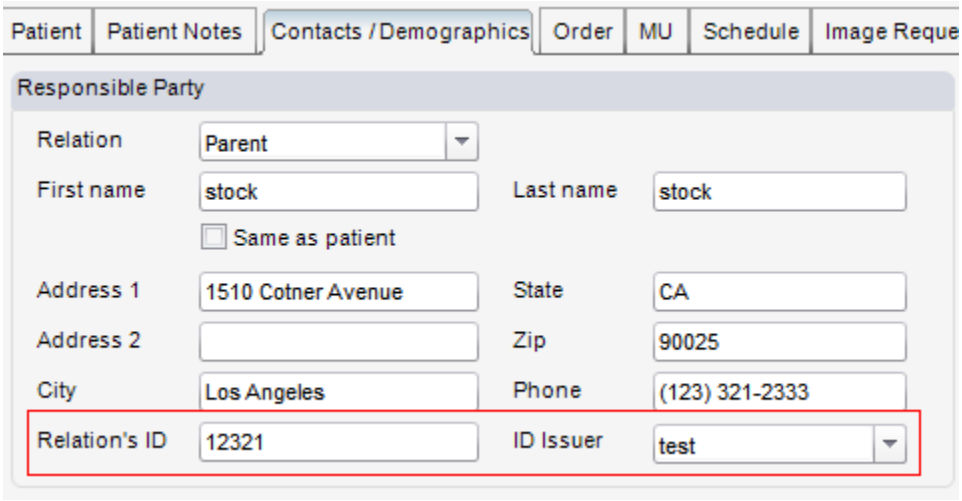

**Figure 5.53 – MRN fields added to Responsible Party**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Patient Weight Added to Review Tab

Patient weight has been added to the Review Tab and Review window that is presented when completing a New Appointment. The Review tab is also available from the Confirmation window which also displays the patient's weight. The verbiage that has been added will read as "The patient reports their weight to be: <XXX>lbs

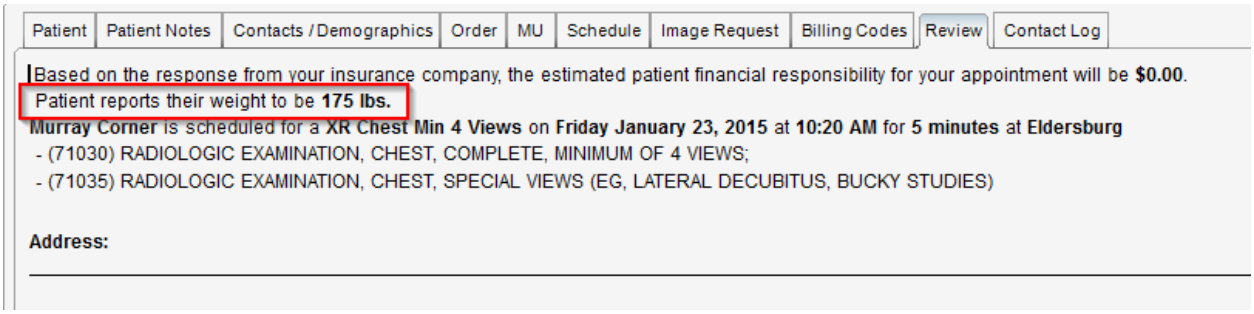

**Figure 5.54 – Patient weight added to Review tab\window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Meaningful Use Tab Available in Confirmation

The Confirmation window and workflow was missing the MU tab. This has been added as the second tab in the Confirmation window.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

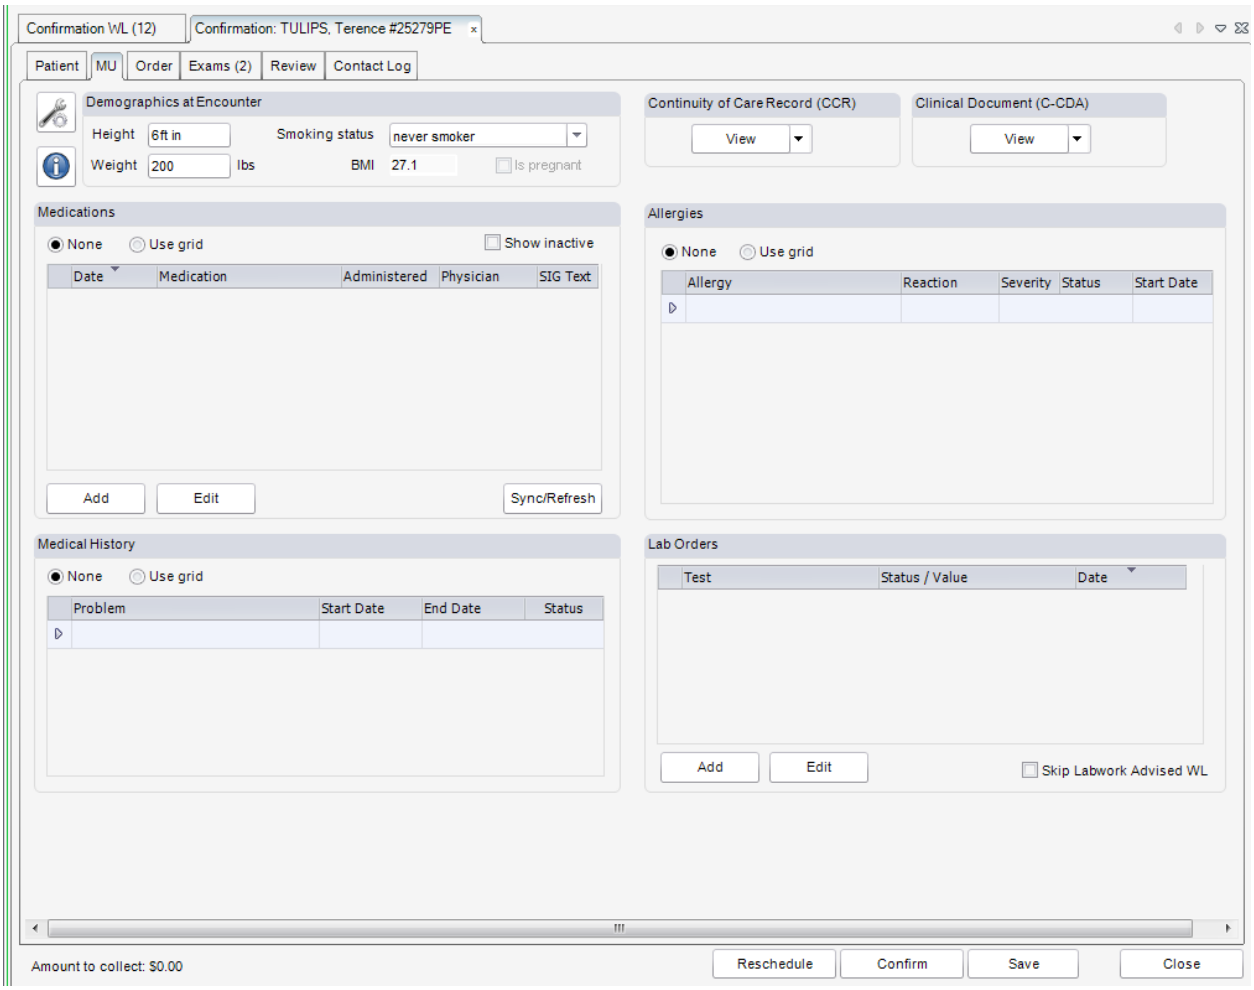

**Figure 5.55 – MU tab added to Confirmation window**

# Registration – Hyperlink to Scanned ID Card

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The Patient tab in the Registration window will now have a hyperlink to the scanned id for Drivers License scan type. The icon of a camera will appear next to the verified ID check box within the General Information section of the Patient tab. Selecting the ICON will open the Patient ID window to show the scanned image of the patients ID

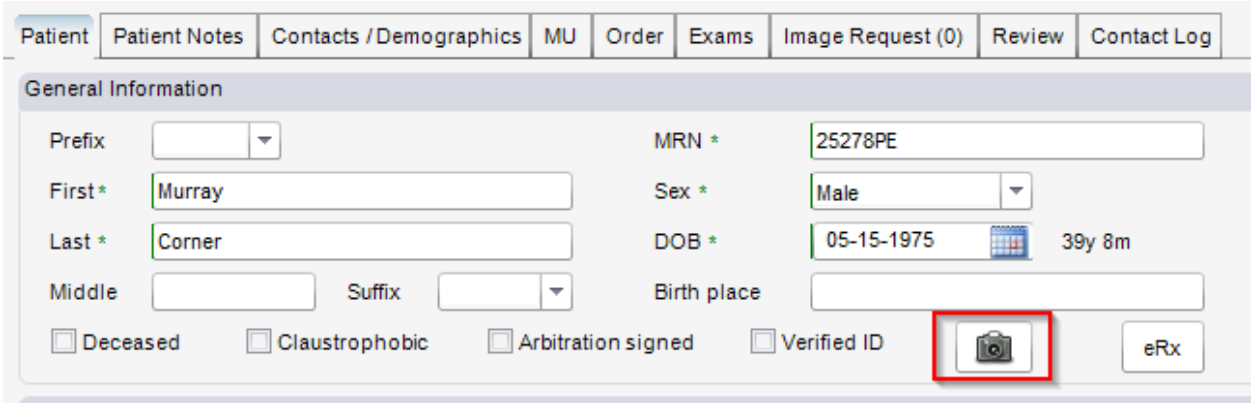

**Figure 5.56 – Hyperlink to patients scanned ID**

The pre-existing configuration setting of "**PhotoIDScanDocumentType**" with a default of License is used to determine which scan document type should show when the user selects the camera icon. This is the same functionality that is used in Patient Merge window.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Improved Error Messages for Payments

When adding payments in eRAD RIS we used to return a generic message that something was missing. We will now provide the following messages.

If the payment amount is missing

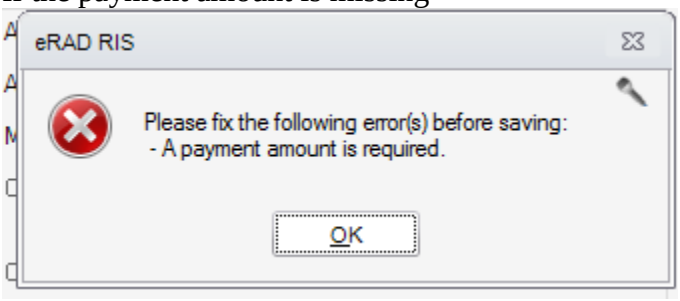

**Figure 5.57 – Missing payment amount message**

Making credit card payments, messages for credit card type, last 4 digits of credit card are required, payee name required and card expiry required. These messages can be appear all in one message or individual, depending on the details missing.

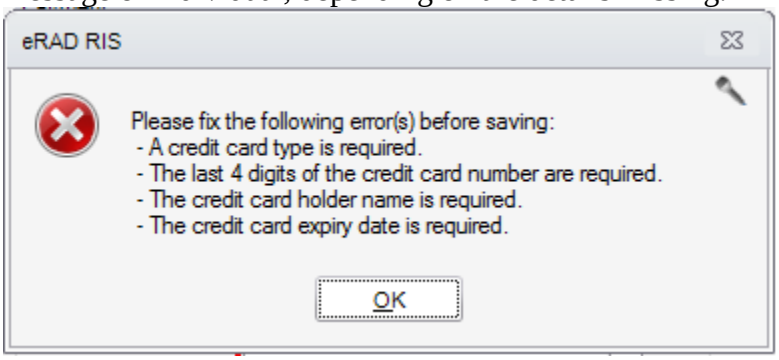

**Figure 5.58 – Missing credit card information message**

Lastly if payment is by check, the user will be notified if the Check Number field has not been completed

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

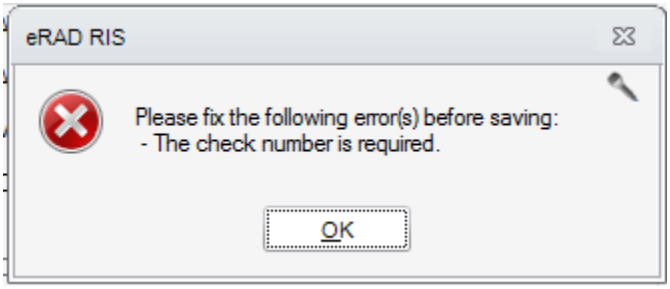

**Figure 5.59 – Missing check number message**

## Insurance Policies Enhancements

When an Insurance Policy was marked as expired we didn't provide a visual representation to aid the user to quickly determine that it had expired. Now when the Expired check box is selected the rows text will become grey. When Expired check box is unselected it will return to the original text state.

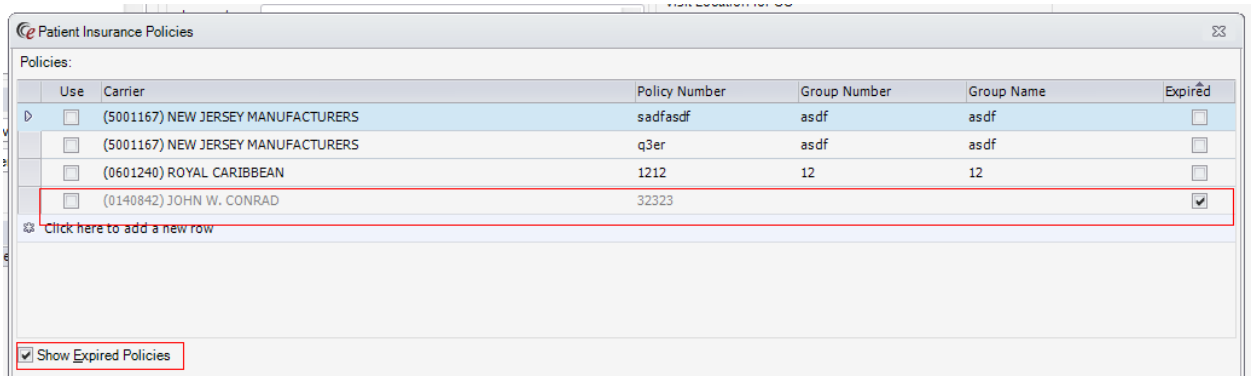

**Figure 5.60 – Displaying expired insurances**

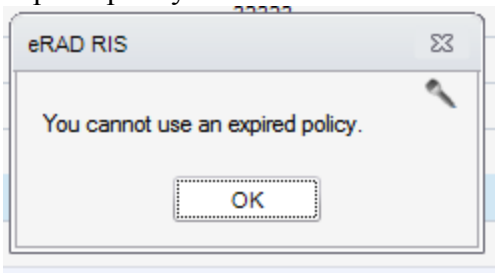
The Show Expired Policies check box will now be selected by default. If the "Use" check box is selected for an expired insurance the user will be presented with a message "You cannot use and expired policy".



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**Figure 5.61 – Attempting to use and expired policy message**

In addition, if you have a policy that has the Use checkbox selected and you try to expire it, the Use check box will automatically be deselected.

If a patient has an Insurance Policy that has been marked as inactive in the lookup table the Insurance Policies grid will display the inactive carrier in red font.

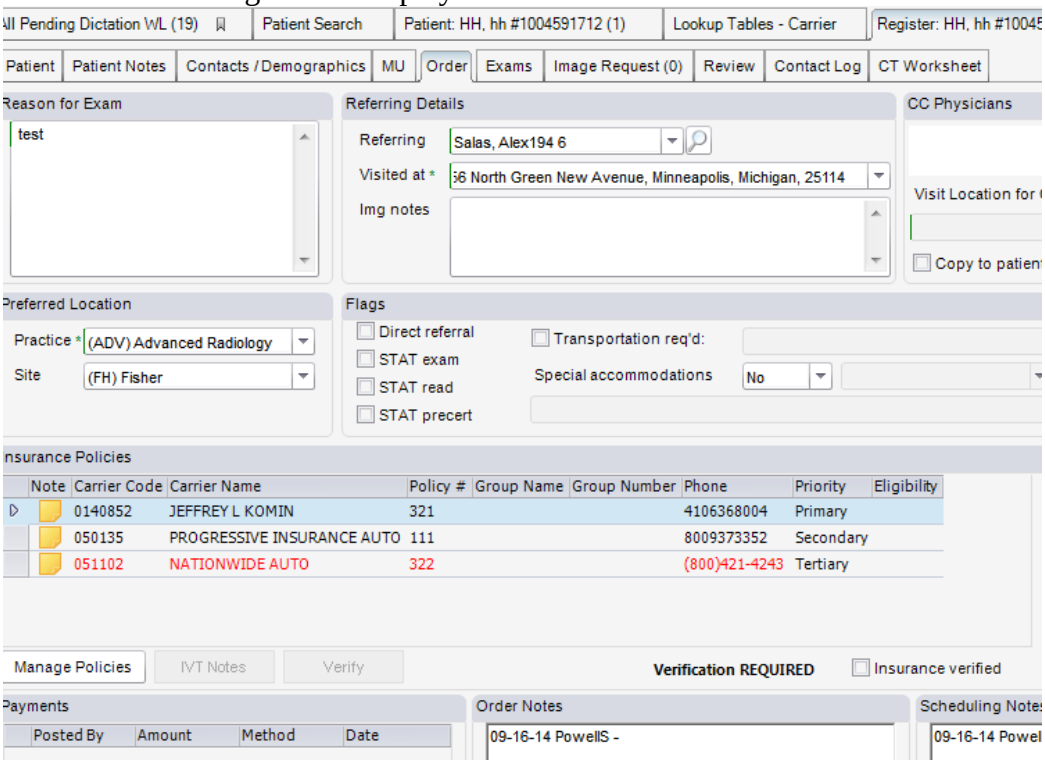


**Figure 5.62 – Inactive carriers**

When a user goes into Manage Policies, there is a prompt that the RIS will now mark this policy as expired, and will remove the Use checkbox.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

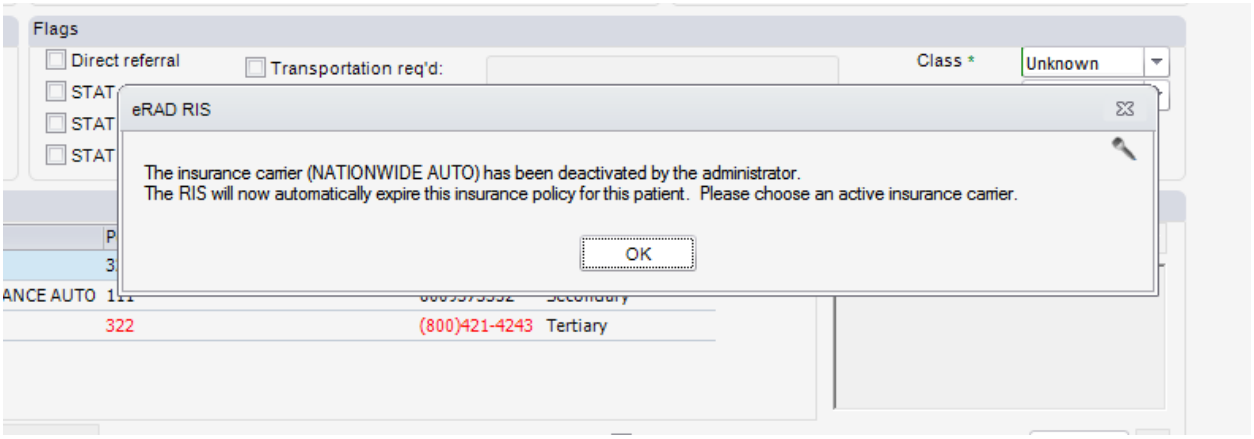

**Figure 5.63 – Message prompt for inactive insurance carrier**

Once they select the OK button the Expiry check box will be automatically selected and the Use check box will be deselected. The carrier row that has been deactivated will have text marked with strikethrough. The strikethrough equates to a carrier that has been de-activated. (does not equate to Expired… I will show that further below).

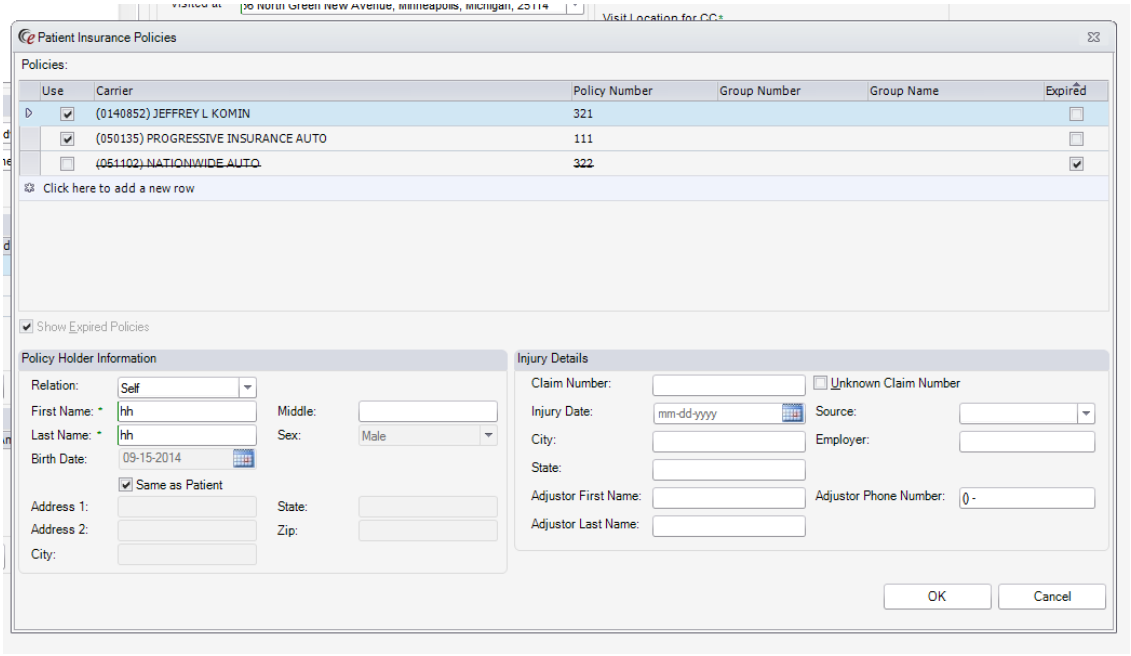

**Figure 5.64 – Insurance carrier that has been marked as inactive via lookup table**

If the user attempts to re-add the Use check box they will be prompted with a message informing that they cannot because it has been deactivated.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

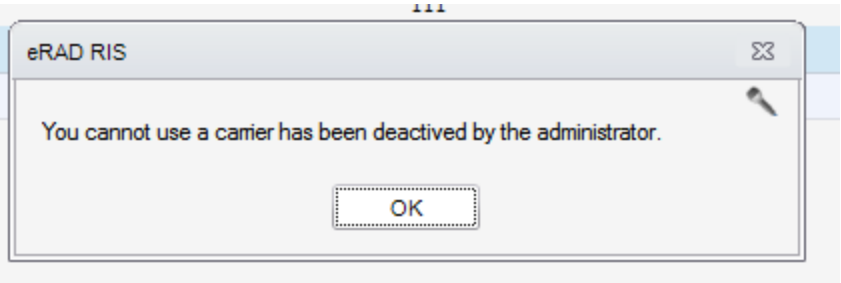

**Figure 5.65 – Message prompt attempting to Use deactivated insurance**

When the deactivated carrier is marked expired and has the strikethrough added and the Manage Policies window is closed the Insurance Policies grid will not display this carrier. If you remember, before it was accessed the first time, the carrier was displayed in red font

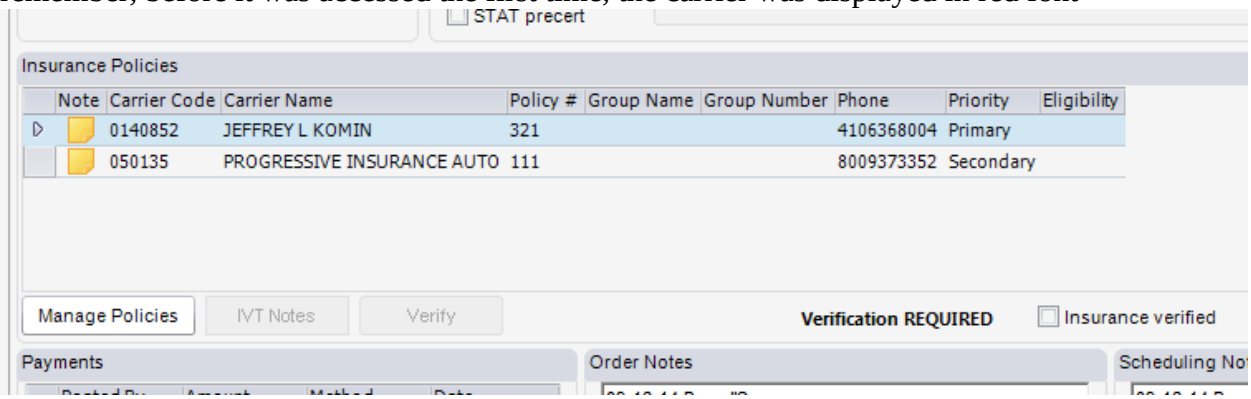

**Figure 5.66 – Deactivated insurance removed from Insurance Policies grid**

Now if the Manage Policies window is opened again, the deactivated carrier will be displayed in strikethrough grey font.

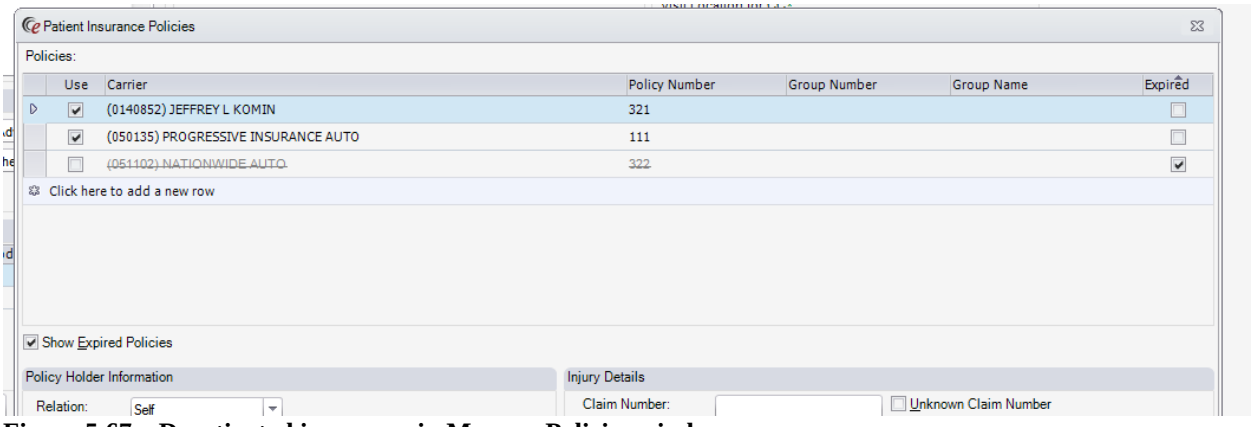

**Figure 5.67 – Deactivated insurance in Manage Policies window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

If an Administrator later re-activates this carrier, the next time a user opens the Manage Policies window, the strikethrough will be gone and the policy can be select for "Use" again.

NOTE: If the patient has a policy attached to their profile, and the administrator disables it, and then the patient is scheduled for a new procedure (ie, it did not already have a USE checkbox for this policy), the RIS will mark this policy expired without a notification to the user.

## Perform Exam – LMP Start and End Age Configurable

In current version of eRAD RIS the Last Menstrual Period date is required for female patients between the ages of 12 and 56. In Build 44 we have introduced two new system configuration settings to make the start and end age configurable.

The system configuration setting of "**LMPStartingAge**" will determine the starting age to have the Last menstrual period date and pregnancy fields enabled. The default value is 12 years of age.

The system configuration setting of "**LMPEndingAge**" will determine the end age to have the Last menstrual period date and pregnancy fields enabled. The default value is 56 years of age.

| System Config Code | Value | Default | Description |
|---|---|---|---|
| [..a..]: lmp | [..a..]: | [..a..]: | [..a..]: |
| LMPStartingAge | 12 | 12 | (value = int) When the patient reaches this age, the LMP checker will be enabled on the technologist screen. |
| LMPEndingAge | 56 | 56 | (value = int) When the patient reaches this age, the LMP checker will no longer be enabled on the technologist screen. |

**Figure 5.68 – New system configuration setting to determine LMP start and end ages**

## Perform Exam – Additional Copy Paste options

The Perform Exam window has a copy paste function that can be used when a user wants to copy key fields from one study to another of the same order. The fields of Assigned Radiologist and Performing Radiologist have been added to the Items to copy list.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

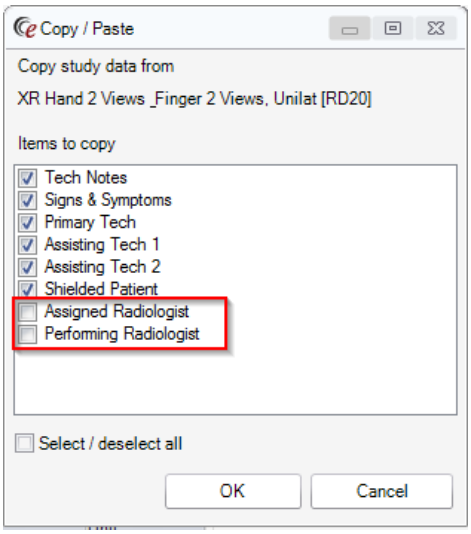

**Figure 5.69 – Additional options for copy / paste function**

## Retain Pre-Cert Approval on Reschedule

During the point of reschedule, after the desired studies have been selected to be rescheduled but the scheduled studies do not change, all existing Pre-cert information will be copied up to the new study item. If the Pre-cert has been approved and the expiration date has not been reach yet, then the Pre-cert status will remain as approved.

## User Management – Internal Person Search

When searching for an internal person using the Quick Search in the upper right of eRAD RIS we have added the ability to search on username. To search on username, prefix your search with a colon :

Example, my username is darcyn. To perform an internal person search on that username enter

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

:darcyn in the search field.

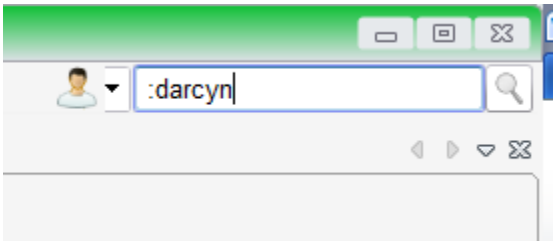

**Figure 5.70 – person search on username**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## User Management – Helpdesk Reset Password

We have added a method for users who don't have Personnel access to assist users who require a password change, forgotten passwords, etc…

This feature is enabled with the access string "**Config.TechSupportChangePassword**" that has a default of None. From the Internal Person Search window a user with this permission can right click on the users account and select the Reset Password option

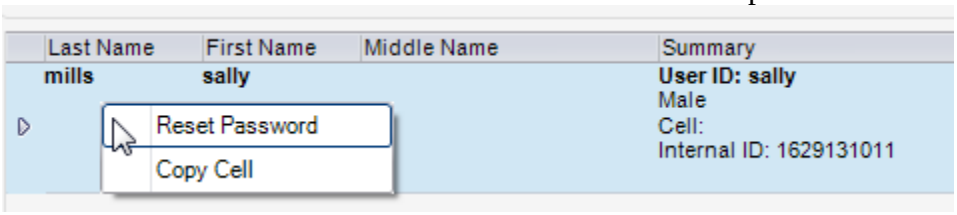

**Figure 5.71 – Reset Password from Internal Person Search**

The Reset Password dialog supports 3 use cases:

1. Modify the RIS password for a user who is using RIS authentication
2. Modify a RIS user so that they begin using their domain password instead of their current password
3. Modify a user who is using domain authentication so that they begin using RIS authentication

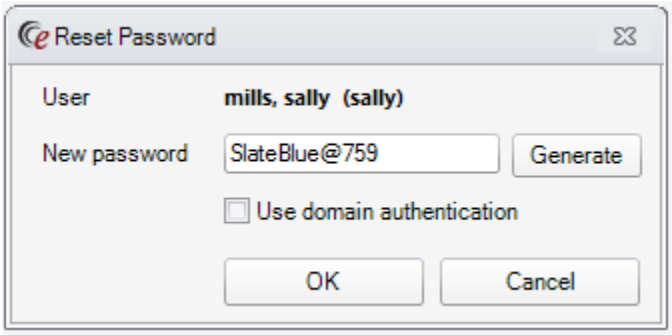

**Figure 5.72 – Reset password window**

The Reset Password dialog box generates a new password automatically for users who are using custom authentication although the help desk user may choose to generate a new password instead by pressing the "Generate" button or by typing in a password of their choosing.

An entry is generated in the audit table whenever a user changes either the domain_auth_flag or the password (either for their own account or for another user).

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Upon selecting the OK button the user will be presented with a confirmatory message

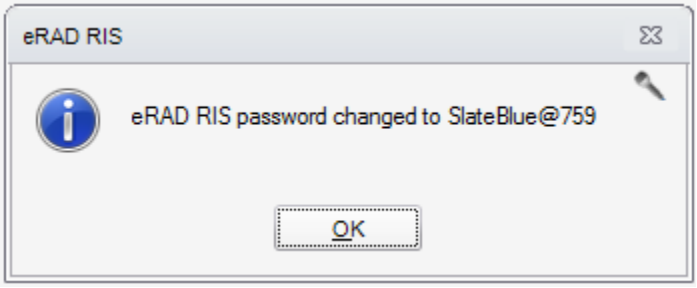

**Figure 5.73 – Confirmatory message informing password has changed for RIS Authentication user**

If the user chooses to select "Use domain authentication" the New Password field and Generate button will be disabled and the the confirmatory message will be slightly different.

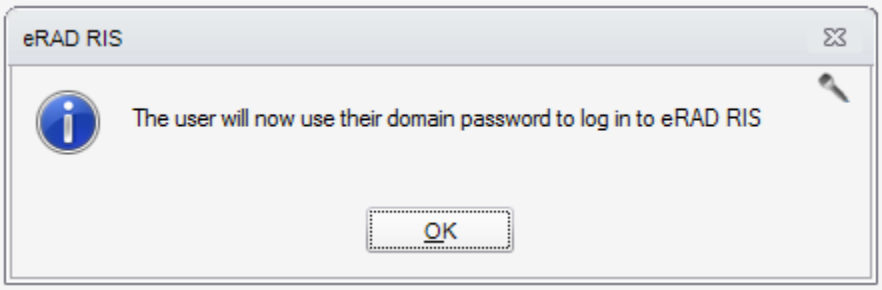

**Figure 5.74 – Changing user to be Domain Authenticated**

If the user is switched from to RIS Authentication from Domain Authentication the confirmatory message will inform the user of the change.

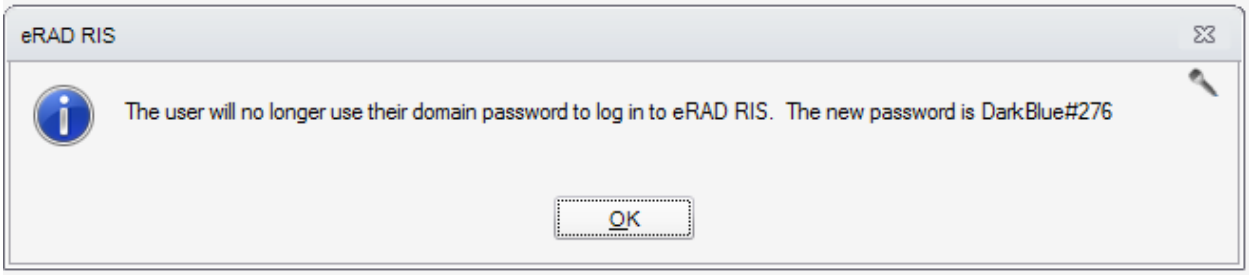

**Figure 5.75 – Confirmatory message when changing from Domain to RIS autentication**

As a security feature, a user who is not a RIS Administrator or does not have permission to access the full Personnel editor ("Config.LookupEditor.Personnel") is not allowed to change the credentials of a user that has these elevated permissions. This constraint is designed to prevent a user that is not allowed to access the personnel editor from hijacking an administrative account.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

If they attempt to change the password of a said person they will receive an error message

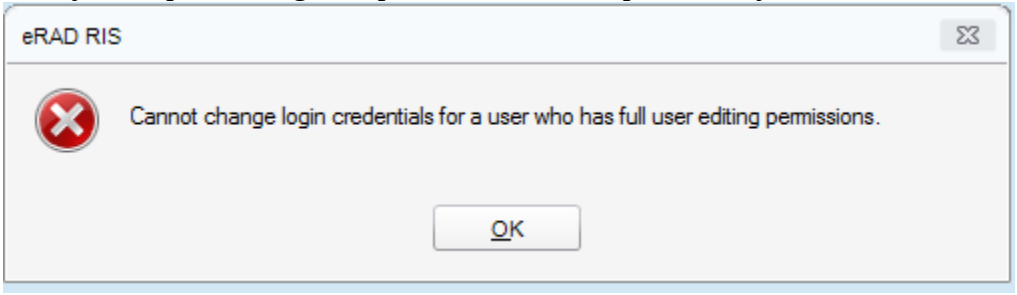

**Figure 5.75 – Cannot change password for user with personnel editor permissions**

### Random Password Generation

Passwords are generated using a random color from the KnownColor enumerated type, adding a random symbol from the following list: `{ "!", "@", "#", "$", ".", "-", "+", "=" }`, and then adding a random number less than 1000.

IF the password criteria has not been met, the user attempting to reset the password will be informed with the following message.

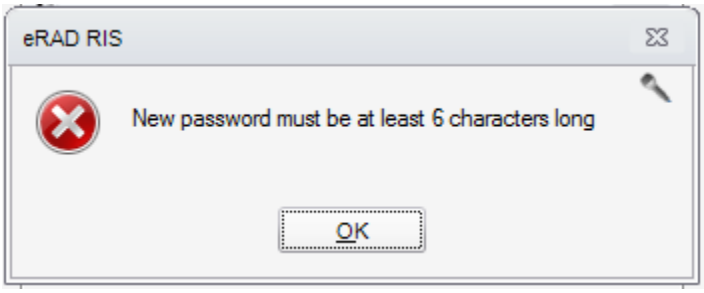

**Figure 5.76 – Password doesn't meet password criteria**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## User Management – Enhanced Password Requirements

At the user management level, eRAD RIS will no longer allow a user to set a password that doesn't meet the minimum length, is not considered "strong" or has been used by this user recently.

The "strong" password and minimum length are already defined in system config. As such we will leave that functionality in place. Strong passwords are forced on users resetting their own passwords. However in the administration section, both the personnel look up and reset password utility bypass the strong password requirement. This allows an admin to set a password to whatever they decide. There is one restriction; the password being set cannot be in the user's recent password history.

Recent passwords are stored in the database, as long as they persist; the user cannot have their password reset to one from their history. A system configuration setting of "**RecentPasswordRestrictionCount**" will determine how many passwords we store in the history for each user until they can re-use a previous password. The default value for this setting is -1. A value of zero or less disables the setting.

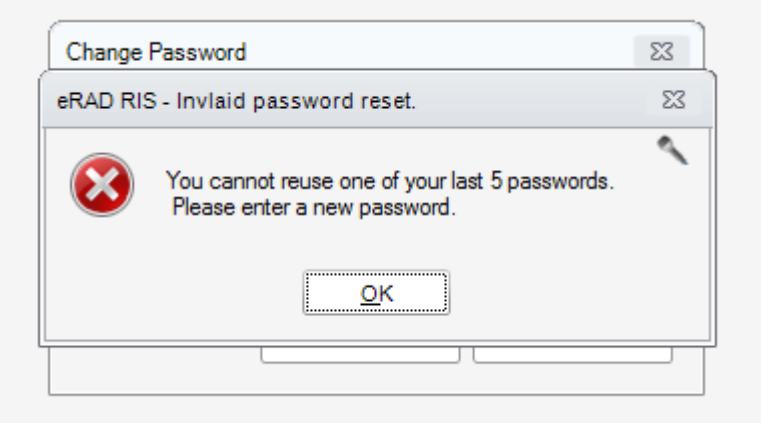

**Figure 5.77 – Message informing a recent password cannot be used**

Passwords will also now expire after a defined amount of time in days. The system configuration setting of "**ExpirePasswordInDays**" controls this feature. A default of -1 is applied to this setting. A value of zero or less will disable this setting. Once expired, the user will be able to login one more time. At this time, they are presented with a reset password screen and notified that their password has expired and must be reset. If they manage to bypass this, the user will be locked out upon next login attempt.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

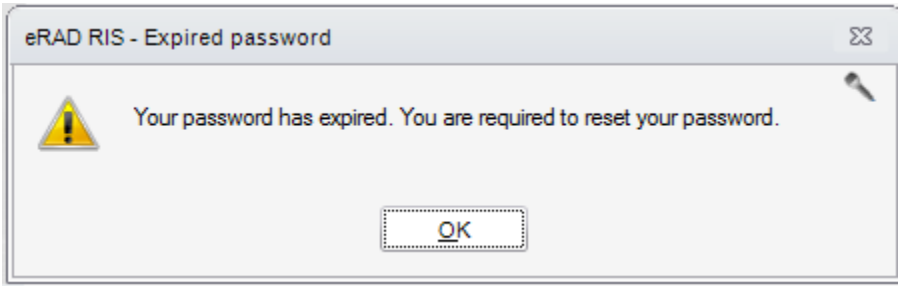

**Figure 5.78 – Password reset message**

Users will be locked out if they try to login with an incorrect password more than a system configuration defined set amount of attempts. The setting that controls this feature is "**AllowedPasswordFailAttempts**" that has a default value of -1. Values of zero or less will disable this setting.

Locked out users will need to contact their administrator to be unlocked/reset.
To unlock the account, and administrator simply sets a new password, this updates/resets the users failed attempts and change date.

**Figure 5.79 – user account locked message on login in attempt**

Passwords reset in the personnel editor and the tech support reset password utility will set the passwords as expired. This will force the user to reset their password upon login.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Track Viewing of Audit Log

We will now capture in the audit log the user activity when the audit log is accessed and when a eRAD RIS based audit log management report is accessed.

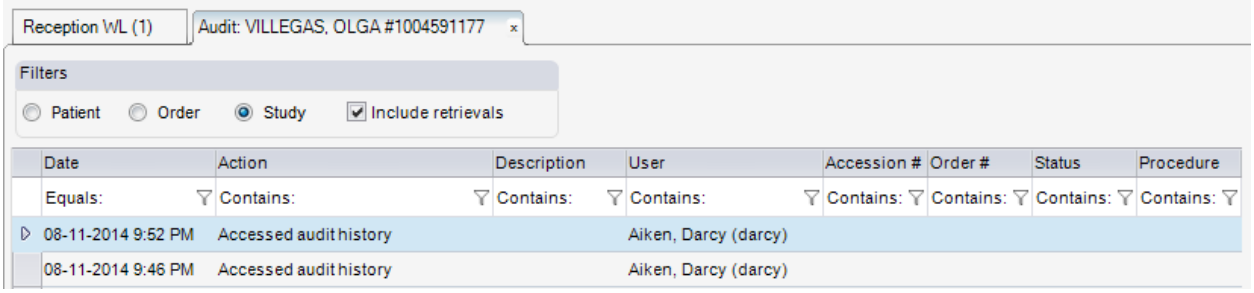

**Figure 5.80 – Audit log entry of a user accessing audit log**

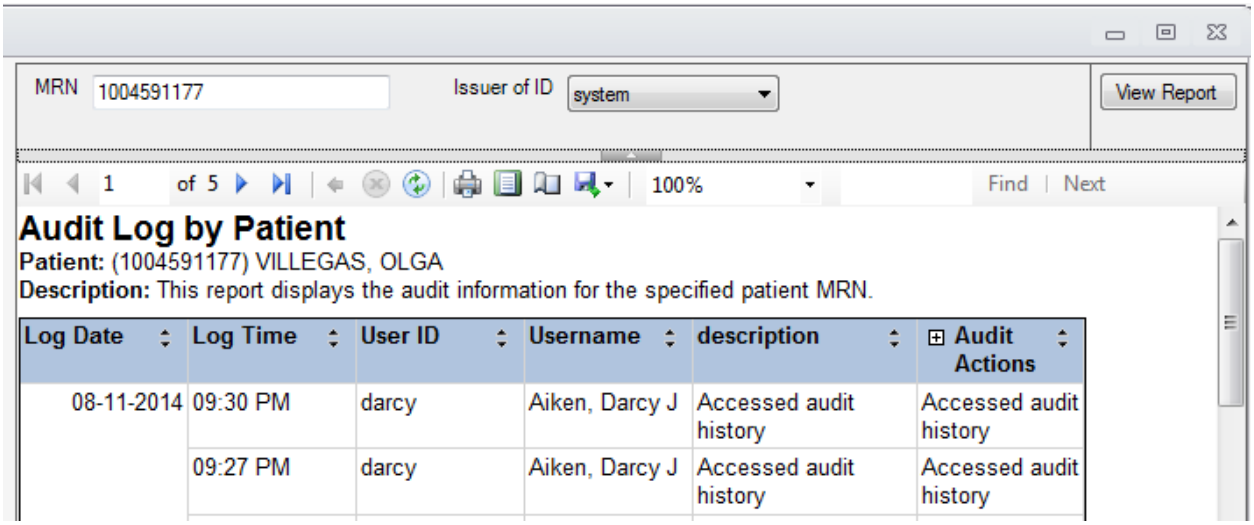

**Figure 5.81 – new entry displayed in the audit management report (running the report adds a new entry)**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Work List Context Menu Re-Organization

Context menu organization for worklist context menus.

Group 1: Workflow/data entry screens – These are status dependent. They are in reverse workflow order, therefore, the 'latest' and most likely option will always be on top.

# 8. Resolved Defects

Bugs Suggested Features and Support Issues resolved in build 2.44. The extract is taken from Redmine bug tracking system and only displays defects resolved in 2.44.

| Bug # | Priority | Subject | Category | Found Version |
|---|---|---|---|---|
| 6954 | Immediate | Reporting - Batch dictation files are not cleaned up if user closes the screen | Embedded Reporting | 2.42.09 |
| 8539 | Urgent | Laterality for scheduled procedure is not being initialized as expected. | | 43.1 |
| 8396 | Urgent | Patient Name to be included in Email message to RADAR | Document Distribution | 2.43.1 |
| 8085 | Urgent | CD Import - Windows 7 CD Burning via Explorer prevents us from scanning CD without DICOMDIR | CD Burning | 43 |
| 8038 | Urgent | Lab Results - have to change the date twice in order for it to save | Meaningful Use | 43.0.11 |
| 8014 | Urgent | Carestream PACS integration Read Only mode issue (Copy of #8011 for 43.0.14) | PACS (Non - eRAD) Integration | 43.0.12 |
| 7875 | Urgent | Insurance Eligibility - Amount to collect in View Edit | Insurance Eligibility | 43.0.6 |
| 7826 | Urgent | PACS IW - Infinite loop trying to open study with invalid external id | PACS (Non - eRAD) Integration | 2.43.1 |
| 7589 | Urgent | patient insurance group name is limited to 20 characters | DB | 2.42 |
| 7574 | Urgent | c_frm_core_view - joining site based on scheduled_modality_code, should join on study table _site_code | Web Services/DB | 42.1.2 |
| 4228 | Urgent | RadNet - Mammo - Add BIRADS trademark | Thick Client GUI | 2.43.0.0 |
| 8465 | High | Zotec TOS Integration - Print Receipt is displaying previous patient's data | | 43.1 |
| 8146 | High | Study not on Labwork Advised WL | Meaningful Use | 2.43.0.14 |
| 8128 | High | Insurance Eligibility - Schedule Order Screen Lockup | Insurance Eligibility | 43.0.14 |
| 8111 | High | Hologic integration configuration file needs to be configured individually for each user account | PACS (Non - eRAD) Integration | 2.43.0.14 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 7968 | High | MU Medications, Medical History and Allergies grids are not refreshing for a new patient | Meaningful Use | 43.1 |
| 7908 | High | Powerscribe - discard an addendum may delete original report if HL7 not received | Powerscribe Integration | 2.43.0.11 |
| 7805 | High | object reference error when scheduling from the Follow Up screen from BI-RADS 4/5 worklist | Web Services/DB | 2.43.0.6 |
| 7682 | High | Patient folder does not display the Signing Radiologist column | Patient Folder | 43.0.6.2 |
| 7577 | High | c_frm_core_view - expects referring to have an address | Web Services/DB | 43.0.2 |
| 7575 | High | Transportation Report - Should have a date range, site selector and DOS grouping | Mgt Reports | 42.1 |
| 7277 | High | Cannot access a disposed object. Object Name: RadGridView | Performance | 43.0.1 |
| 7126 | High | Dictated by user id changes to editor's id in PowerScribe 360 | Powerscribe Integration | 42.1 |
| 6958 | High | Scheduling -- start date for search criteria not set for mammo follow-up orders | Scheduling | 2.42 |
| 6610 | High | Ris is hanging after mt's make edits to a report | Embedded Reporting | 42.0.9 |
| 6504 | High | Reschedule with more than one procedure, the RIS sometimes invert the order | | 1.4 |
| 6345 | High | Poor usability around canceling adding new address to referring | Admin-Other | 1.42 |
| 5685 | High | Logout - after entering username and PWD error saying eRAD RIS is already running | Thick Client GUI | 1.42 |
| 5657 | High | Cannot click 'OK' or 'Cancel' in PACSLoginDialog when running in 'Minimized' recording control mode | Thick Client GUI | 1.42 |
| 5476 | High | Scheduling - Inactivity message displaying at incorrect time | Thin Client GUI | 1.41.005 |
| 4571 | High | Document Distribution eventually jams if a fax job gets stuck in Transmitting | Document Distribution | 1.40.16 |
| 4538 | High | IVT WL slow if user filters on both site and practice | Web Services/DB | 1.4 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 4503 | High | Perform Exam - Complete / Start can advance a study when it shouldn't | Technologist | 1.41 |
| 4049 | High | Hold codes - update status appropriately when Hold codes are changed to real codes | Thick Client GUI | 2.42 |
| 3757 | High | IVT pre-cert notes disappearing randomly | Thick Client GUI | 1.40.006 |
| 3751 | High | Modifying insurance can cause the study to fall off the IVT Worklist | Thick Client GUI | 1.40.006 |
| 2304 | High | A study in a "Pending" IVT status does not show the IVT flag on the worklist | Thick Client GUI | 1.38 |
| 1805 | High | visited location not filtered for cc physicians | Thick Client GUI | 1.38 |
| 8570 | Normal | Zotec TOS Integration - 401 Error | | 43.1 |
| 8300 | Normal | GetExamCountsByChair takes a rather long time to execute | Radiology Reporting | 2.43 |
| 8250 | Normal | IVT WL slow when query for practice | Worklists | 2.43.1 |
| 8220 | Normal | there are unused, overlapping (duplicate indexes) and missing on the db that may be contributing to excessive resource use | DB | 2.43 |
| 8201 | Normal | person address editor - using StrongPasswordRegex instead of EmailPDFPasswordRegex | | 2.43.1 |
| 8193 | Normal | c_frm_reminder_letter - view cleanup | Web Services/DB | 2.43.1 |
| 8159 | Normal | CD Import - 3rd Party DLL missing dependency | | 43.1 |
| 8148 | Normal | Powerscribe closing open report in eRAD RIS with autofeed turned off | Powerscribe Integration | 2.43.1 |
| 8143 | Normal | Radiology Reporting - Multitab reporting with Powerscribe 360 will cause tabs to close and save | Powerscribe Integration | 2.43.0.6 |
| 8126 | Normal | MU - CQM Measures Report is hanging on the SouthEast DB | Meaningful Use | 2.43 |
| 8125 | Normal | The scheduled DB job rRIS_California : Update Mammo Letters WL Reason was taking 25 minutes to run | Mammography | 2.43 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 8121 | Normal | Trace Data database logic includes needless refresh logic that generates needless CPU load | Web Services/DB | 2.43.0.14 |
| 8096 | Normal | Error when scheduling procedure plans and image requests | Image request | 43.0.14 |
| 8090 | Normal | Epson Discproducer problem does not write DVDs | | 43.0.13 |
| 8089 | Normal | Carestream PACS Integration - Accession Number being used instead of External Study Identifier | PACS (Non - eRAD) Integration | 2.43.0.12 |
| 8088 | Normal | Carestream PACS Integration - Password is stored in log file | PACS (Non - eRAD) Integration | 2.43.0.12 |
| 8087 | Normal | Insurance Eligibility - Zotec TOS not returning payment amounts back to RIS | | 43.0.12 |
| 8086 | Normal | Timeout error while burning images to CD | CD Burning | 2.43.0.11 |
| 8083 | Normal | Incoming EMR orders not matched to internal patient because of phone number formatting | EMR | 2.43.0.14 |
| 8068 | Normal | Create rRIS User SQL Script tries to insert RIS Administrators group but the group is already inserted as part of the B43 Base Schema | DB | 2.43.0 |
| 8022 | Normal | User Preferences - Integration Tab - Out bound reporting verbiage change | Radiology Reporting | 2.43.1 |
| 8020 | Normal | User Preferences - Input Device barcode event action patient search verbiage change | Radiology Reporting | 2.43.1 |
| 7974 | Normal | error during rescheduling process: The INSERT statement conflicted with the FOREIGN KEY constraint "FK_c_scan_document_association_c_study" | Scheduling | 2.43.0.12 |
| 7962 | Normal | Cannot match external patient during walk-in/scheduling after including "Existing Orders" | EMR | 2.43.0.12 |
| 7931 | Normal | Exams cannot leave HoldCodeCompleted status via Change Status -> Manual Status Update | Web Services/DB | 2.43.0.12 |
| 7838 | Normal | Creating an addendum - when you submit it , the status stays as SIGNED, Cannot sign off this addendum | Radiology Reporting | 43.0.7 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 7819 | Normal | Reporting Custom Fields - Magnet strength shows NOT AVAILABLE when table value is null or empty | Radiology Reporting | 2.42.1 |
| 7816 | Normal | CQM Measures Stage 2 will fail if the combined practice codes selected are more than 20 characters | Mgt Reports | 2.43.0.8 |
| 7775 | Normal | Peer Review - Signed by is showing user_id only not user id and name as per convention | Radiology Reporting | 2.43.1 |
| 7769 | Normal | run RIS services in console shows "unrecognized command line argument" on console screen | Web Services/DB | 2.43 |
| 7706 | Normal | MU CQM | Meaningful Use | 2.43 |
| 7652 | Normal | B43 base new install scripts cause an error. | DB | 2.43 |
| 7621 | Normal | Insurance Verified Checkbox disappears | | 43.0.5 |
| 7610 | Normal | Radiology Reporting - M*Modal remove unwanted events from interactive dictation | Radiology Reporting | 2.43.1 |
| 7609 | Normal | Radiologist Reporting - eRAD RIS log entered into capture log | Radiology Reporting | 2.43.1 |
| 7588 | Normal | Grids - All grids are missing the left hand border on the header row (in light mode) | UI Look and feel | 2.43 |
| 7507 | Normal | Clean up current editor control code in preparation for new interface implementation | Radiology Reporting | 2.43.0 |
| 7497 | Normal | biopsy surgeon selection shows referring's and other personnel that are not surgeons | Mammography | 2.43.0.5 |
| 7489 | Normal | Disabled menu items in dark mode aren't visually identifiable. | UI Look and feel | 43.1 |
| 7483 | Normal | Preferred Radiologist - may show radiologist from another practice | Radiology Reporting | 2.42 |
| 7470 | Normal | Scheduling- Error when choosing time from the Calendar view if modality room does not match procedure. | Scheduling | 2.43.05 |
| 7464 | Normal | Mgt Reports - Mammo Annual Radiologist Summary - the format of the values in the dropdown for the technologist is not the same as user dropdowns in other reports | Mgt Reports | 43.0.4 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 7447 | Normal | jfif file type and possible additional files extensions jif, .jpe, .jfi could cause rendering issues for browsers IE8 and earlier. | | 2.42 |
| 7445 | Normal | Light mode - Buttons sometimes appear white and super white (should all be super white) | UI Look and feel | 2.43 |
| 7444 | Normal | User preference for pending signature notification is worded poorly | Radiology Reporting | 43.1 |
| 7433 | Normal | Request Addendum - exception when performed modality is null | Radiology Reporting | 2.43.1 |
| 7431 | Normal | Peer Review Workflow - verbiage case | Radiology Reporting | 2.43.1 |
| 7411 | Normal | Notification for STAT cases pending signature count can be wrong | Radiology Reporting | 2.43.0 |
| 7409 | Normal | Reporting - able to edit read-only reports and sign off on studies dictated by other users | Radiology Reporting | 2.43.1 |
| 7407 | Normal | Peer Review Workflow - Unable to open or review locked studies from the All Peer Review Pending Action WL | Radiology Reporting | 2.43.1 |
| 7358 | Normal | Reporting - Layout not displaying tool windows properly when switching reporting modes or loading layouts | Radiology Reporting | 2.43 |
| 7351 | Normal | Assign to radiologist in scheduling screen doesn't use common radiologist picker control | Radiology Reporting | 2.43.1 |
| 7350 | Normal | User (Radiologist or Transcriptionist) picker undesirable highlighting when opening | Radiology Reporting | 2.43.1 |
| 7334 | Normal | Canceled Exams - add canceled date to details | Mgt Reports | 42.0.1 |
| 7330 | Normal | cancelling a completed study is getting error do to the I-Code Reference | | 2.43.0.2 |
| 7325 | Normal | Emergency access stays disabled after using it and doing next workflow | Radiology Reporting | 2.43 |
| 7315 | Normal | there is a chance that the arrive multiple study dialog box will open and then close by itself based on the existing of studies in specfic status | | 2.43 |
| 7311 | Normal | Manual change status Dialog screen Ok button doesn't always appear on the screen | Thick Client GUI | 2.43 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 7304 | Normal | Medical History - Date Ranges cannot overlap | Meaningful Use | 2.43.0.1 |
| 7297 | Normal | Smoking Status, 'never smoker', is interpreted by Clinical Decision Support that the patient is a smoker | Meaningful Use | 2.43 |
| 7296 | Normal | Edit Availability template Date Range will not allow the start date to be moved to be 5 days before the currently set Start Date | Scheduling | 2.43.2 |
| 7286 | Normal | QA workflow changes back to editing workflow after breaking glass | Radiology Reporting | 2.43 |
| 7284 | Normal | Error assigning radiologist on a study with a null performed modality | Radiology Reporting | 2.43 |
| 7278 | Normal | Practice code is not required for Authorization Rules | Utilization Management | 2.43 |
| 7273 | Normal | CDS_03_PossibleReaction alert giving errors on deleted row | Meaningful Use | 43.0.1 |
| 7272 | Normal | CDS_03_PossibleReaction alert giving errors on null column | Meaningful Use | 43.0.1 |
| 7257 | Normal | MU Allergy Severity Should be using the active lookup values | Meaningful Use | 2.43 |
| 7253 | Normal | able to "use" an insurance where the carrier was inactive | | 2.43 |
| 7248 | Normal | Error on GetData/DisplayData | Technologist | 2.43 |
| 7232 | Normal | Reporting - Create/Edit a report in exam done (bad data perhaps) will result in poorly worded message | Radiology Reporting | 2.43 |
| 7221 | Normal | User preference wording on integration tab state we drop an xml file and write another | Radiology Reporting | 2.43 |
| 7201 | Normal | CommonLib Config class uses non thread safe dictionaries for storing system and user configuration | Infrastructure | 1.43 |
| 7200 | Normal | DataStoreBase uses non thread safe dictionaries for storing credentials and connections | Infrastructure | 1.43 |
| 7199 | Normal | dbnull error on person first name when opening reporting screen | Radiology Reporting | 2.43 |
| 7197 | Normal | When registering a patient with multiple procedures, and then deselecting the | Reception | 2.43 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| | | procedure checkbox, an error is produced | | |
| 7180 | Normal | Inactive study items, study item certs are still be used to validation if precert is still required | Thick Client GUI | 2.42.09 |
| 7163 | Normal | Import ICD code window needs clean up | Admin-Other | 2.43 |
| 7143 | Normal | SAPS - mays stop processing jobs if a PowerScribe 360 encountered | Web Services/DB | 2.42.1 |
| 7142 | Normal | SAPS - service will not recover and process remaining jobs on signing failure | Web Services/DB | 2.42.1 |
| 7138 | Normal | Mammo letter config save button appears to not save changes | Admin-Other | 2.43 |
| 7086 | Normal | Internal Person search doesn't have default field | Admin-Other | 2.43 |
| 7077 | Normal | Nuggets - Scanned document nugget does not show print button unless screen is expanded | Worklists | 2.42 |
| 7068 | Normal | Flags - STAT READ has many different explanations and icons | UI Look and feel | 2.42 |
| 7060 | Normal | Null policy number causes failure in StudyDataset rules when signing reports | Billing | 2.42.0.2 |
| 7040 | Normal | Context menu on Patient folder (and likely other worklists) needs re-organization. | UI Look and feel | 2.43 |
| 7012 | Normal | Labels cut off in Modality lookup editor. | UI Look and feel | 2.43 |
| 6999 | Normal | There is no row at position 0 exception when trying to view C-CDA document | Thick Client GUI | 2.43 |
| 6977 | Normal | Radiologist Pending Edit worklist doesn't have the dictate button | Radiology Reporting | 2.43 |
| 6972 | Normal | BI-RADS picker set tissue density to inactive value | Mammography | 2.43 |
| 6947 | Normal | Patient search on external patient has split button active with on option that isn't available. | Patient Search | 2.43 |
| 6944 | Normal | MU - Lab results - the results date field has slashes rather than dashes | UI Look and feel | 2.43 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 6919 | Normal | Can't log in to RIS if time on client differs from server | Web Services/DB | 2.42 |
| 6898 | Normal | "ReportingEvent: contribute report" showing in verbose log when signing | Radiology Reporting | 2.42.1 |
| 6897 | Normal | "Starting open report in PowerScribe 360" is logged when not in PowerScribe 360 mode | Powerscribe Integration | 2.42.1 |
| 6859 | Normal | All Problem WL - the context menu is not highlighting the assigned radiologist | Worklists | 2.43 |
| 6858 | Normal | STAT UM Priority is not required | Utilization Management | 2.43 |
| 6841 | Normal | Details for rRISServices.exe and rRISServicesX64.exe should contain the proper version information | Documentation | 43 |
| 6834 | Normal | QA workflow, error when saving opens the wrong screen. | Radiology Reporting | 2.43 |
| 6833 | Normal | Enhance stored procedures to parameterize the queries | DB | 2.43 |
| 6826 | Normal | Dark mode - Person hyperlinks are black text on (usually) dark grey background. | Dark Mode/Theming | 2.42 |
| 6821 | Normal | Reschedule can show incorrect procedure if procedure was changed in Register window | Scheduling | 2.43 |
| 6771 | Normal | Error, clicking Post on Billing Exception WL | Billing | 42.1.2 |
| 6768 | Normal | RIS Upgrade Process consumes large amount of disk space on client machines over time | Client Install | 2.42 |
| 6750 | Normal | MU - CCDA Error when generating XML when Allergy is NULL | Meaningful Use | 2.43 |
| 6715 | Normal | Radiologist daily counts control opens wrong worklist when clicking Signed Pending Release item | Radiology Reporting | 2.42.09 |
| 6706 | Normal | Technique and TechNotes custom field show as "Not Implemented" | Embedded Reporting | 1.4 |
| 6705 | Normal | Selected Summary doesn't redraw properly when resizing the control | Radiology Reporting | 1.39 |
| 6704 | Normal | RTF to CDA converter doesn't handle \line rtf formatting | Powerscribe Integration | 2.42.1 |

# 9. Known Limitations

The following are Bugs Suggested Features and Support Issues found in build 2.44. Bugs reported in previous versions are not captured as Known Limitation in this document.

| # | Status | Priority | Subject |
|---|---|---|---|
| 8647 | New | Normal | Dictated By Date WL missing context menu items |
| 8635 | New | Normal | CT Dosage is not displayed with three decimal places in Perform Exam window |
| 8605 | New | Normal | MU tab- Medications - Switching from "Use grid" to "None" and saving deletes the current medication list. |
| 8594 | New | Normal | IVT WL, Pre-cert status stays the same when changing insurance at arriving/checking stage. |
| 8593 | New | Normal | Confirmation window thinks there are 2 exams on a rescheduled study |
| 8592 | New | Normal | Error upon trying to add new row in lookup tables |
| 8591 | New | Normal | Switching Insurance during reschedule makes the "Insurance verified" checkbox disappear. |
| 8587 | New | Normal | Contrast amounts that exceed Max Value are acceptable upon Saving in Perform Exam window |
| 8586 | New | Normal | Contrast alert prompt for exceeding max dose only displays one contrast name at a time if there is greater than one that exceeds. |
| 8581 | New | Normal | Template editor - opening an existing template in template editor, change the Practice, and then close, saying no to save changes will save the practice change. |
| 8571 | New | Normal | Add alternate MRN is using Issuer Code and Responsible Party is using Description from Issuer table |
| 8569 | New | Normal | Mammo drawing tool - Breast diagram does not change between male and female templates if the sex is altered after viewing template |
| 8568 | New | Normal | When logged in as a user with Admin or RIS Admin usergroup only, when you try to sign a report get an incorrect message. |
| 8565 | New | Normal | Mammo drawing tool - Unintentional lines can be added to a scar |
| 8562 | New | Normal | Image Request Status column on Patient Folder WL doesn't display status, stays empty |
| 8560 | New | Normal | Switching from Powerscribe360 to M*Modal with dictation window still open then click skip & continue will cause an error. |
| 8557 | New | Normal | Peer Review QA window - no scrolling action added to |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| | | | addendum request and peer review windows |
| 8545 | New | Normal | When an exam is aborted by a tech in the perform exam window, it is removed from the PACS WL, it can be set back to started then completed (exam done) but the exam is not recreated in PACS. |
| 8527 | Resolved | Normal | Error when trying to create a new template for dictation |
| 8490 | New | Normal | Access string WL.MT.ReportDraftedQaAll no longer used |
| 8473 | New | Normal | The "View Images" icon in the reporting window doesn't appear to work correctly. |
| 8471 | New | Normal | Walk-In not responding when Checking In multiple studies with multiple CC Physicians |
| 8467 | New | Normal | Walk-in removing first exam not refreshing scheduled date |
| 8466 | New | Normal | Mammo follow up orders can be opened in Register window |
| 8451 | New | Normal | Arrive/Checking In date field not auto-formatting resulting in error |
| 8449 | New | Normal | Null reference error closing "New Schedule" dialog from Appointment Book |
| 8448 | New | Normal | Attempt to alter Group Number or Group Name of Insurance Carriers causes a shift in the list and potential incorrect changes |
| 8443 | New | Normal | PreferredSite not auto-selected in search options under schedule tab when scheduling an order. |
| 8414 | New | Normal | removed former referring practice address references |
| 8408 | New | Normal | Inactive rooms showing in calendar view. |
| 8404 | Resolved | Normal | New Walk-in Button from Patient Search results does not trigger the existing orders prompt |
| 8392 | New | Normal | Error when scheduling and responsible party and emergency contact are the same |
| 8387 | New | Normal | Signing and Dictation context menu item behaviour is inconsistent |
| 8379 | Resolved | Normal | Title of a Peer Review Report and the title from the folder do not match |
| 8378 | Resolved | Normal | Peer Review Reports are not displaying today's data unless tomorrows date is included in the date range |
| 8374 | New | Normal | Error when trying to edit an Image Request if the Deliver To/Pickup By section did not have a name included. |
| 8302 | New | Normal | Assigned Radiologist is not recognized as assigned in the Assign to Radiologist window |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 8289 | New | Normal | Mammo breast diagram in reporting window has option to clear all images |
| 8285 | New | Normal | Dark mode in personnel editor -> account tab, cannot see values |
| 8282 | New | Normal | Dictation Control - Form that is already visible cannot be displayed as a modal dialog box. |
| 8278 | New | Normal | Close button appears to be disabled after selecting OK for ?no phone number? alert |
| 8273 | Resolved | Normal | Burn CD - Destination path label doesn't display path if Auto Select is used |
| 8262 | New | Normal | Mgmt Report: Audit Log by Patient |
| 8249 | New | Normal | Diagnose Reporting Screen Layout - show BI-RADS trademark |
| 8247 | New | Normal | Save as Order - Column 'visit_key' is read only |
| 8232 | New | Normal | Dark Mode - Theming - Recommendation dropdown in the BIRADS picker control not styling properly |
| 8230 | New | Normal | able to open the same accession twice in rad window |
| 8175 | New | Normal | Creating an addendum from "All signed by Date WL" using Powerscribe360 with auto feed next from worklist turned on, will not let you exit the exam if selecting No to creating an addendum prompt. |
| 8168 | New | Normal | Checking "Show Expired Policies" checkbox will undo changes made to a policy expired checkbox status |
| 8030 | New | Normal | Using the tab while adding an insurance policy causes another policy row to be started which causes an alert to user. |
| 8455 | New | Normal | Error produced if contrast amount is deleted and then the Start or Complete button is selected |

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 44.1 and subsequent server releases. This version of eRAD RIS is referred to as Build 2.44.1

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 2.44.1 is considered a new release of the application. It does not require a reinstallation of eRAD RIS. If users choose to reinstall, this is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 4. New Access Strings and Configuration Settings 44.1

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Access string / User Group Permission tables | Clinical.RepostToBilling | None | Enables access to the billing confirmation / Repost context menu action |
| Access string / User Group Permission tables | WL.BillingConfirmation | None | WL access for Billing Confirmation work list under Administration menu |
| Access string / User Group Permission tables | Clinical.Billing.ShowCodingColumns | None | Controls the ability to see the billing confirmation coding columns in the Billing Codes grid. See the view edit screen, for an example of the Billing Codes grid. |
| | | | |
| SystemConfig lookup | BillingConfirmationWLLag | 60 | The number of minutes Lag after which the billing code(s) that has not been finalized will display in the Billing Confirmation WL. |
| SystemConfig lookup | RISOrderSourceDescription | RIS | Describes RIS generated orders |
| SystemConfig lookup | ICodeExpirationDays | 5 | The number of days from the time an ICode is created to when it will expire, negative value will provide no expiry date. |
| SystemConfig lookup | TechContrastRequired | False | Disables the Contrast Required feature. The Contrast grid on the Perform Exam window and also on the View/Edit window will not require an entry. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 5. New Features and Enhancements

## Billing Integrity

The eRAD RIS sends "billing" messages to Zotec when an exam reaches a final state. A final state occurs when either the diagnostic report for the exam is signed (identified with a status of "Signed") or when only the technical component (acquisition) of an exam is to be performed (identified with a status of "ExamDoneTechOnly"). Once either of these states is reached a final validation is done on the exam's data, such as insurance details, referring physician details, etc. If the validation passes the study's billing status is changed to "Billed". If not the study is put on the Billing Exception WL. A RIS user can work this work list to correct the failed edits and subsequently push the study to a "Billed" status. Once the study reaches "Billed" status then eRAD RIS will send a "StudyBilled" message to Mirth. Mirth will then encode the message to appropriate format, likely HL7, and send it to the desired billing system for processing.

Although the eRAD RIS status suggests the study has been "Billed" the truth is RIS actually does not know if it has been billed or not. This status actually means the study has been pushed to an external billing system for post billing activity. eRAD RIS currently does not get any feedback from external billing systems to indicate the status of post billing activity. Without this it is very difficult to identify studies that have been reimbursed compared to those studies that still need reimbursement.

In build 44.1 a new work list titled Billing Confirmation WL has been added. Access to this work list is controlled by access string **"WL.BillingConfirmation"** which has a default of None. The work list is available under the Administration menu. This work list shows studies that have a billing code with the coding status of ***Not Understood, Not Sufficient, Tentative.***

In addition to the coding status, the study won't display until the Lag in the work list exeeds the system configured value for "**BillingConfirmationWLLag**" which is set in minutes. This is a new system configuration setting for this feature. It has a default value of 60 minutes.

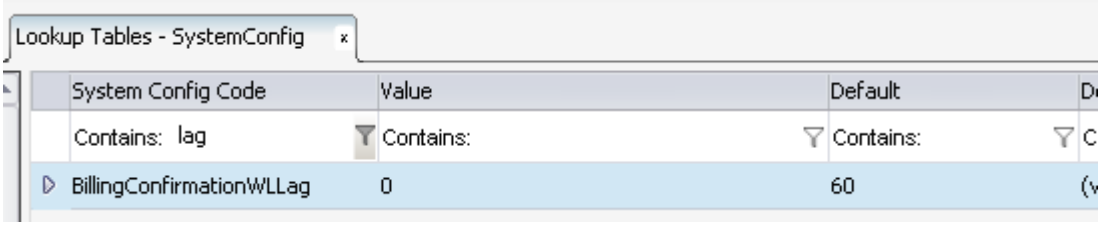

**Figure 5.1 – New system configuration setting BillingConfirmationWLLag**

The following is an example of the work list. Lag is a calculation of the minutes between <now> and coding_submitted_date. You can see the new columns of Coding Status, Coding Submitted

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Date, Coding Last Action Date and Lag that have been created and included on this work list. All new columns are list further in this document

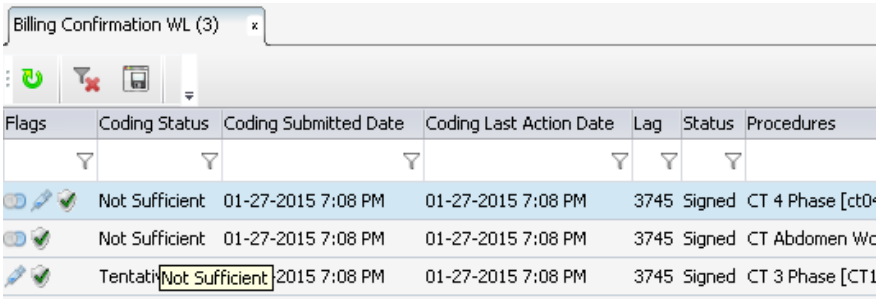

**Figure 5.2 – Billing Confirmation WL**

From the billing confirmation you can open the study in View Edit, then on the Billing Codes tab you can change the coding status to "not remitting" and document the reason in the coding_notes field.

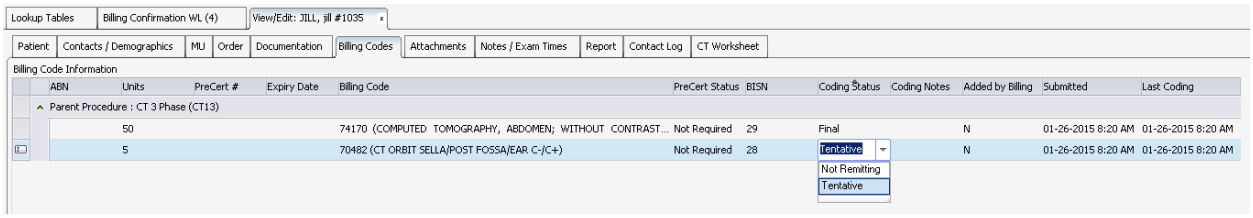

**Figure 5.3 – View/edit window access from Billing Confirmation displaying Billing Codes tab**

Looking at the Billing Codes tab above there are new columns added. The columns of BISN, Coding Status, Coding Notes, Added by Billing, Change Reason, Submitted, Last Coding and Downcoded Procedure (which is not displayed by default but can be added via column chooser. To access the column chooser right click on a column header)

From the billing confirmation you can also Repost items back to billing. This feature supports multi select and is accessible from the right-click "Repost" context menu.

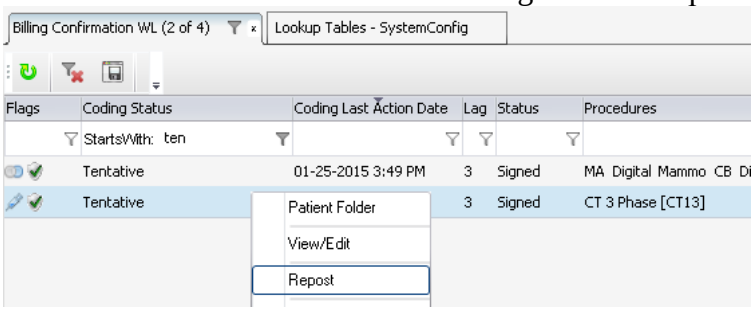

**Figure 5.4 – Repost from Billing Confirmation WL**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The following is the list of new columns added that appear on the Billing Confirmation WL or on the Billing Codes tab of View/Edit

**bisn** – (billing item serial number)

Identity column, generated upon saving a billing code. It is required to have a value in the DB. It should be unique for the entire database. Its purpose is to unique identify a billing item. To be used with in the interface with an external billing system.

**coding_status**

Billing code's coding status, which defaults to null. The external billing system will send messages to update the status. The coding status will be one of the following values:

- Submitted
- Not Understood
- Not Sufficient
- Tentative
- Final
- Not Remitting

If 'Not Understood' or 'Not Sufficient' the coding_notes field will contain an explanation. If the status is 'Final' and it is a new billing code the coding_notes field will contain an explanation

**coding_notes**

A general notes filed to be used by eRAD RIS to add comments regarding billing items that needed an action.

**added_by_billing_**flag

A flag to indicate that the diagnosis code was "downcoded"

**downcoded_procedure_code**

A procedure code assigned by the external billing/coding system

**coding_submitted_date**

A date time to indicate when the coding was sent to the billing system

**coding_recieved_date**

A date time to indicate when the coding was received in the billing system

**coding_last_action_date**

A date time to indicate last processing action by the external billing system, which will be used to calculate the lag column in the billing confirmation worklist.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Insurance Eligibility – Tier 2 and Advanced and Complex Parsing

If the insurance return's Xray section contains line items with "TIER 2" or "TIER TWO" we will move those line items so they only exist in the CT/MRI section of the return. For "TIER 2" and "TIER TWO", this is the default functionality. We have seen several cases where this is necessary.

For additional cases, where there is a need to move line items between service sections, we have introduced configuration via the c_eligibility_special_condidtions as shown in the following.

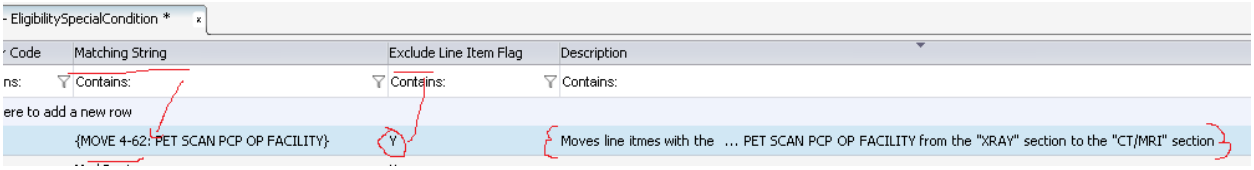

**Figure 5.5 – Configuring Eligibility Special Condition**

To meet the other requirements, customers can create new rules such as:

<move 4-62: Radiology Advanced>
<move 4-62: Complex Imaging >

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Insurance Eligibility – Store Carrier User and Pin for Eligible

Eligible now requires eRAD RIS to store and forward a user and pin to connect to a particular carrier. Although it is only for one carrier today, the number of carriers that eligible will require this for will increase in the future.

The EligibleConfig lookup table has 2 new columns added titled Portal User and Provider Pin. The Portal User will store the username required for Eligible to connect to the carrier and the Provider Pin is similar to a password that the Carrier will also require to be passed over.

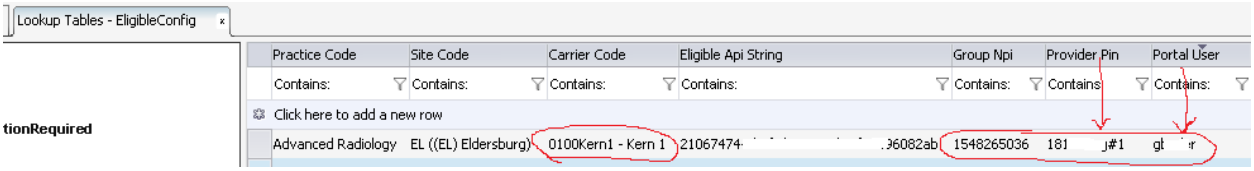

**Figure 5.6 – EligibleConfig lookup displaying new columns**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## CD Burning Enhancements

### Improved Detection of Not Enough Disk Space

In previous builds in which we supported CD Exporting (or CD Burning) from the RIS we would gather an estimated size of the images to be burned. The estimated sizes could vary greatly and the end result could be a significant size difference. This made it difficult to determine what media type to use (CD or DVD).

To improve the Burn CD process we will no longer use the estimated size and will no longer present message at beginning of burn process informing that you might want to consider using DVD. Instead we will now wait until 2/3 of the burn process (around 66%) is complete and we have an actual size of the image(s) that have been requested to be copied.

If the size of the image(s) exceeds 650MB we will present the user with a message "There are too many studies to fit on a CD. Would you like to burn these studies to a DVD?"

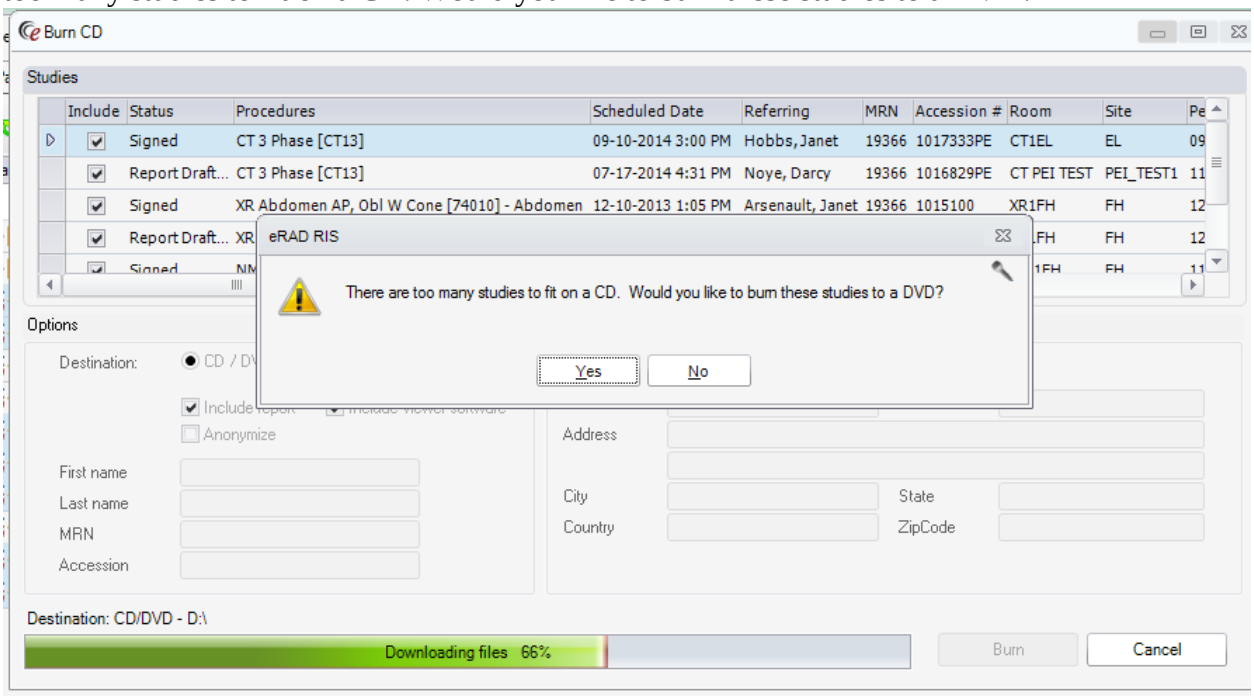

**Figure 5.7 – Burn CD prompt for too many studies for a CD**

With the message presented the user must change the media before selecting Yes. If they leave the CD in and select Yes the will immediately get an error of Not enough space and the Burn process will not resume. The user will need to start again.

Selecting No will abort the Burn CD process and close the window.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**Remember Previous Destination**
Another enhancement is the Burn CD window will remember the user previous destination selection. If you are a user that uses Disc Producer only, that destination radio button will be selected the next time you open the Burn CD window. Also if there happens to be multiple Disc Producers, the last one selected will also be remembered.

**CD Burner User Profile**
Lastly a new field was added on the Practice table that will allow for a "CD burner user profile" to be added and will be the default layout used when burning CDs.

A user account is created in eRAD PACS with a defined hanging protocol that will be the default layout of images displayed from burned CD will be presented. The username of the eRAD PACS account is then added to the CD burner user profile field. This is accessed under the Administration > Configure > System > Organization, select the practice that you want to have the profile associated with and open for edit. On the PACS and Reporting tab enter in the User ID that was created in the PACS in the CD burner user profile field. Save the Organization lookup table.

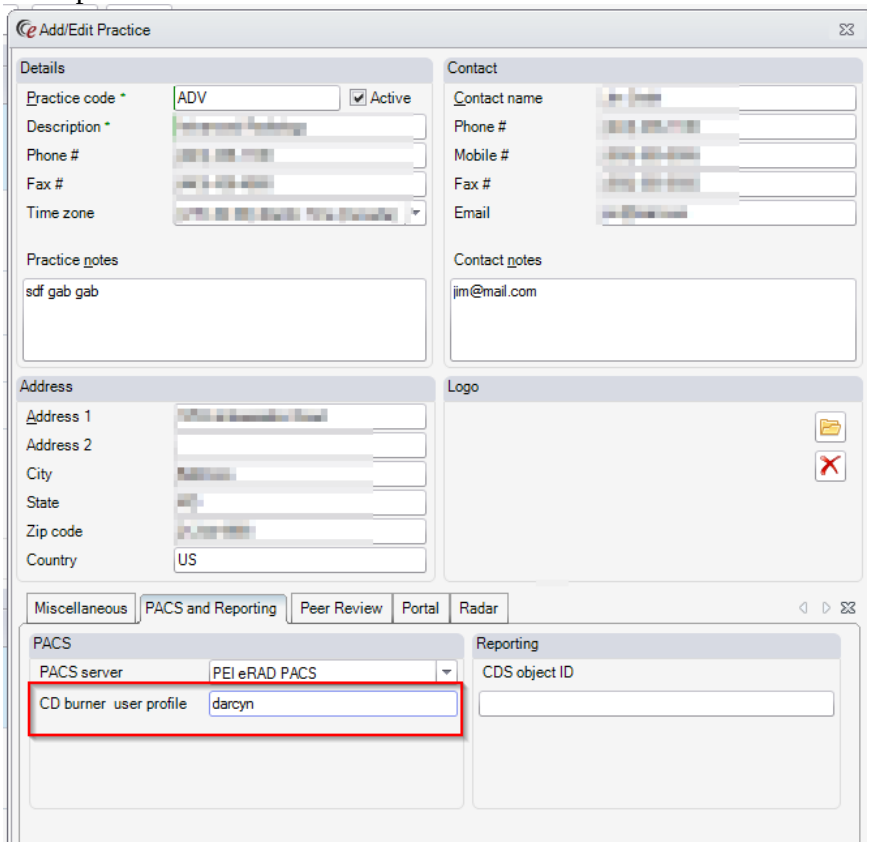

**Figure 5.7 – CD burner user profile field on Practice lookup table**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Show Patient Notes of Merged Patients

In previous versions of eRAD RIS, when a patient was merged with another, the source patients, patient notes didn't display on the destination patients, patient notes. In Build 44.1 a new hyperlink has been added to the Patient Notes tab. When looking at the figure below the Previous patient notes hyperlink will open a new Previous Patient Notes window and display the notes for all of the patients that have been merged to the current patient.

The notes will be grouped under a header that shows the previous patient name, MRN, and the date of the merge. The user can then use the mouse to highlight the text they want to extract and press Control+C to copy the text to the clipboard so that it can be pasted into the notes section and saved.

All screens that allow the user to add patient notes have had the Previous Patient Notes added.

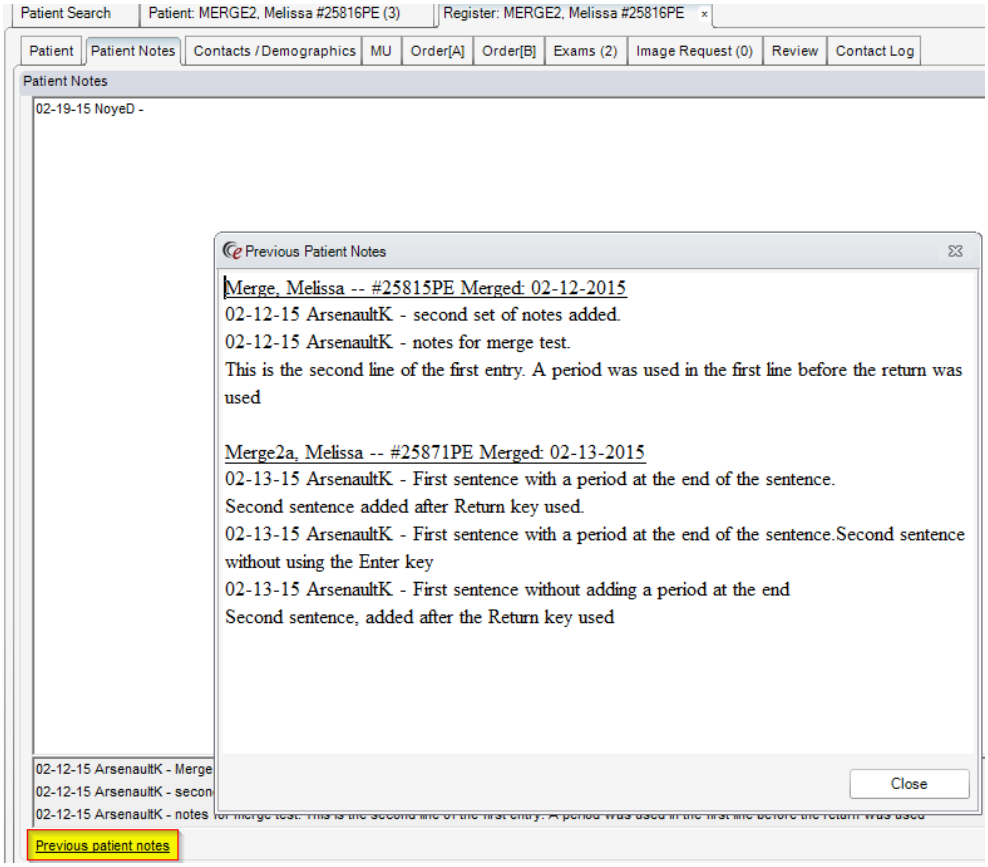

**Figure 5.8 – Displaying previous patient notes of merged patients**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Display Issuer of Order on Existing Orders Pop-Up Window

A new column titled Order Source has been added to the Existing Orders window prompt that will display the Issuer of the Order.

The Existing Orders prompt is displayed when creating a New Appointment or Walk-In for a patient that has pre-existing orders in the system.

IT will show either the value of the "issuer_of_placer_order_number" column in the order (when specified, this is generally the emr code), or the value from the new system configuration setting of "**RISOrderSourceDescription**" that has a default of "RIS" for an internally generated order.

If the "issuer_of_placer_order_number" matches an EMR code in the EMR lookup table, the tool tip for the Order Source column will show the full description of the EMR as well as the EMR code.

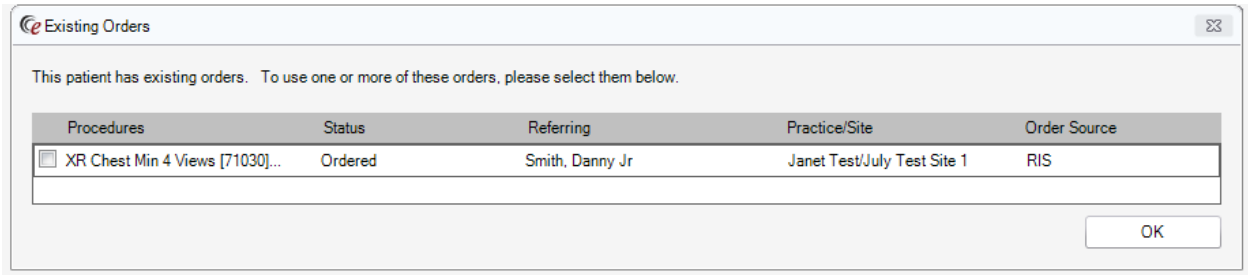

**Figure 5.9 – Issuer of Order "Order Source" added to Existing Orders window**

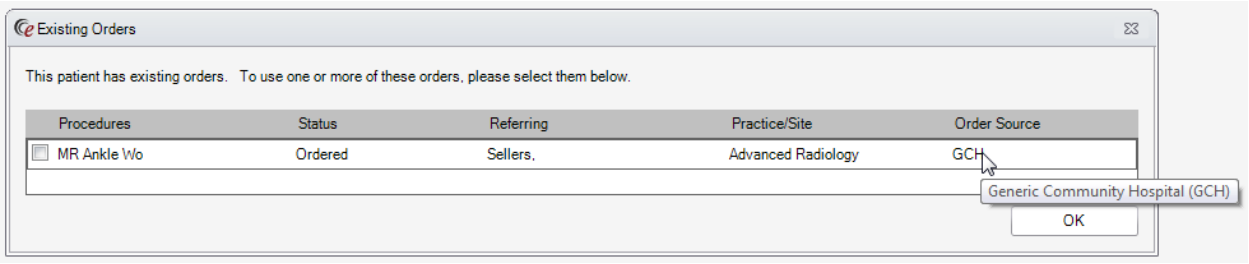

**Figure 5.10 – Order Source with tooltip displayed**

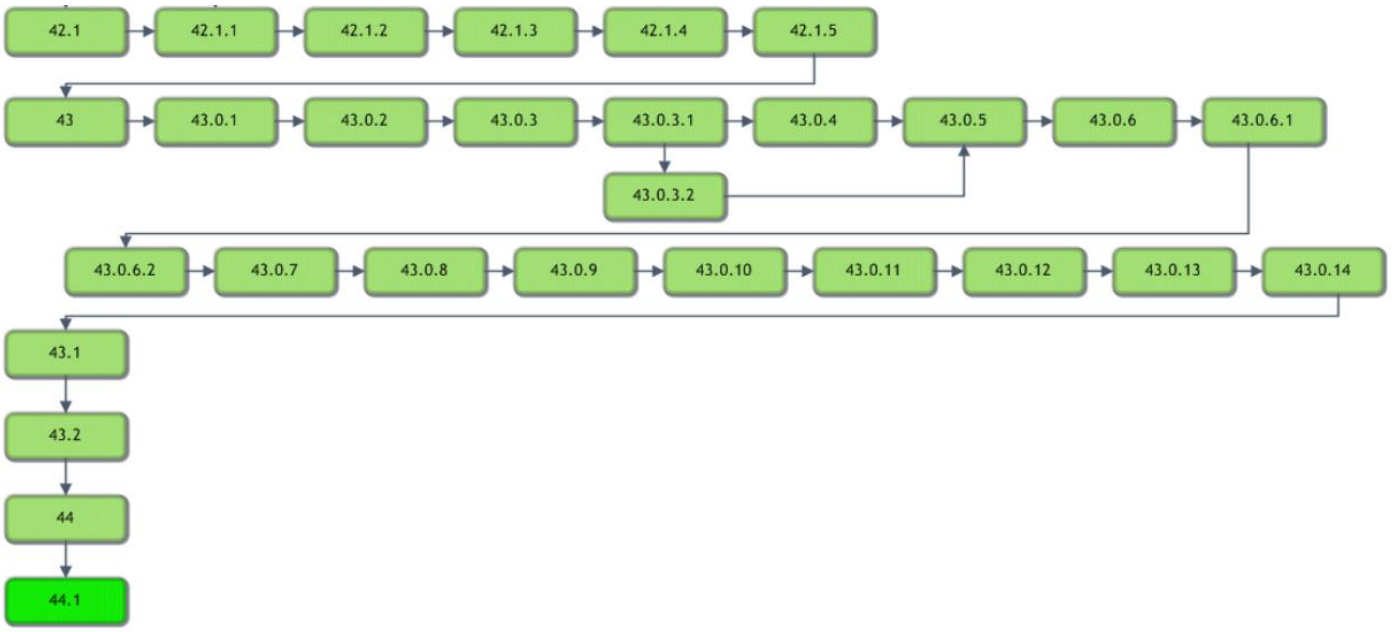
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Disable Contrast Required

The feature of Contrast, Sedation and CT Dosage Tracking was included with Build 44. The means to turn this feature off was on each individual procedure code using the Requires Contrast Flag. In Build 44.1 we have added a global configuration setting of "**TechContrastRequired**" which has a default of False. When using the default the Contrast grid will still be present in the Perform Exam and View/Edit windows but the user will not be required to enter a contrast to save the study. When a value of True is added, the feature will work as intended when released with Build 44.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 6. Code Stream



**Legend:**

Light Green = Released software

Gray = Will not be released

Bright Green = Current Release

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 7. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|
| 42.1 | - | 2.42.1.0.22744 | 2.42.0.0.21261 | 2.42.1.0.22744 | 2.42.1.0.22736 | GUI.zip, Web Service, DB updates and Management Report Deployment |

# 8. Resolved Defects

Bugs Suggested Features and Support Issues resolved in build 2.44.1. The extract is taken from Redmine bug tracking system and only displays defects resolved in 2.44.1.

| Bug # | Priority | Subject | Category | Found Version |
|---|---|---|---|---|
| 9269 | Immediate | B44.1 upgrade scripts are taking too long to run on large database | DB | 2.44.1 |
| 9012 | Immediate | missing reply to information for the secure message | Connect Patient Portal 1.x | 2.44 |
| 8223 | Urgent | IVT WL queries are terribly slow for a 3 Radnet data centers | IVT / Precert | 2.43 |
| 8759 | Urgent | Pending Dictation WL is taking a long time to process results. | Worklists | 2.43.1 |
| 9010 | Urgent | Insurance Eligibility - NPD pricing is missing some billing codes | Insurance Eligibility | 44 |
| 7256 | High | CD Burning - Improve detection of "not enough space" | CD Burning | 2.43 |
| 8463 | High | Insurance Eligibility - Eligibility is preventing scheduling of follow-up | Insurance Eligibility | 43.1 |
| 8653 | High | Insurance Eligibility - update on the order resulting in wrong IVT Intervention flag on the order table. | Insurance Eligibility | 43.1 |
| 8659 | High | All signed pending QA context menu option for verify reports doesn't open proper action and report can be released | Radiology Reporting | 2.44 |
| 8761 | High | QA flag is not removed after verifying edit | Radiology Reporting | 2.44 |
| 9023 | High | Activation issue when using next workflow in dictation screen with reuse on. | Radiology Reporting | 2.44 |
| 9024 | High | Possibility that when you open a reporting screen, RIS get relocated to cursor position. | Radiology Reporting | 2.44 |
| 3538 | Normal | Reception / Technologist wl Precert required column not updated correctly | Worklists | 1.4 |
| 4394 | Normal | Signed pending release WL context menu item missing. | Radiology Reporting | 1.4 |
| 7917 | Normal | CD Burning generate may generate http requests for status updates every second | CD Burning | 2.43.0.11 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 7967 | Normal | Insurance Eligibility - Tier 2 and advanced / complex parsing. | Insurance Eligibility | 43.0.6 |
| 8025 | Normal | Insurance Eligibility - Remaining Copay is incorrectly taken as co-payment amount | Insurance Eligibility | 43.0.12 |
| 8116 | Normal | CD Burning - remember users previous destination preference | CD Burning | 43.1 |
| 8273 | Normal | Burn CD - Destination path label doesn't display path if Auto Select is used | CD Burning | 2.44 |
| 8680 | Normal | MU - Generating of the Icode code needs to be expanded to generate the Icode code at Check-In Status | Meaningful Use | 2.43 |
| 8760 | Normal | ICode expiration date is currently hard codes to 5 days needs to be changed | Connect Patient Portal 1.x | 2.44 |
| 9157 | Normal | Unable to make contrast not required for techs without affecting MU contrast alerts | Technologist | 2.44 |
| 4617 | Low | Expired Insurances | Insurance Managment | 1.41 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 9. Additional Defects Resolved

The following list of defects was reviewed\retested in 2.44.1 and could no longer be reproduced. These defects may have been resolved with a duplicate defect logged in Redmine, resolved inadvertently with the resolution of another defect or work flow has changed so that the logged defect is no longer an issue or a defect was logged against a workflow that no longer is supported (Example – Bug 2124 – We no longer allow orders to be opened in registration window)

| Bug # | Priority | Subject | Found Version |
|---|---|---|---|
| 4574 | High | Outside Reads - history field changed to signs and symptoms | 1.41 |
| 4731 | High | Should not have the ability to click sign twice on a Laterality check message box | 1.41 |
| 5333 | High | Reporting - Attachment viewer "Show More" option doesn't display attachment | 1.41.1 |
| 2124 | Normal | procedure picker does not refresh after checkin | 1.1.2.37.14326 |
| 2764 | Normal | Scheduling - No warning on deleting studies with assigned attachments | 1.1.3.39.15389 |
| 2880 | Normal | Notification for pending signature not displaying when study count is met. | 1.39 |
| 3065 | Normal | Carrier search - Object reference error if search performed more than once | 1.4 |
| 3135 | Normal | Procedure code description in new appointment truncates (the display) of some procedure codes | 1.4 |
| 3175 | Normal | Pending Pacs Correction message needs clean up | 1.4 |
| 3361 | Normal | When cloning multiple Personel, scrolling loses focus on what you select | 1.1.3.39.16026 |
| 3524 | Normal | Reschedule a multi study second time does not include second study | 1.40.004 |
| 3537 | Normal | @accession number search throws error if patient has cancelled orders | 1.4 |
| 3582 | Normal | Reporting - protect sections and delete table raising exceptions | 1.4 |
| 3597 | Normal | Laterality check message on transcribe | 1.4 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 3600 | Normal | Audit log error when more then one patients audit history is opened | 1.40.006 |
| 3682 | Normal | Delete dictation on a study that was signed by contribute A (maybe b too) | 1.40.007 |
| 3893 | Normal | MT Transcribe & Continue/Close user preference not saving | 1.40.010 |
| 4372 | Normal | Creating a new appointment from the patient search window causes error. | 1.41 |
| 4421 | Normal | Shortcut for Tables not working in report editor (CTRL + T) | 1.41 |
| 4645 | Normal | Inactive procedure codes appear in the Procedure Plan table | 1.41 |
| 4646 | Normal | Schedule group lookup needs default column widths | 1.41 |
| 4901 | Normal | Scheduling - reservation needs to happen when picked | 1.4 |
| 4941 | Normal | Reporting - Autosave timing error | 1.41.002 |
| 4967 | Normal | Reporting - Submit audio in minimized mode throws error. | 1.41.002 |
| 5275 | Normal | Reporting - Adding empty space to field will allow user to sign | 1.41.1 |
| 5319 | Normal | Reporting - closing Attachment Viewer Preferences throws error in reporting window. | 1.41.1 |
| 5320 | Normal | Reporting - Attachment viewer in reporting window - double click to open the report will change to the next scan doc. | 1.41.1 |
| 5502 | Normal | Error when opening a patient merge suggestion: "Source patient not found" | 1.41.002.1 |
| 5519 | Normal | Reporting - pending signature on login and pending signature worklist notifications can be shown at the same time | 1.42 |
| 6033 | Normal | Scheduling - Holiday is not displayed in New Appointment Calendar view. | 1.42 |
| 3886 | Low | Reporting - Default button action on Skip/ Close button | 1.40.010 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 4027 | Low | Image request - Remove image request, select edit throws error | 1.40.013 |
| 4163 | Low | Perform Exam - Cancelled studies in patient history list have buttons enabled | 1.41.015 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 10. Known Limitations

The following are Bugs Suggested Features and Support Issues found in build 2.44.1. Bugs reported in previous versions are not captured as Known Limitation in this document.

| # | Status | Priority | Subject |
|---|---|---|---|
| 9166 | New | High | Contrast is required on view/edit when contrast setting is set to true and is required |
| 9181 | New | High | Contrast - Perform Exam on non-contrast and contrast study copying contrast/billing codes to non-contrast study |
| 9013 | New | Normal | Preferred Site (c_orderRow.filler_site_code) not auto-populating on Scheduling/Walk-ins |
| 9014 | New | Normal | Preferred Site (c_orderRow.filler_site_code) isn't required when saving an order through "Schedule Later" |
| 9100 | New | Normal | Contrast - If a contrast is made inactive it still is available for selection and could be added to billing codes |
| 9103 | New | Normal | Contrast billing- if a BillingCode is not Active it will still be added to the billing code tab if the Contrast associated to it is added to Contrast grid |
| 9106 | New | Normal | Rescheduling- choosing Schedule Later from the Appointment Book will not change the status of the procedure in Reception WL or Patient folder |
| 9122 | New | Normal | EMR orders - the laterality is sent from external system but is not populated in scheduling window |
| 9139 | New | Normal | EMR order does not reflect correct information on Review tab. |
| 9172 | New | Normal | Contrast - Billing codes added on Perform Exam window don't get pre-cert status added. |
| 9190 | New | Normal | Contrast and Sedation - Manually delete default contrast will remove 2nd contrast code from grid |
| 9117 | In Progress | Normal | EMR order - attempt to schedule a 2nd time and schedule window has incorrect information. |
| 9099 | Peer Testing | Normal | Verify edits context menu option available from Report Drafted WL |
| 8999 | New | Low | Personnel - Domain authentication checkbox being auto-checked with no visual indication |
| 9007 | New | Low | IVT Window - Removing Insurance on exam/practice that doesn't require IV isn't adding exam to IVT WL |
| 9158 | New | Low | EMR order - the phone number is not displayed correctly in WL |
| 9169 | New | Low | System Config  code - 'EnableContrastBillingRelation' |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| | | | the default is set to True, should be set to False |
| 9184 | New | Low | Contrast - Perform Exam - Billing Codes added to empty Billing Code grid do not re-enable the Edit/Delete buttons |
| 9185 | New | Low | Outside Read - alert for no billing codes only appears after clicking save |
| 9116 | Resolved | Low | EMR orders - schedule - The Map Procedures to EMR order window has a double 'the' in the instructions |
| 9009 | Duplicate | Low | Preferred Site dropdown required on scheduling after clicking Save as Order button. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# Server Update

For eRAD RIS
Version 2.0
Build 44.1
Update 44.1.1

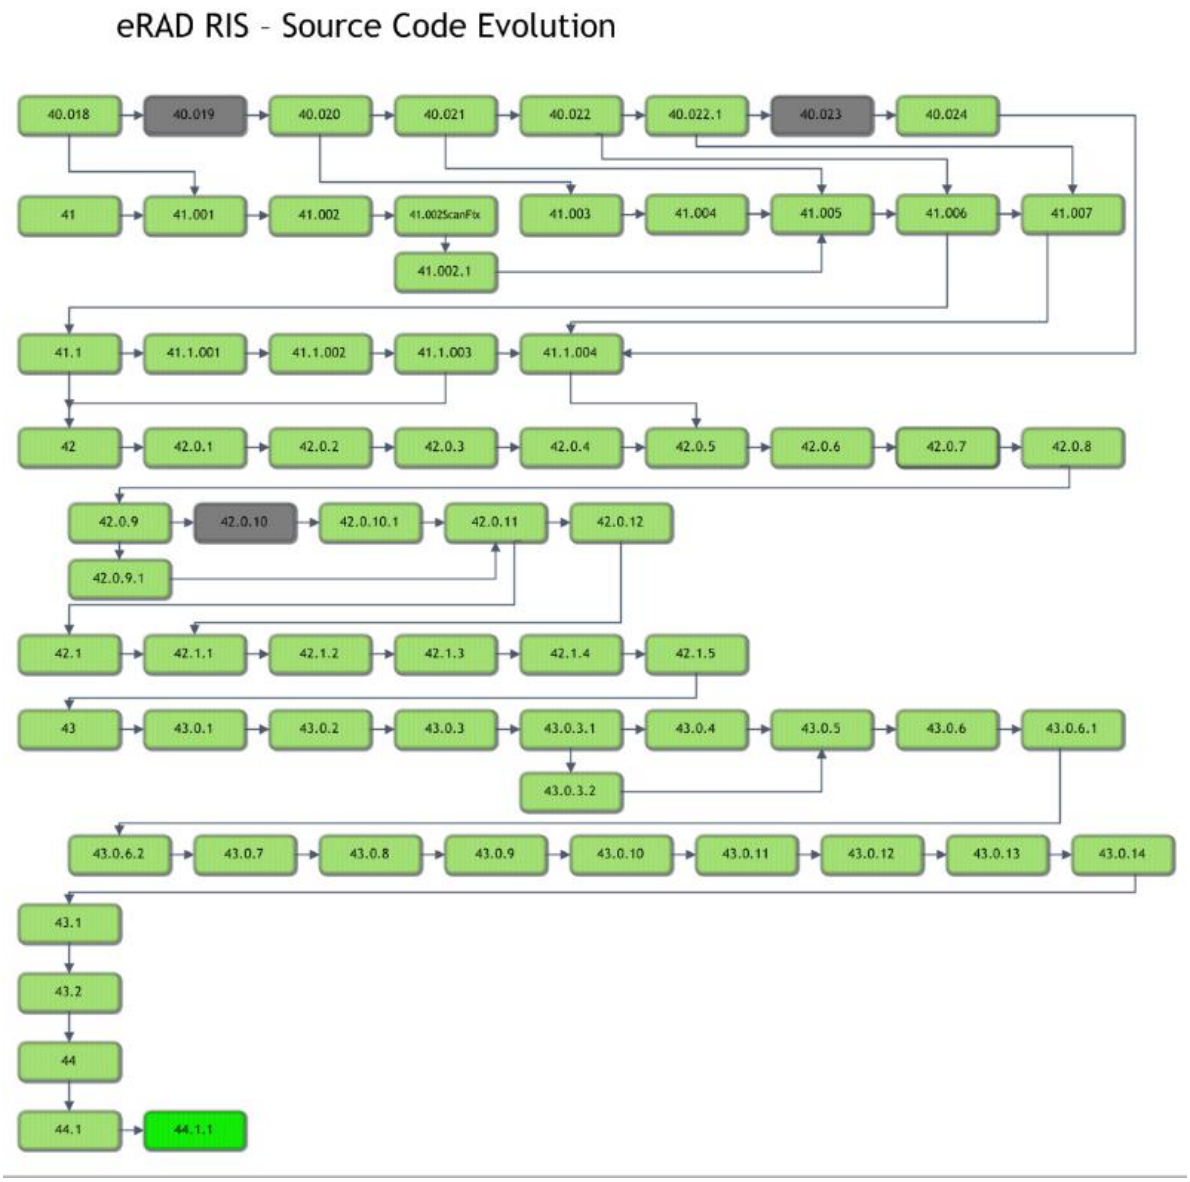
## 1. Defects Resolved

| Redmine # | Tracker | Subject | Priority |
|---|---|---|---|
| 9249 | Bug | Reporting Radiology - Previous field "ProcedureDescription" not working after upgrading to 44.x | Urgent |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 2. Code Stream



**Legend:**

Light Green = Released software

Gray = Will not be released

Bright Green = Current Release

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 3. Package Contents

Files included for this server update:

1) GUI ZIP Updates folder contains:
   - rRIS_1.3.44.1.1.27093.zip

## 4. Intended Audience

This document is created by the RIS Development team for the RadNet/eRAD RIS Implementation teams.

## 5. Who is affected

Build 44.1 installs. Server updates are not cumulative. This server update must be applied to 44.1.1

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## 6. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |

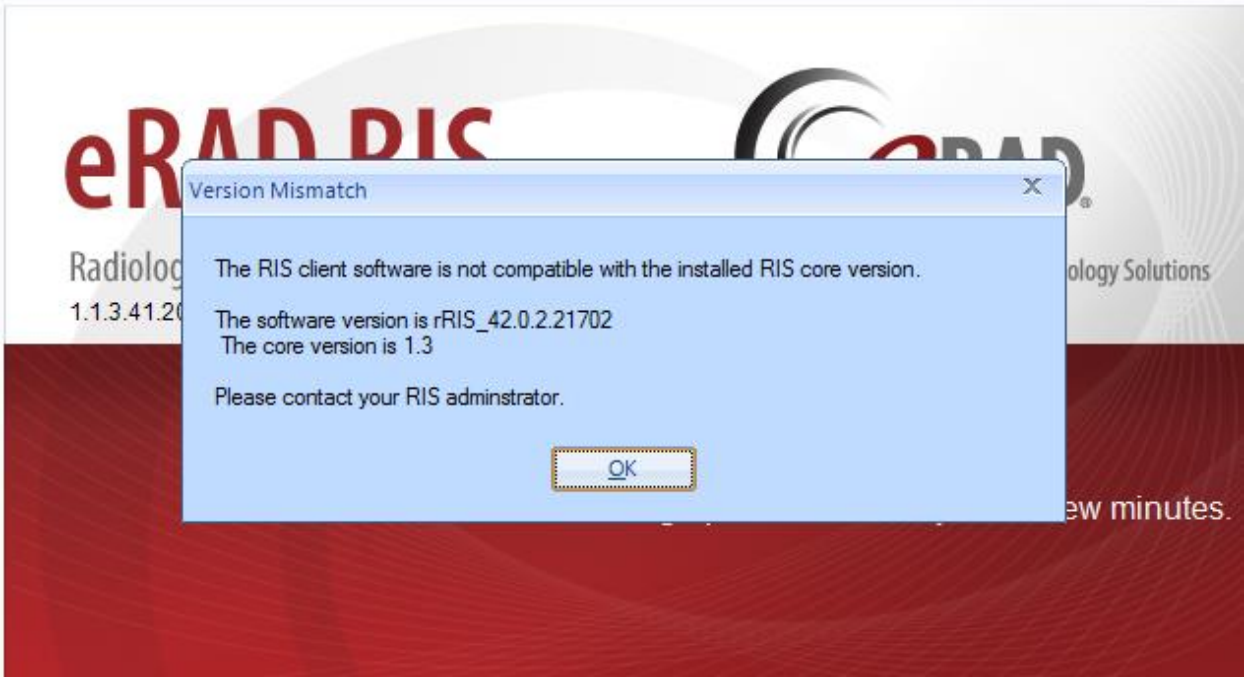
## 7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.44.1.1.27093.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_44.1.1.27093→ rRIS_1.3.44.1.1.27093
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 44.1 and subsequent server releases. This version of eRAD RIS is referred to as Build 2.44.1

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 2.44.1 is considered a new release of the application. It does not require a reinstallation of eRAD RIS. If users choose to reinstall, this is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 4. New Access Strings and Configuration Settings 44.1

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Access string / User Group Permission tables | Clinical.RepostToBilling | None | Enables access to the billing confirmation / Repost context menu action |
| Access string / User Group Permission tables | WL.BillingConfirmation | None | WL access for Billing Confirmation work list under Administration menu |
| Access string / User Group Permission tables | Clinical.Billing.ShowCodingColumns | None | Controls the ability to see the billing confirmation coding columns in the Billing Codes grid. See the view edit screen, for an example of the Billing Codes grid. |
| | | | |
| SystemConfig lookup | BillingConfirmationWLLag | 60 | The number of minutes Lag after which the billing code(s) that has not been finalized will display in the Billing Confirmation WL. |
| SystemConfig lookup | RISOrderSourceDescription | RIS | Describes RIS generated orders |
| SystemConfig lookup | ICodeExpirationDays | 5 | The number of days from the time an ICode is created to when it will expire, negative value will provide no expiry date. |
| SystemConfig lookup | TechContrastRequired | False | Disables the Contrast Required feature. The Contrast grid on the Perform Exam window and also on the View/Edit window will not require an entry. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 5. New Features and Enhancements

## Billing Integrity

The eRAD RIS sends "billing" messages to Zotec when an exam reaches a final state. A final state occurs when either the diagnostic report for the exam is signed (identified with a status of "Signed") or when only the technical component (acquisition) of an exam is to be performed (identified with a status of "ExamDoneTechOnly"). Once either of these states is reached a final validation is done on the exam's data, such as insurance details, referring physician details, etc. If the validation passes the study's billing status is changed to "Billed". If not the study is put on the Billing Exception WL. A RIS user can work this work list to correct the failed edits and subsequently push the study to a "Billed" status. Once the study reaches "Billed" status then eRAD RIS will send a "StudyBilled" message to Mirth. Mirth will then encode the message to appropriate format, likely HL7, and send it to the desired billing system for processing.

Although the eRAD RIS status suggests the study has been "Billed" the truth is RIS actually does not know if it has been billed or not. This status actually means the study has been pushed to an external billing system for post billing activity. eRAD RIS currently does not get any feedback from external billing systems to indicate the status of post billing activity. Without this it is very difficult to identify studies that have been reimbursed compared to those studies that still need reimbursement.

In build 44.1 a new work list titled Billing Confirmation WL has been added. Access to this work list is controlled by access string **"WL.BillingConfirmation"** which has a default of None. The work list is available under the Administration menu. This work list shows studies that have a billing code with the coding status of ***Not Understood, Not Sufficient, Tentative.***

In addition to the coding status, the study won't display until the Lag in the work list exeeds the system configured value for "**BillingConfirmationWLLag**" which is set in minutes. This is a new system configuration setting for this feature. It has a default value of 60 minutes.

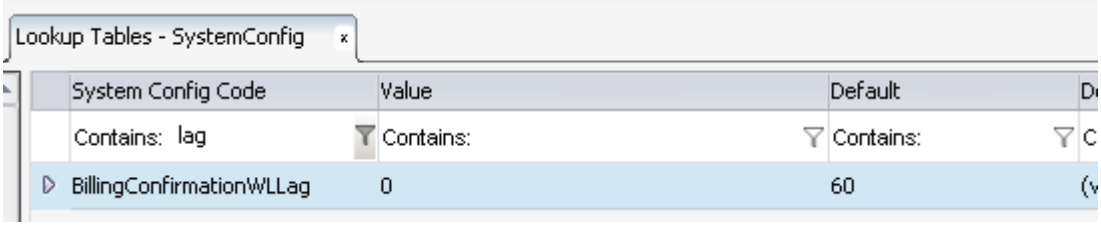

**Figure 5.1 – New system configuration setting BillingConfirmationWLLag**

The following is an example of the work list. Lag is a calculation of the minutes between <now> and coding_submitted_date. You can see the new columns of Coding Status, Coding Submitted

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Date, Coding Last Action Date and Lag that have been created and included on this work list. All new columns are list further in this document

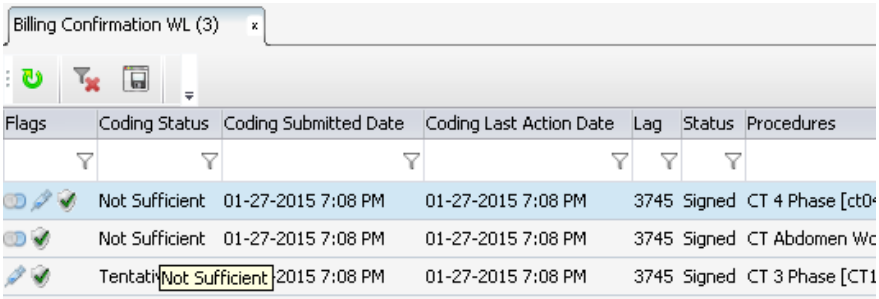

**Figure 5.2 – Billing Confirmation WL**

From the billing confirmation you can open the study in View Edit, then on the Billing Codes tab you can change the coding status to "not remitting" and document the reason in the coding_notes field.

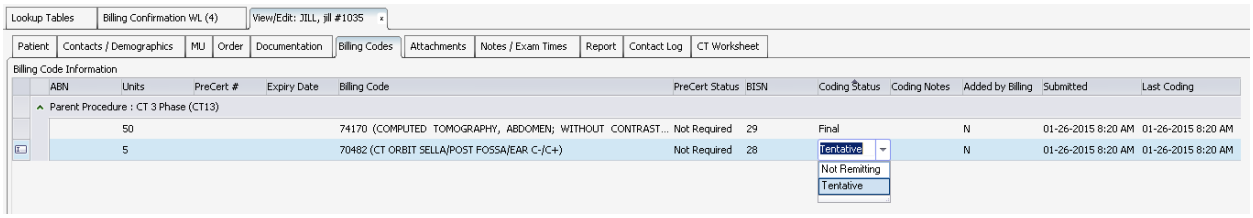

**Figure 5.3 – View/edit window access from Billing Confirmation displaying Billing Codes tab**

Looking at the Billing Codes tab above there are new columns added. The columns of BISN, Coding Status, Coding Notes, Added by Billing, Change Reason, Submitted, Last Coding and Downcoded Procedure (which is not displayed by default but can be added via column chooser. To access the column chooser right click on a column header)

From the billing confirmation you can also Repost items back to billing. This feature supports multi select and is accessible from the right-click "Repost" context menu.

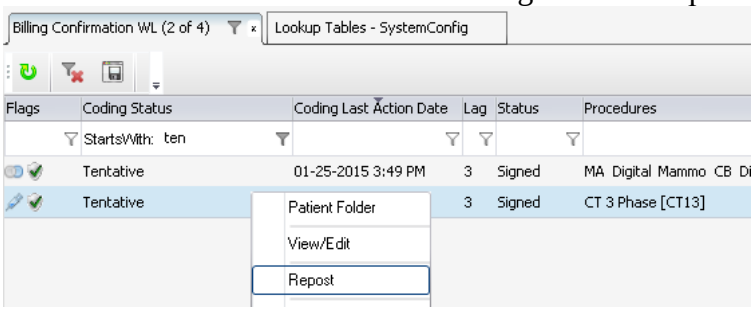

**Figure 5.4 – Repost from Billing Confirmation WL**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The following is the list of new columns added that appear on the Billing Confirmation WL or on the Billing Codes tab of View/Edit

**bisn** – (billing item serial number)

Identity column, generated upon saving a billing code. It is required to have a value in the DB. It should be unique for the entire database. Its purpose is to unique identify a billing item. To be used with in the interface with an external billing system.

**coding_status**

Billing code's coding status, which defaults to null. The external billing system will send messages to update the status. The coding status will be one of the following values:

- Submitted
- Not Understood
- Not Sufficient
- Tentative
- Final
- Not Remitting

If 'Not Understood' or 'Not Sufficient' the coding_notes field will contain an explanation. If the status is 'Final' and it is a new billing code the coding_notes field will contain an explanation

**coding_notes**

A general notes filed to be used by eRAD RIS to add comments regarding billing items that needed an action.

**added_by_billing_**flag

A flag to indicate that the diagnosis code was "downcoded"

**downcoded_procedure_code**

A procedure code assigned by the external billing/coding system

**coding_submitted_date**

A date time to indicate when the coding was sent to the billing system

**coding_recieved_date**

A date time to indicate when the coding was received in the billing system

**coding_last_action_date**

A date time to indicate last processing action by the external billing system, which will be used to calculate the lag column in the billing confirmation worklist.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Insurance Eligibility – Tier 2 and Advanced and Complex Parsing

If the insurance return's Xray section contains line items with "TIER 2" or "TIER TWO" we will move those line items so they only exist in the CT/MRI section of the return. For "TIER 2" and "TIER TWO", this is the default functionality. We have seen several cases where this is necessary.

For additional cases, where there is a need to move line items between service sections, we have introduced configuration via the c_eligibility_special_condidtions as shown in the following.

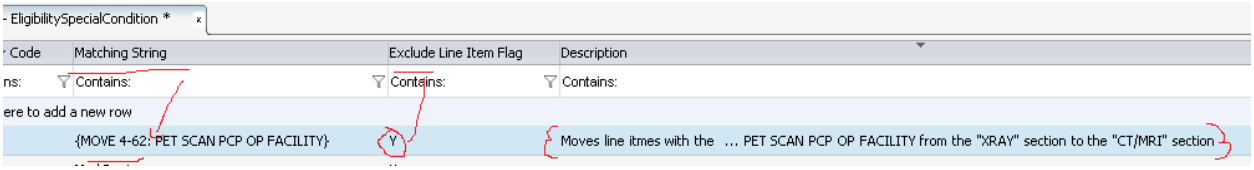

**Figure 5.5 – Configuring Eligibility Special Condition**

To meet the other requirements, customers can create new rules such as:

<move 4-62: Radiology Advanced>
<move 4-62: Complex Imaging >

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Insurance Eligibility – Store Carrier User and Pin for Eligible

Eligible now requires eRAD RIS to store and forward a user and pin to connect to a particular carrier. Although it is only for one carrier today, the number of carriers that eligible will require this for will increase in the future.

The EligibleConfig lookup table has 2 new columns added titled Portal User and Provider Pin. The Portal User will store the username required for Eligible to connect to the carrier and the Provider Pin is similar to a password that the Carrier will also require to be passed over.

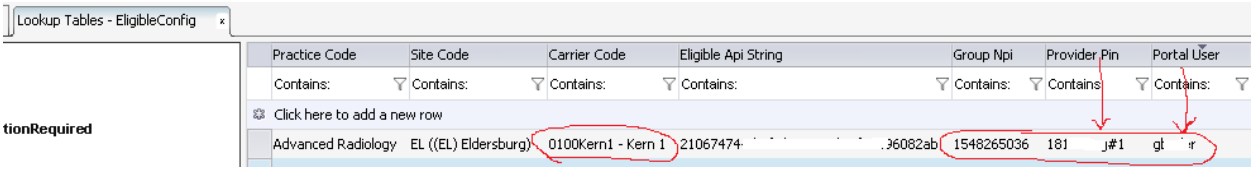

**Figure 5.6 – EligibleConfig lookup displaying new columns**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## CD Burning Enhancements

### Improved Detection of Not Enough Disk Space

In previous builds in which we supported CD Exporting (or CD Burning) from the RIS we would gather an estimated size of the images to be burned. The estimated sizes could vary greatly and the end result could be a significant size difference. This made it difficult to determine what media type to use (CD or DVD).

To improve the Burn CD process we will no longer use the estimated size and will no longer present message at beginning of burn process informing that you might want to consider using DVD. Instead we will now wait until 2/3 of the burn process (around 66%) is complete and we have an actual size of the image(s) that have been requested to be copied.

If the size of the image(s) exceeds 650MB we will present the user with a message "There are too many studies to fit on a CD. Would you like to burn these studies to a DVD?"

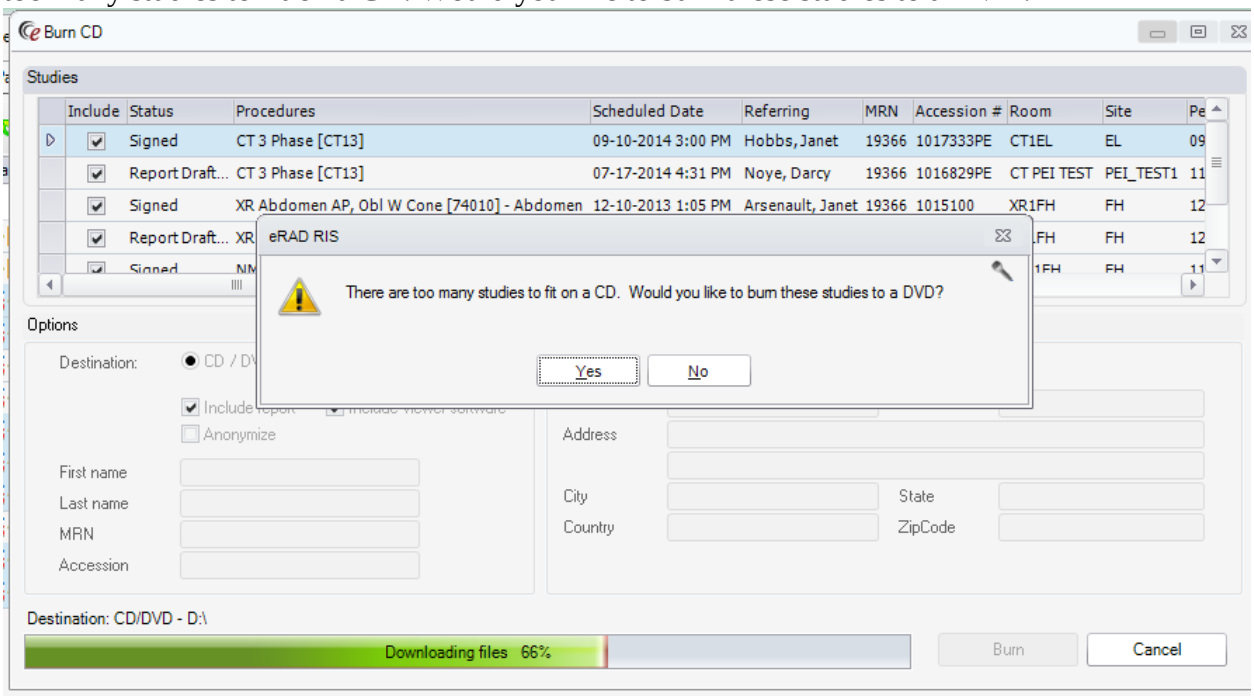

**Figure 5.7 – Burn CD prompt for too many studies for a CD**

With the message presented the user must change the media before selecting Yes. If they leave the CD in and select Yes the will immediately get an error of Not enough space and the Burn process will not resume. The user will need to start again.

Selecting No will abort the Burn CD process and close the window.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**Remember Previous Destination**
Another enhancement is the Burn CD window will remember the user previous destination selection. If you are a user that uses Disc Producer only, that destination radio button will be selected the next time you open the Burn CD window. Also if there happens to be multiple Disc Producers, the last one selected will also be remembered.

**CD Burner User Profile**
Lastly a new field was added on the Practice table that will allow for a "CD burner user profile" to be added and will be the default layout used when burning CDs.

A user account is created in eRAD PACS with a defined hanging protocol that will be the default layout of images displayed from burned CD will be presented. The username of the eRAD PACS account is then added to the CD burner user profile field. This is accessed under the Administration > Configure > System > Organization, select the practice that you want to have the profile associated with and open for edit. On the PACS and Reporting tab enter in the User ID that was created in the PACS in the CD burner user profile field. Save the Organization lookup table.

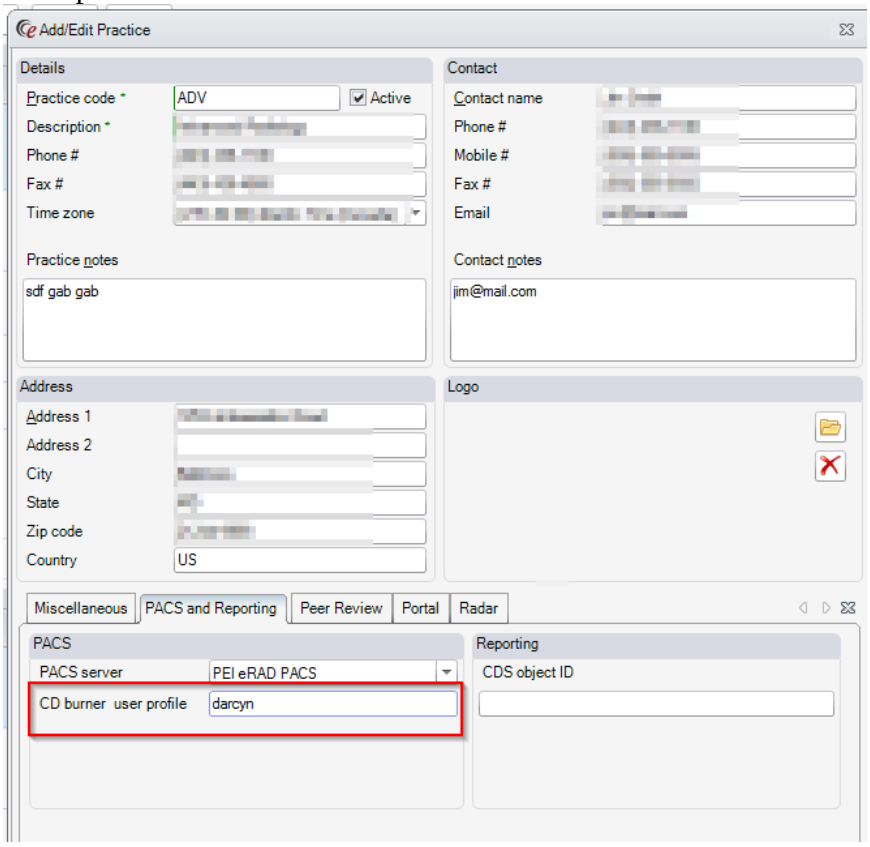

**Figure 5.7 – CD burner user profile field on Practice lookup table**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Show Patient Notes of Merged Patients

In previous versions of eRAD RIS, when a patient was merged with another, the source patients, patient notes didn't display on the destination patients, patient notes. In Build 44.1 a new hyperlink has been added to the Patient Notes tab. When looking at the figure below the Previous patient notes hyperlink will open a new Previous Patient Notes window and display the notes for all of the patients that have been merged to the current patient.

The notes will be grouped under a header that shows the previous patient name, MRN, and the date of the merge. The user can then use the mouse to highlight the text they want to extract and press Control+C to copy the text to the clipboard so that it can be pasted into the notes section and saved.

All screens that allow the user to add patient notes have had the Previous Patient Notes added.

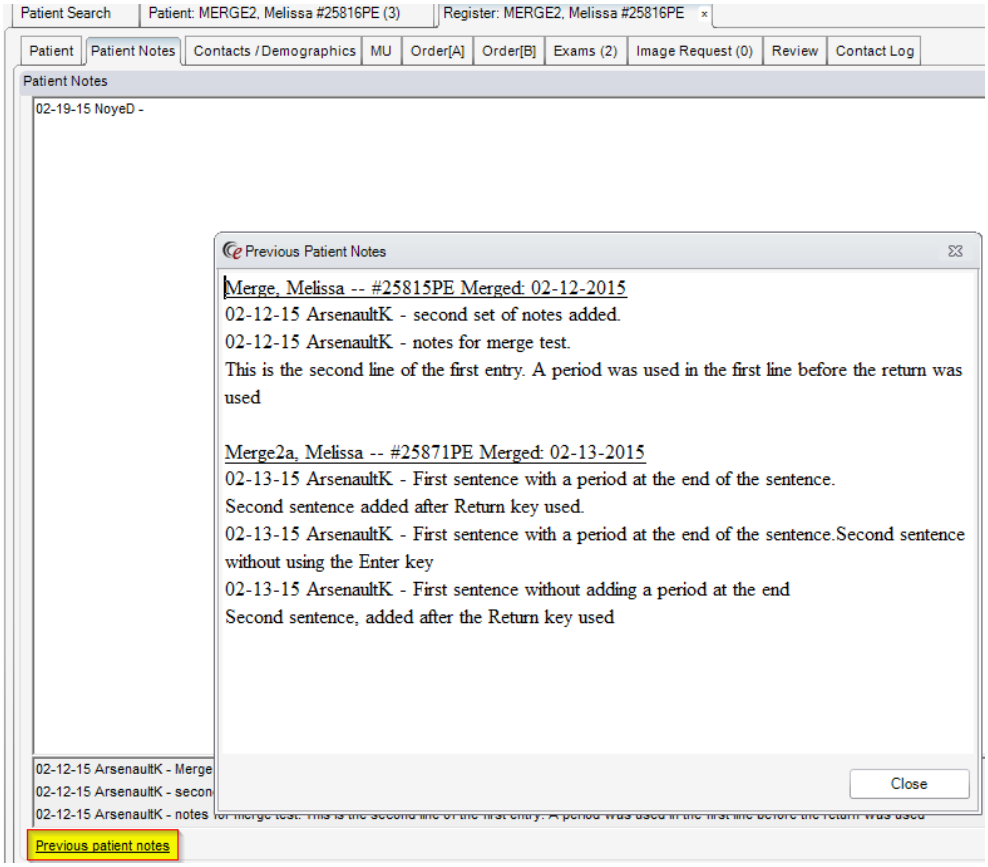

**Figure 5.8 – Displaying previous patient notes of merged patients**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Display Issuer of Order on Existing Orders Pop-Up Window

A new column titled Order Source has been added to the Existing Orders window prompt that will display the Issuer of the Order.

The Existing Orders prompt is displayed when creating a New Appointment or Walk-In for a patient that has pre-existing orders in the system.

IT will show either the value of the "issuer_of_placer_order_number" column in the order (when specified, this is generally the emr code), or the value from the new system configuration setting of "**RISOrderSourceDescription**" that has a default of "RIS" for an internally generated order.

If the "issuer_of_placer_order_number" matches an EMR code in the EMR lookup table, the tool tip for the Order Source column will show the full description of the EMR as well as the EMR code.

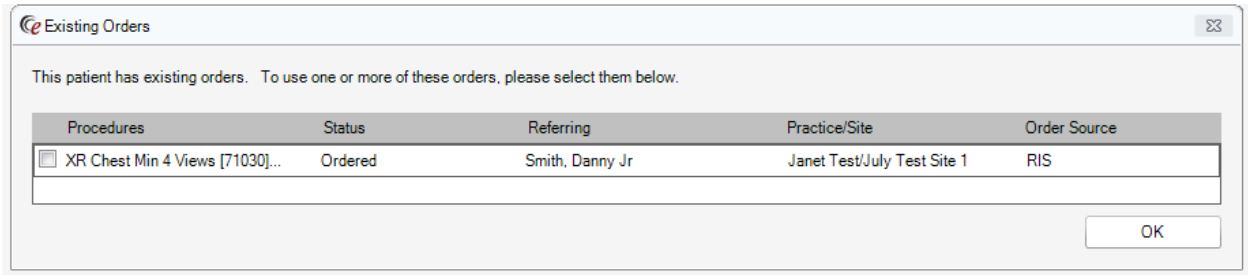

**Figure 5.9 – Issuer of Order "Order Source" added to Existing Orders window**

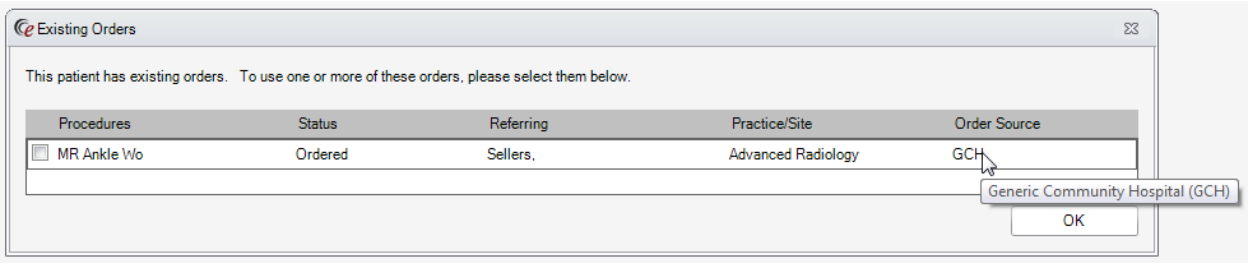

**Figure 5.10 – Order Source with tooltip displayed**

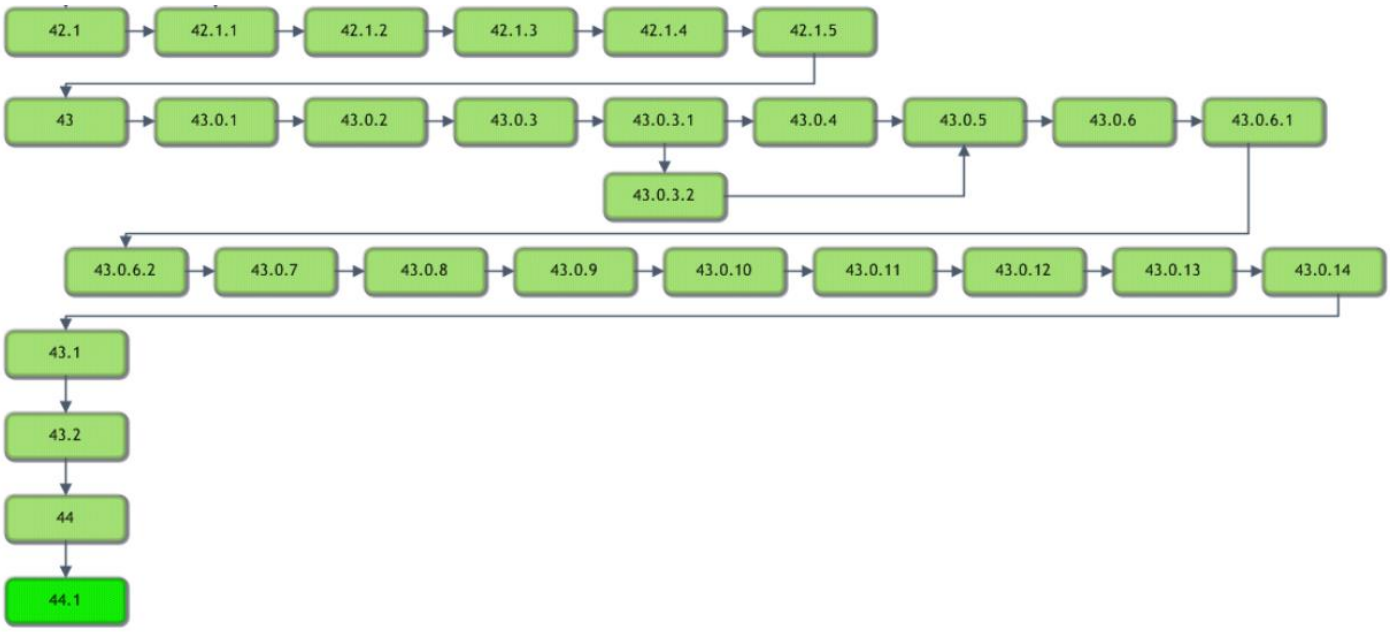
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Disable Contrast Required

The feature of Contrast, Sedation and CT Dosage Tracking was included with Build 44. The means to turn this feature off was on each individual procedure code using the Requires Contrast Flag. In Build 44.1 we have added a global configuration setting of "**TechContrastRequired**" which has a default of False. When using the default the Contrast grid will still be present in the Perform Exam and View/Edit windows but the user will not be required to enter a contrast to save the study. When a value of True is added, the feature will work as intended when released with Build 44.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 6. Code Stream



**Legend:**

Light Green = Released software

Gray = Will not be released

Bright Green = Current Release

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 7. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|

# 9. Additional Defects Resolved

The following list of defects was reviewed\retested in 2.44.1 and could no longer be reproduced. These defects may have been resolved with a duplicate defect logged in Redmine, resolved inadvertently with the resolution of another defect or work flow has changed so that the logged defect is no longer an issue or a defect was logged against a workflow that no longer is supported (Example – Bug 2124 – We no longer allow orders to be opened in registration window)

| Bug # | Priority | Subject | Found Version |
|---|---|---|---|
| 4574 | High | Outside Reads - history field changed to signs and symptoms | 1.41 |
| 4731 | High | Should not have the ability to click sign twice on a Laterality check message box | 1.41 |
| 5333 | High | Reporting - Attachment viewer "Show More" option doesn't display attachment | 1.41.1 |
| 2124 | Normal | procedure picker does not refresh after checkin | 1.1.2.37.14326 |
| 2764 | Normal | Scheduling - No warning on deleting studies with assigned attachments | 1.1.3.39.15389 |
| 2880 | Normal | Notification for pending signature not displaying when study count is met. | 1.39 |
| 3065 | Normal | Carrier search - Object reference error if search performed more than once | 1.4 |
| 3135 | Normal | Procedure code description in new appointment truncates (the display) of some procedure codes | 1.4 |
| 3175 | Normal | Pending Pacs Correction message needs clean up | 1.4 |
| 3361 | Normal | When cloning multiple Personel, scrolling loses focus on what you select | 1.1.3.39.16026 |
| 3524 | Normal | Reschedule a multi study second time does not include second study | 1.40.004 |
| 3537 | Normal | @accession number search throws error if patient has cancelled orders | 1.4 |
| 3582 | Normal | Reporting - protect sections and delete table raising exceptions | 1.4 |
| 3597 | Normal | Laterality check message on transcribe | 1.4 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 3600 | Normal | Audit log error when more then one patients audit history is opened | 1.40.006 |
| 3682 | Normal | Delete dictation on a study that was signed by contribute A (maybe b too) | 1.40.007 |
| 3893 | Normal | MT Transcribe & Continue/Close user preference not saving | 1.40.010 |
| 4372 | Normal | Creating a new appointment from the patient search window causes error. | 1.41 |
| 4421 | Normal | Shortcut for Tables not working in report editor (CTRL + T) | 1.41 |
| 4645 | Normal | Inactive procedure codes appear in the Procedure Plan table | 1.41 |
| 4646 | Normal | Schedule group lookup needs default column widths | 1.41 |
| 4901 | Normal | Scheduling - reservation needs to happen when picked | 1.4 |
| 4941 | Normal | Reporting - Autosave timing error | 1.41.002 |
| 4967 | Normal | Reporting - Submit audio in minimized mode throws error. | 1.41.002 |
| 5275 | Normal | Reporting - Adding empty space to field will allow user to sign | 1.41.1 |
| 5319 | Normal | Reporting - closing Attachment Viewer Preferences throws error in reporting window. | 1.41.1 |
| 5320 | Normal | Reporting - Attachment viewer in reporting window - double click to open the report will change to the next scan doc. | 1.41.1 |
| 5502 | Normal | Error when opening a patient merge suggestion: "Source patient not found" | 1.41.002.1 |
| 5519 | Normal | Reporting - pending signature on login and pending signature worklist notifications can be shown at the same time | 1.42 |
| 6033 | Normal | Scheduling - Holiday is not displayed in New Appointment Calendar view. | 1.42 |
| 3886 | Low | Reporting - Default button action on Skip/ Close button | 1.40.010 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 4027 | Low | Image request - Remove image request, select edit throws error | 1.40.013 |
| 4163 | Low | Perform Exam - Cancelled studies in patient history list have buttons enabled | 1.41.015 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 10. Known Limitations

The following are Bugs Suggested Features and Support Issues found in build 2.44.1. Bugs reported in previous versions are not captured as Known Limitation in this document.

| # | Status | Priority | Subject |
|---|---|---|---|
| 9166 | New | High | Contrast is required on view/edit when contrast setting is set to true and is required |
| 9181 | New | High | Contrast - Perform Exam on non-contrast and contrast study copying contrast/billing codes to non-contrast study |
| 9013 | New | Normal | Preferred Site (c_orderRow.filler_site_code) not auto-populating on Scheduling/Walk-ins |
| 9014 | New | Normal | Preferred Site (c_orderRow.filler_site_code) isn't required when saving an order through "Schedule Later" |
| 9100 | New | Normal | Contrast - If a contrast is made inactive it still is available for selection and could be added to billing codes |
| 9103 | New | Normal | Contrast billing- if a BillingCode is not Active it will still be added to the billing code tab if the Contrast associated to it is added to Contrast grid |
| 9106 | New | Normal | Rescheduling- choosing Schedule Later from the Appointment Book will not change the status of the procedure in Reception WL or Patient folder |
| 9122 | New | Normal | EMR orders - the laterality is sent from external system but is not populated in scheduling window |
| 9139 | New | Normal | EMR order does not reflect correct information on Review tab. |
| 9172 | New | Normal | Contrast - Billing codes added on Perform Exam window don't get pre-cert status added. |
| 9190 | New | Normal | Contrast and Sedation - Manually delete default contrast will remove 2nd contrast code from grid |
| 9117 | In Progress | Normal | EMR order - attempt to schedule a 2nd time and schedule window has incorrect information. |
| 9099 | Peer Testing | Normal | Verify edits context menu option available from Report Drafted WL |
| 8999 | New | Low | Personnel - Domain authentication checkbox being auto-checked with no visual indication |
| 9007 | New | Low | IVT Window - Removing Insurance on exam/practice that doesn't require IV isn't adding exam to IVT WL |
| 9158 | New | Low | EMR order - the phone number is not displayed correctly in WL |
| 9169 | New | Low | System Config  code - 'EnableContrastBillingRelation' |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| | | | the default is set to True, should be set to False |
| 9184 | New | Low | Contrast - Perform Exam - Billing Codes added to empty Billing Code grid do not re-enable the Edit/Delete buttons |
| 9185 | New | Low | Outside Read - alert for no billing codes only appears after clicking save |
| 9116 | Resolved | Low | EMR orders - schedule - The Map Procedures to EMR order window has a double 'the' in the instructions |
| 9009 | Duplicate | Low | Preferred Site dropdown required on scheduling after clicking Save as Order button. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# User Release Notes

for eRAD RIS
Version 2
Build 44.2

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 44.2 and subsequent server releases. This version of eRAD RIS is referred to as Build 2.44.2

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 2.44.2 is considered a new release of the application. It does not require a reinstallation of eRAD RIS. If users choose to reinstall, this is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 4. Existing Access Strings Required for New Feature in B2.44.2

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Access string / User Group Permission tables | Clinical.VoidStudy | None | Gives access be able to change a signed study to void from the view edit screen |
| Access string / User Group Permission tables | Clinical.RISAdminChangeStatus | None | Allows a RIS administrator to make changes to the status of an exam that might not be possible otherwise |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 5. New Features and Enhancements

## Delete Signed Report Workflow

Occasionally there is a reason for a report to be deleted from a study. This may occur if eRAD RIS receives a blank report that was signed in another system. To assist RIS Administrator's with this task a series of steps can be performed to get the study back to Exam Done with no report or dictation. It must be noted that there is no **"Undo" or "Undelete"** option with this feature. Once the dictation/report is deleted, they cannot be retrieved.

Once a study is in Signed status and the dictation/report needs to be removed from this study RIS Administrators can use a 3 step process to get the Signed study back to Exam Done status without a dictation or report associated.

1.) From the Patient Folder work list open the Signed study in the View/Edit window. In this window there is an option to "Void" the study. Access to the Void button is controlled by pre-existing access string "**Clinical.VoidStudy**" which has a default of None. Clicking on this button will present the user with a confirmatory message. Selecting Yes will close the message and View/Edit window and status of the study will now be in Voided status.

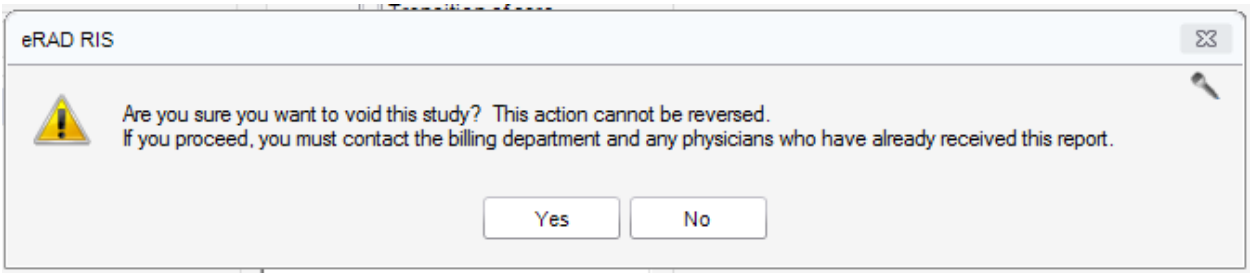

**Figure 5.1 – Void study confirmatory message**

2.) Right click on the "Voided" study to open the context menu. In the menu list select "Change Status to…" which will present a sub menu option of "Manual Status Update…".

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

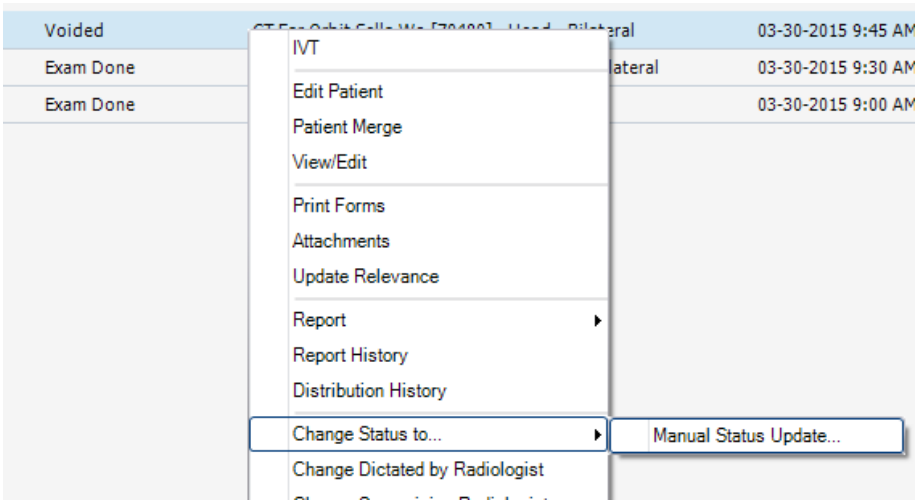

**Figure 5.2 – Manual Status Update menu option**

This will open the Manual Status Update window. In the Move to Status field select Exam Done (the only option).

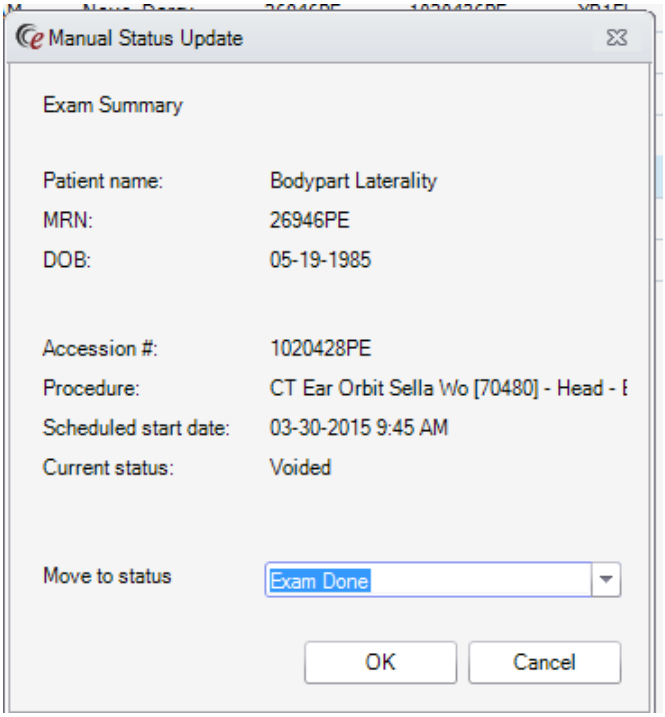

**Figure 5.3 – Manual Status Update window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Selecting the OK button will present the user with another confirmatory message as seen in the figure below.

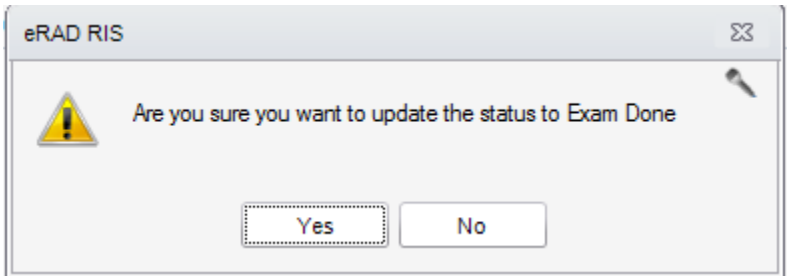

**Figure 5.4 – Manual Status Update confirmatory message**

The status of the study will now be in Exam Done on the work list. At this point the Dictation and or Report will still be available on this study. The report can be viewed from the context menu Report>Preview Report and can also be viewed in Report History and also from within the View/Edit window on the Report tab.

3.) The last step is to access the context menu once more and again select the Change Status to… menu. This time select the "Delete Dictation/Report and Reset Status" sub menu option. The status of the study will remain Exam Done

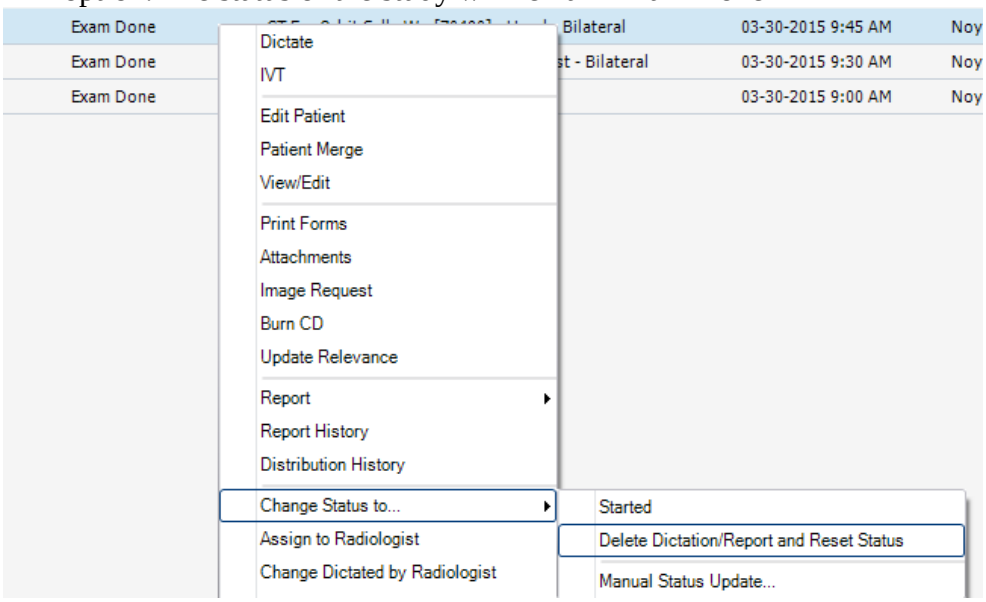

**Figure 5.5 – Deleting Dictation and Report**

Selecting this option will once again present the user with a confirmatory message informing them that this cannot be undone

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

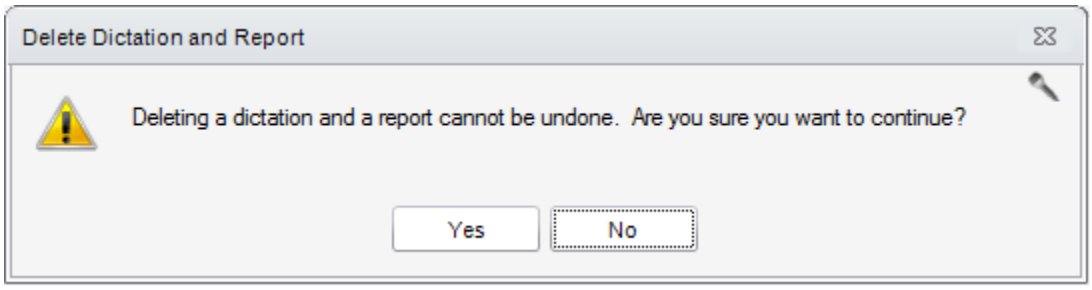

**Figure 5.6 – Delete dictation and report confirmatory message**

Selecting "Yes" will then proceed to delete the dictation and report. The user can then proceed to create a new dictation and report on this study.

The audit History captures the events of deleting a signed report.

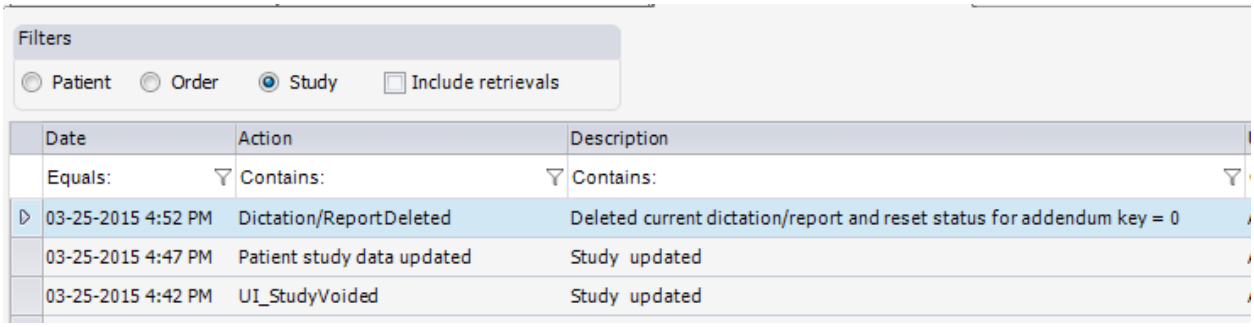

**Figure 5.6 – Audit history captures the workflow steps of deleting a signed report**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

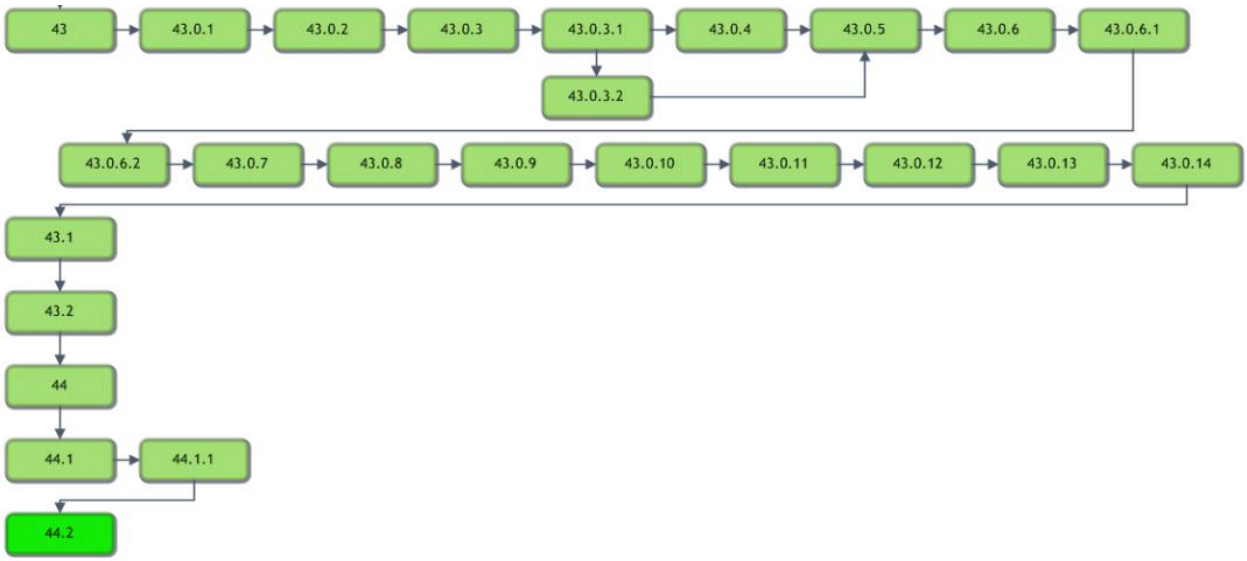
# 6. Code Stream



**Legend:**

Light Green = Released software

Gray = Will not be released

Bright Green = Current Release

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 7. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |

# 8. Resolved Defects

Bugs Suggested Features and Support Issues resolved in build 2.44.2. The extract is taken from Redmine bug tracking system and only displays defects resolved in 2.44.2.

| Bug # | Priority | Subject | Category | Found Version |
|---|---|---|---|---|
| 9313 | Urgent | Possible to set side code for outside reads to null via IVT. ***Study will disappear from patient folder. | DB | 2.43.1 |
| 9181 | High | Contrast - Perform Exam on non-contrast and contrast study copying contrast/billing codes to non-contrast study | Technologist | 2.44.1 |
| 9294 | High | Scheduling - Body part list is not filtered down when possible list of values exists | Scheduling | 2.44 |
| 9337 | High | Details result set dates are not correct, versus the review tab and timeslot search | Scheduling | 2.43 |
| 9312 | Normal | IVT screen does not show correct site code for outside reads | IVT / Precert | 2.43.1 |
| 8706 | High | My Pending Dictation Worklist row counts include chair workflow logic, even for regions/practices that are not chair workflow enabled | Worklists | 2.43.1 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 9. Known Limitations

The following are Bugs Suggested Features and Support Issues found in build 2.44.2. Bugs reported in previous versions are not captured as Known Limitation in this document.

| # | Status | Priority | Subject |
|---|---|---|---|
| 9361 | New | High | Reconcile screen does not show correct site code for outside reads |
| 9366 | New | Normal | Addendum Requested flag is not cleared when study is voided |
| 9380 | New | Normal | Error upon selecting "add new row" in BillingCode table |
| 9386 | New | Normal | Edit to Units of Contrast in Billing Codes tab does not immediately reflect the change in the Contrast grid |
| 9388 | New | Normal | Contrast can be saved with Zero saving in the Vials column. |
| 9390 | New | Normal | Contrast is required to be entered by Scheduler if edits are made in View/Edit before patient even arrives. |

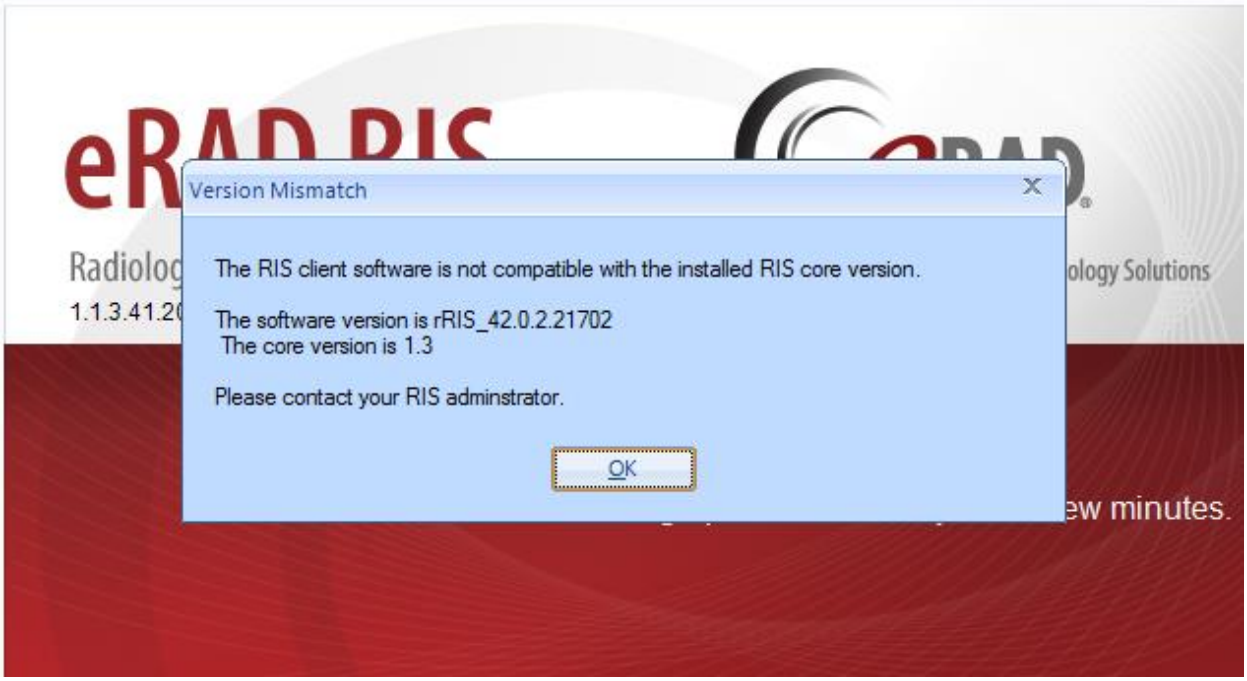
## 7. Installing

### Client/GUI

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.44.2.1.27959.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_44.2.1.27959→ rRIS_1.3.44.2.1.27959
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Web Service

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 90 files in the rRISService folder and 2 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below).

## Services Configuration Wizard

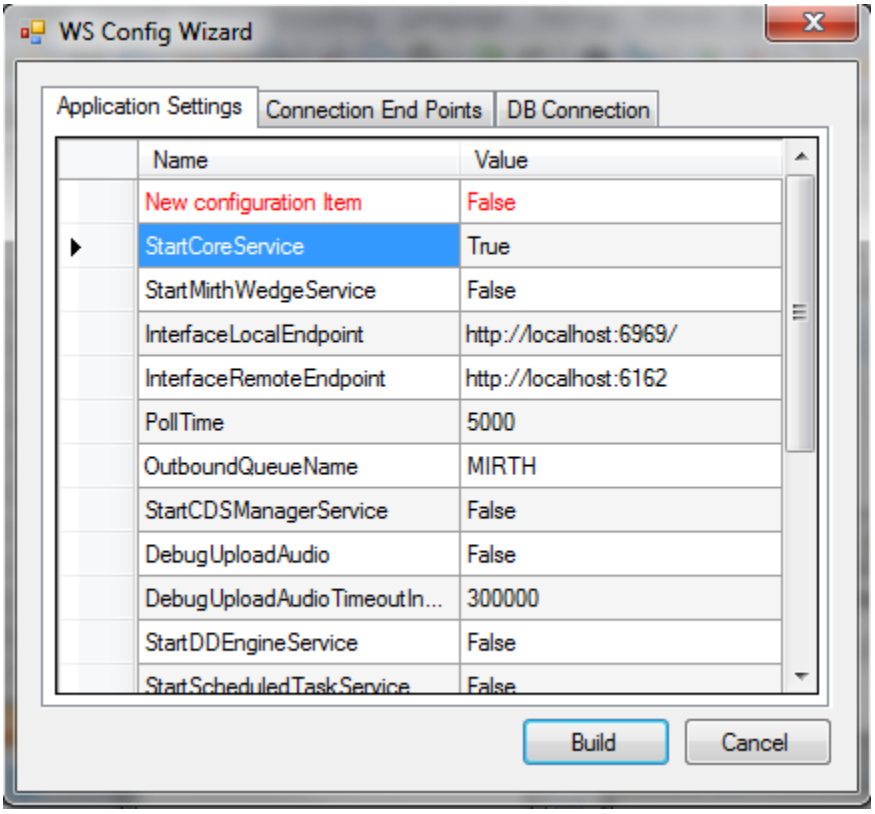
With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

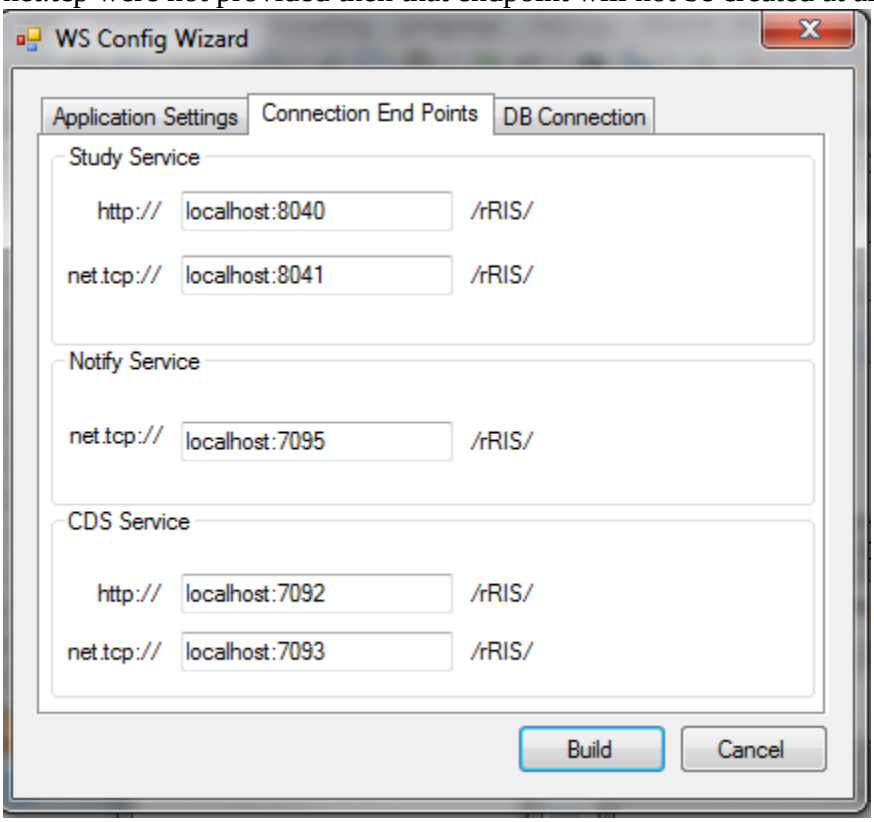
**NOTE:** the rRISServices.exe.config file is also included in the deploy folder. If this file has changes it **will not** update your current file in the Web Service directory. Any changes to this file will require a manual update of the rRISServices.exe.config and rRISServicesx64.exe.config files.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.



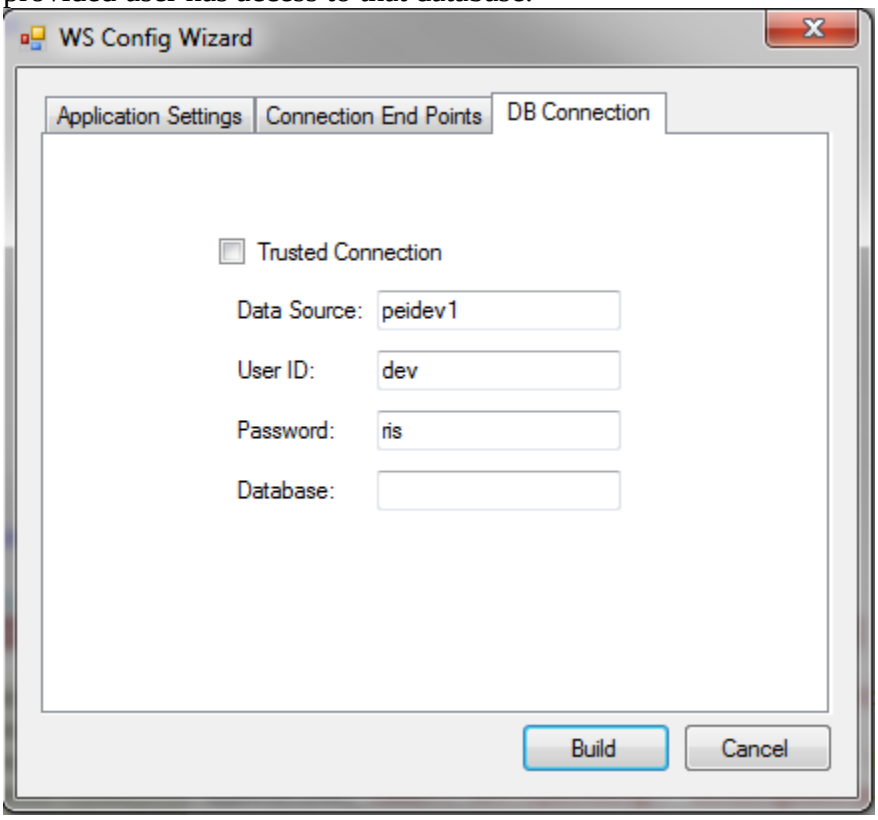
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of "Study Service" or "CDS Service" if both http and net.tcp were not provided then that endpoint will not be created at all.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

**DB Connection:** will display the existing configuration, if the Connection is to be used as a trusted connection, then the user ID and password will become disabled and will not be used, and will rely on the provided database value, When not using the trusted connection, The Database value is not needed but can be used to force a specific database connection as long as the provided user has access to that database.



It is always good practice to do a compare of the .config files.

1) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   **Restart each service**.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Database Updates

Always run the upgrade scripts in a test environment of the actual database to make sure they run cleanly. If any errors occur please contact development.

*Note: There is a new upgrade process introduced with B43.1 called "RunUpgrade.bat". The batch file will open a command window. This process will prompt you for the database server name, database name and authentication credentials. There is no need to run the database upgrade scripts manually as was done in previous releases.*

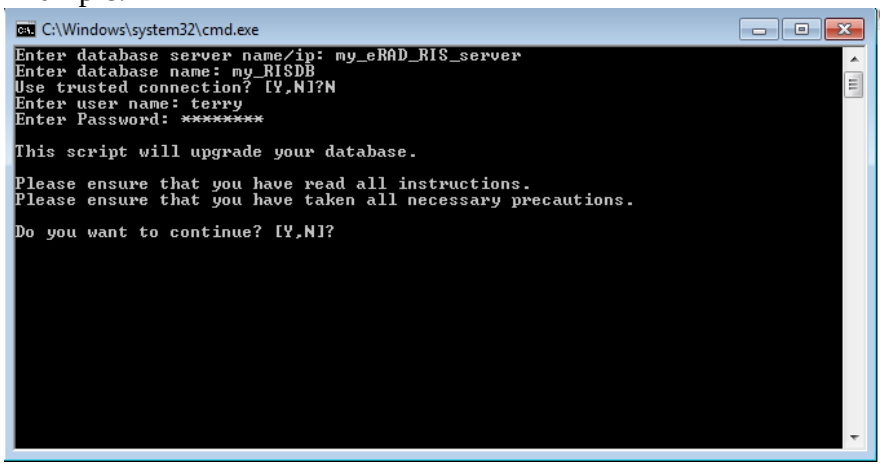
1) From the upgrade folder, double click the "RunUpgrade.bat" command file.

2) Enter the server name, database name and authentication credentials to the database. You have 2 choices for authentication credentials.

3) You can choose to use "Trusted connection". Using this option will pass the identity of the currently logged on user. If this user has "db_owner" access to the eRAD RIS database then feel free to use this options.

4) If you decide not to use "Trusted connection" then you will be prompted for user id and password.

   Example:



5) After the upgrade program has finished you can find the upgrade logs in the "log" folder. The file name will be eRAD_RIS_db_upgrade_timestamp.log, where timestamp is a value representing the date and time the upgrade started. If you see any errors please contact the development team

6) In the Common folder there is a subfolder of MU. The MU folder contains updates to lookups relevant for MU as well as updates for Zip Code table to add the County. Copy the

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

MU folder to the database server before running the batch file. There is a readme file contained in the MU folder. The details have also been included below

a) The mu bulk install process must be run from a path on the database server!
b) Copy Files ImportDataFileUpgradeDB.bat and ImportDataFileUpgradeDB.sql from upgrade folder to a location on the database server(This location will be referred to as the "Script Folder Path".)
c) Copy Folder scripts and Source files from the upgrade folder to "Script Folder Path" ....Note source files must be inside the scripts folder
d) Run bat file
   i) Enter Script Folder path [C:\Temp\SNOMED]:
   ii) Enter database server name/ip: [ie peidev1]
   iii) Enter database name: [ie rRIS_MU]
   iv) Use a trusted connection to log on to SQL Server:
   "N" means you will have to enter db [username] [password]
   "Y" means you have a trusted connection and will not have to enter [username][password]
   v) Do you wish to load SNOMED concept codes?
   "N" no files will be loaded into the l_snomed_concept table
   "Y" yes means l_snomed_concept table will be truncated and reloaded with the latest US concept codes
   Source File [sct2_Concept_Snapshot_US1000124_20140301.txt]
   vi) Do you wish to load SNOMED descriptions codes?

## 1. Resolved Items

| Redmine # | Subject | Priority |
|---|---|---|
| 9594 | Interface with the configurability create internal patient for external id if match not found | Normal |

The RIS Services were updated so that if the c_child_patient node has an attribute called create_internal set to Y then if no internal patient is found or is already associated to the external MRN, a new row will be created.

The MIRTH mapping line required to create the attribute looks like:

```
tmp['Patient']['c_child_patient'].@create_internal = 'Y';
```

With this attribute on (Y), and the message sent to RIS with only the external identifier and a match is not found we will create an internal MRN for this patient. Alternatively if the attribute is “N” it will behave as it does today, sending the message to RIS and an internal ID will not be created.

In addition to the create_internal attribute, we also included the attributes of require_phone_match and require_gender_match, both valued with 'N'.
Examples:

```
tmp['Patient']['c_child_patient'].@require_phone_match = 'N';
tmp['Patient']['c_child_patient'].@require_gender_match = 'N';
```

# 7. Installing

## Web Service

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 90 files in the rRISService folder and 2 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below).

### Services Configuration Wizard

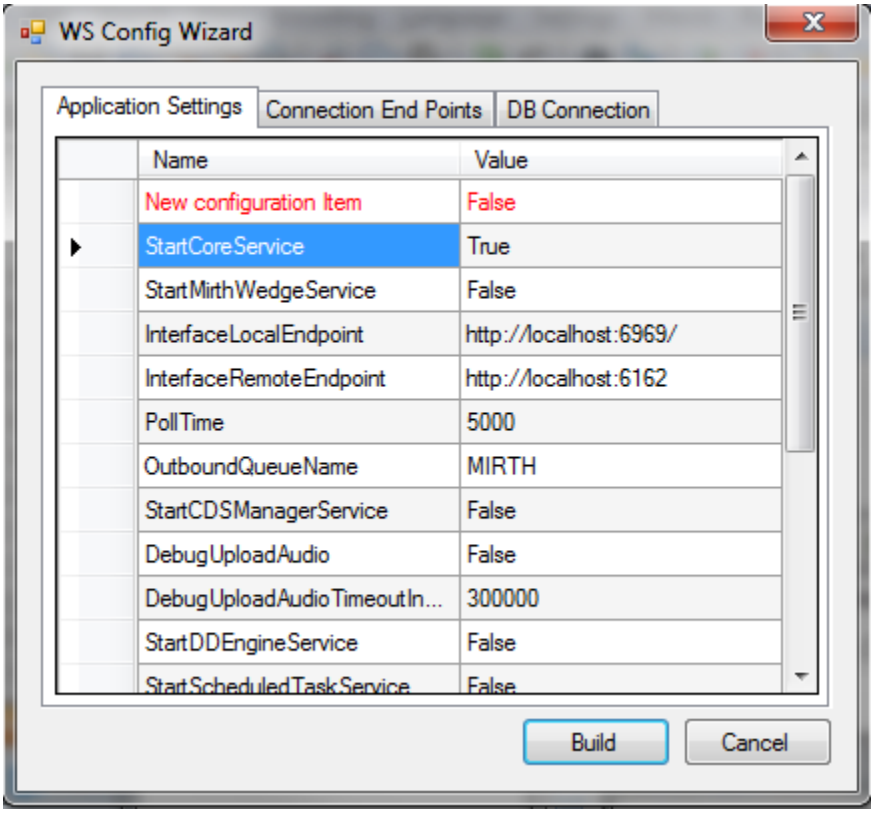
With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

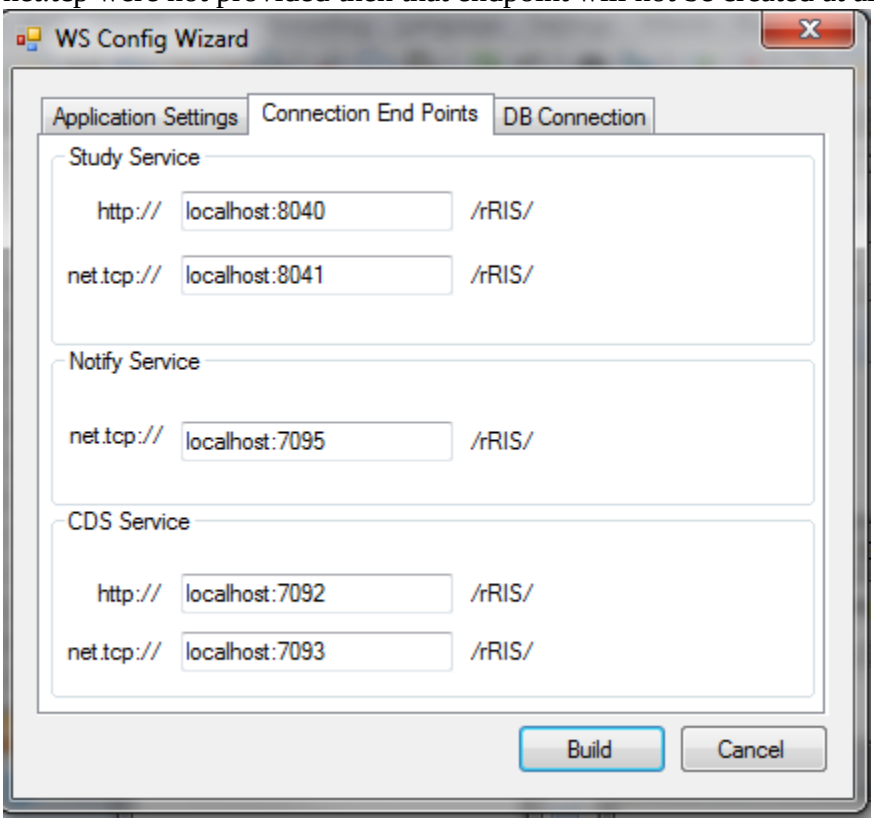
**NOTE:** the rRISServices.exe.config file is also included in the deploy folder. If this file has changes it **will not** update your current file in the Web Service directory. Any changes to this file will require a manual update of the rRISServices.exe.config and rRISServicesx64.exe.config files.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.



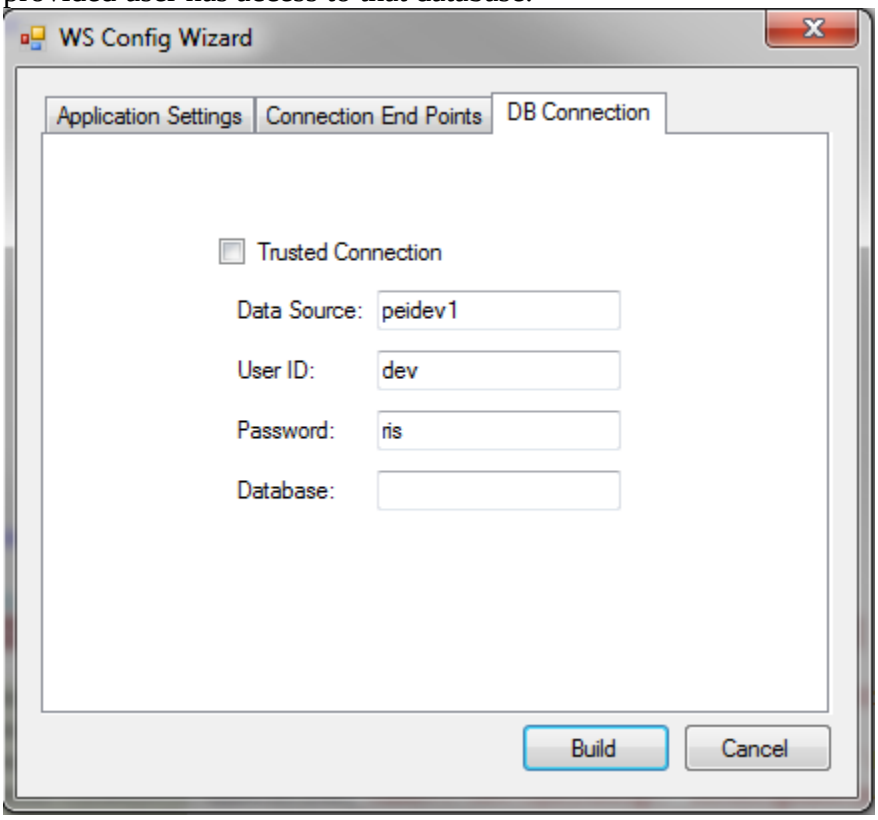
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of "Study Service" or "CDS Service" if both http and net.tcp were not provided then that endpoint will not be created at all.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

**DB Connection:** will display the existing configuration, if the Connection is to be used as a trusted connection, then the user ID and password will become disabled and will not be used, and will rely on the provided database value, When not using the trusted connection, The Database value is not needed but can be used to force a specific database connection as long as the provided user has access to that database.



It is always good practice to do a compare of the .config files.

1) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   **Restart each service**.

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 44.2 and subsequent server releases. This version of eRAD RIS is referred to as Build 2.44.2

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 2.44.2 is considered a new release of the application. It does not require a reinstallation of eRAD RIS. If users choose to reinstall, this is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 4. Existing Access Strings Required for New Feature in B2.44.2

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Access string / User Group Permission tables | Clinical.VoidStudy | None | Gives access be able to change a signed study to void from the view edit screen |
| Access string / User Group Permission tables | Clinical.RISAdminChangeStatus | None | Allows a RIS administrator to make changes to the status of an exam that might not be possible otherwise |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 5. New Features and Enhancements

## Delete Signed Report Workflow

Occasionally there is a reason for a report to be deleted from a study. This may occur if eRAD RIS receives a blank report that was signed in another system. To assist RIS Administrator's with this task a series of steps can be performed to get the study back to Exam Done with no report or dictation. It must be noted that there is no **"Undo" or "Undelete"** option with this feature. Once the dictation/report is deleted, they cannot be retrieved.

Once a study is in Signed status and the dictation/report needs to be removed from this study RIS Administrators can use a 3 step process to get the Signed study back to Exam Done status without a dictation or report associated.

1.) From the Patient Folder work list open the Signed study in the View/Edit window. In this window there is an option to "Void" the study. Access to the Void button is controlled by pre-existing access string "**Clinical.VoidStudy**" which has a default of None. Clicking on this button will present the user with a confirmatory message. Selecting Yes will close the message and View/Edit window and status of the study will now be in Voided status.

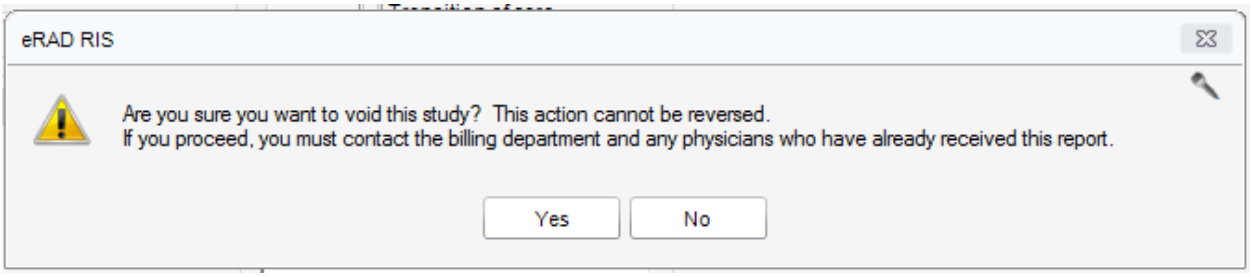

**Figure 5.1 – Void study confirmatory message**

2.) Right click on the "Voided" study to open the context menu. In the menu list select "Change Status to…" which will present a sub menu option of "Manual Status Update…".

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

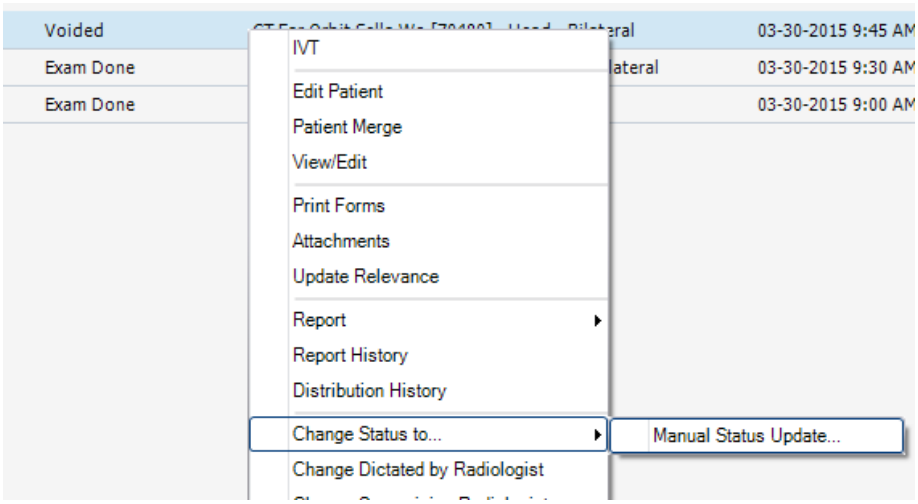

**Figure 5.2 – Manual Status Update menu option**

This will open the Manual Status Update window. In the Move to Status field select Exam Done (the only option).

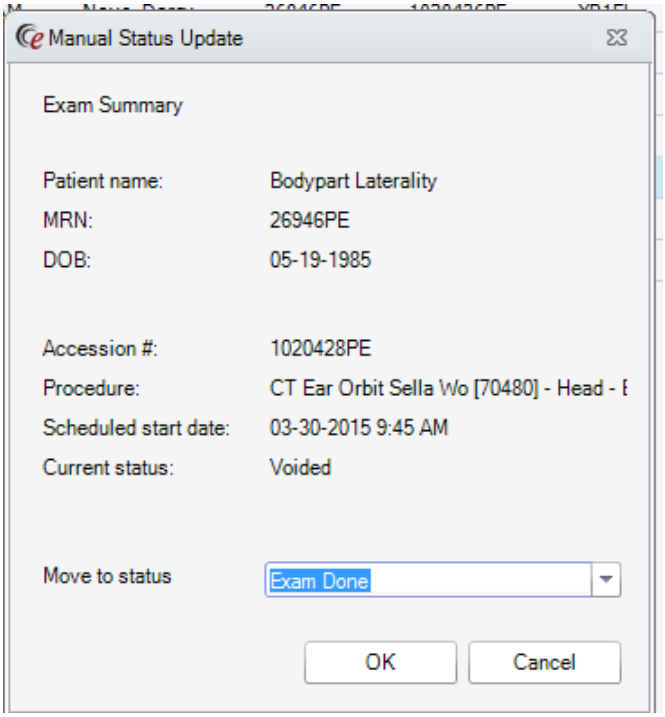

**Figure 5.3 – Manual Status Update window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Selecting the OK button will present the user with another confirmatory message as seen in the figure below.

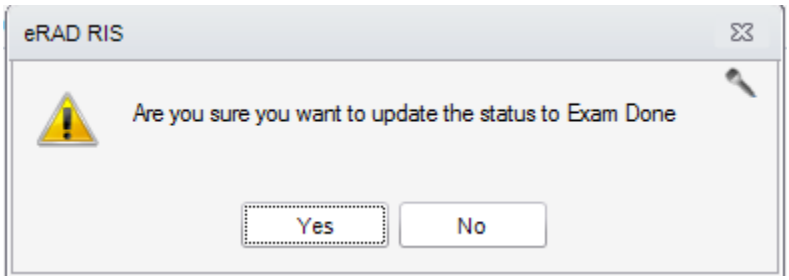

**Figure 5.4 – Manual Status Update confirmatory message**

The status of the study will now be in Exam Done on the work list. At this point the Dictation and or Report will still be available on this study. The report can be viewed from the context menu Report>Preview Report and can also be viewed in Report History and also from within the View/Edit window on the Report tab.

3.) The last step is to access the context menu once more and again select the Change Status to… menu. This time select the "Delete Dictation/Report and Reset Status" sub menu option. The status of the study will remain Exam Done

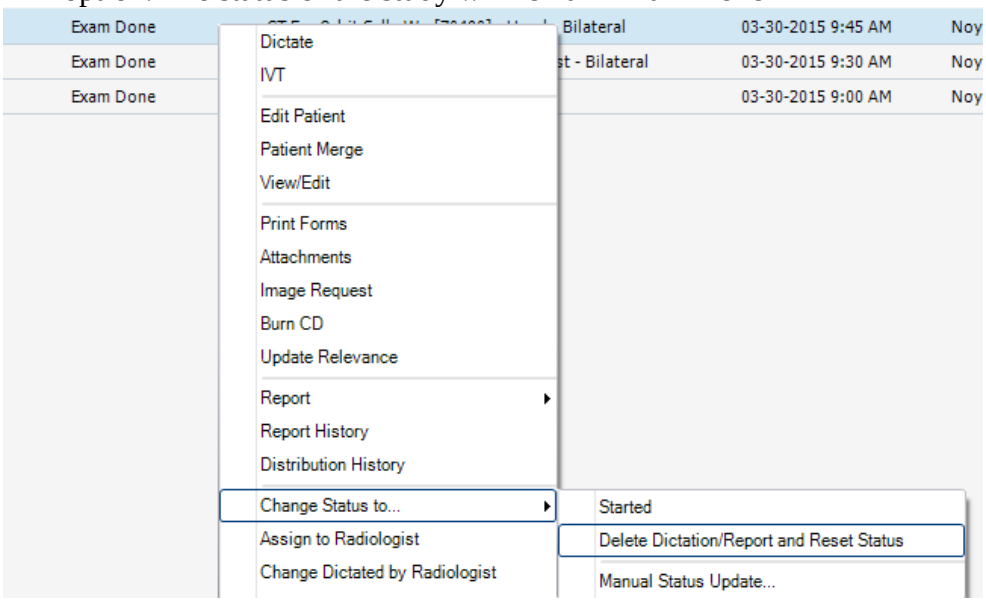

**Figure 5.5 – Deleting Dictation and Report**

Selecting this option will once again present the user with a confirmatory message informing them that this cannot be undone

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

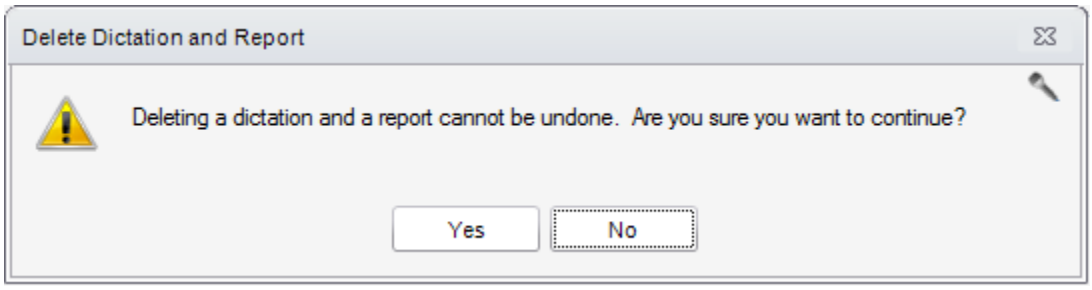

**Figure 5.6 – Delete dictation and report confirmatory message**

Selecting "Yes" will then proceed to delete the dictation and report. The user can then proceed to create a new dictation and report on this study.

The audit History captures the events of deleting a signed report.

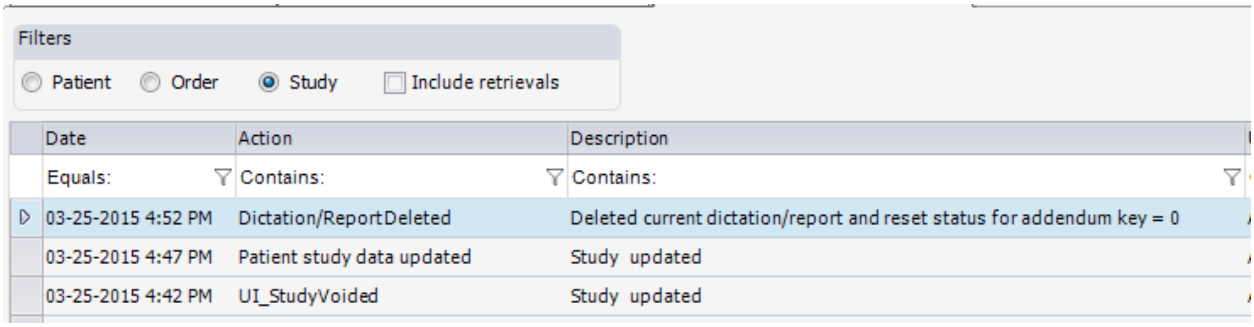

**Figure 5.6 – Audit history captures the workflow steps of deleting a signed report**

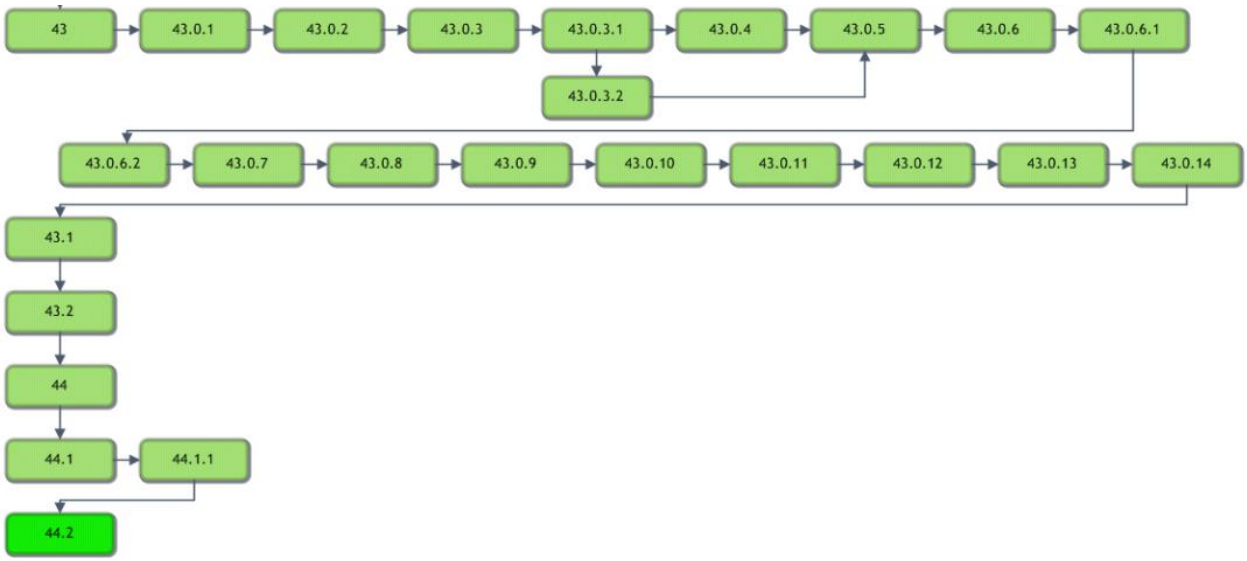
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 6. Code Stream



**Legend:**

Light Green = Released software

Gray = Will not be released

Bright Green = Current Release

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 7. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|
| 43 | - | 2.43.0.0.23715(3GB) | 2.43.0.0.23171 | 2.43.0.0.23715 | 2.43.0.0.23743 | Full Version Release |

# 8. Resolved Defects

Bugs Suggested Features and Support Issues resolved in build 2.44.2. The extract is taken from Redmine bug tracking system and only displays defects resolved in 2.44.2.

| Bug # | Priority | Subject | Category | Found Version |
|---|---|---|---|---|
| 9313 | Urgent | Possible to set side code for outside reads to null via IVT. ***Study will disappear from patient folder. | DB | 2.43.1 |
| 9181 | High | Contrast - Perform Exam on non-contrast and contrast study copying contrast/billing codes to non-contrast study | Technologist | 2.44.1 |
| 9294 | High | Scheduling - Body part list is not filtered down when possible list of values exists | Scheduling | 2.44 |
| 9337 | High | Details result set dates are not correct, versus the review tab and timeslot search | Scheduling | 2.43 |
| 9312 | Normal | IVT screen does not show correct site code for outside reads | IVT / Precert | 2.43.1 |
| 8706 | High | My Pending Dictation Worklist row counts include chair workflow logic, even for regions/practices that are not chair workflow enabled | Worklists | 2.43.1 |

# 9. Known Limitations

The following are Bugs Suggested Features and Support Issues found in build 2.44.2. Bugs reported in previous versions are not captured as Known Limitation in this document.

| # | Status | Priority | Subject |
|---|---|---|---|
| 9361 | New | High | Reconcile screen does not show correct site code for outside reads |
| 9366 | New | Normal | Addendum Requested flag is not cleared when study is voided |
| 9380 | New | Normal | Error upon selecting "add new row" in BillingCode table |
| 9386 | New | Normal | Edit to Units of Contrast in Billing Codes tab does not immediately reflect the change in the Contrast grid |
| 9388 | New | Normal | Contrast can be saved with Zero saving in the Vials column. |
| 9390 | New | Normal | Contrast is required to be entered by Scheduler if edits are made in View/Edit before patient even arrives. |

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 44.3 and subsequent server releases. This version of eRAD RIS is referred to as Build 2.44.3

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 2.44.3 is considered a new release of the application. It does not require a reinstallation of eRAD RIS. If users choose to reinstall, this is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 4. Existing Access Strings Required for New Feature in B2.44.3

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| System Configuration | EligibilityReceiptPath | None | (value = string) Determines the relative path on the report server for eligibility payment receipts |
| System Configuration | MaxPaymentAboveAmountToCollect | 999 | (value = int) Max $ above the amount to collect that will be allowed. |
| System Configuration | MaxPaymentAmount | 6000 | (value = int) Max $ amount that can be paid in a single payment. |
| System Configuration | ShowKeepSelfPayPrivate | False | (value = bool) Determines if RIS will present the 'Do not share with insurance provider' option in the case of self-pay. |
| System Configuration | UsualAndCustomaryInsuranceNumber | None | Insurance number to use when looking up the usual and customary rate, which is displayed on the patient's receipt. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 5. New Features and Enhancements

## Insurance Eligibility – Payment Receipt Showing Insurance and Pricing

It can be difficult explaining charges to the patient. A report showing the breakdown of the amount to collect is required.

For payment made on visits, where RIS had used eligibility to calculate an amount to collect, RIS will display an alternate receipt. The receipt will list the CPTs and their Usual & Customary rates and the eligibility verified co-insurance, co-pay and deductible portions, plus payment information such as total payments and estimated balance. The receipt creation process archives all this information, so that when we re-print the receipt, it prints exactly the same.

To get the Usual & Customary amount, the new system configuration setting of "**UsualAndCustomaryInsuranceNumber**" (no default value) must be set to the NPD's insurance company for the usual rate fee schedule. If this is not set, then the costs in the report will display as blank. The usual rate is stored for every CPT, even those which do not have Eligibility enabled carrier.

To enable the auto printing and reprinting of the Eligibility Payment Receipt, set the new system configuration setting of "**EligibilityReceiptPath**" (no default value) to the new payment form as shown in the following.

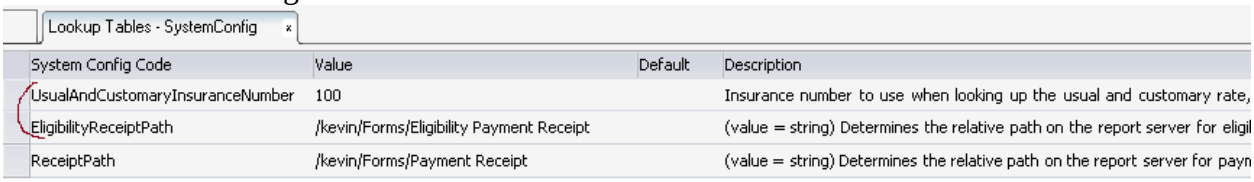

**Figure 5.1 – Displaying new system configuration settings**

The Eligibility Payment receipt will get printed after saving a screen such as Registration or View Edit when there was one or more payments made during the edit. Or receipts can be reprinted by right clicking on one of the payment and choosing "reprint" as shown in the following:

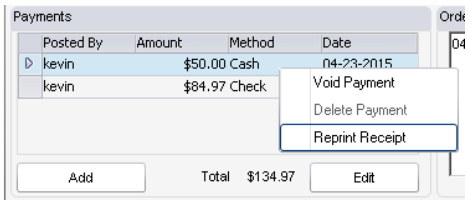

**Figure 5.2 – Reprinting receipt**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

There are two variations on the Eligibility Payment Receipt.

1) A simple receipt where the patient paid for their services in full.
2) Payment estimate change, CPTs could have changed during the exam and patient either needs to be either refunded or pay an additional amount.

In these two cases the receipt will look similar but in the second case will have additional fields such as '**Current Payments**' and '**Previous Payments for this Visit'**.

The following shows a simple receipt where the patient paid using both Cash and Cheque:

LOGO

RECEIPT

Insurance Payments are an Estimate Only

**Please write this number on your check:** 39110
**Make checks payable to:** Advanced Radiology

| Service Date | Description | Units | Charge | Total |
|---|---|---|---|---|
| 04/23/2015 | CT ORBIT SELLA/POST FOSSA/EAR C-/C+ | 1 | $ 430.17 | $ 430.17 |
| | | | | $ 430.17 |

| | Deductible Portion | Copay | Coinsurance | Total |
|---|---|---|---|---|
| Estimated Patient Responsibility | $ 100.00 | $ 10.00 | $ 24.97 | $ 134.97 |

| Method | Notes | Amount |
|---|---|---|
| Cash | | $ 50.00 |
| Check #2123 | | $ 84.97 |
| | Total Payments | $ 134.97 |
| | Estimated Patient Balance | $ 0.00 |

**Thank you for your business!**

**Figure 5.3 – Payment receipt display different modes of payment**

After the initial registration, additional CPTs were added and the patient had to return to pay the additional amount. The following is the second payment receipt for this visit:

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| Service Date | Description | Units | Charge | Total |
|---|---|---|---|---|
| 04/23/2015 | CT ORBIT SELLA/POST FOSSA/EAR C-/C+ | 1 | $ 430.17 | $ 430.17 |
| 04/23/2015 | RADIOLOGIC EXAMINATION, ABDOMEN; ANTEROPOSTERIOR AND ADDITIONAL OBLIQUE AND CONE VIEWS | 1 | $ 47.13 | $ 47.13 |
| 04/23/2015 | RADIOLOGIC EXAMINATION, ABDOMEN; SINGLE ANTEROPOSTERIOR VIEW | 1 | $ 29.26 | $ 29.26 |
| | | | | $ 506.56 |

| | Deductible Portion | Copay | Coinsurance | Total |
|---|---|---|---|---|
| Estimated Patient Responsibility | $ 100.00 | $ 10.00 | $ 31.96 | $ 141.96 |

| Method | Notes | Amount |
|---|---|---|
| CreditCard MC 3322 | XR ABDOMEN AP was added after inital registration. Patient paid remaining ESTIMATED balance. | $ 6.99 |
| | Current Payments | $ 6.99 |
| | Previous Payments for This Visit | $ 134.97 |
| | Total Payments | $ 141.96 |
| | Estimated Patient Balance | $ 0.00 |

**Figure 5.4 – Second payment required for additional services receipt**

The Usual and Customary amount is often different from the contracted rate. To help our staff understand how the amount to collect was calculated, we have updated the "Amount to Collect – Details" popup to include a list of CPTs and their rates.

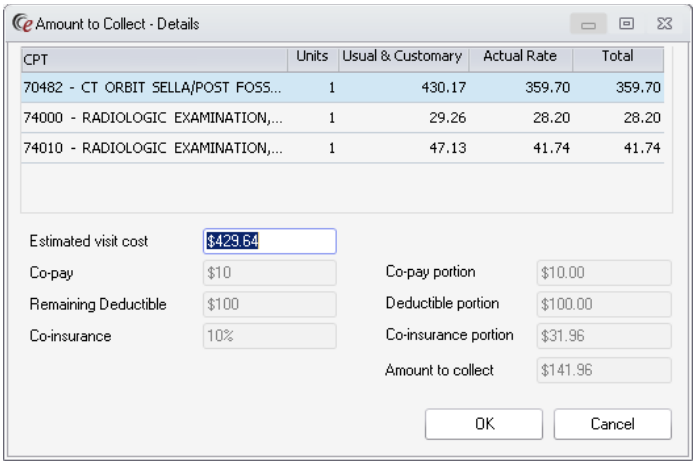

**Figure 5.5 – Amount to Collect Details changes**

A new column titled "Charge For Each Unit Flag" has been added to the Billing Code lookup table. By default we will not charge for multiple units. The RIS will only bill for multiple units if the billing_code lookup's field charge_for_each_unit_flag is set to 'Y'. If charge_for_each_unit_flag is 'N' then the visit cost will only include one charge for the CPT and the Eligibility Payment Receipt and the above Amount to Collect Details will only show that the CPT was charged once.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

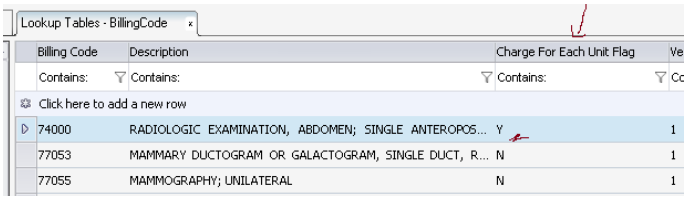

**Figure 5.6 – New column on the Billing Code tab**

Administrators can update multiple billing code in a batch as outlined in the following steps:

1. Filter on the types of billing codes you would like to set to 'Y'

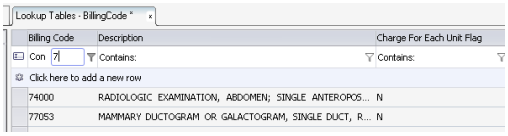

**Figure 5.7 –Filtering billing code table**

2. Set one of the entries to 'Y'
3. Press <CTRL>+A on the keyboard to select all rows
4. Right click on the cell that has the 'Y' from step 2 and select "Assign Cell To Selected Rows"

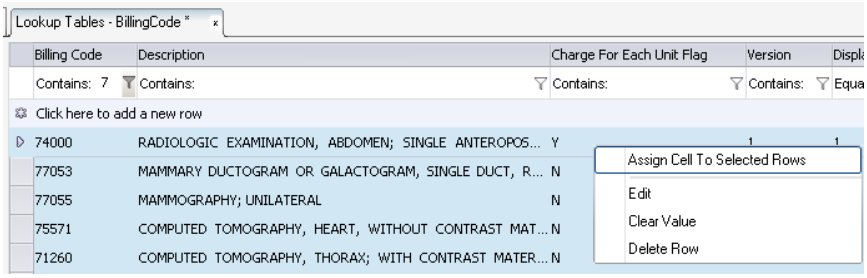

**Figure 5.8 – Assigning multiple rows in billing code with attribute**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Insurance Eligibility – Payments Exceeding Amount to Collect Warning

A popup warning is now displayed, if the amount entered is greater than the remaining amount to collect. The warning is displayed when the cursor focus moves away from the Amount textbox.

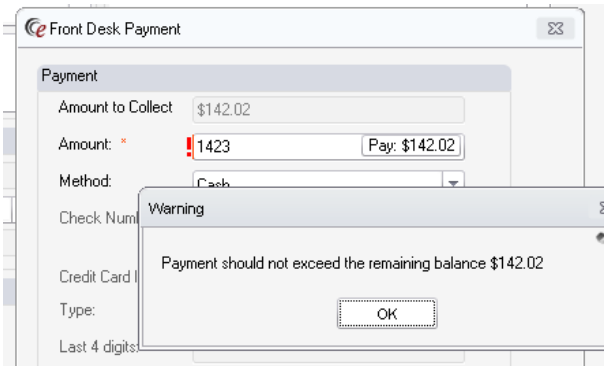

**Figure 5.9 –Warning if payment exceeds amount to collect**

To help users key in the correct remaining balance, we have introduced the "Pay" button. When clicked, the "Amount" text box will get set to the remaining balance. In the above example, clicking the "Pay: $142.02" button sets the amount to 142.02.

Two new system configuration settings have also been introduced. The first is "**MaxPaymentAmount**" that has a default of 6000. This setting will limit the user's ability to enter an amount more than the value set for this configuration setting.

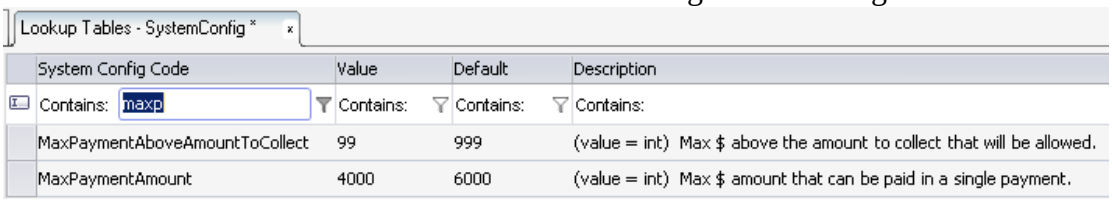

**Figure 5.10 – new configuration settings for payment amounts**

In the example below the user tried to enter a payment amount of $5000.00. The amount to collect is $142.02. Because the value set above for MaxPaymentAmount is $4000.00, we will display a message and inform the user they cannot enter this payment amount.

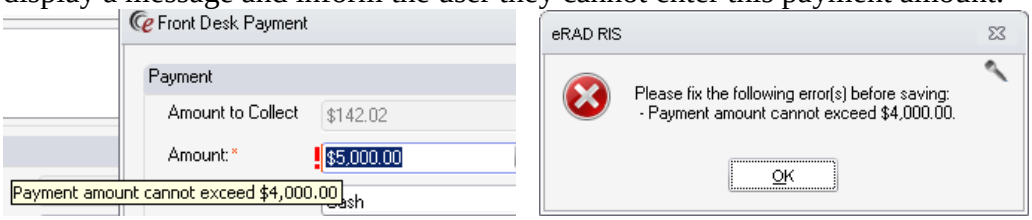

**Figure 5.11 – Message displayed when Amount to Collect exceeds MaxPaymentAmount**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

In the next example the user is trying to enter a payment amount that exceeds the set value for the next new system configuration setting of "**MaxPaymentAboveAmountToCollect**" which has a default of 999. In figure 5.10 the value is set to $99 and the amount to collect is $142.02. Since the payment amount exceeds $99 the user is prevented from entering that amount and the value displayed with these two values added together.

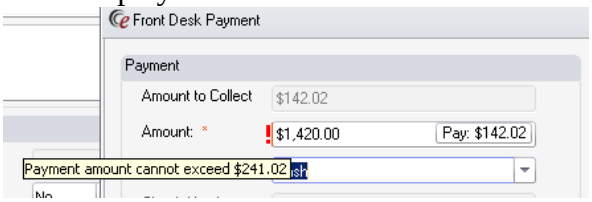

**Figure 5.12 – Amount entered exceeds MaxPaymentAboveAmountToCollect**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Insurance Eligibility – Collect Copay When it Exceeds Amount to Collect

If the amount to collect is less than the copay, the amount to collect will now be that of the copay amount. In the example below you can see that the amount to collect is $56, but the Copay portion is $99. The amount to collect will be $99.

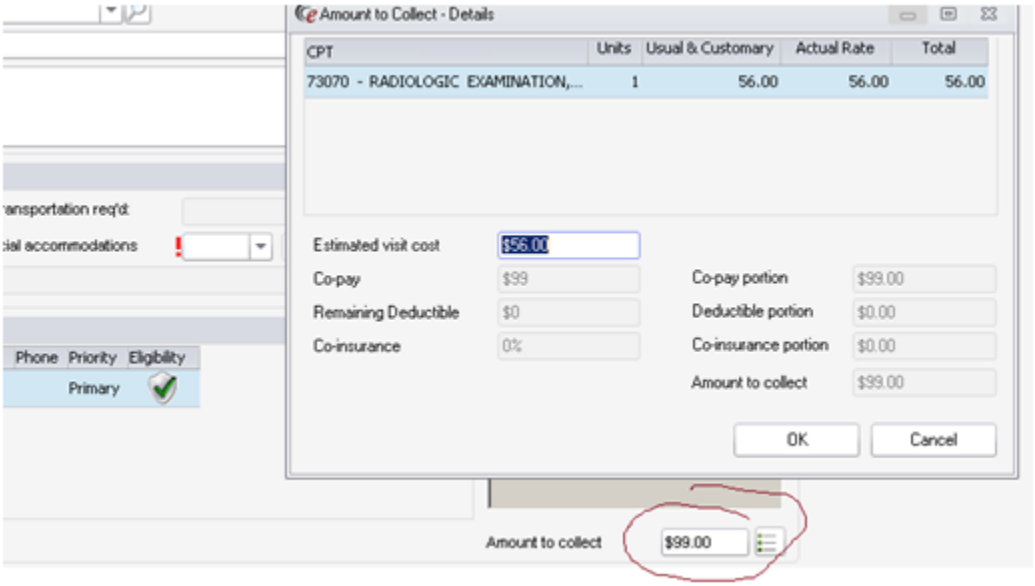

**Figure 5.13 – Amount to Collect will now be the Copay amount.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Self-Pay Option "Do not share with insurance provider"

When the exam is to have a self-pay method selected from the Billing Method section on the Order tab a new check box will appear. This check box is labeled "Do not share with insurance provider". Functionally in eRAD RIS, it will not affect anything. The flag is set to Y when selected, which is then passed to an external system that will share/not share data with the insurance company.

A new system configuration setting of "**ShowKeepSelfPayPrivate**" which has a default of false will control whether or not this check box will appear when selecting a self-pay option

**Figure 5.14 – Check box displayed when self-pay option used and config setting ShowKeepSelfPayPrivate=Y**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Referring Doctor Affiliations Included With MIRTH Messages

Logic was added to the RIS outbound external interface to include identifiers for the doctors affiliations as part of the expanded study container sent to MIRTH.

The referring doctors affiliation will be included in the c_order.requested_by_address_key.l_person_address node within the study container. A new node called affiliation_list is now a child node of l_person_address. If there are no affiliations this node would be empty. If there 1 or more then a child node called <affiliation_code> node would repeat for each occurrence. See examples below.

```
        <report_cc_delivery_emr_flag>N</report_cc_delivery_emr_flag>
        <report_delivery_do_not_deliver_flag>N</report_delivery_do_not_deliver_flag>
        <report_cc_delivery_do_not_deliver_flag>N</report_cc_delivery_do_not_deliver_flag>
        <report_delivery_email_flag>N</report_delivery_email_flag>
        <report_cc_delivery_email_flag>N</report_cc_delivery_email_flag>
        <affiliation_list />
    </l_person_address>

                <affiliation_code>1</affiliation_code>
                <affiliation_code>109</affiliation_code>
            </affiliation_list>
        </l_person_address>
    </requested_by_address_key>
    <indication>DAT</indication>
```

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Interface to Create Internal System ID for External ID via External System

The RIS Services were updated so that if the c_child_patient node has an attribute called create_internal set to Y then if no internal patient is found or is already associated to the external MRN, a new row will be created.

The MIRTH mapping line required to create the attribute looks like:

```
tmp['Patient']['c_child_patient'].@create_internal = 'Y';
```

With this attribute on (Y), and the message sent to RIS with only the external identifier and a match is not found we will create an internal MRN for this patient. Alternatively if the attribute is "N" it will behave as it does today, sending the message to RIS and an internal ID will not be created.

In addition to the create_internal attribute, we also included the attributes of require_phone_match and require_gender_match, both valued with 'N'.
Examples:

```
tmp['Patient']['c_child_patient'].@require_phone_match = 'N';
tmp['Patient']['c_child_patient'].@require_gender_match = 'N';
```

# 8. Resolved Defects

Bugs Suggested Features and Support Issues resolved in build 2.44.3. The extract is taken from Redmine bug tracking system and only displays defects resolved in 2.44.3.

| Bug # | Priority | Subject | Category | Found Version |
|---|---|---|---|---|
| 6032 | Normal | Scheduling - New Appointment Calendar - Selecting time on calendar does not check for room availability. | Thick Client GUI | 1.42 |
| 7270 | Normal | Note column in personel causing errors | Admin-Clinical Data | 2.43 |
| 7497 | Normal | biopsy surgeon selection shows referrings and other personnel that are not surgeons | Mammography | 2.43.0.5 |
| 7932 | Normal | An error in the image caching process can terminate RIS | PACS (eRAD) Int - RIS only | 2.43.0.12 |
| 8428 | High | Collection was modified error related to worklist views | Radiology Reporting | 2.43.1 |
| 9150 | High | Insurance Eligibility - CPT costs needed to be multiplied by units | | 43.1 |
| 9323 | High | IVT - MRN isn't read-only on patient tab. | Thick Client GUI | 2.43.2 |
| 9425 | Normal | Amount to collect not updating on Schedule Order/Review screens when blanked out | Billing | 2.44 |
| 9448 | High | Review Tab - Estimated responsibilities when zero should be handled better | Billing | 43.1 |
| 9471 | Normal | Warning needed if selected insurance has a blank policy number | Insurance Eligibility | 43.1 |
| 9480 | Low | Reporting Radiologist - PowerScribe error and crash opening report with powerscribe integration | Radiology Reporting | 2.43.1 |
| 9513 | Normal | AppointmentBook is showing cancelled studies | Scheduling | 2.44.2 |
| 9523 | Urgent | Old layout for dictation/editing are not maintained into the 44 upgrade. | Radiology Reporting | 44 |
| 9524 | Urgent | Bacode scanner not opening PS360 report when set to Diagnose on accession number | Powerscribe Integration | 2.44.2 |
| 9525 | Normal | Assigned Radiologist is not recognized as assigned in the Assign to Radiologist window | Radiology Reporting | 2.44 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 9530 | High | Error arriving studies from same order | Reception | 2.44.2 |
| 9532 | Normal | error changing pre-cert info on registration | Reception | 2.44.2 |
| 9543 | High | Reporting Radiologist - M*Modal interactive dictation performance issues when using encrypt audio method | Radiology Reporting | 2.44.2 |
| 9554 | High | the wedge should not expand the virtual table c_order_ref_addresses | Web Services/DB | 2.44.2 |
| 9555 | Urgent | Post message routine in RIS Services (wedge) fails | Web Services/DB | 2.44.2 |
| 9559 | Normal | validate MS-SQL Server 2008 R2 SP3 | DB | 2.44.2 |
| 9574 | High | Insurance Eligibility - Performance issue as we add more eligibility configurations | | 44.2 |
| 9586 | Normal | DD Engine updates pending lay letters to be cancelled is a causing database blocking | DB | 2.44.2 |
| 9608 | Normal | Reporting Radiologist - Exception on application exit using Powerscribe | Radiology Reporting | 2.44.2 |
| 9632 | Normal | Assigning an exam to a chair in Pending Dictation WL produced an error. | Chair/County workflow | 2.44.3 |
| 9646 | High | Insurance Eligibility - Amount to collect issue in "Perform Exam" | | 44.2 |

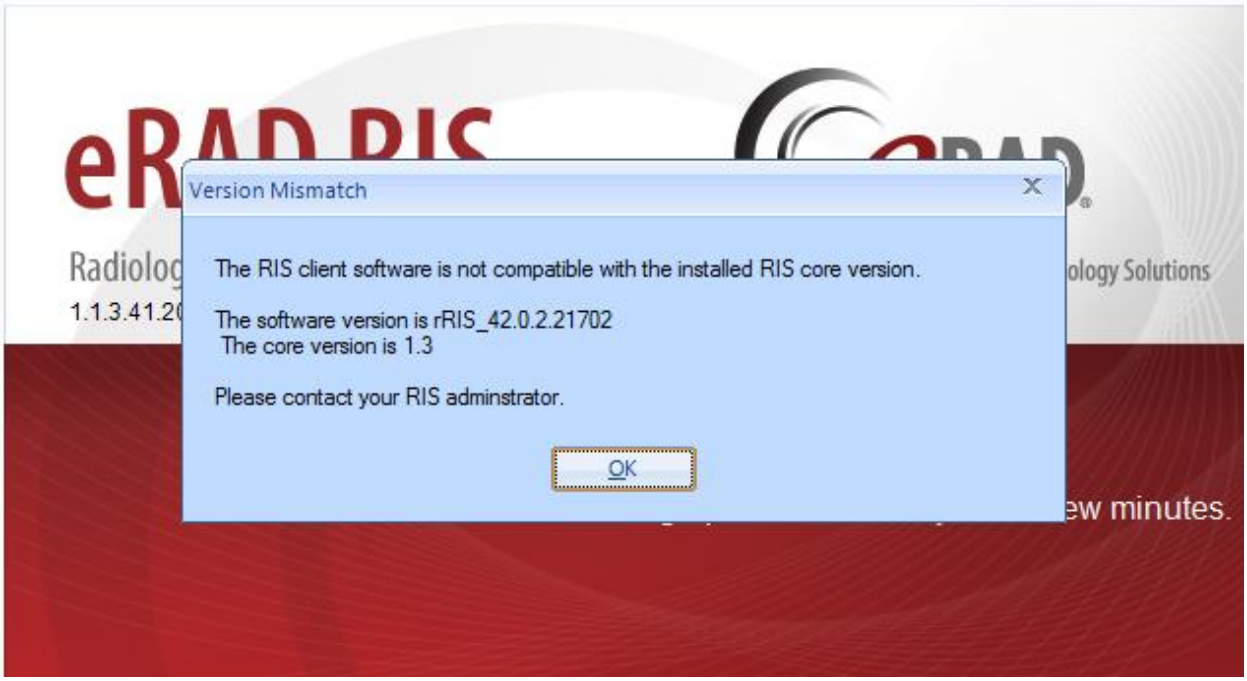
# 7. Installing

## Client/GUI

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.44.3.1.28535.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_44.3.1.28535→ rRIS_1.3.44.3.1.28535
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

## Web Service

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 88 files in the rRISService folder and 2 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below).

## Services Configuration Wizard

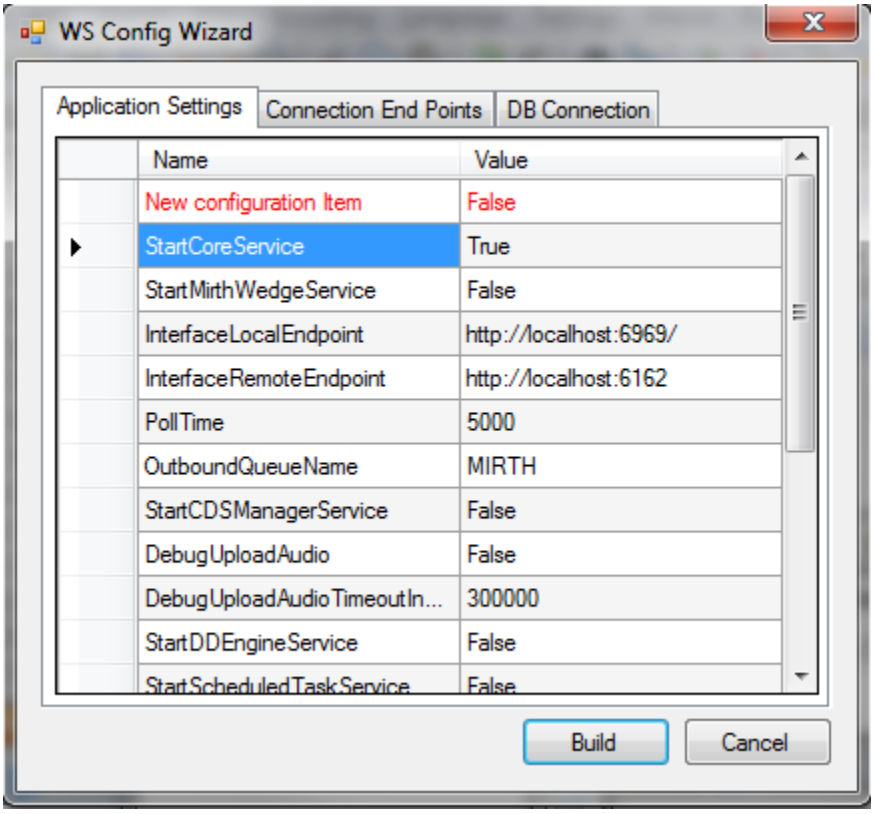
With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

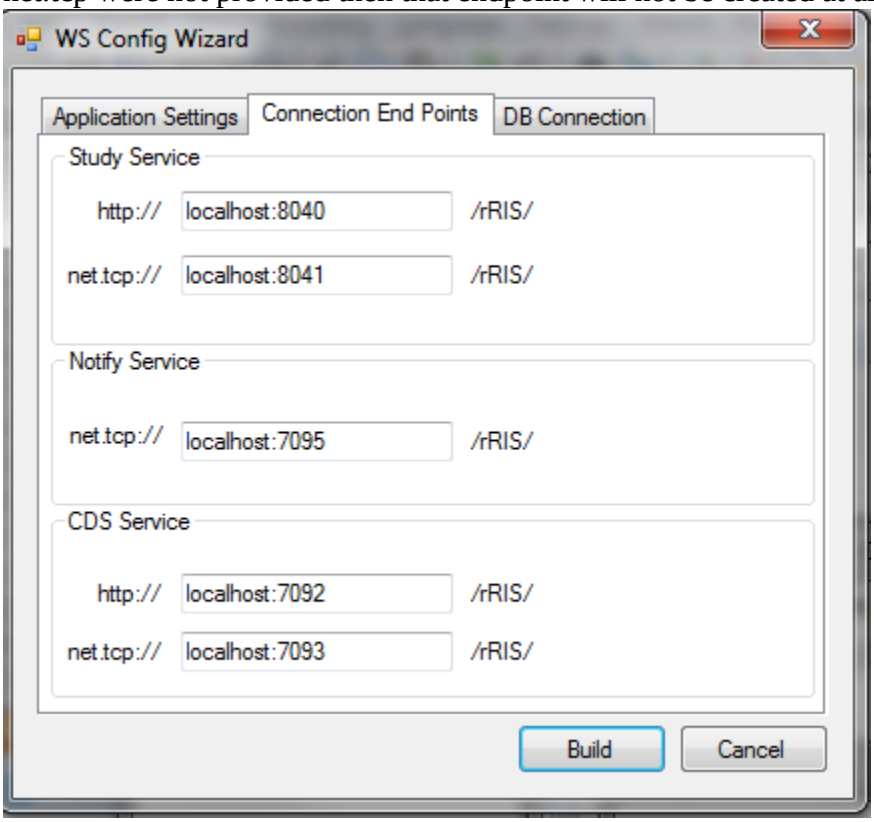
**NOTE:** the rRISServices.exe.config file is also included in the deploy folder. If this file has changes it **will not** update your current file in the Web Service directory. Any changes to this file will require a manual update of the rRISServices.exe.config and rRISServicesx64.exe.config files.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.



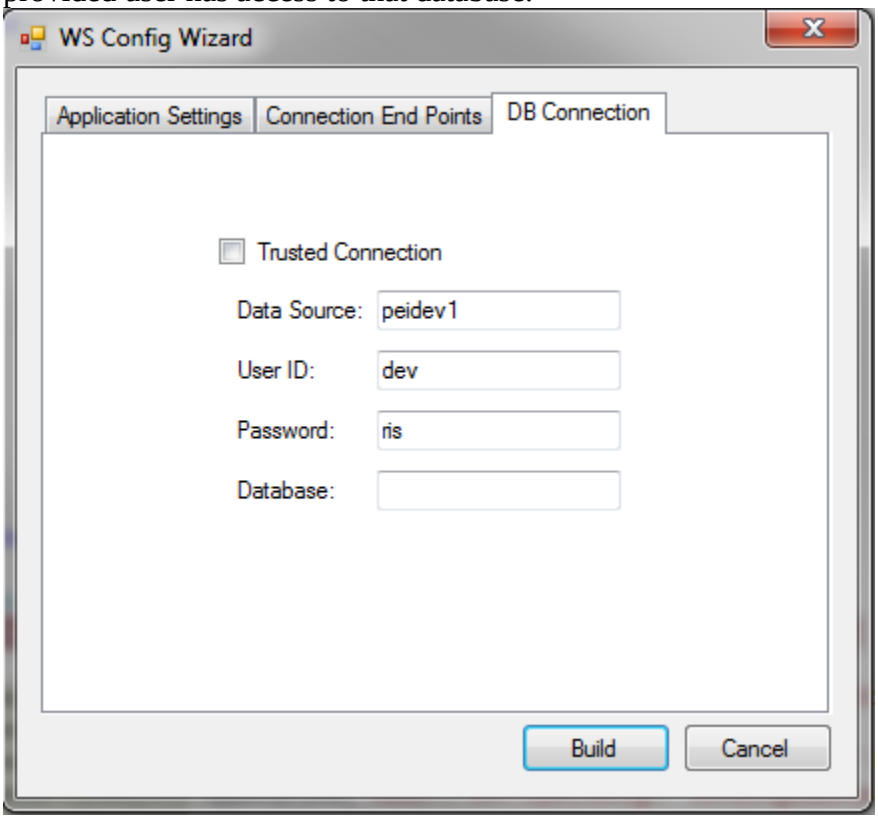
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of "Study Service" or "CDS Service" if both http and net.tcp were not provided then that endpoint will not be created at all.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

**DB Connection:** will display the existing configuration, if the Connection is to be used as a trusted connection, then the user ID and password will become disabled and will not be used, and will rely on the provided database value, When not using the trusted connection, The Database value is not needed but can be used to force a specific database connection as long as the provided user has access to that database.



It is always good practice to do a compare of the .config files.

1) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   **Restart each service**.

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 44.3 and subsequent server releases. This version of eRAD RIS is referred to as Build 2.44.3

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 2.44.3 is considered a new release of the application. It does not require a reinstallation of eRAD RIS. If users choose to reinstall, this is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 4. Existing Access Strings Required for New Feature in B2.44.3

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| System Configuration | EligibilityReceiptPath | None | (value = string) Determines the relative path on the report server for eligibility payment receipts |
| System Configuration | MaxPaymentAboveAmountToCollect | 999 | (value = int) Max $ above the amount to collect that will be allowed. |
| System Configuration | MaxPaymentAmount | 6000 | (value = int) Max $ amount that can be paid in a single payment. |
| System Configuration | ShowKeepSelfPayPrivate | False | (value = bool) Determines if RIS will present the 'Do not share with insurance provider' option in the case of self-pay. |
| System Configuration | UsualAndCustomaryInsuranceNumber | None | Insurance number to use when looking up the usual and customary rate, which is displayed on the patient's receipt. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 5. New Features and Enhancements

## Insurance Eligibility – Payment Receipt Showing Insurance and Pricing

It can be difficult explaining charges to the patient. A report showing the breakdown of the amount to collect is required.

For payment made on visits, where RIS had used eligibility to calculate an amount to collect, RIS will display an alternate receipt. The receipt will list the CPTs and their Usual & Customary rates and the eligibility verified co-insurance, co-pay and deductible portions, plus payment information such as total payments and estimated balance. The receipt creation process archives all this information, so that when we re-print the receipt, it prints exactly the same.

To get the Usual & Customary amount, the new system configuration setting of "**UsualAndCustomaryInsuranceNumber**" (no default value) must be set to the NPD's insurance company for the usual rate fee schedule. If this is not set, then the costs in the report will display as blank. The usual rate is stored for every CPT, even those which do not have Eligibility enabled carrier.

To enable the auto printing and reprinting of the Eligibility Payment Receipt, set the new system configuration setting of "**EligibilityReceiptPath**" (no default value) to the new payment form as shown in the following.

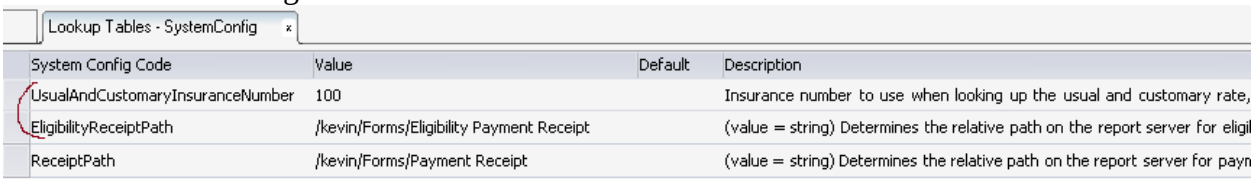

**Figure 5.1 – Displaying new system configuration settings**

The Eligibility Payment receipt will get printed after saving a screen such as Registration or View Edit when there was one or more payments made during the edit. Or receipts can be reprinted by right clicking on one of the payment and choosing "reprint" as shown in the following:

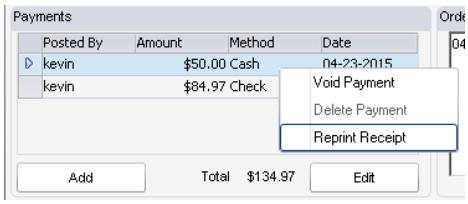

**Figure 5.2 – Reprinting receipt**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

There are two variations on the Eligibility Payment Receipt.

1) A simple receipt where the patient paid for their services in full.
2) Payment estimate change, CPTs could have changed during the exam and patient either needs to be either refunded or pay an additional amount.

In these two cases the receipt will look similar but in the second case will have additional fields such as '**Current Payments**' and '**Previous Payments for this Visit'**.

The following shows a simple receipt where the patient paid using both Cash and Cheque:

Insurance Payments are an Estimate Only

**Please write this number on your check:** 39110
**Make checks payable to:** Advanced Radiology

| Service Date | Description | Units | Charge | Total |
|---|---|---|---|---|
| 04/23/2015 | CT ORBIT SELLA/POST FOSSA/EAR C-/C+ | 1 | $ 430.17 | $ 430.17 |
| | | | | $ 430.17 |

| | Deductible Portion | Copay | Coinsurance | Total |
|---|---|---|---|---|
| Estimated Patient Responsibility | $ 100.00 | $ 10.00 | $ 24.97 | $ 134.97 |

| Method | Notes | Amount |
|---|---|---|
| Cash | | $ 50.00 |
| Check #2123 | | $ 84.97 |
| | Total Payments | $ 134.97 |
| | Estimated Patient Balance | $ 0.00 |

**Thank you for your business!**

**Figure 5.3 – Payment receipt display different modes of payment**

After the initial registration, additional CPTs were added and the patient had to return to pay the additional amount. The following is the second payment receipt for this visit:

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| Service Date | Description | Units | Charge | Total |
|---|---|---|---|---|
| 04/23/2015 | CT ORBIT SELLA/POST FOSSA/EAR C-/C+ | 1 | $ 430.17 | $ 430.17 |
| 04/23/2015 | RADIOLOGIC EXAMINATION, ABDOMEN; ANTEROPOSTERIOR AND ADDITIONAL OBLIQUE AND CONE VIEWS | 1 | $ 47.13 | $ 47.13 |
| 04/23/2015 | RADIOLOGIC EXAMINATION, ABDOMEN; SINGLE ANTEROPOSTERIOR VIEW | 1 | $ 29.26 | $ 29.26 |
| | | | | $ 506.56 |

| | Deductible Portion | Copay | Coinsurance | Total |
|---|---|---|---|---|
| Estimated Patient Responsibility | $ 100.00 | $ 10.00 | $ 31.96 | $ 141.96 |

| Method | Notes | Amount |
|---|---|---|
| CreditCard MC 3322 | XR ABDOMEN AP was added after inital registration. Patient paid remaining ESTIMATED balance. | $ 6.99 |
| | Current Payments | $ 6.99 |
| | Previous Payments for This Visit | $ 134.97 |
| | Total Payments | $ 141.96 |
| | Estimated Patient Balance | $ 0.00 |

**Figure 5.4 – Second payment required for additional services receipt**

The Usual and Customary amount is often different from the contracted rate. To help our staff understand how the amount to collect was calculated, we have updated the "Amount to Collect – Details" popup to include a list of CPTs and their rates.

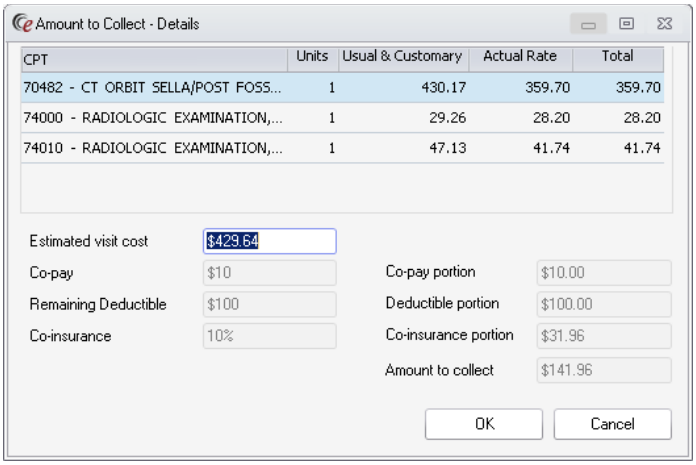

**Figure 5.5 – Amount to Collect Details changes**

A new column titled "Charge For Each Unit Flag" has been added to the Billing Code lookup table. By default we will not charge for multiple units. The RIS will only bill for multiple units if the billing_code lookup's field charge_for_each_unit_flag is set to 'Y'. If charge_for_each_unit_flag is 'N' then the visit cost will only include one charge for the CPT and the Eligibility Payment Receipt and the above Amount to Collect Details will only show that the CPT was charged once.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

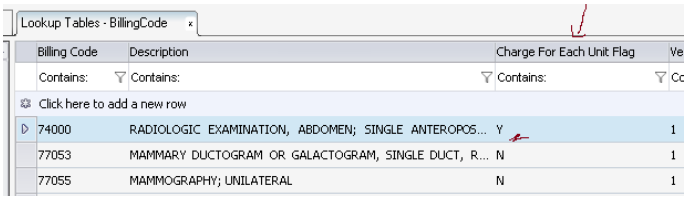

**Figure 5.6 – New column on the Billing Code tab**

Administrators can update multiple billing code in a batch as outlined in the following steps:

1. Filter on the types of billing codes you would like to set to 'Y'

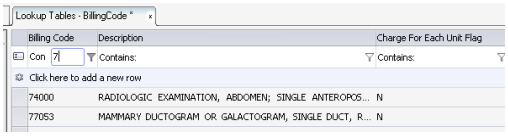

**Figure 5.7 –Filtering billing code table**

2. Set one of the entries to 'Y'
3. Press <CTRL>+A on the keyboard to select all rows
4. Right click on the cell that has the 'Y' from step 2 and select "Assign Cell To Selected Rows"

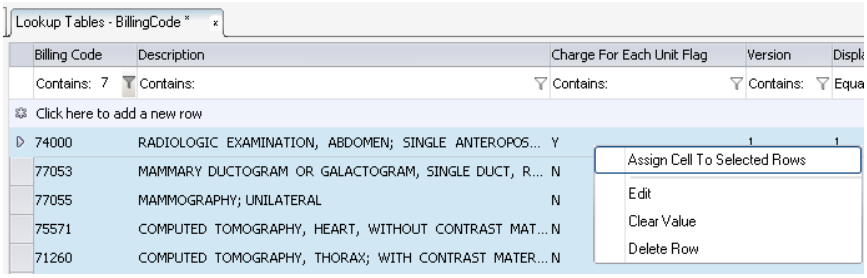

**Figure 5.8 – Assigning multiple rows in billing code with attribute**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Insurance Eligibility – Payments Exceeding Amount to Collect Warning

A popup warning is now displayed, if the amount entered is greater than the remaining amount to collect. The warning is displayed when the cursor focus moves away from the Amount textbox.

