**RESOLVED ITEMS**

eRAD RIS

Redmine #	Subject
17324	Improved core service stability by handling the ServiceHost "Faulted" event and re-creating the service object.
17327	Eliminated the queued messages that would inundate the web services when a failed web service would come back on line.
17328	Eliminated the intermittent "Service Call Aborted" exception when logging out of RIS.

CODE STREAM

Bright Green = Current Release

## PACKAGE CONTENTS

 _ReleaseNotes	05/30/2017 11:27 AM
 rRISService	05/30/2017 11:26 AM
 Service Tools	05/30/2017 11:26 AM
 ThickClient	05/30/2017 11:26 AM

## INTENDED AUDIENCE

The intended audience for this document is the RadNet Clinical Systems team and the eRAD Support/Service team.

## AFFECTED INSTALLS

Build 2016.7 installs. This server update has GUI and Database updates. This update must be applied to 2016.7.9

**INSTALLING**CLIENT/GUI

Copy and replace the current rRIS...zip file with the eRAD\_rRIS\_2016.7.10.zip file provided with this release.

Be sure to make a backup of the ris.exe.config file contained within the current .zip folder.

WEB SERVICE

This updated is only required for the Wedge Web Services. The Core RIS Service and Document Distribution Service are not required to be updated.

1. The web service upgrade consists of replacing the files in the RIS Web Service directory with the files supplied in the rRISService folder with this build. Always create a backup of the files being replaced. This upgrade includes 134 files in the rRISService folder and 7 sub folders. Of those folders, 1 is a folder titled "XSL" that contains a sub folder and files within the subfolder. Another folder is titled "deploy" that contains the new .config files that will be deployed with the user of the file called "ServicesConfigWizard.exe" (see instructions below). Folders ar (Arabic), he (Hebrew), pt\_BR (Brazilian Portuguese) and es-AR (Argentina Spanish) are localization folders. The WedgePlugins folder contains various plugin files for RADAR, MIRTH, Ensemble, etc...

**Services Configuration Wizard**

With the release of 42 to decrease the chance of losing configuration setting and missing new configuration options, we will no longer include the configuration files in the release in the main set of files, but they will now exist in a "deploy" folder, which will contain the three site configurable config files; applicationsettings, connectionstrings, and services as well as a copy of the rRISServices.exe configuration file. The contents of this folder should not be required to be touched.

On the install of a new service, all files will be copied to the appropriate locations on the server (no configurations will be over written). If instructed or to confirm no new configurations have been added the user can run the new application "ServicesConfigWizard.exe"

This application will read the existing configuration file(s) (if files exist), and compare to the provided new configuration files then will display three tabs, for each configuration file:

Application Settings: all existing configuration value will be displayed, if there are any new configuration entries they will be displayed in red.
