2. Changes to Configuration

The following configuration changes were corrected\included in 42.1.4

We had noticed that there were some settings missing from the standard ris.exe.config file that is supplied with the GUI.zip file. The following settings had been introduced in previous builds, but now reside in the file. Settings starting with <! -- are commented out. These settings are located in the <appsettings> section of the ris.exe.config file. Please do a compare with your current one.

```
<add key="ShouldCloseViewSessionOnThread" value="true"/>
<add key="LookupTableTimeToLiveInMinutes" value="60"/>
<add key="EnableHighPriorityLookupStrategy" value="true"/>
<!--<add key="RowLevelCacheDataSetNamesCSV"
value="ProcedureCode,TemplateMacro,Indication"/> -->
<!-- <add key="MModalDataTransferValue" value="0"/> -->
```

A configuration change to the ris.exe.config file was introduced in build 2.42 this setting was designed to lessen the delays when retrieving lookup tables that are larger in size. This config setting, as mentioned, is located in the ris.exe.config file located in the <appSettings> section of the file

This setting is:

```
<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/>
```

Where the value can be any lookup table, and a value="*" will retrieve all lookups.

The setting has resulted in undesired results of possible slowness, depending on the lookup table, and possibly additional bugs. Because of this, we are requesting that all sites comment out this line in the ris.exe.config table. The commented line will look like

```
<!--<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/> -->
```

8. Installing

- 1) Copy and replace the current rRIS...zip file with the rRIS_1.3.42.1.5.23406.zip file provided with this release.
Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_42.1.5.23406 → rRIS_1.3.42.1.5.23406. NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)

- 2) Stop each service listed below. Copy the files from the RIS Service Updates folder to the directory for each rRISService. Be sure to make backup of all files, but especially the rRISServices.exe.config and rRISServices.vshost.exe.config files.

rRISService directories include:

- a) *rRISService*
- b) *CDS rRISService*
- c) *Wedge rRISService*
- d) *DDE rRISService*

Restart each service.