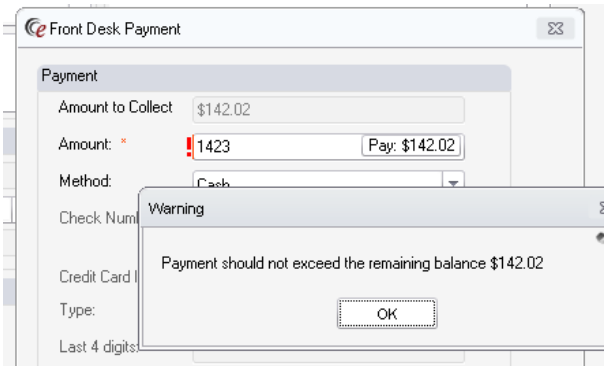

**Figure 5.9 –Warning if payment exceeds amount to collect**

To help users key in the correct remaining balance, we have introduced the "Pay" button. When clicked, the "Amount" text box will get set to the remaining balance. In the above example, clicking the "Pay: $142.02" button sets the amount to 142.02.

Two new system configuration settings have also been introduced. The first is "**MaxPaymentAmount**" that has a default of 6000. This setting will limit the user's ability to enter an amount more than the value set for this configuration setting.

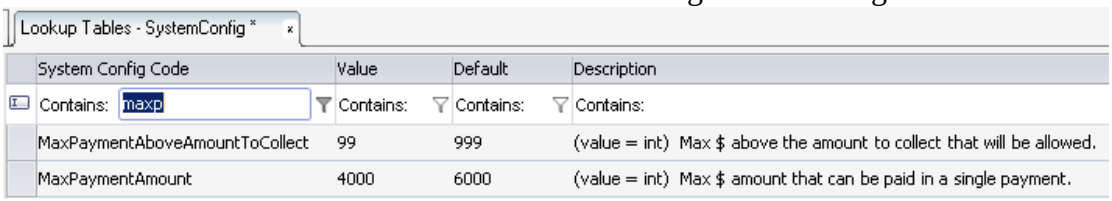

**Figure 5.10 – new configuration settings for payment amounts**

In the example below the user tried to enter a payment amount of $5000.00. The amount to collect is $142.02. Because the value set above for MaxPaymentAmount is $4000.00, we will display a message and inform the user they cannot enter this payment amount.

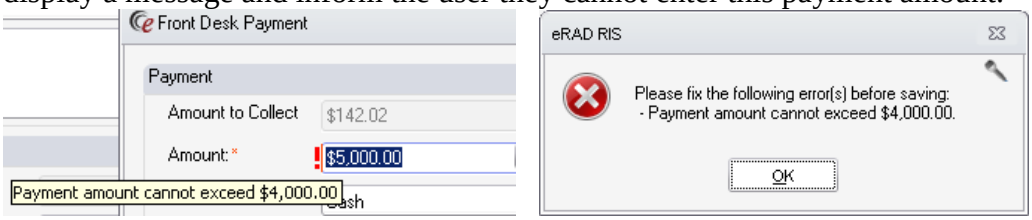

**Figure 5.11 – Message displayed when Amount to Collect exceeds MaxPaymentAmount**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

In the next example the user is trying to enter a payment amount that exceeds the set value for the next new system configuration setting of "**MaxPaymentAboveAmountToCollect**" which has a default of 999. In figure 5.10 the value is set to $99 and the amount to collect is $142.02. Since the payment amount exceeds $99 the user is prevented from entering that amount and the value displayed with these two values added together.

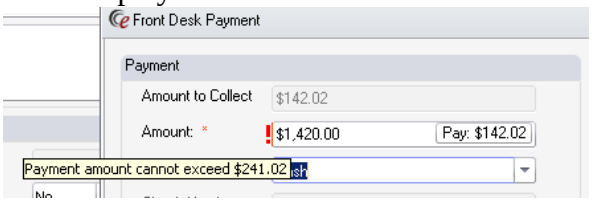

**Figure 5.12 – Amount entered exceeds MaxPaymentAboveAmountToCollect**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Insurance Eligibility – Collect Copay When it Exceeds Amount to Collect

If the amount to collect is less than the copay, the amount to collect will now be that of the copay amount. In the example below you can see that the amount to collect is $56, but the Copay portion is $99. The amount to collect will be $99.

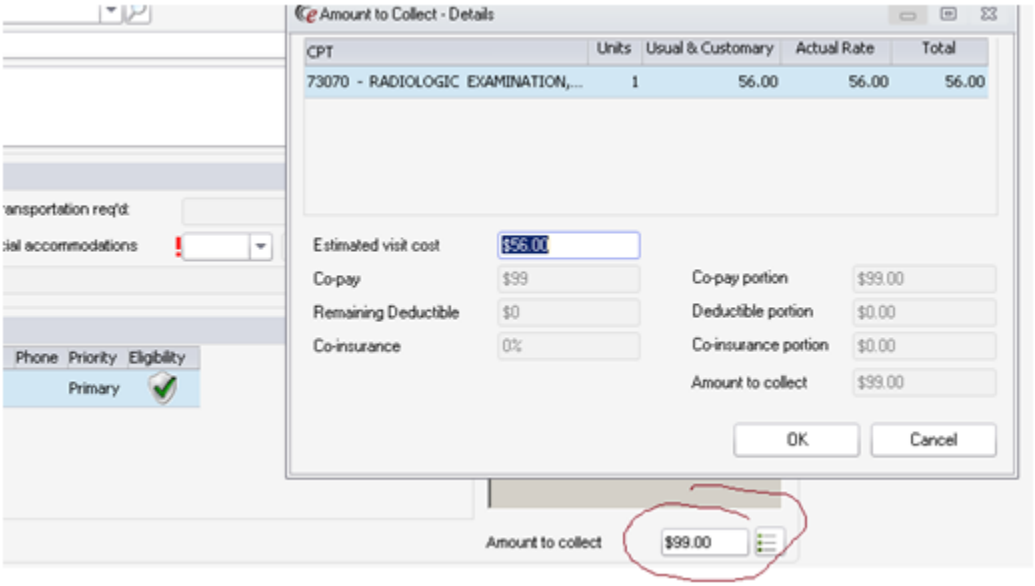

**Figure 5.13 – Amount to Collect will now be the Copay amount.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Self-Pay Option "Do not share with insurance provider"

When the exam is to have a self-pay method selected from the Billing Method section on the Order tab a new check box will appear. This check box is labeled "Do not share with insurance provider". Functionally in eRAD RIS, it will not affect anything. The flag is set to Y when selected, which is then passed to an external system that will share/not share data with the insurance company.

A new system configuration setting of "**ShowKeepSelfPayPrivate**" which has a default of false will control whether or not this check box will appear when selecting a self-pay option

**Figure 5.14 – Check box displayed when self-pay option used and config setting ShowKeepSelfPayPrivate=Y**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Referring Doctor Affiliations Included With MIRTH Messages

Logic was added to the RIS outbound external interface to include identifiers for the doctors affiliations as part of the expanded study container sent to MIRTH.

The referring doctors affiliation will be included in the c_order.requested_by_address_key.l_person_address node within the study container. A new node called affiliation_list is now a child node of l_person_address. If there are no affiliations this node would be empty. If there 1 or more then a child node called <affiliation_code> node would repeat for each occurrence. See examples below.

```
        <report_cc_delivery_emr_flag>N</report_cc_delivery_emr_flag>
        <report_delivery_do_not_deliver_flag>N</report_delivery_do_not_deliver_flag>
        <report_cc_delivery_do_not_deliver_flag>N</report_cc_delivery_do_not_deliver_flag>
        <report_delivery_email_flag>N</report_delivery_email_flag>
        <report_cc_delivery_email_flag>N</report_cc_delivery_email_flag>
        <affiliation_list />
    </l_person_address>
</requested_by_address_key>
<indication>DAT</indication>
        <report_cc_delivery_emr_flag>N</report_cc_delivery_emr_flag>
        <report_delivery_do_not_deliver_flag>N</report_delivery_do_not_deliver_flag>
        <report_cc_delivery_do_not_deliver_flag>N</report_cc_delivery_do_not_deliver_flag>
        <report_delivery_email_flag>N</report_delivery_email_flag>
        <report_cc_delivery_email_flag>N</report_cc_delivery_email_flag>
        <affiliation_list>
            <affiliation_code>1</affiliation_code>
        </affiliation_list>
    </l_person_address>
</requested_by_address_key>
            <report_cc_delivery_emr_flag>N</report_cc_delivery_emr_flag>
            <report_delivery_do_not_deliver_flag>N</report_delivery_do_not_deliver_flag>
            <report_cc_delivery_do_not_deliver_flag>N</report_cc_delivery_do_not_deliver_flag>
            <report_delivery_email_flag>N</report_delivery_email_flag>
            <report_cc_delivery_email_flag>N</report_cc_delivery_email_flag>
            <affiliation_list>
                <affiliation_code>1</affiliation_code>
                <affiliation_code>109</affiliation_code>
            </affiliation_list>
        </l_person_address>
    </requested_by_address_key>
    <indication>DAT</indication>
```

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Interface to Create Internal System ID for External ID via External System

The RIS Services were updated so that if the c_child_patient node has an attribute called create_internal set to Y then if no internal patient is found or is already associated to the external MRN, a new row will be created.

The MIRTH mapping line required to create the attribute looks like:

```
tmp['Patient']['c_child_patient'].@create_internal = 'Y';
```

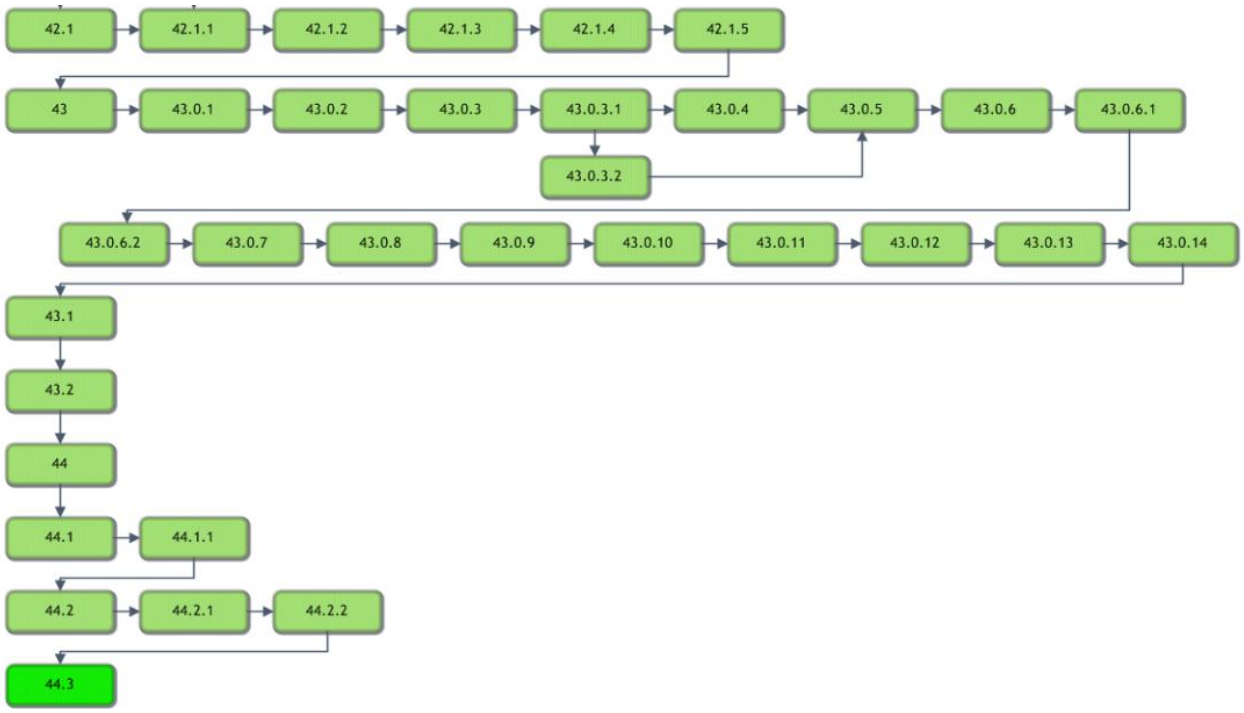
With this attribute on (Y), and the message sent to RIS with only the external identifier and a match is not found we will create an internal MRN for this patient. Alternatively if the attribute is "N" it will behave as it does today, sending the message to RIS and an internal ID will not be created.

In addition to the create_internal attribute, we also included the attributes of require_phone_match and require_gender_match, both valued with 'N'.
Examples:

```
tmp['Patient']['c_child_patient'].@require_phone_match = 'N';
tmp['Patient']['c_child_patient'].@require_gender_match = 'N';
```

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 6. Code Stream



**Legend:**

# 8. Resolved Defects

Bugs Suggested Features and Support Issues resolved in build 2.44.3. The extract is taken from Redmine bug tracking system and only displays defects resolved in 2.44.3.

| Bug # | Priority | Subject | Category | Found Version |
|---|---|---|---|---|
| 6032 | Normal | Scheduling - New Appointment Calendar - Selecting time on calendar does not check for room availability. | Thick Client GUI | 1.42 |
| 7270 | Normal | Note column in personel causing errors | Admin-Clinical Data | 2.43 |
| 7497 | Normal | biopsy surgeon selection shows referrings and other personnel that are not surgeons | Mammography | 2.43.0.5 |
| 7932 | Normal | An error in the image caching process can terminate RIS | PACS (eRAD) Int - RIS only | 2.43.0.12 |
| 8428 | High | Collection was modified error related to worklist views | Radiology Reporting | 2.43.1 |
| 9150 | High | Insurance Eligibility - CPT costs needed to be multiplied by units | | 43.1 |
| 9323 | High | IVT - MRN isn't read-only on patient tab. | Thick Client GUI | 2.43.2 |
| 9425 | Normal | Amount to collect not updating on Schedule Order/Review screens when blanked out | Billing | 2.44 |
| 9448 | High | Review Tab - Estimated responsibilities when zero should be handled better | Billing | 43.1 |
| 9471 | Normal | Warning needed if selected insurance has a blank policy number | Insurance Eligibility | 43.1 |
| 9480 | Low | Reporting Radiologist - PowerScribe error and crash opening report with powerscribe integration | Radiology Reporting | 2.43.1 |
| 9513 | Normal | AppointmentBook is showing cancelled studies | Scheduling | 2.44.2 |
| 9523 | Urgent | Old layout for dictation/editing are not maintained into the 44 upgrade. | Radiology Reporting | 44 |
| 9524 | Urgent | Bacode scanner not opening PS360 report when set to Diagnose on accession number | Powerscribe Integration | 2.44.2 |
| 9525 | Normal | Assigned Radiologist is not recognized as assigned in the Assign to Radiologist window | Radiology Reporting | 2.44 |

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 44.4 and subsequent server releases. This version of eRAD RIS is referred to as Build 2.44.4

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 2.44.4 is considered a new release of the application. It does not require a reinstallation of eRAD RIS. If users choose to reinstall, this is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

# 4. Existing Access Strings Required for New Feature in B2.44.4

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| System Configuration | PatientPortalImageHoldPeriodDays | 3 | The number of days from the time the study is performed to the date that the patient will be able to see the images. |
| System Configuration | PatientPortalReportHoldPeriodDays | 3 | The number of days from the time a report is signed to the date that the patient will be able to see it. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

# 5. New Features and Enhancements

## Update Patient Insurance via Interface

Patient insurance information needs to come in via the interface. This was previously disabled during development of EMR workflow. In the most common cases an insurance will need to be attached to a visit based on a given accession number.

The interface now allows the incoming message to contain c_patient_insurance and c_visit_x_patient_insurance rows. This allows inbound message to add or update multiple insurance policies and associate one or more of them to the visit referred to in the message. The interface tries to look up the given insurance policy based on the policy number and carrier code, which are considered to be the minimum amount of criteria given. If a row is found for this patient is used, otherwise a new row is added. In order to link to the current visit a c_visit_x_patient_insurance row needs to be included in the message, otherwise the c_patient_insurance is only attached to the patient and not the visit.

The following message will create or update an insurance belonging to the patient and associate that insurance to the visit to which the study identified by the accession number belongs. The patient_insurance_key nodes (in blue) identify that this insurance policy should be attached to this visit, meaning the "Use" checkbox will be selected. If multiple insurances are contained in the message and should be attached to the visit then each must have a unique patient_insurance_key and a corresponding c_visit_x_patient_insurance node.

```
<StudyContainer MainAction="HL7_StudyUpdated">
    <Patient>
        <c_patient_insurance>
            <patient_insurance_key>1</patient_insurance_key>
            <carrier_code>0601053</carrier_code>
            <policy_number>B-88968</policy_number>
            <group_number>123</group_number>
        </c_patient_insurance>
    </Patient>
    <Visit>
        <c_visit_x_patient_insurance>
            <patient_insurance_key>1</patient_insurance_key>
        </c_visit_x_patient_insurance>
    </Visit>
    <Study>
        <c_study>
```

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

```
                    <accession_number>1000710</accession_number>
                </c_study>
            </Study>
</StudyContainer>
```

If the section of <Visit> doesn't exist or the node <c_visit_x_patient_insurance> doesn't exist the insurance policy will be added, but will not be used with the visit (Use checkbox will not be selected).

Note that the interface requires only policy_number and carrier_code nodes for the c_patient_insurance table, but it accepts all fields belonging to the c_patient_insurance table.

In addition to a specifying the accession number to associate the insurance other options exists, such as

- <patient_id> with <issuer_of_patient_id>
- <visit_number>

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

## Ability to Cancel Outside Reads via Interface

eRAD RIS prevents some status changes via interface once the study is in ExamDone status. For outside reads received from another system we need to be able to cancel them.

The following HL7 main action will cancel a study in Exam Done, Exam Done (Tech Only) and Hold Code Complete status.

```
<StudyContainer MainAction="HL7_StudyCancelled">
    <Study>
        <c_study>
            <accession_number>1000853</accession_number>
        </c_study>
    </Study>
</StudyContainer>
```

## Ability to Specify Person Address Key via Interface

In previous versions when a message with a referring physician was received we couldn't specify which address (if multiple) to use. With the node displayed below, the <requested_by_address_key> will assign the correct address to the study based on the address key.

```
<StudyContainer MainAction="HL7_StudyUpdated">
    <Patient>
    </Patient>
    <Visit>
    </Visit>
    <Order>
        <c_order>
            <_patient_id>10686</_patient_id>
            <_issuer_of_patient_id>system</_issuer_of_patient_id>
            <requested_by_person_key>20180</requested_by_person_key>
            <requested_by_address_key>23752</requested_by_address_key>
        </c_order>
    </Order>
    <Study>
        <c_study>
            <accession_number>1009942</accession_number>
        </c_study>
    </Study>
</StudyContainer>
```

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

## Forms and Labels – Site Code added to Printing Criteria

The ability to filter the printing criteria of a form by site has been added. The column "site" works in same manner as the existing columns. By default all sites will be included in the printing criteria. The user will need to manually edit to filter the form by site.

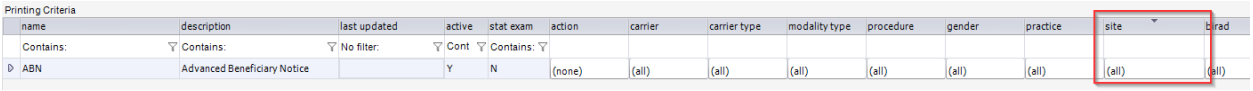

**Figure 5.1 – Site filter added to Forms and Labels Printing Criteria**

Multiple printing criteria rows can be added for each form if the action or availability of the form is different.

## Patient Portal – Configurable Time for Reports and Images Availability

After a report is signed the report itself and the images associated with the report should be held from view for a specific time period via the Patient Portal.

We have introduced 2 new configuration settings to control how long the report and images will be withheld from view on the patient portal.

The system configuration setting of "**PatientPortalImageHoldPeriodDays**" with a default of 3 will determine the number in days from the time the study is performed that the patient will be able to view the images on the patient portal

The system configuration setting of "**PatientPortalReportHoldPeriodDays**" with a default of 3 will determine the number in days from the time the report is signed until the patient can view the report on the patient portal

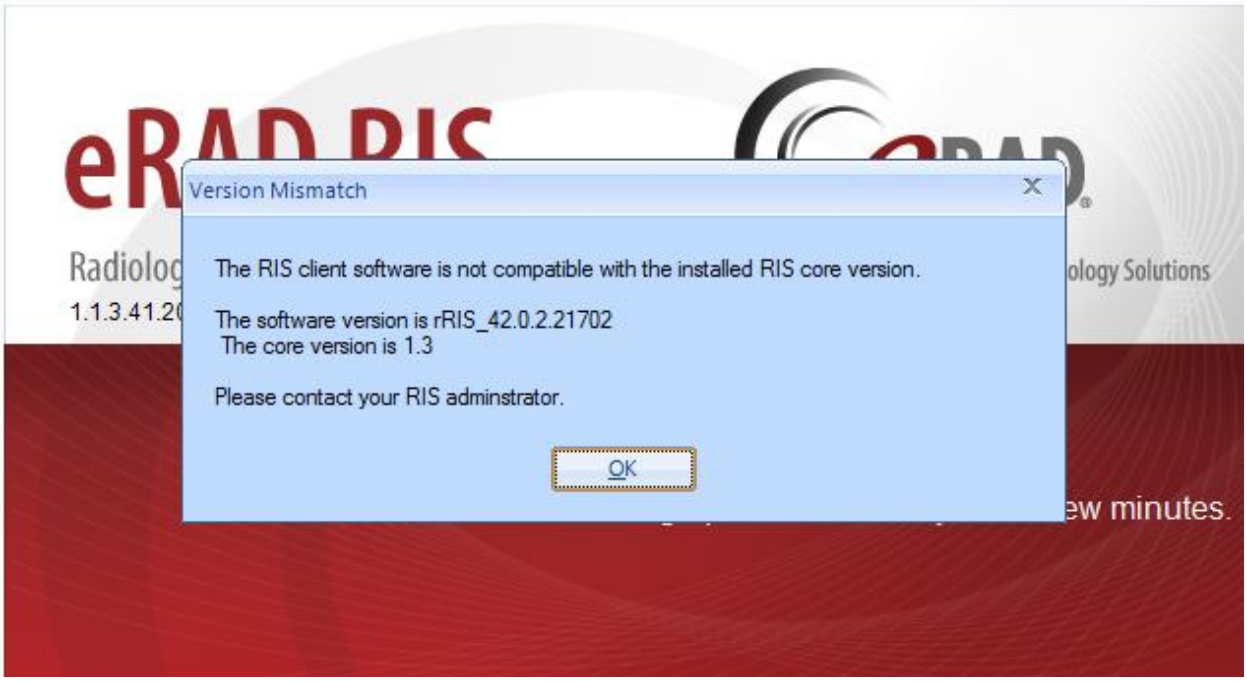
# 7. Installing

## Client/GUI

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.44.4.1.28953.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_44.4.1.28953→ rRIS_1.3.44.4.1.28953
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Web Service

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 88 files in the rRISService folder and 2 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below).

## Services Configuration Wizard

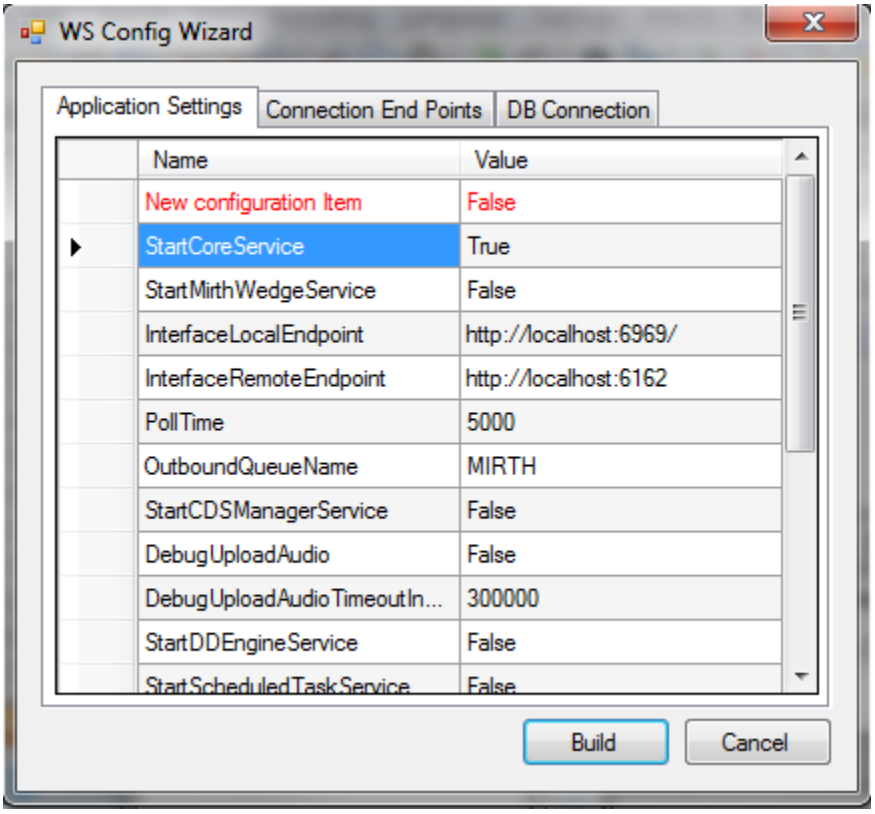
With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

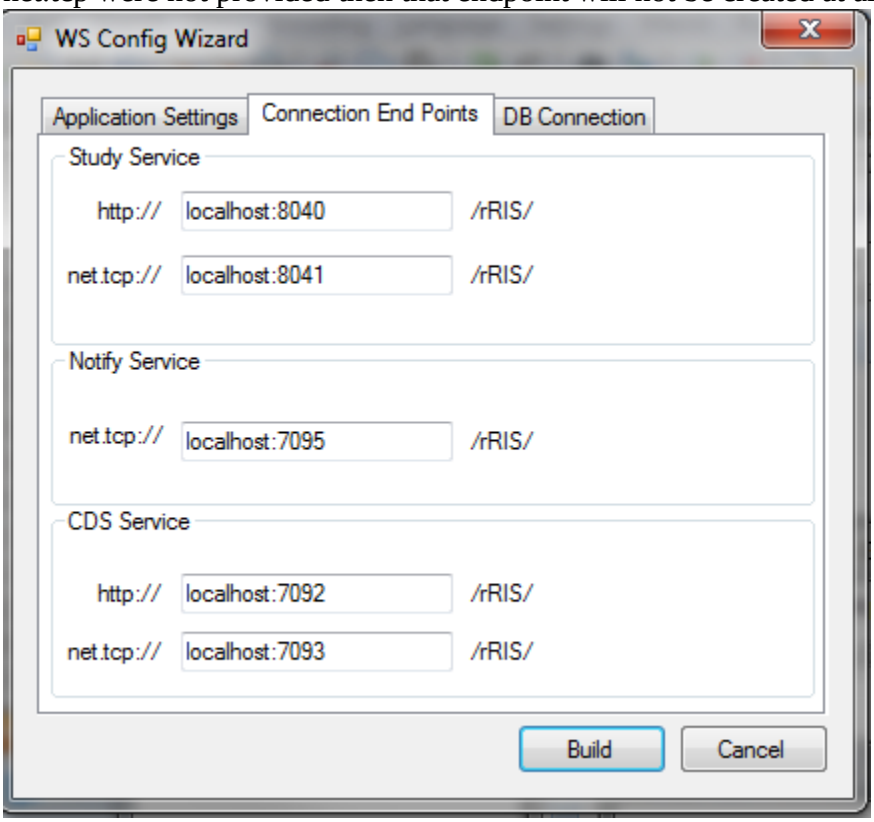
**NOTE:** the rRISServices.exe.config file is also included in the deploy folder. If this file has changes it **will not** update your current file in the Web Service directory. Any changes to this file will require a manual update of the rRISServices.exe.config and rRISServicesx64.exe.config files.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.



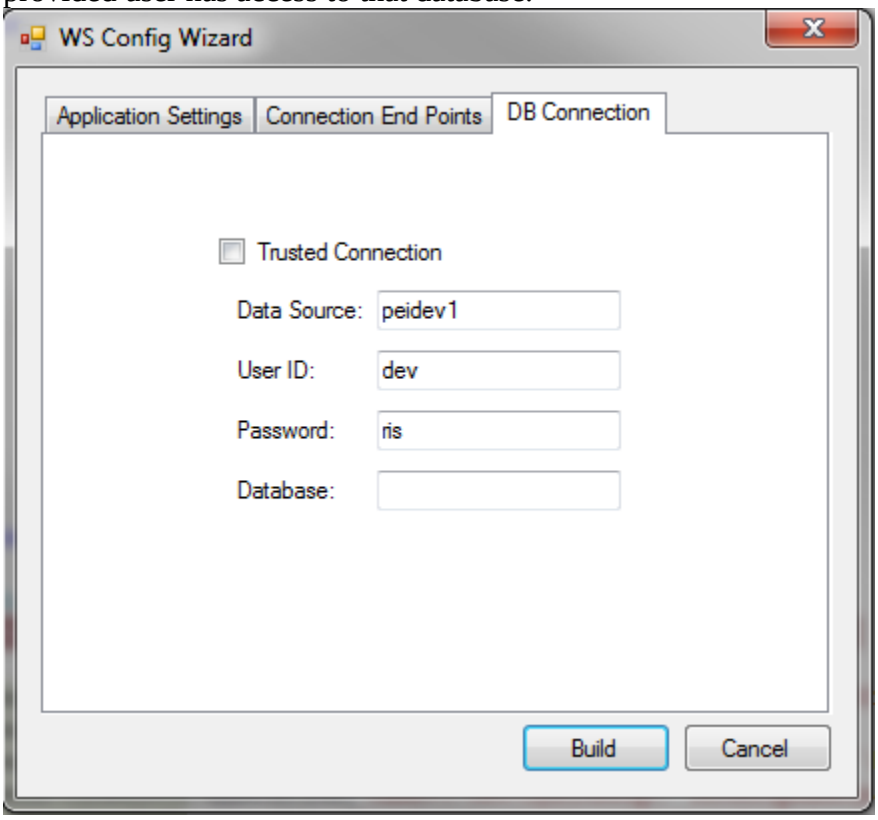
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of "Study Service" or "CDS Service" if both http and net.tcp were not provided then that endpoint will not be created at all.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**DB Connection:** will display the existing configuration, if the Connection is to be used as a trusted connection, then the user ID and password will become disabled and will not be used, and will rely on the provided database value, When not using the trusted connection, The Database value is not needed but can be used to force a specific database connection as long as the provided user has access to that database.



It is always good practice to do a compare of the .config files.

1) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   **Restart each service**.

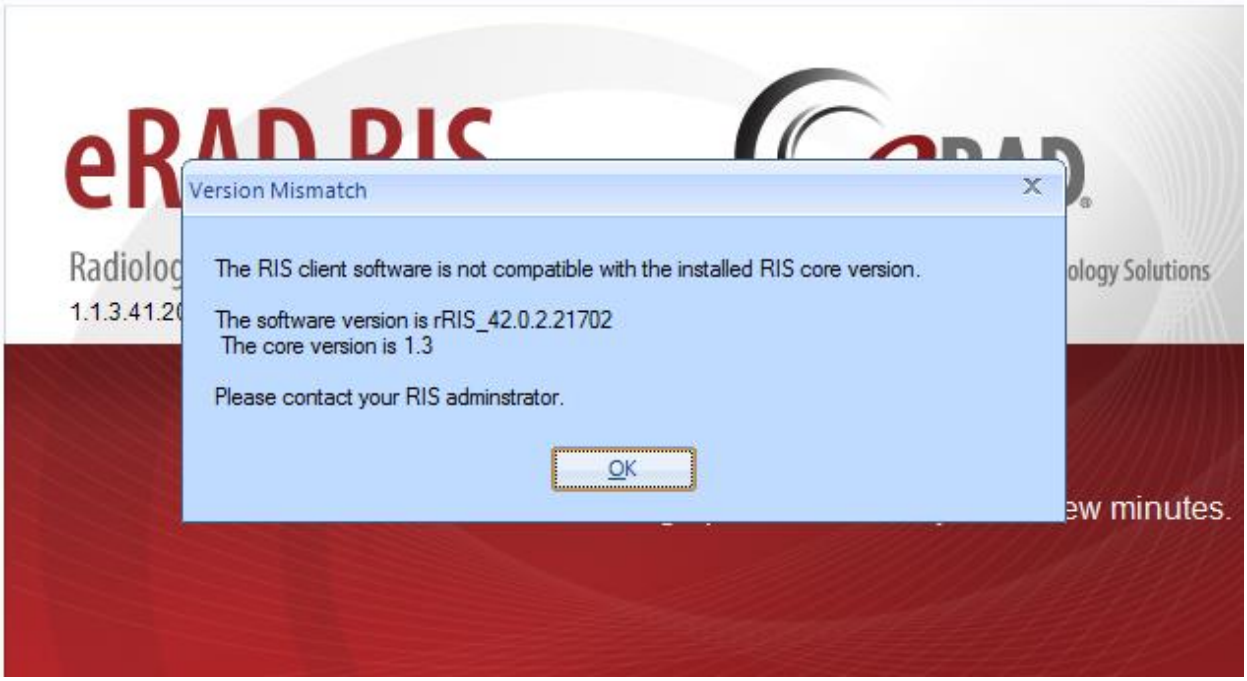
# 7. Installing

## Client/GUI

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.44.4.2.29327.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_44.4.2.29327→ rRIS_1.3.44.4.2.29327
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Web Service

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 88 files in the rRISService folder and 2 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below).

## Services Configuration Wizard

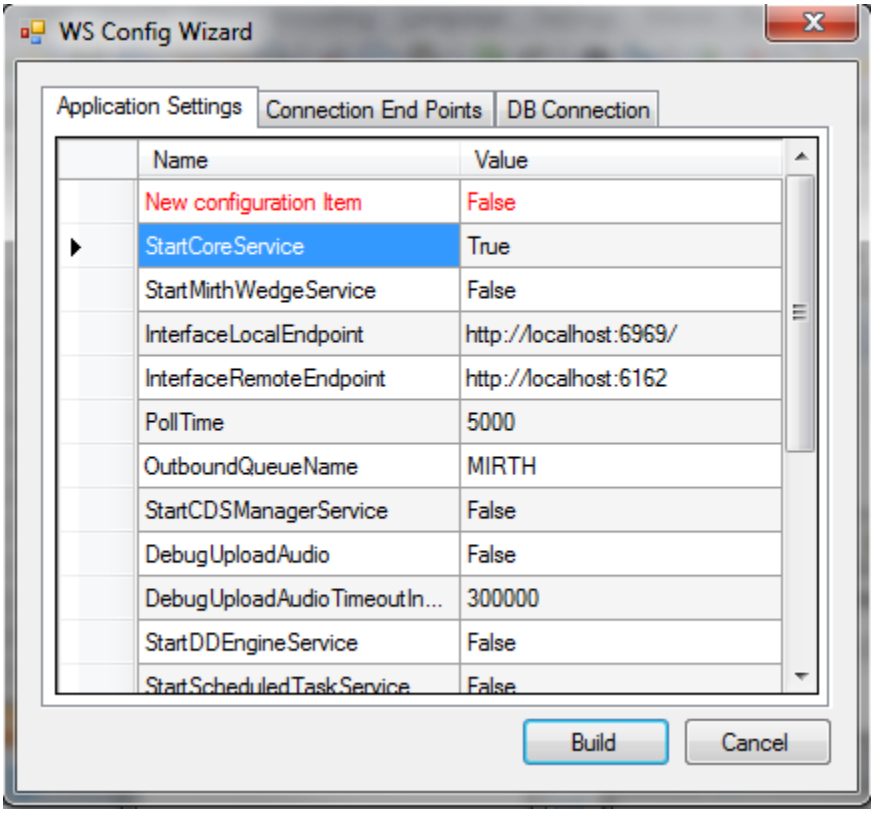
With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

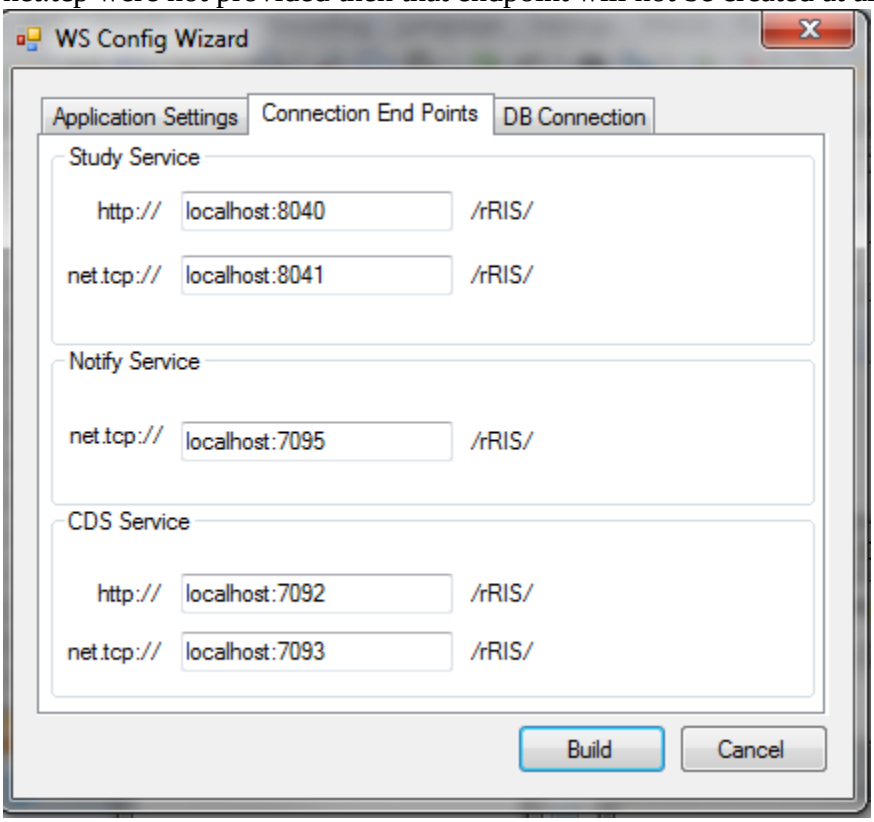
**NOTE:** the rRISServices.exe.config file is also included in the deploy folder. If this file has changes it **will not** update your current file in the Web Service directory. Any changes to this file will require a manual update of the rRISServices.exe.config and rRISServicesx64.exe.config files.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.



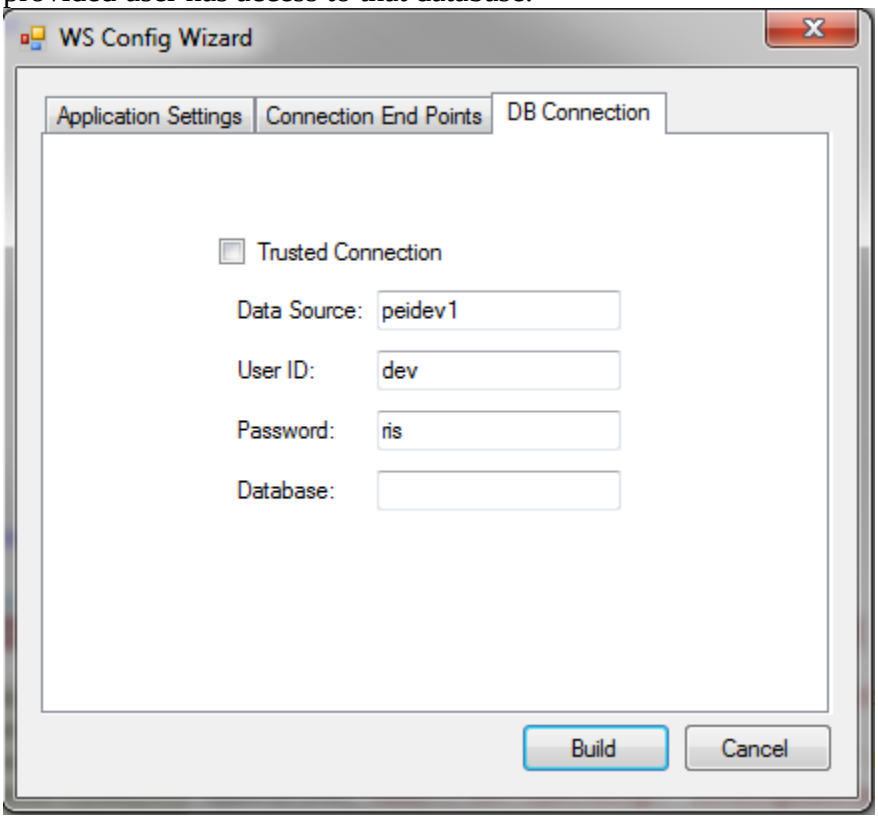
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of "Study Service" or "CDS Service" if both http and net.tcp were not provided then that endpoint will not be created at all.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**DB Connection:** will display the existing configuration, if the Connection is to be used as a trusted connection, then the user ID and password will become disabled and will not be used, and will rely on the provided database value, When not using the trusted connection, The Database value is not needed but can be used to force a specific database connection as long as the provided user has access to that database.



It is always good practice to do a compare of the .config files.

1) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   **Restart each service**.

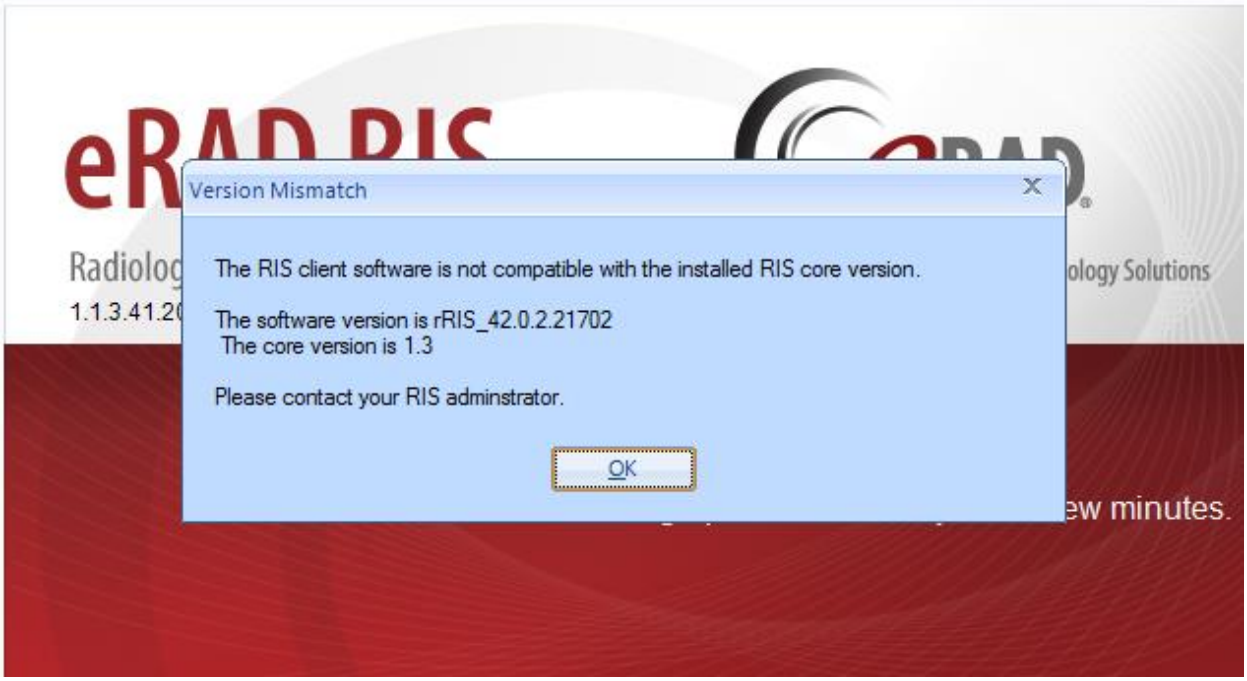
# 7. Installing

## Client/GUI

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.44.4.2.29722.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_44.4.2.29722→ rRIS_1.3.44.4.2.29722
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

## 1. New Features

Special build requirements came in from our customers in South Africa. In future builds starting with Build 45 we will have the ability to create custom access string to hide fields, tabs, etc…
Build 44.4.999 has been developed in the interim to remove tabs and fields requested.

The following has been removed from view in this build 44.4.999

1. Remove the Patient Origin group box from the Patient tab
2. Remove the Family History group box from the Patient tab
3. Remove Approved Medical Record Access from the Contacts/Demographics tab
4. Remove the MU tab
5. Remove the Image Request tab
6. Remove the Review tab
7. Remove the Contact Log tab
8. Make Special Accommodations a non-mandatory field
9. Make Reason for Exam a non-mandatory field
10. Change the text on the Manage Policies button to "Medical Aids"

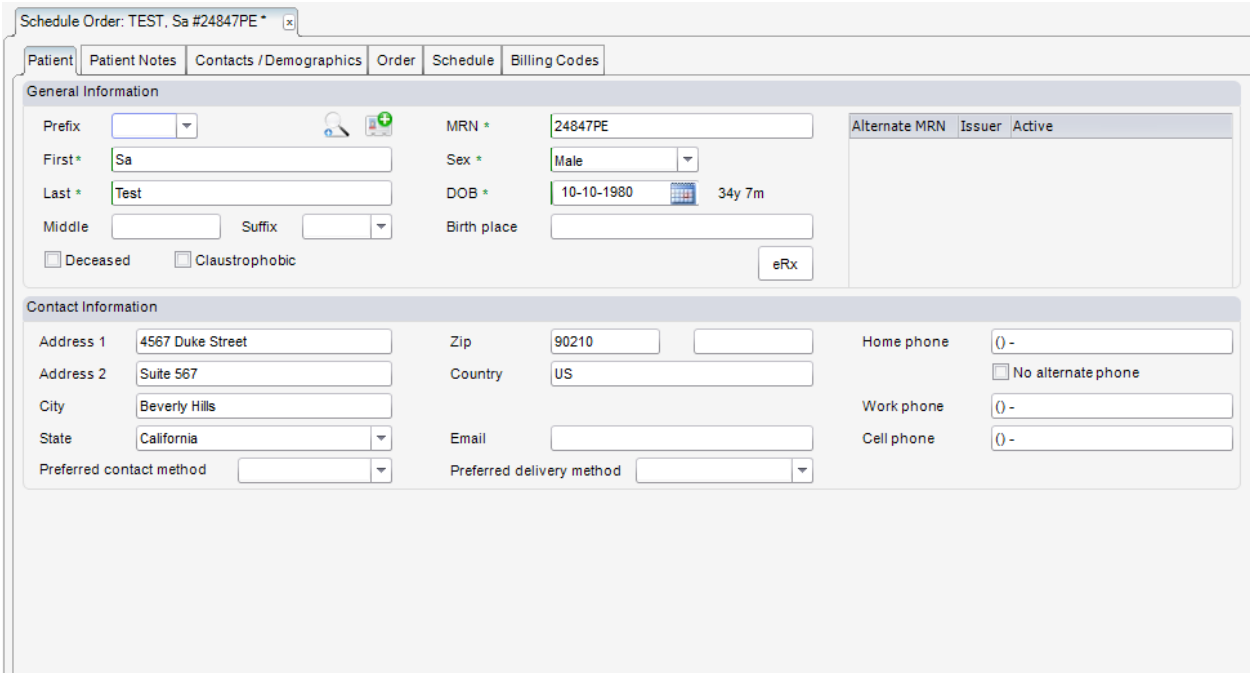

Figure 1 – Patient Tab with Patient Origin and Family History Removed

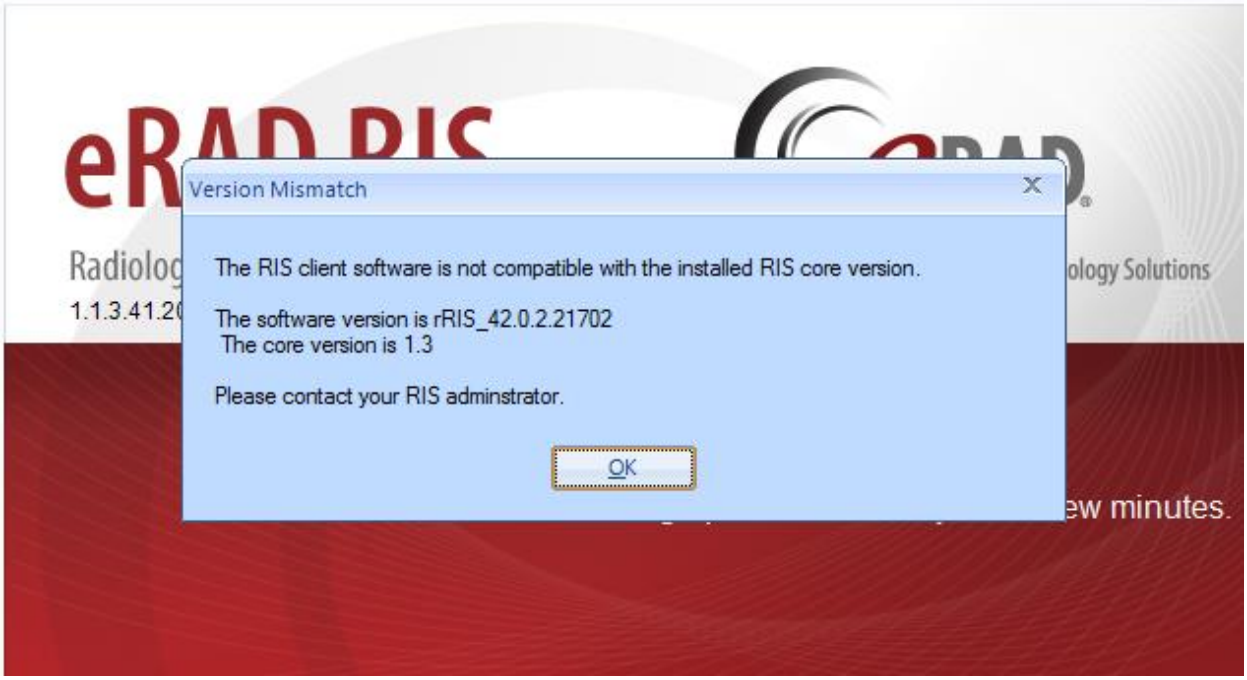
# 6. Installing

## Client/GUI

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.44.4.999.29083.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_44.4.999.29083→ rRIS_1.3.44.4.999.29083
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from RADNET, Inc.

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 44.4 and subsequent server releases. This version of eRAD RIS is referred to as Build 2.44.4

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 2.44.4 is considered a new release of the application. It does not require a reinstallation of eRAD RIS. If users choose to reinstall, this is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

# 4. Existing Access Strings Required for New Feature in B2.44.4

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| System Configuration | PatientPortalImageHoldPeriodDays | 3 | The number of days from the time the study is performed to the date that the patient will be able to see the images. |
| System Configuration | PatientPortalReportHoldPeriodDays | 3 | The number of days from the time a report is signed to the date that the patient will be able to see it. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

# 5. New Features and Enhancements

## Update Patient Insurance via Interface

Patient insurance information needs to come in via the interface. This was previously disabled during development of EMR workflow. In the most common cases an insurance will need to be attached to a visit based on a given accession number.

The interface now allows the incoming message to contain c_patient_insurance and c_visit_x_patient_insurance rows. This allows inbound message to add or update multiple insurance policies and associate one or more of them to the visit referred to in the message. The interface tries to look up the given insurance policy based on the policy number and carrier code, which are considered to be the minimum amount of criteria given. If a row is found for this patient is used, otherwise a new row is added. In order to link to the current visit a c_visit_x_patient_insurance row needs to be included in the message, otherwise the c_patient_insurance is only attached to the patient and not the visit.

The following message will create or update an insurance belonging to the patient and associate that insurance to the visit to which the study identified by the accession number belongs. The patient_insurance_key nodes (in blue) identify that this insurance policy should be attached to this visit, meaning the "Use" checkbox will be selected. If multiple insurances are contained in the message and should be attached to the visit then each must have a unique patient_insurance_key and a corresponding c_visit_x_patient_insurance node.

```
<StudyContainer MainAction="HL7_StudyUpdated">
    <Patient>
        <c_patient_insurance>
            <patient_insurance_key>1</patient_insurance_key>
            <carrier_code>0601053</carrier_code>
            <policy_number>B-88968</policy_number>
            <group_number>123</group_number>
        </c_patient_insurance>
    </Patient>
    <Visit>
        <c_visit_x_patient_insurance>
            <patient_insurance_key>1</patient_insurance_key>
        </c_visit_x_patient_insurance>
    </Visit>
    <Study>
        <c_study>
```

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

```
                    <accession_number>1000710</accession_number>
                </c_study>
            </Study>
</StudyContainer>
```

If the section of <Visit> doesn't exist or the node <c_visit_x_patient_insurance> doesn't exist the insurance policy will be added, but will not be used with the visit (Use checkbox will not be selected).

Note that the interface requires only policy_number and carrier_code nodes for the c_patient_insurance table, but it accepts all fields belonging to the c_patient_insurance table.

In addition to a specifying the accession number to associate the insurance other options exists, such as

- <patient_id> with <issuer_of_patient_id>
- <visit_number>

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

## Ability to Cancel Outside Reads via Interface

eRAD RIS prevents some status changes via interface once the study is in ExamDone status. For outside reads received from another system we need to be able to cancel them.

The following HL7 main action will cancel a study in Exam Done, Exam Done (Tech Only) and Hold Code Complete status.

```
<StudyContainer MainAction="HL7_StudyCancelled">
    <Study>
        <c_study>
            <accession_number>1000853</accession_number>
        </c_study>
    </Study>
</StudyContainer>
```

## Ability to Specify Person Address Key via Interface

In previous versions when a message with a referring physician was received we couldn't specify which address (if multiple) to use. With the node displayed below, the <requested_by_address_key> will assign the correct address to the study based on the address key.

```
<StudyContainer MainAction="HL7_StudyUpdated">
    <Patient>
    </Patient>
    <Visit>
    </Visit>
    <Order>
        <c_order>
            <_patient_id>10686</_patient_id>
            <_issuer_of_patient_id>system</_issuer_of_patient_id>
            <requested_by_person_key>20180</requested_by_person_key>
            <requested_by_address_key>23752</requested_by_address_key>
        </c_order>
    </Order>
    <Study>
        <c_study>
            <accession_number>1009942</accession_number>
        </c_study>
    </Study>
</StudyContainer>
```

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

## Forms and Labels – Site Code added to Printing Criteria

The ability to filter the printing criteria of a form by site has been added. The column "site" works in same manner as the existing columns. By default all sites will be included in the printing criteria. The user will need to manually edit to filter the form by site.

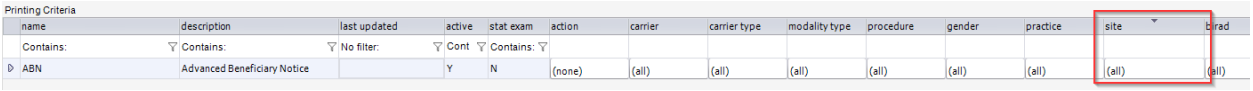

**Figure 5.1 – Site filter added to Forms and Labels Printing Criteria**

Multiple printing criteria rows can be added for each form if the action or availability of the form is different.

## Patient Portal – Configurable Time for Reports and Images Availability

After a report is signed the report itself and the images associated with the report should be held from view for a specific time period via the Patient Portal.

We have introduced 2 new configuration settings to control how long the report and images will be withheld from view on the patient portal.

The system configuration setting of "**PatientPortalImageHoldPeriodDays**" with a default of 3 will determine the number in days from the time the study is performed that the patient will be able to view the images on the patient portal

The system configuration setting of "**PatientPortalReportHoldPeriodDays**" with a default of 3 will determine the number in days from the time the report is signed until the patient can view the report on the patient portal

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 44.5 and subsequent server releases. This version of eRAD RIS is referred to as Build 2.44.5

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 2.44.5 is considered a new release of the application. It does not require a reinstallation of eRAD RIS. If users choose to reinstall, this is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

# 4. Existing Access Strings Required for New Feature in B2.44.5

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Access string and User Group Permissions | Clinical.EditPatientFlags | None | Full access to this enables the user to assign patient flags |
| Access string and User Group Permissions | Clinical.EditPatientFlagsNotes | None | full access to this enables the user to add notes to patient flags |
| Access string and User Group Permissions | Config.LookupEditor.PatientFlag | None | Provides access to the lookup table PatientFlag |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

# 5. New Features and Enhancements

## Ability to Add Patient Flags

A new lookup table titled "PatientFlag" has been added in Administration>Configure>General folder. This new table's access is controlled by the access string "**Config.LookupEditor.PatientFlag**"

In this table an administrator can create a set of attributes that can be attached or tagged to a patient, e.g. "DontSchedule", "WriteOffAcct", etc. Based on configuration, these flags can also display a message when the patient is opened in various screens in RIS.

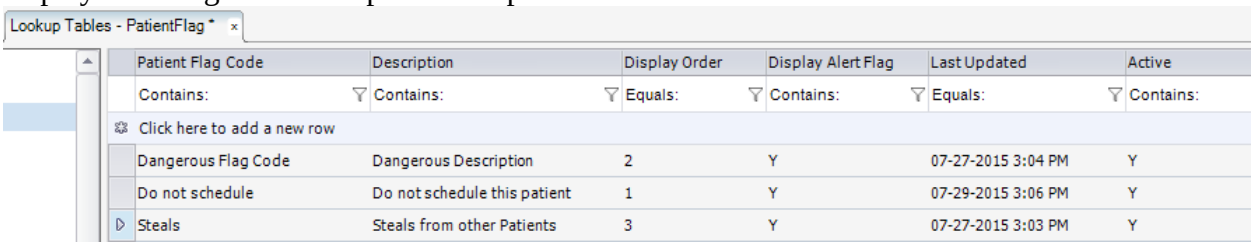

**Figure 5.1 – PatientFlag lookup table**

The patient flags can be displayed or edited from either the patient folder or from the patient general tab on various screens in RIS. The button on the patient general tab for launching the Patient Flags dialog will change in appearance depending on whether or not there are patient flags attached (it will appear more muted if there are no flags).

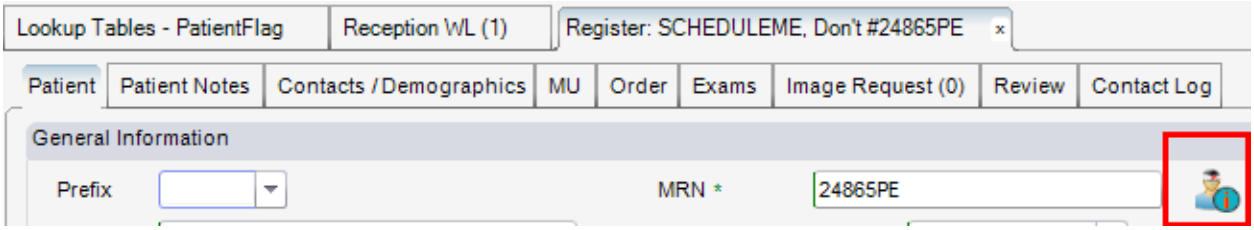

**Figure 5.2 – Patient Flag button on patient tab that has flags attached**

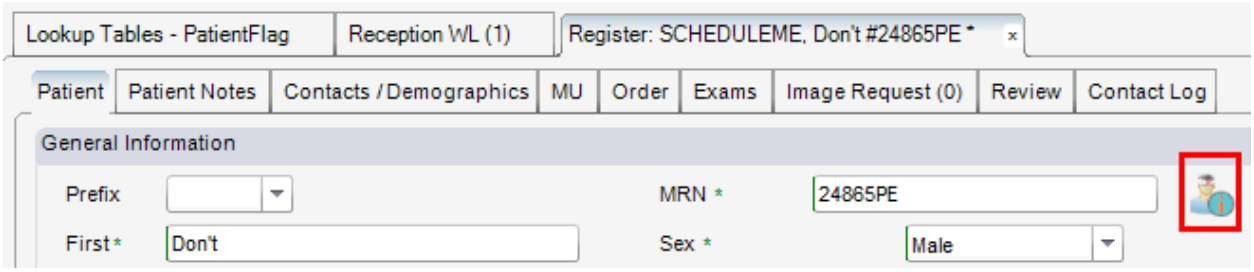

**Figure 5.3 – Patient Flag button on patient tab that doesn't have flags attached**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

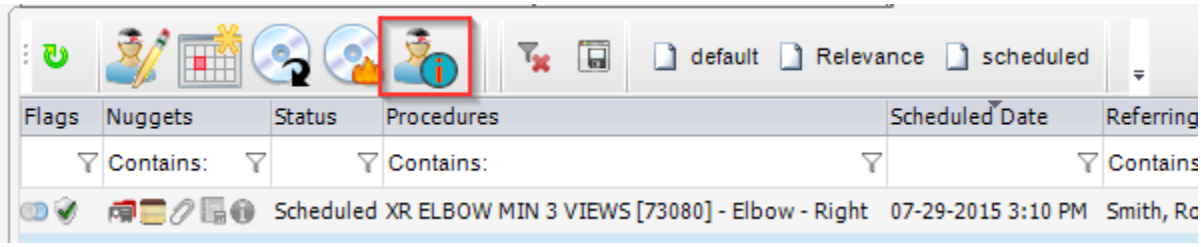

**Figure 5.4 – Accessing/adding patient flags from Patient Folder WL**

Patient Flags can be attached by checking a checkbox next to the description of the desired flag. To add a note, an authorized user can double click the Notes cell on the list of patient flags and begin editing.

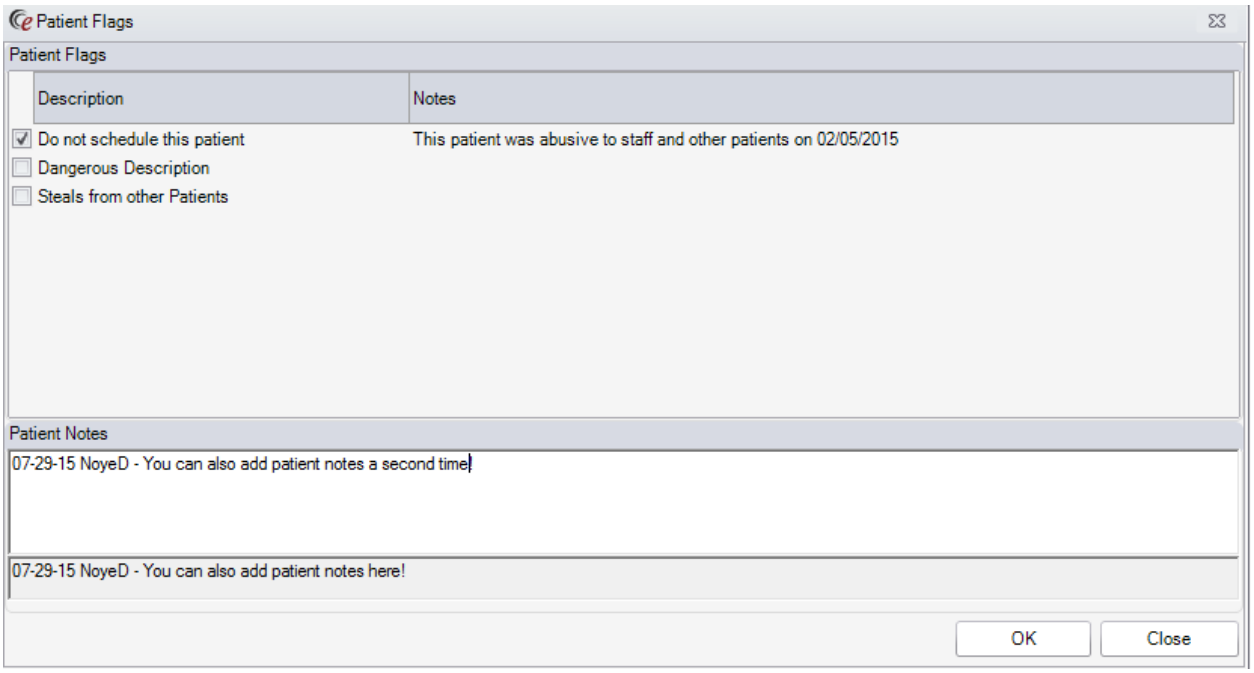

**Figure 5.5 – Patient Flags window**

When this patient is accessed in a data window (e.g. schedule order, view/edit, registration) the alert will display provided the Patient Flag Code in the PatientFlag lookup table has the column Display Alert Flag set to Y (see figure 5.1). The alert however will not appear in any reporting windows (e.g. dictate, sign reports, create/edit report)

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

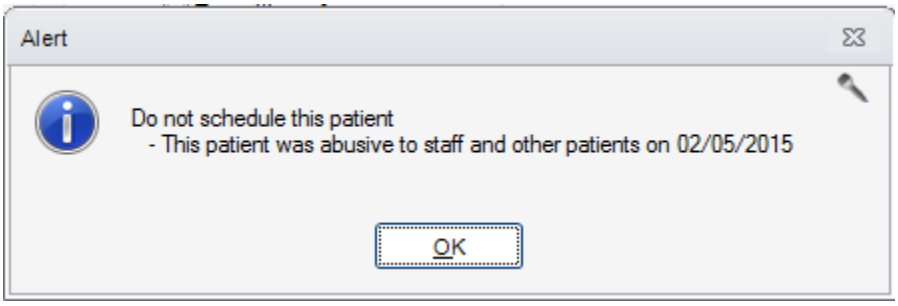

**Figure 5.6 – Patient Flag alert**

Access to add patient flags are controlled by the new access string of "**Clinical.EditPatientFlags**" which has a default value of None. Users with access will have the Patient Flag button available, will be able to open and add patient flag. The access level of ReadOnly would give the user the ability to see the Patient Flags button and open the Patient Flags window to view the available patient flags, but would not be able to assign.

The ability to add notes to the Patient Flag is controlled by the access string "**Clinical.EditPatientFlagsNotes**" which has a default of None. The Notes field allows the user to attach a note of up to 250 characters to the Patient Flag. The Notes will also be displayed in the alert along with the Patient Flag Code.

If a user has Read Only access and attempts to assign a patient flag they will be presented with message informing they don't have permission to assign

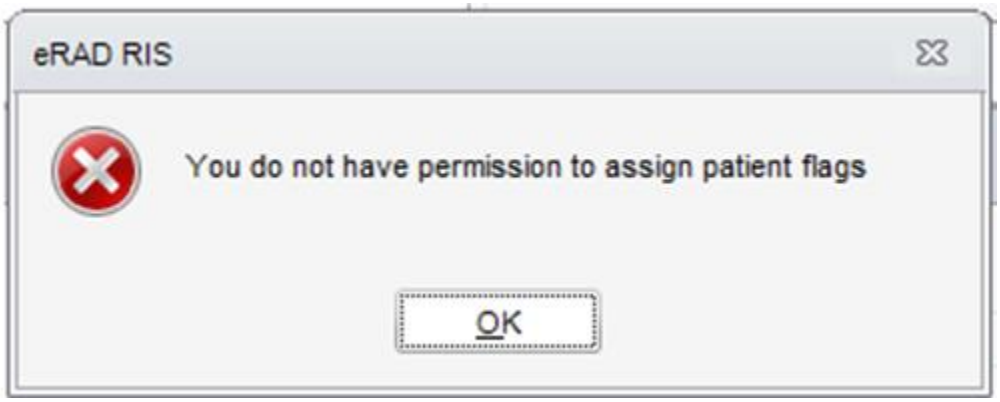

**Figure 5.7 – Message presented to user that cannot assign patient flags**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

## Alert on Referring Physician Selected for Order

A new alert has been created to present a pop-up message when a referring physician is selected on the Order Tab. The Personnel table has a new field under the Notes tab titled "Referring Alert Message". This free form text box will accept up to 2000 characters. The check box Display Alert will determine if the alert pop-up message is presented to the user on the order tab when this Referrer is chosen.

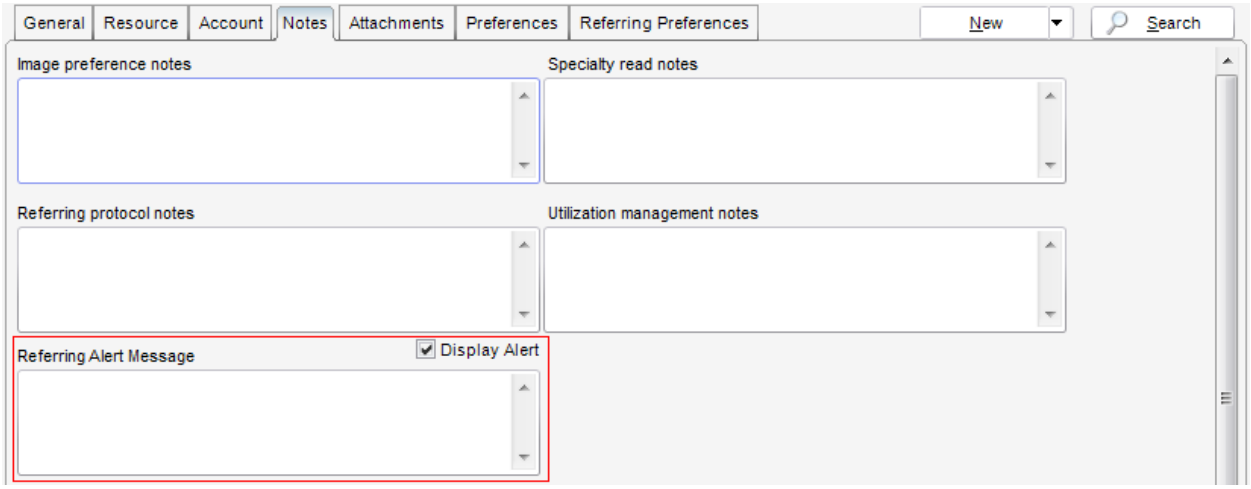

**Figure 5.8 – Referring Alert Message notes field and Display Alert check box**

The alert that is presented to the user is will display the Referrer's name preceded by Alert in the title bar. A check box to acknowledge that the message has been read must be selected in enable the Ok button before the message window can be closed.

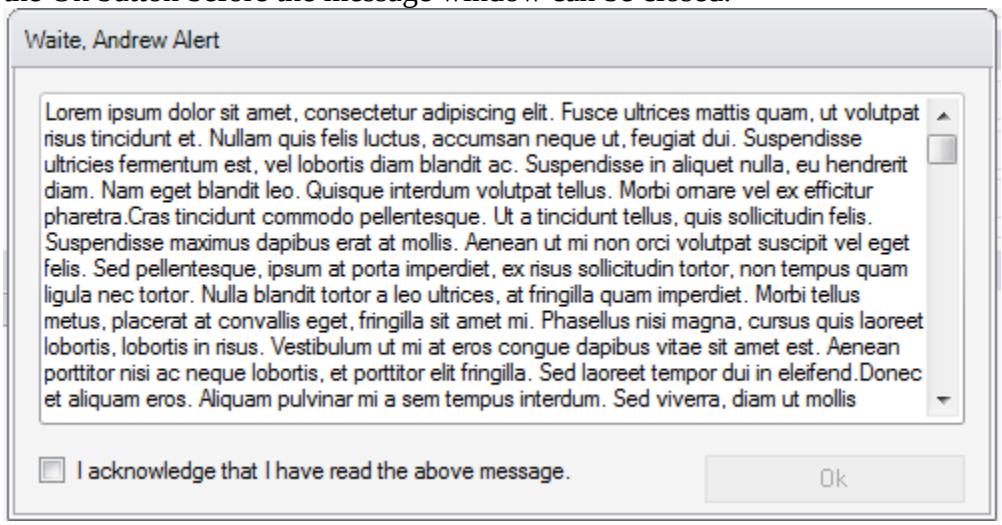

**Figure 5.9 – Referring alert**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

## Insurance Eligibility – Denied Based On DOS Should Be Conditional

Some insurance plans are renewed monthly. This can cause an issue if the study is scheduled in current month and the appointment is scheduled for the next month (or any future month).

If plan's start and end are the first and last day of the current month and the appointment is for a different month, then we will ignore the DOS check because this insurance gets renewed every month and therefore can only be checked for dates within the current month.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

## Insurance Eligibility – Fix Calculation of Remaining Deductible

When deductible is listed in the service section and no remaining is specified the remaining needs to be calculated.

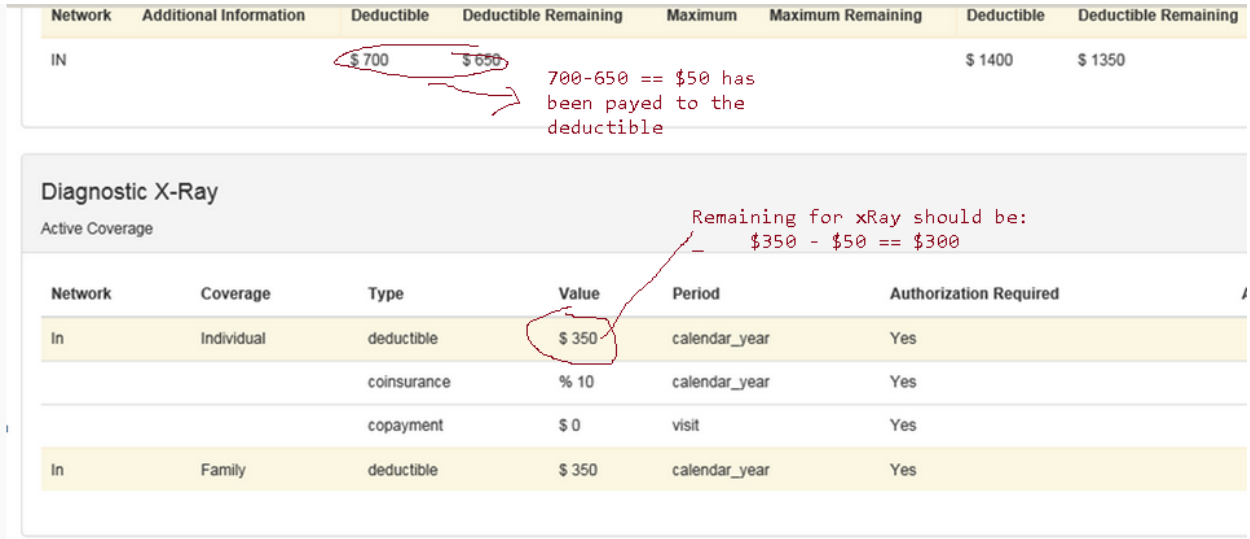

**Figure 5.10 – Calculating the remaining deductible**

The deductible of $700 is listed as an In-network deductible, but for services other than radiology services. The problem is that because "deductible remaining" isn't listed in the service type section, we pull that from the Plan section and get the $650 value. A code change was made to more accurately determine the remaining deductible.

When deductible is listed in the service section and there is no "deductible remaining", we will calculate the deductible remaining as follows:

**Remaining Deductible = ServiceType.deductible – (Plan.Deductible –Plan.DeductibleRemaining)**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

## Configurable Site Based Insurance Contract

Currently, when NPD does not have a contracted price we use the selfpay price, which is often way price is too high and is resulting in too many refunds.

Added the site field "default_npd_insurance_number ", which is displayed in the site configuration screen as shown in the following:

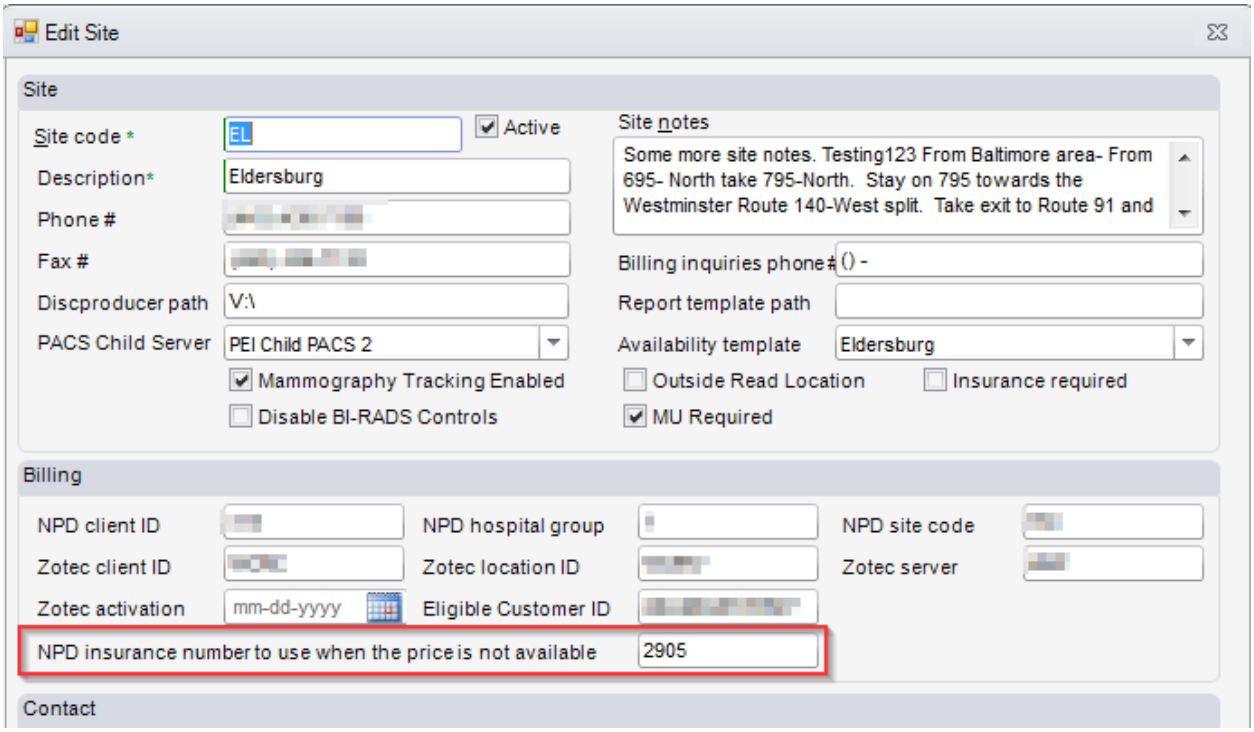

**Figure 5.11 – NPD price field on Site lookup**

When contacting the NPD for contract pricing, we will first try to send the l_carrier.insurance_co_number, but if that field isn't specified, we will attempt to get the pricing from the NPD with the first 4 digits of the carrier_code. If those requests return an NPD result that does not have a price we will then retry the NPD call with this new alternate NPD insurance number. If the NPD insurance number to use when price is not available isn't specified, then we try using the self-pay number 100.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

## Alternative Options for Prep Instructions

Although the current prep notes are suitable for some employees, we require the ability to have alternative sets of notes that can be displayed for other users (e.g. some call center users may require a script to be read to the patient verbatim). There should be a user preference that indicates whether an alternative set of notes should be displayed to a user, or if the core notes should be used instead.

Currently, a procedure can have a single prep note attached directly, but that prep note can be overridden at the modality level via the ScheduleGroups lookup table

To start, a new lookup table titled PrepInstructionType has been added. The PrepInstructionType lookup is located under the Procedure folder on the Administration>Configure menu and allows an administrator to define new prep instructions types (e.g. a script).

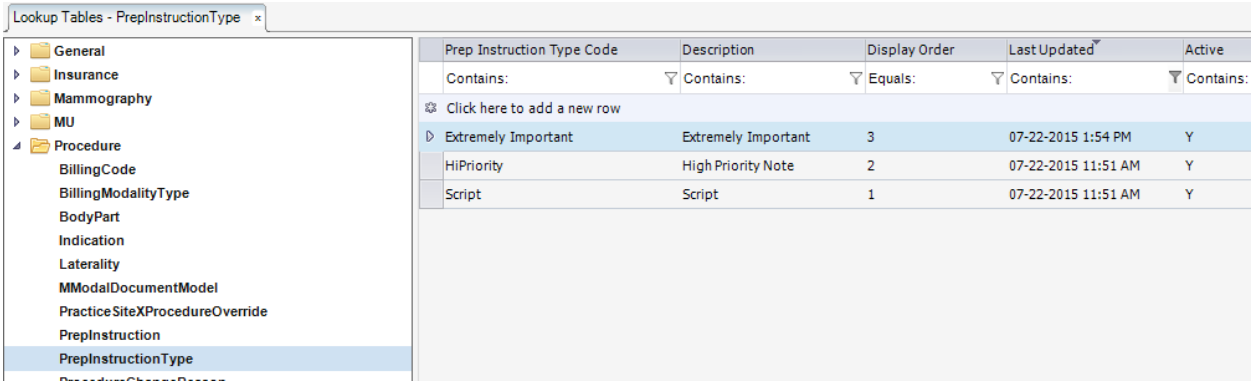

**Figure 5.12 – PrepInstructionType lookup**

After PrepInstructionTypes are defined, the RIS Administrator can use Administration -> Configuration -> PrepInstruction to define the notes to be displayed during scheduling/reception. Prep Instruction Types can be disabled with the Active column, which will prevent notes of that type from being displayed to the user.

The editor for PrepInstructions now shows an arrow that indicates that a prep instruction can be expanded. Once expanded the grid will show the alternative notes (if any) for that prep instruction and a line item that says “Click here to add a new row”. The RIS Administrator can then add as many types of alternative notes as desired.

Alternative notes attached to a prep note can be disabled individually using the Active column.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

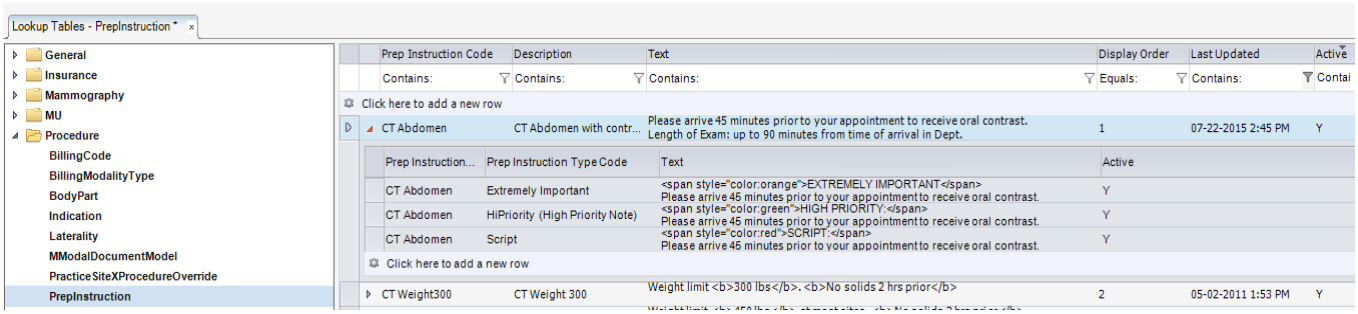

**Figure 5.13 – PrepInsruction table displaying how each can be expanded to show additional configuration**

A new user preference "Prep Instructions Level" has been added under the General tab. The default option will be "Default". The list of available values will be the active items from the PrepInstrucitonsType lookup.

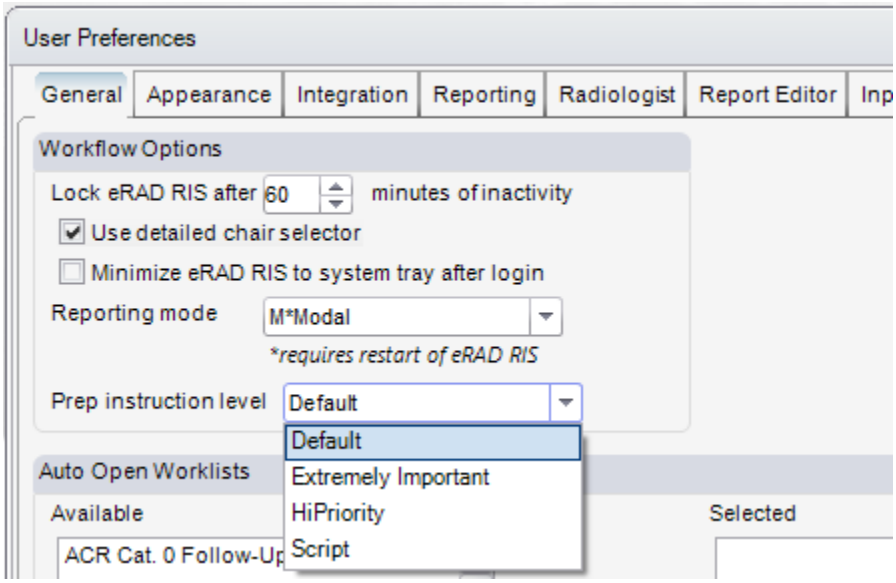

**Figure 5.14 – Prep Instruction Level user preference**

If a user is configure with a custom prep instruction level (e.g. script) but no script exists for a given procedure, then the core prep instructions should be displayed instead.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

## MModal Version 7.93

We applied the new libraries provided from M*Modal in our application. This new version uses a new recognizer version (v6).

**PLEASE TAKE NOTE**

To utilize and gain the benefit from this newer recognizer (v6), **M*Modal must be notified so they can make backend changes to the user accounts.**

To get the latest v6 recognizer we will need to notify M*Modal of which users will be using the 7.93 deployment. Otherwise things will function as they did with the existing v5 recognizer.

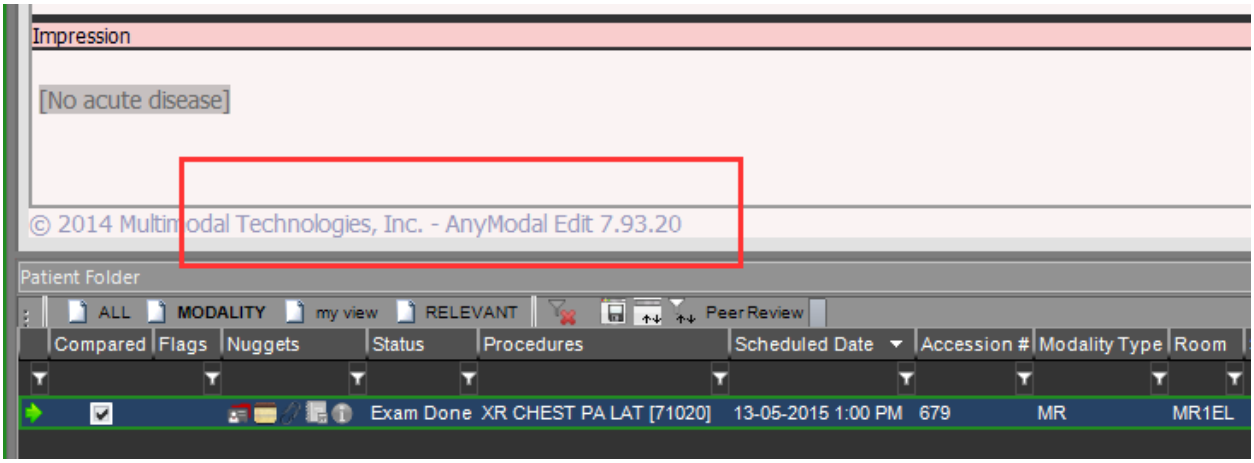

**Figure 5.15 – Reporting window displaying version 7.93**

# 9. Known Limitations

The following are Bugs Suggested Features and Support Issues found in build 2.44.5. Bugs reported in previous versions are not captured as Known Limitation in this document.

| # | Status | Priority | Subject |
|---|---|---|---|
| 11197 | New | Normal | Missing access string for new lookup table PrepInstructionType |
| 11187 | New | Normal | Patients that have the same Patient Flag set cannot be merged |
| 11182 | New | Low | Removing Patient Flag and it's corresponding notes only removes the notes |
| 11157 | New | Normal | Import CD - Study row shouldn't be created if the Study UID already exists in PACS |
| 11151 | New | Low | Clearing Patient Flag notes adds empty string which causes alerts to display extra line with hyphen |
| 11143 | New | Normal | EMR order X show share insurance details when visit key is the same |
| 11130 | New | Normal | Referring Physician alerts get reshown on Checking In |
| 11093 | New | Normal | CC Physician - visit location is not populating the first time you select a physican. |
| 11091 | QE Rejected | Low | Patient Flags special access strings should apply to flag and note |

## 1. New Features

Users would like to see how long a request has been in progress to cache PACS images for a study. The column should display in minutes since the cache request was made.

A new sortable column titled “Minutes since cache request” has been added to the Pending Dictation WL and the All Pending Dictation WL.

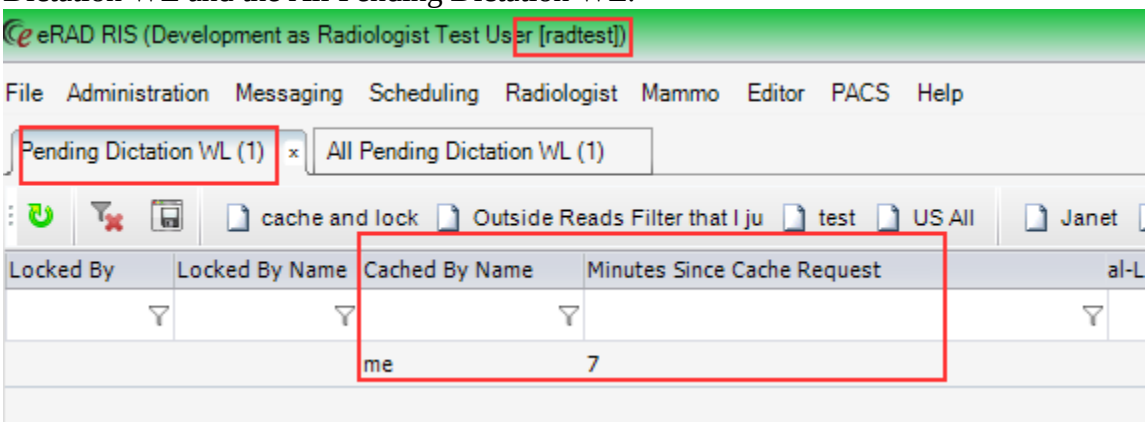

**Figure 1 – Current User on the My Pending Dictation WL**

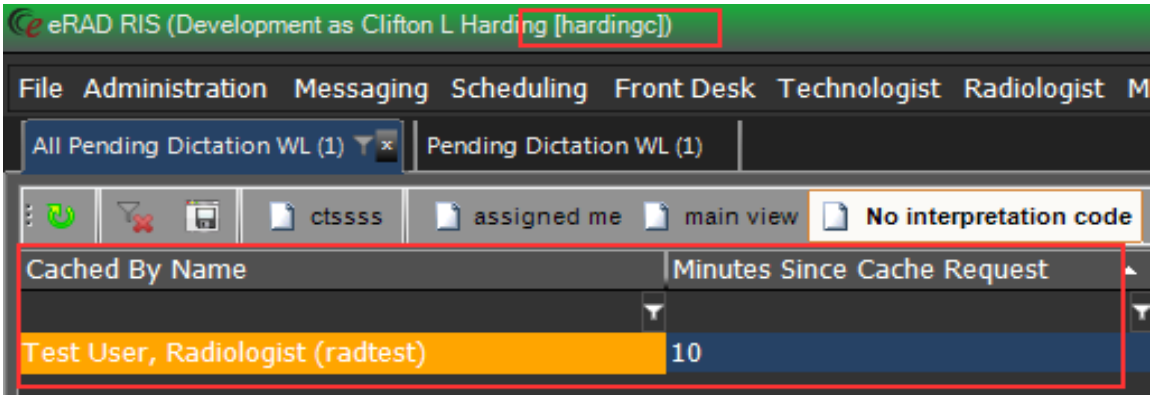

**Figure 2 – Other user viewing All Pending Dictation WL**

This information will allow a user to more accurately estimate if enough time has elapsed for the study to have cached. Conditional formatting can be applied to a Worklist View to visually distinguish when a cache request has surpassed a chosen length of time.

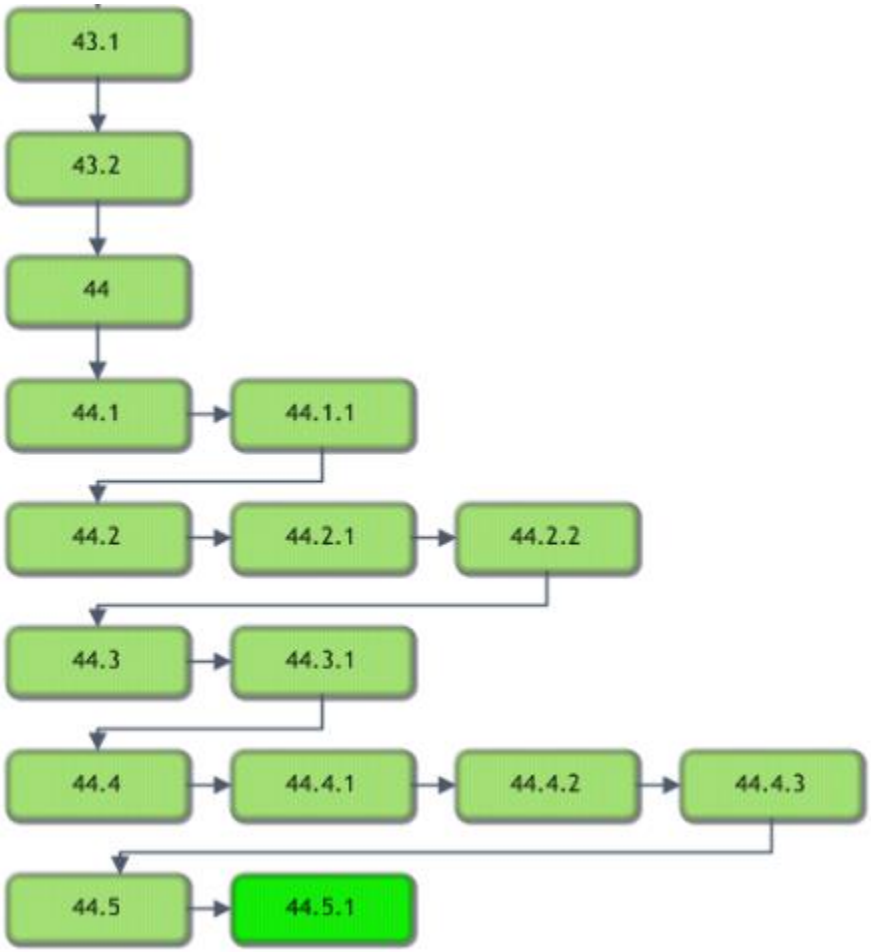
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## 2. Resolved Items

| Redmine # | Subject | Priority |
|---|---|---|
| 11425 | Changing priority in insurance policies grid may not adhere if Mange Policies is opened | High |
| 11420 | incorrect scanner displayed on ViewEdit and PerformExam for outside reads | High |
| 10663 | Patient Key / Insurance error when scheduling a new patient with insurance and multiple orders | Normal |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## 3. Code Stream



**Legend:**

Light Green = Released software

Gray = Will not be released

Bright Green = Current Release

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## 4. Package Contents

Files included for this server update:

1. **GUI_ZIP_Updates** contains 1 file:
   rRIS_1.3.44.5.1.30451

2. **rRISService** folder contains:
   2.1. ABCpdf.dll
   2.2. ABCpdf9-32.dll
   2.3. ABCpdf9-64.dll
   2.4. Antlr3.Runtime.dll
   2.5. CDSJobManager.dll
   2.6. CDSJobManager.pdb
   2.7. CdsLib.dll
   2.8. CdsLib.xml
   2.9. CdsLib.XmlSerializers.dll
   2.10. CommonLib.dll

## 5. Intended Audience

This document is created by the RIS Development team for the RadNet/eRAD RIS Implementation teams.

## 6. Who is affected

Build 44.5 installs. This server update must be applied to 44.5

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## 7. eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |

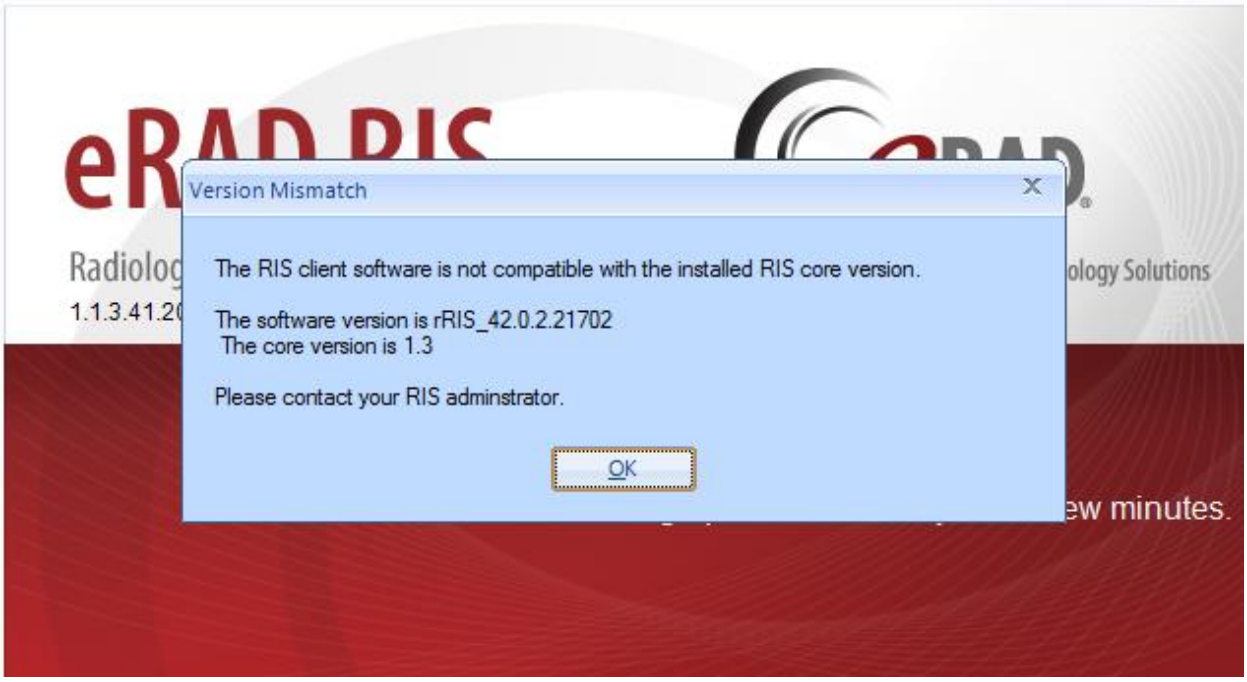
# 8. Installing

## Client/GUI

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.44.5.1.30451.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_44.5.1.30451→ rRIS_1.3.44.5.1.30451
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Web Service

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 88 files in the rRISService folder and 2 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below).

## Services Configuration Wizard

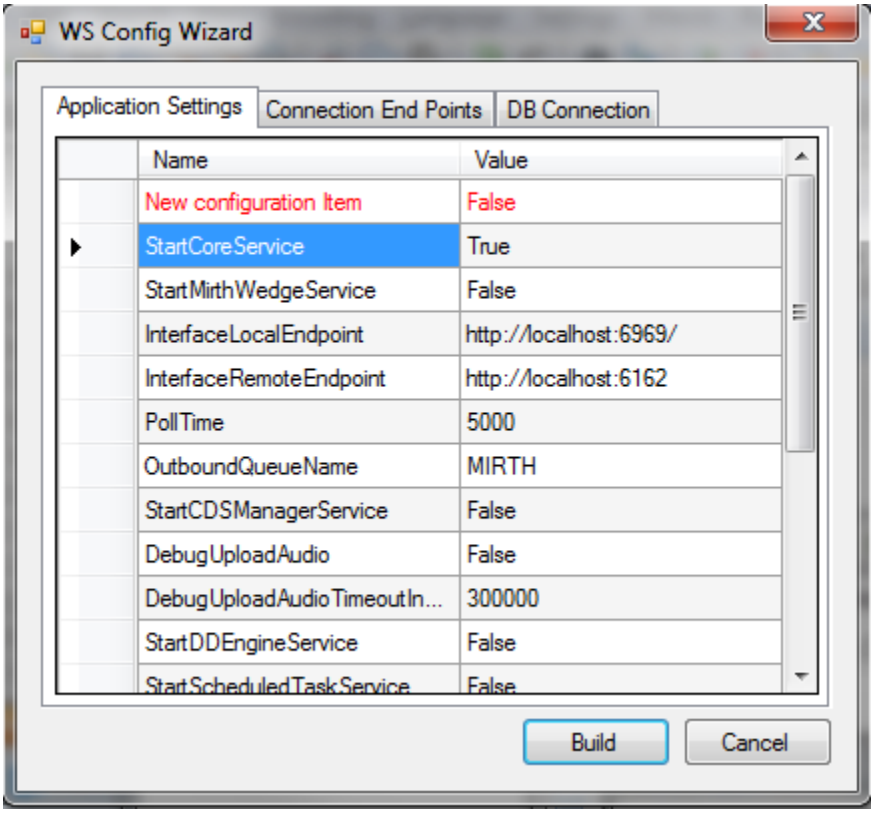
With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

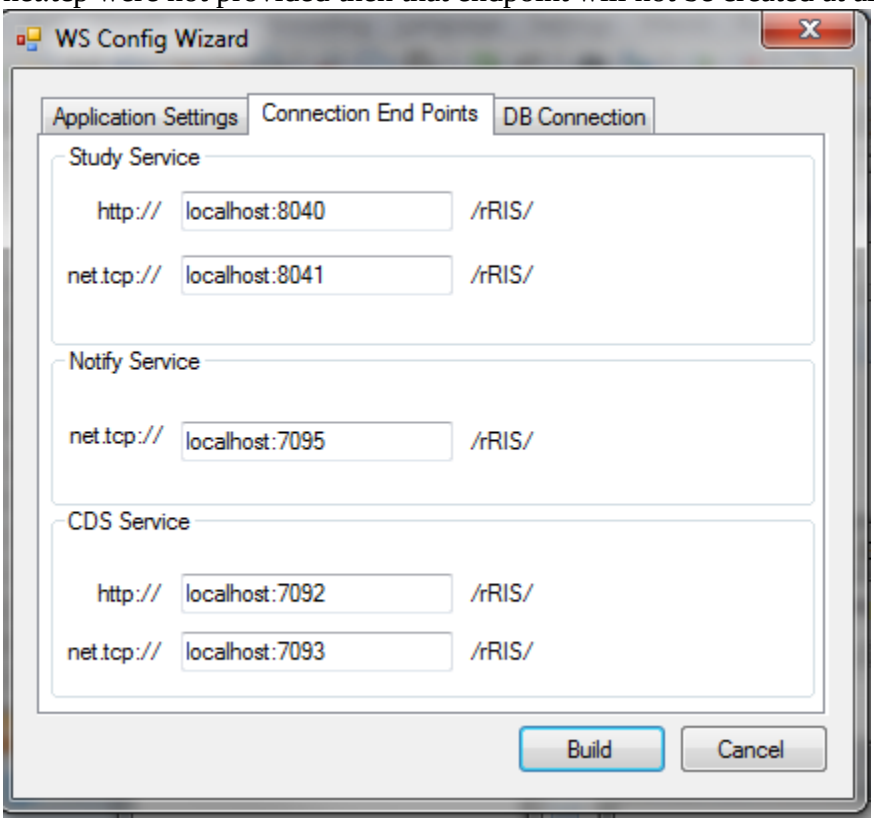
**NOTE:** the rRISServices.exe.config file is also included in the deploy folder. If this file has changes it **will not** update your current file in the Web Service directory. Any changes to this file will require a manual update of the rRISServices.exe.config and rRISServicesx64.exe.config files.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.



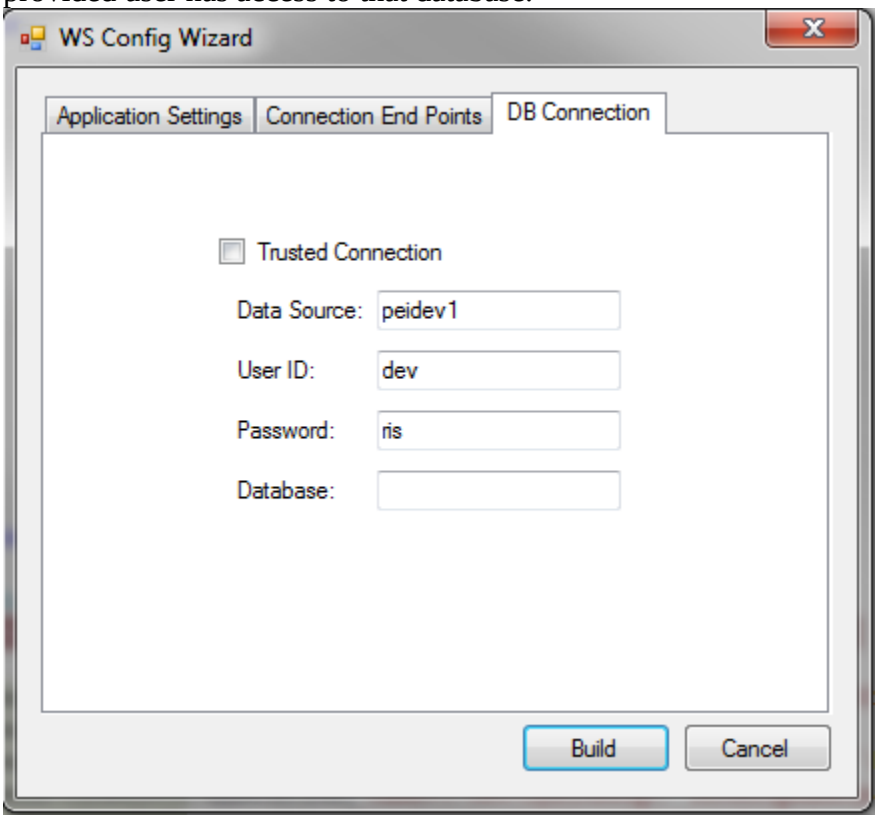
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of "Study Service" or "CDS Service" if both http and net.tcp were not provided then that endpoint will not be created at all.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**DB Connection:** will display the existing configuration, if the Connection is to be used as a trusted connection, then the user ID and password will become disabled and will not be used, and will rely on the provided database value, When not using the trusted connection, The Database value is not needed but can be used to force a specific database connection as long as the provided user has access to that database.



It is always good practice to do a compare of the .config files.

1) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   **Restart each service**.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Database Updates

Always run the upgrade scripts in a test environment of the actual database to make sure they run cleanly. If any errors occur please contact development.

*Note: There is a new upgrade process introduced with B43.1 called "RunUpgrade.bat". The batch file will open a command window. This process will prompt you for the database server name, database name and authentication credentials. There is no need to run the database upgrade scripts manually as was done in previous releases.*

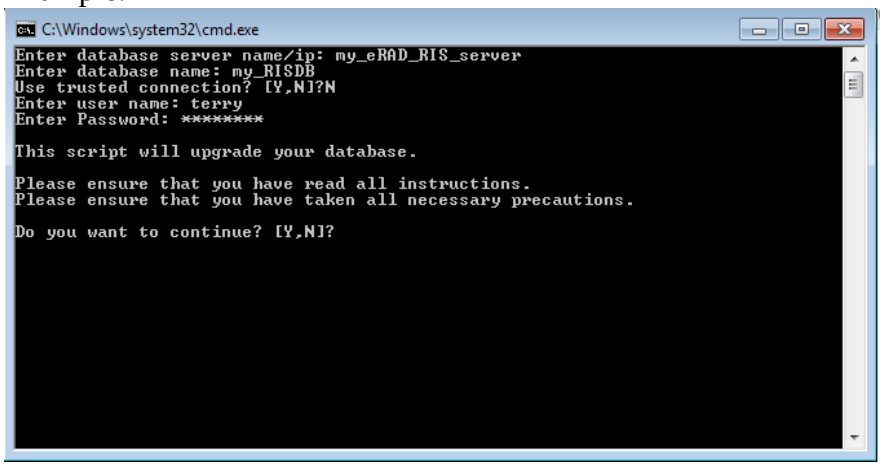
1) From the upgrade folder, double click the "RunUpgrade.bat" command file.

2) Enter the server name, database name and authentication credentials to the database. You have 2 choices for authentication credentials.

3) You can choose to use "Trusted connection". Using this option will pass the identity of the currently logged on user. If this user has "db_owner" access to the eRAD RIS database then feel free to use this options.

4) If you decide not to use "Trusted connection" then you will be prompted for user id and password.

   Example:



5) After the upgrade program has finished you can find the upgrade logs in the "log" folder. The file name will be eRAD_RIS_db_upgrade_timestamp.log, where timestamp is a value representing the date and time the upgrade started. If you see any errors please contact the development team

6) In the Common folder there is a subfolder of MU. The MU folder contains updates to lookups relevant for MU as well as updates for Zip Code table to add the County. Copy the

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

MU folder to the database server before running the batch file. There is a readme file contained in the MU folder. The details have also been included below

a) The mu bulk install process must be run from a path on the database server!
b) Copy Files ImportDataFileUpgradeDB.bat and ImportDataFileUpgradeDB.sql from upgrade folder to a location on the database server(This location will be referred to as the "Script Folder Path".)
c) Copy Folder scripts and Source files from the upgrade folder to "Script Folder Path" ....Note source files must be inside the scripts folder
d) Run bat file
   i) Enter Script Folder path [C:\Temp\SNOMED]:
   ii) Enter database server name/ip: [ie peidev1]
   iii) Enter database name: [ie rRIS_MU]
   iv) Use a trusted connection to log on to SQL Server:
   "N" means you will have to enter db [username] [password]
   "Y" means you have a trusted connection and will not have to enter [username][password]
   v) Do you wish to load SNOMED concept codes?
   "N" no files will be loaded into the l_snomed_concept table
   "Y" yes means l_snomed_concept table will be truncated and reloaded with the latest US concept codes
   Source File [sct2_Concept_Snapshot_US1000124_20140301.txt]
   vi) Do you wish to load SNOMED descriptions codes?
   "N" no files will be loaded into the l_snomed_description table
   "Y" yes means the l_snomed_description table will be truncated and reloaded with the latest US description codes
   Source File [sct2_Description_Snapshot-en_US1000124_20140301.txt]
   vii) Do you wish to load ICD9 to SNOMED mappings codes?
   "N" no files will be loaded into the l_snomed_icd9_map table
   "Y" yes means the l_snomed_icd9_map table will be truncated and reloaded with the latest US ICD9 to SNOMED mapping codes
   Source File [ICD9CM_SNOMED_MAP_1TO1_201312.txt and ICD9CM_SNOMED_MAP_1TOM_201312.txt]
   viii) Do you wish to load ICD10 to SNOMED mappings codes?
   "N" no files will be loaded into the l_snomed_icd10_map table
   "Y" yes means the l_snomed_icd10_map table will be truncated and reloaded with the latest US ICD10 to SNOMED mapping codes
   Source File [xder2_iissscRefset_ExtendedMapSnapshot_US1000124_20131220.txt]
   ix) Do you wish to load US zip codes?
   "N" no files will be loaded into the z_zipCodesWithCounty table
   "Y" yes means the z_zipCodesWithCounty table will be truncated and reloaded with the latest US zip codes
   Source File [5-digit Commercial.csv]

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**********

Note: the following files should be loaded once only with B43!

**********

x) Do you wish to load CMS codes?
"N" no files will be loaded into the s_mu_code table
"Y" yes means the s_mu_code table will be truncated and reloaded with the latest CMS codes
Source File [s_mu_code.txt]

xi) Do you wish to load HL7 support sets for CCDA?
"N" no files will be loaded into the l_hl7v3_voc_value_set table
"Y" yes means the l_hl7v3_voc_value_set table will be truncated and reloaded with the latest hl7v3_voc_value_set codes
Source File [l_hl7_voc_value_set.txt]

xii) Do you wish to load HL7 support codes for CCDA?
"N" no files will be loaded into the l_hl7v3_voc_value_code table
"Y" yes means the l_hl7v3_voc_value_code table will be truncated and reloaded with the latest l_hl7v3_voc_value_code codes
Source File [l_hl7_voc_value_code.txt]

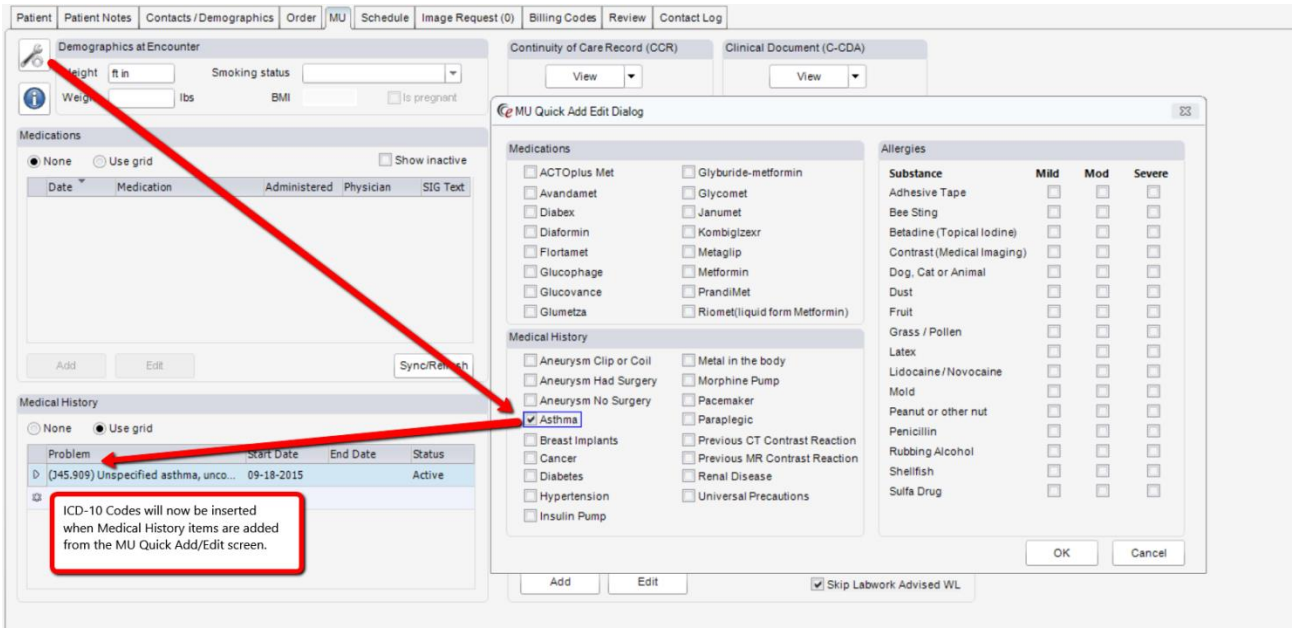
## 1. Resolved Items

Please Note:

Resolved Items #11581 and #11582 below will impact the functionality of the MU Quick Add/Edit tool. As soon as this update is applied, the MU Quick Add/Edit tool will immediately begin adding any selected Medical History items to the MU grid using ICD-10 codes. This will occur regardless of the ICD-10 Effective Date in the SystemConfiguration settings. As part of the update, a script will convert any existing Medical History that was previously entered for patients using the Quick Add/Edit tool from ICD-9 codes to the equivalent ICD-10 codes. The conversion is based on the CMS General Equivalence Mapping (GEM) table.



| Redmine # | Subject | Priority |
|---|---|---|
| 11636 | CCDA to display proper ICD10 | Normal |
| 11582 | Need to convert historical ICD-9 codes that were added with the Quick Add/Edit tool to ICD-10 codes | Normal |
| 11581 | Need the MU Quick Add/Edit tool to begin adding Medical History using ICD-10 codes instead of ICD-9 | Normal |
| 9620 | MU Quick Add Edit Dialog error when clicking OK - "Column '_problemName' does not belong to table c_patient_problem_list." | Normal |

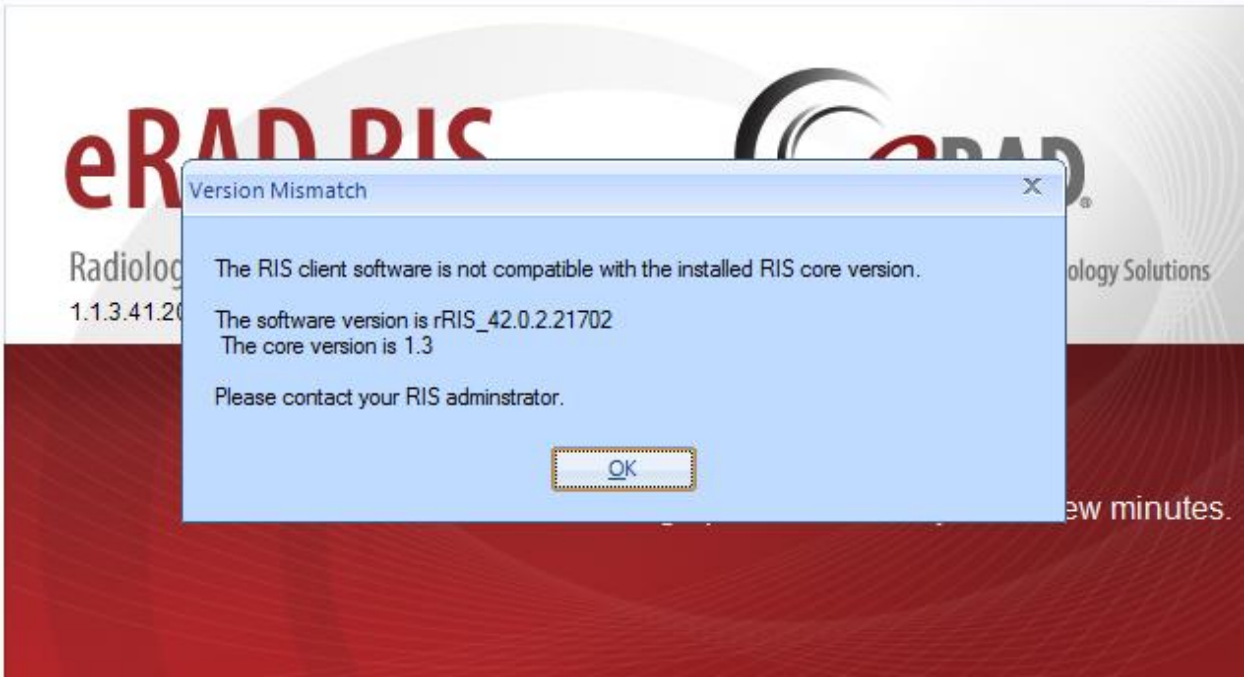
# 7. Installing

## Client/GUI

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.44.5.2.30705.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_44.5.2.30705→ rRIS_1.3.44.5.2.30705
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Web Service

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 88 files in the rRISService folder and 2 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below).

## Services Configuration Wizard

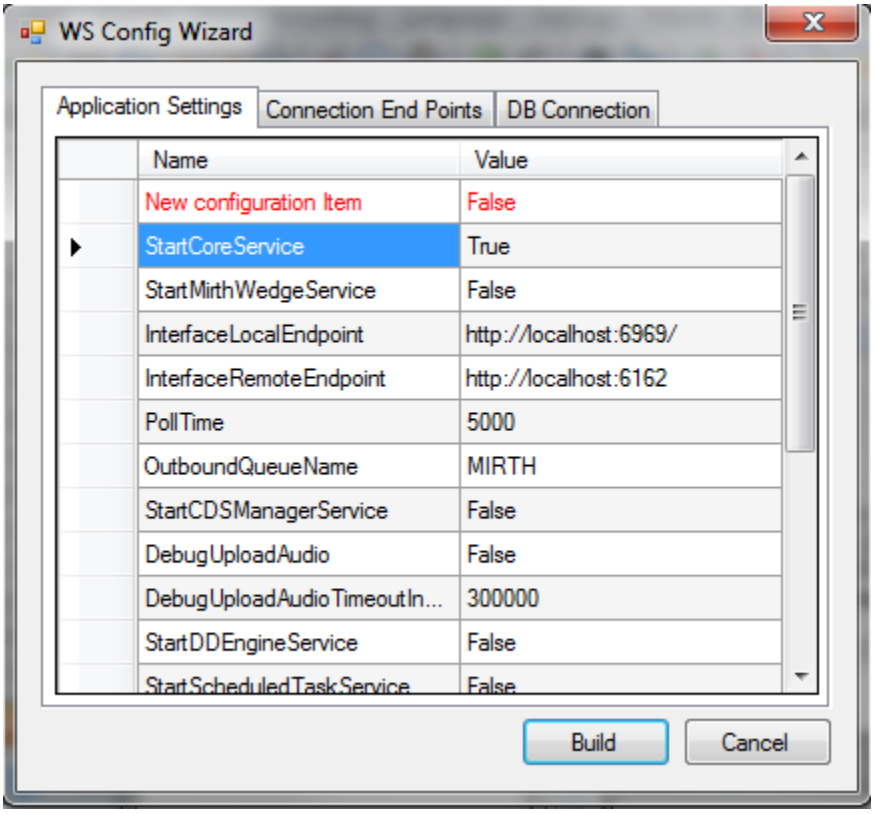
With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

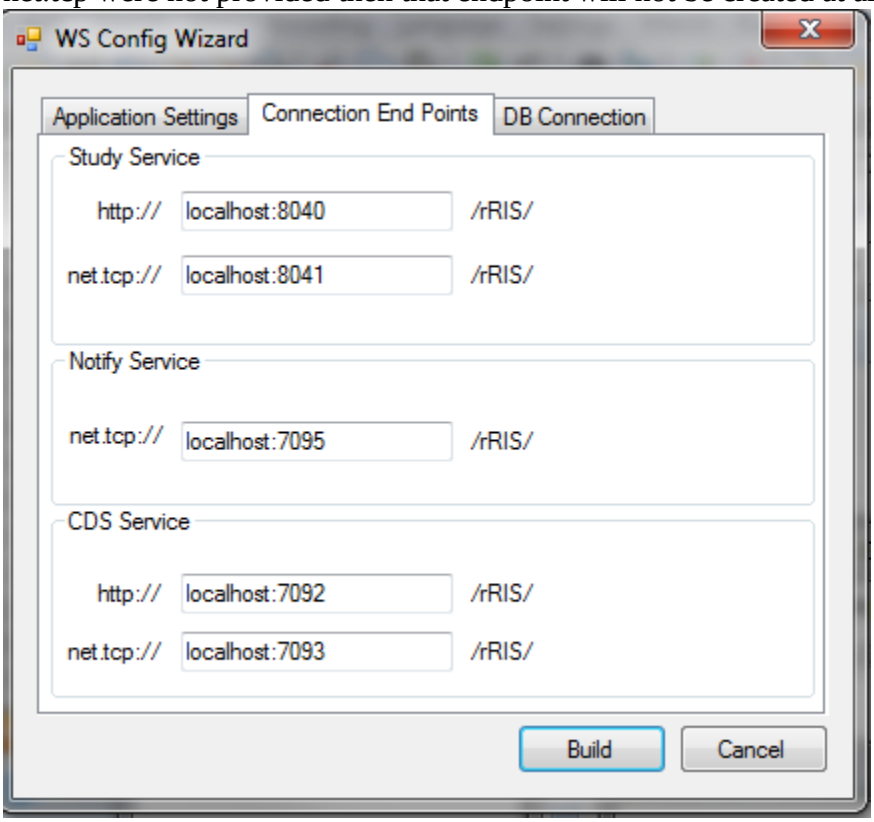
**NOTE:** the rRISServices.exe.config file is also included in the deploy folder. If this file has changes it **will not** update your current file in the Web Service directory. Any changes to this file will require a manual update of the rRISServices.exe.config and rRISServicesx64.exe.config files.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.



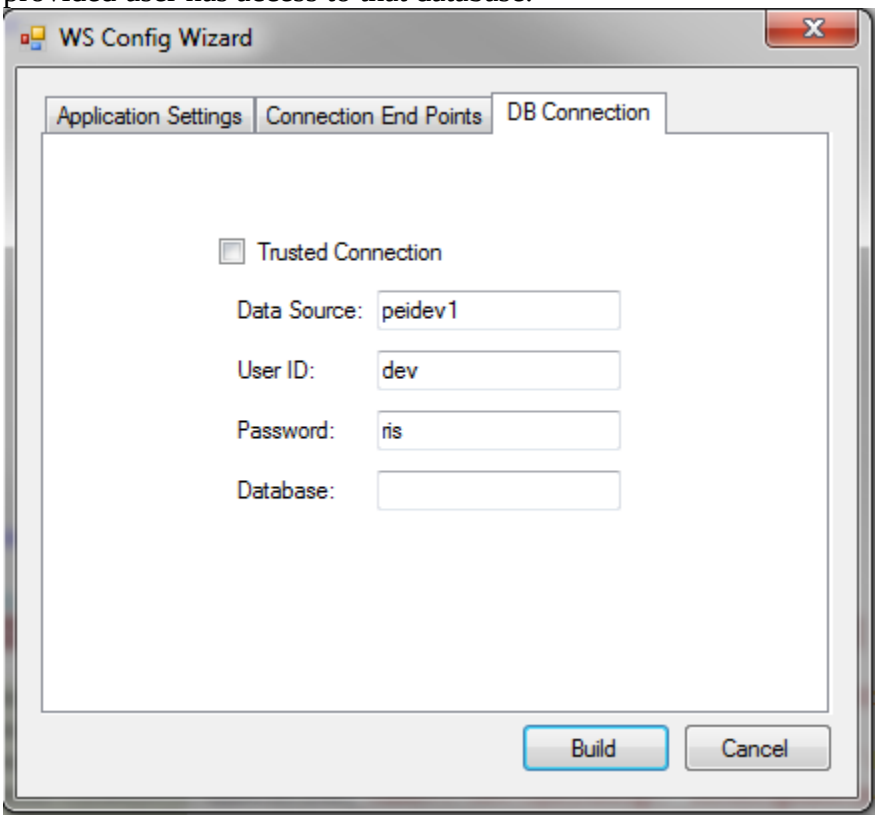
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of "Study Service" or "CDS Service" if both http and net.tcp were not provided then that endpoint will not be created at all.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**DB Connection:** will display the existing configuration, if the Connection is to be used as a trusted connection, then the user ID and password will become disabled and will not be used, and will rely on the provided database value, When not using the trusted connection, The Database value is not needed but can be used to force a specific database connection as long as the provided user has access to that database.



It is always good practice to do a compare of the .config files.

1) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   **Restart each service**.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Database Updates

Always run the upgrade scripts in a test environment of the actual database to make sure they run cleanly. If any errors occur please contact development.

*Note: There is a new upgrade process introduced with B43.1 called "RunUpgrade.bat". The batch file will open a command window. This process will prompt you for the database server name, database name and authentication credentials. There is no need to run the database upgrade scripts manually as was done in previous releases.*

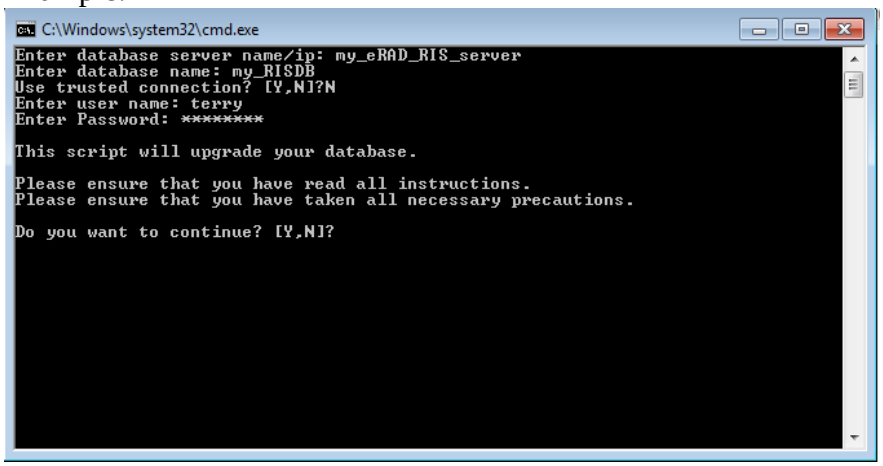
1) From the upgrade folder, double click the "RunUpgrade.bat" command file.

2) Enter the server name, database name and authentication credentials to the database. You have 2 choices for authentication credentials.

3) You can choose to use "Trusted connection". Using this option will pass the identity of the currently logged on user. If this user has "db_owner" access to the eRAD RIS database then feel free to use this options.

4) If you decide not to use "Trusted connection" then you will be prompted for user id and password.

   Example:



5) After the upgrade program has finished you can find the upgrade logs in the "log" folder. The file name will be eRAD_RIS_db_upgrade_timestamp.log, where timestamp is a value representing the date and time the upgrade started. If you see any errors please contact the development team

6) In the Common folder there is a subfolder of MU. The MU folder contains updates to lookups relevant for MU as well as updates for Zip Code table to add the County. Copy the

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

MU folder to the database server before running the batch file. There is a readme file contained in the MU folder. The details have also been included below

a) The mu bulk install process must be run from a path on the database server!
b) Copy Files ImportDataFileUpgradeDB.bat and ImportDataFileUpgradeDB.sql from upgrade folder to a location on the database server(This location will be referred to as the "Script Folder Path".)
c) Copy Folder scripts and Source files from the upgrade folder to "Script Folder Path" ....Note source files must be inside the scripts folder
d) Run bat file
   i) Enter Script Folder path [C:\Temp\SNOMED]:
   ii) Enter database server name/ip: [ie peidev1]
   iii) Enter database name: [ie rRIS_MU]
   iv) Use a trusted connection to log on to SQL Server:
   "N" means you will have to enter db [username] [password]
   "Y" means you have a trusted connection and will not have to enter [username][password]
   v) Do you wish to load SNOMED concept codes?
   "N" no files will be loaded into the l_snomed_concept table
   "Y" yes means l_snomed_concept table will be truncated and reloaded with the latest US concept codes
   Source File [sct2_Concept_Snapshot_US1000124_20140301.txt]
   vi) Do you wish to load SNOMED descriptions codes?
   "N" no files will be loaded into the l_snomed_description table
   "Y" yes means the l_snomed_description table will be truncated and reloaded with the latest US description codes
   Source File [sct2_Description_Snapshot-en_US1000124_20140301.txt]
   vii) Do you wish to load ICD9 to SNOMED mappings codes?
   "N" no files will be loaded into the l_snomed_icd9_map table
   "Y" yes means the l_snomed_icd9_map table will be truncated and reloaded with the latest US ICD9 to SNOMED mapping codes
   Source File [ICD9CM_SNOMED_MAP_1TO1_201312.txt and ICD9CM_SNOMED_MAP_1TOM_201312.txt]
   viii) Do you wish to load ICD10 to SNOMED mappings codes?
   "N" no files will be loaded into the l_snomed_icd10_map table
   "Y" yes means the l_snomed_icd10_map table will be truncated and reloaded with the latest US ICD10 to SNOMED mapping codes
   Source File [xder2_iissscRefset_ExtendedMapSnapshot_US1000124_20131220.txt]
   ix) Do you wish to load US zip codes?
   "N" no files will be loaded into the z_zipCodesWithCounty table
   "Y" yes means the z_zipCodesWithCounty table will be truncated and reloaded with the latest US zip codes
   Source File [5-digit Commercial.csv]

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**********

Note: the following files should be loaded once only with B43!

**********

x) Do you wish to load CMS codes?
"N" no files will be loaded into the s_mu_code table
"Y" yes means the s_mu_code table will be truncated and reloaded with the latest CMS codes
Source File [s_mu_code.txt]

xi) Do you wish to load HL7 support sets for CCDA?
"N" no files will be loaded into the l_hl7v3_voc_value_set table
"Y" yes means the l_hl7v3_voc_value_set table will be truncated and reloaded with the latest hl7v3_voc_value_set codes
Source File [l_hl7_voc_value_set.txt]

xii) Do you wish to load HL7 support codes for CCDA?
"N" no files will be loaded into the l_hl7v3_voc_value_code table
"Y" yes means the l_hl7v3_voc_value_code table will be truncated and reloaded with the latest l_hl7v3_voc_value_code codes

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 44.6 and subsequent server releases. This version of eRAD RIS is referred to as Build 2.44.6

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet /eRAD RIS implementation teams.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 2.44.6 is considered a new release of the application. It does not require a reinstallation of eRAD RIS. If users choose to reinstall, this is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application, please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

# 4. New Settings for B2.44.6

## Access strings

| Setting | Default | Purpose / Controls Access to |
|---|---|---|
| Clinical.CreateReminder | None | Controls access to the create reminder feature from patient folder. |
| Clinical.EditReminder | None | Controls access to the edit reminder feature from patient folder. |
| Clinical.PreviewTerminatedReport | None | Controls access to previewing reports that have been terminated for voided or discontinued exams. |
| Config.LookupEditor.Complication | None | Grants access to the Complication lookup table located under the Mammography folder from the Configure option under Administration menu |
| Config.LookupEditor.PrepInstructionType | None | Grants access to the PrepInstructionType lookup table located under the Procedure folder from the Configure option under Administration menu |

## System Config

| Setting | Default | Purpose / Controls Access to |
|---|---|---|
| BreastBodyPartCode | N/A | The code for the breast body part. May be used to activate mammo related functionality (e.g. Create Reminder) |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

# 5. New Features and Enhancements

## Breast Imaging Updates

### Feature 11221 – Biopsy Window Re-Design

The General section of the Add Mammo Biopsy window has been re-designed to make various labels more intuitive and add additional data collection fields. As displayed in Figure 5.1, Concordance and Complications sections have been added. These additions allow the user to collect additional information that can be made available for future Management Reports or database queries. Also a new option for a Lesion Classification of High Risk Malignant has been added. This allows for the flexibility of categorizing High Risk pathology findings as either Malignant or Benign, while still maintaining their "High Risk" designation. The database was updated to consider the selection of "High Risk Malignant" as Malignant when calculating statistics for MQSA-related management reports (e.g. True/False Positives, Sensitivity, Specificity, etc.). As before, the "High Risk Benign" category is treated as Benign for MQSA statistics.

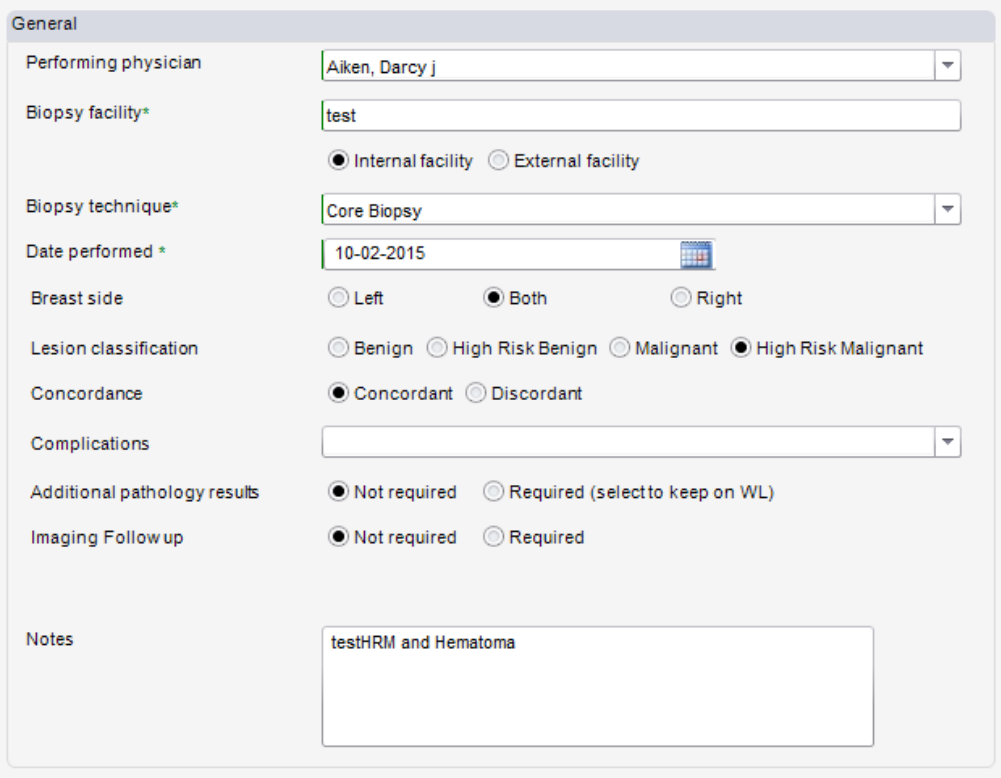

**Figure 5.1 – Biopsy window changes**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

The following labels have also been updated to more accurately and precisely identify various data to be collected:

- Performing surgeon → Performing physician
- Biopsy location → Biopsy facility
- Additional surgery → Additional pathology results
- Follow up → Imaging follow up
- Create Follow Up (button available after selecting Follow Up Required) → Create Reminder

Selecting Required for Additional Pathology Results will allow the exam to remain on the ACR Category 4/5 Follow Up WL after saving the pathology results. This allows the Mammo Tracking personnel to continue to monitor the case for outstanding pathology results that may be forthcoming for a repeat biopsy, a biopsy of an additional site that was recommended in the same report, or simply additional surgical pathology if desired. This behavior has not changed, but the terminology has been updated to Additional *Pathology* Results Required/Not Required, as the previous label of Additional *Surgery* Required/Not Required sometimes mislead Mammo Tracking personnel who believed that the purpose was to record whether the patient would be having surgery as a result of the biopsy results.

The Complications list box is populated with values from the new lookup table titled Complications which can be found at Administration menu>Configure>Mammography>Complication.

This new lookup table's access is controlled by access string: "**Config.LookupEditor.Complication**" which has a default of None.

| Complication Code | Description | Display Order | Last Updated | Active |
|---|---|---|---|---|
| Contains: | Contains: | Equals: | Equals: | Contains: |
| Click here to add a new row | | | | |
| HT | Hematoma | 0 | 10-02-2015 11:39 AM | Y |
| IS | Insufficient Sample | 0 | 10-02-2015 11:39 AM | Y |
| PI | Post-procedure Infection | 0 | 10-02-2015 11:39 AM | Y |

**Figure 5.2 – Complication lookup table**

Additional improvements have also been made to the Breast History grid at the top of the Add Mammo Biopsy window, as outlined in the description for Feature 11418 beginning on the following page.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

## Feature 11418 – Manually Create Mammo Tracking Reminders

Previously, eRAD RIS did not have a method to manually create breast imaging Reminders, unless pathology results are being entered as follow-up to a BI-RADS® 4 or 5 exam. It is sometimes desirable to create Reminders at other times, particularly for patients who have come to our facilities for biopsies that had been recommended elsewhere and are therefore not on the ACR Category 4/5 Follow Up WL.

**From the Patient Folder:**

A new context menu item (right-click menu) titled Create Reminder has been added in the Patient Folder. Selecting this option will open the Create Reminder window. This new context menu item is controlled by access string "**Clinical.CreateReminder**" with a default of none. The Create Reminder option will be available for procedures that have the body part that is specified in the new system config setting "**BreastBodyPartCode**." This would include both BI-RADS® enabled exams, as well as other breast procedures and biopsies.

Options in the Create Reminder window are: Type of Reminder (Annual, Short Term or Callback), Site and Target Date.

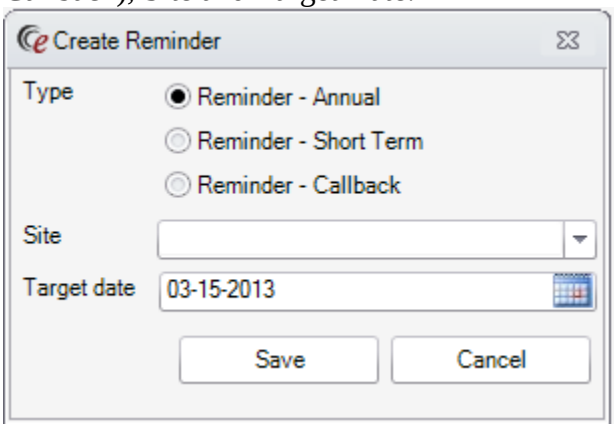

**Figure 5.3 – Create Reminder window accessed from Patient Folder**

The procedure used for a Reminder is determined by the pre-existing system config setting of DefaultMammoFollowUpOrderProcedureCode. The referring physician assigned will be that from the original study that was used to create the Reminder.

Another new context menu item added to the Patient Folder is Edit Reminder. This new context menu option is controlled by access string "**Clinical.EditReminder**" which has a default of None. This option will be available for statuses of Reminder – Annual, Reminder – Short Term, and Reminder – Callback. The purpose is to edit the details for an existing Reminder.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

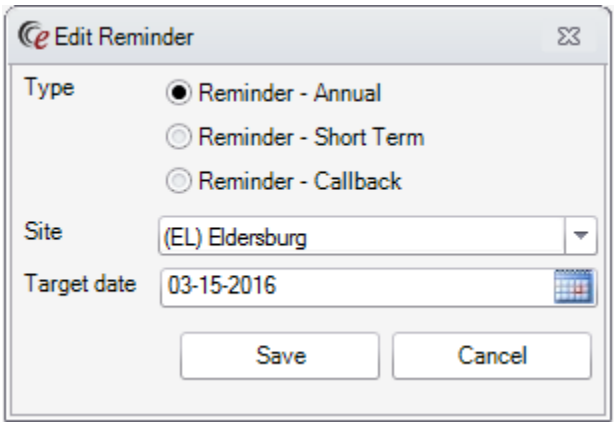

**Figure 5.4 – Edit Reminder window**

## From the Add Mammo Biopsy Window

It is also possible to Create or Edit Reminders from the Add Mammo Biopsy window.

The Breast History grid at the top of this window has been updated in order to provide a comprehensive view of all BI-RADS® enabled exam in any status other than Cancelled or Discontinued, as well as outstanding Reminders.

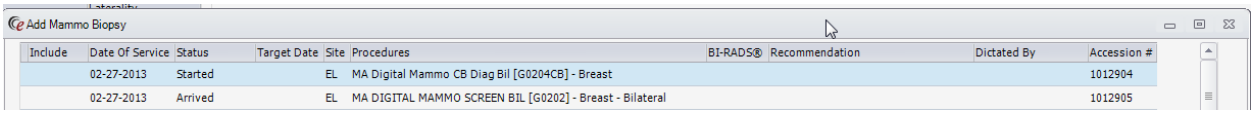

**Figure 5.5 – Add Mammo Biopsy window history**

The "Include" column is used for correlating pathology results with multiple exams; the behavior of this column has not changed, though the checkbox is only displayed for rows that are in the Signed status. The columns displayed in this Breast History grid have also been adjusted to display the most relevant details in a logical order.

From the Breast History grid, the user can now right-click on an existing Reminder and choose Edit Reminder to change the type of Reminder, the site, or the target date.

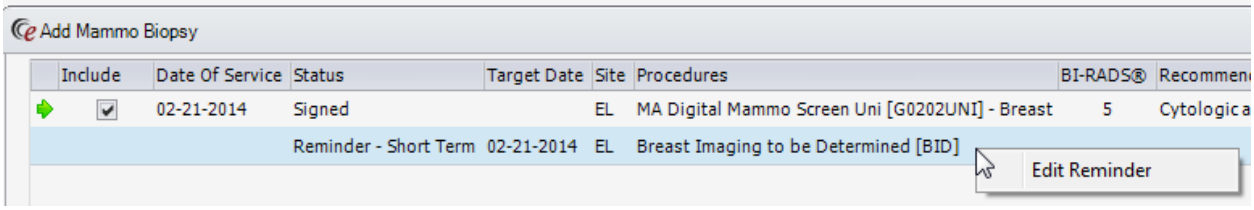

**Figure 5.6 – Edit reminder on existing reminders**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

Reminders can also be created in the same manner as before from the Add Mammo Biopsy screen, though some of the terminology has been updated, as described above. The Create Reminder button (previously labeled Create Follow up) becomes available after selecting Additional Pathology Results = Not Required *and* Imaging Follow Up = Required. After clicking the Create Reminder button, the user can enter the type of Reminder, the Site, and the Target Date.

One additional improvement to the Breast History section has been added. To help the user determine what follow-up is necessary, there is a new context menu option available, "Show Report," to display the report on a signed exam.

**Figure 5.7 – Show report option on signed exam**

Select Show Report to open a quick loading view of the report that is similar to the Data Nugget report view.

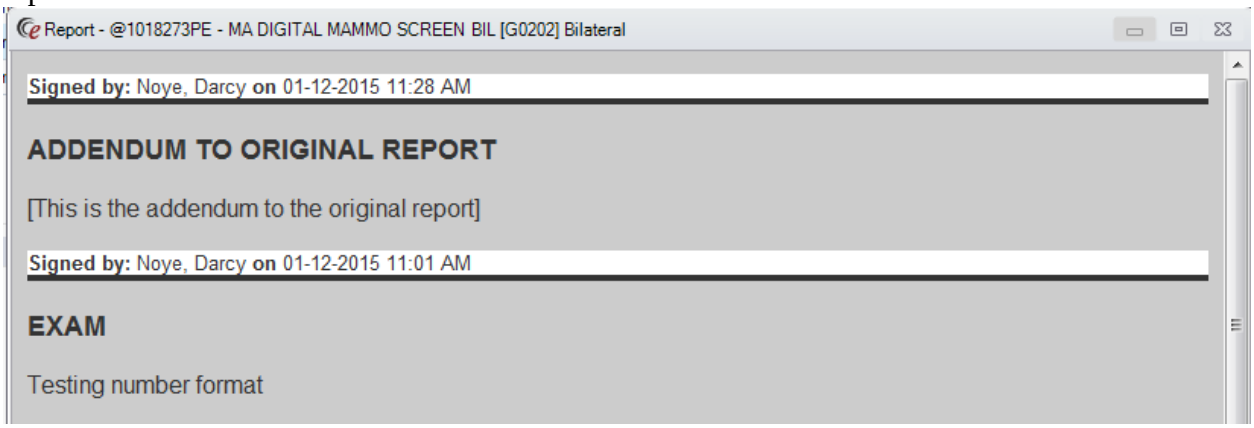

**Figure 5.8 – Show report window**

## Insurance Eligibility

### Feature 7852 - Reduce number of calls to Eligible API

This feature will reduce the number of redundant eligibility checks. We will omit the day-of-service auto eligibility check for the following scenarios:

- The remaining deductible is 0 or not provided and a previous request was valid in the same calendar month.

- More than one insurance policy is selected. In these cases, we don't calculate the amount to collect using deductible, so there is no need to retrieve an up-to-date deductible amount.

- The status or remaining deductible has been overridden. Manual overrides do not require updated deductible amounts for the calculation of the amount to collect.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

## Radiologist

### Feature 11277 – Automate Logging into PowerScribe Immediately After Logging into eRAD RIS

eRAD RIS is now launching and logging into PowerScribe immediately after successful login to eRAD RIS if the reporting mode is PowerScribe. eRAD RIS maintains full functionality during this initial login process. If a user opens a case before the PowerScribe login is complete, eRAD RIS will wait for the login process to complete and display the message "Waiting for PowerScribe."

This feature is enabled by default, but users can change this behavior by changing the “Launch on login” user preference on the “Reporting” tab in the “PowerScribe” section.

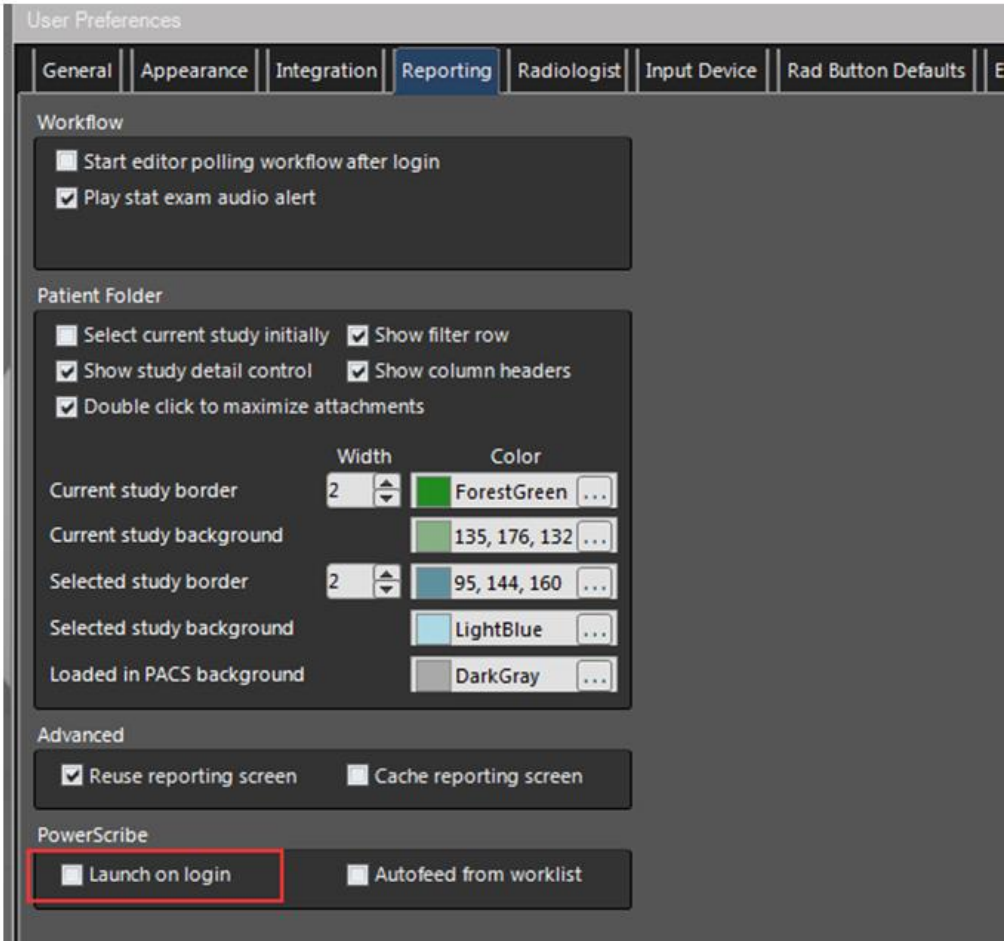

**Figure 5.9 – New user preference for PowerScribe “Launch on login”**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

## Outbound Messaging

### Feature 10564 – Support ICD Data in RIS Outbound Messages

eRAD RIS needs to support sending each ICD9 or ICD10 entered in RIS in its own field in the DG1 segment of the HL7 message.

For customers who enter this information on the front end of RIS, they expect that information to be transferred to the billing system without the need to re-enter it in that system.

The problem is a limitation in the XML RIS sends to Mirth. The messages sent did not expand to include the ICD9 or ICD10 codes.

Now messages sent will be expanded to include all of the ICD9 and ICD10 codes. Below is an example of the message with multiple ICD codes being sent. Implementations will need to configure mappings to handle the new nodes.

# 8. Resolved Defects

Bugs, Suggested Features and Support Issues resolved in build 2.44.6. The extract is taken from Redmine bug tracking system and only displays defects resolved in 2.44.6.

| Bug # | Priority | Subject | Category | Found Version |
|---|---|---|---|---|
| 11167 | Urgent | Contacts/Demographics info not resetting on changing patients | Scheduling | 2.44.4.3 |
| 11044 | Urgent | Enhance wedge to support when a rad occupies or vacates a primary chair | Interfaces | |
| 11579 | High | Lab Work Request WL (CPOE) - Addendum Signed Bug | Meaningful Use | 2.44.5.0 |
| 11292 | High | RIS incorrectly stores PACS bookmark after logout from PACS | PACS (eRAD) Int - RIS only | 2.44.4.2 |
| 11288 | High | Users can print/preview unsigned reports without permission. | Radiology Reporting | 2.44.2 |
| 11197 | High | Missing access string for new lookup table PrepInstructionType | Access strings | 2.44.5 |
| 11187 | High | Patients that have the same Patient Flag set cannot be merged | Patient Merge | 2.44.5 |
| 11186 | High | Insurance Eligibility - Medicare DBNull parsing error on address line 2 | Insurance Eligibility | 44.4 |
| 11182 | High | Removing Patient Flag and it's corresponding notes only removes the notes | Scheduling | 2.44.5 |
| 10777 | High | CA - Error adding billing codes | Billing | 2.44.4.1.28953 |
| 10748 | High | Error created when trying to do a confirmation on an exam. | Confirmation | 44.2 |
| 11904 | Normal | Next workflow can open the exact same report that was just closed causing exceptions | Radiology Reporting | 2.44.x |
| 11902 | Normal | Closing PowerScribe 360 after initial sync willl require two attempts from RIS to open a report | Powerscribe Integration | 2.44.x |
| 11889 | Normal | Insurance Eligibility - WL Flag calculation is looking at cancelled studies. | Insurance Eligibility | 44.4 |
| 11887 | Normal | Insurance Eligibility - RIS loops updating the c_eligibilityrequest table | Insurance Eligibility | 44.4 |
| 11840 | Normal | Insurance Eligibility - We need to prevent accepting insurances if 3 of the 4 demographics do not match | Insurance Eligibility | 44.4 |
| 11775 | Normal | Same study can be opened multiple times from pending dictation WL | PACS (eRAD) Integration | 2.44.5.2 |
| 11751 | Normal | CD Import - fails to import all images. | | 44.4 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

| | | | | |
|---|---|---|---|---|
| 11572 | Normal | Clean up trace table is cost higher db resources than is needed | DB | 2.44.5 |
| 11568 | Normal | Remove collations from database DDL files | DB | 2.44.5 |
| 11557 | Normal | Missing indexes that affect RIS performance | DB | 2.44.5 |
| 11497 | Normal | The 'minutes since cache requested' and 'cached by Name' columns should be synced up to update at the same time | Worklists | 2.44.5.1 |
| 11421 | Normal | billing codes not added for outside reads | Billing | 2.44.5 |
| 11362 | Normal | Height not Required on Scheduling when auto-entered from previous visit as <empty string> | Meaningful Use | 2.44.5 |
| 11346 | Normal | failed to enable constraint error when using the schedule button on the follow up screen | Mammography | 2.44.4.3 |
| 11307 | Normal | Powerscribe closing open report in eRAD RIS | Powerscribe Integration | 2.43.0.6 |
| 11306 | Normal | Waiting for PowerScribe 360 message box is hiding other focused applications | Powerscribe Integration | 2.43 |
| 11305 | Normal | Reporting Radiologist - PowerScribe initial dictation will open PS but not the report to dictate | Powerscribe Integration | 2.44.2 |
| 11304 | Normal | Reporting Radiologist - PowerScribe addendum interuption cases getting mismatched error with RIS | Powerscribe Integration | 44.2 |
| 11303 | Normal | Reporting Radiologist - PowerScribe issues with fix #7908 and #8143 one is reverting the other to fix different issues. | Powerscribe Integration | 44.2 |
| 11267 | Normal | align patient portal v1.0.x db views to RIS release | Connect Portal 4.x | 2.44.5 |
| 11266 | Normal | Missing access string to prevent a voided exam from having the report previewed and printed | Radiology Reporting | 2.44 |
| 7969 | Normal | Reporting Radiology - RTF to CDA converter bolding text when not bolded in source system | Powerscribe Integration | 2.42.1 |
| 6333 | Normal | Attachments Screen: fails to save for pre-scheduled studies. | Scanning | 1.42 |

# 9. Known Limitations

The following are Bugs Suggested Features and Support Issues found in build 2.44.6. Bugs reported in previous versions are not captured as Known Limitation in this document.

| # | Status | Priority | Subject |
|---|---|---|---|
| 11980 | New | Normal | BI-RADS picker is editable - causes Index out of range error |
| 11978 | New | Normal | Appointment book allows any procedure to be scheduled in a room |
| 11966 | New | Normal | Mammo Biopsies Window - Cancel and ESC Key functionality |
| 11948 | New | Normal | PowerScribe - approving an addendum also saves a 2nd exam that is opened. |
| 11934 | New | Normal | Study/Order locks not clearing on closing multi-orders from Walk-In window |
| 11960 | New | Low | Confirmation - Administered checkbox under Medications is always unchecked (visually) |
| 11937 | New | Low | Error on filtering Calculated Time Severity column (Confirmation/Closed Rooms/Reception WL) |
| 11935 | New | Low | Study/Order locks not clearing on closing multi-orders from Schedule Order>Existing Orders prompt |

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 44.7 and subsequent server releases. This version of eRAD RIS is referred to as Build 2.44.7

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet /eRAD RIS implementation teams.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 2.44.7 is considered a new release of the application. It does not require a reinstallation of eRAD RIS. If users choose to reinstall, this is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application, please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

# 4. New Features and Enhancements

### Features 12358 and 12359 – Support XR-29

At the start of 2016, Centers for Medicare & Medicaid Services (CMS) will reduce Medicare payment for certain outpatient CT exams performed on scanners that do not meet the radiation dose safety criteria outlined in the XR-29 CT Standard (also known as MITA Smart Dose). Medicare claims submitted for certain CT exams performed on or after January 1, 2016 must be appended with a modifier if the CT scanner was not XR-29 compliant. Two new fields have been added to the RIS lookup tables in order to allow for the appropriate adjustments to be made to the billing file for any customers who must comply with this Medicare requirement.

A new field called XR29 Compliance Date has been added to the Modality lookup table. This will allow the RIS Administrator to specify the date the CT scanner became XR-29 compliant.

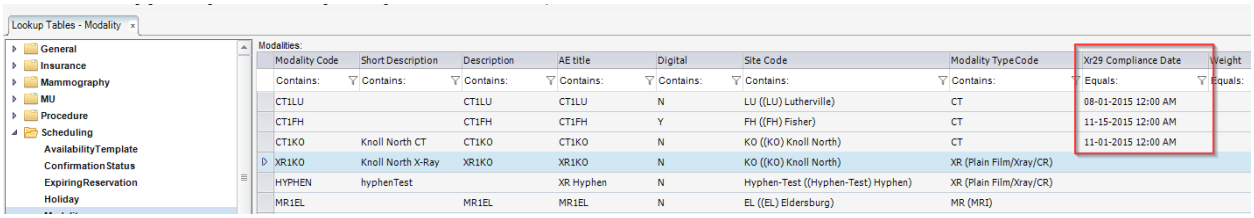

**Figure 5.1 – Modality lookup table displaying new column of Xr29 Compliance Date**

A new field called XR29 Required Flag has been added to the Billing Code lookup table. This will allow the RIS Administrator to specify the CPT codes that require the XR-29 modifier to be added for Medicare claims.

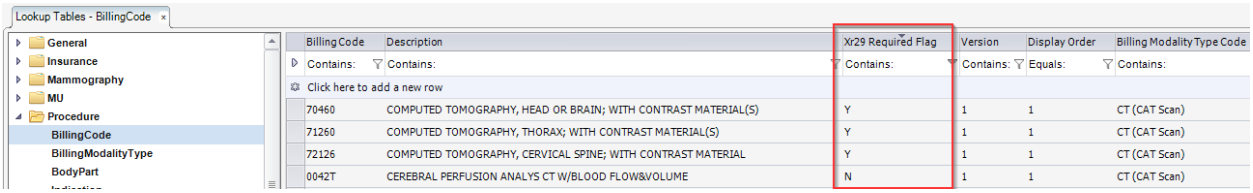

**Figure 5.2 – Billing code lookup table displaying new column of Xr29 Required Flag**

When generating the billing file, the two additional columns can be used to build the logic to determine the appropriate modifier. Please contact the eRAD Support team for assistance with modifying your billing file if you submit claims to Medicare for outpatient CT exams.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

A management report has been created to help administrators track which CT scanners are compliant. It is located in the Maintenance folder.

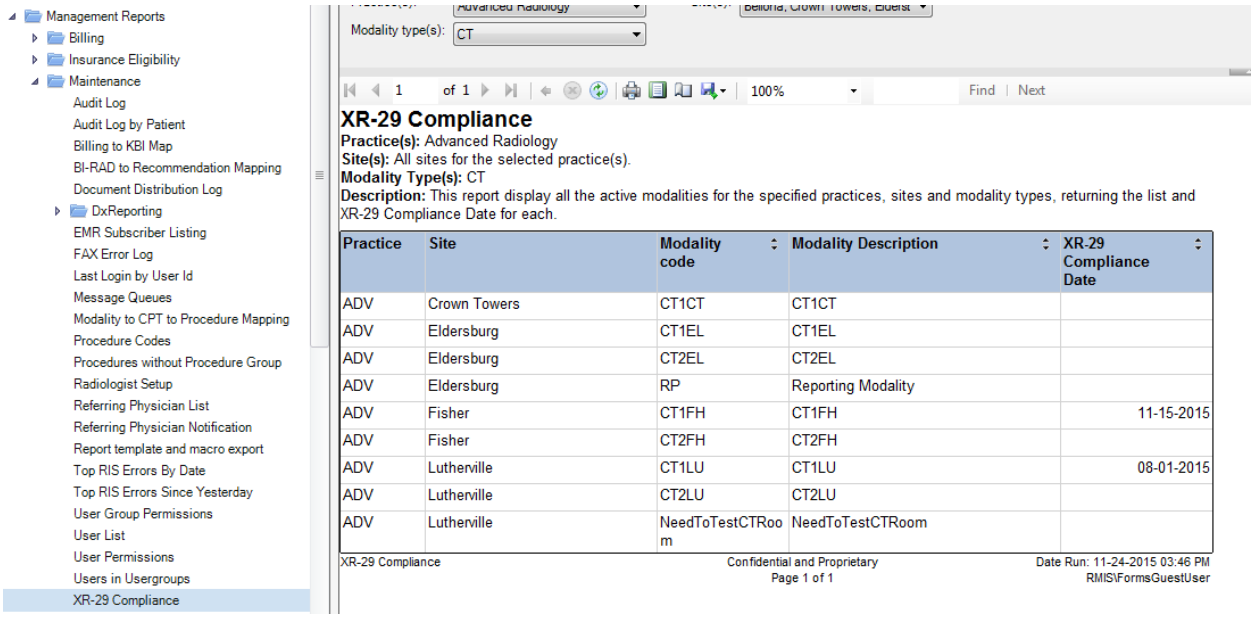

**Figure 5.3 – XR-29 Compliance Management Report**

# 7. Resolved Defects

Bugs, Suggested Features and Support Issues resolved in build 2.44.7. The extract is taken from Redmine bug tracking system and only displays defects resolved in 2.44.7.

| Bug # | Priority | Subject | Category | Found Version |
|---|---|---|---|---|
| 12280 | Urgent | PACS images not synced with current report after timeout exceeded in eRAD RIS | PACS (eRAD) Int - RIS only | 2.44.6 |
| 12358 | Normal | Support XR-29 | Thick Client GUI | |
| 12359 | Normal | Create XR-29 management report | Mgt Reports | |
| 12408 | Normal | When prompted "Action required in PACS" and PACS is killed, clicking OK to message should allow you to continue working in RIS without PACS. | PACS (eRAD) Integration | 44.7 |
| 12414 | Normal | PowerScribe error when closing studies with the X on the tab | Powerscribe Integration | 2.44.7 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD Inc.

# 8. Known Limitations

The following are Bugs Suggested Features and Support Issues found in build 2.44.7. Bugs reported in previous versions are not captured as Known Limitation in this document.

| # | Status | Priority | Subject |
|---|---|---|---|
| 12409 | New | Normal | Under certain circumstances, the RIS message "Action required in PACS before continuing" must be acknowledged twice to continue working in RIS |
| 12411 | New | Normal | PACS "Invalid Study file" displays every time you go to the Patient folder |
| 12415 | New | Normal | PACS images getting locked when you exit out of RIS |
| 12422 | New | Normal | After restarting the PACS viewer, not all images are displayed when tabbing through studies that were open before PACS viewer was killed. |

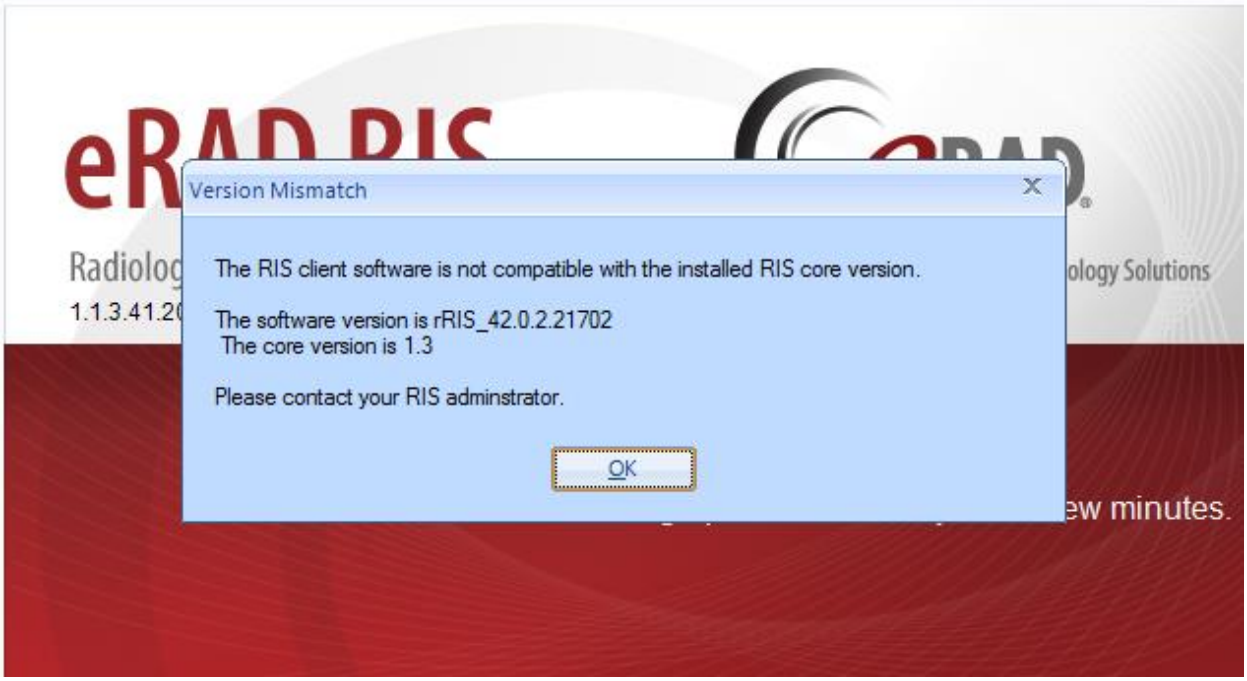
# 7. Installing

## Client/GUI

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.44.7.1.32395.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_44.7.1.32395→ rRIS_1.3.44.7.1.32395
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Web Service

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 88 files in the rRISService folder and 2 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below).

## Services Configuration Wizard

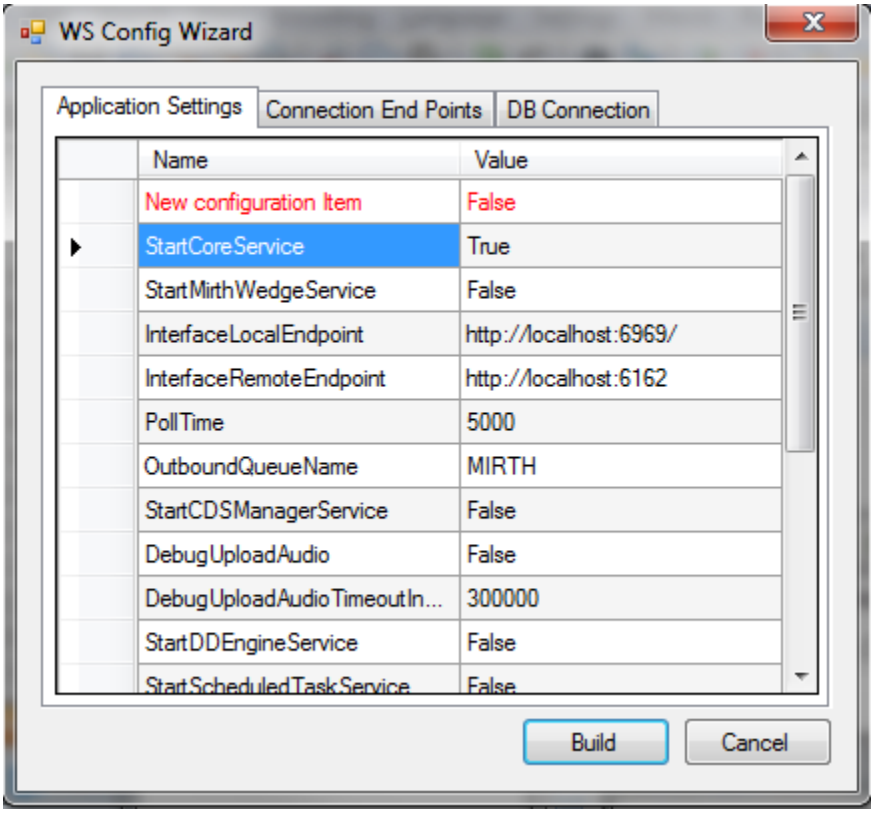
With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

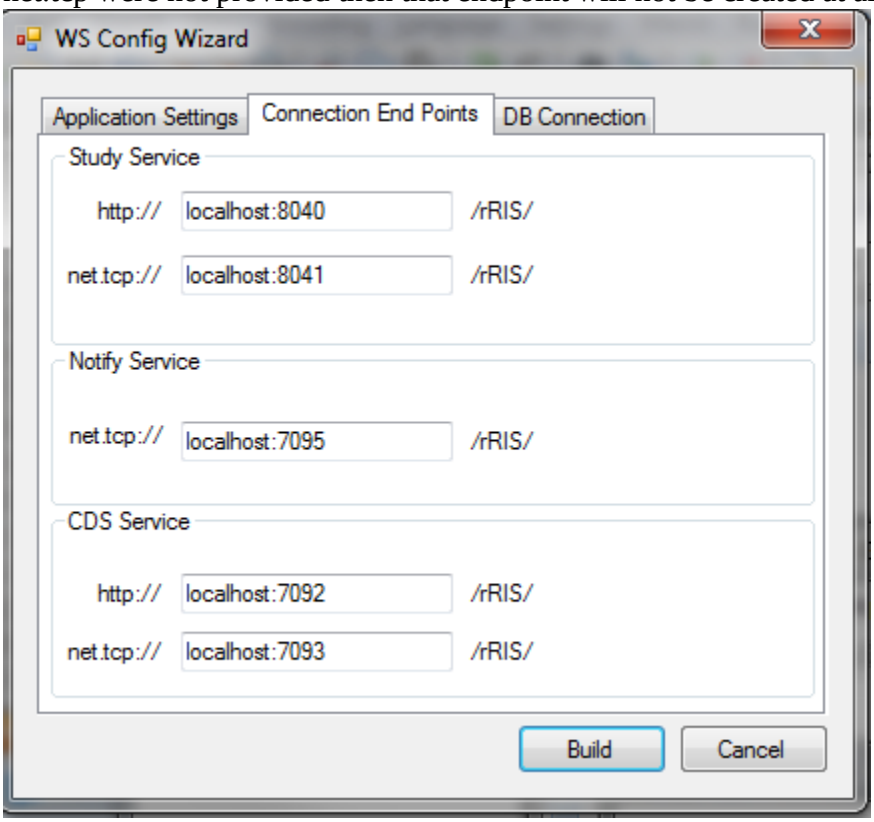
**NOTE:** the rRISServices.exe.config file is also included in the deploy folder. If this file has changes it **will not** update your current file in the Web Service directory. Any changes to this file will require a manual update of the rRISServices.exe.config and rRISServicesx64.exe.config files.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.



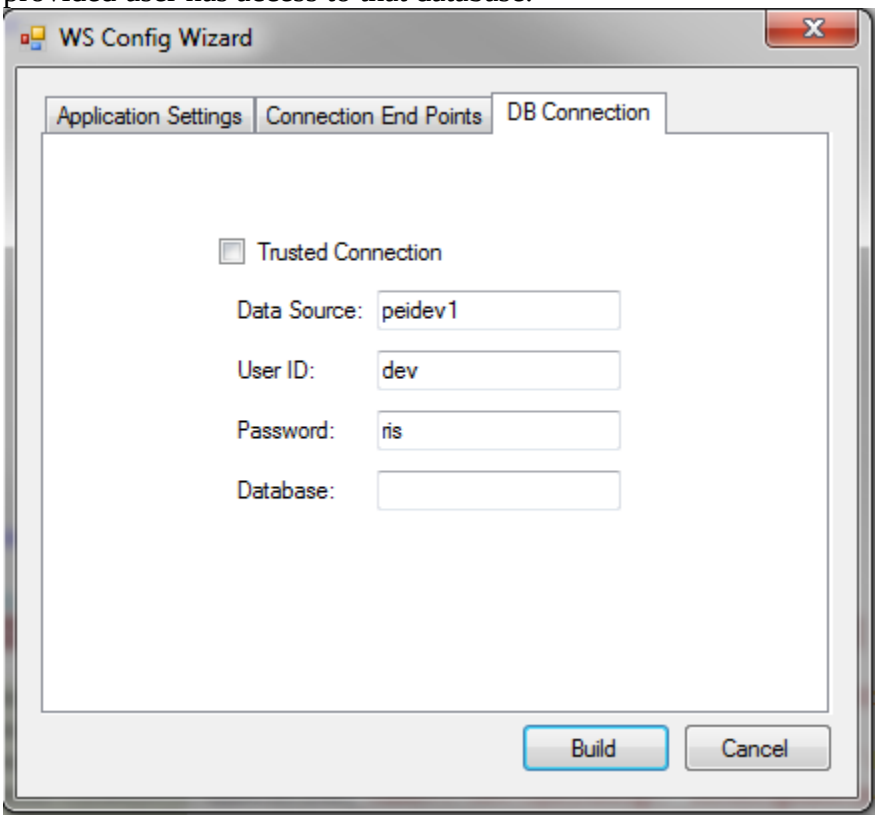
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of "Study Service" or "CDS Service" if both http and net.tcp were not provided then that endpoint will not be created at all.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**DB Connection:** will display the existing configuration, if the Connection is to be used as a trusted connection, then the user ID and password will become disabled and will not be used, and will rely on the provided database value, When not using the trusted connection, The Database value is not needed but can be used to force a specific database connection as long as the provided user has access to that database.



It is always good practice to do a compare of the .config files.

1) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   **Restart each service**.

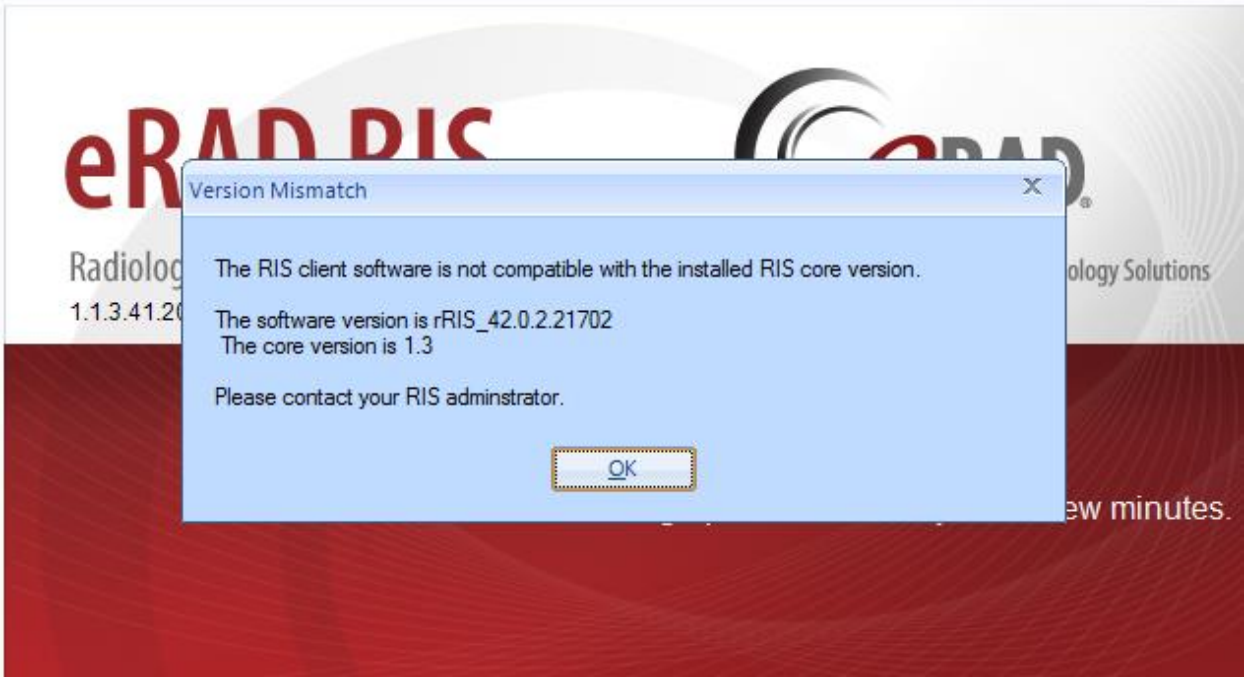
# 7. Installing

## Client/GUI

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.44.7.2.32694.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_44.7.2.3694→ rRIS_1.3.44.7.2.32694
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Web Service

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 90 files in the rRISService folder and 2 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below).

## Services Configuration Wizard

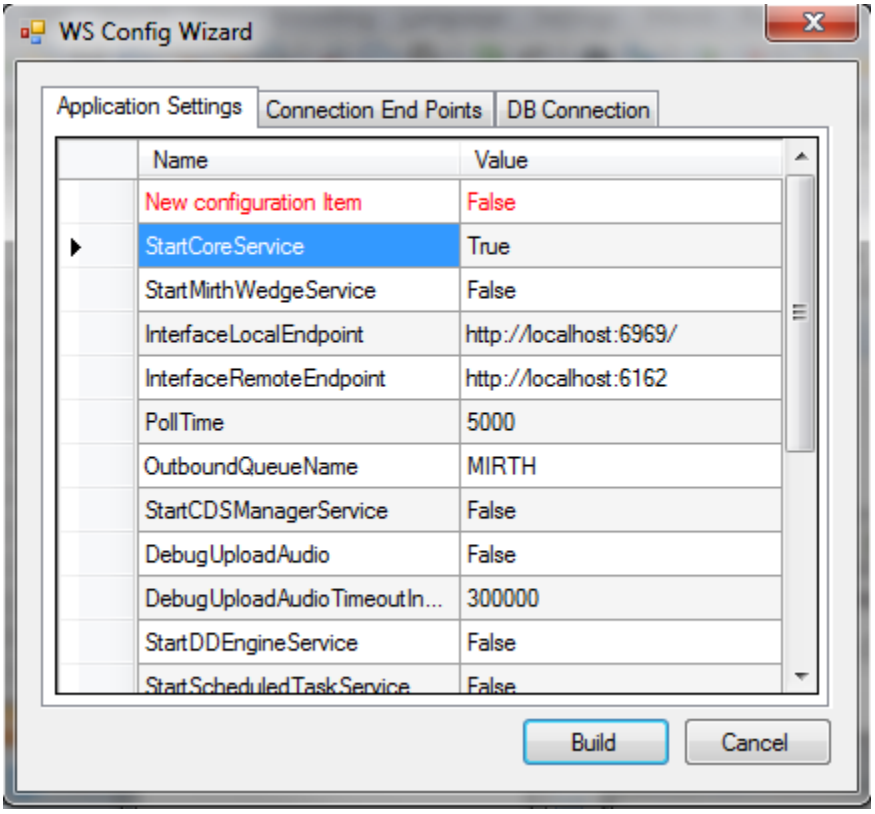
With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

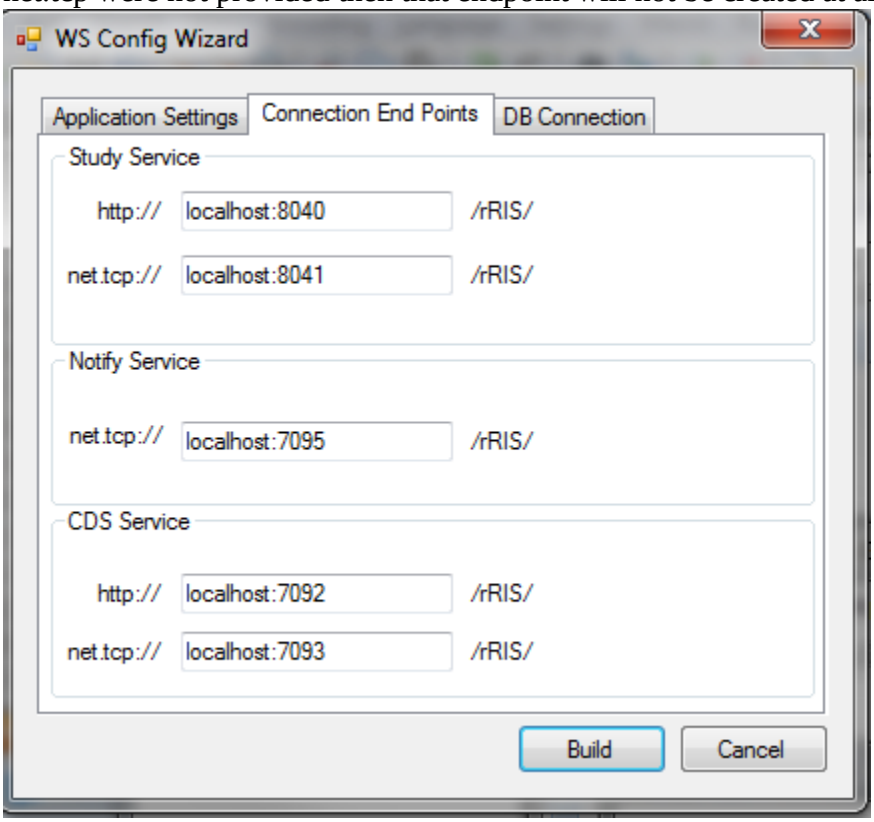
**NOTE:** the rRISServices.exe.config file is also included in the deploy folder. If this file has changes it **will not** update your current file in the Web Service directory. Any changes to this file will require a manual update of the rRISServices.exe.config and rRISServicesx64.exe.config files.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.



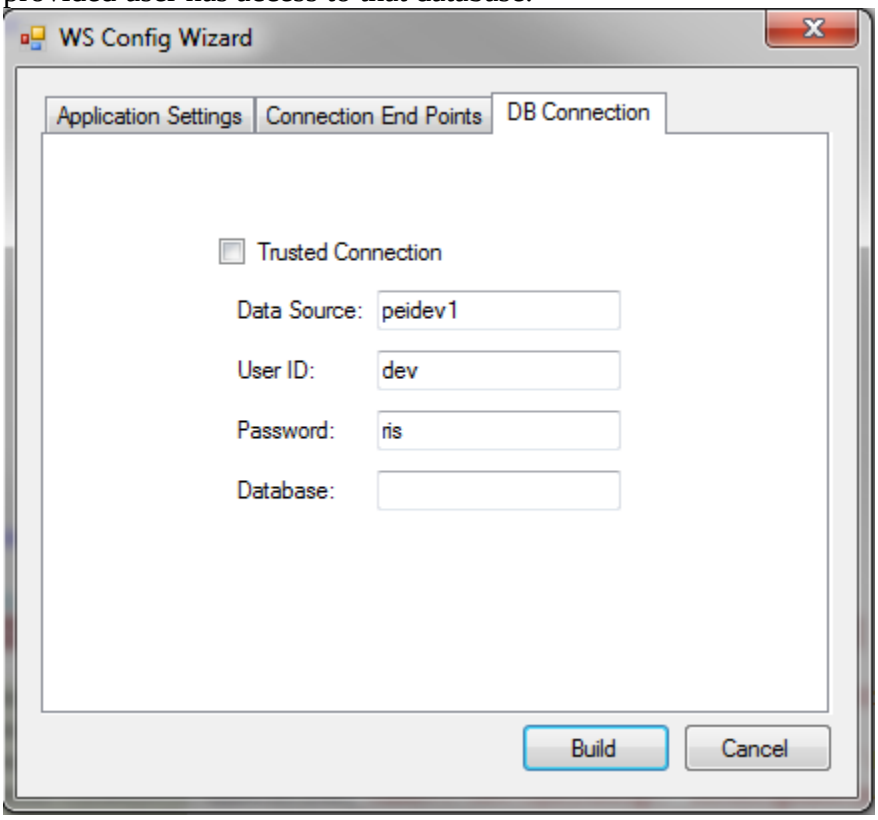
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of "Study Service" or "CDS Service" if both http and net.tcp were not provided then that endpoint will not be created at all.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**DB Connection:** will display the existing configuration, if the Connection is to be used as a trusted connection, then the user ID and password will become disabled and will not be used, and will rely on the provided database value, When not using the trusted connection, The Database value is not needed but can be used to force a specific database connection as long as the provided user has access to that database.



It is always good practice to do a compare of the .config files.

1) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   **Restart each service**.

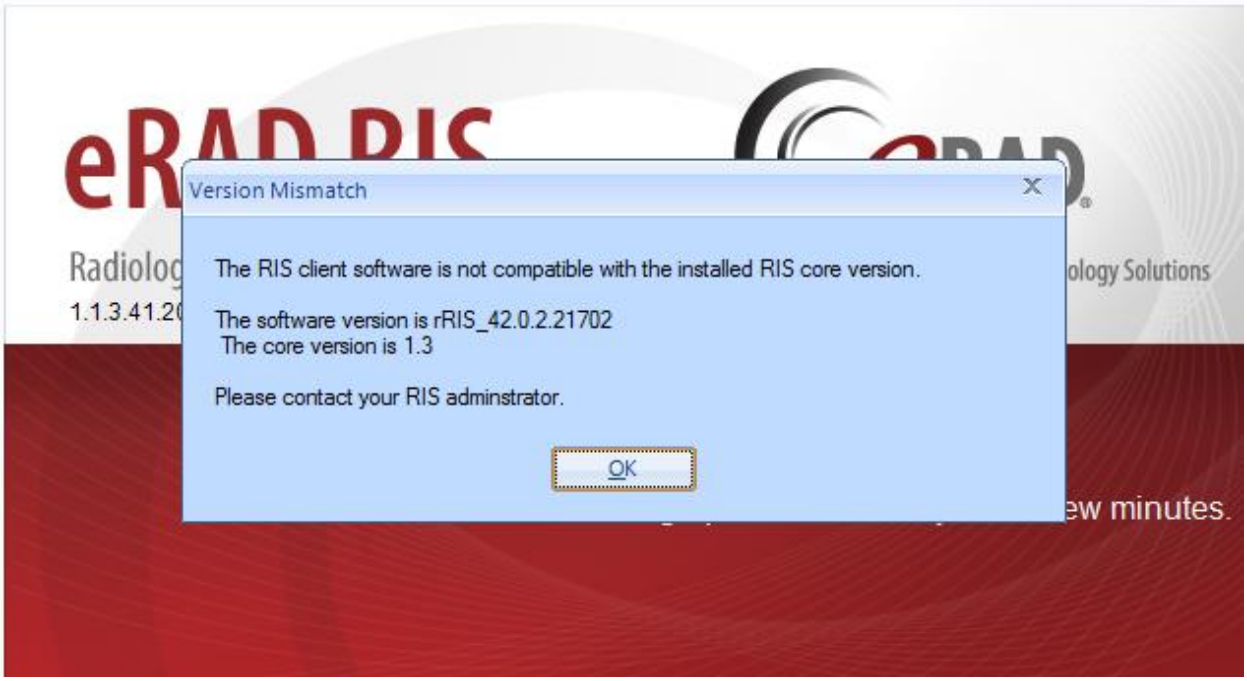
# 7. Installing

## Client/GUI

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.44.7.3.32749.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_44.7.3.32749→ rRIS_1.3.44.7.3.32749
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

# Server Update

For eRAD RIS
Version 2.0
Build 44.7
Update 44.7.4

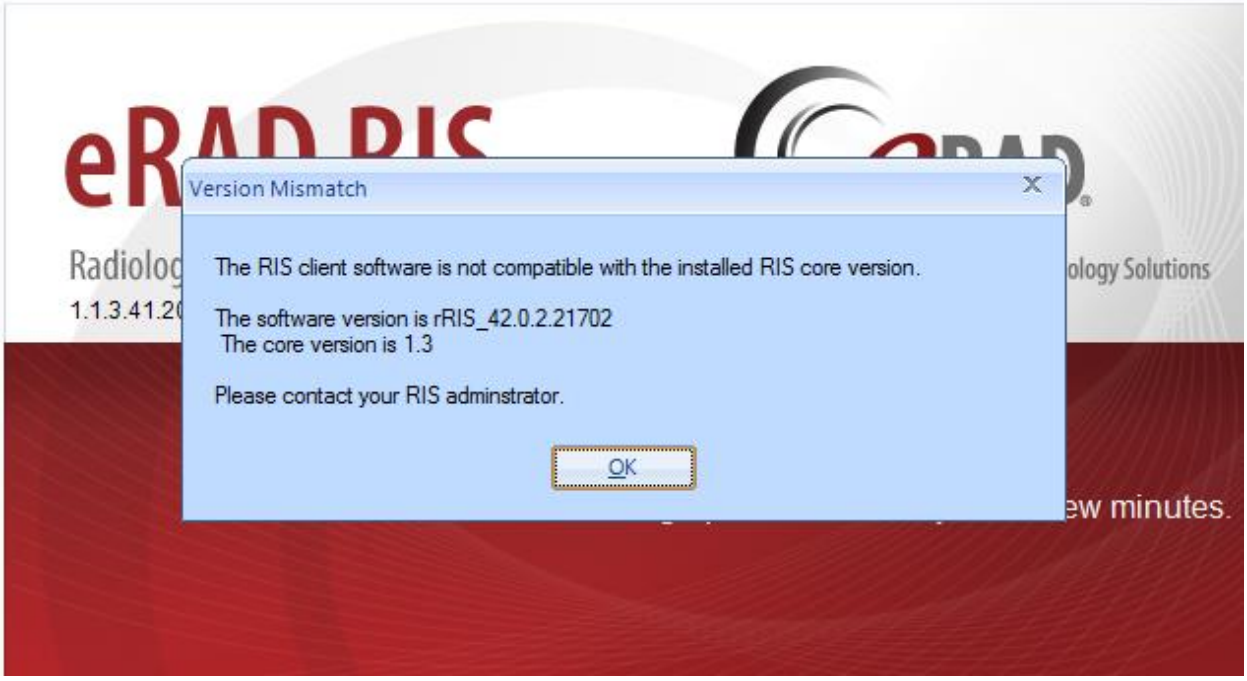
# 7. Installing

## Client/GUI

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.44.7.3.32779.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_44.7.3.32779→ rRIS_1.3.44.7.3.32779
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS as of the end of Sprint 44 and subsequent server releases. This version of eRAD RIS is referred to as Build 2.45

Only features which can be visually demonstrated to the user will be outlined in this document.

# 2. Intended Audience

This document is created by the RIS Development team for the RadNet RIS management team.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

*Please note that Build 2.45 is considered a new core release of the application and will require a reinstallation of eRAD RIS. This is accomplished by navigating to the eRAD RIS shared installation drive and running the CoreInstall.bat file (ex: I:\RISDeployment\CoreInstall.bat)*

If you experience difficulties accessing the application please do not hesitate to contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 4. New Access Strings and Configuration Settings 45

| Setting Placeholder | Setting | Default | Purpose / Controls Access to |
|---|---|---|---|
| Access string / User Group Permission tables | Clinical.AuditHistory.ShowReportPeerReviewed | None | Allows the user to see when reports were peer reviewed in the audit history |
| Access string / User Group Permission tables | Clinical.ChangeStatusCancelTechRepReqd | None | Controls access to the context menu option Change Status CancelTechRepReqd |
| Access string / User Group Permission tables | Clinical.ContrastTimer | None | Enables the user to start and reset the contrast timer on the Technologist WL |
| Access string / User Group Permission tables | Clinical.ExportIsraelMinistryOfHealth | None | Controls access to the menu item to export the XML for the Israeli Ministry of Health |
| Access string / User Group Permission tables | Clinical.PortalLauncher | None | Controls access to the context menu for the Portal Integration Window |
| Access string / User Group Permission tables | Clinical.QuickRadarMessage | None | Controls access to the context menu for the quick RADAR message feature |
| Access string / User Group Permission tables | Clinical.RadarMessage | None | Controls access to the context menu for the RADAR message feature |
| Access string / User Group Permission tables | Clinical.ReportEditor.AdvancedMenu | None | Enables access to the advanced menu in the eRAD report editor |
| Access string / User Group Permission tables | Clinical.VerifyReport | None | Controls access to the Verify Report button on the context menu on work lists |
| Access string / User Group Permission tables | Config.AllowEradReportingIntegration | None | Allows users access to turning on eRAD reporting workflow for themselves or other users if the current user has admin access |
| Access string / User Group Permission tables | Config.AllowExternalReportingIntegration | None | Allows users access to turning on External reporting workflow for themselves or |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| | | | other users if the current user has admin access |
| Access string / User Group Permission tables | Config.AllowMModalReportingIntegration<br><br>Replaces<br><br>Config.AllowMModalConfig | Full | Allows users access to turning on M*Modal reporting workflow for themselves or other users if the current user has admin access |
| Access string / User Group Permission tables | Config.AllowPowerScribeReportingIntegration<br><br>Replaces<br><br>Config.AllowPowerScribeConfig | None | Allows users access to turning on PowerScribe reporting workflow for themselves or other users if the current user has admin access |
| Access string / User Group Permission tables | Config.LookupEditor.AccessString.AllowedToChangeDefaults | None | Controls access to editing the default access level code on access strings |
| Access string / User Group Permission tables | Config.LookupEditor.AccessString.CustomAccessStrings | None | Full access enables the user to add, edit and delete custom access strings |
| Access string / User Group Permission tables | Config.LookupEditor.AdditionalResource | None | lookup table access for Additional Resources |
| Access string / User Group Permission tables | Config.LookupEditor.AuditHistory | None | Allows the user to see the audit log for configuration changes. |
| Access string / User Group Permission tables | Config.LookupEditor.Autotext | None | lookup table access for Autotext |
| Access string / User Group Permission tables | Config.LookupEditor.BrowserConfig | None | Controls access to the Lookup Editor for the BrowserConfiguration used by the Portal Integration Window |
| Access string / User Group Permission tables | Config.LookupEditor.LogControl | None | lookup table access for Log Control |
| Access string / User Group Permission tables | Config.LookupEditor.OrderingOrganization | None | lookup table access for Ordering Organization |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| Access string / User Group Permission tables | Config.LookupEditor.OverbookReason | None | lookup table access for Overbook Reason |
| Access string / User Group Permission tables | Config.LookupEditor.SystemMessage | None | Lookup table access for the System Messages currently used for Portal |
| Access string / User Group Permission tables | Config.LookupEditor.ValidationRules | None | lookup table access for ValidationRules |
| Access string / User Group Permission tables | Menu.File.UserPreferences | Full | Enables access to the User Preference menu option on the File menu. |
| Access string / User Group Permission tables | Portal.MIM | None | Allows access to the MIM section form the referring portal. |
| Access string / User Group Permission tables | Portal.PACS | None | Allows access to the PACS section form the referring portal. |
| Access string / User Group Permission tables | Portal.Referring | None | Allows access to the Referring Portal |
| Access string / User Group Permission tables | Portal.Referring.Admin | None | Allows access to the Referring Portal Administration Login |
| | | | |
| SystemConfig lookup | AllowedReportingIntegrationTypes | 15 | (value = sum of desired types where External = 1, MModal = 2, PS360 = 4 and eRAD = 8) Determines which reporting integration types are allowed on this system. The default equals all reporting modes as 1+2+4+8=15 |
| SystemConfig lookup | DateFormat | MM-dd-yyyy | (value = string) The date format (i.e. MM-dd-yyyy). Only numeric dates are supported. |
| SystemConfig lookup | DaysToKeepClientErrorLog | 60 | (value = int) The number of days to keep an error log after |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| | | | it has been generated. |
| SystemConfig lookup | DefaultAlternateMRNMask | AAAAAAAAAA | (value = string) Default mask for alternate MRNs. Mask rules: # = number only, A = alphanumeric and L = alpha only. |
| SystemConfig lookup | DictationArchiveCurrentLocation | N/A | DictationArchiveCurrentLocation |
| SystemConfig lookup | DictationArchiveDaysOfTheWeek | 0,1,2,3,4,5,6 | (value = string) A comma separated list of days that the dictation archive process will wake up to see if there is work. The list is contains numbers representing the day number within the week, where: 0 is Sunday, 1 is Monday, 2 is Tuesday, 3 is Wednesday, 4 is Thursday, 5 is Friday, 6 is Saturday. For example, a value of 0,1,2,3,4,5,6 means that the archive process will run every day of the week. |
| SystemConfig lookup | DictationArchiveMaxThreads | 6 | (value = int) The maximum number of thread the dictation archive process can use within one process. Default is 6. |
| SystemConfig lookup | DictationArchiveServerNames | N/A | (value = string) A comma separated list of server names that are allowed to run the dictation archive service. |
| SystemConfig lookup | DictationArchiveStartTime | 00:00:00 | (value = time) The time of day in hh:mi format (24 hour) that the dictation archive process can wake up. |
| SystemConfig lookup | DictationArchiveStopTime | 00:00:00 | (value = time) The time of day in hh:mi format (24 hour) that the dictation archive process must stop. Does not have to be greatergreaterIf less than DictationArchiveStartTime then the process will continue to the next day until the time is reached. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| SystemConfig lookup | DictationMaxSizeInDB | 2147483647 | (value = int) The maximum size in GB that the system will persist dictation directly in the db. When this value is exceeded the dictation archive process will begin (at its next run time interval) to move audio files to the archive. |
| SystemConfig lookup | DictationMinSizeInDB | 2147483647 | (value = int) When dictation archiving is initiated, this is the minimum size in GB that the system will reduce the amount of dictations that are persist directly in the db. |
| SystemConfig lookup | EnforceZipcodeSelection | False | (value = bool) True to force user to select a zip code for signing |
| SystemConfig lookup | GenericIncomingMessagePersonKey | -1 | (value = int) The Person key that will be used when sending secure messages for a non-user messaging instance, i.e. new account setup. |
| SystemConfig lookup | HeightAndWeightFormat | 1 | (value = int) 1 - Imperial (Height - ft in / Weight - lbs), 2 - Metric (Height - cm / Weight - kg) |
| SystemConfig lookup | HeightRequiredEffectiveDate | 1999-01-01 | (value = DateTime yyyy-MM-dd) Date to define when to enable checking if height is required when scheduling or arriving the patient |
| SystemConfig lookup | KillWordViewerAfterLegacyReport | True | (value = bool) True enables RIS to try to 'kill' or close the Word Viewer after opening legacy report in a new instance of the Word Viewer from the reporting screen. |
| SystemConfig lookup | KillWordViewerBeforeLegacyReport | True | (value = bool) True enables RIS to try to 'kill' or close the Word Viewer before opening legacy report in a new instance of the Word Viewer. |
| SystemConfig lookup | MiMS_URL | N/A | URL that will be used for MIM image viewing |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| SystemConfig lookup | OrderLevelLocking | False | (value = bool) True to lock the entire order at once |
| SystemConfig lookup | OverbookReasonFormat | 1 | (value = int) 1 - free text only, 2 - OverbookReason lookup only, or 3 - both free text and the OverbookReason lookup. |
| SystemConfig lookup | PhoneNumberFormatDisabled | False | (value = bool) True to disable the phone number format mask |
| SystemConfig lookup | PortalHelpRequestMessageGroup | N/A | The message group that Help request would be sent too. If no message group is defined then just email will be sent to the configured Portal's send to email address. |
| SystemConfig lookup | PortalImageMigrationToolUrl | N/A | (value = string) URL to custom migration tool for PACS Images. |
| SystemConfig lookup | PortalLauncherEnforceTimeoutInReportingScreen | True | (value = bool) Whether the PortalLauncherSessionTimeout is enforced when the Portal Launcher is open in the reporting screen |
| SystemConfig lookup | PortalLauncherSessionTimeout | 20 | (value = int) The amount of time, in minutes from when the Portal Launcher is opened until it automatically closes. -1 = infinite |
| SystemConfig lookup | PortalLauncherTabLocation | Left | (value = string) Possible values - Left, Right, Top, Bottom. Sets the location of the tabs in the portal launcher window. |
| SystemConfig lookup | PortalNewAccountRequestMessageGroup | N/A | The message group that New Account requests would be sent too. If no message group is defined then just email will be sent to the configured Portal's send to email address. |
| SystemConfig lookup | ReferingPortalDefaultExamTabCriteria | [{"name":"Completed","filter_criteria":{"DayRange":"90","progress_status":["Completed"]},"sort_criteria":{"patient_name":"ASC"},"display_order":1},{"name":"Scheduled","filter_ | (value = string) JSON value to define default filter tab view criteria for the refering portal exams tab. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| | | criteria":{"DayRange":"90","progress_status":["Scheduled"]},"sort_criteria":{"patient_name":"ASC"},"display_order":2},{"name":"InProgress","filter_criteria":{"DayRange":"90","progress_status":["InProgress"]},"sort_criteria":{"patient_name":"ASC"},"display_order":3}] | |
| SystemConfig lookup | ReferingPortalDefaultOrderTabCriteria | [{"name":"Orders","filter_criteria":{"DayRange":"7"},"sort_criteria":{"patient_name":"ASC"},"display_order":1},{"name":"Under Review","filter_criteria":{"DayRange":"90","um_status":["MDReview","NurseReview"]},"sort_criteria":{"patient_name":"ASC"},"display_order":2},{"name":"Drafted","filter_criteria":{"DayRange":"7","um_status":["Received"]},"sort_criteria":{"patient_name":"ASC"},"system_criteria":{"RowCounter":"true","RowCounterClass":"gray"},"display_order":5}] | (value = string) JSON value to define default filter tab view criteria for the refering portal orders tab. |
| SystemConfig lookup | RegistrationRequiresSubscriberDOB | False | (value = true/false) True will require the subscriber's date of birth to be entered prior to arriving. |
| SystemConfig lookup | RISOutputFilePath | %ApplicationStartUp% | (value = string) Path to directory where RIS will write output files. |
| SystemConfig lookup | ShowDOBCalendar | False | (value = bool) True shows the calendar selection control on Date Of Birth. |
| SystemConfig lookup | StartOfWeek | 1 | (value = int) numaric value of the first day of the work week: 0=Sunday...6=Saturday |
| SystemConfig lookup | TimeFormat | h:mm tt | (value = string) The time format (i.e. h:mm tt) |
| SystemConfig lookup | UMExpirationDays | 90 | (value = int) The number of days until an authorization expires. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| SystemConfig lookup | WalkinAddMinutes | 0 | (value = int) The amount of time in minutes to add to the scheduled start time for a walk in study. |
| SystemConfig lookup | WeekEndDays | 0,6 | Comma delimited list of of the days of the normal weekend: 0=Sunday...6=Saturday |
| SystemConfig lookup | WeightRequiredEffectiveDate | 1999-01-01 | (value = DateTime yyyy-MM-dd) Date to define when to enable checking if weight is required when scheduling or arriving the patient |
| SystemConfig lookup | WorkWeekDays | 1,2,3,4,5 | Comma delimited list of of the days of the normal work week: 0=Sunday...6=Saturday |
| SystemConfig lookup | ZipCodeCharacterMax | 5 | (value = int) Number of characters needed for zip code validation. |
| SystemConfig lookup | ZipCodeToAddressAutoFill | True | (value = bool) True to have address fields auto-filled when entering a zip code. |
| | | | |
| Applicationsettings.config | ExternalInterfacePlugin | None | This setting contains the name of the plugin to use for sending messages out to an external system.<br>See feature External Web Services Infrastructure for more information |
| Applicationsettings.config | QueueItemReserveTime | 25000 | This setting determines how long the Wedge will reserve a queue item. |
| Applicationsettings.config | DDEQueueItemReserveTime | 25000 | This setting determines how long the DDE will reserve a queue item. |
| Applicationsettings.config | StartExternalInterfaceService | False | When set to True, this setting will enable the External Interface Web services.<br>See feature External Web Services Infrastructure for more information |
| services.config | <service behaviorConfiguration="rRISBehaviorWithDebug" name="WCFService.ServiceImplementation.ExternalInterfaceServ | "http://localhost:7100/rRIS" /> | Used with External Web Services Infrastructure.<br><br>The server_name (localhost) |

## Changes to RIS.exe.config file

The section <listeners> in the ris.exe.config file has been changed in this release. Below you will see the before and after. Text highlight green in the "after" displays the changes.

| Before | After |
|---|---|
| rollFileExistsBehavior="Increment"<br>rollInterval="Hour"<br>header="" footer=""<br><br>fileName="verbose_log/trace.log"<br>formatter="SimpleTextFormatter" /><br></listeners> | rollFileExistsBehavior="Increment"<br>rollInterval="Hour"<br>header="" footer=""<br><br>fileName="/verbose_log/trace.log"<br>formatter="SimpleTextFormatter" /><br></listeners> |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 5. New Features and Enhancements

## Language Localization and Right to Left Language Support

A framework has been constructed to allow other languages to be displayed and utilized in eRAD RIS. This framework consists mostly of a Microsoft standard resource file approach, however the decision was made to not simply use this framework verbatim, as under that model, each screen within RIS would have its own resource file leading to massive repetitiveness (and therefore inconsistency).

Therefore, the core of eRAD RIS application uses a single resource file called LANG.Resx. The deployment of this resource file is performed by the native Microsoft framework.

The first localization language is Hebrew. With this we are also supporting right to left language. All of the user based screens in eRAD RIS.

The configuration screens have not been localized.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Capture and Display Primary and Alternate Patient Names

The Patient tab can display two new fields extended on the patients first and last names. These new fields can be hidden by adding custom access strings

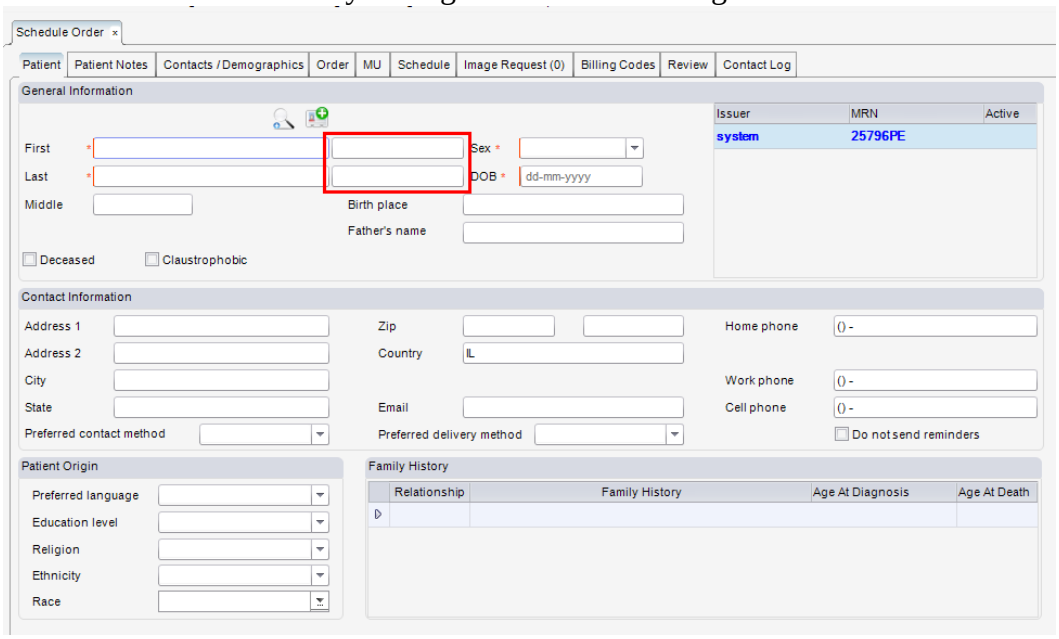

**Figure 5.1 – Alternate Patient First and Last name fields**

To remove this field from view on the patient tab, Service Personnel would need to create a customer access string.

An example would be having the Patients first and last names displayed in a native language, such as Hebrew, and the alternate first and last names displaying the English names (or vice versa)

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Patient Search for Hebrew and English Patient Names

With data entered in the First and Last name fields, as well as data entered in the Alternate First and Last name fields we can use the Patient Search window to locate the patient using either of the names.

Upon searching for a patient, the new alternate name data will be shown in the existing alternate name columns. This column will display any historical names as well as the new alternate names (as historical alternate names).

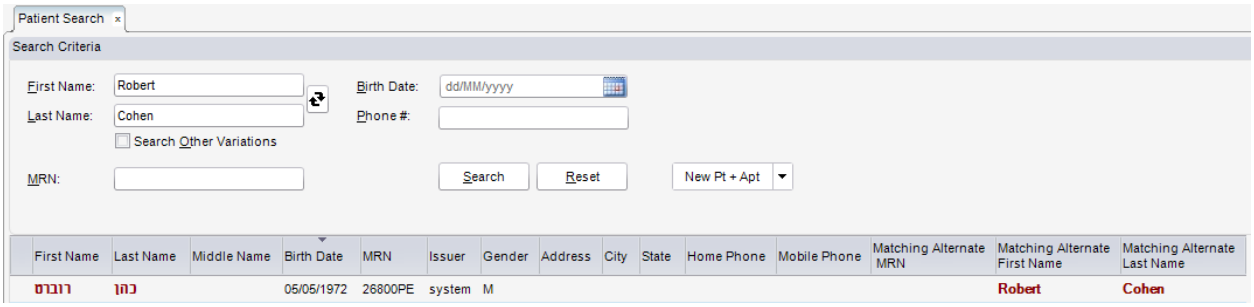

**Figure 5.2 – Patient Search displaying both Hebrew and English names**

In this screen capture the alternate name is the English name. When searching on the English name it displays under that column. The Hebrew name will display in the First and Last name fields.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Capture and Display Patients Fathers Name

In Israel, the father's name is used to reconfirm that the staff has the appropriate patient. The RIS must be able to capture and display the patient's father's name for reception and technologist roles

The field displayed below has been added to the Patient tab.

**Figure 5.3 – Father's Name field on Patient tab**

The field is enabled by default. To remove this field from view on the patient tab, Service Personnel would need to create a customer access string.

NOTE: creating custom access strings in new in Build 45. See feature in this document for more information

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Support Configurable Date Format

eRAD RIS currently utilizes a hardcoded date format of "MM-dd-yyyy" throughout the application. Not all customers want to utilize this format, therefore it needs to be configurable.

A new system configuration setting of "**DateFormat**" has been added and has a default value of "MM-dd-yyyy".

The DateFormat setting allows the system to be configured to use a specific date format.

For example if the customer would like slashes instead of dashes, DateFormat can be set to "MM/dd/yyyy". **Please note that only numeric date formats are supported at this time. The format of dd/MMM/yyyy for example is not a valid date format that is supported in eRAD RIS.**

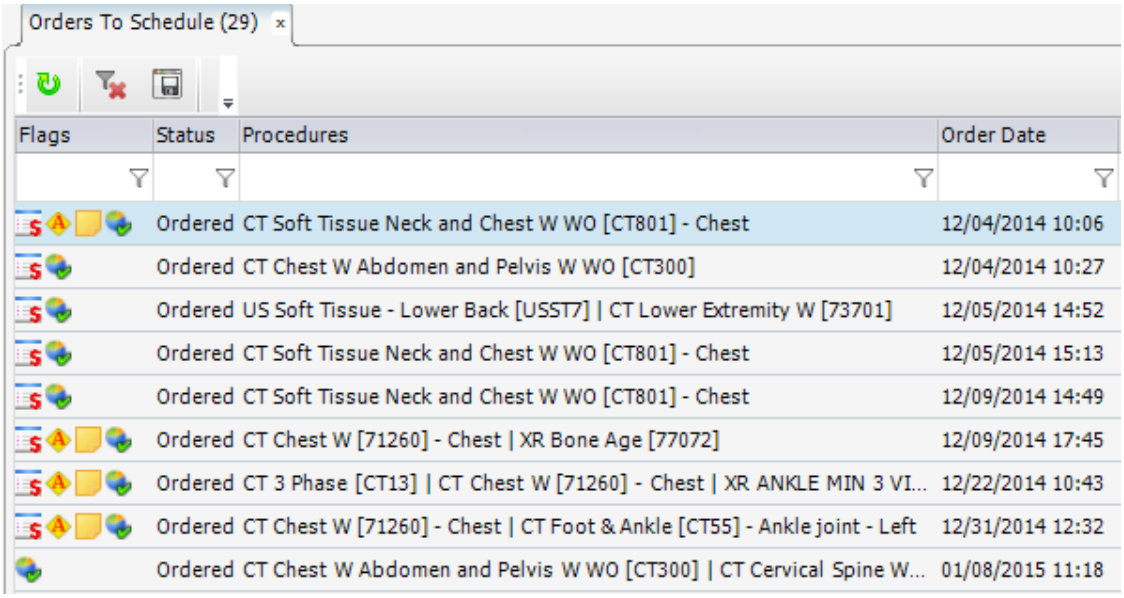

**Figure 5.4 – Example of date format with slashes instead of dashes on work list**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

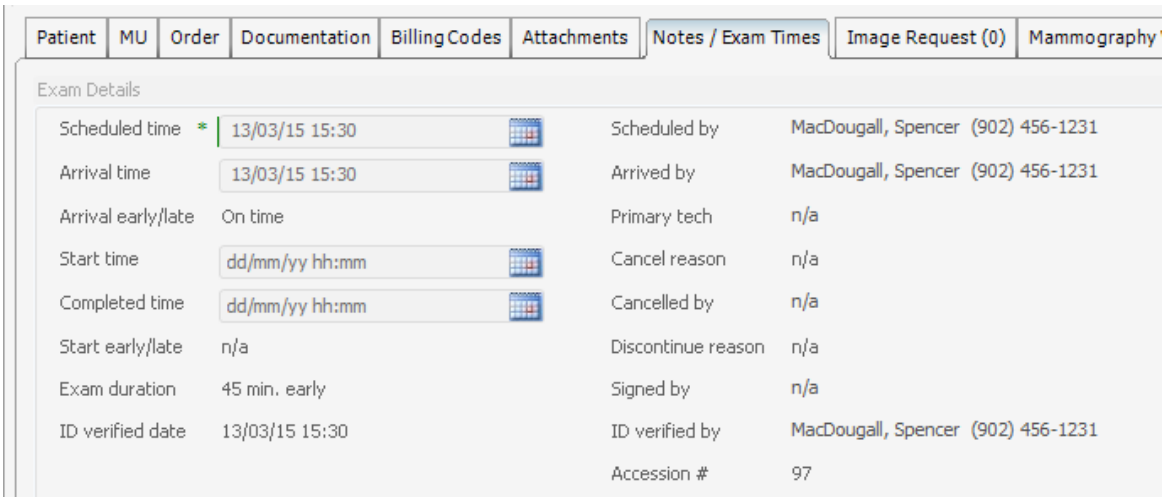

**Figure 5.5 – Example of slashes instead of dashes on data window**

It is also recommended that the DateFormat configuration value matches the short date format set on the client's workstation. The user will be promoted after login if the values do not match.

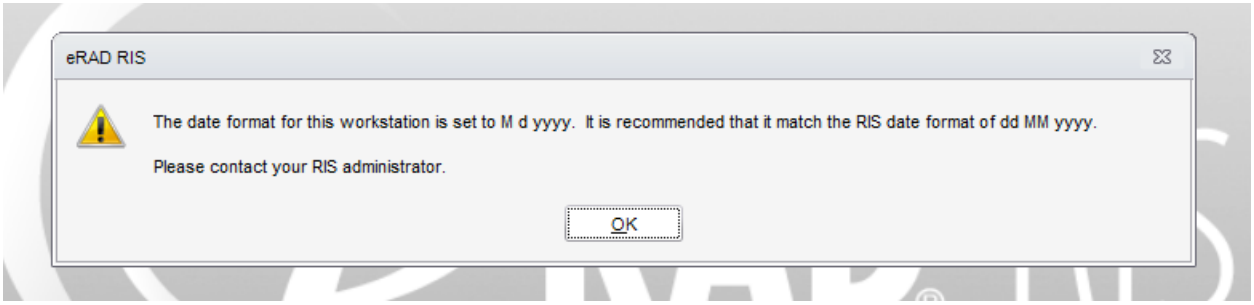

**Figure 5.6 – Message on login of conflicting regional date format and system Configuration setting DateFormat**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Support 24 Hour Time Format

Not all customers use the 12 hour clock as a standard. Therefore eRAD RIS is also required to display time in a 24 hour format.

A new System Configuration value of "**TimeFormat**" has been added to the system with a default value of h:mm tt. All times that are displayed in the system (data forms, worklists, appointment book, etc.) will be based on this configuration value.

The TimeFormat setting allows the system to be configured to use a specific time format. The default value is "h:mm tt". If the customer would like times displayed in a 24 hour format, the TimeFormat setting can be changed to "HH:mm". If the customer wants the 12 hour format but would like to include the leading zero, the TimeFormat setting can be changed to "hh:mm tt".

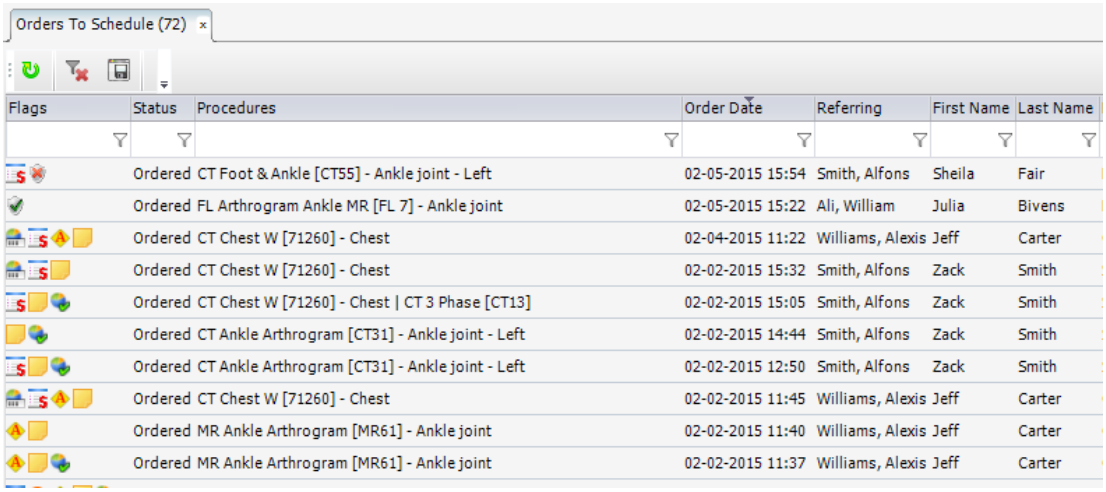

**Figure 5.7 – Work list using 24 hour time format**

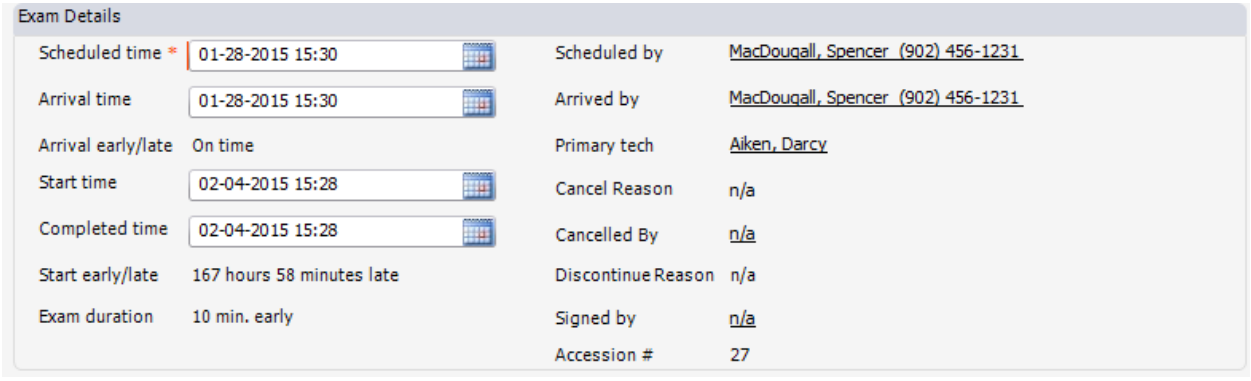

**Figure 5.8 – Data window using 24 hour time format**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Support International Phone Numbers

eRAD RIS is designed to use a phone mask format of (###) ###-#### ########. This format is not acceptable for international customers. There is a requirement to allow the system to be configured to bypass the phone number mask.

A New System Configuration setting of "**PhoneNumberFormatDisabled**" with a default of false has been added to eRAD RIS. If the PhoneNumberFormatDisabled is set to true, the system will ignore the phone number mask and allow the user to enter up to 20 numeric characters. The validation that requires a phone number filed to be at least 10 characters also gets removed when the PhoneNumberFormatDisabled is set to true.

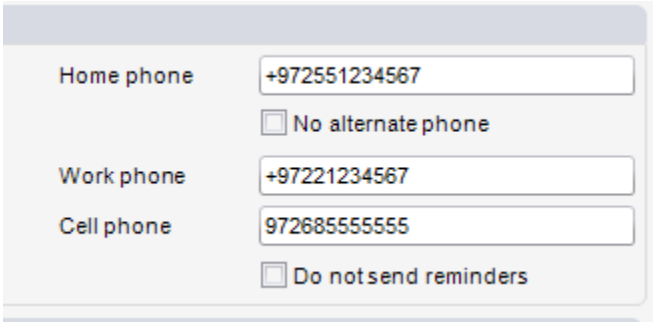

**Figure 5.9 – Phone number mask removed**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Support Metric Height and Weight

eRAD RIS is currently hardcoded to the US standard of feet and inches for height and pounds for weight. The system must support both metric and imperial height and weight formats.

A new System Configuration setting of "**HeightAndWeightFormat**" has been added with a default value of 1.

HeightAndWeightFormat can be set to 1 for Imperial or 2 for Metric.

1. Imperial (Height - ft in / Weight - lbs)
2. Metric (Height - cm / Weight - kg)

The HeightAndWeightFormat will display the patient demographics at encounter in Imperial or Metric formats.

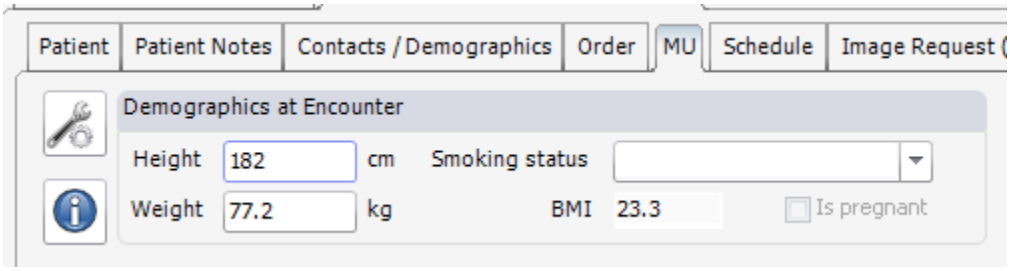

**Figure 5.10 – Height and weight displayed in metric**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Zip Code (Postal Code) changes

Two new System Configuration settings have been added to allow for different lengths of postal codes.

The first setting of "**ZipCodeCharacterMax**" has been added with a default value of 5. This setting controls the number of characters required for validation.

The second new setting is "**ZipCodeToAddressAutoFill**" which has a default value of True. When set to False, the State and Country fields will not auto-populate.

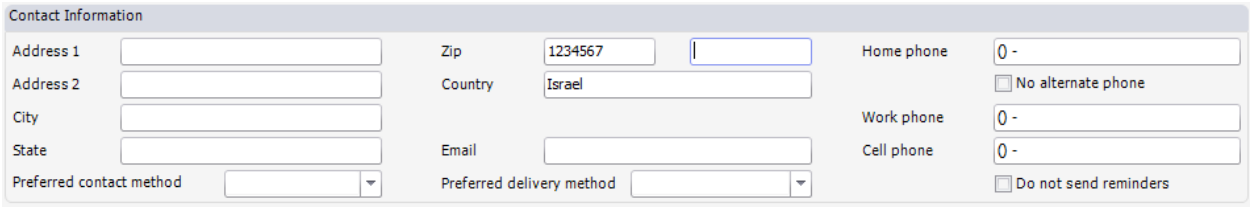

**Figure 5.11 – Zip code field allowing more than 5 characters**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Limit the Number of Open Patient Tabs via User Groups

A new column has been added to the User Group lookup table. The column of Maximum Open Patient Tabs will determine how many patient tabs are permitted to be opened for a user that belongs to the User Group.

| Group Name | Description | Display Order | Maximum Open Tabs | Maximum Open Patient Tabs | Display In Portal Flag | Portal Display Name |

| MammoTech | Mammo Techniciam | 13 | 20 | 1 | N | |
| SchedulingAdmin | Scheduling Admin | 8 | 20 | 20 | N | |
| Technologist | Technologist | 3 | 20 | 1 | N | |
| Radiologist | Radiologist | 6 | 45 | 20 | N | |
| Administrator | Administrator | 4 | 20 | 20 | N | |

**Figure 5.12 – UserGroup lookup table displaying new column Maximum Open Patient Tabs**

If a user attempts to open more than their allowable amount of patient tabs, they will receive a message informing they must close one before they can proceed.

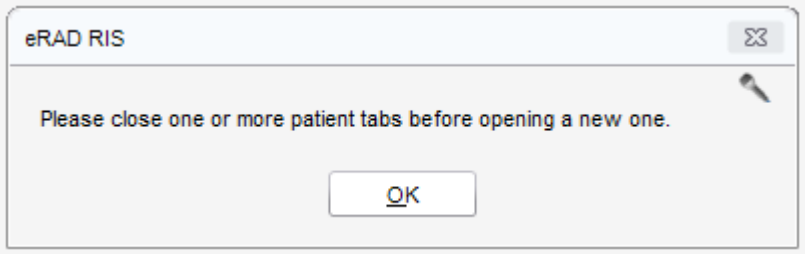

**Figure 5.13 – Informative message if attempt to open more than allowed patient tabs**

If the user belongs to multiple user groups, the user group with the larger value for Maximum Open Patient Tabs will be used. For example, looking at the User Group figure above, if the user belongs to both the Technologist and Administrator User Groups they will be permitted to have 20 patient tabs open.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Order Level Locking

In Build 42 eRAD RIS introduced Non Order Level Locking. In Build 45 eRAD RIS will again support order level locking.

Order level locking will be controlled by a new system configuration setting of "**OrderLevelLocking**" which has a default of False to maintain our existing screen based strategy or True to lock the entire order

The Radiologist work lists have been modified so that they were no longer looking for locks that end with the word Report. Without this change, the locked by column was always null.

When a user attempts to open a locked order they will be given the option to open in read only mode or simply close. There is also an option to break lock, which is permission based so it can be available to administrators only.

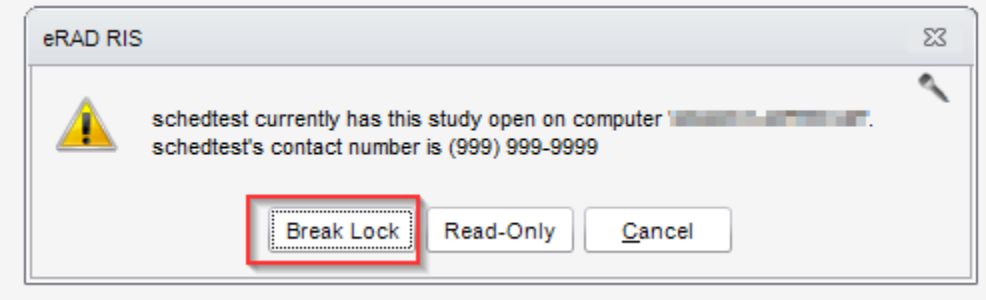

**Figure 5.14 – Locking message. The Break Lock button is permission based**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Ability to Hide Controls and Data Fields

We have many fields in eRAD RIS which are not relevant to all customers.
We have an existing pattern in eRAD RIS for controlling access via access strings. We have included the ability to create custom access strings to show/hide.

This is for the **SERVICE** team only. We have constructed a dynamic access string pattern which will behave in the following manner: Some access strings can now be created by the service team. Based on a predictable known naming convention, the access string will be able to control access to elements without custom code being added to eRAD RIS. At this point, the framework supports 2 patterns – one to control data capture/display elements (ie, fields) and another to control the visibility of an entire tab.

System owned access strings will not be editable in the look up editor, only custom access strings.

**Data Fields**
For these access strings, the acceptable values are:

- FULL (can read and write)
- DISABLED/READONLY (visible, but greyed-out and cannot be modified)
- NONE (not visible)

We do not implement a true 'READONLY' at this time (which would be a non-greyed out control that is not editable). We felt it was not clear to the user that they could not modify the field, as it appears the same as a FULL access field.

**Tabs**
As mentioned, tabs can also be hidden from view. A custom access string can be created by Service Personnel.

For Tab access strings the following values are acceptable.

- FULL (tab is visible and user can click on it)
- DISABLED/READONLY/NONE (tab is not visible)

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Legacy Reports Opening in Microsoft Word Viewer

The system now supports listing a file type in the c_legacy_report table. If the file type is WORD then the system will load the legacy reports in the Microsoft Word Viewer. The files are served to eRAD RIS application from the web service and are saved in a temporary location, similar to existing PDF legacy report functionality.

eRAD RIS will delete the temp file when Microsoft Word Viewer is closed by the user.

If the user leaves the Microsoft Word Viewer open, then when eRAD RIS closes, the viewer will be force killed (this is required to remove the file lock) and the temporary file will be deleted. The Microsoft Word Viewer is read only.

There are two new System Configuration settings for this feature.

"**KillWordViewerBeforeLegacyReport**" with a default value of True. True enables RIS to try to 'kill' or close the Word Viewer before opening legacy report in a new instance of the Word Viewer.

"**KillWordViewerAfterLegacyReport**" with a default value of True. True enables RIS to try to 'kill' or close the Word Viewer after opening legacy report in a new instance of the Word Viewer from the reporting screen.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Support Domain Single Sign On

User will launch RIS with a new command line switch /SSO to invoke single sign on. When a user logs onto their workstation, selecting the eRAD RIS icon from the desktop will automatically log that person in.

This of course only works with Domain users. If the user account created in eRAD RIS and is using eRAD RIS authentication SSO will not work.

There are also a few features within eRAD RIS that doesn't support SSO.

Credential Swap, UI Locking and Logout as they aren't compatible with the SSO model. Also PACS integration will be an issue as we don't have the client's username and password to pass to the PACS server so a user who wishes to launch the PACS viewer will be forced to login the first time.

The user preference for UI locking will be disabled

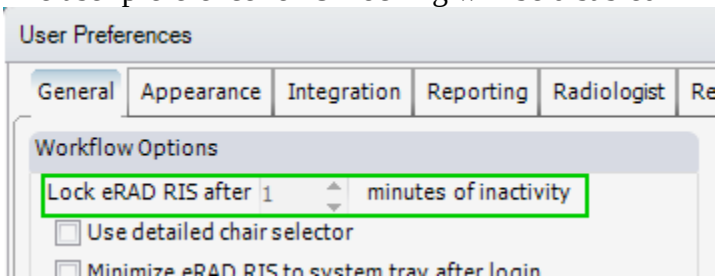

**Figure 5.15 – User preference disabled because of Single Sign On**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Configurable Client File Storage Paths

In previous versions most files were written to the directory in which the application was running from, which was the users profile directory. With the support of Citrix, we will need to have the ability to write the files configurable.

A new System Configuration setting of "**RISOutputFilePath**" has been added with a default value of %ApplicationStartUp%.

RIS now uses this path and then tags it with a folder that matches the current users username and writes output files in that location instead of just in the current start up folder

This value supports a few values that act like environment variables. Here are the available variables you can use instead of an actual path:

| | |
|---|---|
| **%ApplicationData%** | = "C:\\Users\\$user_account\\AppData\\Roaming" |
| **%LocalApplicationData%** | = "C:\\Users\\$user_account\\AppData\\Local" |
| **%CommonApplicationData%** | = "C:\\ProgramData" |
| **%MyDocuments%** | = "C:\\Users\\$user_account\\Documents" |
| **%DesktopDirectory%** | = "C:\\Users\\$user_account\\Desktop" |
| **%ApplicationStartUp%** | = current value AKA RIS's runtime location |

The value can also be just a path like "C:\\some\\folder\\location".

The actual path where the files will be written can have a folder added to it that contains the current logged in username (RIS username). You would add another value to your path: %UserName%.

Let's imagine the current logged in user's username is 'TestUser' and the RISOutputFilePath is set to "C:\\some\\folder\\location%UserName%". The resulting file location will be "**C:\\some\\folder\\location\\TestUser**".

RIS will test the path on login. If it cannot write and delete a test file in this location the follow error:

"Error with output file path" + exception message.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Portal Launcher

Customers require integrations with several portals from within RIS. These various portals require us to be able to pass over various pieces of data in the URL as well as to perform validation on whether a given portal is available for a study/order.

Users now have the option from the Patient folder to launch the portal viewer. A new window in the RIS that contains a tab for each configured portal. The viewer automatically passes data regarding the Patient/Study/Order to the portal via the URL. The portal viewer is also available via a Tool window for the radiologists.

This feature has 3 new System Configuration settings and 2 new Access Strings:

**System Config settings**

PortalLauncherSessionTimeout – Amount of time in minutes before the Portal Launcher window will close automatically. Default: 20

PortalLauncherEnforceTimeoutInReportingScreen - Whether or not any configured timeout will apply when the portal window is open in the reporting screen. Default: True

PortalLauncherTabLocation – Sets location of tabs in portal launcher. Default: Left

**Access Strings**

Config.LookupEditor.BrowserConfig – Controls access to the BrowserConfig Lookup Editor

Clinical.PortalLauncher – Controls the ability to launch the portal viewer from the patient folder and the radiologist tool windows.

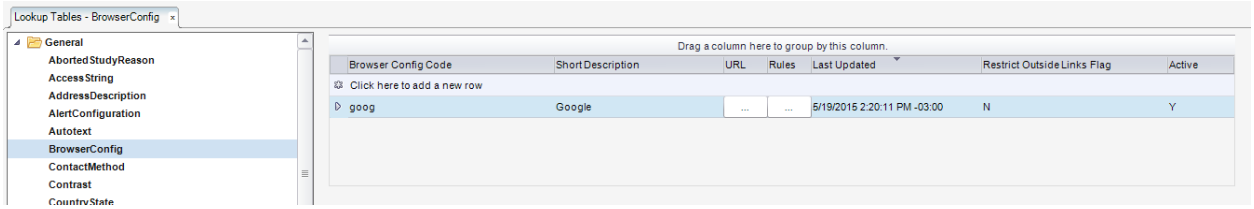

**Figure 5.16 – BrowserConfig lookup table**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

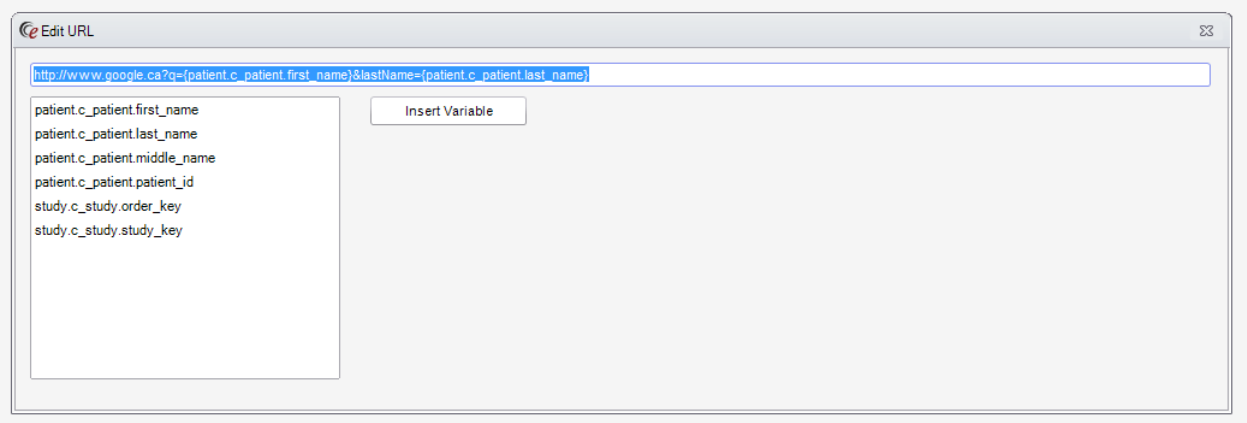

**Figure 5.17 – Window opened from URL button**

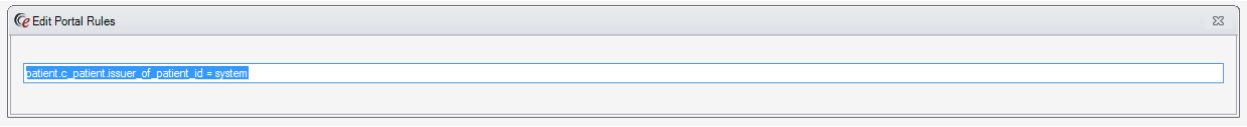

**Figure 5.18 – Editor Portal rules window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Configurable Default Value on Access String table

The default level of access on the Access String table has been locked down for quite some time.

In Build 45, the Default Access Level Code is once again available. A user can change the default value of the access string and keep it that way after every upgrade.

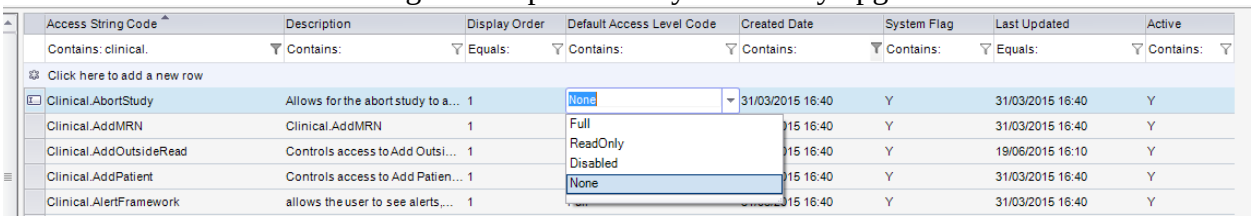

**Figure 5.19 – Ability to change the Default Access Level Code value**

The ability to change the Default Access Level Code is controlled by the access string "**Config.lookupeditor.AccessString.AllowedToChangeDefaults**" which has a default value of None. If FULL the user can edit the default values for access strings.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Configurable Weekday, Weekend and Start of Week Values

In eRAD RIS today the work week is Monday-Friday, weekends are Saturday and Sunday. The work week starts on Monday. In Israel to support Hebrew localization, the work week starts on Sunday thru Thursday and the weekend is Friday and Saturday. We needed a method to change these values.

Three new system configuration settings have been added to control this behaviour. The days are numbered as such: 0=Sunday, 1=Monday, 2=Tuesday, 3=Wednesday, 4=Thursday, 5=Friday and 6=Saturday

"**WorkWeekDays**" which has a default of 1,2,3,4,5, will determine the days of the work week

"**WeekEndDays**" which has a default of 0,6 will determine the days of the weekend

"**StartOfWeek**" with a default value of 1 will determine the first day of the week.

WorkWeekDays and WeekEndDays will determine how to apply the repeating restrictions and closures in the availability template.

StartOfWeek will determine the first day listed for Time Ranges in the Availability Template

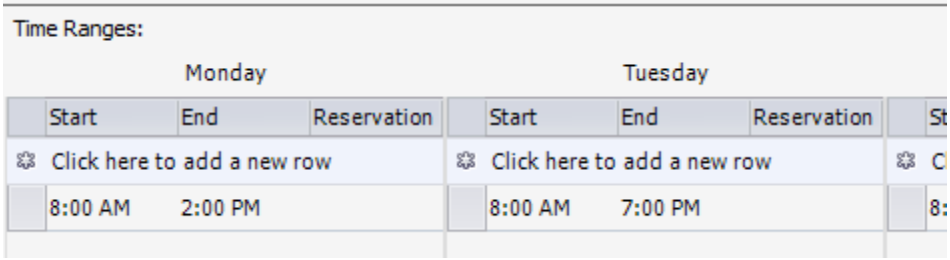

**Figure 5.20 – StartOfWeek = 1 so Monday is the first day listed**

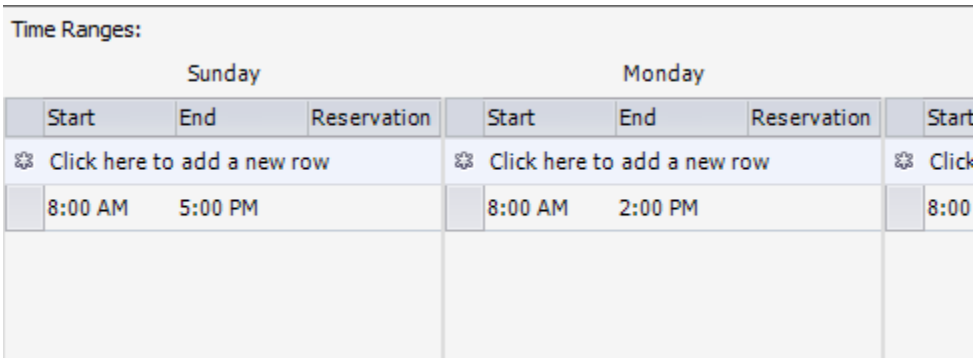

**Figure 5.21 – StartOfWeek = 0 so Sunday is the first day listed**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

It will also determine the first day listed in the Day and time search options on the Schedule tab

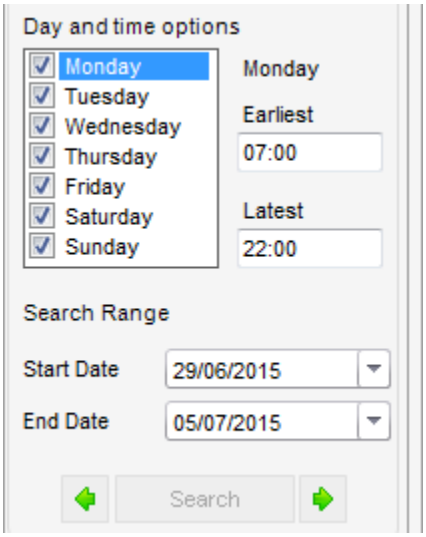

**Figure 5.22 – StartOfWeek = 1 Monday is the first day listed**

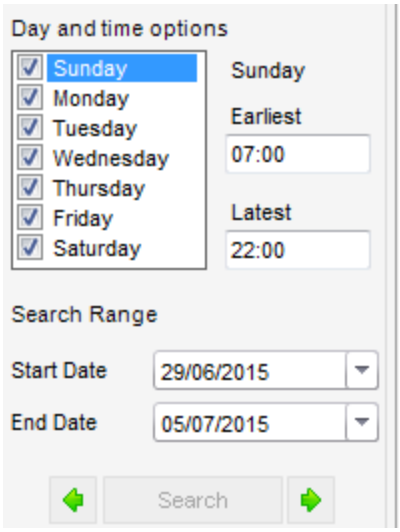

**Figure 5.23 – StartOfWeek = 0 so Sunday is the first day listed**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Resource Type Changes in Personnel Editor

A new lookup table titled AdditionalResource has been added under the User folder on the Administration>Configure menu. The AdditionalResource access is controlled by new access string of "**Config.LookupEditor.AdditionalResource**" that has a default access level of Full.

The lookup table columns are Additional Resource Code, Description, Display Order, Last Updated and Active. The codes added to this table will then be available in a new field in the Personnel table under the Resource tab. This field is a multi-type ahead control that allows the person to belong to multiple resource groups.

