eRAD RIS Server Update

1. Defects Resolved

Redmine #	Subject	Priority
6173	Reporting - Worklists not refreshing when reporting screen is open is causing worklist count problems	High
6172	Locking issue where next workflow might fetch a study that was already locked by another user	Normal
6141	Radiologist screen reuse causes default template error	Normal

Change to Configuration

A configuration change to the ris.exe.config file was introduced in build 2.42 this setting was designed to lessen the delays when retrieving lookup tables that are larger in size. This config setting, as mentioned, is located in the ris.exe.config file located in the <appSettings> section of the file

This setting is:

```
<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/>
```

Where the value can be any lookup table, and a value="*", will retrieve all lookups.

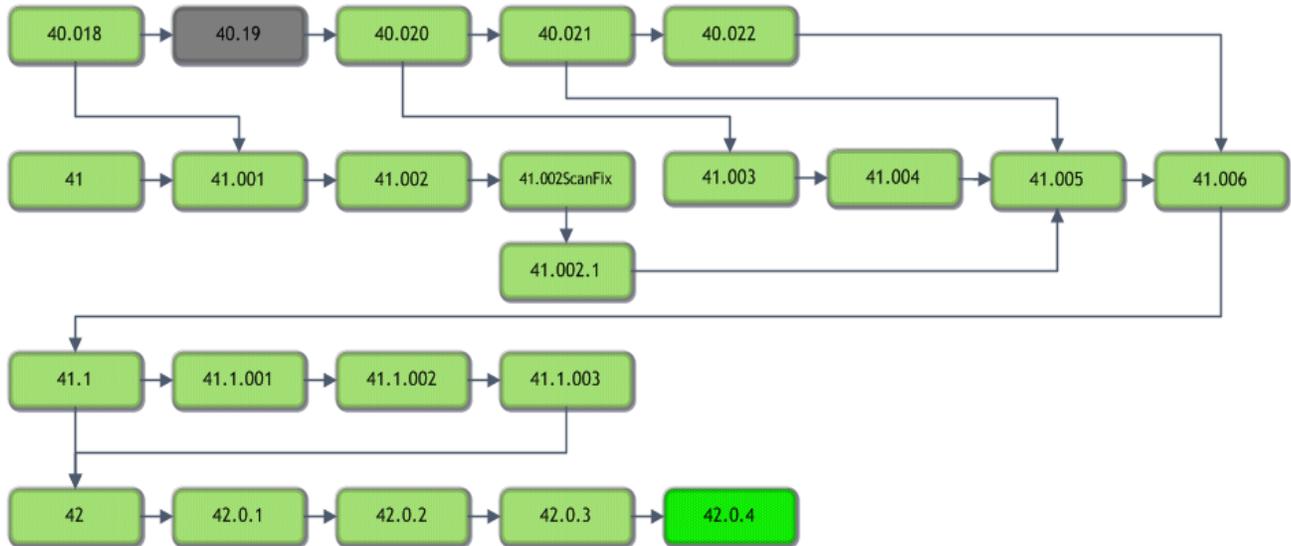

The setting has resulted in undesired results of possible slowness, depending on the lookup table, and possibly additional bugs. Because of this, we are requesting that all sites comment out this line in the ris.exe.config table. The commented line will look like

```
<!--<add key="RowLevelCacheDataSetNamesCSV" value="ProcedureCode,TemplateMacro,Indication"/> -->
```

7. Installing

- 1) Copy and replace the current rRIS...zip file with the rRIS_1.3.42.0.4.21862.zip file provided with this release.
Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

If you receive the Version Mismatch error above the GUI.zip will need to be renamed to add 1.3. to it. The GUI.zip file name change is from rRIS_42.0.4.21862 → rRIS_1.3.42.0.4.21862. NOTE: the GUI.zip included with this release has already been renamed to include 1.3.

This is required for installs that have not reached build 42. Because the software installed on your local workstation is a pre-42 build it detects a version mismatch in the software naming and won't allow the newest build to be launched (it is looking for 1.3. in the name). Once the workstation(s) have reached a build of 42 we will no longer need to add "1.3." to the GUI.zip name. Also note that a core install will not resolve this issue below.

NOTE: If your upgrade is coming from 40.016.1 or prior a core install will be required. Versions (builds) of 40.017 and greater do not require a core install as long as you are at least at 40.017 (Core Version 1.3.40.18756)

eRAD RIS Server Update

- 2) Run the B42.04.sql file against the eRAD RIS database instance.

8. Known Limitations

Known limitations listed in this document may not have been introduced in 42.0.4, but have been discovered during testing of 42.0.4.

Redmine #	Subject	Info
6186	RADNET - Reporting - My pending dictation - worklist counts display differently	This does not affect work list refreshing, study access or the count on the work list. When a refresh of the work list is completed it will show correctly. Example: the count on the work list tab may show 9 of 10, where 9 is the correct study count on the work list, but another user has the other study open in the dictate window (locked by that user).
