INTENDED AUDIENCE

The intended audience for this document is the RadNet Clinical Systems team and the eRAD Support/Service team.

It is appropriate to share the document with any customers applying the patch, in order to review new feature descriptions and resolved defects.

WHO IS AFFECTED

Build 2017.3 installs. This server update must be applied to 2017.3.4

NEW FEATURES

FEATURE #18849 – CAPTURE “ORDERING DEPARTMENT” FROM INTERFACE AND DISPLAY ON WORKLISTS

There is a customer requirement to capture and display an Ordering Department, which is populated to RIS via interface. The data will be displayed in a new column labeled *Ordering Department* on the following worklists:

- Orders to Schedule
- Reception
- Technologist
- Pending Dictation
- All Pending Dictation

While the Ordering Organization column may be visible on other radiologist worklists, the data is only configured to be displayed on the worklists above.

The Ordering Organization cannot be edited in eRAD RIS; updates will occur in the originating system and are populated via the interface.

Users who have saved Custom Views on their worklists will need to add the new column and re-save their Custom View in order to see this data on their worklists.

RESOLVED ITEMS

eRAD RIS

Redmine #	Subject
19192	MRNs with an Issuer using Mod10 or Mod10PrePad Identity Validation Type will appropriately fail to save when validation rules are not met.
19222	When checking for existing MRNs for Issuers with Mod10PrePad Identity Validation Type, the leading zeros will be added prior to the check, ensuring that a duplicate MRN cannot be created.
19151	The Administration Portal header is now correctly applying the configuration value for "Portal Name."
19153	Resolved a Portal timing issue which could sometimes result in PACS image thumbnails failing to load.
19152	Corrected a discrepancy in web address (URL) when setting up a new UM Portal account, which previously prevented a user from entering their verification code when opening the page from the email.
19091	Resolved an excessive CPU issue related to c_ProcessPostEvents.
19090	Resolved a performance issue on the IVT worklist by preventing parallel queries.
19089	A new index was added to improve performance of the Labwork Requested worklist.
19088	A new index was added to improve performance of Document Distribution queries.

The following items, developed for future RIS versions, have been released early in this patch, so that customers can benefit from the changes more quickly.

Redmine #	Subject	Original Resolved Version
19066	Eligibility - Removed Carefirst (BCMDC) trigger logic that set remaining deductible to null.	3.2018.1
19077	Lab observations are now available in the outbound action container for interface messages.	3.2018.1
19117	Resolved an issue that could cause the Issuer of ID to be hidden after making changes to the current selection.	2.2017.4
19104	Resolved an issue that could result in a time out of a Patient Search under certain conditions.	3.2018.1
19078	Resolved an issue that could cause users to receive an Assign Credentials error.	3.2018.1
17815	It is now possible to select a midnight (00:00) time slot when scheduling, if the Availability Template is configured to allow it.	3.2018.1

INSTALLING

CLIENT/GUI

Copy and replace the current rRIS...zip file with the eRAD_rRIS_2017.3.5.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

WEB SERVICE

This updated is only required for the Wedge Web Services. The Core RIS Service and Document Distribution Service are not required to be updated.

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 134 files in the rRISService folder and 7 sub folders. Of those folders, 1 is a folder titled “XSL” that contains a sub folder and files within the subfolder. Another folder is titled “**deploy**” that contains the new .config files that will be deployed with the user of the file called “ServicesConfigWizard.exe” (see instructions below). Folders are (Arabic), en_AU (Australian English), en-ZA (South Africa), he (Hebrew), pt_BR (Brazilian Portuguese), es-AR (Argentina Spanish) and ru-RU (Russian) and are localization folders. The WedgePlugins folder contains various plugin files for RADAR, MIRTH, Ensemble, etc...

Services Configuration Wizard

With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a “deploy” folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, and services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