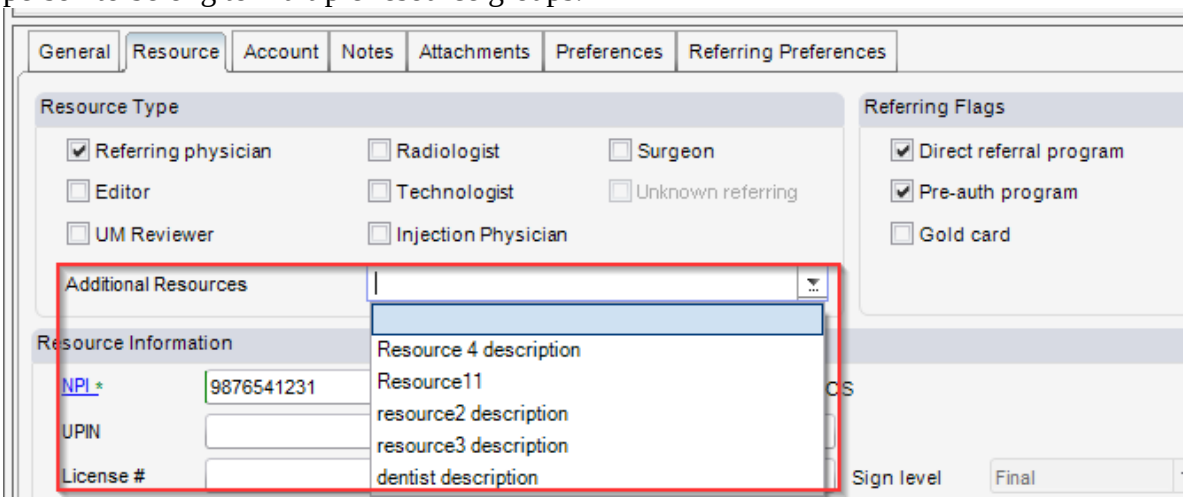

**Figure 5.24 – Additional Resources field in Personnel Editor**

Also a new Resource Type has been added. The Injection Physician checkbox option is available.

**Figure 5.25 – Injection Physician Resources field in Personnel Editor**

This will also be a Type option in the Internal Person Search window and display in the Resource Details column.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Patient Search – Search by License #

The patient search window now allows the user to search by the Physician License #.

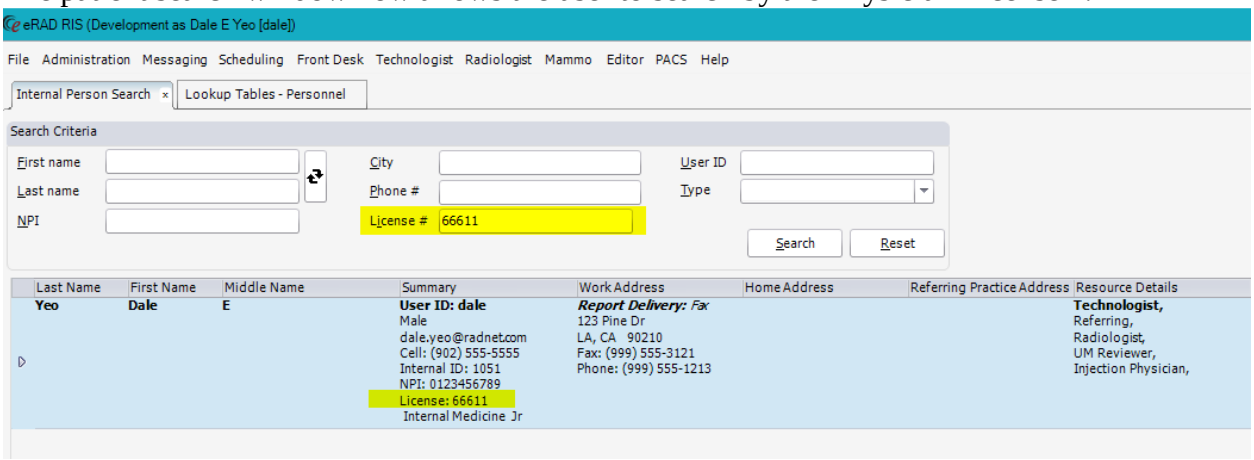

**Figure 5.26 – License # search option**

The License field being referenced in the search is based on the highlighted field in the screenshot below from the personnel editor.

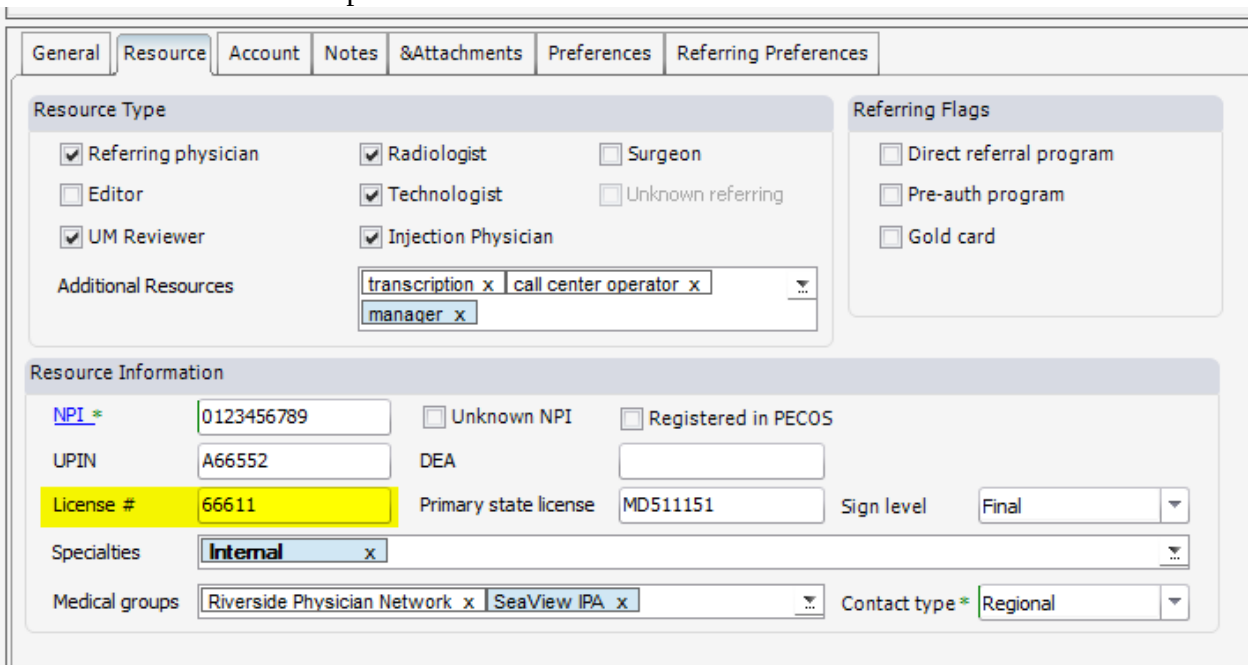

**Figure 5.27 – License # field in Personnel Editor**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Personnel Editor Message on Referring Address

Although the screen will not delete an address that is already in use, to be standard it should prompt "Are you sure you want to remove this address" before proceeding.

A confirmation message “Are you sure you want to remove this address?” has been added when the Remove button is selected with an address selected in the Contact Information section of the General tab.

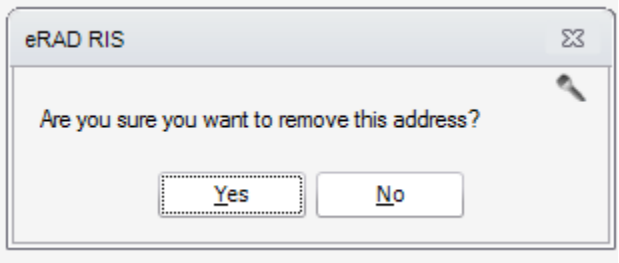

**Figure 5.28 – Confirmation message choosing to remove address from Personnel Editor.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Site Lookup Table Changes

In previous versions the Organization>Site window has been refactored. The look and feel is now the same as the Practice window.

It has the same functionality as before, except we now have data grouped in a tab page as shown in the following:

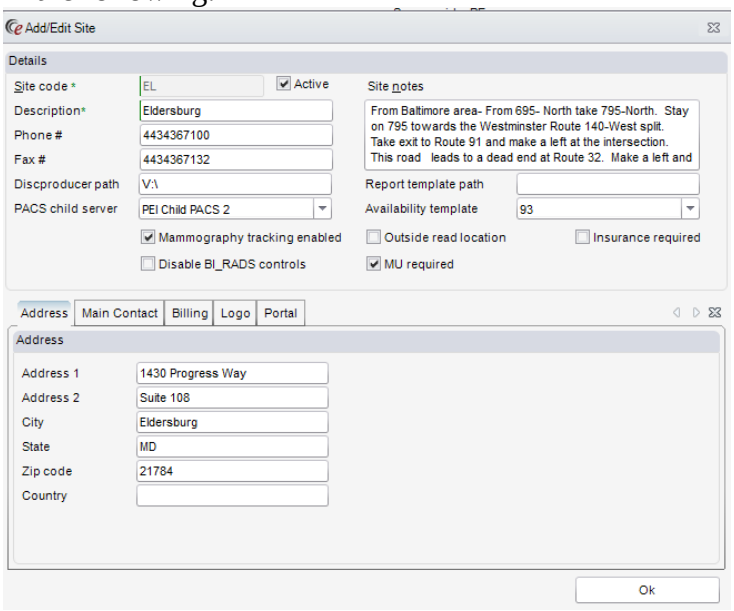

**Figure 5.29 – New look Site window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Audit History Updates

Additional logging will be displayed in the Audit History. All added and changed values for the following tables and fields.

c_order_item.procedure_code
c_study.scheduled_modality_code
c_study.scheduled_start_date
c_study_item.procedure_code
c_study_item_certification.billing_code

An example of the logged events

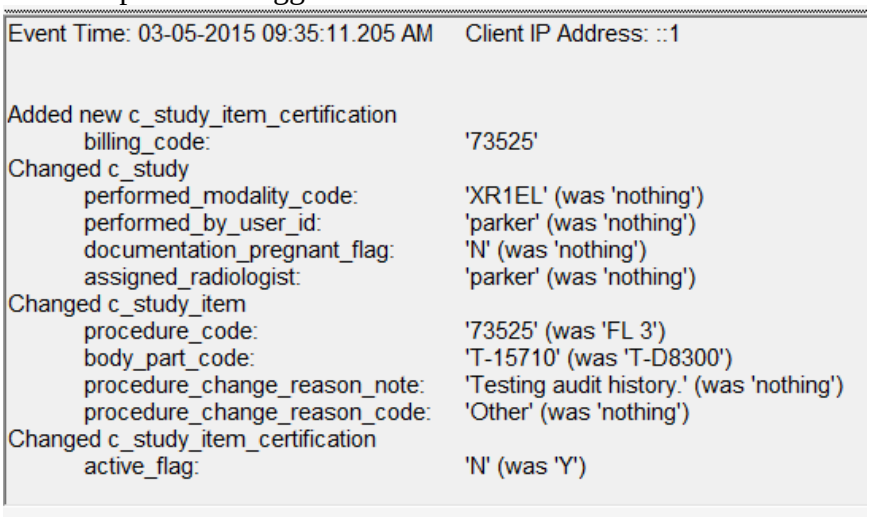

**Figure 5.30 – Audit history additional logging events**

The splitter bar between the audit event list and the details of the event will now remember the last position the user placed it. Looking at the screenshot below you can see the splitter bar has been raised from its initial position. The next time this user opens the Audit History window the splitter bar will be in the same position, saving the user time to adjust.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

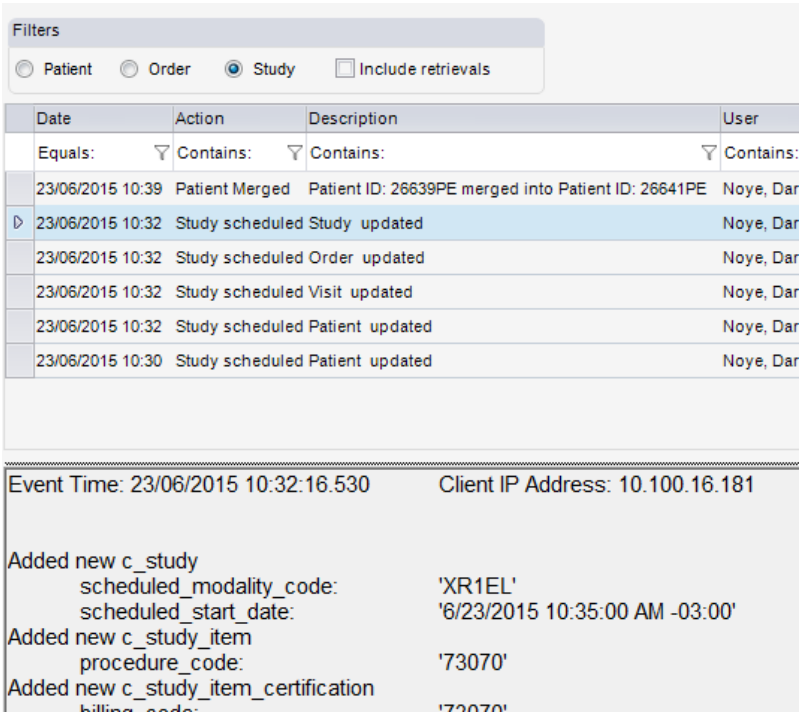

**Figure 5.31 – Splitter Bar keeps last position in Audit History window.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Audit History Logging and Retrieval of Lookup Tables

We have added an Audit History context menu option from the Administration->Configuration screen. An authorized user can now right click on a lookup table (e.g. SystemConfig) and then choose Audit History and see a list of all of the audited changes that were made. This is controlled by the access string "**Config.LookupEditor.AuditHistory**" which has a default of None.

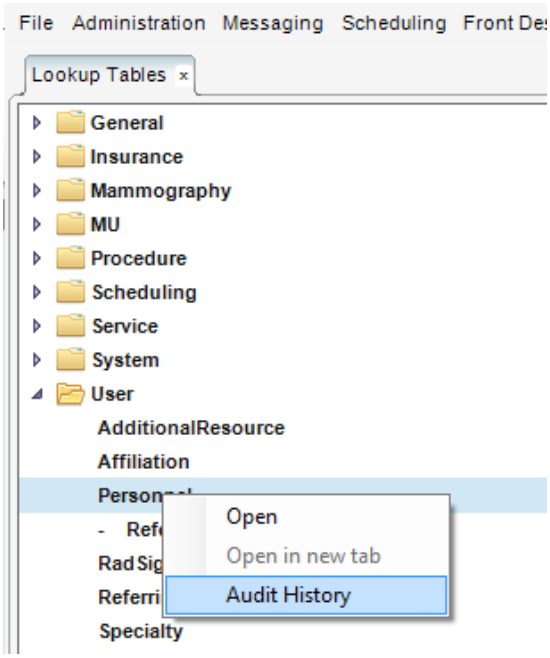

**Figure 5.32 – Audit History on Lookup Table**

The Audit History shows an ordered list of all changes that were made in a specific date range (including the date and the user ID), and when the user clicks an entry on the list, the bottom portion of the screen will display a list of the rows that were modified (added, deleted, or changed) including the before and after versions of the information in the case of modified rows.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

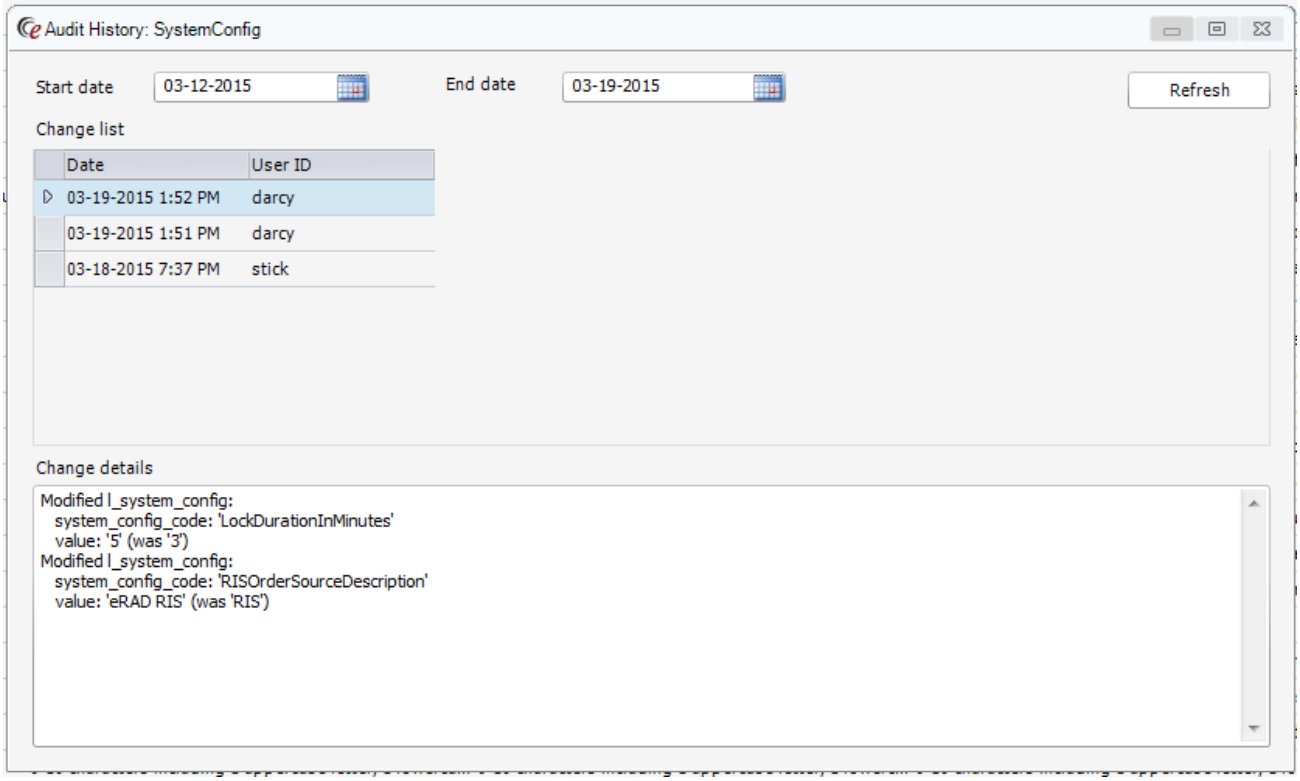

**Figure 5.33 – Audit History showing SystemConfig changes**

Any modified row will show the row's primary key identifier. Any rows that include a user, person, or user group identifier should also include additional information to clarify which user, person or group is being described.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Required Fields Configurability

A new lookup table has been added under the Service folder of the Lookup tables directory. This new lookups access is controlled by access string Config.LookupEditor.ValidationRules that has a default access level of None. As the parent folder suggests, the validation rules should be applied by Service Personnel.

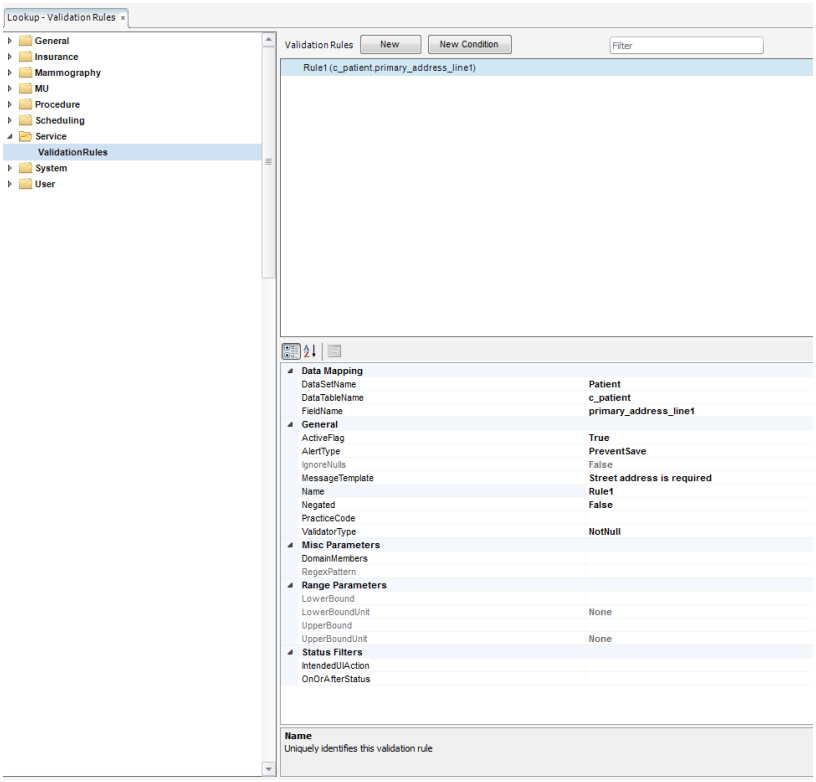

**Figure 5.34 – ValidationRules lookup table**

The topmost portion of the editor provides a "New" button for creating new rules, a "New Condition" button that allows conditional logic to be attached to a rule (e.g. require e-mail address ONLY if preferred delivery method is e-mail), and a filter for searching through the existing rules by name or table/fieldname.

To indicate a field is required, launch the validation rules editor and follow the steps below:

1. Click the "New" button to create a new rule. This will create a new row in the top level panel with a generic name (e.g. Rule2), and the bottom portion of the screen will display a grid of properties that allow the rule to be configured.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

2. Under the "Data Mapping" category, use the drop down boxes to set the DataSet name, DataTableName, and FieldName to indicate which field should be required (e.g. DataSet: Patient, DataTable: c_patient, FieldName: primary_address_line1)
3. Optionally enter a practice, intended UI Action (these correspond to actions in RIS like UI_PatientArrived), and/or OnOrAfterStatus and then Save the changes.

Note – in order for the RIS client to begin enforcing the new validation rules, you must either log out of RIS or choose Help -> Refresh Configuration.
Note that when a screen is loaded that has controls mapped to fields that are required; they should have a red bar painted on the margin of the control to indicate that they are mandatory.

**Figure 5.35 – Address 1 field is now required based on a rule created**

# Validation Rule Properties

**Data Mapping Properties**

1. DataSetName – identifies the dataset that contains the table/column to be validated. The editor currently provides a drop down list with the following values: Patient, Visit, Order, and Study. This field is required for all validation rules
2. DataTableName – identifies the table that contains the column to be validated. The editor provides a list of all tables in the DataSet with the name specified in "DataSetName". This field is required for all validation rules
3. FieldName – identifies the column to be validated. This field is required for all validation rules.

**General Mapping Properties**

1. ActiveFlag – identifies whether this rule is enabled. A rule or condition with ActiveFlag = False will be ignored by the validation framework. This field defaults to true.
2. AlertType – Specifies the result of the validation. The editor has a dropdown list that currently contains two values: Warning, or PreventSave. The evaluation of the rules is the same in either case, but the failure to pass validation is handled differently. As the name suggests, PreventSave is a hard-stop that will prevent the user from proceeding until the data is fixed. A warning will simply display a message to the user to draw their

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

attention to a potential problem. The warning will only be displayed one time for the lifetime of the screen/data the user has open.

3. IgnoreNulls – indicates whether the validation rule should bypass fields that are null. E.g. we may want a rule that will allow null for an e-mail address, but if one is provided, we should verify that it matches a specific pattern. This defaults to false for a "NotNull" ValidatorType but true for all others.
4. MessageTemplate – the message that will be displayed if validation fails. Note that this message will not be used for "NotNull" validators, the Required Fields framework displays its own message e.g. "Address 1. Is required". Note that MessageTemplate does not apply to "Conditions", the parent validation rule's MessageTemplate will be used instead. If no MessageTemplate is specified, the defaults provided by the Enterprise Library will be used (this may not be desirable). If the message template includes "{0}", the "{0}" will be replaced with the value that was validated.
5. Name – unique identifier for a validation rule, the value entered is presented in the top panel of the screen and is searchable using the Filter control. The editor will provide a default value e.g. Rule1. This field is required.
6. Negated – if true, this indicates that the rule should prevent matching values e.g. if a DomainValidator is used with DomainMembers {"a", "b", "c"}, then the rule will only allow values of "a", "b", or "c". If the Negated property is set to true, in this case the values of "a", "b", and "c" would all be unacceptable.
7. PracticeCode – optionally identifies the practice to which the rule applies. If not specified the rule will apply to all practices (this is the default). If the current exam/patient data is associated with a particular practice, we will filter based on that practice. When a screen opens without exam context (e.g. New Patient), we will apply the rules based on the current practice indicated by the "OrgPicker" in RIS.
8. ValidatorType - the following types of Validators are now supported:
    a. NotNull – indicates that the field is required
    b. RangeValidator – indicates that the field should fall within the numeric range specified
    c. DomainValidator – indicates that the field should belong to a list of values (e.g. "Baby", "Toddler", "Child")
    d. StringLengthValidator – indicates that the fields should be alphanumeric text with a length between a specified range
    e. RegexValidator – indicates that the fields should match a regular expression pattern, e.g. `\b[A-Z0-9._%+-]+@[A-Z0-9.-]+\.[A-Z]{2,4}\b` is an e-

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

mail address DateTimeRangeValidator – indicates that the fields should fall within a specific range e.g. 01/01/1970 – 01/01/1999. Note that we are using a case insensitive version of the RegexValidator.

f. DateTimeRangeValidator – indicates that the fields should fall within a specific range e.g. 01/01/1970 – 01/01/1999
g. RelativeDateTimeValidator – indicates that the fields should fall within a specified range relative to the current date/time e.g a birth date could have a lower bound of -120 years and an upper bound of -18 years to enforce the rule that a patient had to be at least 18 years old

**Misc Parameters**

1. DomainMembers – used to specify a list of acceptable values. If Negated is true these values will be prohibited instead. This is required for a DomainValidator.
2. RegexPattern – Identifies the regular expression to be used for a RegexValidator. This is required for a RegexValidator.

**Range Parameters**

LowerBound – Identifies the minimum value in the acceptable range. This could be a numeric value in the case of a RangeValidator or StringLengthValidator, but must be a DateTime in the case of a DateTimeRangeValidator or RelativeDateTimeValidator. This field is required for a RangeValidator, a StringLengthValidator, a DateTimeRangeValidator, or a RelativeDateTimeValidator.
UpperBound – Identifies the maximum value in the acceptable range. See LowerBound for additional notes.
LowerBoundUnit – Identifies the unit of time for the lower bound (e.g. second, minute, hour, day, year). This is required for a RelativeDateTimeValidator.
UpperBoundUnit – Identifies the unit of time for the upper bound (e.g. second, minute, hour, day, year). This is required for a RelativeDateTimeValidator.

**Status Filters**

IntendedUIAction – limits the rule so that it only applies to a particular action (e.g. UI_PatientArrived). The default IntendedUIAction is UI_StudyUpdated, but several screens have been updated with logic to change the IntendedUIAction when the user clicks a status type button (e.g. CheckingIn, Arrive, Start, Complete, etc). Note that if a rule was configured to require a value when the exam is being checked in, there is nothing that would prevent the user from removing the value afterwards when arriving the patient. This field is optional; a blank value will mean that the validation should be applied to all statuses.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

OnOrAfterStatus – limits the rule so that it only applies once an exam hits a particular status. There is a natural ordering applied to statuses so if a field is required OnOrAfterStatus "Arrived", it will also be required by the technologist.

## Conditions

When a rule is selected, a condition can be added so that a validation failure will not be enforced unless all the other conditions tied to that rule are true. To add a condition, click on a rule and then click the "New Condition" button, a condition can then be configured in the same manner as a regular rule (note that the MessageTemplate for a condition is ignored). A condition is nested underneath it's "parent" rule on the top panel of the editor and its name is prefixed with "Condition – "

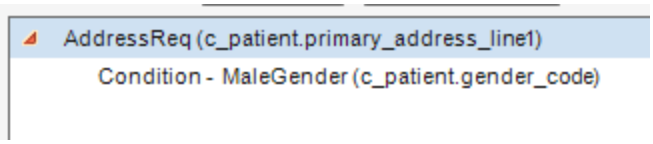

**Figure 5.36 – Example of Condition**

Conditions may be configured to look at other rows in the same study container regardless of which dataset they belong to.

## Warnings

Rules with an alert type of Warning may be useful for building functionality similar to the Alert framework. Rules configured with the Alert framework are potentially more precise but may require a new build of RIS in order to provide new alert types. Rules configured with the ValidationRules framework are dynamic and can be created/configured without a new release of RIS.

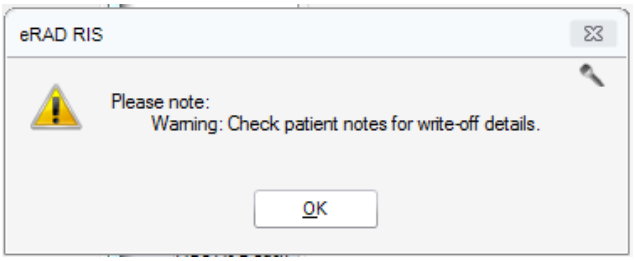

**Figure 5.37 – Warning message created**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

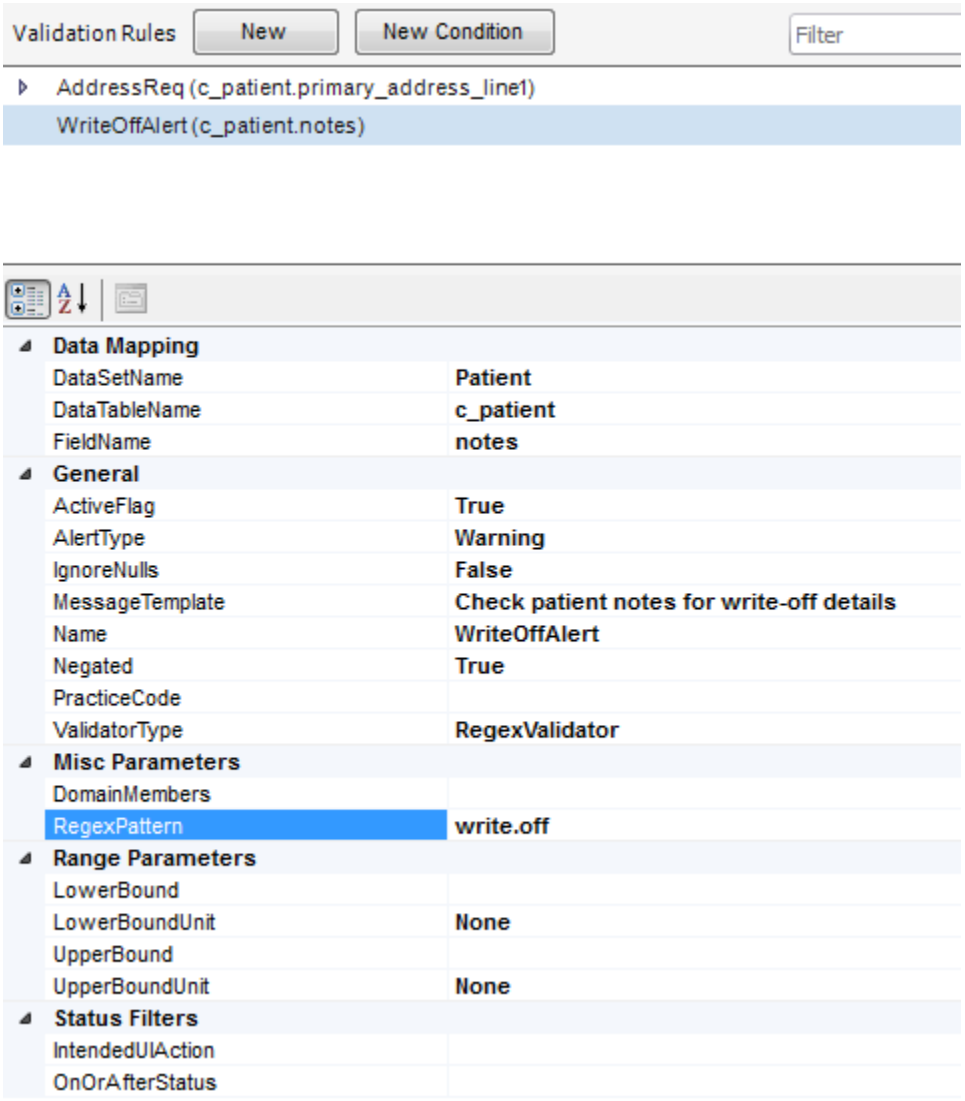

**Figure 5.38 – Validation Rules**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Visit Number Added to Work Lists

Visit number now shows up as the last column in the worklists for Receptionists, Technologists and Transcriptionists. It appears near the center of the Radiologist worklists as these add extra columns for each worklist beyond the basic set.

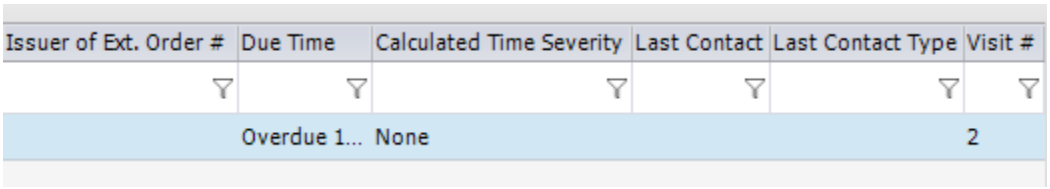

**Figure 5.39 – Visit column added to work lists**

## Cancel Reason Code Added to Orders to Schedule Work List

The column of Cancel Reason has been added to the Orders to Schedule work list.

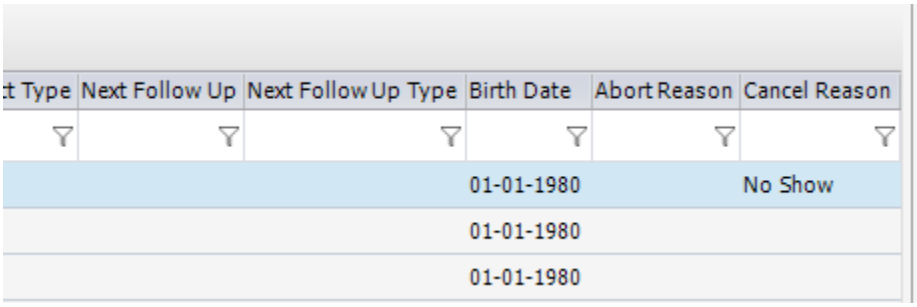

**Figure 5.40 – Cancel Reason on Orders to Schedule work list**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Referring Doctor Column Added to Work Lists

The Closed Room Reschedule and Confirmation work lists now have the Referring Doctor column added.

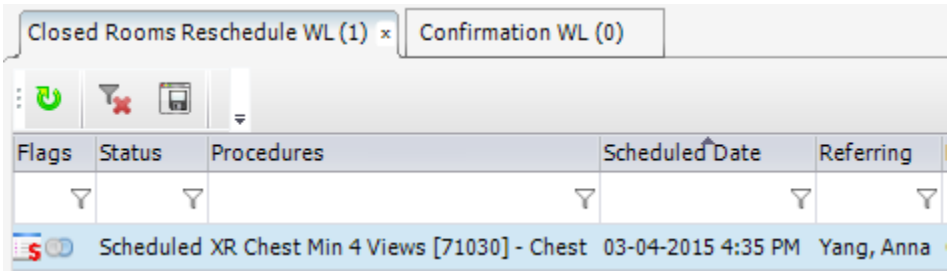

**Figure 5.41 – Referring column**

## Order Number Added to Patient Folder Work List

The Patient Folder WL now has the Order # column.

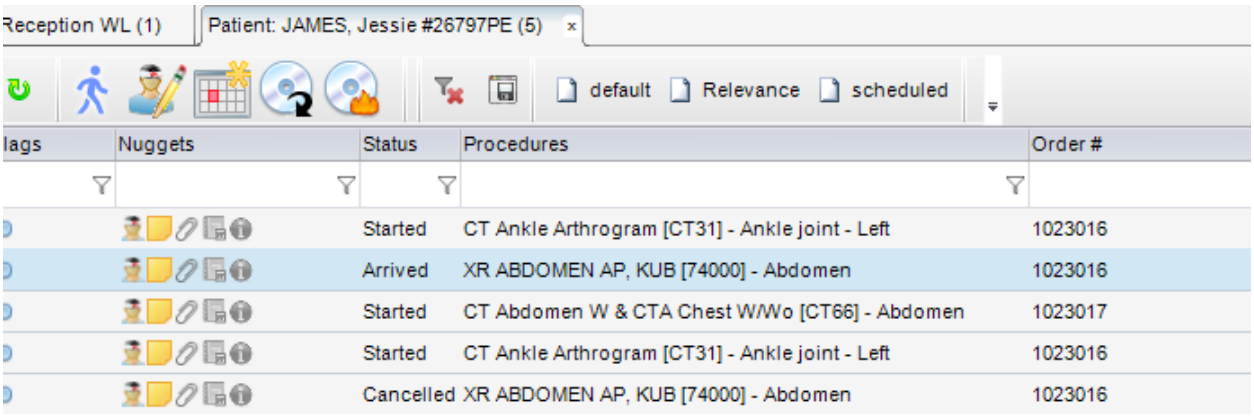

**Figure 5.42 – Order # column on Patient Folder**

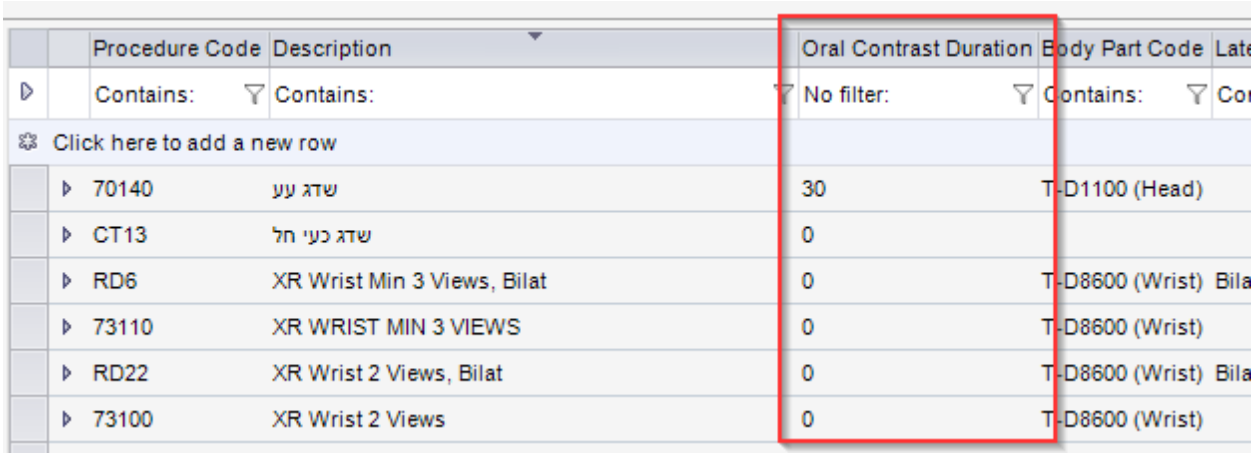
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Support Elapsed Time for Contrast on Work List

The ProcedureCode lookup table has been enhanced to include an Oral Contrast Duration field. This represents the amount of time in minutes the oral contrast must be administered before the procedure is performed. This field is numeric and defaults to a value of 0.



| Procedure Code | Description | Oral Contrast Duration | Body Part Code | Late |
|---|---|---|---|---|
| Contains: | Contains: | No filter: | Contains: | Cor |
| Click here to add a new row | | | | |
| 70140 | שדג עע | 30 | T-D1100 (Head) | |
| CT13 | שדג כעי חל | 0 | | |
| RD6 | XR Wrist Min 3 Views, Bilat | 0 | T-D8600 (Wrist) | Bila |
| 73110 | XR WRIST MIN 3 VIEWS | 0 | T-D8600 (Wrist) | |
| RD22 | XR Wrist 2 Views, Bilat | 0 | T-D8600 (Wrist) | Bila |
| 73100 | XR Wrist 2 Views | 0 | T-D8600 (Wrist) | |

**Figure 5.43 – Oral Contrast Duration column added to procedure code table**

A Contrast Timer column has been added to the Technologist WL. It counts down the number of minutes since the contrast has been consumed by the patient.

On the context menu of the Technologist WL the "Start Contrast Timer" and "Stop Contrast Timer" context menu items have been added. Access to these options on the context menu are controlled by the access string "**Clinical.ContrastTimer**" which has a default of None.

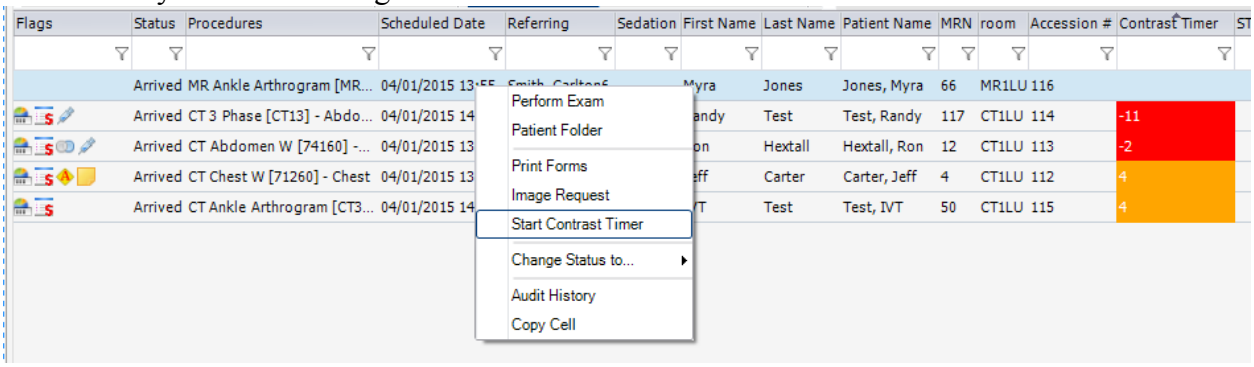


**Figure 5.44 – Start Contrast Timer in context menu**

If the contrast timer has been started, the system will take the oral contrast duration assigned to the procedure code from the study and begin counting the minutes down. The user will have the ability to stop the contrast timer which will basically remove the value from the Technologist

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

WL. Selecting start contrast timer again will start the contrast timer from the oral contrast duration.

If the procedure code for the selected study does not have an oral contrast duration greater than zero, the "Start Contrast Timer" menu item will not be available to the user.

The eRAD RIS service team have the ability to add custom colors to the Technologist WL as a visual indicator for the Contrast Timer. For example, the Conditional Formatting Rules Manager can be setup with the following and then saved as a worklist view:

- Set the RowForeColor to Green if the Contrast Timer is > 10 minutes.
- Set the RowForeColor to Orange if the Contrast Timer is <= 10 and >=1.
- Set the RowForeColor to Red if the Contrast Timer is <= 0.

**Figure 5.46 – Conditional Formatting of Technologist WL using RowForeColor**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Technologist – Verify Patient ID

A “Technologist verified ID” checkbox has been added to the documentation tab of the Perform Exam window.

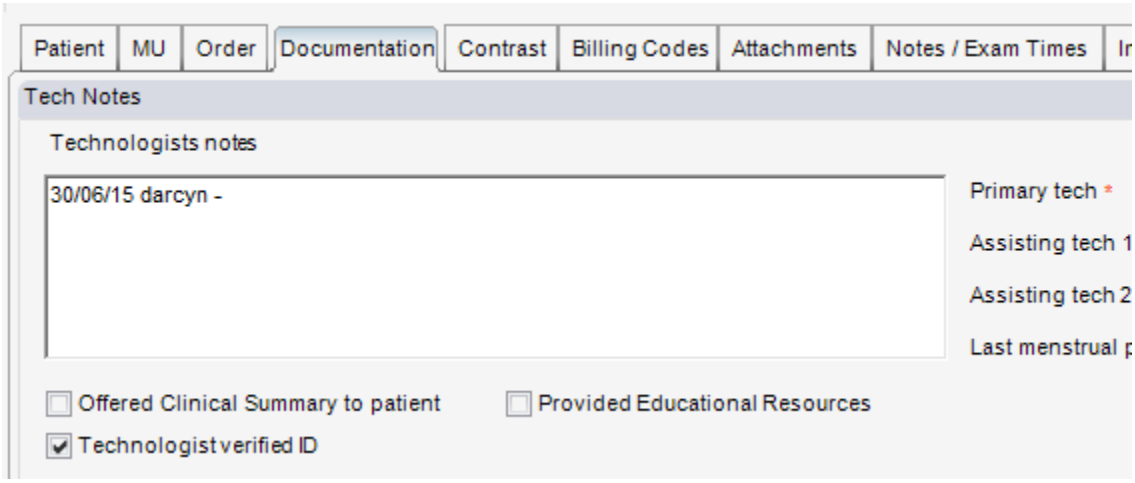

**Figure 5.47 – Technologist verified ID check box**

Once the technologist verifies the patient by checking the Technologist verified ID checkbox, the “ID verified date” and “ID verified by” labels are automatically updated on the Notes / Exam Times tab.

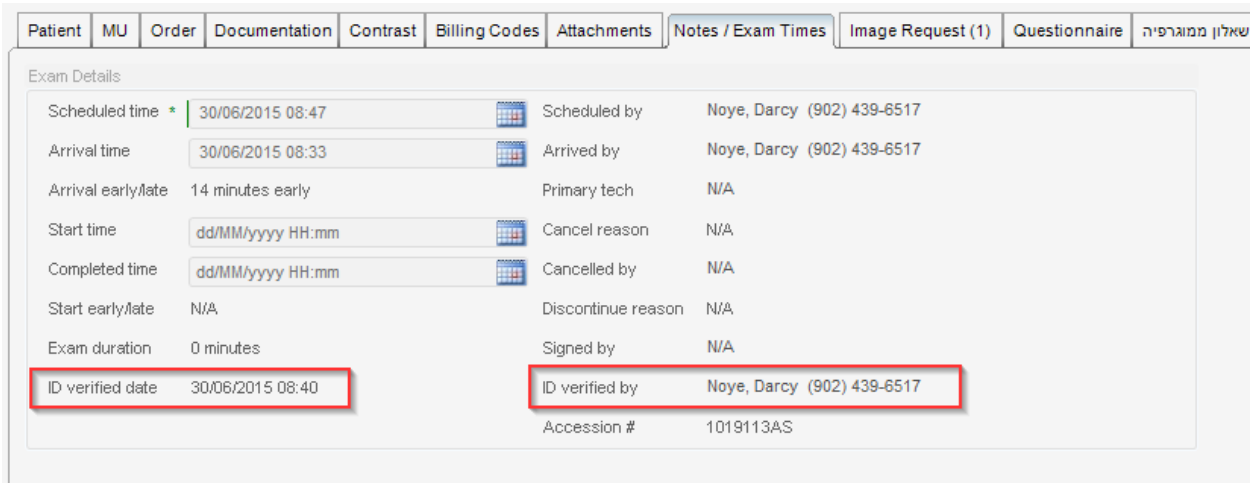

**Figure 5.48 – ID verified date and ID verified by fields added to Notes/Exam Times tab**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Contrast Enhancements and Injection Doctor Workflow

The contrast fields that were once on the Documentation tab have been given their own tab. The Contrast tab will contain the Contrast and Sedation data panes as well as the new Contrast Injection Details data pane.

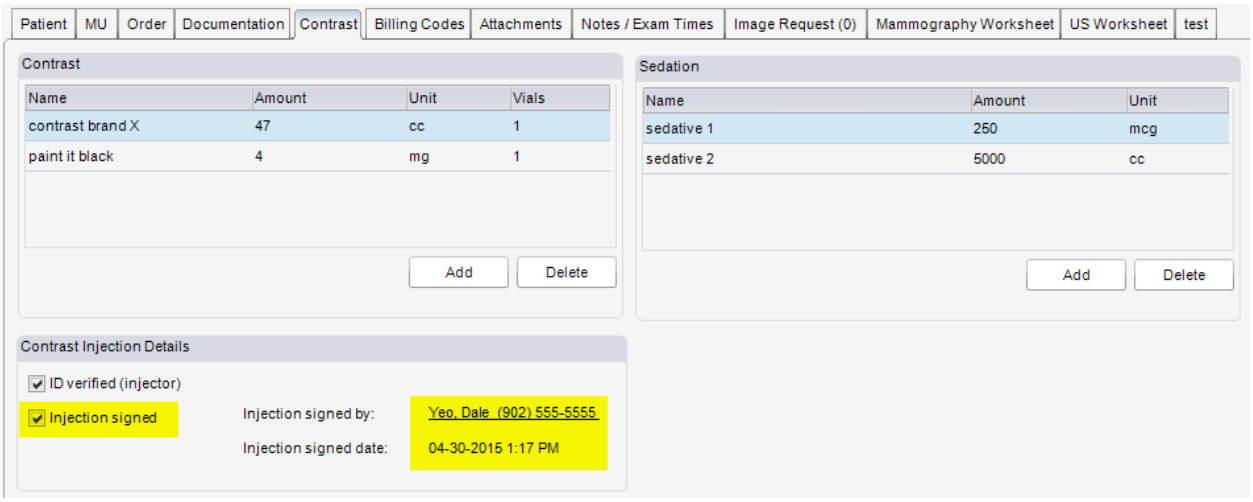

**Figure 5.49 – Contrast tab of Perform Exam window**

Once the Injection signed check box is selected the fields of Injection signed by: and Injection signed date: will auto populate.

The ID verified (injector) and Injection signed check boxes will be enabled if the user has the Resource Type of Injection Physician checked in the Personnel Editor on the Resource tab.

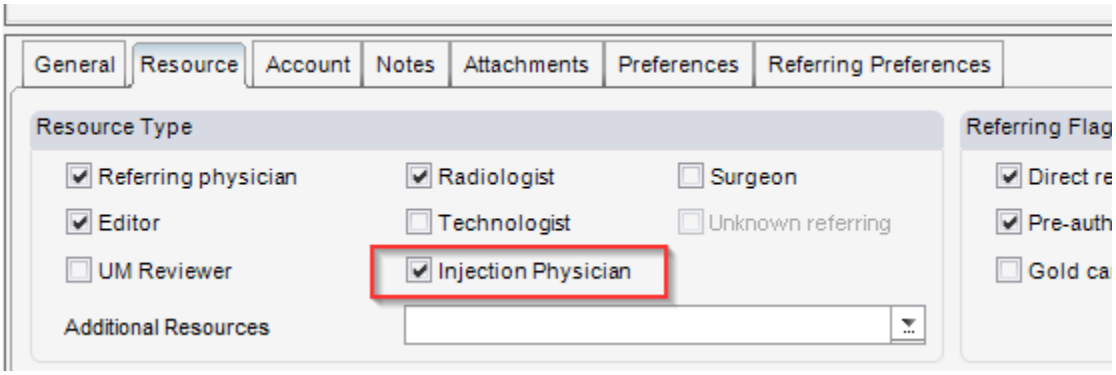

**Figure 5.50 – Injection Physician resource type**

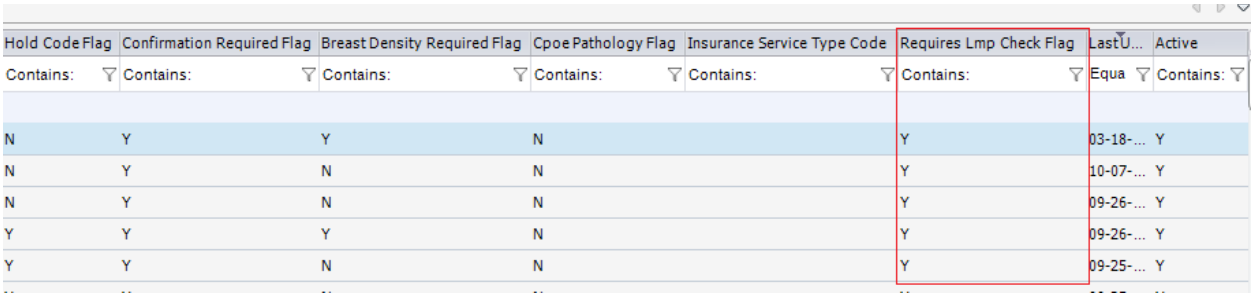
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Technologist – LMP Required Options

The ProcedureCode lookup table has a new column added of Requires Lmp Check Flag, which by default has a value of Y and will be located on the right of the ProcedureCode lookup table.



| Hold Code Flag | Confirmation Required Flag | Breast Density Required Flag | Cpoe Pathology Flag | Insurance Service Type Code | Requires Lmp Check Flag | LastU... | Active |
|---|---|---|---|---|---|---|---|
| Contains: | Contains: | Contains: | Contains: | Contains: | Contains: | Equa | Contains: |
| N | Y | Y | N | | Y | 03-18-... | Y |
| N | Y | N | N | | Y | 10-07-... | Y |
| N | Y | N | N | | Y | 09-26-... | Y |
| Y | Y | Y | N | | Y | 09-26-... | Y |
| Y | Y | N | N | | Y | 09-25-... | Y |

**Figure 5.51 – Requires LMP Check Flag column in ProcedureCode lookup table**

With the default set to Y, it will behave as before and the LMP will be required to be completed for female patients that fall between the age range set in the system configuration settings of LMPStartingAge (default of 12) and LMPEndingAge (default of 56).

Below is an example of the LMP field enabled (set to Y on the procedure code) and disabled.

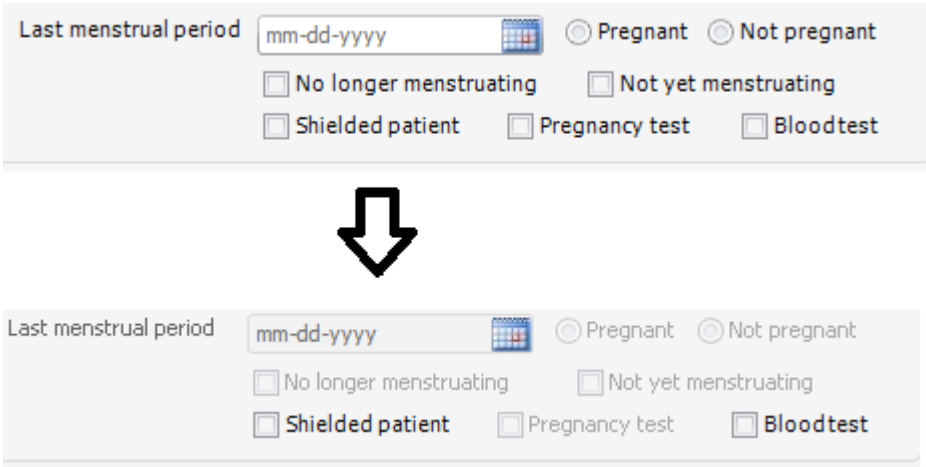


**Figure 5.52 – LMP enabled and disabled for same patient**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Cancelled Due to Technical Repeat Status

A new cancelled status has been added to eRAD RIS. The status of CancelTechRepReqd is an end-state status. No auto order replacement study will be created.

The workflow will have the user access the new status from the context menu option of Change Status to… Cancelled due to required tech repeat. Access to this context menu option is controlled by the access string "**Clinical.ChangeStatusCancelTechRepReqd**" which has a default of None.

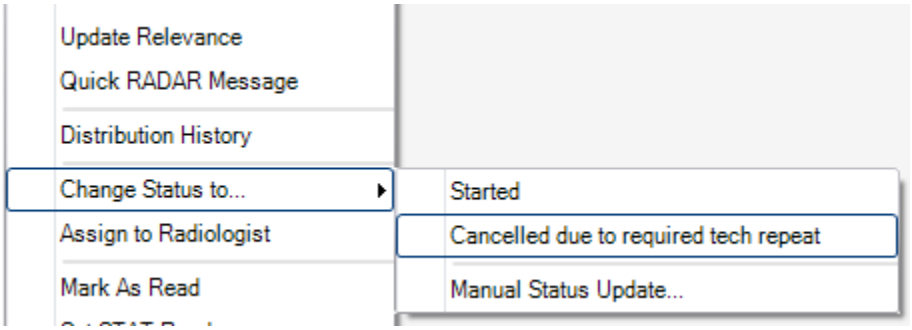

**Figure 5.53 – Context menu option to cancel for tech repeat**

This status uses sequence 0 like the other cancelled statuses. Also it currently is mapped to no portal_status_code (aka NULL).

These items are only viewable in non-status based work lists such as the Patient Folder work list.

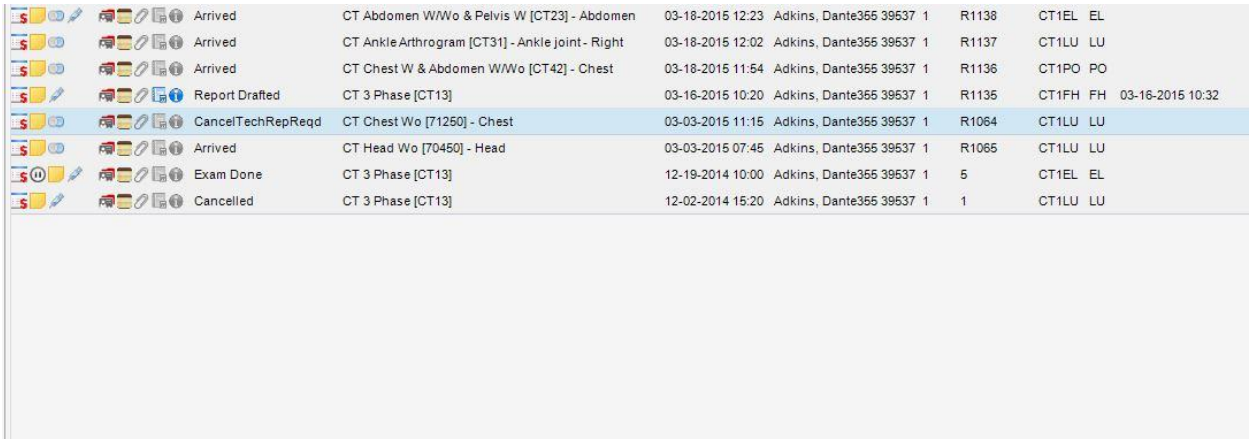

**Figure 5.54 – CancelTechRepReqd status on work list.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Discontinue and Cancel Reason Codes on Notes/Exam Time Tab

Previously we didn't have anywhere in the application to see the cancelled reason or discontinued reasons. We have added these to the Notes/Exam Time tab in the View/Edit window.

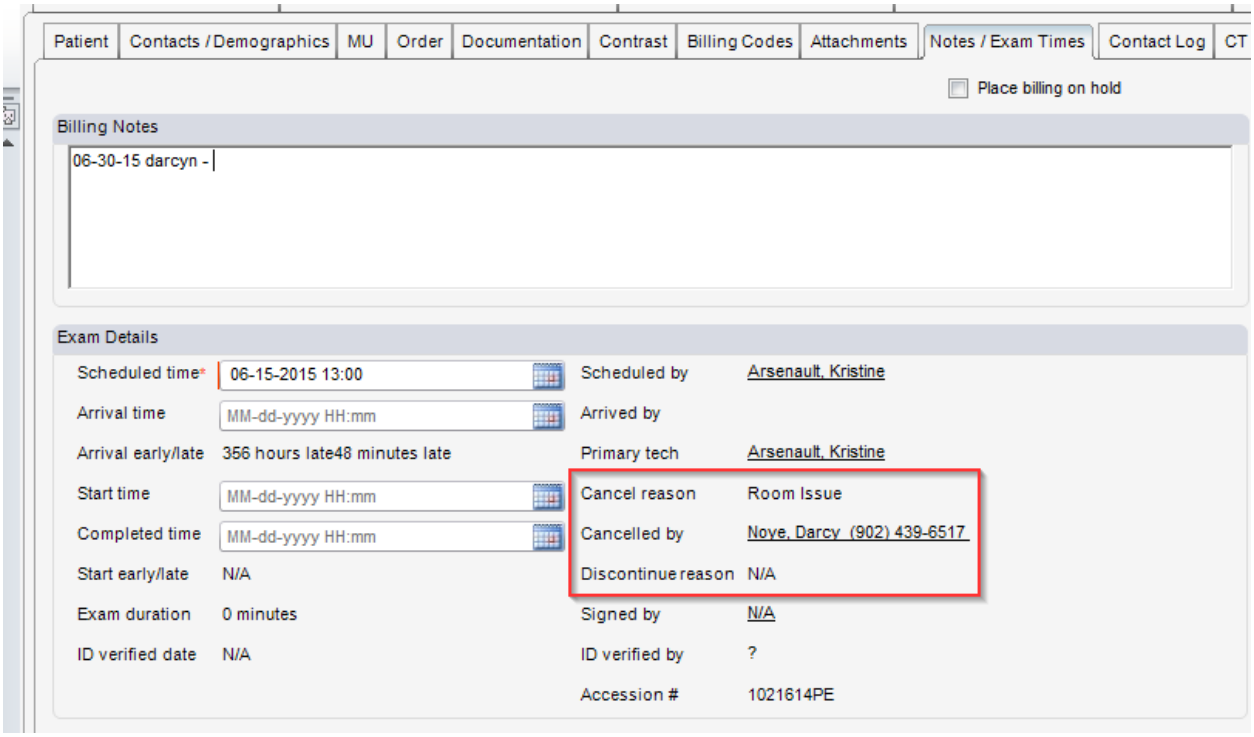

**Figure 5.55 – Displaying where the Cancel and Discontinue reason codes can be viewed.**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Search Field Override to Patient When Search Starts With Using Symbols

When you are in the search field, regardless of what category you might be on (ie patient or internal person or carrier search etc) – if you search using a # or @ that RIS recognizes you are searching for patient data, and doesn't force you to go choose patient option first.

Entering in the # symbol will search for MRN and the @ symbol will search for accession number.

Example: in the figure below the search option is looking to search for site, but with #24063PE entered it will automatically search for a patient and if found it will open the patient folder

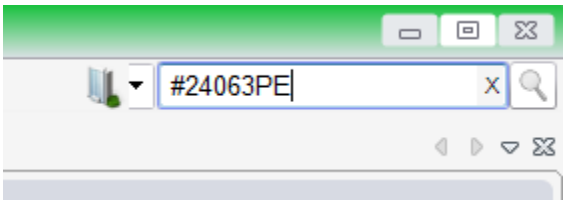

**Figure 5.56 – Search for patient in Site search**

It will also change the quick search to be for patient.

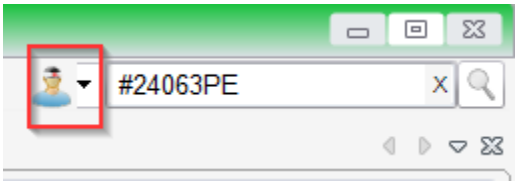

**Figure 5.57 – After performing search**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Note Fields Configurability to be Log Controls

Throughout the application there are many different note fields (AKA log controls). In Build 45 we have introduced the ability change the note field from a free form text field to an auto text field, or a combination of both.

A new lookup table called LogControl has been added under the General directory of the Configure menu option. This lookup's access is controlled by access string "**Config.LookupEditor.LogControl**" and has a default access level of None. This table contains all of the eRAD RIS log controls and the state of the log control is defined in this table.

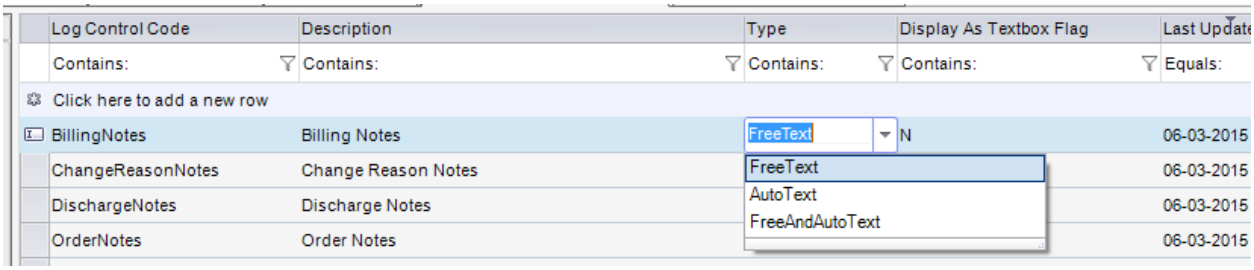

**Figure 5.58– LogControl lookup table**

The LogControl lookup has been modified to include a display_as_textbox_flag column. If the value for display_as_textbox_flag = Y, then the screen will render using a standard textbox and not a log control. Currently, this configuration is only available for the following:

1. Technologist Notes on both the Documentation and New Outside Read screens
2. Signs and Symptoms on both the Documentation and New Outside Read screens
3. Change Reason Note on the Documentation Screen

If a textbox or open text control is to be displayed, open the LogControl lookup table and set the Display as Textbox Flag to 'Y' for the log control code. If a log control is to be displayed, set the Display as Textbox Flag to 'N' and specify if the log control is FreeText, AutoText, or FreeAndAutoText.

Only ChangeReasonNotes, SignsAndSymptoms, and TechNotes support this feature at this time.

If the Display as Textbox Flag is enabled for ChangeReasonNotes, SignsAndSymptoms, or TechNotes, then only FreeText can be chosen as the Type.

Please note that if the RIS is configured to use a LogControl for a field like TechNotes, it can change the appearance of TechNotes in other areas of the application for example diagnostic

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

report templates. The TechNotes will include the date stamp and username with each entry versus just plain text.

If a control that doesn't support "Display As Textbox Flag" has the value set to Y, on save of the lookup the user will be prompted with validation message.

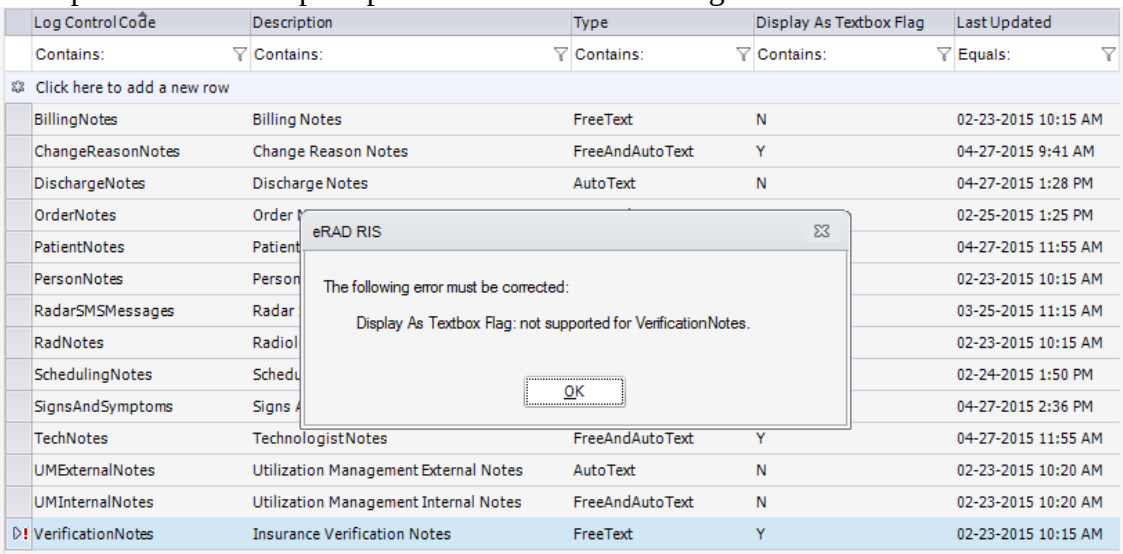

**Figure 5.59 – Validation message informing Log Control doesn't support Display As Textbox Flag**

Another validation message will appear if one of the supported Log Controls has the Display As Textbox Flag = Y and the Type column is something other than FreeText

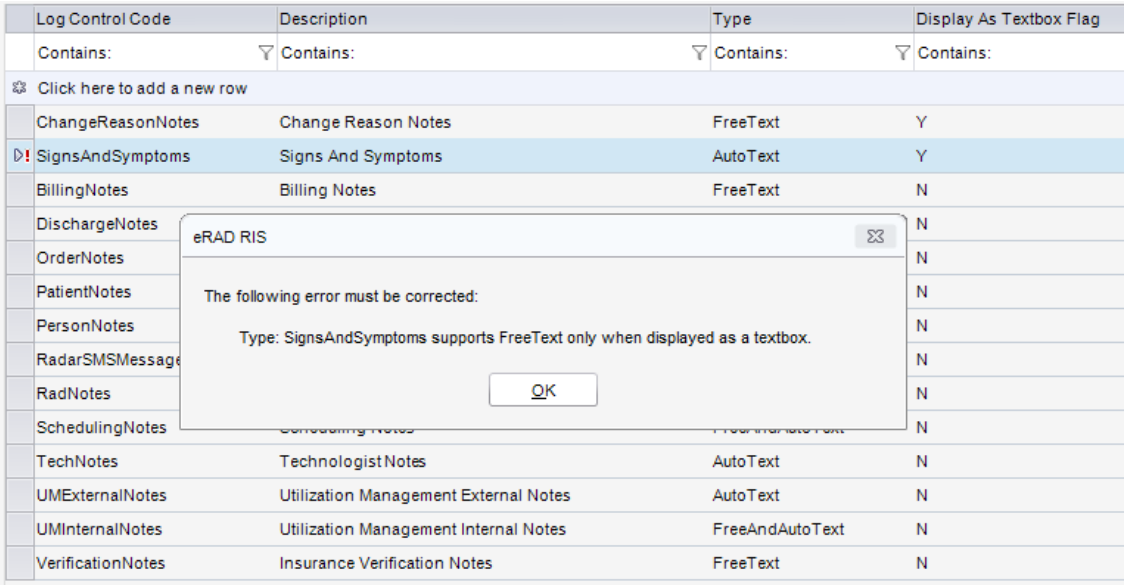

**Figure 5.60 – Validation message informing Log Control must be FreeText when Display As Textbox Flag=Y**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Auto text that is to be entered in the log control will come from the Autotext lookup table. This lookup table is controlled by the access string "**Config.LookupEditor.Autotext**" which has a default access level of None.

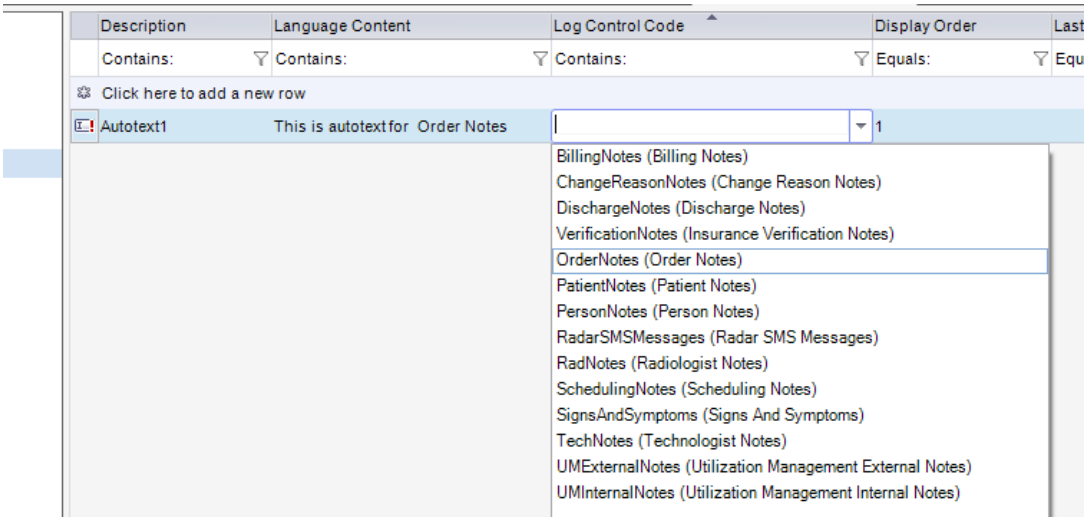

**Figure 5.61 – Autotext lookup table**

With the Order Notes field now configured for Autotext, the Order Notes field will not permit to have free text entered. The Autotext is accessed from a context menu on the notes field.

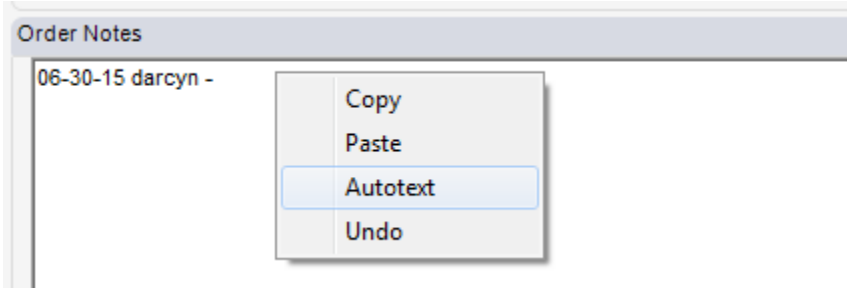

**Figure 5.62 – Context menu with Autotext option for Order Notes field**

Selecting the Autotext context menu option will open a new window titled Autotext. This window will contain the options available for this log control.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

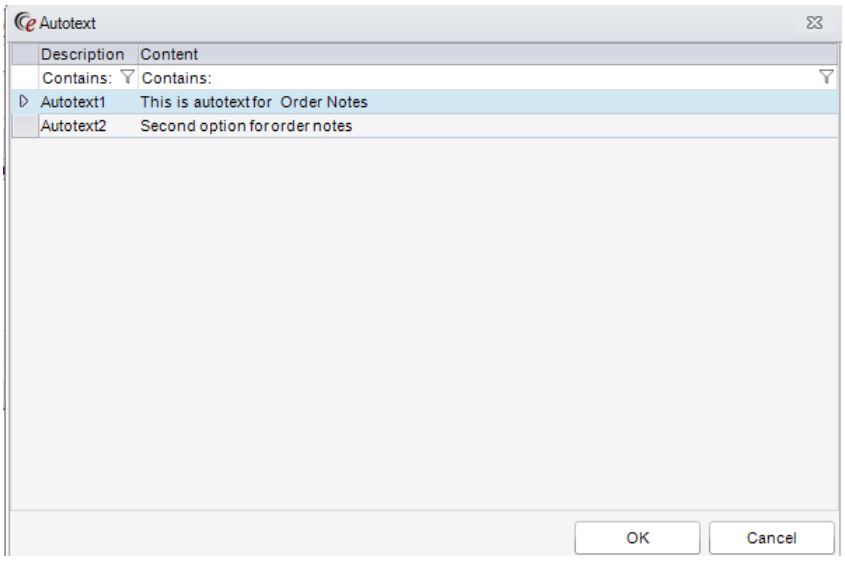

**Figure 5.63 – Autotext window with available options**

If the log control, in this example Order Notes is configured to be free text and auto text, a combination of both can be used in the field.

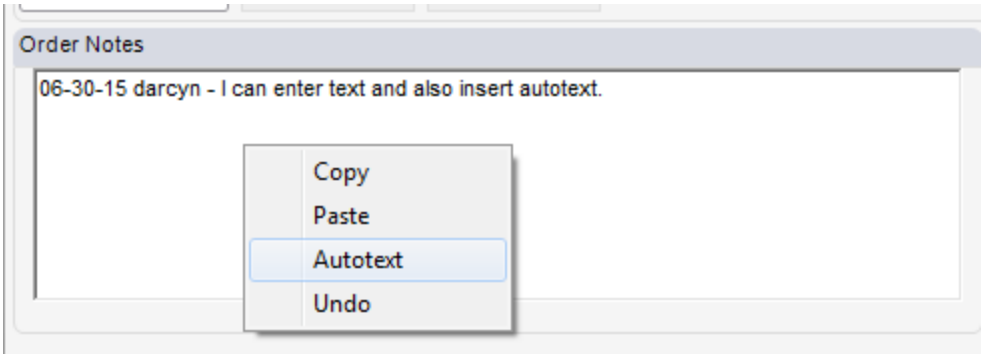

**Figure 5.64 – Free text/Autotext field**

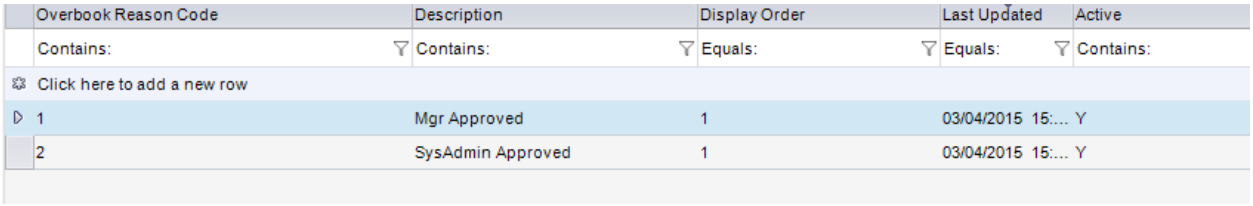
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Overbook Reason Enhancements

To continue on from the previous feature, the Overbook Reason field will also have the options of free text, autotext or a combination of both. To start a new lookup table has been created to capture the Overbook Reason Code that can be used if the field is Autotext only or both available to the field. The OverbookReason table access is controlled by the access string of "**Config.LookupEditor.OverbookReason**" which has a default of Full.



| Overbook Reason Code | Description | Display Order | Last Updated | Active |
|---|---|---|---|---|
| Contains: | Contains: | Equals: | Equals: | Contains: |
| Click here to add a new row | | | | |
| 1 | Mgr Approved | 1 | 03/04/2015 15:... | Y |
| 2 | SysAdmin Approved | 1 | 03/04/2015 15:... | Y |

**Figure 5.65 – Overbook Reason lookup table**

If the OverBook reason field is free text, autotext or a combination of both is controlled by a new System Configuration setting called "**OverbookReasonFormat**" has default value of 1.

The possible values are

- 1 - free text only
- 2 - OverbookReason lookup only
- 3 - both free text and the OverbookReason lookup.

The scheduling screen in RIS has been updated to support the above pattern. If the overbook reason utilizes the lookup values, it is important to note that it is the Description field from OverbookReason and not the OverbookReasonCode that is stored in the database.

The Overbook field itself on the scheduling window is controlled by the pre-existing access string of "**Clinical.Schedule.AllowOverbooking**" which has a default access level of None

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Send SMS message from Work List

The option to send a RADAR message from the Reception or Patient Folder WL has been added in B45. The context menu option of Quick RADAR Message has been added with an access string of "**Clinical.QuickRadarMessage**" that controls access to it, which has a default of None.

Selecting this context menu option will open the Quick RADAR Messgae window. The message will have a character limit of 160. Options are SMS (text) or Email. This message can be free text or can be configured to autotext. The patients name, mobile phone number and email address will be displayed in the window.

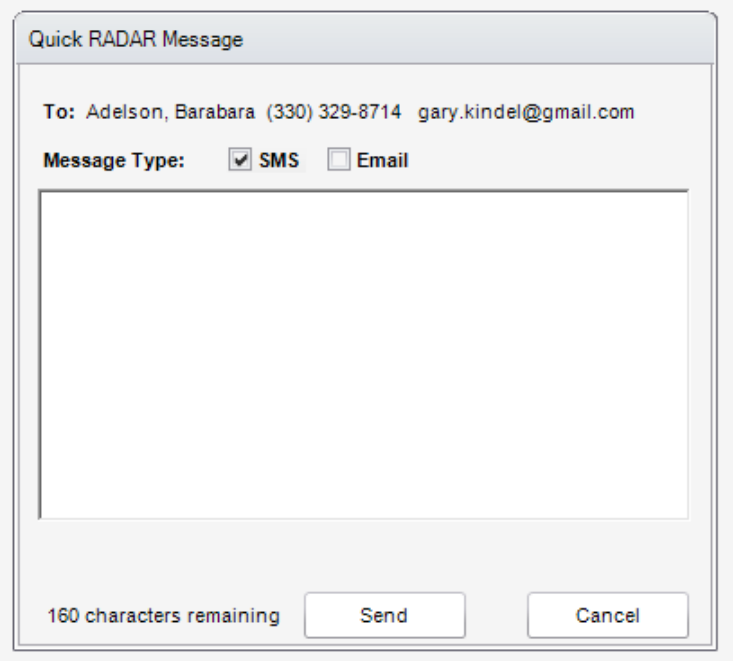


**Figure 5.66 – Quick RADAR Message dialog window**

If the patient selected to send the RADAR message is missing the Email and mobile phone information the user will be presented with the following message.

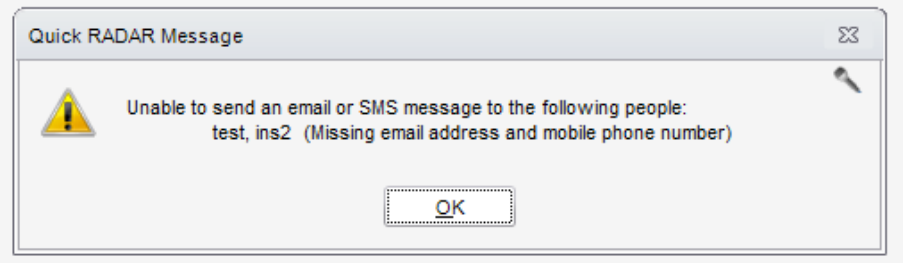

**Figure 5.67 – Quick RADAR Message that patient doesn't have an email or mobile phone number**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Support Linking of Reports

For stage 1 of linked reports, linking is limited to procedure plans that are predefined to be reported together. There is no support for manual linking and unlinking studies for stage 1.

The ProcedurePlan lookup table lookup table has always had the Report Together Flag, but it wasn't being used. Now we will use it for Linked Reporting. When the Report Together Flag is set to Y, the Plan Procedures grid will require one procedure to be set as the Primary Study.

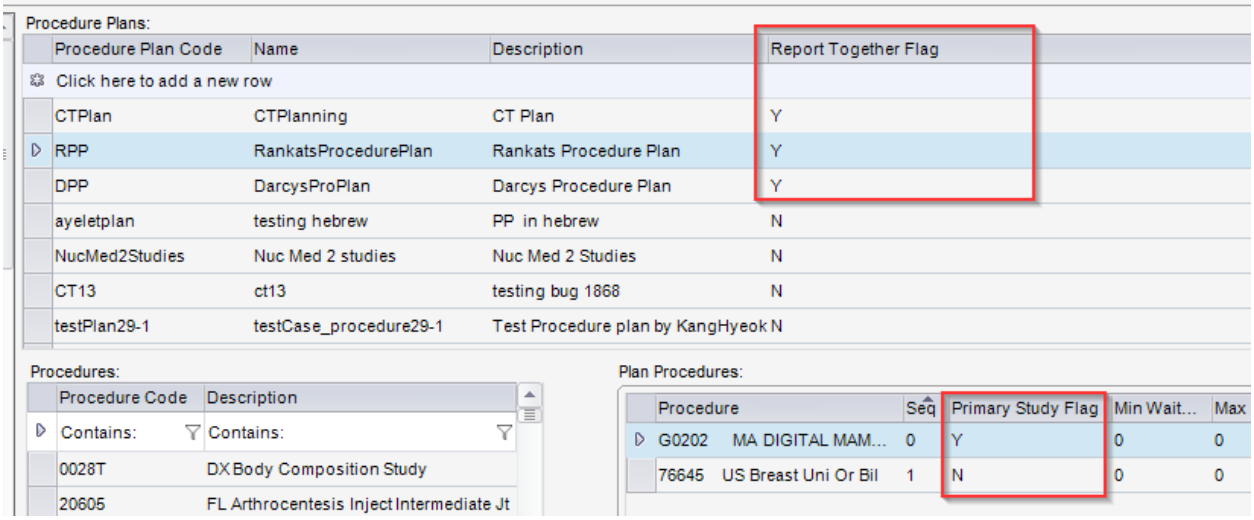

**Figure 5.68 – Procedure Plan lookup table**

The primary study will be the study that is reported on. But before it gets to Exam Done status, the procedure plan will behave just as it did before. After the plan is scheduled the work lists will display a new flags for Primary and Non-Primary studies in the plan.

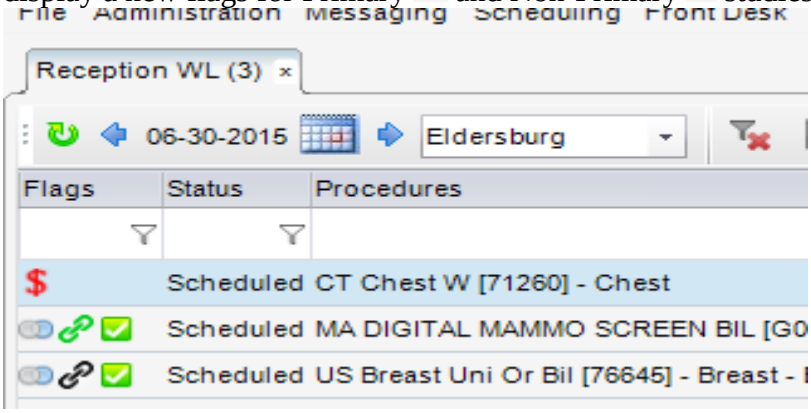

**Figure 5.69 – Linked Reporting flags for primary and non-primary**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

If the primary study is rescheduled on its own, the linked reporting will be broken and the studies belonging to the procedure plan will then become individual studies no longer tied together. This is also true if the procedure is changed during the registration process. If the procedure picker row is remove (red x) or the procedure is removed (black x) and a different procedure is used in its place on the primary study, this will also break the linked reporting.

For the Technologist the procedure plan can be opened in the Perform Exam window. If they are of different modalities, the studies will start and completed as before, even if the studies "Include" option is used. The only change is with the Preferred Radiologist. When a radiologist is assigned to one study it will be auto assigned to the remaining studies in the procedure plan.

The worklists have been enhanced to better identify which studies on the work list belong together in the report together procedure plan. When one of the studies from the procedure plan is selected on the work list, the other studies also part of the procedure plan will have their row color change to pinkish color. In the figure below you can see the Mammo study is selected on the work list and the US Breast study has a pink row color.

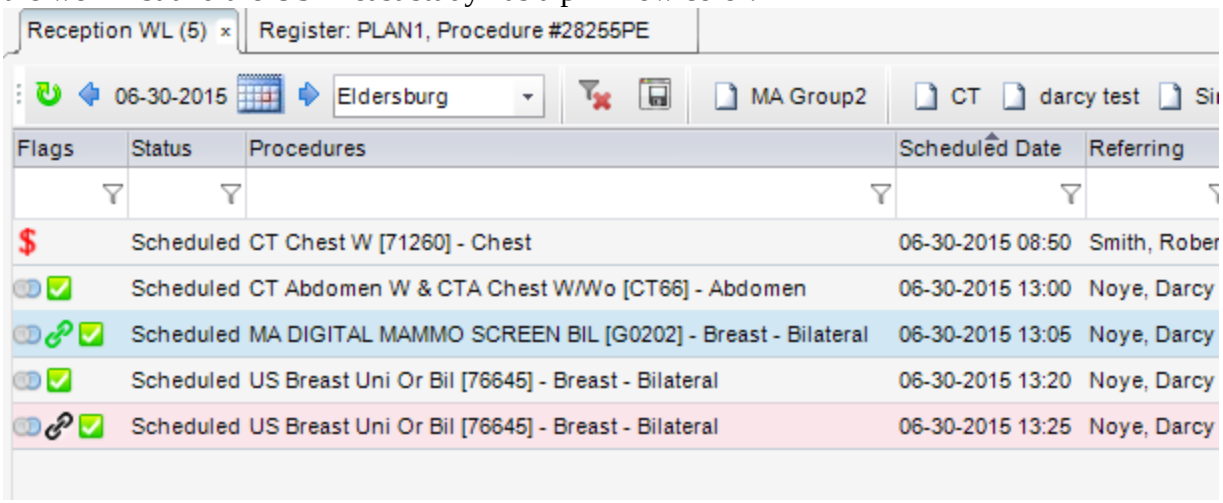

**Figure 5.70 – Row color of report together procedure plans change color**

Once the report together procedure plan has been completed by the Technologist and the studies are not in a status of Exam Done only the primary study will appear on the My Pending Dictation work list. If one or more of the studies needs to be PACS Corrected, none of the studies can be reported on, the option to open the dictate window will not be available until PACS Corrected = Y for all studies in the plan.

From the Patient Folder a user can select to dictate on one of the non-primary studies, but when the Dictate window opens, it will open for the primary study. The template loaded in the report

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

editor and the templates and macros available in the Template Browser data pane will also be based off of the primary study.

In the Patient History data pane in the reporting window, the same pinkish row color will be displayed when one of the studies selected from the report together procedure plan is selected. This is true also if the reporting window is opened on another study belonging to the same patient. Other configurable row colors remain the same. The current and selected study background and boarder will still appear.

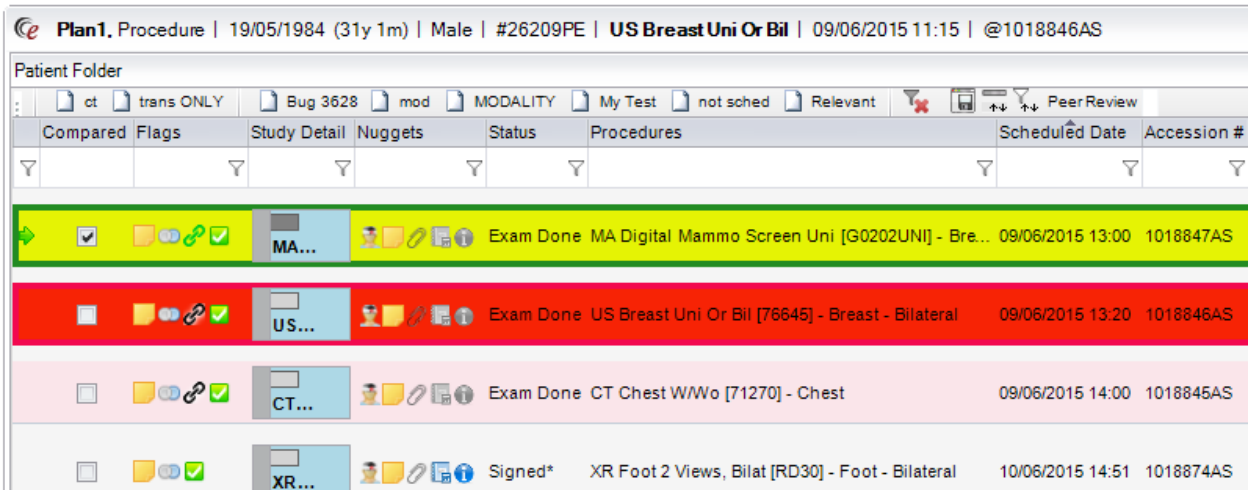

**Figure 5.71 – Patient History data pane**

PACS images will be opened for all studies belonging to the plan. These are not included in the count for user preference "Load Relevant Priors". Relevancy is also based off of the primary study only.

The exam status of the primary study will be reflected on the non-primary studies. Once the primary study status changes from Exam-Done to Report Drafted, from Report Drafted to Transcribed… right up to Signed status, so will the non-primary studies. If the primary study is Voided, the non-primary studies will return to a status of Exam Done and will need to be reported on again, or actioned to be cancelled (aborted or discontinue). If the "Delete Dictation/Report and Reset Status" is used, this will also change the status of the studies in the report together procedure plan to all be Exam Done.

Flags added to any of the studies in the procedure plan will also be copied over to the other studies in the plan. Flags such as Suspended, QA, Problem and Mark As Read will be applied to all studies.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

If one of the studies has the Supervising Radiologist, Assigned Radiologist or Assigned Editor added or changed, this will also be applied to all of the studies in the report together procedure plan.

The QA workflow will only look at the primary study. If a Radiologist or Editor is configured to have every 2nd study sent to QA, the report together procedure plan will only count as one study. So if a report together procedure plan has 3 studies in the plan, this will only count as one.

This is also true for the Daily Statistics counters. If the report together procedure plan has 3 studies that are dictated on, the counter will only count this as 1. Same is true for Signing counter and Editor statistics

Locking of studies post exam done will be that if one of the procedures is opened, it will lock the remaining studies in the procedure plan.

Editor polling will only open the primary study. The non-primary studies will be skipped over and the next available will be opened.

When viewing the final report from the Data Nugget or from the Preview/Print Report context menu option, the primary and non-primary studies will all display the same report.

Document Distribution will send one report based on the primary study. If a manual job is created, again the primary study will be used.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Show Patient Notes from Previously Merged Patients Notes

In build 45 we added a hyperlink to the bottom of the patient notes control, it will appear as a read only label when there are no previous patient notes, or an underlined hyperlink when there are previous patient notes.

When the user clicks the hyperlink, a dialog box pops up and will display the notes for all of the patients that were merged into the current patient, grouped under a header that shows the previous patient name, MRN, and the date of the merge. The user can then use the mouse to highlight the text they want to extract and press Control+C to copy the text to the clipboard so that it can be pasted into the notes section and saved.

All screens that allow the user to add patient notes have been updated with the new feature.

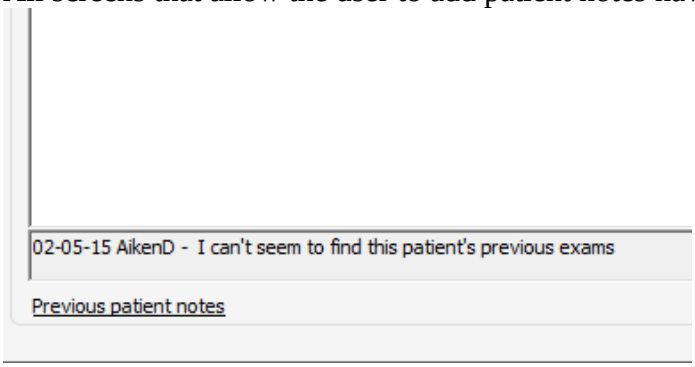

**Figure 5.72 – Hyperlink to access merged patient notes**

Selecting this hyperlink will open the Previous Patient Notes window.

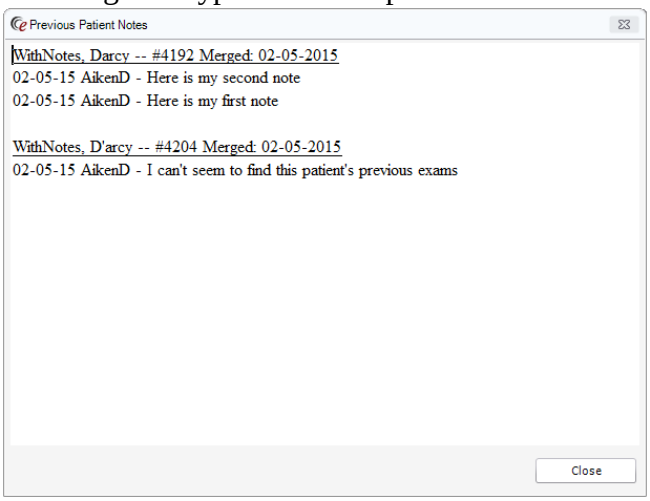

**Figure 5.73 – Previous Patient Notes window**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Enhanced Alternate MRN

The MRN grid on the patient tab has changed. We also moved the system MRN to be in the grid as well.

The Add/Remove options in the context menu have been removed as well as the buttons. The Grid will not have a "Click here to add a new row" option similar to other grids.

Adding and removing MRN rows is still controlled by the existing access strings, "**Clinical.AddMRN**" and "**Clinical.RemoveMRN**".

A special read only blue row has been added to the first position in the grid. This row is to hold and display the system issued MRN. The end user cannot edit or remove this row.

Support for applying masks to the MRNs has been added. There is a default mask that can be configured with the new System Configuration setting of "**DefaultAlternateMRNMask**" that has a default of AAAAAAAAAA.

The Issuer table also has a new column titled Mask so a mash can be defined for each issuer. The column.

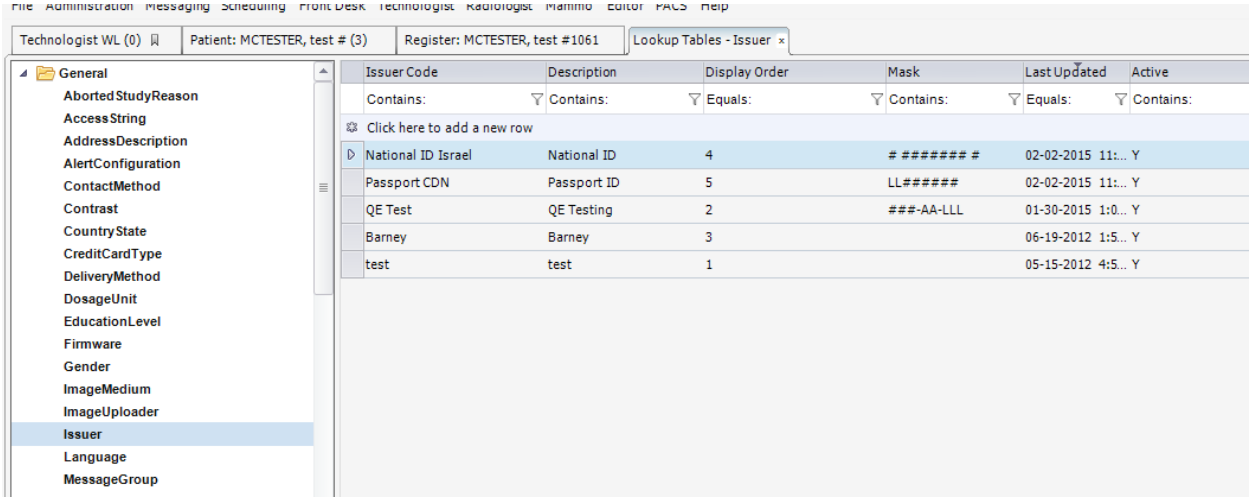

**Figure 5.74 – Mask column added to Issuer table**

Mask rules: # = number only, A = alphanumeric and L = alpha only.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Configuration Overbook Reason for Rooms/Modalities

The Modality lookup has been modified. It now includes an "Allow Overbook Flag". This flag defaults to "N". If enabled, the system will not prompt the user to specify a reason when there is already a procedure booked for the selected time on the scanner. The system will not enforce the overbook reason as a required field.

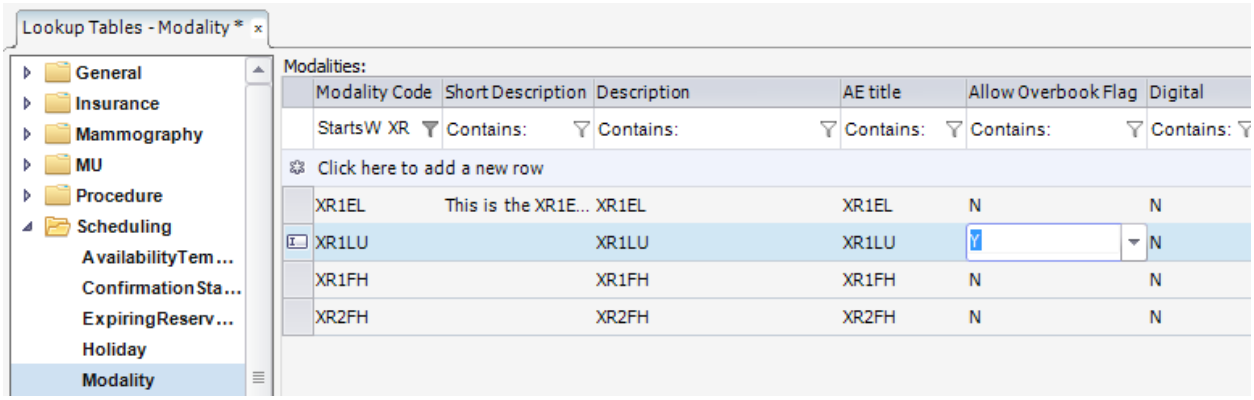

**Figure 5.75 – Modality table with Allow Overbook Flag added**

## New Walk-In Button on Patient Folder

As the title indicates, a new ICON has been added to the Patient Folder to open the Walk-In window.

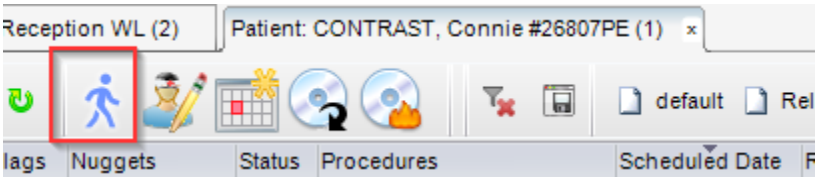

**Figure 5.76 – New Walk-In button on the Patient Folder WL**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## DOB Field Enhancements

Using the calendar control was a bit cumbersome and time expensive trying to find a date. We have enhanced this DOB field on the Patient tab so it is an intelligent date control which will hopefully save the user's time entering in the patient date of birth.

But we will leave it up to the customer to choose which they like to use. A System Configuration setting of "**ShowDOBCalendar**" has been added with a default of false. When set to true the calendar selection control will be displayed and available.

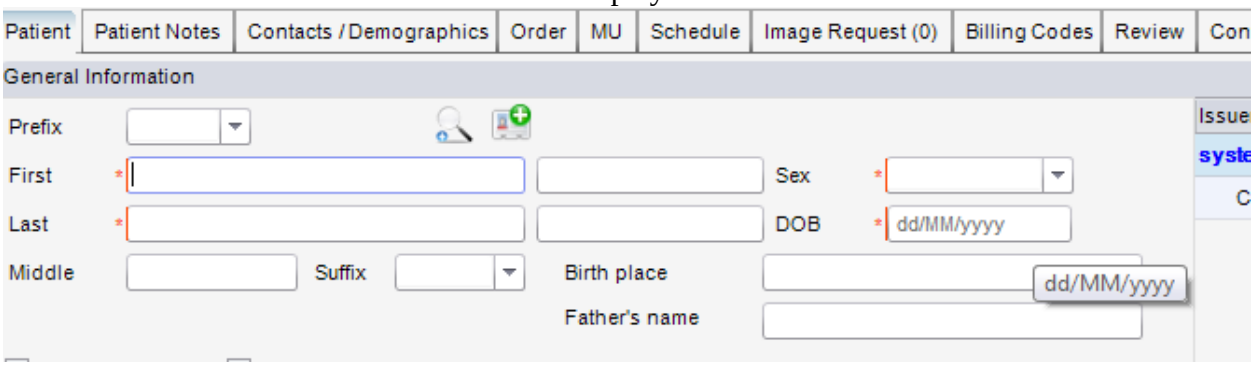

**Figure 5.77 – Changes to DOB field on patient tab**

## Quick Search Enhancement to Clear Search Criteria

When entering a text in to the Quick Search field for Patient, Internal Person, Site, etc… we can easily clear the contents of the search field using the X.

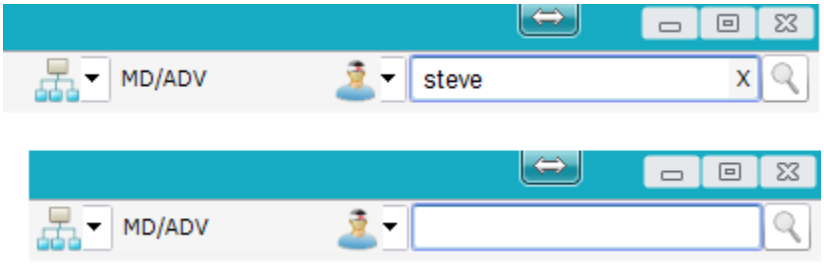

**Figure 5.78 – Quick Search with the X to clear contents**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Using Preferred Site Value on Reschedule

This feature works directly with the System Configuration setting "**ScheduleUsePreferredSite**". When rescheduling the procedure, the Site field in the Search Options on Schedule tab will be defaulted to the site value from the Preferred Site on the Order tab.

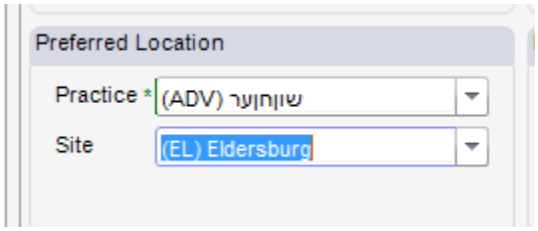

**Figure 5.79 – Preferred Site**

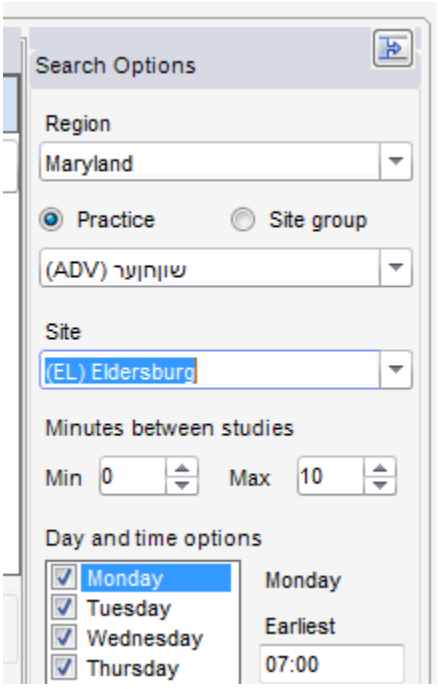

**Figure 5.80 – Search Options Site defaulted**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Add X Amount of Minutes to Walk-In Procedure

Walk-In has always been a "now" time. So when the Walk-In procedure was completed in the Walk-In window, the time of the exam would be current time.

We have added a new System Configuration setting of "**WalkinAddMinutes**" with a default value of 0, that will add time onto the Walk-In's scheduled start time.

For example, with the value set to 11 you can see in the figure below the Scheduled Time is 11 minutes more that current time

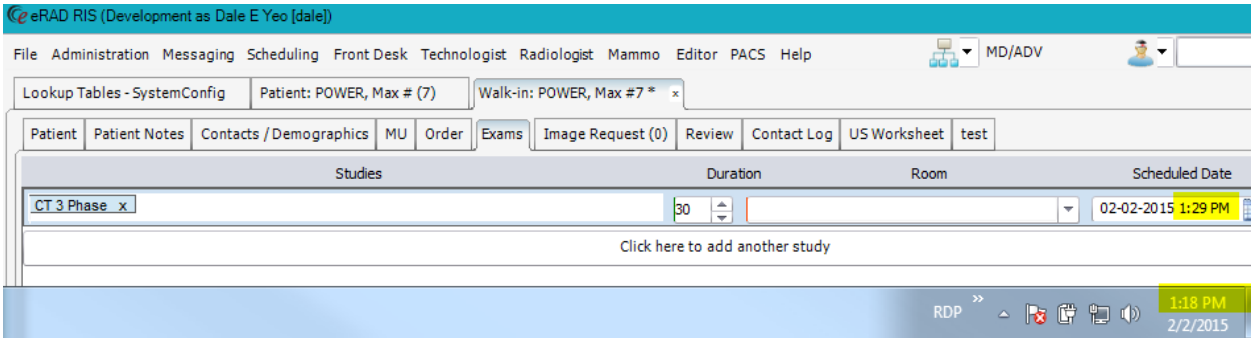

**Figure 5.81 – Walk-in time increased by system configuration setting**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Issuer of ID Added to Existing Order Window

Added a new column to the existing orders dialog box that appears when scheduling and appointment or creating a Walk-In for a patient that has orders to be scheduled. The new column has the caption "Order Source" and will show either the value of the "issuer_of_placer_order_number" column in the order (when specified, this is generally the emr code), or the system configuration value for RISOrderSourceDescription (generally "RIS") for an internally generated order.

If the "issuer_of_placer_order_number" matches an EMR code in the EMR lookup table, the tool tip for the Order Source column will show the full description of the EMR as well as the EMR code.

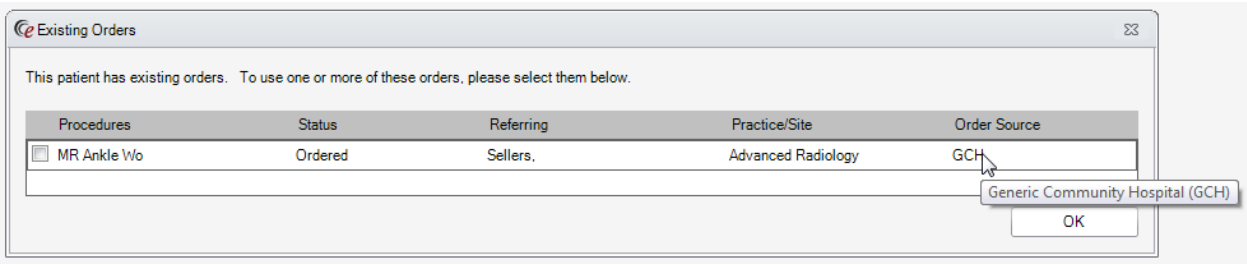

**Figure 5.82 – Existing Orders window with Order Source column added**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Support Automated Appointment Reminder Opt Out

Some patients do not want to have automated appointment reminders. A new checkbox “Do not send reminders” has been added on the Patient tabs, Contact Information data pane.

This will store this field at the patient level. During Implementation, RADAR will still need to reference this flag.

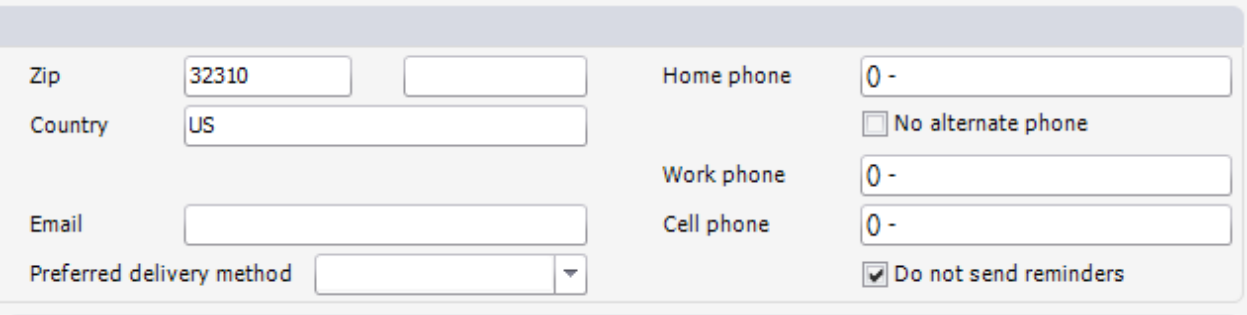

**Figure 5.83 – Checkbox for Do not send reminders**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Order Notes added to MU Tab

The order notes field has been added to the MU tab. As with the Order Notes field on other tabs, it will adhere to the configuration set for Autotext in the  Log Control lookup table

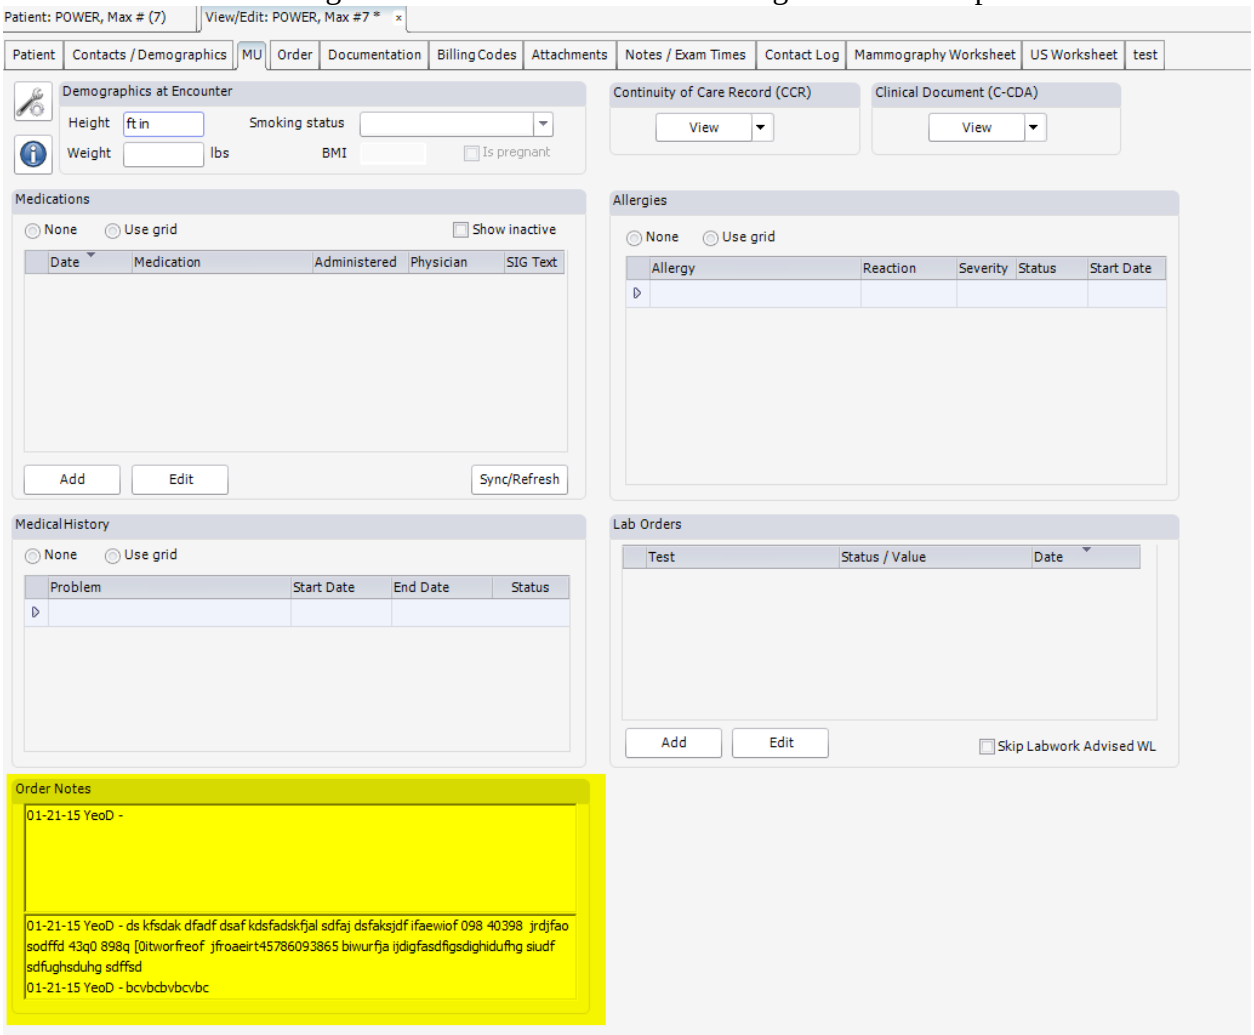

**Figure 5.84 – Order notes on MU tab**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## New Diabetic Medications For MU

Added 4 new diabetic medications to the Quick add/edit screen (Jentadueto, Invokamet, Kazano and Xigduo). Corrected the two medications that were identified as needed corrected (ACTOPlus Met changed to ActoPlus Met and Kombiglzexr changed to Kombiglyze XR). Created a db script that will need to run that will update the c_patient_medication table changing the drug_name from Kombiglzexr to Kombiglyze XR.

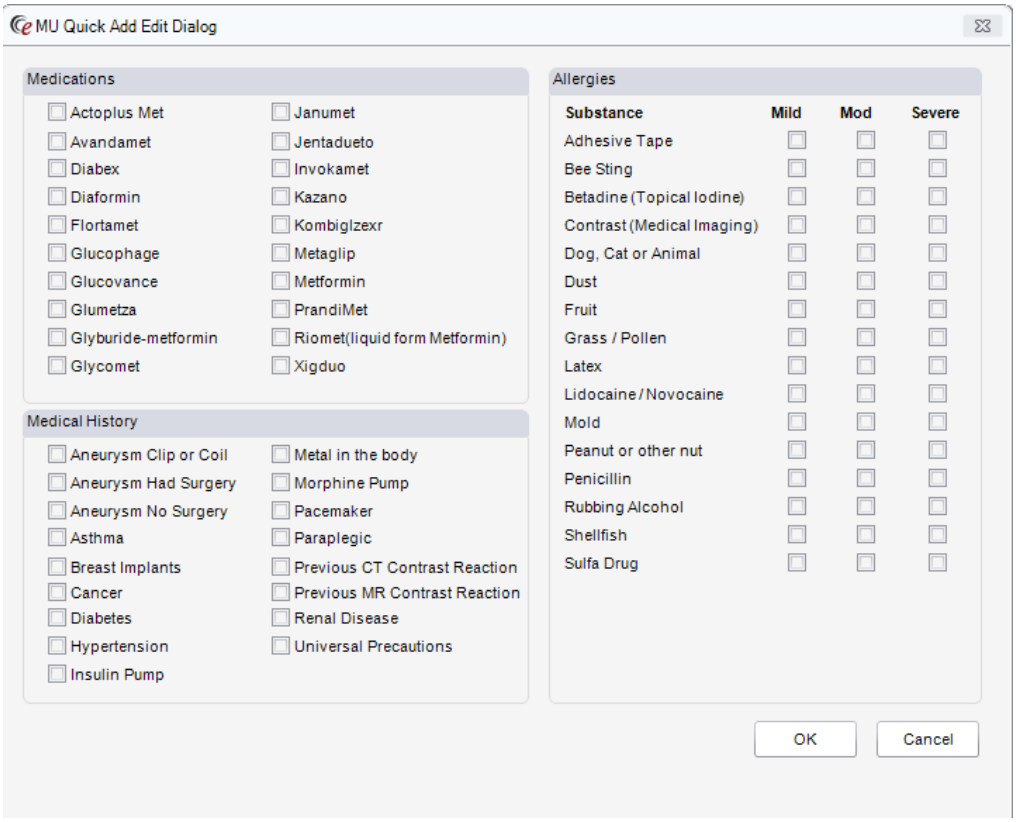

**Figure 5.85 – Quick add edit window displaying additions and changes to Medications**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Effective Date for Height and Weight

With the pre-existing System Configuration settings of HeightRequiredOnArrival, WeightRequiredOnArrival, HeightRequiredOnSchedule and WeightRequiredOnSchedule configured it was making it difficult to check the patient record in the Scheduling or Registration windows if the patient wasn't there at the time. The user would be prompted to complete this data and couldn't save.

We have added 2 new System Configuration settings.

"**HeightRequiredEffectiveDate**" which has a default of "1999-01-01"
Date to define when to enable checking if height is required when scheduling or arriving the patient"

**"WeightRequiredEffectiveDate"** which has a default of "1999-01-01"
Date to define when to enable checking if weight is required when scheduling or arriving the patient"

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – Embedded Audio Recorder

We implemented a new recorder, which can be used by choosing the "eRAD" option in his user preferences. This option is controlled by access string "**Config.AllowEradReportingIntegration**" which has a default of None

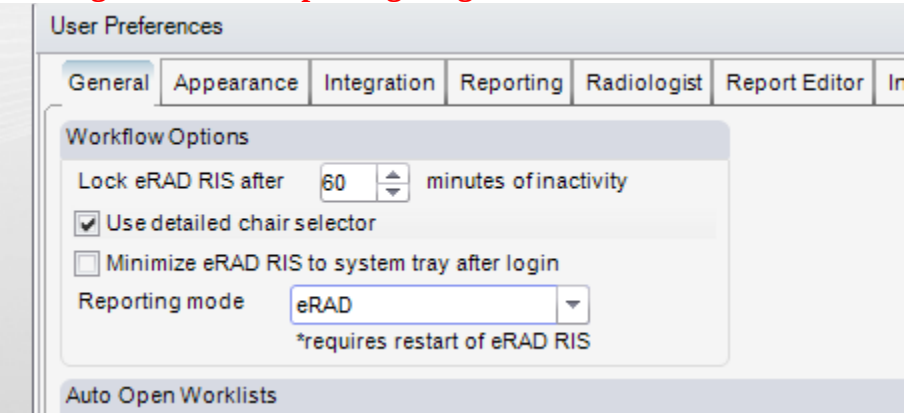

**Figure 5.86 – New user preference**

This new recorder will support record, pause, stop, playback, rewind, fast forward and show playback position (1:40 of 3:22).

Other User Preferences currently supported are Resume playback after rewinding and Insert/overwrite dictation.

It is recommended user then restarts eRad RIS for changes to take effect, and for their previous modes to be uninitialized. Once this change has been made, the user would not notice or see anything different than if they were running in batch mode. The only real differences would be that there is no batch process, audio must go to MTs for transcription and that the report tab in the dictation screen would now say "Digital Audio Report".

Current limitations are a user would not have auto save reports/recovery or the ability to set playback speed wouldn't yield any results.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting – eRAD Report Editor

With the audio recorder we also need to build our own report editor. The report editor would need to be seamless when changing from one editor to another, meaning not losing any functionality. The functionality of the editor will be explained below

**Shortcuts** – All relevant shortcuts have been added. For more information on shortcuts please reference the Shortcuts.docx document

**Command bar** – All relevant buttons have been added. Tooltip values are also present

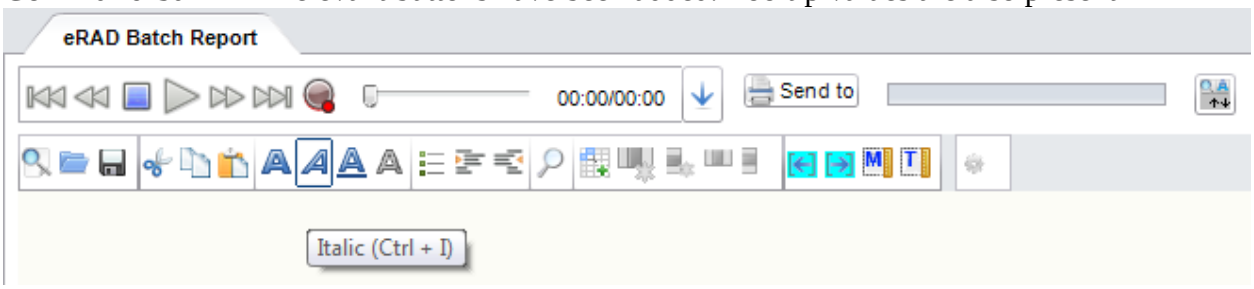

**Figure 5.87 – Command bar**

**Custom Colors in Editor** – The editor will support colors for Font, Background, Field Background, Template Text, Macro Text, Radiologist Edit Text, Transcription Edit Text and QA Edit Text. Also Font Size is available.

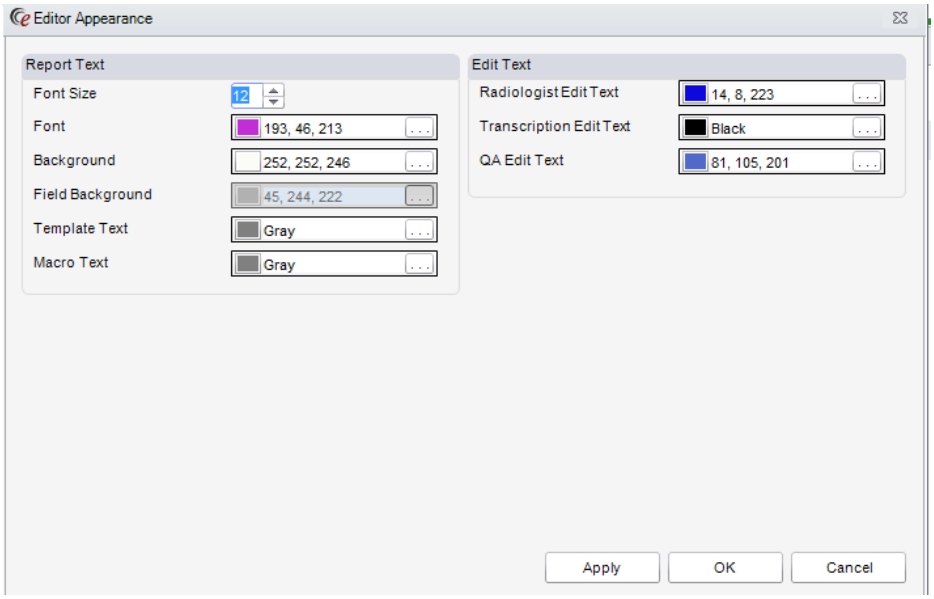

**Figure 5.88 – eRAD Editor Appearance**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**Text Expander** – A file called TextExpander.txt is used to create a user specific file <userid>_TextExpander.txt.

We will load all those entries into the editor when we create one assuming the user's preference for text expander is set. We read the file and add every line item one by one. We've seen this take as much as 160ms, on initial load, but this is with many other things trying to load for the first time and accessing the disk. After the initial load we see values around 20ms, which doesn't seem to fluctuate much based on the size of the file. We tested as big as we deploy, and as small as 1. Difference was not measurable in load time.

**Next and Previous Field Navigation –** When the template loaded has multiple fields, users will be able to navigate to next and previous fields by use of the mapped buttons on the SpeechMike, the arrow keys on the keyboard, next and previous field buttons on the command bar and using the Fields data pane.

**Tables and Columns in Reports** - New tables can be added via right click content menu option or toolbar button.
We provided the same control that will create default table of 3 columns and 2 rows. This can be modified at the time of table creation or after.

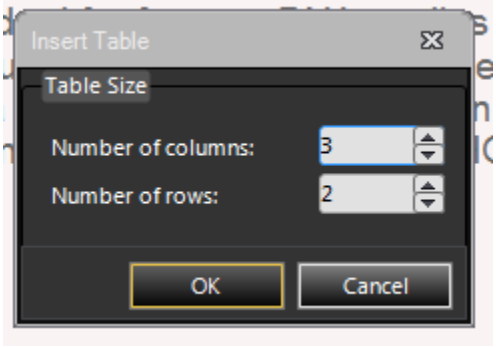

**Figure 5.89 – Insert tables**

After the table is inserted and the cursor is focused in the table more options will be available to the user in the toolbar and the context menu. These options include Insert Column, Insert Row, Delete Column and Delete Row. There are four options only available in the context menu and they are Insert Column Left, Insert Column Right, Insert Row Above and Insert Row Below.

The pre-existing access string of "**Clinical.CreateTableInReport**" which has default of Full is used to control user access to insert tables into a report.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**Base template support -** In the template/macro lookup editor, we now have a type for "Base Templates" which is only available when the editor type is set to "eRAD". These base templates are created just like any other templates.

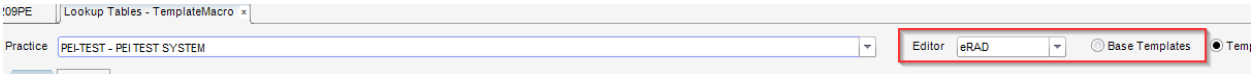

**Figure 5.90 – Creating base templates for eRAD reporting**

These base templates are created just like any other templates with a couple exceptions. They can only be assigned to practices and you do not have the options to set it as template/default/normal. One of the benefits with the eRAD Base Template, is that you can include fields that will be driven by data which you could not do with our M*Modal implementation. This is a great way to produce advanced custom reports quickly and consistently.

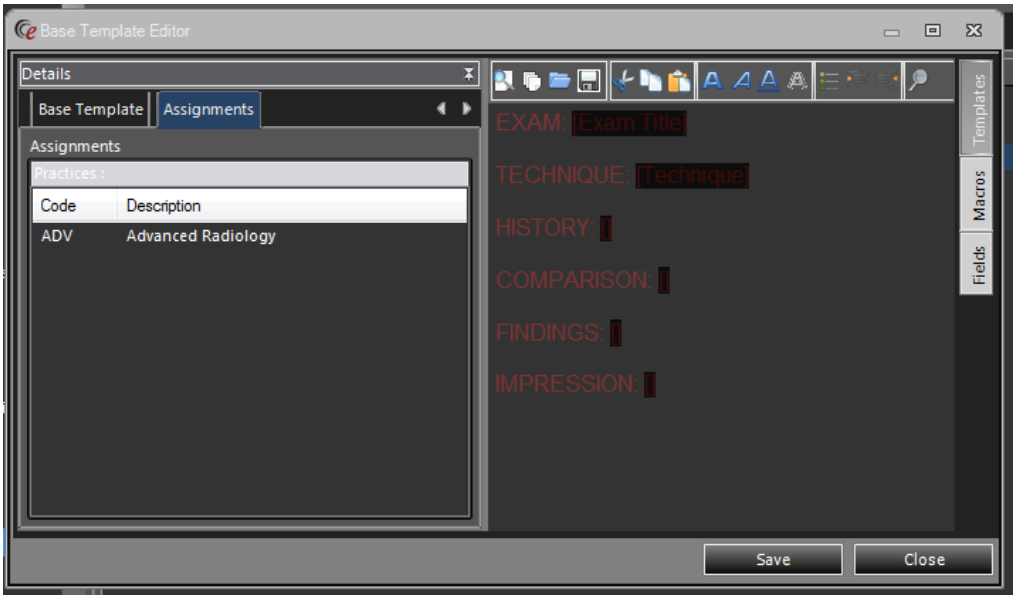

**Figure 5.91 – Creating base templates**

When the user then creates a template, they will have the option to choose a Base Template in the same dropdown used by M*Modal users, this dropdown will populate based on the selected Practice on the same screen. Unlike with M*Modal the user does not require base template in order to save, it is purely optional.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

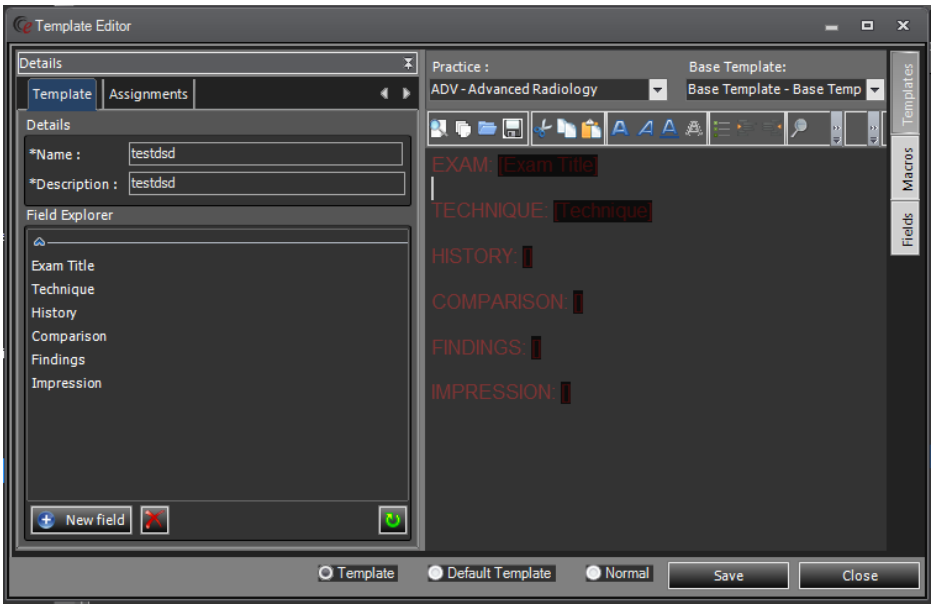

**Figure 5.92 – Base template not required**

Something to note is that we REQUIRE a base template be created for ADDENDUM it should be named "ADDENDUM" and will be used by code to support addendum workflow. Similar to how in M*Modal we required a pair of Base Document Models to support basic workflow.

**Create template from report to support Auto Macros** - We insert bookmark around the field before we populate it, we then use those bookmarks to reconstruct the field when we create a template from the report.

**Advanced menu for reporting window -** A new menu bar with more functionality which can be added to the editor pane at runtime by the user has been added. If the user does not have the correct access, which is "Full", the code removes the menu item from the context menu.

To enable the editor's advanced menu, right click in the editor window to bring up the context menu, and then select the "Editor Advanced Menu" item. This will insert a new menu bar with more functionality above the existing one. To remove the advanced menu, simply bring up the context menu again by right clicking in the editor pane and select "Editor Advanced Menu" to toggle visibility.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

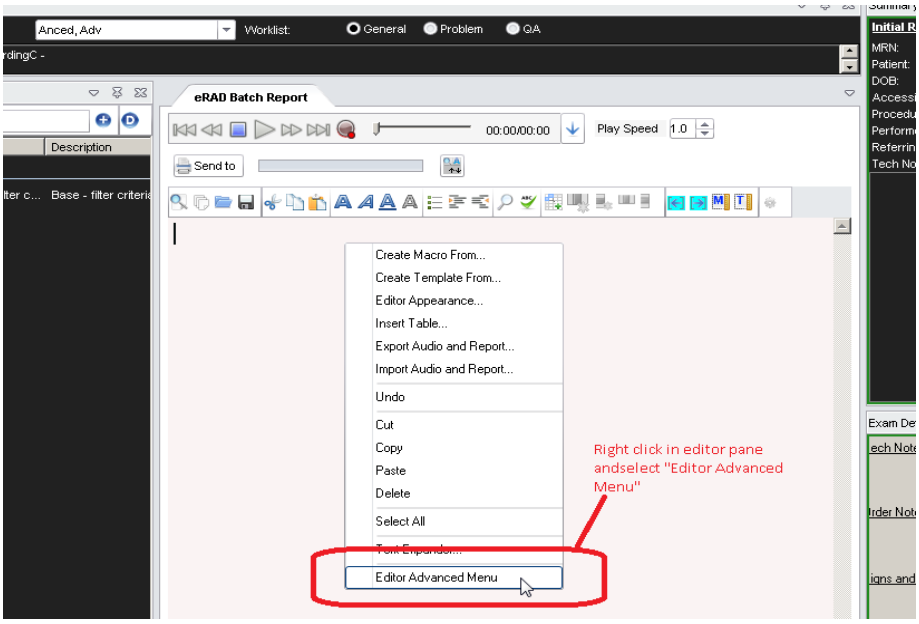

**Figure 5.93 – Access to Advanced menu**

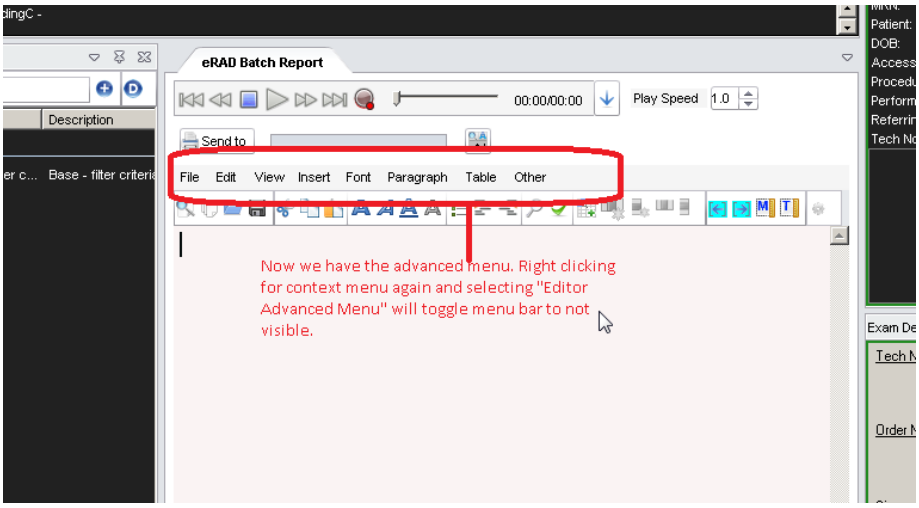

**Figure 5.94 – Displaying advanced menu**

**Support Auto Save in eRAD Editor** - With the new editor control, we need to make sure we can support existing auto save functionality so that when RIS crashes or is terminated, then the user would be prompted to reload reports that were in progress on login.
One thing we needed to do with this editor was to disable its automatic backup feature. When the report was saved over an existing file, it would create a <filename>.BU backup of the existing

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

file before overwriting it. This caused errors as our auto save feature would try to parse these files as unique auto saved reports and would start searching for accession numbers with a .BU suffix.
This feature is only really complete once Feature #7864 is completed, as it takes care of the audio recorder part of this feature. Right now we are having some technical difficulties with that one, it might get delayed into another build.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## General Reporting – Add Editor Appearance Preferences to User Preferences

This screen was available through the right click context menu on the report in the Radiologist/Transcription screens. We changed it a little mostly sizing and alignments so that it would match that of the user preferences screen. We also changed the buttons; we now have an Apply, OK and a Cancel button.

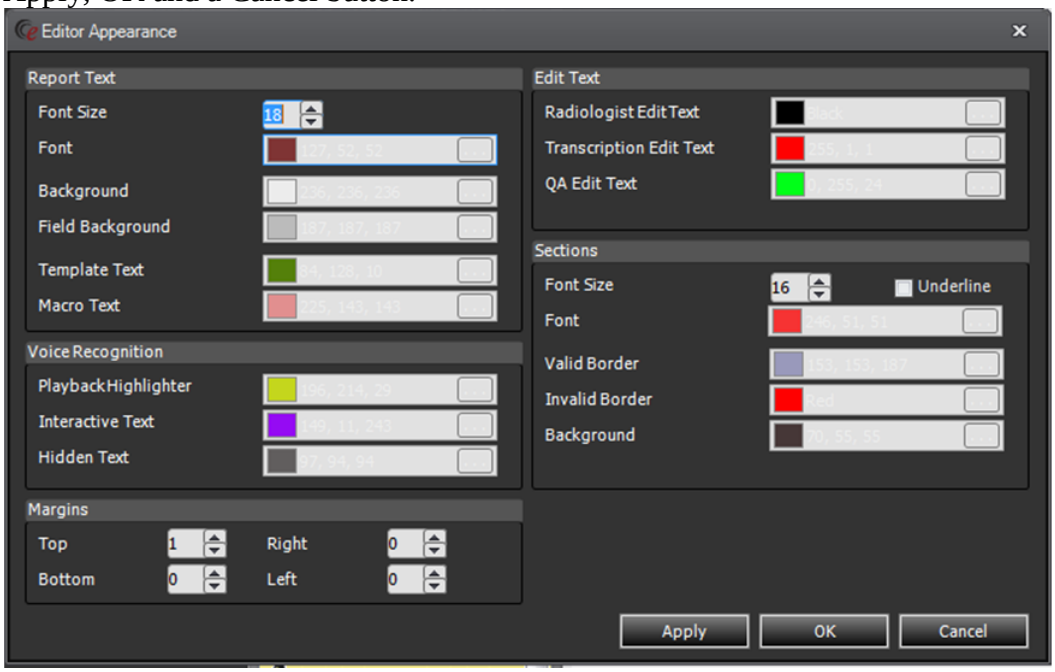

**Figure 5.95 – Editor Appearance**

We then injected them into the user preference screen under the "Report Editor" tab. These are the same control as the above screen they are being reused in this screen. If the user is using eRAD reporting then the "Margins", "Sections" and the "Voice Recognition" groups will not be visible neither from the "User Preferences" screen nor the "Editor Appearance" screen.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

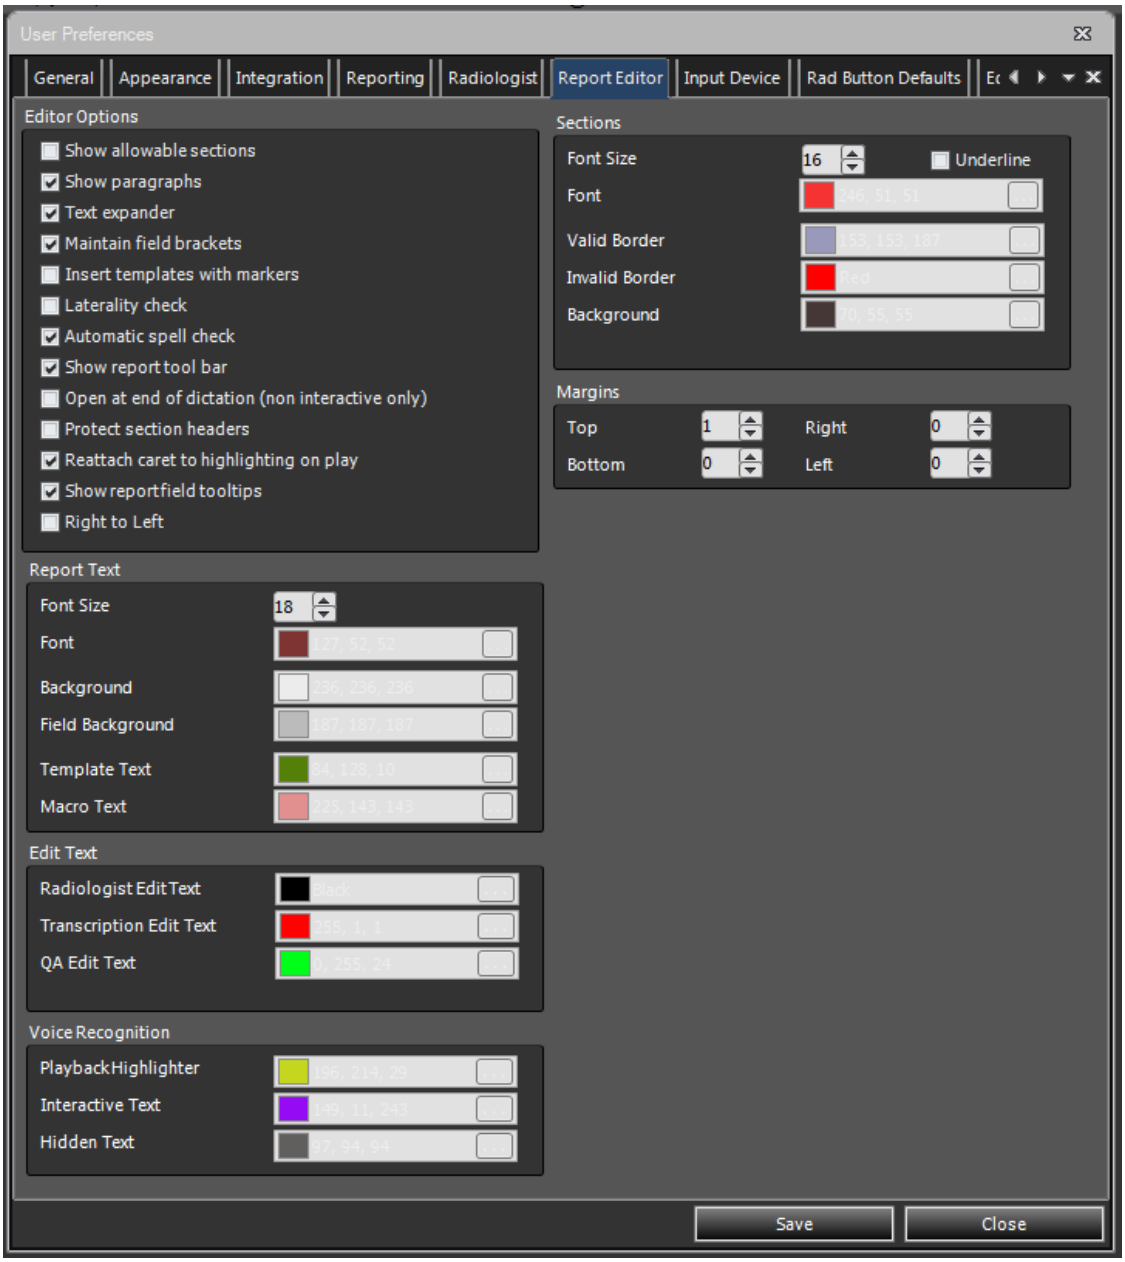

**Figure 5.96 – Editor Appearance in User Preferences**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## General Reporting – Permissions for Report Integration Types

Current report integration types are:

1. eRAD (New type as of build 45 which includes it's own editor "TEEdit" and it's own basic dictation playback/recording device "MCI")
2. External (used to be None)
3. M*Modal
4. PowerScribe 360

The following access strings determine the integration type will be available to be selected in the User Preferences>General> Reporting Mode options

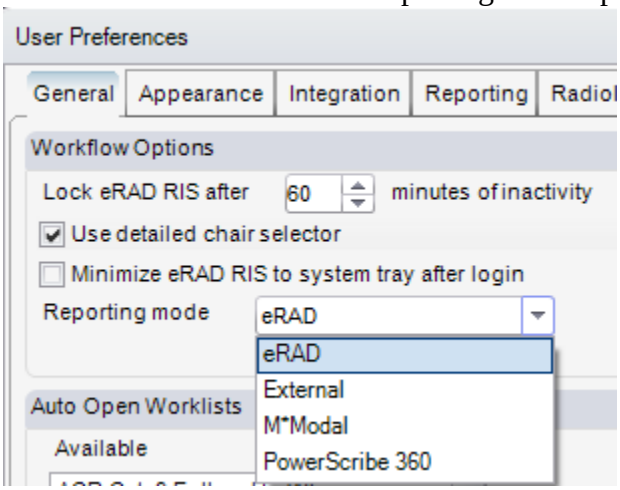

**Figure 5.97 – Reporting modes**

1. **Config.AllowEradReportingIntegration** – has a default of None. Controls access to eRAD reporting mode.
2. **Config.AllowExternalReportingIntegration** – has a default of None. Controls access to External Reporting Mode.
3. **Config.AllowMModalReportingIntegration** – has a default of Full. Controls access to MModal reporting mode
4. **Config.AllowPowerScribeReportingIntegration** – has a default of None. Controls access to PowerScribe 360 reporting mode

A new system configuration setting of "**AllowedReportingIntegrationTypes**" was added to control which reporting modes are available in the system. The default value for the setting is 15. The value is the sum of desired types where External = 1, MModal = 2, PS360 = 4 and eRAD =

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

8. So a value of 10 would mean that both eRAD and MModal are allowed. 15 means all are permitted (1+2+4+8=15).

In the template/macro lookup editor, we now have a drop down to identify which editor we are working with (MModal or eRAD integration). This drop down will default to the editor based on the users reporting mode. The default will always fall back to MModal if it's an available option assuming the user is using neither reporting integration types. It will also only load the values in the drop down if the system config setting and the access string allow for it or if the user is still on a no longer allowed mode. When only 1 value exists in the drop down, the drop down will not be shown.

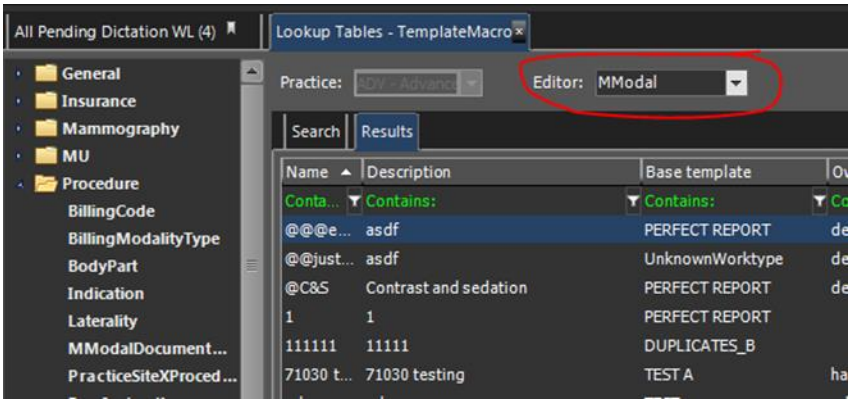

**Figure 5.98 – Template/Macro defaulting to reporting mode**

If the configuration is such that neither MModal nor eRAD Reporting is permitted, then the Template/Macro editor will not open. It will display the following message "The current system configuration doesn't support this lookup editor."

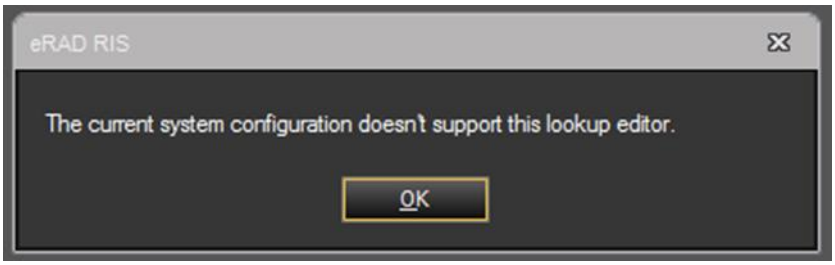

**Figure 5.99 – Message is not configured for MModal or eRAD reporting**

We are now hiding the "Interactive" and the "Interactive info prompt" group boxed in the "Radiologist" tab and the "Voice Recognition", "Margins" and "Sections" group boxes under the "Report Editor" tab for user preferences when the user is using the eRAD integration type.
We changed the text of the report tab on the reporting screen as follows…

- "Interactive Report" is now "M*Modal Interactive Report"

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

- "Batch Report" is now "M*Modal Batch Report"
- "eRAD Batch Report" is a new mode that didn't exist before.
- "Report" for other modes like External or PowerScribe 360

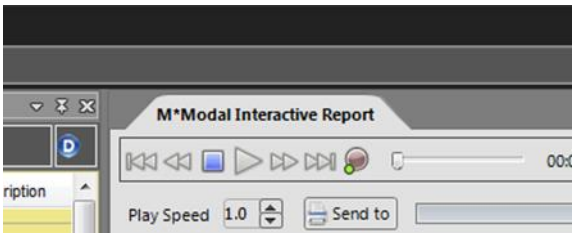

**Figure 5.100 – MModal added to tab name when reporting mode is MModal**

## General Reporting – Custom Field for Modality Description

We added a new custom field in our list of custom fields that maps to the current study item modality report description column. The report description column is set in the Admin>Scheduling>Modality table.

If this value is empty nothing will be placed into the diagnostic report field.

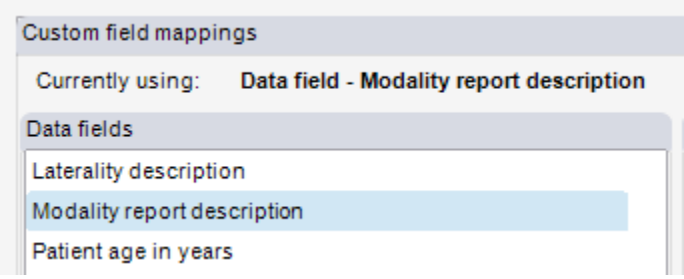

**Figure 5.101 – Modality report description custom field mapping**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## General Reporting – Insert Template in the Template Editor

In the template editor we added a tab on the right hand side that will expand with the list of templates. User double clicks on one and the template will replace all the text in the current editor. We do not merge the documents. This is simply a way to get started using another template.

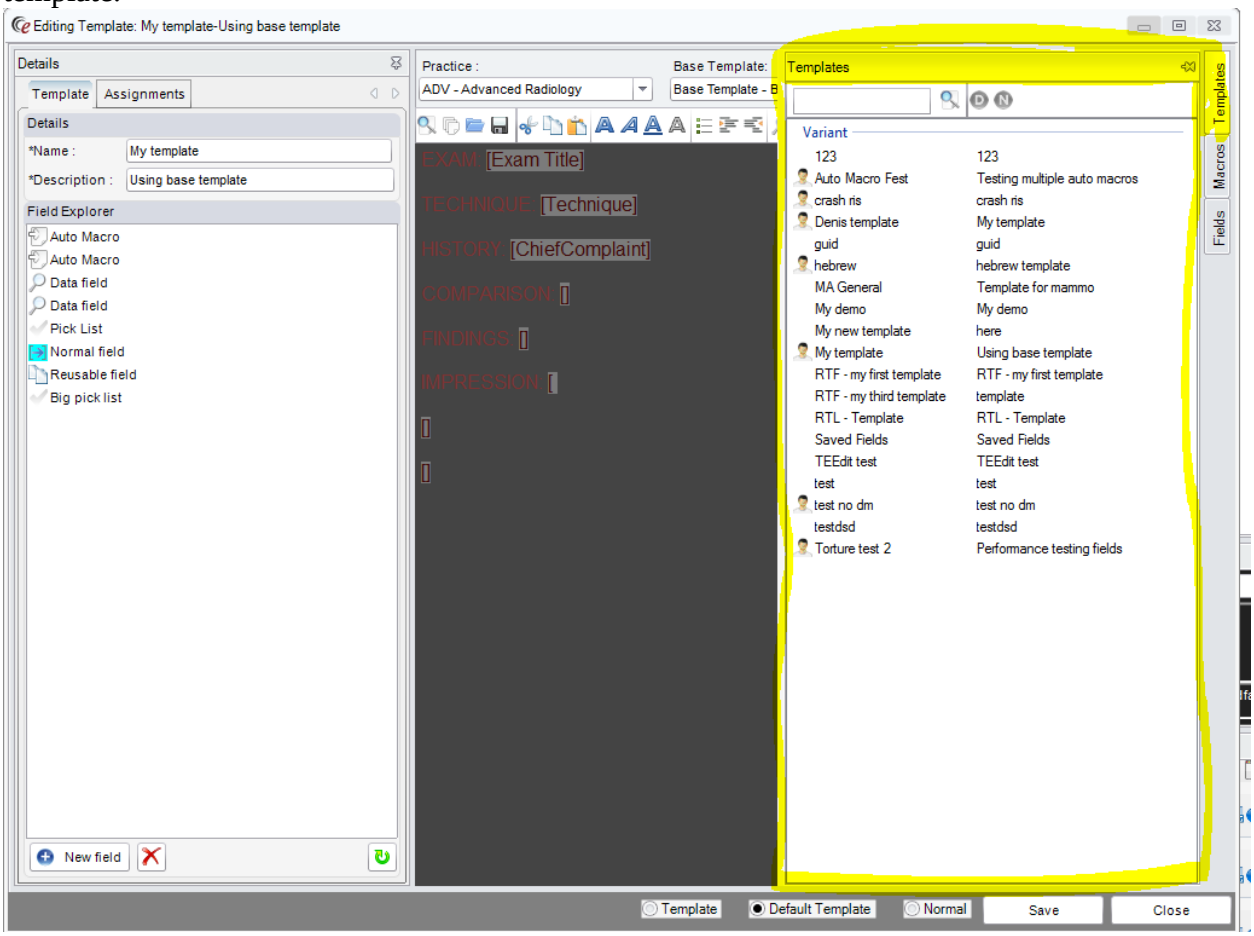

**Figure 5.102 – Inserting existing template into new template**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## General Reporting – Support Pick Lists in Report Editor

We created a new field type called pick list. This option will be available when creating a new field. The field can be named and will show in the field editor as this name.
Users can add option to the pick list type of field and set the following properties on the pick list option.

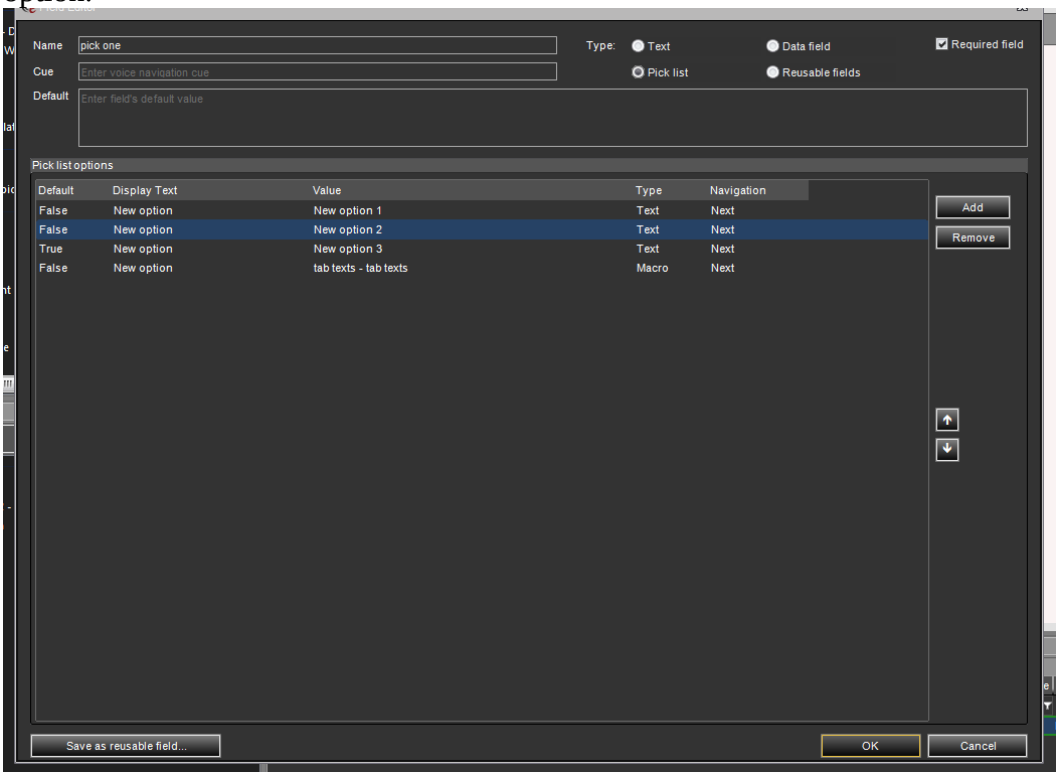

**Figure 5.103 – Pick lists**

**Default** – this will determine if the option will be inserted by default when the pick list is first loaded. This default option will be highlighted when the cursor is located in the field.
**Display Text** – this column will be what the users see in the first column of the "Pick list options" in the "Fields" tool window. Meant to be a short descript name.
**Value** – this column will be one of two scenarios.

- **Type** = "Text" we will simply put this text directly into the field as text.
- **Type** = "Macro" we will try to locate a macro matching on the text entered into the value column. If the macro is not found we will indicate to the user as we do similar to xKeys insertion.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**Type** – this column will drive the previous value setting. The default for this option is "Text". There are only two options currently "Macro" and "Text".
**Navigation** – this column will determine where the cursor and selection is placed after selected the option. It is a drop down with the following options.

- "Next" – default option will move to the next valid field in the report. Similar to click the next field on the speech mike or shortcut
- "None" – will not do any additional navigation after option selection
- "Previous" – navigate to the previous field

We have the ability to remove an add items in the pick list.
We have the ability to sort the options which is how they will display to the user when creating reports.

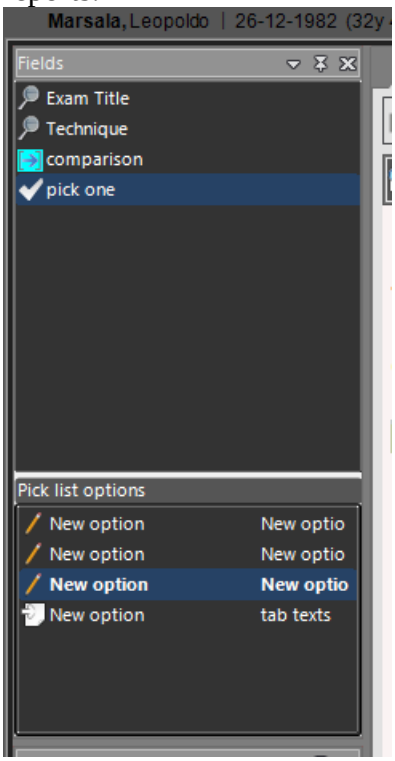

**Figure 5.104 – Adding and removing from pick list**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## General Reporting – Technologist Name as Report Field

We added a new custom field that can be mapped into the diagnostic report that will contain the performing technologist if available.

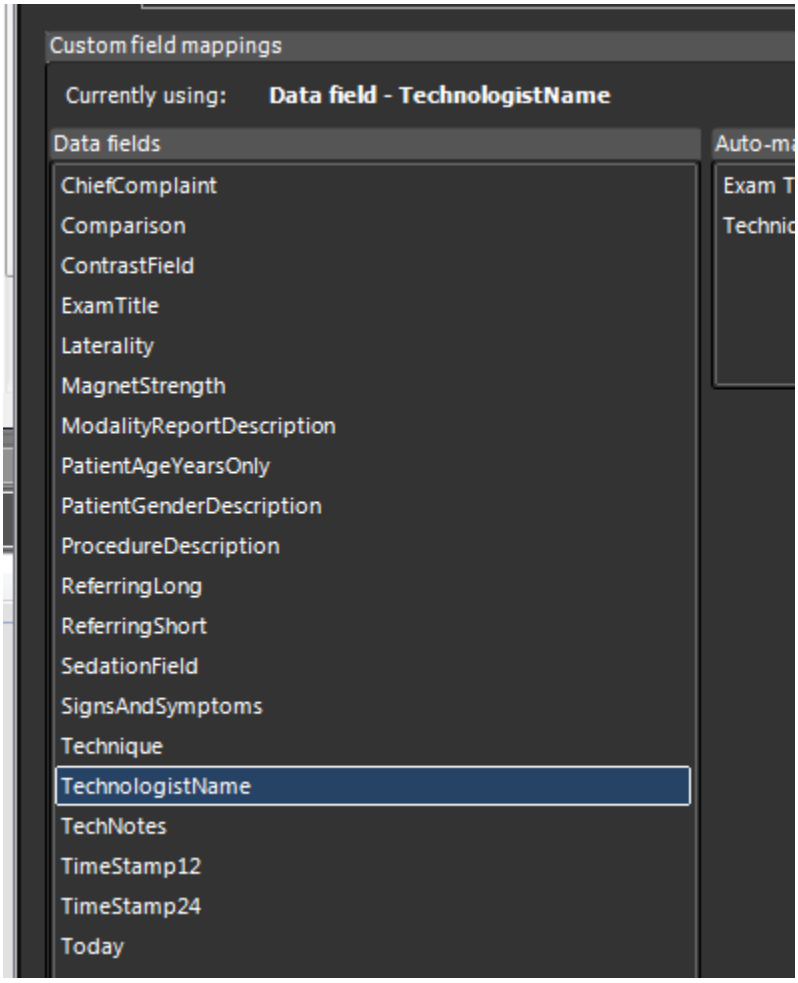

**Figure 5.105 – Tech name as custom field**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## General Reporting – Support DEXA Reporting

Persistence of DEXA values is done in the eRAD RIS database in the c_study_item_dexa table. There will be one row per study item in this table. Typically one row per study until the system supports multiple study items per study.

Loading these DEXA values into the diagnostic reports is done via the template/macro manager tool. In this tool fields can be added and then mapped to the specific DEXA value(s). Current DEXA study values map the field directly to the c_study_item_dexa table. For previous DEXA study values map the field to the c_study_item_dexa_previous table.

Note that we populate the previous dexa table based on performed end date. This will also populate for unsigned studies as it was a performed DEXA exam.

Allowing technologists to create the report prior to the radiologist opening will be addressed in Build 45.1.

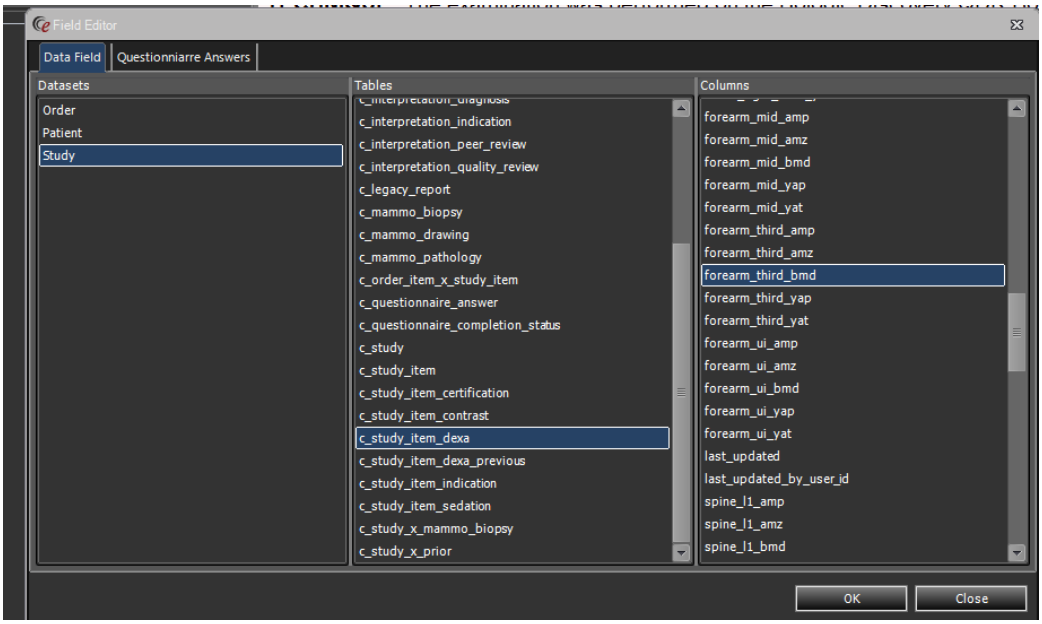

**Figure 5.106 – Support for DEXA reporting**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## General Reporting – Zip Code Added to Signed Reports

The reading location zip code has been requested to be displayed in the report. The zip code is of the reading radiologist is captured in the County Selector or Chair Selector windows.
Chair Selector is enabled in the Practice table, where the County Selector is enabled with the System Configuration setting of "**EnforceCountySelection**" with a default of False.

A new System Configuration setting has been added titled "**EnforceZipcodeSelection**" which has a default of False.

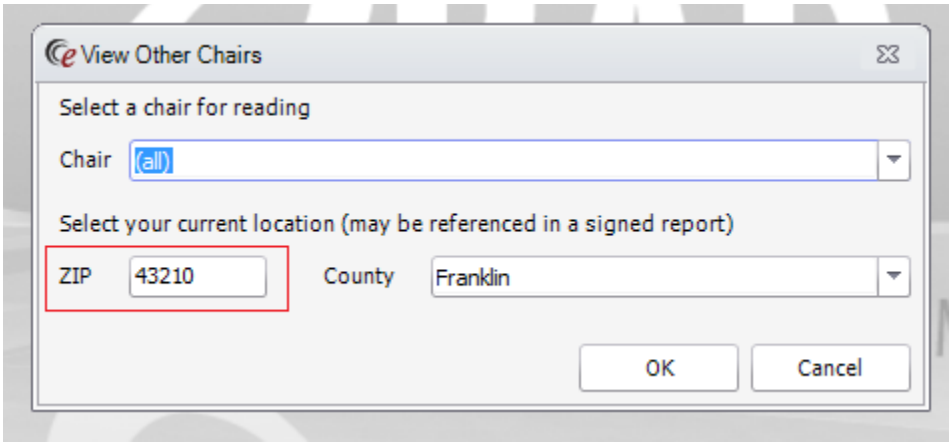

**Figure 5.107 – ZIP for report and can be a required field now**

When the setting is turned on, the user must enter a zip code before reports can be signed. The selected zip code will then be saved when the report is signed.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## General Reporting – Restrict Exam Dictation to Associated Practice Only

We now check the practice code of the study and validate if the radiologist is associated to that practice. If not associated the dictate and sign button will be disabled.

Worklists needed to include the practice code column so the appropriateness checks would function properly. This was mainly a change in the worklist views with the addition of a store procedure used to get the My Signed By Date WL.

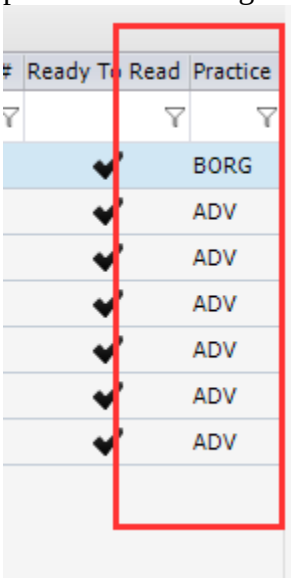

**Figure 5.108 – Practice column**

If using the feature "Report on accession number" (inbound reporting) we check the practice code while opening the dictation screen and indicate to the user they do not have rights to open the study.

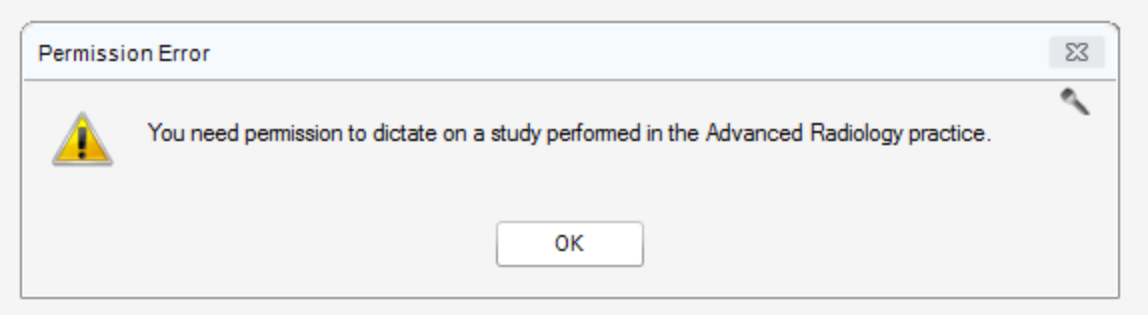

**Figure 5.109 – Message informing cannot dictate because not assigned to practice**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## General Reporting – Show Only Assigned Studies on My Pending Dictation

The Pending Dictation (My) WL in eRAD RIS returns all studies assigned to the logged in user and studies not assigned to anyone.

We added a new practice level setting "Show unassigned studies on Pending Dictation WL". This new setting is default to true (Y) which will replicate pre-existing WL functionality.

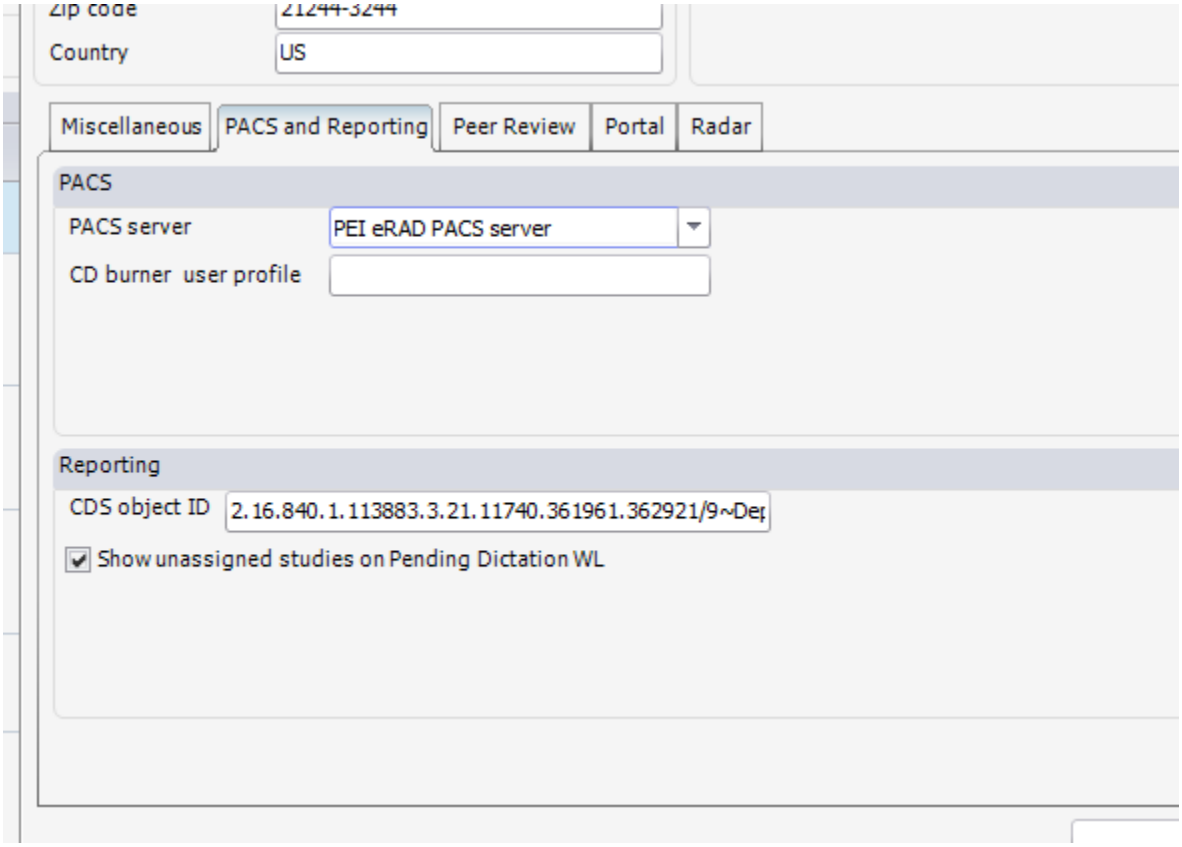

**Figure 5.110 – Preference on practice to show/hide unassigned studies on Pending Dictation**

If the practice chooses not to include unassigned studies on the Pending Dictation WL they can turn this setting off.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## General Reporting – Assign Radiologist to Procedure Code Group

A new lookup table of ReadingGroup has been created and resides under the Procedure directory of the Configure menu.

We created a new custom editor to maintain this feature, it allows to see users/reading groups and procedures all on one screen with the ability to add/remove users and procedures from reading groups as well as creating and deleting reading groups.

The editor will open up as follows, it will list the reading groups in the top left grid, with the user assignments grid bellow, and the procedures on the right.

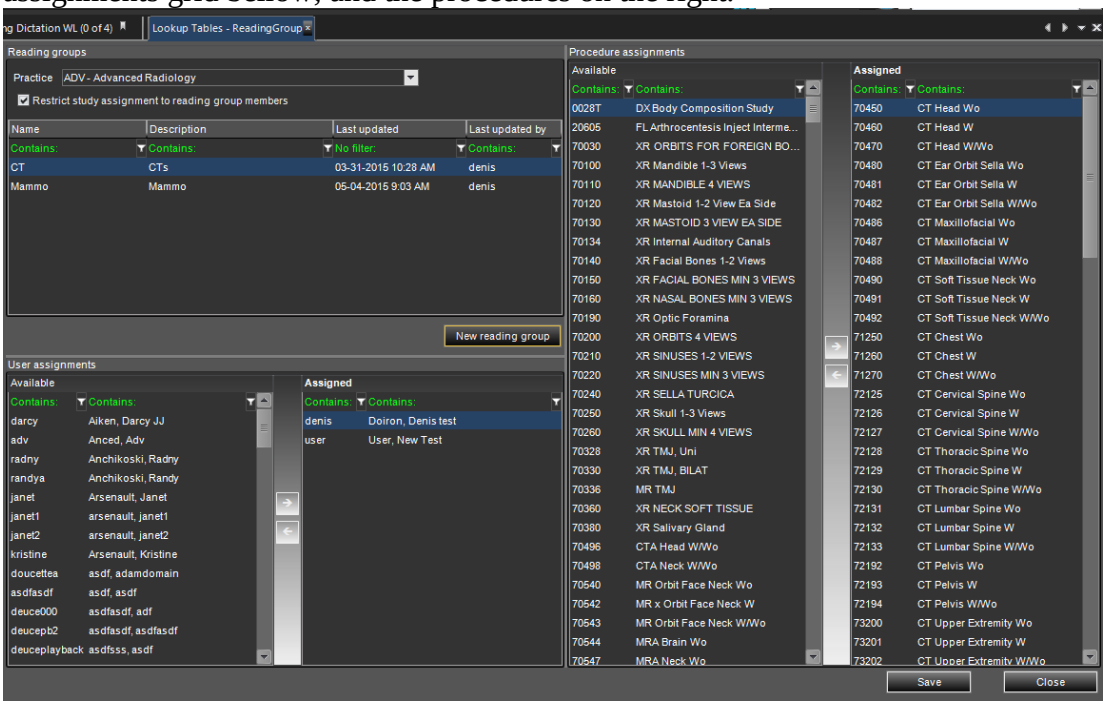

**Figure 5.111 – Reading Group lookup table**

When they choose to create a new reading group, they click the “New” button and a popup form will show asking for the name and the description of the reading group. These fields have validation and the “OK” button will only enable when they pass validation. Hovering over the red exlamation mark will provide information on why it isn’t passing validation.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

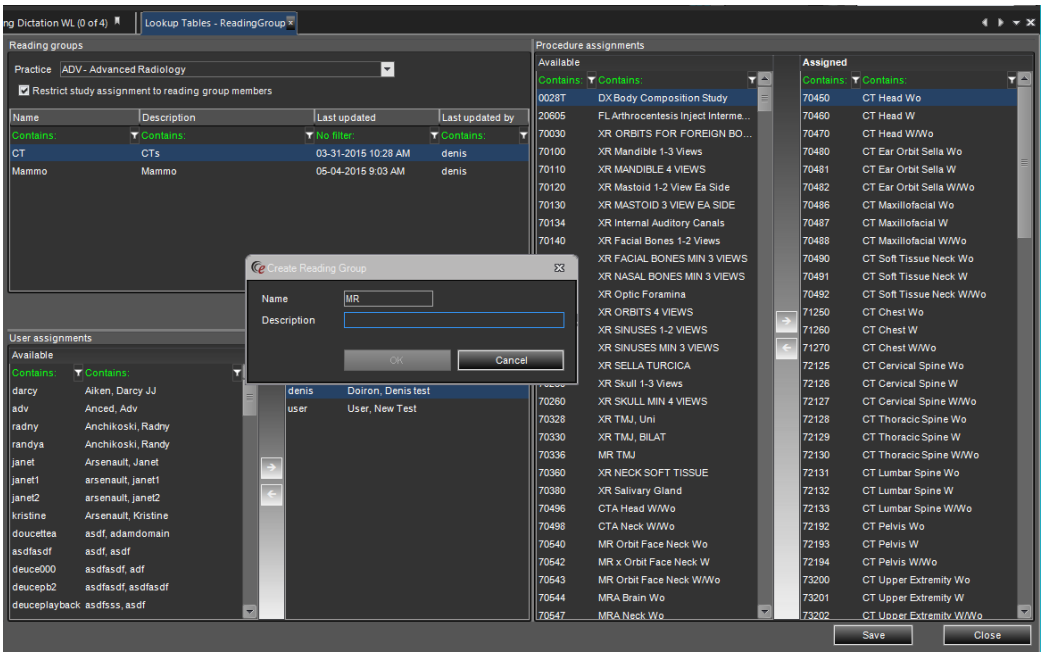

**Figure 5.112 – Reading Group**

The assignments areas are 2 separate grids, one showing the available items, and the other showing the selected items for this reading group. The user then moves item between them either by double clicking items, or using the arrow button between the grids until he/she is happy with the assignments. The user can create or modify multiple reading groups then click “Save” to commit changes to the database.

Users can be assigned to as many reading groups as desired, but procedures can only be assigned to 1 reading group per practice. Once a procedure is assigned to a reading group, it will no longer be in the available list for any other reading groups in that practice.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

From this screen we can also control which practice will limit radiologist assignments to members of appropriate reading groups. This is controlled with the checkmark under the practice selection control.

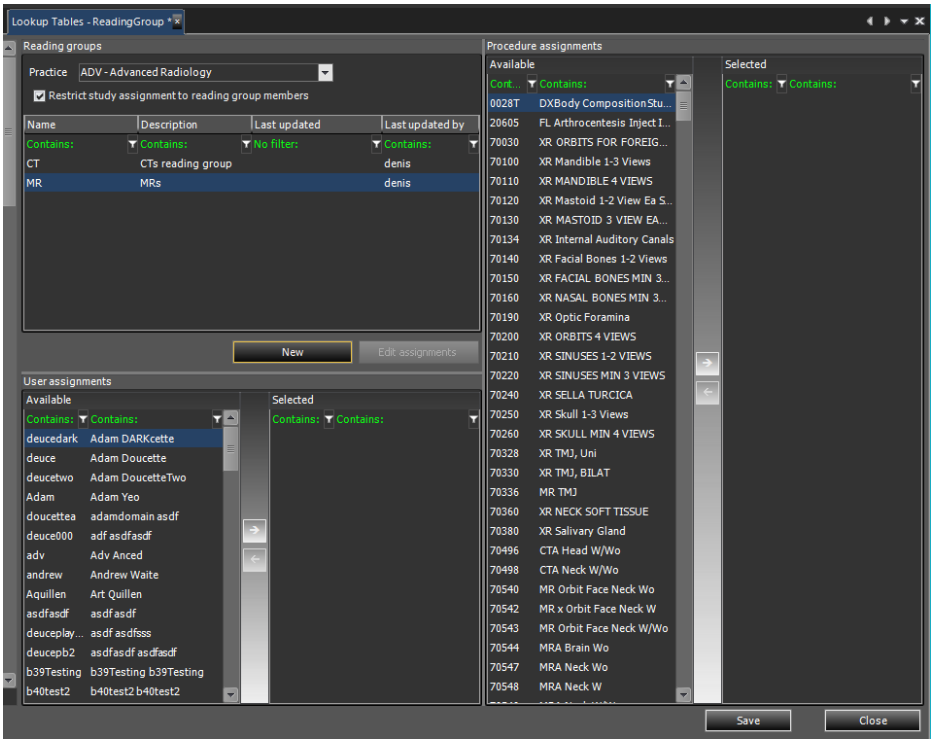

**Figure 5.113 – Reading Group lookup table**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

This is also available to be configured in the “Add/Edit Practice” screen under the “PACS and Reporting” tab.

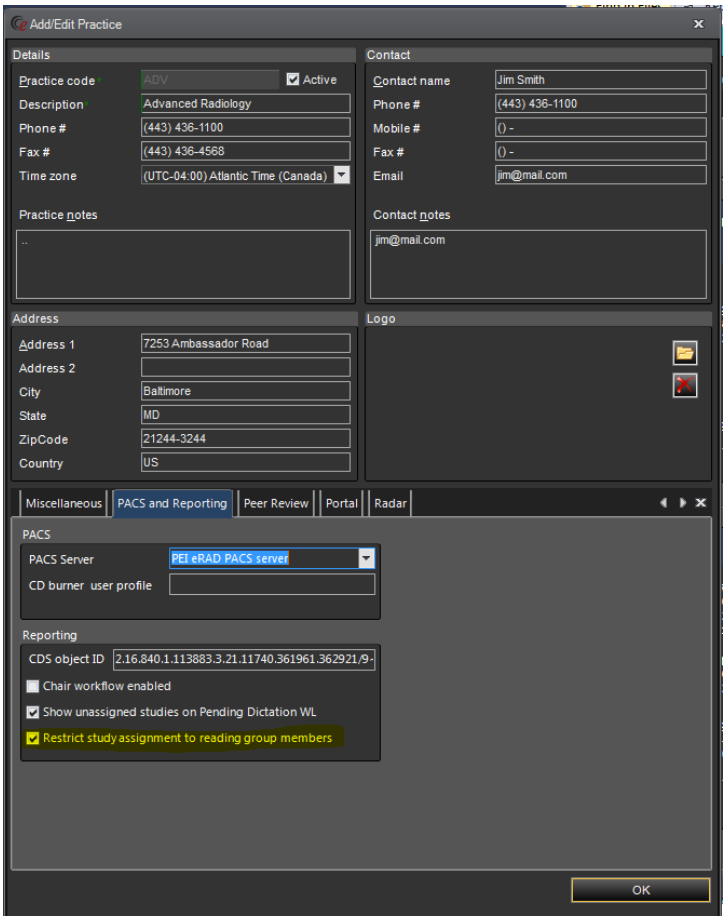

**Figure 5.114 – Preference on practice for reading group**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Users can also be assigned to reading groups in the personnel editor. Similar to how we assign user groups and schedule groups.

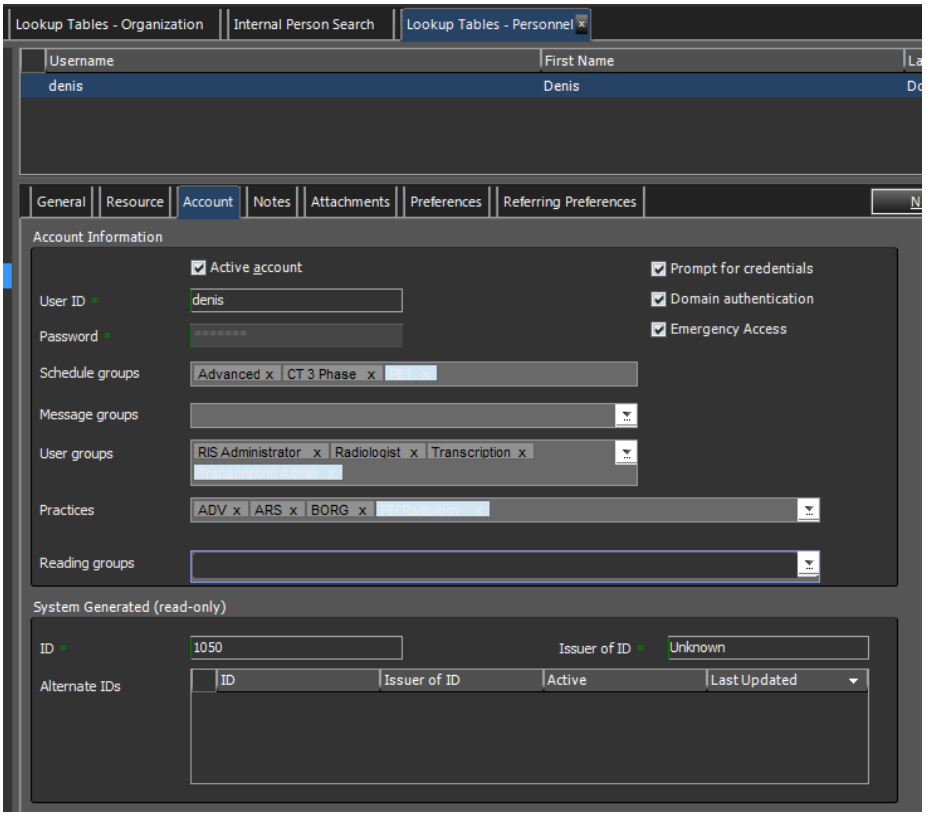

**Figure 5.115 – Assigning Reading Groups in Personnel Editor**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

When the practice is set to "Restrict study assignments to reading group members" we will filter our "Assign to radiologist" dialog to limit the list of users to the currently assigned users or users that are part of all the reading groups of the selected studies. If we are assigning multiple studies as once, the users in the list will be the ones that are allowed to read all cases.

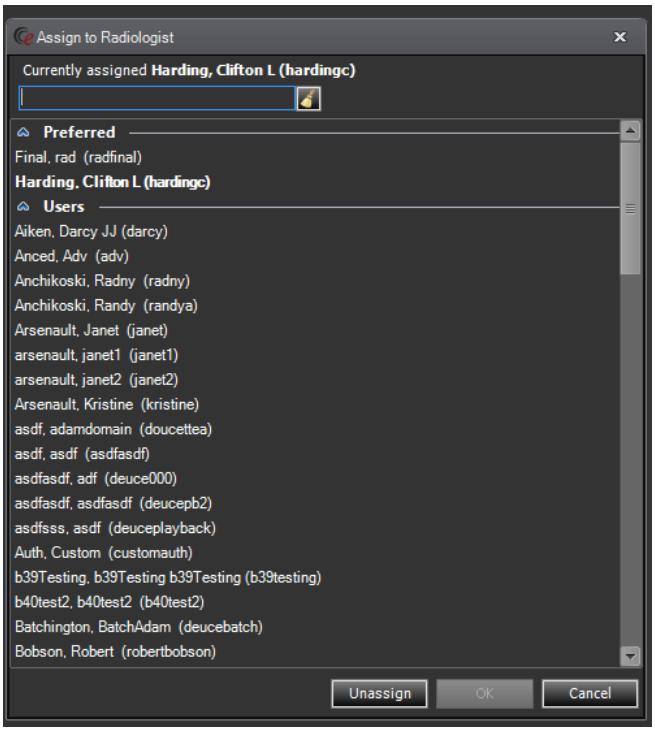

**Figure 5.116 – Assign Radiologist filtered by Reading Group**

A new column has also been added to the work lists. The Reading Group Column will display the Description and Name of the reading group and is available on the Patient Folder WL as well as the Radiology and Editor WL's

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## General Reporting – Elapsed Time Pending Signature

Added new column Elapsed Minutes Pending Signature renames Time Pending Signature to Elapsed Time Pending Signature.

The Elapsed Minutes Pending Signature will allow users to sort, filter and create conditional filters to highlight particular exams that exceed configurable amount of time.

**Figure 5.117 – New columns for time pending signature**

## General Reporting – Show Elapsed Suspended Time on Work Lists

We added two new columns Elapsed Time Suspended and Elapsed Minutes Suspended.

The Elapsed Time Suspended was added for consistency with existing Time Pending Signature.

The Elapsed Minutes Suspended will allow users to sort, filter and create conditional filters to highlight particular exams that exceed configurable amount of time.

Users can multi-select exams and remove the suspended flag.

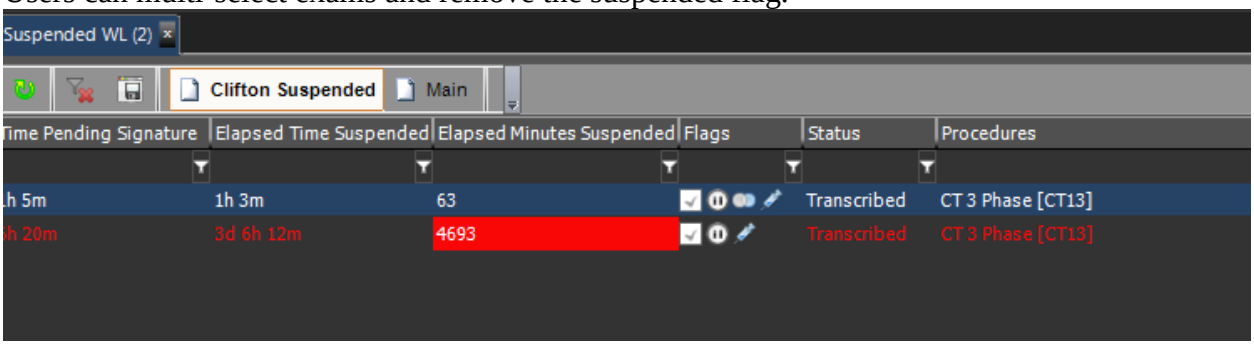

**Figure 5.118 – New columns for time suspended**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## General Reporting – Ability to Display Audit History for Peer Review

When a report was Peer Reviewed it was never captured in the Audit History. This was to hide the details so other users could not see who had Peer Reviewed others studies.

We now control visibility of the "Report Peer Reviewed" audit entries via access string of "**Clinical.AuditHistory.ShowReportPeerReviewed**" which has a default of None.

If the access string is set to "Full" the entry will be displayed. If set to anything else it will be hidden.

## Reporting MModal – Upgrade to MModal Version 7.93

We applied the new libraries provided from M*Modal in our application. This new version uses a new recognizer version (v6). To utilize and gain the benefit from this newer recognizer we must notify M*Modal so they can make backend changes to the users account.

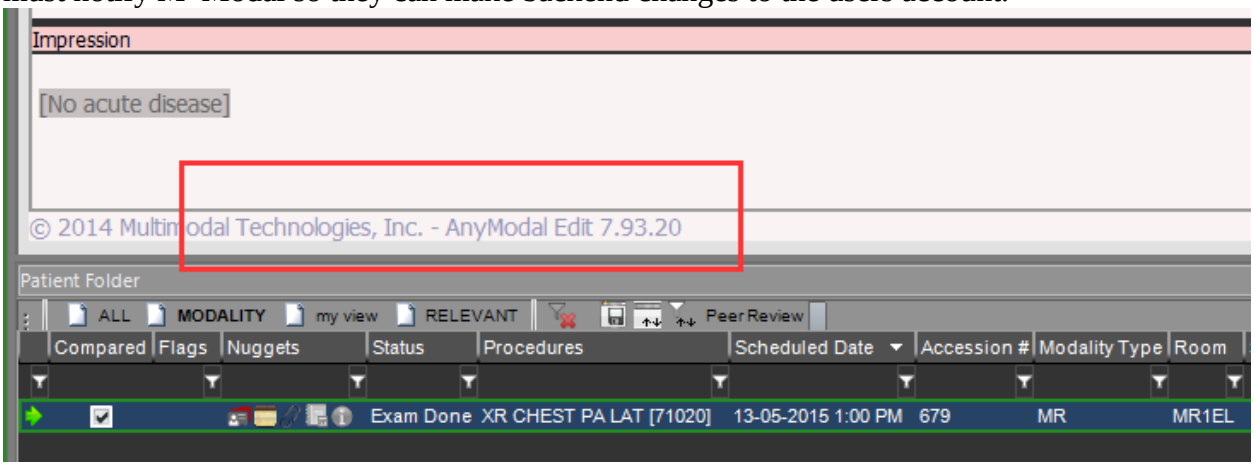

**Figure 5.119 – MModal 7.93**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Reporting PowerScribe – PowerMicII Support

We integrated the PowerMic II device by referencing the Interop.USBMgrLib.dll in the AudioLib and MainApp projects. This library exposed the needed methods and hooks for us to tie into the device button presses.

Below is a screen shot displaying all of the buttons that can be configured in eRAD RIS. Configuration options are the same as the Philips Speech Mike device.
We coded the device to support hot-swapping. You can plug and unplug on the fly and it will be recognized with a message.

If another system is using the Power Mic II as an input device you can set the buttons in eRAD RIS to do "Nothing" so it doesn't conflict with the other application.

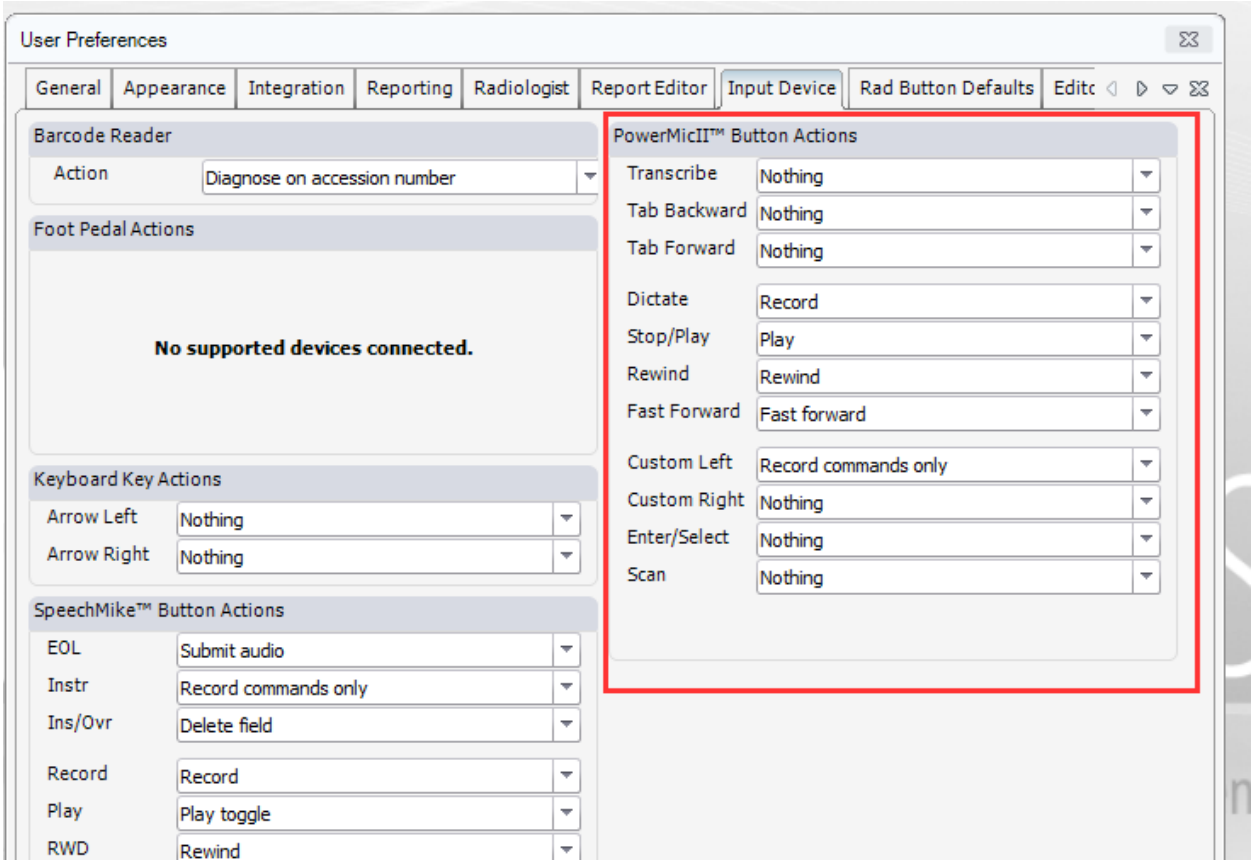

**Figure 5.120 – PowerMic button assignments mapped via user preferences**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Document Distribution – Save Patient Preference for Report Distribution

The patient preference for report distribution will be saved in the order table in a new column of patient_report_delivery_preference. This feature will not be mapped to any screens in RIS, but simply a place in the system to store the data to receive from and/or pass to external systems.

## Document Distribution – Active Printer Synchronization

The DD now starts a task for the queue poller then loops every 10 seconds to poll for new/changed printers each iteration.

If it finds a new printer that is also in the lookup, it will start the worklist worker for this printer. If it finds a printer that is not in the lookup but is currently being worked it will stop the worker. If it finds a printer that no longer has *Keep Printed Documents* turned on then it will stop the worker.

## Document Distribution – Verify Printer's Keep Printed Documents Setting

We now check to make sure the printer has the Keep Printed Documents checked box checked before we submit jobs to it. If it does not, then it will print an error message indicating that printer does not have this setting and will not add it to the list of printers for which is submits jobs. An error message will be printed to the console to indicate that this printer does not have the *Keep Printed Documents* setting on.

Submitting a print job for this printer will now result in the job staying in Pending status.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Document Distribution – Jobs Created When Transaction Fails

All jobs now roll back if any portion of the work of processing the jobs fails to complete. Instead of processing the queue item in one transaction, it is now done in three steps each having its own transaction logic.

The first step involves a database transaction where the action queue row will have its available date time temporarily set to a future date to act as a reservation time period so no other program pulling from this queue can get the same job. This period is based on the database time and a configurable reservation time in the applicationsettings.config file.

The second step is where the actual business logic takes place. This may or may not be done within a transaction, depending on the needs of the program using the queue. The DDE uses a transaction for this step but the Wedge which uses the same code does not.
The third step is within another database transaction and either deletes the action queue row if it was successfully processed or updates it if it was not.

The three step approach has been applied to processing c_action_queue rows one at a time as well as to the strategy of processing all rows grouped by the action_data_key values of their corresponding c_action rows.

Added new settings in the applicationsetting.config file for DDE Service for:
QueueItemReserveTime – This setting determines how long the Wedge will reserve a queue item.
DDEQueueItemReserveTime – This setting determines how long the DDE will reserve a queue item.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Document Distribution – EMR Distribution Jobs Validity Check

EMR distribution jobs should go to error status in the following cases:

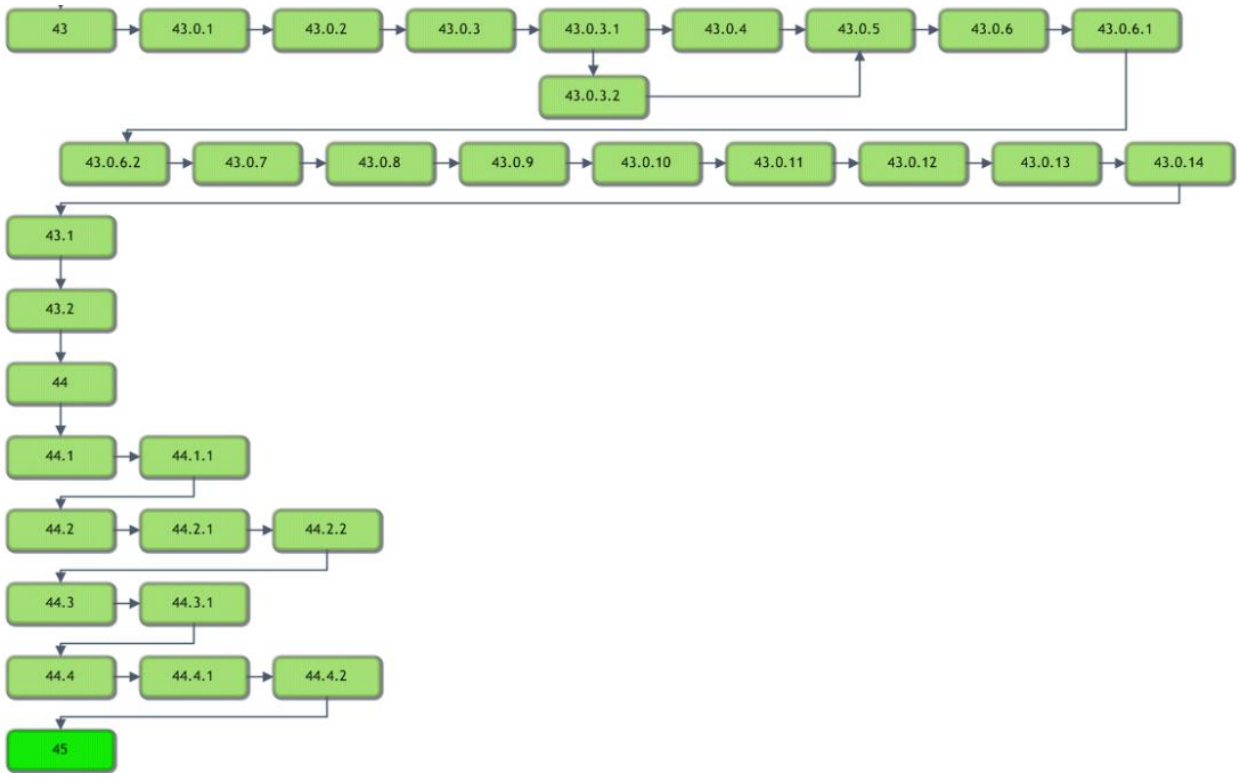
1) The job is related to an EMR order that has multiple studies associated to it and the EMR does not have functionality to account for it.
2) The job is for an order with no placer order number but is destined for an EMR that does not support unsolicited reports.

There were two new columns added to the EMR lookup table to denote the ability of the EMR to accept reports for these cases.

- supports_unsolicited_reports_flag
- supports_multiple_reports_flag

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 6. Code Stream



**Legend:**

Light Green = Released software

Gray = Will not be released

Bright Green = Current Release

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 7. RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|
| 43 | - | 2.43.0.0.23715(3GB) | 2.43.0.0.23171 | 2.43.0.0.23715 | 2.43.0.0.23743 | Full Version Release |

# 8. Resolved Defects

Bugs Suggested Features and Support Issues resolved in build 2.45. The extract is taken from Redmine bug tracking system and only displays defects resolved in 2.45.

| Bug # | Priority | Subject | Category | Found Version |
|---|---|---|---|---|
| 8612 | Immediate | DB data dictionary was not being created in B44 or dev branch | DB | 2.44 |
| 9506 | Urgent | view c_frm_reminder_letter missing a status in its filter | DB | 2.43.1 |
| 9355 | Urgent | Possible to set site code for outside reads to null via IVT. ***Study will disappear from patient folder. | DB | 2.43.1 |
| 9205 | Urgent | IVT WL queries are terribly slow for a 3 Radnet data centers | IVT / Precert | 2.43 |
| 8555 | Urgent | Laterality for scheduled procedure is not being initialized as expected. | Scheduling | 43.1 |
| 8411 | Urgent | Patient Name to be included in Email message to RADAR | Document Distribution | 2.43.1 |
| 9619 | High | Collection was modified error related to worklist views | Radiology Reporting | 2.43.1 |
| 9531 | High | Error arriving studies from same order | Reception | 2.44.2 |
| 9514 | High | AppointmentBook is showing cancelled studies | Scheduling | 2.44.2 |
| 9347 | High | Contrast - Perform Exam on non-contrast and contrast study copying contrast/billing codes to non-contrast study | Technologist | 2.44.1 |
| 9334 | High | Scheduling - Body part list is not filtered down when possible list of values exists | Scheduling | 2.44 |
| 9282 | High | Details result set dates are not correct, versus the review tab and timeslot search | Scheduling | 2.43 |
| 9232 | High | Contrast - Perform Exam - CT dose changing while starting exam with multiple studies from same order | Technologist | 2.44.1 |
| 9021 | High | Adding Alternate MRN error in message | Patient Folder | 2.43.1 |
| 8763 | High | QA flag is not removed after verifying edit | Radiology Reporting | 2.44 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 8762 | High | All signed pending QA context menu option for verify edits doesn't open proper action and report can be released | Radiology Reporting | 2.44 |
| 8460 | High | Insurance Eligibility - Copay is asked for when billing codes are configured with "Allow amount to collect with Valid Insurance" set to 'N'. | Insurance Eligibility | 43.1 |
| 8404 | High | New Walkin Button from Patient Search results does not trigger the existing orders prompt | Reception | 2.44 |
| 8132 | High | Marketing - Monthly Variance Report performance issue | Mgt Reports | 2.43.0.14 |
| 8066 | High | MQSA Location Summary Group By BI-RADS - Calculation error | Mgt Reports | 43.0.12 |
| 7837 | High | c_frm_core_view - update view | User Views | 2.43.0.6 |
| 7730 | High | MQSA Location Summary Group By BI-RADS - times out on large installations | Web Services/DB | 2.43.0.6 |
| 6929 | High | Log text box control should display UserID - not a combination of lastname + first initial | All Workflows | 2.42 |
| 6106 | High | error opening merge suggestions due to patient search results | Web Services/DB | 1.41 |
| 10539 | Normal | Arbitration Signed does not save on PerformExam and ViewEdit screen | Technologist | 2.44.3 |
| 9695 | Normal | Undo feature allows user to backspace date/user in notes | Logging | 2.44 |
| 9661 | Normal | Scheduling - Advanced search panel - the time field allows invalid input | Scheduling | 2.43 |
| 9607 | Normal | Login - If you attempt login with blank userid or password you get an error 500 message | Localization | 2.44 |
| 9600 | Normal | patient search is slow when search for first name with "search other variations" turned on and sounds like is used | Patient Search | 2.44.2 |
| 9536 | Normal | error changing pre-cert info on registration | Reception | 2.44.2 |
| 9520 | Normal | Scheduling - Advanced serach - First day of the week should follow the config item for first day of week. | Scheduling | 2.44 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 9482 | Normal | datamodel test case - PrimaryKeyTest() is ignoring tables that it should not be. | DB | 2.43.1 |
| 9477 | Normal | missing database index on c_eligibility_invoice.eligibility_invoice_key | Web Services/DB | 2.43.1 |
| 9469 | Normal | Insurance Eligibility - Warning entries for EligibilitySpecialCondition are not ignored when marked as inactive | Insurance Eligibility | 43.1 |
| 9442 | Normal | Access strings - some flags cannot be visually turned off for users | Admin-Other | 2.44 |
| 9440 | Normal | Template/macro lookup editor shows user names and dates in the wrong format | Radiology Reporting | 2.41 |
| 9367 | Normal | View/Edit - Outside Reads throws error on opening View/Edit. | View Edit | 2.44 |
| 9288 | Normal | a db sql job was causing locks and resulting in slow screen loads | Mammography | 2.43.1 |
| 9285 | Normal | Chair selector - Cancel is not enabled when logging into the application. | Radiology Reporting | 2.43 |
| 9264 | Normal | Color Dialog boxes not persisting custom colors | UI Look and feel | 2.4 |
| 9246 | Normal | CA - job to call c_SummaryMaster failed | DB | 2.43.1 |
| 9234 | Normal | db upgrade scripts will not work if there user supplied credentials | DB | 2.44 |
| 9233 | Normal | Contrast - Changing performed procedure in Perform Exam keeps contrasts but removes their billing codes | Technologist | 2.44.1 |
| 9221 | Normal | Unable to make contrast not required for techs without affecting MU contrast alerts | Technologist | 2.44 |
| 9220 | Normal | ICode expiration date is currently hard codes to 5 days needs to be changed | Connect Patient Portal 1.x | 2.44 |
| 9219 | Normal | MU - Generating of the Icode code needs to be expanded to generate the Icode code at Check-In Status | Meaningful Use | 2.43 |
| 9177 | Normal | RIS DB scheduled jobs should run as a non active directory user. | DB | 2.43.1 |
| 9094 | Normal | Cannot access a disposed object. Object name: 'MainShell'. When exiting application. | Radiology Reporting | 2.44 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 9019 | Normal | Activation issue when using next workflow in dictation screen with reuse on. | Radiology Reporting | 2.44 |
| 9017 | Normal | Collection was modified error on application exit when using Minimized to tray. | Embedded Reporting | 1.39 |
| 9014 | Normal | Preferred Site (c_orderRow.filler_site_code) isn't required when saving an order through "Schedule Later" | Scheduling | 2.44.1 |
| 9013 | Normal | Preferred Site (c_orderRow.filler_site_code) not auto-populating on Scheduling/Walk-ins | Scheduling | 2.44.1 |
| 9000 | Normal | Personnel - Entering password and changing back to the password field later gives "Cannot reuse one of the users last 3 passwords" message. | Person Management | 2.44 |
| 8996 | Normal | Personnel - Unknown NPI and Registered in PECOS checkbox unchecking themselves in certain scenarios. | Person Management | 2.44 |
| 8989 | Normal | Volume level is very high during playback of dications. | Radiology Reporting | 44 |
| 8766 | Normal | Report History Icon - Study Info panel is always empty. | Radiology Reporting | 2.44 |
| 8757 | Normal | Report History - Error on reports drafted that are Batch and Edited by System as long as it's not an addendum | Radiology Reporting | 2.44 |
| 8702 | Normal | Contrast - Amount value is getting reset back to the default when clicking the start button. | Technologist | 2.44 |
| 8676 | Normal | procedure c_UpdateSalesSummary fails when c_study._site_code is null | DB | 2.43.1 |
| 8661 | Normal | precert query that executes thousands of times in large data centers that could be improved with an index | DB | 2.43.1 |
| 8648 | Normal | CDS Console Management menu option should be available regardless of users reporting mode | Radiology Reporting | 2.42.1 |
| 8571 | Normal | Add alternate MRN is using Issuer Code and Responsible Party is using Description from Issuer table | UI Look and feel | 2.44 |
| 8527 | Normal | Error when trying to create a new template for dictation | Radiology Reporting | 2.44 |
| 8511 | Normal | Payment screen:  Last 4 digits of credit card number error and mask are not intuitive. | Payment control | 2.44 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 8470 | Normal | When the PACSIntegration.Override is set to None, get error when you log into RIS | PACS (eRAD) Int - RIS only | 2.44 |
| 8455 | Normal | Error produced if contrast amount is deleted and then the Start or Complete button is selected. | Technologist | 2.44 |
| 8416 | Normal | Connect referring portal is not display quick launch icon | Connect Referring Portal 3.x | 2.43 |
| 8379 | Normal | Title of a Peer Review Report and the title from the folder do not match | Mgt Reports | 2.44 |
| 8378 | Normal | Peer Review Reports are not displaying today's data unless tomorrows date is included in the date range | Mgt Reports | 2.44 |
| 8302 | Normal | Assigned Radiologist is not recoginized as assigned in the Assign to Radiologist window | Radiology Reporting | 2.44 |
| 8301 | Normal | GetExamCountsByChair takes a rather long time to execute | Radiology Reporting | 2.43 |
| 8282 | Normal | Dictation Control - Form that is already visibile cannot be displayed as a modal dialog box. | Radiology Reporting | 2.44 |
| 8184 | Normal | BulkWritable columns operations fails in patient folder if there is an order that is not scheduled in the patient's folder | Patient Folder | 44 |
| 8062 | Normal | IVT Turnaround Report Failing | Mgt Reports | 43.0.14 |
| 8005 | Normal | Radiologist reading location - user prompted twice | Radiology Reporting | 43.0.12 |
| 7995 | Normal | County Selection - DB upgrade issue | DB | 43.0.12 |
| 7977 | Normal | Carrier - Performance issue saving lookup table | Insurance Managment | 43.0.12 |
| 7845 | Normal | Floating windows in reporting cannot be made smaller after opening a reporting screen. | Radiology Reporting | 2.43 |
| 7824 | Normal | Person search - Unknown gender is confusing with unknown referring | Web Services/DB | 2.42 |
| 7792 | Normal | Management Reports - No Date Range displayed on 'Carriers Not Using Insurance Eligibility' report | Mgt Reports | 2.43.08 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 7784 | Normal | Adminsitration - Conditional Tab - exception possible after clearing value | Questionnaire | 2.43.1 |
| 7675 | Normal | Need to alter the varchar(5000) fields to varchar(max) | DB | 2.43 |
| 7576 | Normal | Patients from an Electronic Order are not searchable from the Walk-In screen | Reception | 2.43 |
| 7188 | Normal | County selection screen requires user to click or tab to county field. | UI Look and feel | 2.43 |
| 7171 | Normal | Workflow issue saving order when specfying scanned document at exam level | Scanning | 2.42 |
| 7096 | Normal | Reschedule reason drop down lookup lists - Not ordered correctly | Infrastructure | 2.41 |
| 6360 | Normal | The advanced search icon is small, and needs a hover text to ensure clarity of it's purpose. | Scheduling | 1.42 |
| 5527 | Normal | Reporting - Support for IE10 | Embedded Reporting | 1.4 |
| 2935 | Normal | New Appointment button is available to users who don't have rights to create new appointment | Scheduling | 1.39.001 |
| 1963 | Normal | Scheduling summary screen overlaps windows taskbar. | Thick Client GUI | 1.37 |
| 1339 | Normal | Column chooser appears to have hidden column names available | UI Look and feel | 1.36 |
| 8604 | Low | Race not auto-populating from Confirmation window | UI Look and feel | 2.44 |
| 8577 | Low | Family History not auto-populating in Edit Billing window (BEWL) | UI Look and feel | 2.44 |
| 8564 | Low | Note to radiologist, the acknowledgment warning has a spelling mistake "actionning" should only have 1 n "actioning" | Radiology Reporting | 2.44 |
| 8545 | Low | When an exam is aborted by a tech in the perform exam window, it is removed from the PACS WL, it can be set back to started then completed (exam done) but the exam is not recreated in PACS. | PACS (eRAD) Integration | 2.44 |
| 8248 | Low | Improper english in eRAD RIS warning message. | Thick Client GUI | 2.44 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | | |
|---|---|---|---|---|
| 7951 | Low | Unused system config setting for LookupTableIndexTimeToLiveMinutes should be removed | Web Services/DB | 2.43.0.12 |
| 6978 | Low | Message box - poor wording | UI Look and feel | 2.43 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 9. Known Limitations

The following are Bugs Suggested Features and Support Issues found in build 2.45. Bugs reported in previous versions are not captured as Known Limitation in this document.

| # | Status | Priority | Subject |
|---|---|---|---|
| 10568 | In Progress | Urgent | Memory leaks present and memory usage climbing very quickly. |
| 10912 | New | High | EMR with new MRN grid |
| 10910 | New | High | Unable to match EMR patient to internal patient (Duplicate MRN message) |
| 10897 | New | High | Linked Reports - linked_id column should be default of null instead of 0 |
| 10846 | New | High | Questionnaire - Checkboxes cannot save Y and N values |
| 10844 | New | High | Questionnaire - Hebrew questionnaires opened in a browser RTL issue with Save/Finish/Next Page/Previous Page buttons |
| 10840 | New | High | Duplicate MRN issue when using the New Patient button from data window or from patient search |
| 10825 | New | High | Hidden answers are saved as though they were visible |
| 10767 | New | High | M*Modal Interactive Dictionary color problem |
| 10760 | New | High | Walk-In - Existing Orders window showing on Checking In |
| 10712 | New | High | apparent memory leak in user preferences screen |
| 10620 | New | High | Editing pick list option values and hitting enter while cell is in edit mode causes issues |
| 10560 | New | High | Schedule - Able to schedule without a room selected causing exception |
| 8994 | In Progress | High | ris.exe crashes on exit on Windows Server 2012 |
| 10926 | New | Normal | New Reading Group lookup table is missing access string |
| 10924 | New | Normal | Addendum request's assign to rad dropdown does not show *Preferred rads |
| 10922 | New | Normal | Unable to assign to radiologist from the work list for addendums |
| 10920 | New | Normal | Next - Previous navigation - keyboard action- Selecting Previous field or section causes an error when using eRAD editor. |
| 10919 | New | Normal | Change font size feature does not change the size in the menus |
| 10918 | New | Normal | When in the dictation window and using the Next - Previous navigation, hover icon says 'Previous field' |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| | | | regardless if using Next or Previous |
| 10917 | New | Normal | Technologist verified ID is required but not showing any indication that is it. |
| 10916 | New | Normal | Rename column in modality lookup to avoid confusion |
| 10915 | New | Normal | EMR orders missing Contacts/Demographics information |
| 10914 | New | Normal | Error when trying to save an incomplete insurance policy if there is an existing expired policy that is "not shown" |
| 10911 | New | Normal | MRN - Error on hover on empty issuer |
| 10905 | New | Normal | The RIS Icon when launched via Citrix is an 'R' |
| 10900 | New | Normal | When launching RIS via Citrix, default for PACS is Hologic |
| 10899 | New | Normal | Preferred rad - Display order the same on multiple items |
| 10898 | New | Normal | Preferred Rad - Inactive rads can be added to the list |
| 10896 | New | Normal | Open Patient Tab limitation setting is exceeded when Reuse Reporting Screen is checked. |
| 10892 | New | Normal | error when opening context menu from dataset visualizer |
| 10889 | New | Normal | System Config ShowDOBCalendar=False doesn't apply to IVT window |
| 10887 | New | Normal | Dictation files save to external location, when they cannot be found in the Gui the Load Audio button is displayed once then the dictation controls are accessible |
| 10885 | New | Normal | eRAD Report Editor - Clicking/drag dropping is copying selection of text within report |
| 10882 | New | Normal | Visibility Framework - Most fields cannot be set to read-only on Contacts/Demographics tab |
| 10879 | New | Normal | Visibility Framework - Including a study on Perform Exam re-enables read-only fields on Documentation tab |
| 10878 | New | Normal | Visibility Framework - Some fields cannot be set to read-only/hidden |
| 10858 | New | Normal | Validation Framework - Audit History errors in Event Viewer on null value for condition |
| 10857 | New | Normal | Report history ICON missing from toolbar in reporting window |
| 10856 | New | Normal | Reporting - (Hebrew RIS) Copy button on Reporting panes includes \t |
| 10853 | New | Normal | Peer review - skip and continue does not work |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 10850 | In Progress | Normal | Ability to arrange pages in the questionnaire |
| 10848 | New | Normal | Ability to set the display order for conditional tabs |
| 10836 | New | Normal | Questionnaire - Unable to save blank/null entries for dropdowns that are tied to DB fields |
| 10829 | New | Normal | Polling queue next workflow will try to open interpretation types that the user doesn't have access to |
| 10828 | New | Normal | Tabs on the All Suspended WL should state which WL, ie Rad or Editor |
| 10821 | New | Normal | When using the New Walk-In and New Appointment from patient search if the patient has existing orders the existing orders popup is incorrect |
| 10820 | New | Normal | Unable to remove dates in a date field. |
| 10818 | New | Normal | Object reference error when moving mouse over MRN in the MRN grid when the issuer is not one of the issuer's listed in the l_issuer table (EMR MRN) |
| 10817 | New | Normal | Issuer does not show up for MRN's from EMR's if the issuer is not in the l_issuer table |
| 10813 | New | Normal | Rulesets are evaluated in design mode |
| 10792 | New | Normal | When saving a scheduling availability template, the template selection should remain on that template |
| 10789 | New | Normal | Image Request - not repopulating the location value |
| 10786 | New | Normal | Image request form - phone number - Appears to not populate when only 1 address for the referring |
| 10784 | New | Normal | Action Container should not contain c_primary_interpretation node. |
| 10783 | New | Normal | Order notes on MU tab needs to take into account Order X |
| 10782 | New | Normal | Attached Documents window should have the Minimize option disabled |
| 10775 | New | Normal | Personnel - Modifying Additional Resources doesn't recognize changes after intial save |
| 10763 | New | Normal | Walk-In - Error on Patient Search>Walk-In>Selecting Mutliple orders from Existing Orders window |
| 10761 | New | Normal | Register - MU fields not clearing validation properly |
| 10753 | New | Normal | Visibility Framework - Need a way to hide State field on Image Request window |
| 10751 | New | Normal | Questionnaire-When creating a text box the instructions "Double-click to edit" remain in the text area |
| 10749 | New | Normal | IVT WL - Referring Physician Specialty Column filtering should default to "Contains" |
| 10747 | New | Normal | Visibility Framework - Some fields have additional |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| | | | labels that can't be hidden |
| 10740 | In Progress | Normal | Reading Groups- Changes to assigned/unassigned Users and Procedures are not contributing any update to the Last updated field |
| 10720 | New | Normal | Possible SQL injection on WL queries with parameter order by |
| 10714 | New | Normal | External Scheduling Interface - Issue with GetBookingLock and Expiry |
| 10698 | New | Normal | Opening a 2nd patient folder from patient search causes an error if data nugget is opened for 1st patient. |
| 10697 | New | Normal | Questionnaire- Unable to click and drag to move a question box |
| 10686 | In Progress | Normal | Template/Macro Lookup - context menu option Export List to Excel is not working |
| 10685 | In Progress | Normal | Template/Macro Lookup - context menu export templates defaults file type to cda (xml) |
| 10676 | New | Normal | Assuta External Scheduling Interface - Issue with EndDate |
| 10670 | In Progress | Normal | ERAD Editor - when you edit an existing macro, can easily edit a field when you meant to create a new field. |
| 10666 | New | Normal | Laterality required orders can be misleading to user if there is more than one |
| 10657 | New | Normal | Perform Exam - Body part dropdown isn't filtered initially |
| 10654 | New | Normal | Strange behavior in template created in a previous version of RIS |
| 10618 | New | Normal | When editing pick lists, there is no way to navigate between cells in the grid. |
| 10615 | New | Normal | Word Viewer - closing Word Viewer when closing another reporting tab |
| 10614 | New | Normal | When using "Cache Reporting Screen" User Preference once you open a dictation for Addendum every time you try and open the dictation screen after that you get an error from interpretation_get saying there is no item at index 1 |
| 10612 | New | Normal | Word Report Viewer does not close when closing the patient tab |
| 10597 | New | Normal | Linked Reports - User preference to set current study linked background color. |
| 10577 | QE Rejected | Normal | Priority column is interfering with the new prioritize arrows in the Insurance Policies grid |
| 10575 | New | Normal | Text Expander - adding a new value only saves for the |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| | | | session, log out and back into RIS, value is not saved. |
| 10555 | New | Normal | Picklist - with several options, 1 being Type = macro. The macro has several lines of text that is bulleted, when inserted into report numbering is incorrect. |
| 10553 | QE Rejected | Normal | Configuration module window still mirrors R to L when it should not |
| 10549 | New | Normal | Questionnaire datepickers do not display as RightToLeft when the Questionnaire is RightToLeft |
| 10513 | New | Normal | eRAD Report Editor - Entries made in M*Modal text expander |
| 10508 | New | Normal | db view called c_vw_WL_SignedByDate_My is obsolete. |
| 10491 | New | Normal | There needs to be an access string to disable the 'save as order' button |
| 10465 | New | Normal | Cancel Study - c_previous_referring does not belong to this DataSet |
| 10441 | New | Normal | eRAD Report Editor - field color not applying |
| 10430 | In Progress | Normal | Reports fields with special characters |
| 10419 | QE Rejected | Normal | Worklists - Columns not populated on the signed by date worklist. |
| 10388 | New | Normal | Phillips Speechmike Barcode scanner does not work through Citrix |
| 10387 | New | Normal | Motorola Sybol Scanner does not work in Citrix when not in HID Keyboard Mode |
| 10338 | New | Normal | RUM - Default Body part/Laterality not auto-populating on adding Alternate/Additional procedure |
| 10331 | New | Normal | RUM - Stat Exam flag set from IVT window doesn't change UM required to UM complete flag |
| 10321 | New | Normal | Add/Edit Region dialog box says Add/Edit Site in the title bar. |
| 10316 | New | Normal | Setting RecentPasswordRestrictionCount to 0 or lower disables tracking passwords but does not prevent checking against old passwords in validation |
| 10300 | New | Normal | TE Edit - Advanced Menu - font seems to interfer with the reporting editor's font. |
| 9735 | New | Normal | Missing accesss string - Clinical.ReportEditor.AdvancedMenu |
| 9716 | New | Normal | Editor Appearance -> Color dialog -> system -> some values are saved incorrectly. |
| 9696 | New | Normal | System config items - 'Wedge Groups container' and 'Wedge Unescapes Container' look identical, need clarification. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 9690 | In Progress | Normal | After login background screen displays duplicate eRAD RIS logo |
| 9673 | New | Normal | Changes to Billing Codes not updating Amount to Collect on Self Pay |
| 9654 | New | Normal | eligibility service will not run if the connection string doesn't end with ";" |
| 9647 | New | Normal | zip code loookup on IVT screen does not behave the same as zip code lookup on other screens |
| 9643 | New | Normal | log control on tech notes does not enforce 1000 character limit |
| 9642 | In Progress | Normal | Custom fields for time are not working |
| 9486 | New | Normal | Procedure plan site override of min/max times cannot find available times |
| 9422 | New | Normal | User is able to complete an exam that Requires contrast without entering a contrast. |
| 9356 | New | Normal | Contact Log - Saved entries show userID for Contact By |
| 9344 | In Progress | Normal | RUM - STAT Exam - Priority dropdown can be cleared > saved which then causes errors. |
| 9343 | In Progress | Normal | RUM - Body Part dropdown on adding additional/alternative procedure can be saved with invalid text. |
| 9317 | New | Normal | Worklist - Conditional formatting will not set the back color for the entire row. |
| 9297 | New | Normal | Manual Status Update - Discontinued - Not prompted to enter discontinue reason |
| 9291 | New | Normal | Scheduling-Schedule Date box changes from green to red for the same time slot |
| 8991 | New | Normal | Unable to Login with benign error if AllowedPasswordFailAttempts system config is missing |
| 8990 | New | Normal | Questionnaire - Rendering questionnaire not displaying correctly |
| 8988 | New | Normal | old trace log cleanup procedure looks for trace log in the current directory |
| 8516 | New | Normal | Direct Message - Issue attaching CCDA document to New Patient |
| 8279 | New | Normal | issuer_of_id has hard coded default of system |

# Table of Contents

1. Purpose ..... 5
2. Intended Audience ..... 5
3. Installing/Accessing the Application ..... 5
4. New Settings ..... 6
4.1. New access strings ..... 6
4.2. New system configuration settings ..... 8
4.3. Changes to RIS.exe.config file ..... 10
5. New Features and Enhancements ..... 11

Primary User: Radiologist ..... 11
07293 Automatically open images when signing (user preference) ..... 11
08351 Linked Reports - Simple linked reports (phase 1) ..... 12
10766 Linked Reports - Show linked information in the title bar of reporting window ..... 15
10640 Linked Reports - Create worklist icon and tool tip to display linked information ..... 18
08360 Create 'Finding Follow Up' workflow ..... 20
09371 Ability for users to create diagnostic report prior to radiologist ..... 23
11205 Conditional Fields for Structured Reporting (Phase 1) ..... 26
10488 Legacy Report Viewer - PDF viewer should be managed by RIS ..... 29
10572 Ability to protect a field element in the eRAD report editor ..... 30
9630 Integrate with GE Universal viewer ..... 32
Biopsy Workflow ..... 33
11076 Biopsy Workflow - Ability to Flag a Procedure as a Biopsy ..... 34
11077 Biopsy Workflow - Create Pending Biopsy and All Pending Biopsy Worklists ..... 35
11078 Biopsy Workflow - Notify a radiologist of an assigned pending biopsy ..... 37
11079 Biopsy Workflow – Drawing tool – Add tool to show biopsy locations (annotation tool) ..... 38
11184 Biopsy Workflow - Drawing tool - Add tool for arrow (FNL tool) ..... 40
11083 Biopsy Workflow – Generate a Biopsy Procedure Report (framework) ..... 41
11082 Biopsy Workflow – Ability to collect custom Biopsy Data ..... 45
11271 Biopsy Workflow - Ability to save a form directly to the patient folder ..... 46
11084 Biopsy Workflow - Track biopsies that are awaiting results ..... 47

Mammography ..... 49
9255 Support BIRADS 4a,4b,4c (non-USA sites only) ..... 49

Front Desk ..... 50
8355 Validation on manually entered MRN ..... 50
10534 Support Configurable Autotext for Addendum Notes ..... 52

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Scheduler/Front Desk ..... 54
10623 Need to have 'Source of Order' as a user-editable field instead of 'Visited At' ..... 54

Scheduler and Technologists ..... 56
10843 Provide Viewer/editor for 'Study Extra Info' ..... 56

All users ..... 59
10700 Questionnaire - Display questionnaire answers in the reporting screen ..... 59
10819 Questionnaire - Allow certain questions to be marked required ..... 60
10849 Questionnaire - Ability to hide a page at runtime ..... 62
10991 Questionnaire - Tab Order should be configurable ..... 63
11000 Questionnaire - Support dark theme ..... 64
11008 Questionnaire - Ability to specify a type of tab ..... 65
11402 Display "Radiologist" type questionnaires and update a corresponding diagnostic report (Report Assistant) ..... 66
11061 Questionnaire - Support cascading dropdowns ..... 67
11417 Questionnaire – Support a type-ahead control that links to personnel and medication lookup tables ..... 69
11172 Questionnaire – Autotext pick list for text controls ..... 71
11242 Questionnaire - Ability to show/hide pages ..... 75
10765 Worklists - Need site description and room description in most worklists ..... 77

Infrastructure ..... 78
8356 Support of non "system" issuer of IDs ..... 78
9562 Support a Secondary Reporting Database ..... 80
11161 Support command line options for RIS client application via the config file ..... 81
10603 Add SLA field to the procedure group table ..... 82
8764 Insurance Eligibility – Support 'or' logic for the medical group string ..... 83

Interface updates ..... 84
11522 New Action needed to submit an order without automatically generating a scanned document ..... 84
8331 Ability to update RIS procedure code tables via an interface ..... 84
11153 Create an Action Queue history table ..... 84

Management reports updates ..... 86
11154 Questionnaire mapping report ..... 86
9213 Linked report management report ..... 86
10416 Referring details report ..... 86

# 1. Purpose

This document describes some of the new features and changes implemented in eRAD RIS in build 2.45.1

Not every feature will be described in this document. Typically only features which can be visually demonstrated to the user are outlined in this document.

# 2. Intended Audience

This document is created by the eRAD RIS Development/Commercialization team for customers of eRAD RIS.

# 3. Installing/Accessing the Application

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:
Username: rRIS
Password: Summerside

If you experience difficulties accessing the application please contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 4. New Settings

## 4.1. New access strings

| Setting | Default | Purpose |
|---|---|---|
| Clinical.AdditionalData | None | Controls access to the Additional Data grid on the Exam tab and the Exam Details tab |
| Clinical.EditExternalMRN | None | Allows editing of external MRN in the MRN grid on the Patient tab. |
| Clinical.EditMRN | None | Allows editing of MRN in the MRN grid on the Patient tab. |
| Clinical.EditPatientFlags | None | Controls access to assign patient flags |
| Clinical.EditPatientFlagsNotes | None | Controls access to assign notes to the patient flags |
| Clinical.FormsAndLabels.AllowSaveAsAttachment | None | Allow user to save a form or label as an attachment from the Print Forms window. |
| ~~Clinical.ReportingEditor~~ | N/A | This access string was obsolete and has been removed. (replaced with Clinical.ReportingTranscription) |
| Clinical.ReportingTranscription | None | Controls access to the Editor's Create/Edit Report Screen |
| Clinical.ResendDictationForRecognition | None | Enables access to the resend dictation for recognition context menu action. |
| Clinical.Schedule.SaveAsOrder | Full | Controls access to the Save As Order/Schedule Later button on Schedule/Reschedule screen, as well as Schedule Later button on Reschedule Reason dialog |
| Config.LookupEditor.DictationArchiveLocation | None | Controls access to the lookup table for the Dictation Archive Location |
| Config.LookupEditor.ExternalReportingSystem | None | Controls access to the External Reporting System lookup table located under the System directory |
| Config.LookupEditor.Finding | None | Controls access to the Finding lookup table located under the Procedure directory. |
| Config.LookupEditor.ImagingCenter | None | Controls access to the Image Center lookup table located under the System directory. These are displayed on the patient and referring portal |
| Config.LookupEditor.LegacyReportArchive | None | lookup table access for the Legacy Report Archive |
| Config.LookupEditor.MarketingDomains | None | lookup table access for Marketing Domains to be used for site groups |
| Config.LookupEditor.PatientFlag | None | lookup table access for PatientFlag located under the General directory |
| Config.LookupEditor.PrepInstructionType | None | lookup table access for Prep Instruction Type located under the Procedure directory |
| Config.LookupEditor.ProcedurePicker | None | lookup table access for Patient Portal Procedure Picker configuration |
| ~~Config.LookupEditor.Questionnaire~~ | N/A | This access string was obsolete and has been removed |
| Config.LookupEditor.ReadingGroup | None | lookup table access for Reading Group located under the Procedure directory |
| Config.LookupEditor.StudyExtraInfo | None | Lookup table access for Study Extra Info located under the System directory |
| Config.LookupEditor.WorkUnit | None | lookup table access for Work Unit located under the Procedure directory |
| Config.QuestionnaireEditor | None | Controls access to the browser-based Questionnaire Editor. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | |
|---|---|---|
| ~~Flag.ExamStat~~ | N/A | This access string was obsolete and has been removed. (was replaced by Flag.StatExam) |
| Flag.LinkedStudy | Full | Access to see the flag for Primary Linked Study |
| Flag.PrimaryLinkedStudy | Full | Access to see the flag for Primary Linked Study |
| ~~Flag.ReadStat~~ | N/A | This access string was obsolete and has been removed. (was replaced by Flag.StatRead) |
| Reporting.UnprotectDataFields | None | Controls access to the Unprotect Fields button on the reporting screen |
| View.FindingsFollowup | None | Access to see the main menu item "View/Findings Followup" (on dictation screens) |
| View.Portals | None | Access to see the main menu item "View/Portals" (on dictation screens) |
| View.ReportAssistant | None | Access to see the main menu item "View/Report Assistant" (on dictation screens) |
| WL.PatientFolder | Full | Controls access to the Patient Folder worklist context menu item. |
| WL.PendingBiopsyResult | None | WL access for Pending Biopsy Result worklist under Administration menu |
| WL.Rad.FindingFollowup | None | WL access for Finding Followup worklist under Radiologist menu |
| WL.Rad.PendingBiopsy | None | WL access for Pending Biopsy worklist under Radiologist menu |
| WL.Rad.PendingBiopsyAll | None | WL access for Pending Biopsy All worklist under Radiologist menu |
| WLNotification.PendingBiopsyNotify | Full | Enables ability to show worklist driven pending biopsy notifications |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## 4.2. New system configuration settings

| | | |
|---|---|---|
| DefaultIssuerGeneratesPatientID | True | Determines the default issuer of patient ID will generate patient IDs in RIS |
| KillPDFViewerAfterLegacyReport | True | Enables RIS to try to 'kill' or close the PDF Viewer after opening legacy report in a new instance of the PDF Viewer from the reporting screen. |
| KillPDFViewerBeforeLegacyReport | True | Enables RIS to try to 'kill' or close the PDF Viewer before opening legacy report in a new instance of the PDF Viewer. |
| PatientPortalImageHoldPeriodDisplayedDays | 5 | The number of days from the time the study is performed to the date that the patient portal will say that it will be able to see the images. |
| PatientPortalReportHoldPeriodDisplayedDays | 5 | The number of days from the time a report is signed to the date that the patient portal will say that it will become available. |
| PortalAddendumReportMessage | This exam does not have a report because it was not requested by your referring provider. Please contact your referring provider for your results. | The desired message to display to the patient when the study has an addendum assigned to it, and has not been passesd the new Hold back period. |
| PortalImagesHoldBackMessage | Images are currently unavailable. Estimated availability is after {PatientPortalImageHoldPeriodDisplayedDays(dddd, MMM dd, yyyy)} | The desired message to display to the patient when the Images are not available to display due to the hold back period. |
| PortalImageUnAvailableMessage | Images are currently unavailable. Please Get Help to request images. | The desired message to display to the patient when the Images are not available due to the PACS server unavailable. |
| PortalIncompleteStatusReportUnavailableMessage | This exam is currently {portal_status_code}. No report is available for this exam. | The desired message to display to the patient when the report is not available, due to the fact the study is not complete |
| PortalLocationLayoutFormatString | {description} | Desired layout for site and practice drop down fields in the Patient Portal ex. {description} |
| PortalReportHoldBackMessage | This report is currently unavailable. Estimated availability is after {PatientPortalReportHoldPeriodDisplayedDays(dddd, MMM dd, yyyy)} | The desired message to display to the patient when the report is not available to display due to the hold back period. |
| PortalReportUnAvailableMessage | No report is available for this exam. | The desired message to display to the patient when the report is not available due to report server unavailable, or no report |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | |
|---|---|---|
| | | configured. |
| PortalTechOnlyNoReportMessage | This exam does not have a report because it was not requested by your referring provider. Please contact your referring provider for your results. | The desired message to display to the patient when the study is completed as Tech Only and there would not be any report available. |
| RADARMessagePHIReminderText | RADAR Quick Message is not a secure method of communication. Patient health information (PHI) must not be included in this message. All messages sent using RADAR Quick Message must conform to established health privacy rules for unsecured communications. | Defines the PHI warning string that will be displayed on RADAR Quick Message dialog screen. |
| WordViewerPath | | Path to directory where Word Viewer is installed. Used for MS Word legacy reports, path must include EXE name. If left empty, RIS will try to open WordViewer.exe and assume it is available in the current system path. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## 4.3. Changes to RIS.exe.config file

The section <listeners> in the ris.exe.config file has been changed in this release. Below you will see the before and after. The changes are shown highlighted in green.

| Before | After |
|---|---|
| <appSettings><br><add key="defaultEndPointName"<br>value="NetTcpBinding_IStudyService" /><br><add key="ClientSettingsProvider.ServiceUri" value="" /><br><add key="LookupTableTimeToLiveInMinutes"<br>value="60"/><br><add key="ShouldCloseViewSessionOnThread"<br>value="true"/><br><add key="EnableHighPriorityLookupStrategy"<br>value="true"/> | <appSettings><br><add key="defaultEndPointName"<br>value="NetTcpBinding_IStudyService" /><br><add key="ClientSettingsProvider.ServiceUri" value="" /><br><add key="LookupTableTimeToLiveInMinutes"<br>value="60"/><br><add key="ShouldCloseViewSessionOnThread"<br>value="true"/><br><add key="EnableHighPriorityLookupStrategy"<br>value="true"/><br><add key="CmdLineArgs" value="" /> |

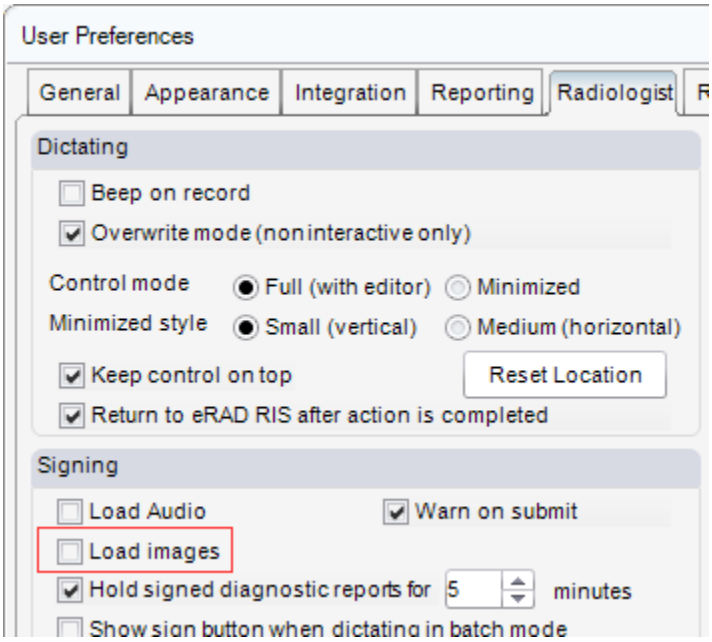
# 5. New Features and Enhancements

## Primary User: Radiologist

### 07293 Automatically open images when signing (user preference)

When a radiologist signs reports (from the pending signature worklist primarily) the images in PACS are not automatically loaded. There is a manual load images button that they can use, but this has to be clicked for each study. There is a desire to have the images automatically load as they do when dictating a report. This would have to be a user preference as not all radiologists will want this feature.

The RIS now has a new user preference in the radiologist tab signing area called Load Images. When set the RIS will load images automatically when opening the study in the Sign Reports window, the same as it does when dictating a study.



*User preferences showing the load images option*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**08351 Linked Reports - Simple linked reports (phase 1)**

There is an industry need for the RIS to support having multiple individual studies performed, but to be read and reported as a single entity from the radiologist's perspective.
Since this is a large undertaking, the development team has broken this up into phases, with 45.1 containing the first phase.

To support this, the RIS development team has implemented a simple 'phase 1' of linked reporting. In this simple model, linking is limited to studies in a procedure plan that is predefined to be linked (aka 'reported together'). There is no support for manual linking and unlinking studies for phase 1. The procedure plan table already has a "report_together_flag" which determines if studies should have a single linked report. If the procedure plan is set to report together then one procedure will also need to be set as the primary study. The primary study will be the study that will technically be reported on. The other (secondary) studies in the procedure plan will be linked to the primary.

The ordering, scheduling and registration workflows are unchanged for linked studies. The tech work flow is only changed in one way, when the tech sets an assigned radiologist on one study; the system applies it to all linked studies.

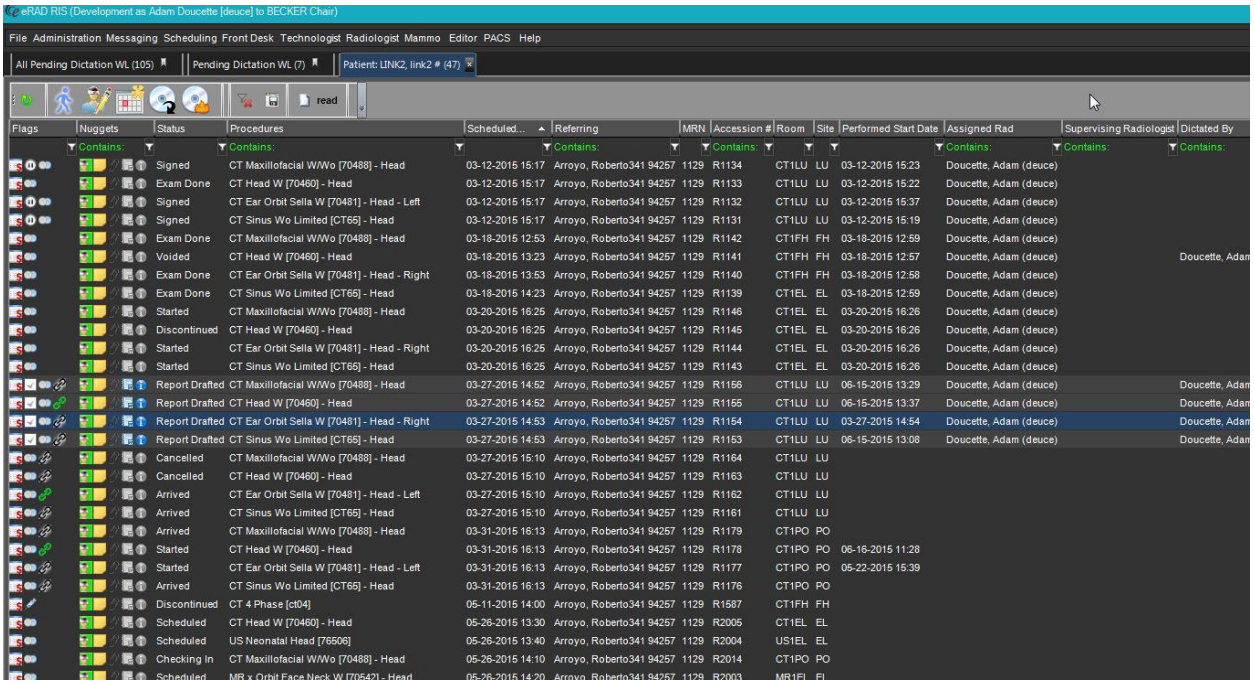
Exams will not show on the 'My Pending Dictation worklist' until all linked studies are PACS corrected and exam done. Then once these conditions are met, RIS shows the primary study on this work list. All of the "my" radiologist and transcriptionist work lists work the same; they only show the primary study.

Unlike the 'My Pending Dictation worklist', the 'All Pending Dictation worklist' will display all linked studies, as individual studies as soon as they are in the status of 'Exam Done' and are PACS corrected. However, if all the 'linked' studies have not reached this state, the studies may not be opened to start dictating. The 'All' worklists show all linked studies.

Opening any linked study in the radiologist or transcriptionist screen will lock all linked studies and will open the primary study regardless of exam selected to be actioned on.
Since the primary study is the item technically opened, you will see the templates and macros for the primary.

