7. Installing

1) Copy and replace the current rRIS…zip file with the rRIS_1.3.43.0.3.24450.zip file provided with this release.
   Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.
If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_43.0..3.24450→ rRIS_1.3.43.0.3. 24450
NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)

2) Run the B43.0.3.1.sql file against the eRAD RIS database instance.
