INTENDED AUDIENCE

The intended audience for this document is the RadNet Clinical Systems team and the eRAD Support/Service team.

It is appropriate to share the document with any customers applying the patch, in order to review new feature descriptions and resolved defects.

WHO IS AFFECTED

Build 2017.3 installs. This server update must be applied to 2017.3.3

NEW FEATURES

FEATURE #18483 - ZIP CODE SHOULD AUTO POPULATE CITY/STATE ON THE INSURANCE RESPONSIBLE PARTY

RESOLVED ITEMS

eRAD RIS

Redmine #	Subject
18374	Wrong Diagnostic Report is showing for order that required utilization review and has multiple procedures
18462	Precert not assigned while scheduling EMR order.
18372	Not Recommended OrderCancelled orders not showing in UM Connect
18546	Log control issue in dark mode.
18601	UM - Excluded Exams Workflow may not prompt user if procedure has billing codes with multiple UM Coverages
18375	Issue previewing attachments with multiple pages
18318	The counters framework is only tracking Error Pages and Failed Login Passwords for UM Connect - not tracking Logins
18271	Change verbiage for CD Burning "error"
18670	UM Portal - Imaging Launching Does not load Images
18652	verbal order generator not functioning
18515	Reno - Patient Connect HeaderLogo - incorrect applicationsconfig setting
18556	c_mgmt_mqsa view does not return data when it is expected.
18639	index plan for popping items from c_action_queue causes a key lookup

18496	External Interface Schema incorrect for some tables
18542	many DB queries are timing out.
18512	Notes fields not appending properly with inbound message
18580	Reno - Laterality and Body Part Required change in behaviour
18604	Problems with Patient Insurance DOB and Name Synchronization
18608	Naming issues with systems in upgrade structure
18381	HTTP deployment method times out after 120 seconds
18359	UM Admin users cannot respond to messages in the User Messages inbox
18377	Practice Override not overriding application settings

The following list are items have been taken from current new development (intended to be released in a future version).

Redmine #	Subject	Original Resolved Version
18509	ExpirationMonthYear exception making it difficult to schedule a cancelled order	3.2017.6

INSTALLING

CLIENT/GUI

Copy and replace the current rRIS...zip file with the eRAD_rRIS_2017.3.3.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

WEB SERVICE

This updated is only required for the Wedge Web Services. The Core RIS Service and Document Distribution Service are not required to be updated.

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 134 files in the rRISService folder and 7 sub folders. Of those folders, 1 is a folder titled **"XSL"** that contains a sub folder and files within the subfolder. Another folder is titled **"deploy"** that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below). Folders ar (Arabic), en_AU (Australian English), en-ZA (South Africa), he (Hebrew), pt_BR (Brazilian Portuguese), es-AR (Argentina Spanish) and ru-RU (Russian) and are localization folders. The WedgePlugins folder contains various plugin files for RADAR, MIRTH, Ensemble, etc...

Services Configuration Wizard

With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, and services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD.

Application Settings: all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

Connection End Points: will display the existing configuration, if the value is left blank then that entry will not be created, in the case of “Study Service” or “CDS Service” if both http and net.tcp were not provided then that endpoint will not be created at all.

DATABASE UPDATES

Always run the upgrade scripts in a test environment of the actual database to make sure they run cleanly. If any errors occur please contact development.

Note: There is a new upgrade process introduced with B43.1 called "RunUpgrade.bat". The batch file will open a command window. This process will prompt you for the database server name, database name and authentication credentials. There is no need to run the database upgrade scripts manually as was done in previous releases.

- 1) From the upgrade folder, double click the “RunUpgrade.bat” command file.
- 2) Enter the server name, database name and authentication credentials to the database. You have 2 choices for authentication credentials.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD.

- 3) You can choose to use “Trusted connection”. Using this option will pass the identity of the currently logged on user. If this user has “db_owner” access to the eRAD RIS database then feel free to use this options.
- 4) If you decide not to use “Trusted connection” then you will be prompted for user id and password.

Example:

```
C:\Windows\system32\cmd.exe
Enter database server name/ip: my_eRAD_RIS_server
Enter database name: my_RISDB
Use trusted connection? [Y,N]? Y
Enter user name: terry
Enter Password: *****

This script will upgrade your database.
Please ensure that you have read all instructions.
Please ensure that you have taken all necessary precautions.
Do you want to continue? [Y,N]?
```

- 5) After the upgrade program has finished you can find the upgrade logs in the “log” folder. The file name will be eRAD_RIS_db_upgrade_timestamp.log, where timestamp is a value representing the date and time the upgrade started. If you see any errors please contact the development team