Study status updates will happen on all studies once the reporting work flow stage has begun. So when the primary is dictated or signed, this status is reflected on the secondary studies as well. Also the QA and Problem flags are reflected on all studies.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



*Patient folder showing worklist icons and highlighting*

There are various impacts to existing workflows which are described here:

PACS integration:
PACS will load the primary study as normal, and will load the linked studies as priors. PACS will load only the primary studies relevancy based priors, not based on all linked studies.

Quality Review Distribution:
QA distribution treats linked studies as a single study.

Delete Dictation and Report:
Delete dictation and report will delete the report/dictation and reset all linked studies back to exam done.

Reset/Open Skipped Rows:
Reset open skipped rows will not have to worry about primary studies, as the rad screen will not allow non-primaries to be opened.

XML Drop Files:
XML files are written using the primary studies data
Rad and MT Daily Stats

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Stats are calculated based on reports actioned upon, not studies. So a linked report of 4 studies is counted as 1.

Auditing:
We are auditing the direct actions taken on a single study key and including the linked_id in the audit trail which provides the link to the primary study.

Document Distribution:
Will not distribute duplicate reports of the linked exams

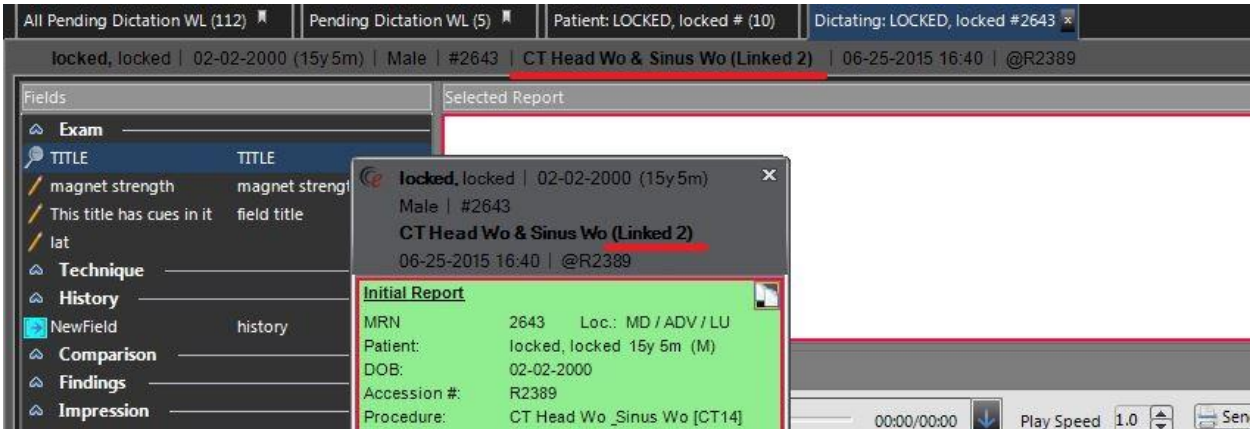
Canceling the Primary study:
If the primary study is cancelled or cancelled due to technical repeat, then the RIS breaks the link. This means the linked ID is set to 0 on all studies and they become their own primary to be reported individually

Report History/Preview Report:
Even when opening a secondary study and invoking these features, the primary report will be displayed and expected.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### 10766 Linked Reports - Show linked information in the title bar of reporting window

When opening a linked study in the reporting window the RIS need to clearly inform the radiologist of the fact that there are multiple studies in this collection to be read. To do so, the RIS will show the word 'Linked' and the number of studies linked in the title bar after the procedure description.



*Radiologist window showing a linked collection with 2 linked studies.*

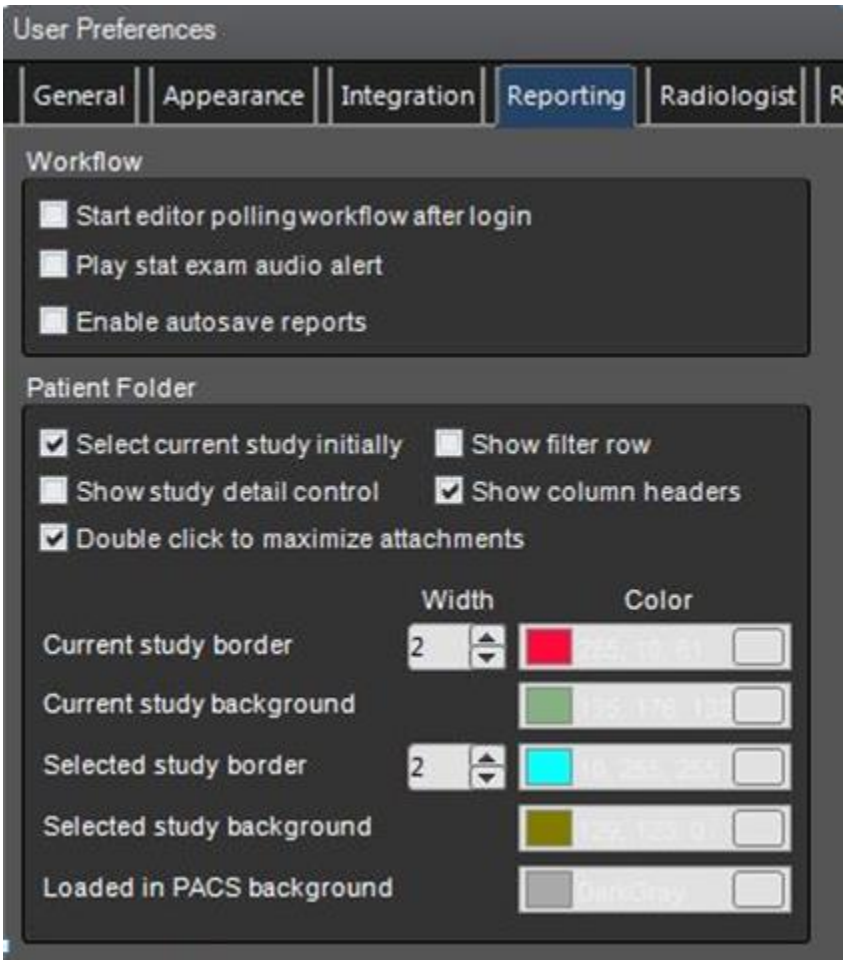
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### 10597 Linked Reports - Display the current study linked background color in patient folder

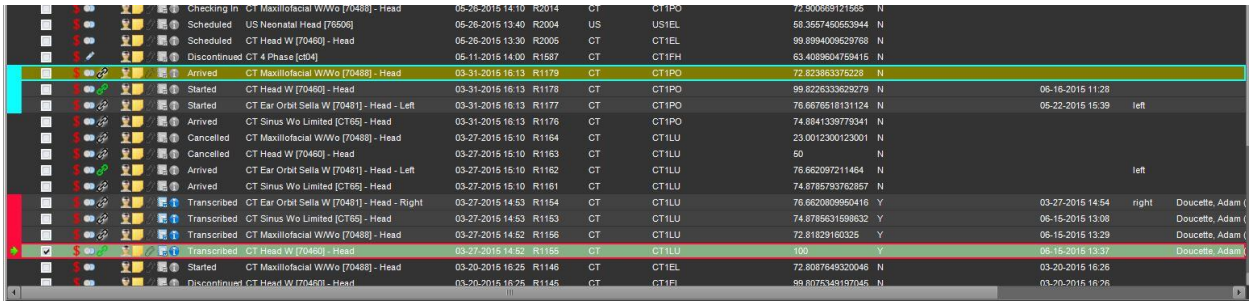
In the patient folder, the RIS needs to visually indicate studies which are linked together. To do so, the RIS now features an icon (a piece of chain) to indicate the studies are linked. To show which ones are linked, the RIS will also show the linked studies with a background color of pink in light mode, (and grey in dark mode) when any study of the linked collection is selected. In this manner, when the user selects a study, they get the visual feedback to tell them there is more than one study attached to the study they have just selected.

In the radiologist's mini-patient folder in the reporting window, the RIS provides similar but enhanced functionality. This patient folder has existing color enhancements known as 'current study border' and 'selected study border'. There is also a column called the 'main study indicator' which shows the current study. The main study indicator column will take on the background color of the current study border color and the column next to the prior study will take on the background color of the selected study border color for the selected.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



*Existing user preference screen showing the red and teal colors being used by this user.*



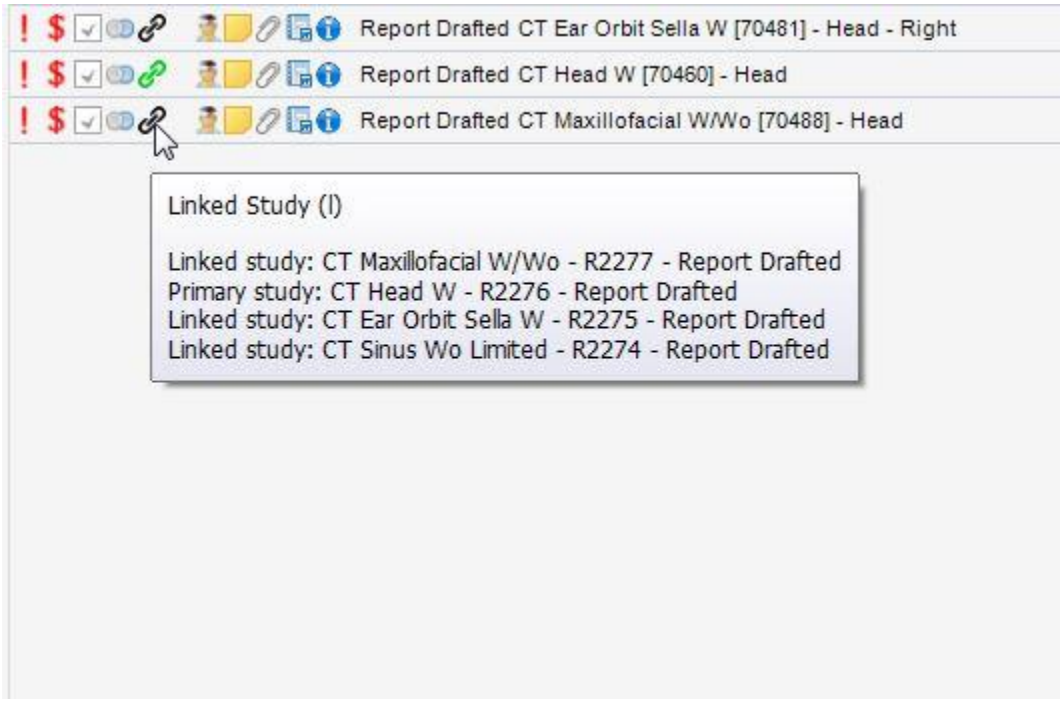
*Patient folder showing the color in the Main Study Indicator column.*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**10640 Linked Reports - Create worklist icon and tool tip to display linked information**

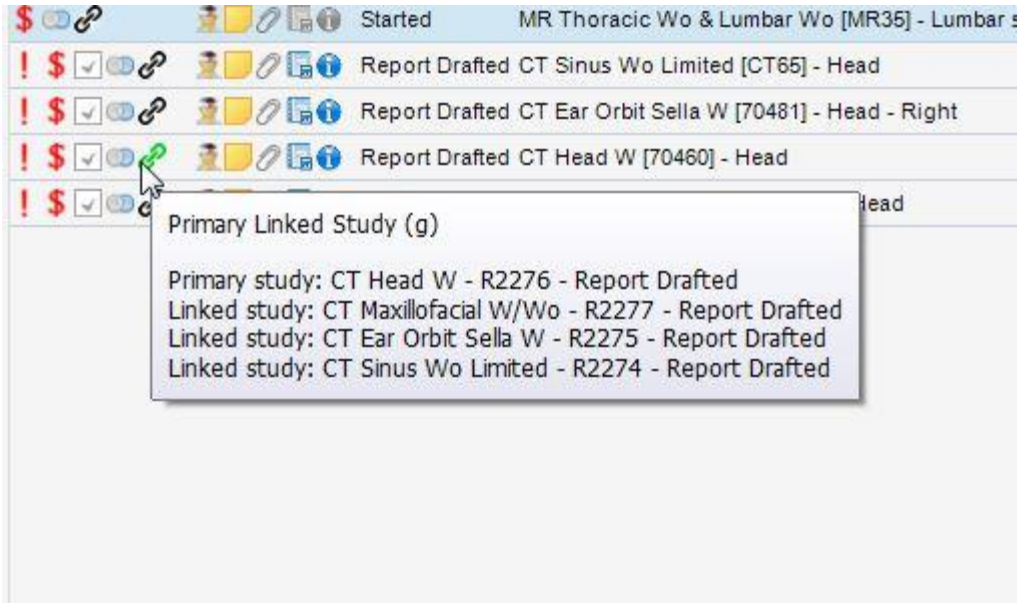
There is a need to show a visual flag and information on various worklists so that a user has detailed information about linked studies.

There is now a flag on several worklists that shows a status about the linked studies. The primary linked study is shown as a green link of chain, while the secondary studies are shows as black links of chain. There is also a tool tip which shows detailed information about all the studies in the linked collection. The tooltip will display all the studies in the linked collection starting with the currently study that the mouse is pointing at, then the primary linked study, followed by the remaining secondary studies. The tooltip will display if they are primary or just linked and display their procedure description, accession number and status.



*Linked study tooltip when the mouse has hovered over a secondary study*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



*Linked study tooltip when the mouse has hovered over the primary study*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

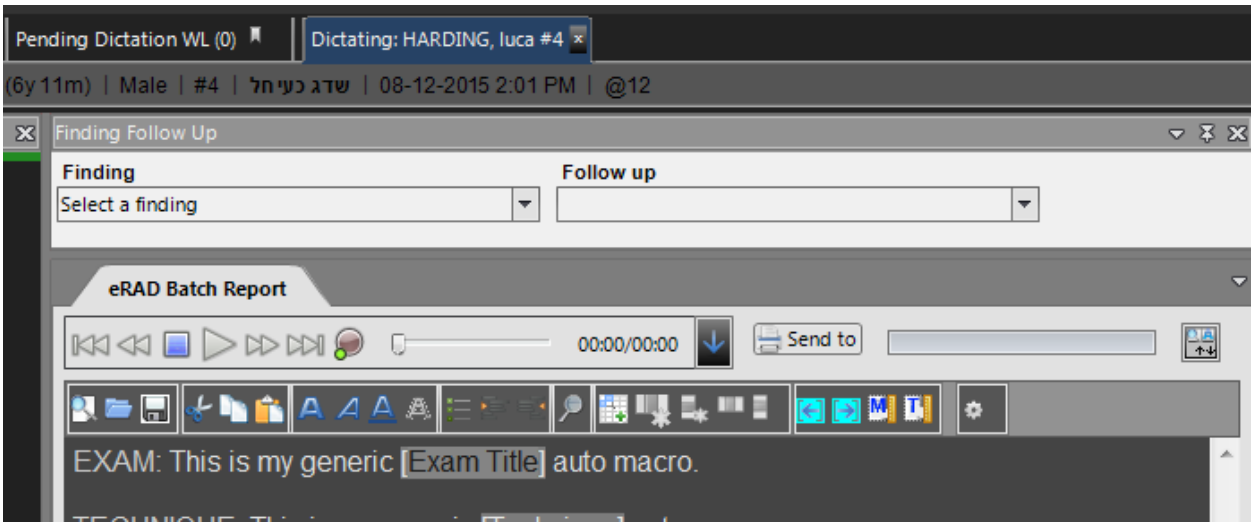
### 08360 Create 'Finding Follow Up' workflow

Includes sub-features:

- 10802 Ability to configure mandatory finding follow up procedures
- 10803 Ability to configure finding a follow up options
- 11549 Management report

There is an industry requirement (initially from Israel) to have a radiologist enter a finding (positive or negative) on certain studies. If the finding is positive, then additional follow up is required. The finding and the follow up should be entered during dictation or transcription of the study. The follow up options need to have a configurable time frame associated with each option. Any studies that require follow up must be placed onto a worklist for someone to review and resolve.

There is now a new panel in the radiologist/transcriptionist window called 'Finding Follow Up'. This window will only appear when the study (procedure code) being read is enabled for the follow up workflow.



*Radiologist window showing 'Finding Follow Up' tool window.*

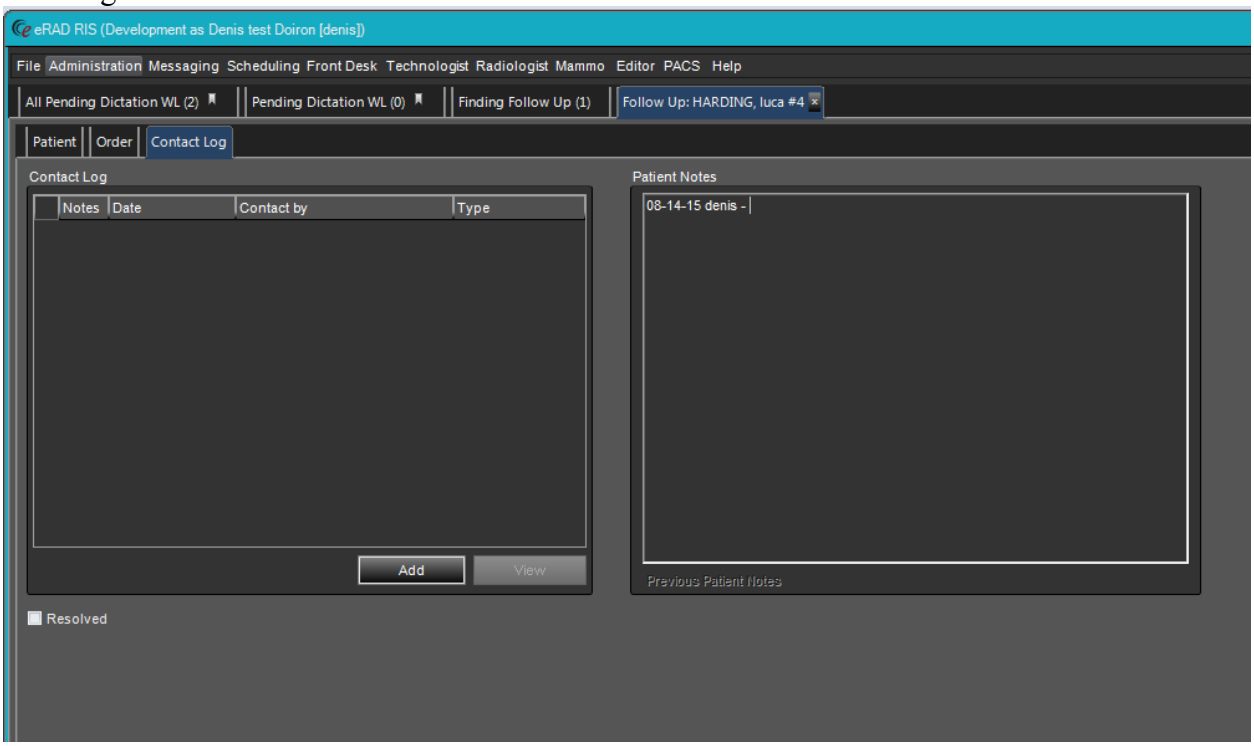
If a finding is required for that study, the radiologist will not be able to sign the report until the drop down is populated. However, the radiologist can send the report to transcription, and the transcrioptionist can populate the value based on the dictation.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The options available in the finding drop down are populated from entries in the “Finding” lookup table which describes the finding options and the associated follow up options, which are stored in the existing “recommendation” lookup. Each findings option can be linked to many follow up options.

The follow up time frame is stored at the follow up option (recommendation) lookup in the follow up days field.

When the radiologist selects a follow up option the “follow up days” value will determine if it shows on the “Finding Follow Up WL” after signing the report. If the follow up option “follow up days” value is empty then it will not go to the “Finding Follow Up WL”.
From this “Finding Follow Up WL” the follow up can be resolved by right clicking and selecting “Remove Follow Up Required Flag” or by opening the “Follow Up” screen shown below and selecting the ‘resolved’ checkbox.



*Follow up contact log*

From the Follow Up screen the user has access to the contact log and the patient notes as well as the Patient and Order data. If the user completes a contact log entry it will increase the contact attempts counter on the worklist. If the user checks the resolved option then the study will be removed from the worklist.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

From patient folder the users can “Set Follow Up Required” flag on a study from the context menu, which will place the study to the Follow Up Required worklist.

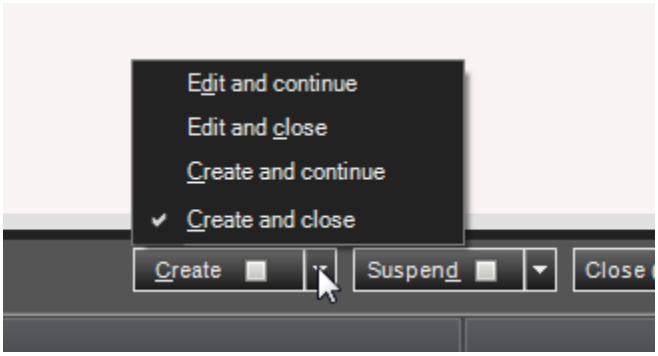
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**09371 Ability for users to create diagnostic report prior to radiologist**

eRAD RIS creates the radiologist report when the radiologist opens the Dictation screen. There have been frequent customer requests for the ability for a technologist (or transcriptionist) to be able to create the initial report in order to pre-populate some data (or the entire report) and then send the report to the Pending Dictation worklist, or the Pending Signature worklist for the radiologist to complete.

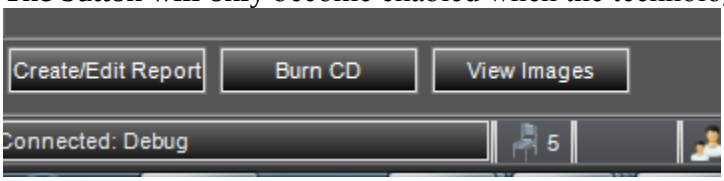
To support this, the "Create/Edit" context menu item (which already existed on the transcription worklist but was limited to studies that already had a report created by the radiologist) has been altered so that it will be enabled on studies that in 'Exam Done' status. Now, if the report does not already exist, this menu item will create the empty report.

There are also two new drop down button options on the "Create/Edit" screen called 'Create and Continue' and 'Create and Close'.



*New button options attached to the Create button*

A "Create/Edit Report" button has also been added to the technologist "Perform Exam" window. The button will only become enabled when the technologist has 'Completed' the study.



*Technologist screen showing the new Create/Edit Report button*

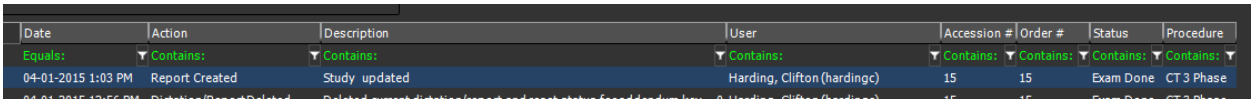
Clicking the button will open a Create/Edit Report screen and the technologist can then view and enter data into the diagnostic report.

In all these cases, the RIS will load the report templates based on the organization structure as there is no 'Dictating Radiologist' at that time in the workflow.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

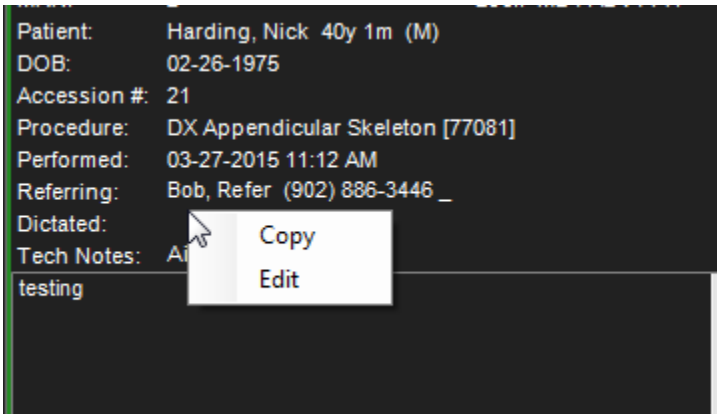
The RIS will not enforce populating BI-RADS drop downs when editors create only, nor will it enforce populating Finding Follow up drop downs when editors create only.

There is a new audit even called Report Created (UI_ReportCreated) - which will show as "Report Created" in the audit history.



*Audit history viewer showing the new audit event*

The RIS will allow the editor to assign to a radiologist when creating or editing the report. This will enable the editor to set the dictating radiologist so it will show on their pending signature worklist. Prior to this change, the summary panel wouldn't show the dictating radiologist if it was empty, but now it shows a blank space and will allow the user to right click and assign a radiologist. This assignment will just be the dictating radiologist and will not populate the dictated date.



*Summary panel showing the blank space where the dictating radiologist would be*

The dictated date (if not yet set) will be populated when the radiologist signs the report.

When the 'Edit and Close/Continue' option is clicked and if the dictating radiologist is not set and the assigned radiologist is not set the RIS will set the dictating radiologist field to be the same as the assigned radiologist. This will allow users in the tech screen to assign to a radiologist as they always did, then create the report and have it show on the pending signature worklist.

When 'Edit and Close/Continue' is clicked and the dictating radiologist is not set and assigned radiologist is not set the RIS will prompt the user for dictating radiologist selection. Without this selection it will not show on a radiologists pending signature worklist. Canceling this dialog is

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

allowed and the study will fall to the ‘All Pending Signature worklist’ with the current user as the dictating radiologist. This was pre-existing logic in eRAD RIS when sending for signature and there was no dictating radiologist.

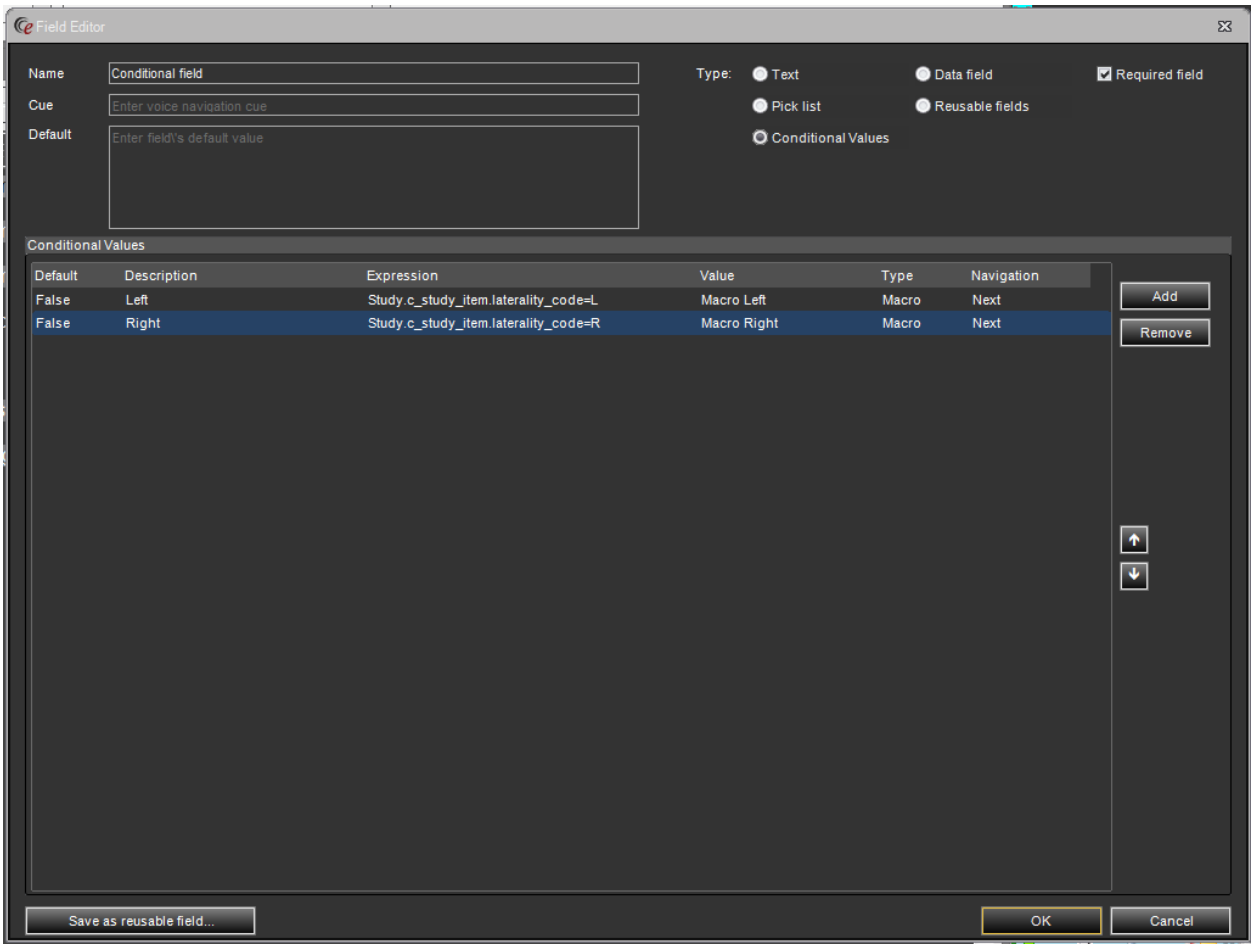
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### 11205 Conditional Fields for Structured Reporting (Phase 1)

The general industry direction is to provide some form of structured reporting capability in eRAD RIS. This will require many sub-features which will be developed over the coming months. The first feature required is a conditional field which could check a simple logical condition and then automatically populate the report with a specific text or macro. This condition would be based on a data field or questionnaire field being equal to a specified value.

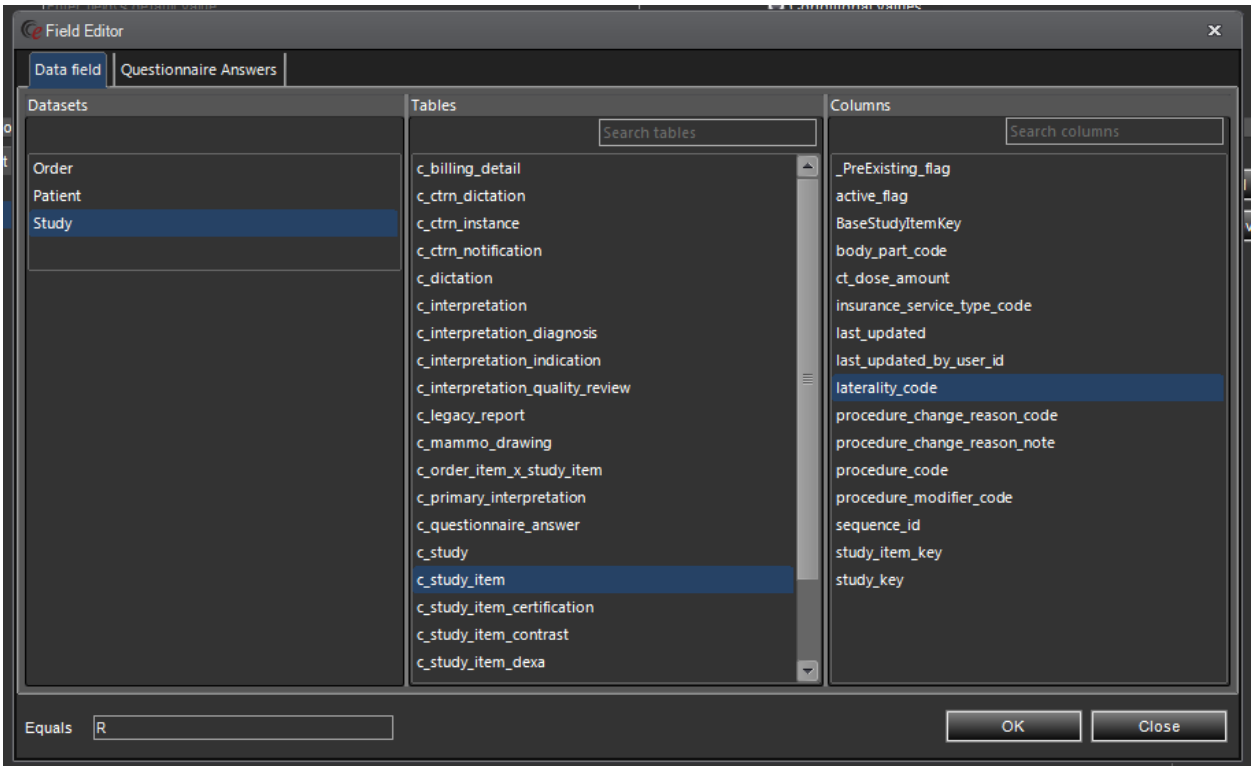
To provide this capability, there is now a new option type in the template macro field editor called `Conditional Values`. When the expression is double clicked to enter edit mode, the advanced data field popup will appear. The advanced data field popup in this case has a "Equals" textbox in the bottom left. When the mapped data field is equal to the value assigned, then its text or macro will get inserted. When no conditions are met, then the default condition will be used, if there are none then the field will stay empty. When multiple conditions are met, the first one will be used.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



*The field editor showing a conditional field set up on laterality code*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



*The advanced field editor popup with the new "Equals" text box.*

The conditional fields will populate when the template is inserted. To repopulate them the template needs to be re-inserted, but then all changes to the report would be lost.

Outstanding Issues

If a conditional field is populated with a macro that contains tables or fields, the original field is deleted, because the RIS can't embed fields or tables in fields. What this means is that in order to repopulate the conditional field based on data changes, the entire template needs to be reloaded, which would lose the user's changes to the report. Phase 2 will aim to remedy this limitation

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**10488 Legacy Report Viewer - PDF viewer should be managed by RIS**

A customer has requested that the PDF viewer for legacy reports should allow only a single report to be viewed at a time. In other words, it should automatically close the legacy report when a new patient is opened to prevent any possibility of confusion. Since some customers prefer the existing workflow, this must be a configuration option.

The RIS now contains an integrated PDF viewer that supports viewing and printing of PDFs, as well as automated closing from the RIS. There are two new configuration settings:

KillPDFViewerBeforeLegacyReport
(value = bool) True enables RIS to try to 'kill' or close the PDF Viewer before opening legacy report in a new instance of the PDF Viewer.
Default TRUE

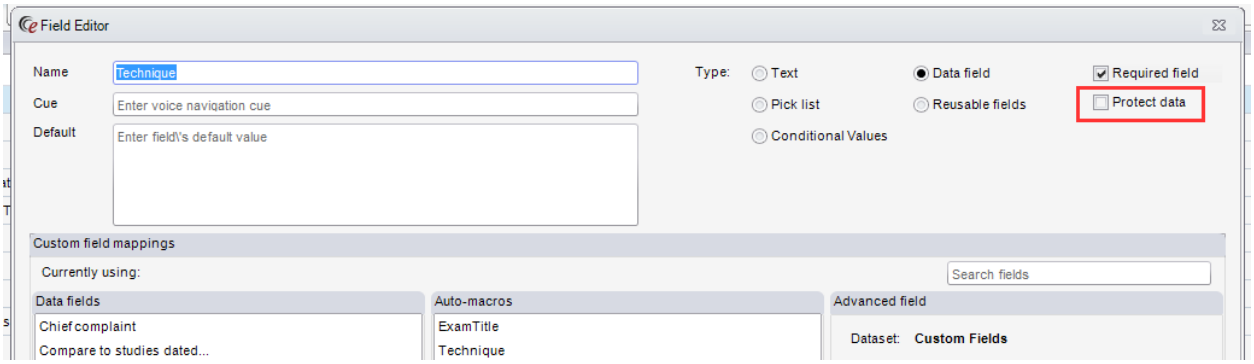
KillPDFViewerAfterLegacyReport
(value = bool) True enables RIS to try to 'kill' or close the PDF Viewer after opening legacy report in a new instance of the PDF Viewer from the reporting screen.
Default TRUE

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### 10572 Ability to protect a field element in the eRAD report editor

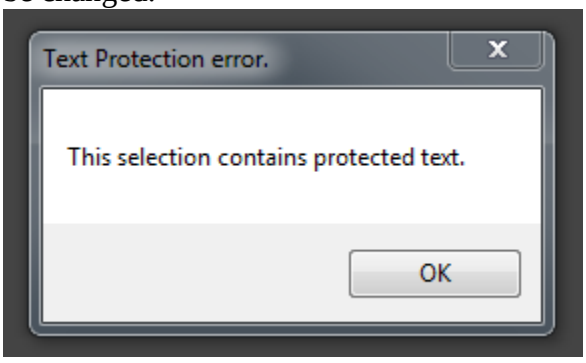
The RIS has the ability to populate diagnostic reports with data from the RIS database. These elements are visually editable by the user, but by design the modification to the data is not saved back to the database field that it came from. Since this may lead to confusion that data should be saved, and since some customers desire this data to be locked down, the RIS should provide a configuration so that this data can be protected from being altered.

The Field Editor tool now includes a checkbox called 'Protect data'. This only applies to data fields and advanced fields.



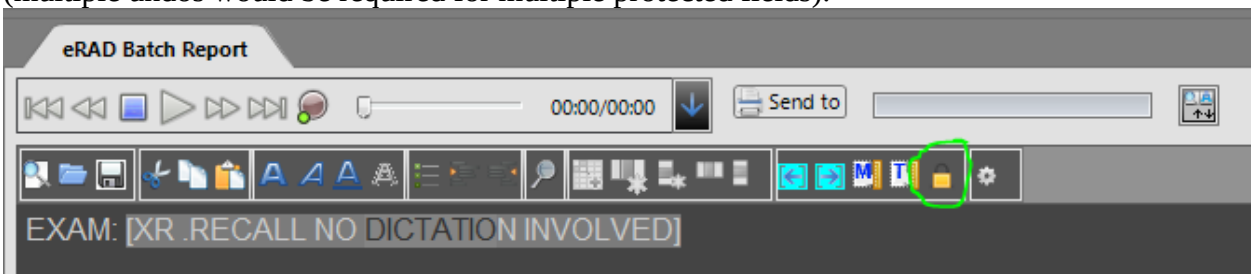
*Field Editor showing new Protect Data option*

When the checkbox is selected, there is a visual font change to show that the field is protected. If the user attempts to modify the text inside this block, the computer will make a "ding" sound. If the user attempts to make a modification to the report by selecting a range of text that includes a protected block, a message box will be displayed saying "This selection contains protected text". This message box is not created by the RIS, so unfortunately the text and behaviour cannot be changed.



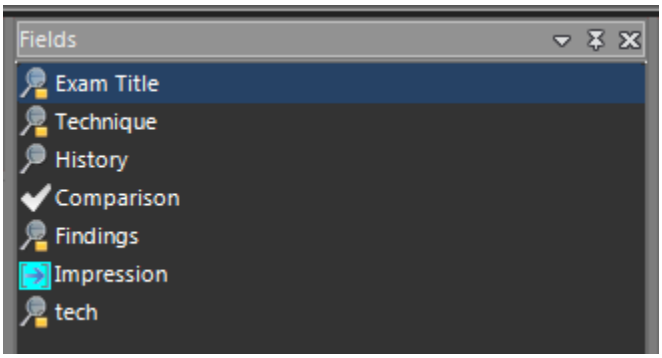
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The user can unprotect all fields (this is from existing functionality). This can be accomplished only if the user has FULL access to the "Reporting.UnprotectDataFields" access string.
When fields are protected in the report, a button will appear in the report editor's toolbar next to the field navigation buttons. The button will only be visible when fields are protected, once the button is clicked to unprotect fields, all fields will be unprotected and the button will disappear. If the user undoes this action, the button will reappear once all the fields are protected again (multiple undos would be required for multiple protected fields).



*Reporting window showing the locked field indicator*

When fields are protected, they will show up in the report field controls with a small lock on the field icon. This icon will stay there even if the user unprotects them. The lock represents the field's property as defined in the field item editor.



*Fields tool window showing the type along with the small lock indicator*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**9630 Integrate with GE Universal viewer**

A customer has requested the ability to integrate the RIS client to the GE Universal Viewer for the radiologist reading environment. This is similar to the integrations that already exist between the eRAD RIS client and eRAD PACS, GE PACS IW, Carestream PACS, and Hologic.

The eRAD RIS client can now be configured to connect to a UV server. The workstation must have the UV PACS client installed on it. Users can launch view sessions, close view sessions, and append new studies into the existing view sessions. Logins are handled in a manner similar to the other PACS integrations in that the first attempt to launch images attempts to log in with the credentials used for eRAD RIS. If this fails the user will be prompted for different credentials.

The integration is based on the performed study instance uid, so an HL7 feed needs to be set up in order to get this information from the PACS to the RIS.

How to enable the feature:

Install the UV PACS viewer on the workstation by logging to the server with Internet Explorer in compatibility mode and installing the viewer.

Configure a UV PACS server in the PACS Server lookup table in RIS. The PACS Server type must be UV and the url field must be filled with the ip or hostname of the server.

Either configure a practice in RIS to use this server or on login use the PACS menu to override the default selection.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**Biopsy Workflow**

There is a need for a biopsy workflow for Israel that is different than the existing US –based workflow.
The basic workflow is as follows, with additional details in the larger section below:

- A study is configured to require a biopsy
- When that study is received in reception, it is automatically added to a 'Pending Biopsy' worklist for the radiologist to perform
- A notification is sent to the radiologist that the study is ready for the biopsy procedure
- The radiologist performs the biopsy and documents the procedure.
- The radiologist annotates an image with locations of biopsy samples and FLN icons
- A 'Procedure Report' is created that includes pertinent details of the biopsy as well as the drawing.
- The procedure report is stored as an attached image to the study
- Downstream systems are notified of the completed biopsy procedure via an interface
- The study is added to a 'Pending Biopsy Results' worklist
- When the biopsy results are received, the same study is released from the pending worklist – or can be manually released
- The study appears on the (my) 'Pending Dictation' Worklist
- The remainder of the workflow is as per normal diagnostic reporting workflow.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### 11076 Biopsy Workflow - Ability to Flag a Procedure as a Biopsy

The RIS now contains a new biopsy workflow. In order to know when to enable this workflow, there needs to be a way to associate the procedure to the workflow.

A new column called 'Biopsy Enabled Flag' has been added to the Procedure Code lookup table with a default value of 'N'. Procedure codes that are required to be sent to the Pending Biopsy workflow will have to have the Biopsy Enabled Flag set to 'Y'.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

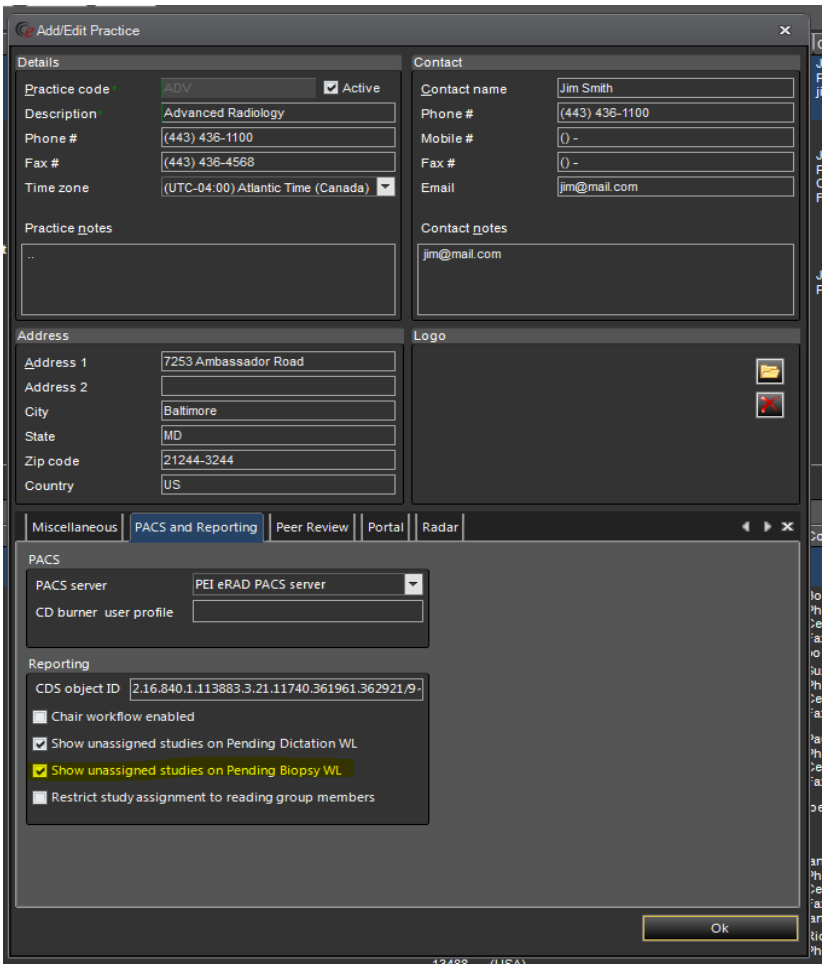
**11077 Biopsy Workflow - Create Pending Biopsy and All Pending Biopsy Worklists**

In order to begin the biopsy process, there needs to be a worklist for the radiologist who performs the biopsy procedure. Therefore, the RIS requires a (my) 'Pending Biopsy' worklist. A senior staff radiologist will also require an 'All Pending Biopsy' worklist.

These worklists have been created and are based on the same statuses as the Technologist WL (Arrived, CheckingIn, Started). The radiologist's (my) Pending Biopsy WL is filtered based on the assigned radiologist. The "Perform Exam" screen will be used by the Radiologist to action the pending biopsies. The pending biopsy work list will show studies in Arrived or Started status that have a procedure code that has the biopsy enabled flag set to 'Y'.

Note:
In the same manner as the (my) Pending Dictation worklist, it is possible to show un-assigned studies on the 'my' pending biopsy worklist. To enable this setting, the following checkbox should be enabled at the practice level:

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



*Practice maintenance screen showing the new unassigned studies option*

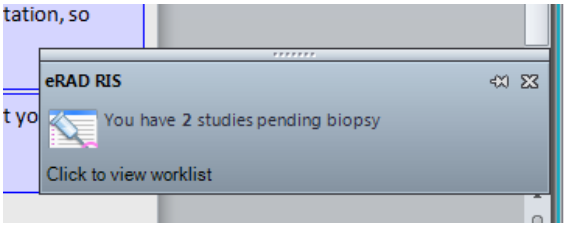
Access Strings:
WL.Rad.PendingBiopsyAll – FULL shows the worklist
WL.Rad.PendingBiopsy – FULL shows the worklist

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### 11078 Biopsy Workflow - Notify a radiologist of an assigned pending biopsy

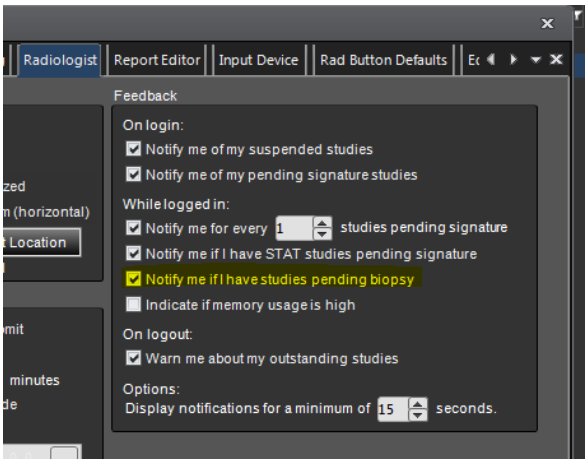
When a radiologist is assigned a biopsy request, he or she will need to be notified.

eRAD RIS now supports a new notification pop-up that will appear for the radiologist when they have a study assigned to them that requires a biopsy.



*Example of a biopsy notification*

There is a user preference that allows the user to turn off this notification.



*The user preference screen showing the new notification option*

Access strings:

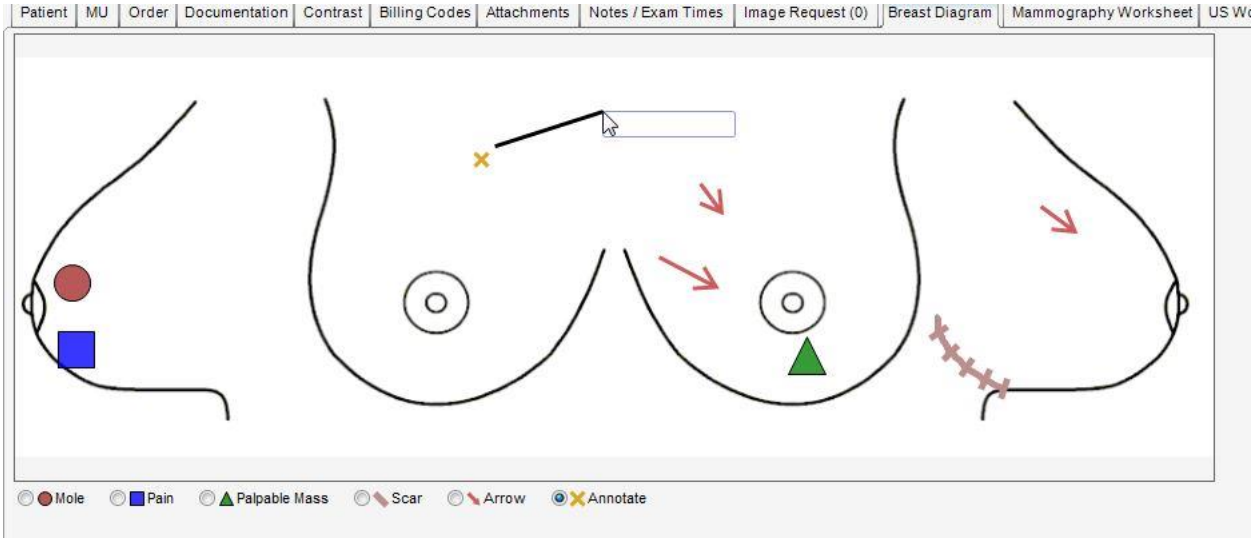
WLNotification.PendingBiopsyNotify" – Default FULL – If set, the notification can appear to the user.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**11079 Biopsy Workflow – Drawing tool – Add tool to show biopsy locations (annotation tool)**

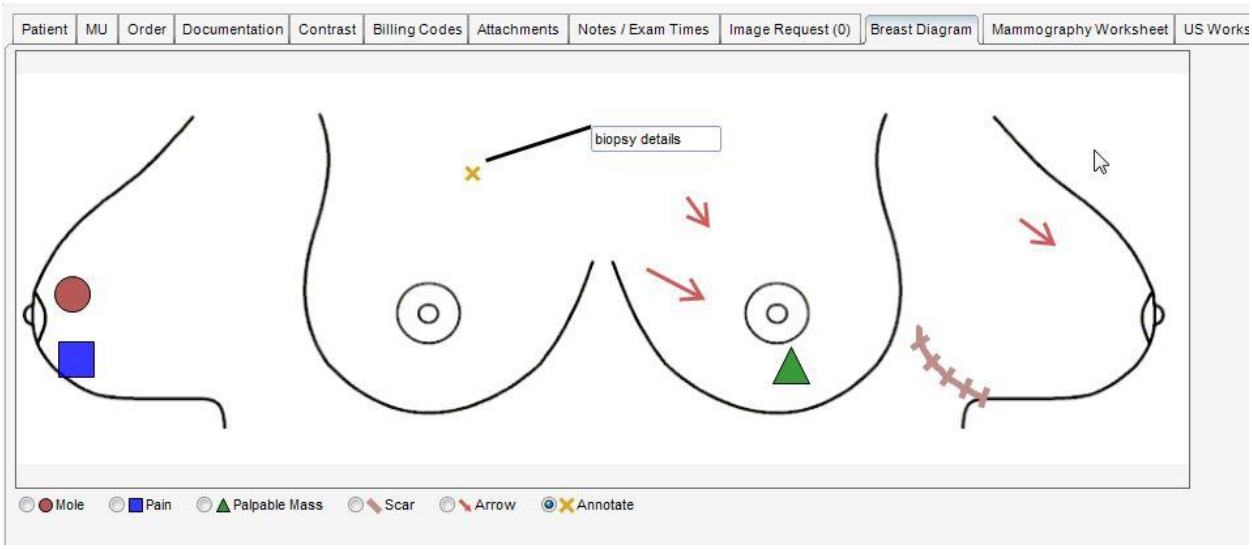
The RIS drawing tool needs to be expanded to include a new tool type which will be used primarily to show the location of a biopsy sample. It is desirable to make this a 'call-out' type tool so that a custom label can be added to each call out, therefore making this tool useful for many other purposes.

eRAD RIS's drawing tool now contains a new tool called 'Annotate'. When selected, the mouse is used to select a starting location for the annotation. Consider this to be the actual location of the biopsy sample in this case, and consider it to act like a 'line' feature in many drawing programs. The user will click down with the left mouse button at the location of the biopsy, and while holding down the left button, will drag the mouse to a new location where the annotation text can be entered. When the user releases the mouse button, the RIS will open a text field where the user can key in the value for the annotation. To delete an annotation, right click on the annotation and select the 'Delete' option.



*Drawing window showing an annotation tool. The user has selected a starting location and is dragging the mouse to a location for the annotation label*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



*Drawing window showing an annotation tool. The user has released the mouse button allowing text to be entered for the label*

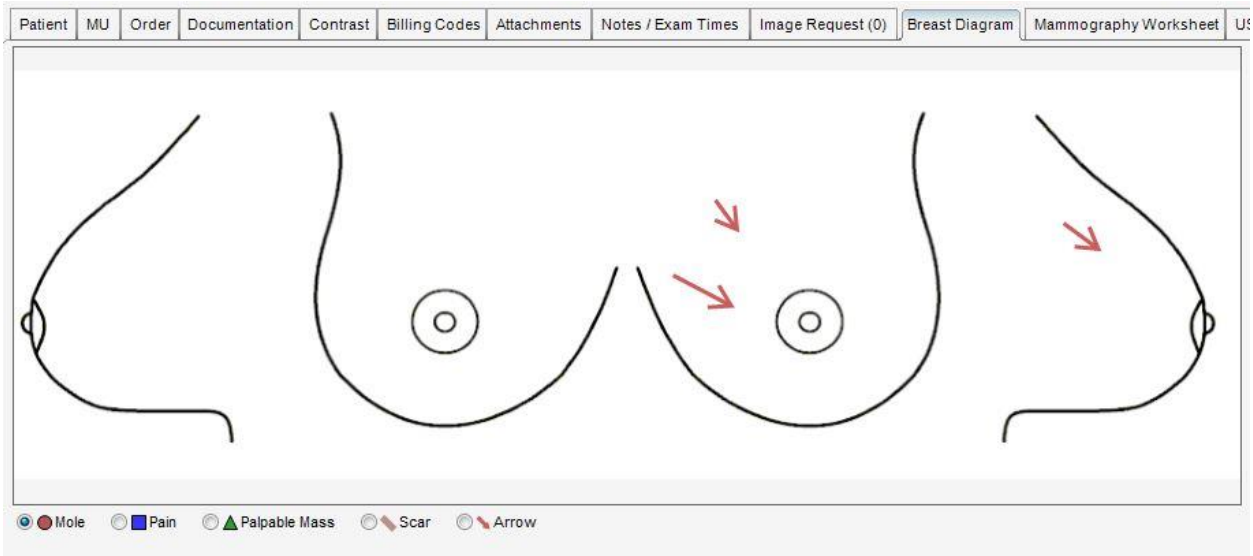
To delete an annotation, right-click on the starting point of the annotation and select 'Delete' from the context menu.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### 11184 Biopsy Workflow - Drawing tool - Add tool for arrow (FNL tool)

The RIS drawing tool needs to be expanded to include a new tool type resembling an arrow which will be used to represent FNL (fine needle localization).

A new tool has been added called 'Arrow'. To draw an arrow, select the tool type, then click on the image with the left mouse button and while holding down the button drag the mouse to another location. When the mouse button is released, an arrow will be drawn. To delete an arrow, right click on the arrow, and select the 'Delete' option.



*Drawing window showing an FNL (arrow) tool. The user has selected a starting point and dragged the mouse to an end point and released the mouse button. The user has done this 3 times.*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**11083 Biopsy Workflow – Generate a Biopsy Procedure Report (framework)**

When the biopsy procedure is marked as completed by a radiologist, a Biopsy Procedure Report is required to be created, printed, stored to the patient's attached images and an XML version needs to be transmitted to an external system. This report must also include the drawing from the drawing tool, along with answers from the questionnaire framework.

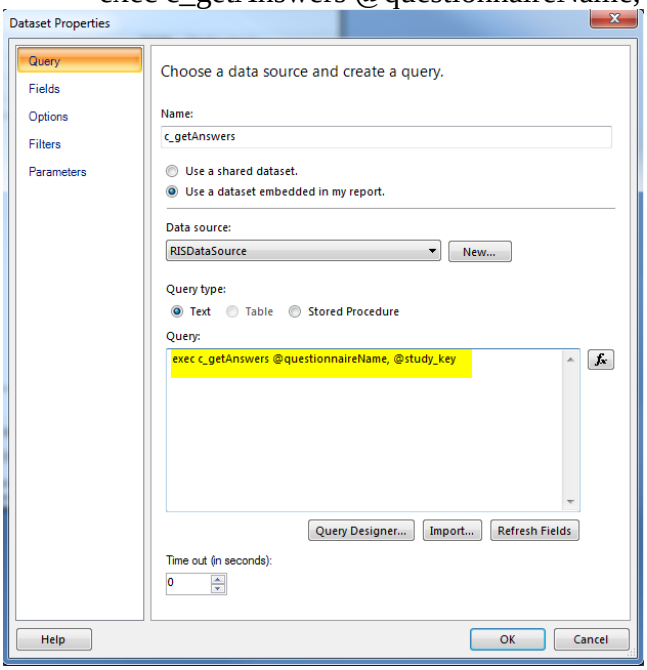
eRAD RIS will generate this report using the existing forms/labels feature. A sample report was created so that service personnel could see how to pull questionnaire answers (the biopsy data entered by the radiologist is stored in these answers) and the drawing into this form.

**How to create the Procedure Report form:**

**This is a more involved setup, usually involving the assistance of eRAD support personnel. For assistance, please contact eRAD Support and reference feature 11083**

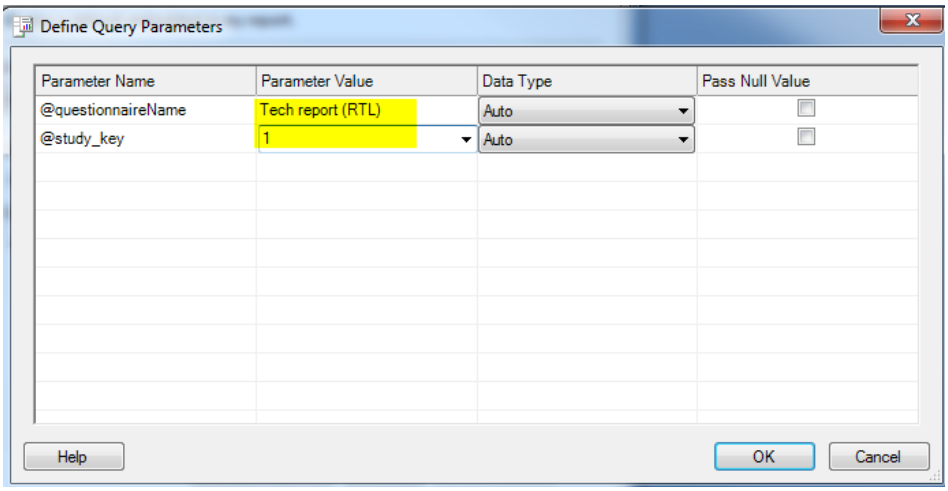
In report builder create a dataset. Set the data source to RISDataSource. Set the query type to Text. Set the query as shown

exec c_getAnswers @questionnaireName, @study_key



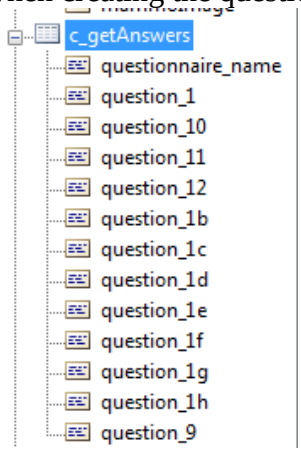
Click the Refresh Fields button, and if prompted enter your sql connection information.
You will be prompted with the Define Query Parameters window.
You will enter the name of the Questionnaire and any study key.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



The dataset should populate with a list of all the question short names from the questionnaire like this:

Note: In this example question_1 through question_12 are the short names for the questions in the sample questionnaire I referenced. This is why it is helpful to have more meaningful names when creating the questionnaire short names for mapping the data into a SSRS report.



Notice that adding that stored procedure creates 2 report parameters if they did not already exist.

- @questionnaireName,
- @study_key

Notice that the Study_key parameter is what drives the form from the worklist.

**How to include the drawing tool image:**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

To pull the biopsy image into the form, join the image_data from the into the c_mammo_drawing table into your query.

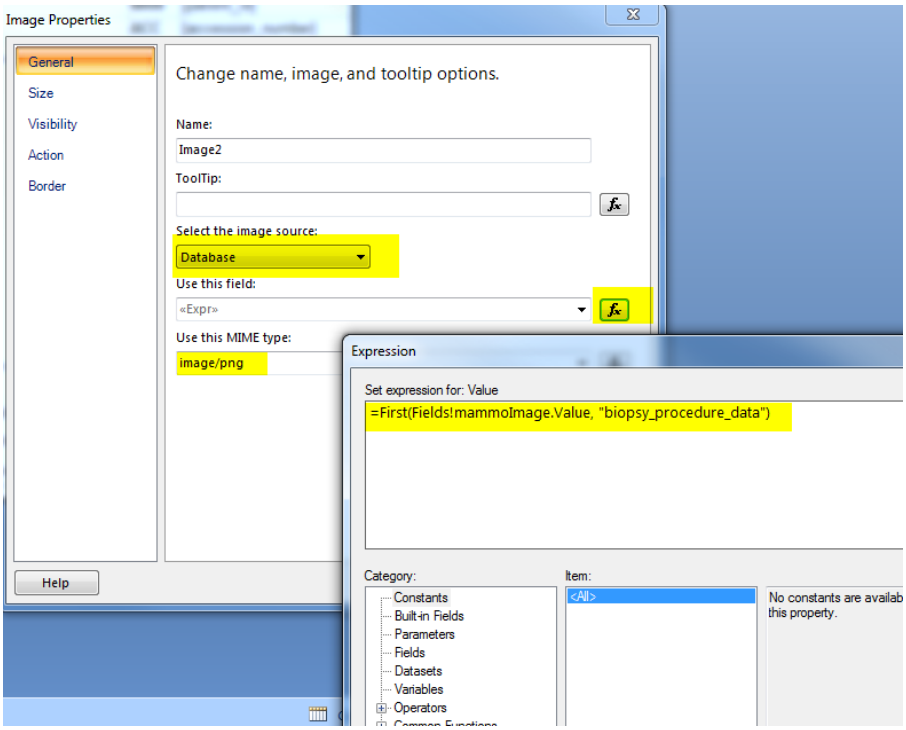
Example:

```
select
        <your patient, study, order or whatever other information you need would be here>
        ,md.image_data as mammoImage
from
        c_study s
        inner join c_patient p on s.patient_key=p.patient_key
        left join c_mammo_drawing md on s.study_key=md.study_key
where
        s.study_key = @study_key
```

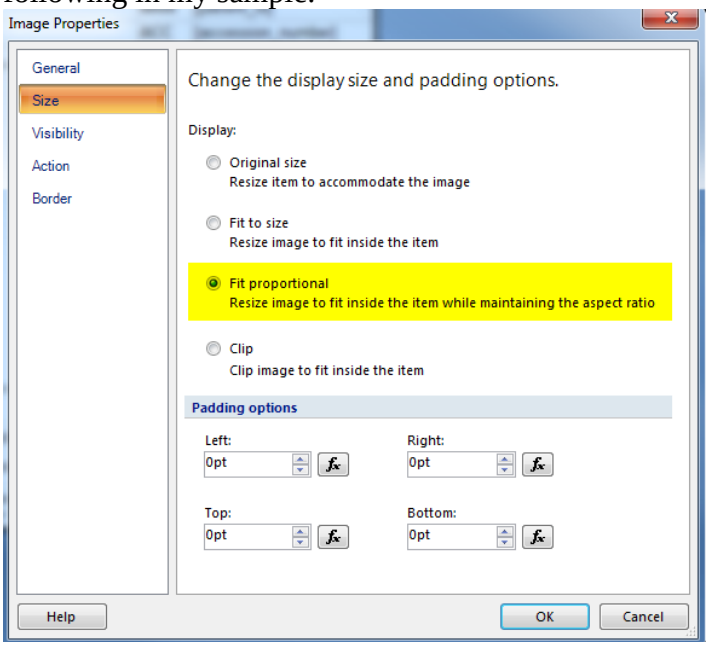
In SSRS report builder put an image where you want it on the form and add information as follows:

- **Select the image source:** Need to be Database
- **Use this field**: Using the little fx (functional expression) button to select the image field from your dataset. In this example I called my dataset biopsy_procedure_data and pulled the field I aliased as mammoImage
- **Use this MIME type**: I selected image/png but you can use what you prefer.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



You might want to set the Size properties to what suits your needs. best, but I just used the following in my sample.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**11082 Biopsy Workflow – Ability to collect custom Biopsy Data**

During the performing of the biopsy procedure, there is specific data that will have to be collected and entered by the performing radiologist (examples include Modality Type, Study, Pathology Type, Left or Right Breast, Biopsy Location, Color of Specimen Container, BIRAD, etc) In order to provide future enhancement opportunity and not hard-code this single solution, it is desirable to use the conditional tab framework to collect this information, but some enhancements to this framework are required. The Conditional Tab editor needs to include body part and biopsy enabled flag. The RIS will also need to produce a 'Procedure Report' when the biopsy has been performed.

The questionannaire framework will now evaluate the biopsy and body part fields when determining when to display a questionnaire.

The forms and labels editor was modified to support filter criteria that includes Body Part and Biopsy flag. A "companion form" can be created to present the information from the questionnaire, with criteria that specify that the form should be printed whenever the "tech completes the exam" (which is actually the radiologist completing the biopsy procedure)

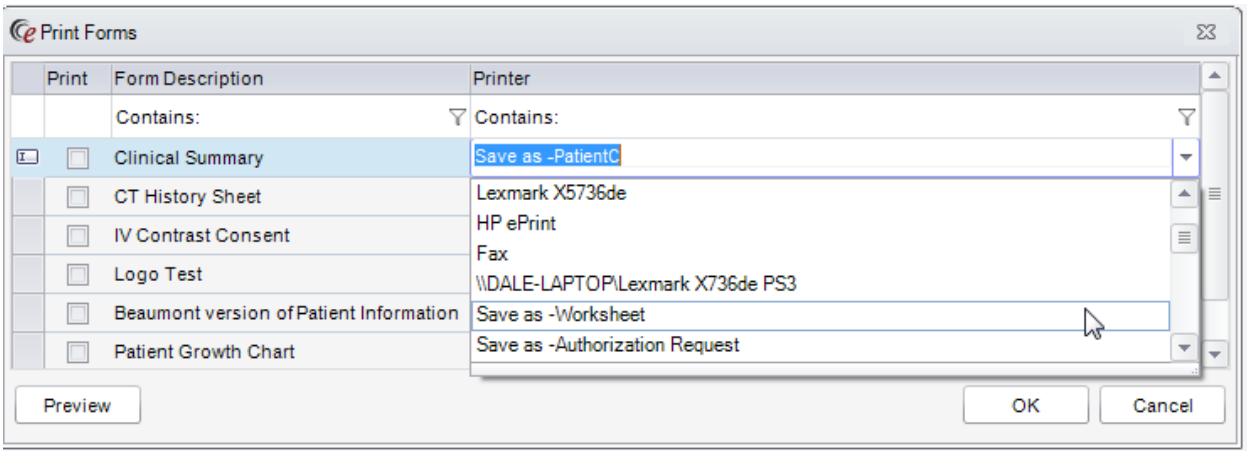
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### 11271 Biopsy Workflow - Ability to save a form directly to the patient folder

When the biopsy procedure report is created, the user must save it to the patient folder. eRAD RIS needs to support creating a form and saving it directly to the patient folder.

The Print Forms dialog (which can be configured to automatically launch at many points in the workflow) normally contains a list of printers where the document can be printed. This has been enhanced to also contain links to save an image of the document directly to the patient folder. It will appear in the list of printers and 'Save as' and a scanned document type. When selected, the RIS will render the report as an image (using multiple pages if necessary) and store the image as a scan document visible from the patient folder. As per normal RIS functionality, once a destination is selected, the RIS will remember this destination, so the user only has to make this selection once.

If more than one copy of the same document is required (for example, in the requested biopsy workflow there has to be a printed copy of the document as well as the document attached to the patient folder) simply configure the document to appear twice in this dialog by having 2 identical forms created.



*The print forms dialog showing the ability to save the document to the patient folder as a 'worksheet' type.*

Access strings:
Clinical.FormsAndLabels.AllowSaveAsAttachment

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

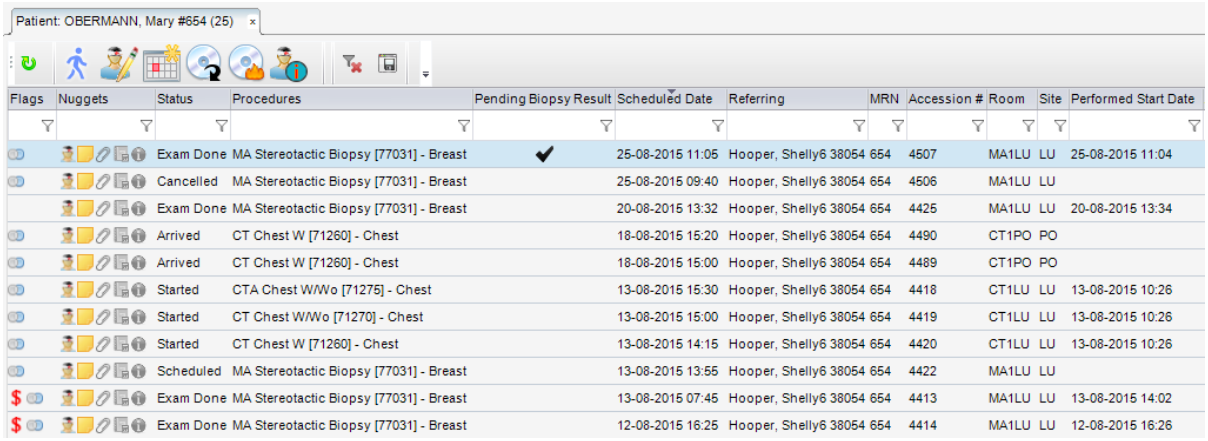
### 11084 Biopsy Workflow - Track biopsies that are awaiting results

As biopsy procedures are completed by the radiologist in RIS and sent to a lab for pathology, there needs to be a means to track that the biopsy has been sent to an external system and is awaiting results.

To accomplish this, a new worklist called Pending Biopsy Result WL has been added to the Administration menu in eRAD RIS. As biopsy procedures are marked as complete by the radiologist, the study will appear on this Pending Biopsy Result worklist. The study will remain on this worklist until the pending_biopsy_result_flag (accessible via the RIS interface) is set to 'N'. Once the interface message is received, the study will be removed from the Pending Biopsy Result WL and a radiologist can now dictate on it from the Pending Dictation worklist.

Should the interface not exist, a user can manually remove a study from the Pending Biopsy Result WL by right clicking and selecting 'Remove Pending Biopsy Result Flag'.

Access strings:
WL.PendingBiopsyResult



| Flags | Nuggets | Status | Procedures | Pending Biopsy Result | Scheduled Date | Referring | MRN | Accession # | Room | Site | Performed Start Date |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | | Exam Done | MA Stereotactic Biopsy [77031] - Breast | ✔ | 25-08-2015 11:05 | Hooper, Shelly6 38054 654 | | 4507 | MA1LU | LU | 25-08-2015 11:04 |

# Mammography

### 9255 Support BIRADS 4a,4b,4c (non-USA sites only)

Currently eRAD RIS supports only 'BIRADS 4', and utilizes the recommendation code to distinguish between 4a, 4b, 4c. A non-US customer wants the BIRADS drop down to directly support the categorization of 4a, 4b, 4c.

To support this request, the RIS has been modified to support the additional BIRADS codes. This change technically allows any of the 0-6 BIRAD codes to be extended in the BIRADS table.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# Front Desk

### 8355 Validation on manually entered MRN

All residents of Israel have an Israeli National ID. This is utilized as the MRN in RIS. All National IDs are required to pass a validation referred to as the Luhn Algorithm also known as Mod 10. The RIS must validate the MRN when entered into the system.

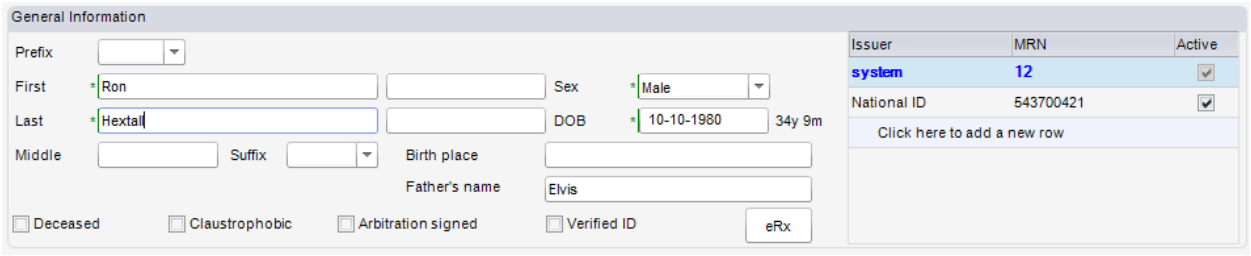
To support this, the RIS now has a simple validation framework for MRN's associated to the issuer. Currently there are two validation types supported, but the framework allows for additional types to be added in the future. The two identity validation types supported today are:

- Mod10 – This validation type will accept (pass) a MRN value through the Mod 10 algorithm and determine if it passes or fails.

- Mod10PrePad – This validation type will pass an MRN value through the Mod 10 algorithm and determine if it passes or fails. It will also pad zeros to the left of the number if it passes validation but is less than the appropriate amount of characters. The appropriate amount of characters is determined by the total amount of characters defined in the Mask for the issuer.

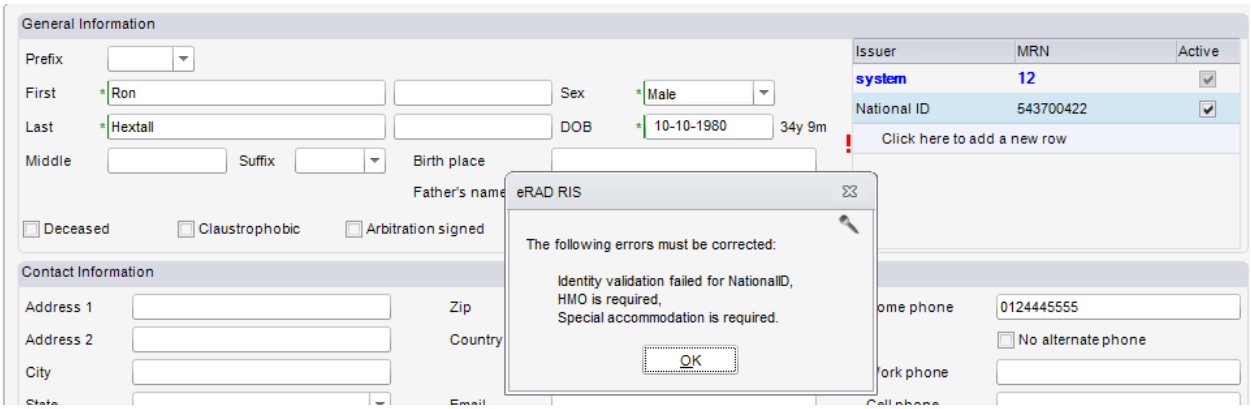
The Patient MRN grid has been enhanced to check for identity validation for the Issuer if configured in the Issuer lookup table. If identity validation fails, an error will be shown to the user which will prevent him or her from saving the MRN.

If identity validation passes but the MRN value is required to be padded with zeros, the appropriate number of zeros will be added to the left of the MRN value.



*General information window showing valid 9 character National ID*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



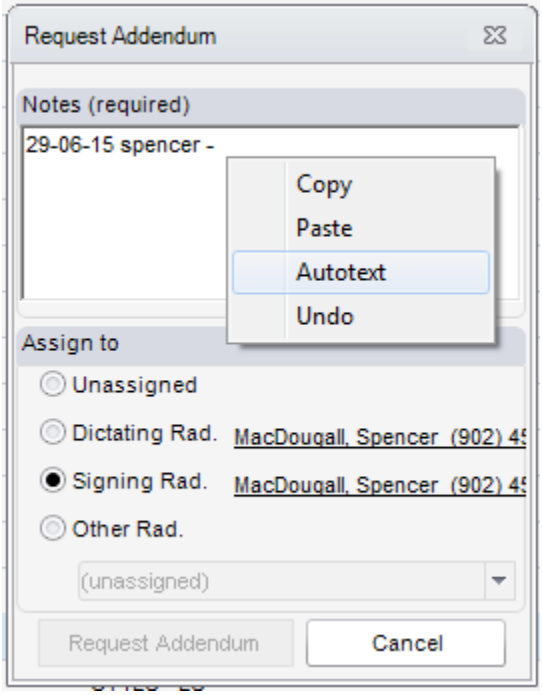
*General information window and error dialog showing invalid ID*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### 10534 Support Configurable Autotext for Addendum Notes

A customer has requested that both the Request Addendum and the Reject Addendum forms in the Radiologist workflow support values driven from a lookup rather than just free text.

In build 45.0, the RIS introduced a new feature called Autotext for log controls. To solve this new customer request, these two addendum fields have been updated to support the autotext control. Now the user can right-click on the note area to invoke the autotext feature. As per the existing autotext feature, these text controls can be configured to support free text, a combination of free text and autotext, or purely autotext.

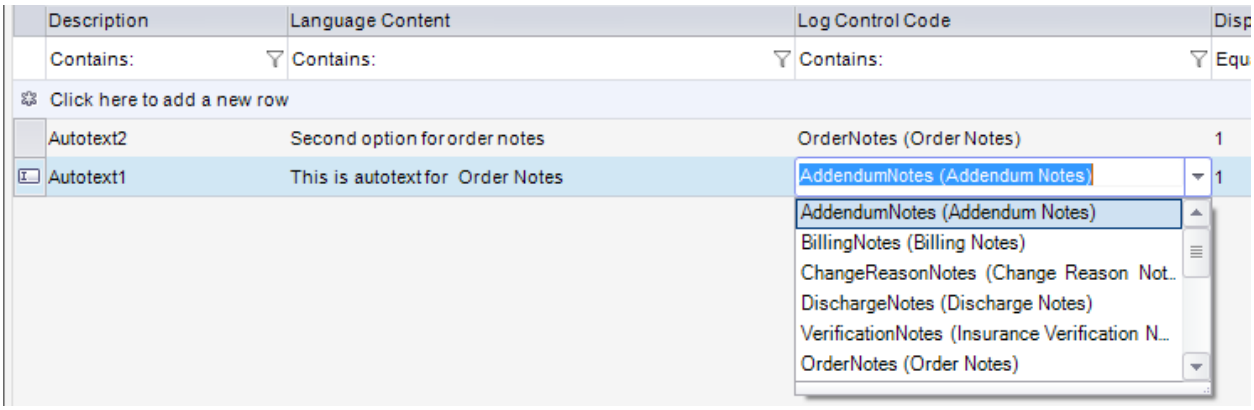


*Request addendum screen showing the right-click autotext option*

How to enable this feature:

To enable this feature a new log control code has been added to the Autotext lookup called "Addendum notes". The administrator can configure autotexts to be associated with this category and will therefore display in these dialogs.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



*Autotext configuration screen showing the new Addendum Notes option*

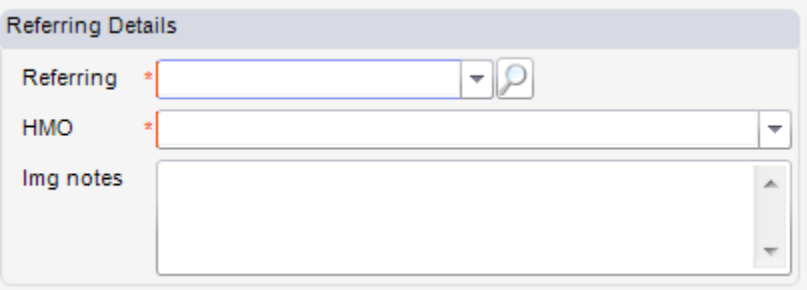
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Scheduler/Front Desk

### 10623 Need to have 'Source of Order' as a user-editable field instead of 'Visited At'

For a specific customer, studies are scheduled in an external CRM system and will not have a 'visited at' populated with the referring physician. The interface will automatically populate a 'source of order' field, and this is how the RIS and its attached system will know where to direct the diagnostic report. Walk-in patients (and VIP's) are directly scheduled in eRAD RIS, therefore the scheduler/receptionist needs to be able to store/edit the 'source of order' so that the RIS knows where to direct the diagnostic report (which is their case is called an HMO). Therefore, it must be possible to edit the 'source of order' in a field within the RIS.

To resolve this need, there is now an ordering organization lookup table, and under the appropriate conditions, this is shown in place of the 'Visited at' in the Referring Details of the order tab.



*Referring Details window showing the source of order field.*

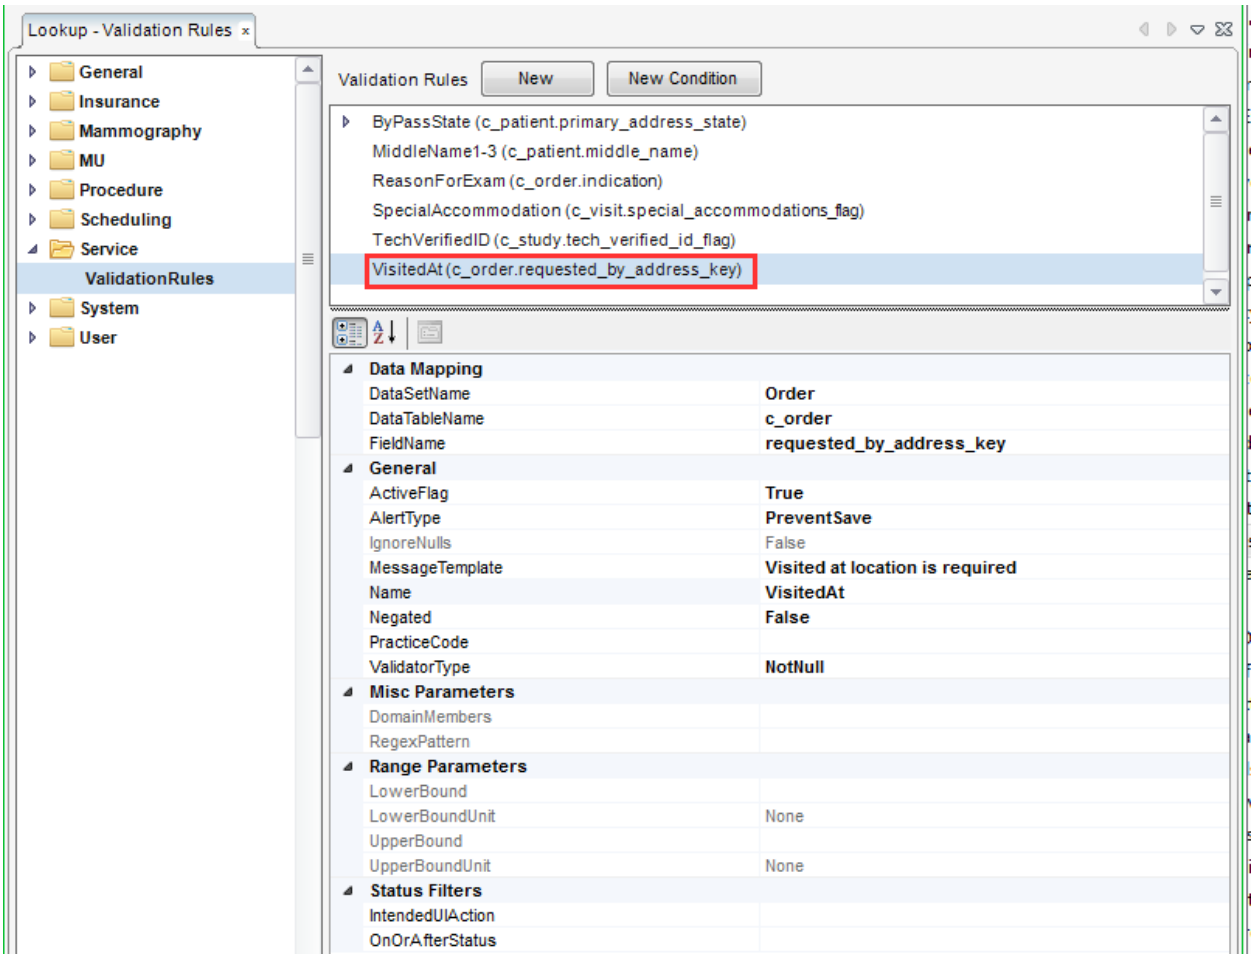
How to enable this feature:

To enable the 'HMO' field, set the following access string to FULL
Custom.Visibility.Data.Order.c_orderRow.ordering_organization_code

To disable the 'Visited at' field set the following access string to NONE
Custom.Visibility.Data.Order.c_orderRow.requested_by_address_key

Outside of this feature (but helpful to mention it here) you will also need to disable the required field for the 'Visited At'

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



*Validation Rules lookup editor showing the rule which disables the Visited At required field*

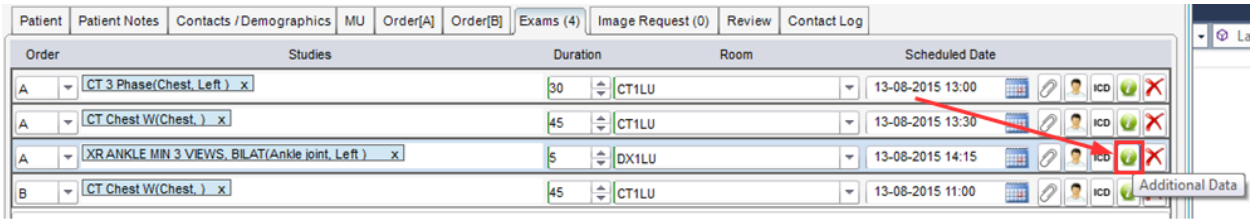
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Scheduler and Technologists

### 10843 - Provide Viewer/editor for 'Study Extra Info'

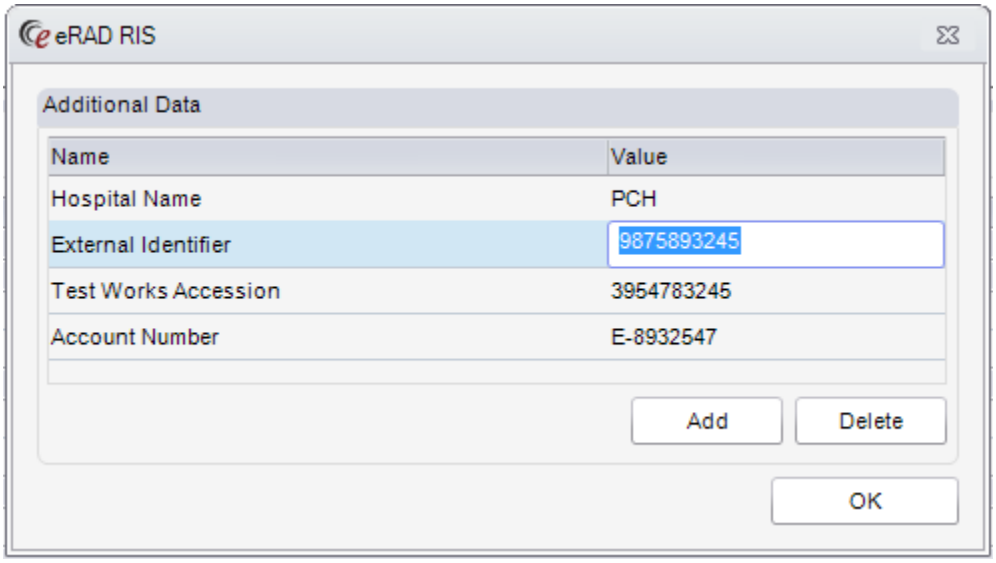
To support dynamic data fields which may be send to eRAD RIS from an external system, the RIS has a special data table known as 'study_extra_info'. While some of these fields are used simply to pass data between systems, there are occasions where the user may need to view and/or add/edit/remove this information.

To allow the viewing and editing, a new button was added to the procedure picker row as shown below:



*Procedure selection screen showing the Additional Data button*

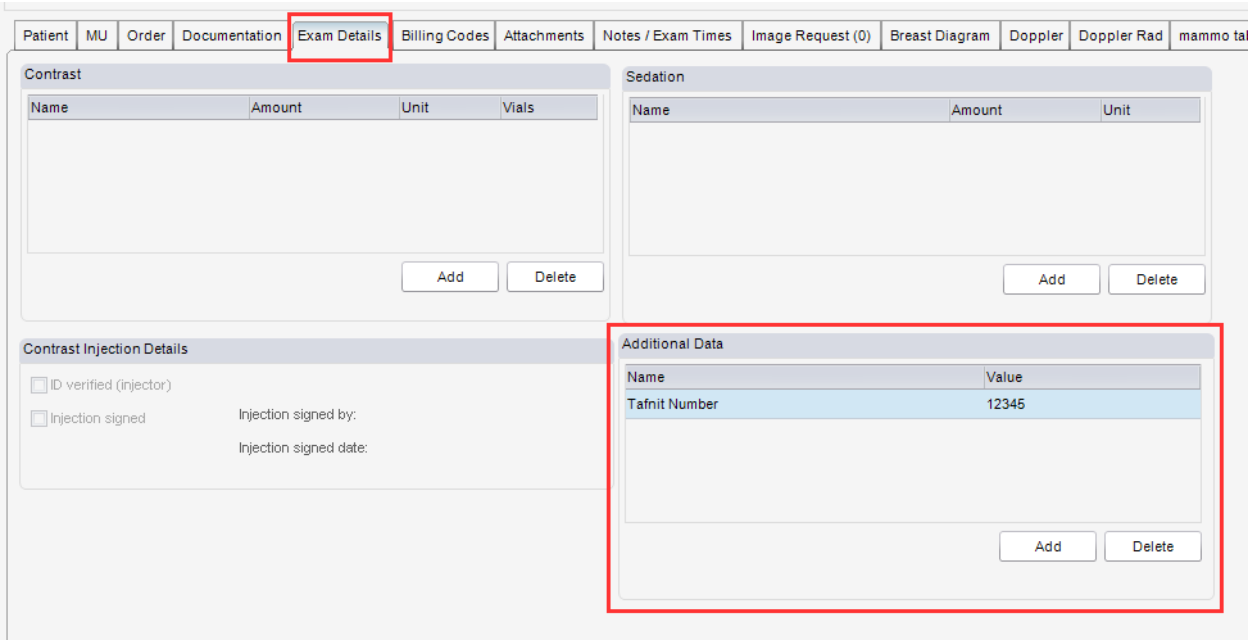
Clicking this button will open the study extra info grid.



*Additional Data popup screen showing the ability to edit a field*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

To view or edit the addition data from other roles (ie: the Perform Exam and the View/Edit screens) an ‘Additional Data’ grid has been added to the Exam Details tab. Note that this tab used to be called ‘Contrast’, but its purpose has grown beyond just recording contrast.



*Tech screen showing the Exam Details tab and showing the additional data grid*

Access strings:

To control access to these fields both for viewing and the ability to edit, each row in the Additional Data (Study Extra Info lookup table) can be linked to an Access String using the following custom format:

“Custom.Visibility.AdditionalData.[field name]”

For example, the Study Extra Info field for ‘ExternalIdentifier’ will have an associated access String of Custom.Visibility.AdditionalData.ExternalIdentifier.

If no custom Access String is added for the Study Extra Info Code, then the system will automatically grant Full rights.

If a particular User Group requires read-only access to ExternalIdentifier, this can be configured in the User Group Permission Lookup table by selecting the group and specifying the Custom.Visibility.AdditionalData.ExternalIdentifier as read-only.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

The Additional Data grid allows the user to view, modify, add, and delete entries in the c_study_extra_info data table based on the permission framework outlined above. A user must have Full rights in order to add, delete, or edit an entry.

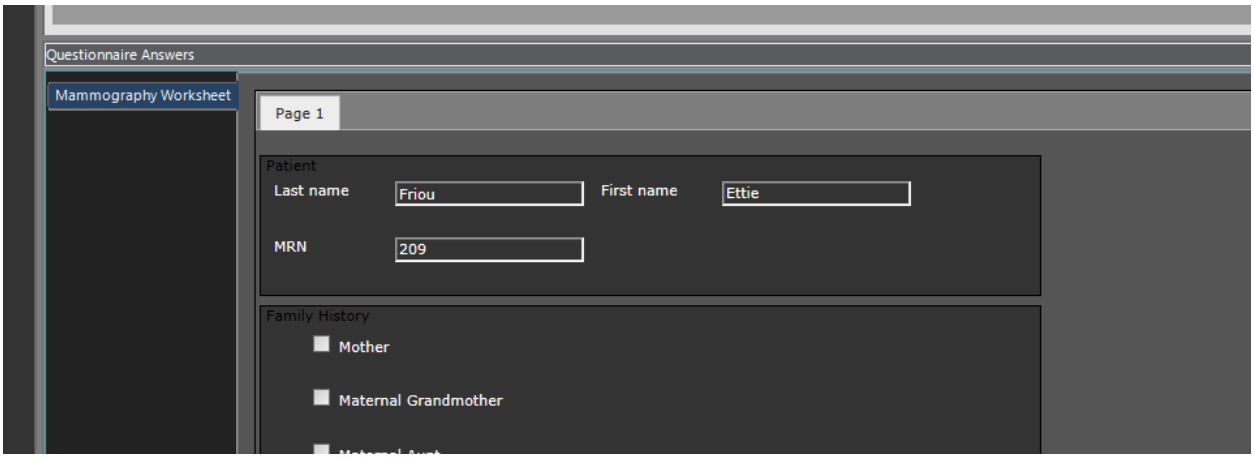
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## All users

### 10700 Questionnaire - Display questionnaire answers in the reporting screen

The new questionnaire (digital forms) feature allows for a customer to create custom questions and store the answers electronically. Radiologists and transcriptionists need a read-only ability to review these answers.

eRAD RIS now contains a new tool window in the reporting screen called 'Questionnaire Answers'. This window can be opened via the View Menu while the reporting screens are open. This new tool window can be docked and saved in the current layout the same as all tool windows. This new tool window will display questionnaires of type "General". (See feature #11008 for more details on conditional tab types). If more than one questionnaire is applicable to a study then each will show as a tab within the viewing window. The screen capture below shows a single Mammography Worksheet questionnaire with a single page of questions and answers.



*Radiologist screen showing the Questionnaire Answers tool window containing a single questionnaire and it's answers*

Access String:
View.QuestionnaireAnswers - used to control if the user can see the tool window

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### 10819 Questionnaire - Allow certain questions to be marked required

The eRAD RIS questionnaire framework does not currently have a mechanism to enforce when questions are to be answered. The system should permit a question to be marked as required. It must bypass the required check if the question is not visible.

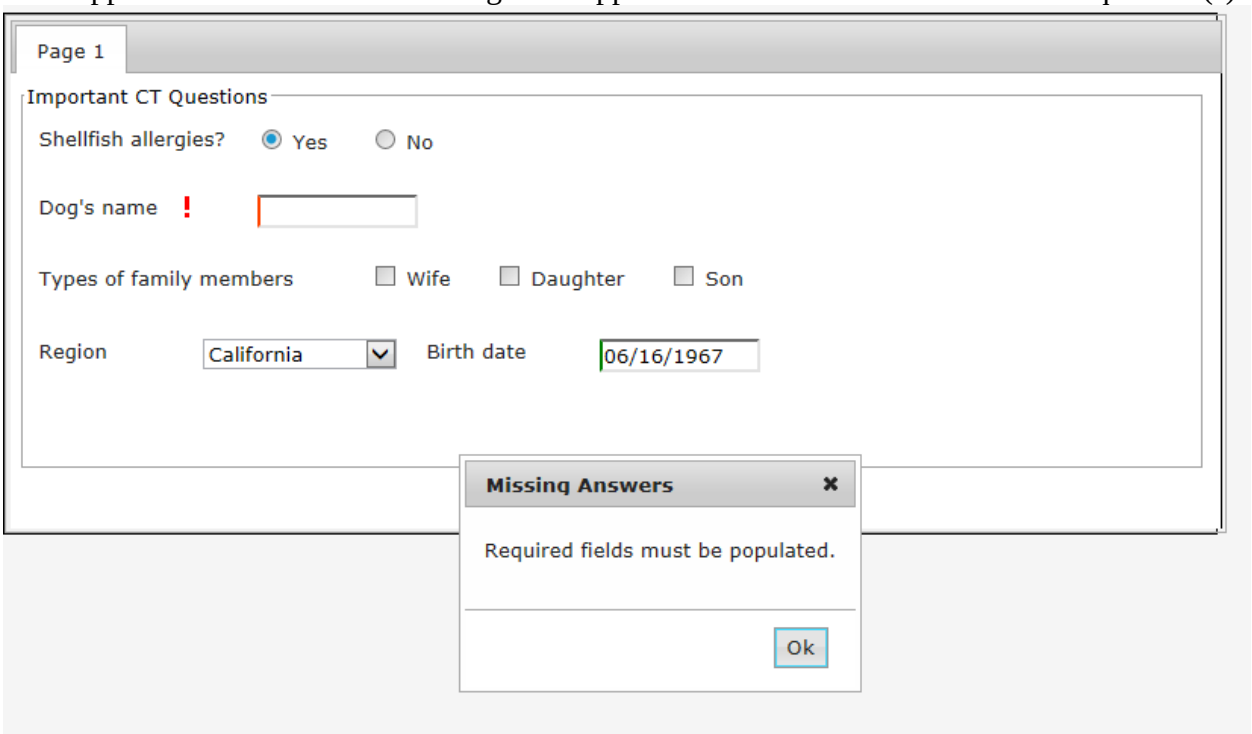
The RIS Admin can now designate questions as required in the questionnaire editor. When the questionnaire is being filled out, required fields are highlighted in red.

*Example question that is required showing the red highlight*

Once the question is answered, the highlight is changed to green to indicate that it is still required, but answered.

*Example question that is required and has been populated*

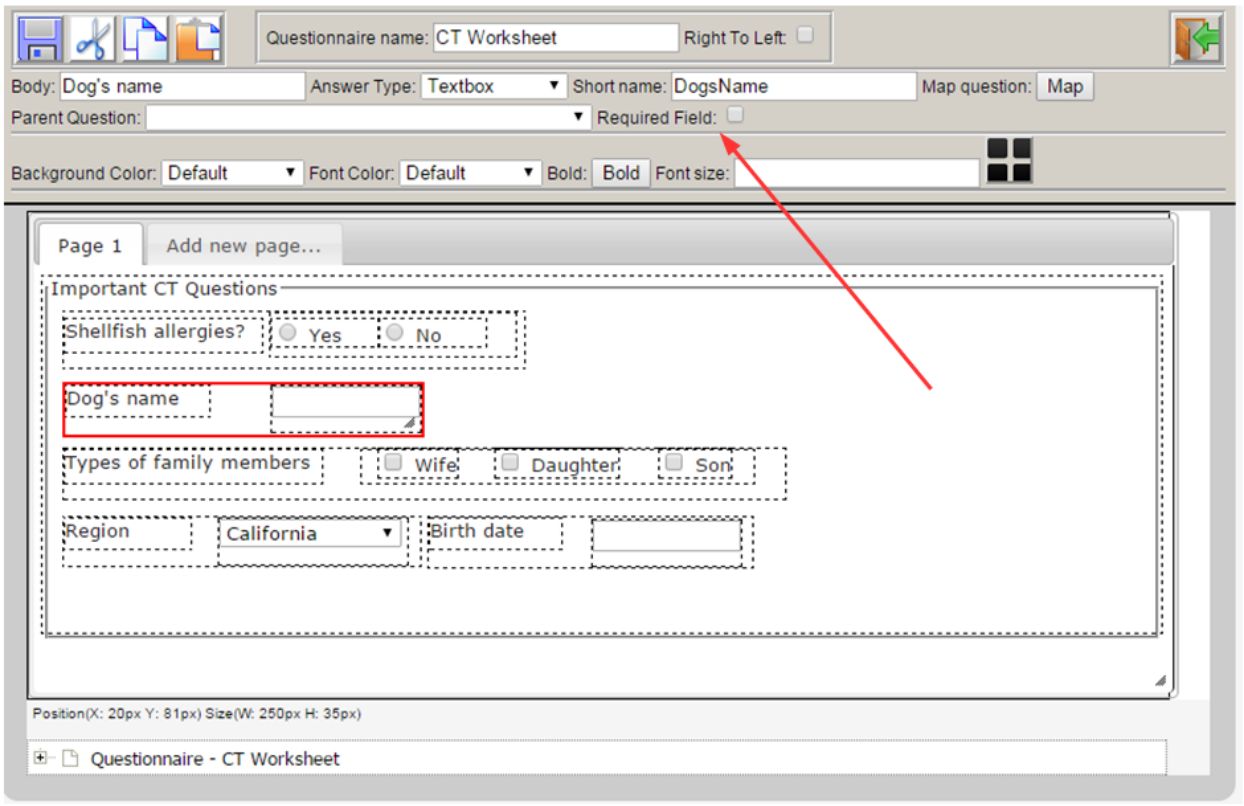
When the user attempts to save, required questions with no answers will have a red exclamation mark appear beside them and a message will appear to remind the user to answer the question(s).



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

How to enable this feature:

To make a question required, select the question in the questionnaire editor. Once selected, the toolbar will show a checkbox for 'Required Field'.



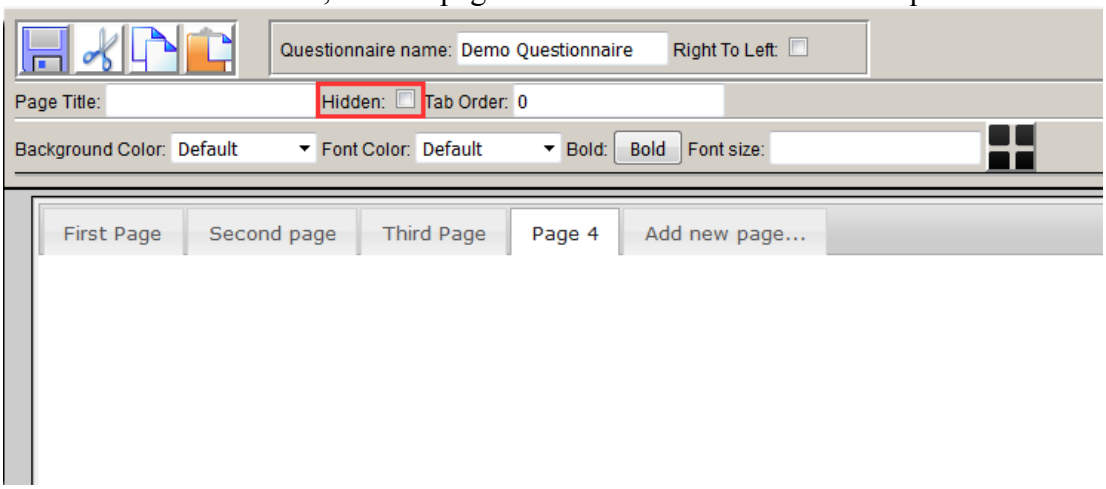
*Questionnaire editor showing the new required field checkbox*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### 10849 Questionnaire - Ability to hide a page at runtime

eRAD RIS can use the questionnaire framework to populate fields in the diagnostic report. Typically these expressions will be added to one or more tab pages that will be visible when designing, but should not be visible when the user opens the questionnaire. Therefore, the RIS needs to be able to hide these pages automatically.

To address this need, each tab page in the questionnaire designer now has a checkbox called 'hidden'. When selected, this tab page will not be available when the questionnaire is displayed.



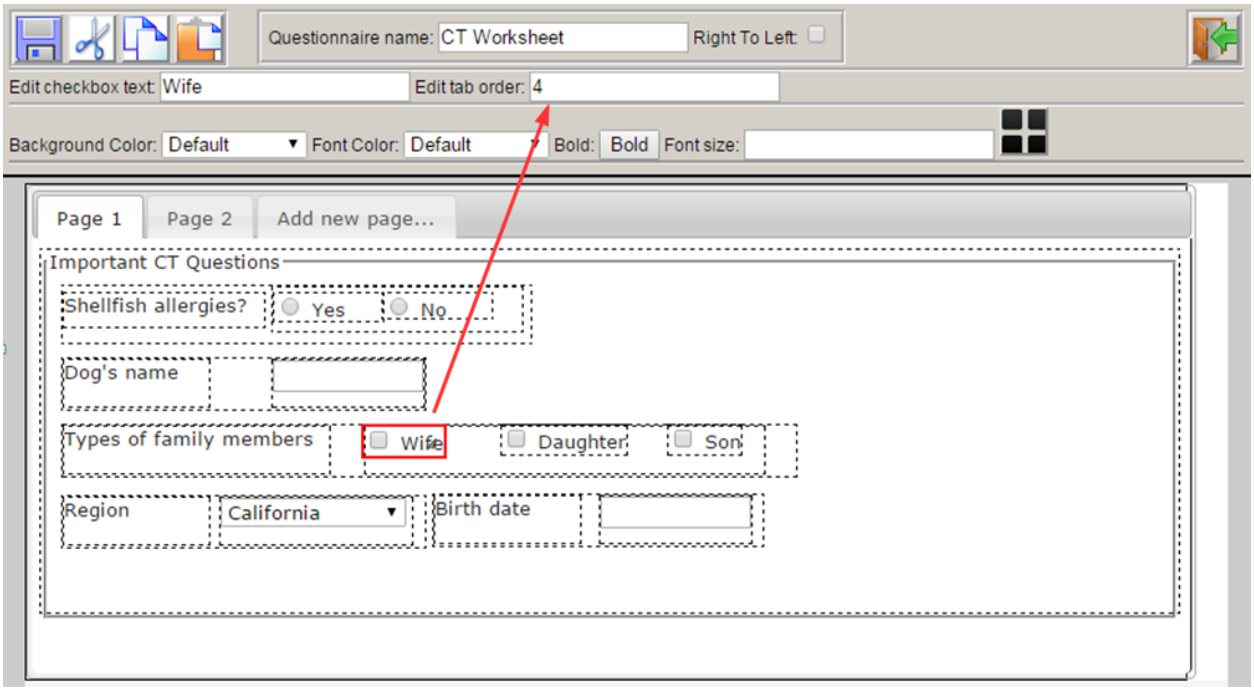
*Questionnaire editor showing the new Hidden checkbox*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### 10991 Questionnaire - Tab Order should be configurable

Initially the questionnaire editor automatically assigned the tab order in the same order as the question was created. However when editing questionnaire, there needs to be a way for the administrator to alter this tab order.

The questionnaire editor now allows the RIS Administrator to alter the tab order of the questions on the page. When editing a questionnaire, selecting an answer element will show a new text field on the toolbar called 'Edit tab order'. Tab order should be set to a sequence to allow the user to tab in that same sequence.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### 11000 Questionnaire - Support dark theme

eRAD RIS supports a dark mode theme (primarily for the radiologist) and when viewing a questionnaire in this mode the RIS should automatically display these questions and answers in this same dark mode.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### 11008 Questionnaire - Ability to specify a type of tab

The questionnaires will currently display to all users when the display criteria matches. However, some questionnaires will only be displayed to the radiologist for example. RIS needs to support a tab type which will help guide if the questionnaire is shown in a particular condition.

To support this need, the RIS now includes a 'Tab Type' in the conditional tab lookup editor. The values are currently only 'General' and 'Radiologist'. Control over which type is displayed is currently hard-coded into various screens in the RIS.

How to enable this feature:

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### 11402 Display "Radiologist" type questionnaires and update a corresponding diagnostic report (Report Assistant)

eRAD RIS requires a new tool window to display "Radiologist" type conditional tabs (questionnaires). This new tool window will allow users to enter and update questionnaire data and save. Upon saving the questionnaire data, a corresponding diagnostic report can update based on this input. This will allow for simple diagnostic report building using the questionnaire framework.

The new tool window is called ‘Report Assistant’. It is available to anyone inside the reporting screens if they have the appropriate permission. The window includes a ‘Save’ button. After the save is selected the RIS will re-insert the default template into the report editor which can incorporate Users should be aware when using this workflow any changes made to the diagnostic report prior to clicking the save button in the Report Assist tool will be overwritten by the default template and all fields will be evaluated again.

Access strings:

View.ReportAssistant

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### 11061 Questionnaire - Support cascading dropdowns

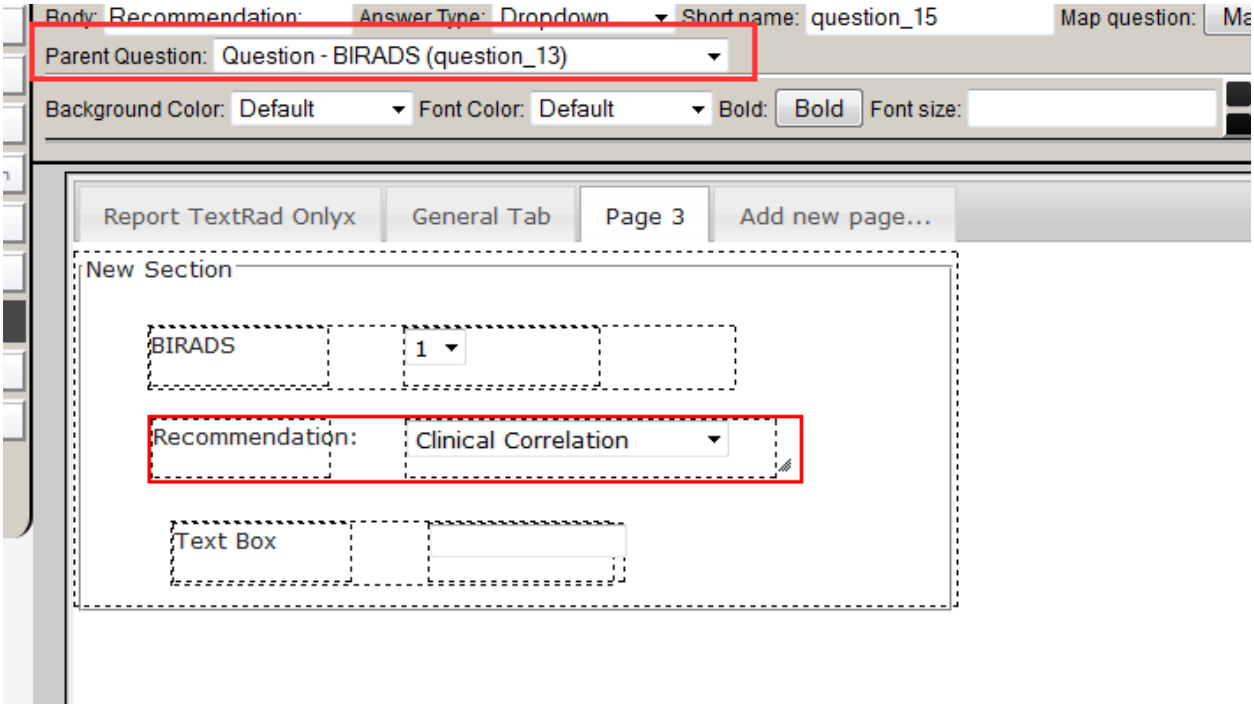
The questionnaire framework currently does not support cascading dropdowns. These dropdowns should have options that are based on a previously selected value from another drop down.

Example: You want to make a drop down list of 'recommendations' but that list of options will vary depending on the value is a previously selected drop down.

To resolve this issue, the questionnaire framework has been updated to support cascading values.

How to configure this feature:

To configure a cascading drop down, select the child drop down field. This will enable a toolbar option called 'Parent Question'.

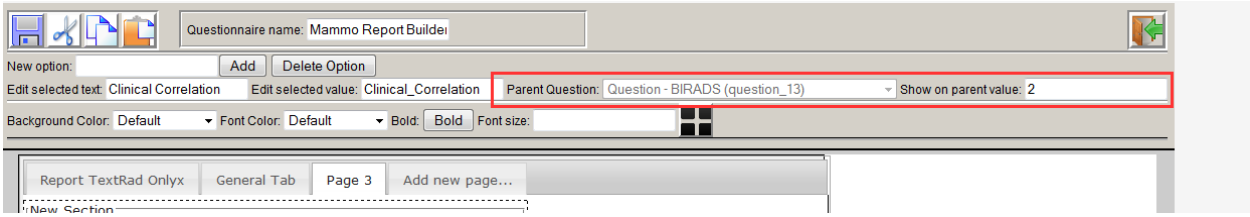


*Questionnaire editor screen showing the parent question field*

The parent question field is a dropdown that will show a list of all questions in the current questionnaire. Select the appropriate parent question.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Next, add or select an existing option and set the value for when this dropdown option should show.



*Questionnaire editor showing the parent question and the value for the cascade*

If the parent's value matches the dropdown show value it will display otherwise it will be hidden.

If no options are set to display for a specific parent value then the dropdown will be empty with no options available.

The system will automatically select the first option in the drop down list when the parent's value is changed.

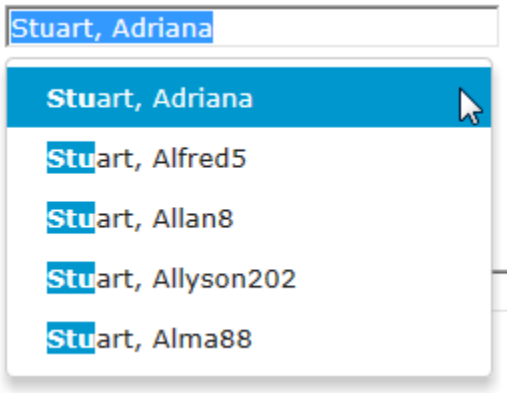
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**11417 Questionnaire – Support a type-ahead control that links to personnel and medication lookup tables**

The eRAD RIS questionnaire builder needs a drop down list option that links to personnel and medication.

Textbox answer types can now be linked to either personnel or medication from RIS. While it might have been nice to link to any lookup table, that will require a larger framework change so for now only these two lookup tables can be supported.

When the user begins typing in a specially configured text box, a query is executed to retrieve up to 10 suggestions that match. When the user tabs out of the text box, the RIS will save the text they have entered if it is a valid item from the list, or select the first suggestion on the list if it was a partial match (e.g. the user entered Wheel for a last name and the closest suggestion was for Wheeler), or the RIS will clear out the item if there were no suggestions (e.g. if the user entered Wheelz and there were no items that had a word that started with wheelz, the RIS would null out the entry.)



*A questionnaire showing the type-ahead for a name*

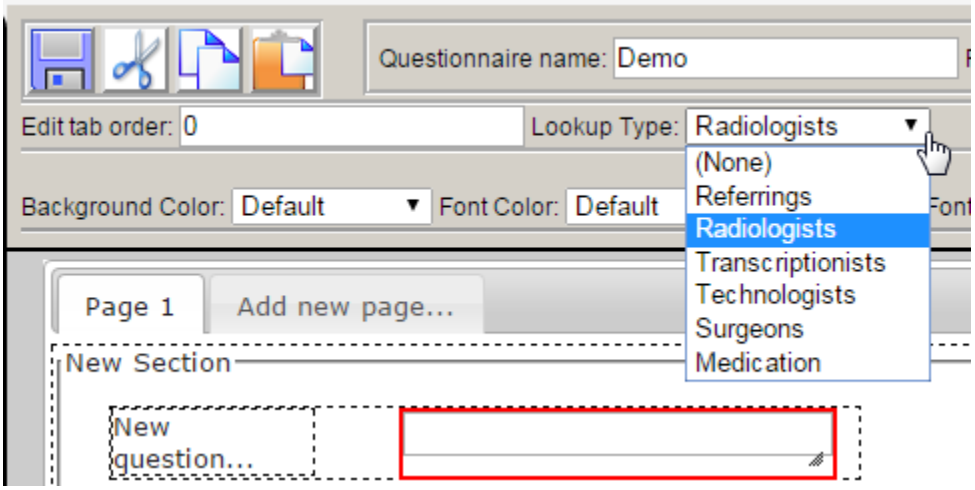
Personnel:
The list of personnel types is currently set to radiologist, referrings, transcriptionists, technologists, and surgeons. The personnel searches all search first name and last name in the same way, but they do a role search (e.g. radiologist_flag = 'Y', technologist_flag = 'Y', etc) as well. If only one word has been entered, the RIS assumes it is a last name. If the RIS finds less than 10 matches on last name, it also search the first name field. If two words are entered, the RIS checks for the existence of a comma and if found, the search assumes lastName, firstName otherwise firstName followed by lastName.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Medication:
Medication search built in a generic way where the RIS searchs the description field and returns the description and the primary key.

How to configure this feature:

In the questionnaire editor, when you select a control of type textbox answer, you will now get a lookup type option on the toolbar. Select the appropriate type of resource to search.



*Questionnaire editor showing the LookupType option when a textbox answer is selected in the questionnaire editor*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### 11172 Questionnaire – Autotext pick list for text controls

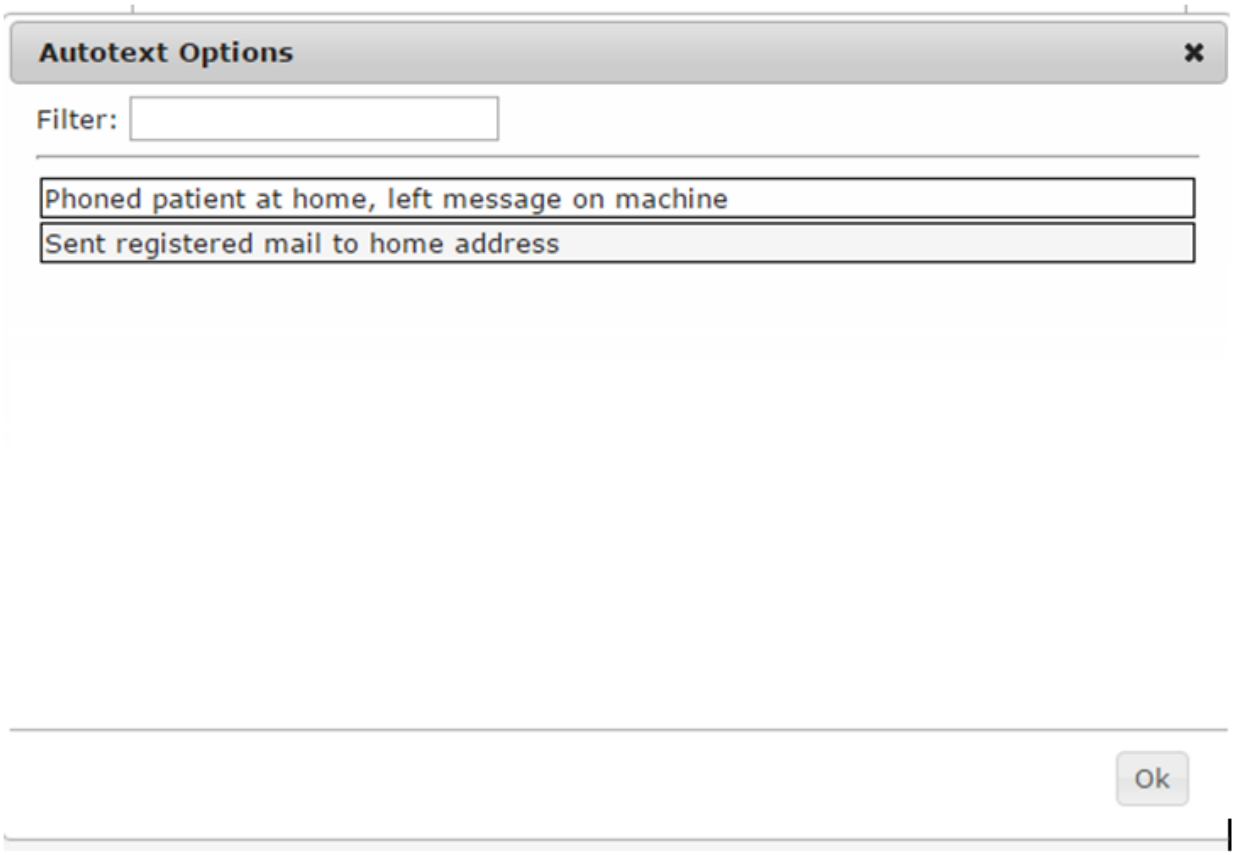
The questionnaire framework needs to support an ‘autotext’ style control, where the user can select one or more values from a list of acceptable values.

eRAD RIS now supports an Autotext style control inside the questionnaire framework. This allows a user to select a value from a drop down list. In addition, the control will allow one or more items to be selected from the list, which will therefore concatenate the selected text

The questionnaire control will appear as a text area with an ellipse button […] When selected, the autotext control will appear

*Example of a text field in a questionnaire with the ellipse button shown*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

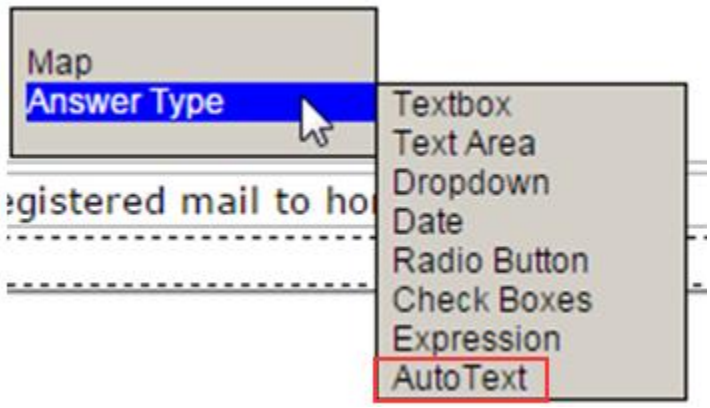


*Example of an autotext inside of the questionnaire framework after the ellipse button is pressed*

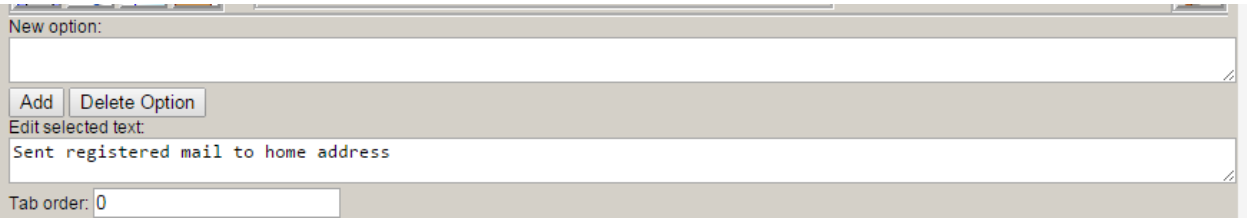
How to configure this feature:

To configure a question to use the autotext control, select the Answer Type option and set the value to ‘AutoText’

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

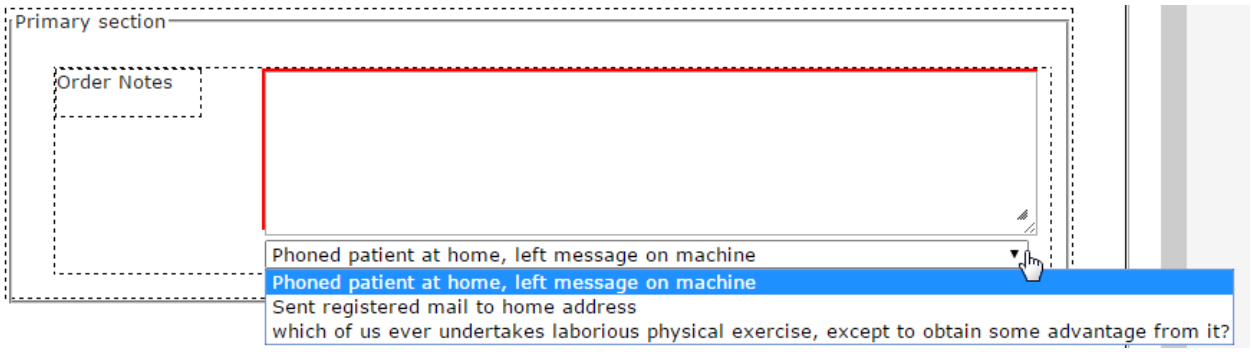


*Questionnaire editor showing the selection of the Auto Text option*



*Questionnaire editor showing the addition of autotext values*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



*Questionniare Editor showing the multiple autotext values*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### 11242 Questionnaire - Ability to show/hide pages

In the existing Questionnaire editor, the user has ability to show/hide pages from "Manage Rules". However, this only shows/hides the contents of that page. It is preferable to hide the entire tab.

Now, when the page contents are hidden by a ruleset, the page tab itself is also hidden.

Example:

*Questionnaire showing only one tab. A ruleset is in place to show a second page if the dog's name is Toto.*

*Questionnaire showing the second tab when a value was entered to match the ruleset.*

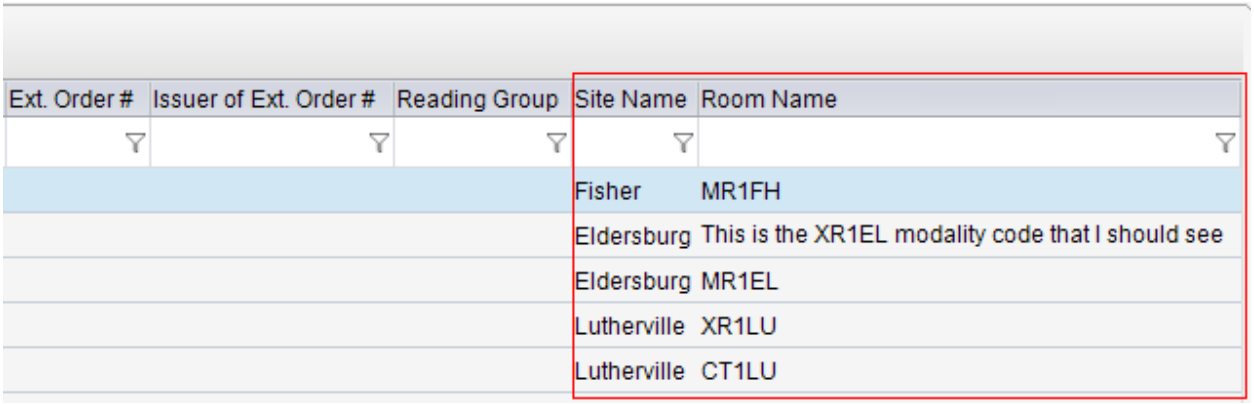
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### 10765 - Worklists - Need site description and room description in most worklists

Currently, eRAD RIS displays site code and room code (sometimes referred to as modality code) in many worklists. This code value is not always meaningful. A customer has requested the ability to display the site name and the room name in any worklist that currently shows site code and room code.

To resolve this, there are now two new columns for site name and room name.



| Ext. Order # | Issuer of Ext. Order # | Reading Group | Site Name | Room Name |
|---|---|---|---|---|
| | | | Fisher | MR1FH |
| | | | Eldersburg | This is the XR1EL modality code that I should see |
| | | | Eldersburg | MR1EL |
| | | | Lutherville | XR1LU |
| | | | Lutherville | CT1LU |

*A general worklist showing the two new columns*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# Infrastructure

### 8356 Support of non "system" issuer of IDs

The RIS currently expects the main MRN for a patient to be what we refer to as the 'System' issuer which is typically generated by the RIS. The RIS support other 'non-system' issuers for alternate ID's, and these can be EMR's ID's for patients. The RIS currently has functionality that if it does not have a 'system' ID for the patient, then it expect the user to manually match this patient to a 'system' ID. In the case where a customer has a national MRN of some kind, the RIS should not expect this matching to occur, and must accept a manually entered MRN as the main MRN for the patient.

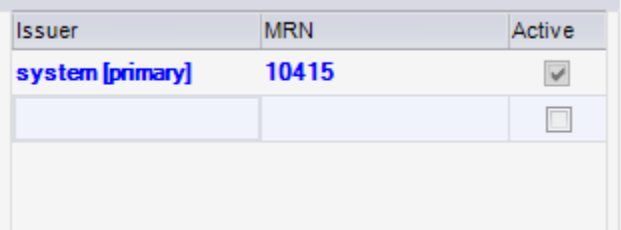
The support this, the RIS has now has a new model for supporting issuers. There is a 'primary' issuer (a RIS MRN, or a national ID, or a passport number for example) and a 'secondary' issuer (an EMR issuer for example which must be matched to a primary issuer). A primary issuer does not have to be matched to primary issuer, but a secondary issuer does – Therefore EMR type MRN's must still be matched to the primary. The RIS can support multiple primary type issuers, such as national ID's, passport numbers etc. There is a configuration setting for "DefaultIssuerOfPatientID" which determines which issuer generates the MRN if the patient is created directly in the RIS.

The RIS also has a new configuration setting to determine if the RIS should automatically generate an MRN for a new patient, or if it should allow the user to key in an MRN. This configuration setting is "DefaultIssuerGeneratesPatientID." The default value for this configuration setting is TRUE which means the existing functionality of RIS generating an ID for a new patient is still in place. However, if DefaultIssuerGeneratesPatientID is FALSE then RIS does not generate an MRNs and patients do not need a default issuer just an issuer that is primary, thus avoiding the need to match EMR patients to internal patients.

As a side note, the DefaultIssuerOfPatientID value now must be in the l_issuer table and should be set to have the primary_issuer_flag column set to Y.

Primary issuers are shown in the MRN grid with word [primary] appended to the end of their name.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



*MRN grid showing the Primary issuer*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**9562 Support a Secondary Reporting Database**

Customers have requested a secondary database instance to use for management reporting so that there will be no impact to the production database if someone runs a large report during working hours.

There can now be a second SSRS reporting data source configured to point to the secondary database. Appropriate reports that don't require real time data will use that data source and thereby hit the secondary database. Configuration must be done by eRAD support personnel.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### 11161 Support command line options for RIS client application via the config file

In the current version of eRAD RIS, command line options (such as the language selector or the single sign on option) would need to be configured in the shortcut on every workstation and would be lost when a new core install is done. It is desirable to have the a mechanism to globally deploy these command line option

To resolve this need, eRAD RIS now allows administrators to set command line options for all users of the system in the client configuration file.

How to implement this feature:

To implement this option add the command lines you wish to use to the ris.exe.config file in the appSettings node and add a key for value of the CmdLineArgs setting.

```
<appSettings>
  <add key="defaultEndPointName" value="NetTcpBindin
  <add key="ClientSettingsProvider.ServiceUri" value
  <add key="LookupTableTimeToLiveInMinutes" value="6
  <add key="ShouldCloseViewSessionOnThread" value="t
  <add key="EnableHighPriorityLookupStrategy" value=
  <add key="CmdLineArgs" value="" />
  <!--<add key="RowLevelCacheDataSetNamesCSV" value=
  <!-- <add key="MModalDataTransferValue" value="0"/
</appSettings>
```

*Example of ris.exe.config file showing the cmdlineargs key*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### 10603 Add SLA field to the procedure group table

A customer has requested a management report that will indicate the turnaround time of a study compared against the agreed upon service level (SLA). Each procedure group can have a different service level.

In order to produce this report, the RIS now has a numeric column added to the procedure group table, where the administrator can enter the expected service level. The management report (being written separately by ELAD) will reference this value to produce this report. The report will be a site level report, not a globally released report

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

**8764 - Insurance Eligibility – Support ‘or’ logic for the medical group string**

The RIS has the ability to use the eligibility special conditions to display a warning when the return does not contain the appropriate medical group string. The RIS has been enhanced in this release to also support <and> and <or> conditions such that more advanced rules can be created on the returned string.

Administrators should be able to create a rule that only fires if the return does not contain "prospect" and does not contain "NUESTRA" also RIS should support the the <OR> operator such as:
Prospect <OR> NUESTRA
This would fire a warning if the return contained Prospect or if the return contains NUESTRA.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Interface updates

### 11522 – New Action needed to submit an order without automatically generating a scanned document

A new main action of HL7_OrderRequested has been created which does not attempt to create a scanned document version of the submitted order

### 8331 – Ability to update RIS procedure code tables via an interface

A stored procedure has been created that will import procedure codes into the RIS. It will perform the following actions:

1. Inserts all new records from the CSV file into the procedure table with the following defaults:
    a. Last updated date with the current date time the procedure was processed
    b. Last updated by user id is stamped as ‘tafnit-‘ & date of processing
    c. Active is set to Y
    d. Display order set to 1
2. Deactivates any RIS procedure codes that are in the RIS table but no longer in the file.
    a. This also updates the last updated date and last updated by user id.
3. Updates any changed information in the procedure description, alternate description in the RIS to match what is in the source file. *Including changes in case sensitivity.

### 11153 – Create an Action Queue history table

A new table was created (c_action_queue_history) that stores a copy of certain fields from the c_action_queue table as each item is removed from the queue. This way the RIS has a history of these messages.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## Management reports updates

### 11154 Questionnaire mapping report

A new report has been created called Questionnaire Data Dictionary under Management Reports \ Maintenance. The report allows you to select from a list of the active questionnaires in RIS, and return the Questions for each questionnaire selected. Fields pulled into the report include the Question Short Name, Question Body, Question Guid and page # all grouped together by the Questionnaire.

### 9213 Linked report management report

The linked report feature essentially allows the radiologist to create a single report from multiple studies. The following management reports were updated with a column called 'Linked Counts' to show the additional studies which were technically read but did not result in a diagnostic report. For example, if the radiologist completed a single report, but it consisted of 3 studies, the report count would be 1, but the linked count would be 2 indicating that the radiologist technically reviewed 3 studies.

- Dictations by User
- Radiologist Dictation Activity by Date
- Radiologist Productivity by User – Mammo
- Radiologist Signing Activity

### 10416 Referring details report

The RIS now includes a new report called Referring Physician Details. This report displays the exams requested by a physician within the dates selected based on date of service. The report is

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

grouped by date the physicians' requested the study.

**Referring Physician Details**

**Date Range:** 01-23-2015 - 07-23-2015
**Physician name searched on:** yeo, da
**Physician selected:** Yeo, Dale E ID:1051
**Description:** This report displays the exams requested by a physician within the dates selected based on date of service. The report is grouped by date the physicians' requested the study.

# 8. Resolved Defects

Bugs, suggested features and support issues resolved in build 2.45.1. The extract is taken from Redmine bug tracking system and only displays defects resolved in 2.45.1.

| Bug # | Priority | Category | Subject |
|---|---|---|---|
| 10668 | Normal | Access strings | Remove redundant access strings: Flag.ExamStat and Flag.ReadStat |
| 11149 | Normal | Access strings | Clinical.ReportingEditor is redundant - should be Clinical.ReportingTranscription |
| 7788 | Normal | Admin-Other | Multiple lookups are missing a default display order value |
| 10733 | Low | Admin-Other | Creating a reading group - Hover text for an error is incorrect |
| 10740 | Normal | Admin-Other | Reading Groups- Changes to assigned/unassigned Users and Procedures is not updating the Last Updated field |
| 10792 | Normal | Admin-Other | When saving a scheduling availability template, the template selection should remain on that template and not reset to first template |
| 10976 | Low | Admin-Other | Tab order in Carrier Search is not in order |
| 10839 | Low | Appointment book | Appointment Book - Message loop on closing Reschedule window with x instead of close if maximum open tabs feature is set to 1 |
| 11035 | Normal | Appointment book | Dragging appointment to new time slot in appointment book throws "Input string was not in a correct format" error |
| 11045 | Normal | CD Burning | CD Burning - When there are multiple studyInstanceUID's may result in error message regarding additional images |
| 11380 | Normal | Confirmation | The Confirmation Status lookup table has a column called confirm_by_default_flag that has no implementation |
| 10583 | Normal | Connect Portal 4.x | Secure Messaging - Subject line should limit the number of characters to the databse field size |
| 10778 | Normal | Connect Referring Portal 3.x | Webapi interface for 'diagnosticreport 'throws an exceptions when "visited at" is null |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 11022 | Normal | Connect Referring Portal 3.x | Add merge_to_person_key to the l_person API for the Connect 3.x interface |
| 11571 | Normal | DB | Questionnaire - Can't copy/paste in questionnaire editor toolbar text fields |
| 11559 | Normal | DB | Add indexes to increase RIS performance |
| 5740 | Normal | Embedded Reporting | Reporting - SnapInsertToTimeStamps causing editing issues for some users |
| 5985 | Normal | Embedded Reporting | Reporting - A colon in the section title will cause report rendering issues. |
| 8029 | Normal | Embedded Reporting | Input/output device selection not sticking for MModal users |
| 10885 | High | Embedded Reporting | eRAD Report Editor – Clicking + drag dropping within template editor is causing intermittent duplication of text issues. |
| 10912 | High | EMR | New MRN grid needs to support EMR MRN's |
| 9216 | Normal | Insurance Eligibility | Insurance Eligibility - Remaining Copay is incorrectly taken as co-payment amount |
| 10784 | Normal | Interfaces | Action Container should not contain c_primary_interpretation node. |
| 10858 | Normal | Interfaces | Validation Framework – Event viewer records an error when there is a null value condition. |
| 11246 | Normal | Interfaces | Scan Documents via the interface append pages instead of replacing the whole document |
| 11255 | Normal | Interfaces | Patient demographics matching fails if birth_date is not in message |
| 11080 | Normal | Legacy Reports | Biewing a legacy report in WORD format does not work from the WL right click, report - print preview. |
| 10897 | High | Linked Reporting | Linked Reports - linked_id column should be default of null instead of 0 |
| 10856 | Normal | Localization | Reporting - (Hebrew RIS) Copy button on Reporting panes includes \t character |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 10981 | Normal | Localization | Custom Fields for Contrast and Sedation not localized |
| 10992 | Normal | Localization | Localization – collection of small items to localize |
| 10997 | Normal | Localization | Part of Admin Config is localized when it shouldn't be. |
| 11081 | Normal | Localization | Problem with Report History Data Nugget |
| 11142 | Normal | Localization | De-localize conditional formatting window |
| 9263 | Normal | Mgt - Report - Custom | Move Radnet only reports from the installer to treat them as custom reports. |
| 11168 | Normal | Mgt - Report - Custom | Radiologist dashboard |
| 7743 | Normal | Mgt Reports | Mammo Annual Radiologist Summary - report details should be sorted by month |
| 9615 | Low | Mgt Reports | Mgt Rpt - Referring Physician List - couple of suggestions for easier viewing |
| 11240 | Normal | Mgt Reports | Mgt Reports - Error on selecting multiple Practices (2 Insurance Eligibility Reports) |
| 10900 | Normal | PACS (Non - eRAD) Integration | When launching RIS via Citrix, the default for PACS is Hologic |
| 11034 | Normal | Patient Search | Patient search – Search for 'other variations' needs to configurable |
| 9475 | Normal | Person Management | Personnel - Selecting the dropdown area of a text box can cause the focus to change to another text box |
| 10775 | Normal | Person Management | Personnel - Modifying 'Additional resources' doesn't recognize changes after initial save |
| 10867 | Normal | Person Management | Unknown NPI Flag - NPI field is not disabled when opening a Referring Physician with Unknown NPI checked |
| 11181 | Normal | Person Management | Personnel Merge - Error when source/destination person doesn't have an active RIS account |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 10936 | Normal | Portal Viewer | Permission Clinical.PortalLauncher doesn't apply to radiology view menu |
| 10813 | Normal | Questionnaire | Questionnaire - Rulesets are evaluated in design mode |
| 10820 | Normal | Questionnaire | Questionnaire - Unable to remove dates in a date field. |
| 10825 | Normal | Questionnaire | Questionnaire - Hidden answers are saved as though they were visible |
| 10836 | Normal | Questionnaire | Questionnaire - Unable to save blank/null entries for dropdowns that are tied to DB fields |
| 10844 | High | Questionnaire | Questionnaire - Hebrew questionnaires opened in a browser RTL issue with Save/Finish/Next Page/Previous Page buttons |
| 10846 | High | Questionnaire | Questionnaire - Checkboxes cannot save Y and N values |
| 11065 | Normal | Questionnaire | Questionnaire Editor - Rules that uses greater than/lesser than don't work properly against numeric values |
| 11068 | Normal | Questionnaire | Questionnaire - RIS populated date fields calendar control doesn't open to the correct date |
| 11073 | Normal | Questionnaire | Questionnaire - Tab title allows for more than 30 characters in RIS (throws error at run time) |
| 11074 | High | Questionnaire | Questionnaire - On Register/Perform Exam, only questionnaires for the study initially opened are shown |
| 11257 | Normal | Questionnaire | Questionnaire - Drop down list cannot be sized |
| 11272 | Normal | Questionnaire | Questionnaire - Newly added sections/questions render improperly until resized. |
| 11290 | Normal | Questionnaire | Questionnaire - Focus is jumping to tree view when clicking questions in the Questionnaire Editor |
| 11057 | Normal | RADAR | Quick RADAR Message - Curly Brackets cannot be entered in message (throws error). |
| 11250 | Normal | RADAR | Quick RADAR Message - To: field is too small |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 11284 | Normal | RADAR | Quick RADAR Message - SMS messages won't send when over 160 characters |
| 8561 | Normal | Radiology Reporting | Report Fields Control - Update field control when fields are modified in the report |
| 9420 | Normal | Radiology Reporting | Reading group and linked reporting need to come together. |
| 9642 | Normal | Radiology Reporting | Custom fields for time are not working |
| 9709 | Normal | Radiology Reporting | Template/macro editor - field editor - the data fields should be alphabetic order. |
| 10395 | Normal | Radiology Reporting | Action Buttons on reporting screen still respond to shortcuts even when they are not visible |
| 10513 | Normal | Radiology Reporting | eRAD Report Editor - Entries made in M*Modal text expander |
| 10530 | High | Radiology Reporting | When permission is not granted to create new templates or macros, user is able to add, edit , delete fields in the template via the preview window. |
| 10563 | Low | Radiology Reporting | Macro/Template Editing - Creating template from with auto-macro fields will inconsistency |
| 10575 | High | Radiology Reporting | Text Expander - adding a new value only saves for the session, log out and back into RIS, value is not saved. |
| 10670 | Normal | Radiology Reporting | ERAD Editor - when you edit an existing macro, can easily edit a field when you meant to create a new field. |
| 10685 | Normal | Radiology Reporting | Template/Macro Lookup - context menu export templates defaults file type to cda (xml) |
| 10686 | Normal | Radiology Reporting | Template/Macro Lookup - context menu option Export List to Excel is not working |
| 10823 | Normal | Radiology Reporting | Similar Display of Preferred Radiologist and Assigned Radiologist Needed |
| 10829 | Normal | Radiology Reporting | Polling queue next workflow will try to open interpretation types that the user doesn't have access to |
| 10887 | Normal | Radiology Reporting | Dictation files save to external location, when they cannot be found in the Gui the Load Audio button is displayed once then the dictation controls are accessible |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 10896 | Normal | Radiology Reporting | Open Patient Tab limitation setting is exceeded when Reuse Reporting Screen is checked. |
| 10918 | Normal | Radiology Reporting | When in the dictation window and using the Next - Previous navigation, hover icon says 'Previous field' regardless if using Next or Previous |
| 10920 | Normal | Radiology Reporting | Next - Previous navigation - keyboard action- Selecting Previous field or section causes an error when using eRAD editor. |
| 10924 | Normal | Radiology Reporting | Addendum request's assign to rad dropdown does not show *Preferred rads |
| 10926 | Normal | Radiology Reporting | New Reading Group lookup table is missing access string |
| 10993 | Normal | Radiology Reporting | Reporting - M*Modal Recognizer not updating |
| 11001 | Normal | Radiology Reporting | Birads picker validation issue with localization |
| 11051 | Normal | Radiology Reporting | Picklist - when the option is a macro the navagition doesn't work. |
| 11053 | Normal | Radiology Reporting | In the report , the Scanner value in the technique field should be populated from something other than Report Description column if that column is blank |
| 11054 | Normal | Radiology Reporting | Opening the TemplateMacro lookup editor will display an additional column 'Macro Type" |
| 11276 | Normal | Radiology Reporting | Make the wordviewer executable name/path configurable in sysconfig |
| 11300 | Normal | Radiology Reporting | Pending dictation WL, when you skip and continue if the Interpretation type is blank the study will not open in dictation window |
| 10891 | Normal | Reception | inaproperate error occouring when trying to split orders on registration for an already scheduled study |
| 7071 | Low | Scheduling | Scheduling - Scroll Wheel on mouse does not work in search results grid |
| 10491 | Normal | Scheduling | There needs to be an access string to disable the 'save as order' button |
| 10653 | Normal | Scheduling | Date at top of Details date grid can display a different date than the selected Scheduled Date/time |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 10868 | Normal | Scheduling | Cannot remove phone number with PhoneNumberFormatDisabled=True |
| 10889 | Normal | Scheduling | System Config ShowDOBCalendar=False doesn't apply to IVT window |
| 10894 | Normal | Scheduling | Preferred Site incorrect on Scheduling site change |
| 11158 | Normal | Technologist | Null object exception when trying to perform exam |
| 2661 | Normal | Thick Client GUI | Template Macro Editor - Double click template or macro |
| 8063 | Normal | Thick Client GUI | Barcode Scanner - Message "Unable to initialize Motorola Barcode Scanner" should not be displayed in left bottom corner if user is not using barcode scanner. |
| 10927 | Normal | Thick Client GUI | Motorola barcode scanner error in application log |
| 11298 | Normal | Thick Client GUI | Unexpected error "splitbutton base : enable check" when opening a study in any QA WL |
| 10811 | Low | UI Look and feel | Cosmetic fixes needed for scheduling calendar |
| 10917 | Normal | UI Look and feel | Technologist verified ID is required but not showing any indication that is it. |
| 11012 | Normal | UI Look and feel | Labels in Register Multiple Studies window are misaligned |
| 11023 | Normal | UI Look and feel | Register multiple studies window has some problems |
| 11024 | Normal | UI Look and feel | Arrive date check window has alignment and wording problems |
| 11220 | Normal | UI Look and feel | Completing a Personnel Merge changes all Yes/No/Cancel prompts to Yes/Cancel/Cancel |
| 11269 | Normal | UI Look and feel | MainStudyIndicator column added when loading worklist views in patient folder. |
| 10753 | Normal | visibility framework | Visibility Framework - Need a way to hide State field on Image Request window |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 10864 | Normal | visibility framework | Visibility Framework - some fields cannot be set to ReadOnly on Reschedule window |
| 10865 | Normal | visibility framework | Custom Access String - Not being able to hide fields on Walk-In>Existing Orders |
| 10879 | Normal | visibility framework | Visibility Framework - Including a study on Perform Exam re-enables read-only fields on Documentation tab |
| 10882 | Normal | visibility framework | Visibility Framework - Most fields cannot be set to read-only on Contacts/Demographics tab |
| 10706 | Low | Walk-In | Walk-In - Selecting order from Existing Orders window doesn't automatically fill date/time on Exams |
| 10419 | Normal | Worklists | Worklists - Columns not populated on the signed by date worklist. |
| 10859 | Low | Worklists | Reading Group column needs to be added to the All Peer Review Pending Action WL |
| 11038 | Normal | Worklists | Null object reference when hovering over flags column in IVT WL |
| 8425 | Normal | | Insurance Eligibility - Deductible issue when service section has a total deductible of zero but no remaining deductible is specified. |
| 10908 | Normal | | Management report icon showing as Radnet R logo, rather than eRAD 'e' logo |
| 10916 | Normal | | Rename column in modality lookup to avoid confusion |
| 11019 | Normal | | Error on Reschedule with Insurance Eligibility |
| 11239 | Normal | | Word Legacy reports - context menu from worklist tries to treat file as PDF |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# 9. Known Limitations

The following are bugs, suggested features and support issues found in build 2.45.1.
Bugs reported in previous versions are not repeated here.

| # | Status | Priority | Subject |
|---|---|---|---|
| 11702 | New | Normal | "Set Follow Up Required Flag" is not always sending study to Finding Follow Up WL |
| 11703 | New | Low | Amount to Collect field on Order tab missing currency sign ($) |
| 11708 | New | Normal | Amount to collect field shows 4 decimal places in some cases |
| 11712 | New | Normal | Amount to collect on Self-Pay cannot be modified in some cases |
| 11364 | New | Low | An exam is aborted in perform exam window. Status changes to 'discontinued', no Mirth message sent. Order is still in PACS WL. |
| 11584 | New | Normal | Auto macros that start with a field must have a space before the field otherwise 'create template from report' doesn't work correctly |
| 11701 | New | Normal | Biopsy - Missing access strings for Remove and set pending biopsy result |
| 11664 | New | Normal | Biopsy – 'Set Pending Biopsy Result Flag' and 'Remove Pending Biopsy Result Flag' are not localized |
| 11401 | New | Low | Drawing tool – Drawing object can be partially outside of visible area |
| 11524 | New | Low | Drawing tool - context menu available when image option not selected |
| 11694 | New | Normal | Citrix - installer missing the telerik files |
| 11692 | New | Normal | Citrix - log files should have more detail |
| 11491 | New | Normal | Conditional fields navigation setting is not working |
| 11493 | New | Normal | Conditional fields not working in M*Modal |
| 11529 | New | High | Contrast - Leaving contrast/sedation amount/units blank on multi-study order can cause false validation fails |
| 11508 | New | Low | CT dose required - If you open a study where the ct dose was not required at time of performing exam , you cannot save unless this value is entered. |
| 11650 | New | Normal | Data Exception while trying to Reschedule from the Reception WL |
| 11494 | New | Normal | Delimiter for questionnaire answers and not localized. |
| 11570 | New | Normal | Dictation field in Summary Panel in dictation window copy option throws error |
| 11480 | New | Normal | Edit and create menu items for the Edit button should be more descriptive. |
| 11729 | New | Normal | EMR on primary issuer setup not taken into account |
| 11507 | New | Low | Error changing primary study flag after it has already been set |
| 11327 | New | Normal | Intermittent error closing User Preferences |
| 11540 | New | Low | Error on adding new row on MRN grid for unlinked patient |
| 11709 | New | Normal | Field meta data is not being saved when pasting into report template with no fields |
| 11609 | New | Normal | Finding Follow Up - Missing language item for finding code in the finding |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| | | | follow up worklist |
| 11660 | New | Normal | Findings - if procedure 'findings required flag' is set to N, the context menu item (Set Required Followup Flag) in patient folder, should not be visible |
| 11714 | New | Low | Getting casting error when saving View/Edit with no patient gender |
| 11363 | New | Normal | Height/Weight not required while going through Existing Orders prompt |
| 11629 | New | Normal | Image Request WL requires new "name" equivalents columns with description |
| 11587 | New | Normal | In dictation window, the 'find' option doesn't find a word if it only exists in a field |
| 11473 | New | Normal | In the editor window, the shortcut CTRL+ALT+S should be changed because the action button has been renamed from 'transcribe' to 'edit' |
| 11675 | New | Low | Indication required but could not add an indication. |
| 11541 | New | Normal | Linking EMR patient to RIS patient hides system issuer (just a visual glitch) |
| 11383 | New | Low | M*Modal - Remove subsection tool bar option in the report editor |
| 11726 | New | Normal | Management Report - Editor Activity report is not returning results |
| 11724 | New | Normal | Management Report - Radiologist Signing Activity report filters |
| 11744 | New | High | Memory Leak In GridFlagCellElement |
| 11742 | New | Urgent | MemoryLeak in QuestionnaireAnswersView control for radiologist screen |
| 11700 | New | Normal | Missing access strings for setting/removing Follow Up Required Flag |
| 11718 | New | Low | MModal - when creating a template from report where the template has multiple auto macros of the same type, numbering of the auto macros fields in new template is backwards. |
| 11591 | New | Normal | MModal - create a template from report - auto macros are not working correctly. |
| 11715 | New | Normal | MModal - when creating a template from report the auto macro doesn't work correctly |
| 11504 | New | Normal | MModal - When opening an older template in template editor via dication window, get error "Index was outside of the bounds of the array" |
| 11676 | New | Normal | MRN - Issuer dropdown filtering out valid entries |
| 11295 | New | High | Multi-Orders don't display correctly on opening Register |
| 11737 | New | Low | No visual cursor on Access String lookup table |
| 11538 | New | Low | Patient flags not usable in dark mode |
| 11016 | New | Low | Patient folder control has a white background in light mode instead of grey |
| 11357 | New | Low | Patient information was updated in registration window but MIRTH message was not sent to PACS with updated information |
| 11683 | New | Low | Personnel - Modifying pre-saved address followed by Edit>Cancel reverts changes |
| 11391 | New | Low | Policy subscriber description needs to be edited within prompt for matching policies. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 11515 | New | High | Portal Launcher - Unable to remove a rule once saved |
| 11483 | New | Normal | Protected Field - Although you cannot insert macros into protected fields, the behavior could be better |
| 11567 | New | Normal | Questionnaire - Date fields require perfect formatting when manually typing in dates |
| 11302 | New | Low | Questionnaire - Display Order on conditional tab should be aligned to left |
| 10999 | New | Low | Questionnaire - Document outline will not reflect tab page order changes |
| 11578 | New | Low | Questionnaire - Expressions only updating on events |
| 11686 | New | Low | Questionnaire - Localization of "Required!" hover text |
| 11661 | New | High | Questionnaire - Mapped date fields problems with dd/MM/yyyy format |
| 11404 | New | Low | Questionnaire - Problem hiding first page through rules |
| 11678 | New | Normal | Questionnaire - Required field message doesn't appear when user is on a different tab |
| 11682 | New | Low | Questionnaire - Required fields exclamation mark not consistent |
| 11580 | New | Low | Questionnaire - Stand-alone textboxes have the Lookup Type dropdown shown |
| 11398 | New | Normal | Questionnaire - Tabbing to checkboxes/radio buttons doesn't highlight them |
| 11593 | New | Low | Questionnaire - Type-Ahead alter images/textboxes by 1 pixel |
| 11561 | New | Low | Questionnaire Answers - Users can close individual questionnaires tabs |
| 11592 | New | High | Questionnaire Answers - Pane isn't read-only in radiologist window |
| 11625 | New | Low | Questionnaire Editor - Creating Rule with Condition "Has answer" prompts for "Value:" |
| 11411 | New | Normal | Questionnaire Editor - Duplicate Short Names created on copy/pasting sections |
| 11674 | New | Normal | Questionnaire Editor - Rules for date fields on calculated dates problem with dd/MM/yyyy |
| 11627 | New | Normal | Questionnaire Editor - Rules on Autotext controls don't work |
| 11396 | New | Normal | Questionnaire Editor assigns duplicate tab title after a page is deleted |
| 11668 | New | Low | Questionnaire Type-Ahead Textbox for Medication returning results with garbage text entered |
| 11696 | New | Normal | Radio buttons may still save an answer when hidden due to a rule on a questionnaire |
| 11739 | New | Normal | Releasing a report sets an unnecessary 2 minute lock |
| 11717 | New | Normal | Remove Follow Up Required Flag - spelling mistake in context menu |
| 11499 | New | Normal | Report Assistant - no scroll bars |
| 11565 | New | Low | Reporting - Create/Edit Report from Tech window shouldn't include 'and Continue' buttons |
| 11589 | New | Low | Reporting - Extra space in BI-RADS required message |
| 11315 | New | Low | Reporting - waiting on selected report when there is no selected report (mouse pointer with spinning wheel) |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 11719 | New | Low | Responsible Party - ID Issuer dropdown now includes primary issuers |
| 11527 | New | Low | Scantype lookup doesn't allow empty Keyboard shortcut if other scantypes don't have assigned keyboard shortcut |
| 11731 | New | Low | Scheduling - Emergency Contact showing as required on Registration |
| 11384 | New | Normal | Shortcut CTRL+SHIFT+R - return to report tab not working |
| 11573 | New | Normal | Shortcut keys for 'Create and Continue' and 'Create and close' required for the reporting editor |
| 11479 | New | Normal | Should be using the templates and the macros of the assigned radiologist. |
| 11475 | New | Low | Tab order need adjusting for Referring Physician Details report |
| 11488 | New | Low | Tech creating a report from the Perform exam window, the audit log shows the incorrect status if a modification is made in the perform exam window after submitting the report. |
| 11521 | New | High | Template editor - Assignments - Modality type, Procedures or Users Windows - Hitting the Cancel button actually saves the changes |
| 11617 | New | Normal | Template/Macro lookup editor, search option not retrieving results. |
| 11426 | New | Low | Text expander - order of items is different depending if you are in eRAD or MModal reporting mode. |
| 11656 | New | Low | validation message for missing dates on the manage rules screen may be shown twice |
| 11611 | New | Normal | View PDF legacy reports in Reporting window |
| 11560 | New | High | Walk-In - Error on splitting orders after Checking In |
| 11481 | New | Normal | Warning or workflow restriction should be put in place based on reporting mode used |
| 11353 | New | Low | When an Appointment is scheduled, then cancelled but will schedule later, then cancelled altogether, it still remains on the PACS WL. |
| 11505 | New | Low | When importing a template in the template\macro editor, get an error if the practice and base template values are not selected prior to the import. |

# New Features

## Questionnaire

### 11685 – Support for Cross Questionnaire Ruleset Actions

There is a process that runs when questionnaires are loaded into RIS. Checkboxes with the same short name will be kept in sync with each other provided that they are both open on the same screen, and that their short name begins with "z_linked_".

For example, front desk staff open a procedure in the registration screen that has multiple Questionnaires and each one contains a checkbox called "z_linked_q1". Completing this checkbox will update the checkbox on the other as well. After a checkbox is updated through this linked question process, the rules are automatically triggered so that the behavior will be the same whether the user manually checks the checkbox or the linked question process makes the change.

Currently, this feature only applies to checkboxes.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## 10819 – Allow Questions to be Marked as Required and Validate on Save

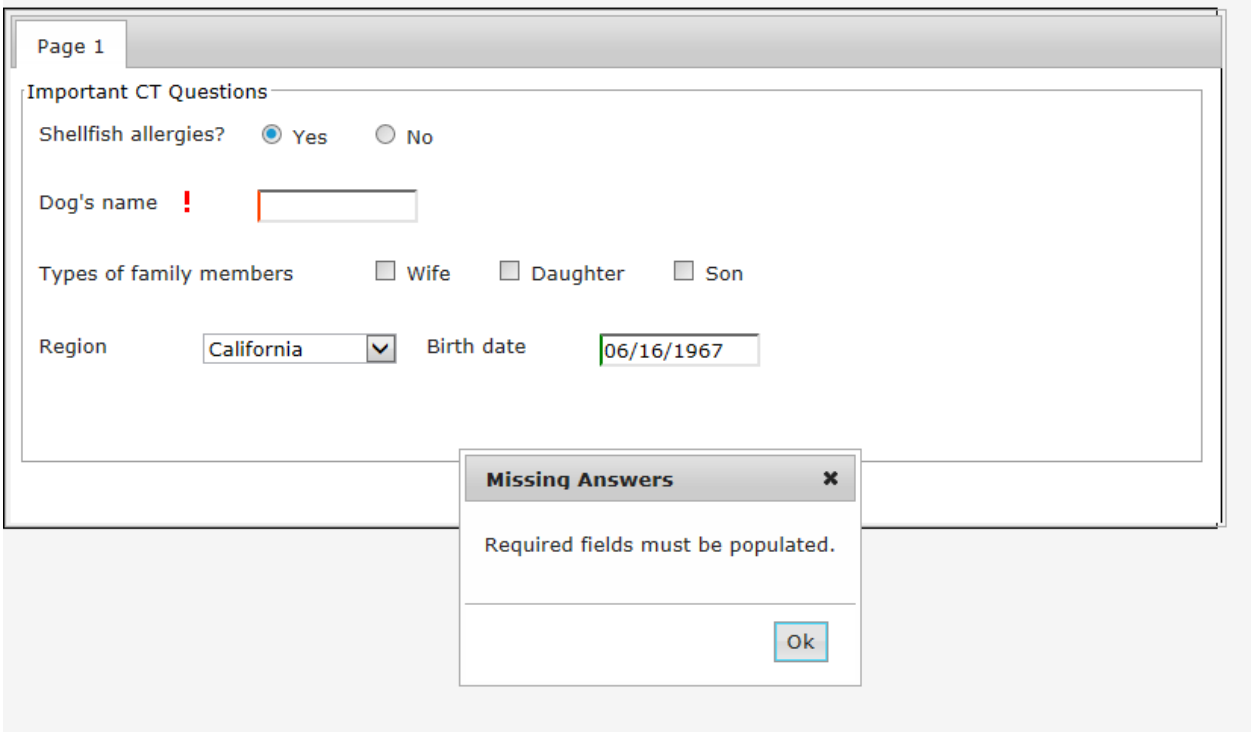
The user can now designate questions to be required fields in the Questionnaire editor.

When completing the questionnaire in the GUI, required fields will be highlighted in red when not answered. Once the required field is completed the red indicator will turn to green. Essentially is works the same as required fields on data windows within eRAD RIS.

Example of red indicator informing user field is required.

When the field has a value, the indicator turns green.

On validation, unanswered required fields will have an exclamation mark appear beside them and a message will appear to remind the user to answer the marked questions. In the event the questionnaire server is unavailable, RIS will allow the user to skip questionnaire validation and save everything else.



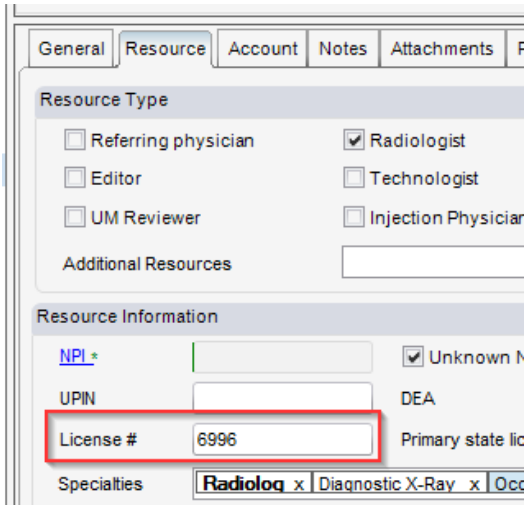
If the field is not visible on the Questionnaire we will bypass this requirement

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Interface Updates

### 11769 – Radiologist Identified by License Number via Interface

In the Personnel Editor we can store the License number for a Radiologist.



We now support the ability to identify a radiologist from the License # value. If the message received from the external system sends in the License #, we will be able to determine the radiologist and assign appropriately to the study.

If more than one Radiologist User is assigned the same License #, when sent to eRAD RIS, a message will be returned informing that it is a duplicate. Similarly, if the license # doesn't exist, a message will be posted. These messages will only be available in MIRTH Management Console.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## 11555 – Allow for Data Masking on Portal Data Variables

A portal plugin framework was created to support the ability to "massage" or manipulate the data value that is sent in a URL for a portal.

This feature resolves an issue of the leading zeros that may be present on a National ID for example. eRAD RIS will store the leading characters, where a portal may need to have the leading zeros stripped.

When the new PortalPluginIntParser.dll is present in the PortalPlugins folder, using the following data variable in the Portal URL will remove the leading zeros:

{patient.c_patient.patient_id?issuer_of_patient_id=1|**ParseInt**}

This is the only variable supported at this time.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Resolved Items

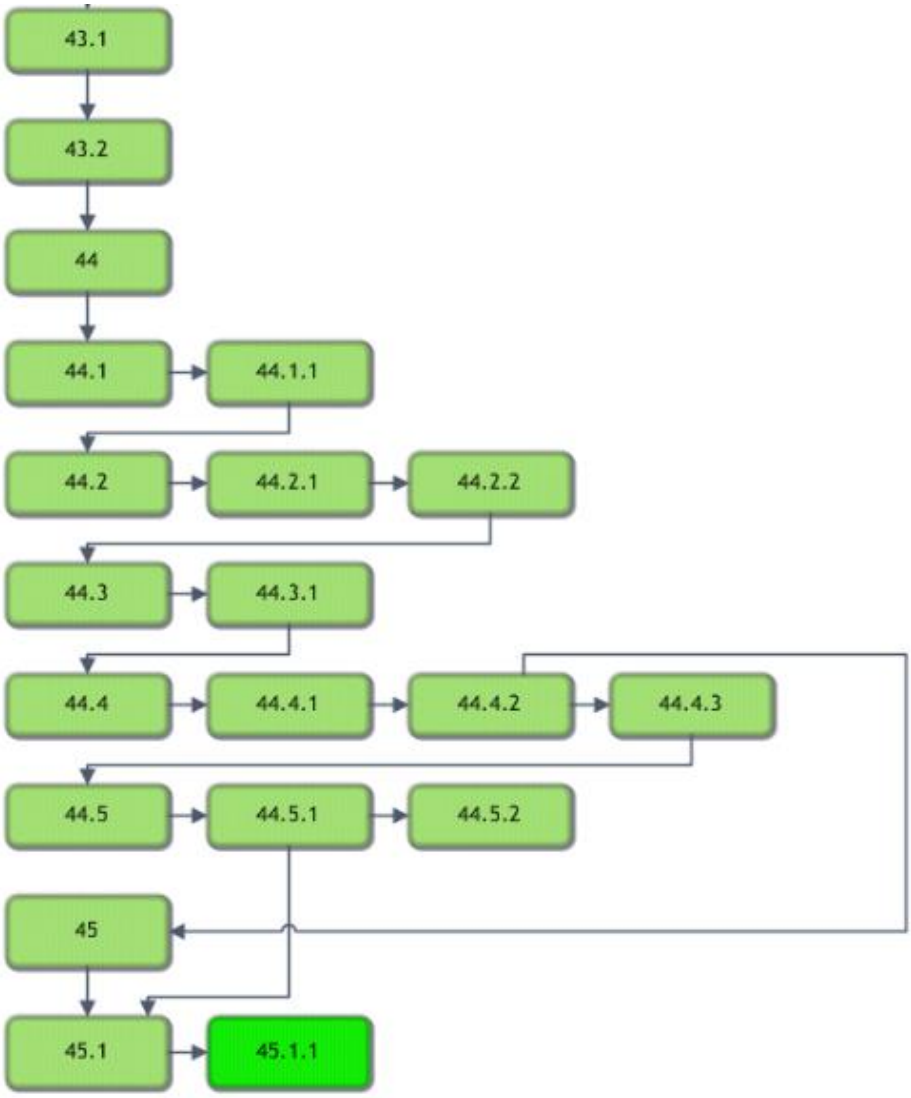
| Redmine # | Subject | Priority |
|---|---|---|
| 11882 | Worklists taking long time to return data - need to modify the worklist views | Immediate |
| 11898 | Unable to map questionnaire data into diagnostic reports in Hebrew culture | Immediate |
| 11742 | MemoryLeak in QuestionnaireAnswersView control for radiologist screen | Urgent |
| 11873 | Scheduling - Opening a scheduled study from appointment book throws error | High |
| 11803 | Exception clicking Bold toolbar button in report editor. | High |
| 11801 | Error loading macros when using conditional fields | High |
| 11785 | Scanner dropdown list in PerformExam and ViewEdit should display modality short description if specified | High |
| 11783 | Error in Field Editor when saving Conditional Values | High |
| 11764 | Findings - Error when submitting a dictation when the findings value is not entered. Cannot submit the dictation. | High |
| 11763 | Support for international date formats | High |
| 11744 | Memory Leak In GridFlagCellElement | High |
| 11727 | MRN - [primary] getting appended to description on Issuer lookup (for primary issuers only) | High |
| 11690 | Discontinued non-primary studies prevent reporting of other linked studies | High |
| 11661 | Questionnaire - Mapped date fields - problems with dd/MM/yyyy format | High |
| 11610 | Cannot merge patients with primary issuer MRN's | High |
| 11592 | Questionnaire Answers pane is not read-only | High |
| 11909 | Drawing control localization changes | Normal |
| 11814 | Inbound Diagnostic Reporting - Leaking a ReportOnAccessionNumber control each time it is opened | Normal |
| 11784 | Client file storage path Config setting RISOutputFilePath doesn't accept the default value | Normal |
| 11746 | MemoryLeak in ReportingRadiologist due to FindingFollowup EventHandler | Normal |
| 11717 | Remove Follow Up Required Flag - spelling mistake in context menu | Normal |
| 11701 | Biopsy - Missing access strings for Remove and Set Pending Biopsy Result | Normal |
| 11700 | Missing access strings for setting/removing Follow Up Required Flag | Normal |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| 11693 | Citrix - call to lauch eRAD view session doesn't return a list of open studies. | Normal |
| 11692 | Citrix - log files need to have more details | Normal |
| 11650 | Data Exception while trying to Reschedule from the Reception WL | Normal |
| 11805 | Questionnaire Answers - Users can close individual questionnaire tabs | Low |
| 11788 | Finding follow up recommendation drop down is not using display order | Low |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Code Stream



**Legend:**

Light Green = Released software

Gray = Will not be released

Bright Green = Current Release

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

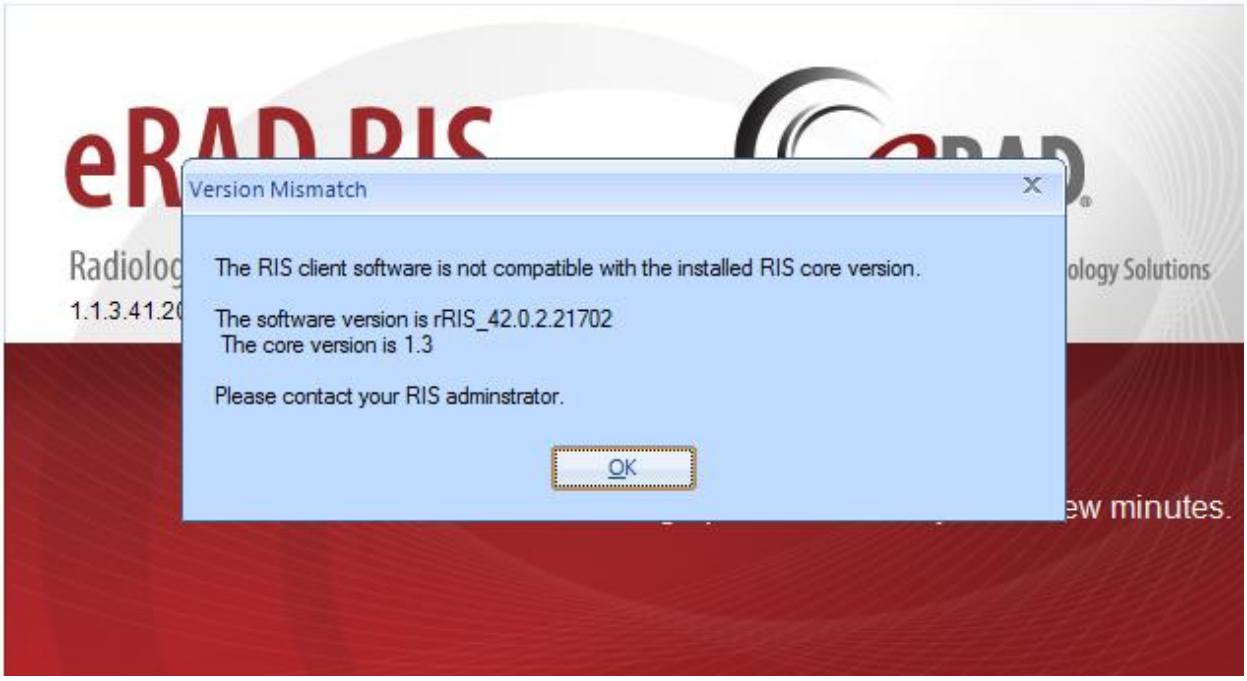
## Installing

### Client/GUI

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.45.1.1.31175.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_45.1.1.31175→ rRIS_1.3.45.1.1.31175
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Web Service

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 88 files in the rRISService folder and 2 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below).

## Services Configuration Wizard

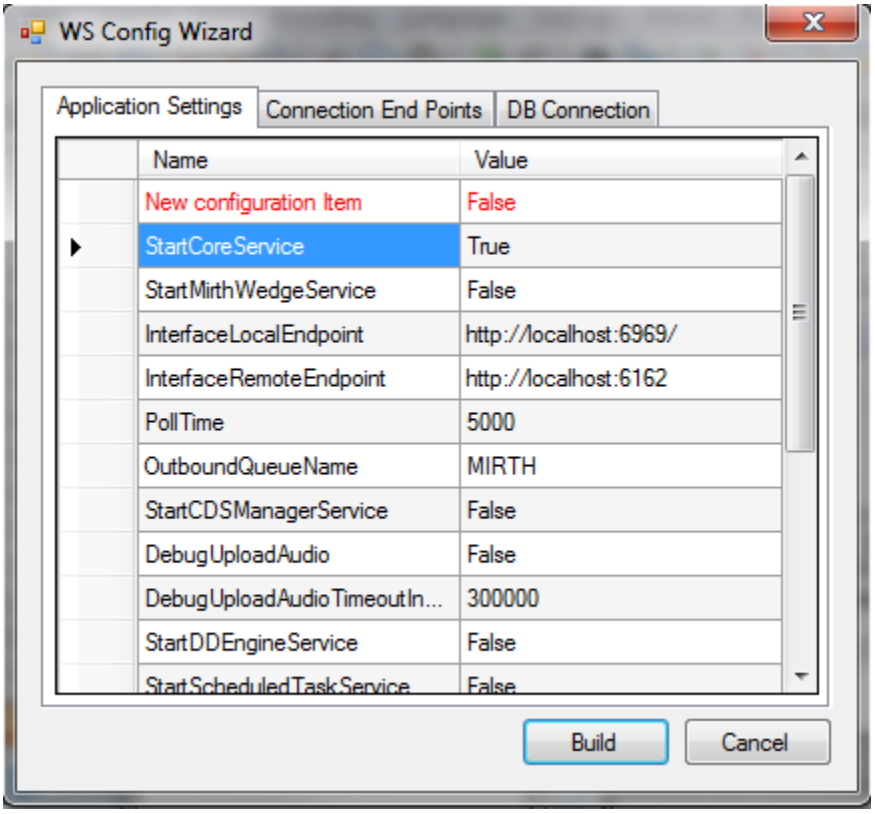
With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

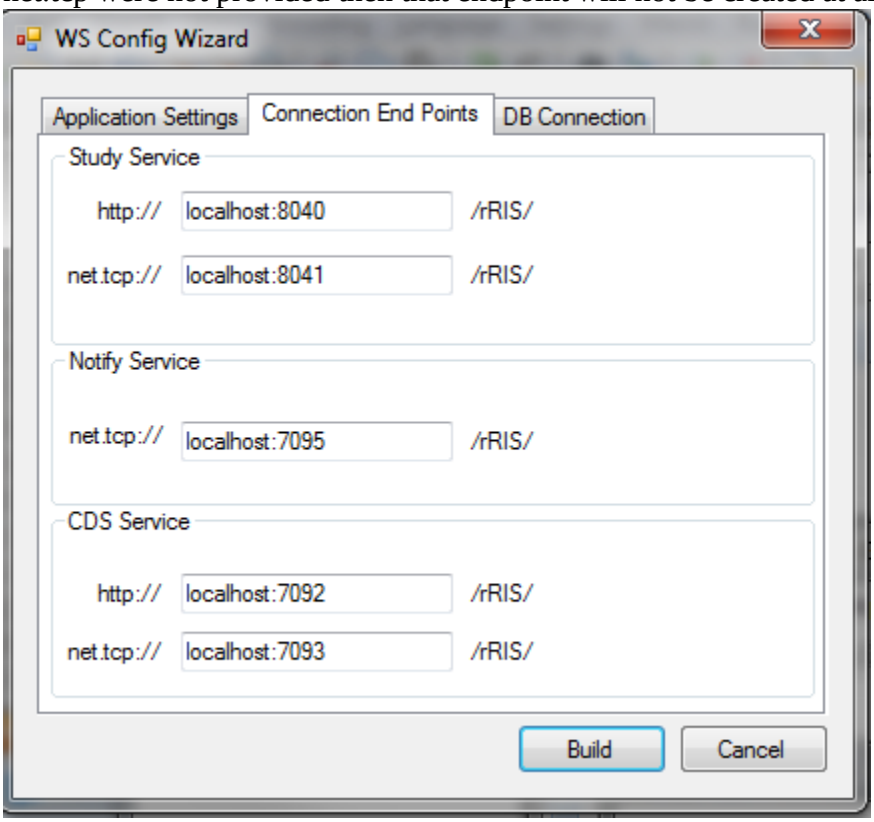
**NOTE:** the rRISServices.exe.config file is also included in the deploy folder. If this file has changes it **will not** update your current file in the Web Service directory. Any changes to this file will require a manual update of the rRISServices.exe.config and rRISServicesx64.exe.config files.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.



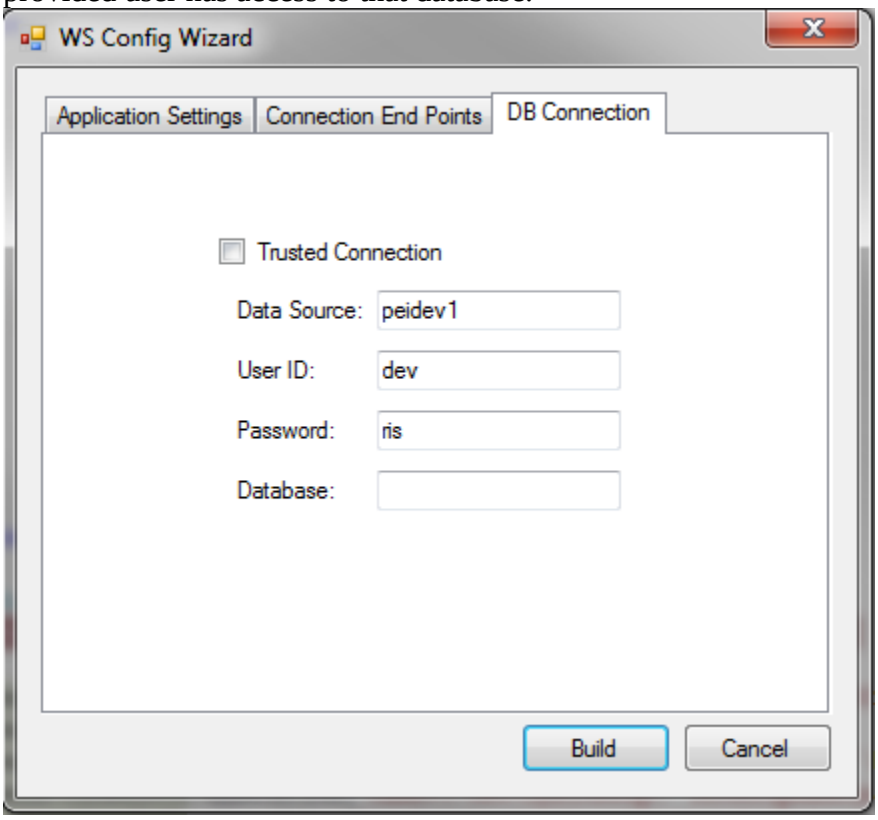
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of "Study Service" or "CDS Service" if both http and net.tcp were not provided then that endpoint will not be created at all.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**DB Connection:** will display the existing configuration, if the Connection is to be used as a trusted connection, then the user ID and password will become disabled and will not be used, and will rely on the provided database value, When not using the trusted connection, The Database value is not needed but can be used to force a specific database connection as long as the provided user has access to that database.



It is always good practice to do a compare of the .config files.

1) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   **Restart each service**.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Database Updates

Always run the upgrade scripts in a test environment of the actual database to make sure they run cleanly. If any errors occur please contact development.

*Note: There is a new upgrade process introduced with B43.1 called "RunUpgrade.bat". The batch file will open a command window. This process will prompt you for the database server name, database name and authentication credentials. There is no need to run the database upgrade scripts manually as was done in previous releases.*

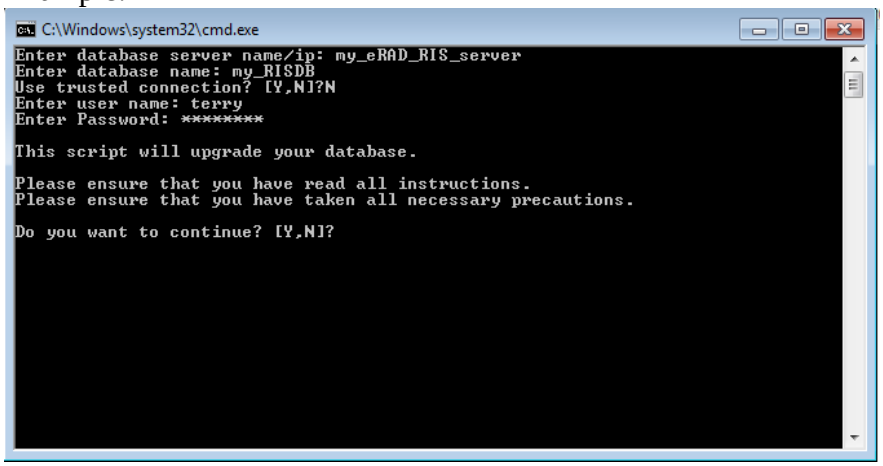
1) From the upgrade folder, double click the "RunUpgrade.bat" command file.

2) Enter the server name, database name and authentication credentials to the database. You have 2 choices for authentication credentials.

3) You can choose to use "Trusted connection". Using this option will pass the identity of the currently logged on user. If this user has "db_owner" access to the eRAD RIS database then feel free to use this options.

4) If you decide not to use "Trusted connection" then you will be prompted for user id and password.

   Example:



5) After the upgrade program has finished you can find the upgrade logs in the "log" folder. The file name will be eRAD_RIS_db_upgrade_timestamp.log, where timestamp is a value representing the date and time the upgrade started. If you see any errors please contact the development team

6) In the Common folder there is a subfolder of MU. The MU folder contains updates to lookups relevant for MU as well as updates for Zip Code table to add the County. Copy the

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

MU folder to the database server before running the batch file. There is a readme file contained in the MU folder. The details have also been included below

a) The mu bulk install process must be run from a path on the database server!
b) Copy Files ImportDataFileUpgradeDB.bat and ImportDataFileUpgradeDB.sql from upgrade folder to a location on the database server(This location will be referred to as the "Script Folder Path".)
c) Copy Folder scripts and Source files from the upgrade folder to "Script Folder Path" ....Note source files must be inside the scripts folder
d) Run bat file
   i) Enter Script Folder path [C:\Temp\SNOMED]:
   ii) Enter database server name/ip: [ie peidev1]
   iii) Enter database name: [ie rRIS_MU]
   iv) Use a trusted connection to log on to SQL Server:
   "N" means you will have to enter db [username] [password]
   "Y" means you have a trusted connection and will not have to enter [username][password]
   v) Do you wish to load SNOMED concept codes?
   "N" no files will be loaded into the l_snomed_concept table
   "Y" yes means l_snomed_concept table will be truncated and reloaded with the latest US concept codes
   Source File [sct2_Concept_Snapshot_US1000124_20140301.txt]
   vi) Do you wish to load SNOMED descriptions codes?
   "N" no files will be loaded into the l_snomed_description table
   "Y" yes means the l_snomed_description table will be truncated and reloaded with the latest US description codes
   Source File [sct2_Description_Snapshot-en_US1000124_20140301.txt]
   vii) Do you wish to load ICD9 to SNOMED mappings codes?
   "N" no files will be loaded into the l_snomed_icd9_map table
   "Y" yes means the l_snomed_icd9_map table will be truncated and reloaded with the latest US ICD9 to SNOMED mapping codes
   Source File [ICD9CM_SNOMED_MAP_1TO1_201312.txt and ICD9CM_SNOMED_MAP_1TOM_201312.txt]
   viii) Do you wish to load ICD10 to SNOMED mappings codes?
   "N" no files will be loaded into the l_snomed_icd10_map table
   "Y" yes means the l_snomed_icd10_map table will be truncated and reloaded with the latest US ICD10 to SNOMED mapping codes
   Source File [xder2_iissscRefset_ExtendedMapSnapshot_US1000124_20131220.txt]
   ix) Do you wish to load US zip codes?
   "N" no files will be loaded into the z_zipCodesWithCounty table
   "Y" yes means the z_zipCodesWithCounty table will be truncated and reloaded with the latest US zip codes
   Source File [5-digit Commercial.csv]

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**********

Note: the following files should be loaded once only with B43!

**********

x) Do you wish to load CMS codes?
"N" no files will be loaded into the s_mu_code table
"Y" yes means the s_mu_code table will be truncated and reloaded with the latest CMS codes
Source File [s_mu_code.txt]

xi) Do you wish to load HL7 support sets for CCDA?
"N" no files will be loaded into the l_hl7v3_voc_value_set table
"Y" yes means the l_hl7v3_voc_value_set table will be truncated and reloaded with the latest hl7v3_voc_value_set codes
Source File [l_hl7_voc_value_set.txt]

xii) Do you wish to load HL7 support codes for CCDA?
"N" no files will be loaded into the l_hl7v3_voc_value_code table
"Y" yes means the l_hl7v3_voc_value_code table will be truncated and reloaded with the latest l_hl7v3_voc_value_code codes
Source File [l_hl7_voc_value_code.txt]

## Resolved Items

| Redmine # | Subject | Priority |
|---|---|---|
| 12004 | Appointment book load times to slow | Urgent |
| 12002 | CD Import or Legacy Data can overwrite the system MRN | Urgent |
| 12001 | CD Import thows exception if DOS on disk cannot be found and time format is not dd-mm-yyyy | Urgent |
| 11984 | Using the "Print Forms" context menu causes error "The UTC time represented when the offset is applied must be between year 0 and 10,000". Auto printing forms simply do not appearthe . | Urgent |
| 12023 | questionnaires should not reference CSS files from CDN servers | High |
| 12011 | Report Rendering (SSRS) - Reports with tables have an extra line after every row data element | High |
| 12009 | Questionnaire - Expressions are not evaluated after visiblity changes on source questions | High |
| 12003 | Citrix Bridge Installer adds CitrixBridge.exe to HKLM\Software\Microsoft\Window\Run but the path is missing so it fails to start on boot. | High |
| 11972 | Diagnostic report editor not keeping right to left document text flow. | High |
| 11969 | Linked Questionnaire checkboxes don't fire change event | High |
| 11967 | Questionnaires should not be editable after report signature | High |
| 11958 | error logging in to questionnaires from browser using domain auth for some users | High |
| 11955 | Alternate name search feature is causing an exception to be thrown if it finds a matching name | High |
| 11954 | Excessive lines added into the diagnostic reports (nugget and SSRS) after going through RTF to CDA converter | High |
| 11953 | Questionnaire - Users do not get prompted on questionnaire not saving | High |
| 11944 | Ability to configure questionnaires to display in specific screens | High |
| 11936 | Poor performance switching between questionnaire tabs for large questionnaires | High |
| 11997 | Questionnaire expressions cannot refer to other expressions | Normal |
| 11965 | Reporting Radiology - RTF to CDA converter bolding text when not bolded in source system | Normal |
| 11964 | Questionnaire Expression Editor allows the user to make over 26 variables, but does not support more than 26 | Normal |
| 11952 | Questionnaire answers are saved to the database even when no answer is provided | Normal |
| 11951 | Report Assistant is saving all questionnaires regardless of changes | Normal |

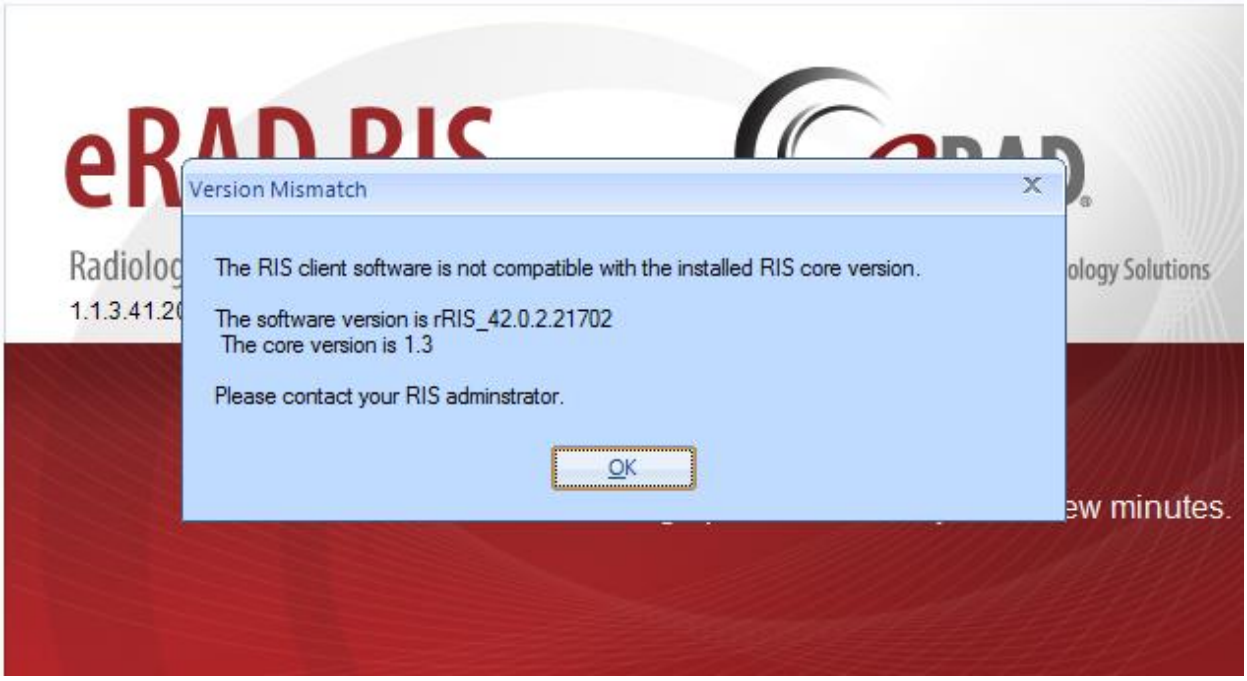
## Installing

### Client/GUI

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.45.1.3.31452.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_45.1.3.31452→ rRIS_1.3.45.1.3.31452
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Web Service

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 88 files in the rRISService folder and 2 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below).

## Services Configuration Wizard

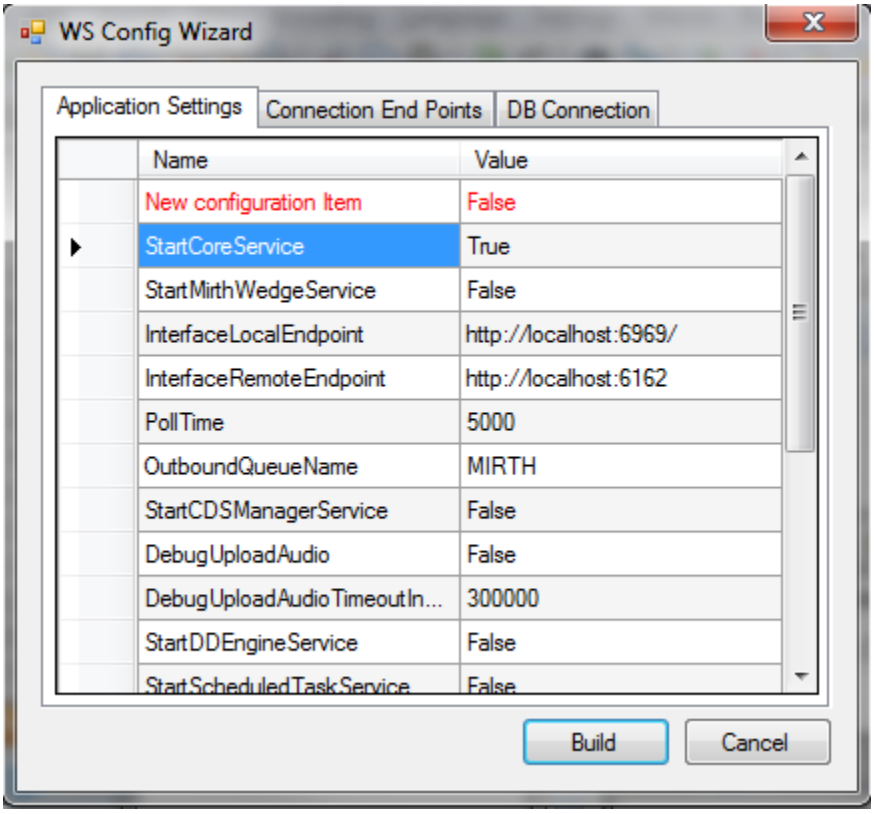
With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

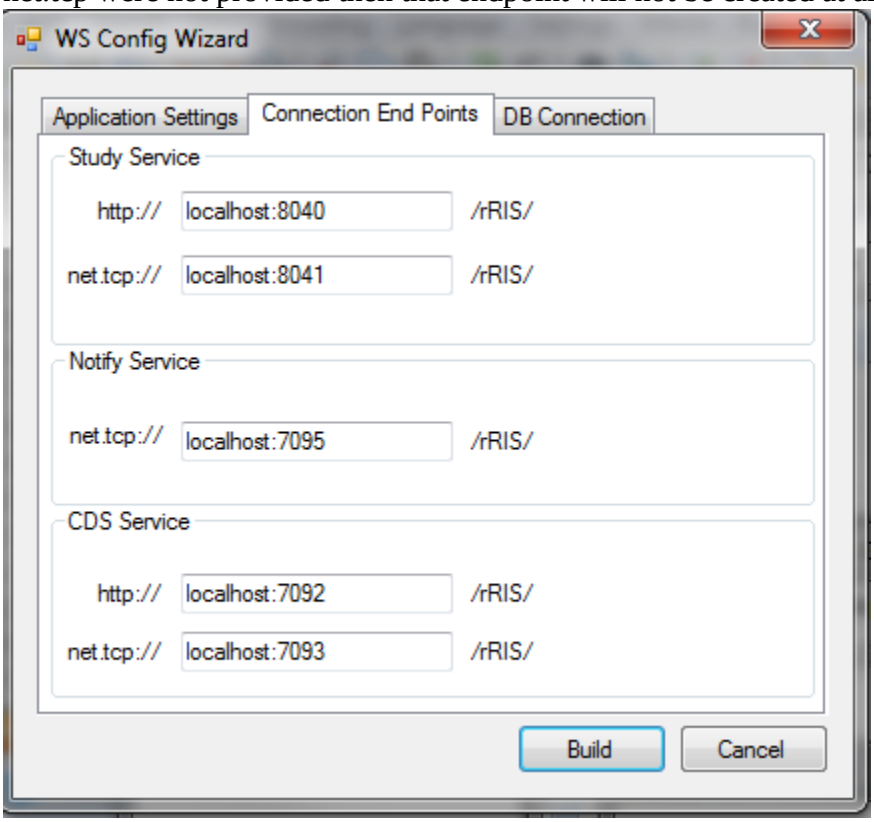
**NOTE:** the rRISServices.exe.config file is also included in the deploy folder. If this file has changes it **will not** update your current file in the Web Service directory. Any changes to this file will require a manual update of the rRISServices.exe.config and rRISServicesx64.exe.config files.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.



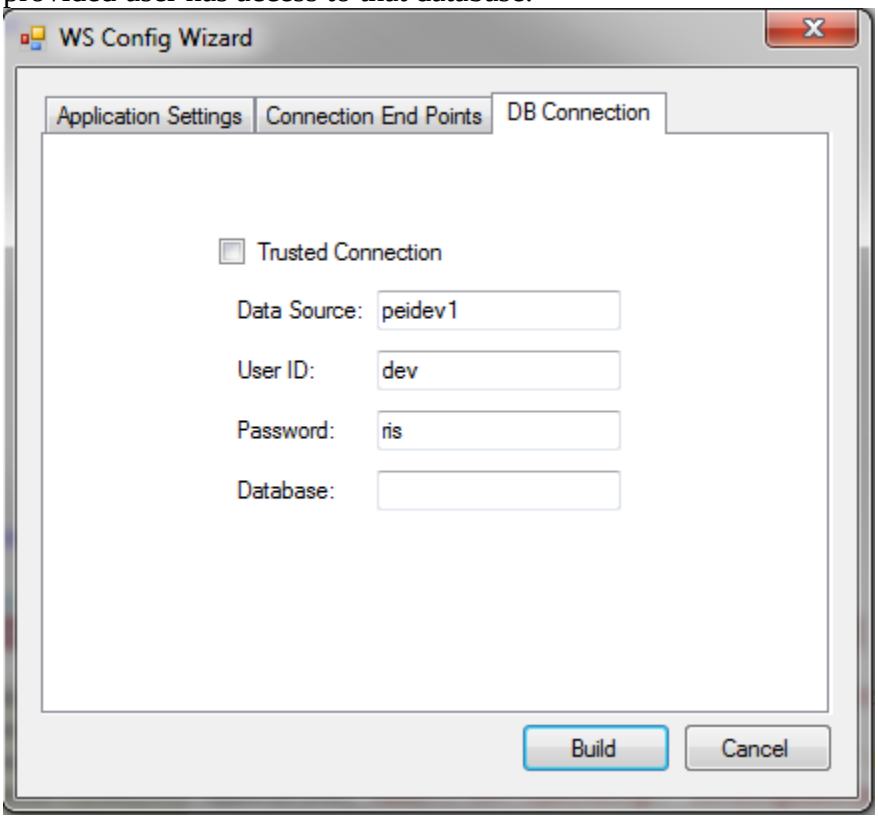
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of "Study Service" or "CDS Service" if both http and net.tcp were not provided then that endpoint will not be created at all.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**DB Connection:** will display the existing configuration, if the Connection is to be used as a trusted connection, then the user ID and password will become disabled and will not be used, and will rely on the provided database value, When not using the trusted connection, The Database value is not needed but can be used to force a specific database connection as long as the provided user has access to that database.



It is always good practice to do a compare of the .config files.

1) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   **Restart each service**.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Database Updates

Always run the upgrade scripts in a test environment of the actual database to make sure they run cleanly. If any errors occur please contact development.

*Note: There is a new upgrade process introduced with B43.1 called "RunUpgrade.bat". The batch file will open a command window. This process will prompt you for the database server name, database name and authentication credentials. There is no need to run the database upgrade scripts manually as was done in previous releases.*

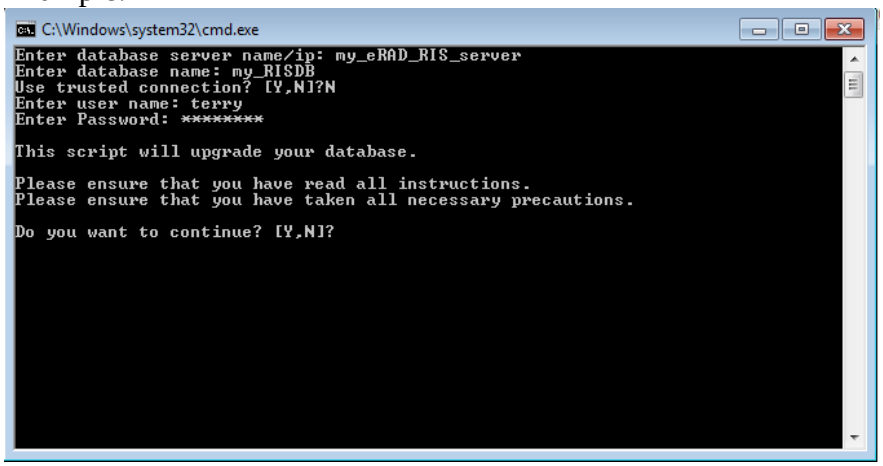
1) From the upgrade folder, double click the "RunUpgrade.bat" command file.

2) Enter the server name, database name and authentication credentials to the database. You have 2 choices for authentication credentials.

3) You can choose to use "Trusted connection". Using this option will pass the identity of the currently logged on user. If this user has "db_owner" access to the eRAD RIS database then feel free to use this options.

4) If you decide not to use "Trusted connection" then you will be prompted for user id and password.

   Example:



5) After the upgrade program has finished you can find the upgrade logs in the "log" folder. The file name will be eRAD_RIS_db_upgrade_timestamp.log, where timestamp is a value representing the date and time the upgrade started. If you see any errors please contact the development team

6) In the Common folder there is a subfolder of MU. The MU folder contains updates to lookups relevant for MU as well as updates for Zip Code table to add the County. Copy the

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

MU folder to the database server before running the batch file. There is a readme file contained in the MU folder. The details have also been included below

a) The mu bulk install process must be run from a path on the database server!
b) Copy Files ImportDataFileUpgradeDB.bat and ImportDataFileUpgradeDB.sql from upgrade folder to a location on the database server(This location will be referred to as the "Script Folder Path".)
c) Copy Folder scripts and Source files from the upgrade folder to "Script Folder Path" ....Note source files must be inside the scripts folder
d) Run bat file
   i) Enter Script Folder path [C:\Temp\SNOMED]:
   ii) Enter database server name/ip: [ie peidev1]
   iii) Enter database name: [ie rRIS_MU]
   iv) Use a trusted connection to log on to SQL Server:
   "N" means you will have to enter db [username] [password]
   "Y" means you have a trusted connection and will not have to enter [username][password]
   v) Do you wish to load SNOMED concept codes?
   "N" no files will be loaded into the l_snomed_concept table
   "Y" yes means l_snomed_concept table will be truncated and reloaded with the latest US concept codes
   Source File [sct2_Concept_Snapshot_US1000124_20140301.txt]
   vi) Do you wish to load SNOMED descriptions codes?
   "N" no files will be loaded into the l_snomed_description table
   "Y" yes means the l_snomed_description table will be truncated and reloaded with the latest US description codes
   Source File [sct2_Description_Snapshot-en_US1000124_20140301.txt]
   vii) Do you wish to load ICD9 to SNOMED mappings codes?
   "N" no files will be loaded into the l_snomed_icd9_map table
   "Y" yes means the l_snomed_icd9_map table will be truncated and reloaded with the latest US ICD9 to SNOMED mapping codes
   Source File [ICD9CM_SNOMED_MAP_1TO1_201312.txt and ICD9CM_SNOMED_MAP_1TOM_201312.txt]
   viii) Do you wish to load ICD10 to SNOMED mappings codes?
   "N" no files will be loaded into the l_snomed_icd10_map table
   "Y" yes means the l_snomed_icd10_map table will be truncated and reloaded with the latest US ICD10 to SNOMED mapping codes
   Source File [xder2_iissscRefset_ExtendedMapSnapshot_US1000124_20131220.txt]
   ix) Do you wish to load US zip codes?
   "N" no files will be loaded into the z_zipCodesWithCounty table
   "Y" yes means the z_zipCodesWithCounty table will be truncated and reloaded with the latest US zip codes
   Source File [5-digit Commercial.csv]

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**********

Note: the following files should be loaded once only with B43!

**********

x) Do you wish to load CMS codes?
"N" no files will be loaded into the s_mu_code table
"Y" yes means the s_mu_code table will be truncated and reloaded with the latest CMS codes
Source File [s_mu_code.txt]

xi) Do you wish to load HL7 support sets for CCDA?
"N" no files will be loaded into the l_hl7v3_voc_value_set table
"Y" yes means the l_hl7v3_voc_value_set table will be truncated and reloaded with the latest hl7v3_voc_value_set codes
Source File [l_hl7_voc_value_set.txt]

xii) Do you wish to load HL7 support codes for CCDA?
"N" no files will be loaded into the l_hl7v3_voc_value_code table
"Y" yes means the l_hl7v3_voc_value_code table will be truncated and reloaded with the latest l_hl7v3_voc_value_code codes
Source File [l_hl7_voc_value_code.txt]

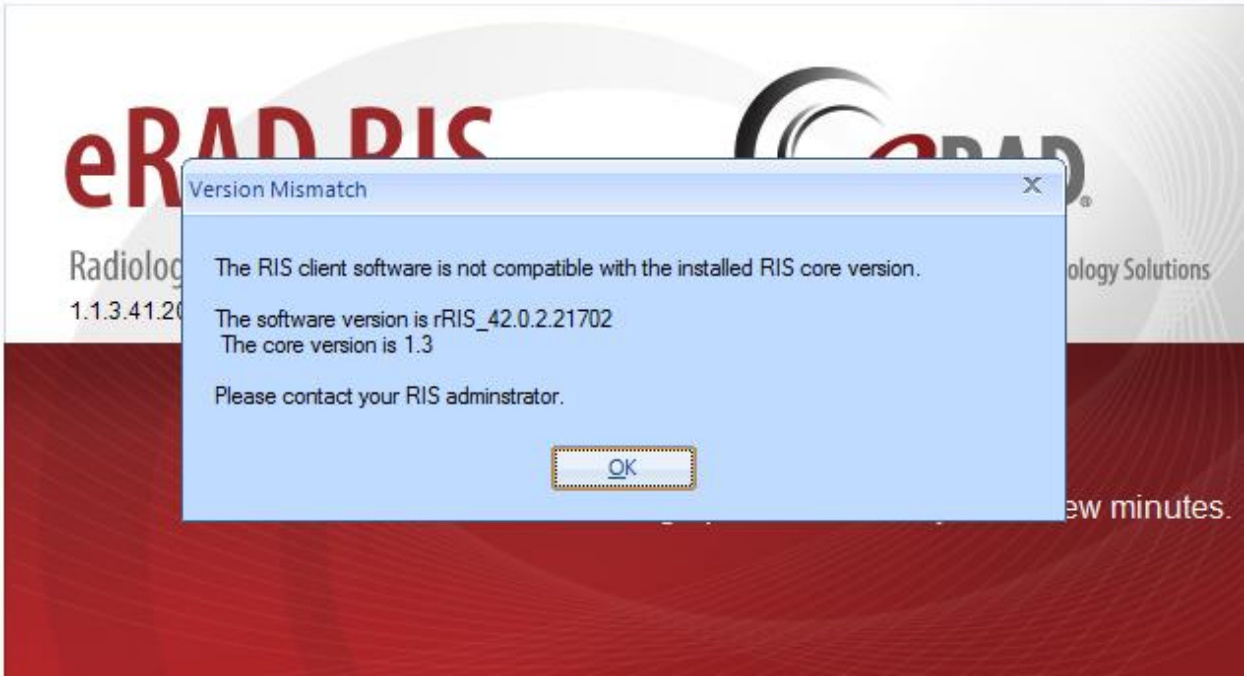
## Installing

### Client/GUI

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.45.1.8.33254.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_45.1.8.33254→ rRIS_1.3.45.1.8.33254
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

# Server Update

For eRAD RIS
Version 2.0
Build 45.1
Update 45.1.9

## Resolved Items

| Redmine # | Subject | Priority |
|---|---|---|
| 12720 | PACS integration intermittent for both Radiologists and technicians | Urgent (next build) |
| 12529 | IW or CSH PACS integration - produces an error and crashes RIS | Urgent (next build) |
| 12427 | PACS images not synced with current report after timeout exceeded in eRAD RIS | Urgent (next build) |
| 12552 | RIS hang during exit | High |
| 12530 | eRAD PACS - Integration - if 2 studies are opened and both do not have images attached. RIS gets stalled until OK is clicked on "Invalid study file" message | Normal |
| 12528 | ERAD PACS - Integration - using the next workflow the 'Waiting for PACS' message times out when relevant studies to open is greater than 0 | Normal |
| 12495 | PACS Integration - Waiting for PACS message, when Cancel is chosen get a "Thread was being aborted" message. | Normal |
| 12428 | When prompted "Action required in PACS" and you kill PACS, clicking OK to message should allow you to continue working in RIS without PACS. | Normal |
| 10672 | PACS Sync - Images can remain shown for previous patient when opening a report to sign off | Normal |

## Package Contents

## Intended Audience

This document is created by the RIS Development team for the RadNet/eRAD RIS Implementation teams.

## Who is affected

This should only be installed at sites that have 2016.1 and intend to use Insurance Eligibility.

It should not be installed at a site that has 2016.1.1 installed, as the change in 2016.1.1 is not included in this release.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

# Installing

## Client/GUI

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.16.1.0.1.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

# Server Update

For eRAD RIS
Version 2.0
Build 2.2016.1
Update 2.2016.1.0.2

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

# Installing

## Web Service

This updated is only required for the Wedge Web Services. The Core RIS Service and Document Distribution Service are not required to be updated.

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 97 files in the rRISService folder and 6 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below). Folders ar (Arabic), he (Hebrew), and pt_BR (Brazilian Portuguese) are localization folders. The WedgePlugins folder contains various plugin files for RADAR, MIRTH, Ensemble, etc…

### Services Configuration Wizard

With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, and services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

**NOTE:** the rRISServices.exe.config file is also included in the deploy folder. If this file has changes it **will not** update your current file in the Web Service directory. Any changes to this file will require a manual update of the rRISServices.exe.config and rRISServicesx64.exe.config files.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

# Installing

## Client/GUI

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.2016.1.0.3.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## Web Service

This updated is only required for the Wedge Web Services. The Core RIS Service and Document Distribution Service are not required to be updated.

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 98 files in the rRISService folder and 6 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below). Folders ar (Arabic), he (Hebrew), and pt_BR (Brazilian Portuguese) are localization folders. The WedgePlugins folder contains various plugin files for RADAR, MIRTH, Ensemble, etc…

**Services Configuration Wizard**

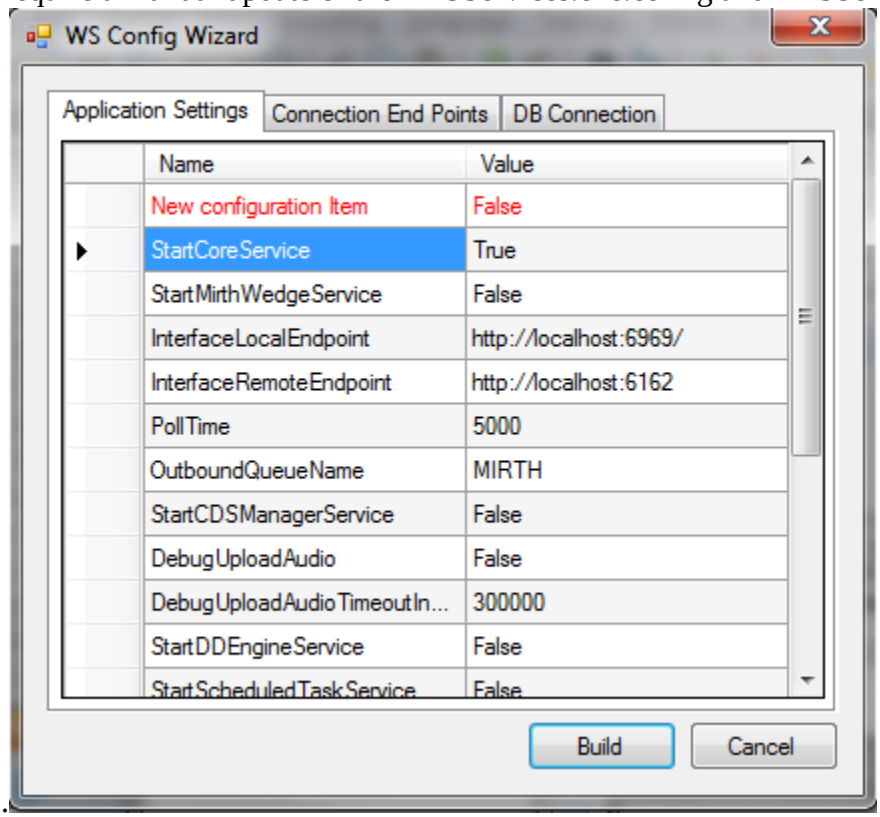
With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, and services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

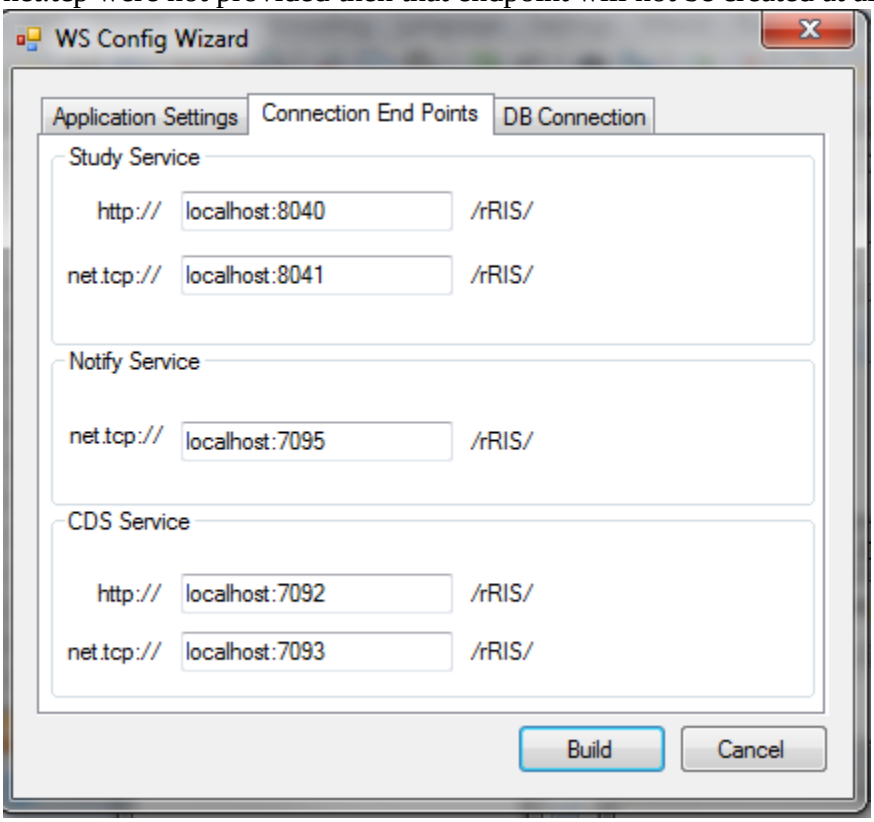
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**NOTE:** the rRISServices.exe.config file is also included in the deploy folder. If this file has changes it **will not** update your current file in the Web Service directory. Any changes to this file will require a manual update of the rRISServices.exe.config and rRISServicesx64.exe.config files.



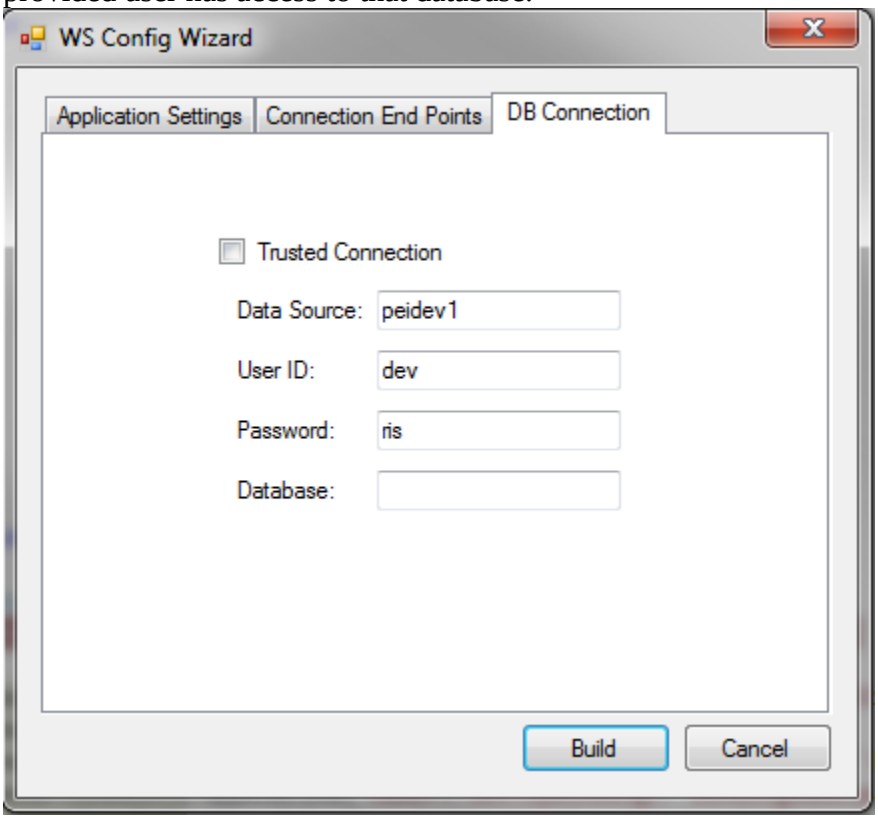
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of "Study Service" or "CDS Service" if both http and net.tcp were not provided then that endpoint will not be created at all.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**DB Connection:** will display the existing configuration, if the Connection is to be used as a trusted connection, then the user ID and password will become disabled and will not be used, and will rely on the provided database value, When not using the trusted connection, The Database value is not needed but can be used to force a specific database connection as long as the provided user has access to that database.



It is always good practice to do a compare of the .config files.

1) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   **Restart each service**.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Database Updates

Always run the upgrade scripts in a test environment of the actual database to make sure they run cleanly. If any errors occur please contact development.

*Note: There is a new upgrade process introduced with B43.1 called "RunUpgrade.bat". The batch file will open a command window. This process will prompt you for the database server name, database name and authentication credentials. There is no need to run the database upgrade scripts manually as was done in previous releases.*

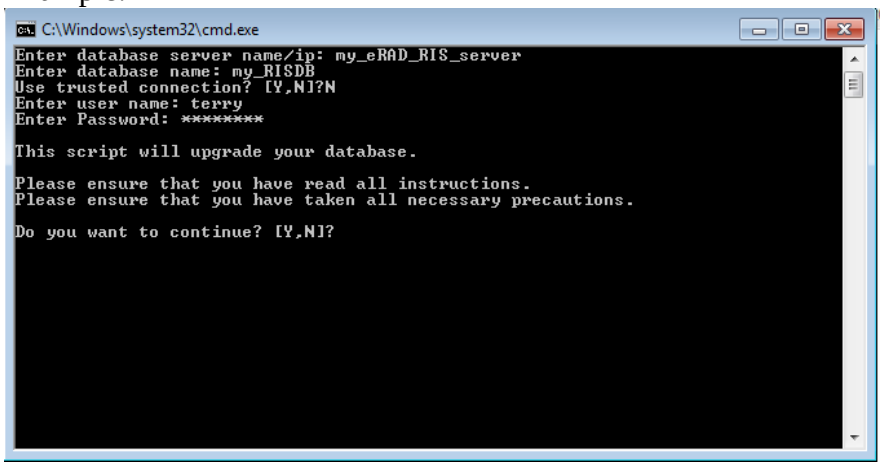
1) From the upgrade folder, double click the "RunUpgrade.bat" command file.

2) Enter the server name, database name and authentication credentials to the database. You have 2 choices for authentication credentials.

3) You can choose to use "Trusted connection". Using this option will pass the identity of the currently logged on user. If this user has "db_owner" access to the eRAD RIS database then feel free to use this options.

4) If you decide not to use "Trusted connection" then you will be prompted for user id and password.

   Example:



5) After the upgrade program has finished you can find the upgrade logs in the "log" folder. The file name will be eRAD_RIS_db_upgrade_timestamp.log, where timestamp is a value representing the date and time the upgrade started. If you see any errors please contact the development team

6) In the Common folder there is a subfolder of MU. The MU folder contains updates to lookups relevant for MU as well as updates for Zip Code table to add the County. Copy the

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

MU folder to the database server before running the batch file. There is a readme file contained in the MU folder. The details have also been included below

a) The mu bulk install process must be run from a path on the database server!
b) Copy Files ImportDataFileUpgradeDB.bat and ImportDataFileUpgradeDB.sql from upgrade folder to a location on the database server(This location will be referred to as the "Script Folder Path".)
c) Copy Folder scripts and Source files from the upgrade folder to "Script Folder Path" ....Note source files must be inside the scripts folder
d) Run bat file
   i) Enter Script Folder path [C:\Temp\SNOMED]:
   ii) Enter database server name/ip: [ie peidev1]
   iii) Enter database name: [ie rRIS_MU]
   iv) Use a trusted connection to log on to SQL Server:
   "N" means you will have to enter db [username] [password]
   "Y" means you have a trusted connection and will not have to enter [username][password]
   v) Do you wish to load SNOMED concept codes?
   "N" no files will be loaded into the l_snomed_concept table
   "Y" yes means l_snomed_concept table will be truncated and reloaded with the latest US concept codes
   Source File [sct2_Concept_Snapshot_US1000124_20140301.txt]
   vi) Do you wish to load SNOMED descriptions codes?
   "N" no files will be loaded into the l_snomed_description table
   "Y" yes means the l_snomed_description table will be truncated and reloaded with the latest US description codes
   Source File [sct2_Description_Snapshot-en_US1000124_20140301.txt]
   vii) Do you wish to load ICD9 to SNOMED mappings codes?
   "N" no files will be loaded into the l_snomed_icd9_map table
   "Y" yes means the l_snomed_icd9_map table will be truncated and reloaded with the latest US ICD9 to SNOMED mapping codes
   Source File [ICD9CM_SNOMED_MAP_1TO1_201312.txt and ICD9CM_SNOMED_MAP_1TOM_201312.txt]
   viii) Do you wish to load ICD10 to SNOMED mappings codes?
   "N" no files will be loaded into the l_snomed_icd10_map table
   "Y" yes means the l_snomed_icd10_map table will be truncated and reloaded with the latest US ICD10 to SNOMED mapping codes
   Source File [xder2_iissscRefset_ExtendedMapSnapshot_US1000124_20131220.txt]
   ix) Do you wish to load US zip codes?
   "N" no files will be loaded into the z_zipCodesWithCounty table
   "Y" yes means the z_zipCodesWithCounty table will be truncated and reloaded with the latest US zip codes
   Source File [5-digit Commercial.csv]

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**********

Note: the following files should be loaded once only with B43!

**********

x) Do you wish to load CMS codes?
"N" no files will be loaded into the s_mu_code table
"Y" yes means the s_mu_code table will be truncated and reloaded with the latest CMS codes
Source File [s_mu_code.txt]

xi) Do you wish to load HL7 support sets for CCDA?
"N" no files will be loaded into the l_hl7v3_voc_value_set table
"Y" yes means the l_hl7v3_voc_value_set table will be truncated and reloaded with the latest hl7v3_voc_value_set codes
Source File [l_hl7_voc_value_set.txt]

xii) Do you wish to load HL7 support codes for CCDA?
"N" no files will be loaded into the l_hl7v3_voc_value_code table
"Y" yes means the l_hl7v3_voc_value_code table will be truncated and reloaded with the latest l_hl7v3_voc_value_code codes
Source File [l_hl7_voc_value_code.txt]

## Resolved Items

| Redmine # | Subject |
|---|---|
| 13599 | Occasional error 'Implicit conversion from data type nvarchar to varbinary(max)' |
| 13579 | Files missing from RIS deployment ZIP file (Microsoft.SqlServer.Types.dll) |
| 13568 | The 'Matching Alternate MRN Issuer' should only display values related to the 'Matching Alternate MRN' column |
| 13552 | Performed_end_date occasionally not populated causing subsequent errors |
| 13530 | Formatting characters in MRN masks are inadvertently being removed upon save |
| 13525 | In Perform Exam, if a study is selected then de-selected for inclusion, it is still included, even though it is clearly un-checked |
| 13522 | Error scheduling an EMR order 'Cannot insert duplicate key row' when EMR MRN is the same but Issuer ID is different |

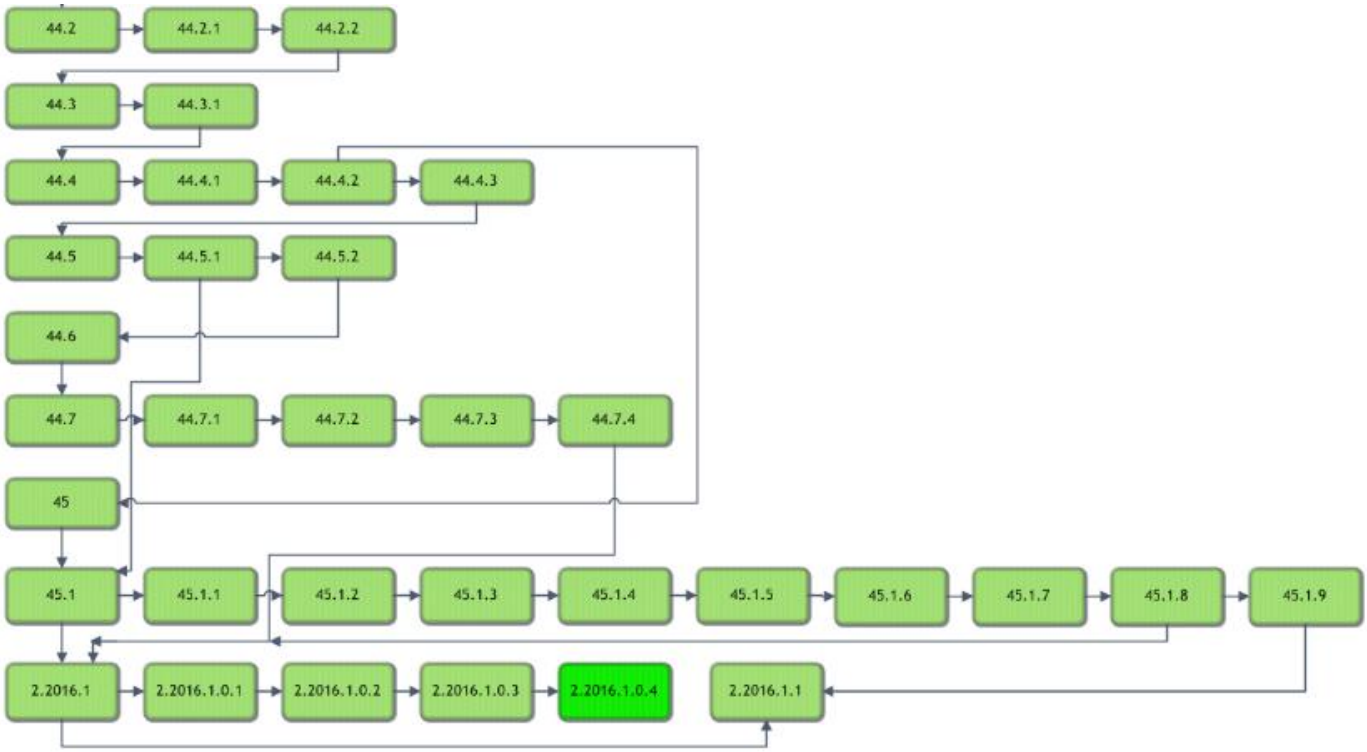
## Code Stream



**Legend:**

Light Green = Released software

Gray = Will not be released

Bright Green = Current Release

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Package Contents

## Intended Audience

This document is created by the RIS Development team for the RadNet/eRAD RIS Implementation teams.

## Who is affected

This must be installed on systems that are already at version 2.2016.1.0.3

It should not be installed at a site that has 2016.1.1 installed, as the change in 2016.1.1 is not included in this release.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

# Installing

## Client/GUI

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.2016.1.0.4.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## Web Service

This updated is only required for the Wedge Web Services. The Core RIS Service and Document Distribution Service are not required to be updated.

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 98 files in the rRISService folder and 6 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below). Folders ar (Arabic), he (Hebrew), and pt_BR (Brazilian Portuguese) are localization folders. The WedgePlugins folder contains various plugin files for RADAR, MIRTH, Ensemble, etc…

**Services Configuration Wizard**

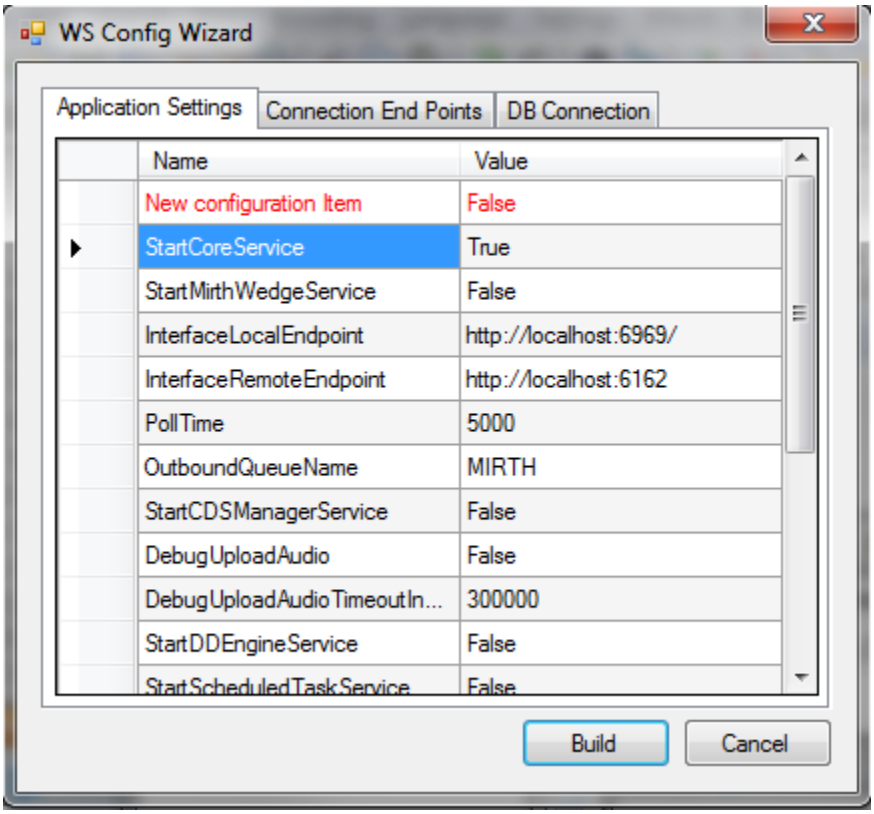
With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, and services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

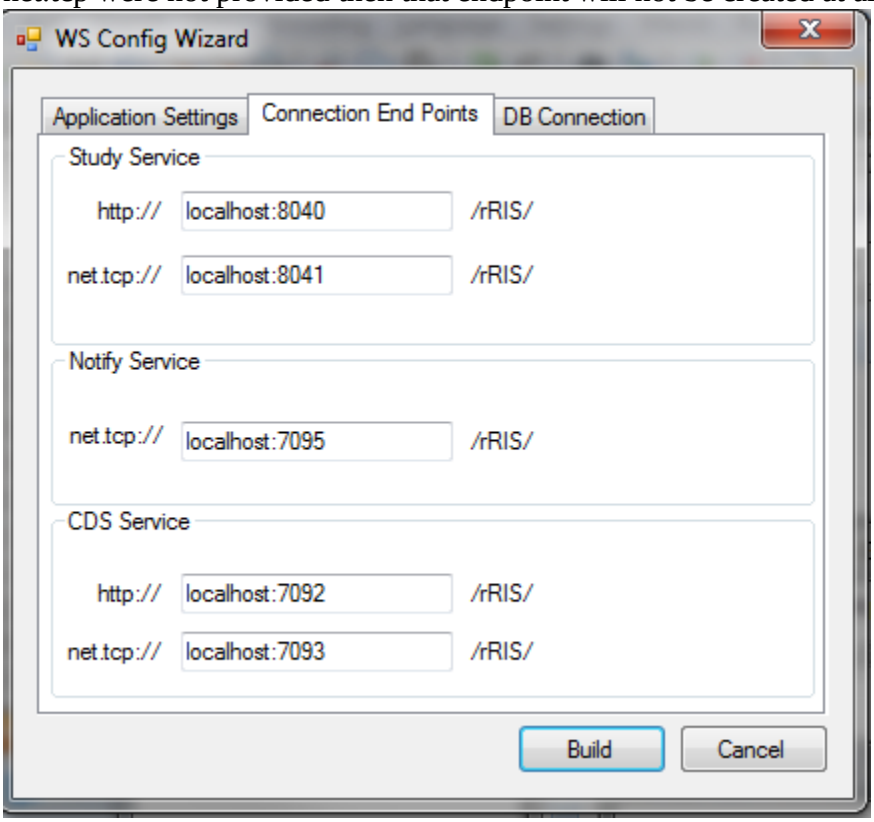
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**NOTE:** the rRISServices.exe.config file is also included in the deploy folder. If this file has changes it **will not** update your current file in the Web Service directory. Any changes to this file will require a manual update of the rRISServices.exe.config and rRISServicesx64.exe.config files.



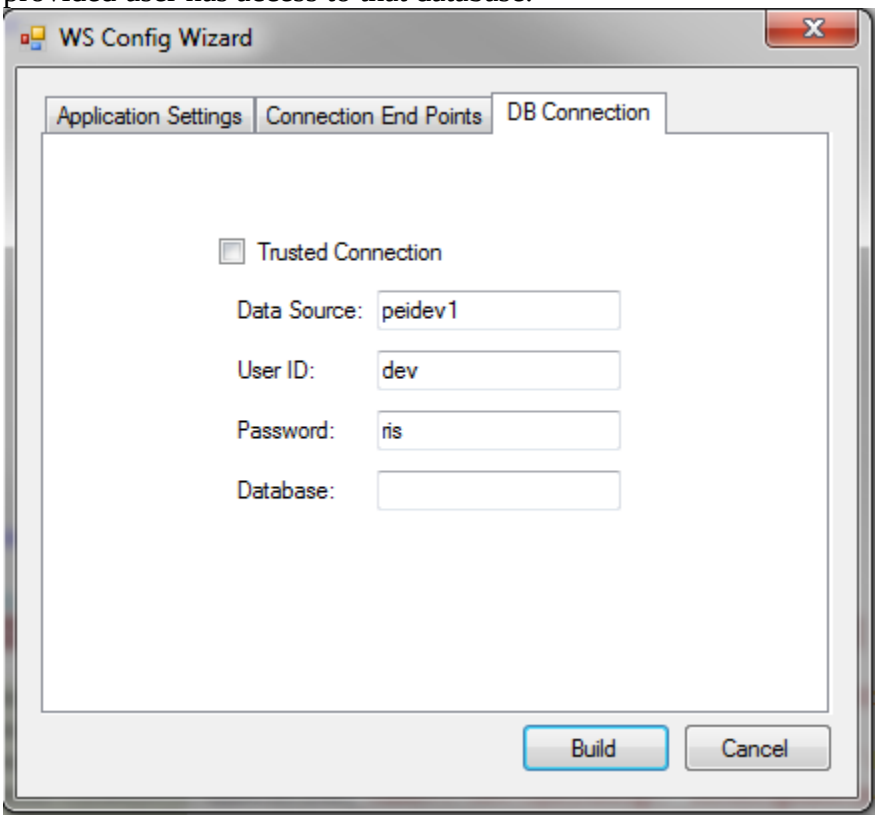
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of "Study Service" or "CDS Service" if both http and net.tcp were not provided then that endpoint will not be created at all.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**DB Connection:** will display the existing configuration, if the Connection is to be used as a trusted connection, then the user ID and password will become disabled and will not be used, and will rely on the provided database value, When not using the trusted connection, The Database value is not needed but can be used to force a specific database connection as long as the provided user has access to that database.



It is always good practice to do a compare of the .config files.

1) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   **Restart each service**.

## Resolved Items

| Redmine # | Subject |
|---|---|
| 13370 | IW or CSH PACS integration - intermittently produces "given key not present" error |
| 13368 | Intermittent issue where View Images button is remaining diabled and PACS Enable/Disable menu remains disabled |
| 13373 | PACS images not synced with current study after timeout exceeded in eRAD RIS |
| 13369 | Intermittent RIS hang during exit |
| 13375 | Powerscribe integration - Closing a study using X on the tab may produce "given key not present" error. |
| 13371 | eRAD PACS Integration - If 2 studies are opened and both do not have images attached, RIS will stall until OK is clicked on "Invalid study file" message |
| 13374 | When RIS prompts "An action is required in PACS" and the user kills PACS manually, the user cannot continue working in RIS. |
| 13376 | eRAD PACS - Integration - using the next workflow the 'Waiting for PACS' message times out when relevant studies to open is greater than 0 |
| 13377 | PACS Integration - When the "Waiting for PACS" message is on the screen, and the user presses Cancel, the RIS should not display a "Thread was being aborted" message box. |
| 13372 | PACS Sync - When images are displayed in reading mode, then the radiologist opens another study to sign off, the images for the first patient remain displayed. |

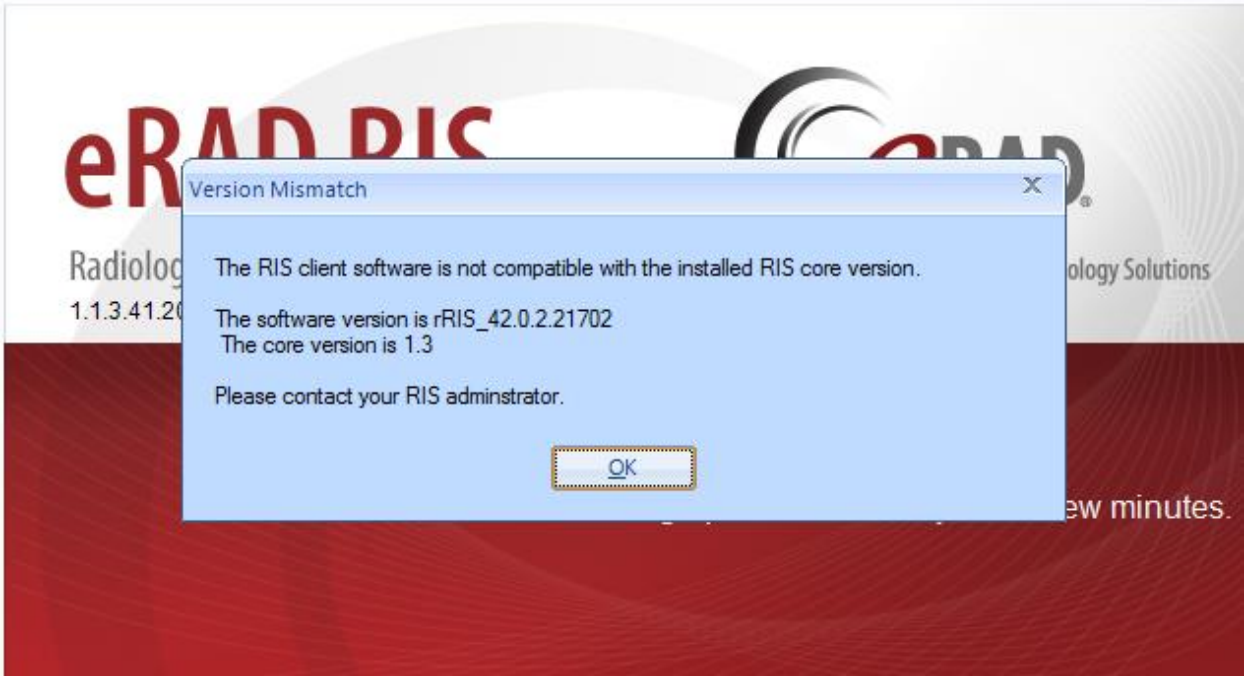
## Installing

### Client/GUI

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.16.1.1.33672.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.



If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_16.1.1.33672→ rRIS_1.3.16.1.1.33672
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

# Release Notes

## PURPOSE

This document describes some of the new features and changes implemented in eRAD RIS in build 2.2016.1

Not every feature will be described in this document. Typically only features which can be visually demonstrated to the user are outlined in this document.

## INTENDED AUDIENCE

This document is created by the eRAD RIS Development/Commercialization team for customers of eRAD RIS.

## INSTALLING/ACCESSING THE APPLICATION

The installation guide for the eRAD RIS client have been posted to the RadNet Wiki page at http://mdbal01rdtweb/Wiki/

Under the RIS menu click on the rRIS page. The credentials to access the page are:

Username: rRIS

Password: Summerside

If you experience difficulties accessing the application, please contact Darcy Noye with the PEI RIS Development Team.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# NEW SETTINGS

## NEW ACCESS STRINGS

| Setting | Default | Purpose |
|---|---|---|
| Clinical.ConnectAnswers.Edit | None | Controls the ability to edit Connect Answers vai the RIS. The Connect Answers are the Patient provided answers to scheduling questions entered via the Patient Portal at the time of scheduling. |
| Clinical.CreateEditSendForDictation | None | Allows the user to send report for dictation from create/edit report screen |
| Clinical.CreateReportFromExamDone | None | Allows the user to create/edit report from exam done status |
| Clinical.FollowUp | Full | Controls access to the Mammo Follow Up screen |
| Clinical.ImportStudies | None | Access to context menu for importing studies into an order |
| Clinical.ImportStudies.AcrossEMRs | None | Access to importing studies into an order from a different EMR |
| Clinical.Linkstudies | None | Access to the manual study linking screen. |
| Clinical.PeerReview.MarkAsCompleted | Full | Allows the user to mark a peer review as completed |
| Clinical.PingMessage | None | Controls access to the Ping message feature. |
| Clinical.PreviewTerminatedReport | None | Controls access to previewing reports that have been terminated such as status like void and discontinued. |
| Config.DigitalFormsEditor<br><br>Replaces<br><br>Config.QuestionnaireEditor | None | Controls access to the browser-based Digital Forms editor. |
| Config.LookupEditor.Complication | None | controls access to the Complication lookup table |
| Config.LookupEditor.CreatedBySystem | None | lookup table access for Created By System |
| Config.LookupEditor.Personnel.ConfirmedRadiologistFlag | None | Access to the edit or view the Confirmed Radiologist Flag |
| Notification.PendingBiopsyNotify<br><br>Replaces<br><br>WLNotification.PendingBiopsyNotify | Full | Enables ability to show worklist driven pending biopsy notifications |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | |
|---|---|---|
| Notification.PendingSignatureWorklist<br><br>Replaces<br><br>WLNotification.PendingSignatureWorklist | Full | Enables ability to show worklist driven pending signature notifications |
| Notification.STATPendingSignature<br><br>Replaces<br><br>WLNotification.STATPendingSignature | Full | Enables ability to show STAT Case Pending Signature notifications |
| Notification.STATPendingSignatureWorklist<br><br>Replaces<br><br>WLNotification.STATPendingSignatureWorklist | Full | Enables ability to show worklist driven STAT Case Pending Signature notifcations |
| Notification.SuspendedNotify<br><br>Replaces<br><br>WLNotification.SuspendedNotify | Full | Enables ability to show suspended notifications |
| View.DigitalFormAnswers<br><br>Replaces<br><br>View.QuestionnaireAnswers | None | Access to see the Digital Form Answers menu item from View menu (visible when dictate window is open on a mammo study) |
| View.SelectedDigitalFormAnswers | Full | Access to see the Selected Digital Form Answers menu item from View menu (visible when dictate window is open) |
| WL.Reception | Full | Controls access to the Reception worklist under Front Desk menu |

## NEW SYSTEM CONFIGURATION SETTINGS

| | | |
|---|---|---|
| BreastBodyPartCode | | The code for the breast body part. May be used to activate mammo related functionality (e.g. Create Reminder) |
| GoogleAPIKey | | A Google Key use to connect to their WEB services for information such as getting geo coordinates for sites, etc. |
| MUMedlinePlusConnectProblemSearchICD10 | mainSearchCriteria.v.cs=2.16.840.1.113883.6.90 | MedlinePlus Connect Problem ICD-10 search specification. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | |
|---|---|---|
| MUMedlinePlusConnectProblemSearchICD9 | mainSearchCriteria.v.cs=2.16.840.1.113883.6.103 | MedlinePlus Connect Problem ICD-9-CM search specification. |
| MUMedlinePlusConnectProblemSearchSNOMED | mainSearchCriteria.v.cs=2.16.840.1.113883.6.96 | MedlinePlus Connect Problem SNOMED search specification. |
| MUMedlinePlusConnectProblemSearch | Removed | Replaced with MUMedlinePlusConnectProblemSearchICD10<br><br>MUMedlinePlusConnectProblemSearchICD9<br><br>MUMedlinePlusConnectProblemSearchSNOMED |
| NPDServiceAddress | | URI to NPD Service. If blank, we will use the address in the application config. An example URI is: http://10.10.1.23/NPDService/NPDService.asmx |
| NPI_URL | https://npiregistry.cms.hhs.gov/registry/search-results-table?first_name={firstname}&last_name={lastname} | URL to NPI registry including placeholders for {firstname} and {lastname} |
| ReferringAddressCode | Removed | The referring practice address pattern was replaced with a referring doctor address editor.<br><br>Therefore:<br><br>references to ReferringAddressCode config needs to be removed. |
| ReportingImpressionSectionStartText | IMPRESSION | Search string of text to mark the beginning of the impression section. |
| ResetInsuranceVerifiedOnReschedule | False | Determines if insurance verified flag is reset when rescheduling a study |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## CHANGES TO WEB SERVICES

Changes to Web services applicationsettings.config file:

| Setting | Default value | |
|---|---|---|
| LegacyInterfaceMode | True | Changes in 45, 45.1 and 2016.1 for some customers required interface files to be updated. This setting will allow pre-existing customers to continue to use their current interfaces without adjustment. |

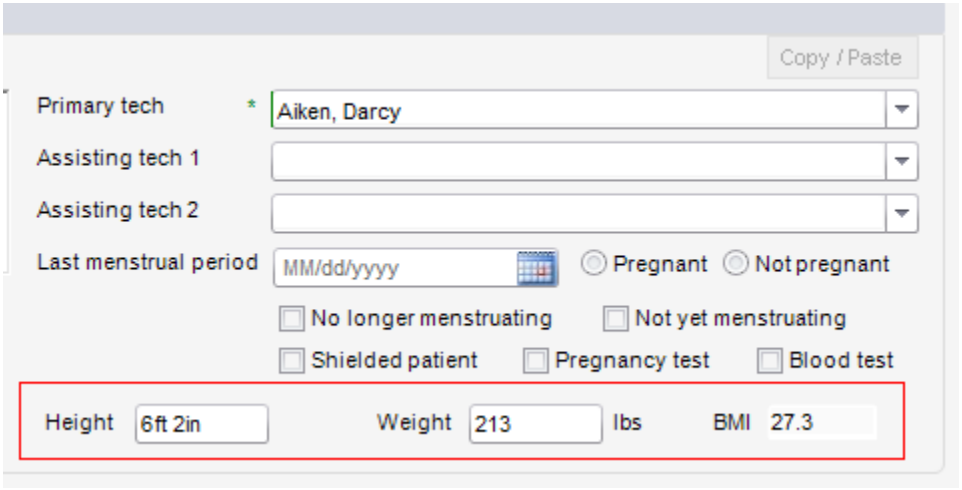
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

# NEW FEATURES AND ENHANCEMENTS

## TECHNOLOGIST

### 6477 - DISPLAY THE HEIGHT AND WEIGHT FIELDS ON THE TECH DOCUMENTATION SCREEN

It was observed that at some sites the patient weight was being re-typed into the Order Notes field, to save the technologist from having to select the MU tab simply to see the weight. At other sites, the technologists were taking the extra time to select the MU tab to see the patient weight, or were simply ignoring this step to save time. Therefore, the patient weight, height, and BMI are now also displayed on the tech 'Documentation' tab to eliminate these extra steps.



