## eRAD RIS Server Update

### Resolved Items

Redmine #	Subject
13370	IW or CSH PACS integration - intermittently produces "given key not present" error
13368	Intermittent issue where View Images button is remaining disabled and PACS Enable/Disable menu remains disabled
13373	PACS images not synced with current study after timeout exceeded in eRAD RIS
13369	Intermittent RIS hang during exit
13375	Powerscribe integration - Closing a study using X on the tab may produce "given key not present" error.
13371	eRAD PACS Integration - If 2 studies are opened and both do not have images attached, RIS will stall until OK is clicked on "Invalid study file" message
13374	When RIS prompts "An action is required in PACS" and the user kills PACS manually, the user cannot continue working in RIS.
13376	eRAD PACS - Integration - using the next workflow the 'Waiting for PACS' message times out when relevant studies to open is greater than 0
13377	PACS Integration - When the "Waiting for PACS" message is on the screen, and the user presses Cancel, the RIS should not display a "Thread was being aborted" message box.
13372	PACS Sync - When images are displayed in reading mode, then the radiologist opens another study to sign off, the images for the first patient remain displayed.

## eRAD RIS Server Update

### Installing

#### Client/GUI

- 1) Copy and replace the current rRIS...zip file with the rRIS\_1.3.16.1.1.33672.zip file provided with this release.  
Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS\_16.1.1.33672 → rRIS\_1.3.16.1.1.33672

NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

**NOTE:** If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)