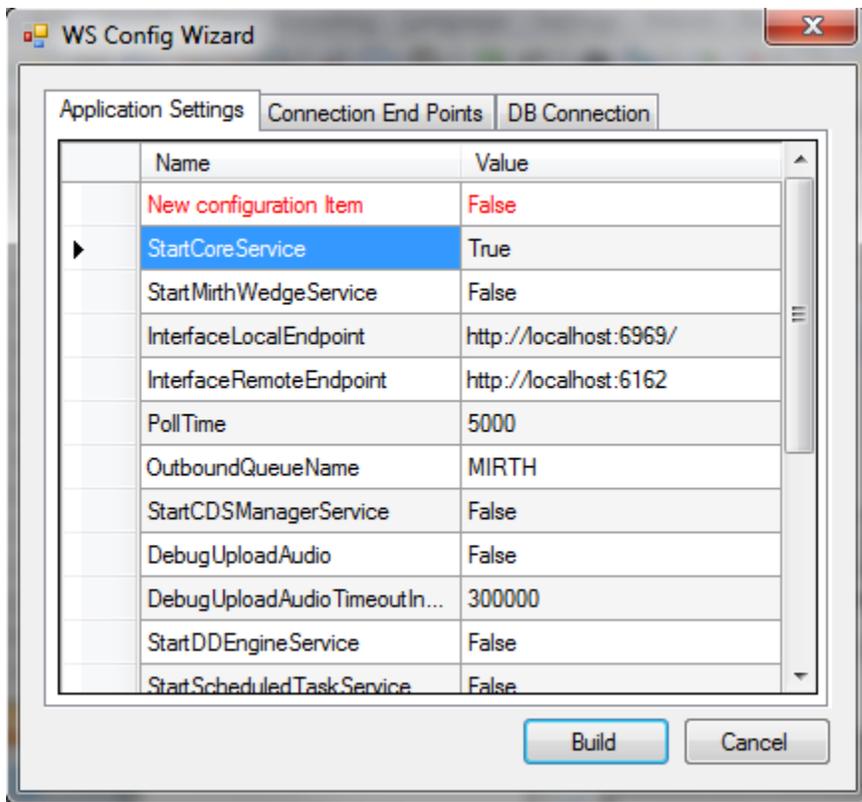

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application “ServicesConfigWizard.exe”

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:

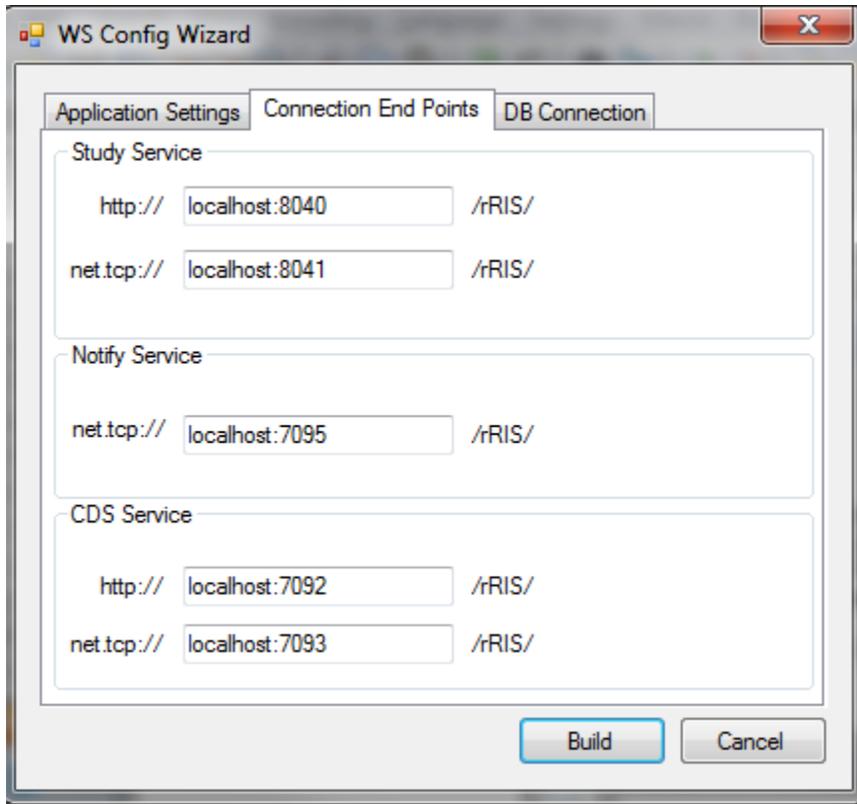

Application Settings: all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD.

Connection End Points: will display the existing configuration, if the value is left blank then that entry will not be created, in the case of “Study Service” or “CDS Service” if both http and net.tcp were not provided then that endpoint will not be created at all.

DATABASE UPDATES

Always run the upgrade scripts in a test environment of the actual database to make sure they run cleanly. If any errors occur please contact development.

Note: There is a new upgrade process introduced with B43.1 called "RunUpgrade.bat". The batch file will open a command window. This process will prompt you for the database server name, database name and authentication credentials. There is no need to run the database upgrade scripts manually as was done in previous releases.

- 1) From the upgrade folder, double click the “RunUpgrade.bat” command file.
- 2) Enter the server name, database name and authentication credentials to the database. You have 2 choices for authentication credentials.

No part of this material may be published, reproduced, stored in a retrieval system, or transmitted

in any form or by any means without the prior written permission from eRAD.

- 3) You can choose to use “Trusted connection”. Using this option will pass the identity of the currently logged on user. If this user has “db_owner” access to the eRAD RIS database then feel free to use this options.
- 4) If you decide not to use “Trusted connection” then you will be prompted for user id and password.

Example:

```
C:\Windows\system32\cmd.exe
Enter database server name/ip: my_eRAD_RIS_server
Enter database name: my_RISDB
Use trusted connection? [Y,N]?N
Enter user name: terry
Enter Password: *****

This script will upgrade your database.
Please ensure that you have read all instructions.
Please ensure that you have taken all necessary precautions.
Do you want to continue? [Y,N]?
```

- 5) After the upgrade program has finished you can find the upgrade logs in the “log” folder. The file name will be eRAD_RIS_db_upgrade_timestamp.log, where timestamp is a value representing the date and time the upgrade started. If you see any errors please contact the development team