Technologists can edit the height and weight here, and the values will be updated on the MU tab. BMI is calculated automatically based on the height and weight values.

### 11031 - CREATE GFR CALCULATOR

Glomerular filtration rate (GFR) is a test used to check how well the kidneys are working. Specifically, it estimates how much blood passes through the glomeruli each minute. Glomeruli are the tiny filters in the kidneys that filter waste from the blood.

To eliminate the need for technologists to navigate to an external website or application to calculate GFR, we now have the ability to add a conditional tab that will include a GFR calculator within RIS.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

*Conditional Tab showing GFR calculator*

The calculator uses the following logic:

For creatinine in µmol/L:

$$\text{eGFR} = 32788 \times \text{Serum Creatinine}^{-1.154} \times \text{Age}^{-0.203} \times [1.210\ if\ Black] \times [0.742\ if\ Female]$$

For creatinine in mg/dl:

$$\text{eGFR} = 186 \times \text{Serum Creatinine}^{-1.154} \times \text{Age}^{-0.203} \times [1.210\ if\ Black] \times [0.742\ if\ Female]$$

Creatinine levels in µmol/L can be converted to mg/dL by dividing them by 88.4. The 32788 number above is equal to $186 \times 88.4^{1.154}$.

### How to enable the feature:

## *External customers will be instructed to contact the eRAD Support team for assistance with enabling the GFR calculator.*

*eRAD Support:*

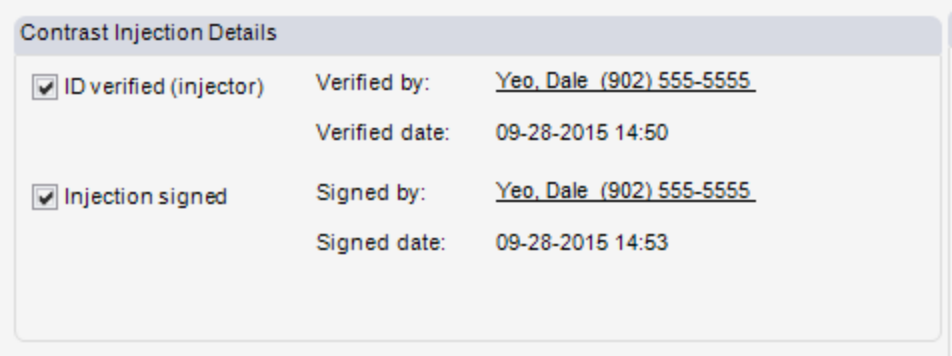
Use the *QuestionnaireUtil* command line utility to publish the calculator, which has been placed in source control under source\DigitalForms\GFR.xml.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Once deployed, use the Conditional Tabs editor in RIS to configure the calculator to be displayed for the desired screens/studies.

### 11826 - DISPLAY THE USER ID (AND DATE) OF THE TECHNOLOGIST WHO VERIFIED THE ID BESIDE THE TECH VERIFIED ID CHECKBOX ON THE PERFORM EXAM SCREEN

eRAD RIS has the ability for the individual responsible for injecting contrast to indicate that they have verified the patient's ID. RIS will now display and store the name and date of the injection ID verification on the Exam Details tab within the Contrast Injection workflow. If configured to require a sign off by the Injection Physician, the name and date are similarly recorded in this section.



## RADIOLOGIST

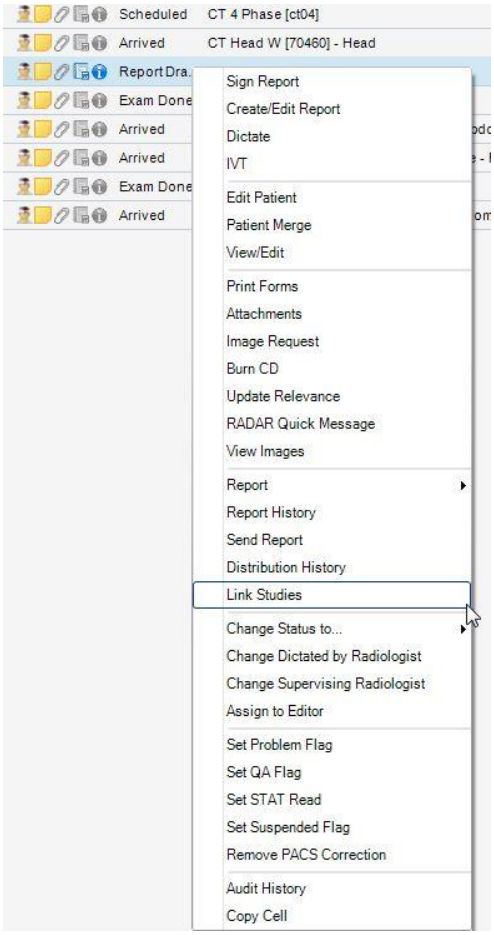
### 10433 - VOICE ENABLED PICK LIST OPTIONS (M*MODAL ONLY)

Pick List options are now voice enabled in M*Modal dictation mode. A voice command can be created for each pick list option and the commands become available when the radiologist selects a picklist field. The cue takes the form of "pick" + display text of the pick list option. There is also a generic cue "pick option" + list position (1, 2, 3, etc.).

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## 12334 - MANUAL LINK AND UNLINK STUDIES CONTEXT MENU

Previously, linked reporting in eRAD RIS could only be done when a Procedure Plan was used, and did not include the ability to manually link or unlink studies on demand. This prevented users from reporting on multiple exams together if they had not initially been scheduled/registered using the appropriate Procedure Plan. It is now possible to manually link or unlink exams in the Patient Folder via the right-click context menu option **Link Studies**. For this phase of linked reporting, the exams must be on the same Order to be eligible for linking.

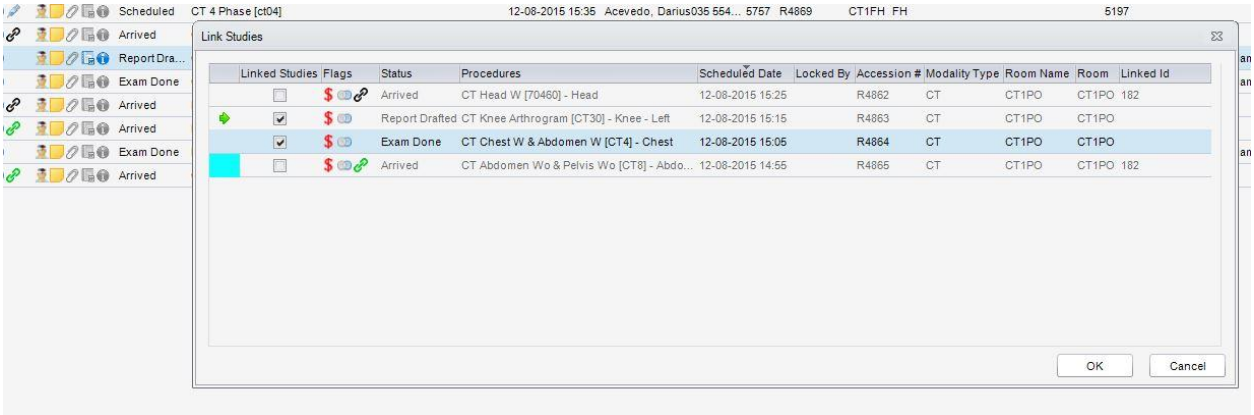


The menu will only be available for exams which qualify as a primary study to link others into.

Manual linking can only occur prior to signing. Exams with existing interpretations cannot be linked into another primary study; they will first have to be reset to Exam Done.

When selecting the Link Studies option, the selected row in the Patient Folder will default as the Primary Study. The following window will open to allow the user to select the exams which should be linked to the Primary Study.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



The manual linking screen will only show rows from the same order as the targeted primary study. Any row that does not qualify to be linked into the primary study will be a disabled row.

When linking, if the primary exam is post Exam Done status, then secondary exams which are at least at Exam Done will have their status sync with the primary. When *unlinking*, if the primary exam is post Exam Done status, then secondary exams are rest to Exam Done status after being unlinked.

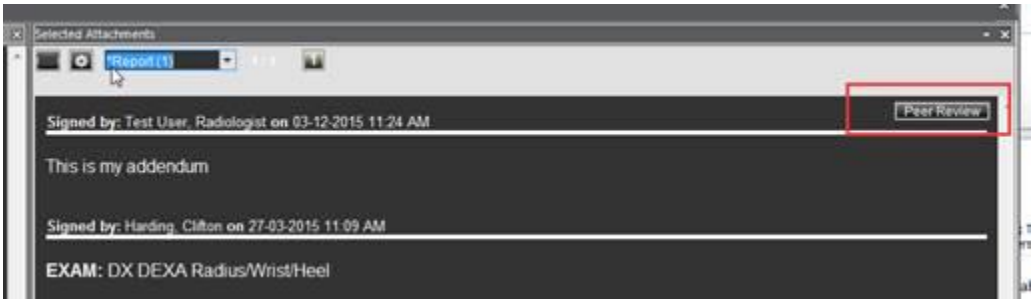
### How to enable the feature:

To manually link or unlink exams, a user must have the access string *Clinical.Linkstudies* set to Full. Default access is none.

## 12682 - MOVE PEER REVIEW ACTION BUTTON TO SELECTED REPORT AND SELECTED ATTACHMENTS PANELS, AND THE REPORT DATA NUGGET

The Peer Review button was located in an area that was inconvenient for many radiologists, due to the placement of panels in their reporting layout. The button has now been moved to the areas in which a radiologist may view a prior report for which they may choose to perform a Peer Review: the panels for Selected Report and Selected Attachments, as well as the Report Data Nugget.

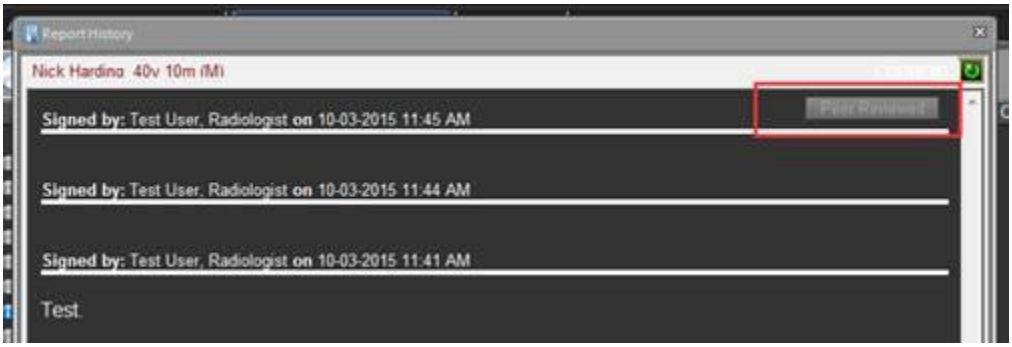
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



With this change, users can also now peer review via the Report Data Nugget in the main patient folder or within the patient folder panel in the reporting screens.

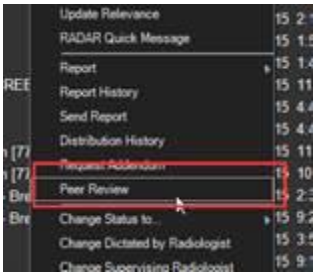
In addition, some rules have been added to enable or disable the Peer Review button appropriately. The button is enabled and visible for all reports the user is permitted to peer review. If the user touched the report (dictated, contributed or signed) the button will *not* be visible. This helps reduce clutter on the screen as it would not be appropriate to peer review one's own report.

If the user previously peer reviewed the report, the button will be visible but disabled. This will indicate to the user that they have already peer reviewed the report. The text in the disabled button will read "Peer Reviewed."



The prior Peer Review access buttons in the context menu and the patient folder panel in the Reporting screen have been removed.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



**How to enable the feature:**

There is an existing access string "*Clinical.PeerReview*" which needs to be enabled for the button to appear.

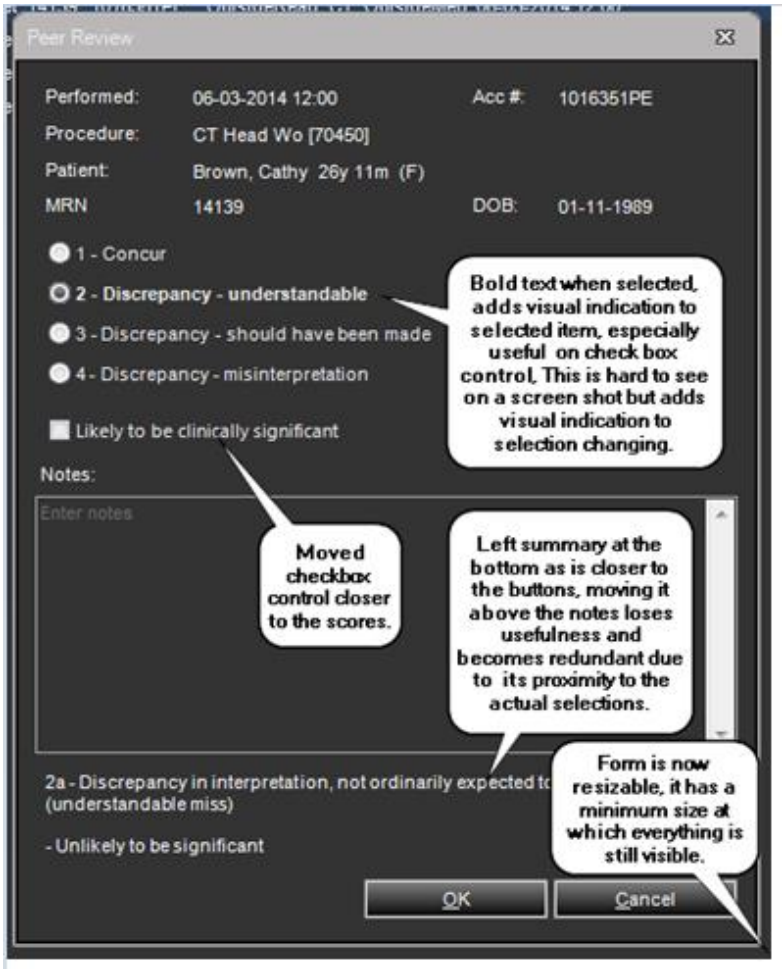
## 12445 - REDESIGN PEER REVIEW WINDOW TO BE MORE INTUITIVE

Improvements were made to make the layout of the Peer Review window more intuitive, particularly when choosing between subcategories. The clinical significance checkbox has been moved and selection cues have been added to bold the active item.

The same changes are reflected in the Peer Review control in the Peer Review QA screen.

The changes result in a workflow with a top down pattern that reduces the need for the user to bounce between the top and bottom of the window, along with reduced visual clutter.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



These changes are made in an ongoing effort to enhance the Peer Review capabilities in eRAD RIS.

## 8280, 8281 - DIFFERENTIATE BETWEEN AN ACTUAL RADIOLOGIST AND ANOTHER PERSON WITH THE RADIOLOGIST RESOURCE SETTING

It is often necessary to assign radiologist capabilities to a non-radiologist for various operational needs. However, since this user is not accredited as a radiologist, it is dangerous to allow them the power to sign patients' reports.

eRAD RIS now supports an additional flag called 'confirmed radiologist.' This flag can only be assigned by a specific type of system administrator, instead of all users with the 'RIS Administrator' role. When this flag is added or removed, it is stored in an audit trail along with the following information:

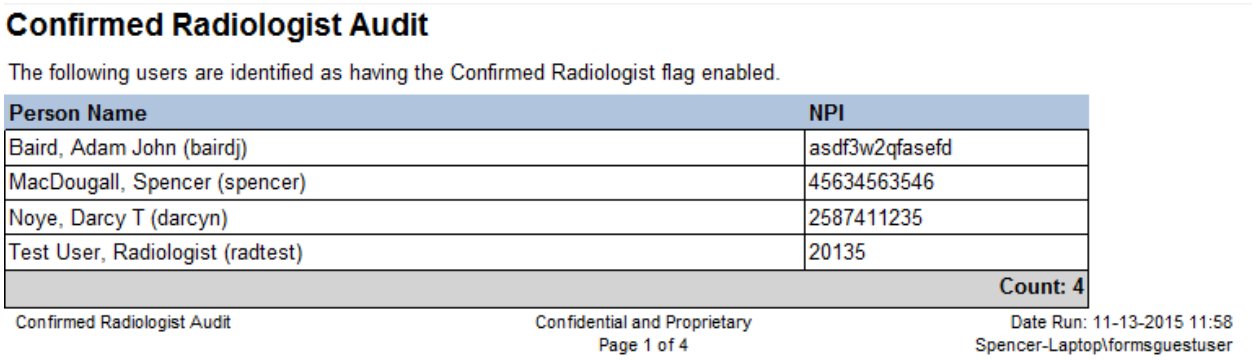
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

- When the flag was changed.
- The user who changed the flag.
- The IP address of the user who changed the flag.
- The radiologist for whom the flag was changed.
- Notes describing the change (e.g. confirmed_radiologist_flag changed from 'N' to 'Y').

The radiologist workflow has been updated so the RIS will track if a report was signed by a 'confirmed radiologist.' This will allow a system administrator to easily track if any diagnostic reports have been signed by someone who has not been flagged as an actual radiologist.

A management report called Confirmed Radiologist Audit has been added to the Maintenance folder in eRAD RIS. It has a data range as a parameter and presents the following information:

a. A listing of all radiologists (full name and NPI) who have the Confirmed Radiologist Flag enabled.



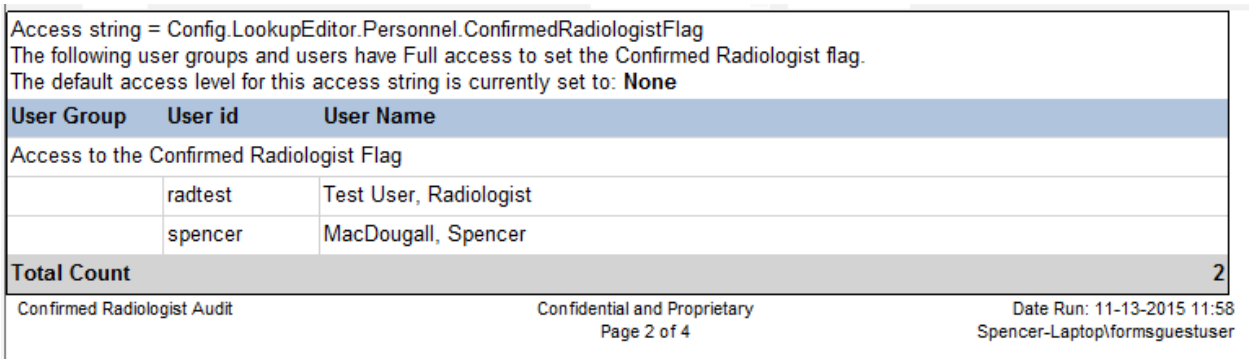
**Confirmed Radiologist Audit**

The following users are identified as having the Confirmed Radiologist flag enabled.

| Person Name | NPI |
|---|---|
| Baird, Adam John (bairdj) | asdf3w2qfasefd |
| MacDougall, Spencer (spencer) | 45634563546 |
| Noye, Darcy T (darcyn) | 2587411235 |
| Test User, Radiologist (radtest) | 20135 |
| | **Count: 4** |

Confirmed Radiologist Audit — Confidential and Proprietary — Page 1 of 4 — Date Run: 11-13-2015 11:58 — Spencer-Laptop\formsguestuser

b. A listing of all users who have **full** access to the *Config.LookupEditor.Personnel.ConfirmedRadiologistFlag* access string which enables the user to set the Confirmed Radiologist flag.



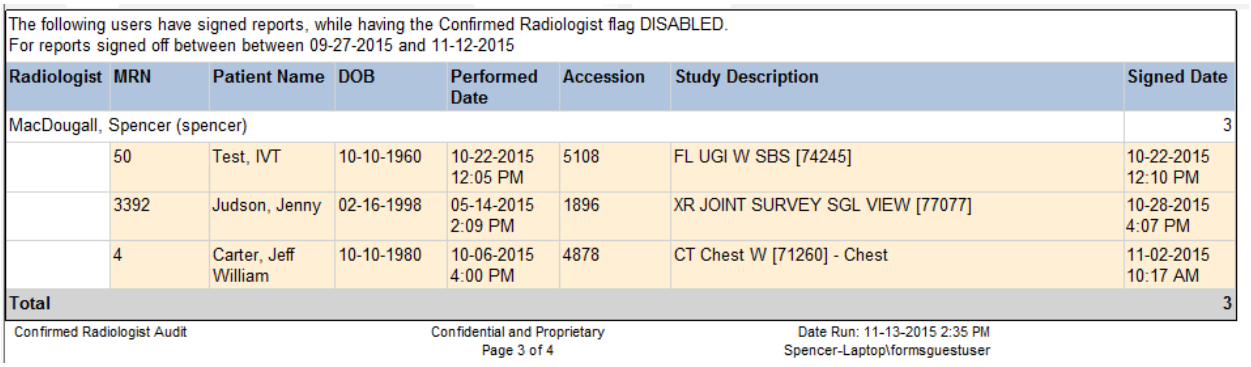
Access string = Config.LookupEditor.Personnel.ConfirmedRadiologistFlag
The following user groups and users have Full access to set the Confirmed Radiologist flag.
The default access level for this access string is currently set to: **None**

| User Group | User id | User Name |
|---|---|---|
| Access to the Confirmed Radiologist Flag | | |
| | radtest | Test User, Radiologist |
| | spencer | MacDougall, Spencer |
| **Total Count** | | **2** |

Confirmed Radiologist Audit — Confidential and Proprietary — Page 2 of 4 — Date Run: 11-13-2015 11:58 — Spencer-Laptop\formsguestuser

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

c. A listing based on the specified date range of all diagnostic reports (user, accession number, study description, date and time) that were signed by a user who ***does not*** have the radiologist flag enabled.

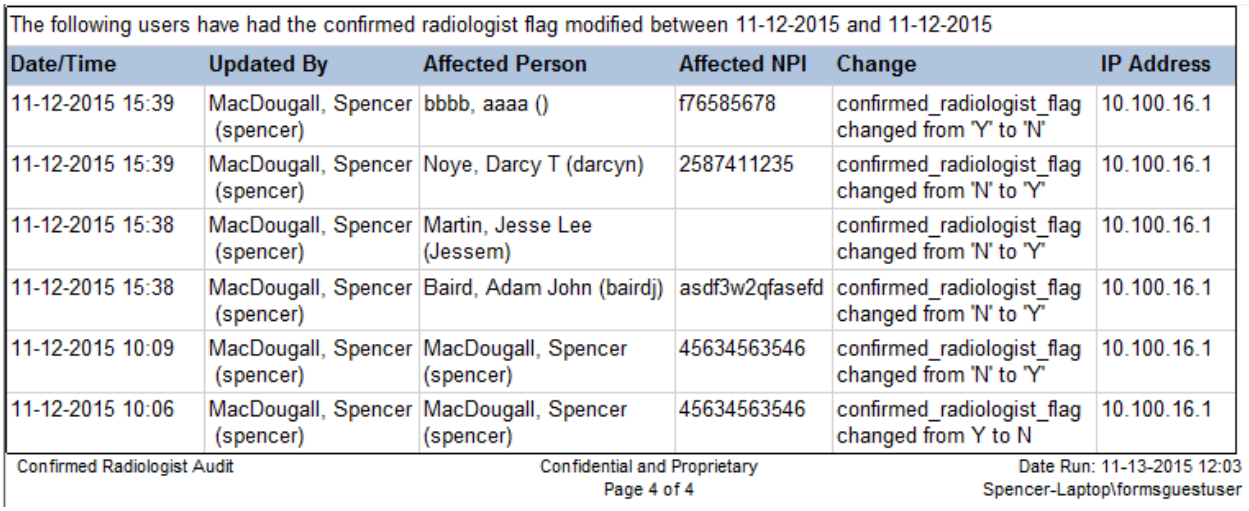


The following users have signed reports, while having the Confirmed Radiologist flag DISABLED.
For reports signed off between between 09-27-2015 and 11-12-2015

| Radiologist | MRN | Patient Name | DOB | Performed Date | Accession | Study Description | Signed Date |
|---|---|---|---|---|---|---|---|
| MacDougall, Spencer (spencer) | | | | | | | 3 |
| | 50 | Test, IVT | 10-10-1960 | 10-22-2015 12:05 PM | 5108 | FL UGI W SBS [74245] | 10-22-2015 12:10 PM |
| | 3392 | Judson, Jenny | 02-16-1998 | 05-14-2015 2:09 PM | 1896 | XR JOINT SURVEY SGL VIEW [77077] | 10-28-2015 4:07 PM |
| | 4 | Carter, Jeff William | 10-10-1980 | 10-06-2015 4:00 PM | 4878 | CT Chest W [71260] - Chest | 11-02-2015 10:17 AM |
| **Total** | | | | | | | 3 |

Confirmed Radiologist Audit | Confidential and Proprietary | Page 3 of 4 | Date Run: 11-13-2015 2:35 PM | Spencer-Laptop\formsguestuser

d. Detailed audit information based on the specified date range of all changes made to the Confirmed Radiologist Flag in the Personnel Lookup Editor. This includes the date and time of the change, the user who made the change, the IP address of the user who made the change, and the radiologist whose account was modified.



The following users have had the confirmed radiologist flag modified between 11-12-2015 and 11-12-2015

| Date/Time | Updated By | Affected Person | Affected NPI | Change | IP Address |
|---|---|---|---|---|---|
| 11-12-2015 15:39 | MacDougall, Spencer (spencer) | bbbb, aaaa () | f76585678 | confirmed_radiologist_flag changed from 'Y' to 'N' | 10.100.16.1 |
| 11-12-2015 15:39 | MacDougall, Spencer (spencer) | Noye, Darcy T (darcyn) | 2587411235 | confirmed_radiologist_flag changed from 'N' to 'Y' | 10.100.16.1 |
| 11-12-2015 15:38 | MacDougall, Spencer (spencer) | Martin, Jesse Lee (Jessem) | | confirmed_radiologist_flag changed from 'N' to 'Y' | 10.100.16.1 |
| 11-12-2015 15:38 | MacDougall, Spencer (spencer) | Baird, Adam John (bairdj) | asdf3w2qfasefd | confirmed_radiologist_flag changed from 'N' to 'Y' | 10.100.16.1 |
| 11-12-2015 10:09 | MacDougall, Spencer (spencer) | MacDougall, Spencer (spencer) | 45634563546 | confirmed_radiologist_flag changed from 'N' to 'Y' | 10.100.16.1 |
| 11-12-2015 10:06 | MacDougall, Spencer (spencer) | MacDougall, Spencer (spencer) | 45634563546 | confirmed_radiologist_flag changed from Y to N | 10.100.16.1 |

Confirmed Radiologist Audit | Confidential and Proprietary | Page 4 of 4 | Date Run: 11-13-2015 12:03 | Spencer-Laptop\formsguestuser

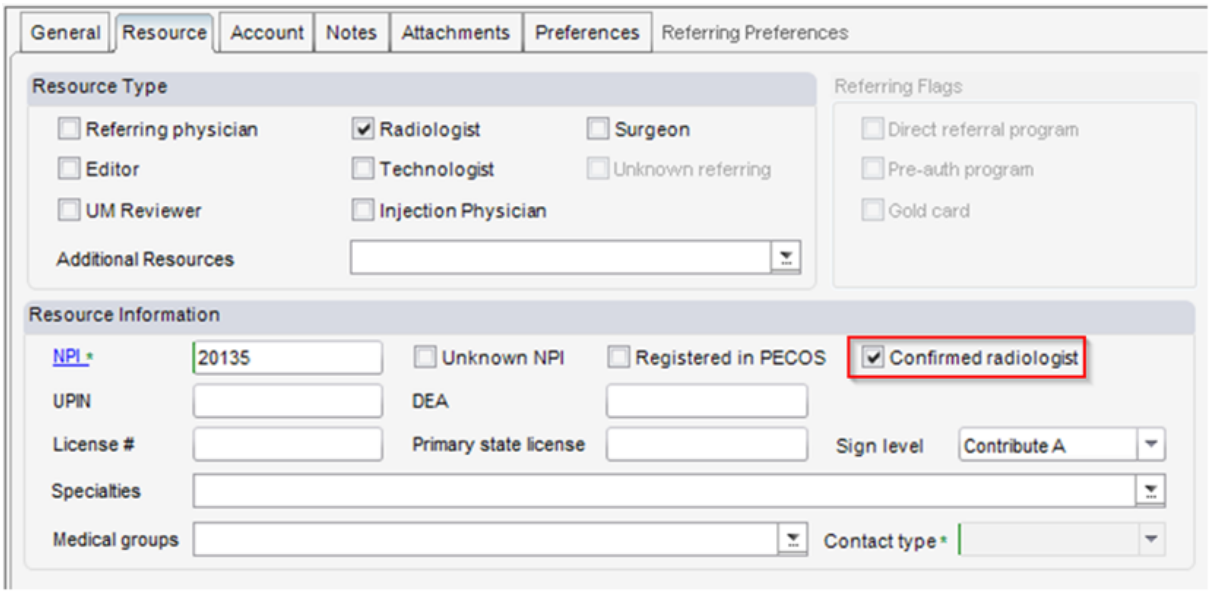
The Confirmed Radiologist Audit report can be configured via SSRS to run and automatically distribute on a weekly basis.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

### How to enable the feature:

To set or remove the Confirmed Radiologist flag, the RIS administrator must first create a user group which has access to set this flag. This is accomplished by creating a group with permission to the *Config.LookupEditor.Personnel.ConfirmedRadiologistFlag* with an Access Level of Full and assign to the appropriate users.

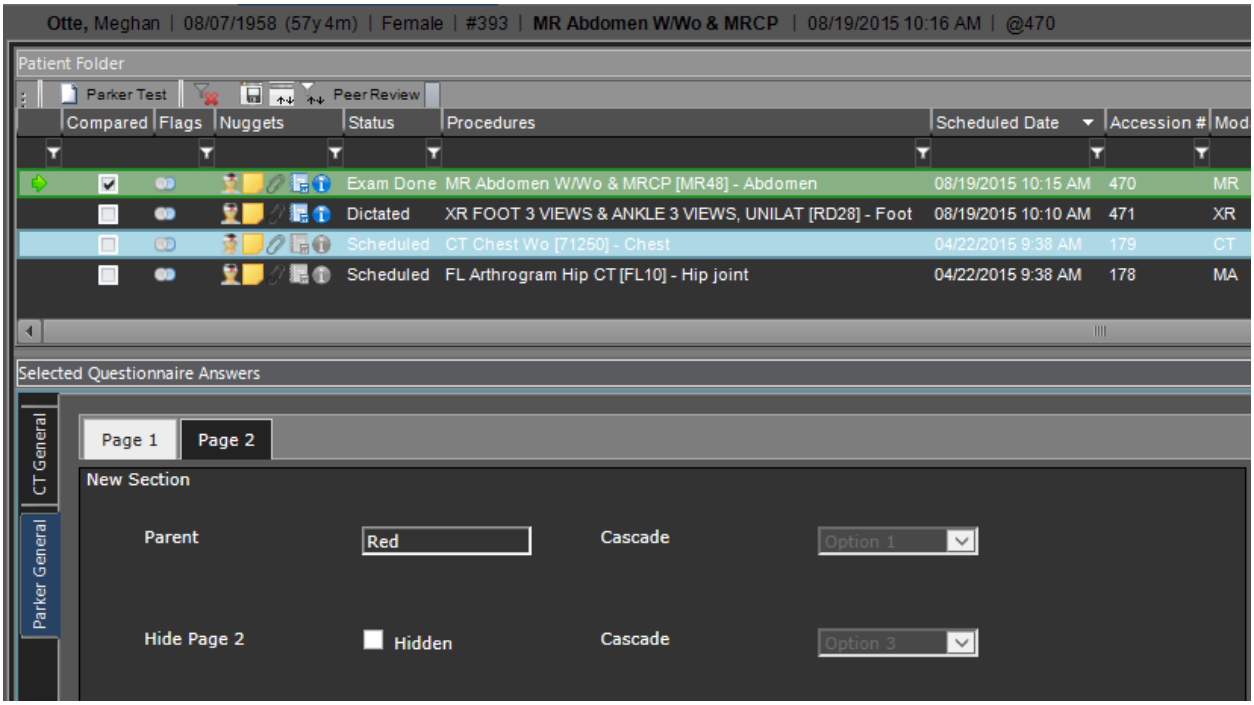
Once the administrator has this permission, the following flag can now be set in the Personnel editor:



## 12598 – ADD "SELECTED DIGITAL FORMS" VIEWER IN REPORTING SCREENS

In the Reporting screen, radiologists required a method to view data from digital forms that were completed for prior studies. A new panel is now available for the Reporting screen: Selected Digital Form Answers. The data displayed in this panel will update to match available Digital Forms for the exam selected in the Patient Folder control, in the same way that the Selected Attachments and Selected Breast Diagram panels function. When the selected row in the patient folder changes, the digital form tabs in the Selected Digital Form Answers panel change to those for the selected row.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



### How to enable the feature:

To view the new panel, a user must have the access string *View.DigitalFormAnswers* set to Full.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## INSURANCE ELIGIBILITY & VERIFICATION

### 8540 - DO NOT COLLECT ANY COPAY AMOUNT TO COLLECT, IF SECOND INSURANCE IS MEDICAID

It is desired that the RIS not display an amount to collect if the second insurance is Medicaid. This feature can also be used to set the Amount to Collect to zero dollars when any configured insurance carrier is used at any level (primary, secondary, tertiary, etc.).

**How to enable the feature:**

An insurance carrier can be configured to trigger a zero dollar amount to collect by setting the Carrier lookup table column *collect_with_multiple_carriers_flag* to 'N.'

| Carrier Code | Description | Collect With Multiple Carriers Flag | Collect Co Pay Flag | Collect Co Insurance Flag | Collect Deductible Flag | Phone | Fax | Address1 | Address2 |
|---|---|---|---|---|---|---|---|---|---|
| Contains: | Contains: | Contains: | Contains: | Contains: | Contains: | Contains: | Contains: | Contains: | Contains: |
| ZAZ8 | VANTAGE MEDICAL GROUP | Y | Y | Y | Y | | | PO BOX 85909 | |
| ZEET | RPN/BLUE CROSS (CAP) | Y | Y | Y | Y | | | PO BOX 51420 | PO BOX 5.. |
| ZEFC | RPN/BLUE CROSS (FFS) | Y | Y | Y | Y | | | PO BOX 51420 | PO BOX 5.. |
| Cigna | Cigna | Y | Y | Y | Y | | | | |
| greatWest | Great West Life | Y | Y | Y | Y | | | | |
| test | cigna | Y | Y | Y | Y | (123) 123-1233 | (231) 233-... | | |
| medicare | Medicare | N | Y | Y | Y | | | | |

By default, the RIS will always collect the copay amount when there are multiple insurance carriers on an order. However, if the *collect_with_multiple_carriers_flag* is set to equal 'N' for any of the selected carriers, the RIS will not collect any copay and amount to collect will be zero.

### 11155 - ADD CONFIGURATION OPTION TO OMIT COPAY, COINSURANCE OR DEDUCTIBLE BY PAYER OR CARRIER

Occasionally, it may be necessary to temporarily stop collecting copay, coinsurance, and/or remaining deductible for a particular carrier. In the Carrier lookup table, there are now options to set the following flags:

- collect_deductible_flag
- collect_co_insurance_flag
- collect_co_pay_flag

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

Lookup Tables - Carrier *

| Carrier Code | Description | Collect With Multiple Carriers Flag | Collect Co Pay Flag | Collect Co Insurance Flag | Collect Deductible Flag | Phone | Fax | Address1 | Address2 |
|---|---|---|---|---|---|---|---|---|---|
| Contains: | Contains: | Contains: | Contains: | Contains: | Contains: | Contains: | Contains: | Contains: | Contains: |
| ZAZ8 | VANTAGE MEDICAL GROUP | Y | Y | Y | Y | | | PO BOX 85909 | |
| ZEET | RPN/BLUE CROSS (CAP) | Y | Y | Y | Y | | | PO BOX 51420 | PO BOX 5.. |
| ZEFC | RPN/BLUE CROSS (FFS) | Y | Y | Y | Y | | | PO BOX 51420 | PO BOX 5.. |
| Cigna | Cigna | Y | Y | Y | Y | | | | |
| greatWest | Great West Life | Y | Y | Y | Y | | | | |
| test | cigna | Y | Y | Y | Y | (123) 123-1233 | (231) 233-... | | |
| medicare | Medicare | N | Y | Y | Y | | | | |

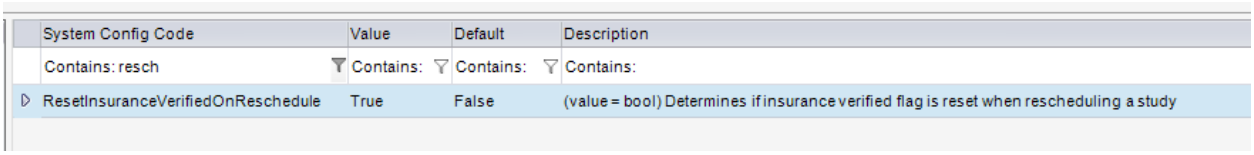
When receiving Eligible API returns, if the flag for deductible, coinsurance, or copay is set to 'N', the value for that component will default to zero. If all three flags are set to 'N,' the amount to collect will be zero dollars.

## 12249 - INSURANCE VERIFIED CHECKBOX DOES NOT RESET WHEN EXAM IS RESCHEDULED

The Insurance Verification Required workflow in eRAD RIS is configured by Modality Type Code. For example, a practice could have Insurance Verification Required enabled for all exams in the CT and MRI modalities. This will push the order to the IVT worklist and also prompt the user to verify the insurance when registering the patient.

Often patients who have had their insurance verified have to reschedule a procedure. Previously, eRAD RIS would not reset the insurance verification status when the procedure was rescheduled. However, some clients may want to re-verify the insurance if the exam is rescheduled for a future date, since the insurance policy could expire.

A new system configuration value called *ResetInsuranceVerifiedOnReschedule* has been added to eRAD RIS with a default value of False.



| System Config Code | Value | Default | Description |
|---|---|---|---|
| Contains: resch | Contains: | Contains: | Contains: |
| ResetInsuranceVerifiedOnReschedule | True | False | (value = bool) Determines if insurance verified flag is reset when rescheduling a study |

If this value is set to True and the insurance verification status is "Verified," the system will reset the insurance verification status to "Required" and push the study back to the IVT worklist.

If the *ResetInsuranceVerifiedOnReschedule* system configuration value is set to False, the insurance verification status will remain as "Verified" when rescheduling.

### How to enable the feature:

Set the *ResetInsuranceVerifiedOnReschedule* system configuration vale to True.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## RECEPTION

### 8615 - ABILITY TO ENTER BLANK CREDIT CARD INFORMATION

The RIS currently requires credit card information to be entered if the payment type is 'credit card.' It was desired by a number of customers to allow the custom validation framework to manage these required fields, which would allow them to be configured as optional.

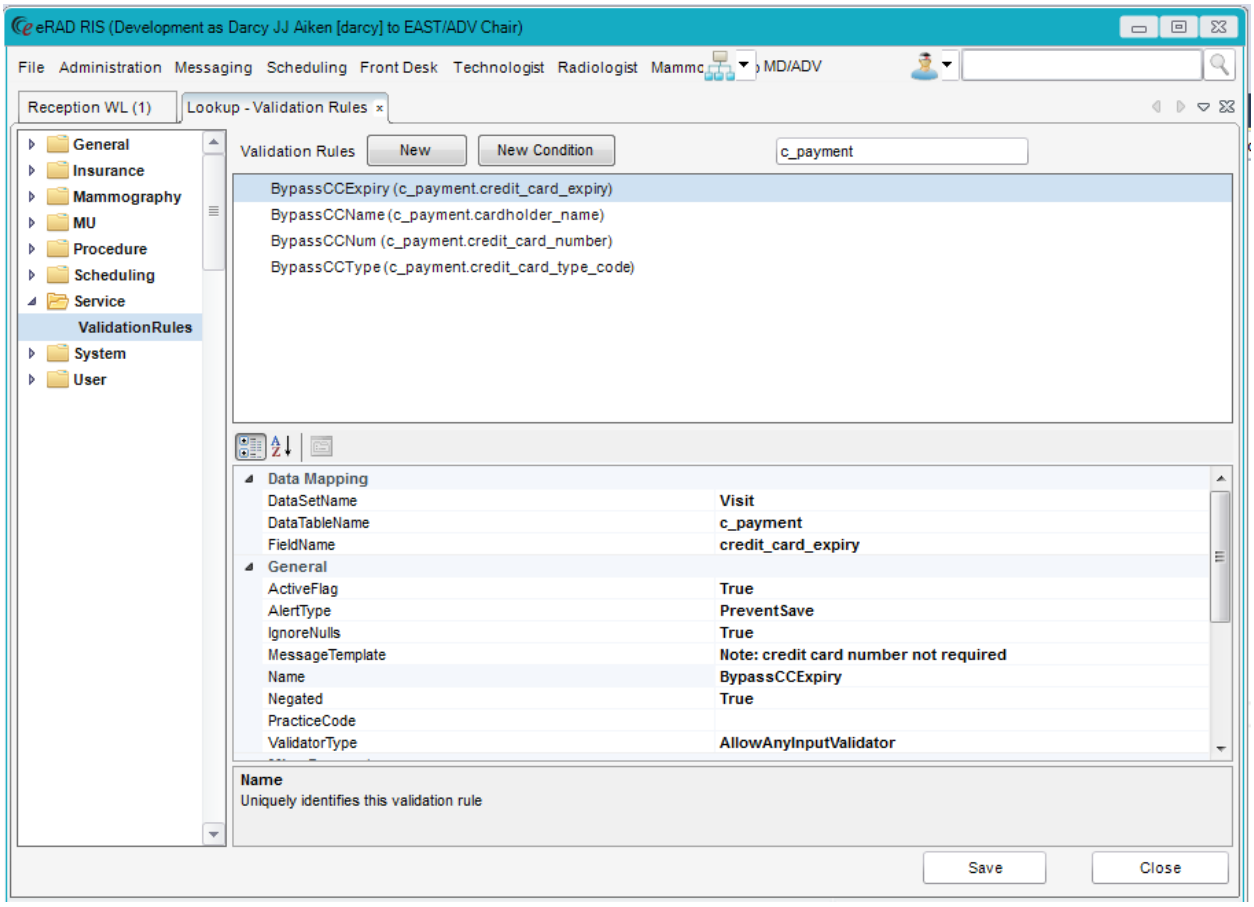
To address this, there is a new validator type '*AllowAnyInputValidator*' which will allow service to configure and override the core validation rules. *AllowAnyInputValidator* will allow a field to be null or contain any value that is permitted by the database.

**How to enable the feature:**

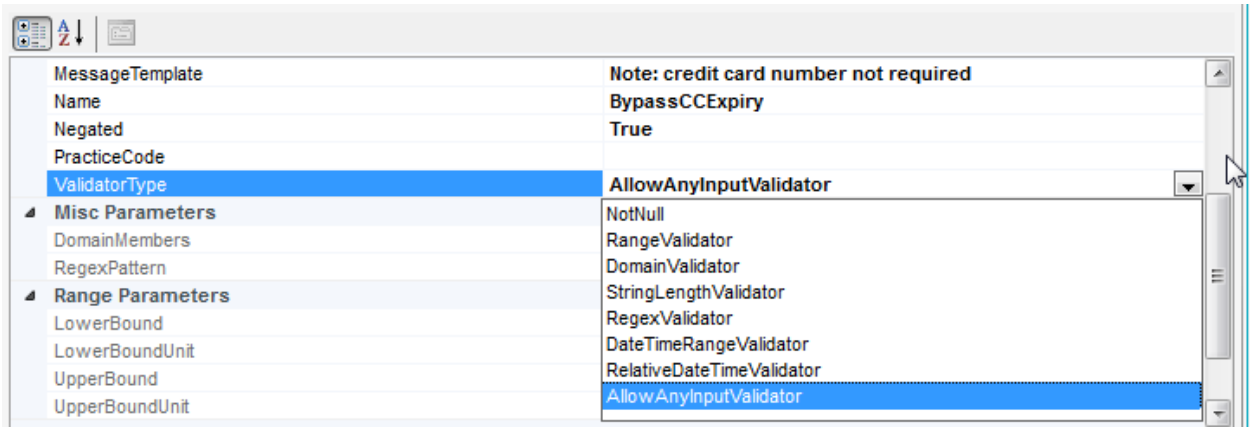
***External customers will be instructed to contact the eRAD Support team for assistance with adjusting validation rules.***

The upgrade scripts will insert new rows into the *l_validation_rule* table on the 4 credit card related fields with active_flag = 'N.' In order to "opt in" to these more relaxed rules, the active_flag can be set to "Y" and once users log in they will obtain the new configuration.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



*Validation Rules Editor showing the new possible validation rules*



*Specifying a validator type of AllowAnyInputValidator*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## INTERFACING

### 8667 - REMOVE XML NODES FROM MESSAGE

The messages sent out from RIS to external systems are large and may contain data that is irrelevant to the receiving system. It is desirable to have the ability to configure the data that is sent to the interface engine which will save bandwidth and cpu cycles in the interface engine (Mirth, Ensemble, etc.).

To resolve this concern, the RIS now features a configurable database table of xpath statements that will cause the wedge to remove content from the message. This removal of data can be prior to the expanding nodes such as procedure_code, *_person_key, etc. and some can be after. This removal is performed before the message is sent to Mirth.

Example: The Wedge expands site_code but the downstream recipient does not need the site's last_updated, last_updated_by_user_id, or notes nodes. Notes in particular are sometimes quite large.

**How to enable the feature:**

***External customers will be instructed to contact the eRAD Support team for assistance with adjusting validation rules.***

The *l_queue_container_pruning* table has been created and added to the QueueSubscription lookup table. This enables it to be edited from the configuration editor in the RIS UI. The *l_queue* table has also been added to provide a list of queue names. This change has been retroactively fitted to have a foreign key relation from the *l_queue_subscription* table.

The pruning table has the following columns:

active_flag – determines whether or not the rule is used at all.
execution_order – determines the order in which the statements are used. This ordering takes effect after the rules are split based on the pre_expansion_flag column. This has no effect on the end result but can be used to optimize the pruning.
xpath – determines the nodes to which the pruning rule applies. It is recommended to thoroughly test the xpath in order to verify it behaves correctly before activating the rule. Notepad++ has a pre_expansion_flag. If set to Y, the rule is applied before the lookups are expanded. Otherwise the rule is applied after.
description – describes what nodes the rule is intended to remove.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

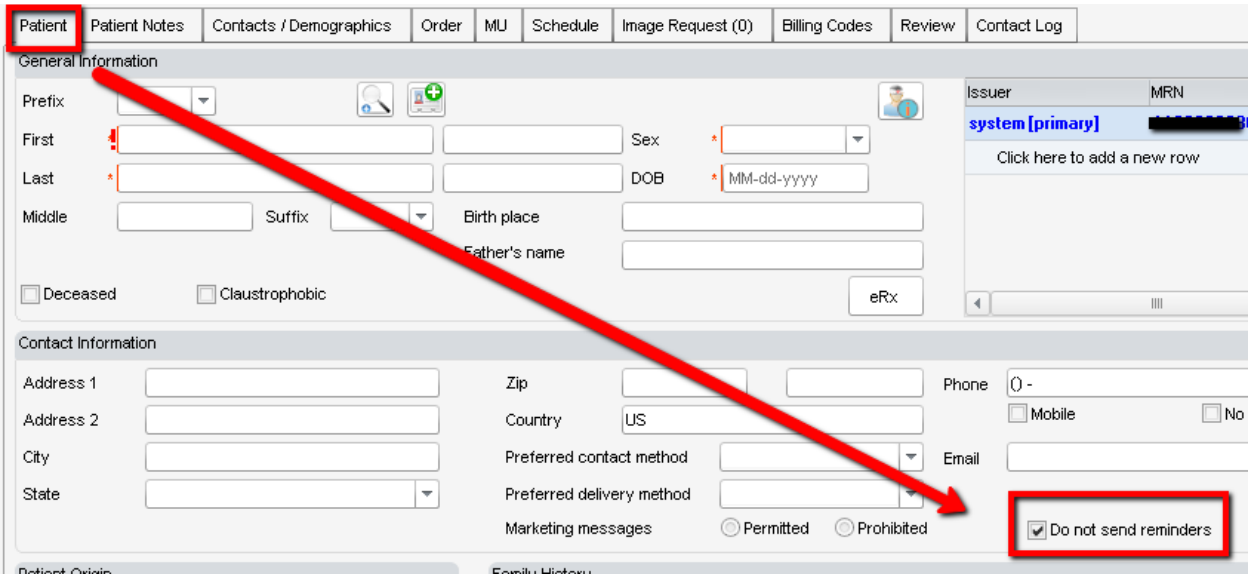
Entries in the table used during development testing looked like this:

| queue_name | active_flag | execution_order | xpath | pre_expansion_flag | description |
|---|---|---|---|---|---|
| MIRTH | Y | 0 | /StudyContainer/Patient/c_patient/deleted_flag | Y | NULL |
| MIRTH | Y | 0 | //l_person/note | N | NULL |
| MIRTH | Y | 0 | //l_child_person[active_flag='N'] | N | NULL |

In order to use this feature, the *LegacyInterfaceMode* flag must be set to False. This feature should be used with caution, as it has the potential to remove too much from the message.

## 11947 - RADAR INTERFACE FOR SITE SPECIFIC REMINDERS/CONFIRMATIONS SHOULD FILTER OUT PATIENTS WHO HAVE 'OPTED-OUT' OF REMINDERS

On the Patient Tab, there is an option to indicate whether the patient would like to opt-out of Reminders. If this box is checked, RADAR will filter these patients out when sending reminders/confirmations.

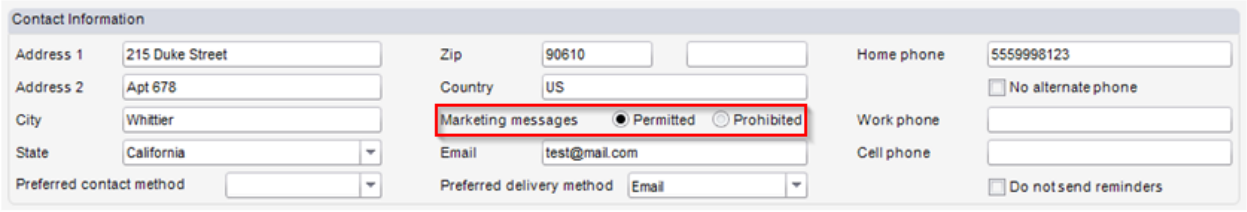


No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## ALL

### 8446 - SUPPORT EMAIL OPT-OUT FOR PATIENTS

Some patients will want to opt-out of email communications for surveys and marketing campaigns. To address this need, two radio buttons have been added to the Contact Information on the patient tab in RIS. The options available under Marketing Messages are “Permitted” and “Prohibited.”

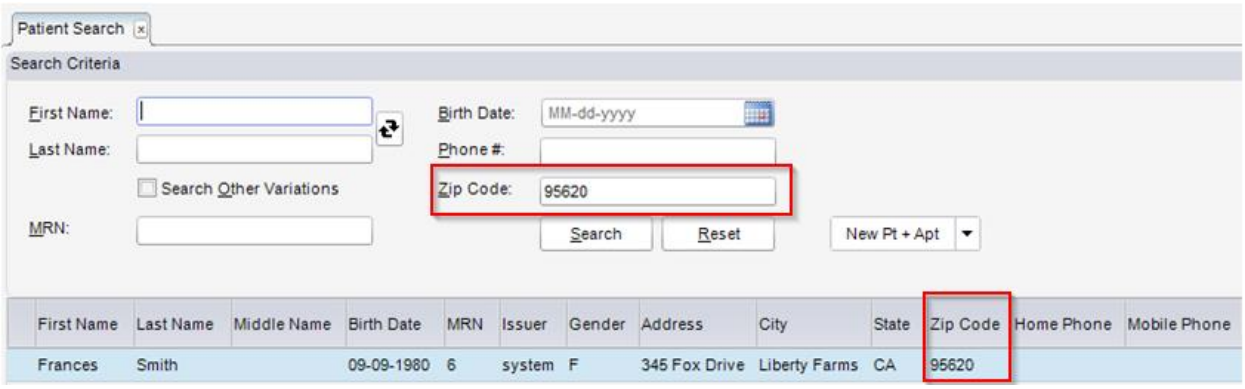


Note that eRAD RIS does not directly distribute marking messages at this time, so this is provided as a data collection point for eventual extraction.

### 7100 – ADD PATIENT ZIP CODE TO PATIENT SEARCH SCREEN

In order to enhance the search results and increase the odds of finding the correct patient, eRAD RIS now supports searching by zip code. This search is based on an **exact match** to the primary zip code of the patient.

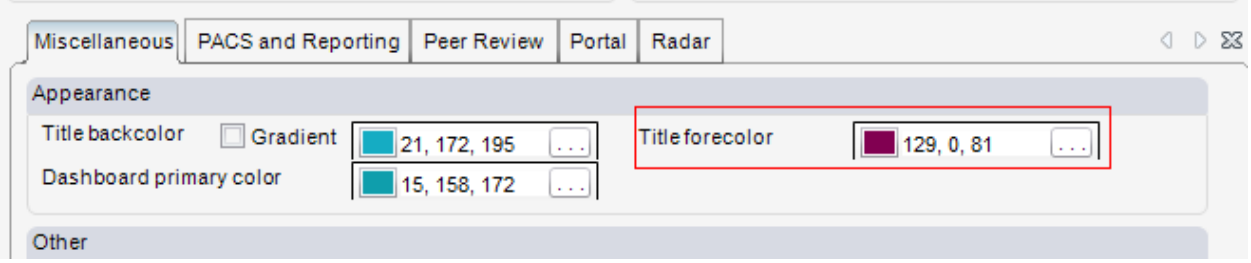
The Zip code column is also included in the returned results grid after the State column.

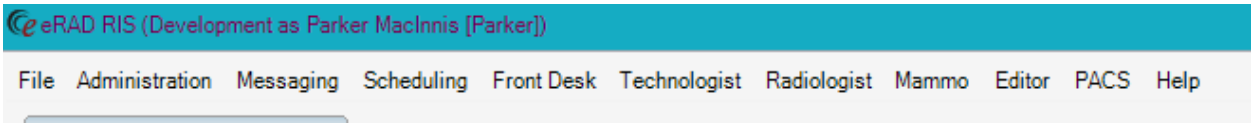


No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## 12645 – ALLOW TEXT COLOR TO BE ADJUSTED IN TITLE BAR OF RIS APPLICATION

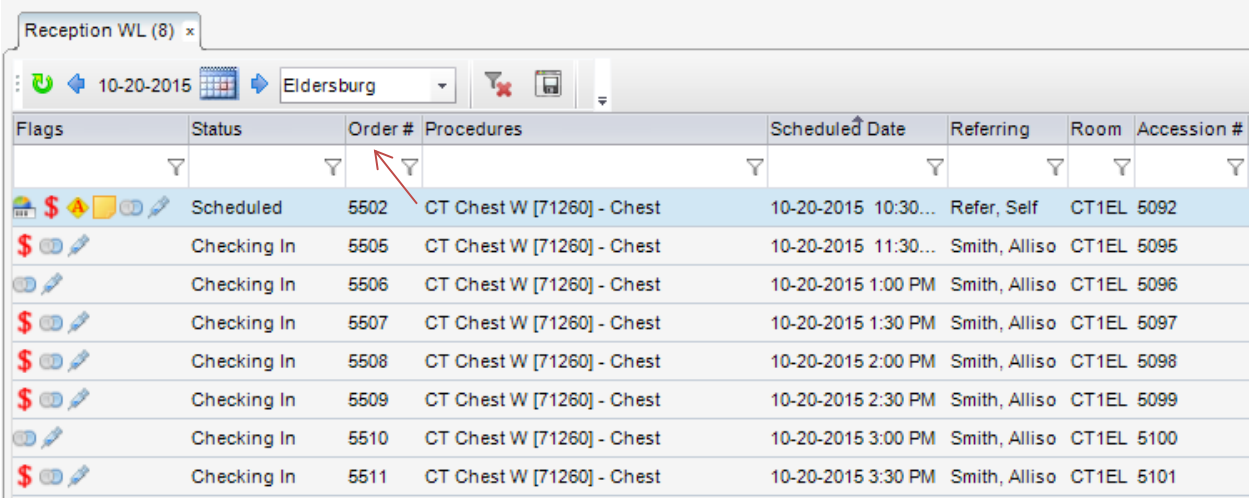
In build 38, the ability was added to change the background border color of the RIS application to enable a visual clue when the user changed practices. The title foreground (text) color could not be set. This could make the title difficult to read when the foreground (text) color was not visually distinct from the chosen background color. This can now be adjusted in the Add/Edit Practice window in the Organization table. If no color is selected, it will default to black, unless the user is in dark theme, which will default to white.





## 12638 - ADD ORDER # COLUMN TO IVT, RECEPTION, AND TECHNOLOGIST WORKLISTS

The Order # column has been added to the IVT, Reception, and Technologist worklists in eRAD RIS.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## 8528 - WORKLISTS - CHANGE LOGIC FOR ACTIVITY IN PAST 15 SECONDS TO ALLOW REFRESH IF ACTIVITY IS IN ANOTHER APPLICATION

Worklists in eRAD RIS self-refresh, but there are circumstances where the system automatically suspends refreshing. Imagine for example that the user is about to click on a worklist row, then the RIS refreshes, causing the user's click to now be on a different row. If the user was not aware of this refresh, they may end up opening a study they did not intend to open. To resolve this concern, there is a feature where if the user is actively moving the mouse on the workstation, worklist refreshes are automatically suspended for a period of 15 seconds. However, the user may be working on a different application (e.g. Excel, Word, email, etc.) and while they are active on that other application, the RIS should not disable refreshing. RIS will now differentiate between activity on the RIS and activity on another application. Worklist refresh will not be suspended when activity is occurring in another application.

For supplemental information, here are the rules around worklist refreshing:

- The default WL refresh interval is 1 minute.
- If the RIS screen is locked, the refresh will not occur.
- If RIS is minimized, the refresh will not occur.
- If a radiologist reporting screen is the current tab, the refresh will not occur.
- If a transcription reporting screen is the current tab, the refresh will not occur.
- If the current tab is a WL and there has been mouse or keyboard activity in the past 15 seconds in RIS the refresh will not occur on the current Tab's WL (other WLs will refresh).

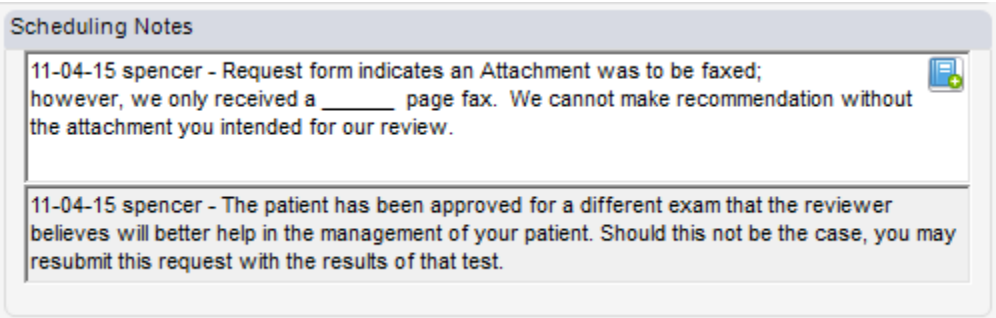
## 12091 - CREATE A VISUAL INDICATOR THAT A LOG CONTROL SUPPORTS AUTOTEXT

The log controls (notes fields) in eRAD RIS can be configured to support Autotext. Customer feedback has indicated that confusion can occur because the user must know to right-click in the log control in order to select 'Autotext' from the context menu. This is not intuitive as the user may try to type free text, but nothing appears if the field is configured for Autotext only and the user may believe the RIS is frozen or waiting for something to refresh.

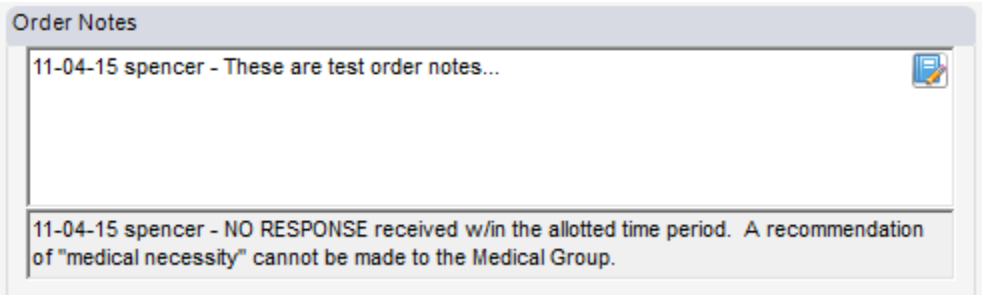
For this reason, if a log control is configured to support Autotext, a visual indicator will now appear.

If the log control supports Autotext, a button will appear in the upper right corner of the control. Clicking this button will launch the Autotext dialog.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



If the log control supports Free *and* Autotext, a different button will appear in the upper right corner of the control. Clicking this button will launch the Autotext dialog, but the user is also permitted to type or copy into the input area.



If the log control supports Freetext only, no button will appear.

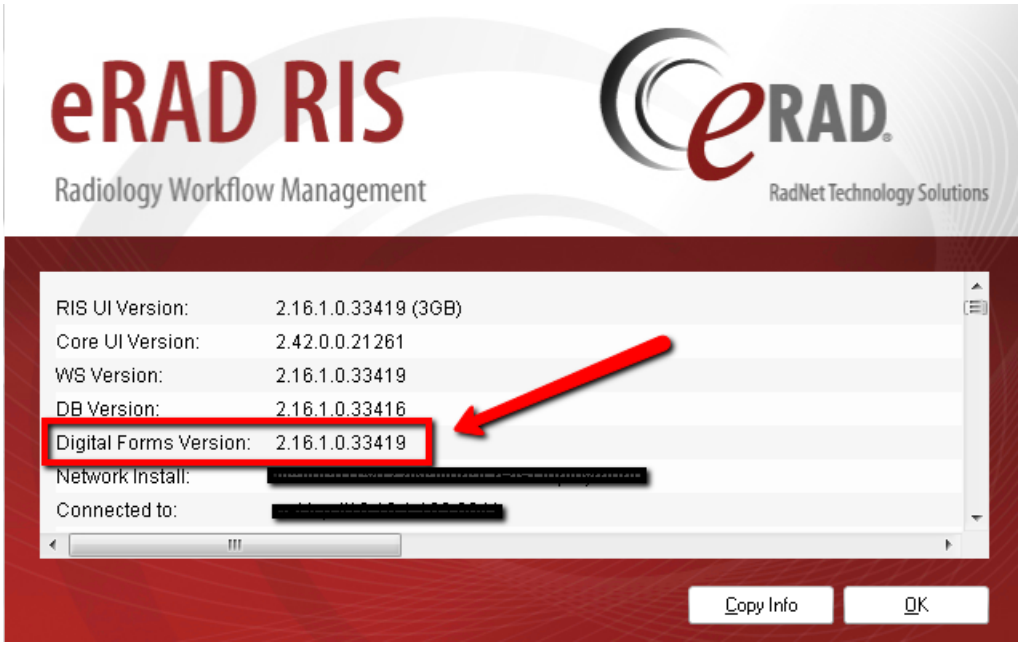
### How to enable the feature:

Log controls are configured for Autotext using the LogControl and Autotext lookups.

## 12140 - HELP ABOUT SCREEN SHOULD CONTAIN THE DIGITAL FORMS VERSION IN ADDITION TO THE OTHER VERSION NUMBERS

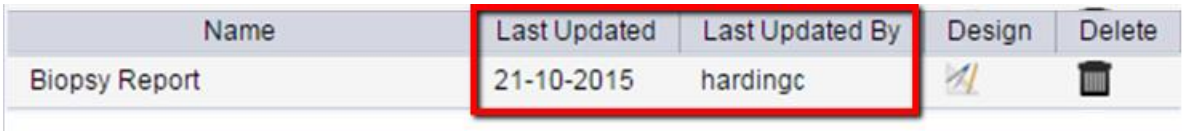
The Help About screen will now display the Digital Forms Version.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



## 12137 – ADD THE LAST UPDATED DATE AND USER ID AS DATA ELEMENTS IN THE LIST OF DIGITAL FORMS

To assist with the management of Digital Forms, new columns were added to the Digital Forms list on the Administration page of the Digital Forms Editor to display the Last Updated date and the Last Update By User Id.

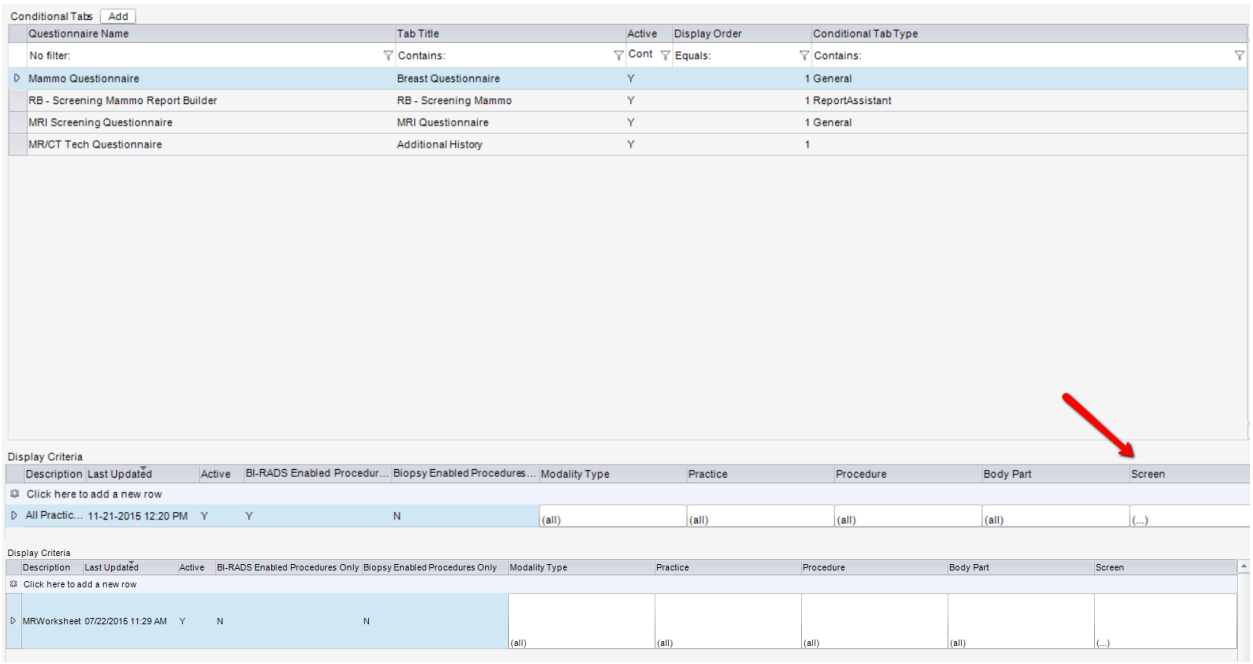


## 11944, 12246 – ABILITY TO CONFIGURE DIGITAL FORMS TO DISPLAY IN SPECIFIC SCREENS

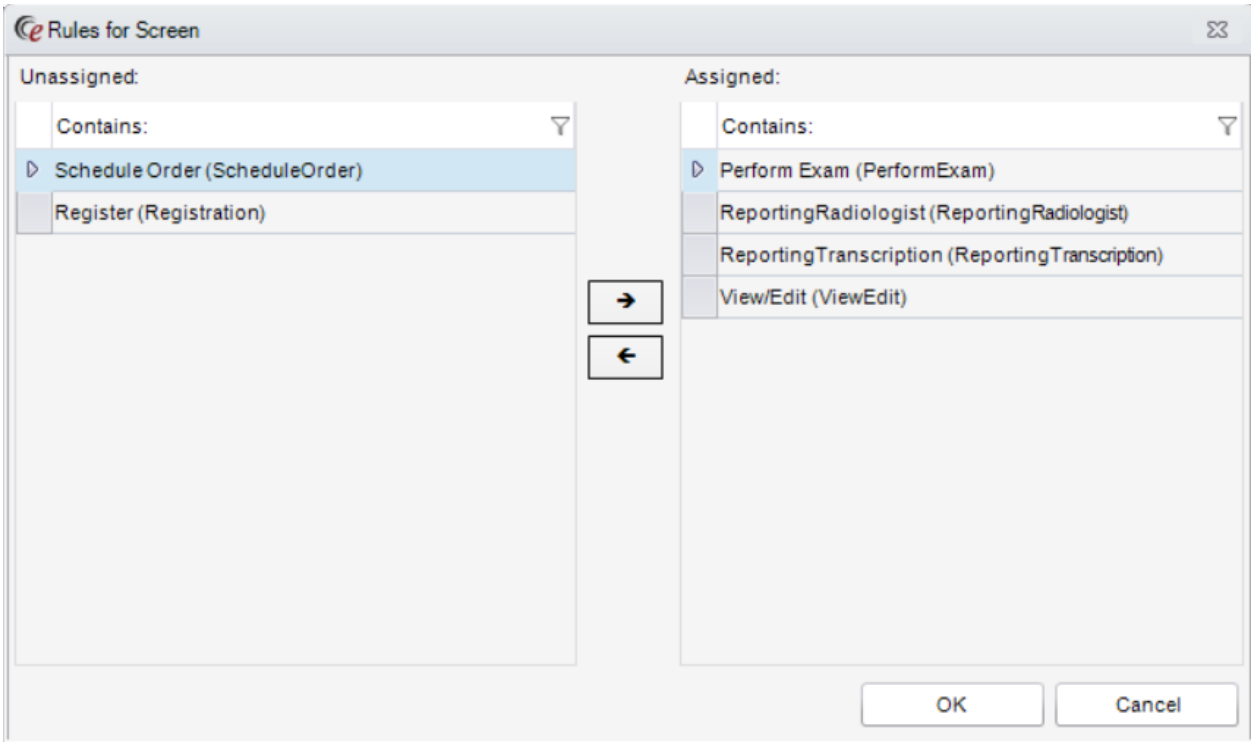
Some digital forms (aka questionnaires) are only applicable to particular screens. RIS now has the ability to indicate whether the conditional tab with the digital form displays for a receptionist but not a technologist, for example.

There is now a Screen criterion in the Conditional Tab editor. This can be left blank and then the conditional tab will be eligible to be displayed on any screen, or the admin can specify one or more screens to which the digital form should be limited.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



*Display Criteria including the new Screen column*



*Popup dialog for assigning one or more screens*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

#### How to enable the feature:

After adding the Digital Form to the Conditional Tab editor, specify screen criteria in the lower Display Criteria grid. Leave blank to display the conditional tab containing the Digital Form on any screen.

Note: Conditional Tab Type will now serve a different purpose. The Radiologist type will be displayed to the user as 'ReportAssistant' and will be used to help govern the treatment of a digital form on the radiologist screens.

## 12188, 8136 - ADD FUNCTIONALITY TO ALLOW FOR MORE COMPLEX EMR ORDER MAPPING

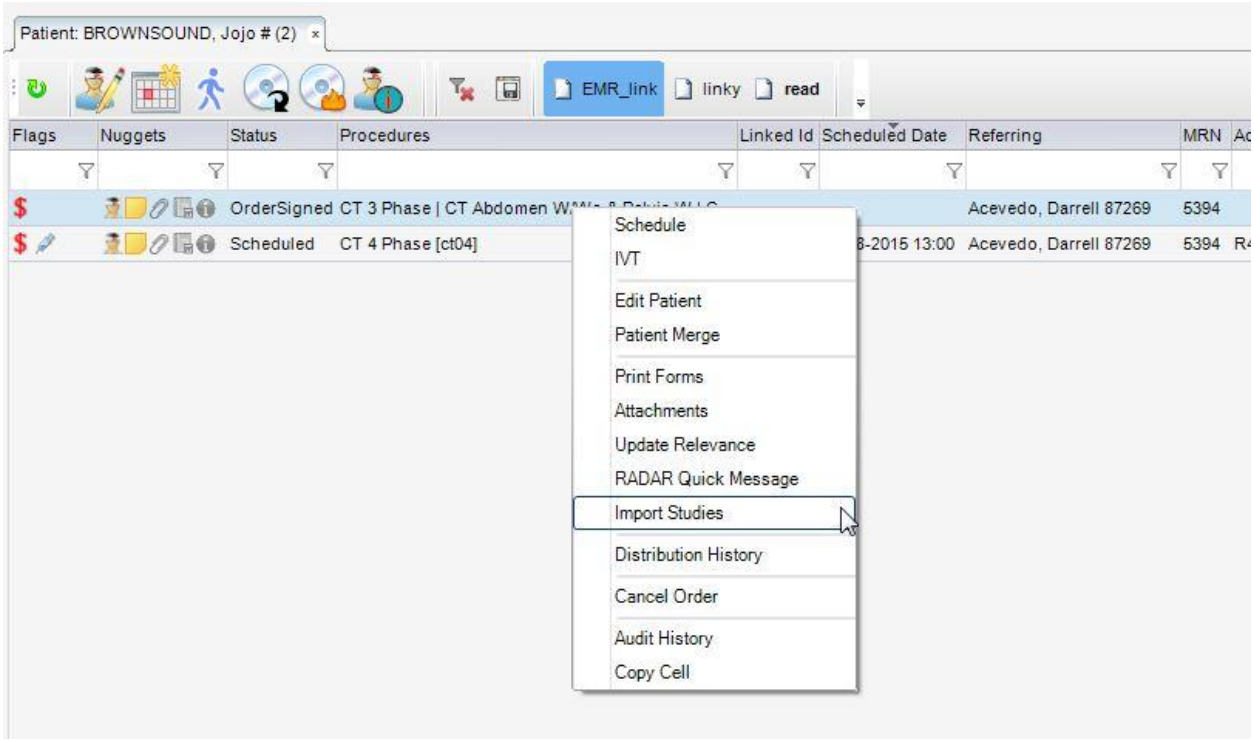
Functionality was added to eRAD RIS to allow an authorized user to import pre-existing scheduled studies into an EMR order on an individual basis. This functionality was added because sometimes users schedule an exam without using the EMR order, and it is necessary to link them up at a later point in the workflow. If the un-used EMR order has multiple exams, a user may have a situation in which some exams have been scheduled and need to be mapped to the EMR order, but the EMR order needs to also remain available to be used for the unscheduled exams. Similarly, there may be a situation in which a patient is scheduled for multiple exams, but only one of them should be mapped to the EMR order. Consider the following examples:

- A referring physician sends an EMR order for a Carotid Ultrasound and a Brain MRI. The ultrasound is scheduled without using the EMR order. This is discovered and an administrator wants to import the scheduled ultrasound into the EMR order. However, the EMR order still needs to also exist in an Ordered status because staff is in the process of obtaining insurance authorization for the Brain MRI and it is not ready for scheduling.
- A referring physician sends an EMR order for a Knee MRI. When the patient is contacted, she also schedules a Pelvic ultrasound that is referred by another physician. An administrator later realizes and wants to import the Knee MRI to the EMR order, but the ultrasound should stay on the existing order.

To handle scenarios of this nature, it is now possible to choose which exams to import from one order into an EMR order. If all exams are selected, the source order is cancelled after all exams are imported to the EMR order. If only a subset of exams is selected, the source order will continue to exist with the remaining studies.

In the case that a user realizes later that additional studies should have been imported to the EMR order, an authorized user can now access the Import Studies window from the right-click context menu in the Patient Folder, even after one or more procedures have already been mapped to an EMR order.

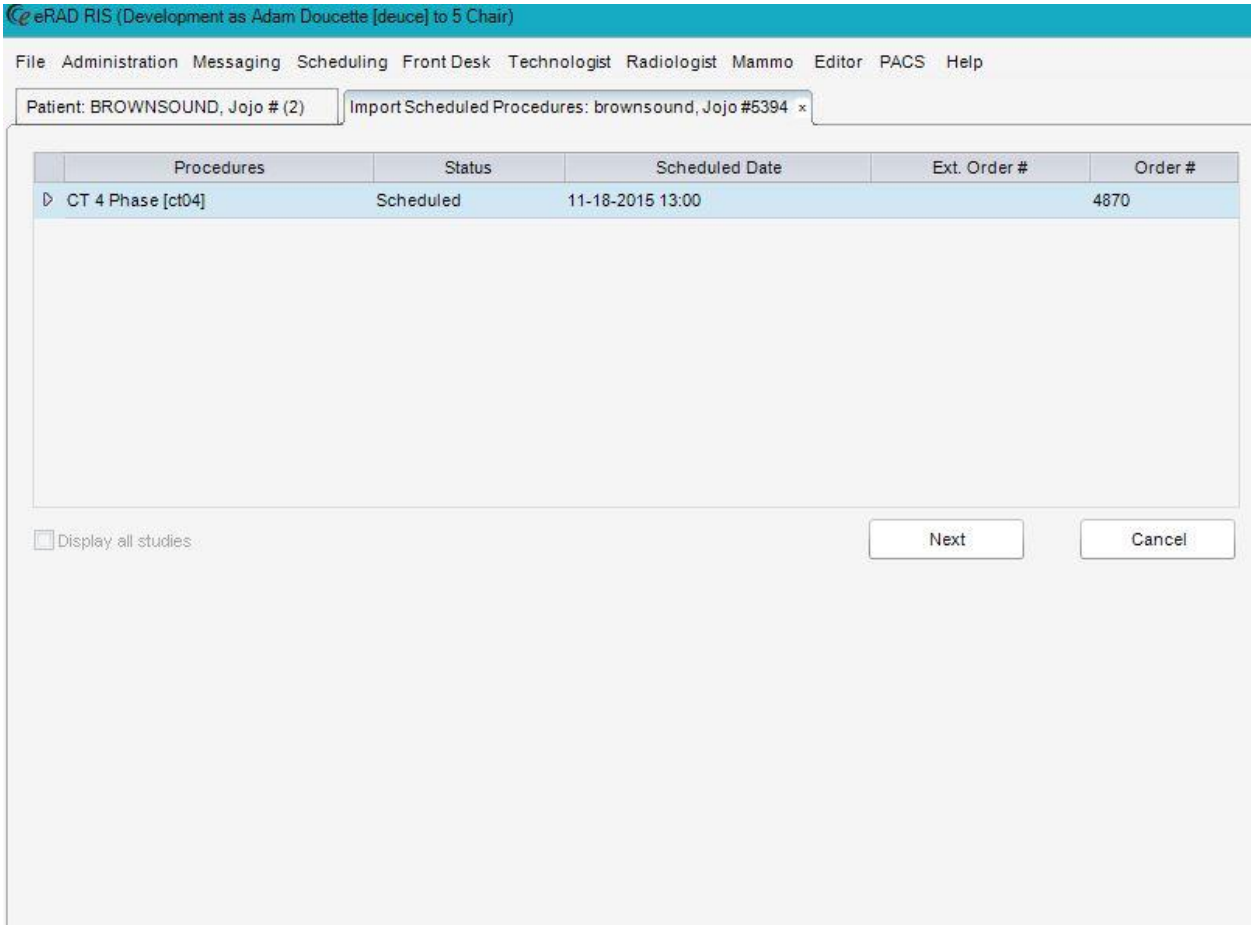
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



The menu item for Import Studies is available for studies in an *OrderSigned*, *Scheduled*, *CheckingIn*, or *Arrived* status. To access, the user must have the access string **Clinical.ImportStudies** set to Full.

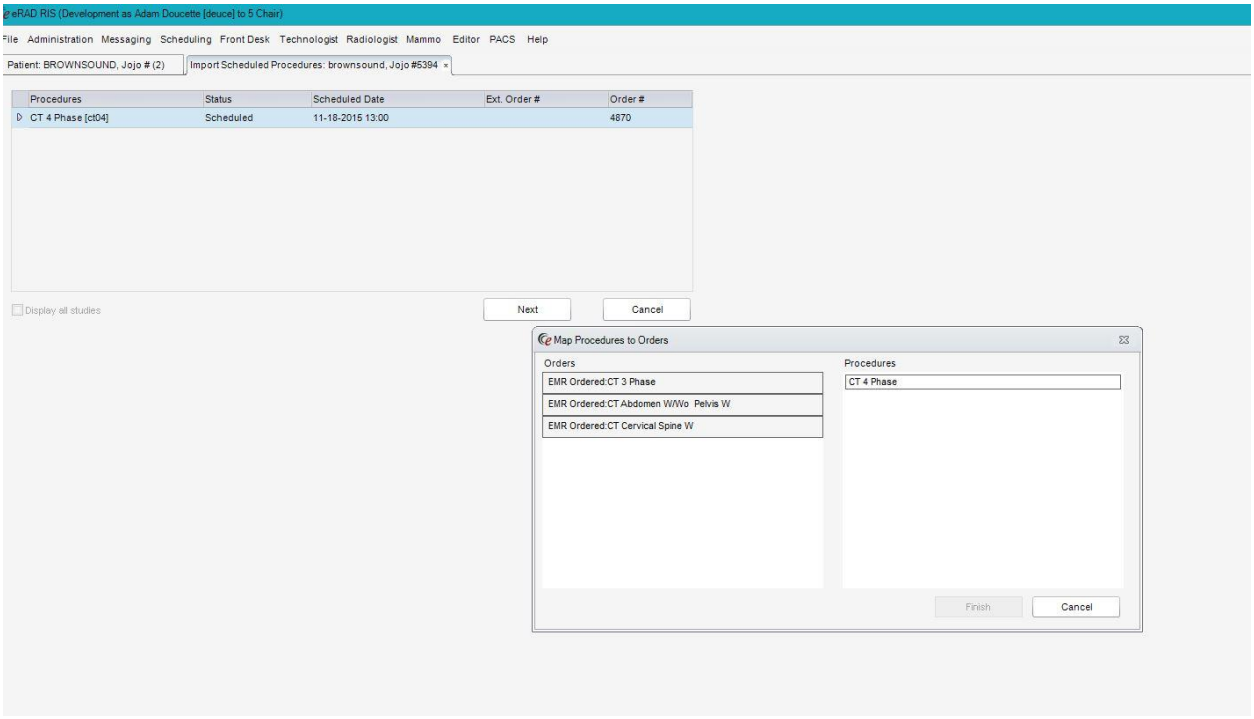
The Import Scheduled Procedures window will open in a new tab.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

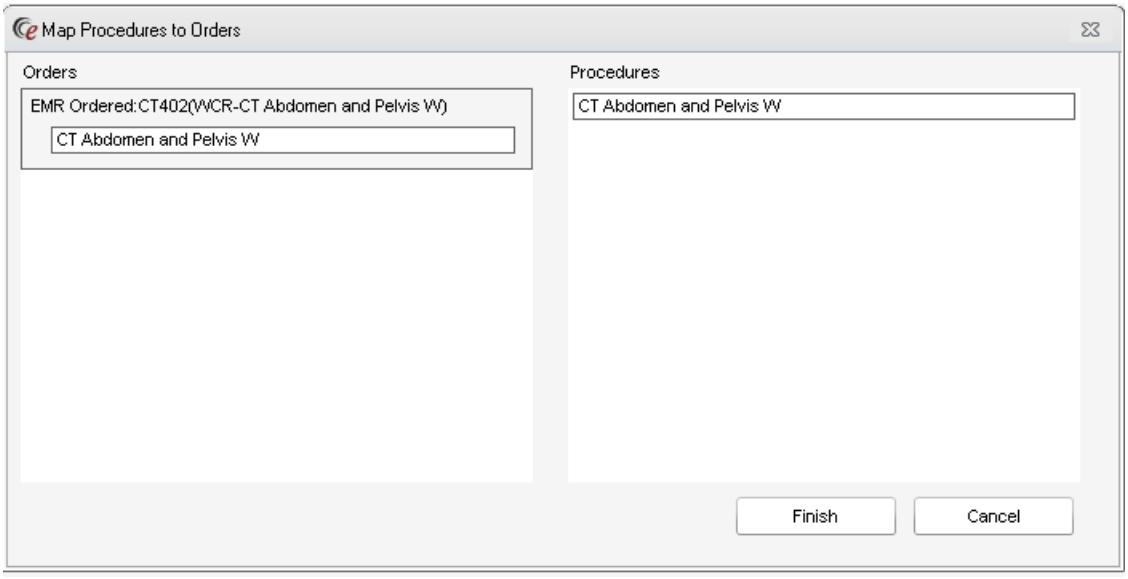


Clicking the Next button will display a pop-up with available Orders on the left and the Procedures on the right.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



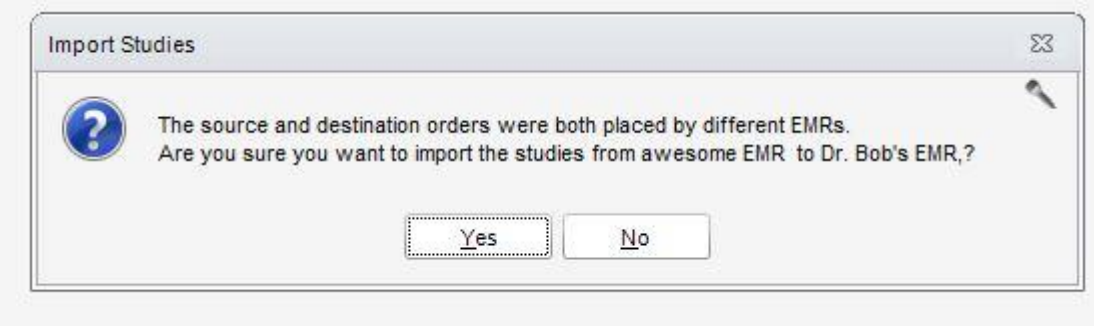
The user can match the Procedure to the appropriate EMR order by dragging.



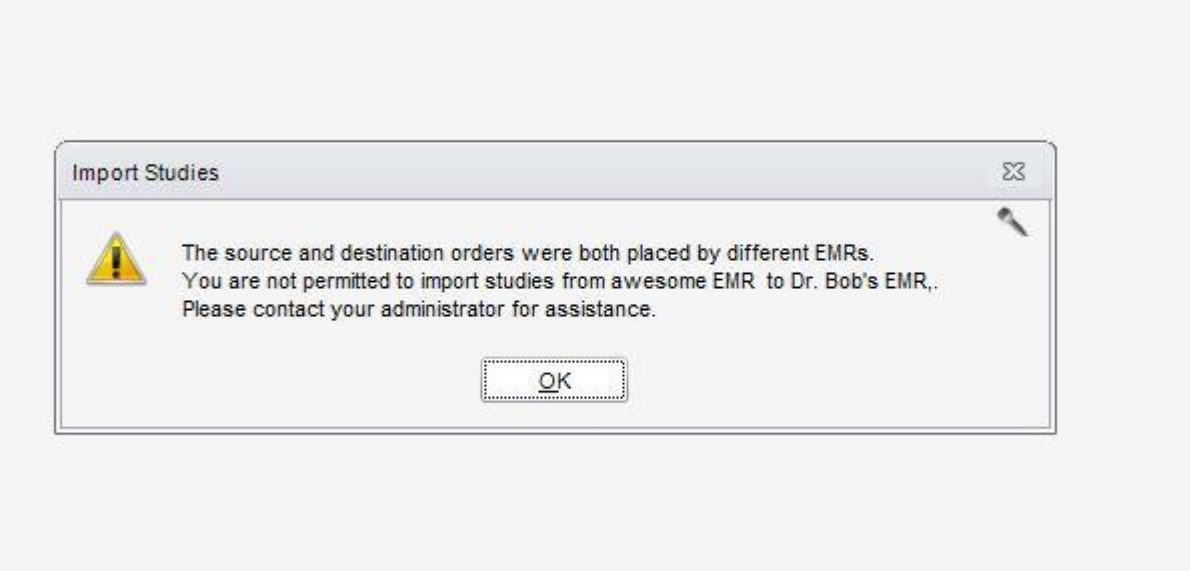
If the Procedure that is being mapped into an EMR order is already associated to a *different* EMR, a user must have additional permissions to continue. Access string **Clinical.ImportStudies.AcrossEMRs** must be set to Full for the user to continue.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

They will be presented with a warning message that must be acknowledged before continuing.



If the user does not have the appropriate access to move studies from one EMR order to another, they will be presented with a message to contact their administrator for assistance.



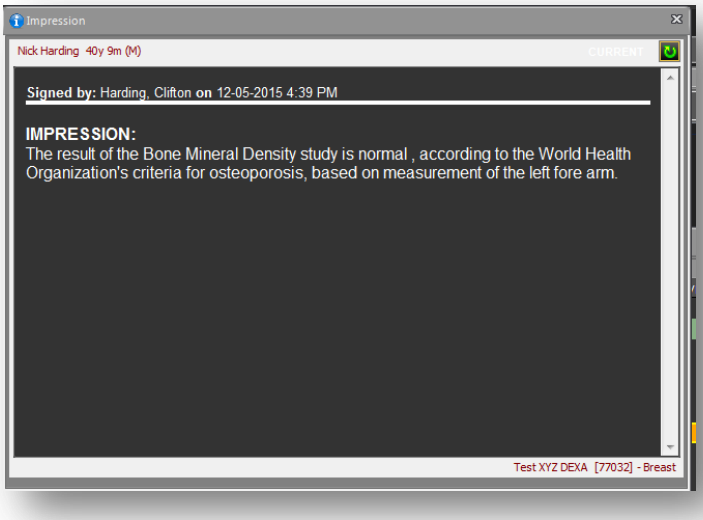
## 12273 - IMPRESSION NUGGET NEEDS TO SUPPORT ERAD AND POWERSCRIBE REPORTING MODES

The Impression data nugget in eRAD RIS now supports PowerScribe 360 and eRAD reporting modes. Previously, the Impression data nugget only supported M*Modal sections named “Impression.” The ‘impression’ string is now configurable so that terms such as ‘conclusion’ or ‘assessment’ can be used to drive the Impression data nugget. This also allows languages other than English to capture the impression in the data nugget.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

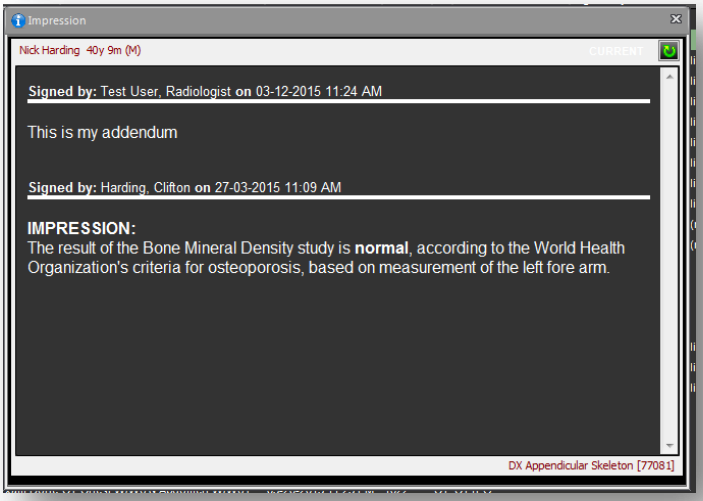
There is now a system configurable value '*ReportingImpressionSectionStartText*' with a default value of 'IMPRESSION'. eRAD RIS will now parse the report RTF (PowerScribe 360 and eRAD reporting modes) looking for the first line that begins with 'ReportingImpressionSectionStartText' value. When found, we select that line and all subsequent lines to be part of the impression.

When using M*Modal reporting mode, we look for sections titled '*ReportingImpressionSectionStartText*' and we will only capture the content within that section.



When a report has an addendum, we show each complete addendum in the impression data nugget (with the most recent addendum first) in addition to the Impression text. We have no way of knowing if the addendum will alter the intent of the impression so we add the complete addendum text.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



### How to enable the feature:

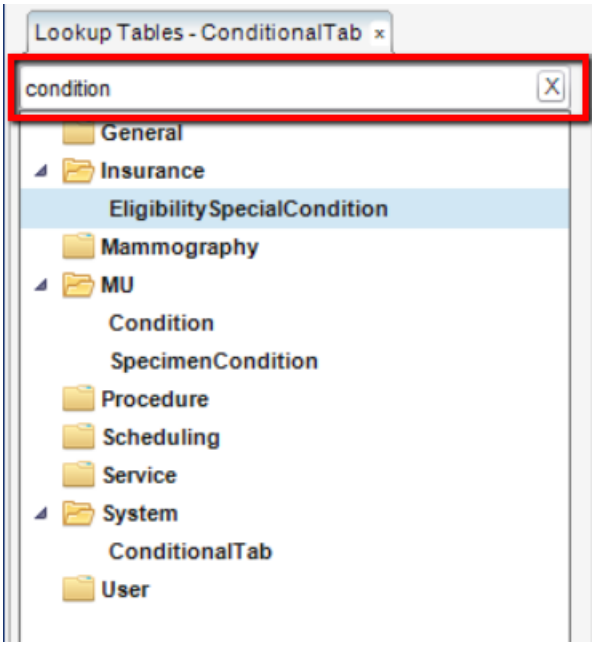
Under System Configuration, select the desired value for '*ReportingImpressionSectionStartText*'. No change is necessary when the default value of 'IMPRESSION' is desired. If a word other than IMPRESSION is used, such as CONCLUSION or a word in a language other than English, the value must be added.

The ability to view the Impression data nugget is controlled by the *DataNugget.Impression* access string as in previous builds. We now also share the access rules controlling the Report data nugget for the Impression data nugget. If the access strings "*Clinical.PreviewPreliminaryReport*" and "*Clinical.PreviewSuspendedReport*" are not set to Full, both the Impression and Report data nuggets will not display when the report is unsigned or suspended, respectively.

## 12457 - SEARCH CAPABILITY IN THE LOOKUP TABLE EDITOR

To assist administrators in quickly locating the desired lookup table, a search box has been added to the lookup editor. Typing in this search field will allow a user to filter the lookup tables by name. Any parent folders that contain lookup tables matching the typed text will be expanded to display the matching lookup. The "X" on the right side of the search box can be clicked to remove the filter. If a user opts not to use the search box, the list of lookup tables can be navigated as usual.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.



## 11968 – MANAGEMENT REPORT: PATIENT EMAIL AND CELL PHONE PERCENTAGES

A new Management Report has been added to display the percentage of email addresses and cell phone (mobile phone) numbers that have been collected in RIS for a given Practice/Site and Date Range. It can be found in the Operations folder.

**Patient Email and Cellphone Percentages**
**Practice:** [redacted]
**Site(s):** All sites for the selected practice(s).
**Date Range:** 08-01-2015 - 10-26-2015
**Description:**This report shows the % of collected cell phone and email addresses for patients who've had studies within the specified practices, sites and date range. Dates are based on when the study was created rather than date of service.
*Note: These numbers could change if a user were to update the patient cellphone or email addresses between the time this report was run and current date.*

| | Aug 2015 | | | Sep 2015 | | | Oct 2015 | | | Total | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Practice/Site | % with Email | % with Cell | Patient Count | % with Email | % with Cell | Patient Count | % with Email | % with Cell | Patient Count | % with Email | % with Cell | Patient Count |
| ⊟ [redacted] | 0% | 100% | 2 | 0% | 2% | 120 | 0% | 3% | 61 | 0% | 3% | 183 |
| [redacted] | 0% | 100% | 1 | 0% | 2% | 60 | 0% | 2% | 60 | 0% | 2% | 121 |
| [redacted] | 0% | 100% | 1 | 0% | 0% | 59 | 0% | 100% | 1 | 0% | 3% | 61 |
| [redacted] | 0% | 0% | | 0% | 100% | 1 | 0% | 0% | | 0% | 100% | 1 |
| ⊞ [redacted] | 0% | 0% | | 0% | 0% | 59 | 0% | 0% | | 0% | 0% | 59 |
| ⊞ [redacted] | 0% | 0% | | 0% | 0% | 59 | 0% | 0% | | 0% | 0% | 59 |
| Total | 0% | 100% | 2 | 0% | 1% | 238 | 0% | 3% | 61 | 0% | 2% | 301 |

## 11851 - ADD PHILLIPS SPEECHMIKE DRIVER EXTENSIONS TO CITRIX BRIDGE INSTALLER

To allow for a single installation on the Radiologist workstations, we now bundle the Phillips SpeechMike Citrix extension drivers with the Citrix Bridge installer.

## 11150 - NEW MULTI PHONE / EMAIL PATTERN NEEDS TO BE IMPLEMENTED FOR THE RIS UI UPGRADE SCRIPT

A new upgrade script was required to convert to the new multi- phone/email pattern. File patient phone number ugrade script.sql has been added.

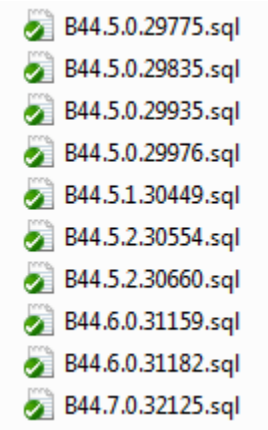
## 12584 - UPGRADE DATABASE FROM B44.5+ CODE STREAM

B45.x (now known as 2016.x) and B44.5+ are 2 active code streams. Over the past 6 months, changes have been made to both streams and commercialized. An upgrade script was written to update a B44.4.0 database to B45.0.0, but since then, B44.5+ and B45+ continued to grow separately with feature additions and bug resolutions. This caused a break in the upgrade path to B45.x (aka 2016.x) if the existing database was upgraded to B44.5 or later in the B44 stream.

The scripts have been updated to upgrade from B44.5+ to B45.x as well as maintain the existing upgrade paths for customers already on the B45 release.

The current B45.0.0.29064.sql script will upgrade the system from 44.4.0.28609 to 45.0.0.29064. This is a large upgrade script that update from the B44 to B45 code stream.

The following B45 upgrade scripts have been added to all of the current B44.5+ upgrade scripts:



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

This will update a B44.x database to 44.7.0.32125.

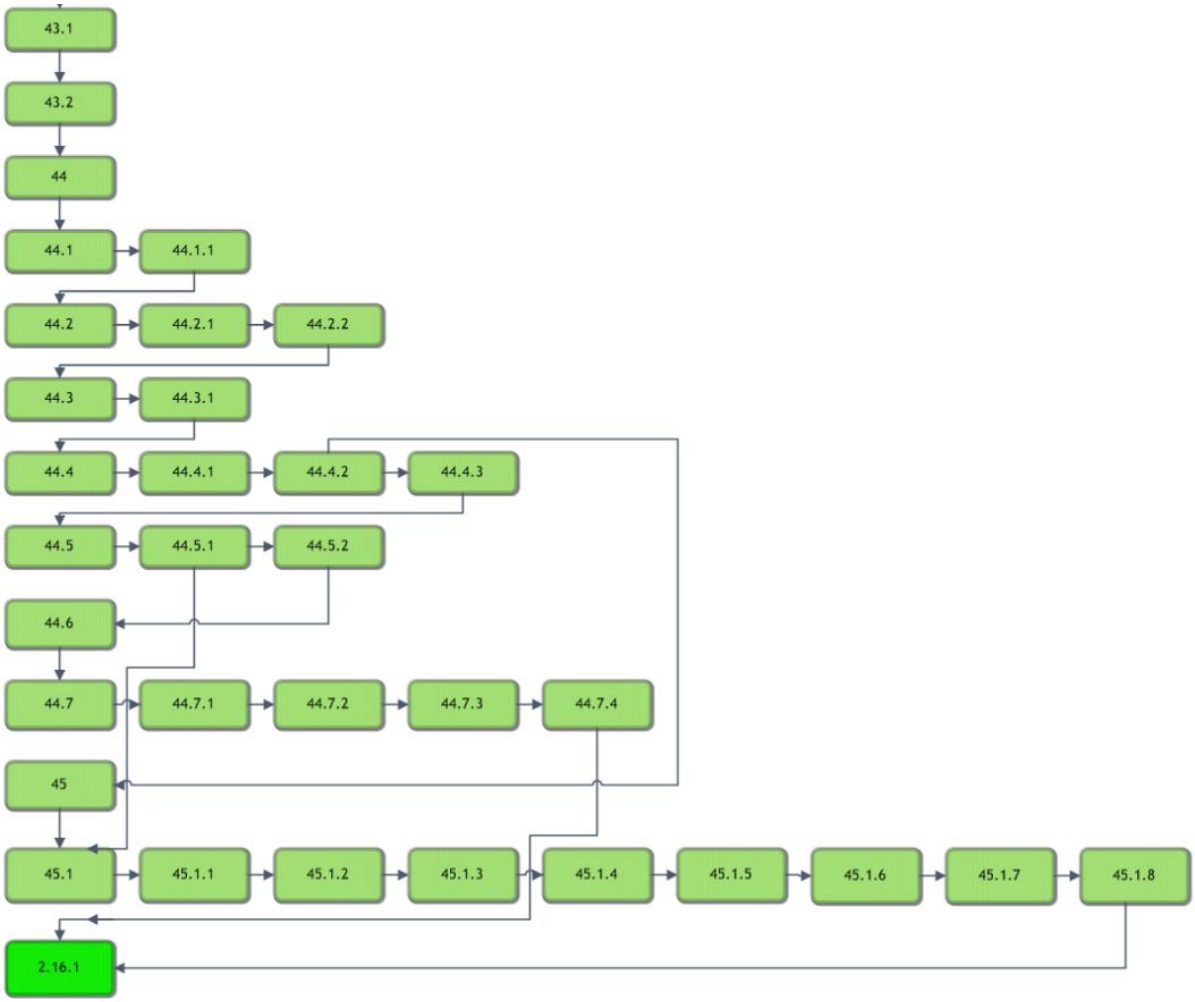
Then there is a “delta” upgrade script to update the database to 45.0.0.29064, which is the first database version in the B45 stream. This script is called “B44.7.0.32125_to_B45.0.0.29064.sql”.

The “runscripts.bat” (an internal upgrade script) has been changed to skip the “B45.0.029064.sql” script if the “B44.7.0.32125_to_B45.0.0.29064.sql” was executed. This results in allowing the database to be upgraded from B44.5+ to B45.0.0.29064 without running the B45.0.029064.sql file, which would have caused errors because it upgrade to the same version, but from a different starting point.

After getting to this point, the database should be 45.0.0.29064. All subsequent scripts in the B45 stream, such as B45.0.0.29070.sql, B45.0.029158, B45.0.0.29270.sql and so on will be executed as normal upgrade process.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## CODE STREAM



**Legend:**

Light Green = Released software

Gray = Will not be released

Bright Green = Current Release

## RESOLVED DEFECTS

Bugs, suggested features and support issues resolved in build 2.2016.1. The extract is taken from Redmine bug tracking system and only displays defects resolved in 2.2016.1.

| Bug # | Priority | Category | Subject |
|---|---|---|---|
| 11894 | Normal | Access strings | Access string rename needed for Notifications |
| 13025 | Normal | Admin-Other | Orphaned configuration setting LocationLayoutFormatString and PortalImageMigrationToolUrl should be removed. |
| 12837 | Normal | Admin-Other | Cannot set a "string" system configuration setting to empty when the system configuration setting has a default |
| 12048 | High | Admin-Other | Medline plus URL change |
| 12044 | High | Admin-Other | PrepInstructionType Lookup missing defaulting of display_order column |
| 11852 | Normal | Admin-Other | Date format with lower case "m" should not be allowed in SystemConfig |
| 11747 | Low | Admin-Other | Access string for WLNotification.* is confusing with the WL prefix. Should be just Notification.* |
| 8134 | Normal | Admin-Other | Unable to add schedule groups if none already exists |
| 7217 | Low | All Workflows | Editing a phone number that contains a zero in the area code requires extra clicks to perform |
| 11923 | High | Appointment book | Appointment Book - Rescheduling more than once creates duplicates (for different times) |
| 12547 | High | Billing | Add/Edit billing codes- An item with the same key has already been added |
| 11741 | Normal | Billing | Adding a billing code after an exam is Signed causes error |
| 11021 | High | Billing | Billing status automatically updated to Pending after "Place billing on hold" is cleared |
| 10317 | Normal | Billing | Billing Notes doesn't refresh properly on Checking In |
| 8036 | High | Billing | Cannot post a payment with a non insurance billing method |
| 11725 | Normal | Billing | Billing screen - c_study_item_certification_RowChanged event has a contrast related exception that happens in the background |
| 9218 | Normal | CD Burning | Destination path label doesn't display path if Auto Select is used |
| 9217 | Normal | CD Burning | Remember users previous destination preference |
| 12028 | Normal | CD Import | After completing a CD import get message InstallDir.txt |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| | | | cannot be found in folder I imported CD from on logout of RIS |
| 12007 | Urgent (next build) | CD Import | CD Import thows exception if DOS on disk cannot be found and time format is not dd-mm-yyyy |
| 12005 | Urgent (next build) | CD Import | CD Import or Legacy Data can overwrite the system MRN |
| 11749 | Normal | CD Import | CD Import - fails to import all images. |
| 10375 | Normal | CD Import | CD Import - Unable to see exam description when font size is Med or Large |
| 8994 | High | Citrix Support | ris.exe crashes on exit on Windows Server 2012 |
| 11960 | Normal | Confirmation | Confirmation - Administered checkbox under Medications is always unchecked (visually) |
| 12173 | High | Connect Portal-Scheduling | Error on importing procedure picker XML |
| 11641 | High | Connect Portal-Scheduling | Search for an appointment solution for 2 or more studies returns for 2 different room and fragmented times |
| 4833 | High | Connect Portal-Scheduling | Appointment search wcf service should not log an error in the application event logs when an appointment solution could not be found. |
| 10767 | High | Dark Mode/Theming | M*Modal Interactive Dictionary color problem |
| 12594 | Normal | DB | Open Capacity pulling in default template when there is an override |
| 12362 | Normal | DB | Phone/fax number fields should be 100 characters in length |
| 12281 | High | DB | Error when previewing addended report in radiologist window |
| 12081 | Normal | DB | Constraint issue CK_l_person_unknown_npi |
| 12036 | Normal | DB | The SPS_ID is missing an index |
| 11645 | Normal | DB | DB Cleanup to remove tables |
| 10508 | Normal | DB | Db view called c_vw_WL_SignedByDate_My is obsolete. |
| 8414 | Normal | DB | Removed former referring practice address references |
| 12413 | Normal | DB | System generated MRN workflow - problem if issuer of patient ID is in issuer look up but is not system |
| 12778 | Normal | Digital Forms | Error when saving digital forms |
| 12687 | Normal | Digital Forms | Cascading drop-downs options have a default 'Show on parent value' of 'test' |
| 12605 | Urgent (next build) | Digital Forms | Previously completed digital forms don't always get carried over on Reschedule |
| 12562 | High | Digital Forms | Required field and Perform Exam actions conflict |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 12531 | Normal | Digital Forms | Message about server unavailable is displayed on the wrong monitor |
| 12436 | Normal | Digital Forms | Required field validation issues on schedule order |
| 12410 | Normal | Digital Forms | Digital form tabs holding perform exam in memory longer than necessary |
| 12404 | Normal | Digital Forms | Digital Forms Editor - Empty expression with mapped variables causes whole editor to stop functioning |
| 12391 | High | Digital Forms | Read only digital forms should not attempt to save answers |
| 12356 | High | Digital Forms | Error opening perform exam for mammo study |
| 12283 | Normal | Digital Forms | Required fields on digital forms aren't required unless the user looks at the digital form |
| 12263 | Normal | Digital Forms | Issue with logins from the browser redirecting to kiosk login instead of digital form editor |
| 12047 | High | Digital Forms | Linked Digital Form checkboxes don't always set changes made flag |
| 12041 | Normal | Digital Forms | ui-icons_454545_256x240.png missing |
| 12037 | Normal | Digital Forms | Linked checkboxes not synced properly on checkbox toggle |
| 12024 | Normal | Digital Forms | Circular references in expressions can cause unhandled exceptions which cannot be fixed |
| 12016 | Normal | Digital Forms | Flicker on digital form when tabs are rendered first as a list and then redrawn as tabs |
| 12015 | High | Digital Forms | Changes not saved after connection to web server re-established |
| 12014 | High | Digital Forms | If communcation service is interrupted while digital form tabs are being edited, the newly entered data may be lost |
| 11998 | Normal | Digital Forms | Digital forms should not reference CSS files from CDN servers |
| 11943 | Normal | Digital Forms | Digital form answers are saved to the database even when no answer is provided |
| 11940 | Normal | Digital Forms | Report Assistant is saving all digital forms regardless of changes |
| 11917 | Normal | Digital Forms | Digital Form Expression Editor allows the user to make over 26 variables, but does not support more than 26 |
| 11885 | Normal | Digital Forms | Required field exclamation points not clearing on entering data (type-ahead/auto-text only) |
| 11877 | Normal | Digital Forms | Blank required fields on Digital Forms Answers pane prevents workflow |
| 11876 | Normal | Digital Forms | Linked checkboxes not syncing properly in Report Assistant |
| 11874 | High | Digital Forms | Digital Form Editor - Tab order can't be set anymore |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 11859 | Normal | Digital Forms | Un-including a study should remove any digital form tab(s) that only apply to that study |
| 11831 | Normal | Digital Forms | Saved empty expressions with mapped variables cause error on refresh |
| 11828 | High | Digital Forms | Empty cascading dropdown values do not save properly |
| 11696 | Normal | Digital Forms | Radio buttons may still save an answer when hidden due to a rule |
| 11678 | Normal | Digital Forms | Required field message doesn't appear when on a different tab |
| 11668 | Normal | Digital Forms | Type-Ahead Textbox for Medication returning results with garbage text entered |
| 11627 | High | Digital Forms | A rule based on the value in an autotext field does not work |
| 11603 | Normal | Digital Forms | Localization of autotext form |
| 11067 | Low | Digital Forms | Digital Form Editor - Unable to clear font size to revert to default font size |
| 7780 | Normal | Digital Forms | Conditional Tab - exception raised in display criteria |
| 12943 | High | Document Distribution | Print jobs occur when config setting turned off |
| 5795 | Normal | Embedded Reporting | Object reference error from ReportFields.SelectSection |
| 11606 | Normal | EMR | Editing EMR MRN's needs to focus on MRN (start) |
| 11539 | Normal | EMR | Duplicate MRN on EMR patient causes exception |
| 7899 | Urgent (next build) | EMR | Walk In Scheduling of EMR order does not allow you to see what was ordered by the EMR |
| 12412 | Normal | EMR | EMR order - problems when issuer is the same as an issuer in the l_issuer look up |
| 12271 | Low | eRAD Editor | eRAD Editor - automacro fields added through Fields tab of template/macro editor aren't treated as automacro fields |
| 11995 | High | eRAD Editor | Inserting a text only macro into an optional field inserts it after the field. |
| 11979 | High | eRAD Editor | Subsequent macro insertions may jump to a seemingly random location in a report |
| 11709 | High | eRAD Editor | Field meta data is not being saved when pasting into report template with no fields |
| 11483 | Normal | eRAD Editor | Protected Field - although you cannot insert macros into protected fields, the behavior could be better |
| 12114 | High | Insurance Eligibility | Insurance eligibility service can crash core RIS Services if a database connection error occurs |
| 11750 | Normal | Insurance Eligibility | Special Condition configuration that removes the Plan will cause eligibility to fail. |
| 11712 | Normal | Insurance Eligibility | Amount to collect on Self-Pay cannot be modified in some cases |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 11708 | Normal | Insurance Eligibility | Amount to collect field shows 4 decimal places in some cases |
| 11706 | High | Insurance Eligibility | Amount to collect on Self-Pay doesn't display for manual entries (non-NPD) |
| 9673 | Normal | Insurance Eligibility | Changes to Billing Codes not updating Amount to Collect on Self Pay |
| 9215 | Normal | Insurance Eligibility | Tier 2 and advanced / complex parsing |
| 9209 | High | Insurance Eligibility | Update on the order resulting in wrong IVT Intervention flag on the order table. |
| 8368 | Normal | Insurance Eligibility | NULL filtering should default to disabled |
| 8040 | Normal | Insurance Eligibility | Alter Coverage.JS insurance details viewer to display details when service type is inactive. |
| 10426 | Normal | Insurance Eligibility | Amount to collect details |
| 8448 | Normal | Insurance Managment | Attempt to alter Group Number or Group Name of Insurance Carriers causes a shift in the list and potential incorrect changes |
| 13144 | Normal | Interfaces | External Interface AppointmentSearch is not working |
| 13012 | Normal | Interfaces | Source code for Ensemble Plugin not up to date with version in Assuta |
| 12850 | High | Interfaces | RIS Wedge causes and exception when attempting to expand c_study_item_certification.downcoded_procedure_code |
| 11911 | Urgent (next build) | Interfaces | Wedge interface channels should not need any modification between 44.x and 45.2 |
| 11865 | Normal | Interfaces | Incorrect error message |
| 11838 | Normal | Interfaces | Inbound user_id fails with poor error message if person is not a user |
| 11676 | Normal | Interfaces | MRN - Issuer dropdown filtering out valid entries |
| 8507 | Normal | Interfaces | Mirth/Wedge matching a referring doctor by NPI does not return the "master" person key |
| 12541 | High | IVT / Precert | Self-Pay exams throw error on opening in IVT |
| 9015 | Normal | IVT / Precert | PreCert status not reflected in Reception WL |
| 8594 | Normal | IVT / Precert | IVT WL, Pre-cert status stays the same when changing insurance at arriving/checking stage. |
| 8147 | High | IVT / Precert | PreCert column on the Orders To Schedule worklist may not match the billing code pre-cert statuses |
| 12366 | High | Linked Reporting | Unable to addend linked studies with voided exam |
| 11985 | Normal | Linked Reporting | Worklist actions not working when primary study is in Arrived, but child studies are in ExamDone |
| 11858 | Normal | Linked Reporting | Prior Report button no longer working from ScheduleOrder |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 11507 | Normal | Linked Reporting | Error changing primary study flag after it has already been set |
| 12753 | Normal | Localization | Localization required - 'Audit history' context menu option |
| 12555 | Normal | Localization | "Save as Order" translated only to "Save" in Hebrew |
| 12115 | High | Localization | In Hebrew mode, worklists will throw an exception when opening the 'select statuses' filter option |
| 11740 | Low | Localization | Second row of message box sentences is forming from left instead of from right in Hebrew. |
| 11980 | Normal | Mammography | BI-RADS picker is editable - causes Index out of range error |
| 8067 | Normal | Mammography | Missing access string for follow up screen |
| 12576 | Normal | Meaningful Use | C-CDA - Exception when no study data available |
| 12501 | Normal | Meaningful Use | CCDA stylesheets may need to be remapped due to changes in the Raw Container. |
| 12454 | Normal | Meaningful Use | CCDA - administrativeGenderCode is sending over null value when configured incorrectly |
| 11945 | High | Meaningful Use | View MedlinePlus Info doesn't work for ICD10 codes |
| 11916 | Normal | Meaningful Use | Error producing CCDA in view/edit - mu - View CCDA |
| 10526 | Normal | Meaningful Use | New Diabetic Medications |
| 9290 | Low | Meaningful Use | There are 4 access strings related to Labwork that need to be reviewed and possibly modified, in particular Clinincal.Labwork.Request. |
| 8674 | Normal | Meaningful Use | Deleting a Medical History row then changing from "Use grid" to "None" gives error on Save. |
| 8247 | Normal | Meaningful Use | Save as Order - Column 'visit_key' is read only |
| 8103 | Normal | Meaningful Use | Transition of Care |
| 7807 | Normal | Meaningful Use | ProcessCPOEFlag can result in exception if performed end date is null |
| 6900 | Low | Meaningful Use | CCDA preview is displaying requested lab orders under results |
| 11723 | Normal | Mgt - Report - Custom | Procedure c_bi_mqsa not looking at extended birad code |
| 13014 | Normal | Mgt Reports | Peer review report - Review Summary by Radiologist not returning correct results - seems you cannot search for 1 day only. |
| 12543 | Normal | Mgt Reports | Mammo Technologist Summary - Procedure Code suppression |
| 12468 | Normal | Mgt Reports | Report deployment Option 7 deletes the backup folder it deploys from |
| 11658 | Low | Mgt Reports | There are some reports that are sorted by First name not the Last Name |
| 11261 | Normal | Mgt Reports | Core Management Reports - Date time format |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 13051 | Normal | MModal | Wrong recognizer files being downloaded when the user preferences set to "Automatically download recognizer". |
| 12691 | Normal | MModal | Default field value for Pick List fields do not populate in Macros |
| 12679 | Urgent (next build) | MModal | Error when doing next workflow in M*Modal reporting mode |
| 12650 | High | MModal | Issues with fields in the report editor. |
| 12442 | High | MModal | Pick list selection into a field with dictated or typed text will render incorrectly |
| 12441 | High | MModal | Previous field voice command intermitently not selected in field browser |
| 11849 | High | MModal | Mapped non-required fields showing as required |
| 11715 | High | MModal | When creating a template from report the auto macro doesn't work correctly |
| 11704 | High | MModal | The protect data checkbox in template editor should be removed. |
| 11493 | High | MModal | Conditional fields not working in M*Modal |
| 11319 | High | MModal | MModal field controls - typing over selection |
| 11318 | High | MModal | MModal Report Field Controls - 3 issues with the field controls |
| 11014 | High | MModal | Picklist field changes from a field to plain text when the default value of the picklist is a macro with plain text in it. |
| 11007 | High | MModal | Picklist that has an option that is a macro created in previous version of RIS, when selected in the dictation window, get error, macro cannot be inserted into report. |
| 10759 | Normal | MModal | Performance improvement opportunity in GetCurrentReportFields for MModal |
| 10648 | Normal | MModal | Modifying a macro from within the dictation window, clicking Ok will produce an error |
| 12409 | Normal | PACS (eRAD) Integration | Sometimes you have to click OK twice to RIS message "Action required in PACS before continuing" to continue working in RIS |
| 9633 | High | PACS (eRAD) Integration | When using PS360 and creating an autotext it is possible to hang the PACS viewer |
| 12859 | Normal | PACS (Non - eRAD) Integration | PACS integration is prompting the rads too much with message boxes after the new update. |
| 12351 | Normal | Patient Folder | Assuta in Hebrew mode, Peer review button is not translated |
| 10613 | High | Patient Folder | Data Nuggets do not close when we close the patient folder tab |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 12779 | High | Patient Merge | Error on Patient Merge |
| 8160 | Normal | Patient Merge | Previous MRNs not showing in Alternate MRN grid after a merge |
| 12056 | High | Payment control | Error adding payment: Column 'Remaining_balance' does not belong to table c_payment |
| 12132 | Normal | Performance | Performance enhancement - Loading Datasets for MModal Document Models while in Erad mode |
| 12131 | Normal | Performance | Performance enhancement - Next workflow |
| 12130 | Normal | Performance | Portal window in reporting screen is re-initializing after already being loaded. |
| 12128 | Normal | Performance | Perform Exam screen repeatedly requests the same data on open |
| 12101 | Normal | Performance | UI performance is poor when switching main tabs in reporting screens |
| 12094 | Normal | Performance | eRAD Reporting Performance - General performance enhancement populating fields |
| 12052 | High | Performance | Performance enhancement - Loading and processing of reporting layouts |
| 12666 | High | Person Management | NPI Link No Longer Valid in Personnel Editor |
| 8372 | Low | Person Management | Buttons are not entirely visible in the Add Radiologists form under the Referring Preferences |
| 12608 | High | Platform | PDFViewer project is requiring .NET Framework 4.5. All other eRAD RIS projects currently only required 4.0. PDF Viewer should require only 4.0. |
| 12040 | Normal | Portal Viewer | Missing top of browser control and tabs |
| 11515 | High | Portal Viewer | Unable to remove a portal launcher rule once added |
| 12580 | Normal | Powerscribe Integration | Wait when launching a report in PowerScribe using the button on the reporting screen. |
| 10743 | Normal | Powerscribe Integration | When failing to open a report in PowerScribe, study keeps returning in next workflow |
| 11251 | Normal | RADAR | Quick RADAR Message - Add Auditing to RADAR messages |
| 11765 | High | Radiology Peer Review | Peer Review - Missing access string for Mark As Completed |
| 12683 | High | Radiology Peer Review | Add peer reviewed count to the daily statistics dashboard |
| 12681 | High | Radiology Peer Review | Peer review button should disable when the user is not able to perform a review |
| 12678 | High | Radiology Peer Review | Peer review screen is not resizable |
| 12677 | High | Radiology Peer Review | Change spelling when loading the peer review QA screen. |
| 13162 | High | Radiology Reporting | Unable to sort exception opening the reporting screens without .net 4.5 |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 13113 | Normal | Radiology Reporting | Error when signing a report |
| 12728 | Normal | Radiology Reporting | Report data nugget is enabled for reports in dictated or exam done status without access to 'Clinical.PreviewPreliminaryReport' |
| 12727 | Normal | Radiology Reporting | Impression data nugget is available when access string are not granted |
| 12667 | High | Radiology Reporting | Datasets are localized creating problems for advanced data fields in all languages other than English |
| 12662 | Low | Radiology Reporting | Custom fields and DataFields are showing on the field control as the same, icon should be different. |
| 12593 | Normal | Radiology Reporting | M*Modal - Invalid field selection when inserting a pick list option set to navigate to previous field |
| 12575 | Urgent (next build) | Radiology Reporting | Selected Report - When failing to load the selected report the previous report images is persisted |
| 12574 | High | Radiology Reporting | Signed studies without a migrated report not presenting message appropriately all the time |
| 12512 | High | Radiology Reporting | Report history control causes an error when opening on a legacy (imported) report |
| 12421 | Urgent (next build) | Radiology Reporting | Report Editor - Populating fields with mixed Hebrew and English words renders incorrectly |
| 12225 | High | Radiology Reporting | Log Control - The Assign to Radiologist Notes do not support AutoText only |
| 12214 | Normal | Radiology Reporting | Improve screen appearance between screen loads "next workflow" |
| 12185 | High | Radiology Reporting | When editing an existing data field, protect check box is not available |
| 12170 | Normal | Radiology Reporting | Adding a conditional field produces an error when entering the expression value in the conditional value grid and clicking OK button in Field Editor window |
| 12129 | Normal | Radiology Reporting | CC Physicians not being cleared in exam details pane on reporting screens (Reuse) |
| 12063 | High | Radiology Reporting | Portal window - TabSelectionChanged error when skipping through cases with Reuse turned on. |
| 12059 | Normal | Radiology Reporting | Preview report in rad screen on addendum before save doesn’t work |
| 12055 | Normal | Radiology Reporting | Portal window loads even when not visible, and it can load before the ParentContentBase is loaded. |
| 12051 | Normal | Radiology Reporting | eRAD Reporting Performance - Calling delete field with the paint argument set to true taking a long time |
| 12039 | Normal | Radiology Reporting | Adding macros with fields in a report that doesn't have a default template causes empty fields when macro is inserted a 2nd time |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 12022 | Normal | Radiology Reporting | RTL - When adding assignments or procedures to a macro or template the arrow that is highlighted and enabled is pointing the wrong way |
| 12019 | Normal | Radiology Reporting | Create Edit Report from Perform Exam loads templates for current user |
| 12012 | Normal | Radiology Reporting | Reporting Layout - Localization bug |
| 11975 | Normal | Radiology Reporting | RTL - Report Assistant save button on wrong side in RTL |
| 11933 | High | Radiology Reporting | When verifying edits the 'Send for dictation and close/continue' should not be available options |
| 11922 | High | Radiology Reporting | Editor split button options should be controlled by access string and more descriptive naming of options |
| 11912 | High | Radiology Reporting | In right to left mode, the tabs for digital form answers and report assistant tool windows should be on the right |
| 11860 | Normal | Radiology Reporting | Reporting Layouts - When using custom output file path the deployed layouts do not load |
| 11827 | Normal | Radiology Reporting | Error when trying to do an addendum on Legacy reports |
| 11675 | High | Radiology Reporting | Indication required but could not add an indication. |
| 11660 | High | Radiology Reporting | Findings - if procedure 'findings required flag' is set to N, the context menu item (Set Required Followup Flag) in patient folder, should not be available |
| 11615 | Low | Radiology Reporting | Finding Follow Up - audit message after adding and removing follow up is spelled inconsistently |
| 11609 | High | Radiology Reporting | Finding Follow Up - Missing lang item for finding code in the finding follow up worklist |
| 11591 | High | Radiology Reporting | MModal - create a template from report - auto macros are not working correctly. |
| 11573 | High | Radiology Reporting | Shortcut keys for 'Create and Continue' and 'Create and close' required for the reporting editor |
| 11570 | High | Radiology Reporting | Dictation field in Summary Panel in dictation window copy option throws error |
| 11499 | Normal | Radiology Reporting | Report Assistant - no scroll bars |
| 11491 | High | Radiology Reporting | Conditional fields navigation setting is not working |
| 11473 | High | Radiology Reporting | In the editor window, the shortcut CTRL+ALT+S should be changed because the action button has been renamed from 'transcibe' to 'edit' |
| 11005 | High | Radiology Reporting | Template editor - some of the command bar buttons are producing an error, ie: Preview Report |
| 10980 | High | Radiology Reporting | Exceptions raised in Template Macro Lookup working with M*Modal reporting mode |
| 10969 | Normal | Radiology Reporting | TemplateMacro lookup table locks RIS when user has limited reporting modes |
| 10968 | Normal | Radiology Reporting | TemplateMacro lookup table error when user has specific reporting modes |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 10612 | Normal | Radiology Reporting | Word Report Viewer does not close when closing the patient tab |
| 10482 | High | Radiology Reporting | External Reporting Mode - Unable to mark addendum as read |
| 9639 | High | Radiology Reporting | Error when clicking the Pending Dictation Tab while an exam is loading in Dictation window |
| 9625 | High | Radiology Reporting | Patient history control throws a hidden exception |
| 9564 | Normal | Radiology Reporting | On opening of dictation Window - exam details tool window is incorrect |
| 9306 | Normal | Radiology Reporting | Sign Report button missing on All Signed Pending QA |
| 9305 | Normal | Radiology Reporting | Sign Report button missing on All Dictated WL |
| 9304 | Normal | Radiology Reporting | Sign Report button disabled when in dictated status |
| 9303 | High | Radiology Reporting | After suspending a report and then moving to Dictated or Draft the suspend flag remains |
| 9302 | Normal | Radiology Reporting | Pending Signature WL has context menu Dictate but no button |
| 9257 | High | Radiology Reporting | EditorSpeechControl error when modifying a template or macro for the 1st time after an upgrade. |
| 8055 | Urgent (next build) | Radiology Reporting | Proxy sign - buttons mislabeled |
| 5494 | Normal | Radiology Reporting | Template/Macro editor from lookup editor won't prompt to save changes when closing the screen. |
| 3784 | Normal | Radiology Reporting | Reporting docked windows not maintaining current tab selections |
| 7774 | Low | Radiology Reporting | Bar-code scanning won’t accept lower case letters and converts to symbols |
| 11846 | Urgent (next build) | Reception | A signed study may return to checking in or arrived |
| 11295 | High | Reception | Multi-Orders don't display correctly on opening Register |
| 11230 | High | Reception | Referring physician alert gets shown a second time when clicking the 'Checking In' button |
| 12389 | Normal | Scheduling | Cannot remove procedure from a procedure plan |
| 12029 | Normal | Scheduling | Error appears when cancelling a study from the reschedule window from the appointment book |
| 12017 | Normal | Scheduling | Appointment book load times too slow |
| 11818 | Normal | Scheduling | When trying to reschedule one study out of a procedure plan, get an error if one of the exams in the procedure plan is in exam done status. |
| 11151 | Low | Scheduling | Clearing Patient Flag notes adds empty string which causes alerts to display extra line with hyphen |
| 9578 | Low | Scheduling | Follow Up Date - Can't use 2 digits for year |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 8408 | Normal | Scheduling | Inactive rooms showing in calendar view. |
| 11949 | High | Structured Reporting | eRAD Editor - When a conditional field exists and the expression is null, auto macros won't populate |
| 12274 | High | Technologist | Should be able to disable tech notes as required field |
| 12252 | High | Technologist | Assigned radiologist dropdown empty on initial opening of Perform Exam |
| 12025 | Normal | Technologist | Hebrew mode: Perform exam window - required flag for tech notes is cut off. |
| 11529 | High | Technologist | Contrast - Leaving contrast/sedation amount/units blank on multi-study order can cause false validation fails |
| 11254 | Normal | Technologist | Study Sedation doesn't work with multiple study items |
| 9617 | Normal | Technologist | Suspended flag remains when documenting multi-study in perform exam screen |
| 9422 | Normal | Technologist | User is able to complete an exam that Requires contrast without entering a contrast. |
| 9186 | Normal | Technologist | Sedation - Changing performed procedure in Perform Exam doesn't remove sedatives |
| 9166 | High | Technologist | Contrast is required on view/edit when contrast setting is set to true and is required |
| 8587 | Normal | Technologist | Contrast amounts that exceed Max Value are acceptable upon Saving in Perform Exam window |
| 12659 | Low | Thick Client GUI | Search in lookup editor is not closing the folders correctly when the delete (x) is clicked. |
| 11946 | Normal | Thick Client GUI | Error logging in to RIS: "The given key was not present in the dictionary" |
| 7936 | Normal | Thick Client GUI | Patient screen icons should have borders (Patient search and New Patient) |
| 6084 | Normal | Thick Client GUI | MU- CCDA problem and vital signs and goals section |
| 6083 | Normal | Thick Client GUI | MU- CCDA Procedure section is incomplete |
| 6050 | Normal | Thick Client GUI | RadNet - Edit Units - sometimes saving units as "1000" arbitrarily |
| 3300 | Low | Thick Client GUI | Scroll bar in lookup editor allows to scroll way below any entries. |
| 2133 | Low | Thick Client GUI | Timing issue between RIS and Jabber |
| 12471 | Normal | UI Look and feel | When closing a lookup editor, it closes the tab completely |
| 12470 | Normal | UI Look and feel | Login screen should select all text when tabbing into username or password fields |
| 11966 | Normal | UI Look and feel | Mammo Biopsies Window - Cancel and ESC Key functionality |
| 11781 | Normal | UI Look and feel | Patient tab tabbing opportunities |
| 11773 | High | UI Look and feel | Follow Up context menu item does not work |
| 11731 | Low | UI Look and feel | Emergency Contact showing as required on Registration |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 11577 | Normal | UI Look and feel | When skipping though cases, tab title switches from Loading... Assigning.. Dictating... |
| 10919 | Normal | UI Look and feel | Change font size feature does not change the size in the menus |
| 10409 | Normal | UI Look and feel | Insurance policies grid and Manage policies window have columns in different order |
| 9640 | Normal | UI Look and feel | Alert prompt verbiage for inaccurate Units value needs to be changed. |
| 9299 | Normal | UI Look and feel | User preferences screen alignment and spacing. |
| 8543 | Normal | UI Look and feel | Pin at top or bottom of insurance policies does not function |
| 8266 | High | UI Look and feel | When running application without RISDeployment folder the title bar says "eRAD RIS (Developer as UserName)" |
| 8057 | Normal | UI Look and feel | System Config description clean up |
| 7121 | Normal | UI Look and feel | Next workflow doesn't look good at all in between screen loads |
| 8505 | Normal | Unknown Reconcile | Changing an unknown referring doctor on an order performs a partial person merge. |
| 8053 | Normal | Utilization Management | Issue removing rows for additional procedures |
| 12522 | Normal | View Edit | Notes/Exam Times missing edited by user |
| 12350 | Normal | View Edit | Assuta - In the View/edit window there is an action button sitting on top of another action button |
| 12880 | Normal | Web Services/DB | Missing index on study_key in c_questionnaire_answer |
| 12500 | Normal | Web Services/DB | Not all data set column max lengths match those of columns in db |
| 12401 | Normal | Web Services/DB | Fill statement incorrect on c_questionnnaire_completion_status |
| 12247 | Normal | Web Services/DB | The RequestedByAndRequestByAddressKeyRelation wcf test case occasionally fails during build process |
| 12116 | High | Web Services/DB | MU Export Service can terminate Core RIS Services if a database connection error occurs |
| 11046 | High | Web Services/DB | Personnel - Medical Group added to Referring Physician breaks RIS |
| 10814 | Low | Web Services/DB | Reschedule prompt improperly locking studies/orders |
| 12585 | Normal | Worklists | Supervising Dictation work list throws exception |
| 12560 | Normal | Worklists | Referring Portal Patient Folder view only shows scheduled modality for Room Name column |
| 12521 | Normal | Worklists | Patient Folder - Edited by column missing from the worklist |
| 12504 | Normal | Worklists | Patient folder could not be retrieve when connecting to the rRIS_Dev2 database |
| 12458 | High | Worklists | Status localization removed after applying filters |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 12120 | Urgent (next build) | Worklists | The RIS Service method RefreshWorklistForPatient is no longer being called |
| 12119 | High | Worklists | Worklist Count - is still referencing old deprecated c_vw_client_worklist view |
| 12113 | Urgent (next build) | Worklists | Many worklists are performing very slowly on rRISDev2 database |
| 12096 | High | Worklists | Room Name column on worklists based on scheduled Modality only, not performed Modality |
| 12095 | Normal | Worklists | Patient folder worklist does not show room description |
| 12053 | High | Worklists | System.IndexOutOfRangeException: Index was outside the bounds of the array. |
| 12030 | Normal | Worklists | The signed by date for all worklist timeouts |
| 11879 | Normal | Worklists | No access string for the Reception WL |
| 11629 | Normal | Worklists | Image Request WL requires new "name" equivalents columns with description |
| 10720 | Normal | Worklists | Possible SQL injection on WL queries with parameter order by |
| 8390 | High | Worklists | Inconsistent RIS Filter Results |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

## KNOWN LIMITATIONS

The following are bugs, suggested features and support issues found in build 2.2016.1.

Bugs reported in previous versions are not repeated here.

| # | Status | Priority | Subject |
|---|---|---|---|
| 12933 | New | Normal | Selected Report tool window - When reloading a legacy report, the previously loaded legacy report is displayed first. |
| 12907 | New | High | Reading_stat_flag - right click menu only sets it on the study |
| 12876 | New | Normal | IsCitrixBridgeAlive timed out error. |
| 12838 | New | Normal | Selected Report tool window - When reloading a legacy report, and moving the window around, the report duplicates itself in the tool window. |
| 12746 | New | Normal | Voice cue navigation for datafields and picklists fields not working |
| 12745 | New | Normal | Field Browser - Fields not updating when voice navigation |
| 12725 | New | Normal | Reusable fields are not populating when the template is inserted into a report |
| 12689 | New | Normal | Running RIS in Minimized mode, logging in twice produces a message that ois hidden, have to quit RIS from task manager. |
| 12684 | New | Normal | MModal - create a template from report - data fields are populating. |
| 12617 | New | Normal | Registration screen retrieves the same data more than once |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 12601 | New | Normal | Calculated columns on insurances are not updated when all insurances are removed |
| 12599 | New | Low | Procedure Picker - Unable to delete Attribute Types |
| 12596 | New | High | Precert information cannot be seen for Order IVT window from cancelled study |
| 12591 | New | Normal | Template/Macros - Conditional field the default column is not working correctly when set to True |
| 12565 | New | Normal | Rad screen - Opening legacy report in patient folder closes legacy report in tool window |
| 12536 | New | Normal | Contrast validation may complain about rows that are not visible |
| 12279 | New | Normal | Unique key violation during walkin process after switching orders |
| 12213 | New | Normal | Cannot filter the Prep Intruction Code column of Procedure Code lookup table if Prep Instruction Code has an apostrophe |
| 12176 | New | Normal | Updates to only issuer_of_patient_id will not result in updates to c_patient_key_data via trigger |
| 12171 | New | Normal | Available_datetime in the action queue is set by RISService box time instead of DB time |
| 12925 | Resolved | Normal | Getting Get Data/DisplayData when editor is MModal and you attempt to dictate an exam when 'Insert template with markers' is turned on. |
| 12894 | Resolved | Normal | Biopsy screen has not been localized |
| 12854 | Resolved | High | Cannot Create/Edit report from perform exam on PACS correction enabled studied. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| 12835 | Resolved | Normal | Extra character appended to a field |
| 12834 | Resolved | High | Reschedule study can cause other studies from same order awaiting reschedule to fall off worklist |
| 12808 | Resolved | High | "Send to" button on reporting screen allows to fax/print preliminary reports even if user should not have access. |
| 12744 | Resolved | Normal | Attachment viewer on the patient folder (both main and mini) will not load the report initially |
| 12174 | Resolved | Normal | Procedure Picker Scrolling Bar Issue |
| 12842 | New | Normal | Verify Credentials window has spinning blue circle (hour glass) |
| 12425 | New | Normal | Specific identity validation errors |
| 13266 | New | Normal | Editing billing codes |
| 13263 | New | Normal | Template editor lookup, result tab, filter the grid by default = Y, edit one of the templates, get error when saving the template. |
| 13248 | New | High | Peer review window - if font is not set to Small either part of the word or all of the word 'review' is missing in the sentence 'I disagree with this review' |
| 13237 | New | Normal | WL Filter FLag selection is not translated |
| 13224 | New | Normal | When Phone number mask is disabled, the phone numbers are displayed in a mask in the referring addresses lookup table. |
| 13204 | New | High | EMR Ordering - Left over EMR order that is not mapped cannot be accessed again from work lists |
| 13182 | New | Normal | Report that is sent to PACS has the element {BR} displayed in the |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from RADNET Inc.

| | | | |
|---|---|---|---|
| | | | report. The report in RIS has a bolded section but the same section in the template is not bolded. |
| 13172 | New | Normal | mModal 7.93 dictation commands that do not work. |
| 13049 | New | Normal | Inserting a macro with picklist with default macro option multiple times doesn't work |
| 13011 | New | Normal | Log control fields dont separate auto text |
| 12996 | New | High | EMR Ordering - Left over EMR order that is not mapped cannot be accessed again from work lists |
| 12989 | New | Normal | Import scheduled procedures window is displaying order procedure description instead of scheduled procedure description |
| 12918 | New | Normal | Patient merge - Phone numbers and email addresses unselected if patient merge is opened when patient folder is open |
| 13067 | Peer Testing | Normal | Linked studies dialog OK button should be disabled |
| 13053 | Peer Testing | Normal | Linked studies dialog checkboxes should be disabled |
| 13156 | Resolved | Normal | Hebrew localization for Digital Forms and Selected Digital Forms |
| 13066 | Resolved | Normal | Unable to dictate on linked studies pending pacs correction |
| 13010 | Resolved | Normal | Creating an addendum on a study existing on the QA worklist will remove it from QA worklist - also unclear which version we are reviewing when in QA screen |
| 13009 | Resolved | Normal | Error on reschedule when digital form has not yet loaded |
| 12993 | Resolved | Normal | Increase character limit on External Notification Email Address |

## Resolved Items

| Redmine # | Subject |
|---|---|
| 13825 | PACS integration will not open sessions reliably via Citrix Bridge |
| 13827 | PACS integration will not close sessions reliably via Citrix Bridge |
| 13845 | The first call to "Show Images" to UV PACS after changing PACS server does not work via Citrix Bridge |
| 13850 | PACS incorrectly indicates "Study is locked" depending on how the user closed the study (via Citrix and non-Citrix) |

Additional information on bug 13850:

Steps to reproduce the "Study is locked" state:

From the Pending Dictation WL, open a study to dictate.
2. Go back to the Pending dictation WL and open a 2nd study.
3. Click on the 1st study's tab → it's images are displayed.
4. Click on the 2nd study → it's images are displayed.
5. While the focus is on the 2nd study, close the study using the x on the tab. → Images are closed and you are returned to the first study – images are displayed for the first study.
7. Close the 1st study via the x on the tab. → Images are closed.
8. Open study 1 again → Images open.

9. Open study 2 again → PACS indicates "Study is locked"

# Installing

## Client/GUI

1) Copy and replace the current rRIS…zip file with the eRAD_rRIS_2016.2.1.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## Citrix Bridge Installer

1) Copy and replace the eRAD RIS Citrix Bridge Installer.exe. Run the Installer on each workstation that will be using Citrix Bridge.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

# Server Update

For eRAD RIS
Version 2.0
Build 2.2016.2
Update 2.2016.2.2

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

# Installing

## Client/GUI

1) Copy and replace the current rRIS…zip file with the eRAD_rRIS_2016.2.2.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## Database Updates

Always run the upgrade scripts in a test environment of the actual database to make sure they run cleanly. If any errors occur please contact development.

*Note: There is a new upgrade process introduced with B43.1 called "RunUpgrade.bat". The batch file will open a command window. This process will prompt you for the database server name, database name and authentication credentials. There is no need to run the database upgrade scripts manually as was done in previous releases.*

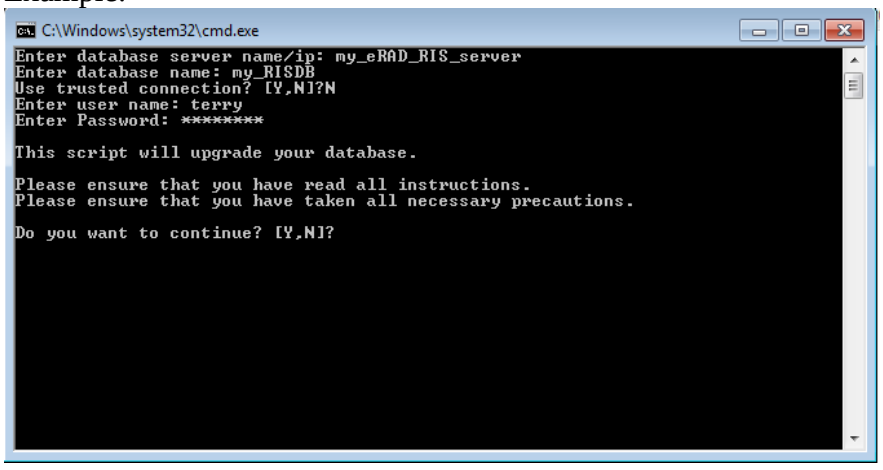
1) From the upgrade folder, double click the "RunUpgrade.bat" command file.

2) Enter the server name, database name and authentication credentials to the database. You have 2 choices for authentication credentials.

3) You can choose to use "Trusted connection". Using this option will pass the identity of the currently logged on user. If this user has "db_owner" access to the eRAD RIS database then feel free to use this options.

4) If you decide not to use "Trusted connection" then you will be prompted for user id and password.

   Example:



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

5) After the upgrade program has finished you can find the upgrade logs in the "log" folder. The file name will be eRAD_RIS_db_upgrade_timestamp.log, where timestamp is a value representing the date and time the upgrade started. If you see any errors please contact the development team

6) In the Common folder there is a subfolder of MU. The MU folder contains updates to lookups relevant for MU as well as updates for Zip Code table to add the County. Copy the MU folder to the database server before running the batch file. There is a readme file contained in the MU folder. The details have also been included below

   a) The mu bulk install process must be run from a path on the database server!
   b) Copy Files ImportDataFileUpgradeDB.bat and ImportDataFileUpgradeDB.sql from upgrade folder to a location on the database server(This location will be referred to as the "Script Folder Path".)
   c) Copy Folder scripts and Source files from the upgrade folder to "Script Folder Path" ....Note source files must be inside the scripts folder
   d) Run bat file
      i) Enter Script Folder path [C:\Temp\SNOMED]:
      ii) Enter database server name/ip: [ie peidev1]
      iii) Enter database name: [ie rRIS_MU]
      iv) Use a trusted connection to log on to SQL Server:
      "N" means you will have to enter db [username] [password]
      "Y" means you have a trusted connection and will not have to enter [username][password]
      v) Do you wish to load SNOMED concept codes?
      "N" no files will be loaded into the l_snomed_concept table
      "Y" yes means l_snomed_concept table will be truncated and reloaded with the latest US concept codes
      Source File [sct2_Concept_Snapshot_US1000124_20140301.txt]
      vi) Do you wish to load SNOMED descriptions codes?
      "N" no files will be loaded into the l_snomed_description table
      "Y" yes means the l_snomed_description table will be truncated and reloaded with the latest US description codes
      Source File [sct2_Description_Snapshot-en_US1000124_20140301.txt]
      vii) Do you wish to load ICD9 to SNOMED mappings codes?
      "N" no files will be loaded into the l_snomed_icd9_map table
      "Y" yes means the l_snomed_icd9_map table will be truncated and reloaded with the latest US ICD9 to SNOMED mapping codes
      Source File [ICD9CM_SNOMED_MAP_1TO1_201312.txt and ICD9CM_SNOMED_MAP_1TOM_201312.txt]
      viii) Do you wish to load ICD10 to SNOMED mappings codes?

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

"N" no files will be loaded into the l_snomed_icd10_map table
"Y" yes means the l_snomed_icd10_map table will be truncated and reloaded with the latest US ICD10 to SNOMED mapping codes
Source File [xder2_iissscRefset_ExtendedMapSnapshot_US1000124_20131220.txt]

ix) Do you wish to load US zip codes?
"N" no files will be loaded into the z_zipCodesWithCounty table
"Y" yes means the z_zipCodesWithCounty table will be truncated and reloaded with the latest US zip codes
Source File [5-digit Commercial.csv]

**********
Note: the following files should be loaded once only with B43!
**********

x) Do you wish to load CMS codes?
"N" no files will be loaded into the s_mu_code table
"Y" yes means the s_mu_code table will be truncated and reloaded with the latest CMS codes
Source File [s_mu_code.txt]

xi) Do you wish to load HL7 support sets for CCDA?
"N" no files will be loaded into the l_hl7v3_voc_value_set table
"Y" yes means the l_hl7v3_voc_value_set table will be truncated and reloaded with the latest hl7v3_voc_value_set codes
Source File [l_hl7_voc_value_set.txt]

xii) Do you wish to load HL7 support codes for CCDA?
"N" no files will be loaded into the l_hl7v3_voc_value_code table
"Y" yes means the l_hl7v3_voc_value_code table will be truncated and reloaded with the latest l_hl7v3_voc_value_code codes
Source File [l_hl7_voc_value_code.txt]

## Citrix Bridge Installer

Copy and replace the eRAD RIS Citrix Bridge Installer.exe. Run the Installer on each workstation that will be using Citrix Bridge.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

# Customer Release Notes

## RIS Version 2

## Build 2016.2

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## TABLE OF CONTENTS

Table of Contents ..... 2

Purpose ..... 5

Intended Audience ..... 5

New Features and Enhancements ..... 6

General ..... 6

12999 – Create a Configurable Default Values Framework ..... 6

7532 – Allow referring physicians to opt out of Marketing Faxes ..... 6

9569 – Add Email Delivery Preference to Search Screen and Address Summary ..... 7

13090 – Capture Patient's County on the Patient Demographics Tab ..... 8

Reception ..... 9

13327 – Imagine Payment Portal Integration ..... 9

Insurance Eligibility & Verification ..... 15

13110 – Update the PAYERS.JSON URL to Resume Ability to Add New Payers ..... 15

13481 – Ability to Configure Eligibility Rules to Ignore the Amount to Collect for an Exam When Certain Insurance Carriers Are Included ..... 16

Technologist ..... 16

12911 – Create a Configuration Option to Default the Logged-In User as the Performing Technologist ..... 16

13157 – Support Tech Only Workflow Based on Procedure Code in Addition to Patient Class ..... 16

Radiologist ..... 17

13069 – Ability to Open Signed Reports in a Radiologist Layout as ReaD-Only ..... 17

PACS Integrations ..... 18

13351 – RIS/PACS Sync Enhancements ..... 18

12915 – GE Universal Viewer – Integrate based on Accession Number Instead of Study Instance UID ..... 20

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

Digital Forms ..... 20

12991 – Load Selected Answers from Previous Digital Form ..... 20

Work Lists ..... 21

7812 – Add a Sedation Required Flag to Work Lists ..... 21

12675 – Add Referring and Patient Type (Class) Columns to Billing Exception and Billing Confirmation Work Lists ..... 21

13613 – Limit the Scope of the IVT Work List to a Set of Sites ..... 22

EMR ..... 23

8158 – EMR Order Reassociation ..... 23

CD Import ..... 25

9511 – option to Retain the Institution Name from the CD or Substitute an Alternative Institution Name for CD Import ..... 25

Interfacing ..... 26

13228 – Receive and Update Billing Codes Via Interface ..... 26

11989 – Configurable XML File Drop ..... 27

Localization ..... 29

13409 – Support Spanish Language in eRAD RIS ..... 29

Platform ..... 29

12697 – Minimum Supported .NET Framework Version is now 4.5.2 ..... 29

13183 – Microsoft SQL Server 2008 R2 SP3 has been validated ..... 29

Code Stream ..... 30

RIS Release Version Numbers ..... 31

New Settings ..... 33

New access strings ..... 33

New system configuration settings ..... 33

Resolved Defects ..... 33

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

Resolved Defects for 2.2016.2 ..... 33

Known Limitations ..... 43

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## PURPOSE

This is the customer Release Notes document for eRAD RIS Version 2016.2.

Not every feature will be described in this document. Typically only features which can be visually demonstrated to the user are outlined here.

## INTENDED AUDIENCE

This document was created by the eRAD RIS Development team and Product Management team for eRAD RIS customers.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

# NEW FEATURES AND ENHANCEMENTS

## GENERAL

### 12999 – CREATE A CONFIGURABLE DEFAULT VALUES FRAMEWORK

eRAD RIS allows the Service Team to add validation rules to improve data integrity and meet custom business needs that are specific to a customer's individual needs. As an expansion of this capability, eRAD RIS now supports the specification of default values for various fields in RIS, based on a configurable set of criteria.

#### *Key Features*

- Almost any field can be selected from Patient, Visit, Order, or Study.
- A field that has a value will not be overwritten by a default value.
- Defaults can be optionally configured so that they apply to a single practice, a particular action undertaken by the user (e.g. StudyStarted), or so they only take effect once a study has reached a certain status in the workflow.
- A default value can be specified as a literal value, e.g. "42" or "routine screening," or it may be a special token value, e.g. $UserID, that will be replaced at runtime (see Special Default Value Tokens).
- Default values may be associated with one or more additional conditions that all must be met before the default will be applied.

**How to enable the Feature:**

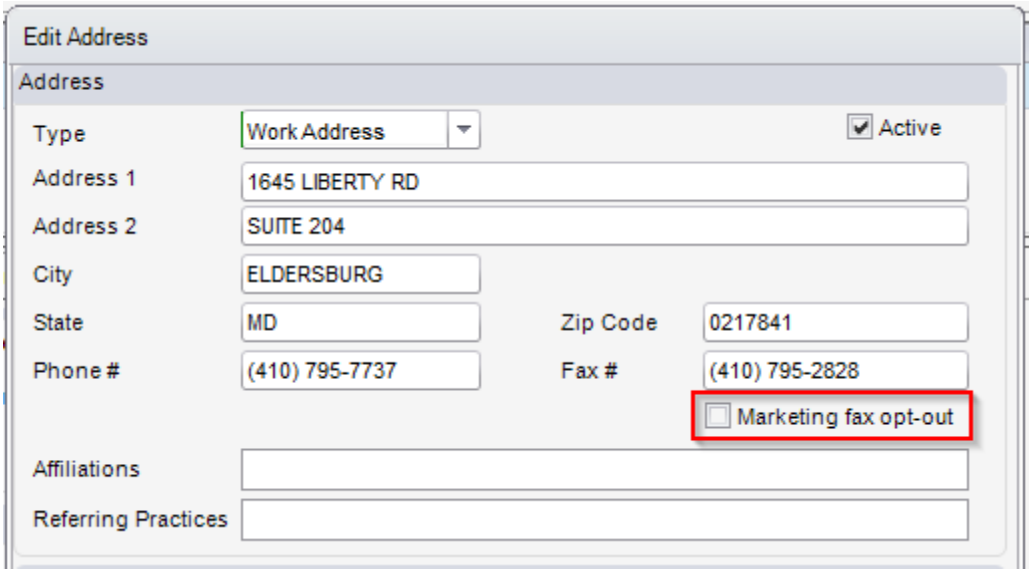
***Please contact the eRAD Support team for assistance.***

### 7532 – ALLOW REFERRING PHYSICIANS TO OPT OUT OF MARKETING FAXES

Some customers send mass faxes out to their referral base as a way of marketing new services or promotions. We have added a feature to indicate when a referring physician does not want to receive these faxes.

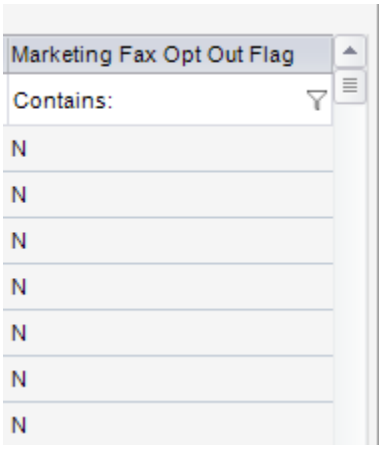
A "Marketing fax opt-out" checkbox has been added to the Personnel table for each address, so that a referring physician can choose to opt out of marketing faxes for one location, but still receive them for another if desired.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



If the referring physician has multiple addresses, checking the opt-out box for one address's fax number will prompt the user: "Do you wish to opt out for all fax numbers associated to this referring doctor?" Answering yes will check the opt-out box for all fax numbers.

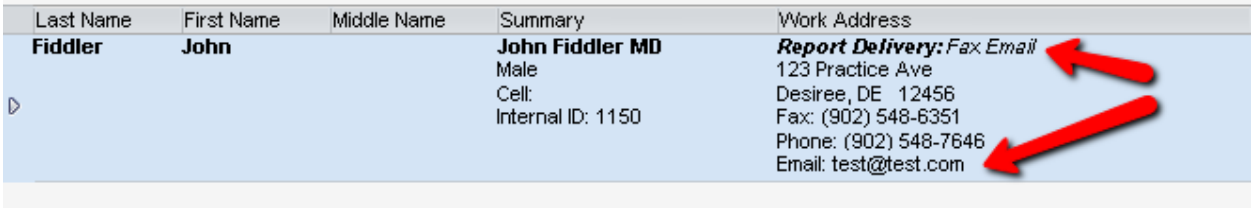
The Referring Addresses lookup also now has a new column to allow setting the flag on multiple address rows.



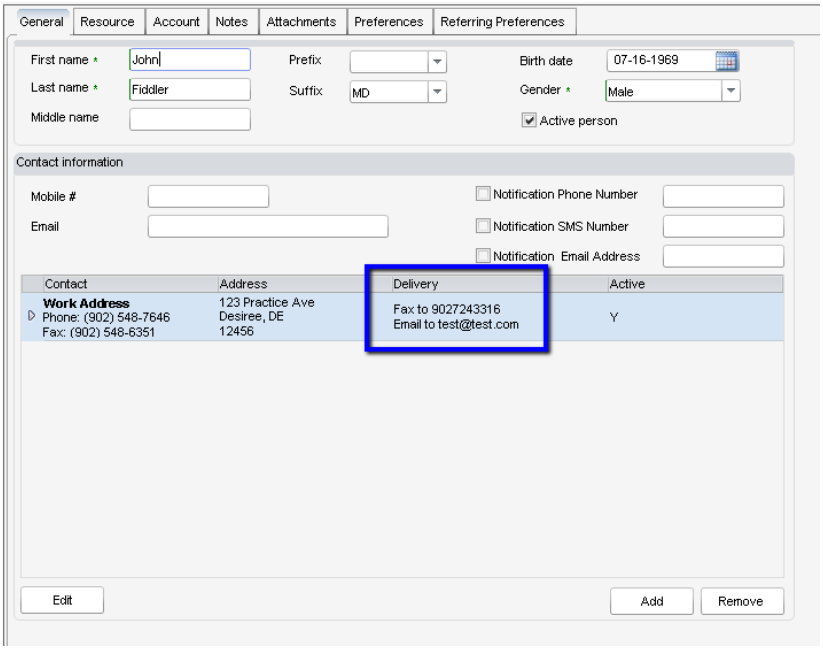
## 9569 – ADD EMAIL DELIVERY PREFERENCE TO SEARCH SCREEN AND ADDRESS SUMMARY

If a referring physician has a report delivery preference of Email, that information is now displayed in the address section on the internal person Search Results screen. Other delivery preferences will continue to be displayed as well.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



In addition, the Email delivery preference will be visible in the address summary grid within the Personnel editor, under the Delivery column.



## 13090 – CAPTURE PATIENT'S COUNTY ON THE PATIENT DEMOGRAPHICS TAB

In some markets, government regulations require the submission of data which includes the patient's county. This field has been added to the Patient tab in the address section. Entering the patient's zip code will automatically populate the patient's county, unless a particular zip code crosses multiple counties. In those cases, the user will need to manually select the county.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

The County field will be available by default. If desired, it can be hidden by utilizing a custom access string. It can be set as a required field using a validation rule. Please contact eRAD Support with either request.

## RECEPTION

### 13327 – IMAGINE PAYMENT PORTAL INTEGRATION

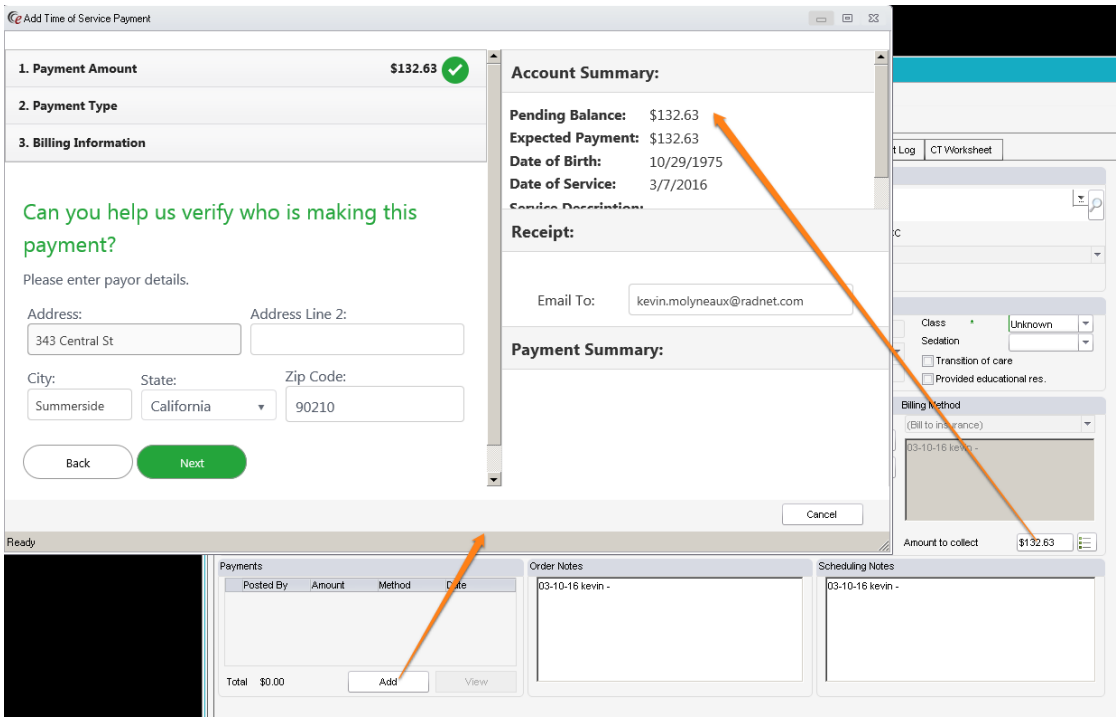
Customers using Imagine Billing now have the ability to seamlessly integrate with the Imagine Payment Portal for time of service payments. eRAD RIS will launch the Payment Portal without the need for the receptionist to re-type any patient information, which should reduce data entry errors and ensure we have the correct patient account.

The "Add" payments button will launch the patient's account in the Imagine Payment Portal in a new window. Within the Payment Portal session, the user can pay with multiple methods such as Cash and Credit Card in one transaction. When they submit the payment via Imagine, one receipt will print for all payments. A row for each payment type will be recorded in the RIS payment grid. Using the "right click / void" context menu in RIS, the user can void each part of the transaction by payment type without needing to relaunch the Payment Portal. Users will also be able to reprint receipts via the right click "Print Receipt" context menu option.

**Details:**

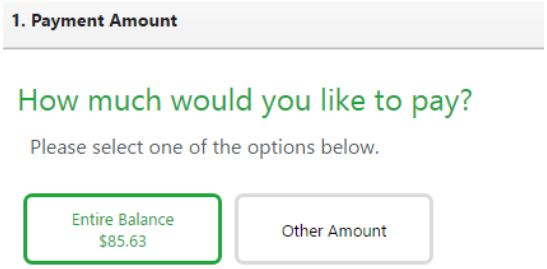
When the user clicks the "Add" payment button for a site that is configured to use the Imagine Payment Portal, the portal is displayed in the following pop-up.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



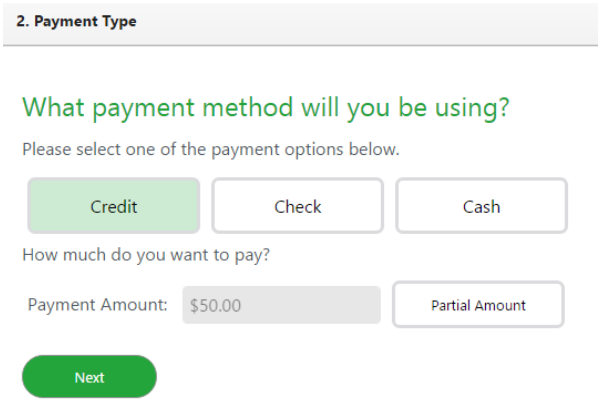
The Pending Balance is pre-populated with the remaining amount to collect value from eRAD RIS, and other key fields, such as email and mailing address, are also pre-populated.

First, the receptionist will be asked to choose the amount the patient is going to pay today. If Other Amount is selected, a payment less than the entire balance can be entered; however, the receptionist will not be allowed to complete the payment process if the amount entered here is not met when splitting the amount across multiple payment types (cash, credit cards, checks, etc.).



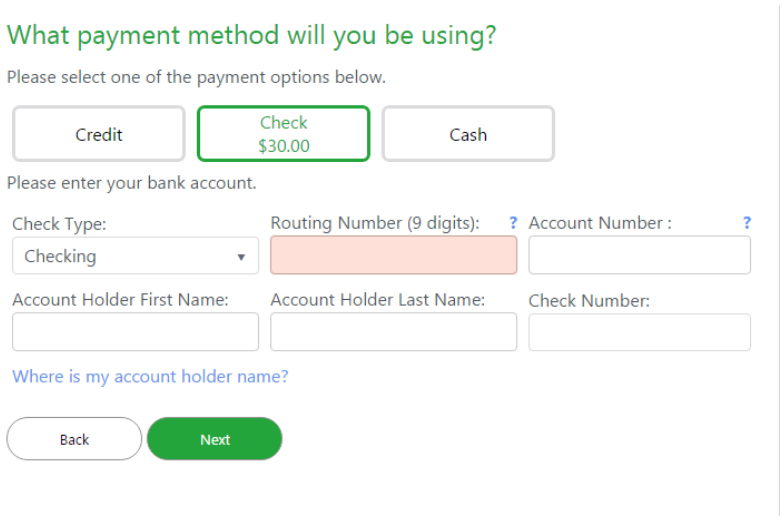
Next, the receptionist will select the type of payment. If the patient is splitting the payment amount between multiple payment methods, click the Partial Amount button to enter the amount for the first payment method.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



Credit Card and Check payment methods will require additional information.

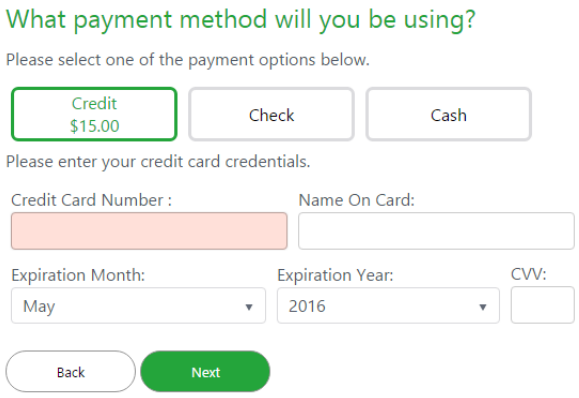
Check:



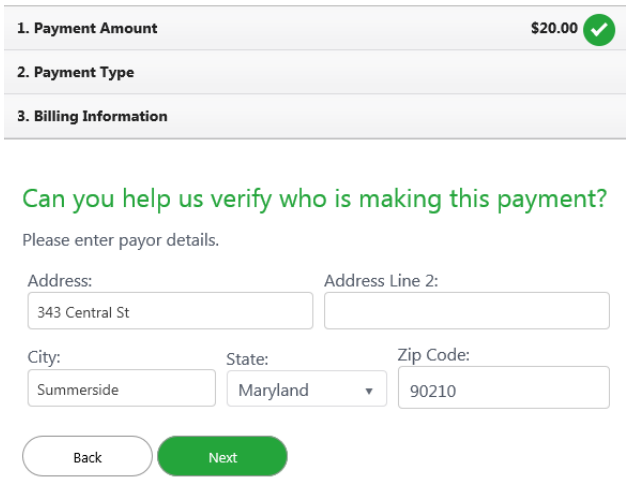
Hovering over the blue question marks on this screen will provide a hint to the user for locating the information on the check.

Credit:

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

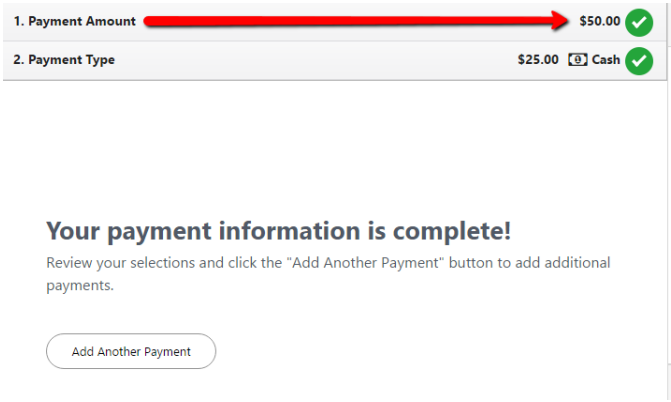


Billing address information will default to the Responsible Party's mailing address but if that address does not exist in RIS, it will default to the patient's address.

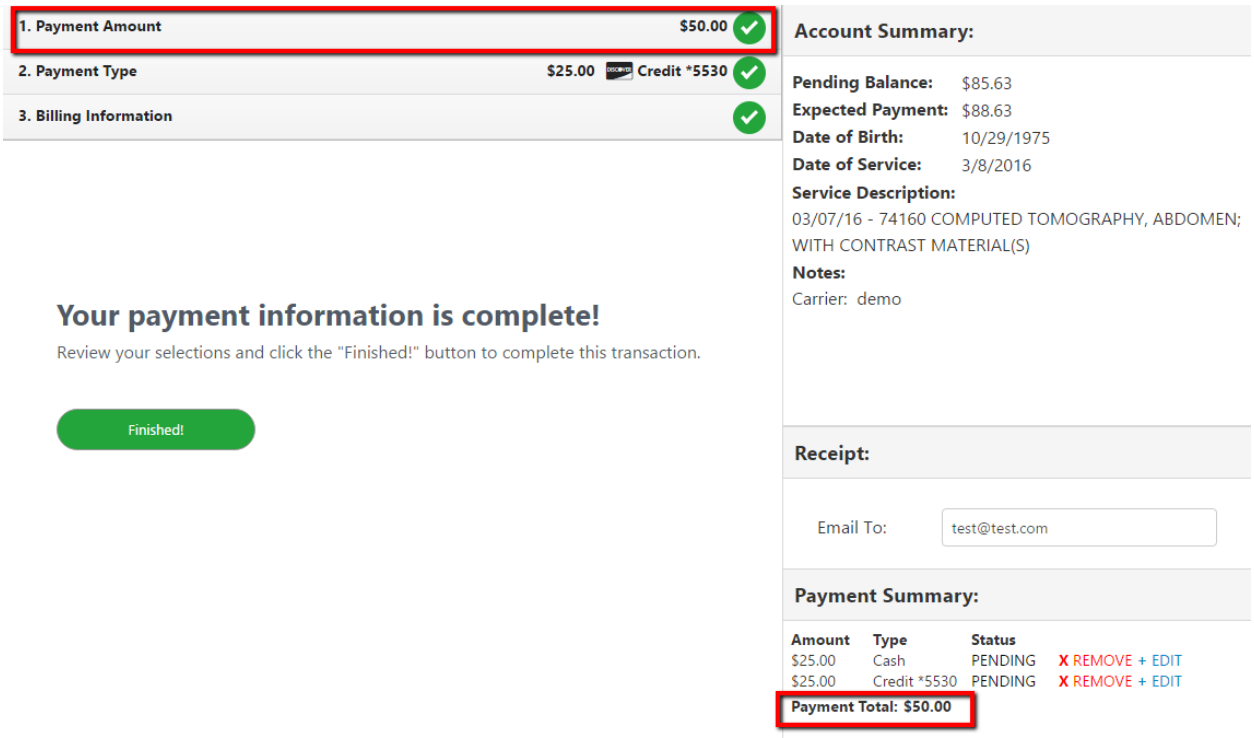


After completing the required information for the payment method, you will be asked to Add Another Payment if the total Payment Amount entered in step 1 has not been reached. (Remember, the Payment Amount can be less than the Pending Balance, but the payments must add up to this manually selected amount.)

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



When the Payment Amount has been reached (i.e. the Payment Amount and Payment Total match), the receptionist will be presented with a button labeled “Finished!” They must click this button to finalize the payment.

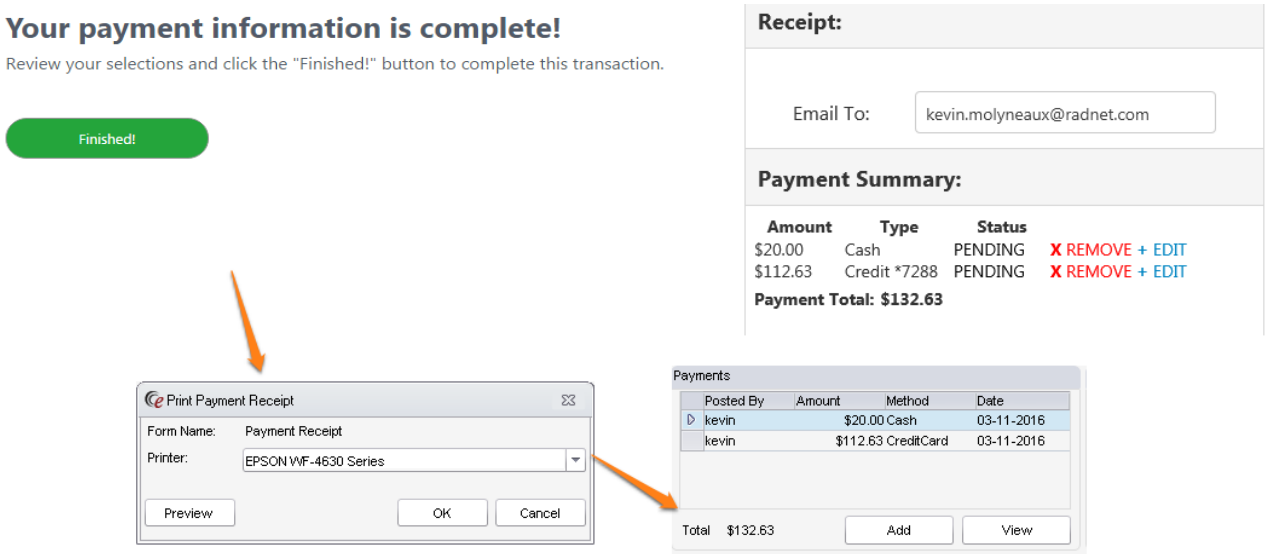


When the user clicks “Finished!” the print receipt dialog is displayed. At this moment, the transaction has been saved in both the Imagine and RIS databases.

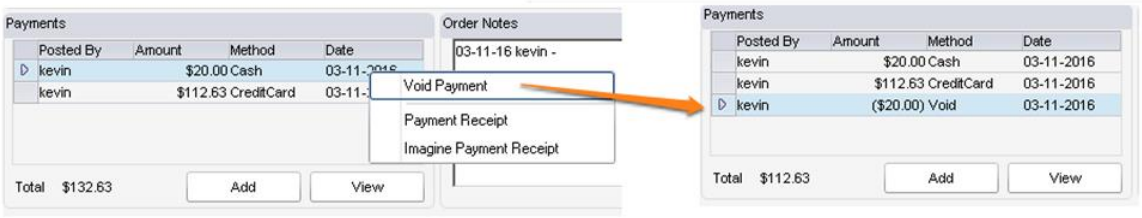
In the following workflow, two payments were collected in one Payment Portal session. There was a cash payment of $20 and the remaining balance was paid with the credit card. When the “Finished!” button is clicked, the “Print

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

Payment Receipt" dialog is presented and the user has the option to Preview or Print the RIS receipt, which details both amounts and includes the billing codes, insurance co-pay, and co-insurance details.

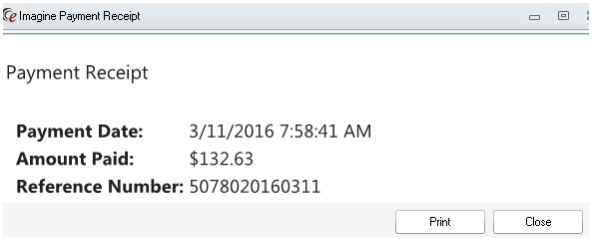


After the payment is made, staff can void portions of the payment. For example in the below image, the user is voiding only the cash portion of the payment ($20).



The Imagine receipt is stored as a PDF in the RIS system. Clicking on the "Imagine Payment Receipt" context menu item (as shown above) displays the PDF and gives the user the option to reprint. This receipt is similar to the receipt emailed to the customer's "Email To" address.

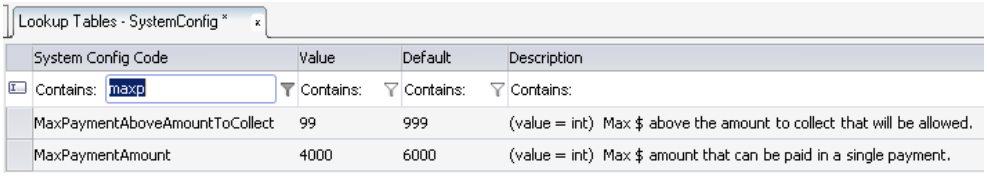
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



There is also a configuration option to display the Imagine Payment Receipt as part of the Payment Workflow. This workflow configuration setting might be helpful in the future when the Imagine Payment Portal supports payment plans. At that time, the receipt will likely contain details on the payment plan agreement.

Note regarding Amount to Collect limits:

The same configuration options exist for setting a maximum payment amount and a maximum payment above the amount to collect value as previously existed.



| System Config Code | Value | Default | Description |
|---|---|---|---|
| Contains: maxp | Contains: | Contains: | Contains: |
| MaxPaymentAboveAmountToCollect | 99 | 999 | (value = int) Max $ above the amount to collect that will be allowed. |
| MaxPaymentAmount | 4000 | 6000 | (value = int) Max $ amount that can be paid in a single payment. |

Just as before, users will be prevented from entering a collection amount greater than:

MaxPaymentAboveAmountToCollect + AmountToCollect

When the amount to collect is less than the MaxPaymentAmount, then a user will be prevented from entering an amount greater than MaxPaymentAmount.

**How to enable the Feature:**

***Please contact the eRAD Support team for assistance.***

**Important Note: This feature requires client to have IE browser version 9 or newer.**

## INSURANCE ELIGIBILITY & VERIFICATION

### 13110 – UPDATE THE PAYERS.JSON URL TO RESUME ABILITY TO ADD NEW PAYERS

For organizations using the Eligibility feature, eRAD RIS previously gave administrators the ability to pick Eligibility Payer IDs from a list generated from https://www.eligibleapi.com/resources/payers/eligibility.xml once per session. If you believe Eligible API has added newer entries, you need to restart the RIS application.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

Unfortunately, the list at the previous URL has been deprecated. We now retrieve the payer list from: https://account.eligible.com/rest#latest_payers.

### 13481 – ABILITY TO CONFIGURE ELIGIBILITY RULES TO IGNORE THE AMOUNT TO COLLECT FOR AN EXAM WHEN CERTAIN INSURANCE CARRIERS ARE INCLUDED

By default, we always collect the co-pay amount when multiple insurance carriers are active for an order. In some scenarios, money should not be collected if a particular insurance is selected as a secondary insurance. For example, if the patient's secondary insurance is Medicaid, the amount to collect should be 0.

A column titled "*Collect with Multiple Carriers Flag*" has been added to the Carrier lookup table.

| Carrier Code | Description | Collect With Multiple Carriers Flag |
|---|---|---|
| Contains: | Contains: medicaid | Contains: |
| Click here to add a new row | | |
| 1500 | MEDICAID | N |

If set to N, the Amount to Collect will be set to 0 if the insurance is active for an order, regardless of the insurance's priority (primary, secondary, tertiary, etc.).

## TECHNOLOGIST

### 12911 – CREATE A CONFIGURATION OPTION TO DEFAULT THE LOGGED-IN USER AS THE PERFORMING TECHNOLOGIST

The ability to default the performing technologist to the user who is currently logged into RIS has been requested for some time. With the addition of the Default Values framework, described later in this document, we now have the ability to configure this option when desired. If the logged in user is a Technologist and the Performing Technologist field is blank, the logged in user will be defaulted into the field and can be changed if needed.

**How to enable the Feature:**

***Please contact the eRAD Support team for assistance.***

### 13157 – SUPPORT TECH ONLY WORKFLOW BASED ON PROCEDURE CODE IN ADDITION TO PATIENT CLASS

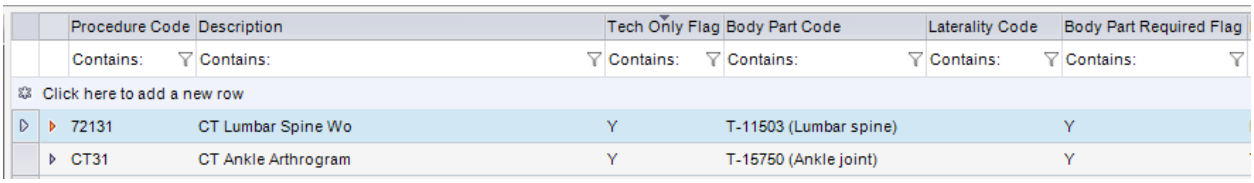
There are scenarios where an eRAD RIS customer is required to only perform a diagnostic procedure and not produce report of the findings. This is referred to as Tech Only workflow. Currently, this is determined by the Class of the patient on the visit. If the class is set to "Tech Only" and the procedure is completed by the

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

technologist, the study is not forwarded to the radiologist for dictation and the status changes to "Exam Done [Tech Only]."

We have expanded the Tech Only workflow to be based on Patient Class ***or*** Procedure Code.

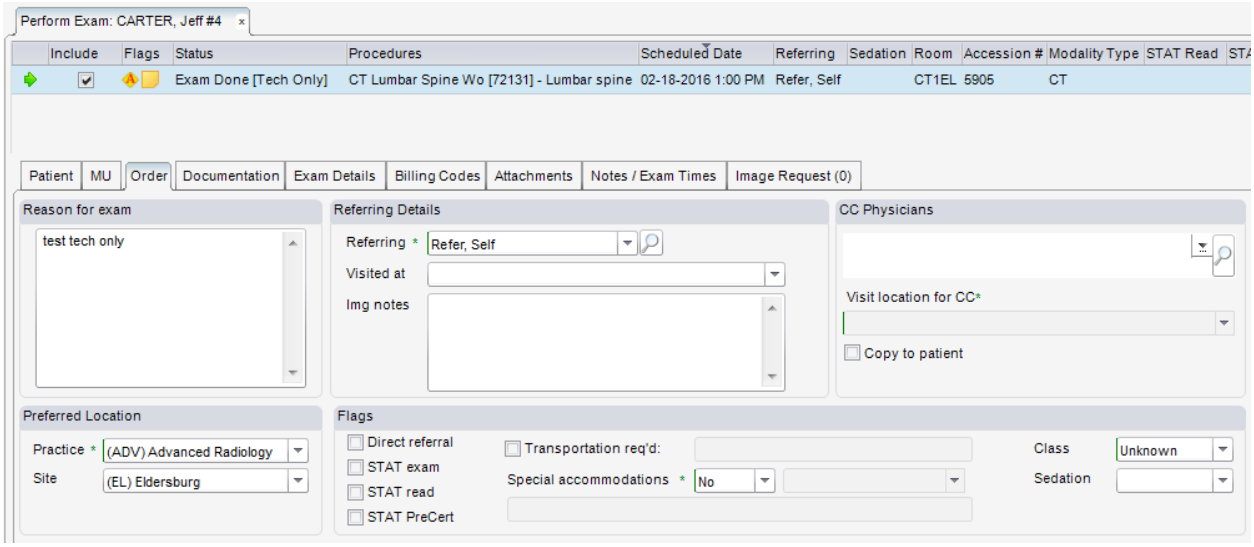
A new field has been added to the Procedure Code lookup called *Tech Only Flag* that defaults to 'N.'



| Procedure Code | Description | Tech Only Flag | Body Part Code | Laterality Code | Body Part Required Flag |
|---|---|---|---|---|---|
| Contains: | Contains: | Contains: | Contains: | Contains: | Contains: |
| Click here to add a new row | | | | | |
| 72131 | CT Lumbar Spine Wo | Y | T-11503 (Lumbar spine) | | Y |
| CT31 | CT Ankle Arthrogram | Y | T-15750 (Ankle joint) | | Y |

If the Tech Only Flag for a procedure code is set to 'Y,' the status will become Exam Done [Tech Only] instead of Exam Done when the procedure is marked as complete.

Upon completion of the exam, the system will check to determine if the patient class is set to 'Tech Only' **OR** if the procedure code for the performed study has the Tech Only Flag set to 'Y.' In either case, the status will advance to Exam Done [Tech Only] and the exam will not fall to the Pending Dictation WL.



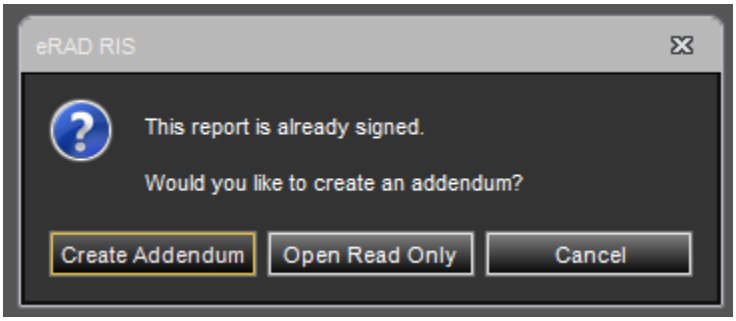
## RADIOLOGIST

### 13069 – ABILITY TO OPEN SIGNED REPORTS IN A RADIOLOGIST LAYOUT AS READ-ONLY

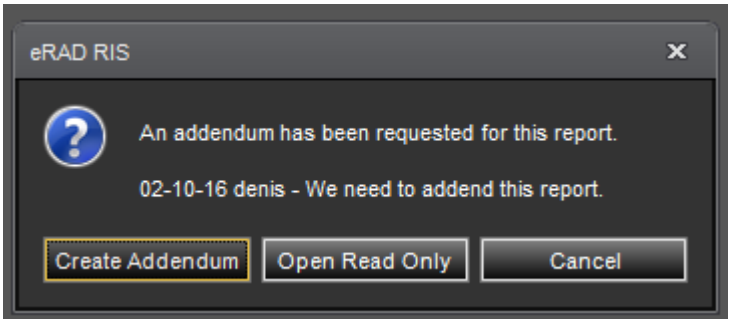
Radiologists sometimes need to look at a prior exam outside of the normal dictation workflow, such as when a referring physician calls to discuss a case. There is a desire to be able to open the case in the Radiologist Layout format, so that all of the data is at their fingertips in the panels to which they are accustomed.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

Now when the radiologist opens a signed report, we have added an option to the Addendum dialog box to open in read only mode.



The Open Read Only option is also available when an addendum has already been requested.



When the screen opens in read only mode, it operates in the same fashion as our existing read only mode that is used when the study is locked or dictated by someone else.

Outstanding issue: When reading in PowerScribe 360, the "Create Addendum" prompt is suppressed in eRAD RIS because PowerScribe issues its own prompt. Therefore, the option to Open Read Only would only be available for PowerScribe users when an addendum has been requested, which is shown in eRAD RIS due to the additional notes about the addendum request. This will be addressed in a future release.

## PACS INTEGRATIONS

### 13351 – RIS/PACS SYNC ENHANCEMENTS

In order to improve the process of keeping RIS and PACS in sync, there are times when RIS will need to wait for PACS and block the user from performing certain actions until the PACS has begun the process of opening the current patient's images. This is accomplished by displaying a message dialog, and disabling the main page on the RIS application under certain circumstances. As a result, RIS will not move faster than PACS creating a situation where the radiologist may be looking at a previous patient's images while reporting on the current patient in RIS.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

There are 3 new dialog boxes which provide feedback and guide/throttle the workflow in order to keep things synchronized. Efforts have been made to decrease the amount of time a radiologist would see or need to interact with the messages, while at the same time reducing risk. For example, as soon as the current patient's images have *started* to load in PACS, we allow the user to move forward in RIS, instead of waiting until the images are completely loaded.

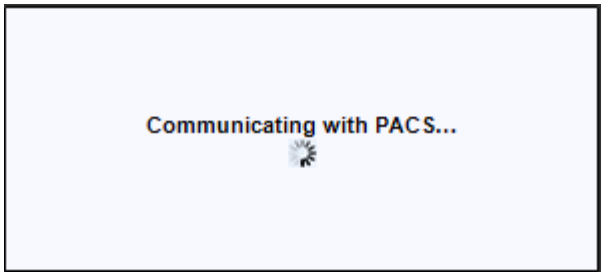
## *Dialog boxes used in RIS PACS Synchronization*

**Communicating with PACS**

This dialog will show when PACS is busy on another exam and RIS has moved on to a new one. If PACS catches up before RIS is finished loading the reporting screen, then this dialog will not be displayed. If PACS is still busy closing or opening a previous exam, the message will be displayed to the radiologist to indicate that the process of updating the PACS images to match the current RIS exam is still underway. When the message does display, it will close on its own as soon as PACS has progressed to opening the current exam, even if the images are still loading.

Examples:

- RIS has a study open, and is waiting for PACS to close the previous study and start opening the current one.
- RIS opened a study that should not show images, it will wait for the previous study to close in PACS.

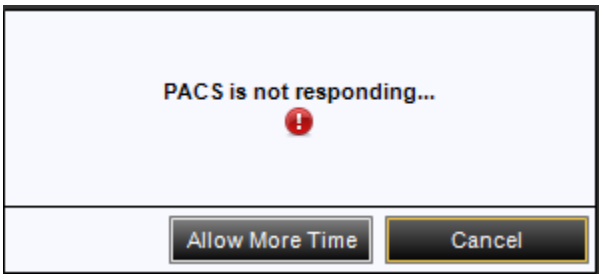


**PACS is not responding**

This dialog will be shown after the "Communicating with PACS" dialog has been displayed for 45 seconds and PACS has not yet begun the process of opening the current exam. If it takes PACS more than 45 seconds to finish working on previous exams and start opening the current one, then this will be shown and user should select "Allow more time" if they believe PACS simply is taking longer to finish. If the user believes PACS is no longer responding, they should select "Cancel" and take appropriate actions to rectify the problem.

Examples:

- PACS took 50 seconds to finish opening the previous study, and another 10 seconds to close it. User should "Allow more time."
- PACS is having problems connecting to the server. User should "Cancel."



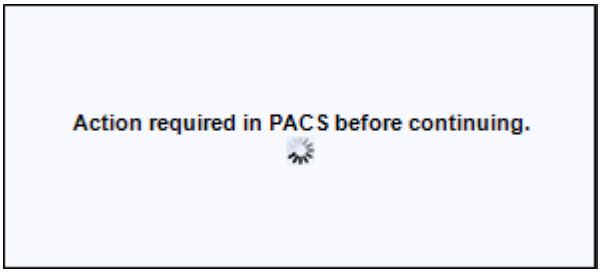
**Action required in PACS before continuing**

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

This dialog is to prevent RIS from issuing more requests to PACS while PACS is waiting for user input on one of its own dialogs. When PACS is waiting for the user to "Break a lock or Open read-only," for example, and RIS attempts to issue a new open request, this dialog will be shown until the action has been taken in PACS. Once that happens this dialog will close, and the new open request will be sent over to PACS.

Examples:

- Radiologist skips to the next exam in RIS, while PACS has an open dialog box regarding breaking a lock in PACS.
- PACS opens an exam and displays an error prompt, while radiologist skips to the next exam in RIS.



Special Note for GE PACS-IW: When multiple PACS windows are open, it is possible that the user might be left with the wrong images up. The described synchronization will only work properly if the user only opens one set of images at a time. This is no different than it would have been before. If the radiologist opens a case that cannot or should not display images (signing workflow for example), PACS will close its last set of images, but if there were more open, they will remain open and will be visible.

### 12915 – GE UNIVERSAL VIEWER – INTEGRATE BASED ON ACCESSION NUMBER INSTEAD OF STUDY INSTANCE UID

A customer requested that integration between eRAD RIS and GE Universal Viewer occur by passing the Accession number instead of the Study Instance UID. This is now possible.

## DIGITAL FORMS

### 12991 – LOAD SELECTED ANSWERS FROM PREVIOUS DIGITAL FORM

In cases where a patient has more than one exam that requires a specific Digital Form, we may not want to prompt the user to re-enter all of the answers from scratch. In the future, we may allow Digital Forms to be linked to the patient or order level, but for the current release, we have created a feature to optionally load answers from *recent* versions of the same form and use those answers as defaults.

The time frame for "recent forms" is defined by a new System Configuration setting labeled '*DigitalFormsNumberOfDaysToPullForward*' with a default of 2 days. This can be adjusted as desired.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

A new attribute was added to Digital Forms to enable this functionality on a form by form basis. If the attribute is *not* turned on, there should be no change in the behavior of Digital Forms. If the attribute is on, we will load the most recent answers for the same patient and form, provided any were completed within the configured time frame.

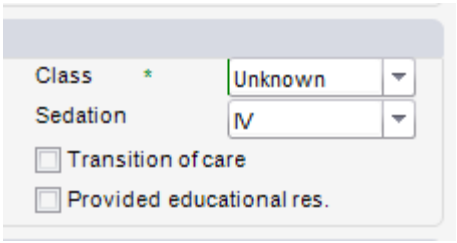
This feature most likely should not be used for Report Assistant Digital Forms that will be populated by the Radiologist as part of the report creation process.

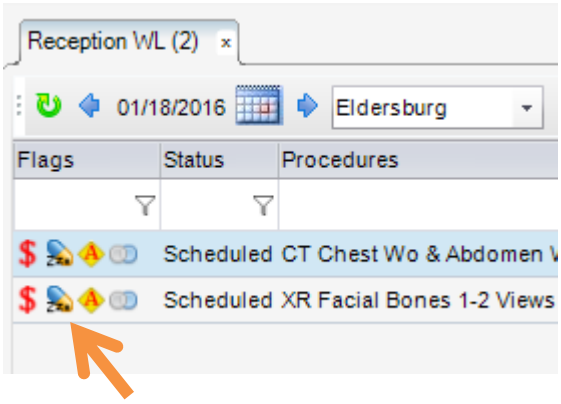
Loading previous answers does not currently work during Scheduling or Walk In workflow. It requires a study that already exists in the database.

## WORK LISTS

### 7812 – ADD A SEDATION REQUIRED FLAG TO WORK LISTS

When Sedation is indicated via the Sedation drop-down on the Order tab, a new flag will appear on the work lists.





The flag does not change depending on the type of sedation, but is intended to draw the user's attention to the fact that some type of sedation is required. It is possible to filter the work list by this flag, if it is desirable to create a Custom View for Sedation patients.

If the user then resets the Sedation drop-down back to null (no option chosen), the flag will be removed.

### 12675 – ADD REFERRING AND PATIENT TYPE (CLASS) COLUMNS TO BILLING EXCEPTION AND BILLING CONFIRMATION WORK LISTS

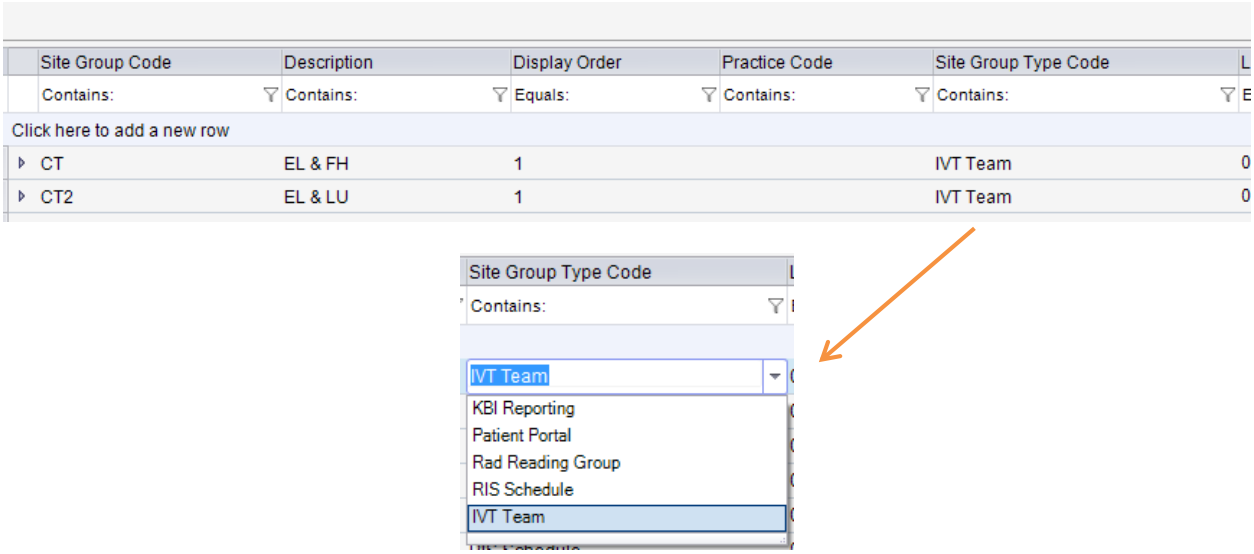
Two new columns were made available on the Billing Exceptions and Billing Confirmation work lists: Referring and Patient Type (Class).

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

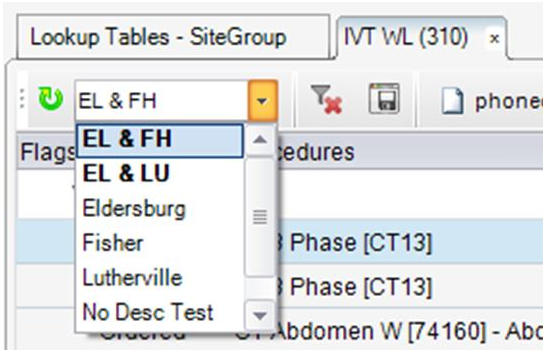
## 13613 – LIMIT THE SCOPE OF THE IVT WORK LIST TO A SET OF SITES

In order to improve IVT work list performance, the IVT work list was constrained to reduce the use of practice-wide work list filters. Several work lists in RIS, such as the Reception WL, have a drop-down list that allows the user to specify a single site; this functionality was enhanced for IVT to allow the user to specify a collection of sites through the use of Site Groups.

Site Groups are a collection of sites that may or may not exist within a single practice. A site group can be configured with a site group type. There is now an *IVT Team* site group type.

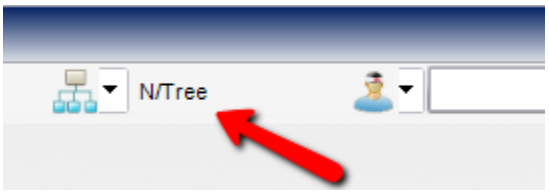


Any site group with a type of IVT Team is eligible to appear in the top left portion of the IVT work list tab. Site groups will be shown in bold above a list of individual sites for the practice currently selected in the Organization Picker.



The list of site groups is filtered to show only those relevant to the current user for their current "Org Picker" selection in the top right portion of RIS.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



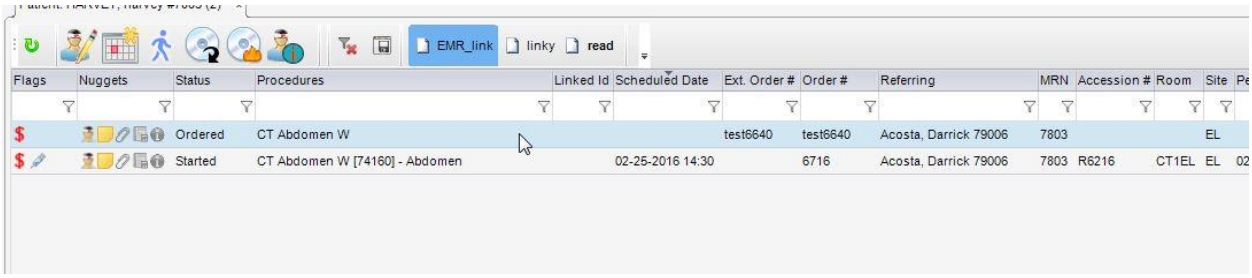
Only the IVT Team site groups that contain the currently selected site or at least one site from within the current practice will be included. There is also an additional filter to ensure that the user is not presented with site groups that contain sites that belong to practices to which the user has not been granted access in the Personnel Editor.

The list of sites and site groups will change as the user changes their currently selected filter in the Org Picker. The user's selected site or site group should be persisted and reloaded from one login session to the next. At this time, the Site Group work list functionality is only available for the IVT work list.

## EMR

### 8158 – EMR ORDER REASSOCIATION

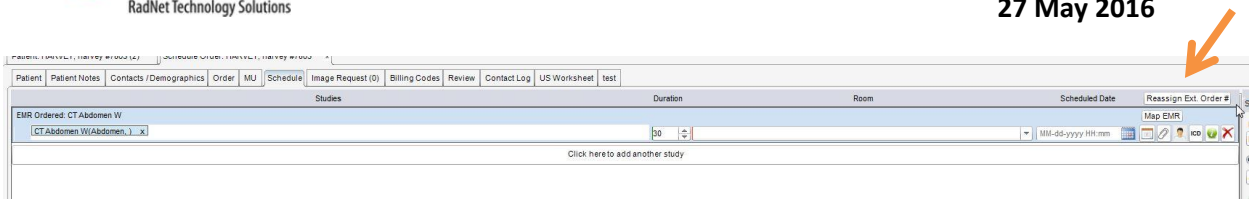
Sometimes exams for EMRs are scheduled without using the electronic order, whether this is accidental or the electronic order was received after the patient called to schedule or register for the exam.



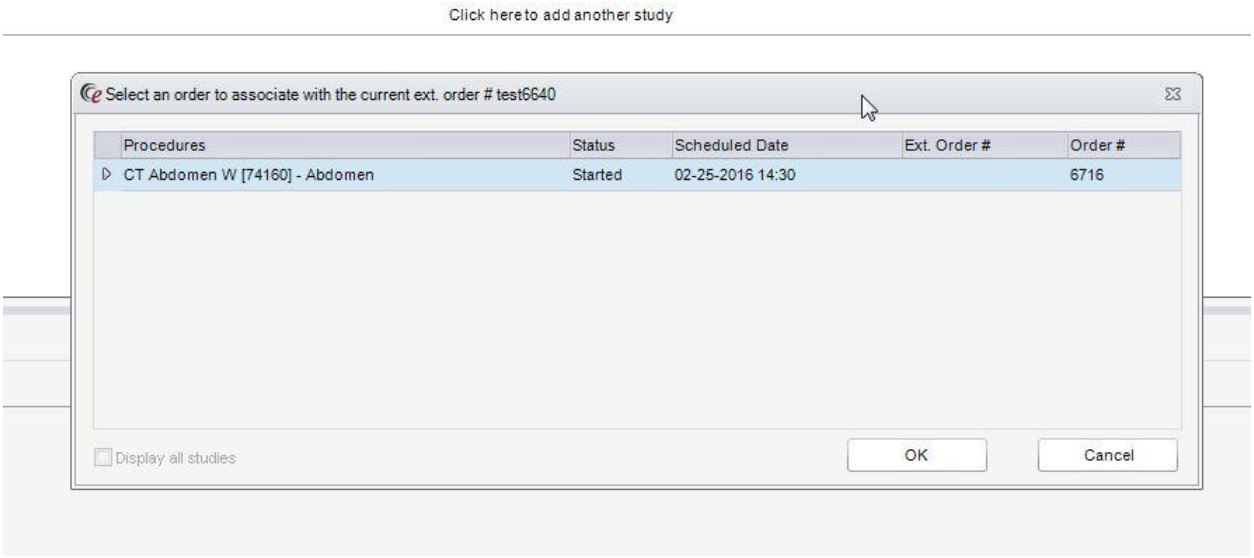
Until now, the process for associating the EMR's external order number and other data from the EMR order after the fact has been laborious and inefficient. eRAD RIS now has the ability to reassign the external order #, issuer, and associated scanned documents to an internal order, without overriding any of the data fields that have already been filled in for the internal order. The external order will be cancelled after it has been copied over to the internal order.

Where the RIS previously displayed the "Import" button on the scheduling screen for EMR orders, we will now display the "Reassign Ext. Order" button.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

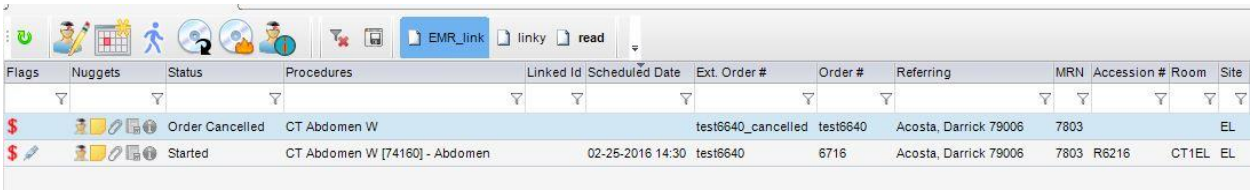


This will bring up the list of orders to choose from as it did before; however it will not have a Next button to load the Import Studies mapping screen, but instead will simply have an OK submission button.



Upon selecting an order and submitting, the selected order will assume the current open EMR order's external order #, issuer and scanned documents.

The original EMR order's placer_order_number will be left intact but appended with "_cancelled." This order is then cancelled.



The report for the exam will now flow to the EMR upon signature as usual.

EMR and non-EMR studies can still be moved to different orders with the Patient Folder right-click menu item Import Studies. This functionality has been left intact and allows for moving exams between orders as needed.

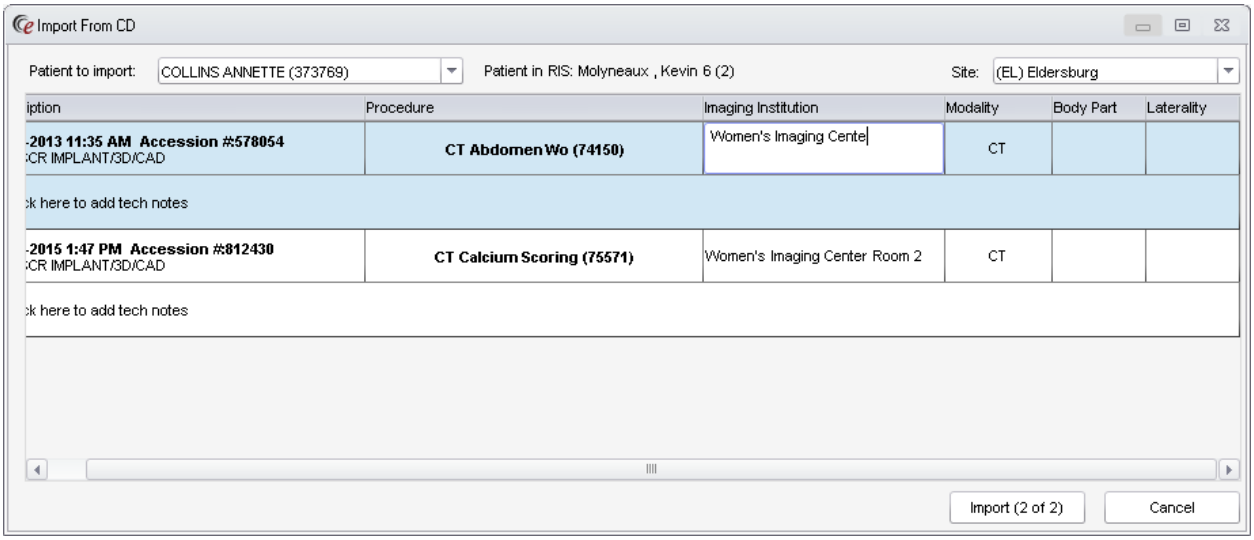
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

# CD IMPORT

## 9511 – OPTION TO RETAIN THE INSTITUTION NAME FROM THE CD OR SUBSTITUTE AN ALTERNATIVE INSTITUTION NAME FOR CD IMPORT

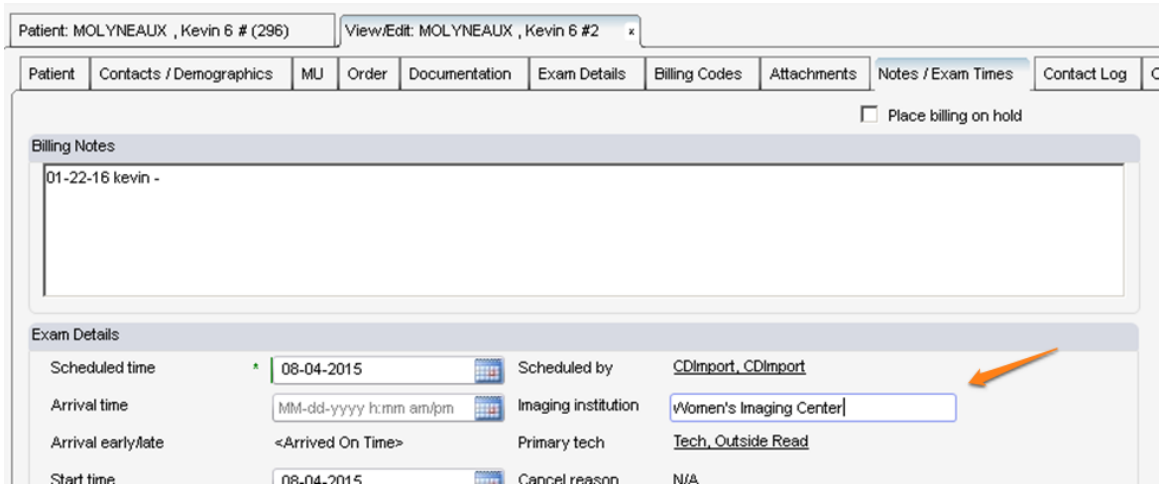
When importing CDs via eRAD RIS, clients have requested the ability to import the Institution Name from the DICOM data on the CD or have the option to coerce their own Institution Name. This allows for more flexibility in how the exams and images are labeled, and allows the radiologist to easily identify where a prior exam was performed when creating the report.

We now take the DICOM field *institution_name* from the CD and store it in the database field *c_study.cd_import_institution_name*. When importing a CD, the institution name will show for each study, as there might be a different institution name per study. In eRAD RIS, the field will always be identified as Imaging Institution as shown in the following:

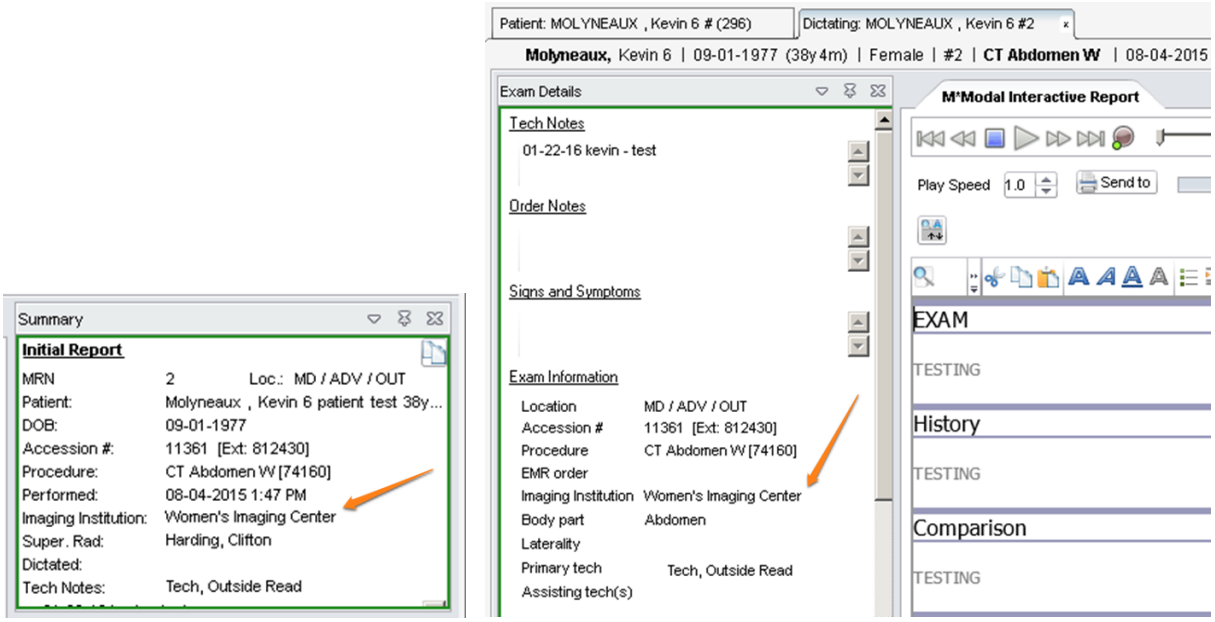


The user can click on the Imaging Institution and edit the contents as shown in the above. Users can also modify the Imaging Institution on the "Notes/ Exam Times" tab after import, by opening in View/Edit mode. The Imaging Institution will only display if the type of exam is a CD Import, which is any study "scheduled" by the user "CDImport." The CD Import is a user account (typically inactive), which must be created to perform a CD Import.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



Radiologists can see the Imaging Institution in the Summary and Exam Details panels. The Imaging Institution field will only display if the exam was imported via the eRAD RIS CD Import tool.



## INTERFACING

### 13228 – RECEIVE AND UPDATE BILLING CODES VIA INTERFACE

An enhancement was requested to allow a customer interface to be able to send and update billing codes and units.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

These requirements were also requested:

- If update was sent to RIS from the third party system, RIS should not add a billing code to a study (accession #) that was cancelled in RIS.
- If update was sent to RIS from the third party system, the RIS should not add a billing code that is already exists in the study (accession #).

To meet these needs, the external interface service was enhanced to receive and process c_study_item_certification updates.

The message sent to the service can define if updates should or should not be applied to Cancelled studies.

The message can also specify whether the billing codes it contains should replace what is currently in RIS and override the default logic applied based on the procedure code to billing code rules. Any billing codes that should have been added based on the configuration will be added as inactive billing codes.

The schema for the External Interface Service has been updated to include the definition of these two attributes.

The logic that adds missing billing codes to studies based on the procedure code configuration was also updated to not take effect for studies in Cancelled, Discontinued, or Void statuses.

If a message is sent with a c_study_item_certification node, the system will add or update the data provided.

Two new attributes can be applied to the Study node to provide some logic to control the updates.

- update_sic_on_cancelled_study - (Y or N) if attribute is present and set to N, the system will not update the c_study_item_certification data if the studies status is cancelled. Otherwise, updates will happen as normal.
- override_sic – (Y or N) if attribute is present and set to Y, the system will apply the insert/update of the c_study_item_certification data provided in the message and will not allow the automatic addition of the c_study_item_certification data based on procedure code configuration. It will also mark any currently active billing codes inactive if they are not contained in the message.

## 11989 – CONFIGURABLE XML FILE DROP

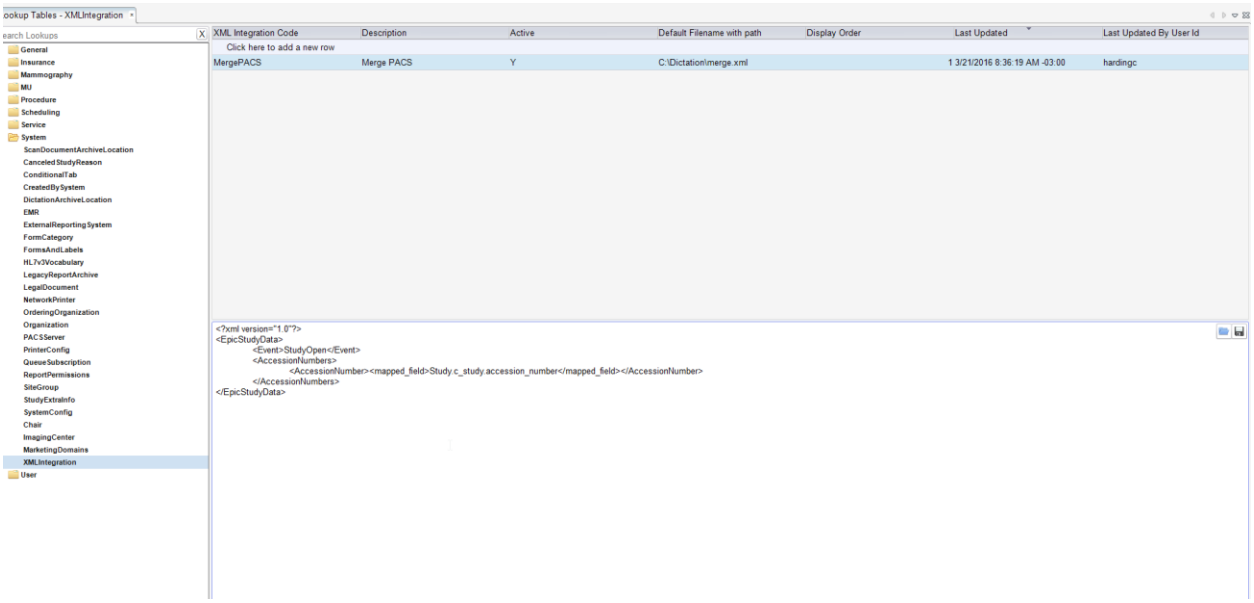
eRAD RIS now has the ability to configure XML files and allow users to write them out when opening or focusing a reporting tab. This functionality was needed for Merge PACS integration, but may be utilized for other possible third party product integrations.

**Administration**

The XML files are stored in a new lookup table, "*XML Integration*," that allows administrators to add, modify or delete entries. Access to the lookup is controlled by the new access string: *Config.LookupEditor.XMLIntegration*.

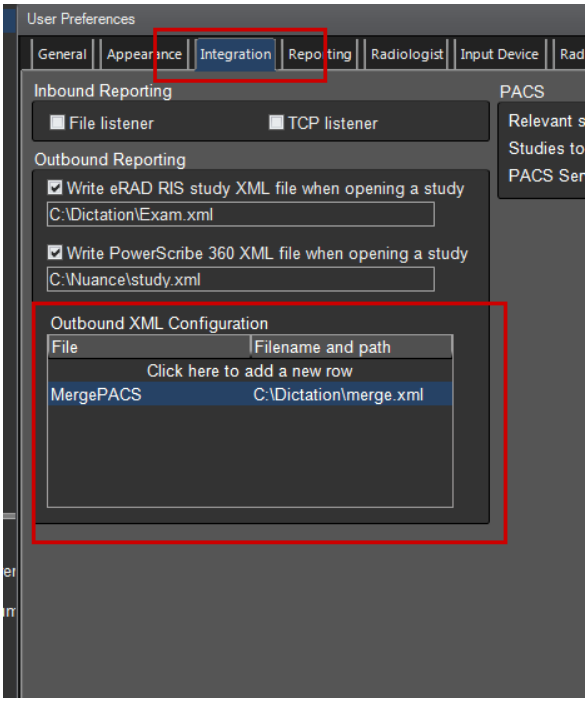
***Please contact the eRAD Support team for assistance with XML file drops.***

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



**User preferences**

Configuration of which XML file(s) should be written when focusing or opening a reporting tab is done in the user preference screen. This XML integration grid contains a list of files to be written when opening a study. Each file references a lookup value and a path to which it will write. It will assume the default path but allows overriding. The same XML file can be written multiple times.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## LOCALIZATION

### 13409 – SUPPORT SPANISH LANGUAGE IN ERAD RIS

Resource files have been added for Spanish language localization. Note that configuration screens have not been localized.

## PLATFORM

### 12697 – MINIMUM SUPPORTED .NET FRAMEWORK VERSION IS NOW 4.5.2

As previously communicated, Microsoft has ended support for .NET framework versions below 4.5.2 and we are raising the minimum requirement for eRAD RIS in response. A .NET folder with the installer for 4.5.2 will be provided with the upgrade.

### 13183 – MICROSOFT SQL SERVER 2008 R2 SP3 HAS BEEN VALIDATED

eRAD RIS has been validated with Microsoft SQL Server 2008 R2 SP3.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## CODE STREAM

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## RIS RELEASE VERSION NUMBERS

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Notes |
|---|---|---|---|---|---|---|
| 43.1 | - | 2.43.1.0.25850(3GB) | 2.43.0.0.23171 | 2.43.1.0.25850 | 2.43.1.0.25771 | GUI.zip Web Service and DB Updates |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

# NEW SETTINGS

## NEW ACCESS STRINGS

| Setting | Default | Purpose |
|---|---|---|
| Config.LookupEditor.XMLIntegration | None | Access to the XML Integration lookup |

## NEW SYSTEM CONFIGURATION SETTINGS

| Setting | Default | Purpose |
|---|---|---|
| DigitalFormsNumberOfDaysToPullForward | 2 | Number of days considered “recent” for carrying forward digital form answers on configured forms |
| DisplayImaginePaymentPortalReceiptInWorkflow | FALSE | To determine whether Imagine version of Payment receipt will print if using Imagine Payment Portal |
| ImaginePaymentPortalAPIURL | | Provided by Imagine Software if applicable |
| ImaginePaymentPortalClientID | | Provided by Imagine Software if applicable |
| ImaginePaymentPortalDataset | | Provided by Imagine Software if applicable |
| ImaginePaymentPortalPassword | | Provided by Imagine Software if applicable |
| ImaginePaymentPortalURL | | Provided by Imagine Software if applicable |
| RISSystemID | | For identifying RIS System for Imagine Payment Portal |

# RESOLVED DEFECTS

## RESOLVED DEFECTS FOR 2.2016.2

Bugs and support issues resolved in build 2.2016.2. The extract is taken from Redmine bug tracking system and only displays defects resolved in 2.2016.2.

| Bug # | Category | Subject |
|---|---|---|

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| 12993 | Admin-Monitoring/Alerts | Character limit is too small for 'External Notification Email Address' in the Message Group table |
| 7456 | All Workflows | Changing the procedure to a non-hold code procedure from the patient folder will not push study to pending PACS Correction WL |
| 11471 | Archiving | Work lists that have audio length and audio size columns are displaying a blank values |
| 13584 | CD Import | CD Import intermittently throws an error - The issue is with UTF8 encoded files and the PDU reader defaulting to ASCII |
| 13181 | Digital Forms | A misconfigured digital form can cause an error |
| 13222 | Digital Forms | A required field in a digital form can be left empty and saved |
| 13009 | Digital Forms | An error can be thrown on reschedule when a digital form has not yet loaded |
| 12587 | Digital Forms | Digital Forms editor needs a logout option |
| 13216 | Digital Forms | Parent question field is not updating in the digital form editor |
| 12959 | Digital Forms | When creating rulesets a check box needs text in order to work |
| 13719 | Digital Forms | Unable to load digital form in editor due to 'Undefined variable' error |
| 12835 | eRAD Editor | An extra character is appended to a field |
| 13056 | eRAD Editor | When in read only mode the user can still insert macros and templates into report |
| 12910 | Exam Search | Exam Search screen is very slow to load |
| 13075 | Finding Followup | Finding/Follow up tool window should show if it has data |
| 11842 | Insurance Eligibility | The insurance eligibility manager occasionally throws a null reference error |
| 13416 | Insurance Eligibility | Changing billing codes is not updating the amount to |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| | | collect field on self-pay |
| 13002 | Insurance Eligibility | Co-insurance portion field issue in stored procedure c_bi_eligibility_payment_receipt |
| 13016 | Insurance Eligibility | Eligibility and missing units on study_item_certification can cause error on save |
| 13594 | Insurance Eligibility | Eligibility items staying on the IVT work list |
| 12292 | Insurance Eligibility | Failed queries to Medicare are causing Denial Of Service trigger in their system |
| 13415 | Insurance Eligibility | If the initial insurance is not valid and the user overrides to make it approved, the pricing is ignored |
| 13528 | Insurance Eligibility | Intermittent exception occurs which prevents re-submitting insurance |
| 13550 | Insurance Eligibility | The insurance eligibility service queries too often |
| 12803 | Insurance Eligibility | The insurance eligibility portal password is not getting used until a site is selected |
| 13122 | Insurance Eligibility | Usual & Customary field from NPD can return as a string and prevent saving in RIS |
| 13218 | Insurance Management | When saving a payment the max payment amount to collect is not displayed in error message |
| 13038 | Insurance Management | When using insurance eligibility and the last name contains a single quote character, the details screen will not display |
| 9546 | IVT / PreCert | PreCert status doesn't update on IVT WL when a detail is changed on the registration/scheduling/walk-in |
| 13349 | Linked Reporting | Discontinued non-primary exams re-activate and adopt their primary status on status change to primary study |
| 13290 | Linked Reporting | Intermittent null reference error in work lists |
| 13053 | Linked Reporting | Linked studies dialog checkboxes should be disabled |
| 13067 | Linked Reporting | Linked studies dialog OK button should be disabled |
| 13021 | Linked Reporting | Patient Folder control in reporting screen causing a CPU spike |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| 12970 | Linked Reporting | ReportCreated action was created and sent for a cancelled linked study |
| 13405 | Linked Reporting | The 'Link Studies' right click menu should not show on orders in patient history |
| 13066 | Linked Reporting | Unable to dictate on linked studies Pending PACS Correction |
| 13164 | Localization | Correct Hebrew text |
| 12685 | Localization | Character (") needs to be supported within the patient notes and other fields |
| 13156 | Localization | Hebrew localization for Digital Forms and Selected Digital Forms |
| 13337 | Localization | Integration messages are not aligned properly when in RTL mode |
| 13308 | Localization | Normals Browser group headers left aligned in right to left mode |
| 12894 | Mammography | Biopsy screen has not been localized |
| 13229 | Mammography | BI-RADS picker not showing on reporting screen |
| 12892 | Mammography | Tab order is incorrect on the mammo biopsy screen for the create reminder button |
| 13286 | Meaningful Use | Error occurs upon accessing the Labwork Advised WL |
| 8164 | Mgt Reports | Radiologist Productivity by User - formatting issues in report |
| 12925 | MModal | Intermittent 'Get Data/DisplayData' error when editor is M*Modal and the user attempts to dictate an exam when 'Insert template with markers' turned on |
| 13336 | PACS (eRAD) Int - RIS only | Disabling PACS integration when images are already shown on PACS will leave the current images open |
| 13497 | PACS (eRAD) Int - RIS only | PACS integration - Unable to enter PACS password |
| 13304 | PACS (eRAD) Int - RIS only | Prefetch studies engine is not logging which studies the RIS is attempting to fetch |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| 13302 | PACS (eRAD) Int - RIS only | Prefetch studies is occurring even when PACS integration is disabled |
| 12505 | PACS (eRAD) Integration | When PACS integrated and close studies using the X on tab, the last study's images may remain open |
| 13307 | PACS (eRAD) Integration | PACS loaded status column in the mini patient folder in dictation window is not displaying correct results |
| 12914 | PACS (Non - eRAD) Integration | GE Universal Viewer requires a new parameter to tell it not to load priors automatically |
| 12067 | PACS (Non - eRAD) Integration | GE Universal Viewer requires a new parameter to tell it stream instead of fetch from archive |
| 13752 | PACS (Non - eRAD) Integration | Intermittent PACS error when opening case for signature. |
| 13384 | PACS (Non - eRAD) Integration | IW PACS images can get out of sync with RIS (under very specific condition) |
| 12836 | PACS (Non - eRAD) Integration | PACS integration is prompting the radiologist with too many message boxes after the update to 44.1.7 |
| 13776 | Patient Management | A duplicate MRN error can occur when manually linking an external MRN to existing patient |
| 13223 | Payment control | If you add a payment before performing a 'check in' the receipt will not be automatically printed |
| 13335 | Person Management | Merging an active account person account into an inactive account throws an exception and cannot be merged |
| 13418 | Powerscribe Integration | PS360 - Images can get out of sync when closing via the X on tab |
| 13010 | Radiology Peer Review | Creating an addendum on a study which is in the QA work list will remove it from QA work list - also unclear which version is being reviewed when in QA screen |
| 12980 | Radiology Peer Review | Peer review button is enabled when creating an addendum - even if the same user previously peer reviewed it |
| 12676 | Radiology Peer Review | Peer review reporting layout colors are applied |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| | | incorrectly |
| 10853 | Radiology Peer Review | Peer review 'skip and continue' does not work |
| 13706 | Radiology Peer Review | Peer review button is not always showing/hiding appropriately |
| 13402 | Radiology Peer Review | Peer review QA window cursor is always an hour glass instead of a pointer |
| 13112 | Radiology Reporting | Ensure all member variables related to patient/study are reset when preparing to reuse the same control (internal patient safety enhancement) |
| 12971 | Radiology Reporting | An error can occur when opening the Review window from Peer Review WL |
| 13094 | Radiology Reporting | 'Assign To' control causes error when using 'next' workflow |
| 13005 | Radiology Reporting | Attachment viewer is not evaluating all permissions when showing the report |
| 12854 | Radiology Reporting | Cannot Create/Edit report from Perform Exam screen on PACS correction enabled studies. |
| 13421 | Radiology Reporting | Delete dictation and report on a non-primary linked study will delete addendum key 0 |
| 12904 | Radiology Reporting | Emergency Access button shows at all times if user has permission to the button |
| 13219 | Radiology Reporting | Hidden error occurs when multiple popups appear in reporting screen |
| 13242 | Radiology Reporting | In read-only mode, the report editor command bar shows a large empty gap |
| 13361 | Radiology Reporting | Language file has been updated |
| 10626 | Radiology Reporting | M*Modal - Automacros are not inserting when inserted via a macro |
| 9162 | Radiology Reporting | PACS Loaded Status column in reporting window is not populating when user preference set to "Reuse reporting screen" |
| 12857 | Radiology Reporting | Philips Speechmike LED and Foot Pedals do not work |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| | | when running RIS via Citrix |
| 11839 | Radiology Reporting | Report assistant - Click save button on report assistant but close on dictation window causes an error |
| 13136 | Radiology Reporting | Report history audio control is shared between tabs instead of unique per tab |
| 12573 | Radiology Reporting | Reporting docked windows are not maintaining their current tab selections and order on initial load. |
| 11695 | Radiology Reporting | RIS crashes when scrolling through the Patient Folder pane in the editing window |
| 13555 | Radiology Reporting | Selecting a supervising radiologist from status bar in RIS will show an hourglass instead of a pointer |
| 12747 | Radiology Reporting | 'Send report for dictation' will not remove suspended flag |
| 12808 | Radiology Reporting | 'Send To' button on reporting screen allows to fax/print preliminary reports even if user should not have access. |
| 11702 | Radiology Reporting | 'Set Follow Up Required Flag' is not always sending study to Finding Follow Up WL |
| 12708 | Radiology Reporting | 'Skip and Continue' then 'Sign and Close' not working with Report Assistant opened and reuse |
| 13050 | Radiology Reporting | STAT and ICD buttons in reporting screens re-order after minimize/maximize |
| 12336 | Radiology Reporting | Template/Macro Editing - exception viewing templates or macros in the browser within the template/macro editor |
| 13539 | Radiology Reporting | The Reject/Edit button behaves as a toggle button instead of single click button |
| 13408 | Radiology Reporting | 'View images', 'View patient folder' and 'View images and patient folder' actions are not working correctly |
| 13252 | Radiology Reporting | 'View Patient Folder' button in reporting screen doesn't cause the data panes to load |
| 13059 | Radiology Reporting | When in read-only mode, the report assistant save button should be disabled |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| 13058 | Radiology Reporting | When in read only mode, users can still insert pick list options |
| 13367 | Reception | Registering a second order for same patient + same day prompts user if they want to include the order that was previously arrived |
| 9377 | Scheduling | Cancelling a single study cancels all studies from order in specific scenarios |
| 13029 | Scheduling | Error on Reschedule from No Show WL and Orders to Schedule WL |
| 12952 | Scheduling | Inactive prep instructions still being displayed |
| 13019 | Scheduling | Not able to make changes to date/time in Notes/exam Times in Scheduling and arriving statuses |
| 9486 | Scheduling | Procedure plan site override of min/max times cannot find available times |
| 12834 | Scheduling | Reschedule study can cause other studies from same order awaiting rescheduling to fall off work list |
| 9521 | Scheduling | Scheduling from Existing Orders window doesn't auto-populate Site in Advanced Search |
| 9378 | Scheduling | Scheduling an order can include a cancelled study that was originally scheduled together |
| 13609 | Scheduling | Scheduling screen site groups drop down should not show entries that are non-scheduling site groups |
| 12755 | Service Tools - Installer | Branding issues in client application - incorrect icon and directory naming |
| 13283 | Structured Reporting | Preview report - Tables are not displaying correctly in print preview when an addendum also has a table. |
| 13378 | Technologist | Exam status can revert back to Started when including multiple exams in Perform Exam and starting them separately |
| 13006 | Technologist | Perform Exam - Notes/Exam Times - Disabled fields become enabled when including a second study |
| 7495 | Technologist | Performed modality does not show up on the |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| | | documentation window if it is now disabled |
| 9688 | Thick Client GUI | Opening a data window action sometimes results in an empty white tab |
| 11963 | Thick Client GUI | Using the escape key to exit out of adding new site throws an error |
| 13385 | UI Look and feel | Add space in title for Signs & Symptoms |
| 11928 | UI Look and feel | Annotate breast drawing label overlaps radio button in Hebrew |
| 12982 | UI Look and feel | Controls on the Exam Details tab in View Edit needs some adjustments. |
| 12938 | UI Look and feel | Critical Result button not re-enabling on Emergency Access |
| 12941 | UI Look and feel | Drop XML button on reporting base issues |
| 12936 | UI Look and feel | ICD button issues on reporting screen. |
| 13763 | UI Look and feel | IVT WL - Site select has no tool tip |
| 12940 | UI Look and feel | Launch PS360 button issues |
| 13248 | UI Look and feel | Peer review window - if font is larger the sentence 'I disagree with this review' is partially clipped |
| 13233 | UI Look and feel | Phone number mask - cannot enter a '+' at beginning of number if numbers are entered first |
| 12946 | UI Look and feel | Reject/Edit Button in reporting screen issue. |
| 12985 | UI Look and feel | Report History control is partially covered by the Legacy Report button's container |
| 12945 | UI Look and feel | Show PACS images button in reporting screen issues |
| 12937 | UI Look and feel | Stat button on reporting screen does not enable on emergency access |
| 13027 | UI Look and feel | Typo in "Reset Scanner Selection" message |
| 13264 | Upgrade process | Two missing access strings in upgrade scripts |
| 13117 | View Edit | StudyExtraInfo exception logged 31 times |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| 9284 | View Edit | View/Edit - Error on opening Billing Codes tab on Discontinued exams |
| 13774 | Walk-In | Error arriving walk-in. Duplicate studies created |
| 12744 | Worklists | Attachment viewer on the patient folder (both main and mini) will not load the report initially |
| 13366 | Worklists | Default custom views must be reset as default after upgrade to 2016.1 |
| 13543 | Worklists | IVT WL are performing badly causing serious over utilization on the CPU |
| 13772 | Worklists | Site group issues on IVT WL when a site_group_code matches a site_code |
| 13748 | Worklists | The PeerReviewPendingQA (All) is taking longer then 2 seconds to run |
| 13237 | Worklists | WL Filter FLag selection is not translated |
| 13585 | Worklists | WL that call the stored function c_GetReportLockByUserID caused a measurable increase in CPU |
| 13045 | Worklists | Work list Columns with Lookup Filters Cause Issues with Filtering and Custom Views |
| 13341 | Web Services/DB | Database view c_vw_client_worklist is no longer valid |
| 13208 | Web Services/DB | Missing index on c_user table |
| 13161 | Web Services/DB | Study remains locked by your user, after tentatively signed is released |
| 13580 | DB | Stored procedure missing a where clause - c_bi_radiologist_signing_activity |
| 13546 | DB | DB upgrade scripts do not correctly populate the c_patient_phone table |
| 13542 | DB | DB missing index |
| 13526 | DB | DB upgrade scripts may deadlock with other competing process |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| 13524 | DB | The 2016.1 upgrade scripts take too long to run |
| 13523 | DB | The 2016.1 upgrade scripts from B44.7 cause loss of data |
| 13423 | DB | RIS SQL jobs does not have a schedule for Update Mammo Recall Categories |
| 13210 | DB | Missing index on l_snomed_icd10_map |
| 9732 | DB | Database triggers rolling back transaction hides the error |
| 7654 | DB | B43 MU Scripts - Confirm they were properly imported |
| 12046 | Build | The default browser emulation level of the WebBrowser Control causes javascript errors in many web pages including digital forms |
| 12483 | Build | UV Templates directory is not included in RIS build package |
| 13414 | Mgt Reports | SQL Reporting folder missing custom "Upload" folders with build |
| 13300 | Scanning | Invisible error - Failed to refresh scan history error |
| 13116 | Scheduling | Invisible error - Specified cast exception - cast not valid |

## KNOWN LIMITATIONS

The following are Bugs and Support Issues found in build 2.2016.2. Bugs reported in previous versions are not captured as Known Limitation in this document.

| # | Priority | Category | Subject |
|---|---|---|---|
| 13590 | Low | DB | Inbox messages work list stored procedure always has 0 rows retrieved |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | | |
|---|---|---|---|
| 13474 | High | EMR | EMR patients don't match when attribute c_child_patient create_internal="N" |
| 12989 | Normal | EMR | Import scheduled procedures window is displaying order procedure description instead of scheduled procedure description |
| 13288 | Normal | Image request | Referring physician image requests can be duplicated |
| 13614 | Normal | Meaningful Use | Exporting a CCDA file and running it thru the XDS toolkit should not produce any errors |
| 13172 | Normal | MModal | M*Modal 7.93 dictation commands that do not work |
| 13088 | Low | MModal | M*Modal - fields tool window is not updating immediately |
| 13602 | Normal | PACS (eRAD) Integration | In the reporting window when you click view images when you already have those images open in PACS, receive a prompt asking you to break the lock you have on the images |
| 13791 | Normal | PACS (Non - eRAD) Integration | Hologic PACS - in the mini patient folder, the 'PACS Loaded status' column is populating 'Open' for the relevant studies |
| 13615 | High | Portal Viewer | Portal windows are leaking memory |
| 13788 | Normal | Powerscribe Integration | PS360 - if multiple studies are open in the reporting window, when closing the requested addendum study, 2 studies are closed. |
| 13762 | Normal | Radiology Reporting | Clinical.PreviewSuspendedReport set to NONE, getting different behavior in create/edit window vs dictate window vs sign window. |
| 13182 | Normal | Radiology Reporting | Report that is sent to PACS has the element {BR} displayed in the report. The report in RIS has a bolded section but the same section |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | | |
|---|---|---|---|
| | | | in the template is not bolded. |
| 13049 | Normal | Radiology Reporting | Inserting a macro with picklist with default macro option multiple times doesn't work |
| 13805 | Normal | Scanning | Scan doc association - patient level attachment changed to order level remains associated with other studies |
| 13807 | Normal | Scheduling | Error on close of scheduling and registration in some cases |
| 13810 | High | Scheduling | Cancelling an order twice will result in the procedure field being blank when scheduling it again |
| 13809 | High | Technologist | Error in Technologist WL - Object reference not set to an instance of an object and exam status does not change |
| 13519 | High | Technologist | Assigned Rad list in Perform Exam window is reordered after initial selection |
| 13518 | High | Technologist | Assigned Radiologist is not retained if referrer has preferred radiologist and included study is toggled |
| 13588 | Normal | UI Look and feel | Arrival early/late field calculates for completed studies |
| 13241 | Low | UI Look and feel | In the Carrier search window, the format mask for fax number is not applied |
| 13011 | Normal | UI Look and feel | Log control fields don't separate auto text |
| 13745 | Normal | User Views | Order # column not visible with existing my views |
| 13475 | Normal | View Edit | Problems with billing code adding/editing on View/Edit screen |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

# Server Update

For eRAD RIS
Version 2.0
Build 2.2016.3
Update 2.2016.3.1

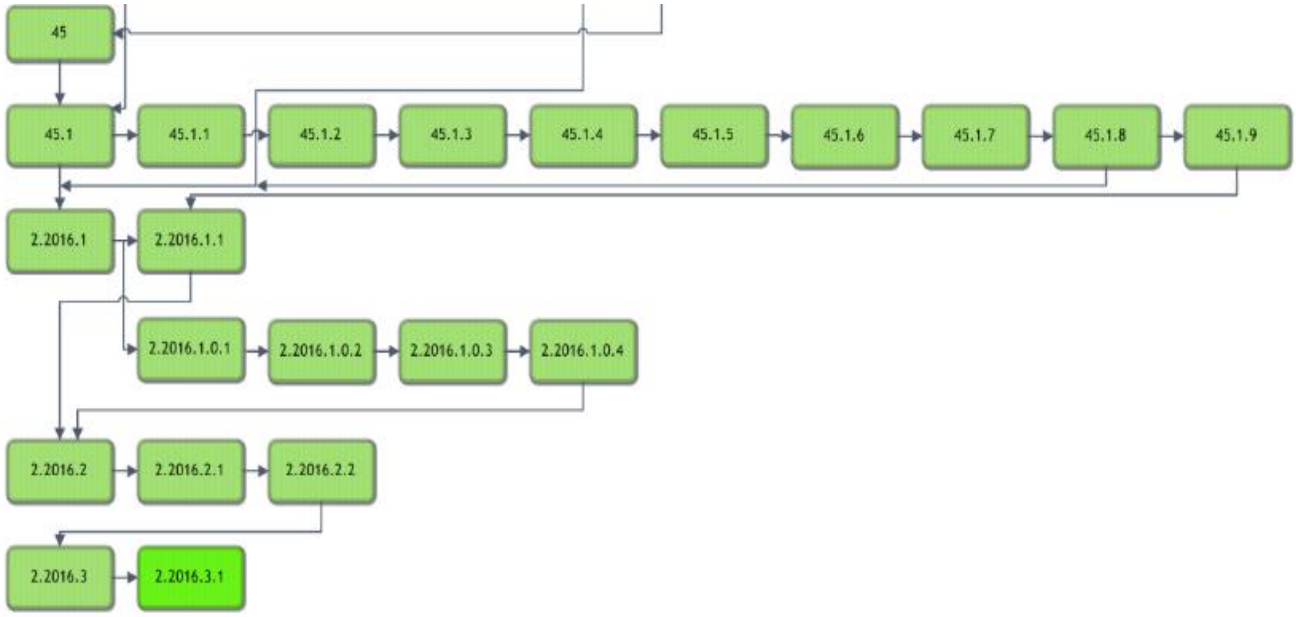
## Resolved Items

| Redmine # | Subject |
|---|---|
| 14340 | Changing procedure removes study from pending dictation worklist |
| 14259 | Patient folder default view not always loading on reporting screen |
| 14247 | Insurance Eligibility - Medical Group Rule feature not working |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Code Stream



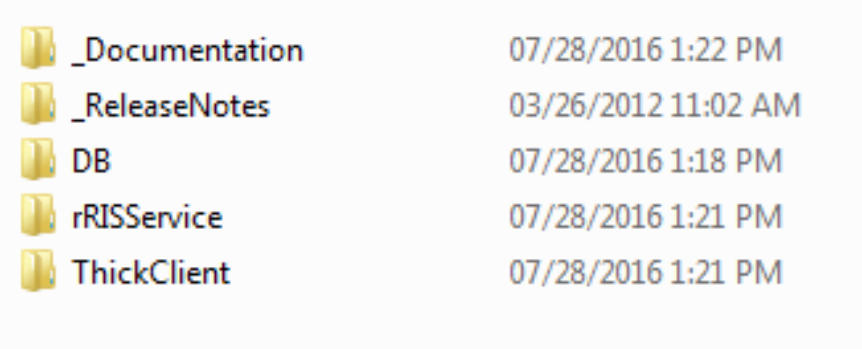
**Legend:**

**Light Green = Previously Released software**

**Bright Green = Current Release**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Package Contents



## Intended Audience

This document is created by the RIS Development team for the RadNet/eRAD RIS Implementation teams.

## Who is affected

Build 2016.3 installs. This server update must be applied to 2016.3

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## eRAD RIS Release Version Numbers

| Build | Patch | UI Version | Core Version | WS Version | DB Version | Digital Forms | Notes |
|---|---|---|---|---|---|---|---|
| 43.1 | - | 2.43.1.0.25850(3GB) | 2.43.0.0.23171 | 2.43.1.0.25850 | 2.43.1.0.25771 | | GUI.zip Web Service and DB Updates |
| 43.2 | - | 2.43.2.0.26864(3GB) | 2.43.0.0.23171 | 2.43.2.0.26864 | 2.43.1.0.25771 | | GUI.zip and Web Service |
| 44 | - | 2.44.0.0.26570(3GB) | 2.44.0.0.26405 | 2.44.0.0.26570 | 2.44.0.0.26475 | | Full Version Release |
| 44.1 | - | 2.44.0.0.26984(3GB) | 2.44.0.0.26405 | 2.44.0.0.26984 | 2.44.0.0.26906 | | Gui.zip, Web Service, and DB |
| 44.1 | 1 | 2.44.1.1.27093(3GB) | 2.44.0.0.26405 | 2.44.1.0.26984 | 2.44.1.0.26906 | | Gui.zip |
| 44.2 | | 2.44.2.0.27410(3GB) | 2.44.0.0.26405 | 2.44.2.0.27410 | 2.44.2.0.27365 | | Gui.zip, Web Service, and DB |
| 44.2 | 1 | 2.44.2.1.27959(3GB) | 2.44.0.0.26405 | 2.44.2.1.27959 | 2.44.2.1.27909 | | Gui.zip, Web Service, and DB |
| 44.2 | 2 | 2.44.2.1.27959(3GB) | 2.44.0.0.26405 | 2.44.2.2.28094 | 2.44.2.1.27909 | | Web Service |
| 44.3 | - | 2.44.3.0.28292 | 2.44.0.0.26405 | 2.44.3.0.28277 | 2.44.3.0.28138 | | Gui.zip, Web Service, and DB |
| 44.3 | 1 | 2.44.3.1.28535(3GB) | 2.44.0.0.26405 | 2.44.3.1.28535 | 2.44.3.0.28138 | | Gui.zip and Web Service |
| 44.4 | - | 2.44.4.0.28762(3GB) | 2.44.0.0.26405 | 2.44.4.0.28762 | 2.44.4.0.28676 | | Gui.zip, Web Server, DB, SSRS Deployment |
| 44.4 | 1 | 2.44.4.1.28953(3GB) | 2.44.0.0.26405 | 2.44.4.1.28953 | 2.44.4.0.28676 | | Gui.zip and Web Service |
| 44.4 | 2 | 2.44.4.2.29327(3GB) | 2.44.0.0.26405 | 2.44.4.2.29327 | 2.44.4.0.28676 | | Gui.zip and Web Service |

# Installing

## Client/GUI

1) Copy and replace the current rRIS…zip file with the eRAD_rRIS_2016.3.1.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## Web Service

This updated is only required for the Wedge Web Services. The Core RIS Service and Document Distribution Service are not required to be updated.

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 98 files in the rRISService folder and 6 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below). Folders ar (Arabic), he (Hebrew), and pt_BR (Brazilian Portuguese) are localization folders. The WedgePlugins folder contains various plugin files for RADAR, MIRTH, Ensemble, etc…

**Services Configuration Wizard**

With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, and services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

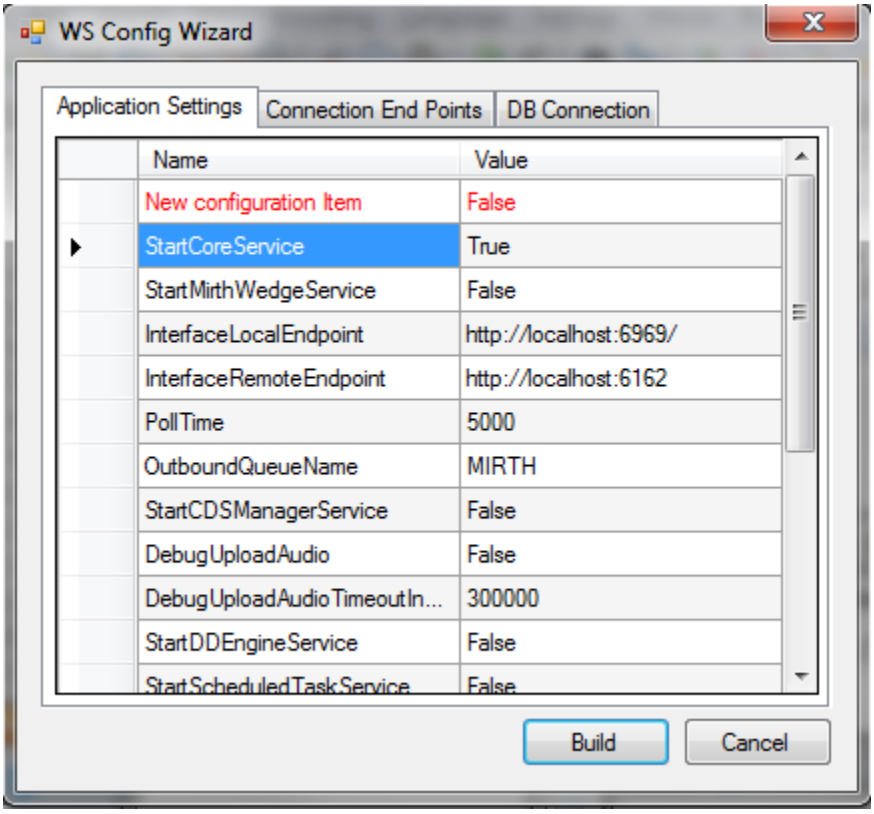
On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

**NOTE:** the rRISServices.exe.config file is also included in the deploy folder. If this file has changes it **will not** update your current file in the Web Service directory. Any changes to this file

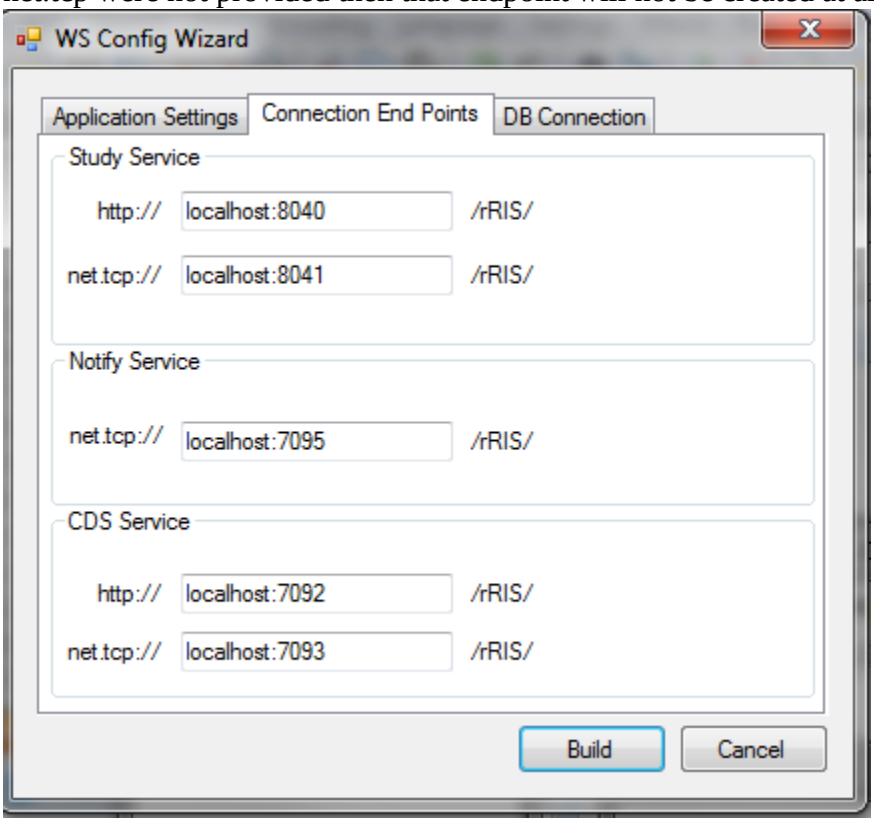
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

will require a manual update of the rRISServices.exe.config and rRISServicesx64.exe.config files.



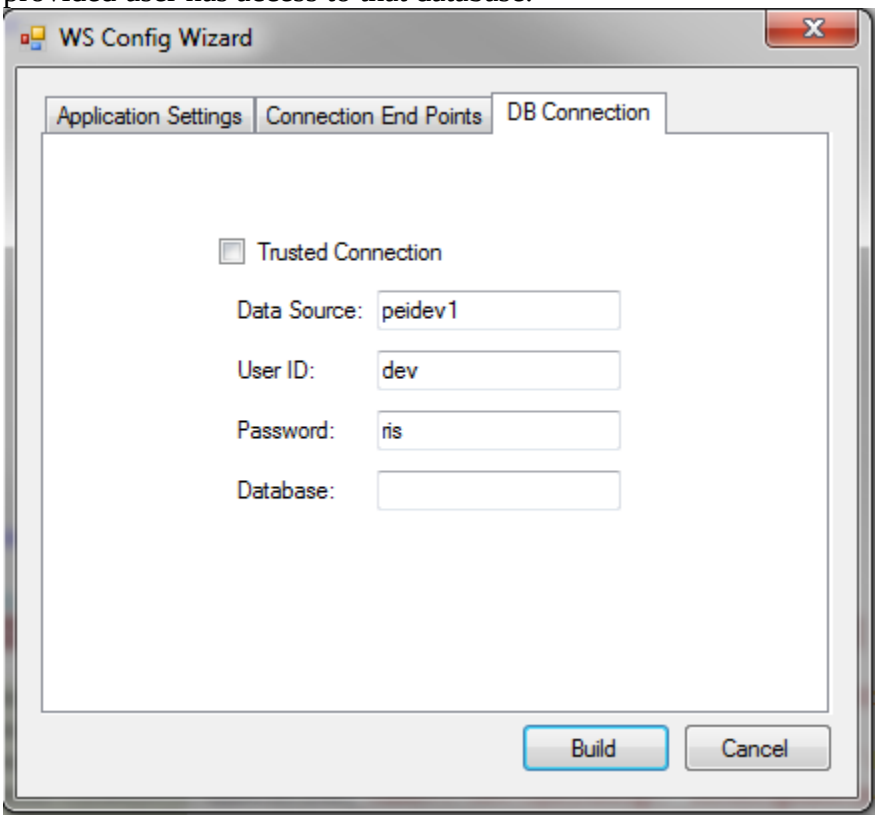
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of "Study Service" or "CDS Service" if both http and net.tcp were not provided then that endpoint will not be created at all.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**DB Connection:** will display the existing configuration, if the Connection is to be used as a trusted connection, then the user ID and password will become disabled and will not be used, and will rely on the provided database value, When not using the trusted connection, The Database value is not needed but can be used to force a specific database connection as long as the provided user has access to that database.



It is always good practice to do a compare of the .config files.

1) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   **Restart each service**.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Database Updates

Always run the upgrade scripts in a test environment of the actual database to make sure they run cleanly. If any errors occur please contact development.

*Note: There is a new upgrade process introduced with B43.1 called "RunUpgrade.bat". The batch file will open a command window. This process will prompt you for the database server name, database name and authentication credentials. There is no need to run the database upgrade scripts manually as was done in previous releases.*

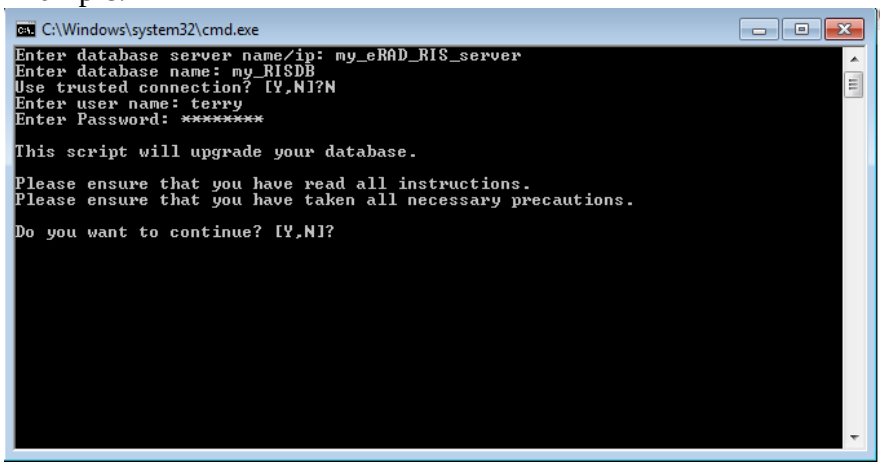
1) From the upgrade folder, double click the "RunUpgrade.bat" command file.

2) Enter the server name, database name and authentication credentials to the database. You have 2 choices for authentication credentials.

3) You can choose to use "Trusted connection". Using this option will pass the identity of the currently logged on user. If this user has "db_owner" access to the eRAD RIS database then feel free to use this options.

4) If you decide not to use "Trusted connection" then you will be prompted for user id and password.

   Example:



5) After the upgrade program has finished you can find the upgrade logs in the "log" folder. The file name will be eRAD_RIS_db_upgrade_timestamp.log, where timestamp is a value representing the date and time the upgrade started. If you see any errors please contact the development team

6) In the Common folder there is a subfolder of MU. The MU folder contains updates to lookups relevant for MU as well as updates for Zip Code table to add the County. Copy the

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

MU folder to the database server before running the batch file. There is a readme file contained in the MU folder. The details have also been included below

a) The mu bulk install process must be run from a path on the database server!
b) Copy Files ImportDataFileUpgradeDB.bat and ImportDataFileUpgradeDB.sql from upgrade folder to a location on the database server(This location will be referred to as the "Script Folder Path".)
c) Copy Folder scripts and Source files from the upgrade folder to "Script Folder Path" ....Note source files must be inside the scripts folder
d) Run bat file
   i) Enter Script Folder path [C:\Temp\SNOMED]:
   ii) Enter database server name/ip: [ie peidev1]
   iii) Enter database name: [ie rRIS_MU]
   iv) Use a trusted connection to log on to SQL Server:
   "N" means you will have to enter db [username] [password]
   "Y" means you have a trusted connection and will not have to enter [username][password]
   v) Do you wish to load SNOMED concept codes?
   "N" no files will be loaded into the l_snomed_concept table
   "Y" yes means l_snomed_concept table will be truncated and reloaded with the latest US concept codes
   Source File [sct2_Concept_Snapshot_US1000124_20140301.txt]
   vi) Do you wish to load SNOMED descriptions codes?
   "N" no files will be loaded into the l_snomed_description table
   "Y" yes means the l_snomed_description table will be truncated and reloaded with the latest US description codes
   Source File [sct2_Description_Snapshot-en_US1000124_20140301.txt]
   vii) Do you wish to load ICD9 to SNOMED mappings codes?
   "N" no files will be loaded into the l_snomed_icd9_map table
   "Y" yes means the l_snomed_icd9_map table will be truncated and reloaded with the latest US ICD9 to SNOMED mapping codes
   Source File [ICD9CM_SNOMED_MAP_1TO1_201312.txt and ICD9CM_SNOMED_MAP_1TOM_201312.txt]
   viii) Do you wish to load ICD10 to SNOMED mappings codes?
   "N" no files will be loaded into the l_snomed_icd10_map table
   "Y" yes means the l_snomed_icd10_map table will be truncated and reloaded with the latest US ICD10 to SNOMED mapping codes
   Source File [xder2_iissscRefset_ExtendedMapSnapshot_US1000124_20131220.txt]
   ix) Do you wish to load US zip codes?
   "N" no files will be loaded into the z_zipCodesWithCounty table
   "Y" yes means the z_zipCodesWithCounty table will be truncated and reloaded with the latest US zip codes
   Source File [5-digit Commercial.csv]

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**********

Note: the following files should be loaded once only with B43!

**********

x) Do you wish to load CMS codes?
"N" no files will be loaded into the s_mu_code table
"Y" yes means the s_mu_code table will be truncated and reloaded with the latest CMS codes
Source File [s_mu_code.txt]

xi) Do you wish to load HL7 support sets for CCDA?
"N" no files will be loaded into the l_hl7v3_voc_value_set table
"Y" yes means the l_hl7v3_voc_value_set table will be truncated and reloaded with the latest hl7v3_voc_value_set codes
Source File [l_hl7_voc_value_set.txt]

xii) Do you wish to load HL7 support codes for CCDA?
"N" no files will be loaded into the l_hl7v3_voc_value_code table
"Y" yes means the l_hl7v3_voc_value_code table will be truncated and reloaded with the latest l_hl7v3_voc_value_code codes
Source File [l_hl7_voc_value_code.txt]

# Installing

## Client/GUI

1) Copy and replace the current rRIS…zip file with the eRAD_rRIS_2016.3.2.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## Web Service

This updated is only required for the Wedge Web Services. The Core RIS Service and Document Distribution Service are not required to be updated.

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 99 files in the rRISService folder and 6 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below). Folders ar (Arabic), he (Hebrew), pt_BR (Brazilian Portuguese) and es-AR (Argentina Spanish) are localization folders. The WedgePlugins folder contains various plugin files for RADAR, MIRTH, Ensemble, etc…

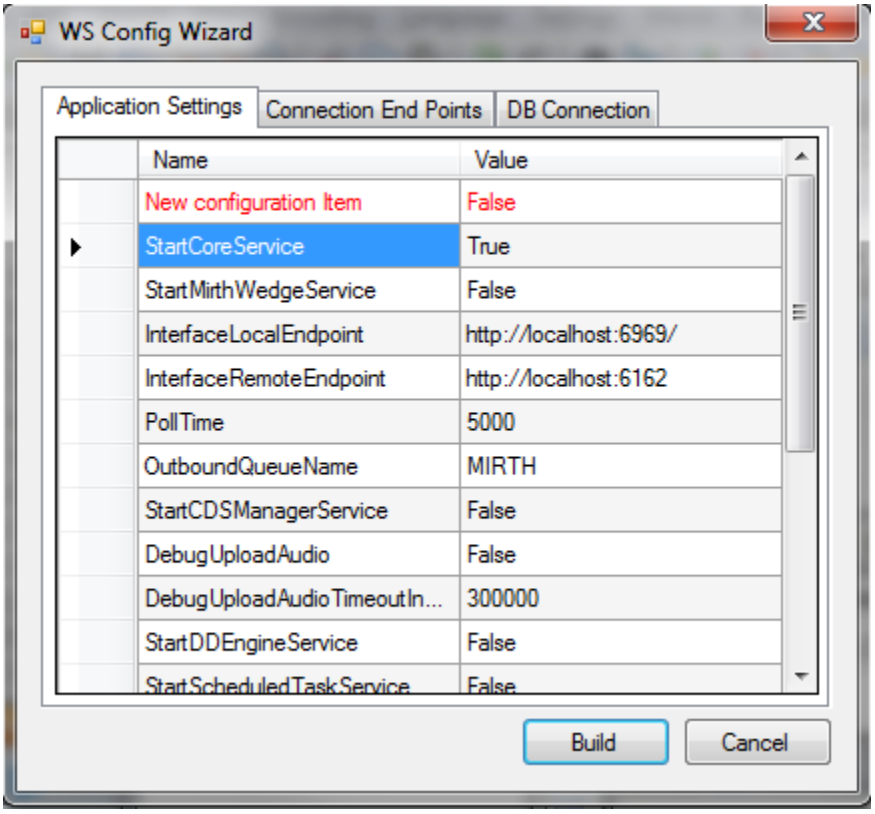
**Services Configuration Wizard**

With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, and services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

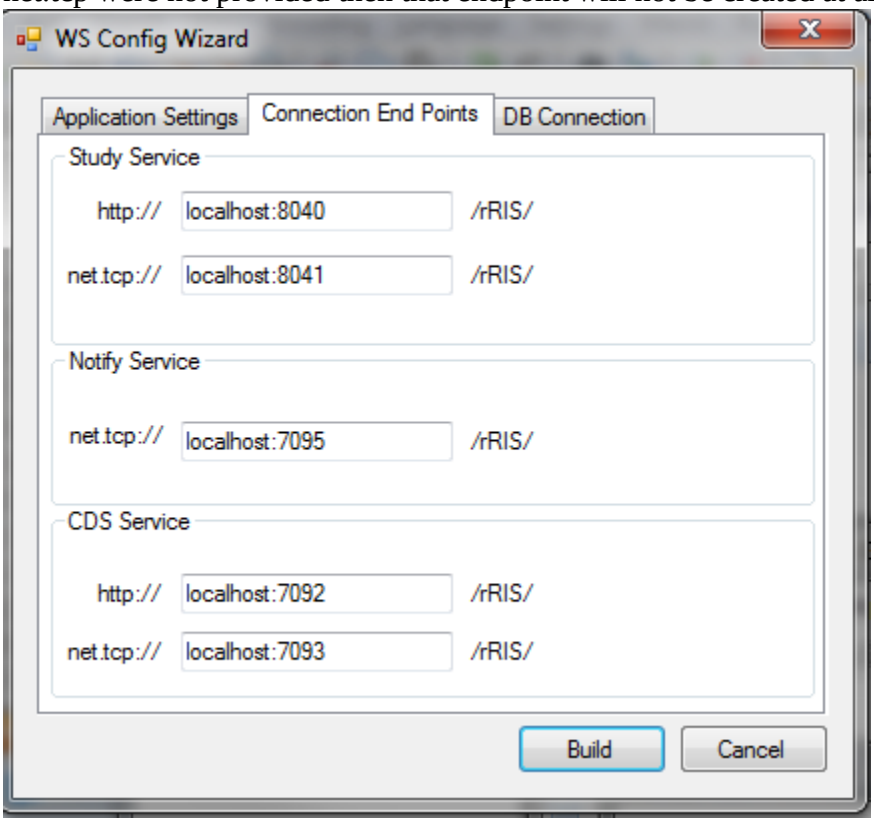
This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.



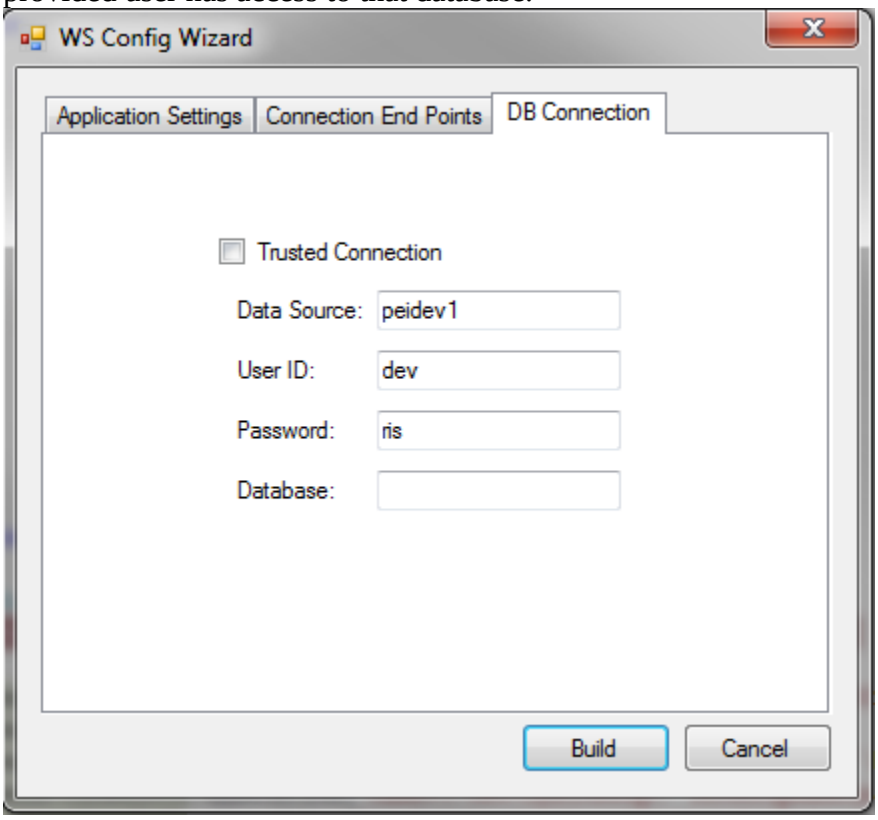
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of "Study Service" or "CDS Service" if both http and net.tcp were not provided then that endpoint will not be created at all.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**DB Connection:** will display the existing configuration, if the Connection is to be used as a trusted connection, then the user ID and password will become disabled and will not be used, and will rely on the provided database value, When not using the trusted connection, The Database value is not needed but can be used to force a specific database connection as long as the provided user has access to that database.



It is always good practice to do a compare of the .config files.

1) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   **Restart each service**.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## PURPOSE

This is the Customer Release Notes document for eRAD RIS Version 2016.3.

Not every feature will be described in this document. Typically, only features which can be visually demonstrated are outlined here.

## INTENDED AUDIENCE

This document was created by the eRAD RIS Development team and Product Management team for eRAD RIS customers.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

# NEW SETTINGS

## NEW ACCESS STRINGS

| Setting | Default | Purpose |
|---|---|---|
| ~~Clinical.RadarMessage~~ | N/A | Removed a duplicate string that was not in use. |
| Config.LookupEditor.Organization.Portal.AdditionalConfiguration | | Allows for the adding/editing of additional portal configuration overrides in the JSON editor. |

## NEW SYSTEM CONFIGURATION SETTINGS

| Setting | Default | Purpose |
|---|---|---|
| RPAllowQuickApproval | False | (value = true/false) Determines if the referring portal user will have the 'Quick Approval' option if not configured to be a referring and not authorized to order on behalf of a referring. |
| RPAppointmentEnabled | False | (value = true/false) Determines if the Referring Portal 'Schedule Appointment' feature will be enabled. |
| RPAuthorizedToOrderNextReview | 5 | (value = number) The interval in days until the Referring provider is prompted to review the list of users authorized to order on their behalf. |
| RPImageNoAccountMessage | | (value = string) The message to display to the referring portal user when image access fails due to not having a valid PACS account. |

The above configuration settings are created in preparation for a future release of our new Referring Physician Portal. There is no need to adjust these settings at this time.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

# eRAD RIS 2016.3 Feature Highlights

Upgrade to eRAD RIS 2016.3 and our New Features will allow you to:

→ Decrease denials by creating special insurance carrier alerts based on plan information in your Eligible API returns.
- Warnings when an incorrect carrier has been selected based on your rules
- Warnings when the priority of carriers is incorrect
  - e.g. Supplemental insurance is entered as Primary

→ Improve system performance.
- Ability to schedule MU database tasks for after hours
- Behind the scenes adjustments to database performance factors

→ Export diagnostic reports in new formats, including Microsoft Word.

→ Assess your exam volume breakdown by payor with a new management report.

→ Configure new user preference options for displaying RIS/PACS communication messages to the radiologist.

→ Allow external systems to query or update RIS look-up tables via interface.

→ Enjoy smoother and more efficient RIS workflow with over 100 resolved defects.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

# NEW FEATURES

## INTERFACING

### 5680 - MFN MESSAGE HANDLER

eRAD RIS now has the ability to allow a remote system to query or update lookup table data. This is limited and secured, and to be used only by an appropriate external system.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## 10525 - EXAM VOLUME BREAKDOWN BY PAYOR MANAGEMENT REPORT

A new core management report has been created called *Exam Volume Breakdown by Payor*. This report generates a pivot style table with a Modality Type across the top of the report and Payor Type down the side of the report. The user of the report can drill-down on the Payor Type to get details of each individual Insurance Payor. This report can query based on Date Range, Payor Type, and of course Practice(s) and Site(s). The report is located in the Operations folder.

**Practice:** Advanced Radiology,American Radilogy 2,American Radiology,Borg/IDE,DATest,Get Well Clinic,PEI Radiology,SIMS Practice,TEST
**Site(s):** All sites for the selected practice(s).
**Date Range:** 05/01/2013 - 05/31/2013
**Payor Types:** All payor types selected.
**Description:** This report displays accession count by insurance payor and modality type based on practice, site(s), date range, and payor type.

| Payor Type | BD | CT | MA | MR | NM | PT | US | XR | Accession Count | |
|---|---|---|---|---|---|---|---|---|---|---|
| ⊞ Automobile Medical (7) | 29 | 1,531 | 4,705 | 2,567 | 84 | 140 | 6,320 | 10,353 | 25,729 | 7.88 % |
| ⊞ Blue Cross (P) | 8 | 688 | 1,945 | 1,056 | 38 | 57 | 2,644 | 4,251 | 10,687 | 3.27 % |
| ⊟ Blue Cross Blue Shield (G) | | 47 | 234 | 99 | 9 | 8 | 248 | 425 | 1,070 | 0.33 % |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## INSURANCE ELIGIBILITY

### 13547 - ELIGIBILITY TABLES CLEANUP TO IMPROVE PERFORMANCE

The eligibility request and response tables contain a large amount of data that is only relevant for a short period of time. eRAD RIS will now trim these tables on a regular interval which will keep the RIS Services running at optimal performance levels.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## 13065 - MEDICAL GROUP RULES ENHANCEMENTS

This feature involves enhancements to informational warnings/alerts for customers using the integration with Eligible API. The intent is to prevent staff members from selecting the wrong insurance carrier by evaluating the medical group data in the return that comes back to RIS via Eligible API. Processing of medical group rules from the *Eligibility Special Conditions* table previously only worked when there was one payer. With multiple payers, the following issues could occur:

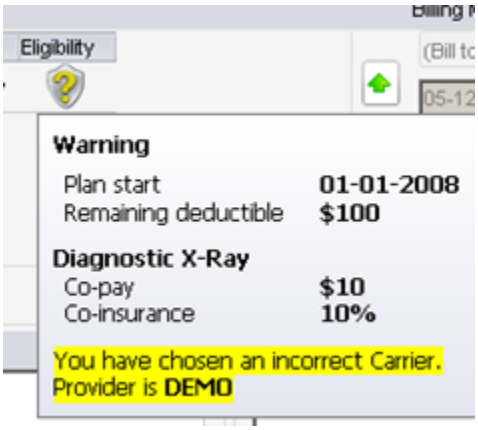
1) The medical group rules report produced duplicate entries.
2) The medical group string check could only apply to one base carrier, which could also cause duplicates and invalid data if multiple rules were configured.
3) Synonyms also needed to support wild cards such as Prospect%.

To resolve these issues, eRAD RIS now supports a new syntax in the *matching_string* field of the *Eligibility Special Conditions* lookup table. This table and the *matching_string* field define when to display a warning indicating an incorrect medical group has been selected. As a refresher, a medical group "string" is simply a piece of text that is found in the information returned from Eligible API in the appropriate section of the return. Remember that you can view the full return by clicking on the Eligible shield.

There are two variations on the medical_group_rule syntax:

- Base Carrier Medical Group Rule
- Simple Medical Group Rule

For both types of rules, an error will be presented to the user in the form of a yellow question mark in the Eligibility shield and a highlighted error message.



A Base Rule means that the string is exclusive to the base carrier. There is only one valid carrier for the string of text in that rule. Simple Rules require that a string of text exists in the return, but it may also exist for other carriers in a group and is not a one-to-one match. It will help the user narrow down the number of appropriate insurance carriers to select from, but if the user picks the wrong carrier from within that group, the Simple Rule will not be able to identify that there is not a correct match.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

To explain the new configurations, examine the following examples. Assume the base carrier is "0100demo." We will create a Base Carrier Medical Group Rule, which validates for this payer that the returned string exists and for all other carriers (for that payer_id) that the string does not exist.

The Base Medical Group Rule for the 0100demo carrier would be:

medical_group_rule:***payer_id=0100demo***:DEMO%:

For the other two carriers in this example, we will create two Simple Medical Group Rules. With simple medical groups rules we only validate for the matching string in the carrier code specified. An example of one of these simple medical group rules is:

medical_group_rule:***PROSPECT%***:

Lookup Tables - EligibilitySpecialCondition *

| Carrier Code | Matching String | Warning Message |
|---|---|---|
| Contains: | Contains: | Contains: |
| Click here to add a new row | | |
| 1468014 - PROSPECT CAL OPTIMA | medical_group_rule:PROSPECT%: | <span style="background-color: #... |
| 0328 - BCBS EMPIRE | medical_group_rule:BCBS%: | <span style="background-color: #... |
| 0100demo - demo | medical_group_rule:payer_id=0100demo:DEMO%: | <span style="background-color: #... |

In the example above, the first two rows are Simple medical Group Rules. The carrier '1468014' will require the text "Prospect" in the return's medical group field and the carrier '0328' will require the text "BCBS." If the required text is missing, the error will display.

The third row is a Base Medical Group Rule (note the "**payer_id=**" in the format). If 0100demo is selected as a carrier and the return does not contain the string "DEMO," the user will get a warning just as with a Simple rule. The difference is that any other carrier that is selected that contains the string "DEMO" will also receive an error. You'll note that carrier '0657' is not listed in the above screen capture because it is not configured for any medical group rules. If that carrier is selected and there is a string of "DEMO" the user will receive an error because that string should only exist for the base carrier '0100demo.' Similarly, if either carrier in the first two rows is selected, the error will display.

### When should I use a Simple Medical Group Rule?

Since Base Rules are configured to be a direct match (the string of text always equals one specific carrier), you need to do a careful analysis of the historical returns for that payer and other payers that may have similar text in their returns. This process is time consuming so it is typical to focus on mapping only the most frequently used payers. Some payers only come up once in a while and the necessary historical data on their Eligible API returns is not available to understand what medical group strings to use. For these reasons, there will always be some payers that will not be mapped to a Base Rule. For these payers, you might use a Simple Medical Group rule that will apply to groups of carriers at the same time. Even if you cannot create a direct match between a string and an individual carrier, you can at least prevent staff from mistakenly choosing a "Prospect" carrier when it is one of the "BCBS" payers.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

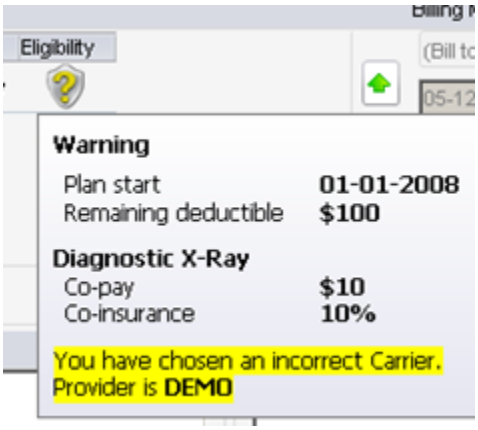
### When should I use a Base Rule?

You should use a Base Rule if the medical group string will never be in another carrier's return. Otherwise, use a Simple Medical Group Rule.

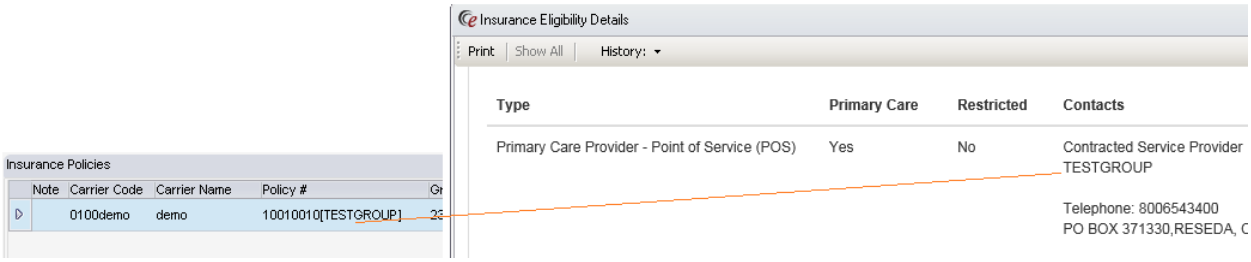
Another feature of the Medical Group Rules is the ability to display a custom message to the user when there is a mismatch. In the "Warning Message" field you can specify a display string such as:

*You have chosen an incorrect Carrier.<br>Provider is {0} *

This will display a highlighted message to the user explaining their incorrect selection. The {0} will be replaced with the Medical Group field from the insurance return.



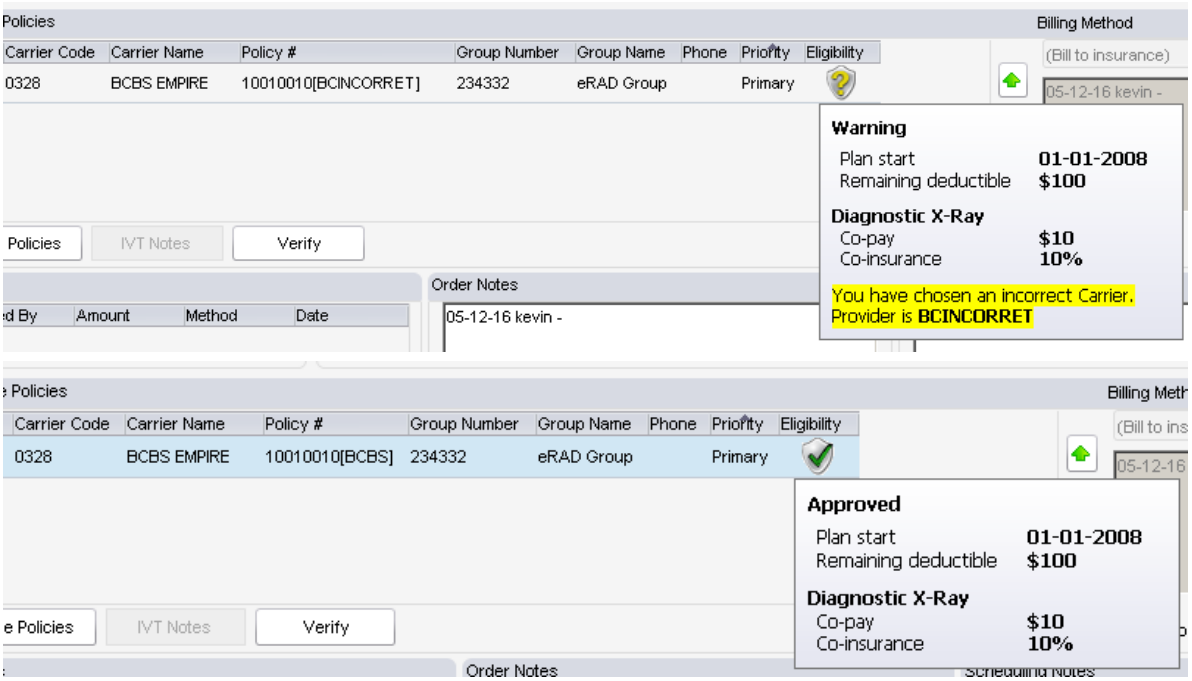
For testing, we have modified the eRad_Demo carrier to include a medical group string in the return, when the policy # ends with brackets containing some string to display as the medical group. For example:



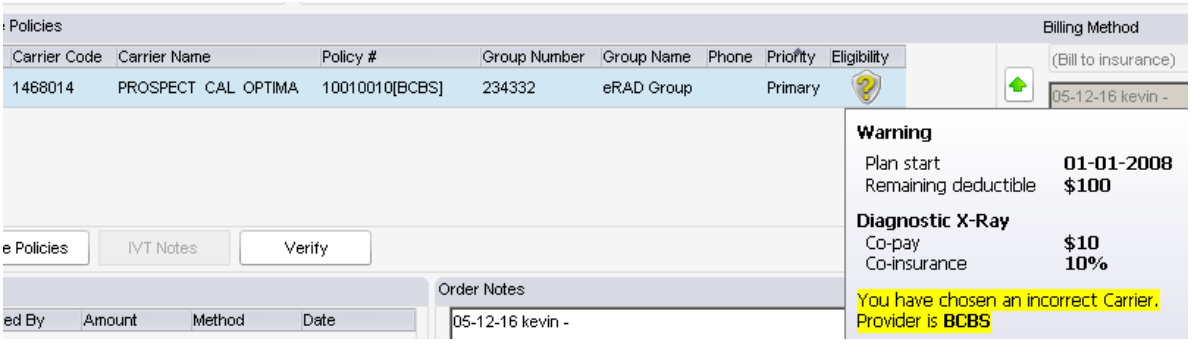
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

To give some additional illustration of these concepts, the following screenshots are some of the test cases using the 4 carriers shown in the previous illustrations.

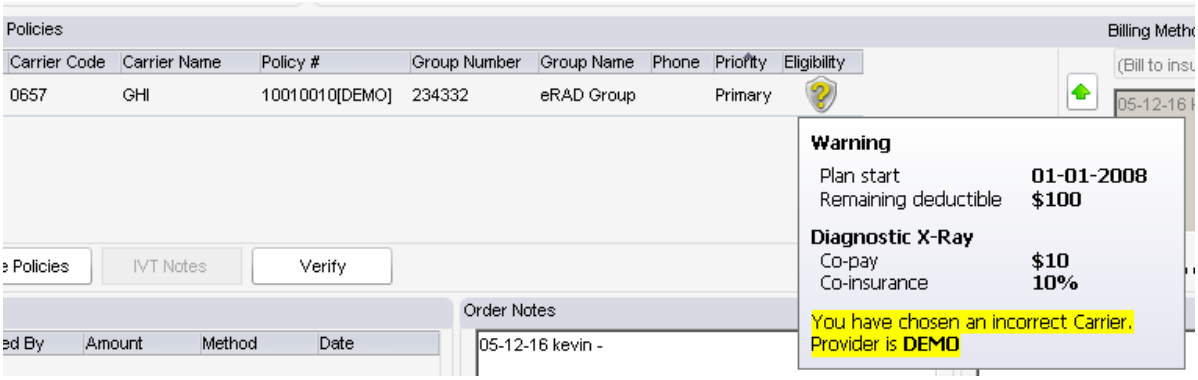
**BCBS EMPIRE:** Rule is that is must start with 'BCBS' and cannot start with 'DEMO'



**PROSPECT CAL OPTIMA:** Rule is that is must start with 'Prospect' and cannot start with 'DEMO'

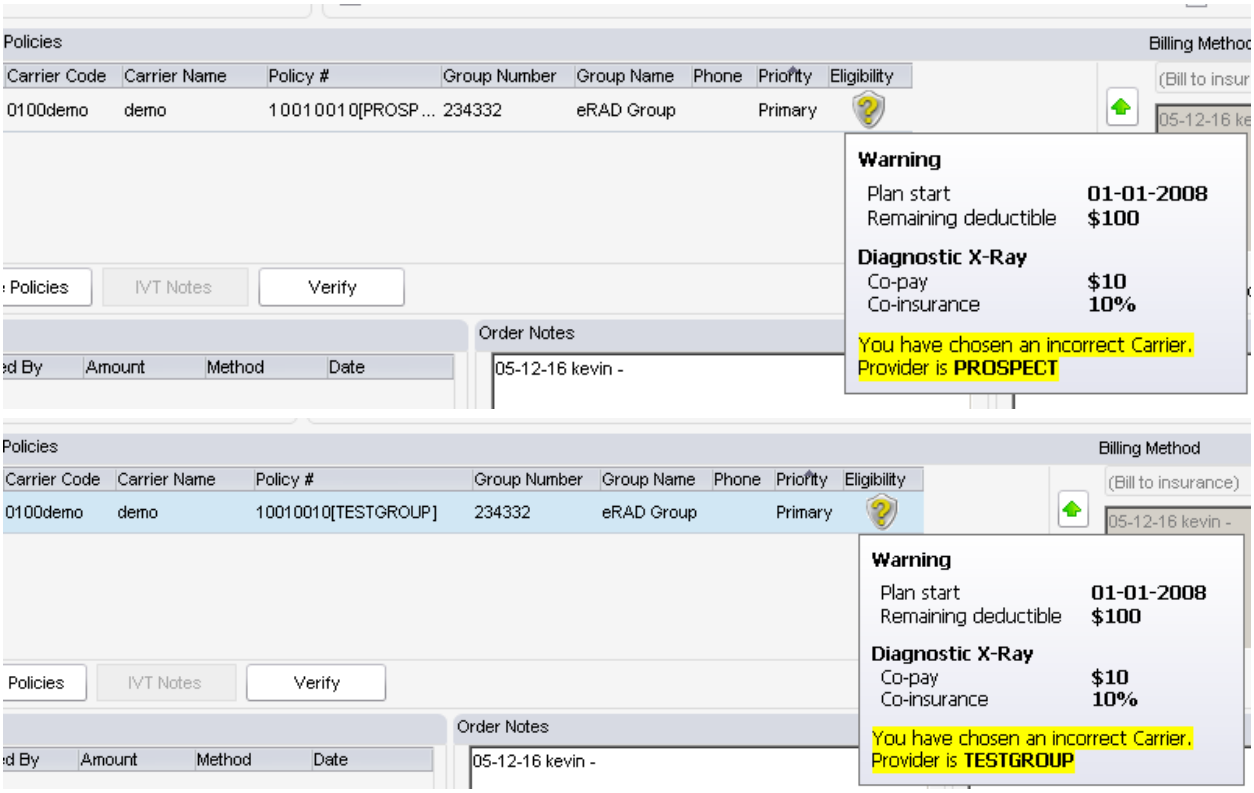


**GHI:** No specific rules; however, but due to 0100demo Base Medical Group Rule it cannot start with 'DEMO'



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

**demo:** Must start with 'DEMO'



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

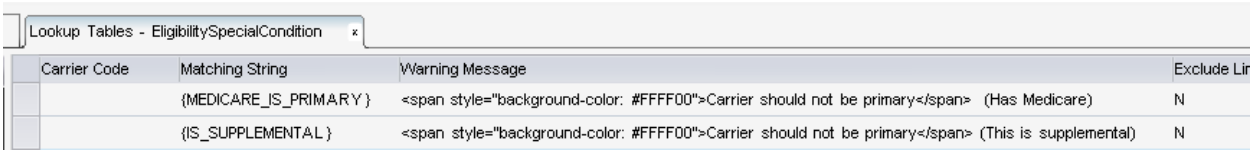
## 13282 - PRIMARY INSURANCE WARNINGS

For customers using Eligible API, we have identified two additional opportunities to assist users in selecting the correct insurance carrier. Two frequent mistakes that lead to denials include:

- Medicare is entered as secondary when it should be primary.
- A supplemental insurance is entered as a primary insurance.

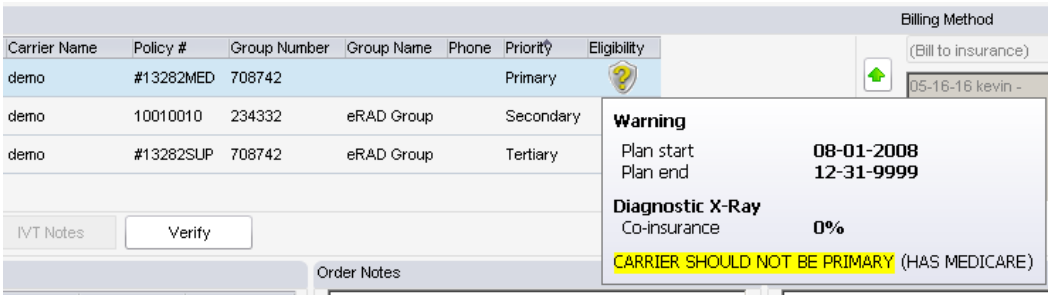
To assist our customers in avoiding denials and potentially missing timely filing deadlines, eRAD RIS can now issue the user a warning if it detects these conditions, based on information in the return from Eligible API.

To enable this feature and configure the custom messages, add entries to the Eligibility Special Condition lookup as shown below:



### Medicare Is Primary:

If a primary insurance has the "Primary Payer MEDICARE" string in the return, this means that the selected carrier is a Medicare supplement and should *not* be listed as primary. When you enable {MEDICARE_IS_PRIMARY} in the Eligibility Special Condition table, eRAD RIS will display the configured warning message under those circumstances.

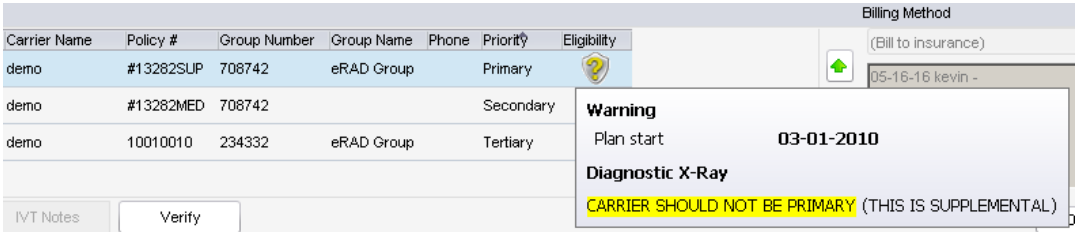


### Insurance Is Supplemental:

If a primary insurance has the "Supplemental Policy" string in the Plan section of the return, this means that the selected carrier is a supplemental insurance (any kind, not necessarily a Medicare supplement) and should *not* be listed as primary. When you enable {IS_SUPPLEMENTAL} in the

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

Eligibility Special Condition table, eRAD RIS will display the configured warning message under those circumstances.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## INFRASTRUCTURE

### 11204 - SUPPORT "UNIVERSAL DEVICE ID"

As a result of an upcoming regulatory requirement, eRAD RIS now has a Universal Device ID field (UDID). This field is located on the Help/About screen.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## 13545- MU POST PROCESS REDESIGN TO IMPROVE PERFORMANCE

The eRAD RIS service layer has the ability to process study events immediately after they have happened in order to do such things as update roll up tables for Meaningful Use (MU) statistics. Since this happens immediately, it does slightly slow down the service layer. Since there is no operational reason to update these statistics immediately, it is desired to postpone these updates until a time of day when there is less activity on the system. eRAD RIS now supports the ability to push those events to a designated time of day.

From a customer perspective, this will be automatically enabled after the upgrade, and no action is required of you.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

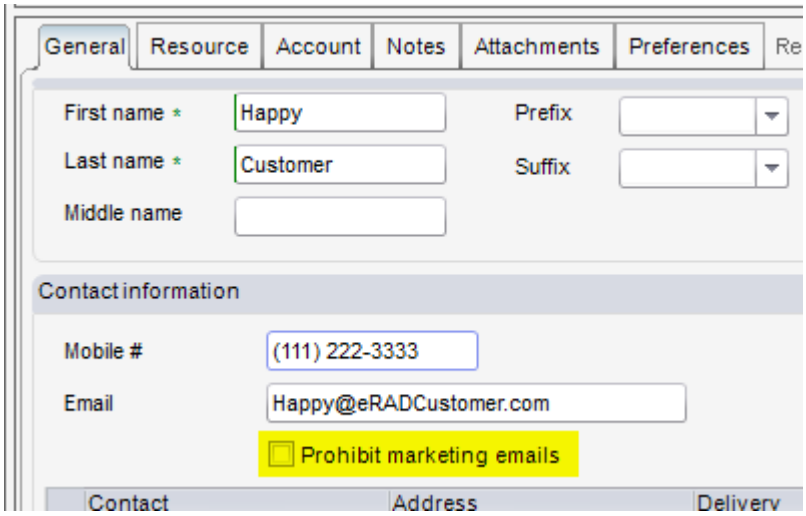
## 13548 - DEPRECATE C_SUMMARYMASTER OBJECTS

There are some objects (stored procedures and tables) in the RIS database that are only used by one customer. These objects do not need to remain in the core of eRAD RIS, and will therefore be removed from the database. This ensures continued optimal performance of the database. The one customer who does use these objects has been updated.

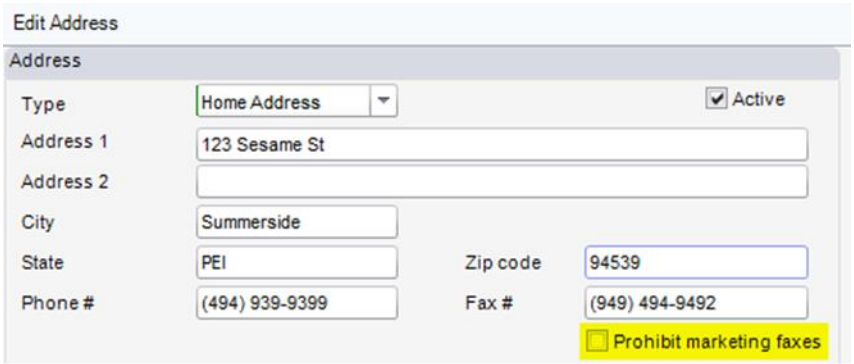
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## 13598 - OPTION TO PROHIBIT MARKETING EMAILS FROM BEING SENT

In the future, the Referring Portal will have the ability to send marketing emails to referring doctors. Some doctors may not want this, so in preparation for this upcoming Referring Portal feature, an option has been added to the referring physician's profile in eRAD RIS to indicate that the portal should not send any marketing emails to their email address. This is set at the referring physician level and cannot be set differently for individual offices (addresses).



This is not to be confused with a feature added in a previous RIS release to prohibit marketing ***faxes***. Marketing faxes are set at the referring physician's address level.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

RIS ADMINISTRATION

## 13732 - CAPTURE ORDER CANCELLED DATE

For statistical purposes, eRAD RIS now stores the date an order was cancelled in the database. This can be queried with a custom management report if desired. For clarity, if the order was scheduled, then the Schedule Later option is used (i.e. it is put back on Orders to Schedule), the order cancel date is not populated because the order is still available to be scheduled, it has simply been moved back to an Ordered status. In that case, the **Cancelled Date** would be recorded (since it was actually a scheduled appointment) but the **Order Cancelled Date** would *not* be recorded/stored.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## 13773 – SUPPORT EXPORTING DIAGNOSTIC REPORT IN MS WORD AND OTHER FORMATS

eRAD RIS now supports exporting the diagnostic report in the following formats: MS-Word, PDF, encrypted PDF, image, Excel, MHTML and HTML.

When working with Hebrew, one advantage to exporting in MS-Word is that the MS-Word format fully supports copy/paste in Hebrew. The PDF created by the Microsoft PDF engine within eRAD RIS does not support copy/paste functionality, so the MS-Word format is an advantage in a Hebrew environment.

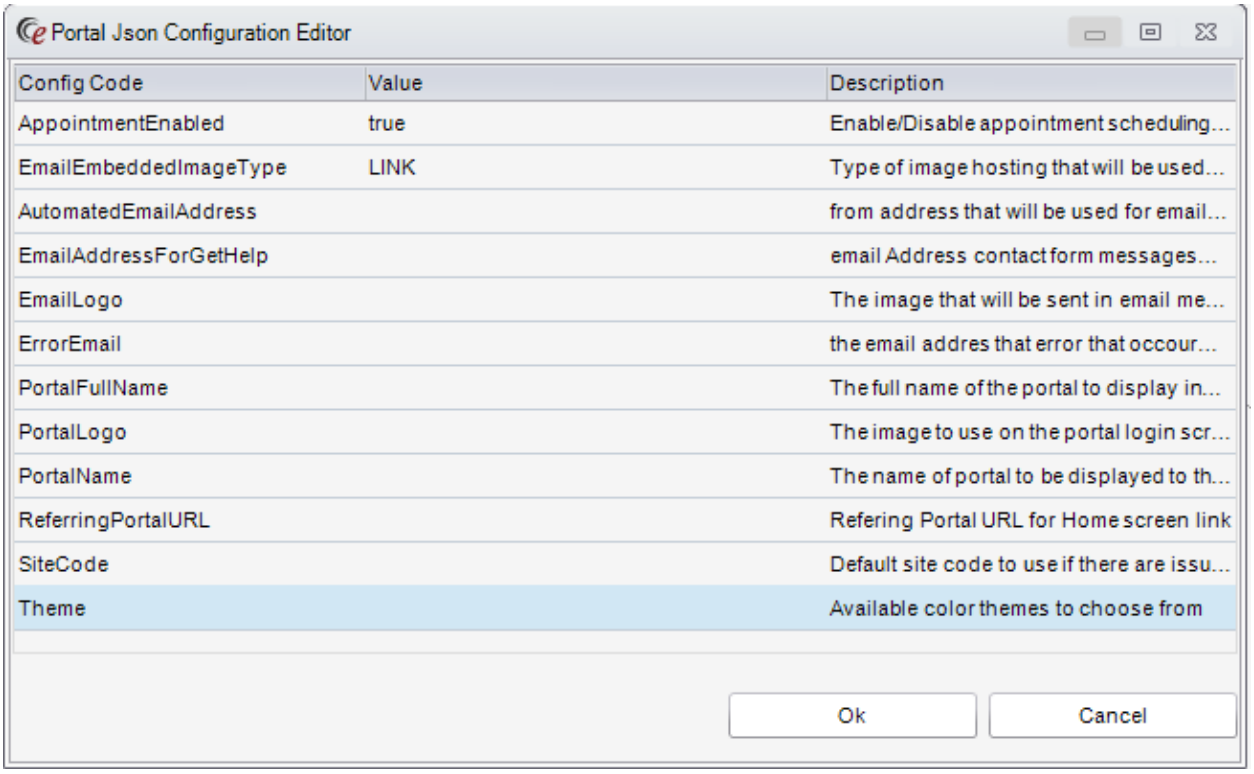
To take advantage of this feature, please contact eRAD Support.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## 13851 – PATIENT PORTAL CONFIGURATION HELPER

The patient portal uses a format called JSON to configure various portal features. This is a complex structure, and a simple typing error can invalidate the configuration. To simplify maintenance and prevent errors, eRAD RIS now has an editing tool that will allow the JSON to be edited without requiring knowledge of JSON and without needing to worry about simple errors.

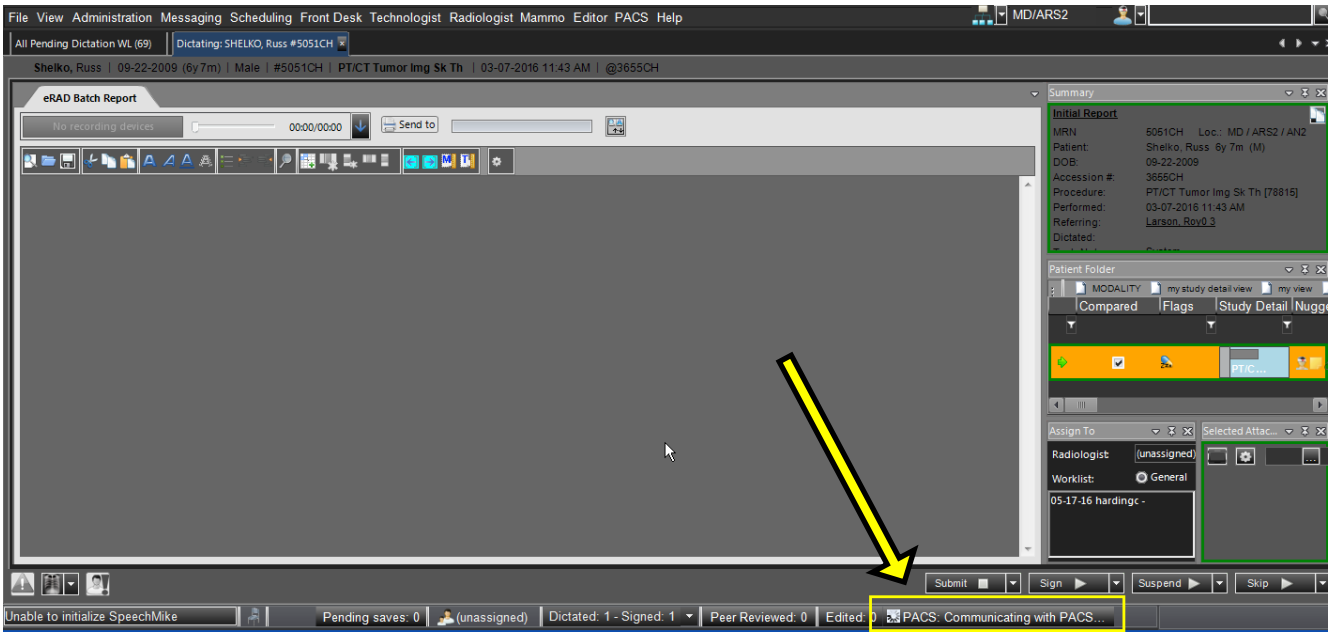
Selecting the […] button will invoke the editor.



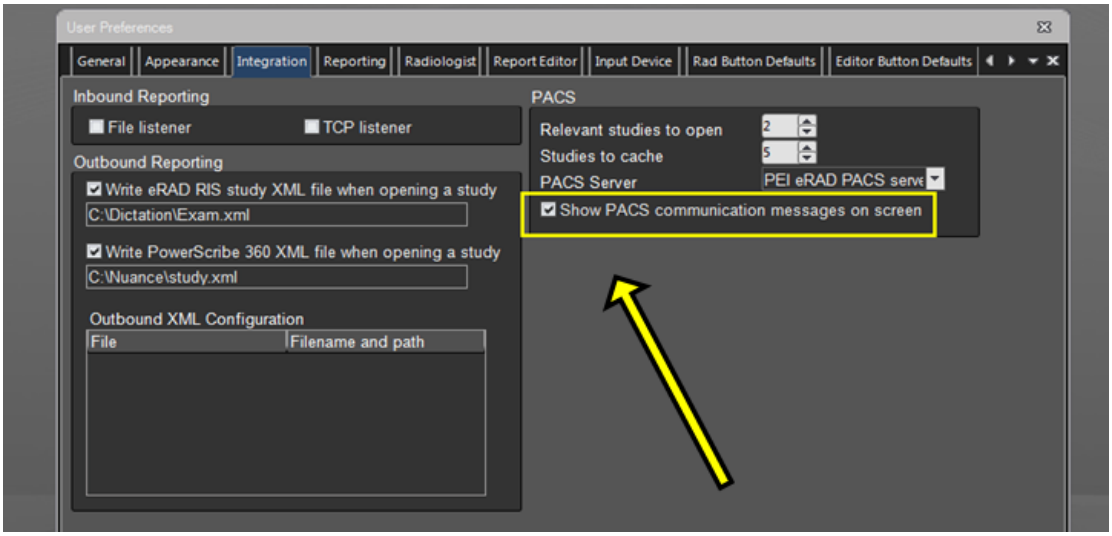
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## #13849 - ADD PACS DIALOG MESSAGES TO ERAD RIS STATUS BAR

eRAD RIS has had many recent enhancements to radiologist messaging when the RIS is communicating to the PACS. The purpose of these messages is to prevent the radiologist from dictating on a new patient before the previous patient's images have been cleared from the PACS viewer. Some radiologists expressed the desire to move the messages to a static notification area instead of a pop-up message. The RIS now has an option to display these PACS status messages to the radiologist in the status strip at the bottom of the RIS screen.



In addition, eRAD RIS has a new user preference to turn off the PACS communication dialog. Users can turn off the PACS dialog in their user preferences under the Integration tab. The default is true (checked).



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## RESOLVED DEFECTS

Bugs and support issues resolved in build 2.2016.3.

| Bug # | Category | Subject |
|---|---|---|
| 13517 | | Concurrency violation on delete all patients phone numbers from the Phone number edit screen |
| 13291 | Access strings | Access string Clinical.RadarMessage is not in use can be removed |
| 13605 | Admin-Other | Timeout Errors when viewing audit log of changes for Personnel dataset |
| 9283 | Audit History | Assign to Chair context menu creating misleading audit history entries |
| 2862 | Audit History | Request for images (Image Request) are not being audited |
| 13266 | Billing | Editing billing codes issue |
| 13217 | Billing | Aborting a started study can result in an error on the billing codes tab |
| 13485 | CD Burning | Horizontal scroll bar for included studies section in CD Burning window is missing |
| 14055 | Client Install | Core install issue when upgrading from 16.2 to 16.3 |
| 13465 | Dark Mode/Theming | Dark mode - Phone number and Email fields on Patient Tab display white text on white background if more than one option listed |
| 13833 | DB | L_person_address_x_referring_practice is missing FK constraint to l_referring_practice |
| 13636 | DB | Queries to c_study table cannot be optimized by DOS or modality code |
| 13562 | DB | Database trigger performance issues |
| 13455 | DB | SQL Assessment - deprecated SET options found |
| 4749 | DB | The scan document archive process is taking a long time to find scan documents to archive |
| 4747 | DB | Missing index on c_interpretation_quality_review when joining to c_interpretation table |
| 13892 | DB Upgrade scripts | Upgrade Script for RISOutputFilePath |
| 13840 | Digital Forms | Exception occurring when scheduling an order that was previously saved as order when digital form has required field |
| 13311 | Digital Forms | ObjectReference error working with digital forms |
| 13271 | Digital Forms | Digital Forms Editor hang during save on large digital form |
| 11069 | Digital Forms | Digital Form Editor - Session Timeout is too short |
| 13505 | Document Distribution | Document Distribution Engine ignores LegacyInterfaceMode unless the Wedge is also enabled |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| 5839 | Embedded Reporting | Edit Templates and Macros icons enabled toggle is backwards |
| 13744 | EMR | External patients can be scheduled in RIS without matching or creating a new internal patient record |
| 13737 | eRAD Editor | eRAD Reporting mode - Conditional fields that are type macro, get error 'Unable to open macro' when opening the dictation window if macro tool window is not loaded. |
| 12942 | eRAD Editor | Inserting a text macro into a field may produce different results if the field is selected from the report tool window rather than the fields tool window. |
| 13486 | Image request | Missing horizontal scroll bar in Image Request screen and window is not resizable |
| 8562 | Image request | Image Request Status column on Patient Folder WL doesn't display status |
| 5943 | Image request | Image Request does NOT show referring doctor's name |
| 13764 | Insurance Eligibility | Error when working with multiple exams at the same time in the perform exam window |
| 13711 | Insurance Eligibility | Excessive audit logging by a "system" service for retrievals |
| 13557 | Insurance Eligibility | Unexpected error processing submit insurance queue |
| 13479 | Insurance Eligibility | Insurance Eligibility - Ignore deductible entry, if remaining and total are both zero |
| 13215 | Insurance Management | Self Pay - changing to a non-NPD enabled site doesn't clear the amount to collect field |
| 10714 | Interfaces | External Scheduling Interface - Issue with GetBookingLock and Expiry |
| 10676 | Interfaces | Assuta External Scheduling Interface - Issue with EndDate |
| 13723 | IVT / Precert | Patient is removed from IVT WL when Precert status is not the same for all exams on the order and one is rescheduled |
| 11992 | IVT / Precert | Precert status doesn't save changes when changed from Schedule Order and View/Edit |
| 13724 | Localization | Messages not localized: 1. User is not logged into PACS, 2. Cannot save because lock is required. |
| 13619 | Localization | When in Scheduling and Front Desk, order tab screen has a word cut off in version QE_HE_2016.2 . |
| 13339 | Localization | PACS login dialog is not localized nor does it support RTL |
| 13338 | Localization | Request to rename field/checkbox in Hebrew under the documentation tab in view/edit |
| 12038 | Localization | Buttons are misleading and inverted for Next/Previous field and Next/Previous portal tab |
| 12586 | Mammography | Manually create reminder window hidden close button when font size set to Large |
| 13819 | Meaningful Use | MU Tab - Allergies Pane - Error appears if Status is |

| | | |
|---|---|---|
| | | selected before Severity |
| 13595 | Meaningful Use | NPI Invalid message should give more detail |
| 13551 | Meaningful Use | Invalid object name 'c_patient_problem_list' when two users update the same patient's problem list |
| 11363 | Meaningful Use | Height/Weight not required while going through Existing Orders prompt |
| 8516 | Meaningful Use | Direct Message - Issue attaching CCDA document to New Patient |
| 13740 | Mgt Reports | Core report: RTAT by Radiologist procedure group issue |
| 13855 | PACS (eRAD) Int - RIS only | PACS Bookmark remains when closing non-focused tab |
| 11760 | PACS (eRAD) Int - RIS only | PACS integration - Unable to reopen a study using View Images button if PACS is closed after initial open |
| 13801 | PACS (eRAD) Integration | RIS not connecting with PACS when using SSO with RTL localization |
| 13794 | PACS (eRAD) Integration | ERAD PACS - gets confused and displayed incorrect images. |
| 13784 | PACS (eRAD) Integration | Getting messages that aren't correct and images eventually get out of sync when PACS Viewer is not displayed |
| 13604 | PACS (eRAD) Integration | PACS sync issue when switching between multiple tabs under certain circumstances |
| 13482 | PACS (eRAD) Integration | PACS sync - PACS is unable to open current study message displayed too many times |
| 13296 | PACS (eRAD) Integration | PACS prefetching: ArgumentOutOfRangeException |
| 14091 | PACS (Non - eRAD) Integration | UV PACS over Citrix - Mini patient folder and main patient folder not appending images correctly |
| 13717 | PACS (Non - eRAD) Integration | In the XML Integration Lookup table cannot select a file with the xml and save to an existing row |
| 13716 | PACS (Non - eRAD) Integration | Outbound XML configuration grid - the drop down column header should not be displayed and you should not be able to add multiple identical rows |
| 12497 | PACS (Non - eRAD) Integration | IW PACS Integration - When a study cannot be loaded the ‘Study loading problem’ message is hidden, instead 'Waiting for PACS' message is displayed |
| 13725 | Patient Management | MRNs for New Appointments with existing patients - system does not release generated MRN |
| 13553 | Patient Management | System generated MRN not automatically advancing for new patients under some circumstances |
| 12918 | Patient Merge | Patient merge - Phone numbers and email addresses not selected if patient merge is opened when patient folder is open |
| 13401 | Patient Search | When using Patient Search with Last Name ending with the letter 'n' and DOB, the letter ‘n’ is ignored |
| 13760 | Payment control | Foreign Key constraint error when calculating cost of procedure |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| 13559 | Payment control | Payment calculator error: object reference not set to an instance of an object |
| 13615 | Portal Viewer | Portal windows are leaking memory |
| 13330 | PowerScribe Integration | PS360 - 'Thread was being aborted' message - inaccurate message and meaningless to user |
| 13587 | Radiology Peer Review | Peer review - the Organization settings do not seem to be saving correctly |
| 13407 | Radiology Peer Review | Peer Review - Value for Notes required at score is affecting what appears on All Peer Review Pending Action WL |
| 13815 | Radiology Reporting | TCP listener (Inbound Reporting) doesn't work when SSO used |
| 13762 | Radiology Reporting | Clinical.OpenStudySuspendedByOtherUser set to NONE, getting different behavior in create/edit window vs dictate window vs sign window. |
| 13746 | Radiology Reporting | Send report option is available on Exam Done studies without a report |
| 13743 | Radiology Reporting | Infinite loop possible when updating supporting reporting files such as text expander, author playback settings, etc. |
| 13730 | Radiology Reporting | RIS produces 2 errors related to 'c_client_worklist' then crashes. |
| 13634 | Radiology Reporting | Radiologist reporting screens hanging when closing from PS360 |
| 13630 | Radiology Reporting | Memory leak in digital form answer view |
| 13628 | Radiology Reporting | M*Modal - edited auto macros reset to the default on subsequent open |
| 13592 | Radiology Reporting | Getting a "ResolveInputOutputDevice" error when opening the dictation window |
| 13437 | Radiology Reporting | When clicking 'Send for dictation' will get prompted that all sections must be entered |
| 13315 | Radiology Reporting | Patient history control error: Cannot access a disposed object |
| 13263 | Radiology Reporting | Template editor lookup, result tab, filter the grid by default = Y, edit one of the templates, get error when saving the template |
| 13251 | Radiology Reporting | Auto Hide for docked patient folder not staying persistent in dictating view |
| 7422 | Radiology Reporting | County Picker does not take in to account the fact that the same county name can exist in multiple states |
| 13531 | Reception | Exception occurs when saving study extra info |
| 13520 | Reception | When changing a Primary/non Primary linked Exam the linking stays intact, Flag isn't removed. |
| 7400 | Reception | Foreign key constraint when checking studies and adding insurance or self pay at time of registration |
| 13566 | Scheduling | When creating a new appointment or new walk in, the |

| | | |
|---|---|---|
| | | MU pop-up window will not save or close when clicking OK |
| 13563 | Scheduling | From the patient folder, when an ordered study is selected, get an unexpected error when opening the walk-in window |
| 13538 | Scheduling | The start time of a schedule restriction cannot be less than the shortest duration of an exam for that modality after the hour (any hour) |
| 13466 | Scheduling | Phone Number is not copying for "Same as Patient" when Self, Spouse, or Child is selected |
| 13303 | Scheduling | Error loading schedule order |
| 12949 | Scheduling | Referring physician alert not being displayed on Schedule Order/Registration/Walk-In |
| 13809 | Technologist | Get an error in the Technologist WL - Object reference not set to an instance of an object and exam status does not change |
| 13519 | Technologist | Assigned Rad list in Perform Exam window is reordered after initial selection. |
| 13518 | Technologist | Assigned Radiologist is not retained if referrer has preferred radiologist and included study is toggled |
| 13495 | Technologist | When in Perform Exam, clearing Procedure name from Procedure picker and continuing evokes an error message |
| 13359 | Technologist | Exam with contrast that is aborted has contrast removed |
| 13586 | Thick Client GUI | Null reference error after double click on worklist |
| 13567 | Thick Client GUI | PACS Login dialog resize issues |
| 13434 | Thick Client GUI | County information should be cached |
| 13331 | Thick Client GUI | Radgridview / gridflagcellelement memory leak |
| 13299 | Thick Client GUI | Error clearing old trace logs |
| 10394 | Thick Client GUI | eRAD RIS lock screen is only hiding RIS, not technically locking. Shortcut commands and actions in third party systems can still occur |
| 9616 | Thick Client GUI | Referring Preferences - Add Radiologists drop down shows duplicates |
| 2601 | Thick Client GUI | Referring detail on Order tab - add suffix |
| 2350 | Thick Client GUI | No Show WL missing patient folder from context menu |
| 14043 | UI Look and feel | Change text on personnel address from "Marketing fax opt-out" to "Prohibit marketing faxes" |
| 13792 | UI Look and feel | SystemConfig spelling and grammar errors - PortalSchedulingBookingLockTimeout & SchedulingBookingLockTimeout |
| 13625 | UI Look and feel | Improve message given to user for failed MRN mask |
| 13491 | UI Look and feel | Navigation buttons on Portal data pane are disabled |
| 13224 | UI Look and feel | When Phone number mask is disabled, the phone numbers are displayed in a mask in the referring |

## KNOWN LIMITATIONS

The following are new bugs found in build 2.2016.3. Bugs reported in previous versions are not captured as Known Limitation in this document.

| # | Priority | Category | Subject |
|---|---|---|---|
| 13992 | Normal | Audit History | Audit History is not recording the county and zip code for the signed exam |
| 14052 | Normal | Client Install | Core install - after a successful install, should have a message stating 'install completed successfully' |
| 13886 | Low | Digital Forms | Do not try to save digital forms from RIS when trying to 'Save As Order' |
| 13971 | Low | Documentation | Assigned Radiologist not showing as a required field until you hit save |
| 13983 | Normal | Image request | Navigating from one view to another in the Image request WL |
| 14005 | Normal | IVT / Precert | Verification of Insurance remains after changing insurance companies |
| 14001 | Normal | IVT / Precert | Insurance verification is showing as required when it's approved through an eligibility check |
| 13998 | Normal | IVT / Precert | When changing insurance companies at scheduling, there is an error after verifying another insurance in the order process |
| 13938 | Normal | Localization | Couple of items not localized to Hebrew |
| 13870 | Low | Meaningful Use | eRx - Throws exception if patient's primary phone number starts with "+" |
| 14003 | Normal | MModal | Conditional fields - value is not retained when 'sent to VR' if option is a macro |
| 13967 | Normal | PACS (eRAD) Int - RIS only | On initial opening of a study, should the 'Communicating with PACS' dialog or status bar message be displayed? |
| 13961 | Normal | PACS (eRAD) Int - RIS only | Status bar is displaying incorrect message when waiting for PS360 |
| 14058 | Normal | PACS (eRAD) Integration | PACS images are not getting released when skipping through in 'All Peer Review Pending Action WL' |
| 14025 | Low | PACS (eRAD) Integration | When closing RIS from the Locked screen, images do not close |
| 13953 | Normal | PACS (eRAD) | PACS status bar message is different than PACS dialog message |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | | |
|---|---|---|---|
| | | Integration | |
| 13945 | Normal | PACS (eRAD) Integration | RIS fails to display message for missing priors when the bookmark is not lost |
| 14093 | Low | PACS (Non - eRAD) Integration | CSH PACS - will log you out if it is not chosen upon login to RIS |
| 14039 | Low | PACS (Non - eRAD) Integration | Integration Manager - Add close requested error |
| 13928 | Low | Patient Folder | Required indication (red exclamation) not updating after Patient Race is added |
| 13974 | Normal | Scheduling | Error for 1 patient with 2 procedures at the same time in the same room |
| 13926 | Normal | Scheduling | Required indication (red exclamation) not updating after None is selected for Medications/Allergies/Medical History on the MU tab |
| 14002 | Normal | Service Tools - Installer | RIS Thick Installer Wix Project cleanup |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

# Installing

## Client/GUI

1) Copy and replace the current rRIS…zip file with the eRAD_rRIS_2016.4.1.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## Web Service

This updated is only required for the Wedge Web Services. The Core RIS Service and Document Distribution Service are not required to be updated.

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 99 files in the rRISService folder and 6 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below). Folders ar (Arabic), he (Hebrew), pt_BR (Brazilian Portuguese) and es-AR (Argentina Spanish) are localization folders. The WedgePlugins folder contains various plugin files for RADAR, MIRTH, Ensemble, etc…

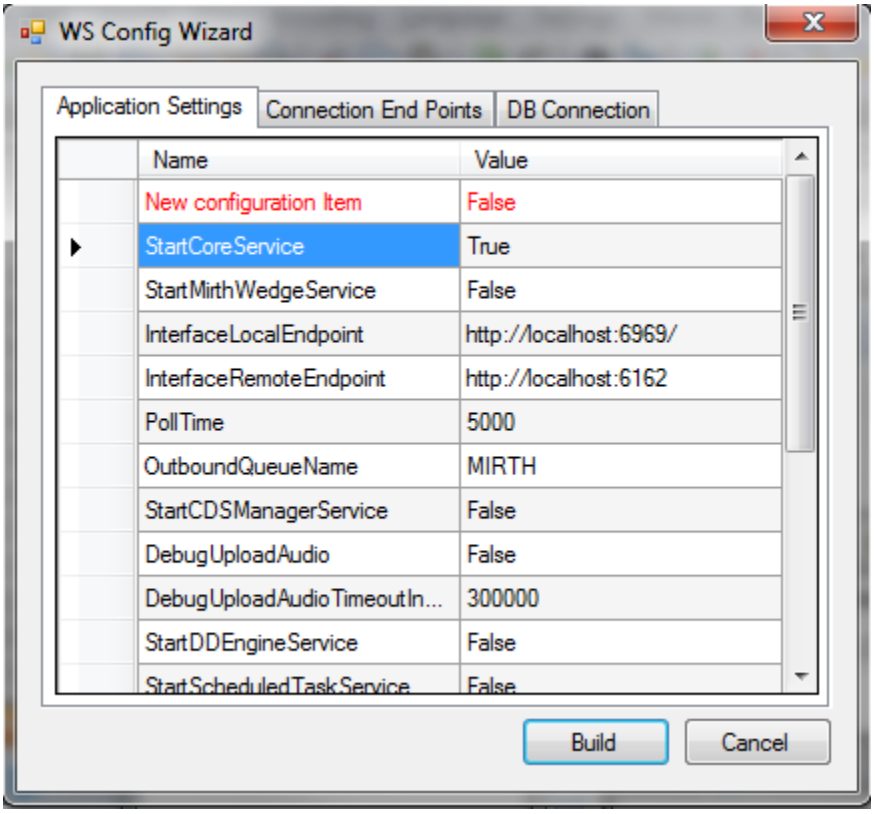
**Services Configuration Wizard**

With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, and services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

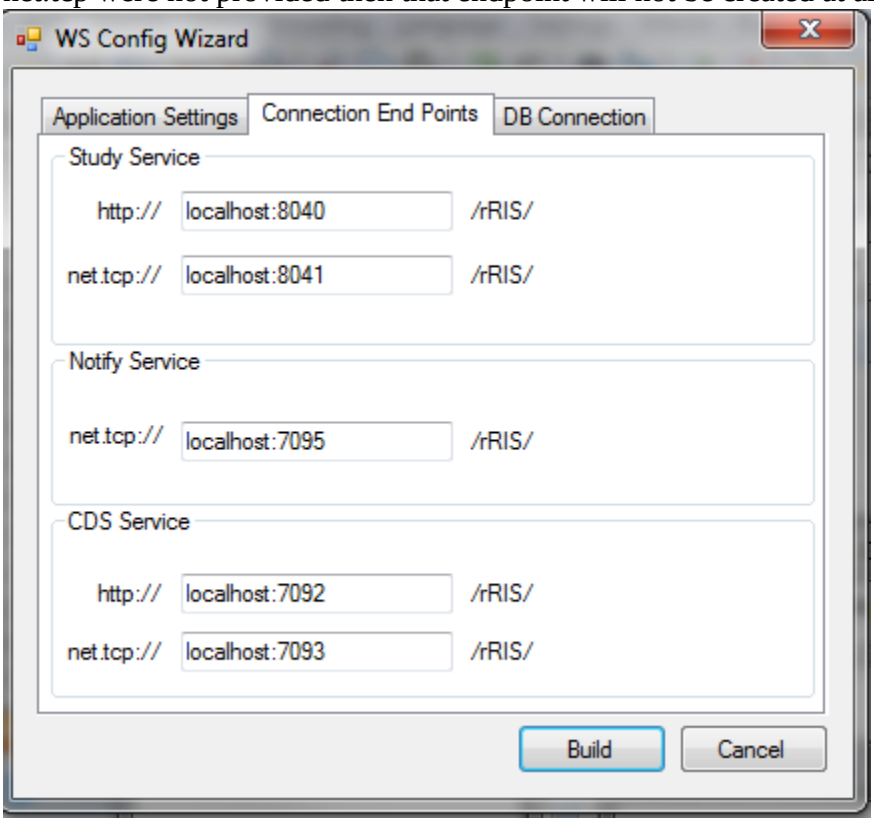
This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.



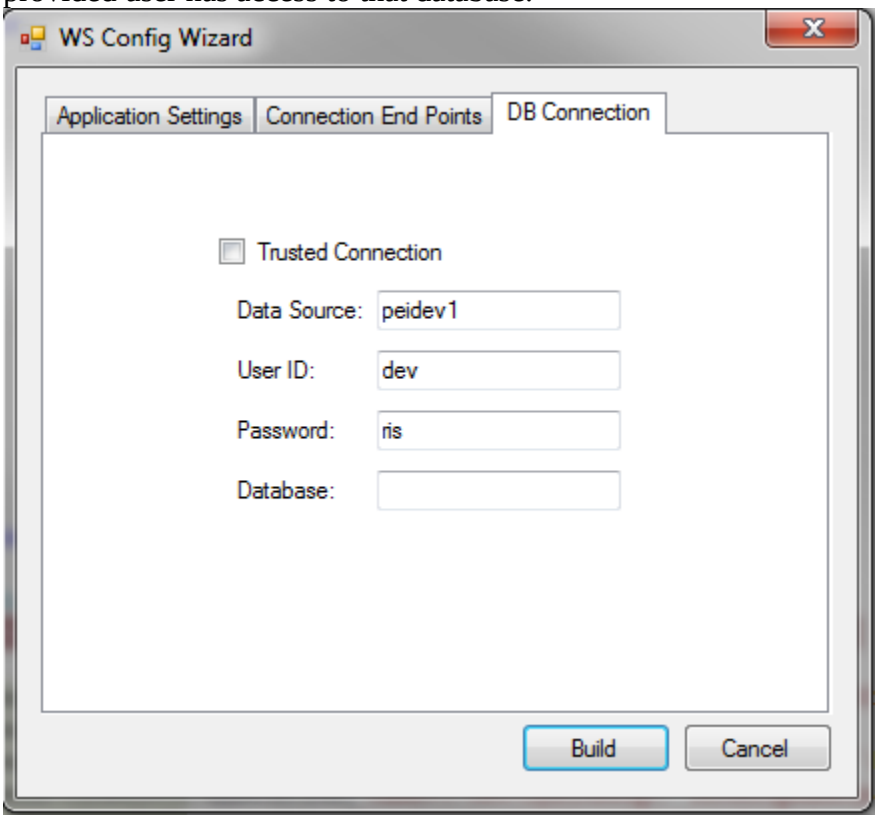
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of "Study Service" or "CDS Service" if both http and net.tcp were not provided then that endpoint will not be created at all.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**DB Connection:** will display the existing configuration, if the Connection is to be used as a trusted connection, then the user ID and password will become disabled and will not be used, and will rely on the provided database value, When not using the trusted connection, The Database value is not needed but can be used to force a specific database connection as long as the provided user has access to that database.



It is always good practice to do a compare of the .config files.

1) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   **Restart each service**.

## Resolved Items

eRAD RIS

| Redmine # | Subject |
|---|---|
| 15289 | It is now possible to arrive or cancel appointments made as a guest in the Patient Portal. |
| 15288 | Ris.exe is once again marked as LARGEADDRESSAWARE. |

Patient Connect

| Redmine # | Subject |
|---|---|
| 15282 | Preparation instructions have been added to the Appointment Summary Tab. |
| 15281 | An occasional issue with the next button not advancing through the workflow after selecting the provider has been resolved. |
| 15280 | Activity logs are now time stamped with the server time, eliminating a 4-hour discrepancy. |
| 15279 | A change has been made to eliminate rounding up to the next day, in order to prevent additional delay to the report being displayed in the portal. |
| 15278 | The Images tab now disappears when PACS is not defined. |
| 15277 | A message that images are not available is now displayed when eRAD PACS is not defined. |
| 15276 | Both phone and email are now required when using the Get Help form. |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Code Stream

# Installing

## Client/GUI

Copy and replace the current rRIS…zip file with the eRAD_rRIS_2016.4.2.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## Patient Portal

The RIS Patient Portal deployment folder contains a sub folder called "PatientPortalAppFolder." The "PatientPortalAppFolder" contains the complete set of files necessary for the RIS Patient Portal to run.

To deploy the RIS Patient Portal files, run the "DeployPatientPortal.bat." This batch program is located inside the "PatientPortalAppFolder." Following is some information about this batch program:

- It needs to be run on the server containing the RIS Patient Portal web site.
- It will present the person running the program (installer) a list of web sites on the current server.
- The installer will have to enter the web site for which they want to deploy the patient portal files.
- The program will present details of what it is about to do and ask the installer to confirm in order to proceed.
- The program will write to a log file in the same folder as the DeployPatientPortal.bat.
- It will replace the bin, content, view and scripts folder in the specified web site path.
- It will also replace the web.config and packages.confile files.
- It will add applicationsettings.config, connectionstrings.config and rewriteRules.config if any of those files are not present.
- It will add applicationsettings.config.vx.x.x.x, connectionstrings.config.vx.x.x.x and rewriteRules.config.vx.x.x.x so the installer can review if there are any changes in these files that may need to be implemented in actual .config file.

You can use this batch program to redeploy new releases of the RIS Patient Portal. Please ensure to review the new .config.vx.x.x.x files and release notes to ensure you take advantage of new configuration settings.

## Resolved Items

### eRAD RIS

| Redmine # | Subject |
|---|---|
| 15583 | Insurance Eligibility - Pin is now only passed to Eligible when appropriate. |
| 15537 | An issue that could prevent a worklist from refreshing under certain conditions was resolved. |
| 14744 | Exams scheduled in the Patient Portal using Guest mode now remain visible in the portal after being merged with internal patient ID. |

The following are bugs identified and fixed in a newer version and the changes were brought back and fixed in 2016.4.3.

| Redmine # | Subject | Original resolved version |
|---|---|---|
| 15602 | Inconsistencies with displaying referring alerts when scheduling appointments with multiple orders have been resolved. | 2016.6 |
| 15542 | Setting the referring physician alert checkbox will no longer prompt that "Another user may have made conflicting changes" when making future updates to the referring physician's account. | 2016.5 |
| 15541 | The referring physician alert is displaying properly when the registration window is opened. | 2016.6 |

### Patient Connect

| Redmine # | Subject |
|---|---|
| 15623 | A small verbiage change was made for the Prescription step (capitalization). |
| 15622 | A verbiage change was made for the "Select your provider" step. |
| 15540 | Creating a Patient Portal account is possible without timing out when using verification code. |
| 15535 | Some messaging changes were made for the Create Appointment workflow. |

# Installing

## Client/GUI

Copy and replace the current rRIS…zip file with the eRAD_rRIS_2016.4.3.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## Web Service

This updated is only required for the Wedge Web Services. The Core RIS Service and Document Distribution Service are not required to be updated.

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 107 files in the rRISService folder and 7 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below). Folders ar (Arabic), he (Hebrew), pt_BR (Brazilian Portuguese) and es-AR (Argentina Spanish) are localization folders. The WedgePlugins folder contains various plugin files for RADAR, MIRTH, Ensemble, etc…

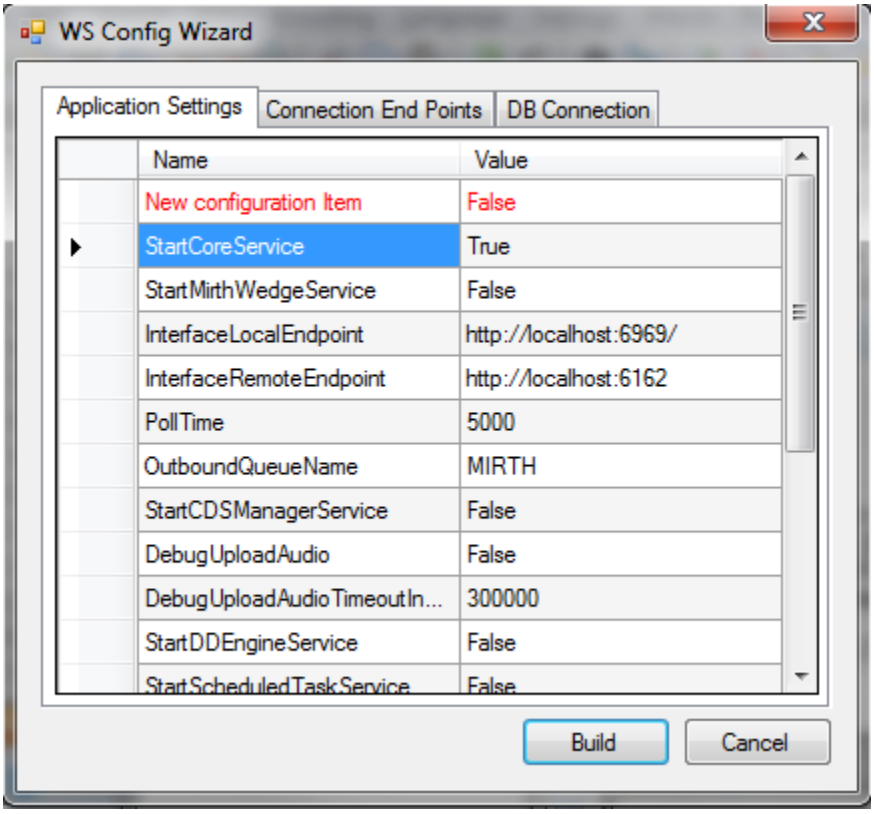
**Services Configuration Wizard**

With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, and services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

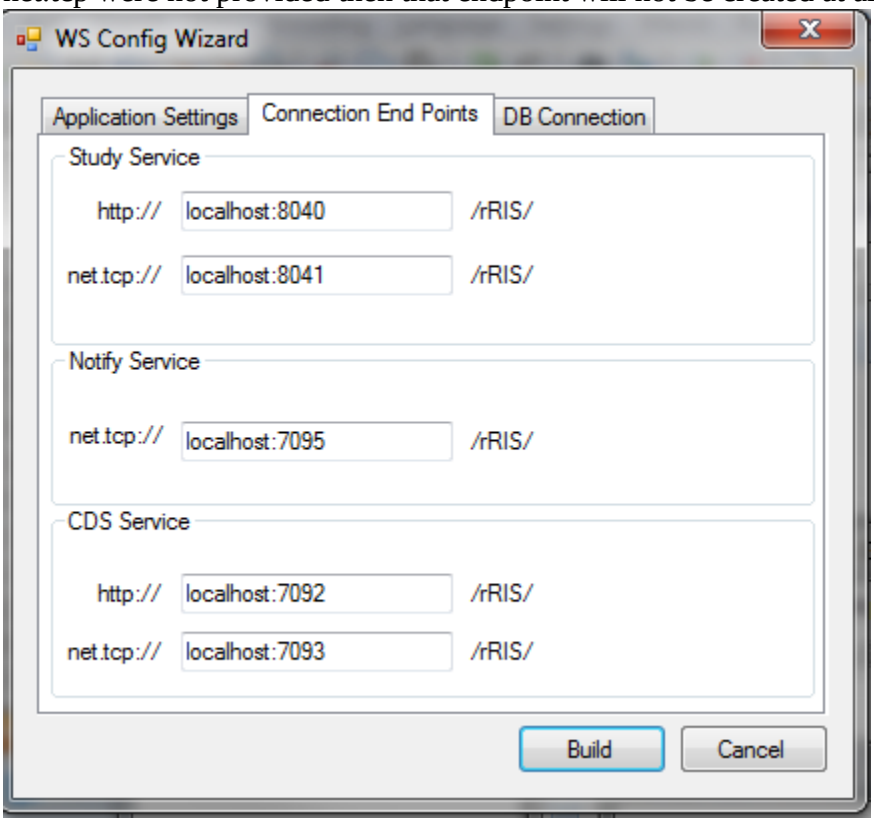
This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.



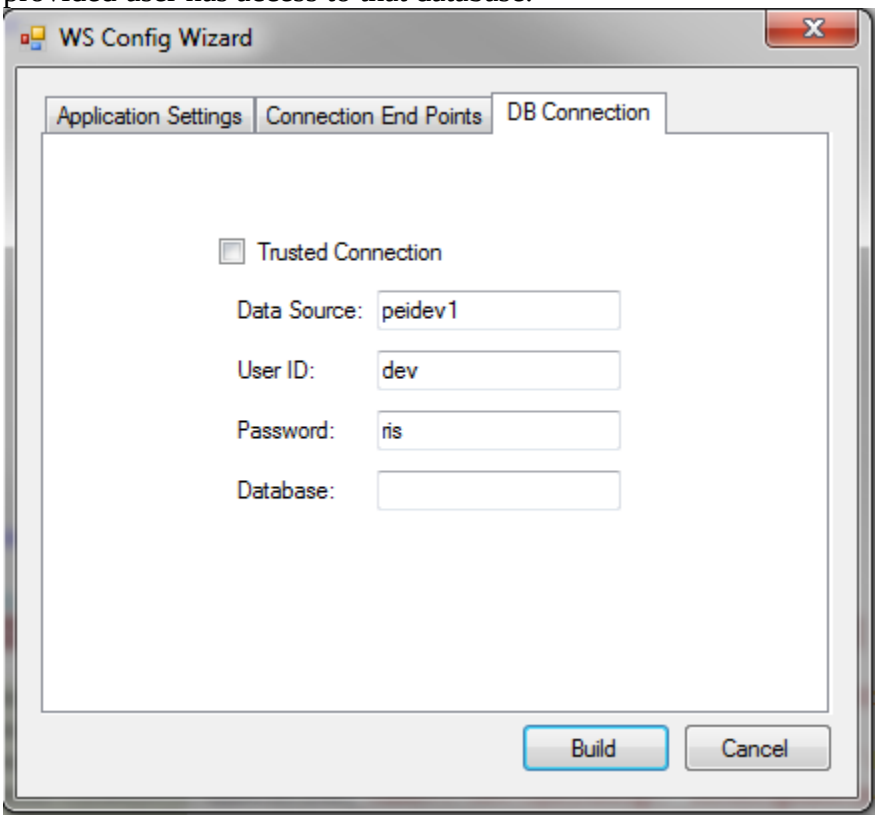
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of "Study Service" or "CDS Service" if both http and net.tcp were not provided then that endpoint will not be created at all.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**DB Connection:** will display the existing configuration, if the Connection is to be used as a trusted connection, then the user ID and password will become disabled and will not be used, and will rely on the provided database value, When not using the trusted connection, The Database value is not needed but can be used to force a specific database connection as long as the provided user has access to that database.



It is always good practice to do a compare of the .config files.

1) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService.
   *rRISService directories include:*
   *a) rRISService*
   *b) CDS rRISService*
   *c) Wedge rRISService*
   *d) DDE rRISService*

   **Restart each service**.

## Database Updates

Always run the upgrade scripts in a test environment of the actual database to make sure they run cleanly. If any errors occur please contact development.

*Note: There is a new upgrade process introduced with B43.1 called "RunUpgrade.bat". The batch file will open a command window. This process will prompt you for the database server name, database name and authentication credentials. There is no need to run the database upgrade scripts manually as was done in previous releases.*

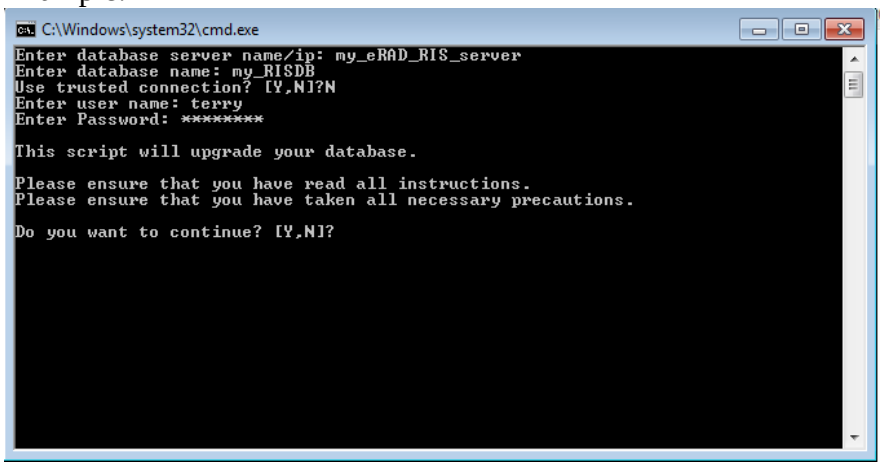
1) From the upgrade folder, double click the "RunUpgrade.bat" command file.

2) Enter the server name, database name and authentication credentials to the database. You have 2 choices for authentication credentials.

3) You can choose to use "Trusted connection". Using this option will pass the identity of the currently logged on user. If this user has "db_owner" access to the eRAD RIS database then feel free to use this options.

4) If you decide not to use "Trusted connection" then you will be prompted for user id and password.

   Example:



5) After the upgrade program has finished you can find the upgrade logs in the "log" folder. The file name will be eRAD_RIS_db_upgrade_timestamp.log, where timestamp is a value representing the date and time the upgrade started. If you see any errors please contact the development team

## Patient Portal

The RIS Patient Portal deployment folder contains a sub folder called "PatientPortalAppFolder." The "PatientPortalAppFolder" contains the complete set of files necessary for the RIS Patient Portal to run.

To deploy the RIS Patient Portal files, run the "DeployPatientPortal.bat." This batch program is located inside the "PatientPortalAppFolder." Following is some information about this batch program:

- It needs to be run on the server containing the RIS Patient Portal web site.
- It will present the person running the program (installer) a list of web sites on the current server.
- The installer will have to enter the web site for which they want to deploy the patient portal files.
- The program will present details of what it is about to do and ask the installer to confirm in order to proceed.
- The program will write to a log file in the same folder as the DeployPatientPortal.bat.
- It will replace the bin, content, view and scripts folder in the specified web site path.
- It will also replace the web.config and packages.confile files.
- It will add applicationsettings.config, connectionstrings.config and rewriteRules.config if any of those files are not present.
- It will add applicationsettings.config.vx.x.x.x, connectionstrings.config.vx.x.x.x and rewriteRules.config.vx.x.x.x so the installer can review if there are any changes in these files that may need to be implemented in actual .config file.

You can use this batch program to redeploy new releases of the RIS Patient Portal. Please ensure to review the new .config.vx.x.x.x files and release notes to ensure you take advantage of new configuration settings.

## Installing

### Client/GUI

Copy and replace the current rRIS…zip file with the eRAD_rRIS_2016.4.4.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

# Server Update

For eRAD RIS
Version 2.0
Build 2.2016.4
Update 2.2016.4.5

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

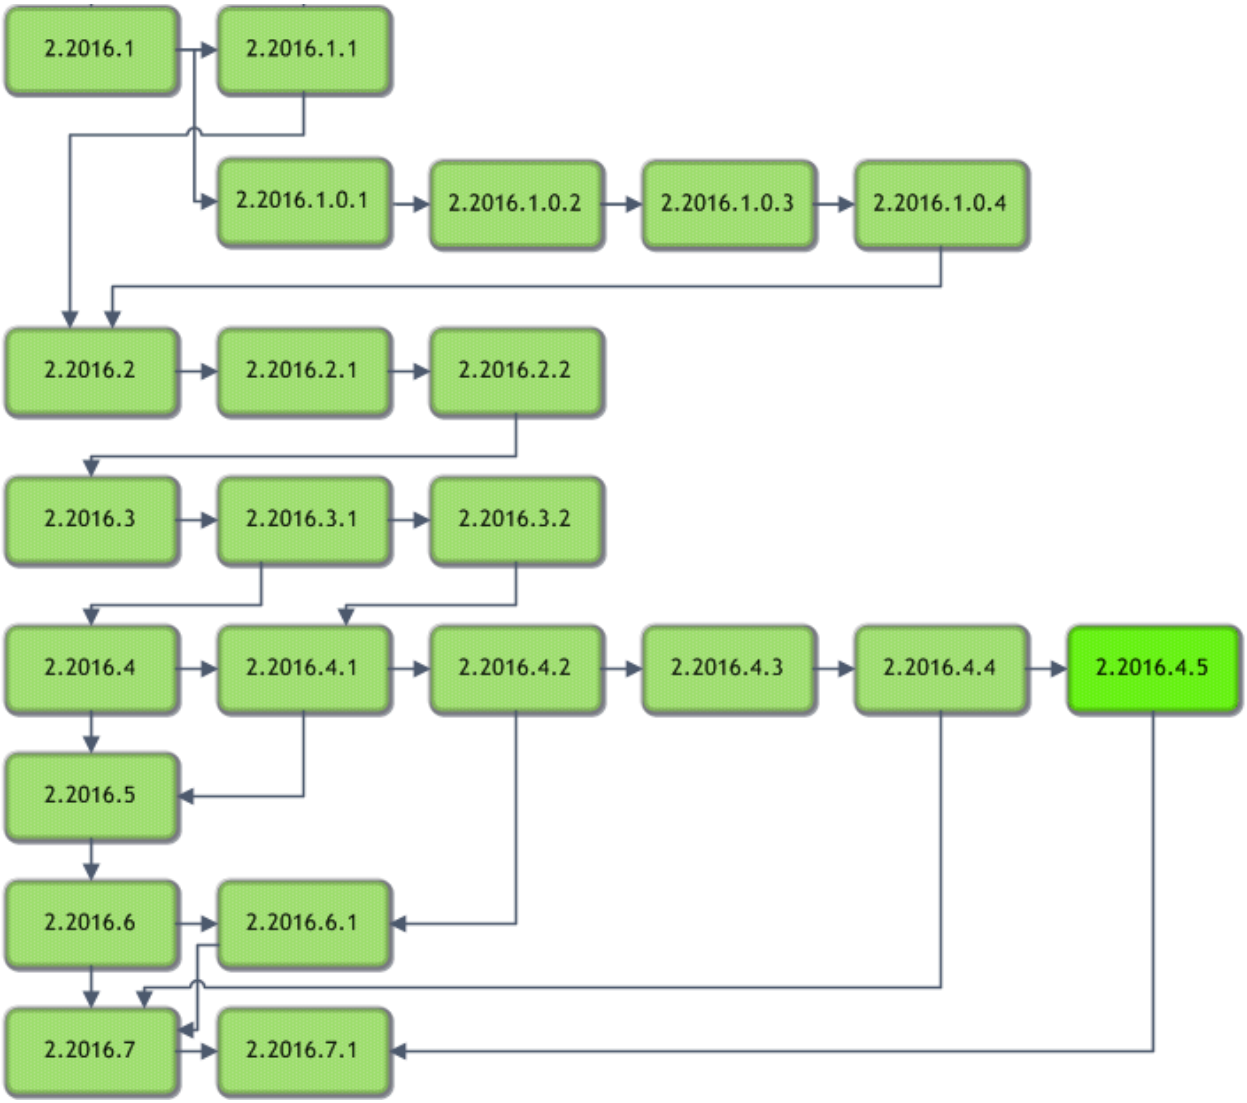
## Resolved Items

**eRAD RIS**

| Redmine # | Subject |
|---|---|
| 15832 | Voiding payments made in the Imagine Payment Portal no longer generates an error when multiple Dataset IDs (tax IDs) are configured. |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Code Stream



**Legend:**

Light Green = Previously Released software

Bright Green = Current Release

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Package Contents

## Intended Audience

The intended audience for this document is the RadNet Clinical Systems team and the eRAD Support/Service team.

## Who is affected

Build 2016.4 installs. This server update must be applied to 2016.4.4. The resolved defect impacts customers using the Imagine Payment Portal, only if they have multiple Dataset IDs configured.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Installing

### Client/GUI

Copy and replace the current rRIS…zip file with the eRAD_rRIS_2016.4.5.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

# Server Update

For eRAD RIS
Version 2.0
Build 2.2016.4
Update 2.2016.4.6

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

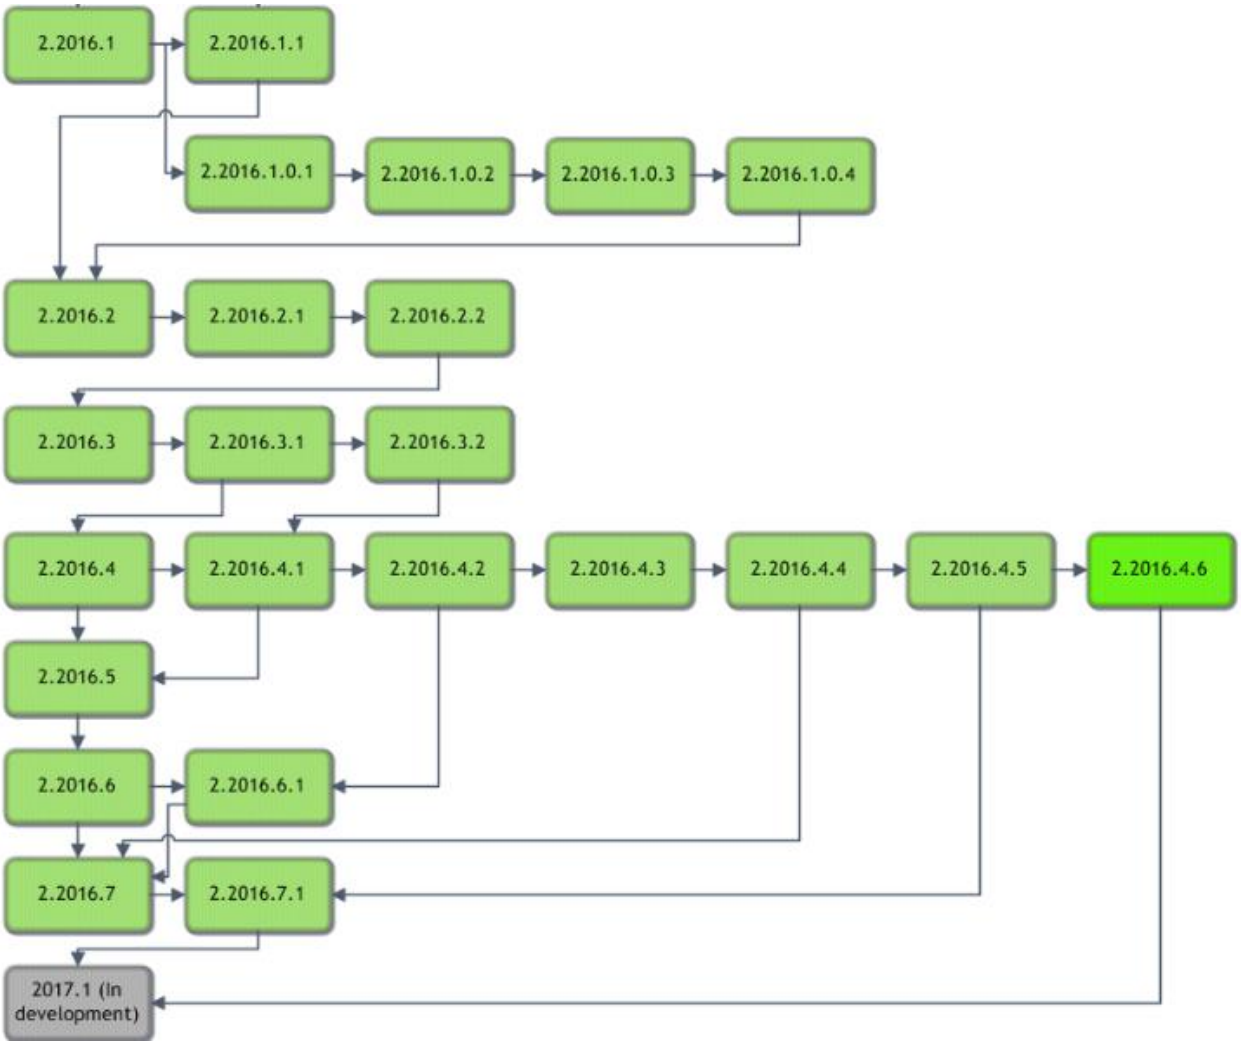
## Code Stream



**Legend:**

Light Green = Previously Released software

Bright Green = Current Release

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Package Contents

## Intended Audience

The intended audience for this document is the RadNet Clinical Systems team and the eRAD Support/Service team.

## Who is affected

Build 2016.4 installs. This server update must be applied to 2016.4.3 as this version had DB and Web Service updates. Versions 2016.4.4 and 2016.4.5 were GUI only releases.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Installing

### Client/GUI

Copy and replace the current rRIS…zip file with the eRAD_rRIS_2016.4.6.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

October 2016

# Customer Release Notes

## for eRAD RIS

## Version 2

## Build 2016.4

Important Notes: This version requires a Core Install. Also, any M*Modal files will need to be manually copied to the new home location for Feature #7572 (see page 36-38).

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## TABLE OF CONTENTS

Table of Contents ..... 2
Purpose ..... 4
Intended Audience ..... 4
New Settings ..... 5
New access strings ..... 5
New system configuration settings ..... 5
New Features ..... 7
Scheduling and Registration ..... 8
11925 – Responsible Party's date of birth can now be captured ..... 8
13103 – Procedure Plans can now book rooms simultaneously ..... 9
Insurance Eligibility ..... 11
13611 – Eligible API integration now allows exceptions for collecting funds based on Payer (or Carrier) and Billing Modality Type ..... 11
Imagine Payment Portal ..... 14
13902 – Imagine Payment Portal integration now supports configuring TSYS account identifiers at a Site level ..... 14
Forms and Labels ..... 15
12043 – A default quantity can be set for printing forms and labels ..... 15
11490 – Automated Form and Label printing now supports additional criteria including exam status, preferred language, contrast, and billing code ..... 16
Digital Forms ..... 17
11514 – Digital Forms questions that have been removed can now be restored ..... 17
Meaningful Use ..... 18
13659 – Implantable Devices can now be documented in accordance with upcoming MU Requirements ..... 18
13844 – A section for Implantable Devices in now displayed in the C-CDA ..... 22
Outside Reads ..... 23
13733 – Indication Codes can now be added when creating an Outside Read ..... 23
Work Lists ..... 24
13803/13804 – Work Lists can now be configured to refresh at different intervals ..... 24
Interfacing ..... 26
8666 – Messages transmitted via Mirth can be filtered to decrease unnecessary messaging ..... 26
Infrastructure ..... 27
7572 – RIS now supports installation to a shared location on the workstation (as opposed to individual Windows user profiles) ..... 27
Referring Physician Management ..... 28
9522 – Marketing representatives can now be associated to a referring physician ..... 28
RIS Administration ..... 29
3667 – Log controls and text boxes support spell check ..... 29
13935 – System Configuration table now enforces more streamlined data entry ..... 30
13818 – Opening the Patient Folder is now shown in the Audit History ..... 31
Document Management ..... 32

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

13808 – Users can now “print” from other applications and autmomatically save the document as an attachment in RIS (No paper or scanner required) ..... 32
RADAR ..... 34
13438 – RADAR Nudge Integration ..... 34
Resolved Defects ..... 44
Known Limitations ..... 47
RIS Release Version Numbers ..... 48
Code Stream Diagram ..... 49

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## PURPOSE

This is the Customer Release Notes document for eRAD RIS Version 2016.4.

Not every feature will be described in this document. Typically, only features which can be visually demonstrated are outlined here.

## INTENDED AUDIENCE

This document was created by the eRAD RIS Development team and Product Management team for eRAD RIS customers.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

# NEW SETTINGS

## NEW ACCESS STRINGS

| Setting | Default | Purpose |
|---|---|---|
| REMOVED Clinical.DeleteDictationReportAndReset | | N/A |
| REMOVED Clinical.PingMessage | | N/A |
| REMOVED Config.LookupEditor.UMCommonLanguage | | N/A |
| Clinical.RADARSecureMessage | None | Controls access to the Nudge message feature. |
| Config.LookupEditor.EligibilityLimitPayment | None | Controls access in the look-up table editor for Eligibility Limit Payment. |
| Config.LookupEditor.WorklistPreference | None | Controls access to the look-up table for WorklistPreference. |

## NEW SYSTEM CONFIGURATION SETTINGS

| Setting | Default | Purpose |
|---|---|---|
| DefaultWorklistRefreshInterval | 5 | (value = int in minutes) Default minutes between work list refreshes. If 0, work list refreshes are disabled. |
| EnableLimitedDBUpdates | True | (value = bool) If enabled, only data rows that contain data different from original values will be updated to the database. |
| MUImplantableDeviceUrl | https://accessgudid.nlm.nih.gov/api/v1/ | (value = string) GUDID Base URL. |
| OptimizedDataSetAssignments | True | (value = bool) It is recommended to keep this set to true. If true, internal assignments only happen when there is an actual difference in the data; otherwise, RIS will always perform the assignment, which will trigger extra events to fire. |
| RADARSecureMessagePort | 0 | (value = int) Configure the port number for the Nudge integration. |
| RADARSecureMessageReportDisclaimer | This report is not for treatment | (value = string) Defines the disclaimer sentence to the report in Nudge integration. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| | purposes. | |
| RADARSecureMessageServer | | (value = string) Configure the server for the Nudge integration. |
| RADARSecureMessageTitle | <last_name>, <first_name> \| #<patient_id> \| @<accession_number> | (value = string) Configure the subject line for a RADAR Nudge conversation. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

Upgrade to eRAD RIS 2016.4 and our New Features will allow you to:

→ Send "documents" (emails, excerpts from websites, etc.) from external applications to a patient's Attachments in RIS without physically printing and scanning.

→ Utilize spell checking for notes fields throughout eRAD RIS, especially those that are mapped into diagnostic reports.

→ Allow radiologists to securely and efficiently communicate with staff and referring providers via an integrated RADAR Nudge instant messaging application.

→ Install RIS to a shared location on the workstation (instead of individual Windows user profiles).

→ Book time for a patient in multiple rooms simultaneously to prevent overbooking a shared radiologist or technologist resource.

→ Improve system performance.

- Configurable work list refresh intervals
- Behind the scenes adjustments to database performance factors

→ Enjoy smoother and more efficient RIS workflow with over 50 resolved defects.

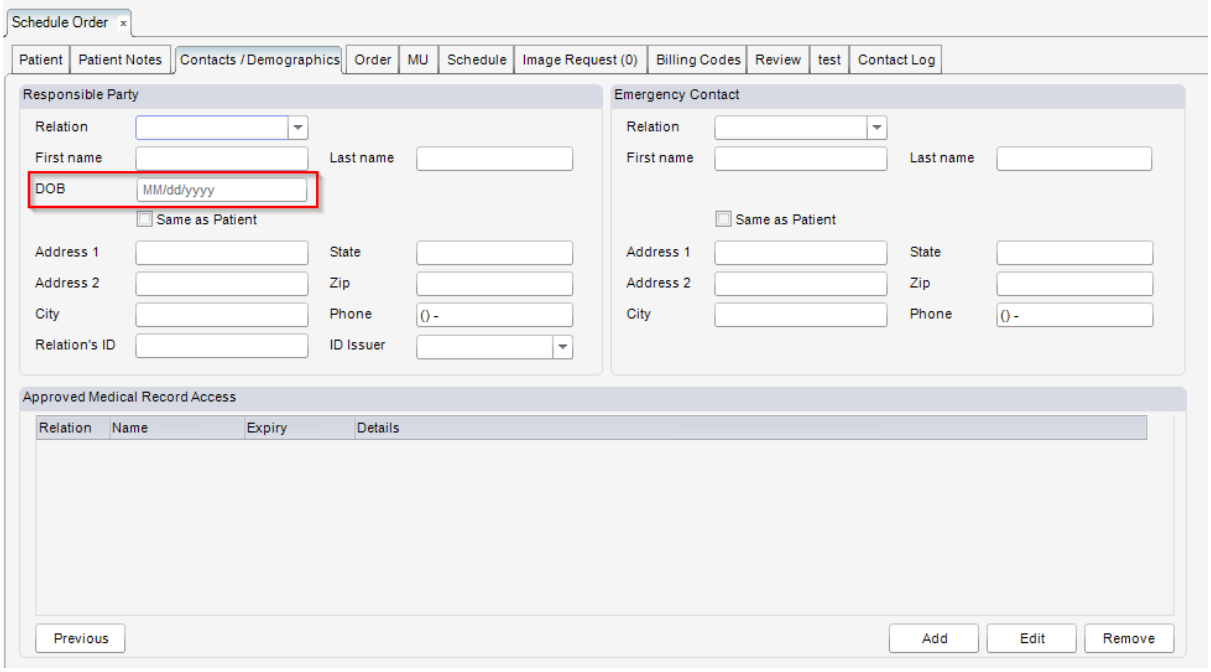
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

# NEW FEATURES

## SCHEDULING AND REGISTRATION

### 11925 – RESPONSIBLE PARTY'S DATE OF BIRTH CAN NOW BE CAPTURED

A field for the Responsible Party's DOB has been added to the Contact/Demographics tab in the Responsible Party section.



Some customers require this information for billing purposes and the new field will allow interested customers to capture this data. If you would like to make this a required field, please let the eRAD Support team know that you would like to configure a Validation Rule to require Responsible Party DOB.

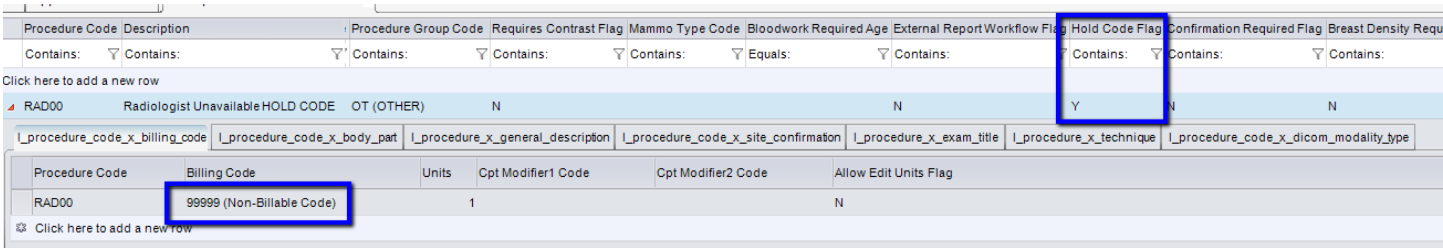
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## 13103 – PROCEDURE PLANS CAN NOW BOOK ROOMS SIMULTANEOUSLY

In some cases, it is desirable to book a patient in two rooms at the same time. Perhaps the patient is having a biopsy in one room, but the mammography room needs to be available for a period of time in the middle of that biopsy, in order for the technologist to take an image of the specimen on the mammo unit. Or perhaps a patient is scheduled for a Fluoroscopy exam and a "Hold Code" is needed in the site's biopsy room, in order to avoid having multiple radiologist-assisted exams at the same time.

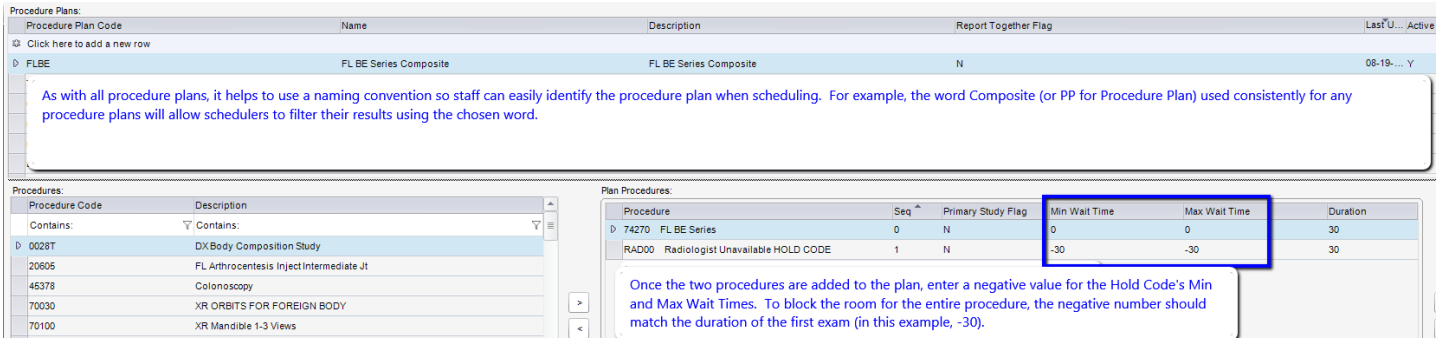
In order to accommodate this workflow, it is now possible to add negative values in the Min/Max Wait Times when creating Procedure Plans.

Example #1: An administrator wants to create a procedure plan for a Fluoro exam that requires a radiologist; it is important to ensure that simultaneous appointments are not scheduled in the biopsy room. Before creating the procedure plan, an appropriate Hold Code should be created to block the biopsy room. When setting up the procedure, the administrator marks the Hold Code as *Hold Code Flag = Y* and associates a No Charge Billing Code, like so:



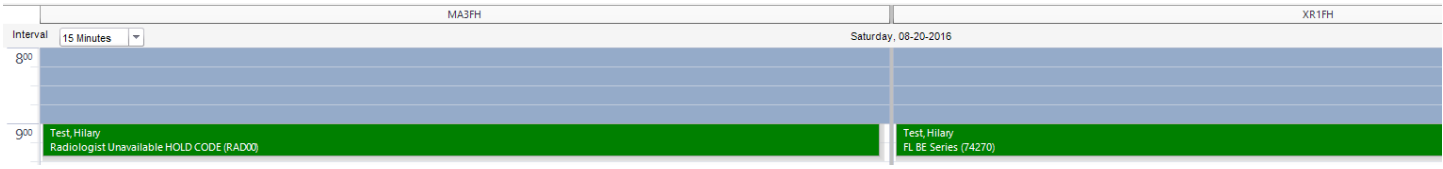
In order for the Time Slot Search to find appointment slots where both the Fluoro Room and the Biopsy Room are available, the new Hold Code is added to the appropriate Schedule Group for the room to be blocked.

Next, the Procedure Plan is created as demonstrated in the image below:

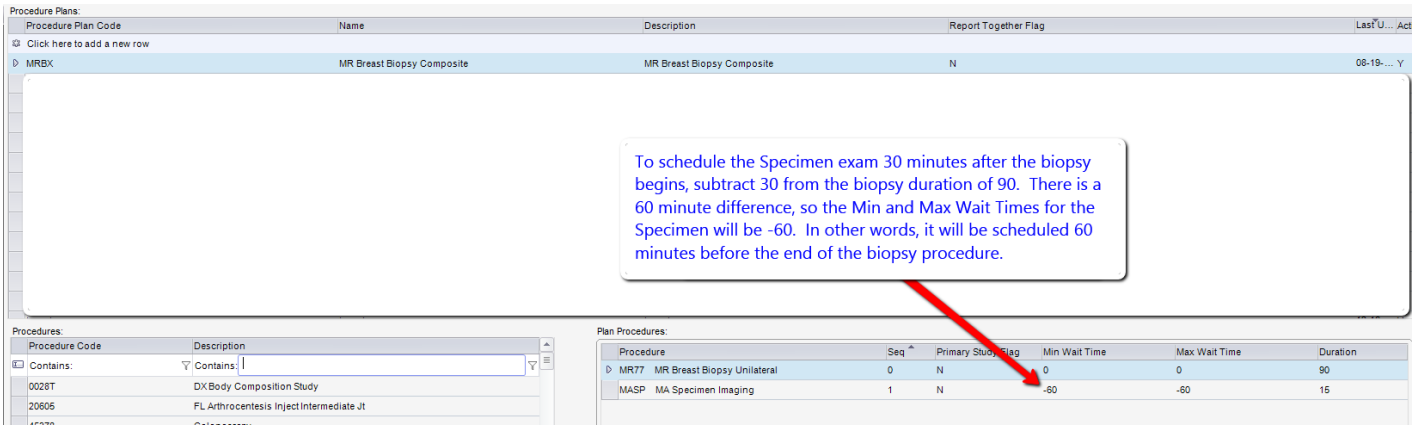


Now, if the procedure plan "FL BE Series Composite" is used when scheduling, it will expand out to include the two procedures (the Fluoro and the Hold Code for the Biopsy Room), the Time Slot Search will automatically find appointment slots where there is availability in both the Biopsy and Fluoro rooms, and exams will be booked for the same period of time in both rooms like so:

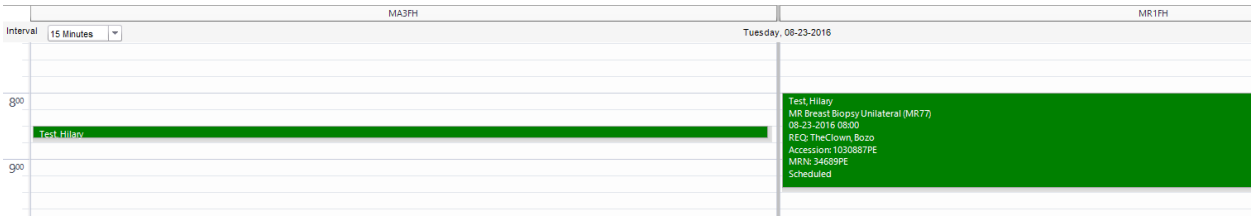
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



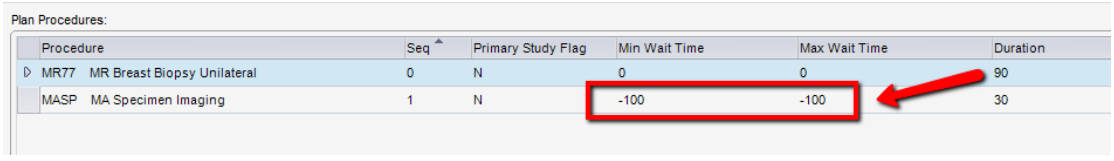
Example #2: An administrator wants to create a Procedure Plan that books a Specimen exam in the Mammo Room during the middle of an MRI Guided Breast Biopsy to ensure that the Mammo unit is available when the biopsy tech needs to obtain a specimen image. Both exams are billable, so a Hold Code is not needed. This procedure plan will be set up to book the Specimen exam in the Mammo room after the biopsy has been in progress for 30 minutes and it will take the technologist 15 minutes to perform the Specimen image. The procedure plan would look like this:



Here's how the scheduled procedure plan looks in the Appointment Book:



Please note that the Min/Max Wait Time should never be set to cause the second exam to occur *before* the beginning of the first exam. If this is done, schedulers will not find results when searching for appointment slots. In other words, don't make the negative Min/Max Wait Times higher than the exam duration for the first exam. Don't do this:



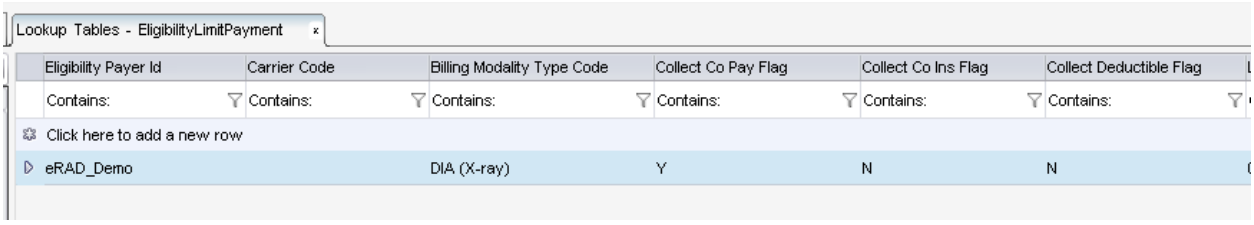
Recommendation: when using this workflow, it is advisable to set the exam Duration on the Procedure Plan, as shown in the examples above. If it is left blank, the default duration on the Procedure Code will be applied, unless there is an override set for the room. However, setting the Duration within the Procedure Plan will override everything else when the Procedure Plan is used. This will be helpful in avoiding unintentional variations caused by room duration overrides that are not obvious from within this table.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## 13611 – ELIGIBLE API INTEGRATION NOW ALLOWS EXCEPTIONS FOR COLLECTING FUNDS BASED ON PAYER (OR CARRIER) AND BILLING MODALITY TYPE

This feature is for clients taking advantage of our automated insurance eligibility feature via Eligible API. Some payers or insurance carriers make exceptions when collecting co-pays, co-insurance, or deductible for certain modality types. For example, it is common for some payers to waive the co-pay for x-ray exams.

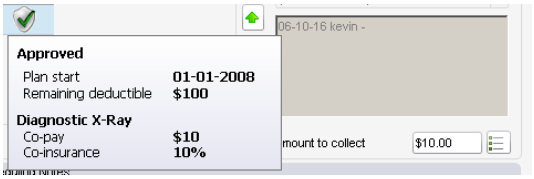
To accommodate for this, a new look-up table named *Eligibility Limit Payment* was added. This table allows for the configuration of exclusions based on modality type and payer/carrier.



In the above example, for all visits with a carrier using the "eRAD_Demo" Eligibility payer id, RIS will not collect co-insurance or deductible when the modality type is X-ray. Only co-pay will be collected (i.e. the value in the Amount to Collect field will only include the amount for co-pay).

Notice that the Carrier Code column in the example above is blank. When configuring rules, it is possible to either fill in the Carrier Code ***or*** the Eligibility Payer ID. When evaluating which rules to use, the system will first attempt to find a matching *carrier_code* rule. If none exist, it will look for a rule by *payer_id*.

The values for any collection categories will still be visible in the information returned from Eligible, even if a limitation rule applies (as displayed below).

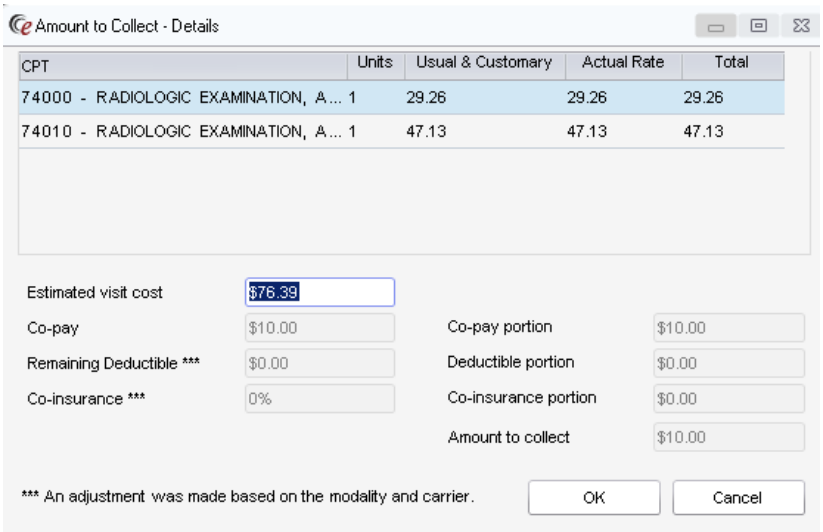


However, despite the remaining deductible and 10% co-insurance requirement listed in the above example, the sample rule configured in the *EligibilityLimitPayment* table will prevent that amount from being added to the Amount to Collect and only the co-pay will apply.

The "Amount to Collect – Details" screen shows the actual values that were used in the calculation. Because the information from Eligible will differ from the values displayed in the Amount to Collect – Details screen when a rule

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

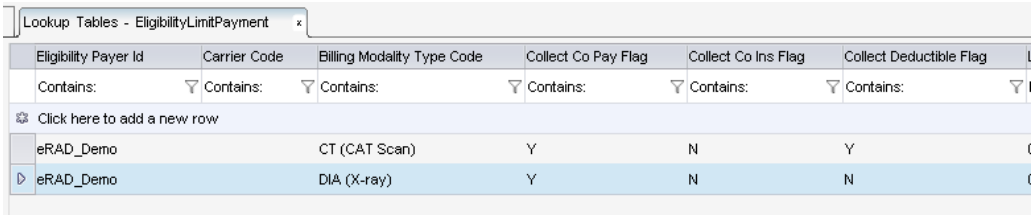
is in effect to ignore a particular payment category, a note will be displayed to indicate that an adjustment was made:



The deductible and co-insurance have been zeroed out above, and the asterisks and corresponding note indicate that an adjustment was made for each.

If a CT study is added to the same visit, the 10% co-insurance or deductible would no longer be suppressed since there are no "Eligibility Limit Payment" rows configured for the CT modality type.

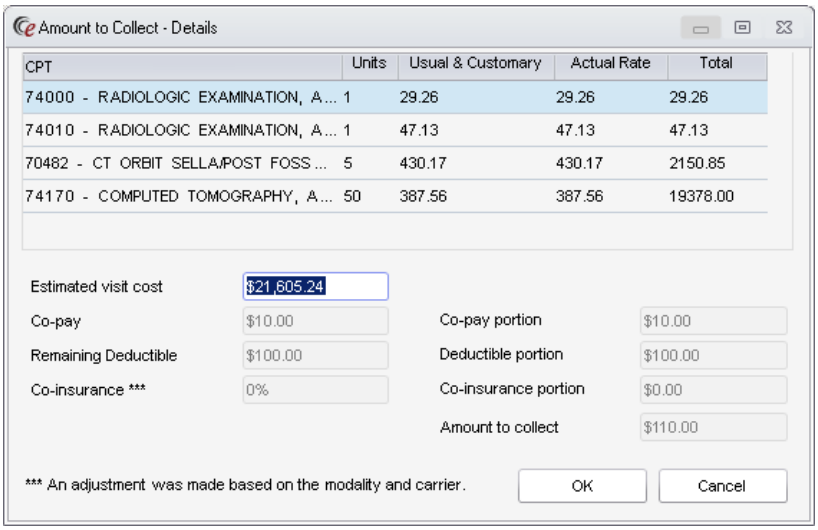
When multiple modality types are scheduled, such as an X-ray and a CT, the system will only prevent collections if an 'N' exists on ***all*** matching "Eligibility Limit Payment" rows. For example, in the following image, there is now an additional rule to not collect the co-insurance for a CT study.



If a patient is scheduled for an X-ray and a CT, the rules are combined; and the only value prevented for collection is the co-insurance (both modality types list N for co-insurance).

In that case, Amount to Collect – Details would look like so:

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



Note that the co-insurance is excluded, but the co-pay and remaining deductible are applied.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## 13902 – IMAGINE PAYMENT PORTAL INTEGRATION NOW SUPPORTS CONFIGURING TSYS ACCOUNT IDENTIFIERS AT A SITE LEVEL

In eRAD RIS, the *DataSet ID* used for the Imagine Payment Portal integration is a global setting in the system configuration table. The DataSet relates to the TSYS account identifier, which sometimes needs to be configurable at the site level.

To resolve this issue, eRAD RIS will specify the DataSet ID at the site level when required using the Imagine Site Code field. If the Imagine Site Code contains a colon (:), the characters in front of the colon will be sent to Imagine as the DataSet ID and characters after the colon will be sent as the Online Provider ID. For example, given an Imagine Site Code of **123:ABC**, 123 is the DataSet ID and ABC will be sent as the Online Provider ID. The syntax is:

Imagine Site Code = <DataSetID>:<OnlineProviderID>

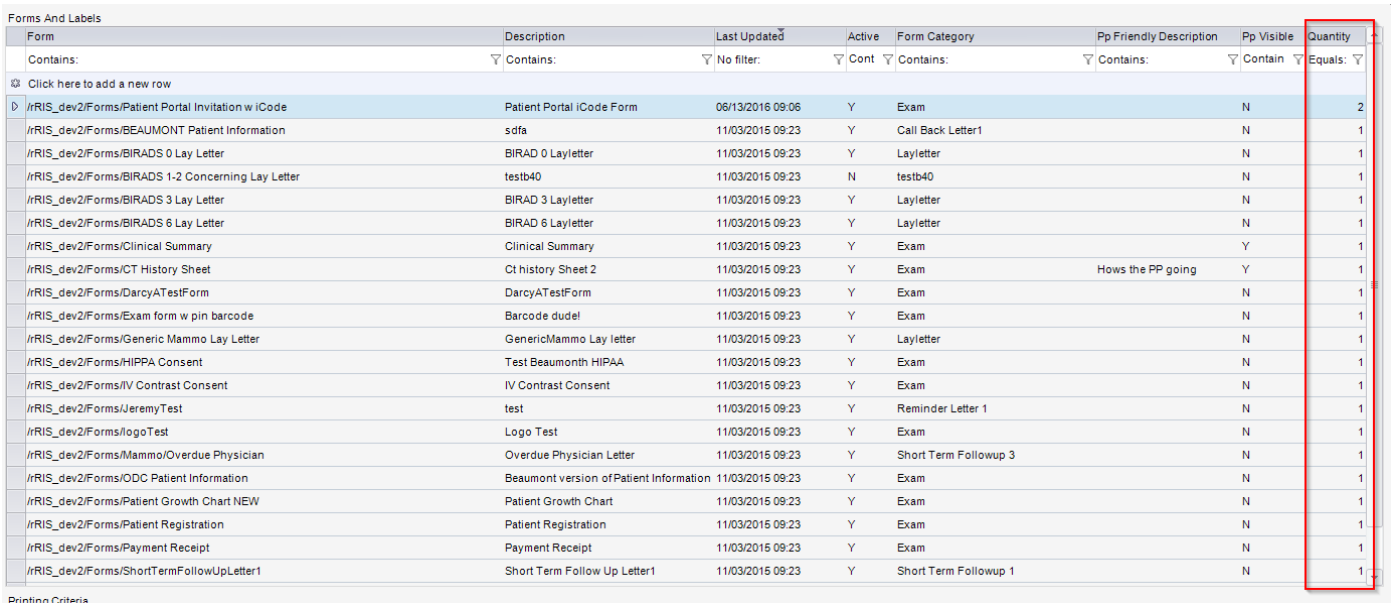
If the <DataSetID>: portion is omitted, then the default DataSet ID from the global System Configuration will be used.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## 12043 – A DEFAULT QUANTITY CAN BE SET FOR PRINTING FORMS AND LABELS

Sometimes labels or forms require multiple printed copies. Today this is supported by adding multiple copies of the same label, and mapping accordingly. To simplify this, there is now a *Quantity* field in the Forms and Labels look-up table, as well as the Print Forms dialog.

In the Forms and Labels table, a RIS Administrator can define a default quantity between 1 and 9 for each form/label.



Forms And Labels

| Form | Description | Last Updated | Active | Form Category | Pp Friendly Description | Pp Visible | Quantity |

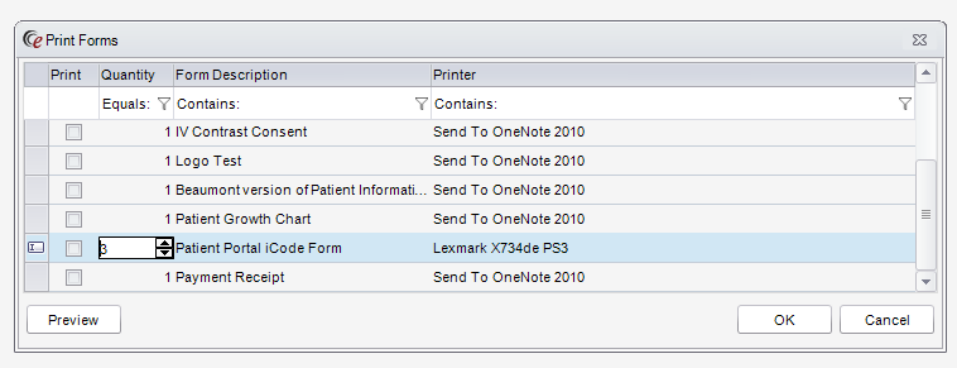
Printing Criteria

When printing, the user has the option to adjust the default. This is done by changing the number in the Quantity column from within the Print Forms dialog box.



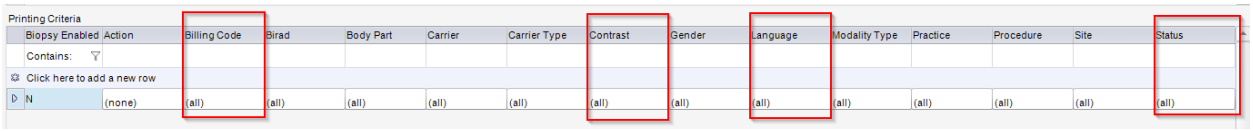
Adjustments in this dialog are **not** saved and the default will be listed when next displayed.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## 11490 – AUTOMATED FORM AND LABEL PRINTING NOW SUPPORTS ADDITIONAL CRITERIA INCLUDING EXAM STATUS, PREFERRED LANGUAGE, CONTRAST, AND BILLING CODE

Additional criteria for triggering Forms and Labels have been added to allow for filtering based on Exam Status, Preferred Language, Contrast Required, and Billing Code.

In the Forms and Labels configuration table, the new columns are now available and all criteria columns are alphabetized.



Just as with the existing criteria types, click the cell to open the criteria selection window. Use the arrow buttons to add or remove values.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## 11514 – DIGITAL FORMS QUESTIONS THAT HAVE BEEN REMOVED CAN NOW BE RESTORED

There is now a process that will enable eRAD Support to restore questions that have been removed from a Digital Form. The process will also restore the question's connection with previously collected data.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## 13659 – IMPLANTABLE DEVICES CAN NOW BE DOCUMENTED IN ACCORDANCE WITH UPCOMING MU REQUIREMENTS

As our U.S. customers are likely aware, the Meaningful Use (MU) program will be evolving into a different form and the Meaningful Use name will no longer be the most accurate way to refer to information collected on this tab. The MU tab will continue to exist in eRAD RIS, indeed it will expand to incorporate other functions required by regulatory programs; however, it will now be renamed as the "Clinical" tab.

As part of preparation for eRAD RIS to obtain its 2017 ONC Health IT Certification, eRAD RIS will now comply with the following requirements.

The application must:

- **Enable a user to record and access a list of Unique Device Identifiers (UDIs) associated with the patient's Implantable Device(s).**
- **The following identifiers from a Unique Device Identifier (UDIs) must be parsed.**
  - **Device Identifier**
  - **Identifiers from the Production Identifier:**
    - **Batch/lot number**
    - **Serial Number**
    - **Expiration Date**
    - **Date a specific device as manufactured; and**
    - **For an HCT/P regulated as a device, the distinct identification code.**
- **Retrieve the following attributes associated with a UDI, from the Global Unique Device Identification Database (GUDID) using one of the methods under the FDA's GUDID guidance, which includes but not limited to the GUDID's web interface, web services, and downloadable module:**
  - **Description of the implantable device referenced by at least one of the following:**
    - **"GMDN PT Name" attribute associated with the Device Identifier in the Global Unique Device Identification Database *OR***
    - **"SNOMED CT® Description" (mapped to the "GMDN PT Name" attribute)**
  - **The following Global Unique Device Identification Database entries:**
    - **Brand Name**
    - **Version or Model**
    - **Company Name**
    - **What MRI safety information does the labeling contain; And**
    - **Device required to be labeled as containing natural rubber latex and dry natural rubber.**
- **UDI Issuing Agencies currently use three different formats for UDIs. Test data will be provided to accommodate each format type. For more information on these issuing agencies, please see:**

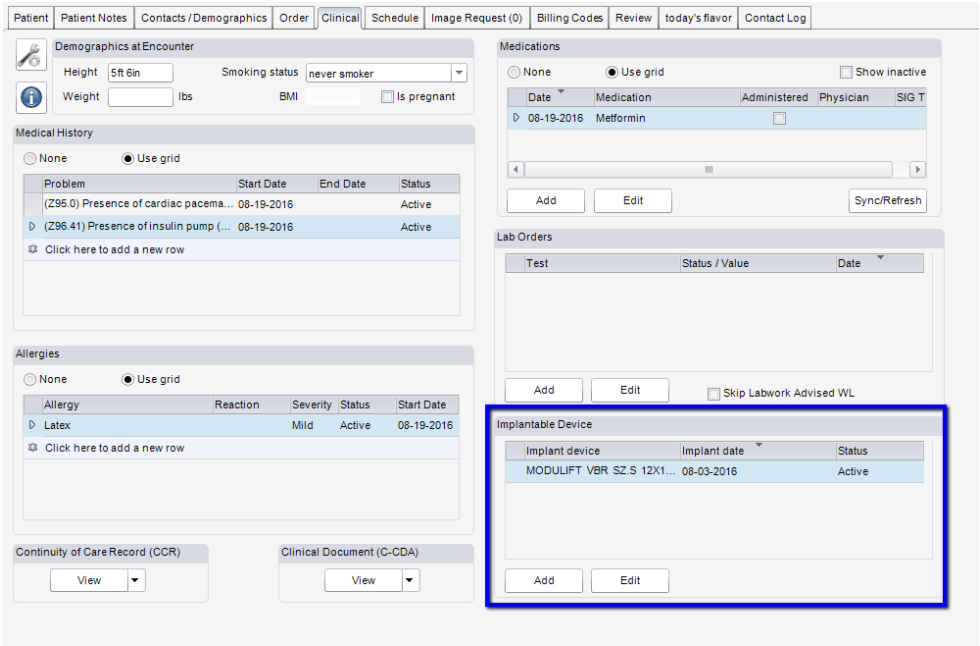
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

http://www.fda.gov/MedicalDevices/DeviceRegulationandGuidance/UniqueDeviceIdentification/UDIIssuingAgencies/default.htm

- **Display to a user an Implantable Device List consisting of:**
  - **Active Unique Device Identifiers for a patient; and**
  - **For each active Unique Device Identifier recorded for a patient, the description of the implantable device using "GMDN PT Name" or "SNOMED CT Description"**
  - **A method to access all Unique Device Identifiers recorded for a patient.**
- **For each Unique Device Identifier recorded for a patient, enable a user to access:**
  - **Unique Device Identifier**
  - **Description of the implantable device (using either "GMDN PT Name" or "SNOMED CT Description")**
  - **Identifiers associated with the Unique Device Identifier (using the "Device and Product Identifiers" described above)**
  - **Attributes associated with the Unique Device Identifier (using "Global Unique Device Identification Database" entries described above)**
- **Enable a user to change the status of a Unique Device Identifier recorded for a patient**
- **Unique Device Identifier(s) part of the Common Clinical Data Set.**

In this context, "implantable device" is defined (as it is in 21 CFR 801.3) as a device that is intended to be placed in a surgically or naturally formed cavity of the human body. A device is regarded as an implantable device for the purpose of this feature only if it is intended to remain implanted continuously for a period of 30 days or more, unless the Commissioner of Food and Drugs determines otherwise in order to protect human health.

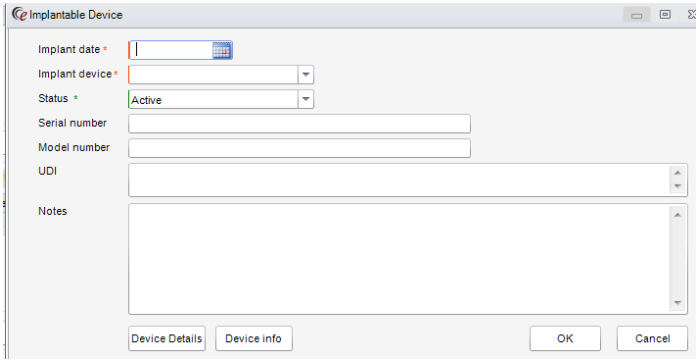
There is a new section in the "Clinical" tab called *Implantable Device*, which is used to display the active and inactive implant devices recorded for a patient. An **important distinction** is that the Implantable Device Section is intended, per CEHRT requirements, to include qualifying devices that are to be implanted during the patient's procedures ***at your facility***, such as the placement of a biopsy marker, drain, or stent. Recording the patient's ***history*** of having a device, such as a pacemaker, implanted at an *outside* medical institution should continue to be done in the Medical History section.



*Note that some pre-existing grids have been shifted to allow for the new Implantable Device grid.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

Users can click the Add button to add new implantable devices to the patient's record or they can click the Edit button to edit any implantable devices that are already associated to the patient.



The implant device is selected from a new lookup *ImplantDevice* and the user must enter at a minimum the implant date, implant device, and the status of the implant. Serial number, model number, and UDI of the device can optionally be added, along with any notes. The UDI field can store either the DI (Device Identifier) or the UDI which consists of two parts: the DI (Device Identifier) and PI (Product Identifier). Note: if the user enters the device UDI (DI + PI), it is possible to see additional information by clicking the *Device Info* button, which will show the batch/lot number, serial number, expiration date, manufactured date and the device identifier which is retrieved via a call to the Global Unique Device Identification Database (GUDID).

There is a new system configuration setting for *MUImplantableDeviceUrl* which will be used to store the URL to the Global Unique Device Identification Database (GUDID), in order to display the device details or to parse the UDI (Unique Device Id).

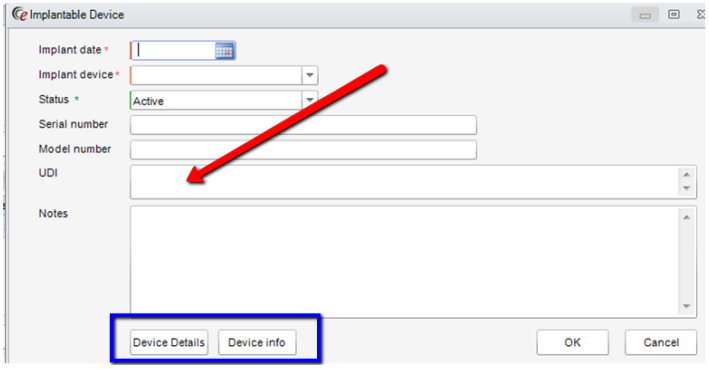
Examples:

- Device Identifier (DI)
  - 08717648200274
- Unique Device ID (UDI)
  - =/08717648200274=,000025=A99971312345600=>014032=}013032&,1000000000000XYZ123

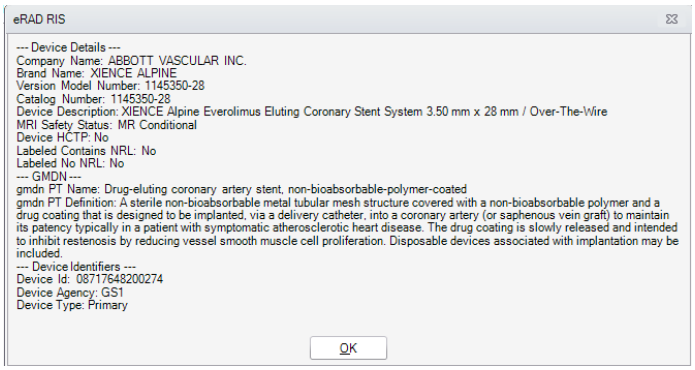
There are currently three FDA accredited issuing agencies for UDI numbers (GS1, HIBCC, and ICCBBA) and all three have different formats for displaying the UDI. eRAD RIS is capable of handling all three formats.

Once either the DI or UDI is entered in the UDI field, the user will also be able to view the device details by clicking the *Device Details* button which will display to the user the brand name, version or model number, company name, MRI safety information and information about the device such as whether it contains natural rubber latex. This information can be copy/pasted into the Notes section if desired.

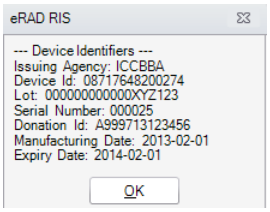
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



Example of Device Details results when the UDI is entered:



Example of Device Info results when the UDI is entered:



Consistent with the policy that UDI's should not be deleted from the implantable device list or from a patient's electronic health record, a UDI that has been designated inactive must still be accessible so that users can view information about the device, even if it was explanted or recorded in error.

The *Device Details* and *Device Info* buttons are hidden if the system configuration setting *MUImplantableDeviceUrl* is empty.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## 13844 – A SECTION FOR IMPLANTABLE DEVICES IN NOW DISPLAYED IN THE C-CDA

An Implantable Device section has been added to the C-CDA to record any materials placed during the procedure, such as stents, tubes, or drains.

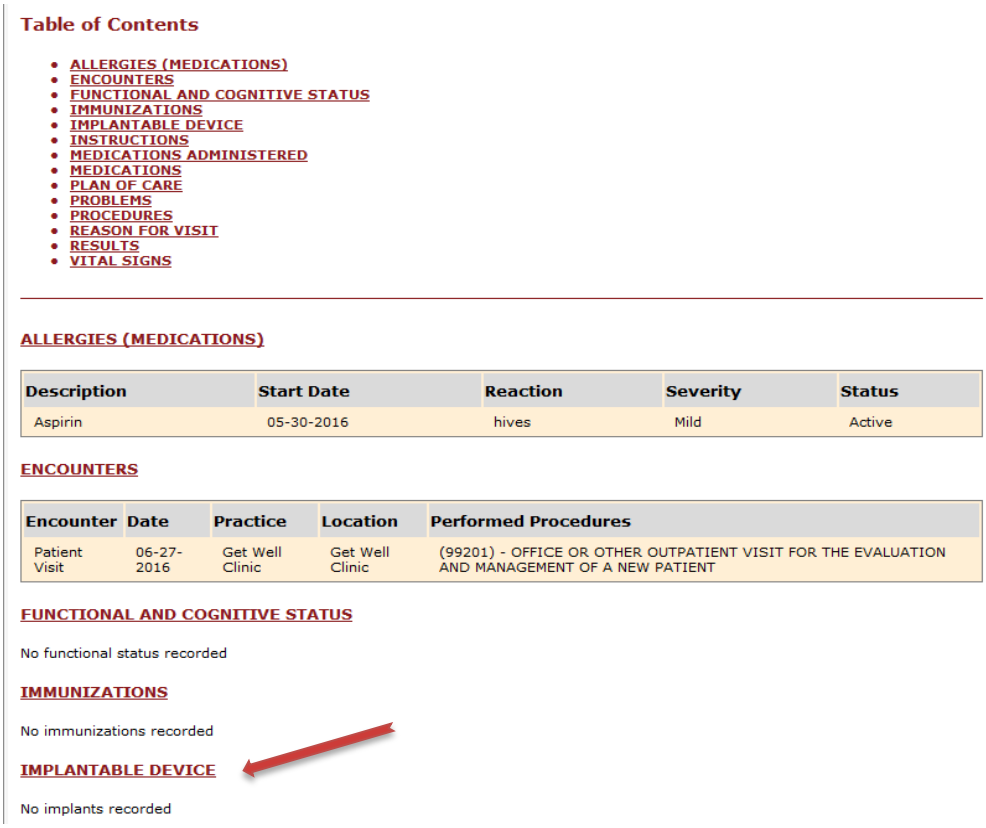


**Table of Contents**

- ALLERGIES (MEDICATIONS)
- ENCOUNTERS
- FUNCTIONAL AND COGNITIVE STATUS
- IMMUNIZATIONS
- IMPLANTABLE DEVICE
- INSTRUCTIONS
- MEDICATIONS ADMINISTERED
- MEDICATIONS
- PLAN OF CARE
- PROBLEMS
- PROCEDURES
- REASON FOR VISIT
- RESULTS
- VITAL SIGNS

**ALLERGIES (MEDICATIONS)**

| Description | Start Date | Reaction | Severity | Status |
|---|---|---|---|---|
| Aspirin | 05-30-2016 | hives | Mild | Active |

**ENCOUNTERS**

| Encounter | Date | Practice | Location | Performed Procedures |
|---|---|---|---|---|
| Patient Visit | 06-27-2016 | Get Well Clinic | Get Well Clinic | (99201) - OFFICE OR OTHER OUTPATIENT VISIT FOR THE EVALUATION AND MANAGEMENT OF A NEW PATIENT |

**FUNCTIONAL AND COGNITIVE STATUS**

No functional status recorded

**IMMUNIZATIONS**

No immunizations recorded

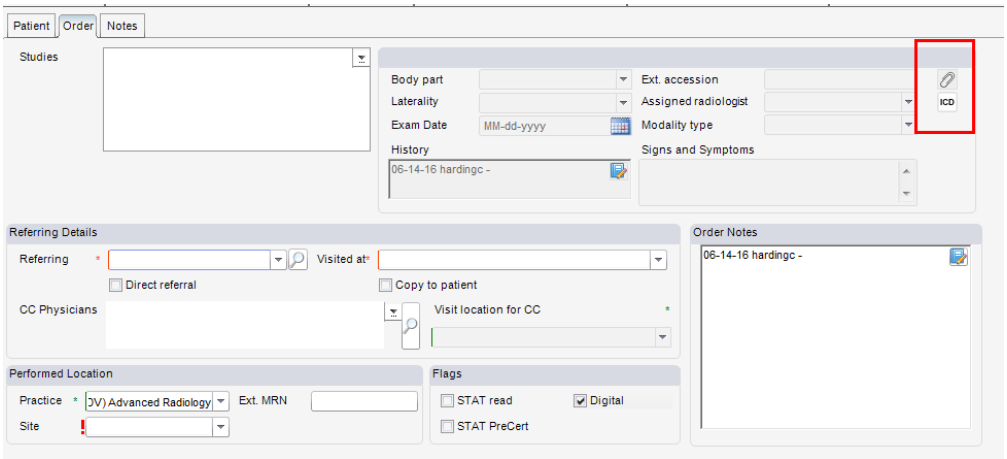
**IMPLANTABLE DEVICE**

No implants recorded

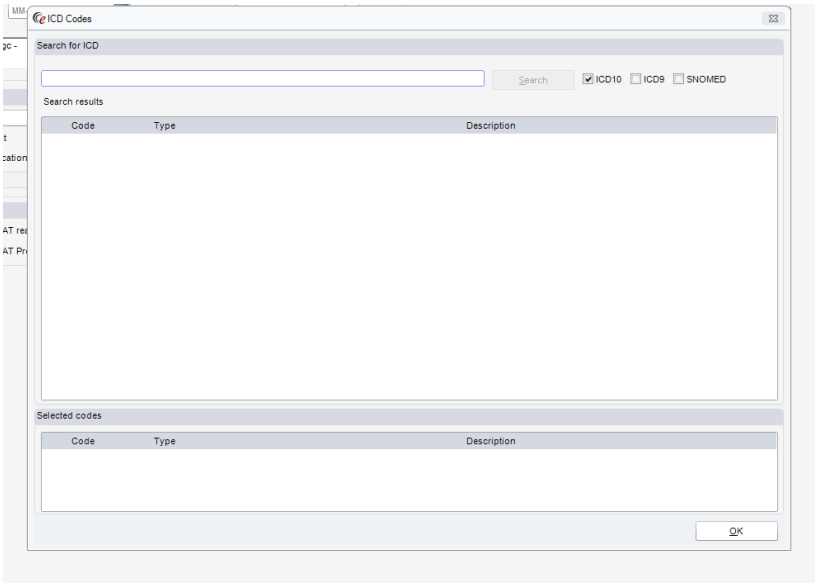
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## 13733 – INDICATION CODES CAN NOW BE ADDED WHEN CREATING AN OUTSIDE READ

Previously, indication codes (e.g. ICD-10 codes) could not be added to an Outside Read until after it was created, via the View/Edit screen. To make this process more efficient, an ICD button has been added to the Outside Read Order tab.



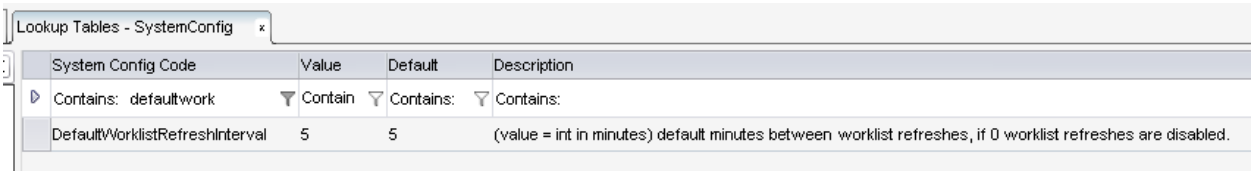
This button is controlled by the existing access string *Clinical.Schedule.AssignIcdCode*. The ICD Codes pop-up window will function as it does in other areas of the application, except that Reason for Exam is not visible, as it is not a part of the Outside Read process. ICD codes will be applied to the selected study. The ICD button will be disabled until a study has been added.

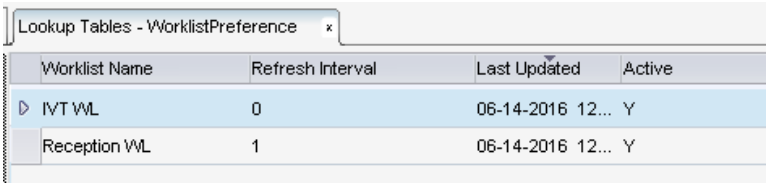


No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## 13803/13804 – WORK LISTS CAN NOW BE CONFIGURED TO REFRESH AT DIFFERENT INTERVALS

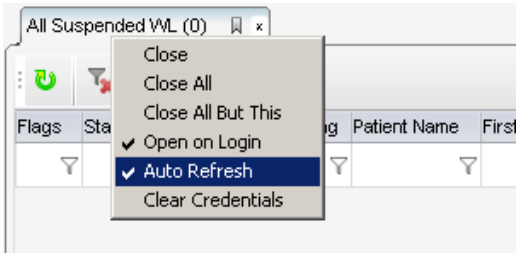
Large work lists with frequent refreshes, such as the IVT WL, create a significant impact on system performance. To alleviate this, a System Configuration setting named *DefaultWorklistRefreshInterval* and a new look-up table named *Worklist Preference* have been added to allow a RIS Administrator to configure a longer interval between automatic work list refreshes.



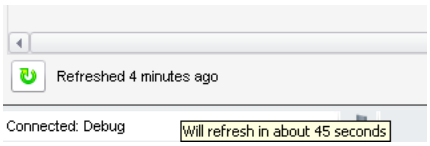


The work list refresh interval is specified in minutes. When set to **zero or less**, the work list refreshes are disabled and users must click the refresh button to refresh manually. Work list refresh intervals should typically be in the 1-10 minute range, though they can be set for longer. Previously, all work lists would refresh every minute.

The "Auto Refresh" checkbox that allowed a user to turn off the refresh has been moved to the work list tab's context menu.



Beneath the work list on the left, there is now a label explaining when the last work list refresh took place, whether automatic or manual. Hovering the cursor over this label will display a tooltip that indicates when the next automatic refresh will occur. There is also an additional Refresh button next to this label, in case the user does not want to wait for the next auto-refresh. Clicking the button will refresh the work list immediately.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

The label updates every 5 seconds and the times listed are rounded as follows:

- Just now
- 15 seconds
- 30 seconds
- 45 seconds
- a minute
- x minutes
- an hour
- x hours

The tooltip explaining when the next refresh will occur is rounded as follows:

- x minutes
- a minute
- 45 seconds
- 30 seconds
- 15 seconds
- Soon

If the work list is not configured to auto-refresh, the tooltip will indicate: “This work list does not auto refresh.”

As before, auto-refresh will not occur under some circumstances even if the designated interval has elapsed. The following scenarios will prevent a work list refresh:

- RIS is locked.
- RIS is minimized.
- Work list has received mouse or keyboard activity in the past 15 seconds. Previously, mouse movements would also cause a delay, but this has been changed to only include click events.

If the user continues to type or click items on the work list and does not move away from that work list, then the work list will not auto-refresh and hovering will display the message “Will refresh soon.” This is done to prevent a work list refresh from changing the list just as a user is clicking on an item, which could result in the wrong item inadvertently being opened.

The following permission string has been added to control access to the new WorklistPreference editor: *Config.LookupEditor.WorklistPreference*.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## 8666 – MESSAGES TRANSMITTED VIA MIRTH CAN BE FILTERED TO DECREASE UNNECESSARY MESSAGING

In order to allow for more granular filtering in Mirth, a new function will allow for message filtering based on logic surrounding metadata. This will allow the ability to suppress messages due to metadata changes that are not deemed significant.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## 7572 – RIS NOW SUPPORTS INSTALLATION TO A SHARED LOCATION ON THE WORKSTATION (AS OPPOSED TO INDIVIDUAL WINDOWS USER PROFILES)

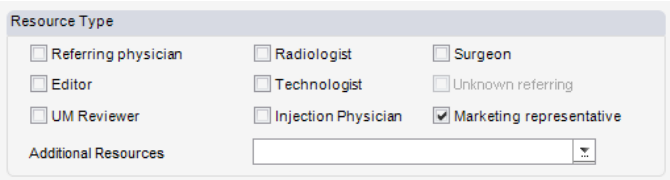
This feature includes two major changes for installation file management. The directory which is used to store the build zips and installed build files has been relocated, so these files can be shared among the various users of a system. Secondly, there is a process to cleanup old RIS builds, anything older than the last 2 builds (including the current build). As this cleanup previously only occurred when switching systems, this will reduce the footprint of the install directory if the user is only ever using one system.

The user should not experience any change in the usage of the system, other than perhaps noticing a reduction of hard drive space required for installation of the RIS GUI. Users also may notice a slight delay in startup if there are multiple old builds which need to be removed.

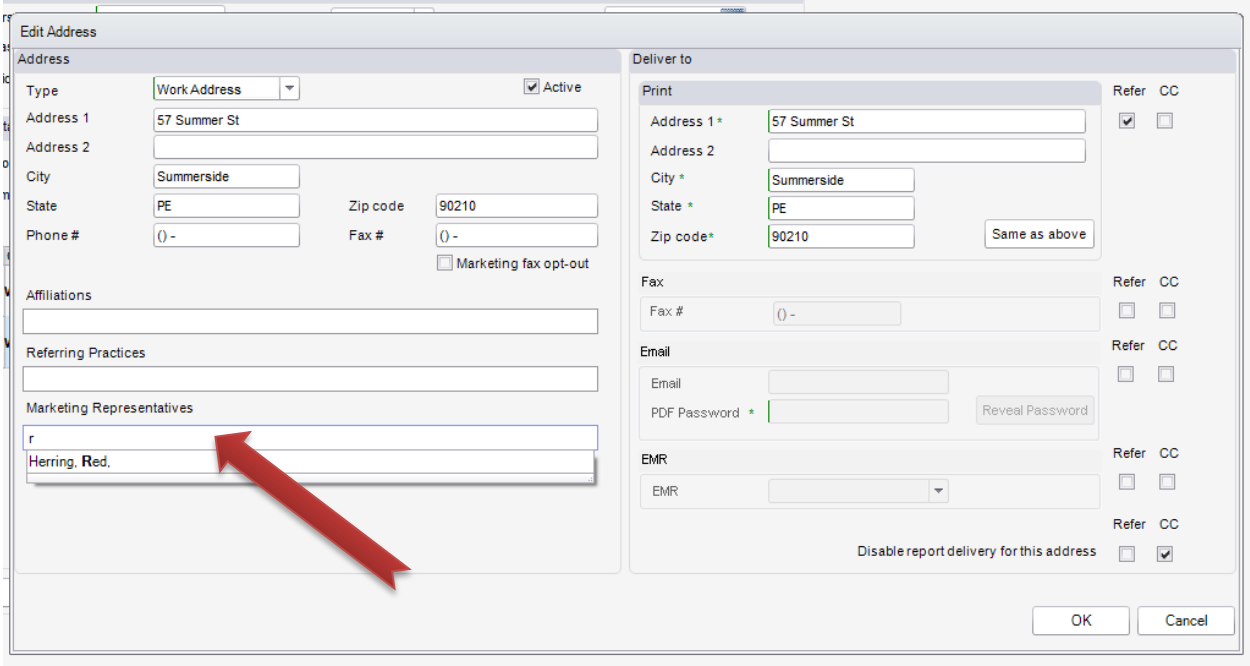
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## 9522 – MARKETING REPRESENTATIVES CAN NOW BE ASSOCIATED TO A REFERRING PHYSICIAN

To support the need for more informative management reports, there is a new Resource Type titled *Marketing representative*.



Each referring address will have a setting for marketing representatives, which will be selected via a multi-select type-ahead. This multi-select will only display users with a resource type of *Marketing representative*.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

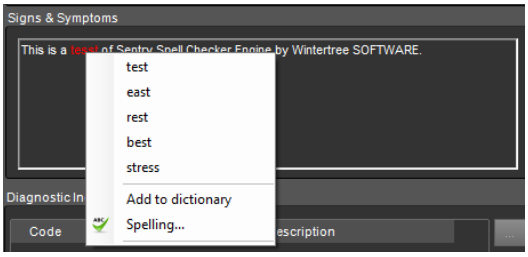
## 3667 – LOG CONTROLS AND TEXT BOXES SUPPORT SPELL CHECK

A spell check feature has been added to some of our controls, in order to provide users with spell checking when typing in a variety of notes fields. This is particularly helpful when turned on for text boxes that are pulled into report templates. "Sentry Spell Checker Engine" (Wintertree) has been implemented in eRAD RIS, which is the same spell checker as is used by the M*Modal editor. It will also use the same dictionaries as configured for M*Modal today, reflecting any changes made in the M*Modal editor that affect the dictionary.

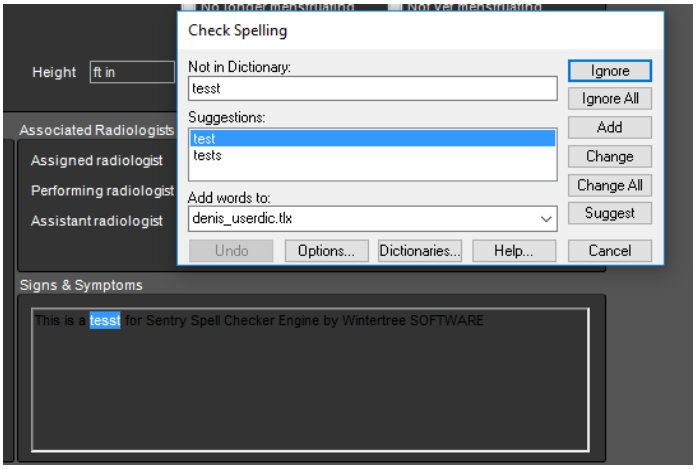
Spelling errors are indicated as the user types with misspelled words displayed in red text.

In order to enable the feature, the *spellcheck_enabled_flag* on the *LogControl* look-up table needs to be set to "Y" for the controls in question.

Right clicking on the misspelled words will show a context menu of up to 5 suggestions, as well as an option to add the word to the dictionary and an option to open the "Spelling…" dialog.



The Spelling dialog shows additional information.



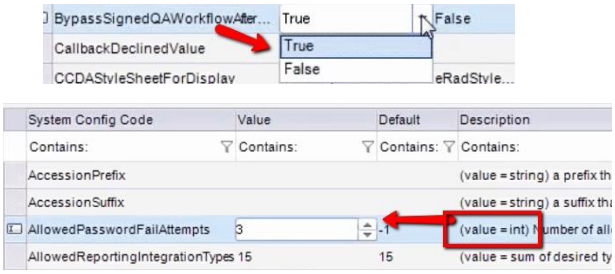
If the control already had a context menu defined, the spell checker options will be shown above the existing items.

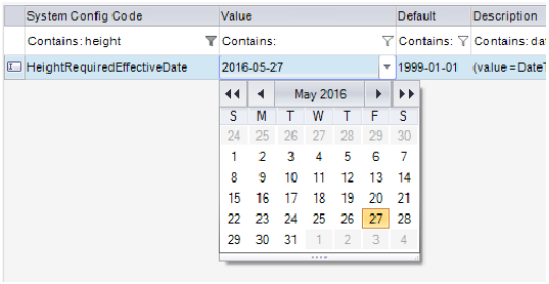
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## 13935 – SYSTEM CONFIGURATION TABLE NOW ENFORCES MORE STREAMLINED DATA ENTRY

When choosing system values in the System Configuration look-up table, administrators are required to enter a variety of types of data. Sometimes it is a Date or Time value, a true or false selection, or even a code from another look-up table, such as the Procedure Code table. Historically, system values were entered in a text field and it was up to the administrator to follow the required format when creating their text entry. As eRAD RIS continues to evolve, the values entered into the System Configuration table will grow more complex. In order for the administrator to more efficiently enter this information, and to drive consistency, eRAD RIS will now offer more advanced controls when entering values in System Configuration.

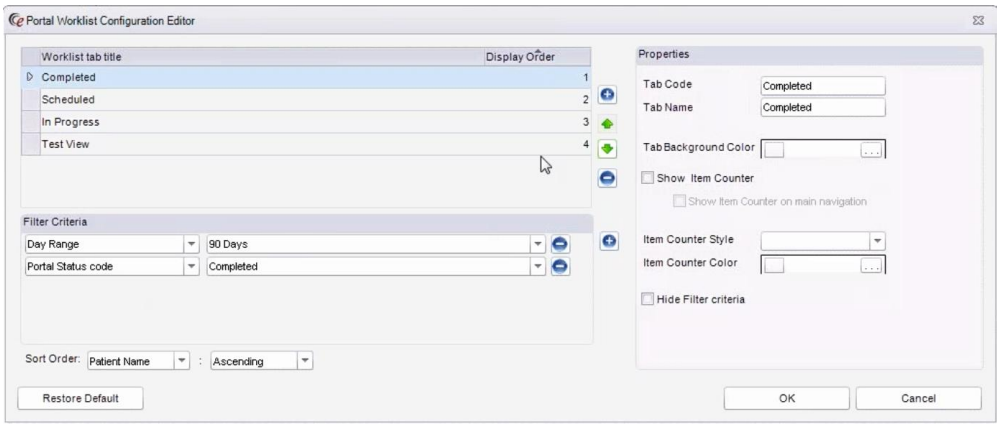
Version 2016.4 will introduce some basic controls such as: numeric spinner controls for values that should be a number (integer), calendar controls for dates, and drop-down selections for True/False selections.





True/False options may have previously been represented by a Y or N value, as opposed to True or False. Any data that was previously entered as Y or N will ***not*** need to be updated and will behave just as before. However, if the value is edited, the administrator will at that time be forced to select True or False in accordance with the new control.

While the above controls are simple, future controls will launch their own editor to allow a variety of selections in an easy to understand display. These selections will then be formatted and stored in the Value field without requiring the administrator to follow complicated format rules.



*Future SystemConfiguration controls may launch multi-step editors like the one above.*

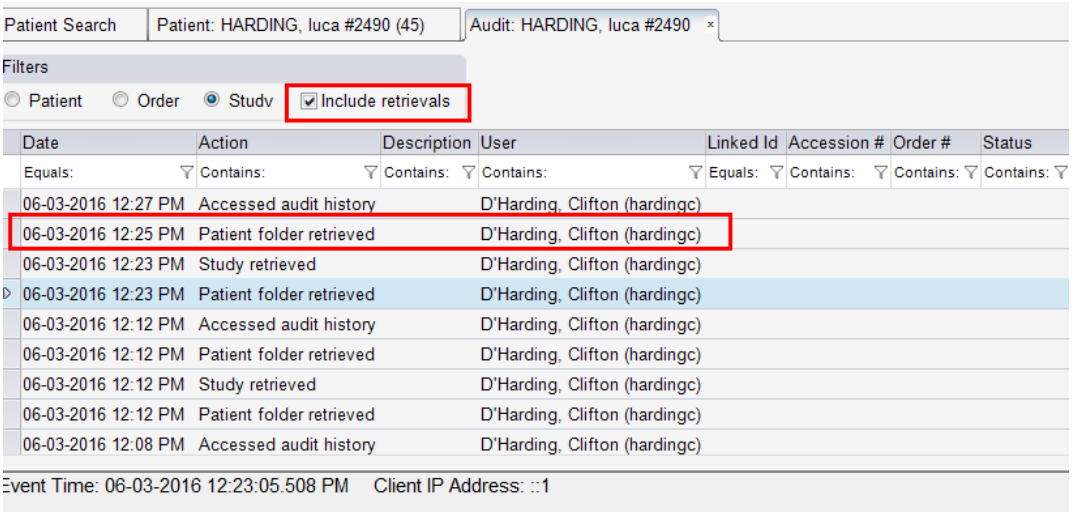
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## 13818 – OPENING THE PATIENT FOLDER IS NOW SHOWN IN THE AUDIT HISTORY

When users open the Patient Folder in eRAD RIS, it is desirable to audit who opened it and when. There is a new web service method created, *GetPatientFolderWithAudit*, that will write an audit entry in the audit table.

eRAD RIS will write a new entry in the audit table when opening the Patient Folder and when previewing the Patient Folder in the patient search results screen. This new entry is called *Patient folder retrieved*.

When looking for the audit message, users must check the *Include retrievals* option.

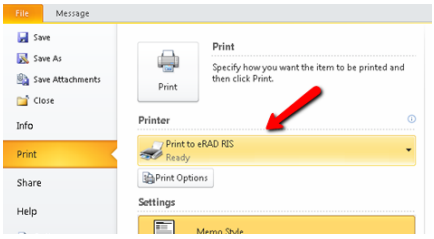


No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

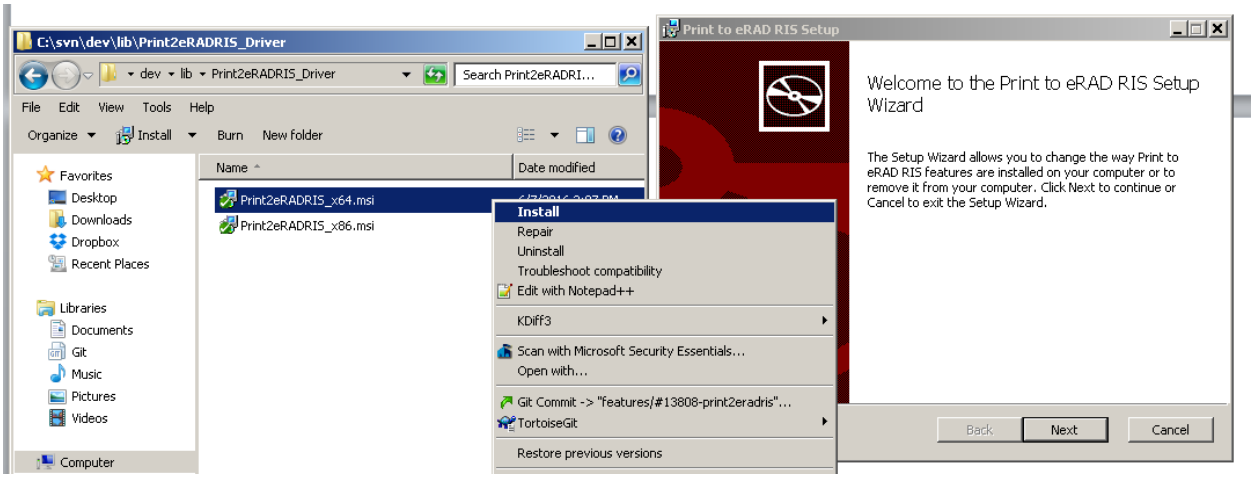
## 13808 – USERS CAN NOW "PRINT" FROM OTHER APPLICATIONS AND AUTMOMATICALLY SAVE THE DOCUMENT AS AN ATTACHMENT IN RIS (NO PAPER OR SCANNER REQUIRED)

In an effort to eliminate a tedious task in which users print content from other applications, such as Internet Explorer, and then manually scan that paper back into RIS, an eRAD RIS print driver has been created, which will print directly into a patient's Attachments.

Users can install the optional *Print to eRAD RIS* print driver. When RIS is open and the current screen has an Attachments tab, or if an attachment pop-up dialog is open, the user can print from another application (Outlook, Internet Explorer, Word, etc.) to the *Print to eRAD RIS* option (instead of a physical printer), which will send the pages to RIS as attachments for the currently selected patient.

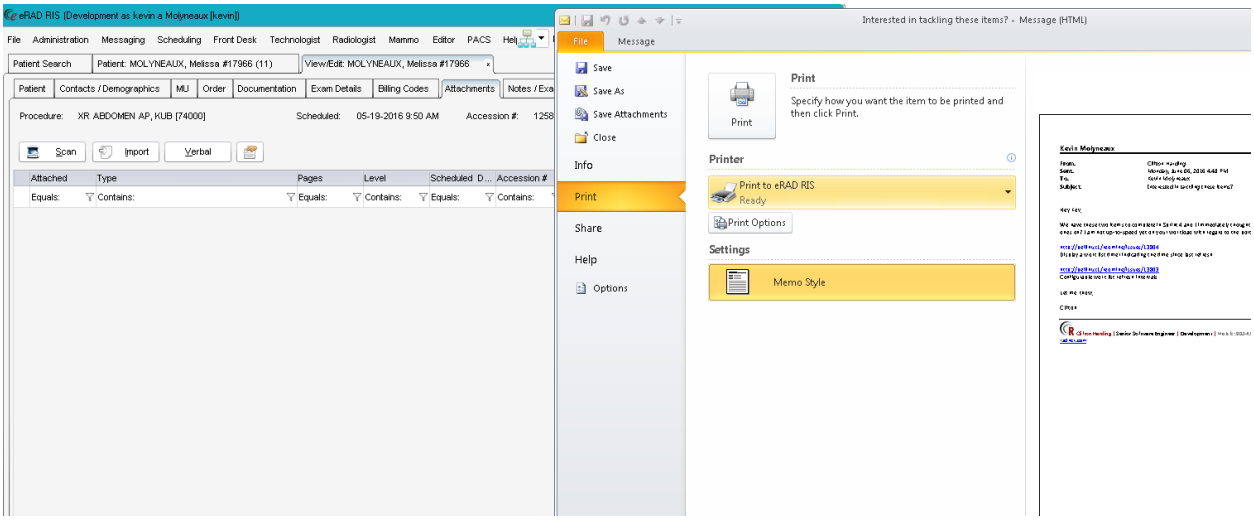


There are 64 and 32 bit versions of the *Print to eRAD RIS* virtual print driver. These will be provided to customers with the intent that local IT staff will install the print driver. You can install the driver manually as shown in the following screenshot:

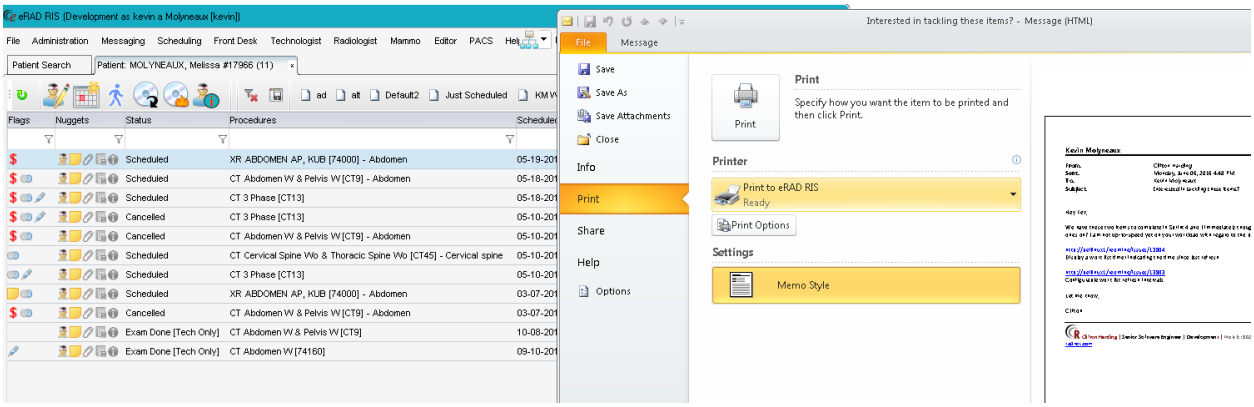


No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

The following screenshot illustrates printing from MS Outlook directly into the RIS attachments:



If a user attempts to use Print to RIS when they do not have an attachments screen open in RIS (either an open attachments window or a screen with an Attachments sub-tab—e.g. View/Edit, Perform Exam, etc.), Print to RIS will not allow the user to proceed.



The user will receive a warning explaining that a qualifying screen must be open in eRAD RIS before initiating the Print to RIS process.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## 13438 – RADAR NUDGE INTEGRATION

The goal of this feature is to integrate eRAD RIS with the RADAR Nudge desktop application. RADAR Nudge is a stand-alone secure instant messaging system. It supports secure communication across multiple client applications. The integration to eRAD RIS will be seamless (appear to be a single application) and will allow a radiologist who is logged into eRAD RIS to quickly and securely initiate a Nudge conversation with the study-appropriate referring doctor, transcriptionist, primary technologist or even the contributing, dictating or signing radiologist. The conversation can be supplemented with a one-button insertion of the exam summary, the impression from the diagnostic report, or even the full report (if available). Nudge's screen capture tools will even allow the capture and transmission of an image to supplement the conversation.

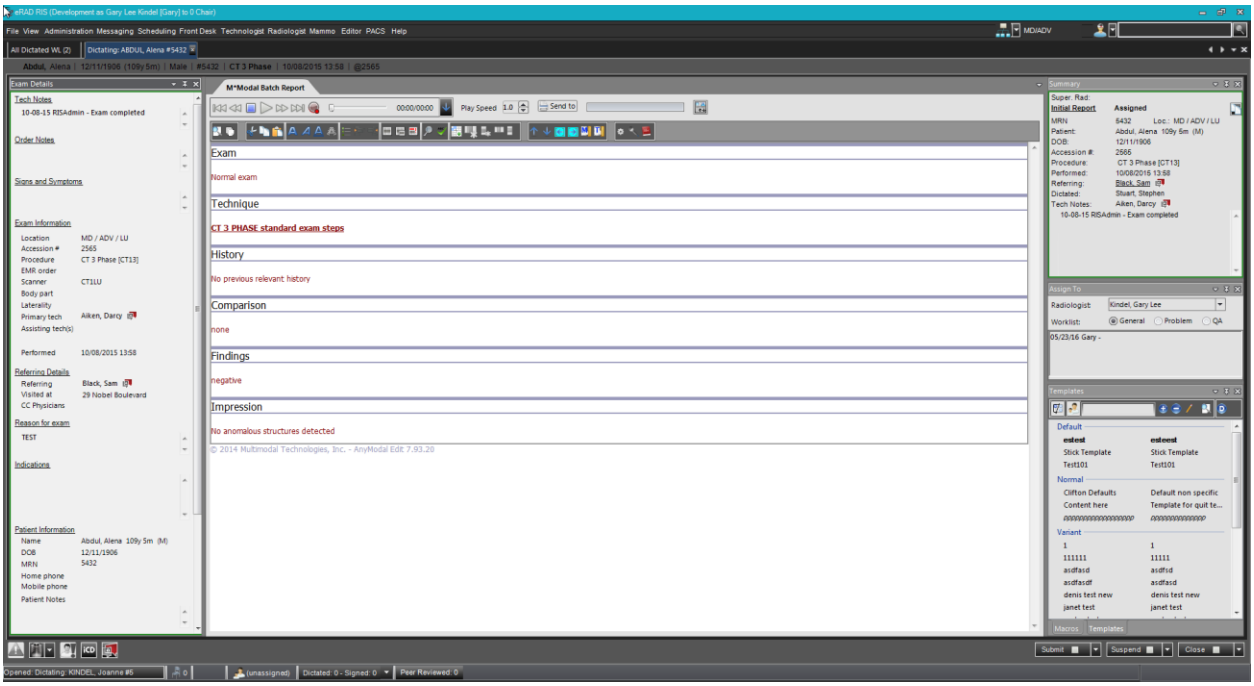
The integrated solution will permit the radiologist to find the appropriate person with whom to communicate without having to search from a large list of Nudge users; instead he/she will be able to select the correct person from a short list of people who are related to the current study. Opening a "new" conversation from the same study and to the same recipient will in fact re-open and continue the original conversation.

Based on the features of the RADAR Nudge application itself, the contents of a conversation that is initiated from eRAD RIS is maintained and viewable regardless of how the conversation continues: on an Apple device via the Apple IOS application, the Android application, the internet web application, or even the Windows application. The entire conversation is viewable at all times from all devices. Once initiated, the conversation is retained forever within the Nudge application in relation to the study. Therefore at any time, the relevant conversation can be opened and reviewed.

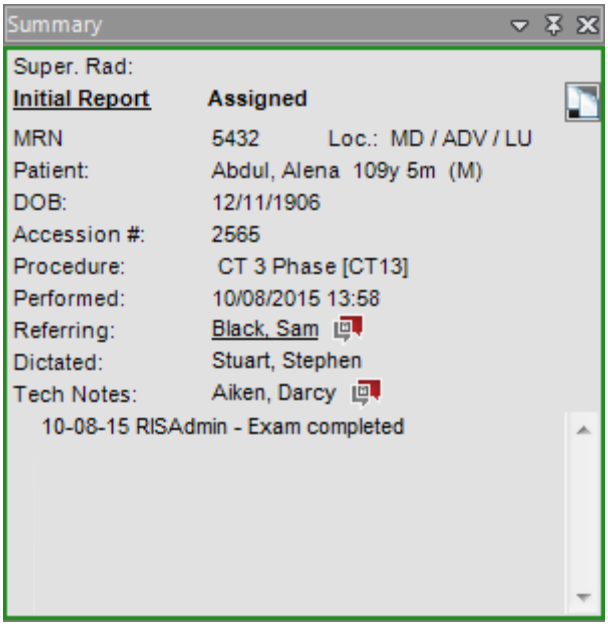
### General Workflow

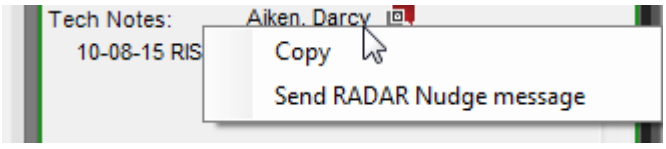
The following image shows a typical radiologist reporting screen. Notice there are three new components: Nudge icons on the Summary and Exam Details panels, as well as a Nudge button at the bottom of the reporting screen.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



In the Summary tool window, there is a RADAR Nudge icon beside each Nudge-enabled user. In the example below, the referring doctor and the technologist are both registered Nudge users, and are the relevant individuals in this study. Therefore the icon becomes visible. If the radiologist wishes to initiate a conversation with these users, he/she simply clicks on the icon, or can right-click and select **SEND RADAR NUDGE MESSAGE**.





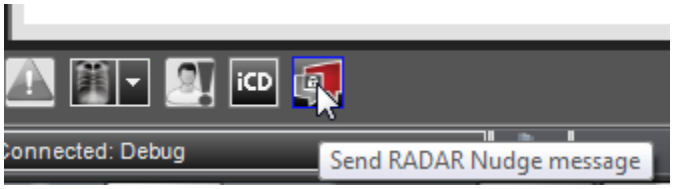
Notice as well that the Exam Details panel has been modified to support the same icon when the appropriate user is Nudge-enabled. The difference is that this panel can support additional user types. It will include:

- Referring physician
- Transcriptionist

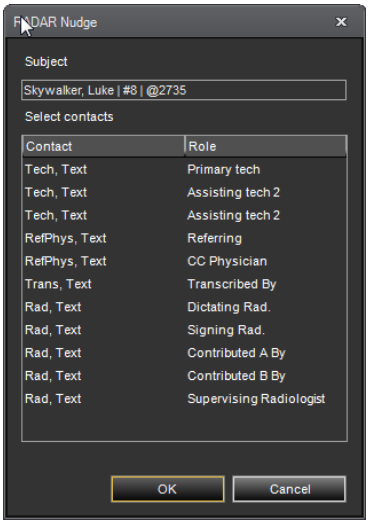
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

- Primary technologist
- Assisting technologists
- CC Physicians
- Dictating Radiologist
- Signing Radiologist
- Supervising Radiologist
- Contributing Radiologist

At the bottom of the radiologist screen is a Nudge icon.



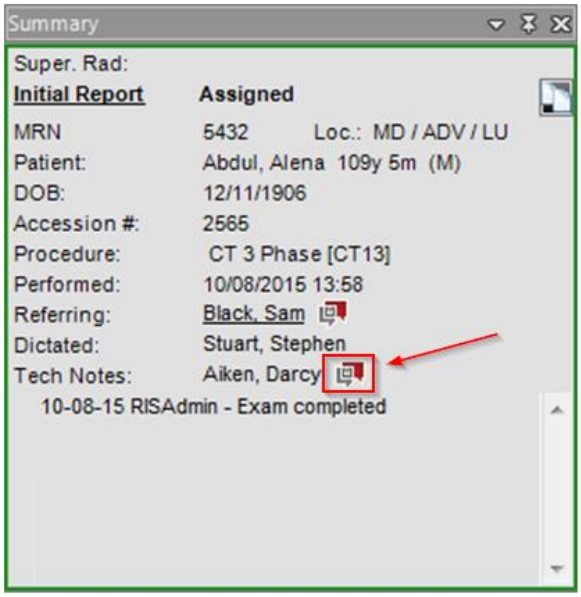
Selecting this icon will load a form that shows all of the Nudge users who are associated to this study. This will permit a group chat, as multiple people can be selected from this list.



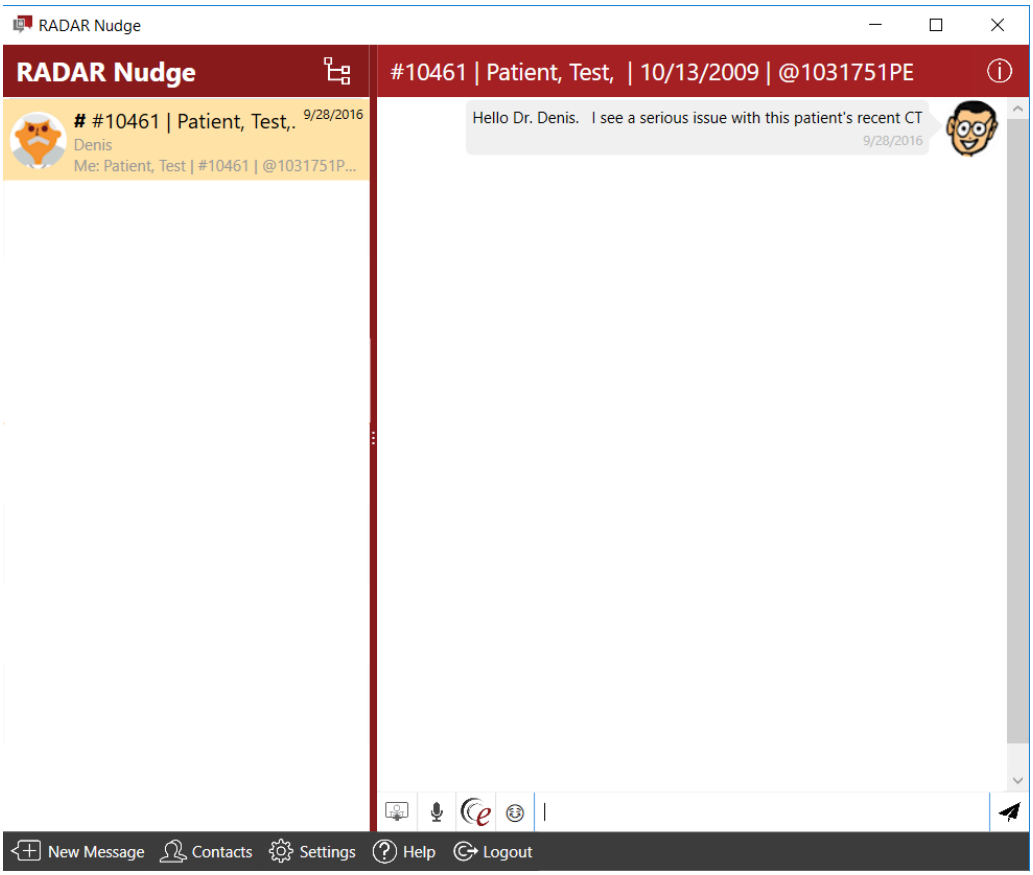
## Interacting with Nudge via eRAD RIS

Select the Nudge application via the Nudge Icon:

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

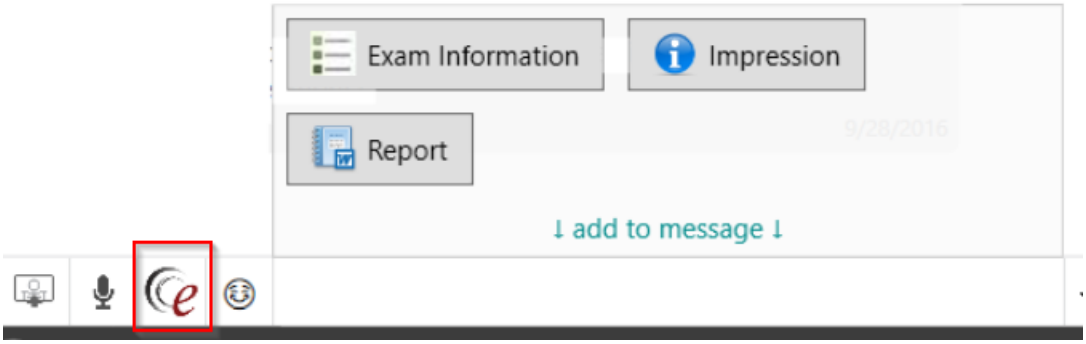


Type a message to the recipient in the messaging pop-up window:



Pressing the button to the left of the text entry area will activate a panel to display additional input buttons.

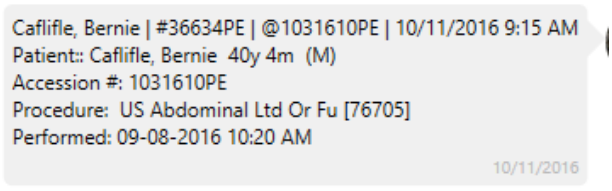
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



Exam Information button: Adds exam summary from current study in dictation/reporting screen to the Nudge message.

The text automatically includes:

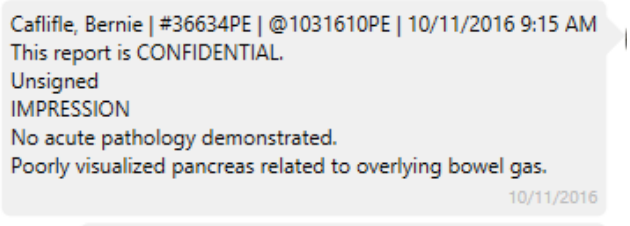
- Exam summary header: last name, first name | #patient id | @accession number | date time (when text was generated).
- Exam summary: patient name, age, accession, procedure, and when procedure was performed.



Impression button: Adds the Impression section of the report from the current study in dictation/reporting screen to the Nudge message, if available.

The text added includes:

- Exam summary header: last name, first name | #patient id | @accession number | date time (when text was generated).
- Disclaimer text. (See the "How to enable this feature" section for instructions on modifying the disclaimer.)
- Report signature status: either "Unsigned" or "Signed by [name] on [date, time]"
- Impression text from report in plain text format.

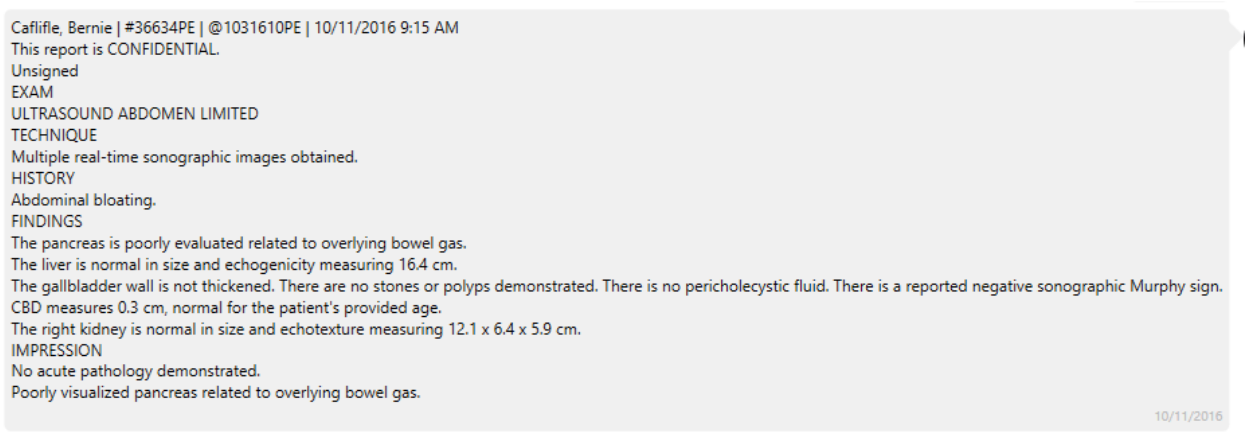


No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

Report button: Adds the report text from current study in dictation/reporting screen to the Nudge message, if available.

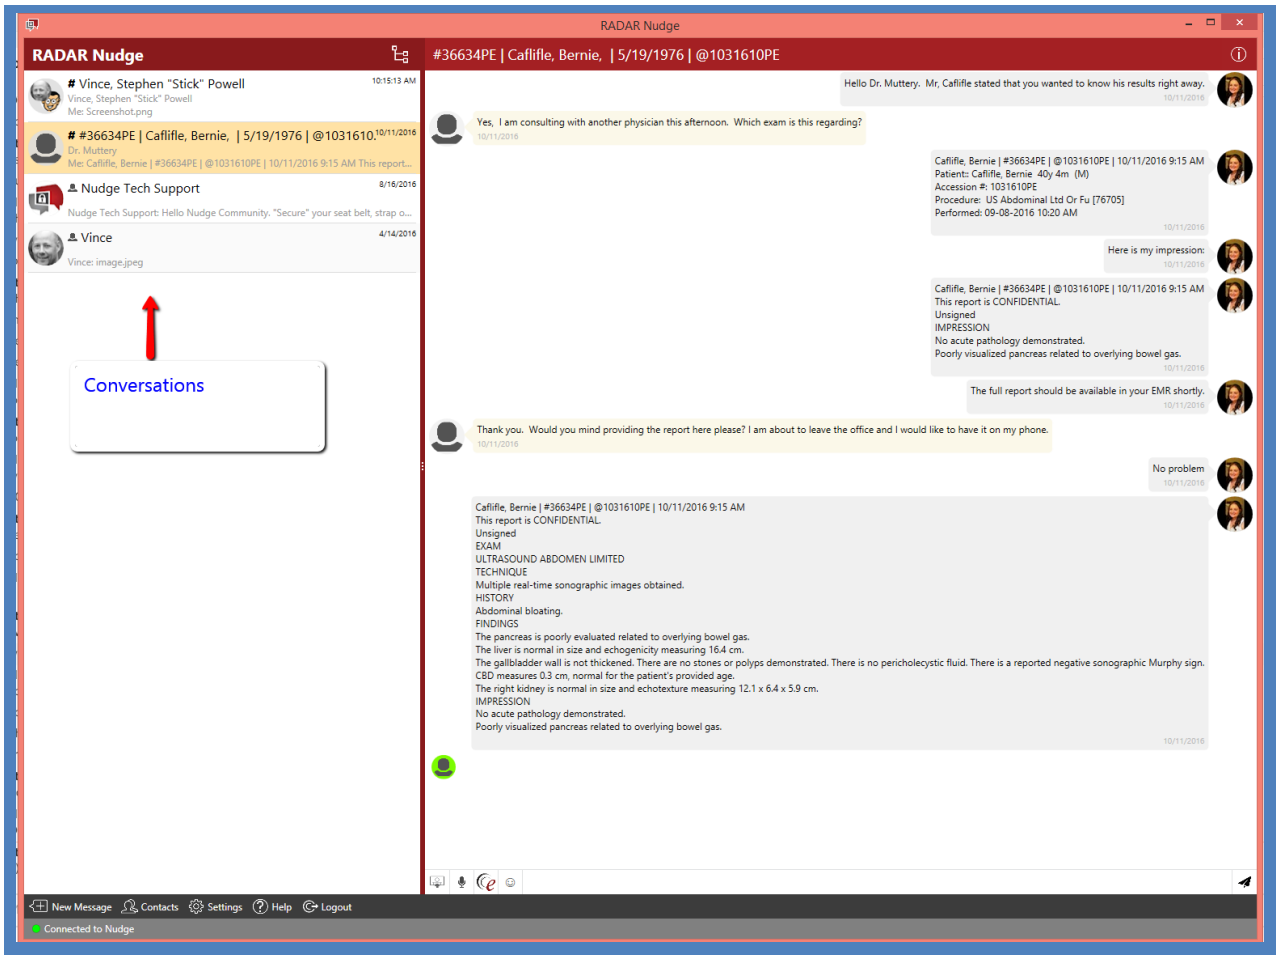
The text added includes:

- Exam summary header: last name, first name | #patient id | @accession number | date time (when text was generated).
- Disclaimer text. (See the "How to enable this feature" section for instructions on modifying the disclaimer.)
- Report signature status: either "Unsigned" or "Signed by [name] on [date, time]"
- Report text in plain text format.



After the initial message is initiated from RIS, the radiologist can continue the conversation in the separate Nudge window. It is possible to have multiple conversations regarding different patients at once. They can be managed from the Nudge application as shown below.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



## How to enable the feature

Please contact eRAD Support if you are interested in RADAR Nudge, or if you are an existing user of the stand-alone RADAR Nudge and would like the integration.

New System Configuration settings are available for the following:

**RADARSecureMessageServer** = (the name of the RADAR server)

Example: ReleaseServer

This will be provided by eRAD Support and is required for RADAR Nudge integration.

**RADARSecureMessagePort** = (port number)

Example: 14093

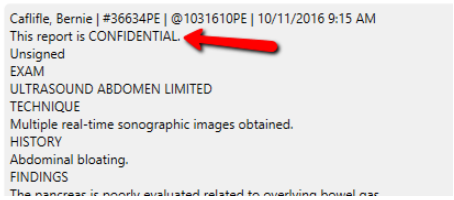
This will be provided by eRAD Support and is required for RADAR Nudge integration.

**RADARSecureMessageReportDisclaimer** = (string to append to the Nudge conversation when the user clicks the 'report' button)

Default: This report is not for treatment purposes.

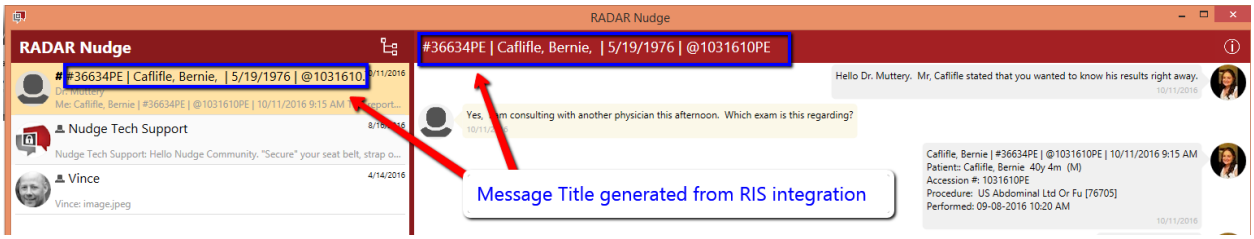
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| System Config Code | Value | Default | Description |
|---|---|---|---|
| Contains: | Contains: | Contains: tr | Contains: nudge |
| RADARSecureMessageReportDisclaimer | This report is CONFIDENTIAL. | This report is not for treatment purposes. | (value = string) Defines the disclaimer sentence to the report in Nudge integration. |



**RADARSecureMessageTitle** = (configuration parameter for conversation title).

Default: <last_name>, <first_name> | #<patient_id> | @<accession_number>'

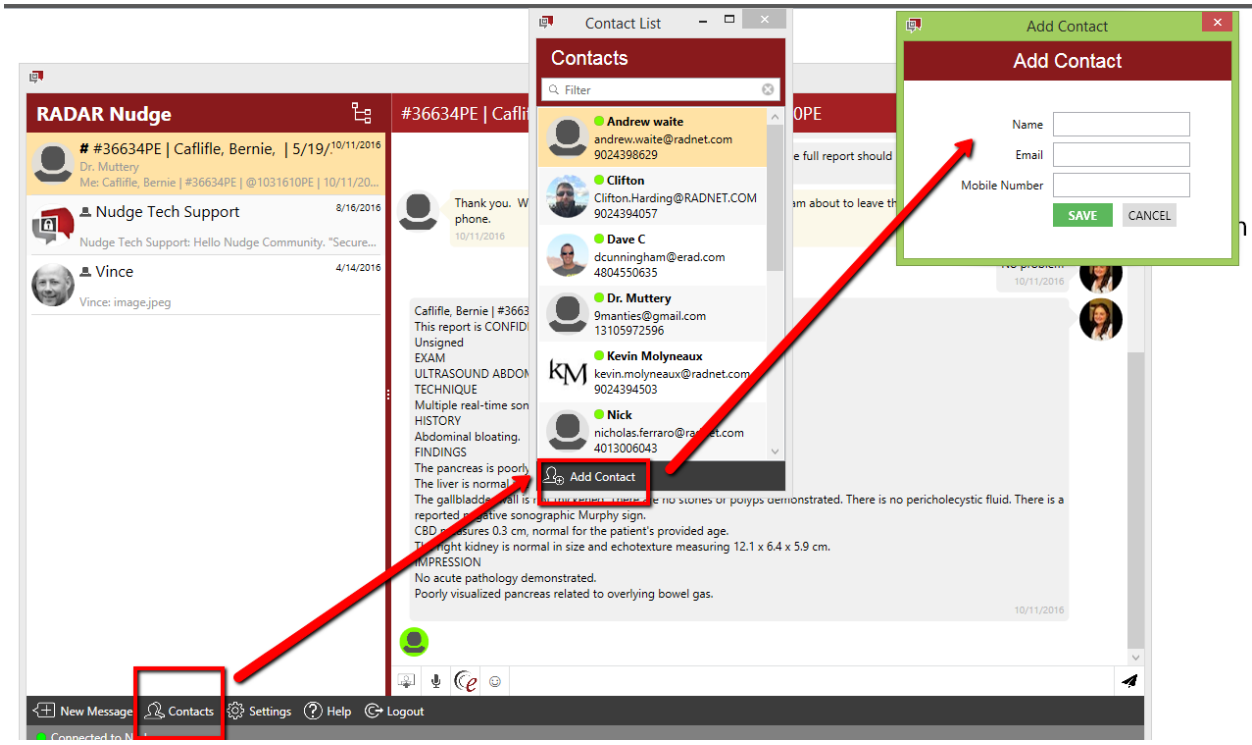


## How to configure a User to use Nudge integration

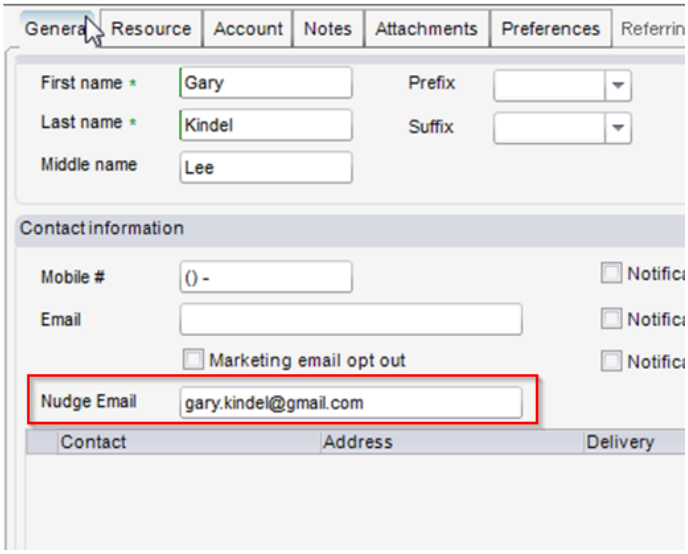
In order to take advantage of RADAR Nudge, referring physicians, as well as internal users such as radiologists, will need to be registered for a RADAR Nudge account and the Nudge client will need to be installed on their workstation.

- Register each user with a RADAR Nudge account. Current Nudge users can send an invitation to join by adding a contact and providing the name and email or mobile number.
  - https://messaging.myradarconnect.com/registration

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



- Install the RADAR Nudge Client on the appropriate workstations.
  - https://messaging.myradarconnect.com/
- Configure the Nudge email in eRAD RIS's Personnel manager:



- Set the access string to *Clinicial.RADARSecureMessage* to Full for any pertinent User Groups.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

The Nudge button at the bottom of the screen should be visible when:

- Current eRAD RIS user has a Nudge email address configured in Personnel editor.
  *and*
- User has access string *Clinicial.RADARSecureMessage* set to Full.

The Nudge icon in the Summary tool window (beside the person hyperlink) is visible when:

- Current eRAD RIS user has a Nudge email address.
  *and*
- User has access string *Clinicial.RADARSecureMessage* set to Full.
  *and*
- Person related to the hyperlink has a Nudge email configured in Personnel editor.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## RESOLVED DEFECTS

Bugs and support issues resolved in build 2.2016.4.

| Bug # | Category | Subject |
|---|---|---|
| 14346 | Admin-Clinical Data | Cannot add new rows to PrintConfig look-up table |
| 3066 | Admin-Other | When editing the referring address, the close button is almost hidden |
| 6979 | Admin-Other | Unable to save business hour templates to organization site |
| 14198 | Admin-Other | Practice and site logos are deleted on save of look-up table |
| 13818 | Audit History | Audit opening patient folder |
| 13902 | Billing | Imagine Payment Portal - Mapping issue with DataSet ID |
| 13927 | Billing | Studies that fail to post to billing still get the 'coding submitted date' populated |
| 14203 | Build | Missing DLL error when converting HTML to a PDF |
| 13313 | CD Import | NullReference error during CD Import |
| 13806 | CD Import | Making a site inactive will not make it disappear from the CD Import list |
| 6767 | Dark Mode/Theming | Dark mode - Buttons seem to have 2 disabled states |
| 13445 | DB | c_audit (transaction history) query for user id and date is slow |
| 13446 | DB | SQL Assessment - duplicate indexes |
| 13590 | DB | Inbox messages work list stored procedure always has 0 rows retrieved |
| 13936 | DB | Database triggers should check to see if data has changed before firing its logic |
| 13973 | DB | Trigger [c_order_set_unknown_carrier_flag] could be setting the _unknown_carrier_flag incorrectly due to multiple carriers being returned by the trigger's query |
| 14032 | DB | IVT WL doesn’t update Carrier column when carrier is removed |
| 13023 | DB Upgrade scripts | Some configuration settings are not populating default values in an upgrade or new install |
| 13786 | Digital Forms | When creating rule sets in Digital Forms, the Action defaults to Hide Page 1 |
| 13920 | Digital Forms | Script error on Digital Forms with autotext boxes when IE 8 is used |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| 13735 | IVT / Precert | IVT items stay on work list if there is a failed eligibility response and then the carrier's eligibility-payer-id is removed |
| 13993 | IVT / Precert | When a Billing code's precert status is changed to Required via ViewEdit, the item does not fall to the IVT WL or update the IVT flags |
| 13612 | Meaningful Use | Direct Message - 'problems importing patient information' message should include more information |
| 13614 | Meaningful Use | Exporting a C-CDA file and running it through the XDS toolkit should not produce any errors |
| 14004 | Outside Read | Outside read with exception is possible after study deletion |
| 13312 | PACS (eRAD) Integration | NullReference error in PACSFormHelper |
| 14169 | Patient Merge | Patient merge - preferred order of phone and email now associated with source patient |
| 13861 | Radiology Peer Review | Peer review button should not be available on the 'All peer review pending action WL' -> Peer review window. |
| 5188 | Radiology Reporting | "Delete previous list" and "delete next list" no longer supported M*Modal commands |
| 11521 | Radiology Reporting | Template editor - Assignments - Modality type, Procedures or Users Windows - Hitting the Cancel button actually saves the changes |
| 13301 | Radiology Reporting | Object reference error in Transcription/Editor screen |
| 13805 | Scanning | Scanned document association - patient level attachment changed to order level remains associated with other studies |
| 6722 | Scheduling | Site Group feature - fails to include Site Group in list in some cases |
| 14018 | Scheduling | Auto-fill of first name and last name for responsible party not working if Self is chosen and previous data present |
| 13839 | Service Tools - Installer | The db installation / upgrade program logs the user id and pw in plain text |
| 13843 | Service Tools - Installer | RIS DB Installer - Error when installing MU Data |
| 6196 | Thick Client GUI | Tech Status Change is not applied if the front desk has the study open |
| 13988 | Thick Client GUI | RIS marks some rows as "Modified" even when there are no changes |
| 14035 | Thick Client GUI | Out of Memory exception |
| 13745 | User Views | Order # column not visible with existing my views |

| | | |
|---|---|---|
| 11956 | Patient Search | Combining an alternate first name and regular last name is not returning the expected search results |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## KNOWN LIMITATIONS

The following are new bugs found in build 2.2016.4. Bugs reported in previous versions are not captured as Known Limitations in this document.

| # | Category | Subject |
|---|---|---|
| 14153 | Digital Forms | When trying to delete a digital form question that already has saved answers, the displayed error message is missing clarifying text. |
| 14170 | Reception | When text already exists in responsible party but the relation is changed, the text remains the same (the only time change occurs is when self is the option and then name and family name changes). |
| 14201 | Patient Merge | Patient Merge preferred order phone number and email buttons are enabled and will raise an exception. |
| 14222 | Service Tools | The Edit window displays an error if tabs are closed. |
| 14239 | Forms | The Last Updated field is not updating in the Printing Criteria Grid. |
| 14295 | Meaningful Use | Exporting a C-CDA file and running it through the XDS toolkit produces errors related to Implant. |
| 14296 | Meaningful Use | Exporting a C-CDA file and running it through the XDS toolkit produces ethnic group errors if Ethnicity = Unknown. |
| 14312 | Scanning | Windows 10 – “Photos” application not compatible with "Print to eRAD RIS" feature. |
| 14313 | CD Import | Exception error logged when importing files from CD. |
| 14321 | CD Import | Loading From CD progress bar cut off in Windows 10. |
| 14356 | Outside Read | When creating an outside read, there is no validation on Exam Date. |
| 14406 | Citrix Bridge | When using RIS over Citrix, if RIS locks up unexpectedly, the user cannot terminate the session and gets an error instead. |
| 14416 | Radiology Reporting | QA Workflow - Send for Dictation and Close moves study to Report Drafted status. |
| 14419 | Image request | Image request window displays intermittent errors. |
| 14424 | Insurance Eligibility | Cannot remove eligibility override unless carrier is removed from "in use." |
| 14426 | Service Tools - Installer | Current core install issues - Windows 10. |
| 14429 | UI Look and feel | The log control Autotext inserts text after manually entered text even though the cursor was in front. |
| 14487 | Radar - Nudge | Nudge Impression and Report button do not work with PS360. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## RIS RELEASE VERSION NUMBERS

## PURPOSE

This is the Customer Release Notes document for eRAD RIS Version 2.2016.5.

Not every feature will be described in this document. Typically, only features which can be visually demonstrated are outlined here.

## INTENDED AUDIENCE

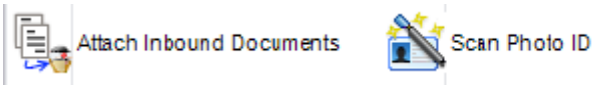
The intended audience for this document is the RIS Administration team for eRAD RIS customers.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## NEW SETTINGS

In 2016.5, development was initiated for some feature sets that will be available in the next version of eRAD RIS. The following settings are related to this functionality. Please leave the default settings at this time; more information regarding these features will be available for your next upgrade.

Note that there are two new menu items that will only be visible to full RIS Administrators. These menu items are for functionality that will be available in the next eRAD RIS upgrade.



## NEW ACCESS STRINGS

| Setting | Default | Purpose |
|---|---|---|
| Clinical.ACRSelect | None | This will allow access to use the ACR Select functionality for the upcoming Utilization Management workflow. |
| Clinical.AttachInboundDocuments | None | Access to the Attach Inbound Documents screen. |
| Clinical.AttachInboundDocuments.BreakLock | None | Access to Break Lock functionality on the Attach Inbound Documents screen. |
| Config.LookupEditor.DocumentDeleteReason | None | Look-up table access for Document Delete Reason (options displayed to user when deleting a document from the Inbound Documents workflow). |
| Config.LookupEditor.ReportingOption | None | Access to look-up table for Reporting Options. |
| RIS.WindowsClient.Login | Full | Allows access to the RIS Windows client application. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## NEW SYSTEM CONFIGURATION SETTINGS

| Setting | Default | Purpose |
|---|---|---|
| ACRSelectToken | | (value = string) Token for ACR Select to identify which site is contacting them. |
| ACRSelectURL | | (value = string) URL for ACR Select site. |
| REMOVED LimitOpenReportingWithPowerScribeCount | | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

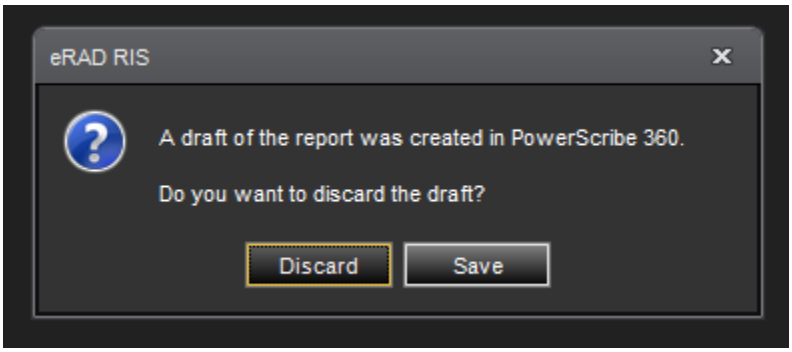
# NEW FEATURES

## POWERSCRIBE INTEGRATION

### FEATURE #13721 – PROMPT THE RADIOLOGIST TO DISCARD OR SAVE WHEN CLOSING A DRAFT AFTER USING INTERRUPT WORKFLOW

When dictating with PowerScribe 360, opening a new report or otherwise switching to a different report tab (also known as the interrupt workflow) will automatically create a draft in PowerScribe 360 so that the radiologist can resume the draft after clicking back to that tab in RIS. If nothing has been changed on the first report and the tab is eventually closed without any changes, the draft in PowerScribe 360 is unnecessary as no changes were made to the report.

To decrease the number of unwanted PowerScribe 360 drafts, RIS will now present a prompt to save or discard drafts that are created in this fashion.



The prompt will only occur if the draft was forced when the radiologist switched report tabs *and* the radiologist closes the report tab in RIS without taking another action on the report in PowerScribe.

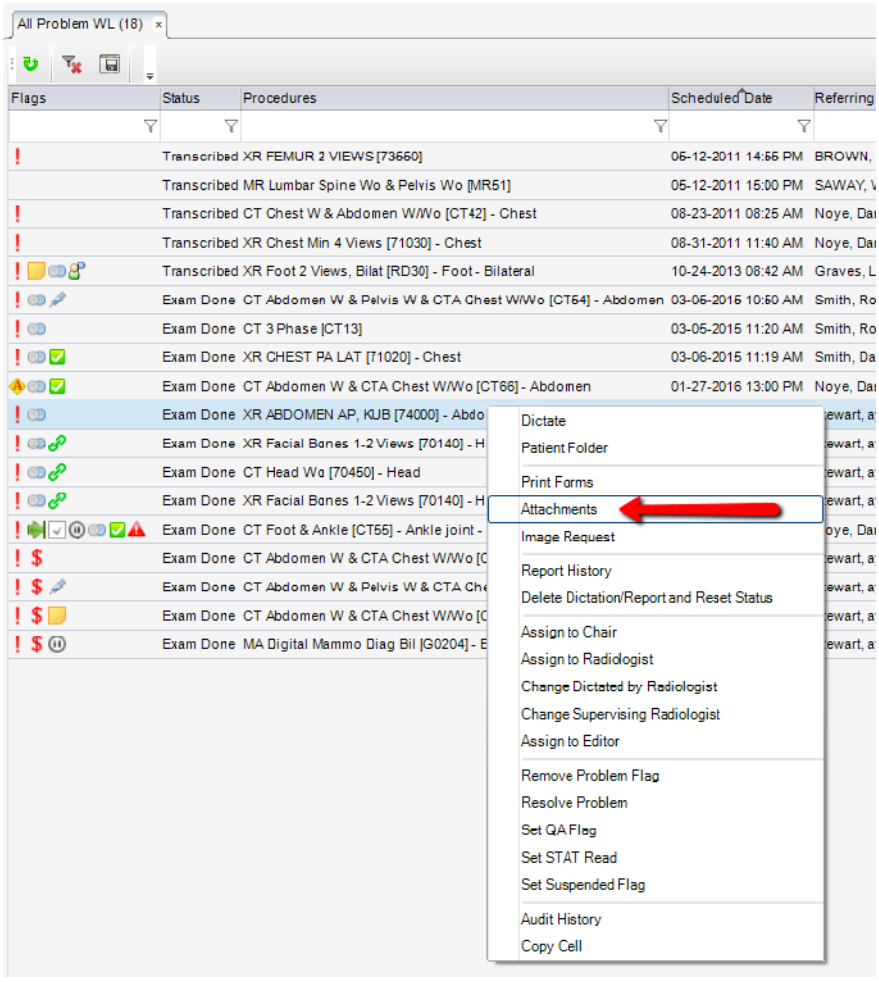
Please note that if the report is closed from PowerScribe 360, then the prompt will not display in RIS.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## GENERAL WORKLIST ENHANCEMENTS

### FEATURE #14138 – ADD ATTACHMENTS MORE EFFICIENTLY FROM THE ALL PROBLEM WORK LIST

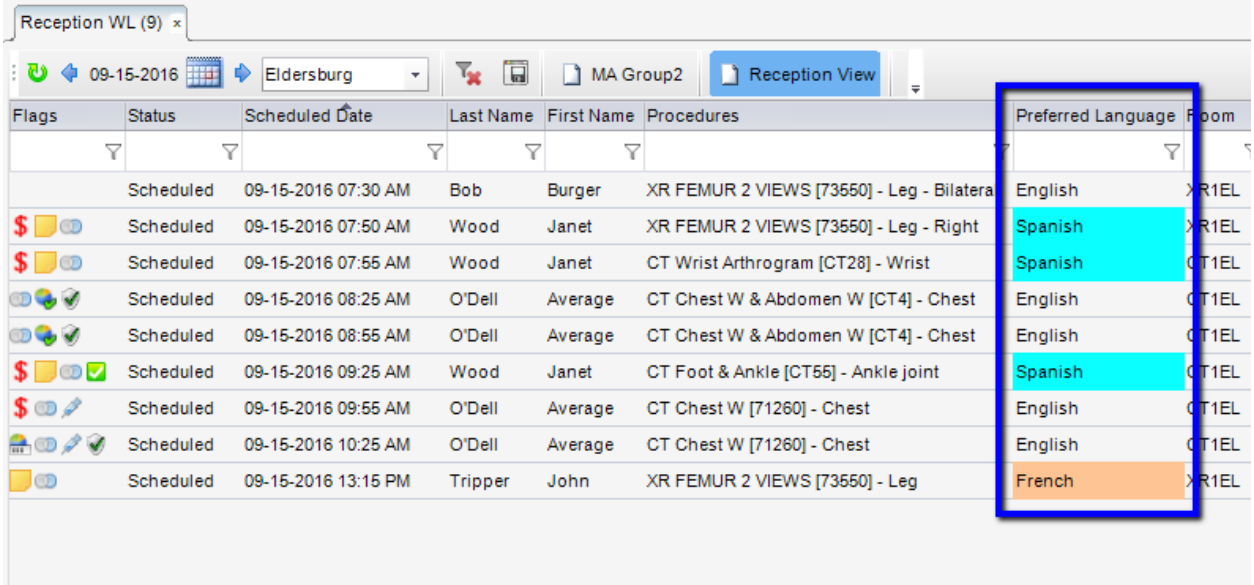
Radiologists often add a study to the Problem WL because a scanned document, such as a technologist worksheet, is either missing from the Attachments or is incomplete and requires additional information. In those cases, users working the Problem WL often need to scan new documents. Therefore, it is now possible to open the Attachments screen directly from the All Problem work list by right-clicking on a study and choosing the Attachments option from the context menu.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #7125 – VIEW PATIENT'S PREFERRED LANGUAGE FROM ORDERS TO SCHEDULE, RECEPTION, AND TECHNOLOGIST WORK LISTS

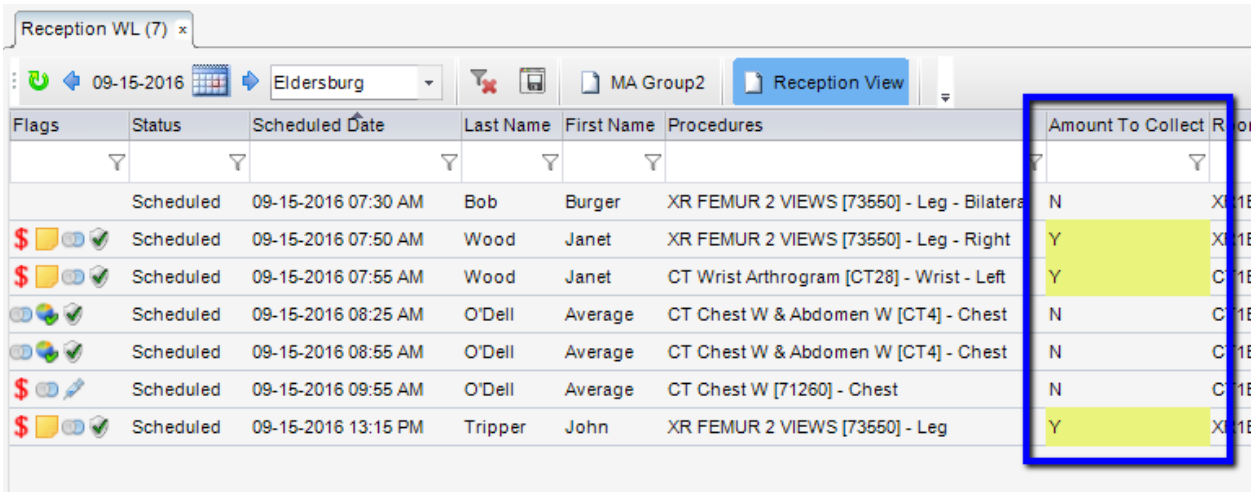
Users often find it helpful to know a patient's preferred language while viewing a work list. Filtering, sorting, or creating Custom Views to highlight specific languages makes it easy to match up a patient with the staff member who speaks the preferred language, or calls attention to a potential need for an interpreter service. For these reasons, a column to display the patient's preferred language is now available on the Orders to Schedule, Reception, and Technologist work lists.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #7500 – VIEW WHETHER A PATIENT HAS AN AMOUNT TO COLLECT FROM THE RECEPTION AND CONFIRMATION WORK LISTS

When viewing the Confirmation or Reception work lists, it can be helpful to see whether or not there is an amount listed in Amount to Collect. This allows staff to more quickly identify whether payment needs to be collected. A new column titled *Amount to Collect* will simply display a Y or N to indicate if there is an amount listed in the Amount to Collect field. Y will show for Yes when there is a value. N will display for No when there is no value or the value is $0.00. Conditional formatting can be applied to draw attention to patients who need to make a payment. Please note that the column will only indicate that there is a value in the Amount to Collect field; it does not update when a payment has been made.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## RIS ADMINISTRATION

### FEATURE #14150 – NEW ACCESS STRING DESIGNED TO PREVENT USER GROUPS CREATED FOR THE UPCOMING PROVIDER PORTAL FROM LOGGING INTO THE RIS CLIENT

In the near future, eRAD RIS will release the fully integrated referring portal. To ensure the referring users will only be allowed to access the portal and not the main RIS application, a new access string has been created. The new access string is: *RIS.WindowsClient.Login*

If a regular RIS user does not have FULL permission for this access string, they will be unable to login to the RIS Windows Client and will receive the following error message:

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## RESOLVED DEFECTS

Bugs and support issues resolved in build 2.2016.5.

| Bug # | Category | Subject |
|---|---|---|
| 8211 | Admin-Other | Log file reader displayed a decryption error despite accurately decrypting logs. |
| 14079 | Admin-Other | Certain keys acting as shortcuts in the Organization table were removed. |
| 14375 | Admin-Rooms | Closed Rooms Reschedule WL showed exams scheduled outside of a room closure under certain conditions. |
| 14292 | Digital Forms | Warning for blank required fields in Digital Form did not display properly. |
| 14195 | eRAD Service Tools | Standard look-up table editors and custom editors that have a code column as unique identifier had potential to have child table rows moved from existing parent row to newly created row. |
| 14005 | IVT / PreCert | Insurance verification was not resetting appropriately after carrier was changed under certain conditions. |
| 14236 | IVT / PreCert | PreCert status updates were reverting back to previous status if an insurance carrier was added from the IVT screen. |
| 13859 | Legacy Reports | When using the PDF viewer for legacy reports, the window is cleared but not closed when the viewer is opened for a second patient. |
| 14041 | Localization | Payments could not be recorded in currencies other than dollars or shekels. |
| 2262 | PACS (eRAD) Int - RIS only | When a technologist clicked View Images, there was no indication that the request was being processed. |
| 6538 | Powerscribe Integration | The User Group setting for maximum number of open PowerScribe dictation tabs was overridden by the System Configuration setting. |
| 14271 | Powerscribe Integration | PowerScribe dictation screen sometimes closes when opening/viewing another PowerScribe 360 report after modifying the first. |
| 14207 | Radar - Nudge | Impression input button in RADAR Nudge was not including impression text in the Nudge message if report mode was eRAD or PS360. |
| 3681 | Radiology Reporting | Interactive Info Prompt sizing issue for M*Modal reporting. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| 13501 | Radiology Reporting | When reporting mode is PS360, clicking Dictate on a signed report that was created using eRAD or M*Modal reporting would issue a PowerScribe prompt to create a temporary order, instead of RIS prompting the user to choose to dictate an addendum or open in Read Only. |
| 13510 | Radiology Reporting | Restored the ability to multi-select exams in the Patient Folder and Assign to Radiologist. |
| 13515 | Radiology Reporting | Report history was showing addendum in the version view. |
| 13782 | Radiology Reporting | eRAD Reporting mode was formatting text as a field when immediately outside the field. |
| 13820 | Radiology Reporting | "Specified cast is not valid" error was occurring when signing in next workflow. |
| 14094 | Radiology Reporting | "Object reference" error was occurring in Edit Templates and Macros from Radiologist menu. |
| 14140 | Radiology Reporting | If a referring was also a surgeon, the referring name did not display in the radiologist's summary window. |
| 14158 | Radiology Reporting | In Exam Details in the reporting screen, "Assisting Tech 2" was displayed instead of "Assisting Tech 1." |
| 14402 | Radiology Reporting | Opening the report data nugget was not possible when the interpretation type was null. |
| 13837 | Scanning | Order level Scan Types could not be assigned in Attachment viewer. |
| 14081 | Scanning | Imported or scanned attachments could not be saved from the Image Request WL. |
| 10721 | Scheduling | Multiple consecutive availability template time blocks were not treated as one merged block. |
| 11978 | Scheduling | When force scheduling from the appointment book, any procedure could be scheduled in any room. |
| 13810 | Scheduling | Cancelling an order twice would result in a blank procedure field when scheduling it again. |
| 14214 | Scheduling | Studies could continue to be added to the same order by canceling and rescheduling with the original canceled study repeatedly, instead of using the most recent canceled exam. |
| 14361 | Scheduling | Studies were incorrectly remaining on the Labwork Advised Work List when the "Skip Labwork Advised WL" checkbox was checked. |
| 14635 | Technologist | Object reference error was occurring for some EMR exams when starting or completing exam. |
| | | |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## KNOWN LIMITATIONS

The following are new bugs found in build 2.2016.5. Bugs reported in previous versions are not captured as Known Limitation in this document.

| # | Subject |
|---|---|
| 14754 | Report history audio control is shared between tabs. |
| 14504 | Exams are not getting locked at Started status. |
| 14520 | Fields are overwritten when inserting macros containing fields. |
| 14533 | Using PowerScribe 360, RIS can crash under certain conditions when using skip and continue and ignoring PS prompt. |
| 14622 | Template/Macro look-up editor's grid becomes un-editable if editing a row before saving previous changes in the grid. |
| 14636 | When viewing images in IW PACS from the Patient Folder and switching to another tab, images are not redisplayed after switching back to the Patient Folder. |
| 14645 | The Register option should not be available for unscheduled Reminder – Callback exams. An error will occur if the option is selected. (Using the Reminder from the Existing Orders prompt when doing a new Walk In functions appropriately.) |
| 14646 | PACS Integration – when switching between multiple open dictations with priors manually appended to the PACS Viewer, some of the manually added priors do not stay in the viewer when returning to the tab. |
| 14723 | Mark as Read - creates an interpretation row if marked as read from within dictation window, but does not create a row if marked as read from context menu. |
| 14676 | Scanning and Attachments – When changing the scan type on a previously saved attachment using the "Classify Remaining As..." option, the scan type will change but the document level may not automatically change. |
| 14696 | MFN Update for Personnel only updates based on person_key. |
| 14794 | Patient Merge does not mark as duplicate if a reverse merge is suggested for the same two patient accounts. |
| 14528 | RADAR Nudge causes a Windows error when Cancel is selected at Nudge login. |
| 14498 | Print to eRAD RIS - Output directory only cleans up print jobs/images when RIS is running. |
| 14617 | When editing an unknown Referrer via the Unknown Reconciliation WL and then changing to a known Referrer, a message prompt is asking for the unknown referring's address. |
| 14624 | Temporary issue displaying Patient Folder information on tab title after selecting a previous Personnel merge from the Recent Actions list. |
| 14657 | Manually changing an exam to Report Drafted should not be allowed. |
| 14729 | When using the "Chair Selector" hotkey (F12) while a context menu is open, RIS will crash. |
| 14225 | Legacy report does not properly support .docx files. |
| 14241 | Report data nugget immediately closes when viewing a legacy PDF report a second time. |
| 14482 | Ctrl + S shortcut does not behave as expected in several look-up editors. |
| 14590 | Error in message resolver when Condition Code is invalid. |
| 14627 | When importing an electronic order to an existing eRAD RIS order that has a cancelled procedure, the electronic order will not display as Order Canceled in the Patient Folder. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

Feature #13256 – INFINITT PACS Viewer Integration ..... 62
RIS Administration ..... 63
Feature #6391 – Grant access to create Room Closures or Restrictions on a per Practice basis ..... 63
Feature #14458 – Restrict access to enable/disable Domain Authentication ..... 64
Patient Management ..... 65
Feature #14818 – Control which screens display Patient Flag Alerts ..... 65
Feature #13812 – Support for PIX / PDQ ..... 67
Miscellaneous User Experience ..... 68
Feature #14341 – Ability to copy from MRN grid ..... 68
Feature #13909 – Enable Billing Notes field when an insurance carrier is selected ..... 68
Resolved Defects - 2.2016.6 ..... 69
Resolved Defects - 2.2016.7 ..... 72
Known Limitations - 2.2016.6 ..... 74
Known Limitations - 2.2016.7 ..... 75
RIS Release Version Numbers ..... 77
Code Stream Diagram ..... 78

## PURPOSE

This is the Customer Release Notes document for eRAD RIS Version 2.2016.7. It includes features for 2.2016.7 and 2.2016.6.

Not every feature will be described in this document. Typically, only features which can be visually demonstrated are outlined here.

## INTENDED AUDIENCE

This document was created by the eRAD RIS Development team and Product Management team for eRAD RIS customers.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## NEW SETTINGS

Please see accompanying document for Utilization Management settings.

### NEW ACCESS STRINGS

| Setting | Default | Purpose |
|---|---|---|
| Clinical.ExternalSearch | None | Allows a user to perform an external patient search. |
| Clinical.PIXQuery | None | Allows a user to perform an identifier query. |
| Config.LookupEditor.PIXPDQServers | None | Controls access to the look-up table PIXPDQServers. |
| Clinical.ScheduleFrom | None | Controls access to the "Schedule From" menu item for scheduling a new exam using information from the selected row on the Patient Folder. |
| Clinical.Visit.Cost.Override | None | Allows a user to override the total visit cost. |
| Config.LookupEditor.DocumentType | None | Controls access to the look-up table for Document Type. |
| Config.LookupEditor.EmployerDirect | None | Controls access to the look-up table for Employer Direct. |
| Config.LookupEditor.Personnel.DomainAuthentication | Full | Functionality to enable/disable the ability to change a user's authentication type. |
| WL.Folders | None | Allows access to Folder worklists under the File menu -> Folders option. |
| Config.LookupEditor.Modality.ViewAllPractices | None | Allows a user of the modality editor to see/edit all rooms across all practices. |
| ~~Config.LookupEditor.Modality.PracticeSpecific~~ | N/A | Removed from the application. Replaced with Config.LookupEditor.Modality.ViewAllPractices. |
| ~~Config.LookupEditor.Modality.ViewAll~~ | N/A | Removed from the application. |

| | | |
|---|---|---|
| WL.CriticalResults | None | Allows access to the All Critical Results WL via the Administration menu. |
| WL.Rad.MyCriticalResults | Full | Allows access to the (My) Critical Results WL. |
| WL.Rad.CriticalResults<br>Replaced with<br>WL.Rad.CriticalResultsAll | None | Allows access to the All Critical Results WL via the Radiologist menu. |
| Config.LookupEditor.CTRMCategory | None | Allows access to the look-up table for CTRM Category. |
| clinical.CTRNNotification<br>Replaced with<br>Clinical.CTRMNotification | None | Allows user to add a critical result notification. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| Config.LookupEditor.ContactLogMethod | None | Allows access to the look-up table for Contact Log Method. |
| Clinical.ChangeAssistantRadiologist | None | Allows user to access the Change Assistant Radiologist context menu option. |
| Clinical.RADARSecurePIC | None | Allows user to send a RADAR SecurePIC request. |
| Clinical.ScanDocs.AllowMarkAsReviewed | None | Allows user to modify the Reviewed status of an attachment received via SecurePIC. |
| Clinical.ViewStudy | None | Allows user to open the View Study screen. |
| Config.LookupEditor.ImplantDevice | None | Allows access to the look-up table for Implant Device. |
| Config.LookupEditor.PreCertGroups | None | Allows access to the look-up table for PreCertGroups. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## NEW SYSTEM CONFIGURATION SETTINGS

| Setting | Default | Purpose |
|---|---|---|
| PIXPDQCurrentServer | | (value = string) The full URL for the Mirth channel handling the PIX and PDQ queries. |
| PIXPDQQueryTimeout | 10 | (value = int) Number of seconds of timeout before RIS considers the request in error. |

| | | |
|---|---|---|
| ~~CTRMEnabled~~ | | This setting has been removed. |
| AttachmentResolutionWhenSizeExceedsMax | 150 | When an attachment page exceeds the 'MaxAttachmentSizeKB' the image will be resized based on this value. |
| EnableRADARInboundMessageProcessing | False | Enables inbound RADAR messages. |
| MaxAttachmentSizeKB | 50 | If an attachment page is larger than this amount in KB, then RIS will resize the resolution of the image based on a 11in high document at the resolution of 'AttachmentResolutionWhenSizeExceedsMax.' |
| RADARInboundMessageClientId | No default | The RADAR account for the RADAR SignalR inbound message channel. |
| RADARInboundMessagePassword | No default | The RADAR account password for the RADAR SignalR inbound message channel. |
| RADARInboundMessageServerUrl | No default | The URL for the RADAR SignalR inbound message channel. |
| RelevanceWeightingFactorBodyPart | 20 | When calculating a relevance score, this is the weight that will be applied to the body part matches (that are not part of the keyword matching). If all relevance weighting factors are set to zero, the relevant scores will only include the date. |
| RelevanceWeightingFactorContrast | 4 | When calculating a relevance score, this is the weight that will be applied to the contrast part of the procedure. If all relevance weighting factors are set to zero, the relevant scores will only include the date. |
| RelevanceWeightingFactorKeywords | 15 | When calculating a relevance score, this is the weight that will be applied to the relevant keyword matches. If all relevance weighting factors are set to zero, the relevant scores will only include the date. |
| RelevanceWeightingFactorLaterality | 50 | When calculating a relevance score, this is the weight that will be applied to the laterality matches. If all relevance weighting factors are set to zero, the relevant scores will only include the date. |
| RelevanceWeightingFactorModality | 8 | When calculating a relevance score, this is the weight that will be applied to the modality type matches. If all |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| | | relevance weighting factors are set to zero, the relevant scores will only include the date. |
| RelevanceWeightingFactorOtherWords | 3 | When calculating a relevance score, this is the weight that will be applied to any other words that happen to match. If all relevance weighting factors are set to zero, the relevant scores will only include the date. |
| UseUTF8ForWedgeOutboundEncoder | False | Determine whether the Wedge encodes items using the utf-8 character set or uses the system default (likely Windows-1255). |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## Upgrade to eRAD RIS release, 2016.7, and New Features will allow you to:

→ Read **driver's license barcodes** with a document scanner to launch registration workflow for the appropriate RIS patient.

→ Manage PreCertification Rules in groups instead of individual carriers with a **redesigned PreCertification configuration** framework.

→ Capture **inbound faxes** and other documents in the RIS with worklist-based document routing workflow.

→ Configure options to **automatically launch** the appropriate PACS viewer and reporting mode, plus preferences about how many priors to launch or cache, based on a variety of study criteria.

→ Organize **studies of interest** into a folder structure for future reference—great for teaching files, tumor boards, and more.

→ Initiate a text message to a patient's phone and securely receive a picture message back in the RIS using **RADAR SecurePIC**—particularly helpful to review referrals and insurance cards when scheduling over the phone.

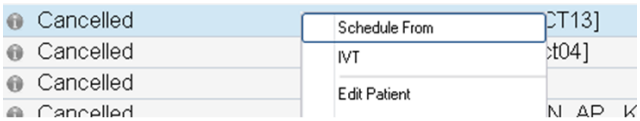
→ Integrate **utilization management** workflow for evaluating appropriate use criteria and medical necessity.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## SCHEDULING AND REGISTRATION

### FEATURE #14663 – ABILITY TO REPLICATE AN EXISTING ORDER TO SCHEDULE A NEW APPOINTMENT

Often a patient needs to schedule a follow-up exam or an annual screening exam that shares all or most of the same information with an exam they have had in the past. In these cases, copying the information from a previous exam can be a time saver: if the referring provider, insurance, special accommodations, reason for exam, etc., are the same as before, the scheduler can more quickly create an appointment for the patient if those items can be copied over. To accomplish this, a new "Schedule From" option is available in the right click menu (context menu) in the Patient Folder.



Selecting this option allows a user to initiate a Scheduling event that copies (clones) all of the data from the selected row (referring and CC doctors, Reason for Exam, insurance information, procedure, etc.). This menu option is available for any study in the Patient Folder, regardless of status. After the exam information is copied to the new order, there is no longer a link between the new order and the original order. The scheduler can make updates to the new order with no impact on the order from which it was initiated.

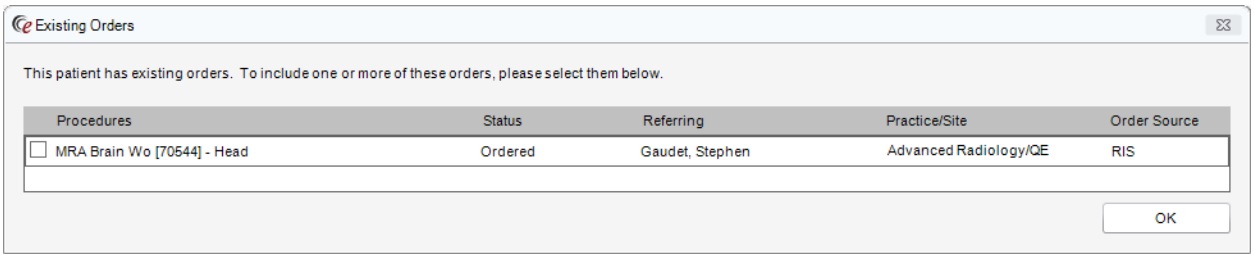
The data from the selected study will be used to load the "Schedule Order" screen. From here, the scheduler can make any necessary changes and either save as an order or proceed to schedule an appointment.

To utilize this feature, a user must belong to a User Group with FULL access to the new access string: *Clinical.ScheduleFrom*.

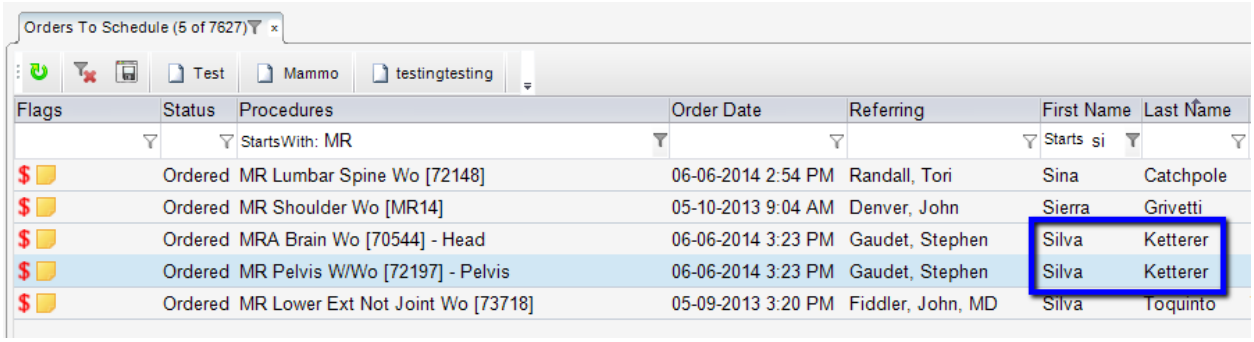
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #14829 – DISPLAY EXISTING ORDERS REMINDER WHEN SCHEDULING FROM AN ITEM ALREADY IN AN ORDERED STATUS

Previously, the Existing Orders reminder only occurred when scheduling a new Order or Walk In. However, even if scheduling from the Patient Folder or the Orders to Schedule worklist, schedulers can sometimes miss that there is more than one Order available. eRAD RIS will now display the Existing Orders reminder when scheduling a *different* existing order.



When opening an Order from the Orders to Schedule WL or Patient Folder, the reminder will display for the scheduler to choose whether or not they would like to also schedule the other order(s).

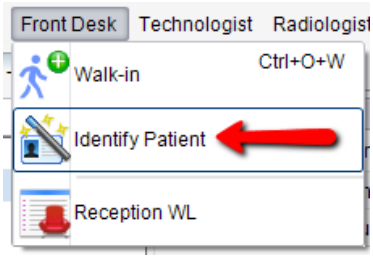


No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #7302, 8006 – USE DATA FROM DRIVER'S LICENSE 2D BARCODE TO OPTIMIZE RECEPTION WORKFLOW

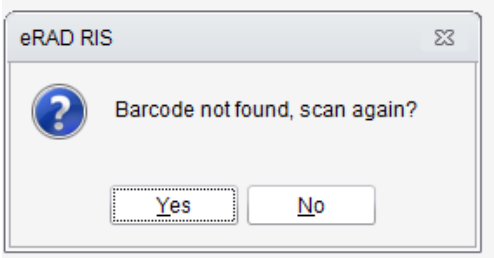
In order to improve the check-in times at the front desk, eRAD RIS will now provide an option to locate a patient by scanning a driver's license and using the image of the 2D barcode on the back of the license to identify and search by key demographics for that license to find likely matches.

To begin, place the patient's driver's license in the scanner and select the *Identify Patient* option under the Front Desk menu.



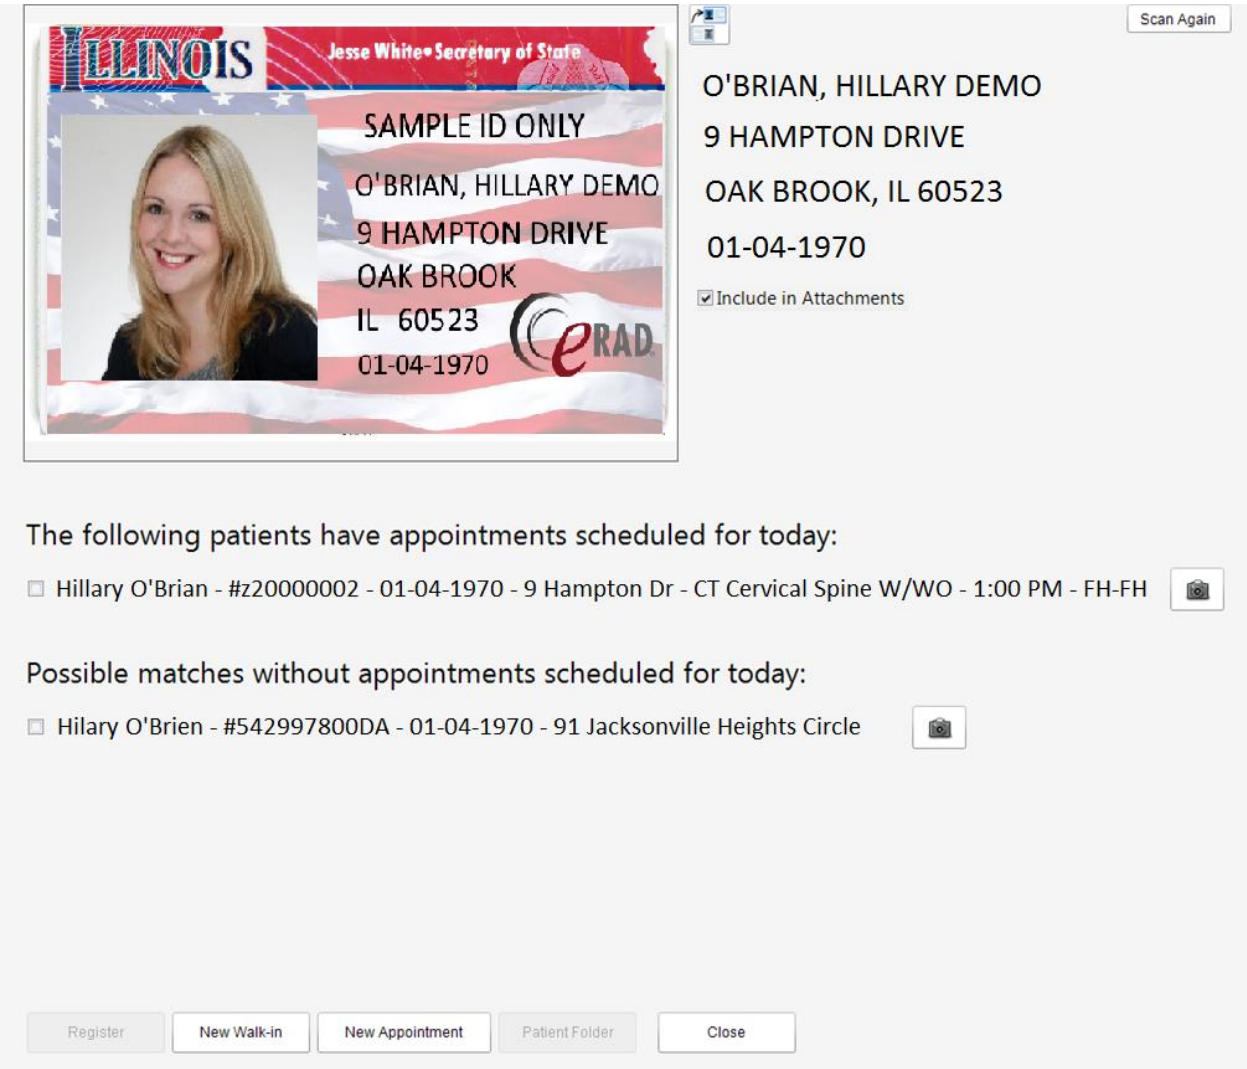
RIS will immediately proceed to scan the license, which will initiate a search using the name and birth date from the barcode on the driver's license. RIS will categorize the results such that matching patients who are scheduled for today will be presented first, as the most likely match. If there is only one exact match for a patient and that patient has an exam scheduled for today, RIS will automatically open the exam in Registration mode. If there are multiple matches, the user will be presented with a summary of the information from the card, the search results, and a list of actions that can be taken.

If the barcode could not be read, the following message will be displayed.

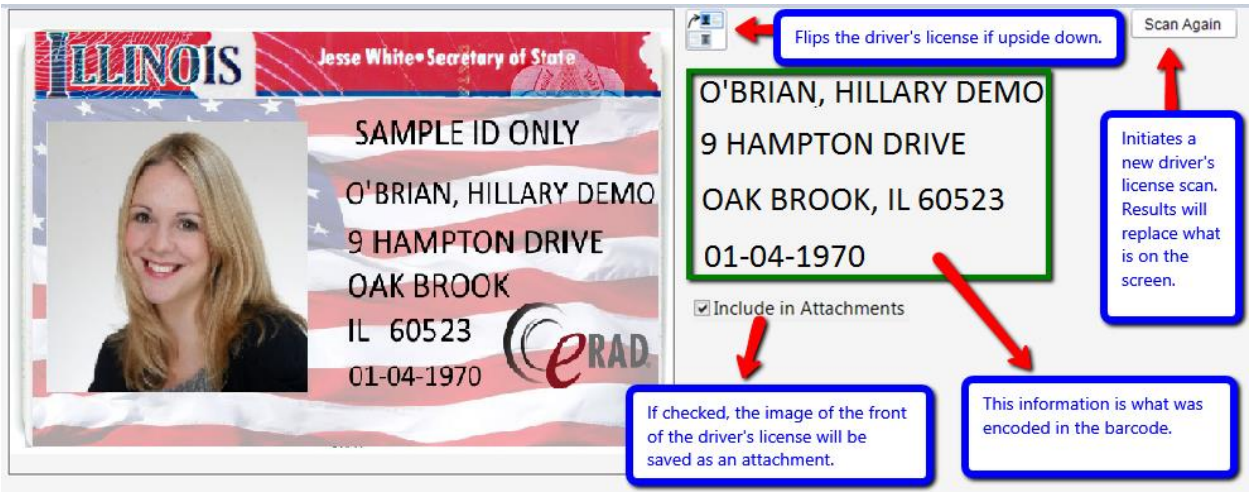


When the barcode is successfully interpreted, the following screen will display.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



The image below describes various components visible on the top section of the screen.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## SEARCH RESULT PRESENTATION

The search result entries are broken up into two categories, those with scheduled exams for today and those without scheduled exams for today. Those patients with one or more scheduled exams today will be displayed as follows:

<First name> <Last name> - #<MRN> - <DOB> – <street address> – <first procedure description> – <first procedure start time> - <first procedure's site_code>

Below those results, patients without exams scheduled for today will be displayed as follows:

<First name> <Last name> - #<MRN> - <DOB> - <street address>

If no matches are found, a message will be displayed in the search results area that no matches were found.

If any of the matching patients have a driver's license on file as an attachment, the camera icon will display next to the patient's information.

Clicking that button will open a small window with an image of the most recent scanned driver's license for easy comparison to the current driver's license.

## SEARCH RESULT SORT ORDER

Within each category, patient search results are sorted based on a point system that attempts to ensure the most relevant patients are at the top of the list. Relevancy points are assigned as follows:

| Description | Points |
|---|---|
| Exams scheduled at currently selected site | 20 |
| Exams scheduled today (regardless of location) | 20 |
| Exact match on last name | 10 |
| Exact match on first name | 10 |
| Exact match on street address | 10 |

Any results with the same relevancy score will be sorted alphabetically by last name and then first name.

## ACTION BUTTONS

The following buttons are displayed at the bottom of the patient search results. Only the buttons relevant to the results selected will be active.

| Button | Description |
|---|---|
| Register | Opens the first scheduled order in registration mode. A study selection dialog box may be displayed if there are multiple orders to be registered for the patient. This button is only enabled if the selected patient has exams |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | |
|---|---|
| | that are Scheduled, Checking In, or Arrived for today. |
| New Walk-in | Opens the walk-in screen. If the user first selects a patient, the screen will open the existing patient, otherwise it will be opened in "new patient" mode with information pre-filled from the driver's license (name, DOB, partial address info, etc.). This button is always enabled. |
| New Appointment | Opens the schedule order screen. If the user first selects a patient, the screen will open the existing patient, otherwise it will be opened in "new patient" mode with information pre-filled from the driver's license. This button is always enabled. |
| Patient Folder | Opens the Patient Folder of the selected patient. This button is only enabled if a patient is selected. |
| Close | Closes the Identify Patient screen. |

## "INCLUDE IN ATTACHMENTS" CHECKBOX

If the "Include in Attachments" checkbox is checked, New Walk-In, Register, and New Appointment will launch a screen with the Verified ID box checked and the scanned copy of the photo ID (front and back) attached to the scanned documents and automatically categorized as the corresponding *PhotoIDScanDocumentType*.

If a patient has a photo ID on file, the user is able to uncheck this box if attaching another copy is undesired. There is a new Practice-level setting that controls the default value of this checkbox.

## VARIATION IN NORTH AMERICAN DRIVER'S LICENSES

This feature was designed using driver's licenses from the United States and Canada. The technology may need to be adjusted to support other international barcodes. There are a few states or provinces that encrypt information on the barcode or store it in a different format. These are exceptions to the rule, but testing with local driver's licenses prior to implementing the workflow is recommended.

## A NOTE ON SCANNER EQUIPMENT

Two popular types of document scanners have been tested with this workflow: the Canon DR-2010C and the Fujitsu fi-6110. Other duplex scanners are also likely to successfully handle the barcode, but would require some initial testing before implementing the workflow.

At this time, testing/workflow modification has not taken place for scanners that do not support duplex (two-sided) scanning.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## HOW TO ENABLE THE FEATURE

1. Associate the access string *Clinical.ReceptionBarcodeWorkflow* with one or more User Groups set to Full.
2. The Scan Type identified by the existing system configuration setting for *PhotoIDScanDocumentType* is used to govern the configuration of the photo ID scan. In order to reduce the risk of a failure to scan, the following settings may override the configuration specified in the Scan Type configuration:
    a. Resolution – if RIS is configured with less than 210 DPI, then RIS will override to use 210.
    b. Duplex Flag – if RIS is configured with duplex flag = "N", then RIS will override to use "Y."
    c. Auto Deskew Flag – if RIS is configured with auto deskew flag = "N", then RIS will override to use "Y."
    d. In testing, 4''x 2.75'' was used on *PhotoIDScanDocumentType*.

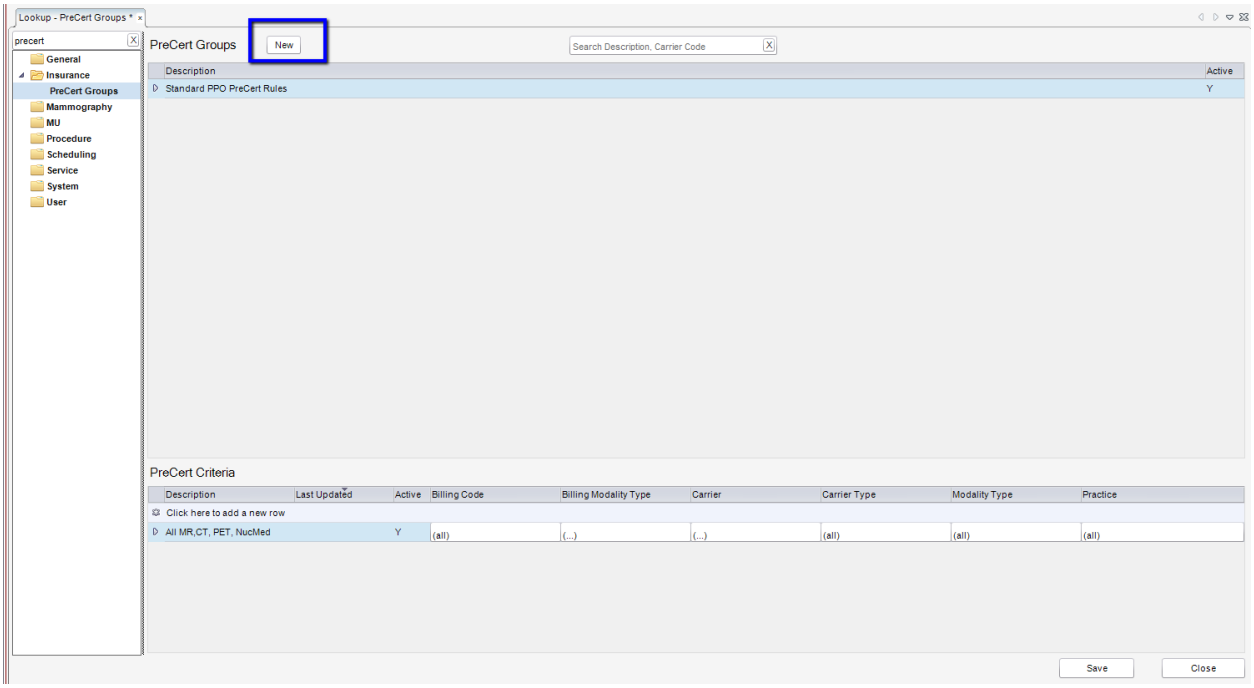
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #11048, 14724 – PRECERT RULES EDITOR REDESIGN: MANAGE PRECERT GROUPS

PreCertification rules have historically been difficult to manage because they had to be configured separately for every insurance carrier. Not only was this time consuming to manage, but the number of PreCert Rules a RIS Administrator was required to build for every carrier could sometimes slow down system performance, particularly if every carrier had very granular, Billing Code level rules. This method of managing PreCert rules was not reflective of the fact that large groups of carriers have the same PreCert rules, and any future changes to PreCert Rules would likely apply to every carrier in that group.

eRAD RIS now has a new editor to reflect this fact: *PreCert Groups*. An administrator can now create and name groups of carriers which fall under the same PreCert requirements, then create rulesets for the entire group to define those requirements. A PreCert Group can have one or more rulesets that include the following criteria: billing code, billing modality type, carrier, carrier type, modality type, and practice. If an order or study matches the criteria for any rulesets based on its insurance carrier, it will be marked as PreCert Required.

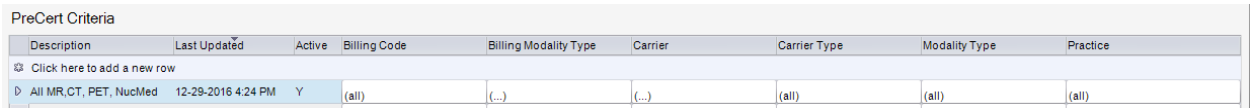
The new editor can be found under Administration -> Configuration -> Insurance -> PreCert Groups. PreCert Groups can include as many insurance carriers as necessary, or can be as small as just one carrier.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

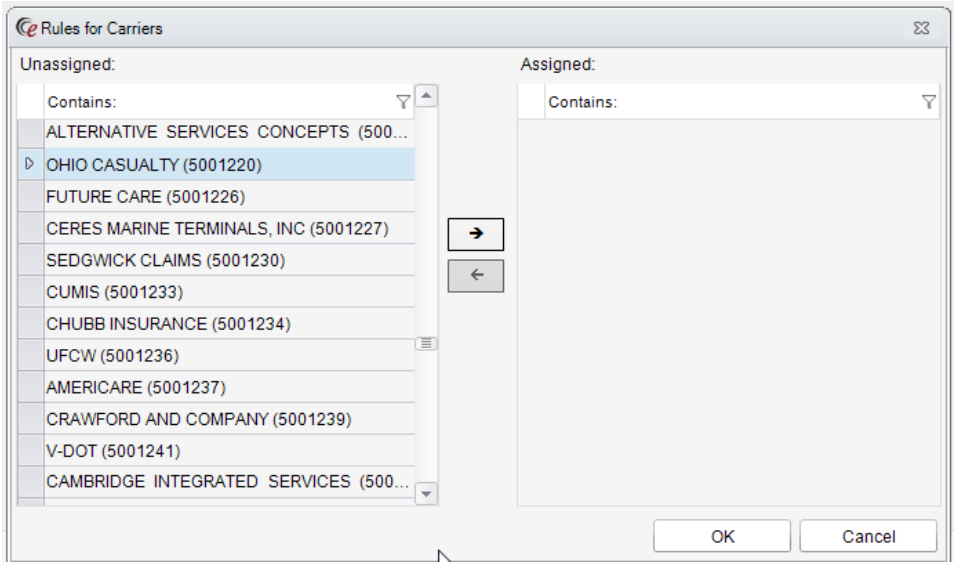
To create a new PreCert Group, click “New” and then enter a useful description to identify the new PreCert group. Note that any word added to the description can be used to find the group later via the search bar.

Next, create the criteria under which PreCert should be required in the bottom section of the screen. This works in the same fashion as creating criteria for printing Forms.



Because there may be multiple rulesets for the PreCert Group, it is helpful to give each ruleset a Description. The criteria will initially default to include “All,” meaning PreCert would be required for every exam under any circumstance. To narrow the criteria under which an exam would fall to the IVT worklist for PreCertification, first choose one of the categories: billing code, billing modality type, carrier, carrier type, modality type, or practice.

Selecting the “Carrier” category will open a new window with a full list of available carriers on the left (Unassigned) and a blank list on the right. Any Carriers to be associated with the rule will be selected and moved to the right side in the Assigned column, using the arrow pointing right. Carriers can be multi-selected by holding down the CTRL key while clicking the desired carriers, then clicking the arrow pointing to the right.



The filter row can be useful for quickly finding carriers of a certain type. For example, to create a rule for Attorney accounts, filtering by ATTY or Attorney or Law may help to quickly identify a chunk of carriers to move to the Assigned column. Alternatively, if all of the desired carriers are included in a particular Carrier Type, such as Attorney, leave the Carrier category as is and instead use the Carrier Type category.

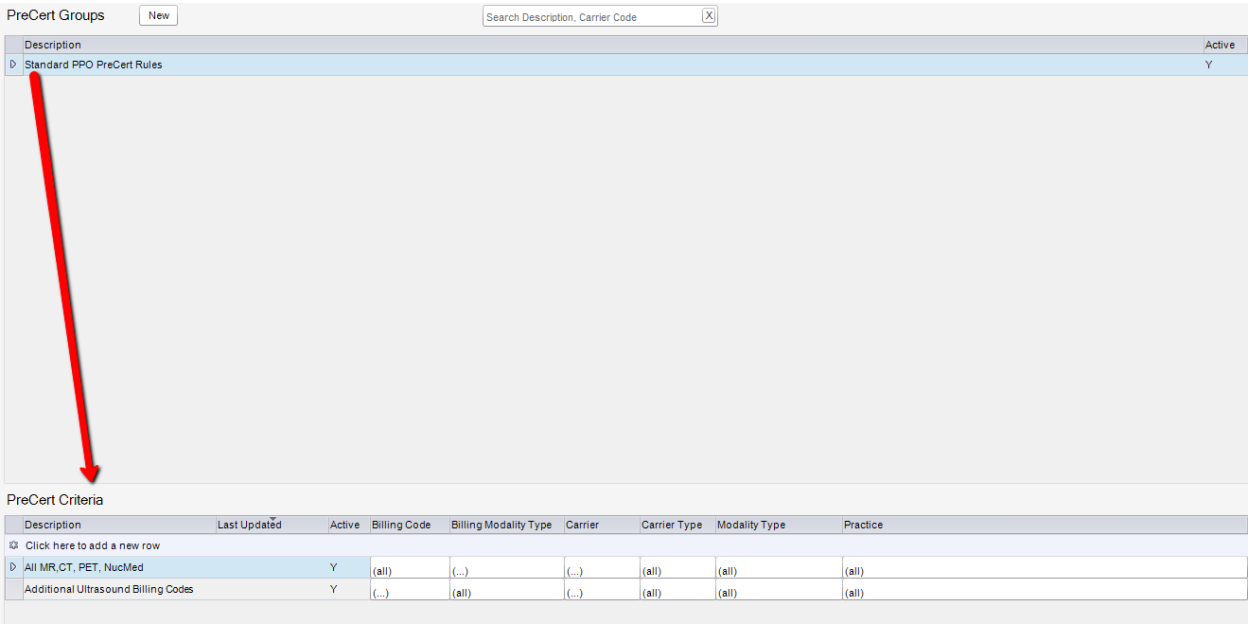
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

After configuring the ruleset to constrain it to a set of carriers, either using Carrier or Carrier Type, the administrator can then select one of three ways to determine which orders/studies will require PreCertification: Billing Code, Modality Type Code, and Billing Modality Type Code.

Modality Type Code and Billing Modality Type Code are two similar concepts, though the former is attached to a modality and the latter to a billing code. Billing Modality Type codes provide another means to group billing codes together in a way that may be more useful for billing purposes.

Billing Code is the most granular method for describing PreCert rules and would ideally be used only in cases where Modality Type Code and Billing Modality Type Code are too broad. For example, some contracts require PreCertification for only certain types of Ultrasound studies. In that case, select the Billing Code category and choose only those billing codes that require PreCert.

A PreCert Group can have multiple rulesets. If any rulesets match, then the given order or study will require PreCertification. In the following example, two rulesets have been configured for a PreCert Group named "Standard PPO PreCert Rules."



The first ruleset was configured to include all MR, CT, PET and Nuclear Medicine procedures based on Billing Modality Type. The second ruleset was added to include some specific Ultrasound Billing Codes. Adding the Ultrasound using Billing Codes instead of one of the Modality Type options prevents situations where all codes for a Modality Type fall to the IVT WL when only a small portion actually need PreCertification. Both rulesets were configured to use the same Carriers and were applied to all Practices.

When looking at rulesets that have already been configured, the "(…)" indicates that selections were made and clicking will open a window to view or change the selections. Otherwise, "(all)" means that no filtering has been done using that category.

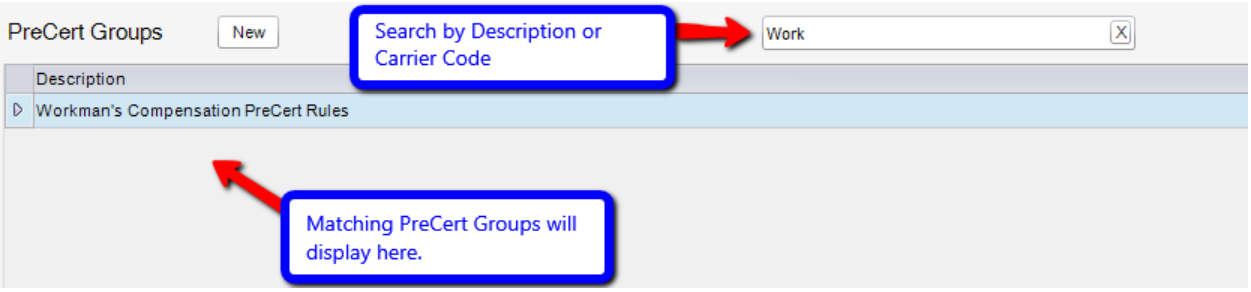
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

The following requirements must be followed:

1) A ruleset must include one of the following types of filters: Billing Code, Modality Type Code, or Billing Modality Type Code.
2) A ruleset must also include either a Carrier filter or a Carrier Type filter.
3) A carrier can only be included in one PreCert group.

## PRECERT GROUP SEARCH

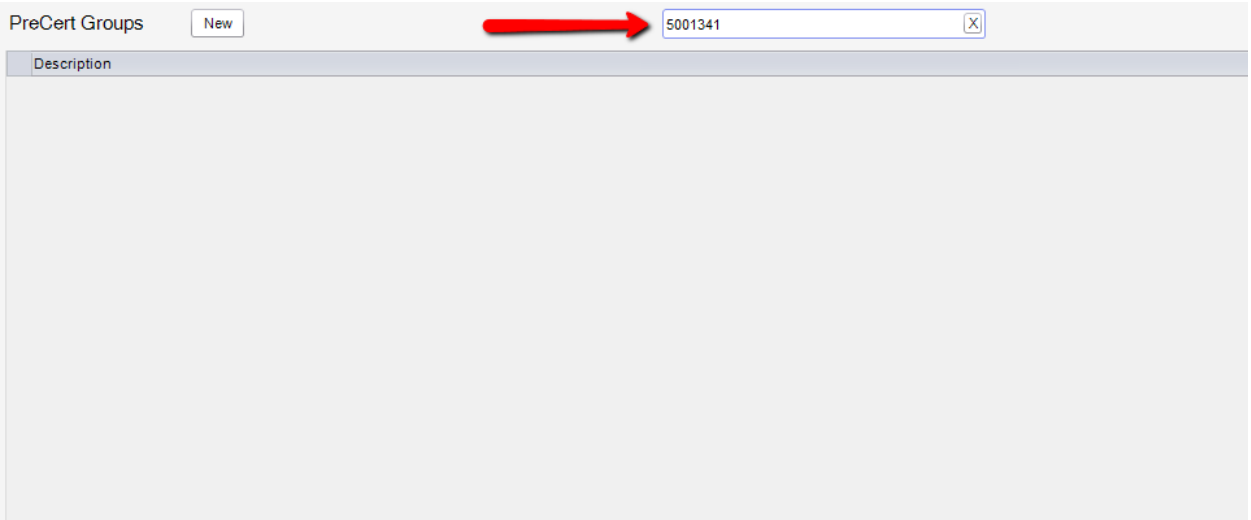
A search bar at the top of the screen allows the user to search for PreCert Groups based on any words in the description. It is also possible to search by Carrier Code, which is helpful when the PreCert Group to which a carrier belongs is not known by the user. A carrier code search will show all matching rulesets for the PreCert Group that includes the specified carrier.



## ACCESSING PRECERT GROUPS FROM THE CARRIER LOOK-UP TABLE

The Carrier look-up table can be used to launch the PreCert Groups editor and automatically apply a filter to find the PreCert Group to which the carrier belongs. For example, if an administrator is making a change to a carrier in the Carrier table and also need to adjust the PreCert Rules at that time, they can right click the carrier in the Carrier look-up table and choose PreCert Group in order to open the PreCert Groups editor.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

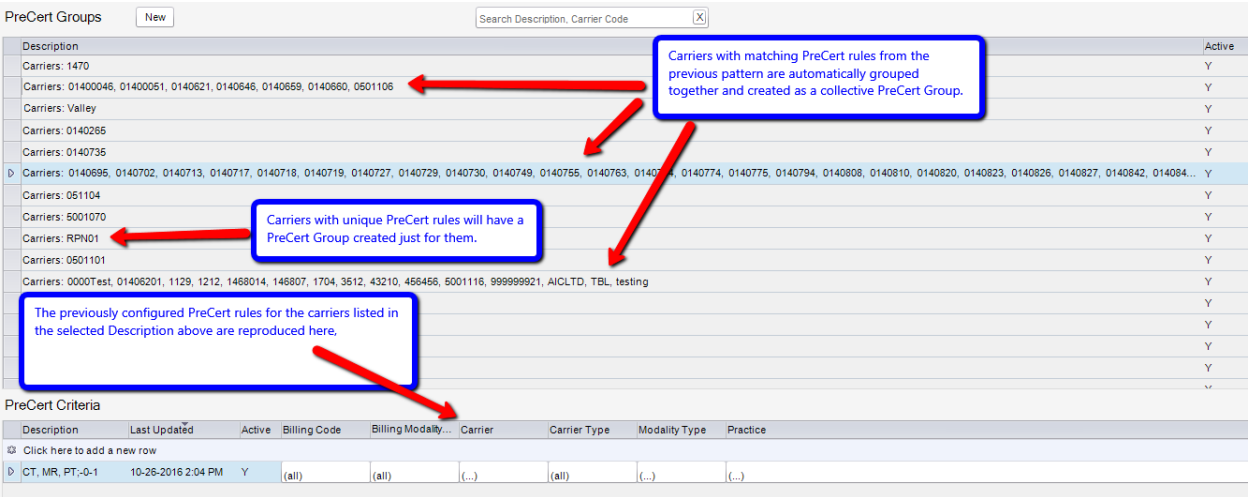


Above, the Carrier code for the selected carrier was automatically searched. No results appear because the carrier does not belong to any PreCert Groups (i.e. no PreCert rules are set for this carrier). To create a PreCert Group, click the New button.

To utilize the new PreCert Group editor in the Configuration tables, users must belong to a User Group set to Full for the access string *Config.LookupEditor.PreCertGroups.*

## IMPACT ON PRECERT RULES CONFIGURED USING THE PREVIOUS PRECERT RULE EDITOR

As part of the upgrade to 2016.7, existing PreCert rules will automatically be converted to the new pattern. A script will identify which carriers have identical PreCert rules. These carriers will then be put together in a PreCert Group and the previous rules will be replicated for that group.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

A temporary PreCert Group description will be assigned, which simply lists the Carrier codes included: "Carriers: 01254, 841211, 55229." At their convenience, RIS Administrators will likely want to evaluate these groups. Perhaps some carriers have matching PreCert requirements today, but should actually be split into two groups because they are likely to be handled differently in the future. Or perhaps some carriers had been given the same PreCert rules in the past, but some of those carriers may benefit from some fine tuning by Billing Code, now that the PreCert Group editor makes this possible. It is also possible that more meaningful descriptions may be created by looking at the carriers that were grouped together and identifying that they share some common characteristic, such as "Workman's Compensation" carriers.

Any questions regarding this new PreCert Group pattern or the migration process can be directed to eRAD Support for clarification.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

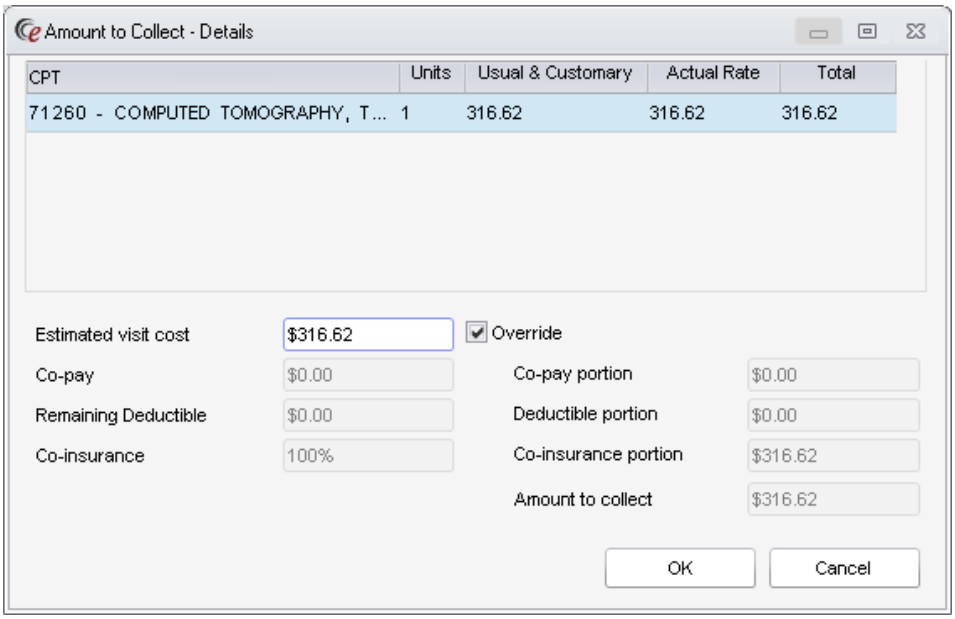
## FEATURE #14509 – ABILITY TO OVERRIDE THE TOTAL VISIT COST

When using the Eligible API integration and utilizing National Payor Database for pricing information, there is sometimes a need for users to override the Total Visit Cost. For example, the visit cost for Medi-cal patients needs to be calculated from a website, instead of the NPD. In cases such as these, a user needs to override the visit cost with the correct amount in order for financial reports to properly balance.

There is now an Override checkbox that can be accessed under the following conditions:

- The user belongs to a User Group with Full access to a new Access String labeled *Clinical.Visit.Cost.Override*.
- The insurance is configured to be validated via Eligible API.
- The National Payor Database is used for cost.

Clicking the Override checkbox will allow the user to specify an alternate estimated visit cost, as shown below.



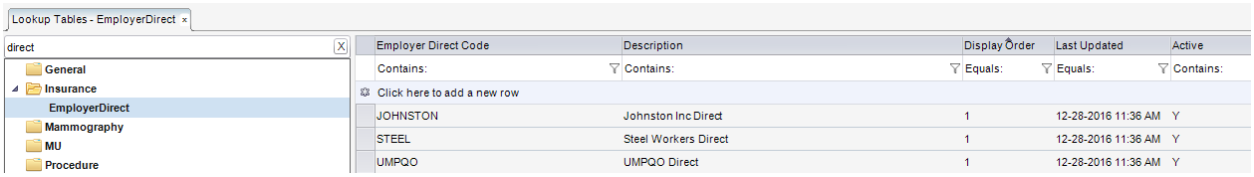
If a user does not have Full access to the *Clinical.Visit.Cost.Override* access string, they will only see the Override checkbox if it has already been checked by a user with the permission. This will indicate to the user that the estimated visit cost has been altered, but they will not have permission to uncheck the box or alter the amount in the estimated visit cost field.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

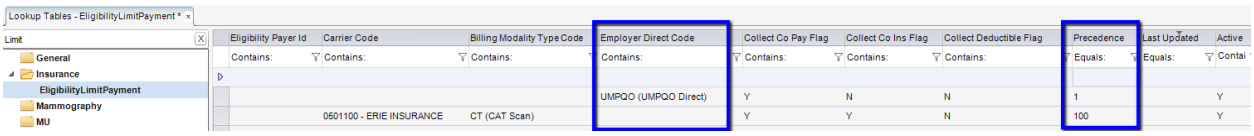
## FEATURE #8755 – EMPLOYER DIRECT FUNCTIONALITY FOR SPECIAL CONTRACTS

A request was made to support marketing efforts to offer employer groups special contracts to redirect imaging from high cost environments to lower cost imaging centers/departments. When referred via a contracted employer group, the contracted pricing will need to override the standard pricing for a patient's insurance carrier. In order to support this pricing in the billing extract and allow for data mining to evaluate the success of these marketing efforts, eRAD RIS now has the ability to capture a new attribute within RIS, attached to the insurance at the patient level. This attribute, called *Employer Direct*, allows an administrator to override the *Eligibility Limit Payment* settings, if the requirement to collect co-pay, co-insurance or deductible differs as part of the contract, and allows for the configuration to pass an alternate insurance code in the billing extract to ensure that the contracted pricing is applied.

Employer Groups participating in the Employer Direct program can be added in a new Employer Direct look-up table.



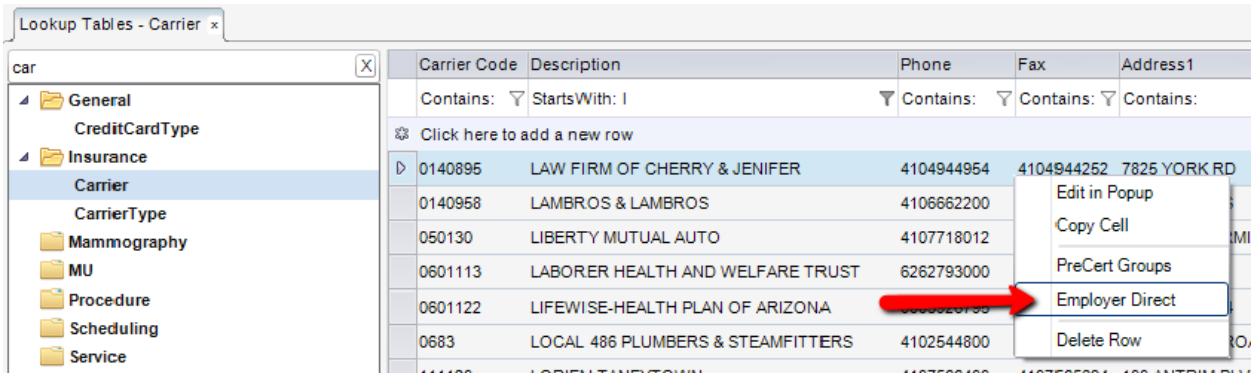
The Eligibility Limit Payment look-up table has a new column to select an Employer Direct Code, in case it is necessary to alter whether co-pay, co-insurance, or deductible are collected based on the contract.



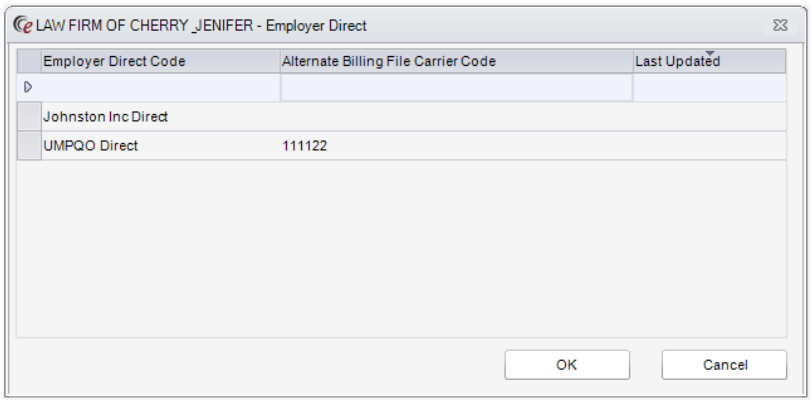
Using this table, there are several ways to configure limited payments. In the example pictured above, Erie Insurance should not collect the deductible for exams with a Billing Modality Type Code of CT, but should collect co-insurance and co-pay. However, if a patient with that same insurance carrier is referred by the UMPQO Employer Direct group, the contract specifies that only the co-pay should be collected, regardless of the insurance carrier. To handle this level of specificity, the Eligibility Limit Payment table now has a *Precedence* column. By giving a rule a **lower** Precedence number, that rule will be evaluated and applied first. Because the Precedence value for the rule for the Employer Direct group UMPQO is lower than the value for the rule for Erie Insurance CTs, the UMPQO rule would be applied first and the co-insurance *and* deductible would be ignored when calculating the Amount to Collect.

To specify which *Employer Direct* codes are applicable to an insurance carrier, the child look-up table *l_carrier_x_employer_direct* was added to the Carrier editor. This mapping is accessible by right clicking on a carrier and choosing "Employer Direct" as shown in the following screenshot.

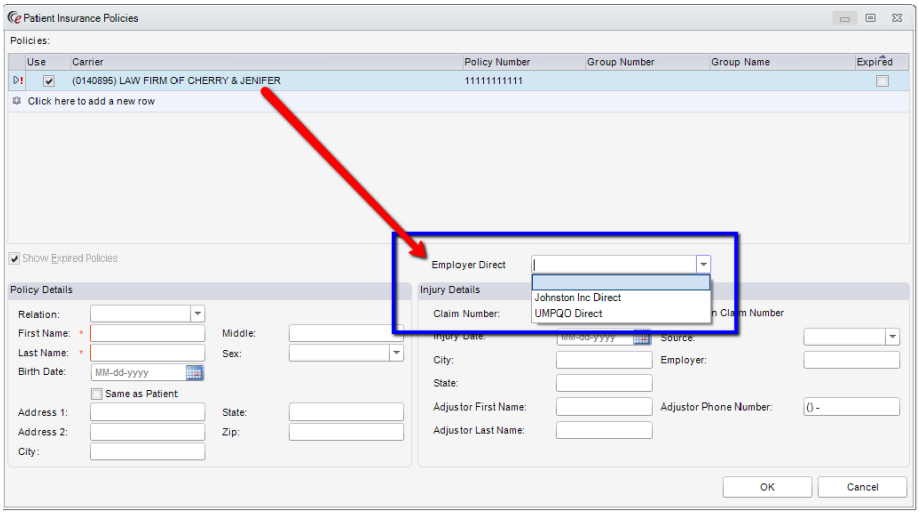
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



A new window will open to add the applicable Employer Direct codes; it is also possible to specify an alternate Carrier Code that should be substituted in the billing extract.



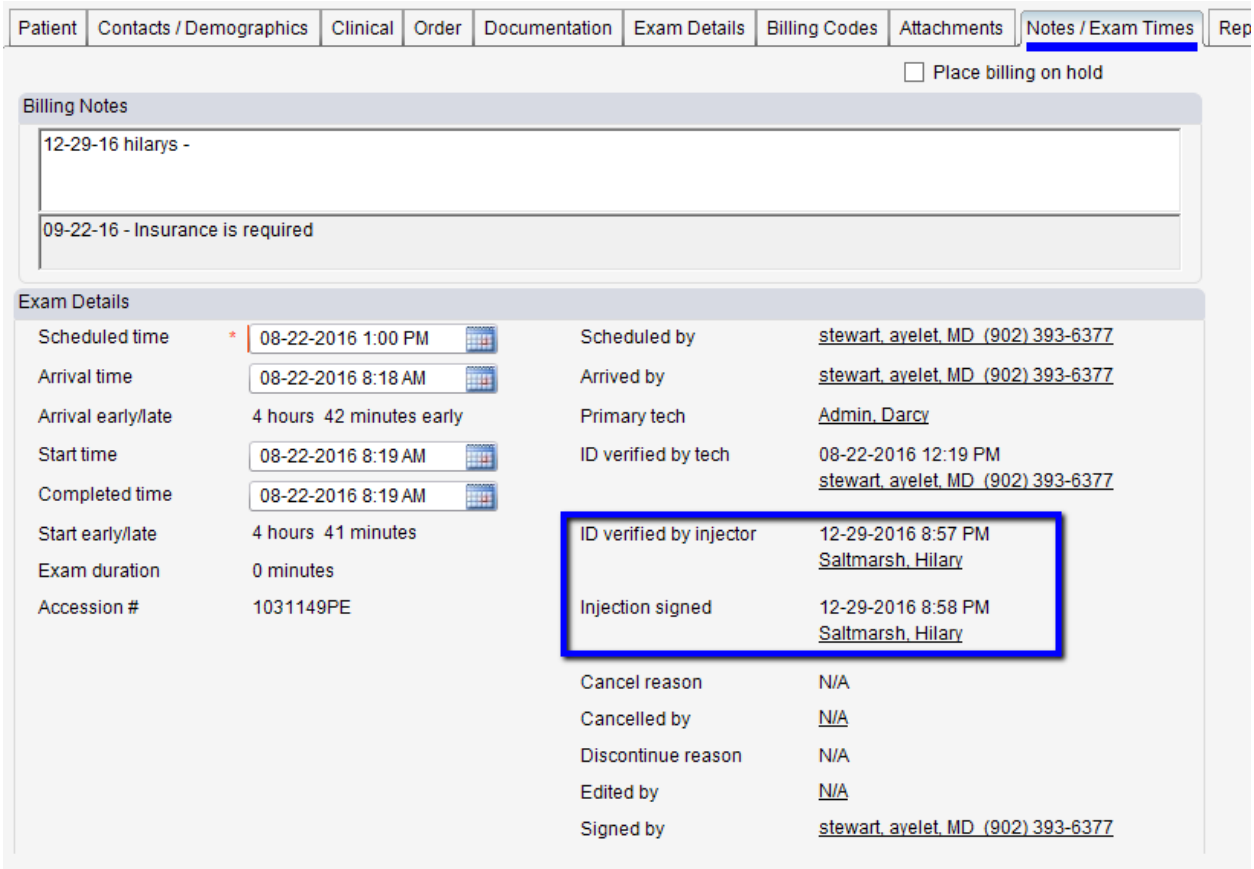
When an order has been referred by an Employer Direct group, the RIS user now has the ability to specify the correct Employer Direct code, in order to drive the appropriate workflow. When the user selects an insurance carrier in the Manage Policies window, an *Employer Direct* dropdown will display as shown in the following screenshot. This dropdown will only appear if one or more Employer Direct codes are associated to the insurance carrier. If there are no associated Employer Direct codes, then the dropdown will not be displayed.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #14569 – DISPLAY INJECTION SIGNED DATE AND TIME STAMP ON THE NOTES/EXAM TIMES TAB

In some countries, contrast injections are performed by an individual other than the technologist. The individual performing the contrast injection is required to separately verify the patient's identity and then sign off on the injection when it is complete. This workflow has been accommodated in eRAD RIS, but the time stamps were not previously included on the Notes / Exam Times tab. The information has now been added to that tab as displayed below.

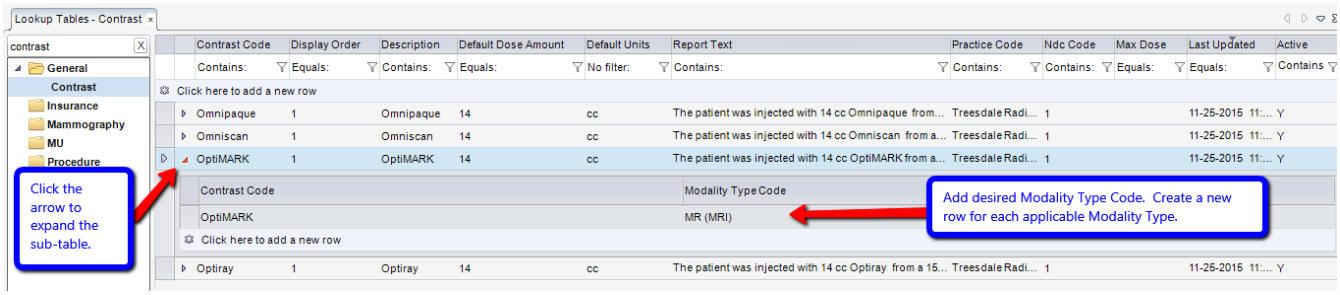


No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

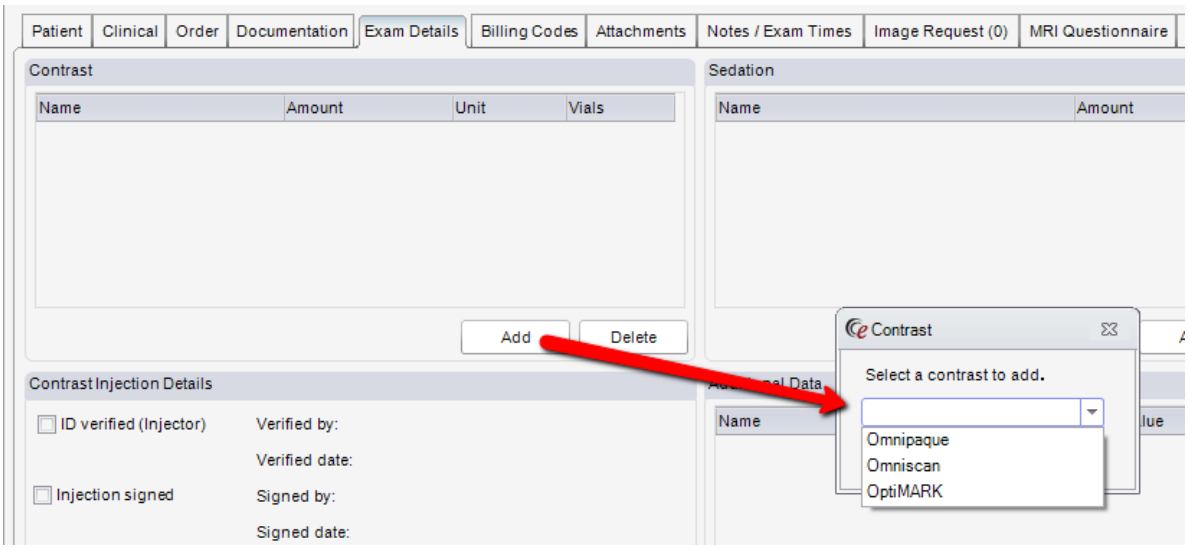
## FEATURE #14567 – FILTER CONTRAST OPTIONS BY MODALITY TYPE

When a technologist enters contrast for an exam on the Exam Details tab, they were previously presented with a list of all of the Contrast options listed in the Contrast look-up table. Some contrast options will never be used in a given modality, so it is now possible to only present the contrast options that are relevant for the exam being performed, based on the Modality Type.

To configure the applicable Modality Types in the Contrast look-up table, click the arrow next to the Contrast to expand the sub-table.



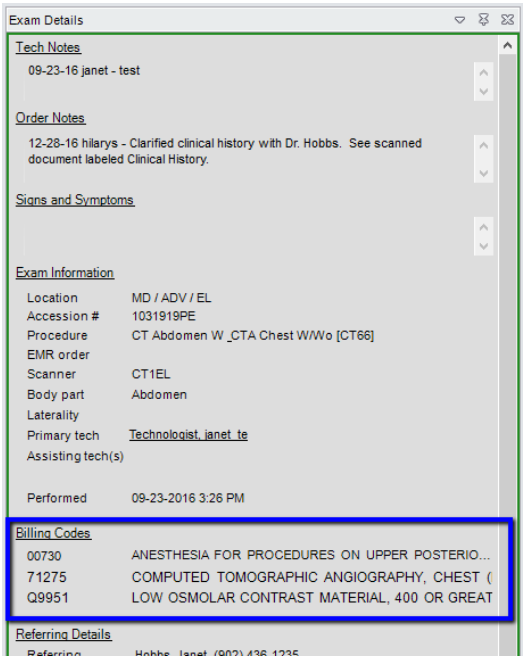
Add each desired Modality Type on a new row by selecting the Modality Type Code from the dropdown list. The Contrast will now only display as an option when choosing contrast for exams in the associated Modality Types, making the technologist's selection more efficient and less prone to error.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #14571 – ACTIVE BILLING CODES ADDED TO THE EXAM DETAILS PANEL

Customers have requested the ability for the radiologist to view the active Billing Codes from within the Reporting screen. The Exam Details data pane now has a section which lists the exam's active billing codes. The information is Read Only and displays both the code and the description for each active billing code on a new line. If more than three billing codes are listed, a vertical scroll bar will appear so that the radiologist can scroll down to view additional codes. The width of the panel can be stretched to see longer descriptions if needed.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #14144 – REPORT EDITOR, PACS SERVER, AND NUMBER OF PRIORS TO LOAD/CACHE ARE NOW CONFIGURABLE FOR A VARIETY OF CRITERIA

Radiologists may need the flexibility of using a different PACS server or report editor depending on the type of study they are reading or where it was performed. It is also often desirable to define a different number of priors to load or to cache depending on the type of study. In order to accommodate these needs, a new configuration editor has been created: *ReportingOptions*.

The configuration allows the administrator to optionally set the following values:

- PACS server
- Number of Priors to Load
- Number of Priors to Cache
- Reporting Editor

Based on these criteria:

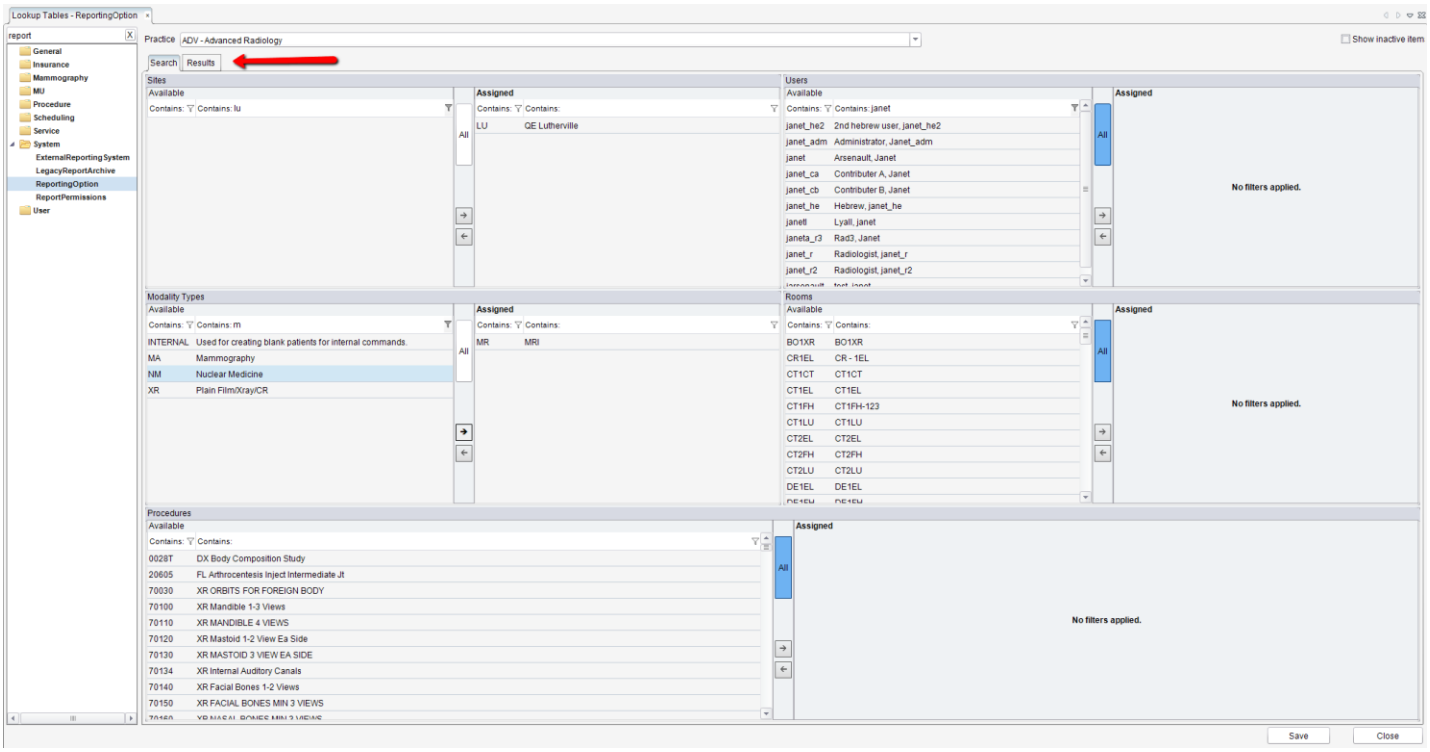
- Practice
- Site
- Modality Type
- Modality
- Procedure Code
- User

Based on the settings defined in the Reporting Options editor, the RIS will evaluate which PACS server and reporting editor to launch for each study as the radiologist moves through their Pending Dictation worklist. The number of priors to load and cache will automatically adjust as well, if the indicated PACS server supports caching. Automatically adjusting these factors according to the study will create a more efficient radiologist experience.

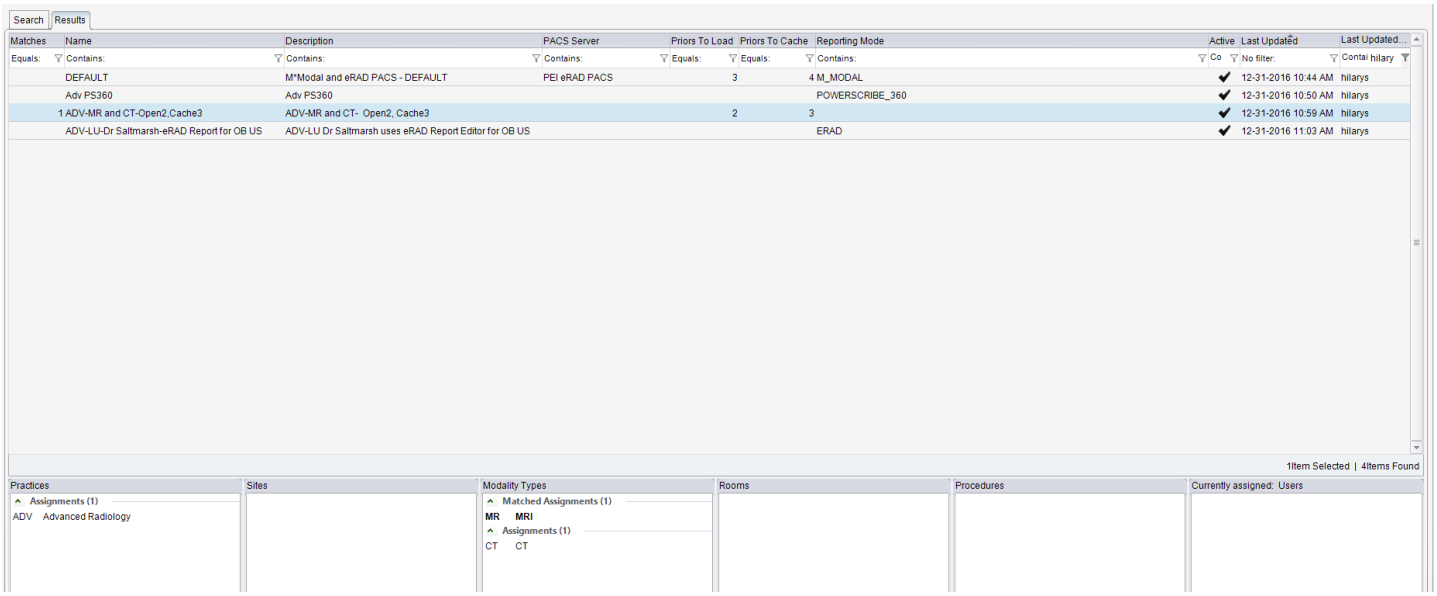
The Reporting Options look-up table editor is used to overlay more specific criteria on top of the existing general settings. These rules can specify a combination of PACS server, report editor and number of priors *and* the situations in which they should be used. The editor follows the same pattern as the Template/Macro editor, with a Search tab and a Results tab.

To view all of the settings that are applicable to the MRI modality type at the Lutherville site, on the Search tab select MRI and Lutherville on the Sites and Modality Types sections.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



Then switch to the Results tab to see any matching rules.

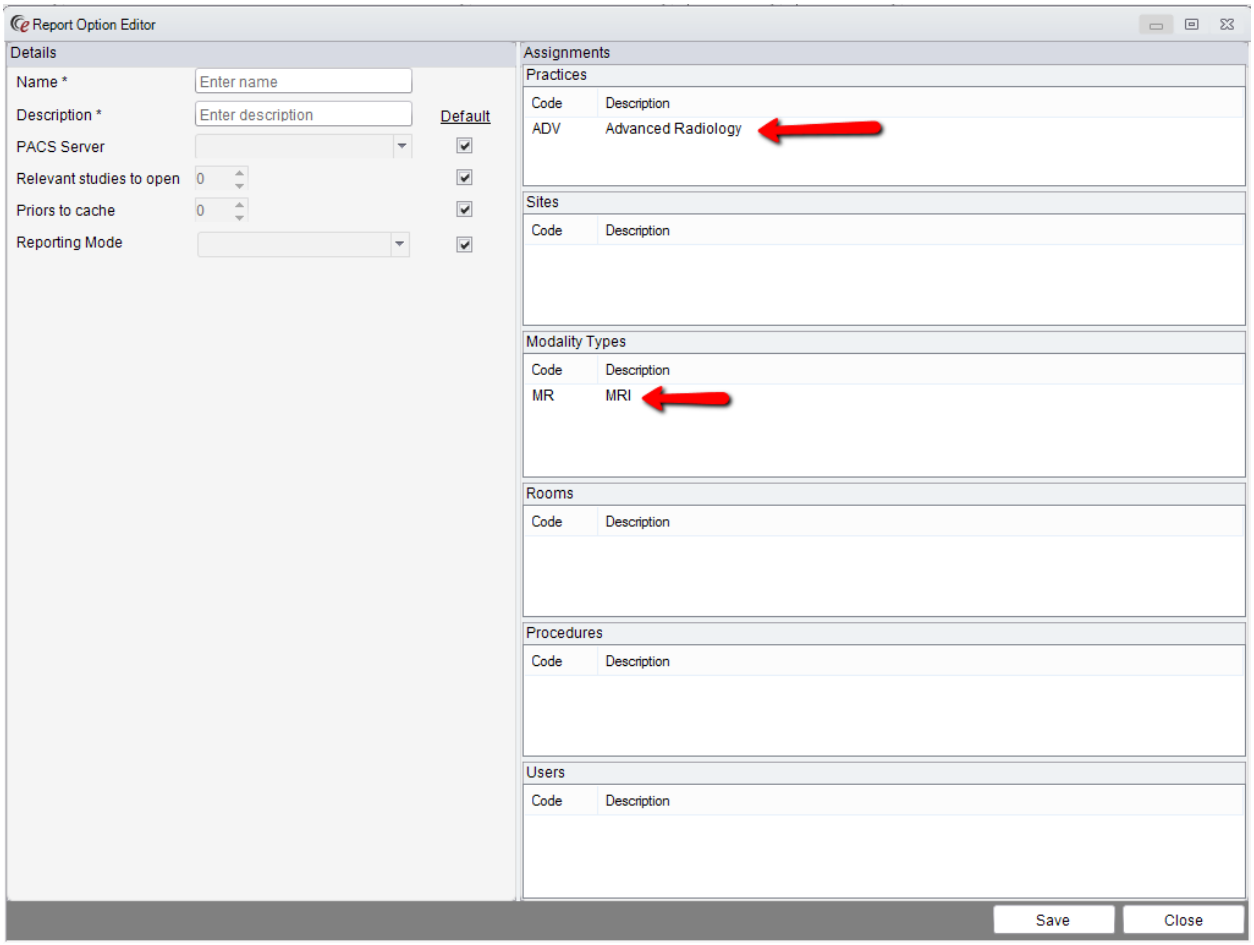


The four entries on the Results tab are either specific to MRI *or* do not have a Modality Type filter at all. Information about the rule can be seen in the columns and also in the criteria boxes at the bottom of the screen. For instance, the selected rule shows that 2 priors will load and 3 priors will cache for all sites at the Advanced practice when the modality type is MRI or CT.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

To create a new rule, click one of the buttons at the bottom of the screen:

"Create using filter criteria" will automatically apply the criteria used on the Search tab to the new rule (e.g. MRI at the Advanced practice). "Create from scratch" will start without any criteria applied for the rule.

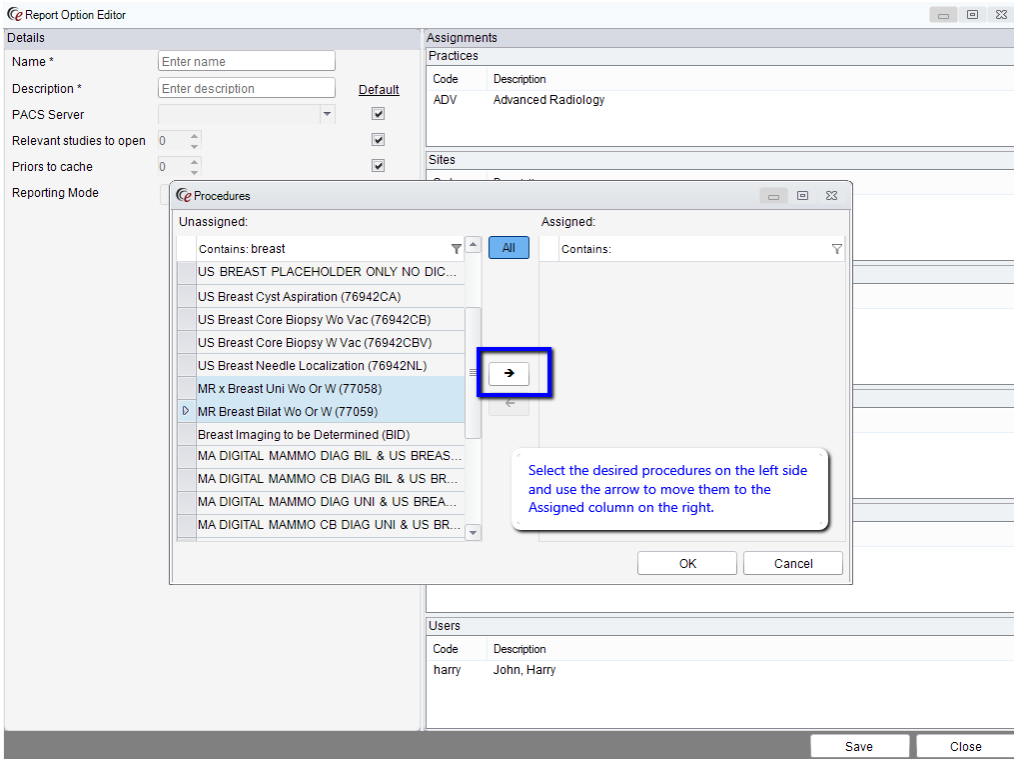


The above editor was opened with the "Create using filter criteria" option, so the Practice and Modality Types sections are prepopulated with Advanced and MRI. The next step is to give the new rule a Name and Description. In case it is not desirable to create a more detailed description, the description field will default to the Name text and can be updated to a full description when desired.

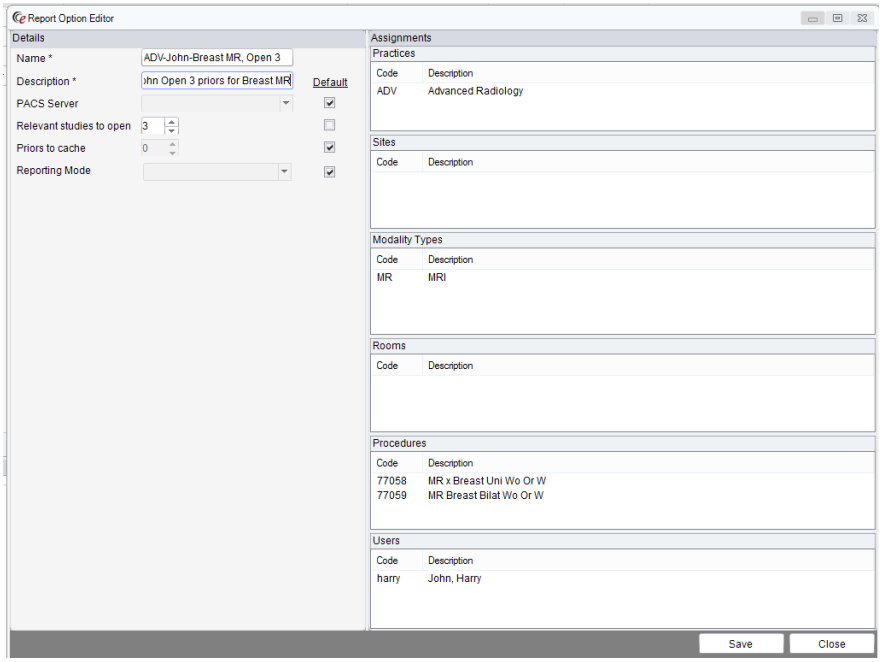
The PACS Server, Relevant studies to open, Priors to cache, and Reporting Mode start out with the Default box checked. To adjust any of the factors for the current rule, uncheck the box and enter the desired value. To create a rule for Dr. John to have 3 relevant priors open for MRI (different than the Practice-level rule to open 2 priors), set Relevant studies to open to 3 and add Dr. John to the Users box (right click the box to open the selection window).

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

To further define the rule to only apply for Breast MRI, select the desired procedures in the Procedures box.

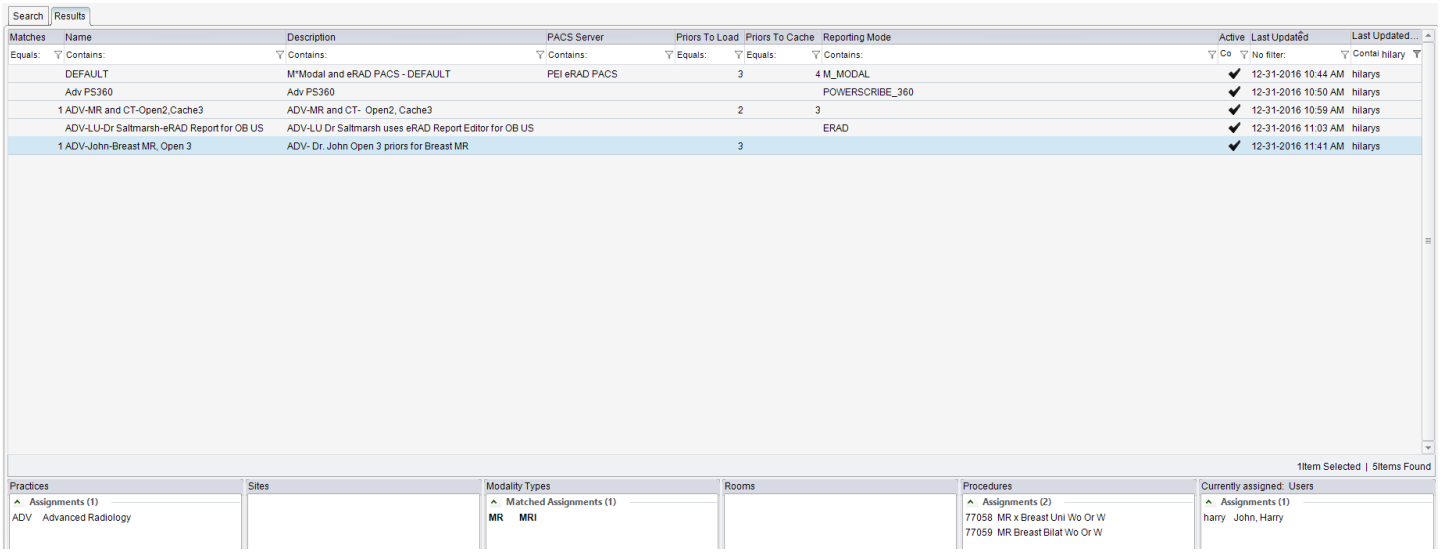


When all of the criteria are entered for the rule, click Save to finalize.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

The rule will now appear on the Results tab.



Because the rule for Dr. John is more specific than the general rule for opening 2 priors for MRI, when Dr. John opens a Breast MRI procedure, eRAD RIS will automatically request that PACS opens 3 priors.

The same strategy can be applied to dynamically open a different PACS or reporting editor depending on the defined rules.

To use this Reporting Option look-up table editor, a user must belong to a User Group with Full access to the new Access String: *Config.LookupEditor.ReportingOption*.

## DYNAMIC PACS

As the user moves through the Pending Dictation worklist, each study is evaluated and the proper PACS opened. If multiple dictation tabs are opened, the proper PACS viewer is opened for each one and any other PACS view sessions are hidden or closed, regardless of whether or not they are from the same type of PACS.

## DYNAMIC REPORTING MODES

Up until now, when a user needed to switch reporting modes, for example, from M*Modal to PowerScribe360, they needed to change their user preference, save, and restart RIS. This feature will allow a user to move through a worklist which necessitates multiple types of reporting modes using Next workflow and the Reporting screen will display in the appropriate mode as they action and continue through the worklist.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## ALLOWABLE REPORTING MODES BASED ON SYSTEM CONFIG AND ACCESS STRINGS

The modes that are allowed to open are those included in the system configuration setting *AllowedReportingIntegrationTypes,* as long as the user has access to the mode based on the corresponding pre-existing access strings:

- *Config.AllowPowerScribeReportingIntegration*
- *Config.AllowMModalReportingIntegration*
- *Config.AllowEradReportingIntegration*
- *Config.AllowExternalReportingIntegration*

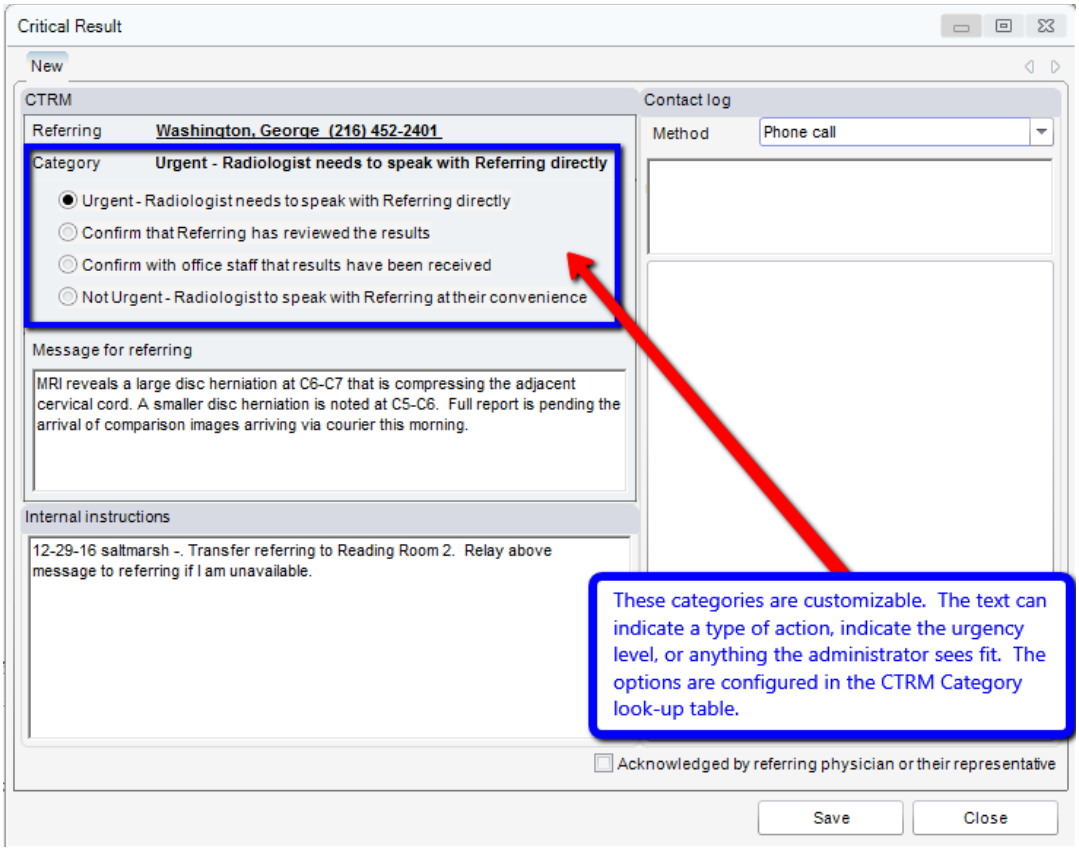
Note that if a reporting mode is turned off, or disallowed, any users that are still set up to use that mode as their primary mode will still have access to its corresponding editor. This allows users to complete existing cases and be switched over when they are ready and trained on the new mode.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

In preparation for the addition of some advanced Critical Result Management options, including the ability to resolve critical notifications via RADAR Nudge and the Connect Provider Portal (to be incorporated in a future phase of development), some of the base functionality of CTRM workflow has been redesigned.

Critical Results are still initiated from the Reporting screen using the button in the bottom left corner of the screen, as indicated below.

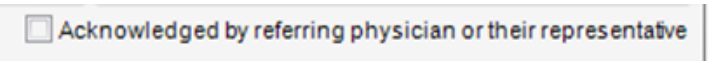
There have been a number of changes to the Critical Result entry screen, pictured below. One new option is the ability to define custom critical result categories. Use the new look-up table, *CTRM Category,* to create options to fit any workflow, whether they are longer descriptions defining an action plan for result communication or short descriptions of the level of urgency.



There are also separate notes fields to include internal instructions for radiology staff or a message to be shared with the referring.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

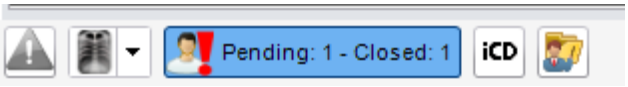
For recording contact attempts, there is a new Contact Log section and a checkbox to resolve the critical result notification when it is acknowledged by the referring physician or their representative (previously, this checkbox was labeled Resolve, which could be misleading).



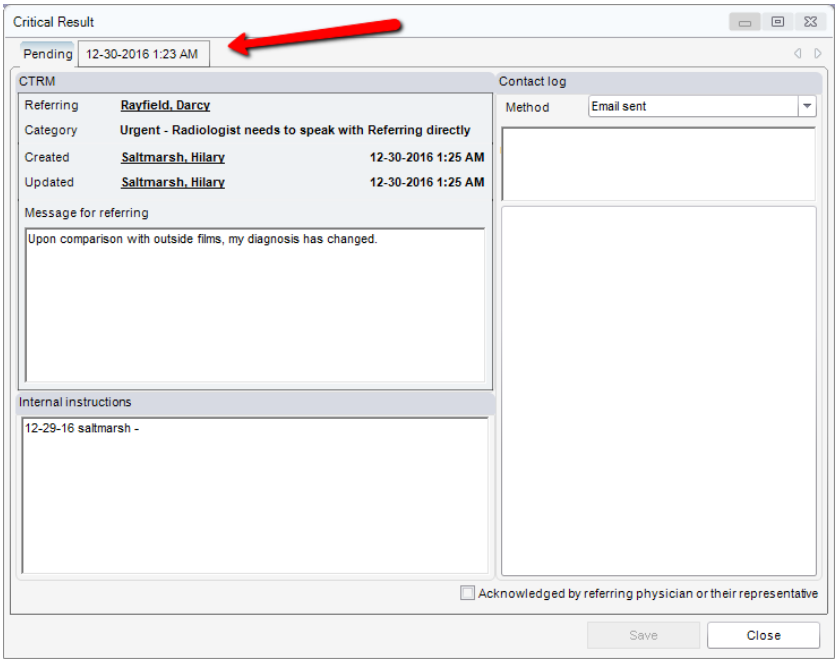
Attention was given to require as little input as possible when creating the Critical Result. The only required input is the selection of the Critical Result Category. The critical result will automatically be associated with the patient's referring physician, and all other fields are optional. It is possible for the radiologist to create the critical result and mark immediately mark it as acknowledged in the event that they make contact with the patient's provider at that time.

Another important difference is that the critical result will be saved as soon as the Save button is clicked, without a need for the report to be dictated or signed. Upon clicking Save, the critical result will immediately fall to the Critical Results WL and All Critical Results WL.

It is possible for more than one Critical Result to be created for the same study, however, only one ***pending*** critical result can exist at one time. If a critical result is acknowledged, but further developments require another critical result notification for that study, a new critical result can be created and all critical results will be separately recorded and viewable. Previous critical results are Read Only once they have been acknowledged. Example:



*Critical Result button, displaying multiple critical results.*



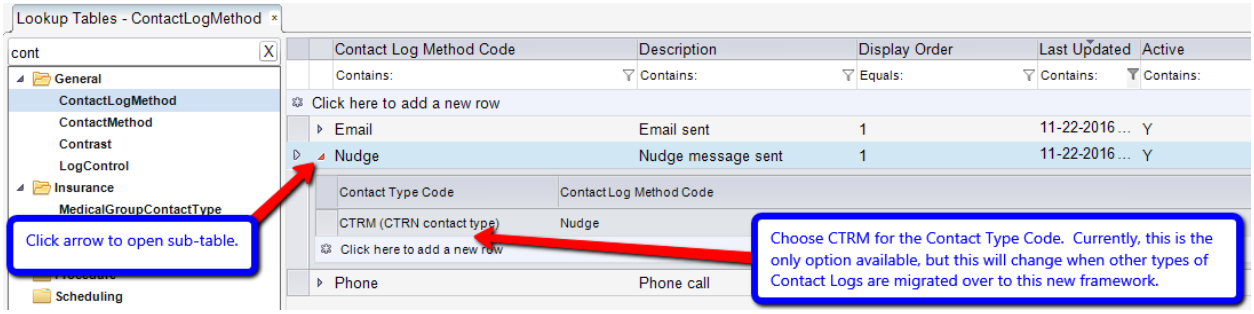
*Critical Result entry screen with multiple tabs for the two critical results created for the study.*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## CONTACT LOG CHANGES FOR CTRM

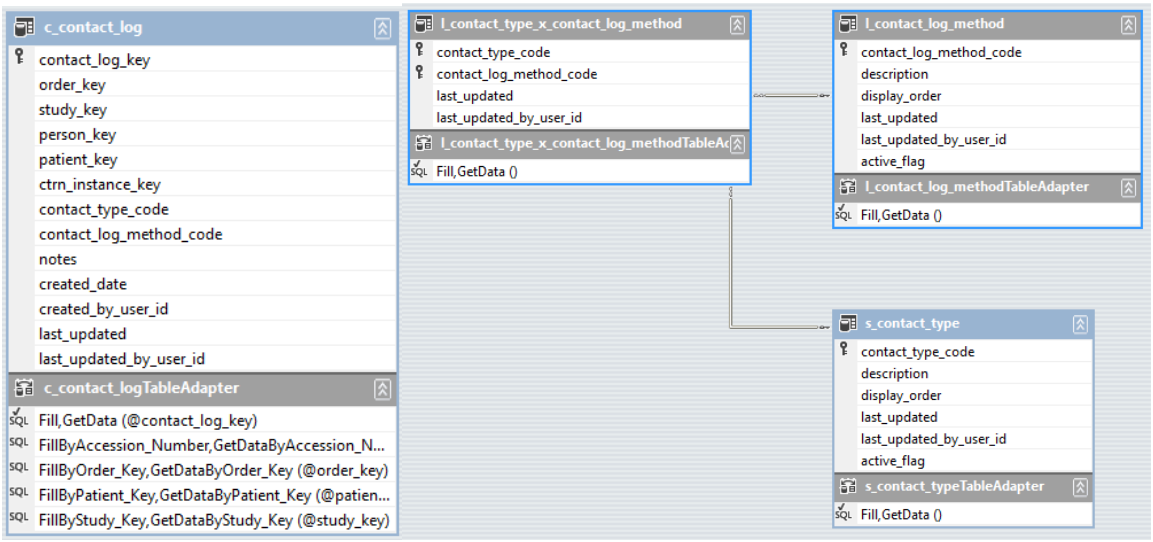
The Contact Log in the CTRM redesign works similarly to the Contact Log in other areas of the application. However, some key differences exist because a new framework has been applied to the CTRM Contact Log which separates it from all other Contact Logs in RIS. Eventually, other types of Contact Logs will migrate to the new framework. The main goal of the change in the Contact Log pattern is to keep the CTRM options separate from other Contact Log options, thereby providing a shorter list of CTRM specific Contact Types to choose from, as well as segregating the messages themselves, so that all Contact Log entries viewed in the Critical Result workflow are applicable and not mixed in with contacts regarding scheduling or mammography follow-up, for example.

To do this, a new look-up table was created: *Contact Log Method*. Create entries for any Contact Log Methods that are pertinent to Critical Results workflow, then click the arrow to the left of each entry to open the sub-table.



In the sub-table, choose a Contact Type Code of CTRM, as described in the picture above.

Here is a look at the data structures:



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## CRITICAL RESULTS WL AND ALL CRITICAL RESULTS WL

There are now three different ways to access or monitor critical results via worklist. Under the Radiologist menu, it is possible to review outstanding critical results created by the logged in user on the Critcal Results WL or to review all outstanding critical results (regardless of who initiated them) on the All Critical Results WL. Because the All Critical Results WL is likely monitored by administrative personnel, it is also accessible under the Administration menu.

There are some helpful columns to be aware of for managing these worklists:

| Last Contact Log Date | Last Contact Log Method | Last Contact Log Note | Contact Log Count |
|---|---|---|---|
| 12-30-2016 12:28 AM | Nudge | Sent message re: herniation via Nudge | 2 |

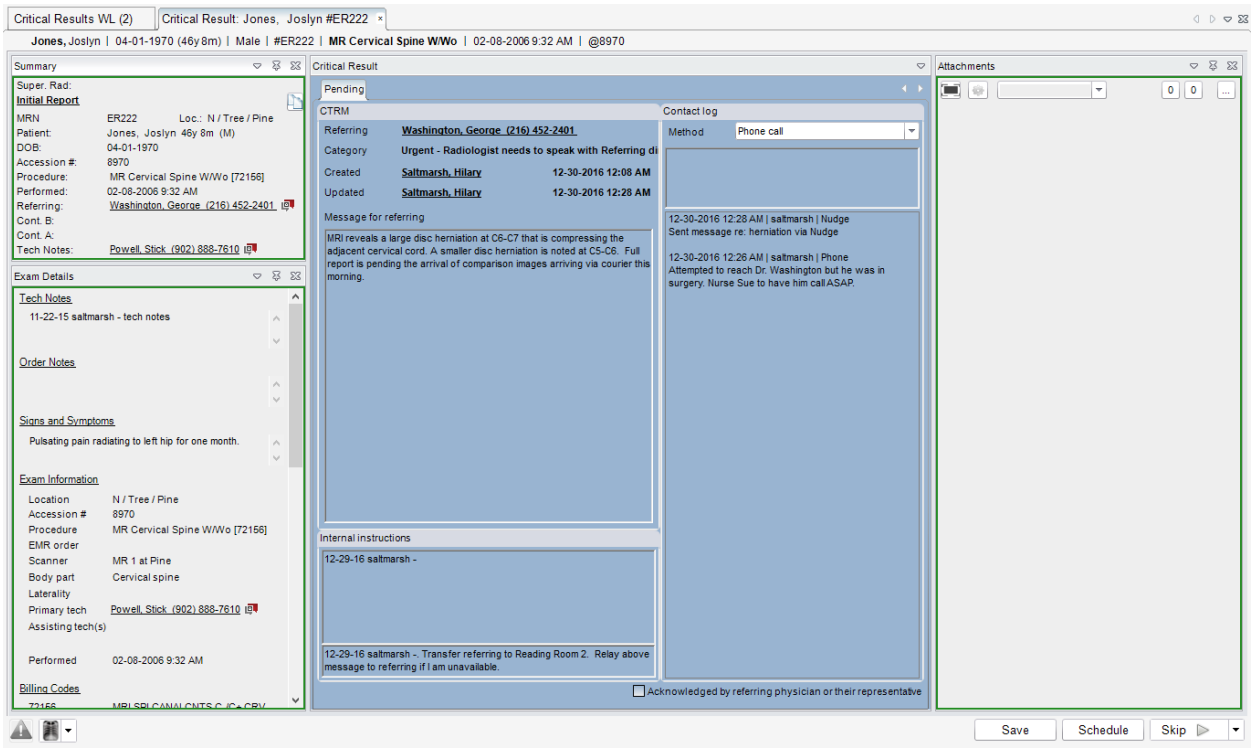
| Elapsed Time Since Created |
|---|
| 4h 1m |
| 2h 44m |

## CRITICAL RESULTS SCREEN

From any of these worklists, clicking the *Edit* button opens a new Critical Result screen which allows the user to edit the notes, record contact attempts, and mark the critical result as Acknowledged.

Modeled off of the Reporting screen, this screen has a number of tool panels which can be arranged according to preference and saved as a layout with a type of “Critical Results.” Even administrators without reporting permissions have the ability to create these layouts for managing the All Critical Results WL from the Administration menu.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



If a report is available for the study, it will be displayed as an HTML version (like the Report Nugget) in a panel.

Note that in this screen, there is not a separate Save button within the Critical Result tool panel (unlike the tool panel in the Reporting screen). To save changes in this screen, the parent screen must be saved by clicking the Save button in the bottom right corner. In the event that an urgent follow-up exam is required, a Schedule button is provided from this screen as well. In an effort to save time, the originating study's information will be cloned for the new Schedule Order event, which can be updated as needed.

The Skip button works in the same way as in the Reporting screen, allowing the user to move to the next item on the Critical Results WL.

## HOW TO ENABLE THE FEATURE

1) Add some CTRM Categories in the look-up table.
2) Add some Contact Log Methods in the look-up table.
   a) Associate these to the "CTRM" Contact Log Type by clicking the arrow to expand the sub-table.
3) Provide any pertinent User Groups with the required access strings:
   a) WL.CriticalResults --Provides access to the All Critical Results WL from "Administration" menu.
   b) WL.Rad.CriticalResultsAll --Provides access to **All** Critical Results WL from "Radiologist" menu.
   c) WL.Rad.MyCriticalResults --Provides access to the Critical Results WL from "Radiologist" menu to view critical results created by the logged in user.
   d) Config.LookupEditor.CTRMCategory --Provides access to the CTRM Category look-up editor.
   e) Config.LookupEditor.ContactLogMethod --Provides access to the Contact Log Method look-up editor.

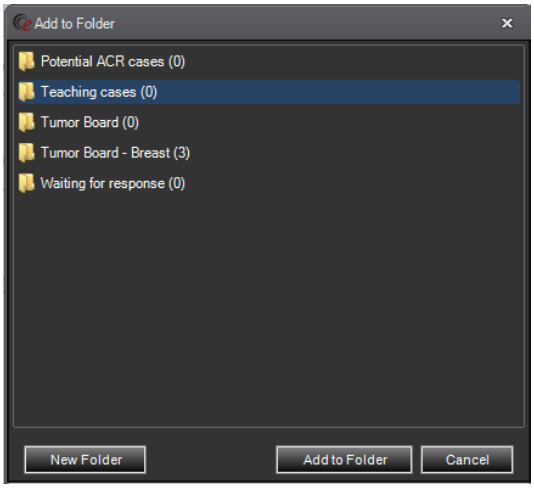
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #14502, 3723 – FOLDER STRUCTURE FOR COLLECTING CASES OF INTEREST, TEACHING FILES, AND OTHER REFERENCE NEEDS

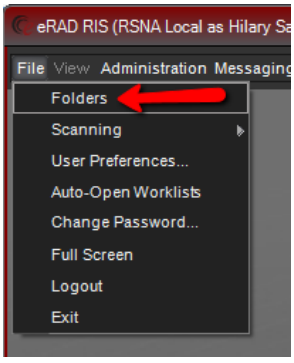
Radiologists participating in Tumor Boards or presenting teaching cases have asked for a method to store studies in a folder structure by category for future reference. Radiologists can now create folders by category and select studies to add to those folders without leaving normal workflow.

From the Reporting screen, a radiologist can add the current study to a folder by clicking the button below.

This button will launch a window for the radiologist to select one of their existing folders or create a new folder.

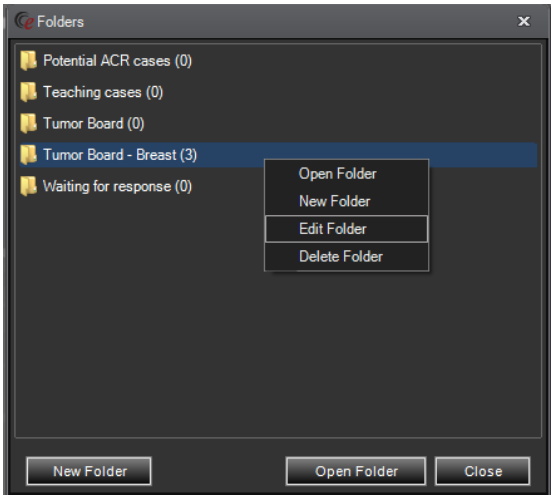


If a user wishes to view the contents of a folder, or simply wants to manage their folders, this can be done by clicking the File menu, then selecting Folders.

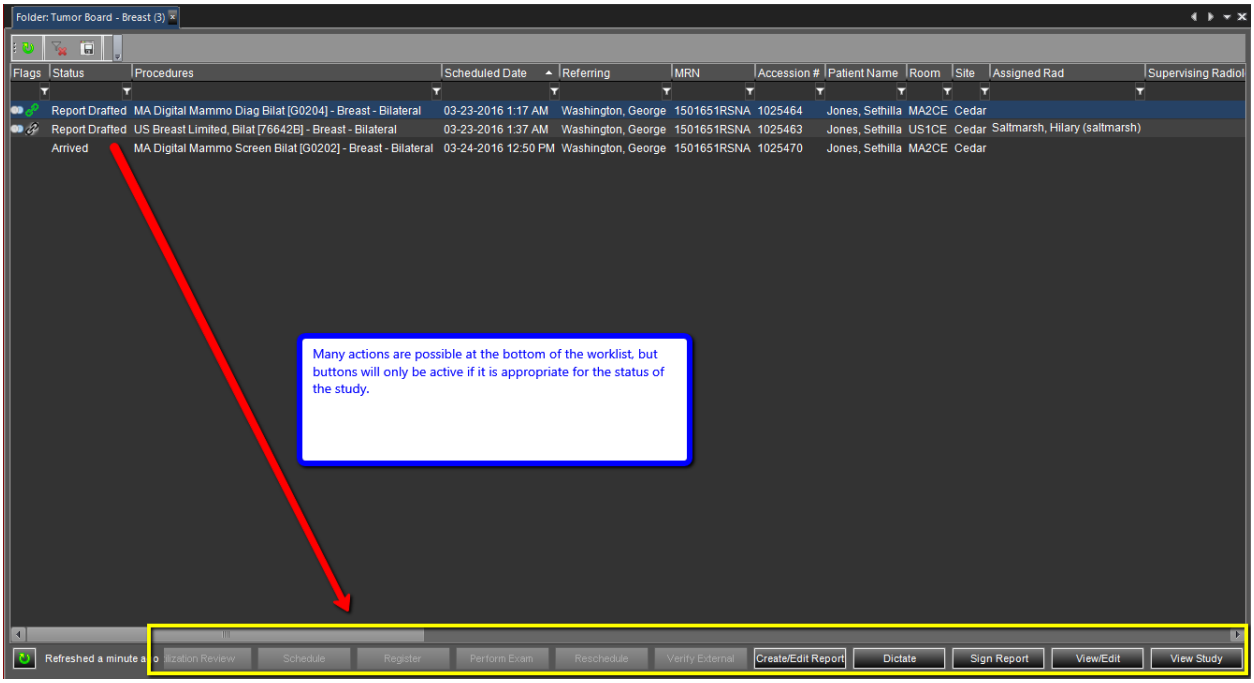


The resulting pop-up window will allow the user to open any folder with studies associated, or they can right click for additional options, such as Delete Folder or Edit Folder, which allows editing of the Folder name.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



When a folder is opened, any studies that were assigned to that folder will be listed on a worklist in a new tab. The tab name will be "Folder: [Name of Folder]."

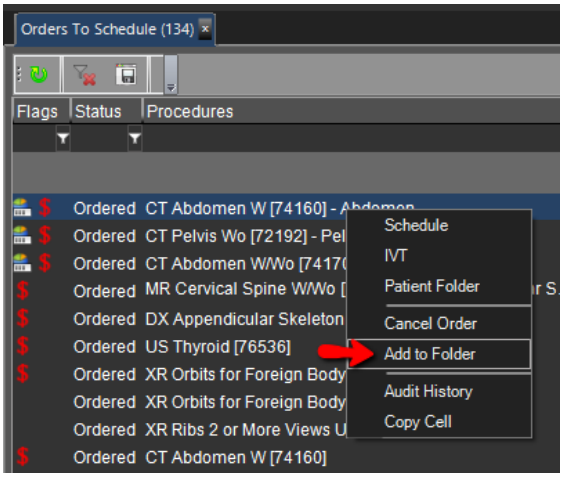


A wide variety of actions are possible via the buttons at the bottom of the worklist or the right click menu options. Depending on the status of the exam and the user's permissions, only applicable buttons or menu items will be available.

Folders aren't just for radiologists. Any user can create folders that are useful for their particular needs, such as a lead technologist looking for images with ideal positioning for ACR testing or a scheduling manager gathering a list of examples to use for a staff training session. To add a study (or an order) to a folder from outside of the

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

Reporting screen, simply right click on an item from a worklist or from the Patient Folder and look for a context menu option called “Add to Folder.” Almost all worklists will have this option.



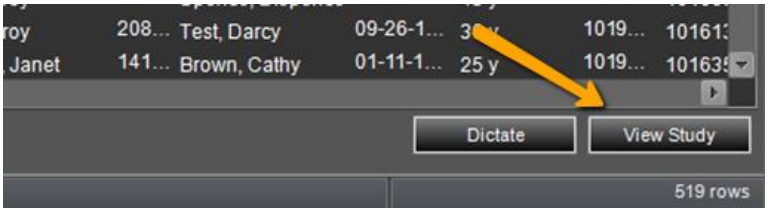
To remove an item from a folder, simply right click the item from the Folder worklist and select the option Remove from Folder.

To grant access to this feature, a user must belong to a User Group with Full access to the new Access String, *WL.Folders*.

At this time, the folders are personal folders only, but the ability to create shared folders or sub-folders will be added in the near future. There is not a limit to the number of folder categories a user can create.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

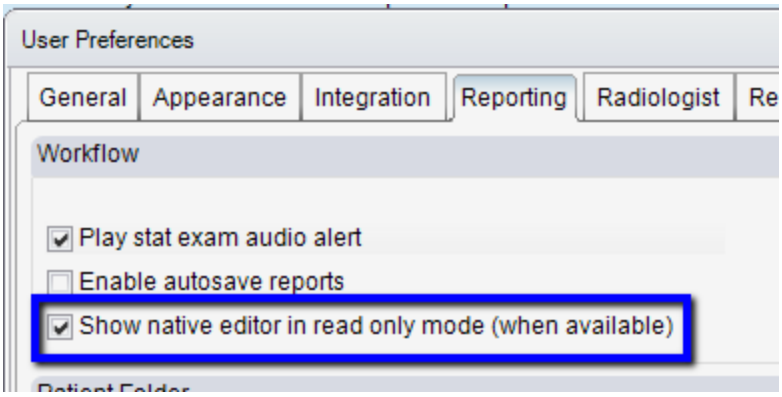
Radiologists and other staff members require an option to open reports in a Reporting screen mode without automatically creating an addendum or launching the full dictation process. This can now be accomplished via a new button called ***View Study*** which will bypass the create addendum prompt and cleanly open the reporting screen (read only) with PACS images.



The new *View Study* button and context menu have been added to all worklists where the "Dictate" button existed. This new button will open the dictate screen in a read only mode, without prompting the user.

A new *Read Only Report Viewer* has been created which will show the report at it would be shown in the report data nugget: it doesn't show an audio control and it will display instead of the native report editor. This viewer will be shown by default all the time for every reporting mode. For example, if an exam was dictated in PowerScribe and the report is opened with View Study, the report will be displayed in a panel in the View Study screen, as opposed to launching PowerScribe.

The user can change a user preference called *Show native editor in read only mode (when available)* which is available on the Reporting tab in the User Preference screen.

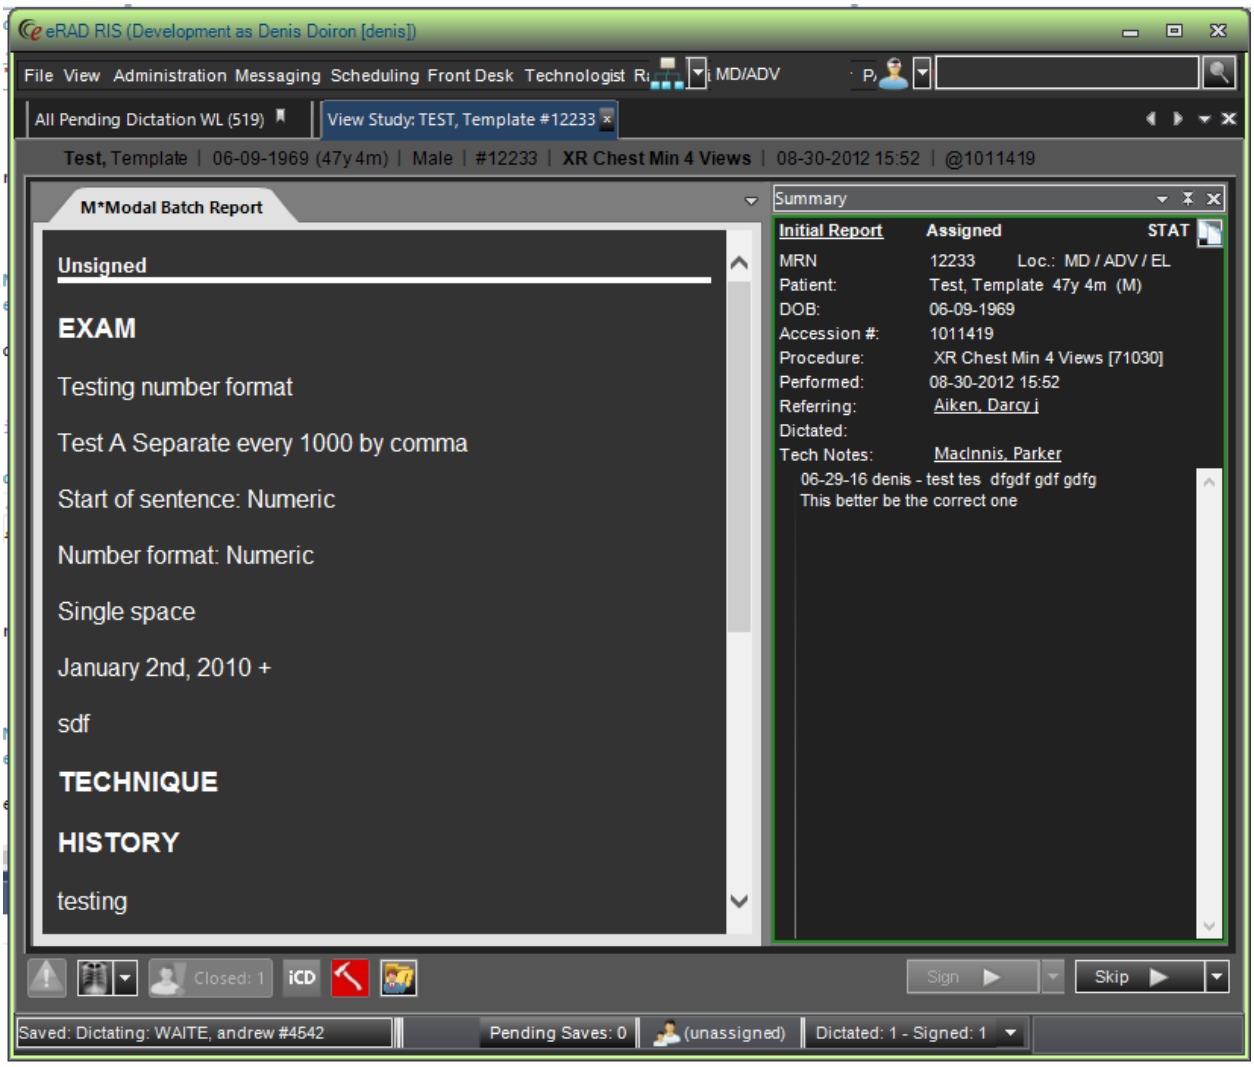


When this is checked, the native editor will be used in read only mode and will have the audio control available. If the user is not allowed to use the native editor due to access string or system configuration settings, then the *Read Only Report Viewer* will be shown in its place.

The button and context menu item will be enabled on all studies from Exam Done forward, as long as there is an interpretation on the study. There is a feature logged to expand this functionality.

In order to access the View Study option, a user must belong to a User Group with an access level of Full for the new access string *Clinical.ViewStudy*.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

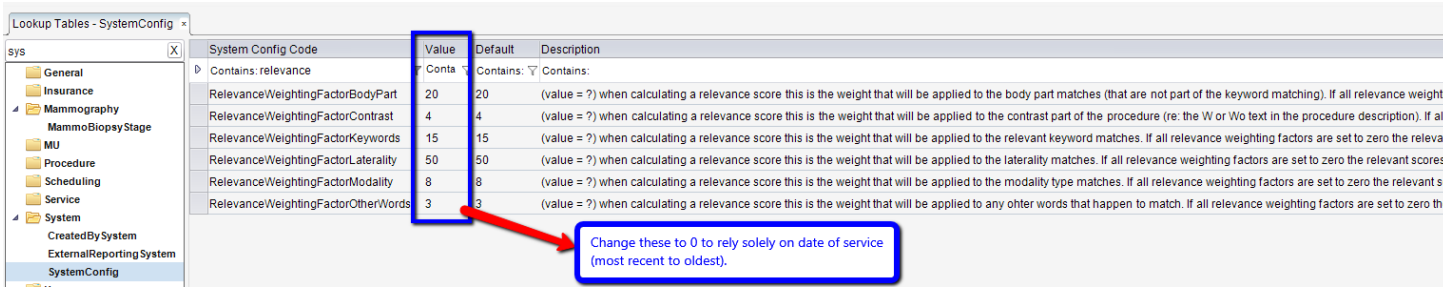
## FEATURE #10370 – SUPPORT FOR REVERSE CHRONOLOGICAL IMAGE CACHING AND LOADING

Previously, relevancy rules discounted the importance of chronology when scoring prior studies to display the most relevant priors regardless of when they were performed. Radiologists have requested that caching be based on relevancy + chronology to ensure that the most recent exams are cached first.

To accomplish this, it is now possible to adjust how various factors are weighted when calculating relevancy. There are six relevancy factors listed in the System Configuration table:

(1) *RelevanceWeightingFactorBodyPart*
(2) *RelevanceWeightingFactorContrast*
(3) *RelevanceWeightingFactorKeywords*
(4) *RelevanceWeightingFactorLaterality*
(5) *RelevanceWeightingFactorModality*
(6) *RelevanceWeightingFactorOtherWords*

Set each weighting factor to zero to rely solely on the date of service, from the most recent study to the oldest.



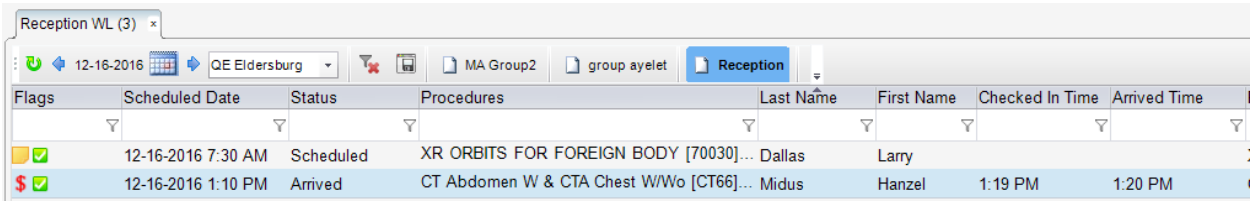
Sometimes, setting the Modality and OtherWords factors to zero will make a notable difference, while leaving the other relevancy settings intact.

At this time, these settings must be changed for the entire system and do not allow for individual user preferences. To leave Relevancy as it has been in the past, no changes are necessary.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #14634 – NEW COLUMNS FOR RECEPTION AND TECHNOLOGIST WORKLISTS: CHECKED IN TIME AND ARRIVED TIME

When technologists share patients between rooms or scheduled patients arrive early or late for their appointments, it can be helpful to know the times the patient was marked as Checked In or Arrived. New columns for *Checked In Time* and *Arrived Time* have been added to the Reception and Technologist worklists. These columns can also be helpful for identifying if an unusually long amount of time has passed since a patient was marked as Checking In but has not yet been Arrived, which can indicate that the patient may need assistance with registration questions or that a step was missed in the Registration process.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #14541, 14572, 14808 – NEW COLUMNS ADDED TO SEVERAL RADIOLOGIST WORKLISTS

When radiologists receive calls from providers wishing to discuss a patient's results, they often utilize worklists to locate the study. Providers commonly have the patient's date of birth handy and radiologists indicated that they would like to see this information on the worklists in order to quickly confirm that they are selecting the correct patient. A DOB column has therefore been added to the following worklists that are commonly used for this purpose:

- Dictated by Date WL
- All Dictated WL
- Finding Follow-up WL

Additionally, columns to indicate the *Performing Radiologist* and the *Assistant Radiologist* have been added to the All Pending Dictation and Pending Dictation worklists.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

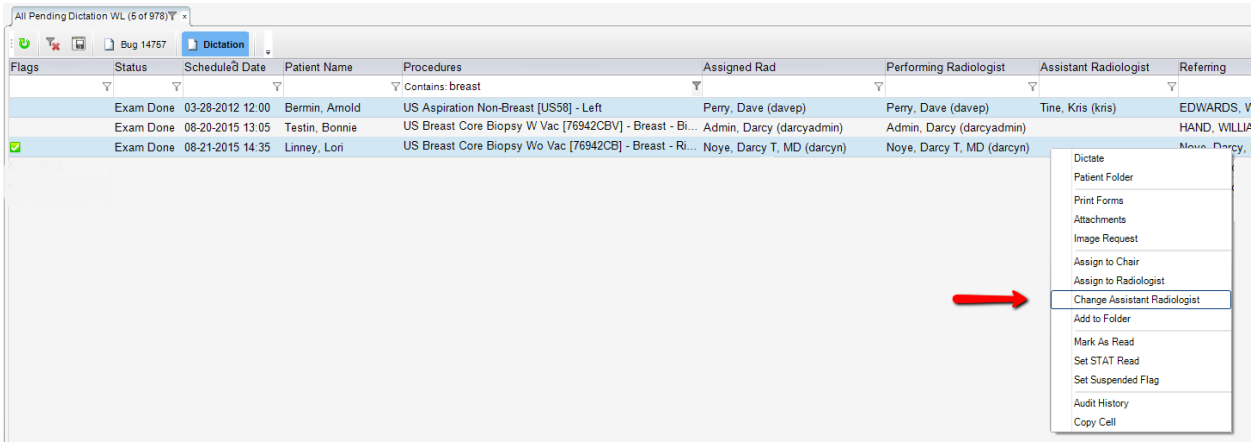
## FEATURE #7091 – IVT OPTION ADDED TO CONTEXT MENU ON ORDERS TO SCHEDULE WL

Schedulers sometimes need to launch the IVT workflow directly from the Orders to Schedule worklist. It is now possible to right click a row on the Orders to Schedule worklist and select *IVT*.

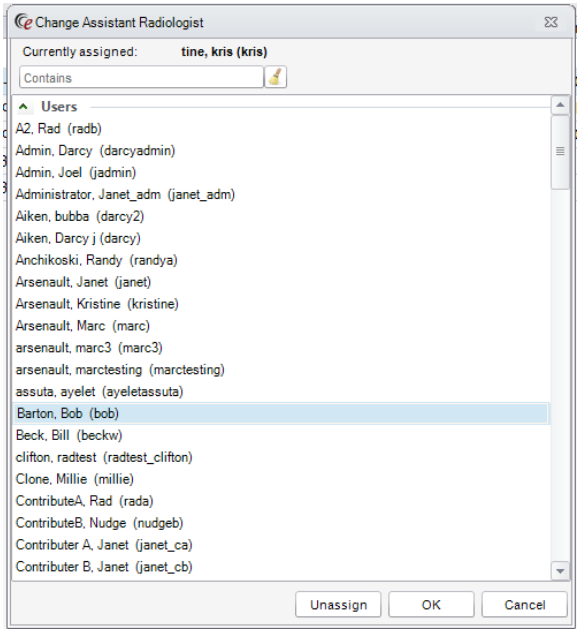
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #14813 – ABILITY TO SET THE ASSISTANT RADIOLOGIST VIA CONTEXT MENU FROM PENDING DICTATION AND ALL PENDING DICTATION WORKLISTS

Some users need to multi-select studies from the Pending Dictation WL or All Pending Dictation WL and set the Assistant Radiologist. It is now possible to right click a row on these worklists and select *Change Assistant Radiologist*. Multi-select can be accomplished by holding the CTRL key, selecting the desired rows, and then right clicking any highlighted row to select *Change Assistant Radiologist*.



A new window will open to allow the selection of the Assistant Radiologist. It functions in the same way as the Assign Radiologist window. A radiologist can be selected from the list or the filter can be used to search for a radiologist. Click the Unassign button to clear the Assistant Radiologist without replacing with a new name.



In order to access the Change Assistant Radiologist in the context menu, users must belong to a User Group with Full access to the new access string: *Clinical.ChangeAssistantRadiologist*.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #7395 – RECEIVE AND PROCESS INBOUND DOCUMENTS (SUCH AS FAXES) VIA RIS

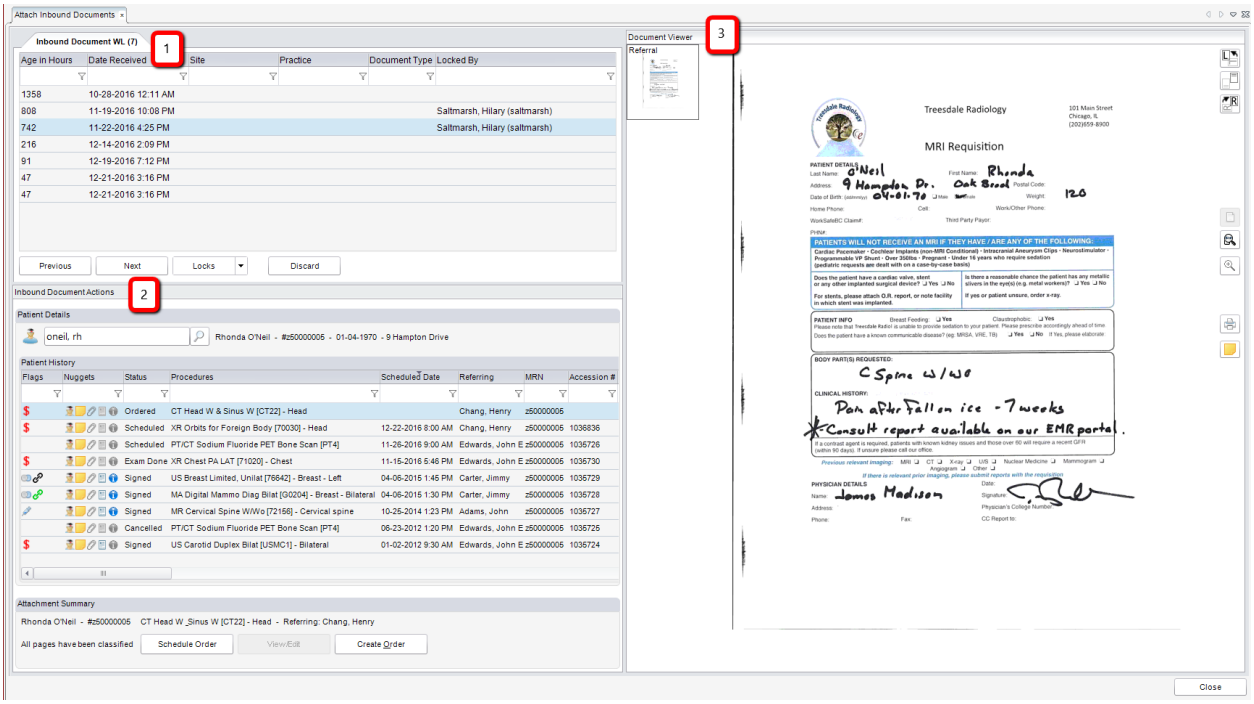
There is a desire to streamline the process of receiving sensitive documents, such as referrals or clinical documentation, and matching them with the appropriate patient and order. eRAD RIS's new Inbound Document module will allow for the elimination of paper faxes and the frustrations caused when an important document is not easily available from anywhere in your organization. Patient satisfaction, scheduling hold times, and appointment turnaround time will benefit from minimizing the time spent physically scanning in faxed documentation or searching for a referral that could have been faxed to a number of physical fax machines.

Even if your organization already uses an external electronic fax system, the efficiencies gained by a streamlined process of associating the faxes to the correct patient/order in RIS and the option of immediately launching the corresponding task that is prompted by the incoming document (such as scheduling an appointment) make this new RIS feature a step towards further gains in productivity.

In order to display electronic faxes and other incoming documents in eRAD RIS, a new screen called ***Attach Inbound Document*** was created. The new screen is accessible from the Administration menu and consists of the inbound document worklist, a document viewer, and some controls to search for patients and associate inbound documents to a patient, order or exam.

These 3 main areas of the Attach Inbound Document screen are displayed in the image below: (1) the Inbound Document WL, (2) the Inbound Document Actions panel, and (3) the Document Viewer. The three panels can be positioned separately, allowing the user to select their preferred layout for the information presented.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

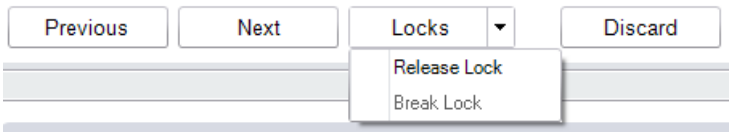


## SECTION #1 - INBOUND DOCUMENT WL PANEL

The Inbound Document WL (area #1) is a panel that can be positioned inside the main RIS window. Each fax that is routed to a specific inbound fax folder will generate a row on this worklist. There is a column to show the age in hours of the selected document (i.e. how many hours it has been since the fax was received), the site and practice (if any) to which the document is associated, an indication of the document type, if known, and a column that identifies the user who has the current document locked.

The Inbound Document service uses the settings on the fax server to determine the practice, site, and document type settings for a fax (e.g. a fax routed to the TREE folder will be associated with the Treesdale Radiology practice, and a fax saved in the TREE/MP folder will be associated with the Treesdale Radiology practice and Mapleton site). If a specific fax device is configured on the fax server for faxes designated to a particular department or function, these incoming documents can be saved to a separate folder which can set the value of the Document Type column accordingly. For example, a dedicated fax for a consolidated PET/CT scheduling department that covers three sites in a geographical area could be configured, which would have a Document Type of PET/CT. These settings allow users to filter the Inbound Document WL to see particular types of faxes.

There are several buttons in the worklist panel to assist in processing the documents on the worklist:



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

- **Previous** – Moves upwards on the worklist towards the older documents. If the previous document is locked by another user, it will be skipped and other documents will be attempted until one is found that is not locked. When the screen initially loads, RIS will attempt to open the oldest document. Clicking the previous button when the oldest document is already loaded will make the screen cycle to the other end of the worklist and attempt to load the newest document.
- **Next** – Moves downwards on the worklist towards the newer documents. If the next document on the worklist is locked by another user, it will be skipped and other documents will be attempted until one is found that is not locked. Clicking next when the most recent document is loaded will make the screen cycle to the other end of the worklist and attempt to load the oldest document.
- **Locks** – Dropdown button containing two options: Release lock and Break lock. When a document is opened, a lock is granted and will be displayed to other users in the "Locked By" column on the worklist. If a user has a lock, they can release it by selecting a different row on the worklist, by closing the screen, or by clicking "Locks -> Release lock."
    - The *Release lock* button will clear the lock from the database so the document can be processed by another user. Additionally, the document will disappear from the Document Viewer portion of the screen and the "Locked by" column will be cleared.
    - The *Break lock* button is used to release a lock in the event that a lock is held by another user who is no longer at their computer (e.g. they left for lunch without closing the Attach Inbound Document screen and still hold a lock on one of the documents).
- **Discard** – Some documents will not be processed and attached to a patient record, such as unsolicited advertising or faxes that are illegible. The discard button will delete the document after prompting the user to specify one of the reasons that are stored in the configurable *DocumentDeleteReason* look-up table. The discard button is disabled if the user clicks on a row that is locked by another user.

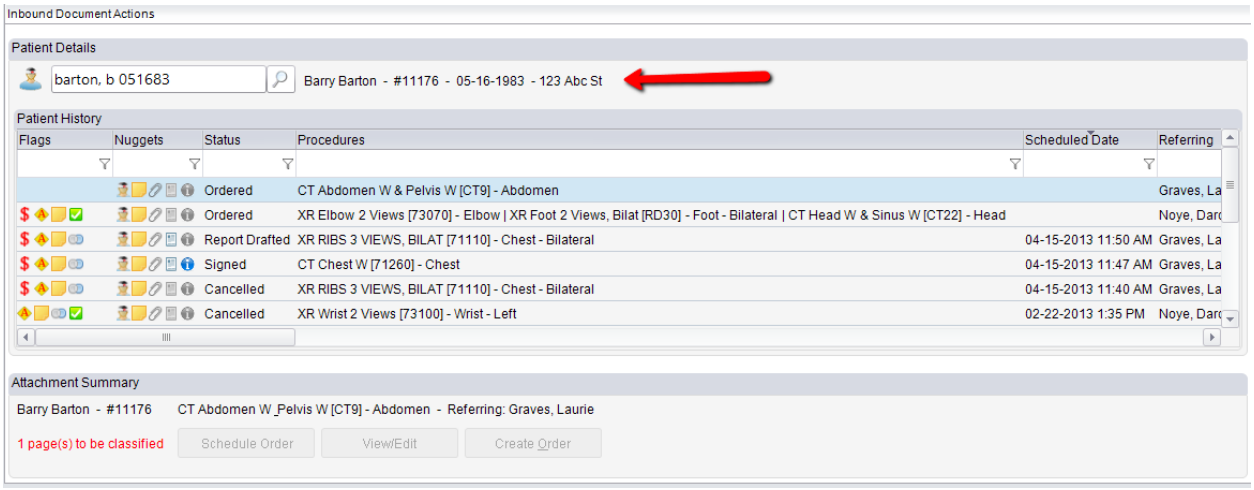
## SECTION #2 - INBOUND DOCUMENT ACTIONS PANEL

The Inbound Document Actions panel is where the processing of the selected document occurs. It has two sections: a *Patient Details* section to search for a patient and view the orders and exams in their Patient Folder *and* an *Attachment Summary* section which displays a summary of how the document will be processed given the patient and order/exam selected, as well as the Action buttons. The Action panel pictured below shows the initial state of the screen *before* a patient is selected and before the user has classified any of the document pages.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

**Patient Search:**

The patient search area contains search controls that are designed to appear similar to the Quick Search box in the upper right corner of RIS. The user can enter name details and optionally a birth date to perform a search, or they can search with #MRN or $AuthNumber. Once the search criteria have been typed in the box, the user can press enter or click the magnifying glass to launch the search and a pop-up window will display the search results. The user can then double click the most appropriate result to make their selection or choose "New Patient."



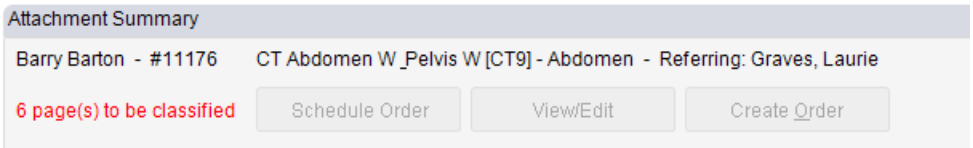
In the screen capture above, the user performed a search for "barton, b 051683" to search for patients with last name Barton, first initial B, and a date of birth of May 16, 1983. In the search results window, the user then double clicked one of the patient search results to select the patient who matches the document to be processed. To the right of the search box, a patient summary will display the patient's name, MRN, date of birth, and street address after the selection has been made.

**Patient History:**

After a patient is selected, all of the patient's exams and unscheduled orders are displayed. The user will examine the selected document and then choose the applicable order or exam in the patient history section to which the document should be attached by single clicking the row. The selected row will be highlighted in blue. To unselect a row, either single click on a different order or exam in the history section, or click into the white filter row to deselect all rows. It is not a requirement to choose an order/exam in the Patient History section, as the document may be for a new exam. Selecting an order or exam in the history section will update the Attachment Summary section described below.

**Attachment Summary:**

The attachment summary area provides information about what has been done to the current document and what actions still need to be taken.



There are two lines of information: the top line indicates the patient and the order or exam that was selected in the patient history (if applicable). The top line will initially show a message in a red font that indicates "No patient selected." After a patient is selected, the top line will use a black font that indicates the patient's name and MRN,

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

as well as the procedure and referring physician information for the currently selected item on the patient history grid. If the user performs a patient search and clicks the New Patient button, this label will indicate “New patient” in a black colored font.

The last line in the attachment summary uses a red colored font to indicate the number of pages that remain to be classified. This action takes place in the Document Viewer, described in the next section. Once complete, a black font will indicate that “all pages have been classified.” When the user sees that no red font appears in the summary, they can move forward by double clicking a row on the worklist or selecting an action button which will now be available.

**Action Buttons:**

Action buttons become enabled once all of the pages have been classified in the Document Viewer section. Only buttons that are relevant to the selected row in the Patient History will be active.

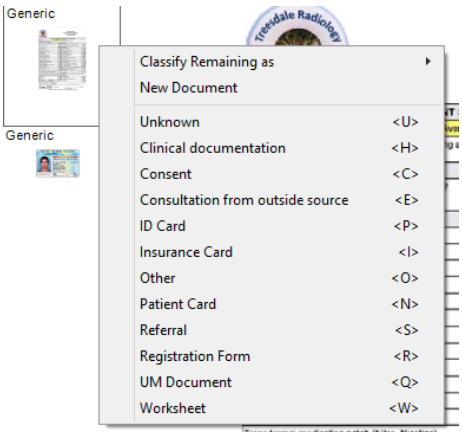
- **Schedule Order –** If an exam in Ordered status is selected in the Patient History section, this button will be available. Clicking this button will launch the selected order to be scheduled and the document will be added to the Attachments for that order. The user can either proceed with scheduling the order or can click Save as Order to simply save the inbound document as an attachment for the order.
- **View/Edit** – If an exam in any status other than Ordered (e.g. Scheduled, Cancelled, Exam Done, etc.) is selected, the View/Edit button is available. Click this button to open the View/Edit screen for the selected exam. The user may take any action in this screen that may be indicated by the received document or simply click the save button to attach the inbound document to the selected exam.
- **Create Order** – This option will ignore the row selected in the Patient History and will open a new Schedule Order screen for the selected patient, so that a new order can be created for the document that was received, such as a new referral. The inbound document will be loaded as an attachment. The user can proceed to schedule or can enter enough information to Save as Order.

For all options, once the selected screen is saved, the document will fall of the Inbound Document WL and the next document will be loaded.

## SECTION #3 - DOCUMENT VIEWER

The Document Viewer initially shows the first page of the loaded document in the main area, with a thumbnail of each page to the left. By right clicking a thumbnail, the user can choose the type of document. Each active *ScanType* is displayed in the context menu and the user can either classify one page at a time or use “Classify Remaining as” to classify the current page and those that come after it with the same ScanType.

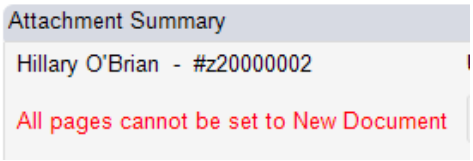
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



**New Document:**

Some faxes may come in with information for multiple patients as part of the same transmission. When this occurs, the user can select a patient for one or more of the pages and then apply a scan document type of "New Document" to the other pages. When the user then associates the document to a patient and saves, a new entry will be created for all pages that were classified as "New Document" and this new document can then be processed and associated with a different patient.

At least one page must have a classification other than "New Document" for the user to save. If the user attempts to use "New Document" as the type for all pages, the Attachment Summary will inform the user that it is not possible to associate all pages as a New Document.



## ATTACH INBOUND DOCUMENT SCREEN LAYOUT

Each user is free to reposition the 3 portions of the screen according to their preference, optionally dragging some portions to other monitors. The screen's layout will be saved when the screen closes and re-applied the next time the user opens the screen. The layout can be reset to the default by right clicking the "Attach Inbound Document" tab title and choosing "Reset Layout."

## HOW TO ENABLE THE FEATURE

1) Configure the inbound document service.
2) Assign permission strings to appropriate User Groups:
   - *Clinical.AttachInboundDocuments*
   - *Clinical.AttachInboundDocuments.BreakLock*
   - *Config.LookupEditor.DocumentDeleteReason*

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #14145 – INTEGRATION WITH RADAR SECUREPIC

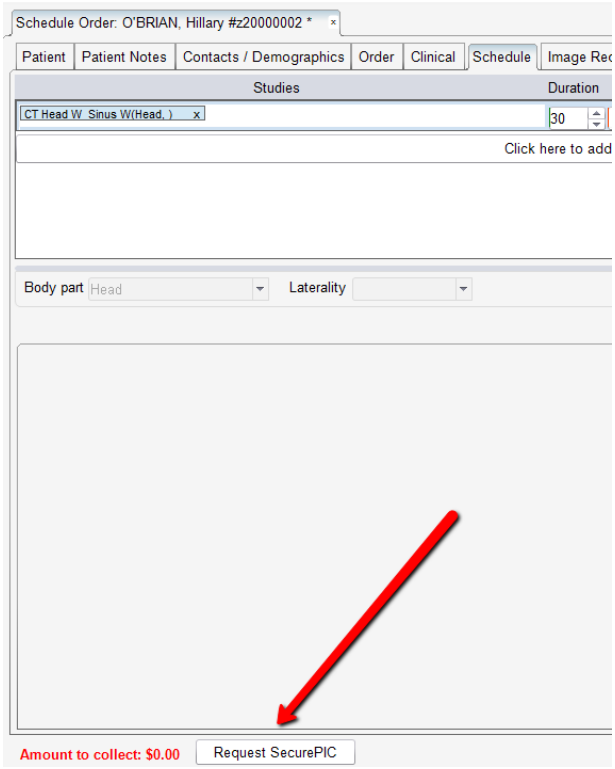
Integration with RADAR SecurePIC gives RIS users the ability to initiate a text message to a patient's mobile phone and securely receive a picture message back from the patient. Anticipate a decrease in scheduling minutes spent asking the patient what they see on their insurance card or referral ***and*** an increase in the accuracy of information entered at the time of scheduling.

Other users will benefit from SecurePIC as well when they need to see something that the patient has in their hands when they are not in the center: whether it is an insurance card, a referral, a pathology report, etc. If a patient shows up at the center and left their referral at home, a SecurePIC can be sent to their family member at the house to securely message a picture of the referral into the patient's RIS account. Some customers are even discussing the option of using mobile phones as an inexpensive scanner substitute for users who don't have a lot of documentation to scan. The possibilities are many.

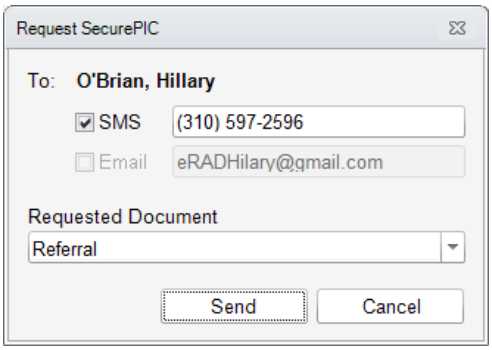
A new button labeled *Request SecurePIC* is located in the bottom left corner of the following screens:

- New appointment
- Walk-in appointment
- Reschedule / Schedule From
- Confirmation
- IVT
- Registration
- View/Edit
- Edit Billing

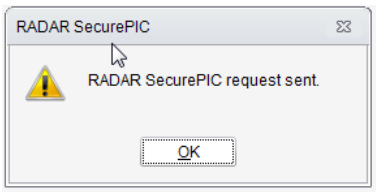
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



When the *Request SecurePIC* button is clicked, a dialog opens displaying the mobile number on file for the patient and allowing the user to select the type of document to request. The document type will be used in the text message to the patient explaining what is being requested.



Upon clicking Send, the RIS user will receive a confirmation or failure message:



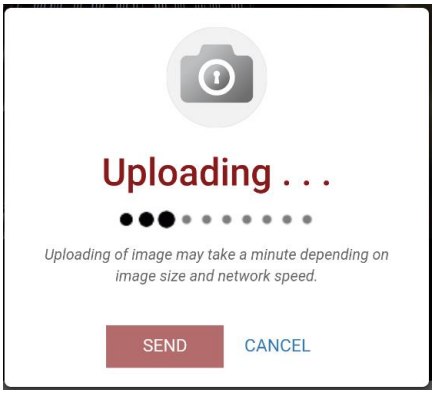
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

The patient will receive an SMS text message that will include information such as the name of the facility, the type of document requested, and instructions to click a URL link to the RADAR SecurePIC web page. Patients should be encouraged, via the message text and any conversation that takes place with the patient prior to sending the message, that they should click the URL link, ***not*** reply back via text message.

The URL link will open a secure web page on the patient's phone, as in the example below:

Clicking on the red "Take Pic" button or clicking the large gray camera logo will initiate a dialog specific to the patient's phone to either take a picture of the requested document or upload an existing image of the document.

Upon following the prompts, the image will be securely uploaded to RADAR. The upload speed can vary depending on the resolution/size of the picture and the patient's internet connection. While it uploads, the patient will briefly see the following on their screen:

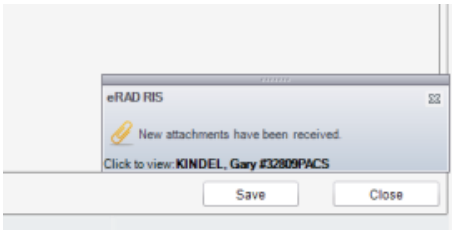


No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

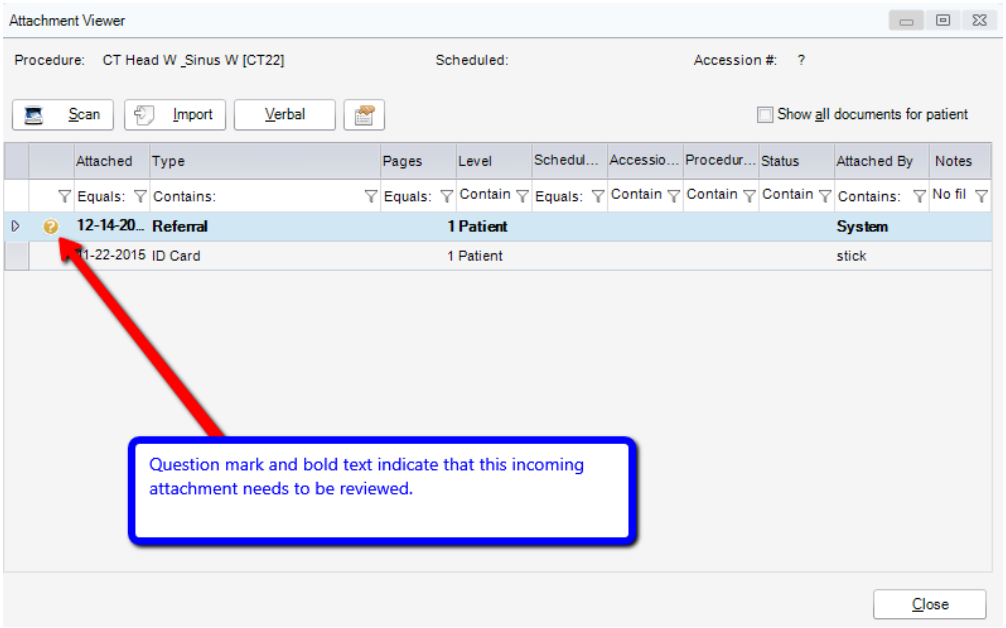
After the image has uploaded, the patient will have the option to send another picture, helpful when they are sending a multi-page document or the front and back of an insurance card.

Once the document is uploaded to RADAR, an inbound SignalR message notification will be pushed to the eRAD RIS services and the photo attachment will be automatically downloaded and added to the database as a scanned document associated with the patient who uploaded it. It will also be labeled with the ScanType the RIS user selected when sending the SecurePIC request.

After RIS receives the photo of the document and it has been converted into an associated scanned document, a desktop alert will appear in eRAD RIS for the user who initiated the SecurePIC request.

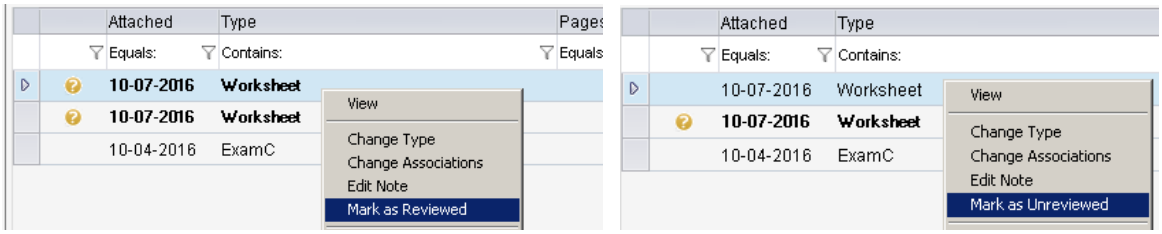


Clicking on the desktop alert message will open the Attachment screen for the patient, regardless of whether the user still has the patient's tab open in RIS. Prior to the new document being opened for review, the attachment will be listed in bold and a yellow question mark will be displayed to indicate that it has not yet been verified.



Upon opening the attachment, the user will have access to all of the usual Attachment tools and can relabel pages, rotate images, and so on. After the user opens the document, if the user has Full access to a new Access String, *Clinical.ScanDocs.AllowMarkAsReviewed*, then it is assumed that the image has been verified and the bold text and question mark are removed. The user can also right click and select *Mark as Reviewed*. It is possible to *Mark as Unreviewed* if necessary.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



Documents that are not reviewed will not display in the Data Nuggets and will not display in the Radiologist specific screens.

If the attachment is not reviewed by the user who initiated the request (perhaps they have left for the day), then the image will fall to the Inbound Document WL for verification. It will maintain all of the associations to the proper patient and ScanType, so a quick review is all that will be needed to process the document from that worklist.

## A NOTE ABOUT FILE SIZE

The size of incoming attachments sent via SecurePIC can be quite large. An attachment from a photo library might be a 10MB panoramic or a large 3MB snapshot. A series of such large files could be problematic for RIS, therefore a check has been added to compact the size of attachments when their size exceeds the value set for the new System Configuration setting: *Config.MaxAttachmentSizeKB*. The image will be resized to the resolution configured for *Config.AttachmentResolutionWhenSizeExceedsMax*.

## HOW TO ENABLE THE FEATURE

To use the RADAR SecurePIC messaging feature:

1. This feature requires that a RADAR account be configured for each Practice.
2. The following system configuration codes must be configured in System Config:
    - *RADARInboundMessageServerUrl* – URL for the RADAR SignalR event broker.
    - *RADARInboundMessageClientId* - <clientid> provided by RADAR.
    - *RADARInboundMessagePassword* - <password> provided by RADAR.
3. The eRAD RIS user must belong to a User Group that has Full access to the new access string: *Clinical.RADARSecurePIC*.
4. In order to mark a SecurePIC attachment as reviewed, the user must also belong to a User Group with Full access to the new access string: *Clinical.ScanDocs.AllowMarkAsReviewed.*
5. Inbound RADAR message processing must be enabled via the System Configuration setting: *EnableRADARInboundMessageProcessing*.
6. An instance of Wedge Service must be running using WedgePlugin for RADAR.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #13720 – SECTRA PACS INTEGRATION

eRAD RIS now supports integration with Sectra PACS, validated against IDS7 Version 18.1. eRAD RIS is able to drive Sectra PACS using URL calls in a manner similar to the other PACS integrations in RIS.

Due to the URL-based integration used with Sectra, RIS receives no response indicating that the URL call was successful or even an indication that it has completed. This results in the need for RIS to assume any URL call to Sectra completes successfully. Because it is not possible to confirm that images from a previous patient are not left on the screen when the radiologist moves to the next report, it is possible for RIS and PACS to become out of sync and display different patients; this is a possibility to be aware of while dictating.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #13256 – INFINITT PACS VIEWER INTEGRATION

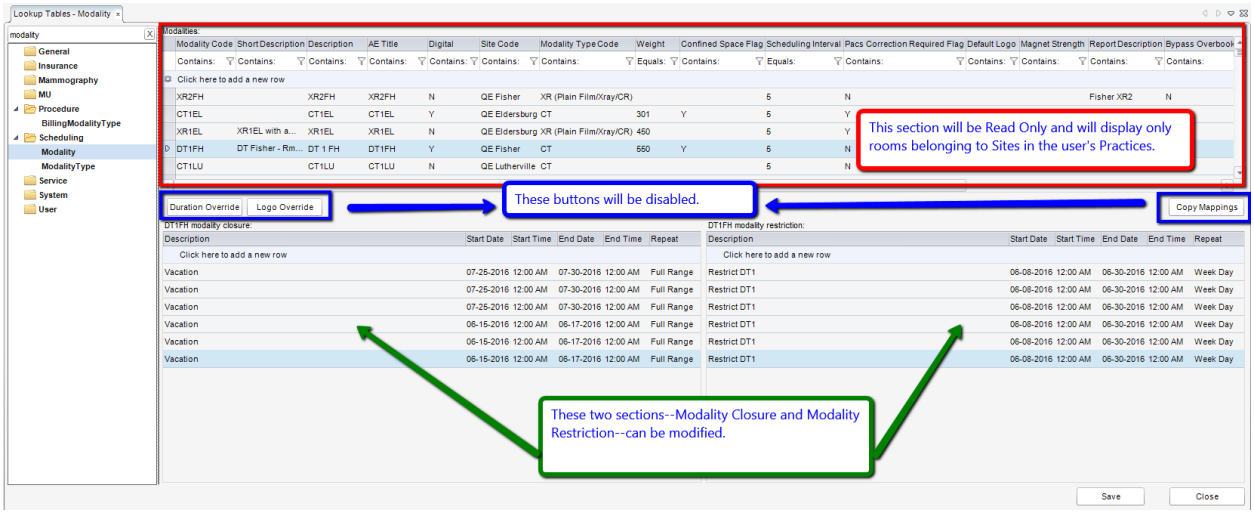
eRAD RIS now supports integration with the INFINITT PACS viewer. eRAD RIS is able to drive the INFINITT Viewer using URL calls, including launching and closing images via actions in the RIS.

Due to the URL based integration used with INFINITT, RIS receives no response indicating that the URL call was successful or even an indication that it has completed. This results in the need for RIS to assume any URL call to INFINITT completes successfully. Because it is not possible to confirm that images from a previous patient are not left on the screen when the radiologist moves to the next report, it is possible for RIS and PACS to become out of sync and display different patients; this is a possibility to be aware of while dictating.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #6391 – GRANT ACCESS TO CREATE ROOM CLOSURES OR RESTRICTIONS ON A PER PRACTICE BASIS

Many times a RIS Administrator would like to give a group of users access to create Modality Closures and Restrictions, but without granting access to the entire Modality table. RIS now has the ability to allow users with limited privilege levels to access only those two functions without the ability to edit other aspects of the Modality table. Furthermore, the access is limited to Practices that are assigned to that user in the Personnel table. These limitations will help to ensure that accidental modality modifications are less likely to occur.



The access string *Config.LookupEditor.Modality.ViewAllPractices* (previously labeled Config.LookupEditor.Modality.ViewAll) can now be set to NONE to disable all controls in the Modality look-up editor other than creating Modality Restriction and Modality Closure *and* will restrict the modalities returned to those that are part of the Practice(s) to which the current user is assigned in the Personnel table. The user will have the ability to create room restrictions and room closures, without modifying any other Modality data.

Limited permission users should have the following Access Strings:

| | |
|---|---|
| Config.LookupEditor.Modality | Full |
| Config.LookupEditor.Modality.ViewAllPractices | None |

RIS Administrators requiring access to edit any aspect of the Modality table for all Practices should have the following Access Strings:

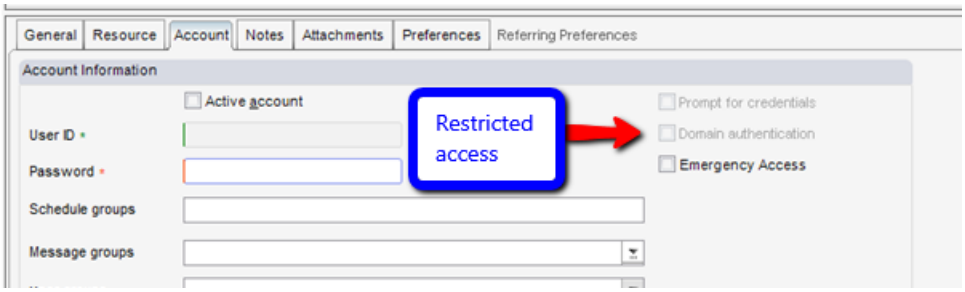
| | |
|---|---|
| Config.LookupEditor.Modality | Full |
| Config.LookupEditor.Modality.ViewAllPractices | Full |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #14458 – RESTRICT ACCESS TO ENABLE/DISABLE DOMAIN AUTHENTICATION

RIS Administrators need to be able to grant access to editing personnel without always granting the ability to change the authentication type for users.

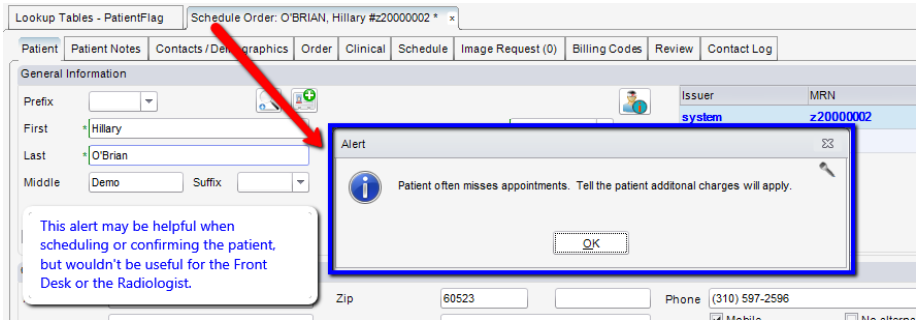
A new access string, *Config.LookupEditor.Personnel.DomainAuthentication*, can be set to None to restrict this access for a given User Group. The system default is Full.



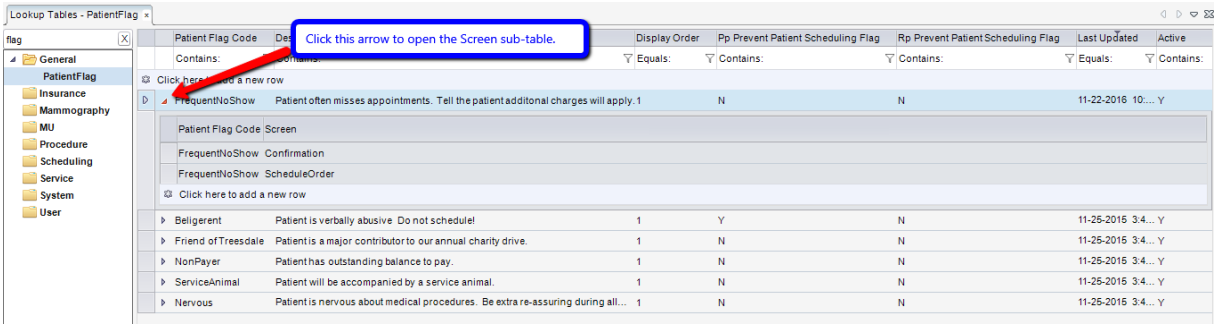
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #14818 – CONTROL WHICH SCREENS DISPLAY PATIENT FLAG ALERTS

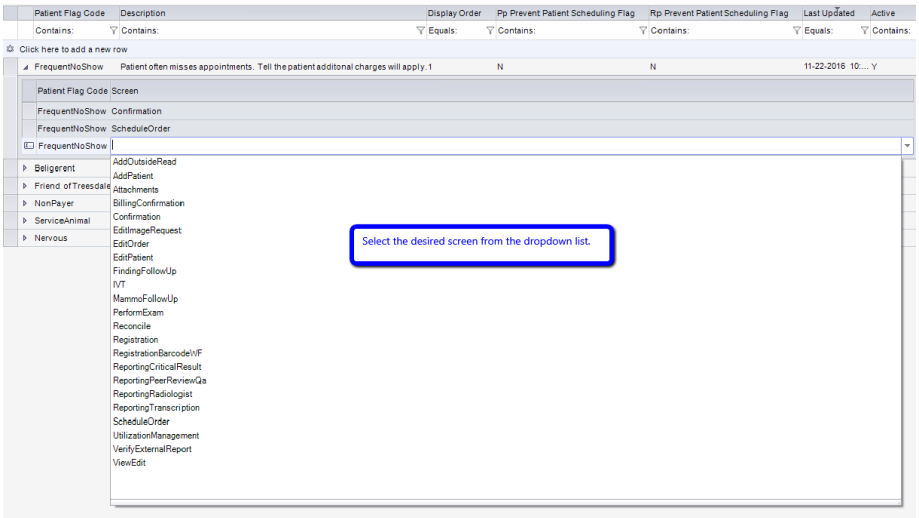
Some messages that are set up as Patient Flag alerts are only applicable at certain points in the workflow. For example, a message that the patient has an overdue balance would be helpful during registration, but not during radiologist workflow.



To increase the flexibility of Patient Flag alerts, it is now possible to configure the messages to display for individual screens. From the Patient Flag look-up table, click the arrow head next to the Patient Flag to be edited. This will open the sub-table where the desired screens can be selected.



Under the Screen column, choose the desired screen from the list provided in the dropdown.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

Any Patient Flags that were created prior to this new functionality will automatically be applied to all available screens, in order to maintain the existing behavior.  To make adjustments, simply delete the row in the Screen sub-table for any screens which should not show the alert.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #13812 – SUPPORT FOR PIX / PDQ

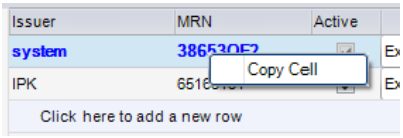
This feature is still under development, but the initial phase of PIX / PDQ (Patient Identity Cross-referencing and Patient Demographics Query) is available for anyone interested in an early implementation of the feature. Please inquire for details if interested.

**Special Note**: As has been recommended previously, RIS administrators are advised to create a User Group with a copy of the RIS Administrator settings, instead of using the User Group labeled RIS Administrator in order to avoid seeing fields that have been hidden and features that have not been activated for your RIS instance.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

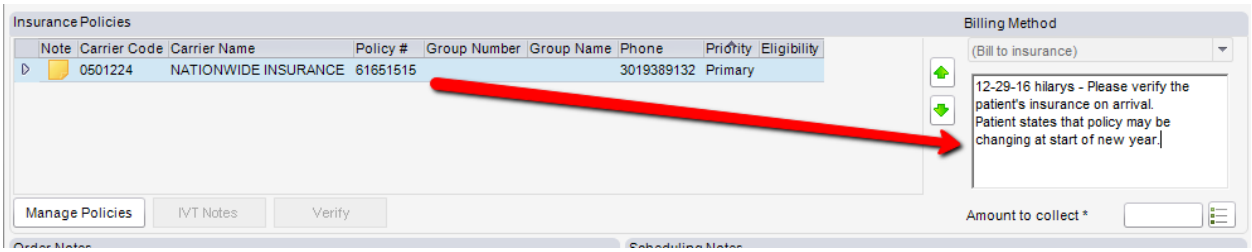
## FEATURE #14341 – ABILITY TO COPY FROM MRN GRID

After recent changes to the MRN grid on the Patient tab, some customers remarked that they no longer had the ability to copy/paste from the MRN grid due to the Read Only nature of the fields in the grid. It is now possible to right-click and choose Copy Cell for any of the MRNs listed in the grid.



## FEATURE #13909 – ENABLE BILLING NOTES FIELD WHEN AN INSURANCE CARRIER IS SELECTED

Previously, the Billing Notes field was disabled after an insurance carrier was selected. It is now available for data entry at any time.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## RESOLVED DEFECTS - 2.2016.6

Bugs, support issues, and design optimizations resolved in build 2.2016.6.

| Bug # | Category | Subject |
|---|---|---|
| 14472 | Alerts | Referring physician alerts are once again displayed in Registration workflow. |
| 14204 | Billing | Imagine Payment Portal - Addition of a field to collect internal notes on a payment to be visible in RIS. |
| 14659 | Billing | The repost to billing feature now properly sends a message to Mirth. |
| 14256 | Cancel | Cancelling a study via the context menu no longer causes a retrieve of all studies that are part of the order, causing a message backlog. |
| 13314 | CD Import | Resolved CD Import error: Input string was not in a correct format. |
| 14027 | Document Distribution | Updates to document distribution jobs, such as a change in fax number, are now audited. |
| 14615 | Drawing Tool | Breast Diagram Drawing Tool - Drawings started prior to starting the exam are now updated with changes made after the exam is started. |
| 14604 | Insurance Eligibility | Insurance's Eligibility is no longer marked as not requiring IVT based on previously selected carrier. |
| 14051 | Insurance Management | Resolved an issue with self pay insurance and study level locking. |
| 14753 | Insurance Management | Resolved an NPD performance issue. |
| 14510 | IVT / PreCert | Amount to collect field no longer clearing out when opening IVT or View/Edit on a patient with only one non-Eligibility insurance. |
| 14621 | IVT / PreCert | Resolved an issue with exams not falling to the IVT WL on PreCert status update under certain conditions. |
| 14675 | IVT / PreCert | Resolved an issue with Precert not updating to Required after insurance carrier change (billing code level PreCert rules). |
| 14722 | IVT / PreCert | Replacing multiple procedure codes using the red X, no longer causes a residual PreCert setting to prevent PreCert required on billing codes from being marked as required (multi study container issue). |
| 14725 | IVT / PreCert | Setting the Portal Verified flag now removes the study from the IVT worklist appropriately when no other requirements remain. |
| 13968 | Localization | Empty curly brackets no longer cause errors during registration in Hebrew. |
| 14058 | PACS (eRAD) Integration | PACS images are not getting released when using Skip and |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| | | Continue in All Peer Review Pending Action WL. |
| 14350 | PACS (eRAD) Integration | Resolved an issue where RIS told PACS to cache a less relevant exam. |
| 14325 | Patient Folder | MRN now appropriately displays on Patient Folder tab when searching by accession. |
| 14630 | Patient Folder | In the Patient Folder, Ordered exams no longer throw an error when using the context menu to Print Forms. |
| 14305 | Patient Search | Searching by DOB only no longer results in the search populating the date to the Last Name field. |
| 14685 | Patient Search | Optimized the query when search for patients by phone number only. |
| 14163 | Problem Workflow | Resolve Problem window - fixed an issue with the display of radiologist names. |
| 14345 | Radar - Nudge | Outside reads where 'Performed start and end date' and 'Performed by user id' are blank will no longer produce an error when opened in Signing screen. |
| 13049 | Radiology Reporting | Inserting a macro containing a picklist with default macro option multiple times can now be done successfully. |
| 14371 | Radiology Reporting | External_report_flag no longer displaying incorrect value in audit history when a study is in Exam Done status and the procedure is changed. |
| 14495 | Radiology Reporting | PerformExam and View/Edit will display information about images loading in PACS but will ***not*** lock the RIS screen while images load. |
| 14327 | Reception | Added null check for subscriber DOB to eliminate errors during registration for Self Pay patients. |
| 14407 | Reception | Arriving second study from same order will no longer change Exam Done study to Arrived. |
| 14326 | Scheduling | If an exam is changed from Order B to Order A during rescheduling, the new appointment is created successfully *and* the previous appointment is appropriately Canceled. |
| 14376 | Scheduling | When re-saving as Order, no longer prompted to fill in Body Part unnecessarily. |
| 14489 | Scheduling | Resolved an issue where breast imaging Reminders could not be canceled under certain conditions. |
| 14605 | Scheduling | Solved an issue with foreign-key constraints on schedule of Follow-up order when the original exam had a CPT level payment. |
| 14625 | Scheduling | On Reschedule, changes made in Patient tab are now saving appropriately. |
| 14682 | Scheduling | When using a combination of Red X and Black X in the |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| | | Registration screen, the cancelled Procedure Code is no longer visible in the Patient Folder column and attempts to View/Edit will not cause an error. |
| 14527 | Technologist | In Perform Exam window, the correct images are displayed when there are 2 orders. |
| 14601 | Thick Client GUI | Switching a WL tab while the context menu is open no longer has a risk of impacting the wrong study. |
| 14677 | Thick Client GUI | MU tab label is now replaced with the new Clinical tab label in Reschedule mode. |
| 14704 | Thick Client GUI | Resolved an issue with protected text in LogTextBox. |
| 14773 | Thick Client GUI | LogTextBox protected text can no longer be altered under certain conditions. |
| 14374 | Unknown Reconcile | Reconcile from Reconciliation WL is now working properly for unknown carriers. |
| 14733 | Web Services | Resolved an exception that had been occurring when saving after adding Billing Codes on View/Edit screen, when EnableLimitedDBUpdates was set to True. |
| 9317 | Worklists | Conditional formatting on worklists can now set the back color for the entire row. |
| 14584 | Worklists | Orders do not appear in the Patient Folder if all of the associated studies have been signed or cancelled. |
| 14831 | Worklists | Exams requiring Portal Verification without also requiring PreCert or Insurance Verification will now fall to the IVT WL as designed. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## RESOLVED DEFECTS - 2.2016.7

Bugs, support issues, and design optimizations resolved in build 2.2016.7.

| Bug # | Category | Subject |
|---|---|---|
| 14786 | Access strings | Look-up editors FollowUpResolvedReason and ImplantDevice access string changes. |
| 14835 | Admin-Clinical Data | Adjustment made to fix an issue with an invalid date/time entry when stopping the Oral Contrast Timer |
| 14762 | Admin-Other | Procedure Plan Description can no longer be left blank and a previous exception has been resolved. |
| 14485 | Billing | Issue with CPT codes not updating/retaining when changing procedure codes has been resolved. |
| 15054 | Digital Forms | Digital forms button on Walk-in and Registration screens is no longer showing forms that are inactive. |
| 15516 | Digital Forms | Trace data for digital forms now saves to database. |
| 5666 | Embedded Reporting | Resolved an issue with double clicking normal browser which led to "0 is not a valid index exception." |
| 14830 | eRAD Editor | Right to left with punctuation characters is now formatting correctly. |
| 14603 | Exam Search Worklist | An issue with certain filters in Exam Search has been resolved. |
| 14763 | Insurance Eligibility | Function for medical group string is now customer specific. |
| 15490 | IVT / Precert | Studies with manual insurance verification do not lose IVT flag after reschedule. |
| 14827 | Log Control | Reason for Exam field is now available on the Log Control look-up table. |
| 15502 | Log Control | Spell check suggestions on context menu have been optimized. |
| 14606 | Mammography | Assigned Pending Biopsy Notifications are functioning properly. |
| 14295 | Meaningful Use | Exporting a CCDA file and running it through the XDS toolkit no longer produces errors related to Implant. |
| 14296 | Meaningful Use | Exporting a CCDA file and running it through the XDS toolkit no longer produces errors when Ethnicity is Unknown. |
| 6467 | PACS (eRAD) Int - RIS only | Disabling PACS via the menu item stays disabled after user preference or organization change. |
| 14644 | PACS (eRAD) Integration | PACS caching - When relevant studies set to 0, no longer caching 2 studies. |
| 15115 | Patient Management | On the MRN grid on Patient tab, after selecting a value for the Issuer the value no longer defaults back when clicking back into the field. |
| 15120 | Patient Management | Adding a new Issuer in lookup editor no longer adds the suffix '- |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| | | EMR' in the Issuer in MRN grid. |
| 14243 | Patient Merge | Restored ability to suggest a duplicate Patient Merge. |
| 14794 | Patient Merge | Patient Merge will be marked as duplicate if a reverse merge is suggested for the same two patient accounts. |
| 14909 | Payment control | Imagine payment receipts are now storing the amount to collect in the payment row. |
| 14910 | Payment control | Resolved an issue with Imagine integration null exceptions. |
| 14987 | Peer Review | Peer Review verbiage update. |
| 15061 | Radar - Nudge | Nudge: the value entered in SystemConfig *RADARSecureMessageTitle* is now displaying correctly in the subject line for new conversations. |
| 15067 | Radar - Nudge | Nudge: creating a Nudge conversion for 2 studies for the same patient, keeps the conversations separate. |
| 13305 | Radiology Reporting | Resolved a concurrency error when saving config file. |
| 14599 | Radiology Reporting | When user preference is PS360, the fields explorer is blank in the template editor. |
| 14754 | Radiology Reporting | Report history audio control is no longer shared between tabs. |
| 14676 | Scanning | Issue with classification levels when using "Classify Remaining As..." option was resolved. |
| 14706 | Scheduling | Resolved issue with scheduling restriction not always being enforced for rescheduling multiple studies in the same order. |
| 14707 | Scheduling | Modality Open error was resolved - Object reference not set to an instance of an object. |
| 14887 | Scheduling | Issue resolved when adding another study, then removing it with no study selected (i.e. blank). |
| 15474 | Technologist | Accidental status change can now be reverted. |
| 15072 | Thick Client GUI | Autosaved report recovery issues have been resolved. |
| 7029 | UI Look and feel | AccessionXMLDrop button now displays only when appropriate for reporting mode. |
| 14788 | UI Look and feel | Report Assistant panel colors can now be adjusted as with other tool panes in the Reporting screen. |
| 15302 | UI Look and feel | Databound dropdown controls no longer allow free text to be typed. |
| 15346 | Web Services | External patient can now match to an internal patient when SystemConfig for EnableLimitedDBUpdates is set to true. |
| 14848 | Worklists | Resolved an issue with new Orders not setting IVT Required WL flag appropriately. |
| 14850 | Worklists | PreAuth WL flag now updating under previously problematic circumstances. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## KNOWN LIMITATIONS - 2.2016.6

The following are new bugs found in build 2.2016.6. Bugs reported in previous versions are not captured as Known Limitations in this document.

| # | Subject |
|---|---|
| 15104 | If scheduled as an Order B (or C, D, etc.), the information on the Clinical (MU) tab will not be copied over from Order A. This is not visible in the Scheduling workflow, but if a user opens the Order B exam by itself after scheduling, the Clinical tab fields will be blank and will need to be filled in again if they are set as required fields. |
| 14971 | Under some circumstances, the RIS application is still visible behind the locked screen. |
| 15099 | RADAR Nudge – When using PS360, the last saved impression and/or report is inserted into the conversation when the Report and Impression Nudge buttons are used. If changes have been made to the report without saving, these changes will not be reflected in the text added to Nudge. |
| 14804 | Claustrophobic checkbox value is not copying over to Order B. |
| 14845 | Foreign key exception when adding "Additional Data" to a procedure during scheduling. |
| 14846 | Error saving when a procedure code does not have a description in the Procedure Code table. |
| 14889 | CSH PACS - Study loaded by External Study Identifier doesn't close correctly. |
| 14941 | Birth date column is not populating for some worklists under Editor menu. |
| 14948 | It is possible for a user who does not have permission to reschedule a study to do so by using the context menu. |
| 14993 | When typing addresses in English(LTR) in the Hebrew RIS (RTL), numbers are placed incorrectly. |
| 15063 | Error occurs when the 'New Patient' button is used after already selecting an existing patient. |
| 15069 | Eligibility shield will disappear from the insurance grid if the carrier's priority is changed during scheduling. The shield will reappear next time the study is opened and is still visible on work lists. |
| 15077 | When removing an exam from a multi-study appointment, the associated Digital Form may remain. |
| 14857 | Occasional error when saving change to a macro. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## KNOWN LIMITATIONS - 2.2016.7

The following are new bugs found in build 2.2016.7. Bugs reported in previous versions are not captured as Known Limitations in this document.

| # | Subject |
|---|---|
| 15777 | Reason for exam text box will allow more than 1,000 characters (more than is permitted by the database) causing an error on save. |
| 15724 | Addendum Request control in reporting screen does not use LogControl. |
| 15569 | Increasing Exam Duration from Schedule tab is not adjusting returned time slot options for multi-study appointments. |
| 15591 | Some driver's licenses from Arizona and Maryland have different formatting on the first and last name fields, which is not handled by Identify Patient workflow. |
| 15454 | In Digital Form Editor, New Image button is not working properly. |
| 15269 | DOB is sometimes formatted differently for driver's licenses from Prince Edward Island, which causes an issue with Identify Patient workflow. |
| 15236 | View Study opens the same study twice when using Skip and Continue while reviewing studies within a Folder. |
| 15055 | Under certain circumstances, an error occurs when working with scanned documents from the Attachments context menu on a worklist. |
| 15632 | When Scheduling from ACR Category 0 Follow-Up WL, Height and Smoking Status should be cloned from the original order, but the user is forced to re-enter the information. |
| 15575 | Inbound document service should ignore files with an extension that is not an image file. |
| 15526 | When Rescheduling a study in Checking In or Arrived status, the site search should default to the original site. |
| 15337 | RADAR Quick Message - Email option should not be available when the patient does not have an email address listed. |
| 15198 | When dictating with "and Continue" and the reporting mode switches from PS360 to something else and then back to PS360, the AutoFeed option does not reappear in the status bar. |
| 15101 | Setting the background color for Reporting screen data panes to transparent causes an error. |
| 15098 | DBNull error when opening Registration when an implant device with a Null (blank) description is entered for the patient. |
| 15676 | Merging external MRN patients with internal patients fails during rescheduling workflow, impacting patients who have scheduled via the Patient Portal using Guest mode. |
| 15559 | Error when requesting a SecurePIC from IVT screen for an Order. |
| 15393 | CSH PACS - from Patient Folder, when viewing a 2nd study, the Accession # is not displayed in the simulator. |
| 15268 | SecurePIC – Need optional ris.exe.config setting for *DBActionSignalRServiceEndpoint* for cases when the IP address used for hosting on the server is different than the IP address used on the client. |
| 15232 | Audit records for RADAR messaging do not include patient /order /study context due to a change with Inbound Document workflow. |
| 15776 | UM Alert should contain both the original and alternative procedure. |
| 15552 | CTRM dialog remains open when closing via PowerScribe 360. |
| 15546 | LOG FILE reader- when using Citrix bridge the log file reader continually adds the same information including the same time when refreshed. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | |
|---|---|
| 15544 | External Report Workflow checkbox triggers dialogue window in View/Edit, does not save state. |
| 15538 | Digital form data is not saving if preceded by validation failure. |
| 15525 | Configurable Reporting options should be logged in the verbose log file. |
| 15497 | Action buttons can be hidden in Inbound document workflow under certain conditions (switch tabs to restore). |
| 15479 | Infinitt PACS is not closing after RIS logout. |
| 15468 | Eligibility flag tooltip can become stuck in "In Progress" after being updated under certain conditions. |
| 15452 | A user may be prompted for PACS login credentials even after disabling PACS. |
| 15409 | Updated critical results entry screen requires localization. |
| 15383 | In Dictation window, Nudge and Folders feature items require localization. |
| 15325 | Hebrew Localization updates. |
| 15191 | Order level attachments not displaying as expected when viewed from the Attachments context menu for a single order. |
| 15592 | Signed pending QA - Verify report - reject Edit and send for dictation goes to Transcribed status and falls to Pending Signature WL. |
| 15551 | Personnel editor error when an inactive Message Group associated to the user has an apostrophe. |
| 15550 | Cannot save Procedure Plan with an apostrophe. |

## Resolved Items

eRAD RIS

| Redmine # | Subject |
|---|---|
| 15810 | Voiding payments made in the Imagine Payment Portal no longer generates an error when multiple Dataset IDs (tax IDs) are configured. |
| 15713 | Caching – after signing or submitting a study, a new study immediately begins caching, instead of waiting for a work list refresh. |
| 15653 | "Resolve Problem" is now translated appropriately in Hebrew. |
| 15690 | Occasional UM Opinion Letter distribution issue has been resolved. |
| 15658 | An issue that occurred in 2016.7 with PreCert status being reset to required when changing the appointment time has been resolved. |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

# Installing

## Client/GUI

Copy and replace the current rRIS…zip file with the eRAD_rRIS_2016.7.1.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## Web Service

This updated is only required for the Wedge Web Services. The Core RIS Service and Document Distribution Service are not required to be updated.

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 134 files in the rRISService folder and 7 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below). Folders ar (Arabic), he (Hebrew), pt_BR (Brazilian Portuguese) and es-AR (Argentina Spanish) are localization folders. The WedgePlugins folder contains various plugin files for RADAR, MIRTH, Ensemble, etc…

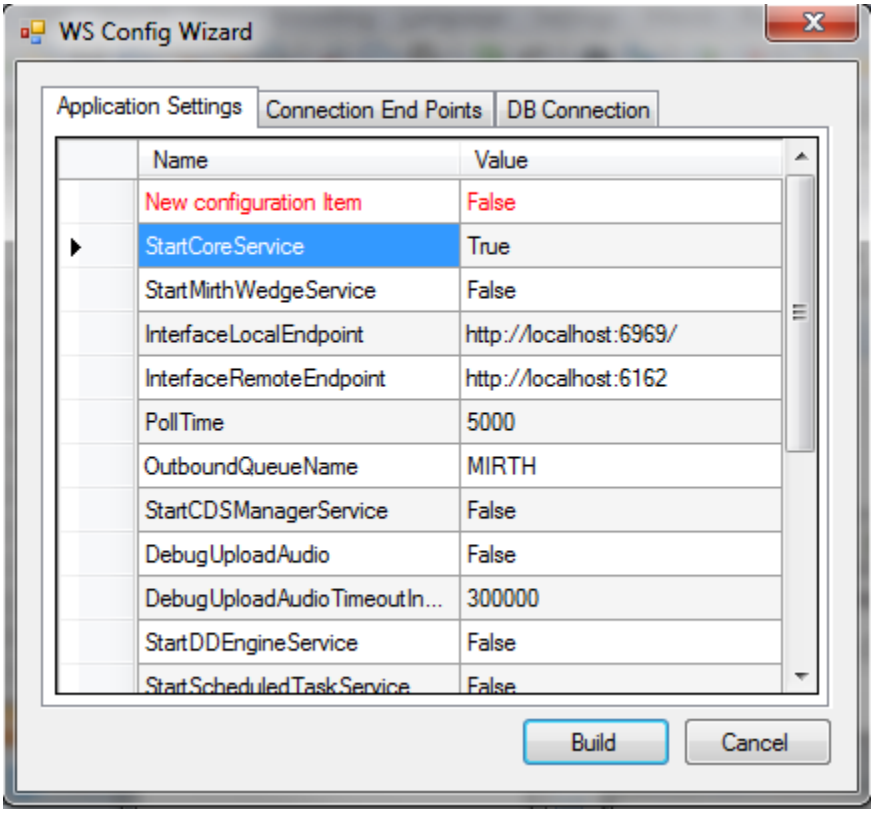
### Services Configuration Wizard

With the release of 42 to decrease the chance of losing configuration settings and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, and services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added, the user can run the new application "ServicesConfigWizard.exe"

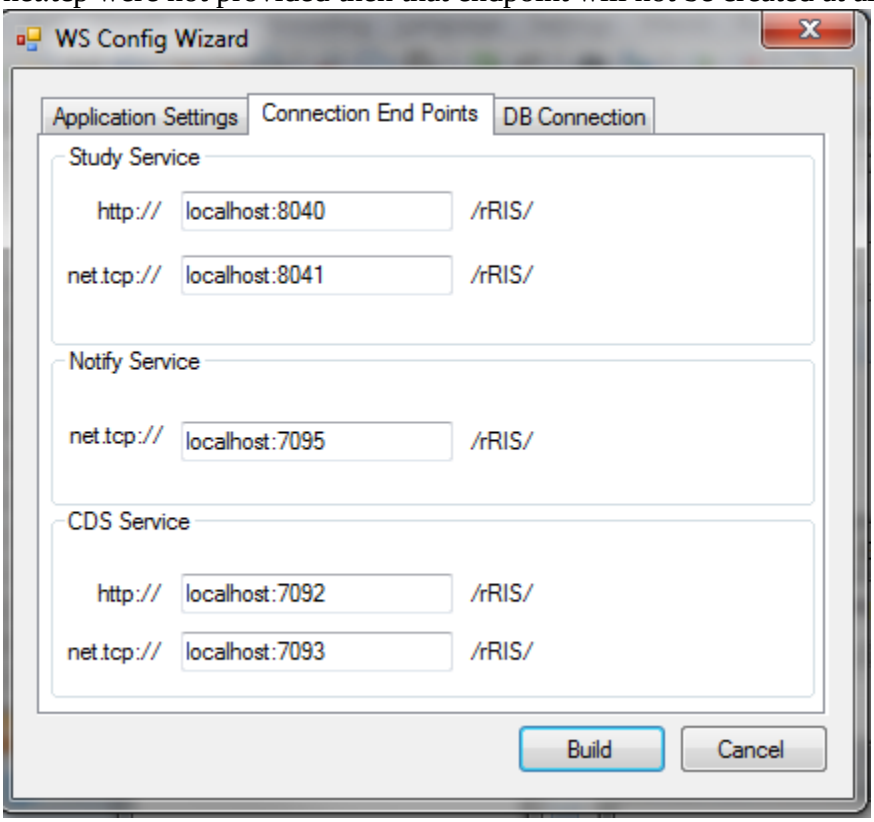
This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of "Study Service" or "CDS Service" if both http and net.tcp were not provided then that endpoint will not be created at all.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

# Installing

## Client/GUI

Copy and replace the current rRIS…zip file with the eRAD_rRIS_2016.7.2.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## Web Service

This updated is only required for the Wedge Web Services. The Core RIS Service and Document Distribution Service are not required to be updated.

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 134 files in the rRISService folder and 7 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below). Folders ar (Arabic), he (Hebrew), pt_BR (Brazilian Portuguese) and es-AR (Argentina Spanish) are localization folders. The WedgePlugins folder contains various plugin files for RADAR, MIRTH, Ensemble, etc…

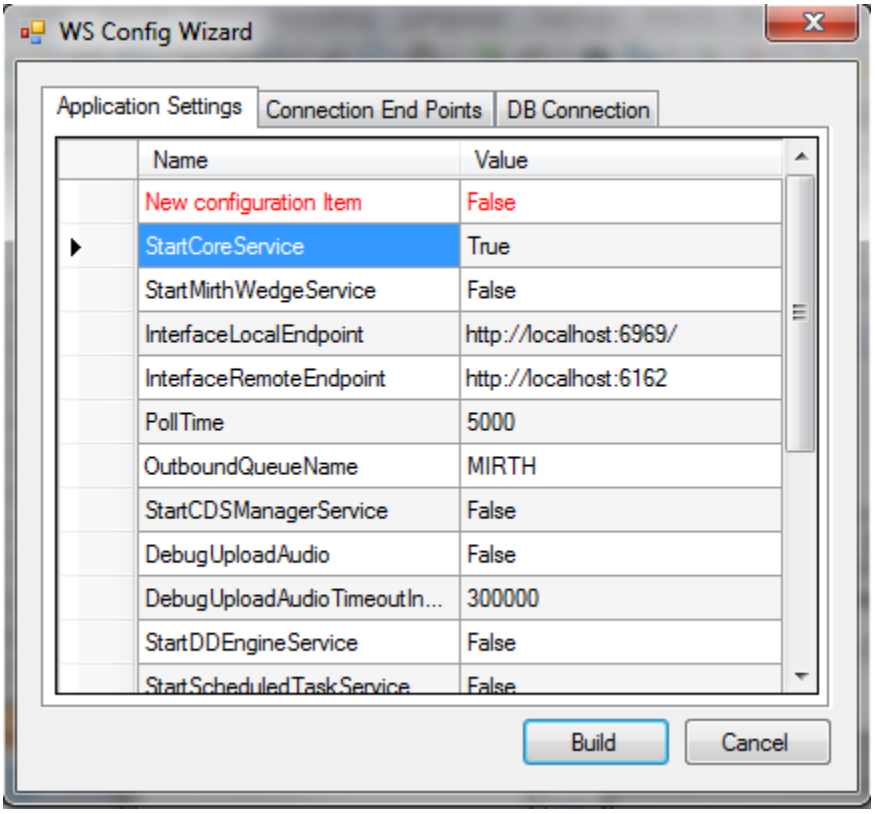
### Services Configuration Wizard

With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, and services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of "Study Service" or "CDS Service" if both http and net.tcp were not provided then that endpoint will not be created at all.

## Resolved Items

### eRAD RIS

| Redmine # | Subject |
|---|---|
| 16238 | The Print Forms option in the context menu is once more available for exams in an Ordered status. |
| 16237 | Resolved issue with fields in older M*Modal templates being regenerated causing navigation and playback issues. |
| 16223 | Resolved issue with optional fields from older M*Modal templates being replaced with required fields. |
| 16276 | Additional logging has been added for worklist refresh. |

## Configuration Updates

The following setting is an edit to pre-existing setting in the RIS.EXE.CONFIG file for Bug #16276 for eRAD RIS Support team to gather additional logging information. These changes will not affect functionality of eRAD RIS or alter the workflow user experience.

### RIS.EXE.CONFIG

| Setting |
|---|
| <add name="Rolling Flat File Trace Listener" type="Microsoft.Practices.EnterpriseLibrary.Logging.TraceListeners.RollingFlatFileTraceListener, Microsoft.Practices.EnterpriseLibrary.Logging, Version=5.0.414.0, Culture=neutral" listenerDataType="Microsoft.Practices.EnterpriseLibrary.Logging.Configuration.RollingFlatFileTraceListenerData, Microsoft.Practices.EnterpriseLibrary.Logging, Version=5.0.414.0, Culture=neutral" rollFileExistsBehavior="Increment" rollInterval="Hour" header="" footer="" fileName="/verbose_log/**trace.log**" formatter="SimpleTextFormatter" /> |

**Changes to:**

# Installing

## Client/GUI

Copy and replace the current rRIS…zip file with the eRAD_rRIS_2016.7.3.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## Web Service

This updated is only required for the Wedge Web Services. The Core RIS Service and Document Distribution Service are not required to be updated.

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 128 files in the rRISService folder and 7 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below). Folders ar (Arabic), he (Hebrew), pt_BR (Brazilian Portuguese) and es-AR (Argentina Spanish) are localization folders. The WedgePlugins folder contains various plugin files for RADAR, MIRTH, Ensemble, etc…

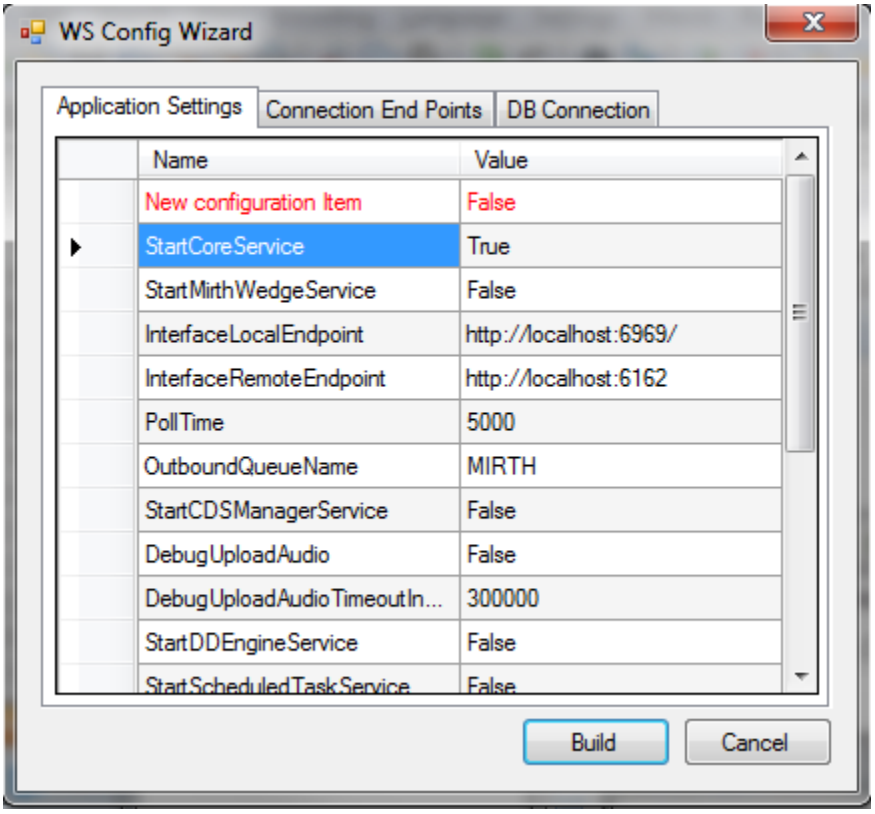
### Services Configuration Wizard

With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, and services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

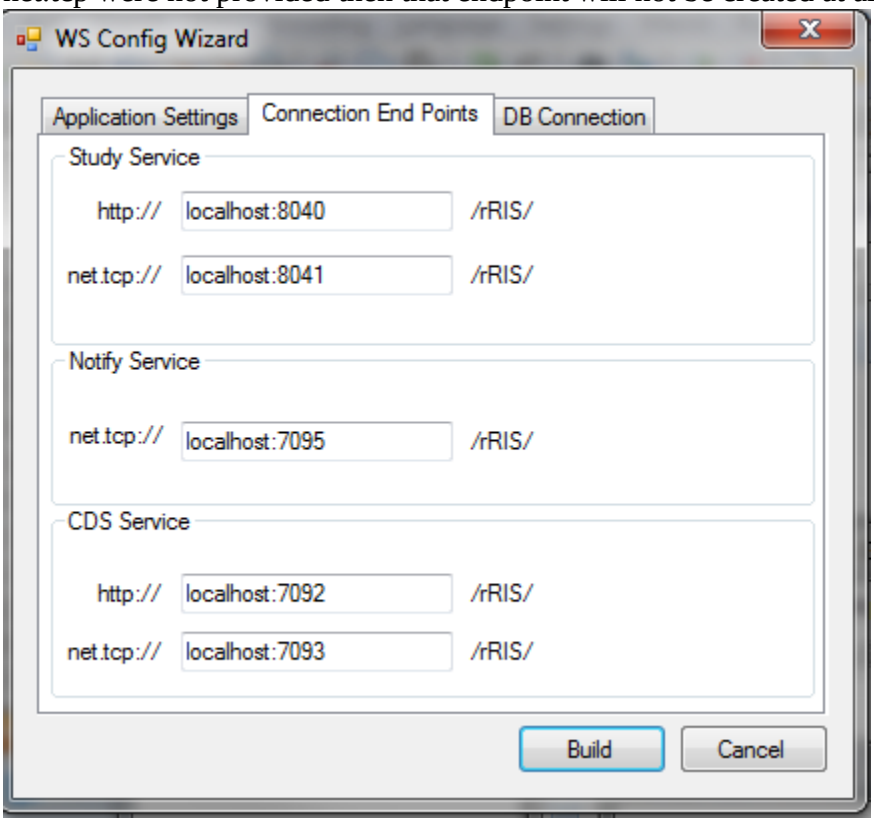
This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of "Study Service" or "CDS Service" if both http and net.tcp were not provided then that endpoint will not be created at all.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Resolved Items

eRAD RIS

| Redmine # | Subject |
|---|---|
| 16284 | Resolved an error that could occur after dictating a study from Pending Dictation WL. "Row has been removed from table." |
| 16266 | Switching between external reporting integration modes (PS360 or External) to internal reporting modes (eRAD or M*Modal) now occurs seamlessly without errors. |
| 16265 | RIS will not crash when opening multiple files (including an external file) while communicating with PACS. |
| 16264 | Next workflow will behave as expected when "Reuse Reporting Screen" is turned off. |
| 16263 | Resolved an issue with the error "Cannot access a disposed object. Object name: RadLabel" which could cause RIS to crash. |
| 16262 | When using emergency access and RIS crashes, using auto-save, clicking the emergency access button again will no longer remove the auto-saved report. |
| 16261 | Resolved an issue in which RIS would crash if unable to find the PACS window. |
| 16260 | Resolved a scenario where RIS could crash while communicating with PACS. |
| 16259 | PACS manager will no longer wait forever in certain conditions. |
| 16257 | Resolved a scenario where RIS could crash while communicating with PACS. |

## Installing

### Client/GUI

Copy and replace the current rRIS…zip file with the eRAD_rRIS_2016.7.4.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

# Server Update

For eRAD RIS
Version 2.0
Build 2.2016.7
Update 2.2016.7.5

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

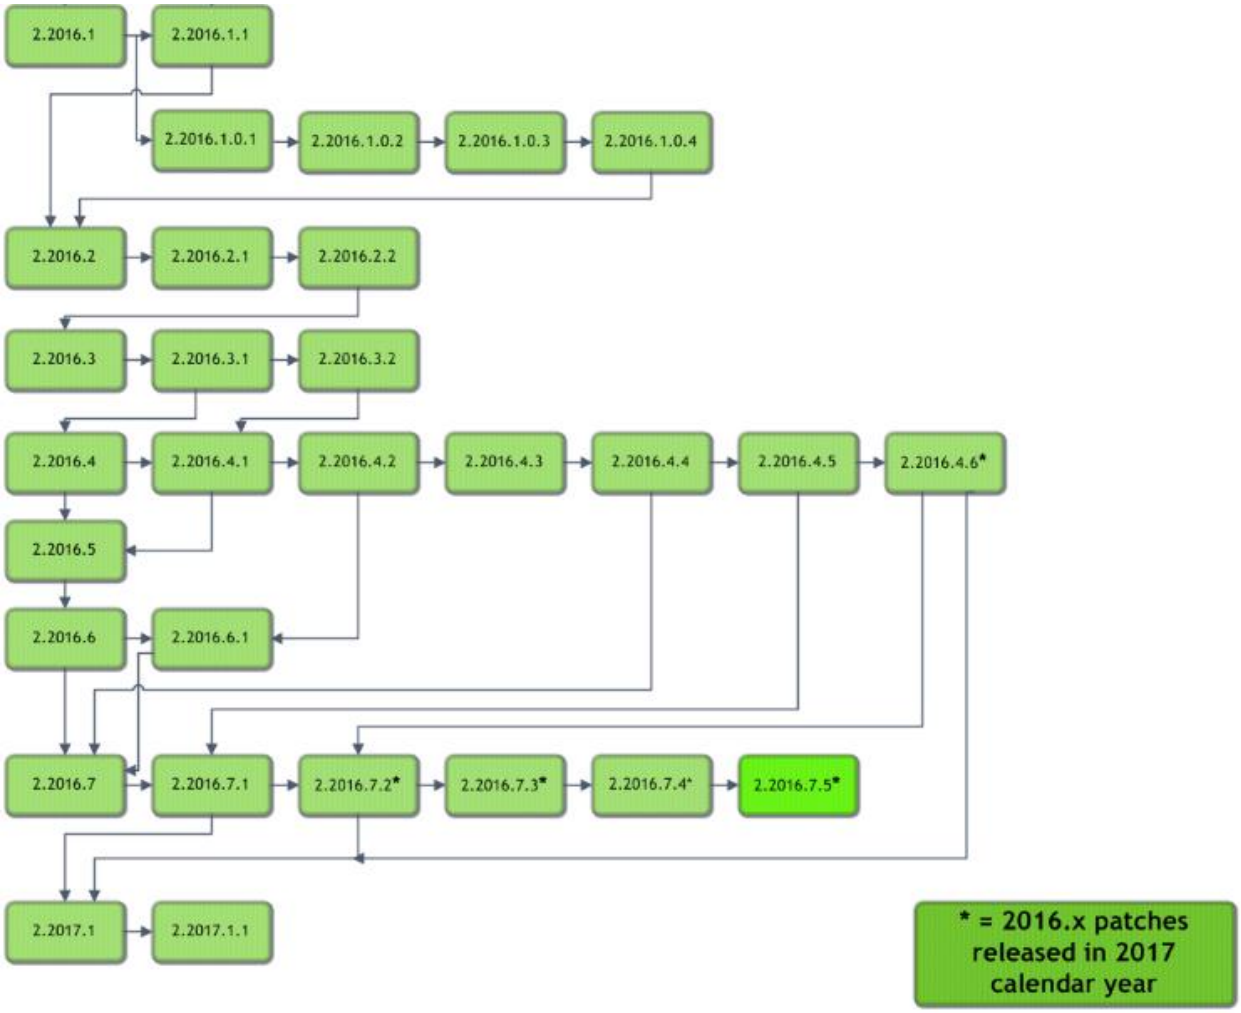
## Resolved Items

eRAD RIS

| Redmine # | Subject |
|---|---|
| 16390 | M*Modal macros created in earlier RIS versions now display properly in the template/macro editor when there is a field at the beginning of the macro. |
| 16364 | Resolved an issue in which template text or sections between two fields could be lost. |
| 16346 | Resolved two issues related to conflicts between Auto WL Refresh and asynchronous saving (when the WL updates the row for the patient who was modified by the current RIS user). |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Code Stream



**Legend:**

Light Green = Previously Released software

**Bright Green = Current Release**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Package Contents

## Intended Audience

The intended audience for this document is the RadNet Clinical Systems team and the eRAD Support/Service team.

## Who is affected

Build 2016.7 installs. This server update must be applied to 2016.7.3

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

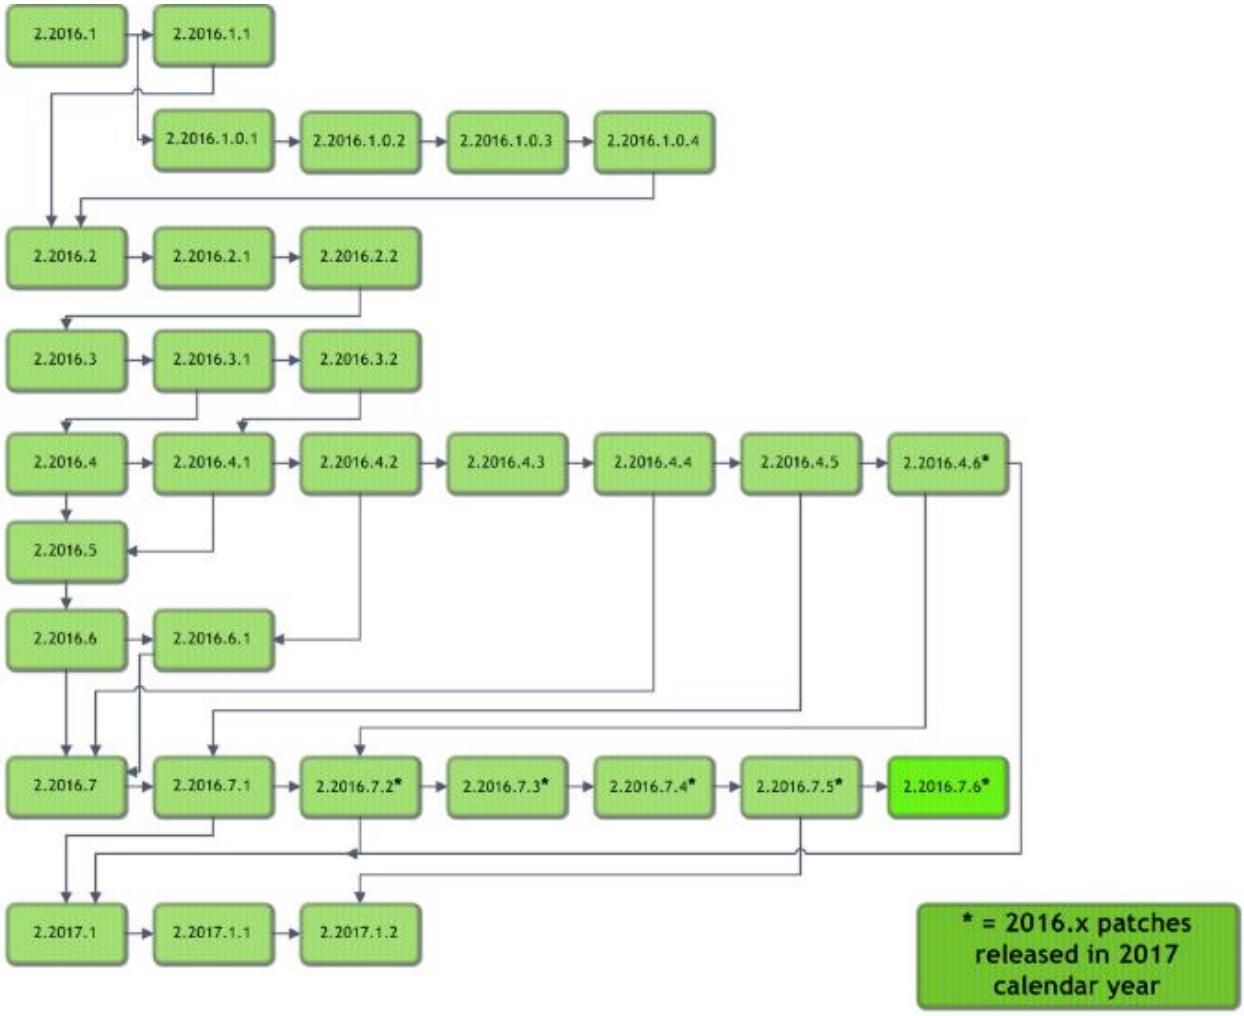
## Resolved Items

eRAD RIS

| Redmine # | Subject |
|---|---|
| 16457 | Utilization Management: Exception no longer occurs when distributing UM Opinion Letter via RADAR password-protected PDF. (Previously the letter would distribute properly, but an exception would occur when it was recorded to the distribution history.) |
| 16446 | M*Modal Reporting: Resolved an issue where fields could be split in a way that caused issues with text highlighting during play back and extra field delimiters (square brackets). Duplicate fields are now left intact and are only fixed within the clipboard before pasting or within the macro XML before inserting. |
| 16445 | M*Modal Reporting: Resolved an issue in which submit and continue from the Dictation window could produce an error. |
| 16437 | Editing multiple reminder letter distribution jobs on the Distribution WL no longer causes exception. |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Code Stream



**Legend:**

Light Green = Previously Released software

**Bright Green = Current Release**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## Package Contents

## Intended Audience

The intended audience for this document is the RadNet Clinical Systems team and the eRAD Support/Service team.

## Affected Installs

Build 2016.7 installs. This server update has GUI and Web Service updates. Since the previous 2016.7.X updates were also GUI or GUI and Web Service updates the minimum previous version must be 2016.7. Please note that 2016.7.1 also has an update to the Utilization Management Portal.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

# Installing

## Client/GUI

Copy and replace the current rRIS…zip file with the eRAD_rRIS_2016.7.6.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## Web Service

This updated is only required for the Wedge Web Services. The Core RIS Service and Document Distribution Service are not required to be updated.

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 134 files in the rRISService folder and 7 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below). Folders ar (Arabic), he (Hebrew), pt_BR (Brazilian Portuguese) and es-AR (Argentina Spanish) are localization folders. The WedgePlugins folder contains various plugin files for RADAR, MIRTH, Ensemble, etc…

### Services Configuration Wizard

With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, and services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

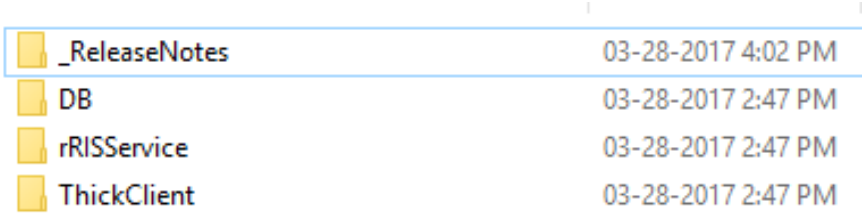
## Package Contents



## Intended Audience

The intended audience for this document is the RadNet Clinical Systems team and the eRAD Support/Service team.

## Affected Installs

Build 2016.7 installs. This server update has GUI and Web Service updates. Since the previous 2016.7.X updates were also GUI or GUI and Web Service updates the minimum previous version must be 2016.7. Please note that 2016.7.1 also has an update to the Utilization Management Portal.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

# Installing

## Client/GUI

Copy and replace the current rRIS…zip file with the eRAD_rRIS_2016.7.7.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## Web Service

This updated is only required for the Wedge Web Services. The Core RIS Service and Document Distribution Service are not required to be updated.

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 134 files in the rRISService folder and 7 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below). Folders ar (Arabic), he (Hebrew), pt_BR (Brazilian Portuguese) and es-AR (Argentina Spanish) are localization folders. The WedgePlugins folder contains various plugin files for RADAR, MIRTH, Ensemble, etc…

### Services Configuration Wizard

With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, and services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

# INSTALLING

## CLIENT/GUI

Copy and replace the current rRIS…zip file with the eRAD_rRIS_2016.7.8.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## DATABASE UPDATES

Always run the upgrade scripts in a test environment of the actual database to make sure they run cleanly. If any errors occur please contact development.

Note: There is a new upgrade process introduced with B43.1 called "RunUpgrade.bat". The batch file will open a command window. This process will prompt you for the database server name, database name and authentication credentials. There is no need to run the database upgrade scripts manually as was done in previous releases.

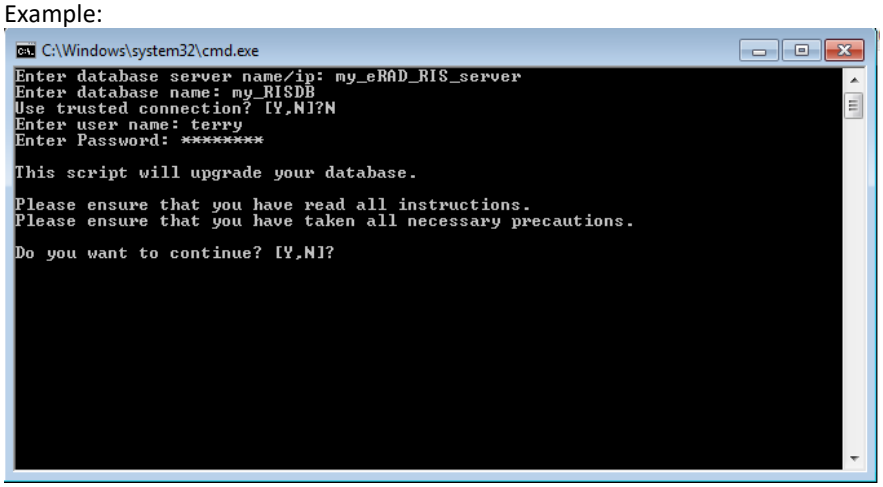
1) From the upgrade folder, double click the “RunUpgrade.bat” command file.

2) Enter the server name, database name and authentication credentials to the database. You have 2 choices for authentication credentials.

3) You can choose to use “Trusted connection”. Using this option will pass the identity of the currently logged on user. If this user has “db_owner” access to the eRAD RIS database then feel free to use this options.

4) If you decide not to use “Trusted connection” then you will be prompted for user id and password.

   Example:



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

After the upgrade program has finished you can find the upgrade logs in the “log” folder. The file name will be eRAD_RIS_db_upgrade_timestamp.log, where timestamp is a value representing the date and time the upgrade started. If you see any errors please contact the development team

## RESOLVED ITEMS

### eRAD RIS

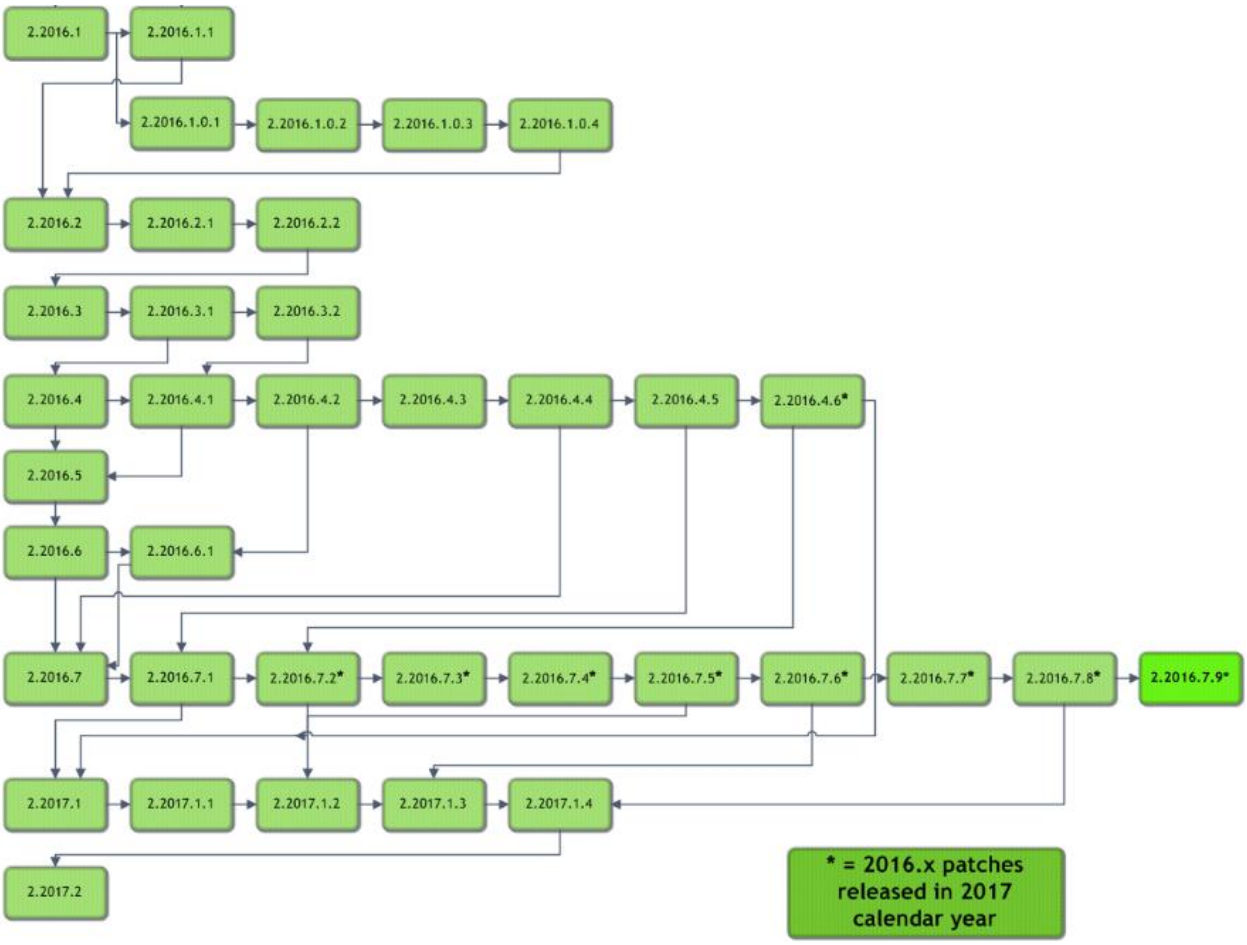
| Redmine # | Subject |
|---|---|
| 17209 | An index change was made to resolve deadlock issues on c_locked_item. |
| 17208 | A change was made to the handling of sequence ID in the External Interface helper to allow for changes to c_order_item or c_study_item via Inbound Wedge. |
| 17193 | Resolved an issue that could cause the M*Modal text expander file to be overwritten. |
| 17176 | Region and Practice are once more prepopulating when creating a new Appointment without patient context. |
| 17123 | 'Alternative' procedures added during Utilization Review now properly replace the billing codes for the original procedure. |
| 17243 | UM Portal version number is now displaying correctly. |
| 17206 | Adjusted a database upgrade script to more efficiently backfill formatted phone number. |

### Utilization Management Connect

| Redmine # | Subject |
|---|---|
| 17071 | 'By Status' filter is now sorting and filtering appropriately. |
| 17207 | Resolved a performance issue which could cause the application to time out. |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## CODE STREAM



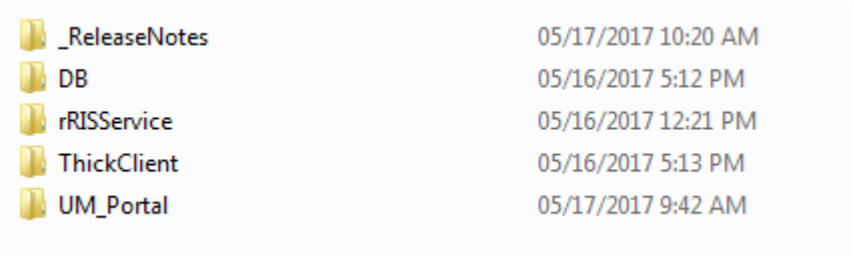
## Legend:

Light Green = Previously Released software

Bright Green = Current Release

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## PACKAGE CONTENTS



## INTENDED AUDIENCE

The intended audience for this document is the RadNet Clinical Systems team and the eRAD Support/Service team.

## AFFECTED INSTALLS

Build 2016.7 installs. This server update has GUI and Database updates. This update must be applied to 2016.7.8

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

# INSTALLING

## CLIENT/GUI

Copy and replace the current rRIS…zip file with the eRAD_rRIS_2016.7.9.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## WEB SERVICE

This updated is only required for the Wedge Web Services. The Core RIS Service and Document Distribution Service are not required to be updated.

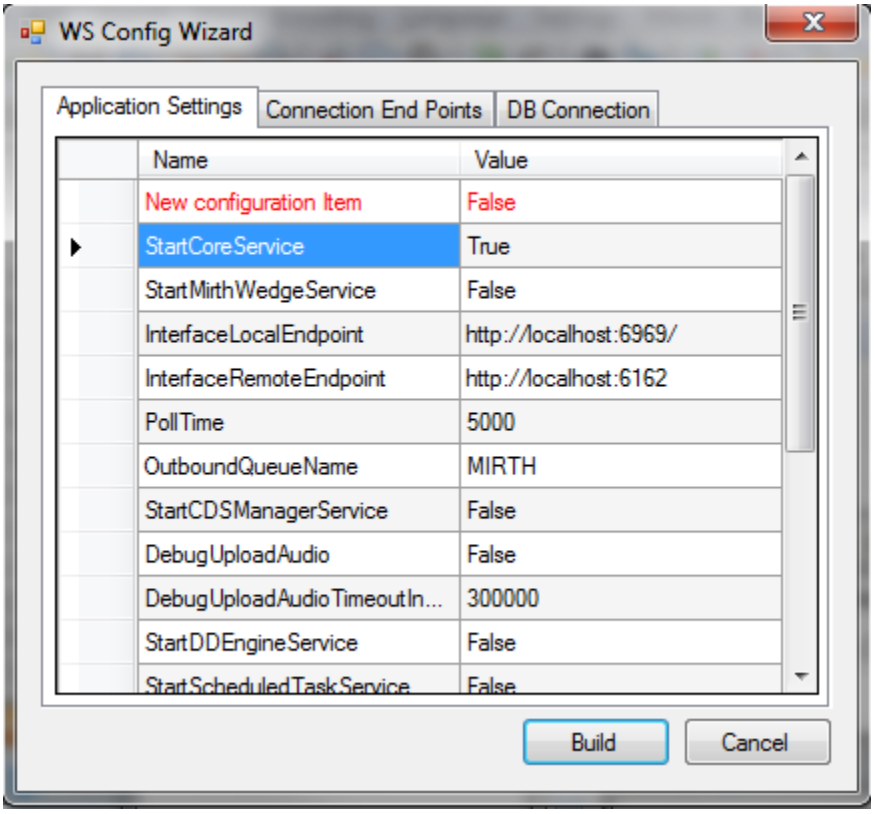
1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 134 files in the rRISService folder and 7 sub folders. Of those folders, 1 is a folder titled "XSL" that contains a sub folder and files within the subfolder. Another folder is titled "deploy" that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below). Folders ar (Arabic), he (Hebrew), pt_BR (Brazilian Portuguese) and es-AR (Argentina Spanish) are localization folders. The WedgePlugins folder contains various plugin files for RADAR, MIRTH, Ensemble, etc…

Services Configuration Wizard
With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, and services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
Application Settings: all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.



## DATABASE UPDATES

Always run the upgrade scripts in a test environment of the actual database to make sure they run cleanly. If any errors occur please contact development.

Note: There is a new upgrade process introduced with B43.1 called "RunUpgrade.bat". The batch file will open a command window. This process will prompt you for the database server name, database name and authentication credentials. There is no need to run the database upgrade scripts manually as was done in previous releases.

1) From the upgrade folder, double click the “RunUpgrade.bat” command file.

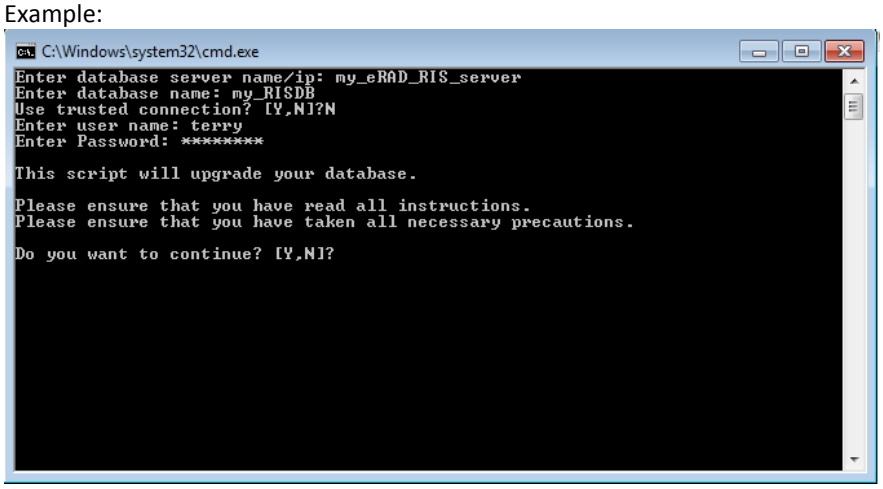
2) Enter the server name, database name and authentication credentials to the database. You have 2 choices for authentication credentials.

3) You can choose to use “Trusted connection”. Using this option will pass the identity of the currently logged on user. If this user has “db_owner” access to the eRAD RIS database then feel free to use this options.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

4) If you decide not to use “Trusted connection” then you will be prompted for user id and password.

Example:



After the upgrade program has finished you can find the upgrade logs in the “log” folder. The file name will be eRAD_RIS_db_upgrade_timestamp.log, where timestamp is a value representing the date and time the upgrade started. If you see any errors please contact the development team

## RESOLVED ITEMS

eRAD RIS

| Redmine # | Subject |
|---|---|
| 17324 | Improved core service stability by handling the ServiceHost "Faulted" event and re-creating the service object. |
| 17327 | Eliminated the queued messages that would inundate the web services when a failed web service would come back on line. |
| 17328 | Eliminated the intermittent “Service Call Aborted” exception when logging out of RIS. |

# INSTALLING

## CLIENT/GUI

Copy and replace the current rRIS…zip file with the eRAD_rRIS_2016.7.10.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## WEB SERVICE

This updated is only required for the Wedge Web Services. The Core RIS Service and Document Distribution Service are not required to be updated.

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 134 files in the rRISService folder and 7 sub folders. Of those folders, 1 is a folder titled "XSL" that contains a sub folder and files within the subfolder. Another folder is titled "deploy" that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below). Folders ar (Arabic), he (Hebrew), pt_BR (Brazilian Portuguese) and es-AR (Argentina Spanish) are localization folders. The WedgePlugins folder contains various plugin files for RADAR, MIRTH, Ensemble, etc…

Services Configuration Wizard
With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, and services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:
Application Settings: all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

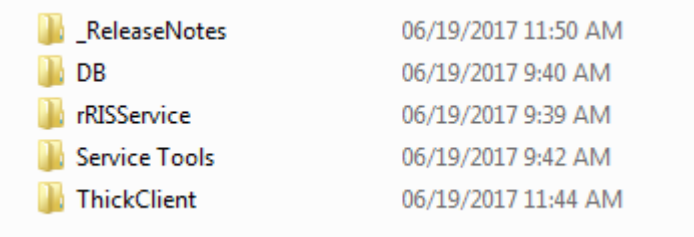
## PACKAGE CONTENTS



## INTENDED AUDIENCE

The intended audience for this document is the RadNet Clinical Systems team and the eRAD Support/Service team.

## WHO IS AFFECTED

Build 2016.7 installs. This server update must be applied to 2016.7.10.

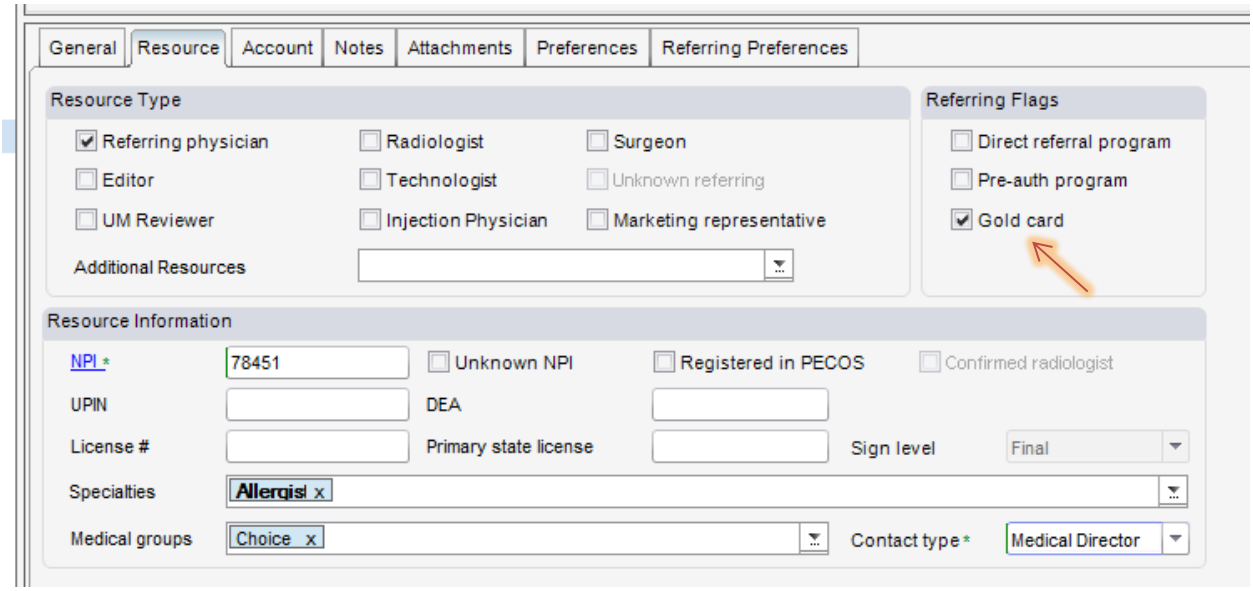
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD.

## NEW FEATURES

### FEATURE #17394 – UTILIZATION MANAGEMENT ORDERS FOR GOLD CARDED PHYSICIANS WILL AUTOMATICALLY ROUTE TO SCHEDULING

Previously, when a referring physician was flagged as "Gold Card" eRAD RIS would display this flag and the corresponding notes, but it was up to the UM reviewer to evaluate the notes and determine whether the order should bypass the utilization review process.



It is now possible to configure eRAD RIS to automatically bypass the Utilization Review workflow when the referring physician is flagged as Gold Card. With this configuration, schedulers can proceed immediately to schedule the procedure without waiting for the utilization review process. The order is automatically flagged as UM Complete and a UM Tracking Number is assigned.

To enable this workflow, a new system configuration value called *UMGoldCardAutoApprove* with a default value of "True" has been added to the system.

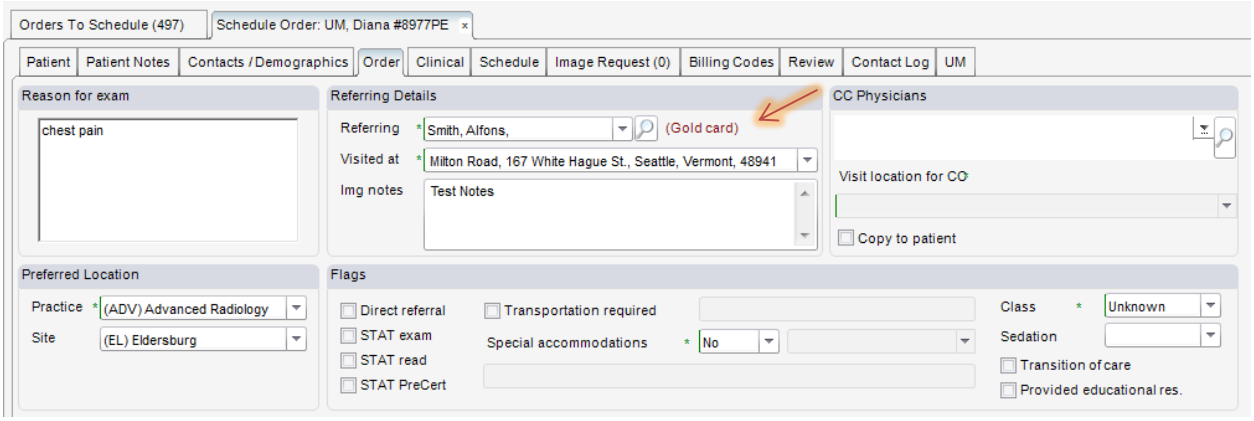
When UMGoldCardAutoApprove is enabled, any orders for Gold Card physicians that require utilization review will be given a new UM Tracking Number and marked as UM Complete, so they can advance to scheduling immediately.

When UMGoldCardAutoApprove is *disabled*, any orders for Gold Card physicians that require utilization review will be given a new UM Tracking Number and marked as UM Required, so they can advance to the Utilization Management Worklist to be reviewed.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

Schedulers will be able to identify that a referring physician is part of Gold Card by looking at the label next to the referring physician's name on the Order tab. It will appear in the same location as the existing label for "Pre-auth program." A referring physician can be labeled as Gold Card, Pre-auth program, or both.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

## FEATURE #17460 - UM CLOCK NOW STARTS COUNTING WHEN THE ORDER FIRST QUALIFIES AS UTILIZATION REVIEW REQUIRED

The UM Clock previously used an order's requested date as the start value (time stamp). Typically, this is the date the order was created in RIS. There are some scenarios where the UM Clock should not use the requested date of the order as a starting point, but rather the date the procedure became qualified for utilization review. For example, an order exists for an X-Ray (UM not required). The X-Ray is changed to a CT procedure 2 days later, which requires utilization review. Since the procedure did not require utilization review until it was changed to a CT, the UM Clock will not use the date that the original order (X-Ray) was created. The UM Clock will instead start as soon as the order first required utilization management (i.e. the date it was changed to a CT).

A new column called *um_received_date* has been added to the c_order_item table. This date/time column will get set anytime a procedure is flagged for utilization review. The UM Clock will use the Received Date as the start parameter.

If an order has multiple procedures that require utilization review, the system will use the oldest Received Date.

If for some reason there is not a Received Date available, the system will revert back to using the Requested Date at the order level which is always available.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

# NEW CONFIGURATION SETTINGS

## SYSTEM CONFIGURATION SETTINGS

| Setting | Default | Purpose |
|---|---|---|
| UMGoldCardAutoApprove | True | (value = True/False) Determines if gold carded providers are automatically approved by UM. |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD.

## RESOLVED ITEMS

# eRAD RIS

| Redmine # | Subject |
|---|---|
| 17525 | UM External Notes are now visible to schedulers. |
| 17524 | UM - When recommending an additional procedure, the reviewer can now adjust the authorization status for the additional procedure (previously this was read-only). |
| 17508 | Opening the Scheduling screen while an IVT or Utilization Review screen is open for the patient will no longer cause an exception. |
| 17394 | Utilization Management Orders for gold carded physicians now automatically route to scheduling. (See Features section) |
| 17460 | UM Clock now starts counting when the order first qualifies as Utilization Review Required. (See Features section) |
| 17463 | Insurance Eligibility will now run as soon as the Utilization Review screen is opened. (Previously for UM workflow, Manage Policies had to be opened first.) |
| 17461 | UM Connect no longer displays cancelled orders on the Orders tab. |
| 17429 | Resolved an issue that was caused by a Follow Up Type Code with a single quote character. The "Missing operand after" exception will no longer display. |
| 17391 | Resolved an issue that could cause “DataTable internal index is corrupted” exceptions. |

# INSTALLING

## CLIENT/GUI

Copy and replace the current rRIS…zip file with the eRAD_rRIS_2016.7.11.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## WEB SERVICE

This updated is only required for the Wedge Web Services. The Core RIS Service and Document Distribution Service are not required to be updated.

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 134 files in the rRISService folder and 7 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below). Folders ar (Arabic), he (Hebrew), pt_BR (Brazilian Portuguese) and es-AR (Argentina Spanish) are localization folders. The WedgePlugins folder contains various plugin files for RADAR, MIRTH, Ensemble, etc…

**Services Configuration Wizard**

With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, and services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

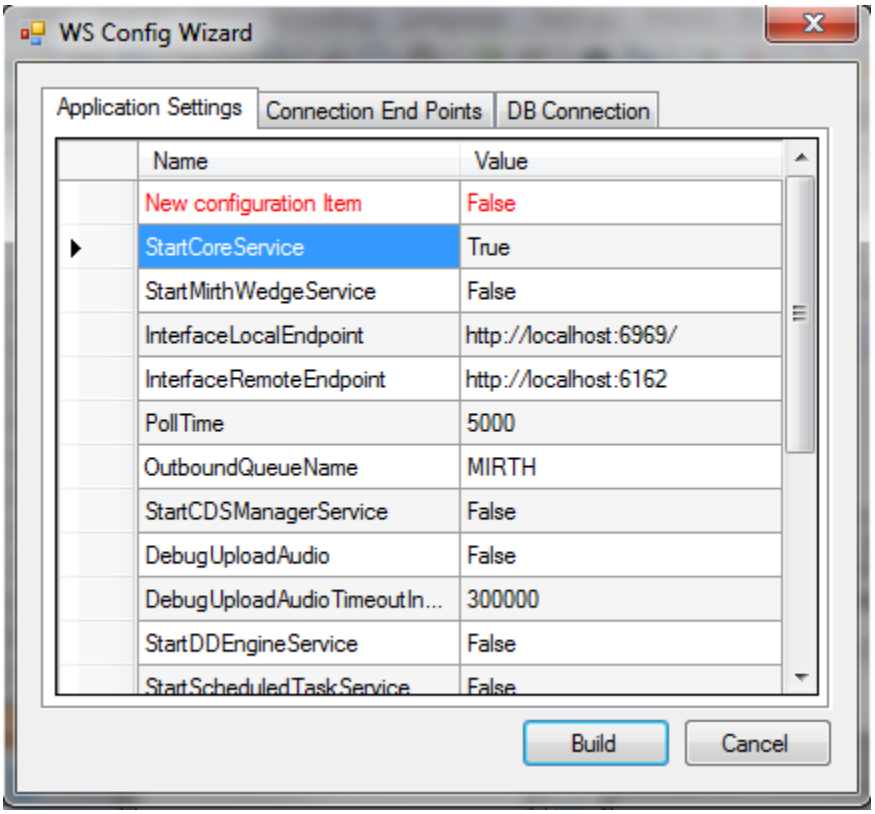
On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

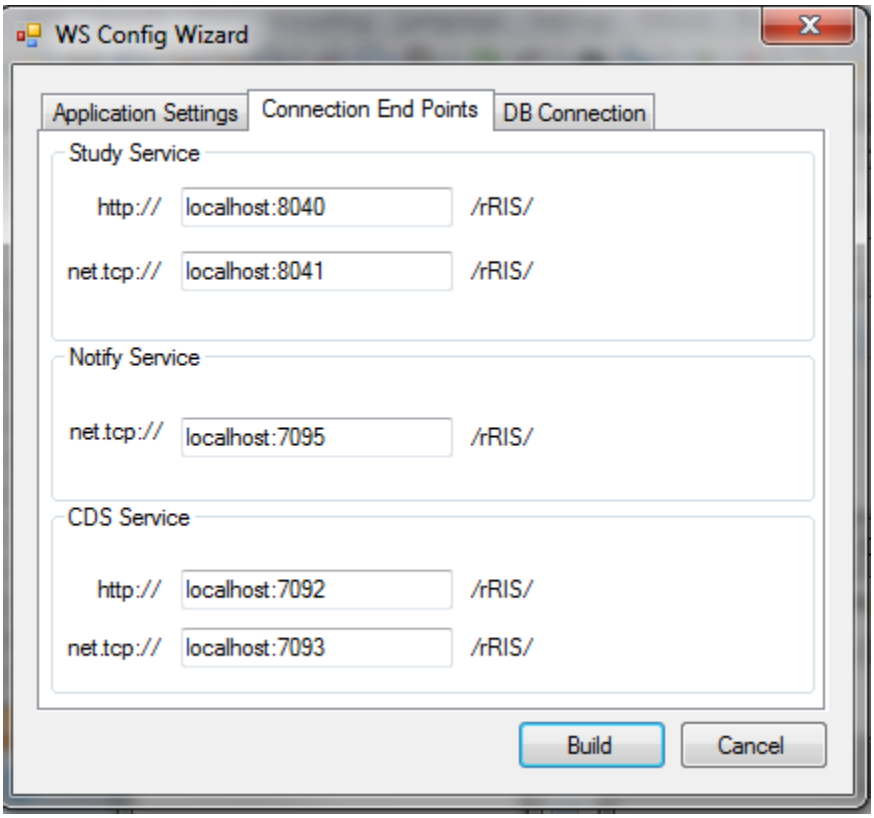
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of "Study Service" or "CDS Service" if both http and net.tcp were not provided then that endpoint will not be created at all.



## DATABASE UPDATES

Always run the upgrade scripts in a test environment of the actual database to make sure they run cleanly. If any errors occur please contact development.

*Note: There is a new upgrade process introduced with B43.1 called "RunUpgrade.bat". The batch file will open a command window. This process will prompt you for the database server name, database name and authentication credentials. There is no need to run the database upgrade scripts manually as was done in previous releases.*

1) From the upgrade folder, double click the "RunUpgrade.bat" command file.

2) Enter the server name, database name and authentication credentials to the database. You have 2 choices for authentication credentials.

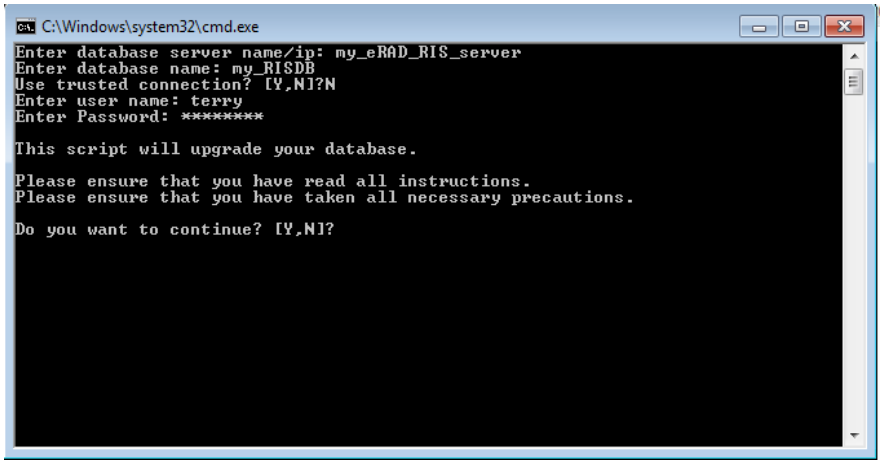
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

3) You can choose to use “Trusted connection”. Using this option will pass the identity of the currently logged on user. If this user has “db_owner” access to the eRAD RIS database then feel free to use this options.

4) If you decide not to use “Trusted connection” then you will be prompted for user id and password.

   Example:



5) After the upgrade program has finished you can find the upgrade logs in the “log” folder. The file name will be eRAD_RIS_db_upgrade_timestamp.log, where timestamp is a value representing the date and time the upgrade started. If you see any errors please contact the development team

## PACKAGE CONTENTS

## INTENDED AUDIENCE

The intended audience for this document is the RadNet Clinical Systems team and the eRAD Support/Service team.

## WHO IS AFFECTED

Build 2016.7 installs. This server update must be applied to 2016.7.11.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD.

## RESOLVED ITEMS

# eRAD RIS

| Redmine # | Subject |
|---|---|
| 17598 | Resolved an issue that prevented document classification from Inbound Document and Scheduling screens. |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

# INSTALLING

## CLIENT/GUI

Copy and replace the current rRIS…zip file with the eRAD_rRIS_2016.7.12.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD.

# Server Update

for eRAD RIS

Version 2.0

Build 2.2016.7

Update 2.2016.7.13

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD.

## INTENDED AUDIENCE

The intended audience for this document is the RadNet Clinical Systems team and the eRAD Support/Service team.

It is appropriate to share the document with any customers applying the patch, in order to review new feature descriptions and resolved defects.

## WHO IS AFFECTED

Build 2016.7 installs. This server update must be applied to 2016.7.12.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD.

## NEW FEATURES

### FEATURE #17597/17544 - SCHEDULED START DATE ADDED TO CHAIR API, WHICH WILL SORT CHRONOLOGICALLY

This feature is for customers using the Chair API. The Chair API now includes the Scheduled Start Date and returns the oldest studies first. This enables the Chair workflow engine to assign aging studies first.

Scheduled Start Date was added as a field in the output of two Chair API requests. Additionally, the results of any requests to obtain an exam list by chair and by status are now sorted by Scheduled Start Date, with the oldest dates listed first.

A change has also been made to make the previously hard coded "7 day filter" configurable. Previously, the Chair API limited query results by chair and status to include exams that had been scheduled within the past 7 days. An optional parameter, *IncludeAllDates*, has been added to bypass the 7 day filter on Scheduled Start Date. This parameter will default to false if not specified and the original behavior will be maintained.

Figures 1 through 3, below, illustrate the XML:

*Figure 1 – Get Exam list by chair and status*

in any form or by any means without the prior written permission from eRAD. 

## FEATURE #17829 - CONFIGURABLE OPTION TO SUPPRESS UNPRINTED BI-RADS 0 LAY LETTERS WHEN NEWER BI-RADS IS AVAILABLE FOR THE PATIENT

There is now a System Configuration setting that will suppress unprinted BI-RADS 0 Lay Letters when a more current BI-RADS exists for the same patient. For example, if a patient's BI-RADS 0 Lay Letter has not been printed by the time they return for their additional imaging, the new exam's Lay Letter would effectively replace the original BI-RADS 0 Lay Letter when the BI-RADS for the new report is anything other than 0.

The default for this new setting will be False. The recommendation for U.S. customers is to leave this setting as false to ensure that patients receive Lay Letters for every BI-RADS exam.

The new System Configuration setting is named *SuppressAllUnprintedBIRADS0LayLetters.*

Please note that this setting does not impact the workflow for unprinted Lay Letters when an addendum is done for the *same* study. If a Lay Letter has not been printed and an addendum is done on that study, the Lay Letter will continue to be replaced with an updated Lay Letter if the BI-RADS information has been updated. This System Configuration setting has no impact on this workflow, which remains unchanged.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

## FEATURE #17748 – ALLOW ERAD RIS SERVICE AND SUPPORT TO ADD COLUMNS TO RETRIEVE FOR PATIENT FOLDER

ALERT: This feature is meant to be used by eRAD Support only. Adjustments should only be made under the direction of an eRAD Support team member.

Recently, a change was made to the way eRAD RIS retrieves data for the Patient Folder, which had been retrieving more data from the database than was necessary to display the information needed in the visible columns.

In reducing the data retrieved for the patient folder, it became evident that some information that is not displayed in the worklist columns is nevertheless used for certain functions, such as determining which context menu options should be available. If the data was not available, the user could receive an error or lose access to certain functionality that is dependent upon the data.

eRAD RIS is once again retrieving the data that was identified as supporting such functions; however, it is beneficial to have a method for eRAD Support to add additional database columns to the set for retrieval, in case it is discovered in the field that additional data is required for an unforeseen function.

To support this, a new System Configuration setting has been added: *PatientFolderExtraColumnsToGet*. This setting will allow a comma separated list of columns to retrieve from the database in addition to the hard coded set. Any column names that are not part of the c_vw_PatientFolder view are deemed invalid and are not retrieved. This will prevent an exception from occurring in the Patient Folder if an invalid column name is entered in System Configuration.

RIS Development should be notified anytime eRAD Support resorts to adding a column to this System Configuration setting so that adjustments can be made in the next release.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

## FEATURE #17351, 17352 – NEW RIS SETTINGS TO REDUCE BANDWIDTH FOR UPDATES

Two new System Configuration settings have been created in an effort to reduce the amount of bandwidth consumed by saving/uploading updates to the server. Both features will be automatically enabled at the time of the upgrade, but will present no detectable changes to the RIS user. **Update: Enable Extra Compression will be disabled until further changes are made.**

Both of these configuration options will decrease the network bandwidth utilization, which will deliver some performance benefits for networks which have slow upload speeds.

**Uploading patient/order updates:**

When saving edits to screens such as ViewEdit or Registration, the data is sent to the server in an XML format, which is fairly bulky and uses more bandwidth than necessary. For example, saving a change to a patient's middle name costs approximately 60KB when sent via XML. A new system configuration setting will enable a *binary serializer* to send the update data in binary format, which reduces the size of the data to be uploaded. When sending in binary format, the same update that cost 60KB when sent via XML is reduced to approximately 8KB.

To enable this feature, the new System Configuration setting, *EnableExtraCompressionOnStudyUpdates*, must be set to True. The default for this setting is True, so it will be enabled at the time of the upgrade, unless the setting is changed to False. **Update: Enable Extra Compression will be disabled until further changes are made.**

**Uploading Attachments:**

Another new System Configuration setting is available to reduce the size of **attachments** for upload. Attachments are typically saved as a JPEG file. However, in many cases, a smaller file size could be achieved by applying LZW compression and saving the attachment as a TIFF file. The image quality on the resulting TIFF file is typically equal or superior to the JPEG image.

When *AllowLZWImageCompression* is set to True, RIS will compress attachments twice: once as a JPEG and once, using LZW Compression, as a TIFF file. The version with a smaller file size will be used for the attachment, unless the compressed TIFF image is significantly different from the original. If 80% of the pixels are different between the JPEG and the TIFF, RIS will choose the JPEG compression for that attachment.

The default for this System Configuration setting is True, which means that this compression process will be enabled at the time of upgrade, unless the setting is changed to False.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD.

## FEATURE #15265 – OPTION TO DEPLOY MULTIPLE REPORT SERVER DATA SOURCES

When management reports do not need to display real-time data, it is beneficial to have the option for these reports to run from other data sources, such as an offline or alternate database.

**Configuration for eRAD Support Only:**

To provide this option, a modification has been made to the management report deployment batch file, *ReportServerDeployment.bat,* which will allow the user to create a second data source. One data source will be used for real time reporting (*RISDataSource*) and the second data source (*ReportDataSource*) will be created for reports that should be run from the alternate source. By default, reports will be deployed to the RISDataSource. (Technical Note: Both data sources can be pointing to the exact same database. If the user does not create the data sources, they will be created on the report server pointing to no particular database.)

```
**********

Do you still wish to Continue, Rename or Exit? [C,R,E]?C
Do you need to create DataSources? [Y,N]?Y

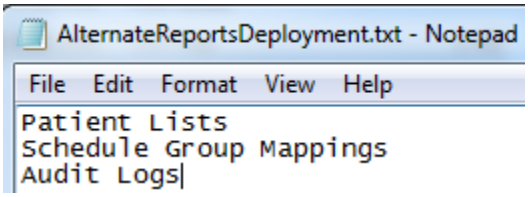
**********************************************************************************
Enter RISDataSource information.(Real-Time Reporting)
**********************************************************************************

Enter destination DATABASE server name: [default:IANLAPTOP-PEI]: peidev1
Enter database name: rRIS_QE01
Enter report schema user name: qe
Enter report schema password: ris
Setup new datasource

**********************************************************************************
Enter ReportDataSource information. (Alternate Reporting)
**********************************************************************************

Enter database name:
```

The deployment script will determine which data source to use for the deployment of each report. To deploy reports to the alternate data source (ReportDataSource), there is a new file called *AlternateReportsDeployment.txt* in the core folder. This new file will contain a list of Report names that will point to the offline or alternate data source, formatted as displayed below.



The script will look at the list of Report Names from this file and select the appropriate data source.

At this time, there is not a GUI to allow users to easily manage moving reports between data sources. Therefore, this information is being provided to the eRAD Support/Service and Implementation teams so that assistance can be provided to any customer who wishes to take advantage of this functionality.

# NEW CONFIGURATION SETTINGS

## SYSTEM CONFIGURATION SETTINGS

| Setting | Default | Purpose |
|---|---|---|
| PatientFolderExtraColumnsToGet | n/a | (value = string) Comma separated list of additional columns to retrieve for the patient folder. Columns must exist in the patient folder view. SERVICE ONLY. Please report to RIS Development when used. |
| SuppressAllUnprintedBIRADS0Lay Letters | False | Suppresses all unprinted BI-RADS 0 Lay Letters if a new report is signed for the patient with any BI-RADS other than 0. Recommendation for this setting is False. |
| EnableExtraCompressionOnStudy Updates | True | (value = bool) Setting this to true will enable gzip and other compression techniques and is ideal for sites with limited upload bandwidth. Set it to false to default to the legacy Microsoft data serialization. **Update: Enable Extra Compression will be disabled until further changes are made.** |
| AllowLZWImageCompression | True | (value = bool) Setting this to true will enable LZW Image Compression when saving attachments. |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

## RESOLVED ITEMS

# eRAD RIS

| Redmine # | Subject |
|---|---|
| 17615 | Resolved an issue with exams scheduled from Cancelled appointments inappropriately retaining their PreCert status. Also revised check on expiry date to ensure that PreCert status will be set to Required if the Expiry Date is prior to the new scheduled date ***or*** the Expiry Date was blank when rescheduling from an Approved exam. |
| 17109 | The increased time for RIS GUI GetData calls to RIS Services has been reduced. |
| 17714 | Database option pack created to backfill _primary_study_key prior to upgrade to prevent the upgrade from taking an excessively long time for large data centers. |
| 17703 | An alias was added for the Reading Group column in the view c_vw_WL_Dictated, as it was noticed that the alias had changed. |
| 17689 | Upgrade script has been added to resolve an issue with preferred radiologist not populating correctly under certain circumstances. |
| 17632 | Addressed an issue with performance problems in the PreCert Group Editor. |
| 17613 | Temporarily disabled *EnableExtraCompressionOnStudyUpdates* until further changes are made. |
| 17519 | An index was added to improve performance during a patient search (previously caused excessive IO). |
| 17514 | Changed an index to improve efficiency of a Chair workflow query. |
| 17443 | Index used by UM Management Reports is now only referencing UM Finalized dates that are not null. |
| 17407 | Added a missing index on c_study_item_sedation for study_item_key. |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

| | |
|---|---|
| 17401 | The study dataset has been updated to take advantage of a new computed column to increase efficiency when determining the primary study. |
| 17390 | Eliminated unnecessary database calls for linked interpretation rows to improve performance. |
| 17389 | No longer retrieving unnecessary database columns for Patient Folder. |
| 17382 | Resolved a performance issue with excessive service calls when searching for carriers. |
| 17772 | Resolved an issue with contrast requirements when patient has multiple studies. |

The following list contains bugs or features that have been resolved in "future" RIS versions and have been pulled back to this earlier version of eRAD RIS. Features are also described in the New Features section.

| Redmine # | Subject | Original Resolved Version |
|---|---|---|
| 17839 | Resolved an intermittent issue with RIS Crashing between scheduling under particular circumstances (Object reference not set to an instance of an object). | 2017.1 |
| 17354 | **New Feature**: Option to deploy multiple report server data sources. | 2017.1 |
| 17353 | Changed the clustered index on c_study table to improve performance. | 2017.1 |
| 17568 | Closed Room Reschedule WL now supports repeat rules, resolving an issue where studies could be filtered from the Confirmation worklist. | 2017.1 |
| 17565 | Resolved a foreign key error when adding and saving contrast. | 2017.2 |
| 17356 | Changes made to increase database execution plan reuse for | 2017.2 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

| | | |
|---|---|---|
| | improved performance. | |
| 17352 | **New Feature**: Support TIFF format with LZW compression and 8bit color depth for RIS scanned documents. (See New Features section titled "New RIS settings to reduce bandwidth for updates.") | 2017.2 |
| 17351 | **New Feature**: Client side setting to optimize calls to UpdateStudy. (See New Features section titled "New RIS settings to reduce bandwidth for updates.") **Update: Enable Extra Compression will be disabled until further changes are made.** | 2017.2 |
| 17374 | Tables without cluster indexes now have one for performance improvement. | 2017.2 |
| 17612 | Resolved an error occurring on the Connect Administrator - System Messages screen when saving without changes. | 2017.2 |
| 17610 | Patient Portal's identity verification no longer allows invalid data after receiving an invitation from the Provider Portal. | 2017.2 |
| 17609 | Removed unnecessary message regarding external report workflow from the View/Edit window. | 2017.2 |
| 17732 | Added two missing indexes for performance improvement. | 2017.3 |
| 17694 | When forwarding messages in the CONNECT Patient Portal Administration portal, patient information is now added above the message body. | 2017.3 |
| 17691 | Resolved an issue with Push Signature service. | 2017.3 |
| 17596 | Resolved a CONNECT Patient Portal issue with iCODE errors when multiple studies are mapped to the iCODE. | 2017.3 |
| 17574 | Made a change to Management Report views to improve | 2017.3 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

| | | |
|---|---|---|
| | performance. | |
| 17558 | eRAD RIS reporting tab will stay in sync even if PowerScribe 360 report is closed immediately upon opening. | 2017.3 |
| 17557 | Resolved an issue with creating multiple addendums from the View Study screen using different reporting modes. | 2017.3 |
| 17403 | Implemented a new string splitting function for performance improvement. | 2017.3 |
| 17373 | Changed the method of calculating the Eligibility flag for performance improvement. | 2017.3 |
| 17372 | RIS now trims Eligibility request and response tables on a regular interval to reduce the size of the indexes and table foot prints. | 2017.3 |
| 17370 | Worklist views and stored procedures now use ITVF for performance improvement. | 2017.3 |
| 17369 | Resolved an issue with database performance related to Exam Search. | 2017.3 |
| 17368 | Exam Searches are now using index when doing date comparisons | 2017.3 |
| 17367 | RIS database compatibility mode no longer equal to SQL 2008. | 2017.3 |
| 17366 | Changed Linked study pattern to improve performance when solving primary study key. | 2017.3 |
| 17365 | Modified a stored procedure for the Pending QA WL to ensure that the correct sites are included. | 2017.3 |
| 17363 | New database object will concatenate the values of string expressions for improved performance. | 2017.3 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

| | | |
|---|---|---|
| 17361 | For performance gains, scaler database functions have been replaced with ITVF replacements. | 2017.3 |
| 17360 | Index has been added to c_eligible_request.visit_key. | 2017.3 |
| 17358 | C_action_data rows can now be added without having to followup with a refresh of the dataset. | 2017.3 |
| 17357 | Changed the way the Legacy Report Flag is determined to improve performance. | 2017.3 |
| 17355 | Log file from deployment script will now differentiate which management reports use the "Real-Time" and which use the "Alternate" reporting server. | 2017.4 |
| 17688 | When referring physician has a Preferred Rad defined, the Assigned Rad is now consistently populating in the perform exam window (Upgrade script needed to backfill new column.) | 2017.4 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

## CODE STREAM

# INSTALLING

## CLIENT/GUI

Copy and replace the current rRIS…zip file with the eRAD_rRIS_2016.7.13.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## WEB SERVICE

This updated is only required for the Wedge Web Services. The Core RIS Service and Document Distribution Service are not required to be updated.

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 136 files in the rRISService folder and 9 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below). Folders ar (Arabic), he (Hebrew), pt_BR (Brazilian Portuguese) and es-AR (Argentina Spanish) are localization folders. The WedgePlugins folder contains various plugin files for RADAR, MIRTH, Ensemble, etc…

**Services Configuration Wizard**

With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, and services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

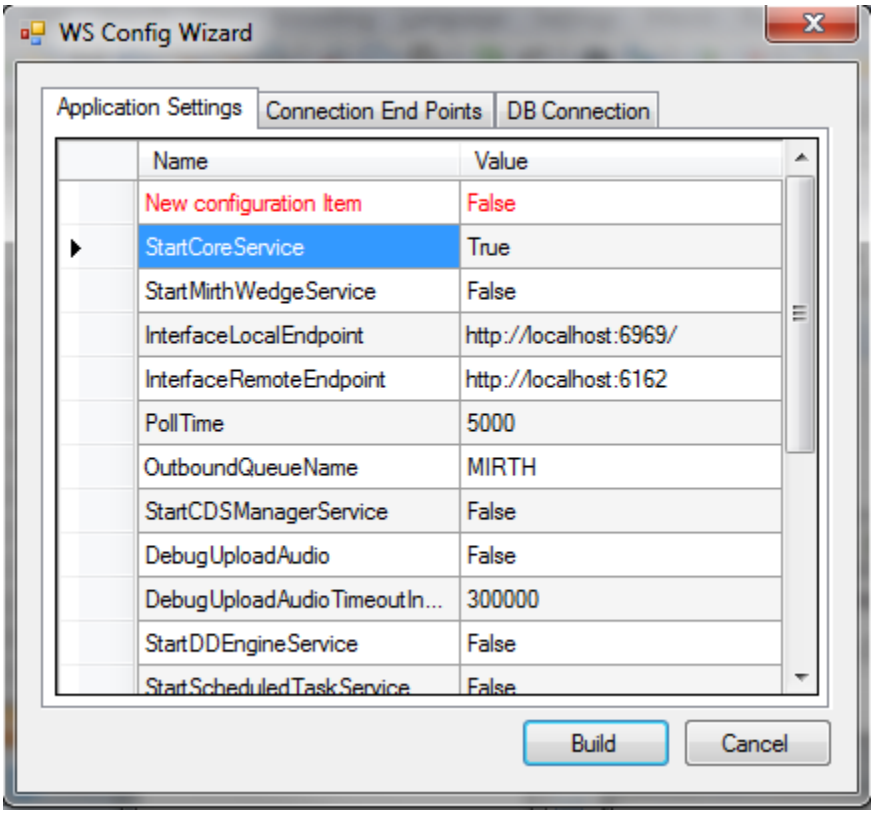
On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

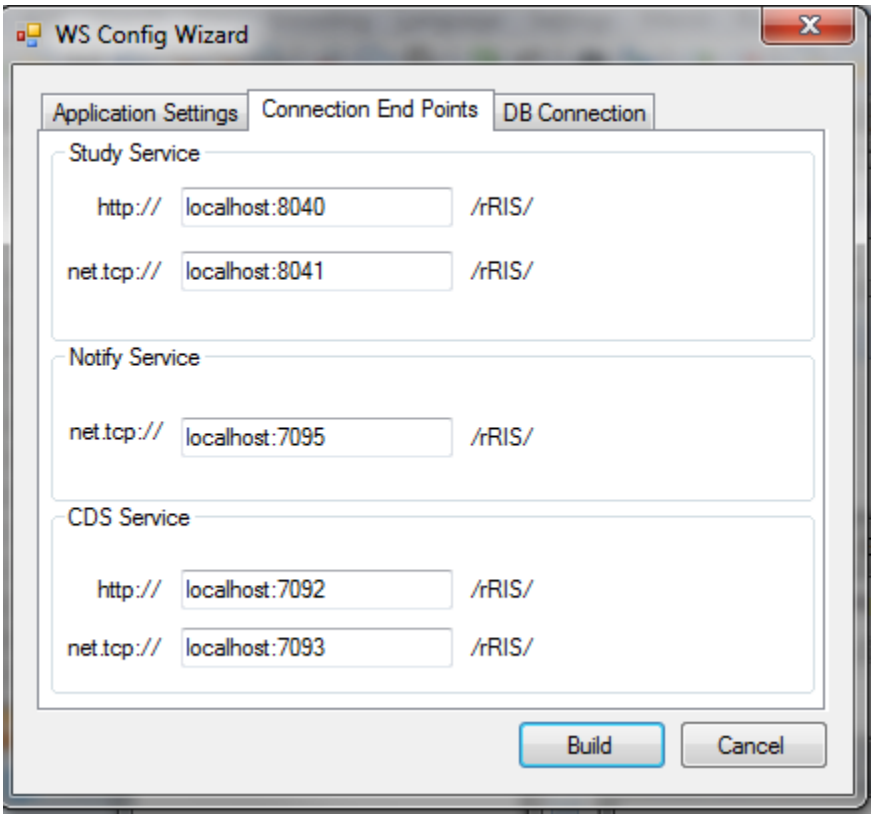
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of "Study Service" or "CDS Service" if both http and net.tcp were not provided then that endpoint will not be created at all.



## DATABASE UPDATES

Always run the upgrade scripts in a test environment of the actual database to make sure they run cleanly. If any errors occur please contact development.

*Note: There is a new upgrade process introduced with B43.1 called "RunUpgrade.bat". The batch file will open a command window. This process will prompt you for the database server name, database name and authentication credentials. There is no need to run the database upgrade scripts manually as was done in previous releases.*

1) From the upgrade folder, double click the "RunUpgrade.bat" command file.

2) Enter the server name, database name and authentication credentials to the database. You have 2 choices for authentication credentials.

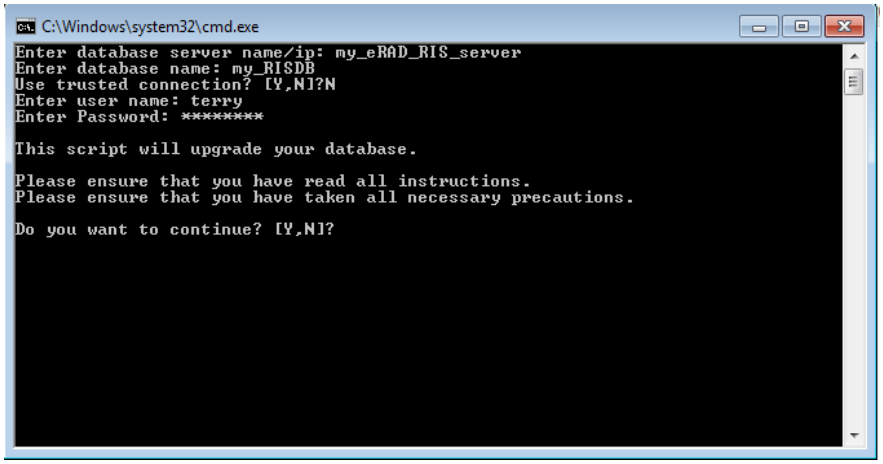
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

3) You can choose to use “Trusted connection”. Using this option will pass the identity of the currently logged on user. If this user has “db_owner” access to the eRAD RIS database then feel free to use this options.

4) If you decide not to use “Trusted connection” then you will be prompted for user id and password.

Example:



5) After the upgrade program has finished you can find the upgrade logs in the “log” folder. The file name will be eRAD_RIS_db_upgrade_timestamp.log, where timestamp is a value representing the date and time the upgrade started. If you see any errors please contact the development team

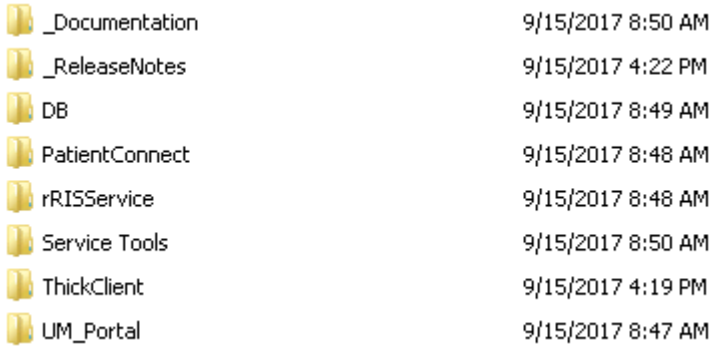
## PACKAGE CONTENTS



## INTENDED AUDIENCE

The intended audience for this document is the RadNet Clinical Systems team and the eRAD Support/Service team.

It is appropriate to share the document with any customers applying the patch, in order to review new feature descriptions and resolved defects.

## WHO IS AFFECTED

Build 2016.7 installs. This server update must be applied to 2016.7.13.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD.

# NEW FEATURES

## UTILIZATION MANAGEMENT

### FEATURE #18166/17708 – SET DEFAULT UM STATUS AND RESOLUTION CODES FOR GOLD CARD AND STAT ORDERS

When configured, special handling for Gold Card or STAT orders requires that the orders be advanced to scheduling, bypassing the UM process. Previously, the UM flag was set to "Y" to allow scheduling, but the order would remain in Received status.

It is now possible to configure which Status and Resolution codes will be used in these scenarios. The defaults are defined by the following System Configuration settings:

- UMDefaultSTATStatusCode
- UMDefaultSTATResolutionCode
- UMDefaultGoldCardStatusCode
- UMDefaultGoldCardResolutionCode

If either UMByPassSTAT or UMGoldCardAutoApprove is set to Y, the order's status code and resolution code will be immediately changed to match the System Configuration values. In addition, the following values are automatically set:

- UM Finalized Date = Current Date/Time
- UM Finalized by User ID = "system"
- UM Final Status Hours = 0

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

## FEATURE #18168/17580 - AUTOMATICALLY UPDATE EXAM STATUS BASED ON ATTRIBUTES OF SELECTED UM STATUS

Previously, when a UM Reviewer marked all procedures in an order as Not Recommended, the Patient Folder continued to display the order in an Ordered status, with the Procedure column displaying as blank due to the fact that no active procedures were associated. This could be confusing in cases where the UM Reviewer needed to go back to the case (e.g. they receive a call from the referring provider) or to other RIS users.

For this reason, a new System Configuration value has been added called *UMDefaultCancelledReasonCode*. This configuration value is dependent on a corresponding entry in the *CancelStudyReason* look-up table.

The workflow will proceed as follows: First, the system will look at the order once it is marked as UM Complete. UM Complete is determined by looking at each ordered procedure that requires utilization review to see if it is in a final UM Status. Next, the system will determine if the final UM Status can advance to scheduling or not. For example, Recommended can be scheduled while Not Recommended typically cannot. This is determined by verifying that the Final Flag on the UM Status is set to "Y" and the Schedule Flag is set to "N."

If is determined that all the procedures for the order require utilization review and none can advance to be scheduled, the system will perform the following tasks:

1. Set the Status Code for the order to Order Cancelled.
2. Set the Cancelled by User ID field for the Order to "system."
3. Set the Cancelled Date for the order to the current date and time.
4. Set the Cancelled Reason Code for the order to the *UMDefaultCancelledReasonCode*.

The following is an example of the audit log for the above scenario.

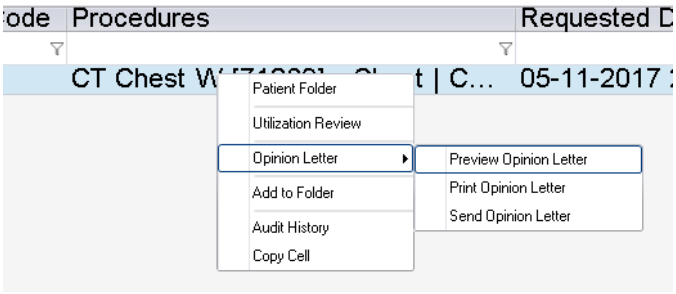
## FEATURE #18170/17530 – RIS USERS CAN NOW PREVIEW AND DISTRIBUTE THE UM OPINION LETTER

Previously, the UM Opinion Letter was only available to be previewed from the Utilization Review screen via the UM Opinion Letter tab. Sometimes it is necessary for other RIS users to preview or distribute the UM Opinion Letter. To accomplish this, a new context menu item has been added to the Patient Folder and UM WL called "Opinion Letter." This option will be available when the UM Required Flag = Y and the user has FULL access to a new access string: *Clinical.OpinionLetter*.

The Opinion Letter context menu item will have three options:

1. Preview Opinion Letter
2. Print Opinion Letter
3. Send Opinion Letter



Access to these three sub-menu options can be controlled via the access strings:

- *Clinical.OpinionLetter.Preview*
- *Clinical.OpinionLetter.Print*
- *Clinical.OpinionLetter.Send*

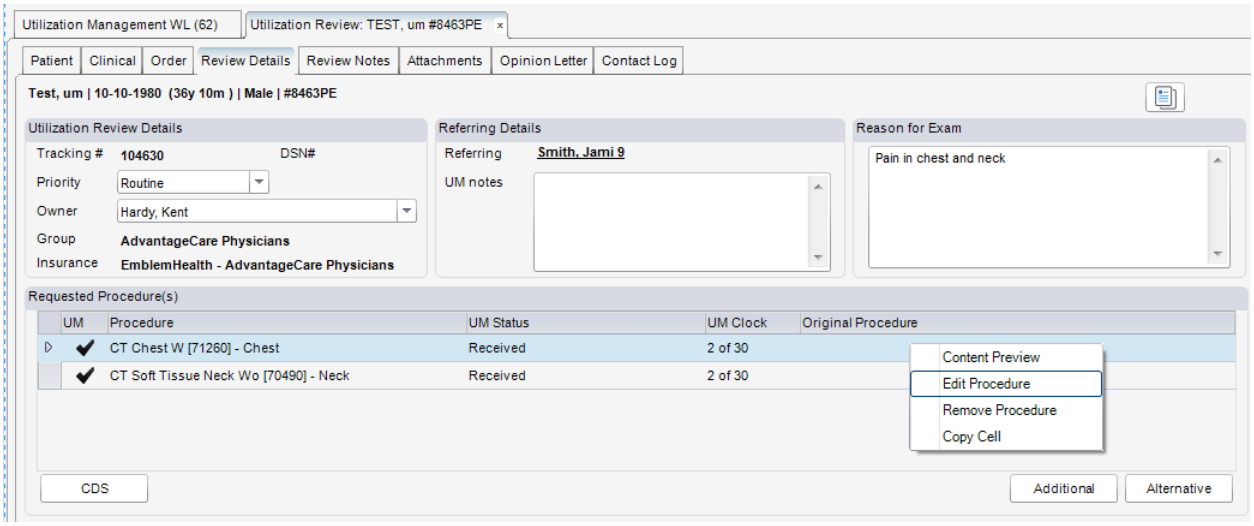
## FEATURE #18172/17529 – UM REVIEWERS CAN NOW CHANGE THE REQUESTED PROCEDURE

When adding UM orders to RIS, the data entry team sometimes mistakenly adds the wrong procedure to the order. The UM reviewer would previously have to modify the existing order via the Schedule Order screen because adding the correct procedure as an Alternative exam for a simple data entry error would skew the statistics. It is now possible for the reviewer to modify the ordered procedure from the Utilization Review screen.

The context menu on the Requested Procedure(s) grid on the Review Details tab has been enhanced to include both **Edit Procedure** and **Remove Procedure** menu items.



For the Remove Procedure option, the following logic is used to determine if the user can delete the procedure from the order.

1. If the procedure is the only one for the order, the user is prevented from removing it and prompted with "At least one procedure is required."
2. If the procedure being removed already has a study associated with it (has been scheduled or is further in the workflow), the user is prevented from removing it and is prompted with "The procedure you are deleting is currently in Scheduled status. Please notify the appropriate person to make adjustments to the appointment."

For the Edit Procedure option, similar logic applies. If the procedure being removed already has a study associated with it (has been scheduled or is further in the workflow), the user is prevented from removing it and is prompted with "The procedure you are deleting is currently in Scheduled status. Please notify the appropriate person to make adjustments to the appointment". Note that the word "Scheduled" will be replaced with the actual status of the study.

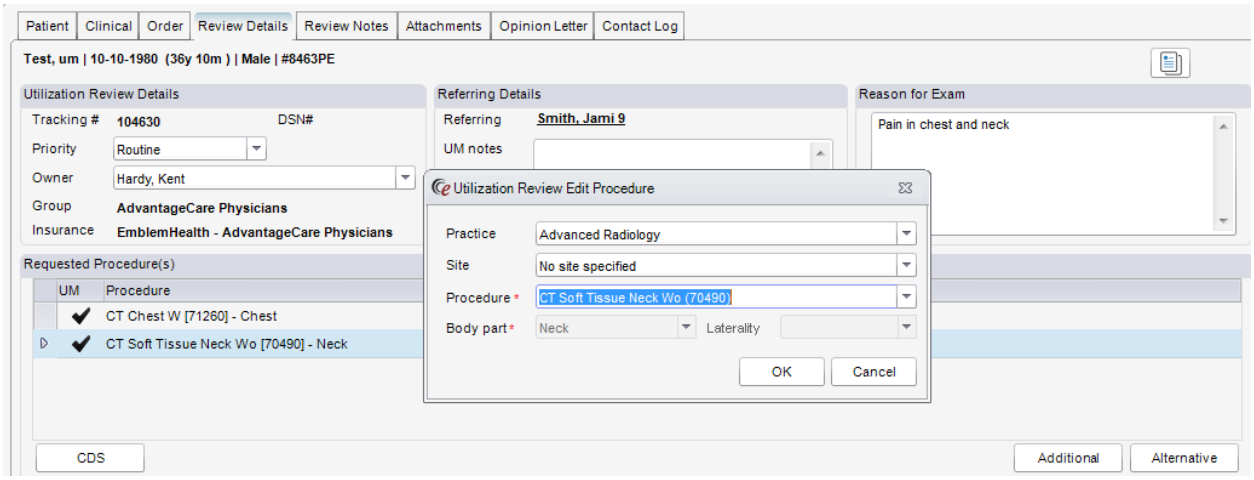
While adding the above logic to not adjust ordered procedures that have studies associated, it was decided to also prevent and display a message to the user for the following scenarios:

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

1. When specifying an alternative procedure for an order item that already has a study associated, the user is prompted with: “The procedure you are recommending an alternative to is currently in scheduled status. Please notify the appropriate person to make adjustments to the appointment.”
2. When removing an alternative procedure for an order item that already has a study associated, the user is prompted with: “The procedure you are deleting is currently in Scheduled status. Please notify the appropriate person to make adjustments to the appointment.”
3. When adding an additional procedure for an order that already has at least one study associated, the user is prompted with: “The order you are adding an additional procedure to has a procedure in scheduled status. Please notify the appropriate person to make adjustments to the appointment.”
4. When removing an additional procedure for an order item that already has a study associated, the user is prompted with: “The procedure you are deleting is currently in Scheduled status. Please notify the appropriate person to make adjustments to the appointment.”

If the above validation passes when editing a procedure, the user is presented with a procedure picker so he or she can modify the procedure and replace it at the order item level.



When selecting Remove Procedure, the user is prompted with “Are you sure you want to remove the procedure?” Selecting yes will delete the order item.

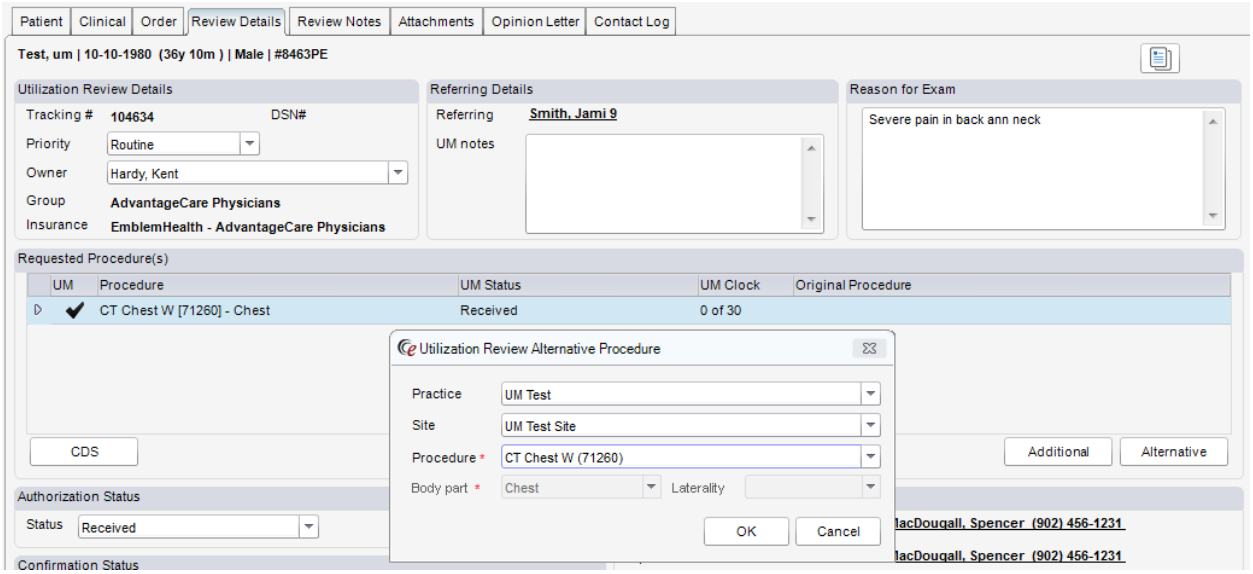
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

## 18169 - UM REVIEWERS CAN NOW CHOOSE ANY ACTIVE PROCEDURE, UNLIMITED BY THE CURRENT SITE'S SCHEDULE GROUP

When a UM Reviewer wishes to recommend an alternative procedure, or add an additional procedure, or edit the procedure, sometimes it is not a procedure that can be performed at the practice or site for which the order was created. Currently, there are some restrictions on what procedures are available in the dropdown when selecting Alternative or Additional procedures. The UM Reviewer should have access to any active procedure when choosing the procedure via UM workflow.

The utilization review procedure picker has been enhanced to include dropdowns for both Practice and Site. When editing the existing procedure or specifying an alternative procedure, the Procedure dropdown will default to the original ordered procedure.



If the user changes the Procedure dropdown to a procedure that cannot be performed at the site or practice specified with the order, he or she is prompted with "The selected procedure cannot be performed at this Site or Practice. Please select a new Practice and Site from the list."

If the user changes the Procedure dropdown to a procedure that cannot be performed at the site but is available at the practice specified with the order, he or she is prompted with "The selected procedure cannot be performed at this Site. Please select a new Site from the list."

The Practice and Site dropdowns are then filtered to present the user with only practices and sites that can perform the newly selected procedure. This is accomplished by comparing active procedure codes against the configured schedule groups.

When adding additional procedures, the reviewer is not limited by the practice and site selection and will not be prompted if the procedure cannot be performed.

# NEW CONFIGURATION SETTINGS

## SYSTEM CONFIGURATION SETTINGS

| Setting | Default | Purpose |
|---|---|---|
| UMDefaultCancelledReasonCode | N/A | (value = string) The default cancelled reason code for orders denied during the utilization review process. |
| UMDefaultGoldCardResolutionCode | N/A | (value = string) The default gold card utilization review resolution code. |
| UMDefaultGoldCardStatusCode | N/A | (value = string) The default gold card utilization review status code. |
| UMDefaultSTATResolutionCode | N/A | (value = string) The default STAT utilization review resolution code. |
| UMDefaultSTATStatusCode | N/A | (value = string) The default STAT utilization review status. |

## ACCESS STRINGS

| Setting | Default | Purpose |
|---|---|---|
| Clinical.OpinionLetter | Full | Controls access to the WL context menu Opinion Letter. |
| Clinical.OpinionLetter.Preview | Full | Controls access to the WL context menu Opinion Letter/Preview Opinion Letter. |
| Clinical.OpinionLetter.Print | Full | Controls access to the WL context menu Opinion Letter/Print Opinion Letter. |
| Clinical.OpinionLetter.Send | Full | Controls access to the WL context menu Opinion Letter/Send Opinion Letter. |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD.

## RESOLVED ITEMS

# eRAD RIS

| Redmine # | Subject |
|---|---|
| 18267 | Rejecting an addendum causes an 'object reference not set' exception. |
| 18132 | Some tables that have many updates will run out of identity values for large, high volume customers. |
| 18104 | UM Portal 'Get list of orders' stored procedure is not performance tuned. |
| 18078 | Poor system performance after updating to 2016.7.13. |
| 18042 | The EMR order is erroneously left active after using the 'existing orders prompt' and merging it into a new appointment. |

The following list contains bugs or features that have been resolved in “future” RIS versions and have been pulled back to this earlier version of eRAD RIS. Features are also described in the New Features section.

| Redmine # | Subject | Original Resolved Version |
|---|---|---|
| 18172 | UM Reviewers can now change the requested procedure. | 3.2017.6 |
| 18170 | RIS users can now preview and distribute the UM Opinion letter outside of the UM screen. | 3.2017.6 |
| 18169 | UM Reviewers can now choose any active procedure, unlimited by the current site's Schedule Group. | 3.2017.6 |
| 18168 | Automatically update Exam Status based on attributes of selected UM Status | 3.2017.6 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

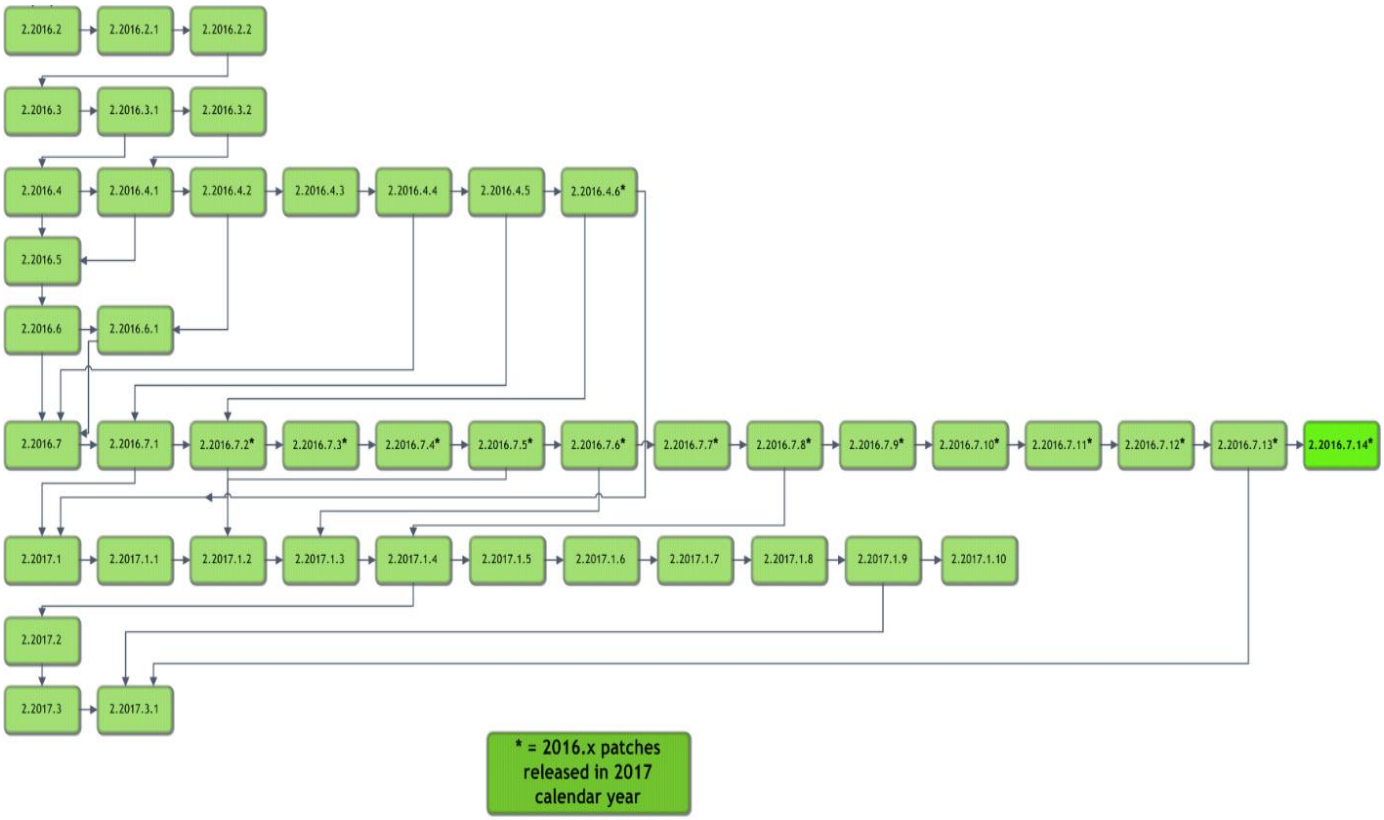
in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| 18167 | UM - If during scheduling a procedure is removed via the red or black X, the UM Required Flag is changed from Y to N. | 2.2017.5 |
| 18166 | Set default UM status and Resolution codes for Gold Card and STAT orders. | 2.2017.5 |
| 18107 | External interface getting backed up causing HL7 messages to be delayed. | 2.2017.5 |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

## CODE STREAM



**Legend:**

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD.

# INSTALLING

## CLIENT/GUI

Copy and replace the current rRIS…zip file with the eRAD_rRIS_2016.7.14.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## WEB SERVICE

This updated is only required for the Wedge Web Services. The Core RIS Service and Document Distribution Service are not required to be updated.

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 136 files in the rRISService folder and 9 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below). Folders ar (Arabic), he (Hebrew), pt_BR (Brazilian Portuguese) and es-AR (Argentina Spanish) are localization folders. The WedgePlugins folder contains various plugin files for RADAR, MIRTH, Ensemble, etc…

**Services Configuration Wizard**

With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, and services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

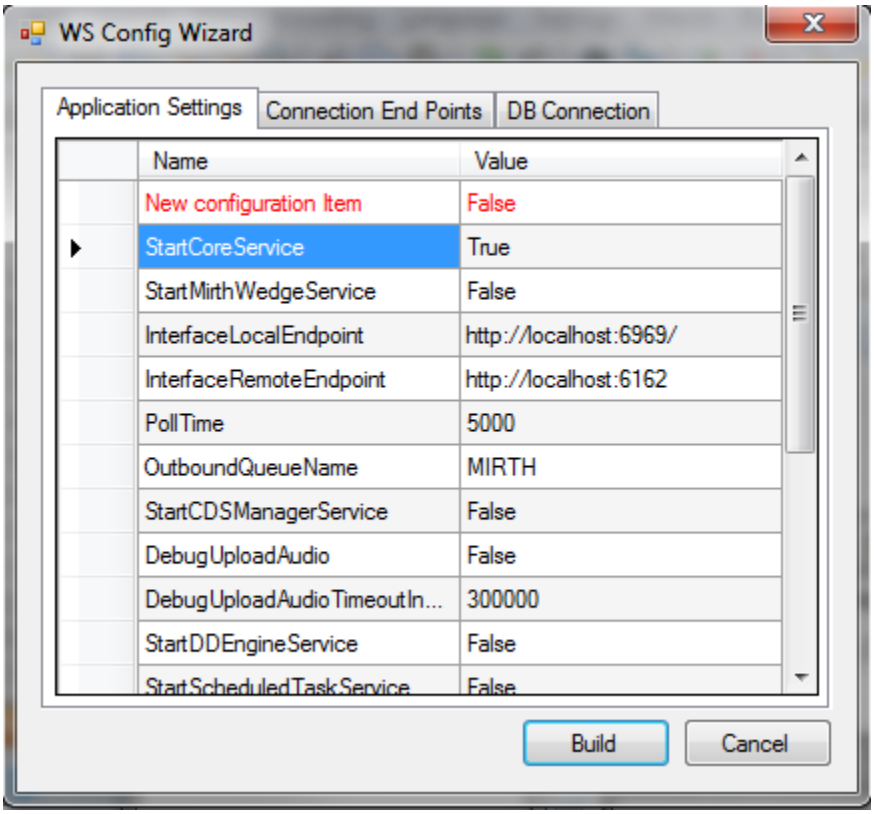
On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

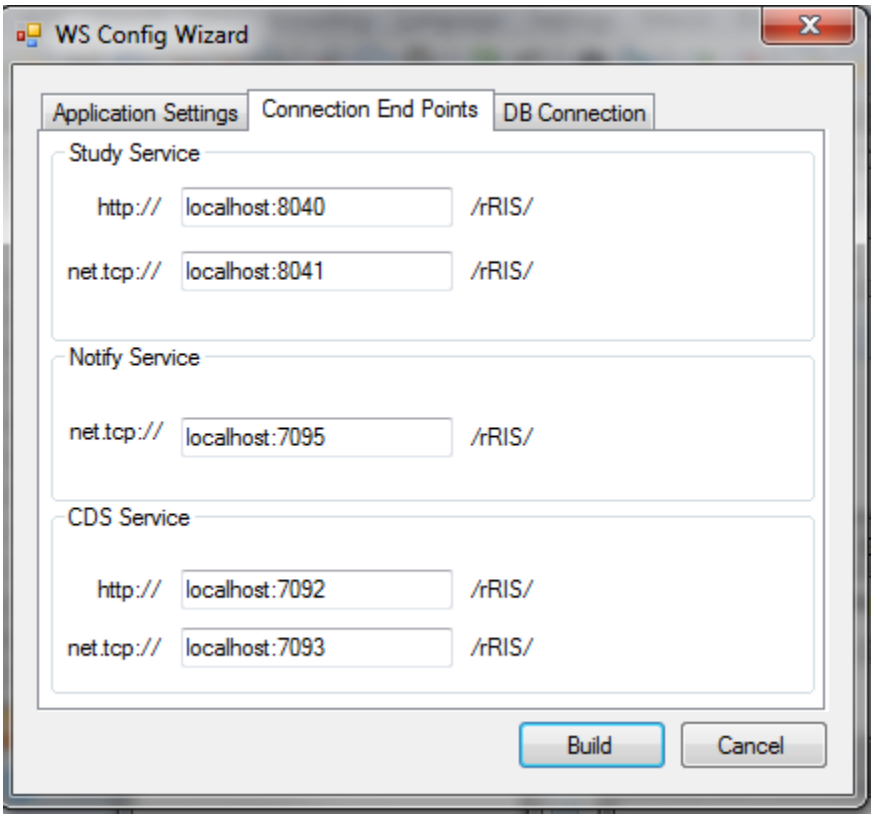
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of "Study Service" or "CDS Service" if both http and net.tcp were not provided then that endpoint will not be created at all.



## DATABASE UPDATES

Always run the upgrade scripts in a test environment of the actual database to make sure they run cleanly. If any errors occur please contact development.

*Note: There is a new upgrade process introduced with B43.1 called "RunUpgrade.bat". The batch file will open a command window. This process will prompt you for the database server name, database name and authentication credentials. There is no need to run the database upgrade scripts manually as was done in previous releases.*

1) From the upgrade folder, double click the "RunUpgrade.bat" command file.

2) Enter the server name, database name and authentication credentials to the database. You have 2 choices for authentication credentials.

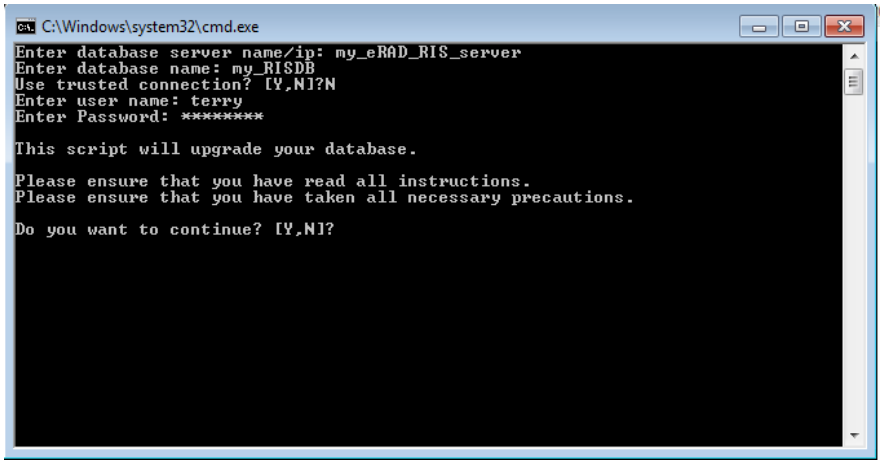
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

3) You can choose to use “Trusted connection”. Using this option will pass the identity of the currently logged on user. If this user has “db_owner” access to the eRAD RIS database then feel free to use this options.

4) If you decide not to use “Trusted connection” then you will be prompted for user id and password.

   Example:



5) After the upgrade program has finished you can find the upgrade logs in the “log” folder. The file name will be eRAD_RIS_db_upgrade_timestamp.log, where timestamp is a value representing the date and time the upgrade started. If you see any errors please contact the development team

## SUMMARY

Utilization Management (UM) in radiology is the evaluation of the medical necessity and appropriateness of a requested diagnostic procedure. It is also known as Utilization Review. The goal of UM is to choose the best imaging study for the patient and contain the costs of medical care. The Utilization Management module in RIS is designed to capture the contract specific rules for Utilization Management for each participating Medical Group and to provide feedback and responses to the Medical Group administrator and the ordering provider throughout the UM process.

eRAD RIS UM will allow utilization review to be performed seamlessly in the RIS application instead of depending on an external system.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

# UTILIZATION MANAGEMENT CONFIGURATION

This section will outline how to configure and build the eRAD RIS UM workflow.

## SYSTEM CONFIGURATION SETTINGS

The following system configuration values are related to eRAD RIS Utilization Management:

- UMEnabled – Determines if the UM workflow is enabled for the RIS instance (True/False).
- UMRoutineReview – The maximum number of UM hours for a routine exam.
- UMUrgentReview – The maximum number of UM hours for an urgent exam.
- UMStartOfDayMinutes – The start of day in minutes for calculating UM elapsed review time.
- UMEndOfDayMinutes – The end of day in minutes for calculating UM elapsed review time.
- UMBypassSTAT – Determines if utilization review is performed on STAT orders (True/False).
- UMTrackingNumberPrefix – A prefix that will be added to the new UM Authorization/Tracking numbers.
- UMOpinionLetterReportPath – The path and name of the UM Authorization/Opinion Letter.
- UMDefaultRecommendedStatusCode – The default UM status when recommending a procedure.
- UMDefaultAdditionalResolutionCode – The default UM resolution when recommending an additional procedure.
- UMDefaultAlternativeResolutionCode – The default UM resolution when recommending an alternative procedure.
- UMExpirationDays – The number of days until the utilization review expires.
- UMAlertFromEmail – The sender email address used for UM Alerts.
- UMAlertFromName – The sender email name used for UM Alerts.
- UMAlertReportPath – The path and name of the UM Alert SSRS Template.
- PortalOpinionLetterUnavailableMessage – The message to display to the web portal user when the report is not available due to unexpected error (e.g. the SSRS report server is unavailable or not configured).
- UMPDefaultOrderTabCriteria – JSON value to define default filter tab view criteria for the UM portal Orders tab.
- UMPNewAccountRequestMessageGroup – The message group to which New Account requests would be sent. If no message group is defined, then an email will be sent to the configured Portal's “send to” email address.
- UMPScanDocumentType - A list of scanned document type codes (comma separated) that will be included in the available scanned documents to display in the UM Portal.
- UMPSystemCode – A value to identify the default system code for the UM Portal. The value must match a value in the l_created_by_system look-up table.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## LOOK-UP TABLES

The following look-up tables are utilized to build and customize the UM workflow in eRAD RIS:

**UM Status** – The main UM Statuses are configured here. The UM Status will determine if the procedure can proceed to be scheduled.

| Um Status Code | Description | Form Content | Final Flag | Display Order | Schedule Flag | Initial Flag | Last Updated | Active |
|---|---|---|---|---|---|---|---|---|

## ACCESS STRINGS

The following access strings are related to eRAD RIS Utilization Management:

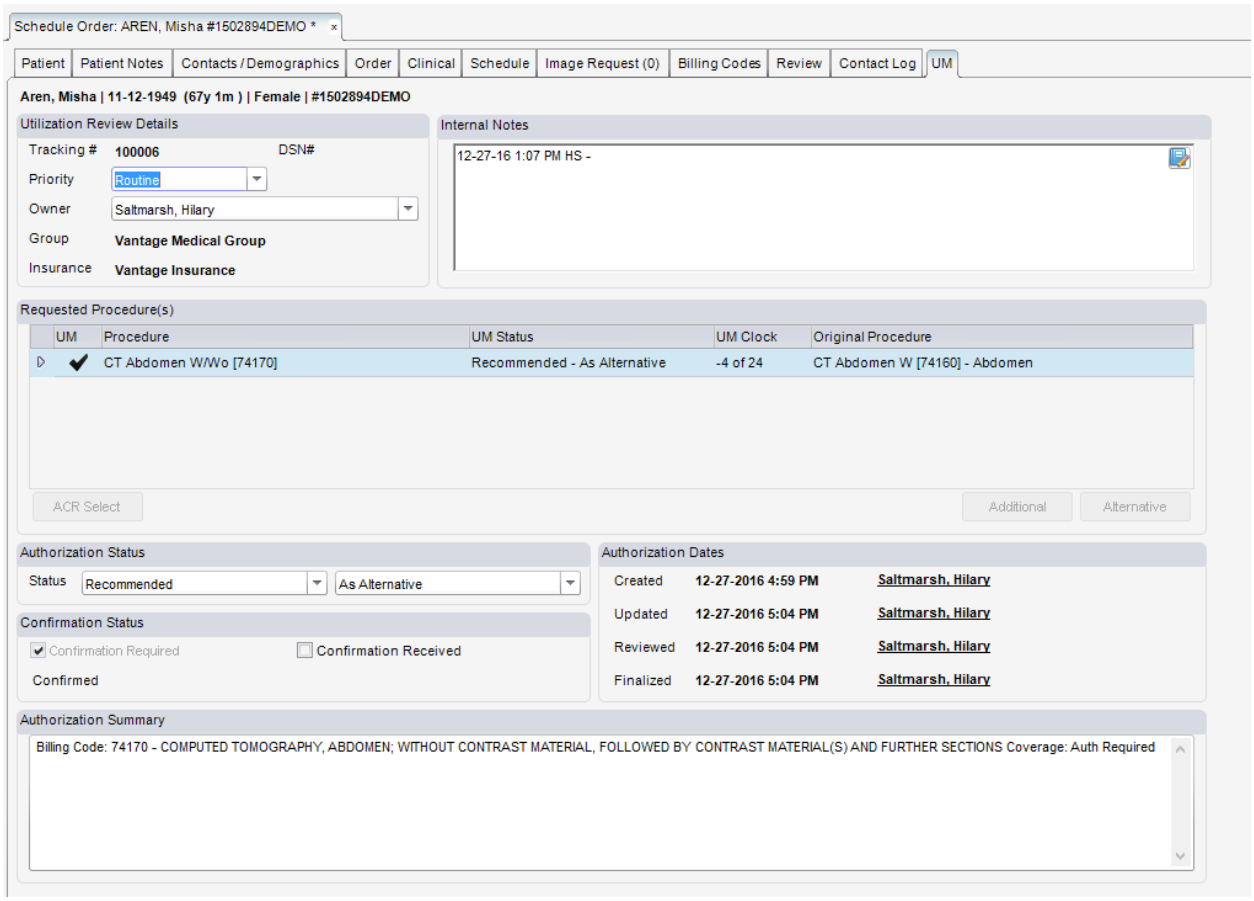
- Clinical.UtilizationManagement – Access to the Utilization Review right-click menu option on a worklist.
- WL.UtilizationManagement – Access to the Utilization Management Worklist on the Administration menu.
- Clinical.UtilizationManagement.InternalNotes – Access to utilization review Internal Notes. These notes are typically only viewed by the Utilization Management department.
- Clinical.UtilizationManagement.ScheduleOverride – Allows a user to override utilization review and proceed to schedule the order.
- Clinical.ACRSelect – Access to use the ACR Select functionality from the Utilization Review screen.
- Flag.UMComplete – Access to see the flag for UM Complete.
- Flag.UMRequired – Access to see the flag for UM Required.
- Portal.UM – Access to the UM Connect Portal.
- Portal.UM.Admin – Access to the UM Connect Portal Administration Login.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

# UTILIZATION MANAGEMENT RIS WORKFLOW

## DETERMINING IF AN ORDER REQUIRES UTILIZATION REVIEW

Once configured, eRAD RIS UM has the ability to automatically determine which orders are required to be reviewed by the utilization management department. This is realized by looking at the primary insurance of the patient along with the CPT codes associated with the requested procedure(s). Typically, authorization requests will come into the Inbound Document workflow as a fax. If an order does require utilization review, this is clearly indicated to the RIS user by the appearance of a UM tab on RIS forms.

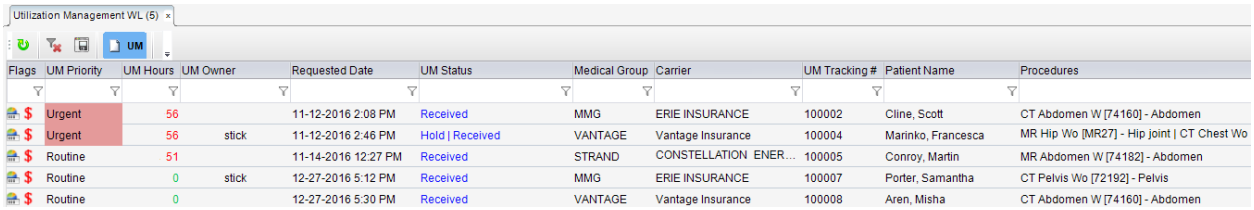


The typical RIS user would see the UM tab in a read-only format. This will allow him or her to see where the order is in the utilization review process.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

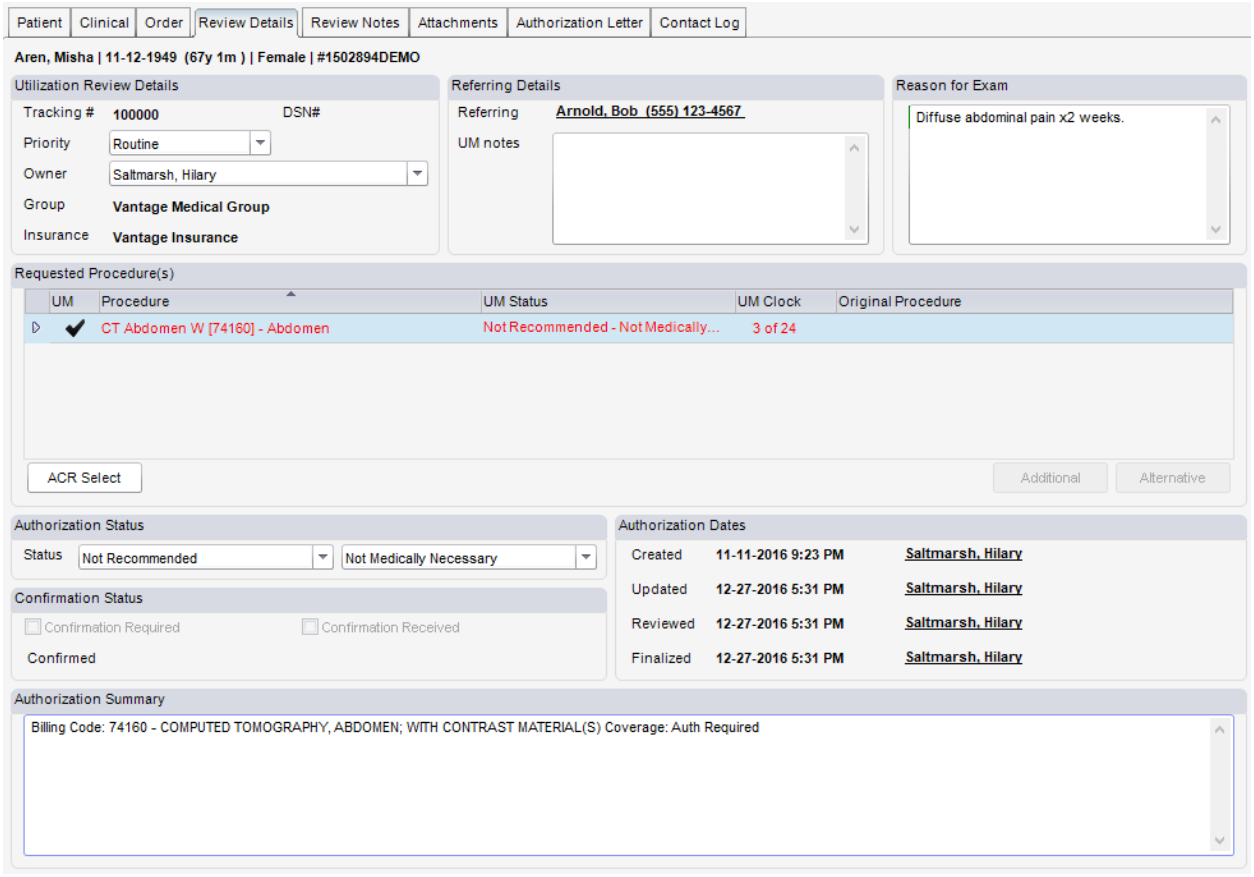
## REVIEWER WORKFLOW

If eRAD RIS determines that an order requires utilization review, the UM Required Flag is enabled, a UM Tracking Number is assigned to the order, the requested procedure(s) is set to an initial UM Status such as Received, the UM Clock is started, and the order is pushed to the Utilization Management Worklist.



| Flags | UM Priority | UM Hours | UM Owner | Requested Date | UM Status | Medical Group | Carrier | UM Tracking # | Patient Name | Procedures |
|---|---|---|---|---|---|---|---|---|---|---|
| | Urgent | 56 | | 11-12-2016 2:08 PM | Received | MMG | ERIE INSURANCE | 100002 | Cline, Scott | CT Abdomen W [74160] - Abdomen |
| | Urgent | 56 | stick | 11-12-2016 2:46 PM | Hold \| Received | VANTAGE | Vantage Insurance | 100004 | Marinko, Francesca | MR Hip Wo [MR27] - Hip joint \| CT Chest Wo |
| | Routine | 51 | | 11-14-2016 12:27 PM | Received | STRAND | CONSTELLATION ENER... | 100005 | Conroy, Martin | MR Abdomen W [74182] - Abdomen |
| | Routine | 0 | stick | 12-27-2016 5:12 PM | Received | MMG | ERIE INSURANCE | 100007 | Porter, Samantha | CT Pelvis Wo [72192] - Pelvis |
| | Routine | 0 | | 12-27-2016 5:30 PM | Received | VANTAGE | Vantage Insurance | 100008 | Aren, Misha | CT Abdomen W [74160] - Abdomen |

The eRAD RIS Utilization Review screen allows a reviewer to make his or her assessment of the ordered procedure(s) to determine if it is clinically appropriate and medically necessary. This is accomplished by setting the Authorization or UM Status. Once the procedure is set to a final UM Status, the UM Clock is stopped and the utilization review process is complete.

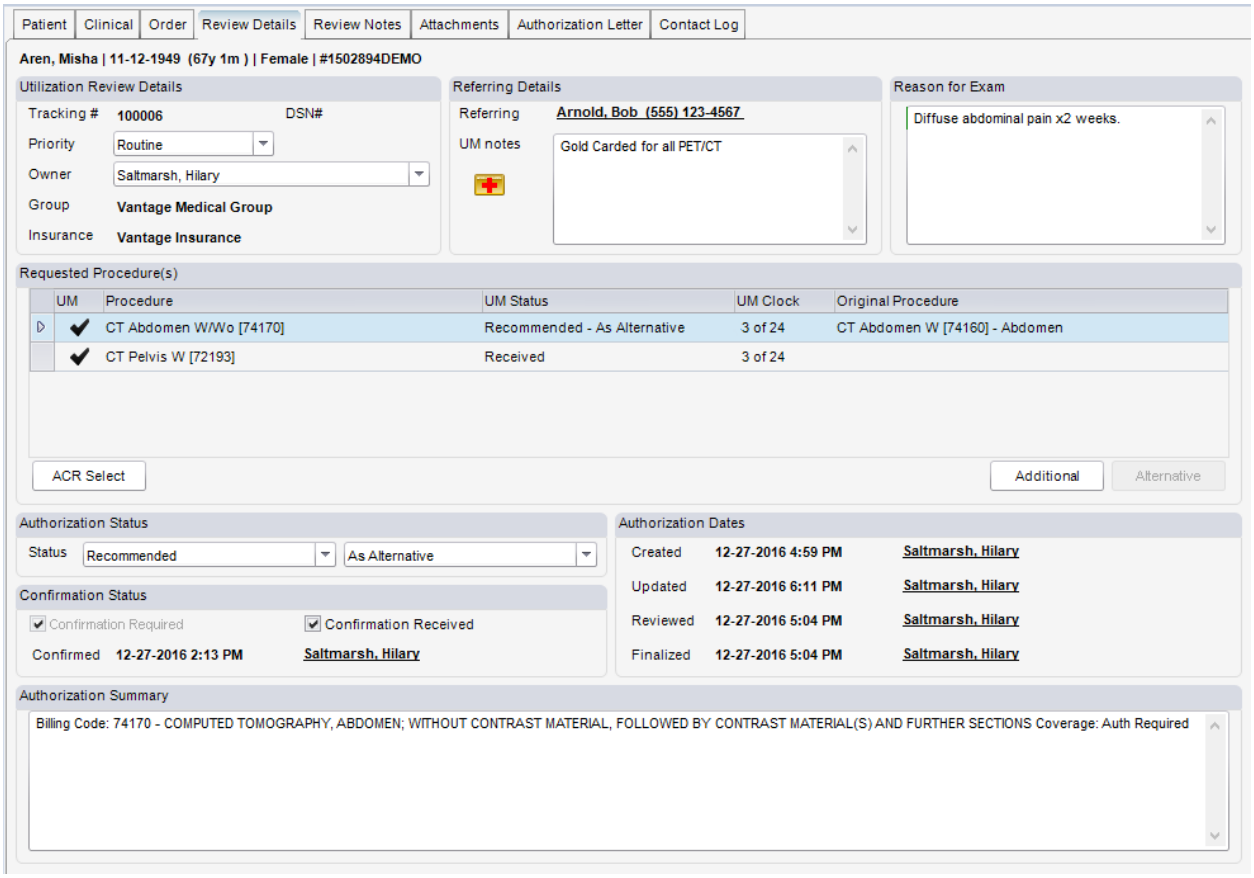


From the Utilization Review screen, reviewers are able to recommend both additional and alternative procedures. For example, the referring physician may order a CT of the Lumbar Spine but, based on appropriateness criteria,

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

the reviewer may determine that an MR of the Lumbar Spine would be the better procedure for the patient. The reviewer also has the ability to recommend an *additional* procedure. For example, based on the results of the review, the reviewer may determine that an MR Pelvis should be performed in addition to the MR Lumbar Spine.

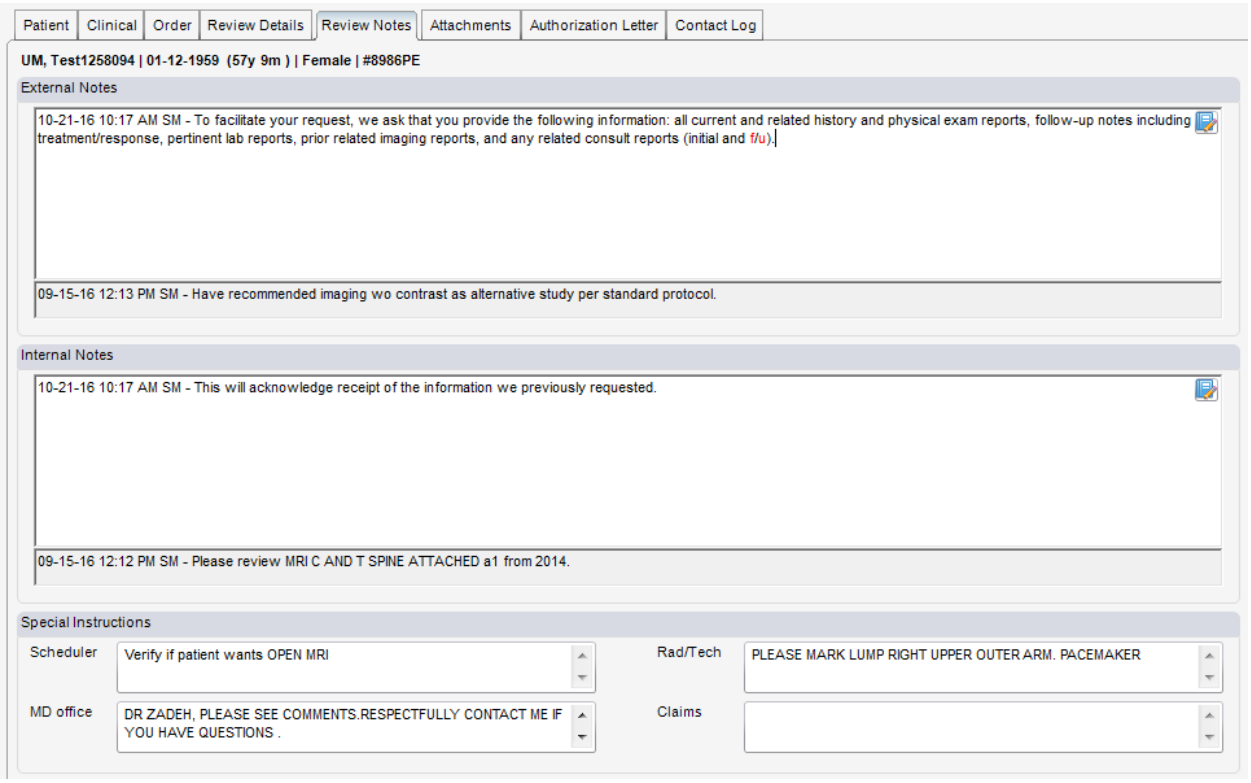
If confirmation from the referring physician is required for additional and/or alternative procedures, this can be configured in the UM Resolution look-up table. If applicable, RIS will set the confirmation required flag for the ordered procedure. Once confirmation has been received, the Confirmation Received checkbox is checked and the review is finalized.



The UM Clock is used to track the turnaround time for the utilization review. It is based on a configurable workday (e.g. 10 hours). RIS can be configured to indicate what the allowable UM review hours are for both Urgent and Routine priorities. For example, a UM Clock showing 3 of 24 means that 3 hours have elapsed on the allowable 24.

The Utilization Review screen allows the reviewer to create notes to which are visible to relevant parties throughout the review process. For example, the External Notes are typically between the reviewer and the ordering physician while Internal Notes are seen by the UM Department only. eRAD RIS also supports allowing the reviewer to create notes containing instructions to the radiologist, technologist, and scheduler to ensure all recommendations based on the review are followed.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

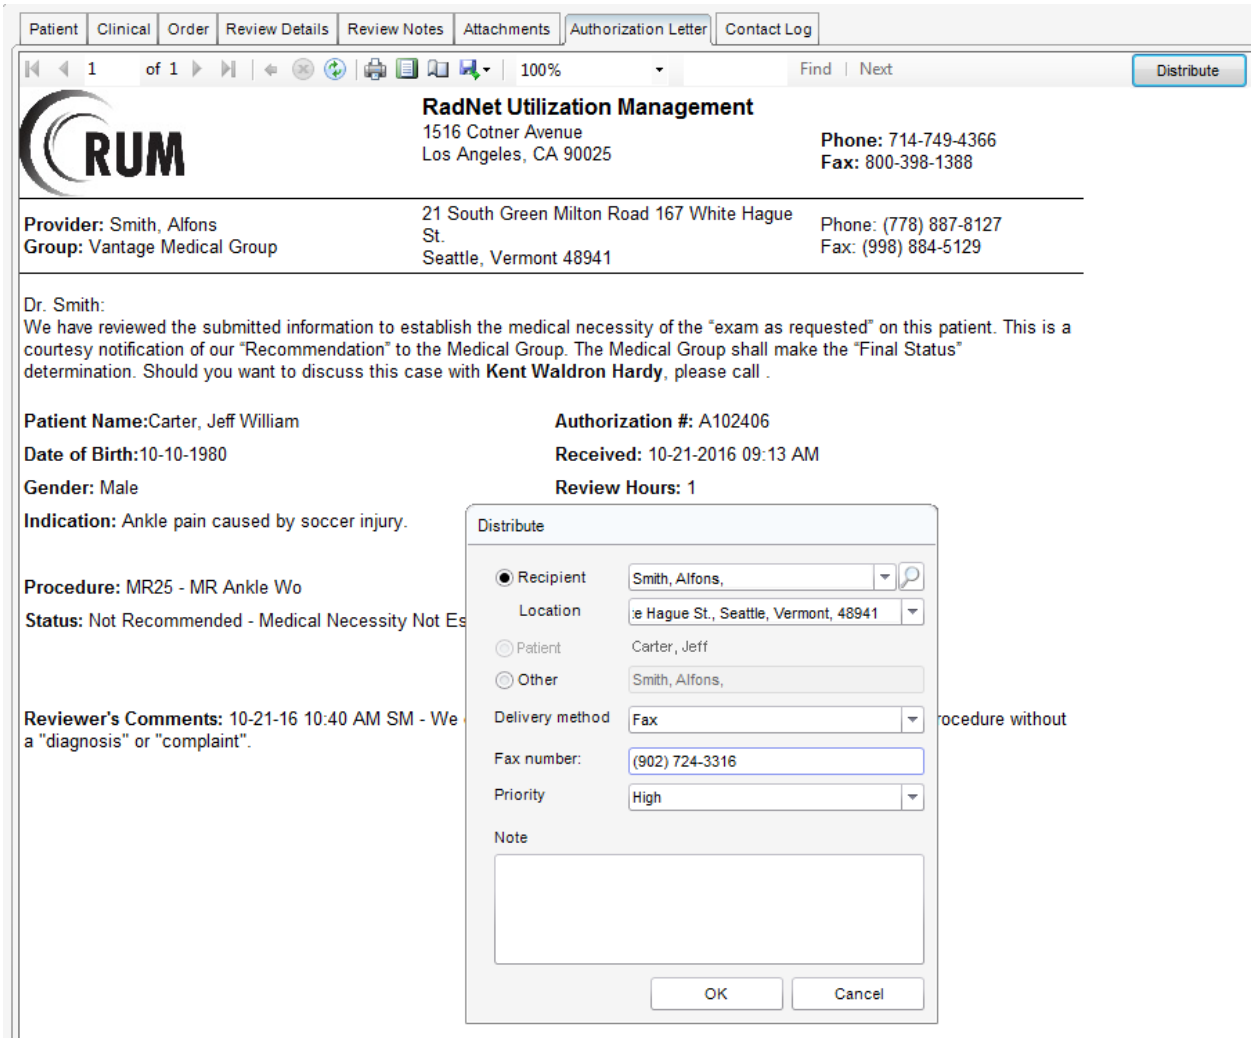


No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## AUTHORIZATION LETTER PREVIEW AND DISTRIBUTION

eRAD RIS UM has the ability to generate and distribute a customizable authorization letter. It is up to the reviewer to decide when it is appropriate to send the letter and this can be done at any time throughout the review process. Quite often a letter will be distributed requesting additional clinical information before the review is finalized.

The distribute dialog will refer to the default delivery method of the ordering provider. This action will place the document on the Distribution Worklist with a document type of Authorization Letter.

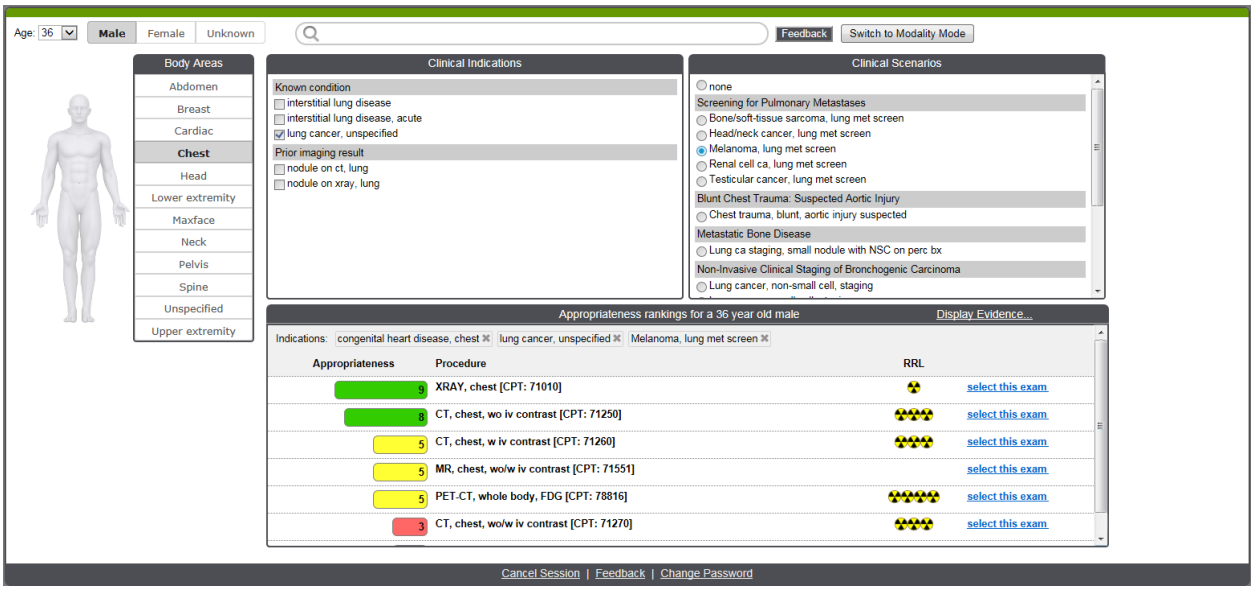


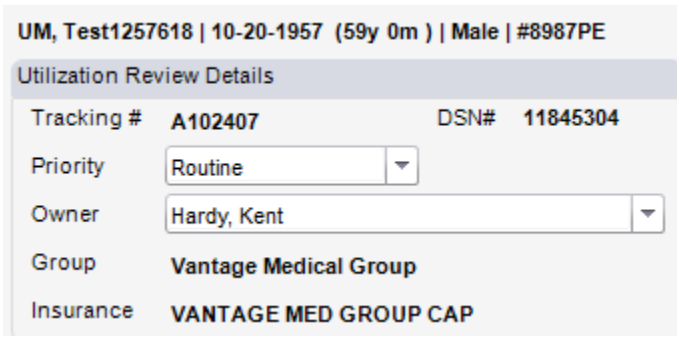
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## ACR SELECT

eRAD RIS UM supports integration with the National Decision Support Company's ACR Select. ACR Select utilizes Appropriate Use Criteria (AUC) to determine the most appropriate procedure. By selecting the ACR Select button on the Review Details tab, the reviewer is able to launch ACR Select and pass in both the age and gender of the patient. The reviewer then selects one or more clinical indications and clinical scenarios. ACR Select will return a list of procedures ranked by appropriateness. The appropriate use criteria are available to the reviewer by clicking on the Display Evidence link.

Once as exam is selected, a Decision Support Number (DSN) is generated and stored with the order in eRAD RIS. The DSN proves that a Clinical Support System was consulted for the order.





No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## UM ALERTS

UM Alerts provide the ability to notify the Medical Group via fax or email when an authorization has been distributed and is in a specified UM Status. For example, a medical group administrator may request that he or she be alerted for all procedures that are Not Recommended or Recommended as Alternative.

For fax alerts, the medical group is sent a carbon copy of the authorization letter when it is distributed to the ordering provider. Email alerts are configurable via an SSRS template.

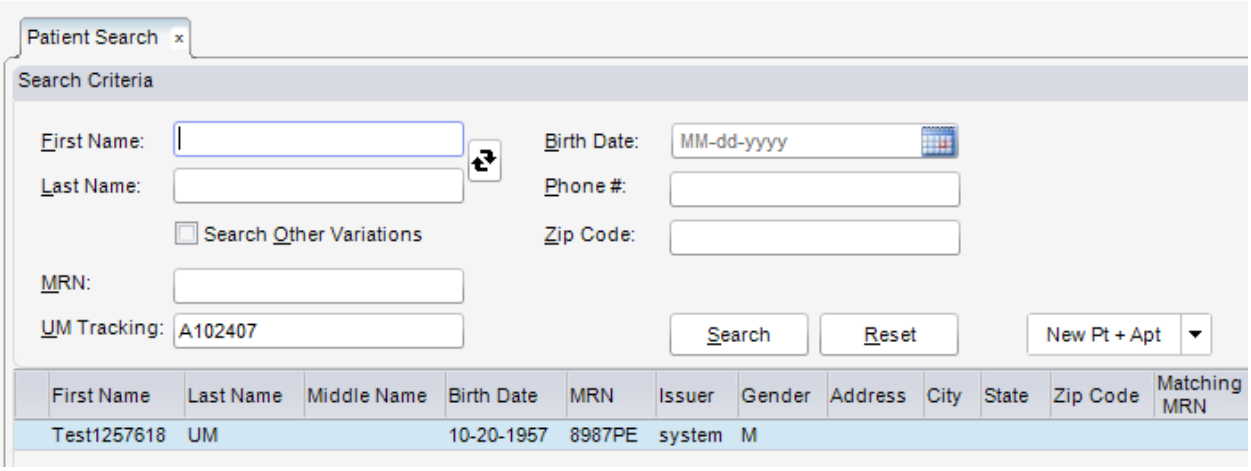
| Exam Requested: | MR Cervical Spine Wo |
| Status: | Not Recommended - Medical Necessity Not Established |

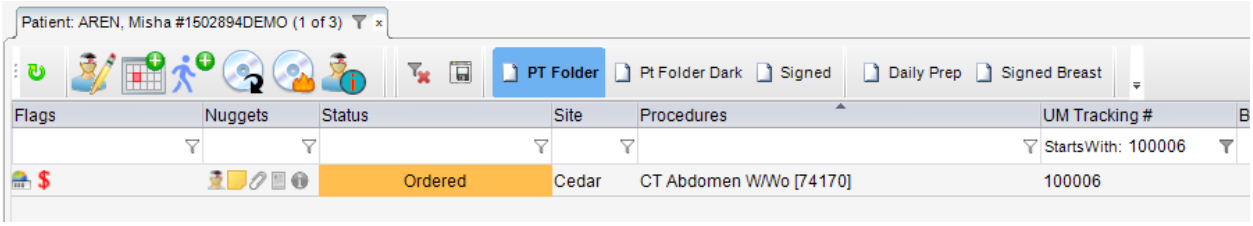
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## SEARCHING BY UM TRACKING NUMBER

The UM Tracking Number has been added to the list of search criteria in eRAD RIS.



It is also available as a column in the Patient Folder and can be filtered to find UM exams for an individual patient.

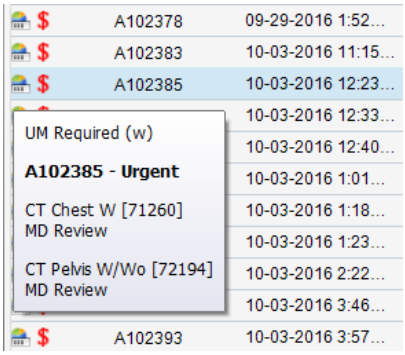


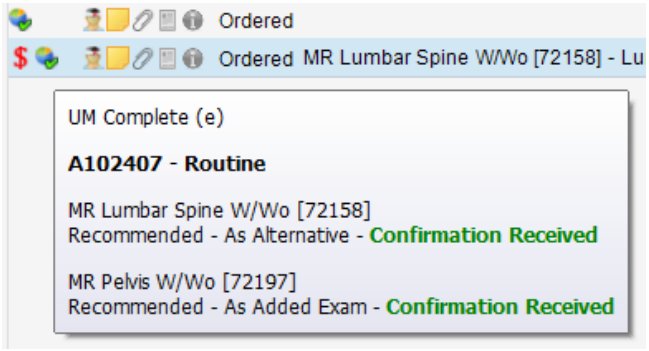
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## UTILIZATION MANAGEMENT AND SCHEDULING

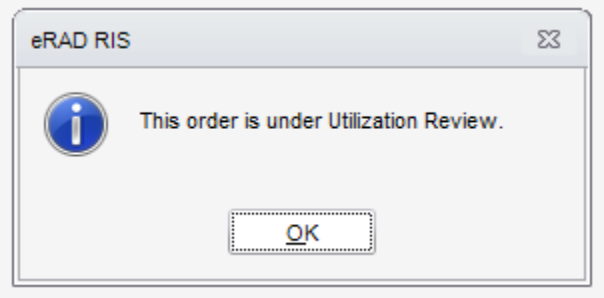
During a typical utilization management process, the diagnostic procedure will not be scheduled until the utilization review is finalized. Having both UM and scheduling integrated into the same environment allows for a much smoother transition between workflow with much less time spent monitoring an external system.

The UM Required Flag will give a clear indication to RIS users that the order is currently with the UM department and has yet to be finalized. The UM Complete Flag is enabled for the order once all the ordered procedures that require review have reached a Final UM Status. Both of these flags have additional UM details available on the hover value.





When a user attempts to schedule an order that is still under utilization review, he or she is presented with a message stating "This order is under Utilization Review." The user can still advance to the schedule screen and the UM tab is available but both the Room Search and Schedule buttons will be disabled unless the Clinical.UtilizationManagement.ScheduleOverride access string is set to Full for the user. Determining if an ordered procedure that requires utilization review can proceed to be scheduled is based on the Schedule Flag of the UM Status, as configured in the UM Status look-up table. For example, a status of Recommended can proceed to be scheduled where a status or Not Recommended cannot.



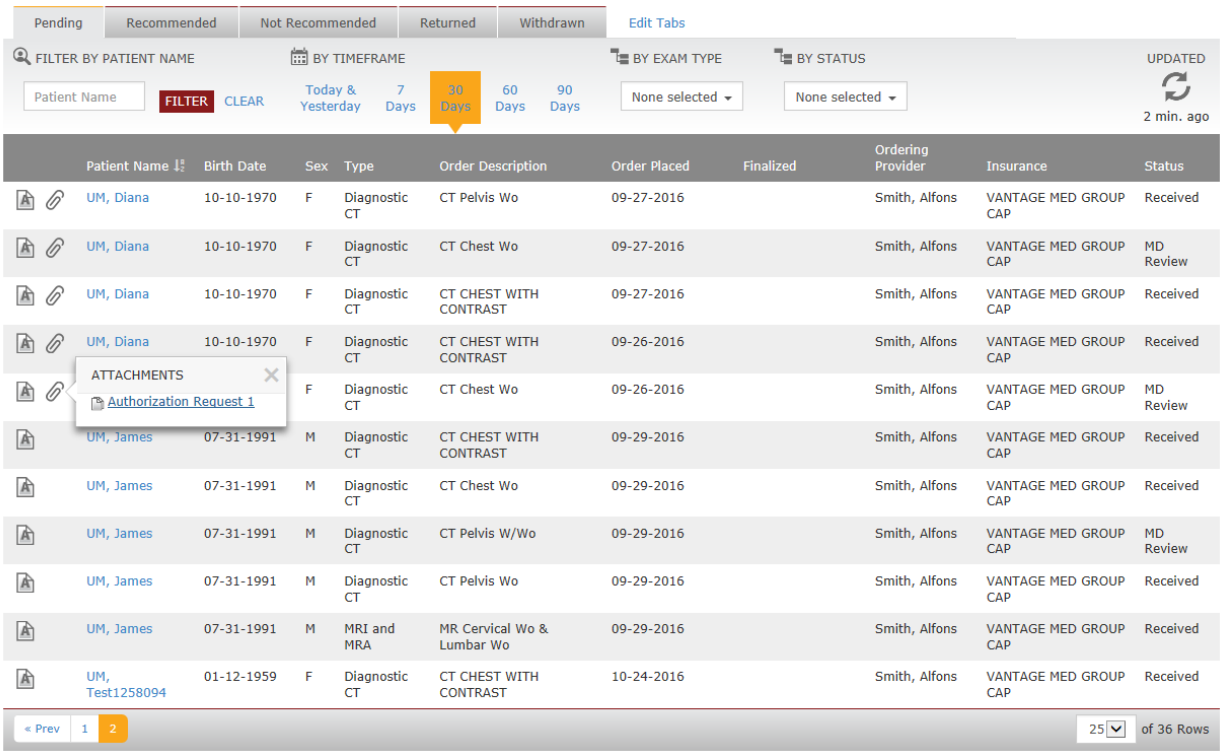
As mentioned previously, if confirmation is required from the ordering provider, the procedure cannot be scheduled until confirmation has been received. Once confirmation has been received, RIS will adjust the ordered procedure accordingly. For example, if the original request is for a CT Chest and utilization review determines that an MR Chest would be more appropriate, it is the MR Chest that the scheduler would see in the Procedure Picker. The CT Chest is stored in the database as the original procedure.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## UM CONNECT PORTAL

The UM Connect Portal provides the ability for users external to the RIS to view and interact with the utilization review process. This includes medical group administrators and ordering providers. UM Connect users are setup in the RIS application, mapped to one or more medical groups, and given a contact type code such as Provider or Group Admin. Only orders that belong to the medical group(s) based on the user's mapping will be presented and searchable.

The tab based layout of the UM Connect portal is configurable. For example, tabs can be defined by UM Statuses such as Pending, Recommended, Not Recommended, etc. From the defined worklists, the user is easily able to view the UM Status of the order. The user can also view any attachments associated with the order and preview the UM Opinion/Authorization Letter.



| Patient Name | Birth Date | Sex | Type | Order Description | Order Placed | Finalized | Ordering Provider | Insurance | Status |
|---|---|---|---|---|---|---|---|---|---|
| UM, Diana | 10-10-1970 | F | Diagnostic CT | CT Pelvis Wo | 09-27-2016 | | Smith, Alfons | VANTAGE MED GROUP CAP | Received |

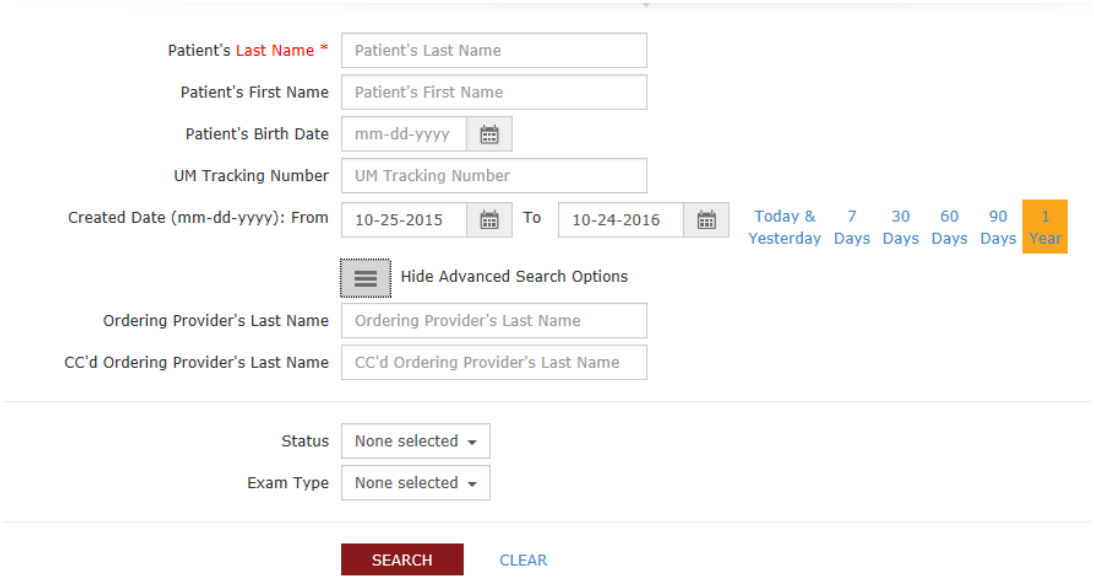
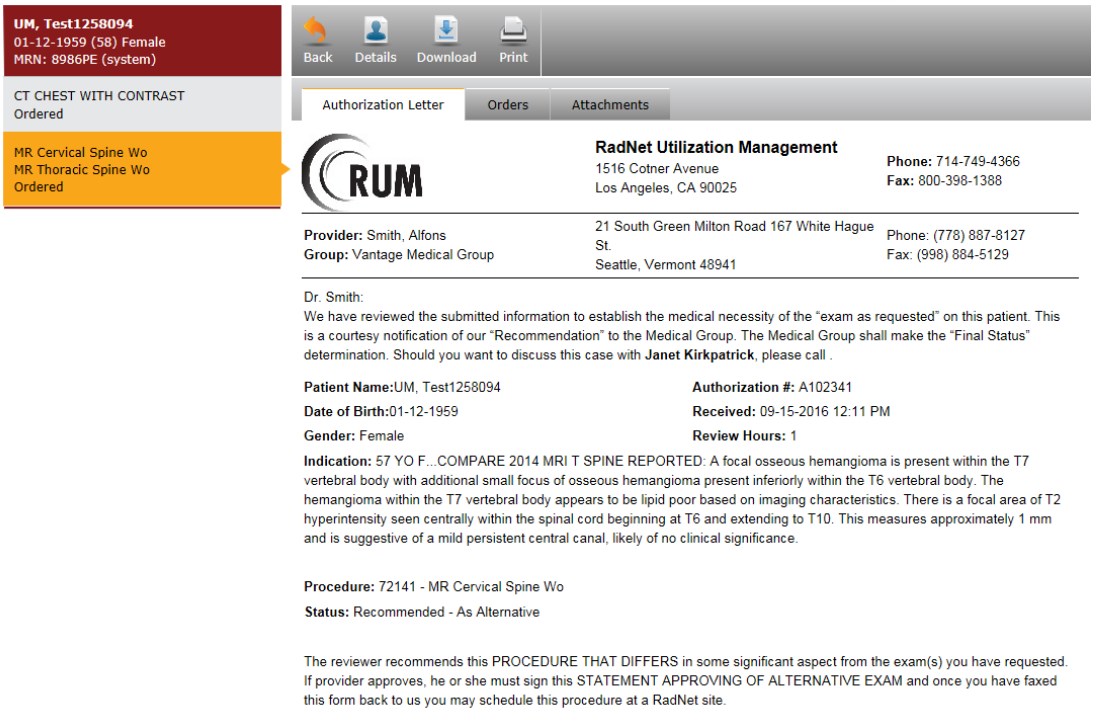
| UM, James | 07-31-1991 | M | Diagnostic CT | CT CHEST WITH CONTRAST | 09-29-2016 | | Smith, Alfons | VANTAGE MED GROUP CAP | Received |
| UM, James | 07-31-1991 | M | Diagnostic CT | CT Chest Wo | 09-29-2016 | | Smith, Alfons | VANTAGE MED GROUP CAP | Received |
| UM, James | 07-31-1991 | M | Diagnostic CT | CT Pelvis W/Wo | 09-29-2016 | | Smith, Alfons | VANTAGE MED GROUP CAP | MD Review |
| UM, James | 07-31-1991 | M | Diagnostic CT | CT Pelvis Wo | 09-29-2016 | | Smith, Alfons | VANTAGE MED GROUP CAP | Received |
| UM, James | 07-31-1991 | M | MRI and MRA | MR Cervical Wo & Lumbar Wo | 09-29-2016 | | Smith, Alfons | VANTAGE MED GROUP CAP | Received |
| UM, Test1258094 | 01-12-1959 | F | Diagnostic CT | CT CHEST WITH CONTRAST | 10-24-2016 | | Smith, Alfons | VANTAGE MED GROUP CAP | Received |

The search capabilities of UM Connect will allow the user to search by a number of different criteria including patient name, birth date, provider, UM Tracking Number, and UM Status. The results are limited to only orders that belong to the medical groups to which the UM Connect user is mapped. This is based on the primary insurance of the order.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



The Authorization Letter, Order information and Attachments are available for each of the patient's UM Orders.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## PURPOSE

This is the Customer Release Notes document for eRAD RIS Version 2.2017.1.

Not every feature will be described in this document. Typically, only features which can be visually demonstrated are outlined here.

## INTENDED AUDIENCE

This document was created by the eRAD RIS Development team and Product Management team for eRAD RIS customers.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

# NEW SETTINGS

## NEW ACCESS STRINGS

| Setting | Default | Purpose |
|---|---|---|
| Config.LookupEditor.GenderIdentity | None | Look-up table access for Gender Identity |
| Config.LookupEditor.SexualOrientation | None | Look-up table access for Sexual Orientation |
| Config.LookupEditor.StudyUpdateResponseInclusions | None | Look-up table access for Study Update Response Inclusions access |
| Flag.ContrastRequested | Full | Access to see the flag for ContrastRequested |
| Flag.SedationRequired | Full | Access to see the flag for SedationRequired |
| View.FindingFollowup<br><br>Replaces<br><br>View.FindingsFollowup | None | Access to see the Finding Followup menu item from View menu (visible when dictate window is open) |
| View.Preset.Administration.PresetCriticalResult | None | Access to preset layout administration for Critical Results |
| View.PresetCriticalResult | Full | Access to see the main menu item View/LoadLayout.../Critical Results |
| ~~WL.MyFolder~~ | | Removed duplicate access string. Remaining access string is WL.Folders. |

## NEW SYSTEM CONFIGURATION SETTINGS

| Setting | Default | Purpose |
|---|---|---|
| UMOpinionLetterReportPath<br><br>Replaces<br><br>AuthorizationLetterReportPath | | (value = path and name)The path and name of the Opinion Letter for Utilization Management. |
| UMTrackingNumberPrefix<br><br>Replaces<br><br>AuthorizationPrefix | | (value = string) A prefix that will be added to UM Tracking numbers for Utilization Management. |
| AddUseLocationFilterToWorklistSiteGroups | True | (value = True/False) Determines if the list of |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| | | sites/site groups on some worklists will include an option to use the location filter. |
| AllowPeerReviewOnInactiveRads | True | Determines if a case read by a now inactive radiologist can be peer reviewed. |
| DaysToKeepImageRequestActive | 0 | (value = int) The number of days to keep a request on the Image Request Worklist before automatically cancelling it. It will be based on the scheduled date or the image request date whichever is greater. A value of 0 will disable the automatic cancellation. |
| DaysToKeepWedgeInboundMessages | 7 | (value = number) This value informs the nightly cleanup job how many days old a Wedge inbound message log entry must be before removing it. |
| DaysToKeepWedgePerformanceTraceLogs | 3 | (value = number) This value informs the nightly cleanup job how many days old a Wedge inbound or outbound performance log entry must be before removing it. |
| ExternalReportsOnPendingDictationWL | False | (value = Y/N) This value determines whether external report verification studies go to the Pending Dictation worklists. If False, they will go to the Pending Signature worklists. Changes to this setting only apply to new studies. A maintenance script exists for system administrators to back-fill existing studies. |
| PortalOpinionLetterUnavailableMessage<br><br>**REPLACES**<br><br>PortalAuthLetterUnAvailableMessage | This opinion letter is currently unavailable on the portal. Please contact the medical group to request the letter. | The message to display to the UM Connect portal user when the Utilization Management Opinion Letter is not available due to unexpected error (e.g. SSRS report server is unavailable or not configured). |
| PortalNoSelectedInsuranceDayPadding | 5 | (value = int) This value is used by Portal online scheduling to add days to the start search criteria to allow time to gather insurance information from the patient prior to the appointment when it is not entered at the time of scheduling. |
| WedgeDuplicateInboundMessagePreventio n | False | (value = bool) If true, we will prevent two messages with the same unique ID from processing twice. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

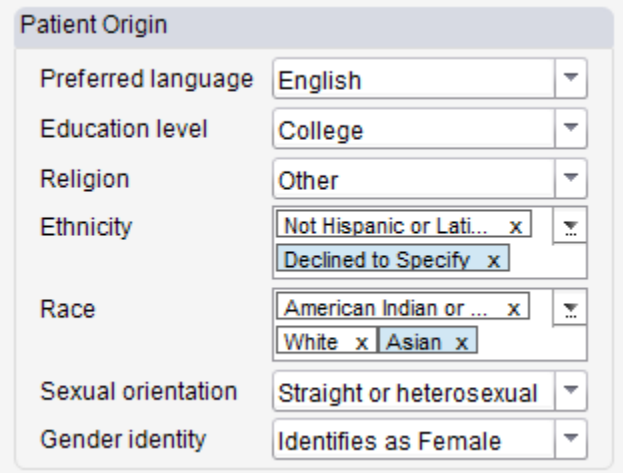
# NEW FEATURES

## SCHEDULING AND REGISTRATION

### FEATURE #13650 – DEMOGRAPHIC UPDATES FOR PATIENT TAB

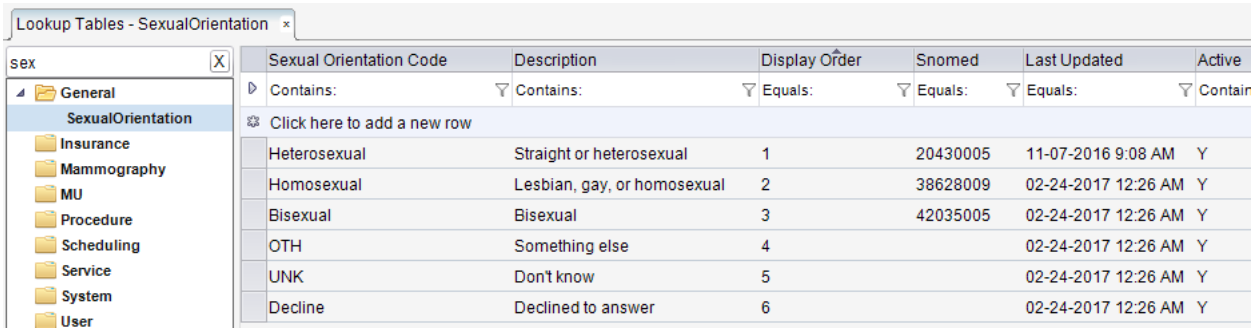
In preparation for the latest round of Certified Electronic Health Record Technology (CEHRT) certification, it was necessary to make some changes to the patient demographics on the Patient tab. The following changes have been made:

1. It is now possible to select more than one Ethnicity.
2. New fields have been added for *Sexual Orientation* and *Gender Identity*.

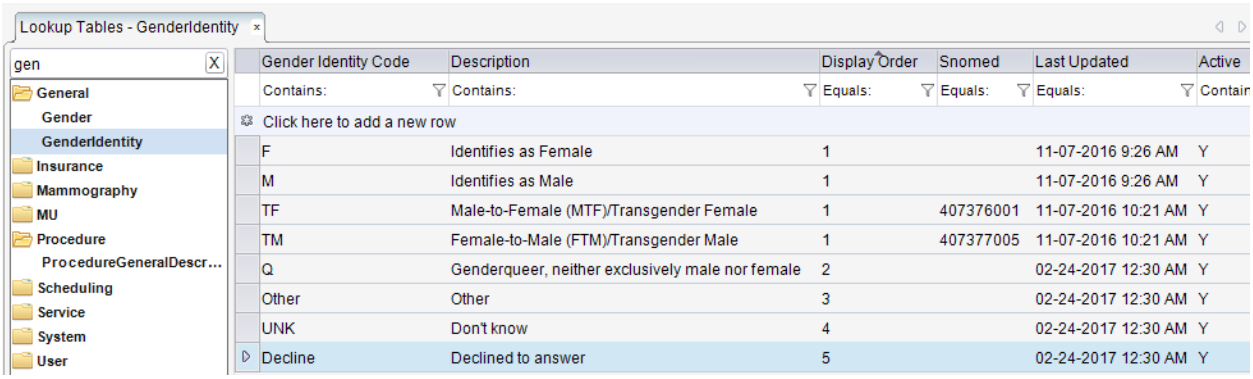


While it is required for certified electronic health technology to have the ***ability*** to collect the sexual orientation and gender identity information, it is likely that most customers will not wish to collect this data. Therefore, these new fields have been **hidden** by default. Please contact eRAD Support if you would like to make these fields visible.

When enabled, the *Sexual Orientation* and *Gender Identity* dropdown fields are populated by two new look-up tables.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



| Gender Identity Code | Description | Display Order | Snomed | Last Updated | Active |
|---|---|---|---|---|---|
| Contains: | Contains: | Equals: | Equals: | Equals: | Contain |
| Click here to add a new row | | | | | |
| F | Identifies as Female | 1 | | 11-07-2016 9:26 AM | Y |
| M | Identifies as Male | 1 | | 11-07-2016 9:26 AM | Y |
| TF | Male-to-Female (MTF)/Transgender Female | 1 | 407376001 | 11-07-2016 10:21 AM | Y |
| TM | Female-to-Male (FTM)/Transgender Male | 1 | 407377005 | 11-07-2016 10:21 AM | Y |
| Q | Genderqueer, neither exclusively male nor female | 2 | | 02-24-2017 12:30 AM | Y |
| Other | Other | 3 | | 02-24-2017 12:30 AM | Y |

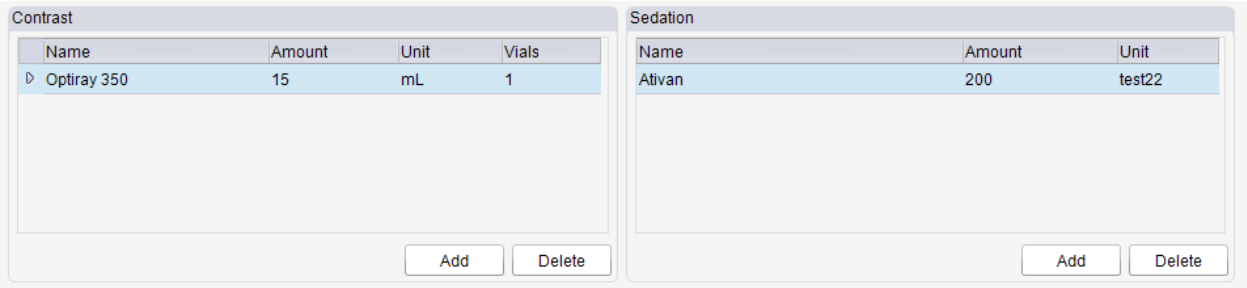
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

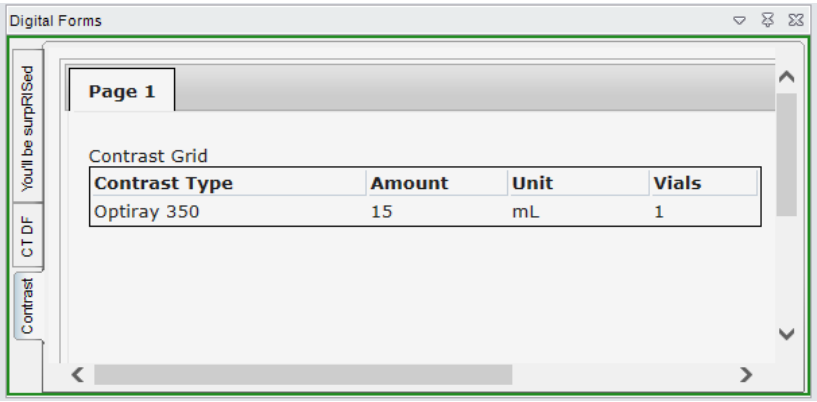
## FEATURE #14828 – DIGITAL FORMS NOW SUPPORT GRIDS

Sometimes important patient information is stored in grids in eRAD RIS, such as the Contrast and Sedation grids.



When this data is mapped into the diagnostic report, the information from this type of grid is visible to the radiologist. However, if there is information that is not mapped into the diagnostic report template or it is not part of the radiologist's workflow to view the report template when dictating, it was not previously possible for the radiologist to easily access this information.

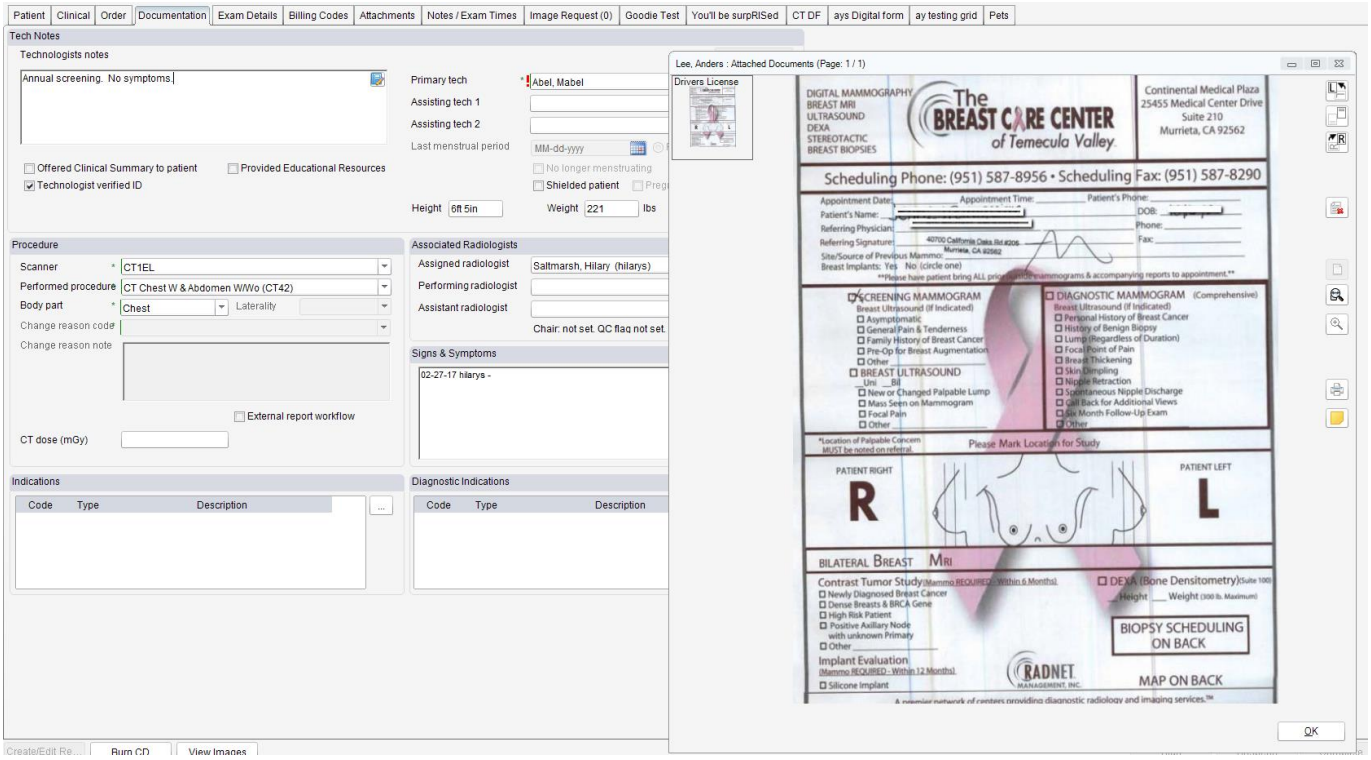
To make it easier for radiologists to see data in a grid, it is now possible to create a grid inside a Digital Form that can be displayed to the radiologist. These grids can be set up by eRAD Support in the Digital Forms Editor. Once created, they can be configured to display in the eRAD RIS Reporting screen as read-only grids that auto-fill using the displayed study's data.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #14545 – VIEW ATTACHMENTS ALONGSIDE RIS SCREENS WHILE ENTERING DATA

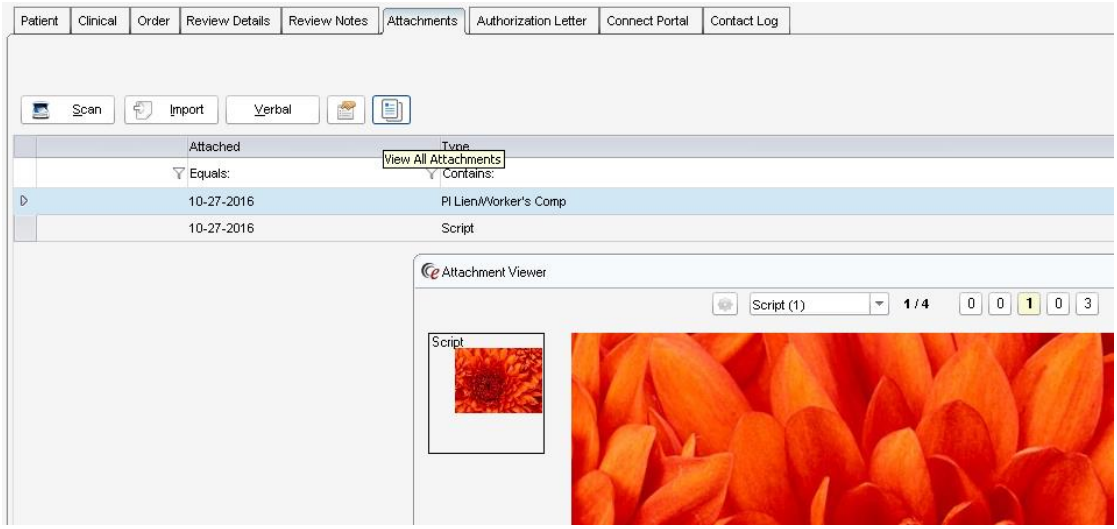
A new feature allows users to view an attachment in a floating window to facilitate data entry for the patient's exam. To open the floating attachment viewer, double click on the desired document in the Attachments tab. Once open, it is possible to re-size or re-position the viewer and then navigate between the sub-tabs for the selected patient.



In the image above, the document is visible while entering data on the Documentation tab.

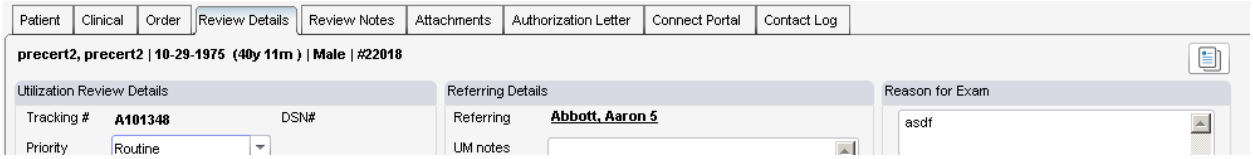
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

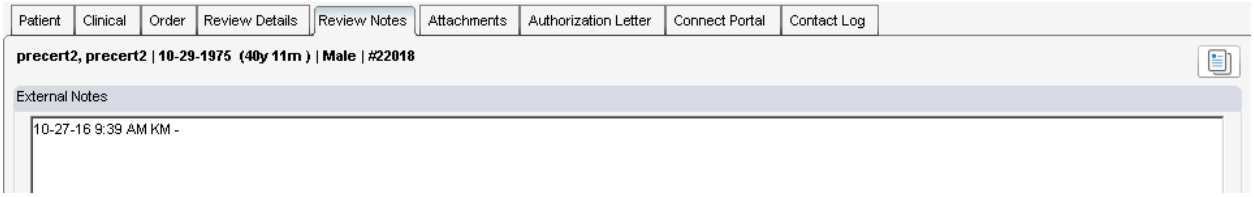
There is also a new button available on the Attachments screen which allows the user to open *all* of the patient's attachments: (📄) "View All Attachments."



This will open the same screen used by the Attachments data nugget from the Patient Folder. This viewer combines all of the patient's attachments, while also allowing the user to set preferences for which type of attachments to display and the preferred order, replicating the existing functionality used in the data nugget. When viewing attachments in this viewer, the content is read-only.

The *View All Attachments* icon is also available in the Utilization Management workflow: look for the icon on the "Review Details" and "Review Notes" tabs in the top right corner.





The floating attachment screen will remember its previous location; however, if it is partially off screen, the location will be ignored. This prevents a user from positioning the viewer almost completely off the screen, then not being able to see the screen when it is re-launched.

If new attachments are added while the *View All Attachments* viewer is open, it is necessary to close the screen and re-open it to see the new documents. If the button is clicked a second time and it is already open, the screen will close and re-open, refreshing its contents. When the button is clicked and there are no attachments, the user will receive a message that attachments are not available.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

For both the Attachment Viewer and the *View All Attachments* viewer, navigating away from the selected patient will automatically close the viewer. This is done to minimize risk so that it is not possible to view one patient's attachments while entering data for a different patient.

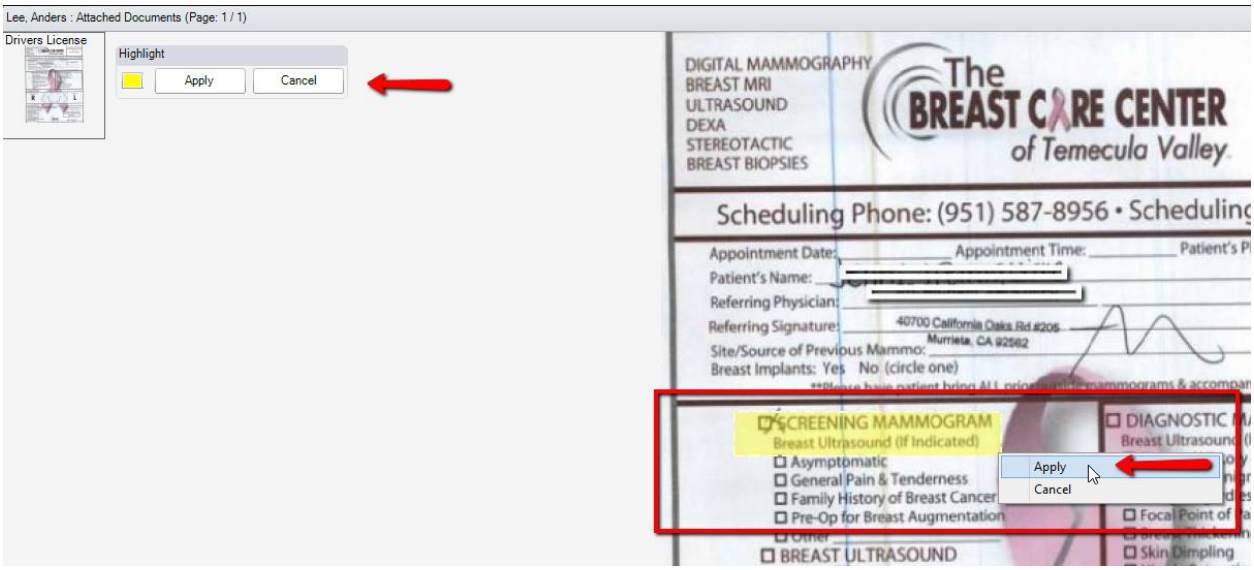
Note: when launching via the Scan / Import buttons, it is not possible to float the document until it has been saved and re-opened from the Attachment tab.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #14996 – HIGHLIGHT AN AREA ON AN ATTACHMENT

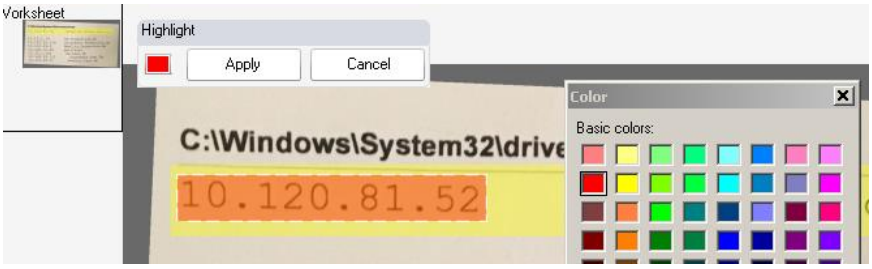
It is often helpful to be able to highlight a particular area of a scanned document, particularly for long documents such as clinical notes. Users now have the ability to highlight an area to make it easier to reference the attachment when communicating with radiologists or other RIS users (e.g. “see the pink highlighted text on page 9”).

The attachment viewer has been updated with a new right-click context menu called *Highlight*. With the document open, right-click and select Highlight. Then select an area of the attachment image by holding the left mouse button and dragging over the section to highlight. The color of the highlighted area can be modified by clicking on the color swatch displayed in the “Apply”/”Cancel” box. To complete the highlighting, the user must click on the “Apply” button or press the enter key.



When using the highlighting, cropping or straightening tools, as soon as the mouse button is released, a context menu to apply or cancel the operation is displayed nearby. Also, the user can simply click <enter> to apply.

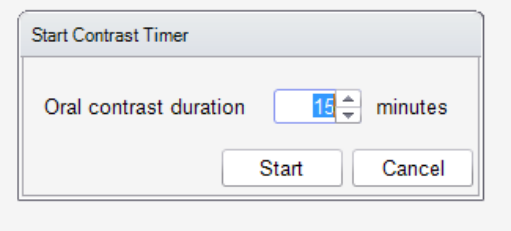
In the following example, a second highlight was created with an alternate color.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #14568 – ADJUST THE DURATION OF CONTRAST TIMER FOR A PATIENT

Previously, the Contrast Timer could be started, stopped and re-started, but it was not possible to use an Oral Contrast Duration different than the default timer length for the selected procedure. To provide the ability to adjust the contrast timer duration for a particular patient, the user will be presented with a new dialog box when selecting the *Start Contrast Timer* option from the right-click menu.



The default Oral Contrast Duration (in minutes) for the procedure code will be provided to the user with the option to make adjustments as needed prior to clicking Start. The maximum duration possible is 5,000 minutes.

To adjust the duration after starting, the user must stop the timer and start it again to make the change.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## RADIOLOGIST

### FEATURE #4123 – EXTERNAL REPORTS CAN NOW BE VERIFIED FROM PENDING DICTATION WL

Some customers who read studies with a different dictation system, outside of eRAD RIS, use the existing *External Report* workflow to allow a radiologist to verify the report created in the external system.

Previously, these studies would fall to the Pending Signature worklist. For External Reports, the screen that would open was a version of the View/Edit tab; from here, the radiologist would verify the report. However, radiologists have indicated that they would prefer to review these studies from the Pending Dictation WL, and would like to be able to access all of the information that they would see when dictating a report from within eRAD RIS, such as Digital Forms, attachments and prior reports.

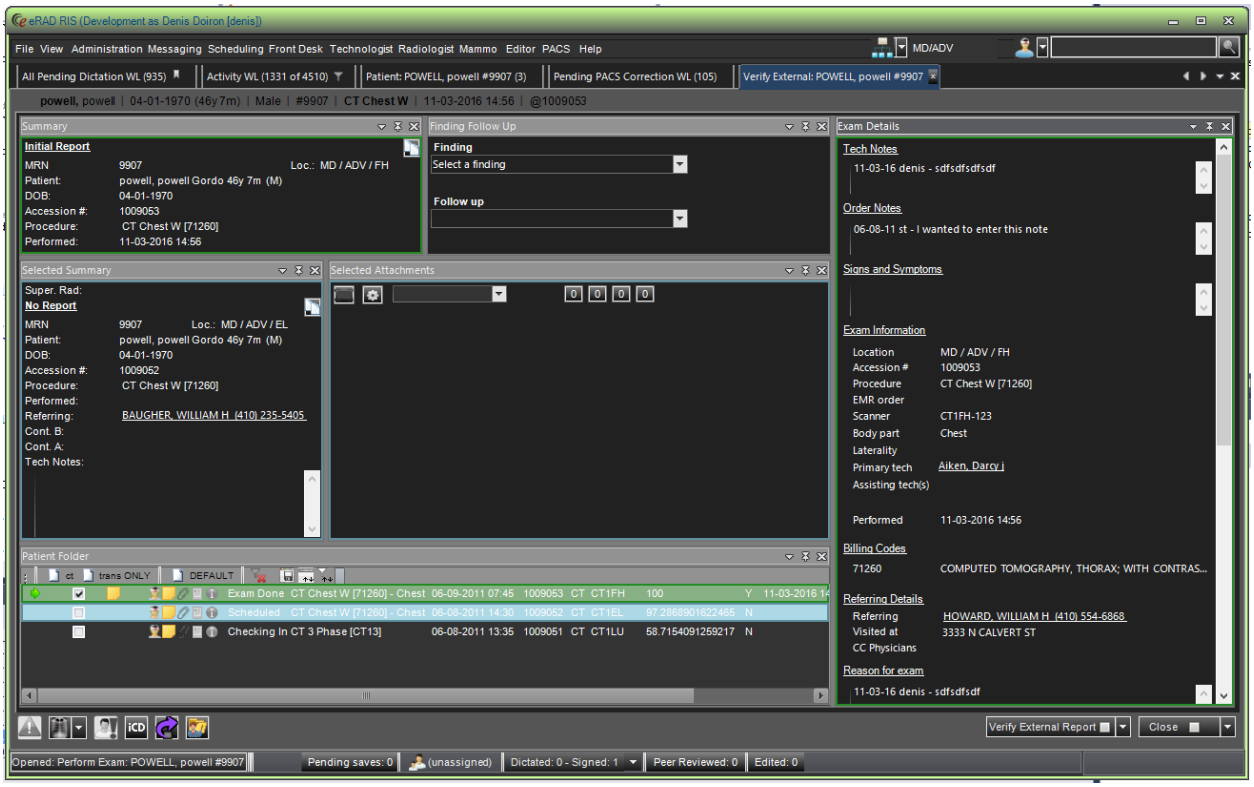
In order to improve this workflow, two main changes have been made:

- There is a new System Configuration setting that will allow the studies to fall to the Pending Dictation WLs, instead of the Pending Signature WLs.
- The studies will now open in a Verify External screen that provides access to the reporting panels used for other reporting modes (Attachments, Digital Forms, etc.).

The new System Configuration setting is labeled *ExternalReportsOnPendingDictationWL*. The default is False, which means that by default, the external reports will continue to fall to the Pending Signature WLs. Change to True to move these to the Pending Dictation WLs. If this is done, only new studies will fall to the Pending Dictation WL; any outstanding external reports that were already on the Pending Signature WL will have to be reviewed there by using the right-click option to open Verify External. A script has been created to move any old studies at the time that this change is made. If your organization would like to change to using Pending Dictation for Verify External studies, please let eRAD Support know that you would like the script to be run.

For either worklist, the resulting screen will now look similar to the normal dictating screen, but with the Verify External Report button instead of Submit/Sign.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.



Panels can be rearranged according to the user's preference, as with normal dictation/signing.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #15097 – DISABLE PEER REVIEW BUTTON FOR INACTIVE RADIOLOGISTS

When a radiologist account is deactivated in eRAD RIS, some customers prefer that active radiologists should not be able to perform Peer Reviews for the inactive radiologist's prior studies.

To accommodate for this, there is a new System Configuration setting called *AllowPeerReviewOnInactiveRads*. The default is True, which will maintain the existing functionality after upgrading. To prevent Peer Reviews for inactive radiologists, set the System Configuration to False.

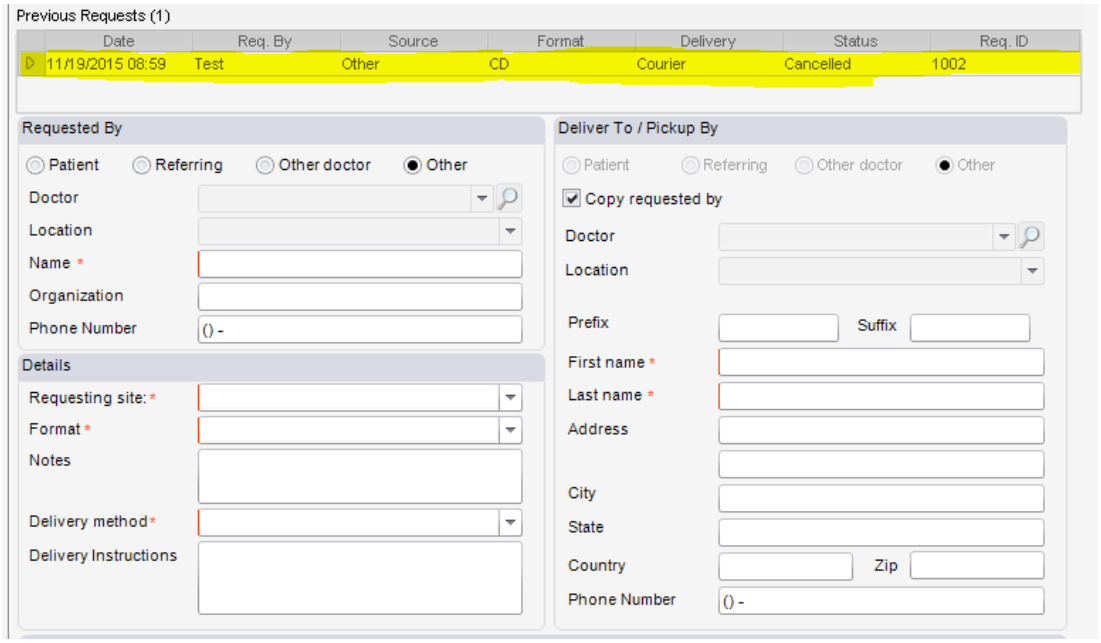
When set to False, radiologists will no longer see the Peer Review button on prior studies that were signed by a radiologist who has since been marked as inactive.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #15109 – AUTOMATICALLY CANCEL IMAGE REQUESTS THAT ARE NOT RESOLVED WITHIN A DEFINED TIME FRAME

Some customers have found that their Image Request worklists can grow to be larger than desired due to patients who neglect to pick up their images. There is now a system configuration setting of *DaysToKeepImageRequestActive*. By default, the value will be set to 0, which means that the feature is turned off and items will remain on the Image Request WL until they are manually resolved. To turn on the feature, enter the number of days that the Image Request should remain on the worklist. If 60 is entered, any Image Requests that are in a Pending or Ready status with a Requested Date that is more than 60 days old will be cancelled. If the request is made ***prior*** to the patient's appointment, the number of days will be applied to the Scheduled Date instead of the Requested Date.

Cancelled Image Requests will fall off of the Image Request WL, but will still be visible in the Previous Requests section for the patient.



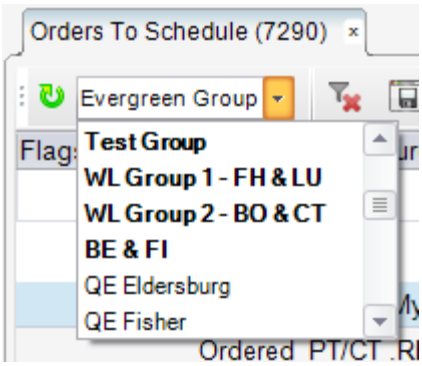
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## GENERAL WORKLIST ENHANCEMENTS

### FEATURES #15106, 14587, 15226, 15427 – ALLOW FILTERING OF ADDITIONAL WORKLISTS BY SITE GROUP

Site Groups, an existing feature, allow a RIS Administrator to create custom groupings of sites that are relevant for workflow purposes. In a previous build, 2016.2, a new strategy was implemented for filtering the IVT WL by *Site Group*, using a Site Group Type Code of ***IVT Team***. One goal of this feature was to improve worklist performance by reducing the need for users to view an entire Practice when only a small number of sites were pertinent. Another benefit of being able to filter worklist content by Site Group is the ability to see data from sites that might span across multiple practices.

Now eRAD RIS has extended this framework to other worklists. As with the IVT WL, a dropdown list will be available to select a Site Group (shown at the top of the list in Bold) or an individual Site.



The Site Group options in the list are driven by the following circumstances:

- At least one site in the Site Group must belong to the Practice selected in the RIS Location Filter (sometimes known as the Organization Picker) in the upper right-hand corner of RIS.

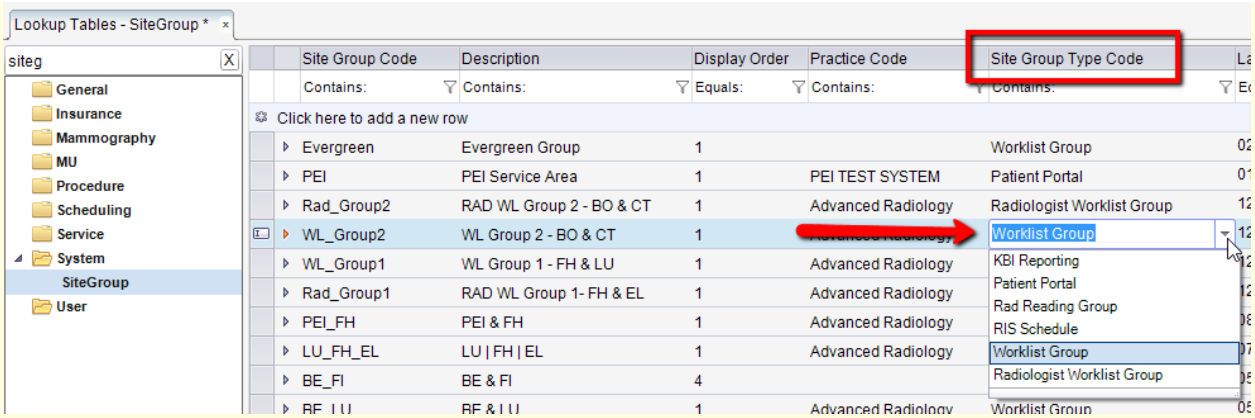
  - Only the Site Groups that contain the currently selected site or at least one site from within the currently selected practice will be included.
  - Note that the list of sites and Site Groups will change as the user changes their selection in the Location Filter. The user's selected site or Site Group for each worklist will be reloaded from one login session to the next, so that users will only have to select their option once, unless their role requires them to switch between multiple site groups routinely.
  - If a user does not see a Site Group that is expected in the list, make sure that the RIS Location Filter is set to a Practice or Site that is included in the Site Group.
- If a Site Group contains sites across multiple Practices, the current user must have access to all Practices in order for that Site Group to appear in the list.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

Only specific types of Site Groups are available in the dropdowns. There are two new Site Group Type Codes:

- **WORKLIST GROUP** – Use this to create Site Groups that will be available on all applicable worklists except those controlled by the Radiologist Worklist Group described below.
    - Orders to Schedule
    - No Show
    - Closed Rooms Reschedule
    - Confirmation
    - IVT
    - Activity
    - Labwork
    - Patient Merge Requests
    - Unknown Reconciliation
    - Pending PACS Correction
    - Pending Biopsy Result
    - Billing Exception
    - Billing Confirmation
    - Image Request
    - Distribution
    - Distribution History
    - Mammo Follow-up Orders
    - Mammo Letters
    - ACR Category 0 Follow-up
    - ACR Category 4/5 Follow-up
- **RADIOLOGIST WORKLIST GROUP** – Use this to create Site Groups that will be available on worklists used by radiologists and editors.
    - All worklists under the Radiologist menu
    - All worklists under the Editor menu

These Site Group Type Codes are assigned by the RIS Administrator in the Site Group table.



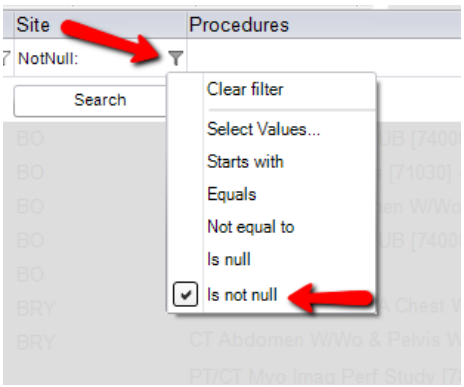
No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

Site Groups must have one of these two Type Group codes in order to be available from the applicable worklist. The previously created "IVT Team" Site Group Type is now incorporated into the general Worklist Group category. Any Site Groups that have been created as "IVT Team" will be converted to the Worklist Group Site Group Type as part of the upgrade.

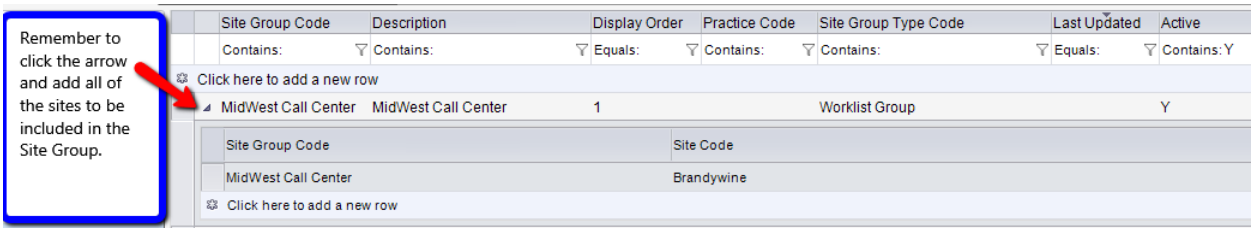
In an effort to eliminate any confusion when the upgrade is applied, the default option in the new worklist filter will be *Use Location Filter* which will maintain the same behavior from previous builds: the worklist contents will be controlled only by the main Location Filter and no Site Group filtering will be applied until the user makes a different selection from the dropdown to use a particular Site Group filter.

If it is desirable to remove this option after implementing worklist Site Groups, it is possible to remove the *Use Location Filter* option by changing the System Configuration setting *AddUseLocationFilterToWorklistSiteGroups* to False.

If there are any worklist items for the Practice in the Location Filter that do ***not*** have a Site assigned, those will also be included on the worklist. This is done to prevent studies without a location from being forgotten. It is possible to hide these by creating a Custom View on the worklist, with a filter of "Is not null" on the Site column. This will hide any worklist items without an assigned Site.

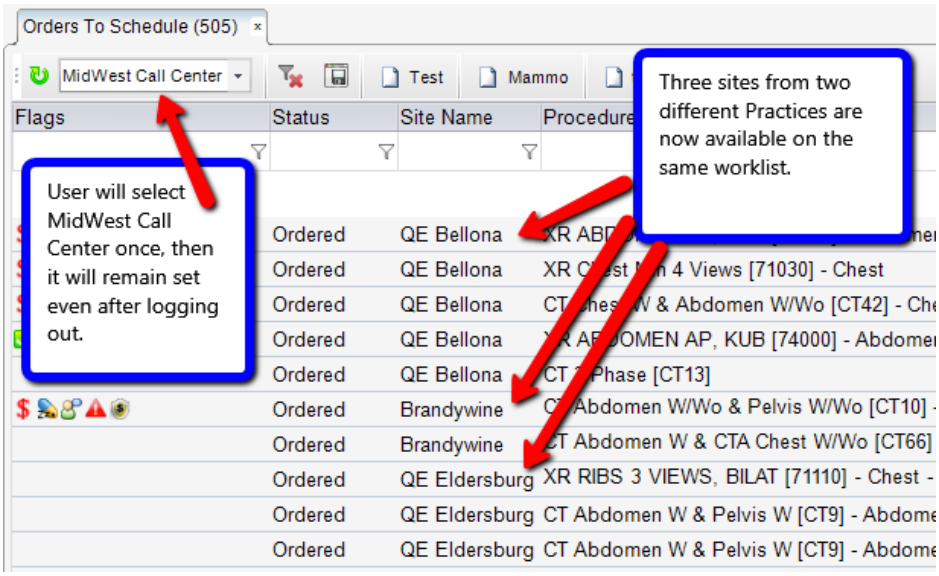


An example may help in understanding how to take advantage of this feature. Imagine there is an organization with two practices: Red Radiology and Blue Radiology. Each practice consists of 15 sites. MidWest Call Center is responsible for scheduling at three of those sites: two from Red Radiology and one from Blue Radiology. The staff would like to view all five sites on the Orders to Schedule WL at the same time. To allow this, the RIS Administrator will create a Site Group called MidWest Call Center. The Site Group Type Code will be Worklist Group. Each of the 3 desired sites will be associated to the new Site Group. In the image below, the first site, Brandywine, has been attached.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

Now that the MidWest Call Center Site Group has been created, the Call Center scheduler can open the Orders to Schedule WL, select the MidWest Call Center option, and see all three sites on the worklist.



No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #14961 - UM PRIORITY COLUMN AVAILABLE ON ORDERS TO SCHEDULE WORKLIST

For customers using Utilization Management functionality, the UM Priority is now available as a column on the Orders to Schedule WL. This will allow users to sort and filter based on the UM Priority.

## FEATURE #15361 – NEW COLUMN AVAILABLE ON TECHNOLOGIST WL TO DISPLAY TIME OF CONTRAST INJECTION

In some organizations, contrast injections are performed by a doctor instead of the technologist performing the scan. There is an existing workflow in eRAD RIS to accommodate the doctor "signing" the injection. For those using this workflow, an *Injected* column is now available on the Technologist worklist to display the time the injection was signed.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## INTERFACING

### FEATURE #14747 – EXTERNAL INTERFACE CAN NOW RETURN VALUES FOR SCHEDULE MESSAGE

To enhance workflow when an external scheduling system utilizes the RIS Scheduling engine, the External Interface Service (Wedge) now provides a new web method (similar to the StudyUpdate method) that returns information regarding the study or studies that were created or updated. Please contact eRAD Support to learn more about this functionality if applicable.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## FEATURE #14511 – MANAGEMENT REPORTS AND DASHBOARDS FOR UTILIZATION MANAGEMENT

A collection of management reports for tracking statistics relevant to the new Utilization Management functionality in eRAD RIS is now available.

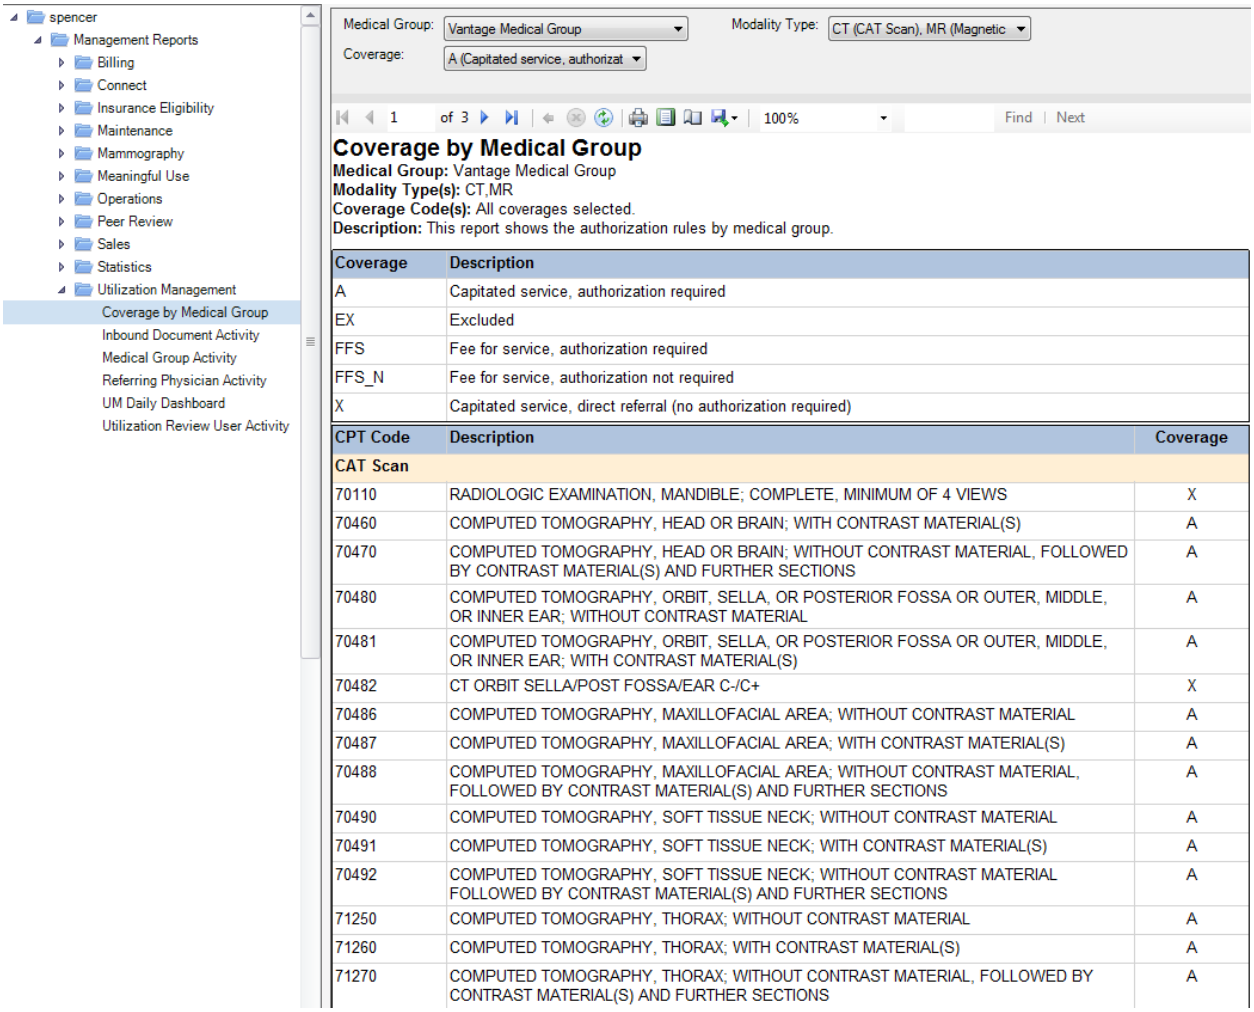
A new core folder called Utilization Management has been added to the Management Report structure in eRAD RIS. The following reports were added to the Utilization Management folder:

- **Coverage by Medical Group** – This will allow the user to select a Medical Group, Modality Type, and Coverage Type. In other words, it is a means to run a report against the UM authorization rules (matrices).
- **Inbound Document Activity** – This report will allow the user to select a date range and receive the following information:
  - The number of documents not processed and the average age in hours.
  - The number of documents discarded, sorted by reason (e.g. Junk Mail, Duplicate, etc.).
  - The number of documents processed by data entry user.
  - A breakdown of incoming vs processed documents by hour of day.
- **Medical Group Activity** – This report will allow the user to select a date range and get a listing of all medical group activity that required utilization review and are in a final UM status for the period:
  - A breakdown of STAT, Urgent, and Routine.
  - Total procedure count, average turnaround hours, and percent compliant.
  - Drill down capabilities from UM Status such as Recommended all the way down to Modality Type (CT, MR, etc.).
- **Referring Physician Activity** – This report will allow the user to select a date range and get a listing of all referring physician activity that required utilization review and are in a final UM status for the period:
  - A breakdown of STAT, Urgent, and Routine.
  - Total procedure count, average turnaround hours, and percent compliant.
  - Drill down capabilities from UM Status such as Recommended all the way down to Modality Type (CT, MR, etc.).
- **Utilization Review User Activity** – This report will allow the user to select a date range and get the following information:
  - A listing of all the reviewers who finalized an authorization request during the period.
  - Average hours to final status and percent of total.
  - Ability to drill-down to see the UM Statuses such as Recommended As Requested.
- **UM Daily Dashboard** – This report is limited to one day's activity and would typically be scheduled and distributed to the UM management team. It contains the following information:
  - Number of unprocessed inbound documents in the data entry queue.
  - Breakdown of the reviewer queue by priority and status.
  - Finalized procedure count by priority and status.
  - Finalized procedure count broken down by average turnaround time.
  - Finalized procedure seven day trend bar chart.
  - Breakdown of procedure count by Modality Type.

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

- Breakdown of procedure count by medical group.
- Top ten referring physician procedure count.

See below for examples of the management reports.



| Coverage | Description |
|---|---|
| A | Capitated service, authorization required |
| EX | Excluded |
| FFS | Fee for service, authorization required |
| FFS_N | Fee for service, authorization not required |
| X | Capitated service, direct referral (no authorization required) |

| CPT Code | Description | Coverage |
|---|---|---|
| **CAT Scan** | | |
| 70110 | RADIOLOGIC EXAMINATION, MANDIBLE; COMPLETE, MINIMUM OF 4 VIEWS | X |

## RESOLVED DEFECTS

Bugs, support issues, and design optimizations resolved in build 2.2017.1.

| Bug # | Category | Subject |
|---|---|---|
| 15268 | RADAR SecurePIC | An optional ris.exe.config setting for DBActionSignalRServiceEndpoint was added to be used when the IP address used for hosting on the server is different than the IP address used on the client. |
| 15300 | Insurance Eligibility | An issue with the Eligibility status icon becoming hidden on the Manage Policies grid when there is a long insurance carrier description has been resolved. |
| 15301 | | Resolved issue with Amount to Collect field not refreshing if scheduling is completed before Eligibility finished running. |
| 15307 | Technologist | An exception no longer occurs when adding to the Contrast grid from View/Edit screen. |
| 15023 | Billing | Resolved an issue with Linked Reports where the non-primary studies would not receive an updated billing status and would not drop from the Activity WL. |
| 15940 | Cancel | It is now possible to cancel an order made as a guest in Patient Portal from the Reschedule workflow (previously caused RIS to crash). |
| 15373 | CD Burning | Resolved an issue where RIS could crash during CD Export under certain circumstances. |
| 15311 | CEHRT | ImportDataFileUpgradeDB has been modified for loading SNOMED codes to disable constraints related to new Gender Identity and Sexual Orientation tables. |
| 15915 | Citrix Bridge | Citrix version 7.9 needs the latest version of vccom API which requires a modification the the citrixbridge.exe. Also resolved a problem with the path for the verbose log in the citrixbridge.exe.config. |
| 7613 | Confirmation | Closed Room Reschedule WL now supports repeat rules, resolving an issue where studies could be filtered from the Confirmation worklist. |
| 15359 | DB | Resolved an issue where users could be allowed to re-use passwords even when the System Configuration setting does not allow it. |
| 14450 | Document Distribution | Improvements made to the logging of Document Distribution notes. |
| 14782 | Finding Followup | It is now possible to save Finding Follow-up selections when using PowerScribe reporting mode. |
| 15037 | Insurance Eligibility | If Eligible API provides a Spend Down amount, this is now |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| | | displayed in the detailed eligibility return. |
| 15286 | Insurance Eligibility | Resolved an issue with the tooltip for the Eligibility worklist icon. |
| 13521 | Interfaces | Wedge will no longer crash when replying to an inbound message when connecting system (e.g. Mirth, Ensemble) has closed the connection. |
| 14715 | Interfaces | Wedge will now provide an alert if a plugin is misconfigured. |
| 15092 | Interfaces | Added support for openxml versions of MS Word and Excel to external interface. This will provide better support for RTL and formatting. |
| 15449 | Interfaces | An error in RadarConnect process message for practices with null values has been resolved. |
| 15522 | Log Control | The notes field context menu, including spellcheck options, is now available in textbox only mode. |
| 15938 | MRN | Assigning MRN during reschedule using guest Patient Portal study no longer throws an exception. |
| 15068 | Outside Read | A core validation rule has been added with a condition that allows Reason for Exam to be required on all studies *except* Outside Reads. |
| 13888 | PACS (eRAD) Int - RIS only | In the Patient Folder, it is now possible to launch images for a study, even if a different study was previously launched from the same Patient Folder and the PACS Viewer was closed. Previously, the Patient Folder would have to be closed and re-opened under those circumstances. |
| 14066 | PACS (Non - eRAD) Integration | Carestream PACS integration now supports appending studies in the viewer when double clicking a prior study from the mini-Patient Folder in the dictation screen. |
| 14889 | PACS (Non - eRAD) Integration | Resolved an issue with Carestream PACS integration in which studies loaded by External Study Identifier did not close properly. |
| 15393 | PACS (Non - eRAD) Integration | Resolved an issue with Carestream PACS integration in which viewing a second study from the Patient Folder does not display the Accession number. |
| 14636 | PACS (Non - eRAD) Integration | Resolved an issue with IW PACS integration in which images were not redisplayed when switching between tabs. |
| 15676 | Patient Merge | Merging external MRNs with internal RIS patients is once more possible during rescheduling workflow. |
| 15149 | Patient Portal | No longer issues with arriving or cancelling appointments made as a guest in the Patient Portal. |
| 15102 | Peer Review | Radiologists are now prevented from peer reviewing studies from outside of their current Practice. |
| 12563 | Person Management | RecentPasswordRestrictionCount set to -1 now fully disables the recent password feature, as designed. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| 13788 | Powerscribe Integration | Resolved an issue with PowerScribe integration in which it was possible to unintentionally close a second study when dictating multiple cases and an addendum. |
| 14867 | RADAR | Resolved an issue for RADAR exam cancellations. |
| 15232 | RADAR | Audit records for RADAR messaging now include patient /order /study context. |
| 15566 | Radar - Nudge | Resolved a value cannot be null error for App.config RADARSecureMessagePort. |
| 11929 | Radiology Reporting | Switching between external reporting integration modes (PS360 or External) to internal reporting modes (eRAD or M*Modal) now occurs seamlessly without errors. |
| 14757 | Radiology Reporting | Resolved an index out of range error that occurred under certain conditions when using Next workflow during dictation. |
| 15392 | Radiology Reporting | All applicable tool window controls in reporting screens will now prompt if there are unsaved changes. |
| 15553 | Radiology Reporting | When using emergency access and RIS crashes, using autosave, clicking the emergency access again will no longer remove the auto saved report. |
| 15975 | Radiology Reporting | Selected Report panel is now properly saving in personal or system layouts. |
| 14045 | Scanning | "A lock is required to update this order" error is no longer occurring when saving scanned documents for an external prior report. |
| 15240 | Scanning | Resolved an issue with auto-cropping when using the Straighten tool on scanned documents. |
| 15671 | Scanning | Scanning no longer unexpectedly converts images to black and white. |
| 14845 | Scheduling | Foreign key exception when adding "Additional Data" to a procedure no longer occurs. |
| 14948 | Scheduling | A user without permission to reschedule a study can no longer do so from the context menu. |
| 15104 | Scheduling | When scheduling using Order A/Order B with different referring physicians, Order B now successfully receives the data from the Clinical tab. |
| 15559 | SecurePIC | SecurePIC requests are now successful from IVT screen for studies in an Ordered status. |
| 15076 | Technologist | Modifying a study that was performed before the Tech verified ID field was set as Required using validation rules has been resolved. |
| 15155 | Technologist | ExamDoneTechOnly - PACS correction flag can no longer be inadvertently set to Y after exam completion. |
| 14971 | Thick Client GUI | Resolved an issue where the RIS application could stay in view |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | | |
|---|---|---|
| | | after RIS locks. |
| 15363 | Thick Client GUI | Resolved an issue that previously resulted in a 'Cannot access a disposed object. Object name: RadLabel' error/crash. |
| 15371 | Thick Client GUI | Resolved an issue that could cause a RIS crash while disposing PerformExam or ViewEdit. |
| 14771 | Utilization Management | When using the Quick Search box to search by UM authorization number, the applicable row will not be highlighted if the search is performed multiple times or with the Patient Folder already open. |
| 15209 | Worklists | Resolved an intermittent issue with RIS Crashing between scheduling under particular circumstances (Object reference not set to an instance of an object). |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## KNOWN LIMITATIONS

The following are new bugs found in build 2.2017.1. Bugs reported in previous versions are not captured as Known Limitations in this document.

| # | Subject |
|---|---|
| 16068 | Dictated by in Summary panel is not populated for reports created by technologist. |
| 15974 | Document Distribution jobs failing to send email via RADAR due to large file size. |
| 15577 | System configuration setting “Enforce zip code selection” set to True and “Enforce county selection” set to False, will require a zip code but the field will not appear. |
| 16040 | Attach Inbound Documents WL action buttons throw exception if pressed when highlighting a locked document row. |
| 16072 | The "Last Login By User ID" management report should display the date. |
| 16060 | TemplateMacro Editor- When using the assignment tab, after filtering available options, items that are not in the results are added to assigned column when using the right arrow to select. |
| 16047 | With preferences for reuse reporting screen (unchecked) and autofeed from worklist (checked), the Next workflow in the dictate screen is sometimes failing to open the next study. |
| 16046 | With the reuse reporting screen preference unchecked, Next workflow in the signing screen behaves as if in the Dictate screen. |
| 16042 | Unable to delete table rows from DocumentType look-up (? FK exception thrown). |
| 16026 | Removed/inactive order_items showing as disabled on Exam Details list when valid, active order_items present. |
| 16024 | Infinitt PACS - Images from Patient Folder are not always closing. |
| 16023 | Imported order-level documents are disabling the incorrect context menu option to switch document level. |
| 16013 | Clinical.ViewStudy access string does not control access to View Study button/context option on appropriate exams. |
| 16005 | When user has both Technologist and Editor resource types, it is possible for them to be assigned as radiologist if creating a report from perform exam screen. |
| 16000 | Inactive UM Resolution Codes are visible in the UM Alerts resolution code drop-down. |
| 15991 | Scheduling a study in OrderSigned status from within a Folder removes the study from Folder's WL. |
| 15989 | Multiple Studies flag gets carried through “Schedule From” action on single-procedure study. |
| 15920 | Contrast amounts are not defaulting when including multiple exams. |
| 15900 | When deleting the dictation /report and resetting status on a study that is suspended, _status_flags is not getting reset. |
| 15884 | Scan Document Notes option still available on non-modal attachment viewer without the option to save them. |
| 15871 | TemplateMacro Results grid is freezing when a change is initiated but not saved before attempting to open the editor window. |
| 15820 | Attach Inbound Documents - Opening context menu on rows other than the one selected throws an error. |
| 15804 | Changing the image request status for studies in Exam Done produces an error that “Signs and Symptoms” is required. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

| | |
|---|---|
| 15800 | Closing a study by clicking X on the tab will lock the images. |
| 15796 | An error is thrown in the “Adding a mammo biopsy” screen when cancelling the person search window. |
| 16070 | eRAD reporting mode - Create template from report creates double brackets for 2nd auto macro field. |
| 15963 | Scheduling an order under Utilization Review from a Folder does not display a message informing the user that it is under UM Review. |
| 15962 | Unable to modify Additional/Alternative procedure status when default statuses are null. |

No part of this material may be published reproduced stored in a retrieval system or transmitted in any form or by any means without the prior written permission from eRAD.

## NEW FEATURES

### FEATURE #16082 – EXTEND THE STUDY EXTRA INFO FEATURE TO INCLUDE ORDER EXTRA INFO

eRAD RIS has had the ability to store extra information received from an external ordering system at the study level, using a feature called *StudyExtraInfo*. This feature extends this functionality to allow us to store information at the ***order*** level.

Sometimes there is a need to store additional information that may be customer specific, particularly information received from one system that also needs to be passed to corresponding systems at certain points in the workflow.

A new lookup table of *OrderExtraInfo* was created for specifying the Code with which the RIS will be receiving information to be stored. The table is listed under Configure>System folder. Access to the table is controlled by a new access string titled *Config.LookupEditor.OrderExtraInfo* with a default of None. The table consists of the Order Extra Info Code, Display Name, Description, Display Order, Last Updated and Active columns.

| Order Extra Info Code | Display Name | Description | Display Order | Last Updated | Active |
|---|---|---|---|---|---|
| Contains: | Contains: | Contains: | Equals: | Contains: | Contains: |
| Click here to add a new row | | | | | |
| Test external system | Test external system | Test external system | 1 | 02-22-2017 11:22 AM | Y |
| [redacted]-BACKUP | [redacted]BACKUP | Backup Order Extra Info Code | 1 | 02-15-2017 1:38 PM | Y |
| [redacted]-OEIC1 | [redacted]-OEIC1 | [redacted]Order Extra Info Code 1 | 1 | 02-15-2017 1:38 PM | Y |

Messages sent will specify the Order Extra Info Code and have a value field. These messages will be stored in another new DataBase table *c_order_extra_info* that is not accessible from the GUI.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

An example c_order_extra_info node to be sent to eRAD RIS:

```
<ext1:c_order_extra_info>
        <order_extra_info_code>Test external system</order_extra_info_code>
        <value>test value to be stored in c_order_extra_info table</value>
 </ext1:c_order_extra_info>
```

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## RESOLVED ITEMS

eRAD RIS

| Redmine # | Subject |
|---|---|
| 16113 | Waiting for PACS dialog is now showing when expected. |
| 16166 | Audio files are now being deleted as appropriate for editors. |
| 16187 | Demographics match on phone number is now compatible with c_patient_phone pattern. |

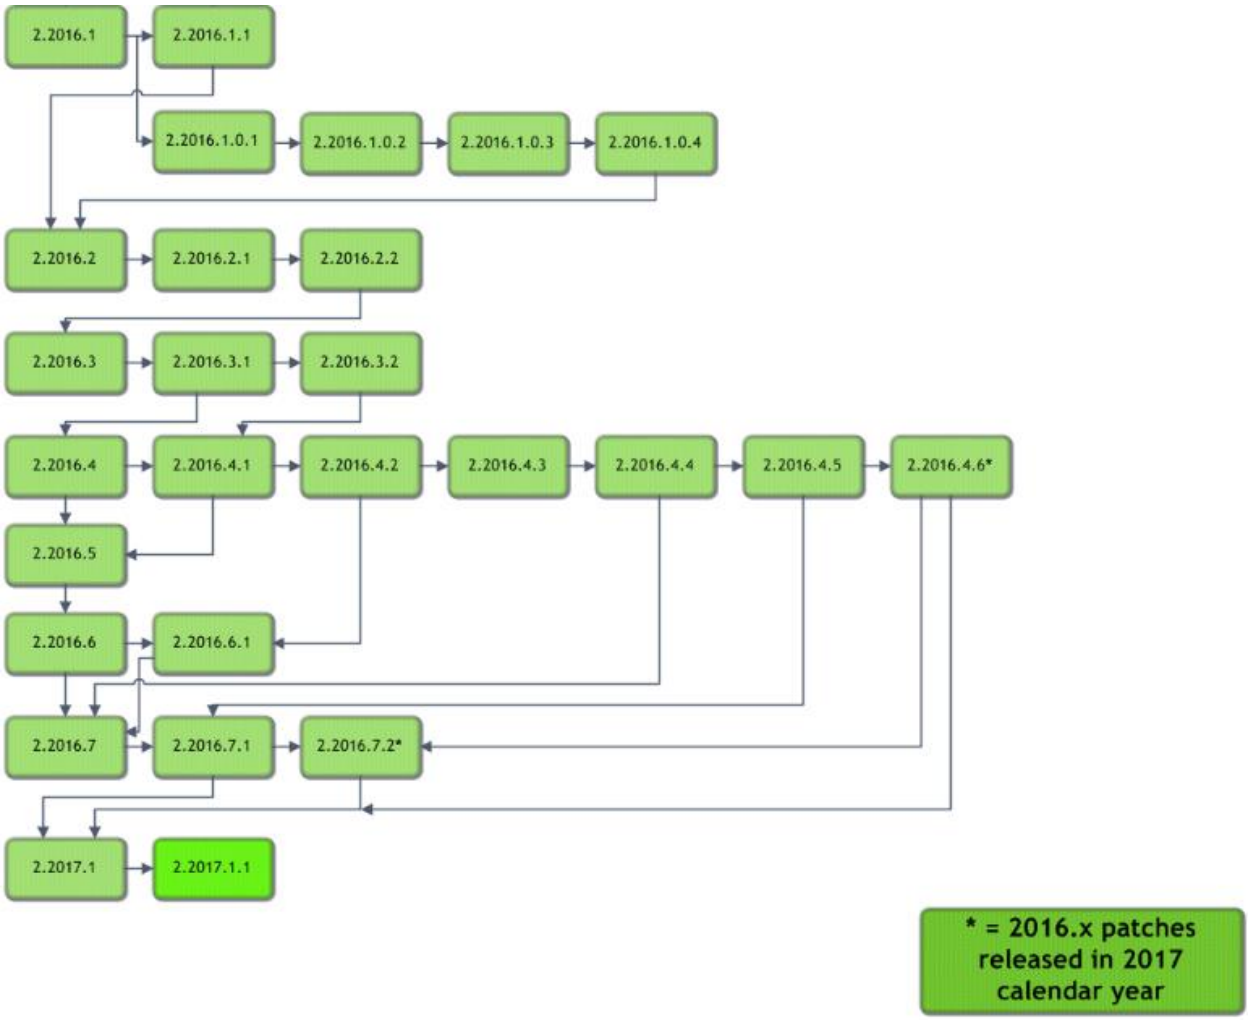
## NEW ACCESS STRINGS

| Setting | Default | Purpose |
|---|---|---|
| Config.LookupEditor.OrderExtraInfo | None | Controls access to the look-up table editor for OrderExtraInfo. |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD.

## CODE STREAM



**Legend:**

Light Green = Previously Released software

Bright Green = Current Release

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior written permission from eRAD.

## PACKAGE CONTENTS

## INTENDED AUDIENCE

THE INTENDED AUDIENCE FOR THIS DOCUMENT IS THE RADNET CLINICAL SYSTEMS TEAM AND THE ERAD SUPPORT/SERVICE TEAM.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

## WHO IS AFFECTED

Build 2017.1 installs. This server update must be applied to 2017.1.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD.

# INSTALLING

## CLIENT/GUI

Copy and replace the current rRIS…zip file with the eRAD_rRIS_2017.1.1.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## WEB SERVICE

This updated is only required for the Wedge Web Services. The Core RIS Service and Document Distribution Service are not required to be updated.

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 128 files in the rRISService folder and 7 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below). Folders ar (Arabic), he (Hebrew), pt_BR (Brazilian Portuguese) and es-AR (Argentina Spanish) are localization folders. The WedgePlugins folder contains various plugin files for RADAR, MIRTH, Ensemble, etc…

**Services Configuration Wizard**

With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

exist in a “deploy” folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, and services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

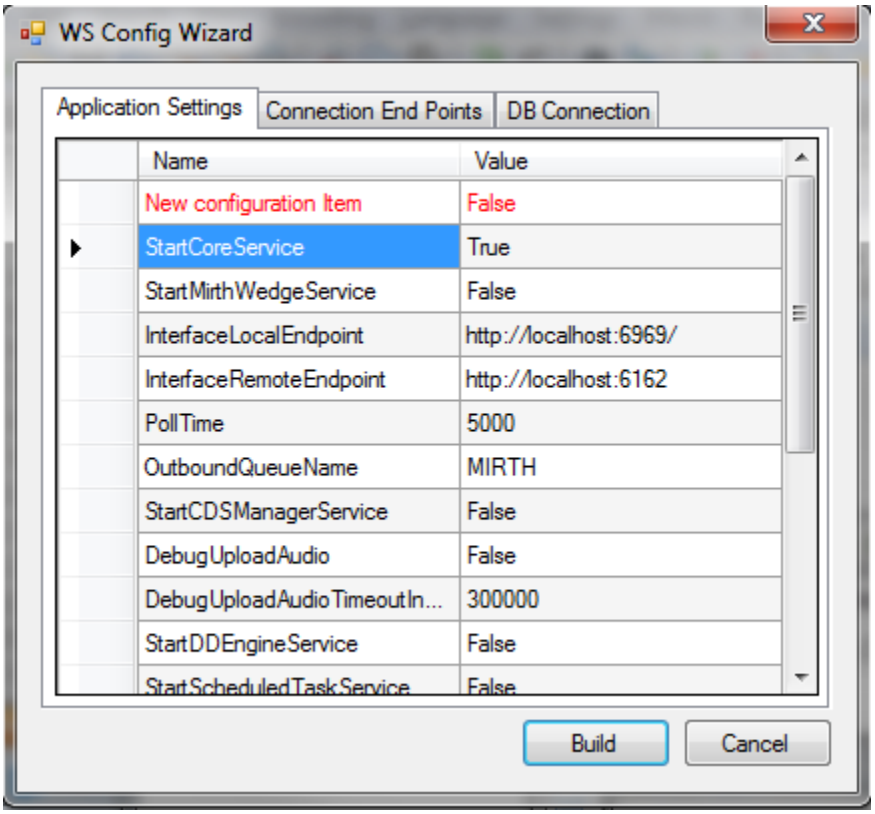
On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application “ServicesConfigWizard.exe”

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:

**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

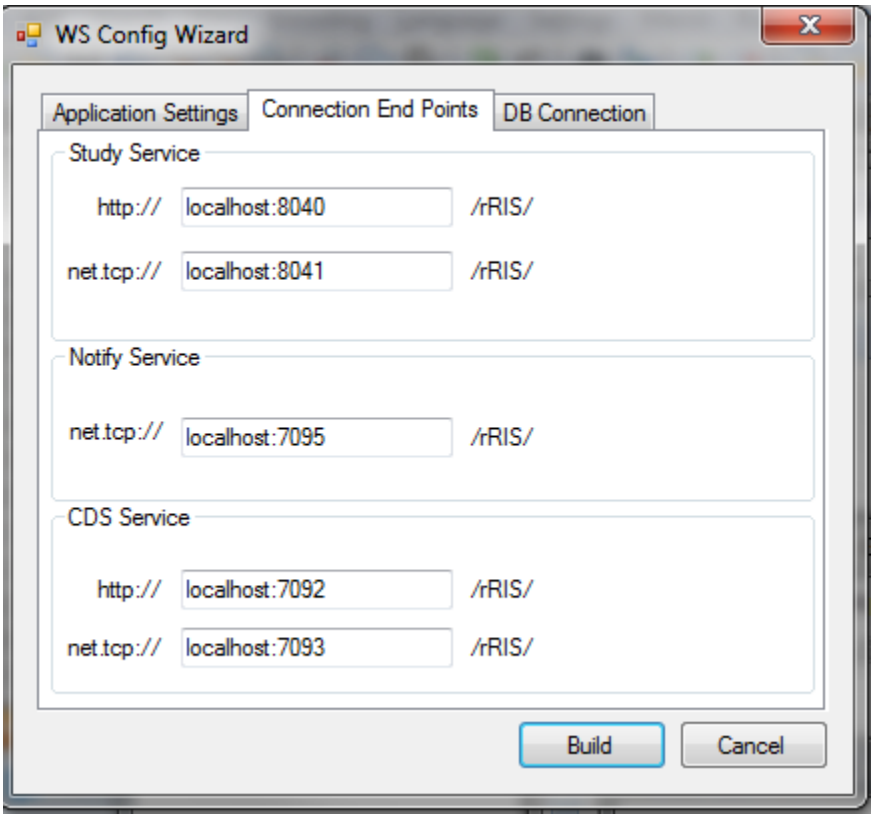
in any form or by any means without the prior written permission from eRAD. 



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of “Study Service” or “CDS Service” if both http and net.tcp were not provided then that endpoint will not be created at all.



## DATABASE UPDATES

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

Always run the upgrade scripts in a test environment of the actual database to make sure they run cleanly. If any errors occur please contact development.

*Note: There is a new upgrade process introduced with B43.1 called "RunUpgrade.bat". The batch file will open a command window. This process will prompt you for the database server name, database name and authentication credentials. There is no need to run the database upgrade scripts manually as was done in previous releases.*

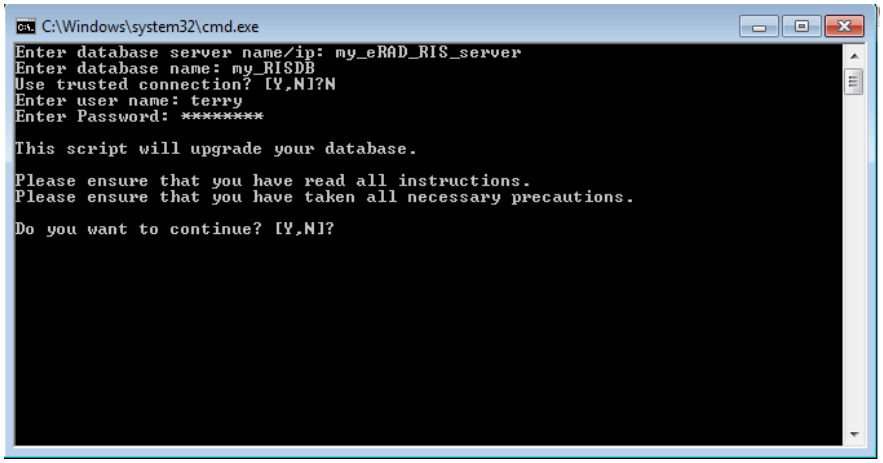
1) From the upgrade folder, double click the “RunUpgrade.bat” command file.

2) Enter the server name, database name and authentication credentials to the database. You have 2 choices for authentication credentials.

3) You can choose to use “Trusted connection”. Using this option will pass the identity of the currently logged on user. If this user has “db_owner” access to the eRAD RIS database then feel free to use this options.

4) If you decide not to use “Trusted connection” then you will be prompted for user id and password.

   Example:



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

5) After the upgrade program has finished you can find the upgrade logs in the “log” folder. The file name will be eRAD_RIS_db_upgrade_timestamp.log, where timestamp is a value representing the date and time the upgrade started. If you see any errors please contact the development team

## NEW SYSTEM CONFIGURATION SETTINGS

| Setting | Default | Purpose |
|---|---|---|
| AppointmentSearchMaxResults | -1 | (value = int) Specify the number of appointment slot results to be returned by the scheduling engine. -1 turns off the feature. Changing the default is only recommended for customers scheduling via an External Interface Service. These customers should use a number higher than the recommended minimum of 500. |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

## NEW FEATURES

### FEATURE #16137 – CARESTREAM PACS INTEGRATION – ABILITY TO OPEN PRIOR STUDIES WHEN PRIMARY STUDY IS NOT AVAILABLE

Before an exam is performed, it is sometimes necessary for the radiologist to view the prior images for the patient. Previously, when a radiologist opened the reporting screen, the *view session* would not be initiated if the current study was unavailable. Without this, the prior studies could not be launched from the reporting screen. To allow for this functionality, a new setting is now available in the CSHConfig.xml file: empty_view_session_on_fail.

Changing this setting to True will adjust the CSH integration behavior to make the ShowStudy call to PACS act as if the primary study opened correctly, even if it has failed because current images do not yet exist. Please note that with this setting turned on, the radiologist will not be prompted that the primary study failed to open, and the mini-Patient Folder will indicate that the PACS status for the primary study is Open. At this point, the radiologist can double click on the desired prior study. RIS will ask the PACS what studies have loaded and upon finding that nothing is loaded, the normal Append call will be replaced with a ShowStudy call. At this point, images for the prior will open, and both current and prior studies will be listed as Open.

To support this behavior, the supports_append setting in the CSHConfig.xml file needs to be set to True.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

## FEATURE #16240 – APPOINTMENT SEARCH IMPROVEMENTS FOR EXTERNAL INTERFACE SERVICE

Some customers use an interface to search the RIS for available appointment slots, which required some performance improvements. Alterations to some of the behind-the-scenes logic were made, which has led to significant performance gains.

In addition, there is now a System Configuration setting which will allow an appointment slot search to be made via the interface to return a given number of results, regardless of the appointment date. Because this method of searching via the interface will bypass the time frame requirement and instead limit search results by the number of results returned, this allows users scheduling in an external system to perform one search when there may not be any appointments available in the next few weeks. The user can simply search and X number of the next available appointments will be returned, even if the first is not available for several weeks.

The System Configuration setting is *AppointmentSearchMaxResults*. By default, this setting is "-1" which means that the functionality is turned off. In that case, all possible results in the given time period will be displayed as usual. If set to 2,000, then the first 2,000 time slots will be available, regardless of the timeframe when searching via the interface service.

Setting this value too low will yield searches with few or even no appointment slots returned. The recommended minimum setting is 500, but care should be taken when setting this configuration to anything under 1,000.

Important Note: This setting controls both the results from the External Interface Service and the results for users searching directly in the RIS. However, users working directly in the RIS cannot bypass the date range requirement. Therefore, it is recommended to only adjust this setting if scheduling is done via the External Interface Service. If scheduling directly in the RIS, the setting default of -1 should be used to disable the feature.

in any form or by any means without the prior written permission from eRAD. 

## FEATURE #16201 – ERAD RIS NOW SUPPORTS UPDATING SEQUENCE ID VIA THE INBOUND EXTERNAL INTERFACE SERVICE

When the schema for inbound study container messages was initially built, sequence ID was not included in the schema. In order to perform updates or additions to any table in the study container which has a sequence ID, the sequence ID has been added to the schema.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

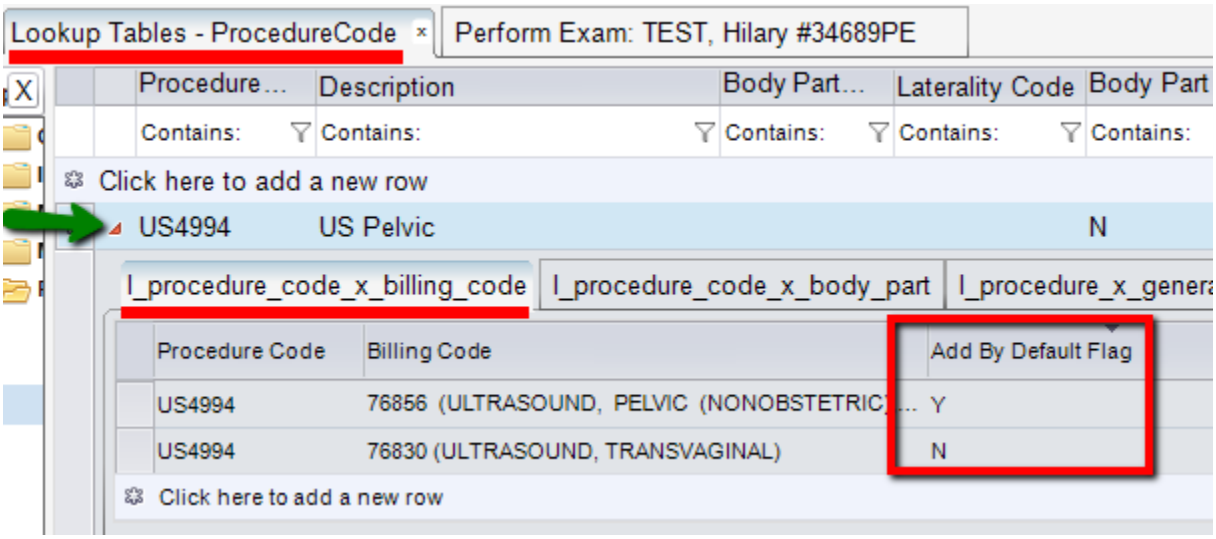
## FEATURE #16299 - ERAD RIS NOW SUPPORTS BOTH DEFAULT AND "RECOMMENDED" BILLING CODES

Previously, all billing codes associated to a procedure were active by default. In some cases, it may be useful to also associate billing codes that are *sometimes* used for a particular procedure. For example, some customers use a workflow in which procedure codes are broad, such as CT Sinus. In this case, the billing code might be the CPT for CT Sinus "with contrast," "without contrast," *or* "with and without contrast." Also, the contrast CPT may or may not be relevant depending on what is performed.

In these cases, being able to associate the billing codes that are most likely to be used for a particular procedure is more beneficial than creating default billing codes that are always active for the exam and have to be deactivated by the technologist.

To allow for this workflow, a new column has been added to the *l_procedure_code_x_billing_code* sub-table, which is found in the Procedure Code look-up table. The column, ***Add By Default***, will default to Y, meaning that the billing code will be associated and active for that procedure. This is the same as the previous behavior.

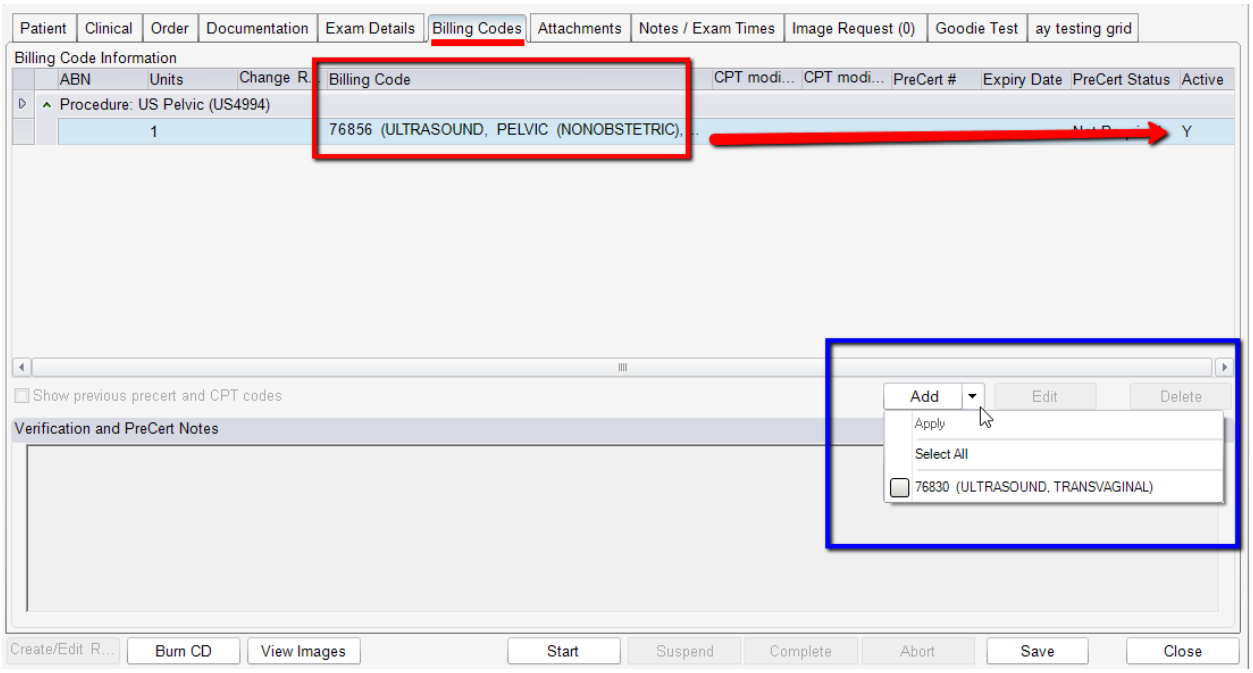
To associate billing codes without actively adding them to the procedure, set the Add By Default column to N. As you can see in the table below, it is possible to have a combination of Default billing codes and recommended/possible billing codes.



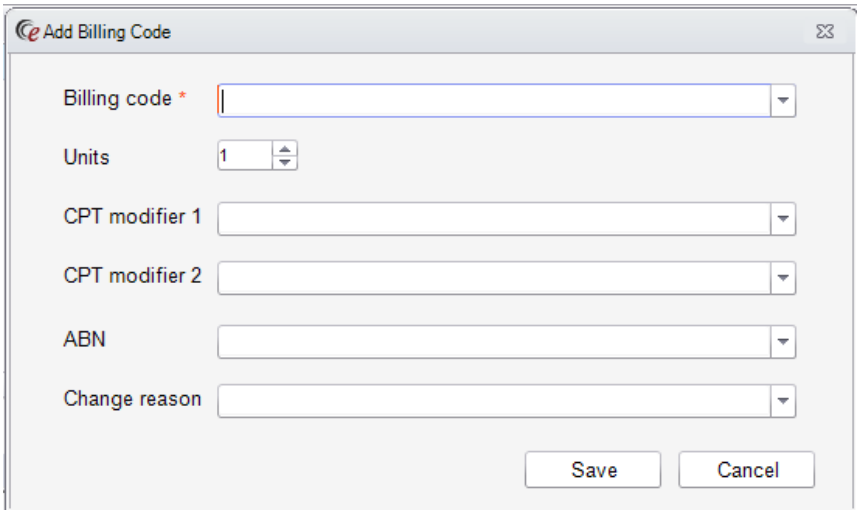
In the example above, the only billing code that will be automatically added for the US Pelvic procedure is 76856. The billing code 76830 will now be available from a quick pick list, as shown below.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 



When suggested codes are available for a procedure, the Add button will have a dropdown arrow allowing the user to quickly select and apply the suggested billing codes. Clicking the main Add button, instead of the dropdown arrow, will open the normal Add Billing Code screen where the entire list of Billing Codes can be accessed.

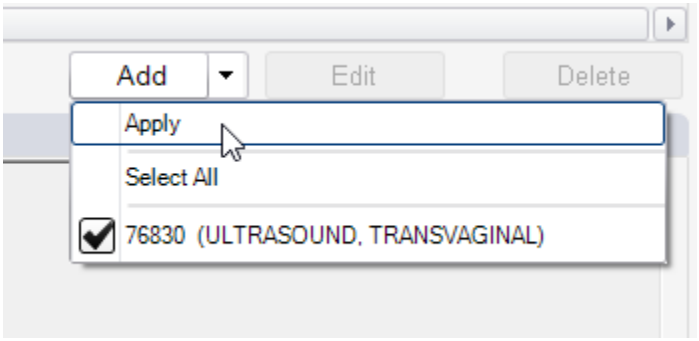


No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

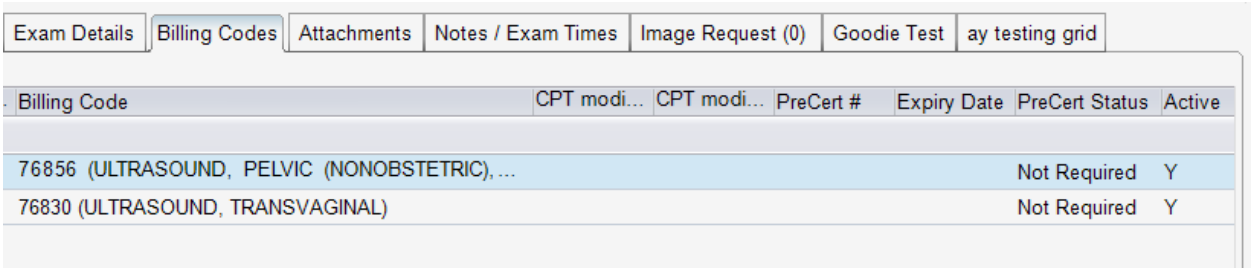
in any form or by any means without the prior written permission from eRAD. 

If no recommendations exist, the Add button will not have the dropdown arrow and the Add Billing Code screen is the only option for adding additional billing codes.

To use suggested billing codes, check the box(es) and click the Apply button.



This will add the billing code to the procedure in an Active status.



Keep in mind that suggested billing codes will not trigger IVT workflow. Once the suggested billing code has been added to the exam, it will be treated like normal active billing codes.

It is also now possible to select multiple lines in the active Billing Codes grid in order to delete them all at once, if needed. Selecting rows and clicking the Delete key on the keyboard is also allowed. The user will be prompted to confirm that they want to delete the selected billing code(s). Deleting a saved billing code row is the same as marking the row as "Active = N". If suggested billing codes are added, but deleted *before* the exam is saved, the row will simply be deleted.

The billing codes associated to any procedure code currently will all be set as Add By Default = Y at the time of the upgrade, which means that they will continue to behave as they did prior to upgrading.

in any form or by any means without the prior written permission from eRAD. 

# INSTALLING

## CLIENT/GUI

Copy and replace the current rRIS…zip file with the eRAD_rRIS_2017.1.2.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## WEB SERVICE

This updated is only required for the Wedge Web Services. The Core RIS Service and Document Distribution Service are not required to be updated.

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 128 files in the rRISService folder and 7 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below). Folders ar (Arabic), he (Hebrew), pt_BR (Brazilian Portuguese) and es-AR (Argentina Spanish) are localization folders. The WedgePlugins folder contains various plugin files for RADAR, MIRTH, Ensemble, etc…

**Services Configuration Wizard**

With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, and services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

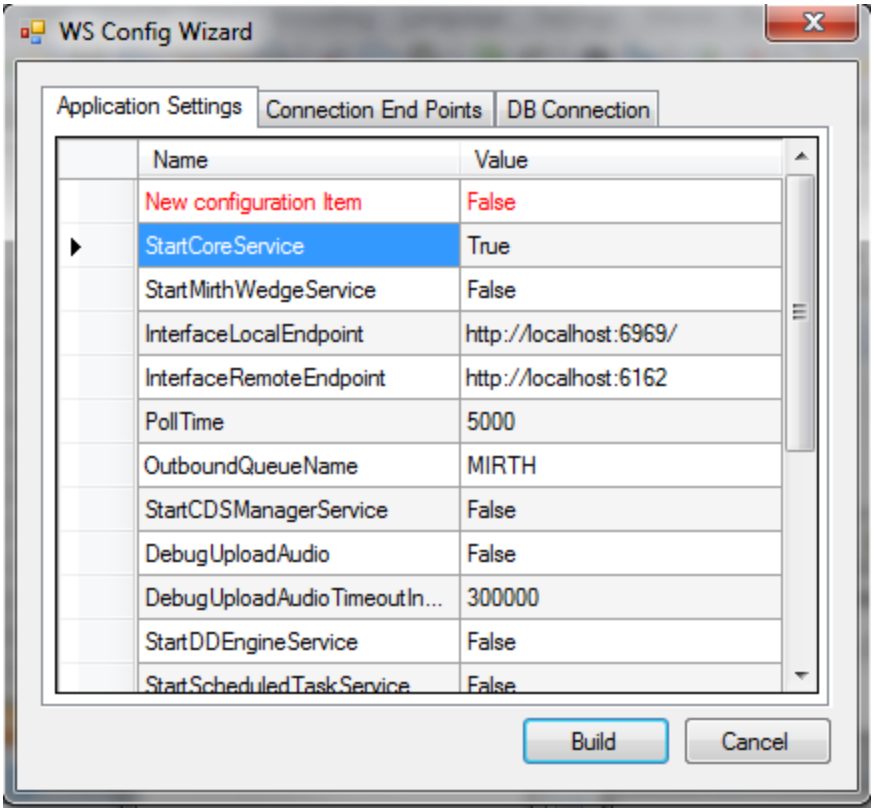
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:

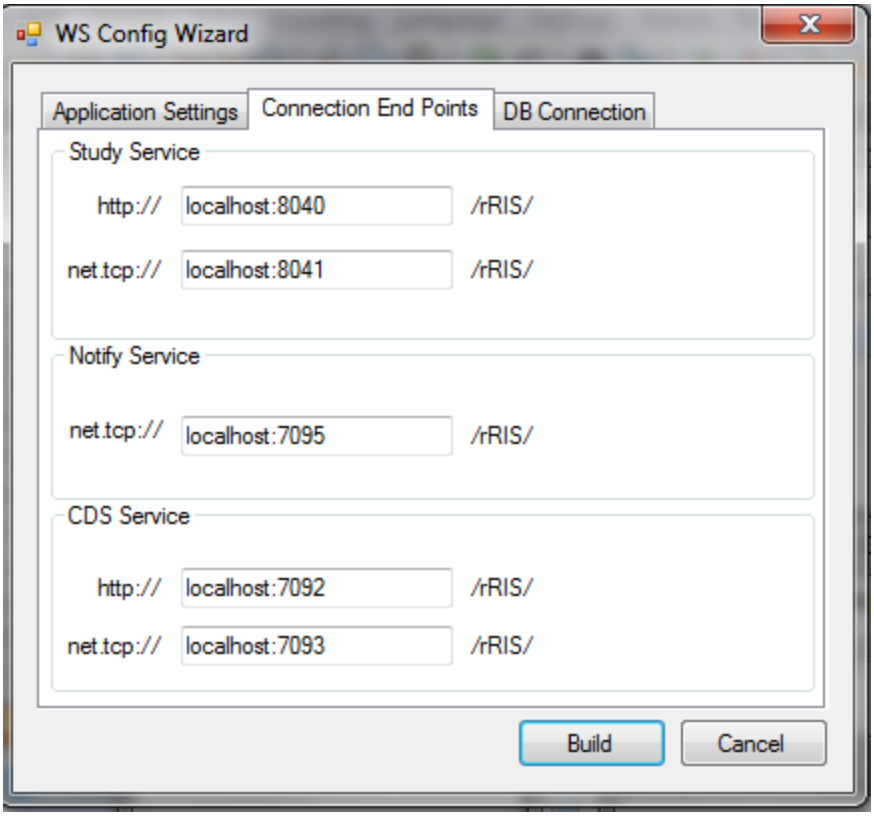
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of “Study Service” or “CDS Service” if both http and net.tcp were not provided then that endpoint will not be created at all.



## DATABASE UPDATES

Always run the upgrade scripts in a test environment of the actual database to make sure they run cleanly. If any errors occur please contact development.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

*Note: There is a new upgrade process introduced with B43.1 called "RunUpgrade.bat". The batch file will open a command window. This process will prompt you for the database server name, database name and authentication credentials. There is no need to run the database upgrade scripts manually as was done in previous releases.*

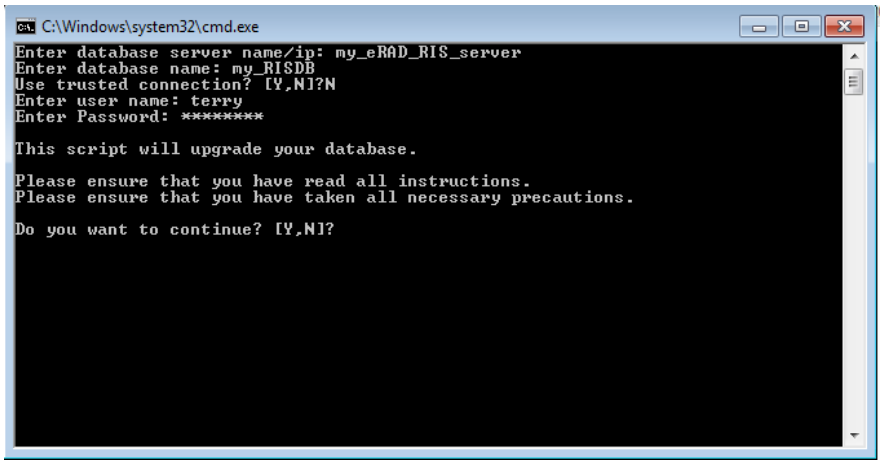
1) From the upgrade folder, double click the “RunUpgrade.bat” command file.

2) Enter the server name, database name and authentication credentials to the database. You have 2 choices for authentication credentials.

3) You can choose to use “Trusted connection”. Using this option will pass the identity of the currently logged on user. If this user has “db_owner” access to the eRAD RIS database then feel free to use this options.

4) If you decide not to use “Trusted connection” then you will be prompted for user id and password.

   Example:



5) After the upgrade program has finished you can find the upgrade logs in the “log” folder. The file name will be eRAD_RIS_db_upgrade_timestamp.log, where timestamp is a value representing the date and time the upgrade started. If you see any errors please contact the development team

# NEW CONFIGURATION SETTINGS

## SYSTEM CONFIGURATION SETTINGS

| Setting | Default | Purpose |
|---|---|---|
| AutoIncludeLinkedStudiesForTech | False | (value = True/False) Determines if linked studies are automatically included (checked) on Perform Exam screen when a linked study is opened. |
| AutoCopyPasteLinkedStudies | False | (value = True/False) Determines if data is copied to all linked studies when one study in a collection is saved on the Perform Exam screen. |

## ACCESS STRINGS

| Setting | Default | Purpose |
|---|---|---|
| Clinical.Tech.AllowAddExam | None | Allows access to the “Add exam to current order” button on Perform Exam screen. |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

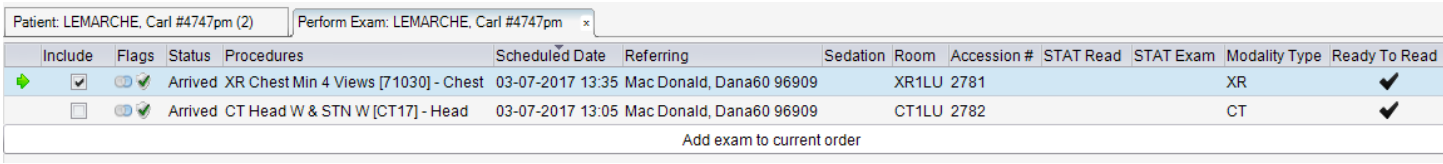
in any form or by any means without the prior written permission from eRAD.

## NEW FEATURES

### FEATURE #16292 – TECHNOLOGIST CAN NOW ADD ADDITIONAL EXAMS TO THE ORDER FROM PERFORM EXAM TAB

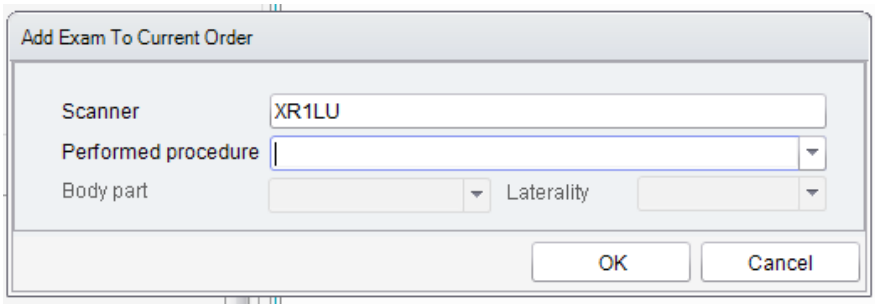
Technologists often need to add additional studies to the order when the patient is already on the table, after receiving feedback from the radiologist or upon realizing that the referral contains a separate exam that was not registered. Technologists need a method to add additional studies with fewer steps, as long as the study belongs to the same order (which would also necessitate the same referring physician and payment method).

To increase efficiency for this workflow, users can be granted a new access string named *Clinical.Tech.AllowAddExam*. The default for this access string is None. If set to Full, a technologist will have access to a new button on the Perform Exam tab labeled "*Add exam to current order*." The button is located beneath the list of today's exams at the top of the Perform Exam tab.



Clicking the "Add exam to current order" button will allow the technologist to add a new exam to the currently selected Order without going through the registration process.

A new window will open for the technologist to select the procedure, along with Body Part and Laterality if applicable.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

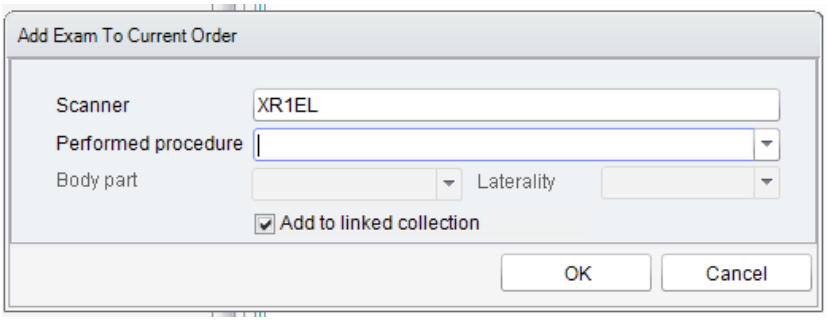
in any form or by any means without the prior written permission from eRAD. 

Currently, the scanner (room) is hard coded to match the same scanner as the existing procedure. In the next phase, this will be expanded to allow the technologist to select a different scanner.

The procedures available in the dropdown will include any procedure code that is part of the Schedule Group for the scanner.

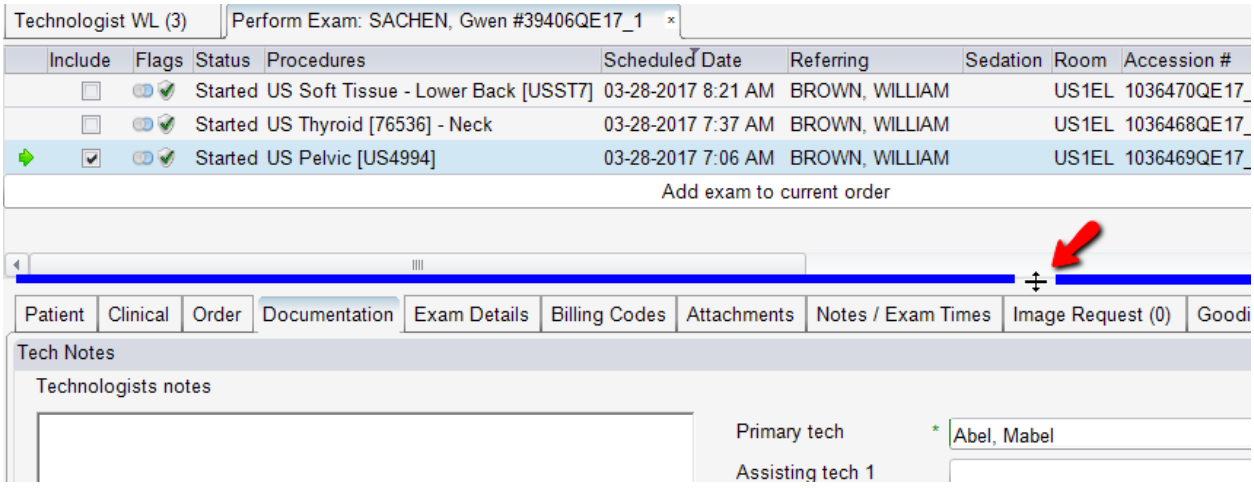
Upon clicking OK, a new exam will be added to the existing order. The Date and Time will default to the current date and time, similar to a Walk In.

For customers using Linked Reports, another option will be available if the current study is part of a set of linked studies.



Checking the "Add to linked collection" checkbox will automatically add the new procedure to the linked set. RIS will set the linked id and display the linked flag for the new study. This box will be checked by default.

It has always been possible to adjust the height of the list of today's procedures at the top of the Perform Exam tab by hovering on the dividing line and click/dragging when the double arrow appears. RIS will now remember this position and re-open with the same height for the next patient.

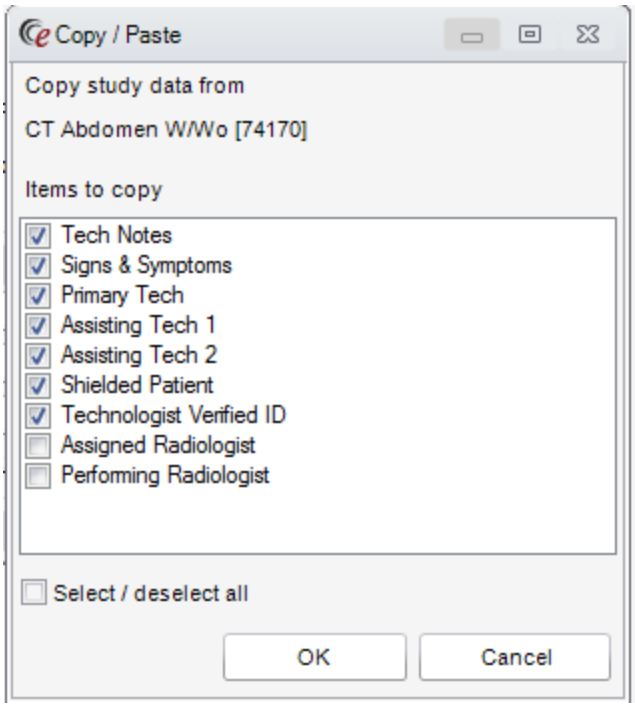


No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

## FEATURE #16294 – COPY/PASTE FEATURE NOW INCLUDES "TECHNOLOGIST VERIFIED ID"

On the Perform Exam screen (Documentation tab), there is an option to Copy/Paste certain data elements to other included studies (via the Include checkbox). An option to include the "Technologist Verified ID" field in the Copy/Paste options has been added. This option will be checked by default.



There are a few related database fields that track the user id of the technologist and the date/time that this field was updated. The core RIS services ensure that these fields are also kept in sync when the copy/paste function is used.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

## FEATURE #16293 – TECHNOLOGIST INFORMATION CAN AUTOMATICALLY COPY TO ALL LINKED STUDIES

When using the Linked Reporting feature, linked studies are not sent to the radiologist for dictation until all studies are completed by the technologist. For customers using linked reporting for exams that are performed on different days or in different modalities, it is preferable to prevent the radiologist from dictating before all of the images are available. However, for customers who routinely use Linked Reporting for multiple x-ray exams performed at the same time by the same technologist, this can cause workflow problems for linked reporting if the technologist forgets to complete one of the studies. In these environments, it is also desirable for certain information, such as primary technologist, technologist notes, and pregnancy status, to automatically copy to all of the studies that are part of the linked set.

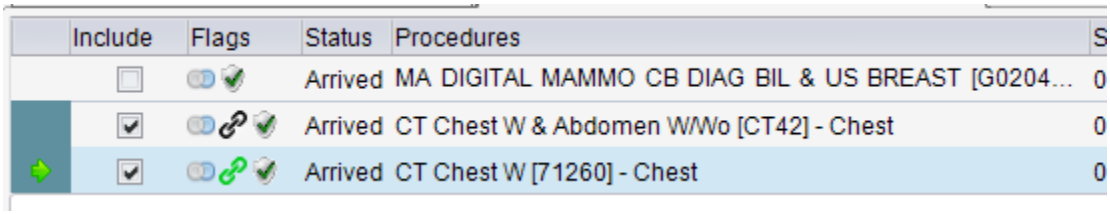
For these purposes, the following System Configuration options are now available:

- *AutoIncludeLinkedStudiesForTech* – When set to True, RIS will automatically "include" all studies in a linked collection when the perform exam window is opened. This allows the technologist to Start and Complete all of the exams together. The default for this setting is False. In a future build, RIS will exclude studies in the linked collection if they have a different Modality Type. For this first phase, this behavior will apply to all studies in the linked collection ***regardless*** of Modality Type.

- *AutoCopyPasteLinkedStudies* – When set to True, RIS will automatically copy/paste all available fields from the most recently saved exam to all other checked exams in the linked collection. The Copy/Paste will occur any time a user saves any of the studies in the linked set from the Perform Exam screen. The default for this setting is False. To use this setting, the first setting, *AutoIncludeLinkedStudiesForTech*, must also be set to True.

Setting both of the above System Configuration settings to True will make the following workflow possible:

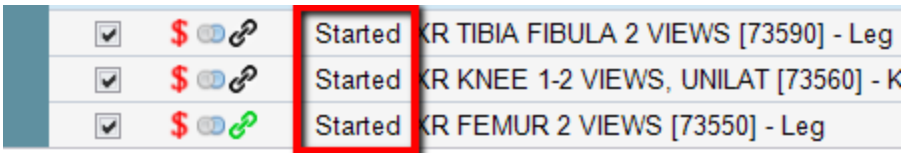
The technologist can open a study from the Technologist worklist and other studies that are part of the linked set will automatically be Included.



The technologist can fill in any fields that are required upon Start (e.g. entering the Primary Technologist). Clicking Start will copy the information to all of the checked studies and all of the studies will move to Started status.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 



Additional information can be added on the Documentation tab and upon the next action which includes a save, such as Complete, Suspend or Save, the fields will copy to all of the included exams that are part of the linked set. Fields that will be copied include: Tech Notes, Signs & Symptoms, Primary Tech, Assisting Tech 1, Assisting Tech 2, Shielded Patient, Pregnancy Status information, Technologist Verified ID, Assigned Radiologist, and Performing Radiologist. These are the same fields that are available for manual (optional) copy/paste workflow, which is still available for customers who would not benefit from this new feature.

Please note that when the new feature is used, it is not possible to handle any of the linked studies separately. In other words, they cannot be de-selected from the Include workflow if they are part of the linked set.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

## FEATURE #16138 - VALIDATION RULES FRAMEWORK HAS BEEN EXTENDED TO CONSIDER TABLES

Validation rules can now be created based off of patient/exam information that exists in tables, such as associated insurance carriers, MRNs and attachments.

Using the enhanced capability, the following validation rules are now possible:

1. Ability to require that at least one insurance is added if Self Pay is not selected.
2. Ability to warn the user, or prevent them from continuing, if a particular issuer of MRN has not been added for the patient.
3. Ability to warn the user, or prevent them from continuing, if a particular scanned document type (such as Referral) is not associated to an order.

As with all validation rules, the timing of the warning or hard stop can be customized.

These are only a few examples of rules that can be created. Please contact eRAD Support to inquire about creating validation rules for your organization.

Service Notes:

The concept of table expressions was added to validation rules in order to allow for rules that consider 1-n type tables. When creating a validation rule, it is now possible to choose a data set and data table, then choose "(ComputedExpression)" and enter an expression and filter that will be evaluated against the specified table.

The property grid in the validation editor was updated to include a section called *Table Expressions* with two properties: Expression and ExpressionFilter. The expression is an aggregate function like Sum, Avg, Min, Max, Count, StDev, or Var. A description of aggregate expressions can be found here:

https://msdn.microsoft.com/en-us/library/system.data.datacolumn.expression(v=vs.110).aspx

The ExpressionFilter can be used to determine which rows should be included in the expression. Expressions take the form of "<column_name> <operator> <filterValue>" (e.g. "active_flag = 'Y'"), but they may also include Boolean (AND/OR) logic (e.g. "active_flag = 'Y' AND sequence_id = 1").

See below for examples of validation rules that utilize the new framework.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

## VERIFIED ID VALIDATION RULE

| | |
|---|---|
| **Data Mapping** | |
| DataSetName | **Study** |
| DataTableName | **c_study** |
| FieldName | **(ComputedExpression)** |
| **General** | |
| ActiveFlag | **True** |
| AlertType | **Warning** |
| IgnoreNulls | **True** |
| MessageTemplate | **Patient ID has not been verified** |
| Name | **VerifiedID** |
| Negated | **True** |
| PracticeCode | |
| ValidatorType | **RangeValidator** |
| **Misc Parameters** | |
| DefaultValue | |
| DomainMembers | String[] Array |
| RegexPattern | |
| **Range Parameters** | |
| LowerBound | **0** |
| LowerBoundUnit | None |
| UpperBound | **0** |
| UpperBoundUnit | None |
| **Status Filters** | |
| IntendedUIAction | **UI_PatientArrived** |
| OnOrAfterStatus | |
| **Table Expressions** | |
| Expression | **count(study_key)** |
| ExpressionFilter | **verified_id_flag = 'Y'** |

The Verified ID Validation rule uses a Field of "(ComputedExpression)" and an *ExpressionFilter* of "verified_id_flag = 'Y'" so that RIS will count only the studies that have *verified_id_flag* set to a "Y". The expression *count(study_key)* means that the rule will validate the number of matching studies. The *ValidatorType* is set to a *RangeValidator* so that RIS can evaluate whether the count of matching studies falls within a certain range. The lower bound and

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

upper bound of the range were both set to zero and the rule is Negated, which means RIS will pass validation only if there is at least one study that is verified_id_flag = 'Y'.

## SCANNED DOCUMENT VALIDATION RULES

| | |
|---|---|
| **Data Mapping** | |
| DataSetName | **ScanDocumentList** |
| DataTableName | **c_vw_scan_document_list** |
| FieldName | **(ComputedExpression)** |
| **General** | |
| ActiveFlag | **False** |
| AlertType | **PreventSave** |
| IgnoreNulls | **True** |
| MessageTemplate | **You must have a worksheet** |
| Name | **WorksheetExists** |
| Negated | **False** |
| PracticeCode | |
| ValidatorType | **RangeValidator** |
| **Misc Parameters** | |
| DefaultValue | |
| DomainMembers | |
| RegexPattern | |
| **Range Parameters** | |
| LowerBound | **1** |
| LowerBoundUnit | None |
| UpperBound | **1000** |
| UpperBoundUnit | None |
| **Status Filters** | |
| IntendedUIAction | **UI_PatientArrived** |
| OnOrAfterStatus | |
| **Table Expressions** | |
| Expression | **count(scan_document_key)** |
| ExpressionFilter | **scan_type_code = 'Worksheet' and CurrentOrdersFlag = 'Y'** |

The above "Worksheet Exists" validation rule is built as a blueprint for other scanned document based rules. It is included in the upgrade script, so it can be easily enabled or configured by the service team. *ScanDocumentList* was added as an option for DataSets to validate. The only data table in this data set is *c_vw_scan_document_list*. The *field name* has been set to "(ComputedExpression)". The expression filter is configured to look for scan_type_code = 'Worksheet' and there is an additional check for CurrentOrdersFlag = 'Y', which here means that

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

the scanned document is associated with one of the orders that is currently opened. *CurrentOrdersFlag* is a calculated column that takes into account all open orders and studies, including studies that are associated with a different order (e.g. OrderA/OrderB, a.k.a. bookX). In cases where the business rule called for a scanned document to simply be on file in the patient record, the CurrentOrdersFlag = 'Y' could be omitted. Another calculated column, *CurrentStudiesFlag*, performs the same function, but considers the study level instead. Conditions can be added, so that the Worksheet required in this example would only fire if the study has a Modality Type of Ultrasound.

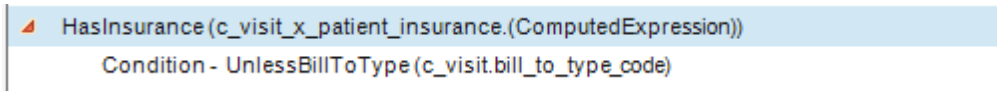
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

## PATIENT INSURANCE VALIDATION RULES

The validation rule for patient insurance considers both insurances and self-pay. A rule is used to check *c_visit_x_patient_insurance* and if no rows are found, the rule will check the *bill_to_type_code* on *c_visit* to make sure RIS does not warn the user about missing insurance if "self pay" has been specified.

The rule with corresponding condition looks like this:



Main rule:

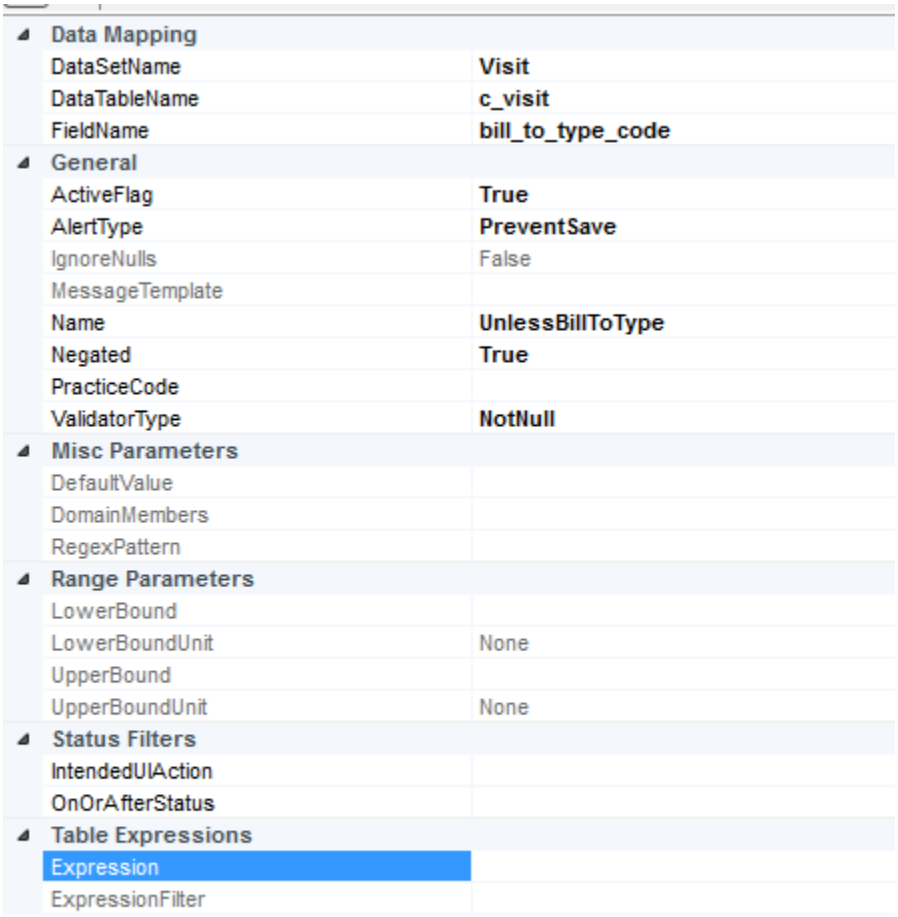
| | |
|---|---|
| **Data Mapping** | |
| DataSetName | **Visit** |
| DataTableName | **c_visit_x_patient_insurance** |
| FieldName | **(ComputedExpression)** |
| **General** | |
| ActiveFlag | **True** |
| AlertType | **Warning** |
| IgnoreNulls | **True** |
| MessageTemplate | **Insurance information was not provided** |
| Name | **HasInsurance** |
| Negated | **False** |
| PracticeCode | |
| ValidatorType | **RangeValidator** |
| **Misc Parameters** | |
| DefaultValue | |
| DomainMembers | |
| RegexPattern | |
| **Range Parameters** | |
| LowerBound | **1** |
| LowerBoundUnit | None |
| UpperBound | **1000** |
| UpperBoundUnit | None |
| **Status Filters** | |
| IntendedUIAction | **UI_PatientArrived** |
| OnOrAfterStatus | |
| **Table Expressions** | |
| Expression | **count(visit_key)** |
| ExpressionFilter | |

The above validation rule checks to see if there is any insurance associated with the current visit.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

Condition:



| | |
|---|---|
| **Data Mapping** | |
| DataSetName | **Visit** |
| DataTableName | **c_visit** |
| FieldName | **bill_to_type_code** |
| **General** | |
| ActiveFlag | **True** |
| AlertType | **PreventSave** |
| IgnoreNulls | False |
| MessageTemplate | |
| Name | **UnlessBillToType** |
| Negated | **True** |
| PracticeCode | |
| ValidatorType | **NotNull** |
| **Misc Parameters** | |
| DefaultValue | |
| DomainMembers | |
| RegexPattern | |
| **Range Parameters** | |
| LowerBound | |
| LowerBoundUnit | None |
| UpperBound | |
| UpperBoundUnit | None |
| **Status Filters** | |
| IntendedUIAction | |
| OnOrAfterStatus | |
| **Table Expressions** | |
| Expression | |
| ExpressionFilter | |

The above condition checks to see if *bill_to_type_code* is null and, if so, a validation failure occurs for exams that also failed the insurance check (main rule).

To replicate previous (hard coded) functionality, this rule is enabled by default, as a soft warning upon arrival. The service team can change the parent rule to "PreventSave" if they want to prevent the user from being able to Arrive without insurance/self-pay. It is also possible to change the timing of the warning/requirement. For

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

example, a customer could choose to warn the user if an insurance has not been entered at the time of scheduling. A second rule could be used to enforce that an insurance is entered at the time of registration.

## MRN VALIDATION RULES

| | |
|---|---|
| **Data Mapping** | |
| DataSetName | **Patient** |
| DataTableName | **c_patient_key_data** |
| FieldName | **(ComputedExpression)** |
| **General** | |
| ActiveFlag | **False** |
| AlertType | **Warning** |
| IgnoreNulls | **True** |
| MessageTemplate | **Must have a QE Test ID** |
| Name | **QETestIssuer** |
| Negated | **False** |
| PracticeCode | |
| ValidatorType | **RangeValidator** |
| **Misc Parameters** | |
| DefaultValue | |
| DomainMembers | |
| RegexPattern | |
| **Range Parameters** | |
| LowerBound | **1** |
| LowerBoundUnit | None |
| UpperBound | **12** |
| UpperBoundUnit | None |
| **Status Filters** | |
| IntendedUIAction | **UI_PatientArrived** |
| OnOrAfterStatus | |
| **Table Expressions** | |
| Expression | **count(patient_key)** |
| ExpressionFilter | **issuer_of_patient_id = 'QE Test'** |

The above rule is a blueprint of a rule that can validate that the patient has at least one patient ID with a particular *Issuer*. The rule is disabled by default, but can be configured/enabled by the service team in the field. In the above sample, the rule is counting rows in the *c_patient_key_data* table that have an issuer of "QE Test" at the point that

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

the patient is arrived. The rule will display the message “Must have a QE Test ID” in the event that the patient is missing an ID issued by the “QE Test” issuer. In the field, this would be adjusted to look for (and warn about) an issuer that is required for the customer. Conditions can be added to this rule. For example, a condition could be added to require an issuer of Arizona State Prison if the Patient Class is set to Prisoner.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

## FEATURE #16299 - ERAD RIS NOW SUPPORTS BOTH DEFAULT AND "RECOMMENDED" BILLING CODES

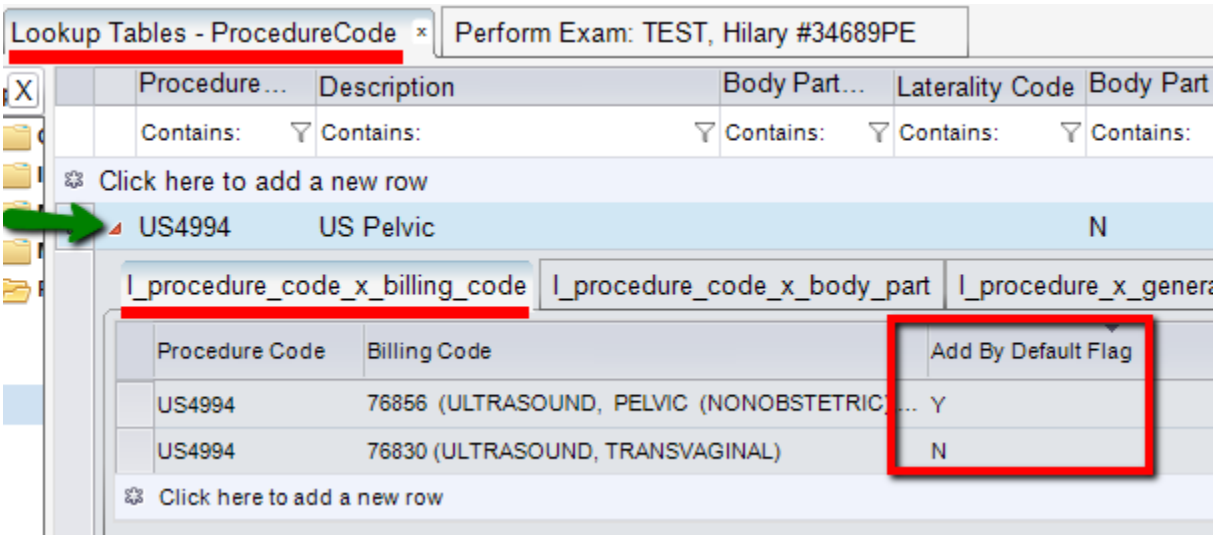
Note: this functionality was originally introduced in the previous patch, 2017.1.2. The description is included here because there have been further changes to the feature.

Previously, all billing codes associated to a procedure were active by default. In some cases, it may be useful to also associate billing codes that are *sometimes* used for a particular procedure. For example, some customers use a workflow in which procedure codes are broad, such as CT Sinus. In this case, the billing code might be the CPT for CT Sinus "with contrast," "without contrast," *or* "with and without contrast." Also, the CPT for contrast material may or may not be relevant depending on what is performed.

In these cases, being able to associate the billing codes that are most likely to be used for a particular procedure is more beneficial than creating default billing codes that are always active for the exam and have to be deactivated by the technologist.

To allow for this workflow, a new column has been added to the *l_procedure_code_x_billing_code* sub-table, which is found in the Procedure Code look-up table. The column, ***Add By Default***, will default to Y, meaning that the billing code will be associated and active for that procedure. This is the same as the previous behavior.

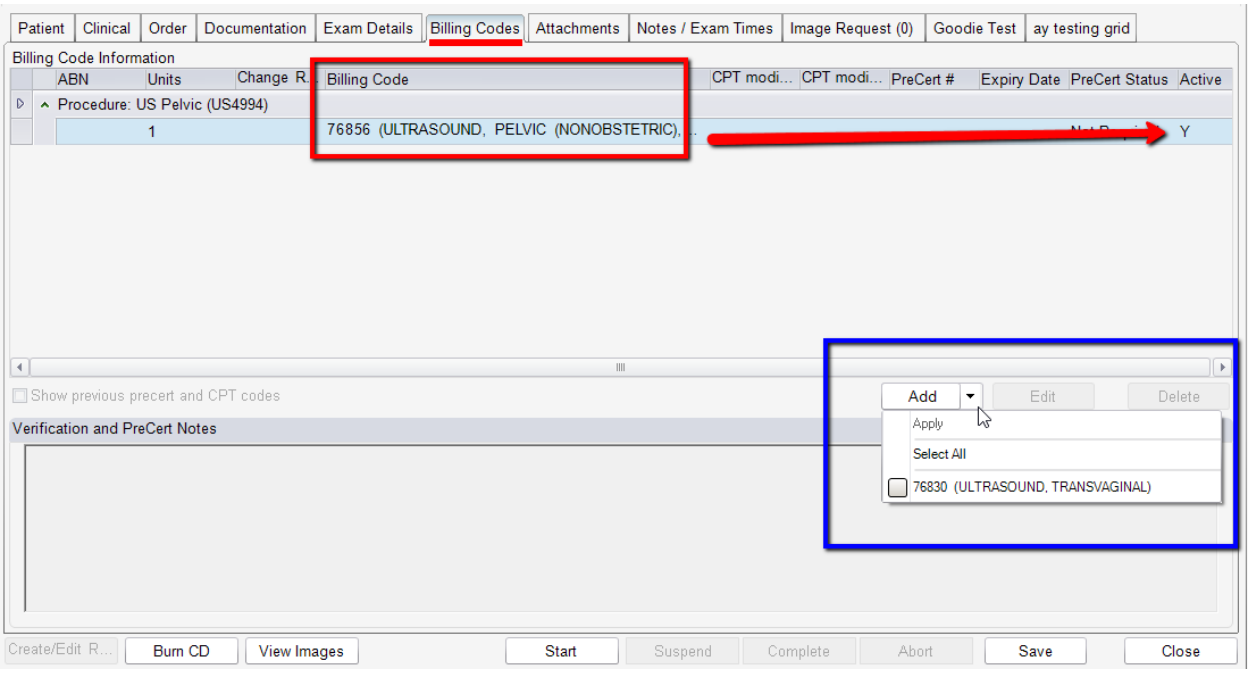
To associate billing codes without actively adding them to the procedure, set the Add By Default column to N. As you can see in the table below, it is possible to have a combination of Default billing codes and recommended/possible billing codes.



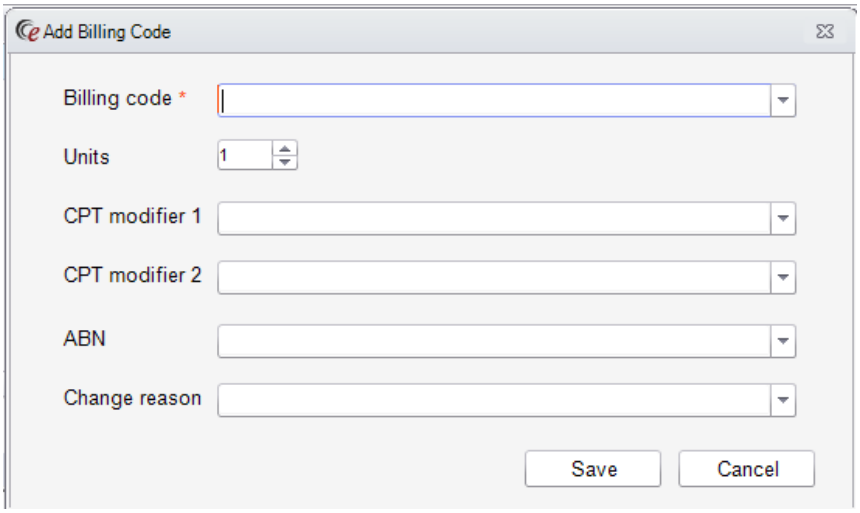
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

In the example above, the only billing code that will be automatically added for the US Pelvic procedure is 76856. The billing code 76830 will now be available from a quick pick list, as shown below.



When suggested codes are available for a procedure, the Add button will have a dropdown arrow allowing the user to quickly select and apply the suggested billing codes. Clicking the main Add button, instead of the dropdown arrow, will open the normal Add Billing Code screen where the entire list of Billing Codes can be accessed.

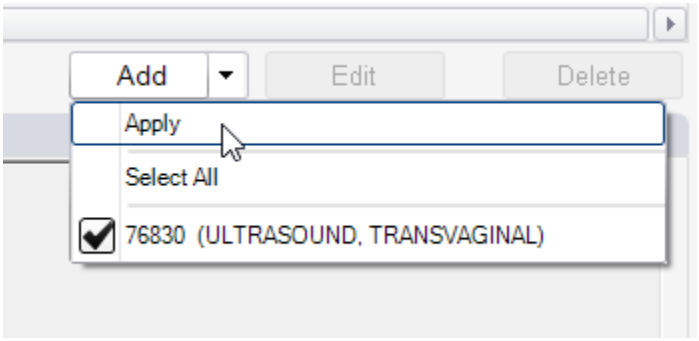


No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

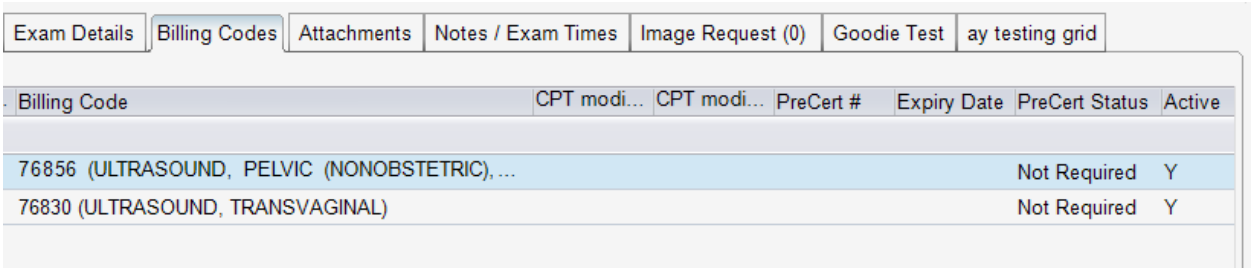
in any form or by any means without the prior written permission from eRAD. 

If no recommendations exist, the Add button will not have the dropdown arrow and the Add Billing Code screen is the only option for adding additional billing codes.

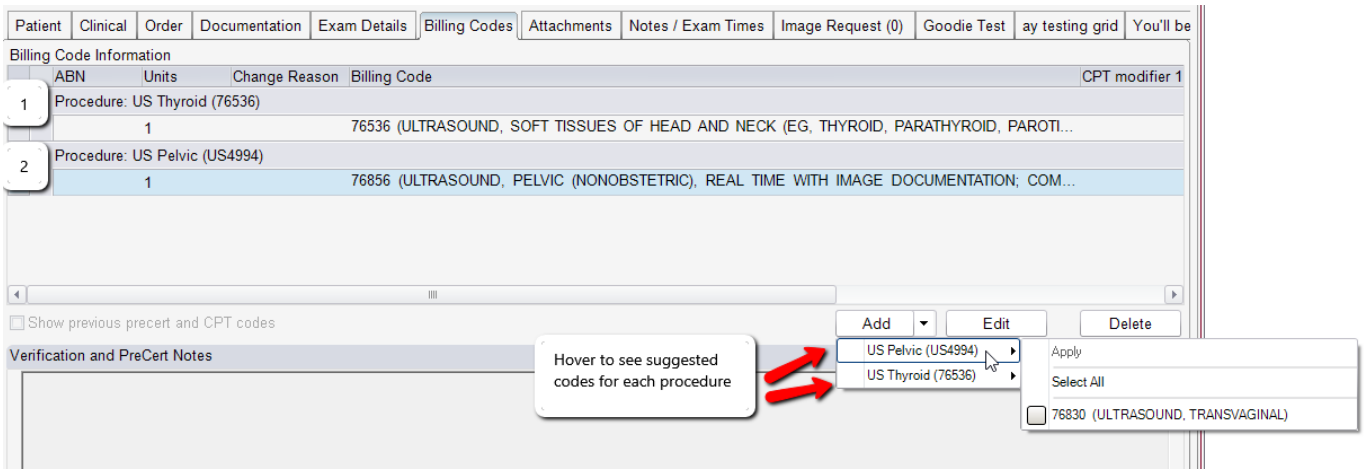
To use suggested billing codes, click the dropdown arrow and check the box(es) to be added. Then click Apply.



This will add the billing code to the procedure in an Active status.



If a technologist is performing multiple exams at once using the "Include" workflow, suggested billing codes will be available for each included procedure (if any).



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

Suggested billing codes will not trigger IVT workflow. Once the suggested billing code has been added to the exam, it will be treated like normal active billing codes and IVT workflow will apply.

It is also now possible to select multiple lines in the active Billing Codes grid in order to delete them all at once, if needed. Selecting rows and clicking the Delete key on the keyboard is also allowed. The user will be prompted to confirm that they want to delete the selected billing code(s). Deleting a saved billing code row is the same as marking the row as "Active = N". If suggested billing codes are added, but deleted *before* the exam is saved, the row will simply be deleted.

The billing codes associated to any procedure code prior to this upgrade will all be set as Add By Default = Y, which means that they will continue to behave as they did prior to upgrading.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

## FEATURE #16310 – VALIDATION RULE TO ALERT USER WHEN NO BILLING CODES ARE PRESENT

Previously, the RIS had a hard coded warning when there were no active billing codes for a procedure. Because the workflow for the above feature includes the possibility that some procedures will legitimately have no active billing codes at the time of scheduling or registration, the hard coded warning has been replaced with a validation rule that allows the customer to customize the timing for the warning (or change it to a hard stop if desired).

The original hard coded rule looked at procedure codes to see if any billing codes were mapped by the RIS administrators. The previous warning that stated: "There Are No Billing (CPT) Codes Mapped To This Procedure" has been removed and a new configurable rule has been added. The new rule does not look at Procedure/Billing Code mappings, but actually checks whether there are any studies that do not currently have billing codes attached.

The new rule will be enabled by default to replicate existing functionality.

# INSTALLING

## CLIENT/GUI

Copy and replace the current rRIS…zip file with the eRAD_rRIS_2017.1.3.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## WEB SERVICE

This updated is only required for the Wedge Web Services. The Core RIS Service and Document Distribution Service are not required to be updated.

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 128 files in the rRISService folder and 7 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below). Folders ar (Arabic), he (Hebrew), pt_BR (Brazilian Portuguese) and es-AR (Argentina Spanish) are localization folders. The WedgePlugins folder contains various plugin files for RADAR, MIRTH, Ensemble, etc…

**Services Configuration Wizard**

With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, and services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

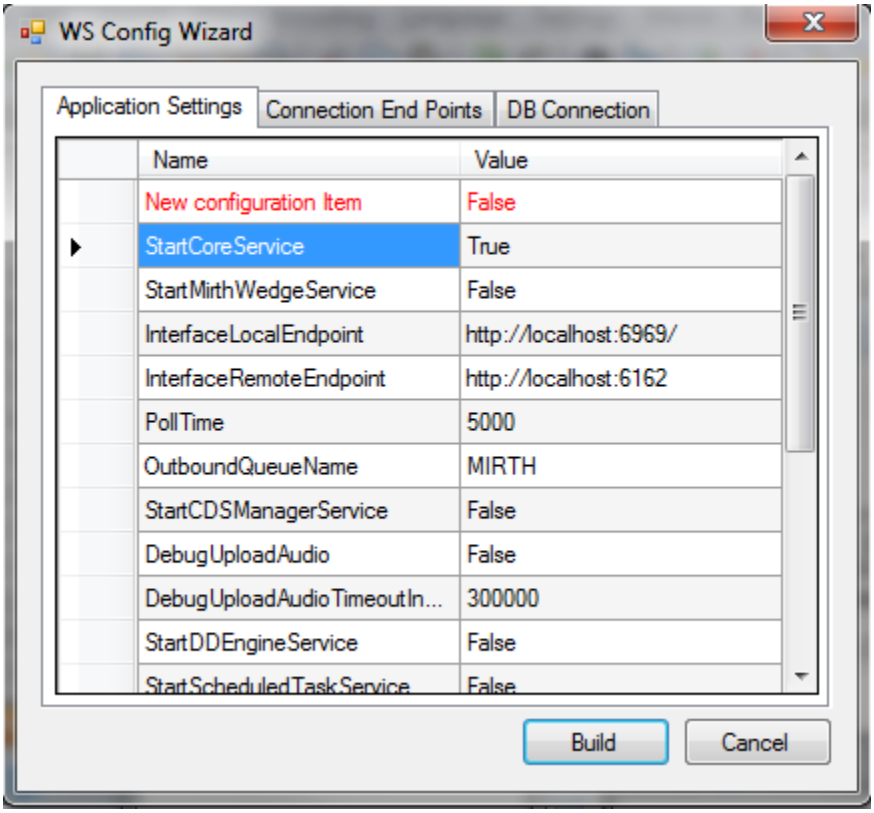
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:

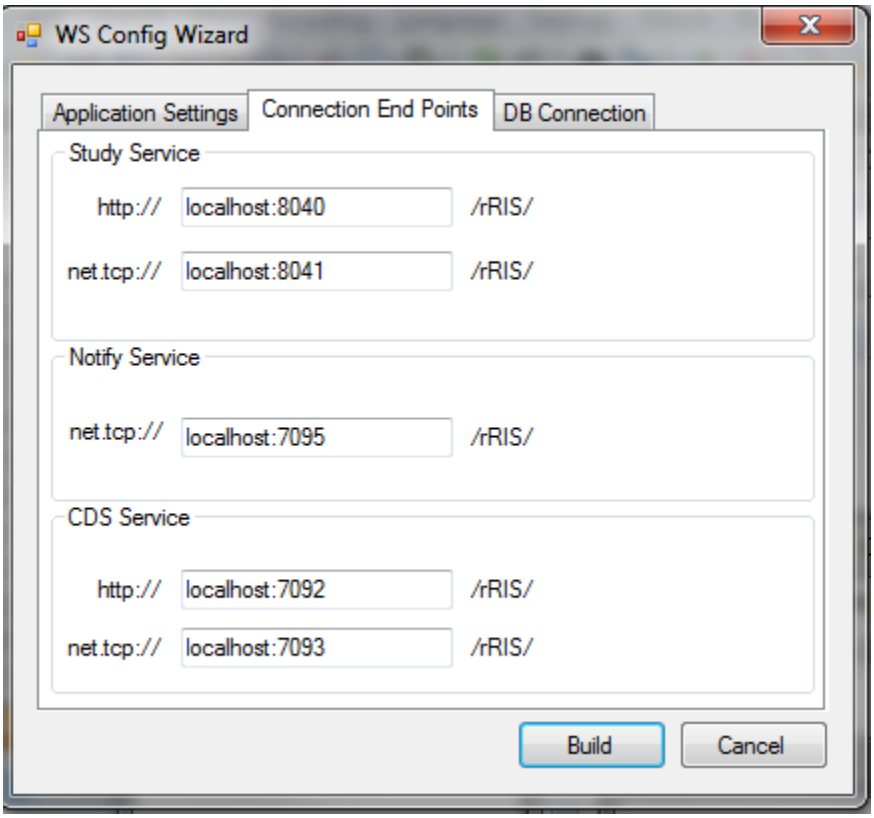
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of “Study Service” or “CDS Service” if both http and net.tcp were not provided then that endpoint will not be created at all.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

## DATABASE UPDATES

Always run the upgrade scripts in a test environment of the actual database to make sure they run cleanly. If any errors occur please contact development.

*Note: There is a new upgrade process introduced with B43.1 called "RunUpgrade.bat". The batch file will open a command window. This process will prompt you for the database server name, database name and authentication credentials. There is no need to run the database upgrade scripts manually as was done in previous releases.*

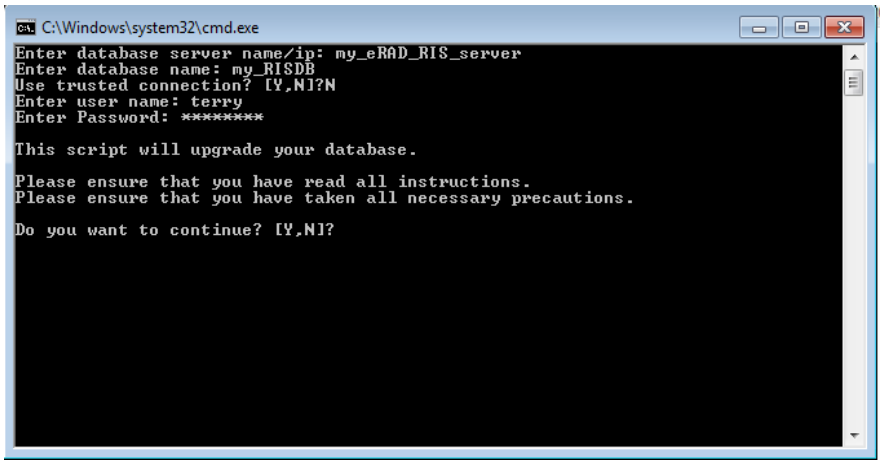
1) From the upgrade folder, double click the "RunUpgrade.bat" command file.

2) Enter the server name, database name and authentication credentials to the database. You have 2 choices for authentication credentials.

3) You can choose to use "Trusted connection". Using this option will pass the identity of the currently logged on user. If this user has "db_owner" access to the eRAD RIS database then feel free to use this options.

4) If you decide not to use "Trusted connection" then you will be prompted for user id and password.

   Example:



5) After the upgrade program has finished you can find the upgrade logs in the "log" folder. The file name will be eRAD_RIS_db_upgrade_timestamp.log, where timestamp is a value representing the date and time the upgrade started. If you see any errors please contact the development team

## PACKAGE CONTENTS

## INTENDED AUDIENCE

The intended audience for this document is the RadNet Clinical Systems team and the eRAD Support/Service team.

## WHO IS AFFECTED

Build 2017.1 installs. This server update must be applied to 2017.1.3.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD.

## NEW FEATURES

### FEATURE #16591 – STRIP LAST CHARACTER FROM VARIABLES PASSED TO EXTERNAL PORTALS

The existing portal feature in eRAD RIS allows the customer to pass patient data to external portals, such as a Health Information Exchange (HIE), in order to pull up records in the external portal. There was an international requirement to strip the last character from the MRN before passing it to the portal.

A new plugin has been added which allows the user to strip the last character from any variable.

When creating/updating an entry in BrowserConfig, the URL can support using "filters" in the URL string. For example, to get the patient id into the URL of the portal page to be opened, the variable would be specified as {patient.c_patient.patient_id}. To strip the last character from the patient id, this would need to be changed to: {patient.c_patient.patient_id**|StripLastChar**}. The additional text in blue tells the RIS to send the patient_id value through the StripLastChar filter before adding the value to the URL that passes the data to the external portal.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD.

## RESOLVED ITEMS

# eRAD RIS

| Redmine # | Subject |
|---|---|
| 17061 | Resolved an error that prevented the addition of a billing code which had been previously deleted. |
| 17059 | An intermittent error for referring physicians with imaging preferences no longer occurs. |
| 16924 | Resolved intermittent patient history errors that occurred when starting or completing an exam in technologist workflow. |
| 16901 | Selected attachment viewer in reporting screens can once again display the report. |
| 16883 | CSH images now close properly after closing Dictation. |
| 16882 | Restored the ability to open the IVT screen for a cancelled order. |
| 16869 | Resolved an issue that could cause billing code units to be null when scheduling an exam that was previously Saved as Order. |
| 16997 | Restored the ability to save attachments from the “Attachments” context menu item. |
| 16983 | Rescheduled studies with unknown referring are once again appearing on the Unknown Reconciliation WL as intended. |
| 16965 | Peer review button is available when the selected report is displayed on Selected Attachment data pane in the reporting screen, even after scrolling through other documents and returning to the report. |
| 16984 | Diagnostic report is no longer missing the report body when first retrieved by External Interface Service. |

# INSTALLING

## CLIENT/GUI

Copy and replace the current rRIS…zip file with the eRAD_rRIS_2017.1.4.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## WEB SERVICE

This updated is only required for the Wedge Web Services. The Core RIS Service and Document Distribution Service are not required to be updated.

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 128 files in the rRISService folder and 7 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below). Folders ar (Arabic), he (Hebrew), pt_BR (Brazilian Portuguese) and es-AR (Argentina Spanish) are localization folders. The WedgePlugins folder contains various plugin files for RADAR, MIRTH, Ensemble, etc…

**Services Configuration Wizard**

With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, and services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

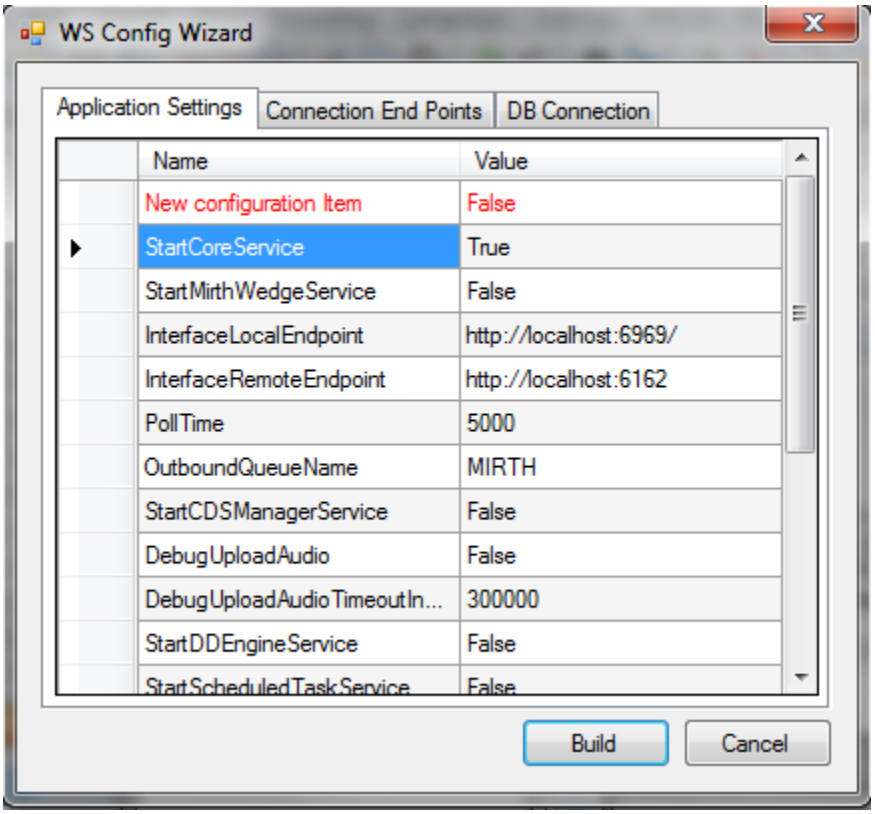
On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

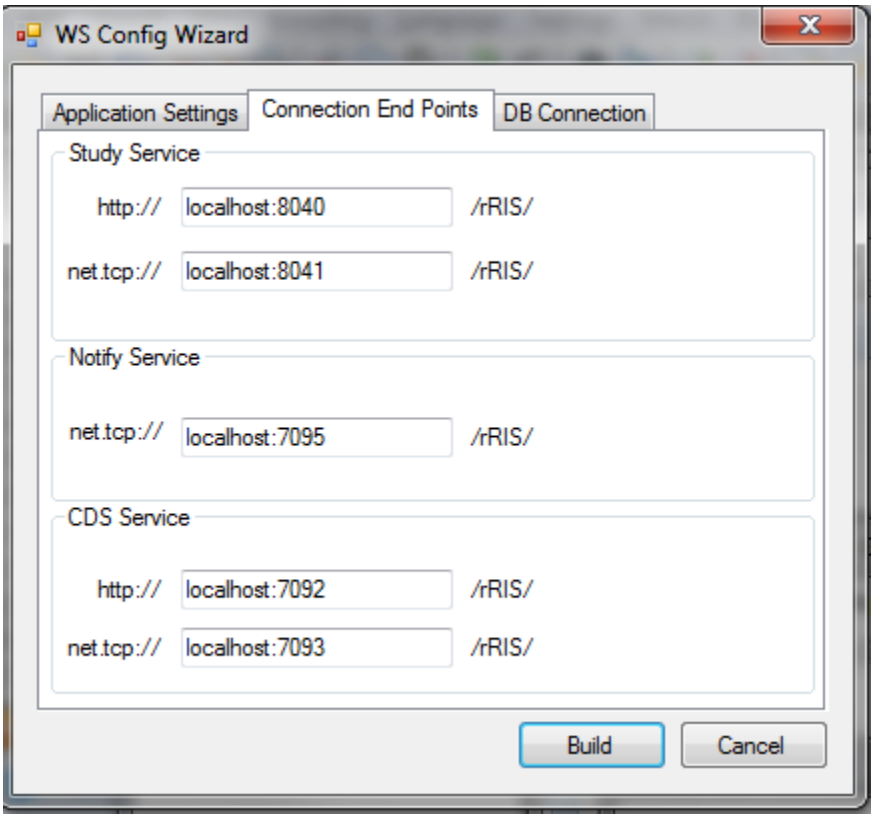
**Application Settings:** all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.



No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

**Connection End Points:** will display the existing configuration, if the value is left blank then that entry will not be created, in the case of "Study Service" or "CDS Service" if both http and net.tcp were not provided then that endpoint will not be created at all.



## DATABASE UPDATES

Always run the upgrade scripts in a test environment of the actual database to make sure they run cleanly. If any errors occur please contact development.

*Note: There is a new upgrade process introduced with B43.1 called "RunUpgrade.bat". The batch file will open a command window. This process will prompt you for the database server name, database name and authentication credentials. There is no need to run the database upgrade scripts manually as was done in previous releases.*

1) From the upgrade folder, double click the "RunUpgrade.bat" command file.

2) Enter the server name, database name and authentication credentials to the database. You have 2 choices for authentication credentials.

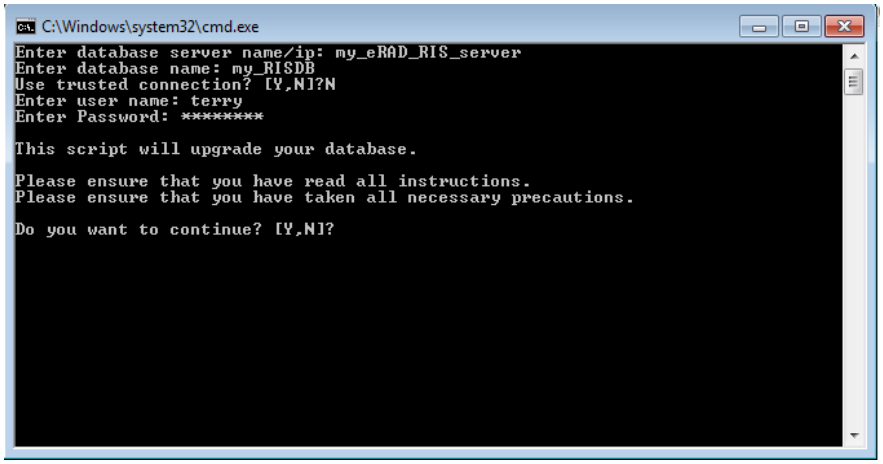
No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD. 

3) You can choose to use “Trusted connection”. Using this option will pass the identity of the currently logged on user. If this user has “db_owner” access to the eRAD RIS database then feel free to use this options.

4) If you decide not to use “Trusted connection” then you will be prompted for user id and password.

Example:



5) After the upgrade program has finished you can find the upgrade logs in the “log” folder. The file name will be eRAD_RIS_db_upgrade_timestamp.log, where timestamp is a value representing the date and time the upgrade started. If you see any errors please contact the development team

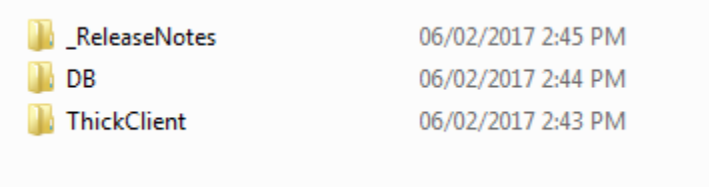
## PACKAGE CONTENTS



## INTENDED AUDIENCE

The intended audience for this document is the RadNet Clinical Systems team and the eRAD Support/Service team.

## WHO IS AFFECTED

Build 2017.1 installs. This server update must be applied to 2017.1.5.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD.

## RESOLVED ITEMS

# eRAD RIS

| Redmine # | Subject |
|---|---|
| 17387 | Restored the ability to select a value for a picklist field in the Create/Edit screen (from which it is possible for a technologist or transcriptionist to begin the report for the radiologist). |
| 17409 | Added two missing indexes that were originally part of the 2017.1.4 database upgrade. |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD.

## CODE STREAM

# INSTALLING

## CLIENT/GUI

Copy and replace the current rRIS…zip file with the eRAD_rRIS_2017.1.6.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

## DATABASE UPDATES

Always run the upgrade scripts in a test environment of the actual database to make sure they run cleanly. If any errors occur please contact development.

*Note: There is a new upgrade process introduced with B43.1 called "RunUpgrade.bat". The batch file will open a command window. This process will prompt you for the database server name, database name and authentication credentials. There is no need to run the database upgrade scripts manually as was done in previous releases.*

1) From the upgrade folder, double click the “RunUpgrade.bat” command file.

2) Enter the server name, database name and authentication credentials to the database. You have 2 choices for authentication credentials.

3) You can choose to use “Trusted connection”. Using this option will pass the identity of the currently logged on user. If this user has “db_owner” access to the eRAD RIS database then feel free to use this options.

4) If you decide not to use “Trusted connection” then you will be prompted for user id and password.

Example:

in any form or by any means without the prior written permission from eRAD. 

5) After the upgrade program has finished you can find the upgrade logs in the “log” folder. The file name will be eRAD_RIS_db_upgrade_timestamp.log, where timestamp is a value representing the date and time the upgrade started. If you see any errors please contact the development team

## PACKAGE CONTENTS

## INTENDED AUDIENCE

The intended audience for this document is the RadNet Clinical Systems team and the eRAD Support/Service team.

## WHO IS AFFECTED

Build 2017.1 installs. This server update must be applied to 2017.1.6 (note there are web service changes in 2017.1.5 as well that will need to be applied).

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD.

## RESOLVED ITEMS

# eRAD RIS

| Redmine # | Subject |
|---|---|
| 17466 | Instituted a new safeguard to ensure RIS doesn't add the same alternate ID to the patient ID grid more than once. This resolves an issue that occurred under a particular set of circumstances with electronic orders. |

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted
